Vol. 74 No. 223

Book 1 of 2 Books

Pages 60127-60314

Friday

Nov. 20, 2009

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** www.gpoaccess.gov/nara, available through GPO Access, is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

For more information about GPO Access, contact the GPO Access User Support Team, call toll free 1-888-293-6498; DC area 202-512-1530; fax at 202-512-1262; or via e-mail at gpoaccess@gpo.gov. The Support Team is available between 7:00 a.m. and 9:00 p.m. Eastern Time, Monday–Friday, except official holidays.

The annual subscription price for the **Federal Register** paper edition is \$749 plus postage, or \$808, plus postage, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 74 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register

Vol. 74, No. 223

Friday, November 20, 2009

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

RECOVERY ACCOUNTABILITY AND TRANSPARENCY BOARD

4 CFR Part 200

RIN 0430-AA00

Implementation of Privacy Act of 1974

AGENCY: Recovery Accountability and Transparency Board.

ACTION: Final rule.

SUMMARY: This document institutes the Recovery Accountability and Transparency Board's (Board) final rule implementing a set of procedural regulations under the Privacy Act of 1974 (Privacy Act or the Act), Public Law 93-579, 5 U.S.C. 552a. These regulations have been written to conform to the statutory provisions of the Act. They are intended to expedite the processing of Privacy Act requests received by the Board and to ensure the proper dissemination of information to the public.

DATES: Effective November 20, 2009.

FOR FURTHER INFORMATION CONTACT: Jennifer Dure, General Counsel, (202) 254-7900.

SUPPLEMENTARY INFORMATION: The proposed rule was published in the *Federal Register* on August 3, 2009 (74 FR 38363) for a public comment period to end on October 2, 2009. This rule sets forth the procedures to be used by members of the public when requesting records from the Board under the Privacy Act. It also establishes a timeframe for responses, a fee schedule for copying records, and charges for obtaining information, when applicable.

Public Comment

The Board received one comment on the proposed rule requesting an explanation concerning the differences between the proposed Privacy Act and Freedom of Information Act (FOIA) rules regarding what is procedurally

required in order for an individual to request access to records, in the custody of the Board. A discussion of the comment and the Board's response are set forth below.

Comments on the Proposed Rule and Explanation

Under the Board's proposed Privacy Act rules, all requests should include, among other things, the requesters full name, address, and telephone number. Requests for Privacy Act records may be made in writing, by fax, by telephone, or in person. The commenter contends that there are additional and more stringent requirements placed on a requester who requests access to his or her records in person. More specifically, such a requester must contact the Board's office at least one week before the desired appointment date. In addition, before a requester can review his or her records, the requester must provide proof of identification. Identification should be a valid copy of one of the following: A government ID, a driver's license, a passport, or other current identification that contains both an address and a picture of the requester.

According to the commenter, the process for requesting records under the Board's proposed FOIA rules "seem[s] quite simplified." Under the proposed FOIA rules (74 FR 38366), all requests for records must include the requester's full name, address, and telephone number. Such a request can be made in writing, via e-mail, or via fax. The commenter correctly points out that the proposed FOIA rule does not provide the option of an in-person request. The commenter concluded that the differences in treatment of requesters for access to the Board's Privacy Act records seem unnecessary, especially with respect to the identification information required of a requester seeking information in person.

The commenter correctly points out the difference between the proposed Privacy Act and FOIA rules, but there is a reason for the difference between them which stems from the laws at issue. Briefly, a Privacy Act request is a request from an individual seeking to review and/or make corrections to federal records, maintained and retrieved in an approved system of records, which are about that individual—with very limited

exceptions, no one else can ask for these records. A FOIA request is a request from the general public for copies of specific records maintained by a federal agency—any member of the public can make such a request. When individuals request information about themselves contained in an approved Privacy Act system of records, the request should be handled under the Privacy Act. Requested records about an individual not contained in an approved system of records asked for under the Privacy Act will have their request processed under the FOIA, since no access rights exist under the Privacy Act.

Because the nature of a Privacy Act request is narrow and specific to an individual in an approved system of records, the Board feels that providing the additional provisions to request and examine records in person is reasonable. In addition, in order to ensure that individuals who request to examine records in person are who they claim to be, it is necessary to require that individuals provide the proper proof of identification as set forth in the proposed Privacy Act rules. This Privacy Act requirement is designed to protect requesters from having their personal information disclosed to anyone else.

Executive Order 12866

The proposed regulation does not meet the criteria for a significant regulatory action under Executive Order 12866. Therefore, review by the Office of Management and Budget is not required.

Regulatory Flexibility Act

The proposed rule adds Privacy Act regulations to 4 CFR Part 200 and will not have a significant economic impact on a substantial number of small entities.

Paperwork Reduction Act

The rule imposes no additional recording and recordkeeping requirements and is therefore exempt from the requirements of the Paperwork Reduction Act.

List of Subjects in 4 CFR Part 200

Administrative practice and procedure, Privacy, Reporting and recordkeeping requirements.

■ Therefore, the Board amends Title 4 of the Code of Federal Regulations by adding Part 200 to read as follows:

CHAPTER II—RECOVERY ACCOUNTABILITY AND TRANSPARENCY BOARD

PART 200—PRIVACY ACT OF 1974

- 200.1 Purpose and scope.
- 200.2 Definitions.
- 200.3 Privacy Act records maintained by the Board.
- 200.4 Privacy Act inquiries.
- 200.5 Requests for access to records.
- 200.6 Processing of requests.
- 200.7 Fees.
- 200.8 Appealing denials of access.
- 200.9 Requests for correction of records.
- 200.10 Disclosure of records to third parties.
- 200.11 Maintaining records of disclosures.
- 200.12 Notification of systems of Privacy Act records.
- 200.13 Privacy Act training.
- 200.14 Responsibility for maintaining adequate safeguards.
- 200.15 Systems of records covered by exemptions.
- 200.16 Mailing lists.

Authority: 5 U.S.C. 552a(f).

§ 200.1 Purpose and scope.

This part sets forth the policies and procedures of the Board regarding access to systems of records maintained by the Board under the Privacy Act, Public Law 93–579, 5 U.S.C. 552a. The provisions in the Act shall take precedence over any part of the Board's regulations in conflict with the Act. These regulations establish procedures by which an individual may exercise the rights granted by the Privacy Act to determine whether a Board system of records contains a record pertaining to him or her; to gain access to such records; and to request correction or amendment of such records. These regulations also set identification requirements and prescribe fees to be charged for copying records.

§ 200.2 Definitions.

As used in this part:

(a) *Agency* means any executive department, military department, government corporation, or other establishment in the executive branch of the federal government, including the Executive Office of the President or any independent regulatory agency;

(b) *Individual* means any citizen of the United States or an alien lawfully admitted for permanent residence;

(c) *Maintain* means to collect, use, store, or disseminate records as well as any combination of these recordkeeping functions. The term also includes exercise of control over, and therefore responsibility and accountability for, systems of records;

(d) *Record* means any item, collection, or grouping of information about an

individual that is maintained by the Board and contains the individual's name or other identifying information, such as a number or symbol assigned to the individual or his or her fingerprint, voice print, or photograph. The term includes, but is not limited to, information regarding an individual's education, financial transactions, medical history, and criminal or employment history;

(e) *System of records* means a group of records under the control of the Board from which information is retrievable by use of the name of the individual or by some number, symbol, or other identifying particular assigned to the individual;

(f) *Routine use* means, with respect to the disclosure of a record, the use of a record for a purpose that is compatible with the purpose for which it was collected;

(g) *Designated Privacy Act Officer* means the person named by the Board to administer the Board's activities in regard to the regulations in this part;

(h) *Executive Director* means the chief operating officer of the Board;

(i) *Days* means standard working days, excluding weekends and federal holidays.

§ 200.3 Privacy Act records maintained by the Board.

(a) The Board shall maintain only such information about an individual as is relevant and necessary to accomplish a purpose of the agency required by statute or by Executive Order of the President. In addition, the Board shall maintain all records that are used in making determinations about any individual with such accuracy, relevance, timeliness, and completeness as is reasonably necessary to ensure fairness to that individual in the making of any determination about him or her. However, the Board shall not be required to update retired records.

(b) The Board shall not maintain any record about any individual with respect to or describing how such individual exercises rights guaranteed by the First Amendment of the Constitution of the United States, unless expressly authorized by statute or by the subject individual, or unless pertinent to and within the scope of an authorized law enforcement activity.

§ 200.4 Privacy Act inquiries.

(a) *Inquiries regarding the contents of record systems.* Any person wanting to know whether the Board's systems of records contain a record pertaining to him or her may file an inquiry in person, by mail or by telephone.

(b) *Inquiries in person* may be submitted at the Board's headquarters

located at 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006. Inquiries should be marked "Privacy Act Inquiry" on each page of the inquiry and on the front of the envelope and directed to the Privacy Act Officer.

(c) *Inquiries by mail* may be sent to: Privacy Act Officer, Recovery Accountability and Transparency Board, 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006. "Privacy Act Inquiry" should be written on the envelope and each page of the inquiry.

(d) *Telephone inquiries* may be made by calling the Board's Privacy Act Officer at (202) 254–7900.

§ 200.5 Requests for access to records.

(a) All requests for records should include the following information:

(1) Full name, address, and telephone number of requester.

(2) The system of records containing the desired information.

(3) Any other information that the requester believes would help locate the record.

(b) *Requests in writing.* A person may request access to his or her own records in writing by addressing a letter to: Privacy Act Officer, Recovery Accountability and Transparency Board, 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006.

(c) *Requests by fax.* A person may request access to his or her records by facsimile at (202) 254–7970.

(d) *Requests by phone.* A person may request access to his or her records by calling the Privacy Act Officer at (202) 254–7900.

(e) *Requests in person.* Any person may examine and request copies of his or her own records on the Board's premises. The requester should contact the Board's office at least one week before the desired appointment date. This request may be made to the Privacy Act Officer in writing or by calling (202) 254–7900. Before viewing the records, proof of identification must be provided. The identification should be a valid copy of one of the following:

(1) A government ID;

(2) A driver's license;

(3) A passport; or

(4) Other current identification that contains both an address and a picture of the requester.

§ 200.6 Processing of requests.

Upon receipt of a request for information, the Privacy Act Officer will ascertain whether the records identified by the requester exist, and whether they are subject to any exemption under § 200.15. If the records exist and are not subject to exemption, the Privacy Act Officer will provide the information.

(a) *Requests in writing, including those sent by fax.* Within five working days of receiving the request, the Privacy Act Officer will acknowledge its receipt and will advise the requester of any additional information that may be needed. Within 15 working days of receiving the request, the Privacy Act Officer will send the requested information or will explain to the requester why additional time is needed for a response.

(b) *Requests in person or by telephone.* Within 15 days of the initial request, the Privacy Act Officer will contact the requester and arrange an appointment at a mutually agreeable time when the record can be examined. The requester may be accompanied by no more than one person. In such case, the requestor must inform the Privacy Act Officer that a second individual will be present and must sign a statement authorizing disclosure of the records to that person. The statement will be kept with the requester's records. At the appointment, the requester will be asked to present identification as stated in § 200.5(e).

(c) *Excluded information.* If a request is received for information compiled in reasonable anticipation of litigation, the Privacy Act Officer will inform the requester that the information is not subject to release under the Privacy Act (see 5 U.S.C. 552a(d)(5)).

§ 200.7 Fees.

A fee will not be charged for searching, reviewing, or making corrections to records. A fee for copying will be assessed at the same rate established for the Freedom of Information Act requests. Duplication fees for paper copies of a record will be 10 cents per page for black and white and 20 cents per page for color. For all other forms of duplication, the Board will charge the direct costs of producing the copy. However, the first 100 pages of black-and-white copying or its equivalent will be free of charge.

§ 200.8 Appealing denials of access.

(a) If access to records is denied by the Privacy Act Officer, the requester may file an appeal in writing. The appeal should be directed to Executive Director, Recovery Accountability and Transparency Board, 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006.

(b) The appeal letter must specify the denied records that are still sought, and state why denial by the Privacy Act Officer is erroneous.

(c) The Executive Director or his or her designee will respond to appeals within 20 working days of the receipt of

the appeal letter. The appeal determination will explain the basis of the decision to deny or grant the appeal.

§ 200.9 Requests for correction of records.

(a) *Correction requests.* Any person is entitled to request correction of his or her record(s) covered under the Act. The request must be made in writing and should be addressed to Privacy Act Officer, Recovery Accountability and Transparency Board, 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006. The letter should clearly identify the corrections desired. In most circumstances, an edited copy of the record will be acceptable for this purpose.

(b) *Initial response.* Receipt of a correction request will be acknowledged by the Privacy Act Officer in writing within five working days. The Privacy Act Officer will provide a letter to the requester within 20 working days stating whether the request for correction has been granted or denied. If the Privacy Act Officer denies any part of the correction request, the reasons for the denial will be provided to the requester.

§ 200.10 Disclosure of records to third parties.

(a) The Board will not disclose any record that is contained in a system of records to any person or agency, except with a written request by or with the prior written consent of the individual whose record is requested, unless disclosure of the record is:

(1) Required by an employee or agent of the Board in the performance of his/her official duties.

(2) Required under the provisions of the Freedom of Information Act (5 U.S.C. 552). Records required to be made available by the Freedom of Information Act will be released in response to a request in accordance with the Board's regulation published at 4 CFR Part 201.

(3) For a routine use as published in the annual notice in the **Federal Register**.

(4) To the Census Bureau for planning or carrying out a census, survey, or related activities pursuant to the provisions of Title 13 of the United States Code.

(5) To a recipient who has provided the Board with adequate advance written assurance that the record will be used solely as a statistical research or reporting record and that the record is to be transferred in a form that is not individually identifiable.

(6) To the National Archives and Records Administration as a record that has sufficient historical or other value to

warrant its continued preservation by the United States government, or for evaluation by the Archivist of the United States, or his or her designee, to determine whether the record has such value.

(7) To another agency or to an instrumentality of any governmental jurisdiction within or under the control of the United States for a civil or criminal law enforcement activity, if the activity is authorized by law, and if the head of the agency or instrumentality has made a written request to the Board for such records specifying the particular part desired and the law enforcement activity for which the record is sought. The Board also may disclose such a record to a law enforcement agency on its own initiative in situations in which criminal conduct is suspected, provided that such disclosure has been established as a routine use, or in situations in which the misconduct is directly related to the purpose for which the record is maintained.

(8) To a person pursuant to a showing of compelling circumstances affecting the health or safety of an individual if, upon such disclosure, notification is transmitted to the last known address of such individual.

(9) To either House of Congress, or to the extent of matters within its jurisdiction, any committee or subcommittee thereof, any joint committee of Congress or subcommittee of any such joint committee.

(10) To the Comptroller General, or any of his or her authorized representatives, in the course of the performance of official duties of the Government Accountability Office.

(11) Pursuant to an order of a court of competent jurisdiction. In the event that any record is disclosed under such compulsory legal process, the Board shall make reasonable efforts to notify the subject individual after the process becomes a matter of public record.

(12) To a consumer reporting agency in accordance with 31 U.S.C. 3711(e).

(b) Before disseminating any record about any individual to any person other than a Board employee, the Board shall make reasonable efforts to ensure that the records are, or at the time they were collected, accurate, complete, timely, and relevant. This paragraph (b) does not apply to disseminations made pursuant to the provisions of the Freedom of Information Act (5 U.S.C. 552) and paragraph (a)(2) of this section.

§ 200.11 Maintaining records of disclosure.

(a) The Board shall maintain a log containing the date, nature, and

purposes of each disclosure of a record to any person or agency. Such accounting also shall contain the name and address of the person or agency to whom or to which each disclosure was made. This log will not include disclosures made to Board employees or agents in the course of their official duties or pursuant to the provisions of the Freedom of Information Act (5 U.S.C. 552).

(b) An accounting of each disclosure shall be retained for at least five years after the accounting is made or for the life of the record that was disclosed, whichever is longer.

(c) The Board shall make the accounting of disclosure of a record pertaining to an individual available to that individual at his or her request. Such a request should be made in accordance with the procedures set forth in § 200.5. This paragraph (c) does not apply to disclosure made for law enforcement purposes under 5 U.S.C. 552a(b)(7) and § 200.10(a)(7).

§ 200.12 Notification of systems of Privacy Act records.

(a) Public Notice. The Board periodically reviews its systems of records and will publish information about any significant additions or changes to those systems in the **Federal Register**. Information about systems of records maintained by other agencies that are in the temporary custody of the Board will not be published. In addition, the Office of the Federal Register biennially compiles and publishes all systems of records maintained by all federal agencies, including the Board.

(b) At least 30 days before publishing additions or changes to the Board's systems of records, the Board will publish a notice of intent to amend, providing the public with an opportunity to comment on the proposed amendments to its systems of records in the **Federal Register**.

§ 200.13 Privacy Act training.

(a) The Board shall ensure that all persons involved in the design, development, operation, or maintenance of any Board systems of records are informed of all requirements necessary to protect the privacy of individuals. The Board shall ensure that all employees having access to records receive adequate training in their protection and that records have adequate and proper storage with sufficient security to ensure their privacy.

(b) All employees shall be informed of the civil remedies provided under 5 U.S.C. 552a(g)(1) and other implications

of the Privacy Act and of the fact that the Board may be subject to civil remedies for failure to comply with the provisions of the Privacy Act and the regulations in this part.

§ 200.14 Responsibility for maintaining adequate safeguards.

The Board has the responsibility for maintaining adequate technical, physical, and security safeguards to prevent unauthorized disclosure or destruction of manual and automated records systems. These security safeguards shall apply to all systems of records in which identifiable personal data are processed or maintained, including all reports and output from such systems of records that contain identifiable personal information. Such safeguards must be sufficient to prevent negligent, accidental, or unintentional disclosure, modification, or destruction of any personal records or data; must minimize, to the extent practicable, the risk that skilled technicians or knowledgeable persons could improperly obtain access to modify or destroy such records or data; and shall further ensure against such casual entry by unskilled persons without official reasons for access to such records or data.

(a) *Manual systems.* (1) Records contained in a system of records as defined in this part may be used, held, or stored only where facilities are adequate to prevent unauthorized access by persons within or outside the Board.

(2) Access to and use of a system of records shall be permitted only to persons whose duties require such access to the information for routine uses or for such other uses as may be provided in this part.

(3) Other than for access by employees or agents of the Board, access to records within a system of records shall be permitted only to the individual to whom the record pertains or upon his or her written request.

(4) The Board shall ensure that all persons whose duties require access to and use of records contained in a system of records are adequately trained to protect the security and privacy of such records.

(5) The disposal and destruction of identifiable personal data records shall be done by shredding and in accordance with rules promulgated by the Archivist of the United States.

(b) *Automated systems.* (1) Identifiable personal information may be processed, stored, or maintained by automated data systems only where facilities or conditions are adequate to prevent unauthorized access to such systems in any form.

(2) Access to and use of identifiable personal data associated with automated data systems shall be limited to those persons whose duties require such access. Proper control of personal data in any form associated with automated data systems shall be maintained at all times, including maintenance of accountability records showing disposition of input and output documents.

(3) All persons whose duties require access to processing and maintenance of identifiable personal data and automated systems shall be adequately trained in the security and privacy of personal data.

(4) The disposal and disposition of identifiable personal data and automated systems shall be done by shredding, burning, or, in the case of electronic records, by degaussing or by overwriting with the appropriate security software, in accordance with regulations of the Archivist of the United States or other appropriate authority.

§ 200.15 Systems of records covered by exemptions.

The Board currently has no exempt systems of records.

§ 200.16 Mailing lists.

The Board shall not sell or rent an individual's name and/or address unless such action is specifically authorized by law. This section shall not be construed to require the withholding of names and addresses otherwise permitted to be made public.

Ivan J. Flores,

Paralegal Specialist, Recovery Accountability and Transparency Board.

BILLING CODE 6820-GA-P

RECOVERY ACCOUNTABILITY AND TRANSPARENCY BOARD

4 CFR Part 201

RIN 0430-AA01

Rule Implementing the Freedom of Information Act

AGENCY: Recovery Accountability and Transparency Board.

ACTION: Final rule.

SUMMARY: This document institutes the Recovery Accountability and Transparency Board's (Board) final rule implementing a set of procedural regulations under the Freedom of Information Act (FOIA) in accordance with 5 U.S.C. 552, and Public Law 104-231, the Electronic Freedom of

Information Act Amendments of 1996. These regulations have been written to conform to the statutory provisions of the Acts, to expedite the processing of FOIA requests received by the Board, and to ensure the proper dissemination of information to the public.

DATES: Effective November 20, 2009.

FOR FURTHER INFORMATION CONTACT: Jennifer Dure, General Counsel, (202) 254-7900.

SUPPLEMENTARY INFORMATION: The proposed rule was published in the **Federal Register** on August 3, 2009 (74 FR 38366) for a public comment period to end on October 2, 2009. This rule sets forth the procedures for members of the public to request records from the Board under both the FOIA and the Electronic Freedom of Information Act Amendments of 1996. The rule also sets forth the procedures that the Board will use when responding to such requests. It sets forth the time frames for responses and the current fee schedule for any applicable charges for information. The rule also supplies information about Board materials available to the public through the Board's Web site.

Public Comment

The Board received comments from two organizations. One commenter requested an explanation concerning the differences between the proposed FOIA and Privacy Act rules regarding what is procedurally required in order for an individual to request access to records in the custody of the Board. Under the Board's proposed Privacy Act rule, all requests should include, among other things, the requester's full name, address, and telephone number. Requests for Privacy Act records may be made in writing, by fax, by telephone, or *in person*. The commenter contends that there are additional and more stringent requirements placed on a requester who requests access to his or her records in person. More specifically, such a requester must contact the Board's office at least one week before the desired appointment date. In addition, before a requester can review his or her records, the requester must provide proof of identification. Identification should be a valid copy of one of the following: A government ID, a driver's license, a passport, or other current identification that contains both an address and a picture of the requester.

According to the commenter, the process for requesting records under the Board's proposed FOIA rule "seem[s] quite simplified." Under the proposed FOIA rule, all requests for records must

include the requester's full name, address, and telephone number. Such a request can be made in writing, via e-mail, or via fax. The commenter correctly points out that the proposed FOIA rule does not provide the option of an *in-person request*. The commenter concluded that the differences in treatment of requesters for access to the Board's records seem unnecessary, especially with respect to the identification information required of a requester seeking information in person.

The commenter correctly points out the difference between the proposed Privacy Act and FOIA rules, but there is a reason for the difference between them which stems from the laws at issue. Briefly, a Privacy Act request is a request from an individual seeking to review and/or make corrections to federal records, maintained and retrieved in an approved system of records, which are about that individual—with very limited exceptions, no one else can ask for these records. A FOIA request is a request from the general public for copies of specific records maintained by a federal agency—any member of the public can make such a request. When individuals request information about themselves contained in an approved Privacy Act system of records, the request should be handled under the Privacy Act. Requested records about an individual not contained in an approved system of records asked for under the Privacy Act will have their request processed under the FOIA, since no access rights exist under the Privacy Act.

Because the nature of a Privacy Act request is narrow and specific to an individual in an approved system of records, the Board feels that providing the additional provisions to request and examine records in person is reasonable. In addition, in order to ensure that individuals who request to examine records in person are who they claim to be, it is necessary to require that individuals provide the proper proof of identification as set forth in the proposed Privacy Act rules. This Privacy Act requirement is designed to protect requesters from having their personal information disclosed to anyone else.

The other commenter raised concerns regarding the Board's proposed definition of "agency records" under § 201.2. The Board's proposed FOIA rule defines "agency record" as "materials that are in the control of the Board and associated with Board business, as follows: (i) Materials produced by the Board. (ii) Materials produced by staff for the Board. (iii) Materials distributed by presenters at a

Board meeting or Board Committee meeting." The commenter feels that the proposed definition is too narrow. The Board agrees and has therefore modified its definition in a way as to leave open the types of information that may be considered "agency records."¹

The same commenter raised concerns regarding § 201.3 of the Board's proposed rule—publicly available documents and the electronic reading room. More specifically, § 201.3(b)(6) of the Board's proposed rule provides that "[r]ecords available electronically on the Board's Web site include * * * [c]opies of records repeatedly released in response to FOIA requests." The commenter is concerned that this provision suggests that the Board will make available a narrower category of records than what is required under FOIA. To alleviate any confusion as to whether the Board will track the law, the Board has modified § 201.3(b)(6) to track the language used in the DOJ Guidance, reflecting its intention to comply with the requirement of proactive disclosure and make records of public interest available prior to receiving frequent requests for such information.

Finally, the same commenter raised concerns regarding § 201.14(c) of the Board's proposed rule—appeals and exhaustion of administrative remedies. The commenter feels that the Board has misstated FOIA regarding when a FOIA requester may bring a lawsuit in federal court to challenge an agency's response to his or her FOIA request. The Board feels that proposed § 201.14(c) and (e) confuse the administrative appeals/judicial review issues and therefore withdraws both provisions in their entirety. The Board believes that the case law on this matter—referenced in the U.S. Department of Justice's "Guide to the Freedom of Information Act,"—speaks for itself.² As revised, the Board's regulations provide requesters with sufficient procedural information to ensure the proper review of requests.

Executive Order No. 12866

These proposed regulations do not meet the criteria for a significant regulatory action under Executive Order 12866. Thus, review by the Office of Management and Budget is not required.

Regulatory Flexibility Act

These proposed regulations will not have a significant economic impact on

¹ The Board will follow the U.S. Department of Justice's "Guide to the Freedom of Information Act" in determining what constitutes an agency record. See U.S. Department of Justice "Guide to the Freedom of Information Act," (2009), at 33.

² See *id.* at 97.

a substantial number of small entities. Therefore, a regulatory flexibility analysis as provided by the Regulatory Flexibility Act, as amended, is not required.

Paperwork Reduction Act

These proposed regulations impose no additional reporting and recordkeeping requirements. Therefore, clearance by the Office of Management and Budget is not required.

List of Subjects in 4 CFR Part 201

Administrative practice and procedure; Freedom of Information; Reporting and recordkeeping requirements.

■ Therefore, the Board amends Title 4 of the Code of Federal Regulations by adding Part 201 to read as follows:

CHAPTER II—RECOVERY ACCOUNTABILITY AND TRANSPARENCY BOARD

PART 201—PUBLIC INFORMATION AND REQUESTS

- Sec.
- 201.1 Scope.
 - 201.2 Definitions.
 - 201.3 Publicly available documents and electronic reading room.
 - 201.4 Board records exempt from public disclosure.
 - 201.5 Requests for Board records.
 - 201.6 Responsibility, form, and content of responses.
 - 201.7 Time of responses to requests.
 - 201.8 Fees.
 - 201.9 Restrictions on charging fees.
 - 201.10 Notice of anticipated fees.
 - 201.11 Requirements for waiver or reduction of fees.
 - 201.12 Denials.
 - 201.13 Business information.
 - 201.14 Appeals.
 - 201.15 Preservation of records.
 - 201.16 Other rights and services.
 - 201.17 How to track a FOIA request.

Authority: 5 U.S.C. 301, 5 U.S.C. 552 as amended; Executive Order 12600, 3 CFR, 1987 Comp., p. 235.

§ 201.1 Scope.

This part sets forth the policies and procedures of the Recovery Accountability and Transparency Board (Board) regarding public access to documents under the Freedom of Information Act (FOIA or the Act), 5 U.S.C. 552. The provisions in the Act shall take precedence over any part of the Board's regulations in conflict with the Act. This part gives the procedures the public may use to inspect and obtain copies of Board records under the FOIA, including administrative procedures which must be exhausted before a requestor invokes the jurisdiction of an

appropriate United States District Court for the Board's failure to respond to a proper request within the statutory time limits, for a denial of Board records or challenges to the adequacy of a search, or for denial of fee waiver.

§ 201.2 Definitions.

For words used in this document, unless the context indicates otherwise, singular includes the plural, plural includes the singular, present tense includes the future tense, and words of one gender include the other gender.

(a)(1) *Agency records*—Materials that are in the control of the Board and associated with Board business, including:

(i) Materials produced by the Board.

(ii) Materials produced by staff for the Board.

(iii) Materials distributed by presenters at a Board meeting or Board Committee meeting.

(2) All references to records include the entire record and/or any part of the record.

(b) *Board*—The Recovery Accountability and Transparency Board.

(c) *Chairman*—The Chairman of the Board is designated or appointed by the President.

(d) *Designated FOIA Officer*—The person designated to administer the Board's activities in regard to the regulations in this part. The FOIA Officer shall be:

(1) The Board officer having custody of, or responsibility for, agency records in the possession of the Board.

(2) The Board officer having responsibility for authorizing or denying production of records from requests filed under the FOIA.

(e) *Executive Director*—The chief operating officer of the Board.

(f) *Member*—An individual appointed to serve on the Board pursuant to Title XV, Subtitle B of the American Recovery and Reinvestment Act of 2009 (Pub. L. 111–5).

(g) *Days*—Standard working days, excluding weekends and federal holidays.

§ 201.3 Publicly available documents and electronic reading room.

(a) Many Board records are available electronically at the Board's Web site (<http://www.recovery.gov>).

(b) Records available electronically on the Board's Web site include:

(1) The rules and regulations of the Board.

(2) Statements of policy adopted by the Board.

(3) Board reports to the President and Congress, including the Committees on Appropriations of the Senate and House of Representatives.

(4) Congressional Testimony of the Chairman of the Board.

(5) Biographical information about the Chairman and other Board members.

(6) Copies of records frequently requested and released in response to FOIA requests.

(c) The cost of copying information available in the Board office shall be imposed in accordance with the provisions of § 201.8.

§ 201.4 Board records exempt from public disclosure.

5 U.S.C. 552 provides that the requirements of the FOIA do not apply to matters that are:

(a) Specifically authorized under the criteria established by an executive order to be kept secret in the interest of national defense or foreign policy and are in fact properly classified pursuant to such an executive order.

(b) Related solely to the internal personnel rules and practices of the Board.

(c) Specifically exempted from disclosure by another federal statute, provided that such statute:

(1) Requires that records are withheld from the public in such a manner that leaves no discretion on the issue; or

(2) Establishes criteria for withholding or refers to particular types of matters to be withheld.

(d) Trade secrets, and commercial or financial information obtained from a person and privileged or confidential.

(e) Interagency or intra-agency memoranda or letters that would not be available by law to a party other than an agency in litigation with the Board.

(f) Personnel, medical, or similar files that disclosing would constitute a clearly unwarranted invasion of personal privacy.

(g) Records or information compiled for law enforcement purposes, but only to the extent that the production of such law enforcement records of information:

(1) Could reasonably be expected to interfere with enforcement proceedings;

(2) Would deprive a person of a right to a fair trial or an impartial adjudication;

(3) Could reasonably be expected to constitute an unwarranted invasion of personal privacy;

(4) Could reasonably be expected to disclose the identity of any confidential source, including a state, local, or foreign agency or authority, or any private institution which furnished information on a confidential basis, and in the case of a record or information compiled by a criminal law enforcement agency in the course of a criminal investigation or by an agency conducting a lawful security

intelligence investigation, information furnished by a confidential source;

(5) Would disclose techniques and procedures for law enforcement investigations or prosecutions, or would disclose guidelines for law enforcement investigations or prosecutions if such disclosure could reasonably be expected to risk circumvention of the law; or

(6) Could reasonably be expected to endanger the life or physical safety of any individual.

(h) Contained in or related to examination, operating, or condition reports, prepared by, on behalf of, or for the use of an agency responsible for the regulation or supervision of financial institutions.

(i) Geological and geophysical information and data, including maps, concerning wells.

§ 201.5 Requests for Board records.

(a) To request Board records, you may:

(1) Write: FOIA Officer, Recovery Accountability and Transparency Board, 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006;

(2) Send a request via e-mail at FOIA@ratb.gov; or

(3) Fax: (202) 254-7970.

(b) When requesting records under this section you must state, in writing:

- (1) Your full name,
- (2) Address,
- (3) Telephone number, and
- (4) At your option, electronic mail address.

(c) When making a request for records about a person, Privacy Act regulations also may apply. Please check the regulations for additional requirements before submitting a request. When making a request for records about someone other than yourself, you must include either:

(1) Written authorization signed by the person permitting you to see the records; or

(2) Proof that the individual is deceased (e.g., a death certificate or obituary).

(d) A request will be considered received for purposes of § 201.7 on the date that it is received by the Board's FOIA office. For prompt handling, write "Freedom of Information Act Request" on the letter and envelope or in the subject line of the e-mail request or fax.

(e) Each request must clearly describe the desired records in sufficient detail to enable Board personnel to locate them with reasonable effort. Response to requests may be delayed if the records are not clearly described.

(f) Whenever possible, requests should include specific information about each record sought, such as date,

title or name, author, recipient, and subject.

(g) If the FOIA Officer determines that the request does not clearly describe the records sought, he or she will either advise you of the additional information needed to locate the record or otherwise state why the request is insufficient. You will then be given the opportunity to provide additional information or to modify your request.

(h) Submitting a FOIA request shall be considered a commitment by the requestor to pay applicable fees required under § 201.8 unless the requestor seeks a waiver of fees. When making a request, you may specify a willingness to pay fees up to a specific amount.

(i) The FOIA does not require the Board to:

(1) Compile or create records solely for the purpose of satisfying a request for records.

(2) Provide records not yet in existence, even if such records may be expected to come into existence at some time in the future.

(3) Restore records destroyed or otherwise disposed of, except that the FOIA Officer must notify the requestor that the records have been destroyed or otherwise disposed of.

§ 201.6 Responsibility, form, and content of response.

The Board's Executive Director or his/her designated FOIA Officer is authorized to grant or deny any request for a record and determine appropriate fees. When determining which records are responsive to a request, the Board will include only records in its possession as of the date of the request.

(a) If no records are responsive to the request, the FOIA Officer will notify the requestor in writing.

(b) When the FOIA Officer denies a request in whole or in part, he/she will notify the requestor in writing. The response will be signed by the FOIA Officer and will include:

(1) The name and title or position of the person making the denial;

(2) A brief statement of the reasons for the denial, including the FOIA exemption(s) that the FOIA Officer has relied on in denying the request; and

(3) A statement that the denial may be appealed under § 201.14 and a description of the requirements of that section.

(c) *Referrals.* When a request for a record not created by the Board is received, the Board shall refer the requestor to the issuing agency in writing, providing the address of the agency contact and the section(s) referred.

(d) *Timing of responses to requests sent to other agencies.* The Board shall

provide, within the FOIA deadline, responses only to those parts of the request not referred.

(e) *Agreements on referrals.* The Board may make agreements with other agencies to eliminate the need for referrals for particular types of records.

§ 201.7 Timing of responses to requests.

(a) *General.* The Board shall normally respond to requests in the order of their receipt.

(b) *Acknowledgement of requests.* On receipt of a request, the Board shall send an acknowledgement letter or an e-mail confirming the requestor's agreement to pay fees under § 201.8 and providing a request number for future reference.

(c) *Time limits for responding to FOIA requests.* The Board shall make an initial determination to grant or deny a request for records within 20 days (excluding Saturday, Sunday and holidays) after the date of receipt of the request, as described in § 201.5(d), except as stated in paragraph (f) of this section. Once the Board determines whether it can grant a request entirely or in part, it shall notify the requestor in writing. The Board shall advise the requestor of any fees to be charged under § 201.8 and shall disclose records promptly on payment of the fees. Records disclosed in part shall be marked or annotated to show the amount of information deleted unless doing so would harm an interest protected by an applicable exemption. The location of the information deleted also shall be indicated on the record when technically feasible.

(d) *Unusual circumstances.* (1) If the statutory time limits for processing a request cannot be met because of "unusual circumstances" as defined in the FOIA (5 U.S.C. 552(6)(B)(iii)), the Board shall promptly notify the requestor in writing, explaining the circumstances and giving the date by which the request can be completed or if the Board cannot complete the request. If the extension is for more than 10 working days, the Board shall provide the requestor with an opportunity to:

(i) Modify the request so that it can be processed within the time limit; or

(ii) Arrange an alternative time period for processing the original request.

(2) If the Board believes that multiple requests submitted by a requestor or by requestors acting in concert constitute a single request that would otherwise involve unusual circumstances, and if the requests involve clearly related matters, they may be aggregated. Multiple requests involving unrelated matters will not be aggregated.

(e) *Expedited processing.* (1) Requests and appeals shall be taken out of order and given expedited processing whenever it is determined that they involve:

(i) Circumstances that could reasonably be expected to pose an imminent threat to the life or physical safety of an individual; or

(ii) An urgency to inform the public about an actual or alleged activity if made by a person primarily engaged in disseminating information.

(2) Requests for expedited processing may be made either at the time of the initial request or at a later time.

(3) Requests for expedited processing must include a statement explaining in detail the basis for requesting expedited processing. For example, a requestor under § 201.8 must establish that his/her professional activity is news reporting, although it need not be his/her sole occupation. The requestor also must establish a particular urgency to inform the public about government activity involved in the request, beyond the public's right to know about government activity generally.

(4) Within 10 calendar days of receipt of a request for expedited processing, the Board shall decide whether to grant the request and notify the requestor of its decision. If a request for expedited treatment is granted, the request shall be processed as soon as practicable. If a request for expedited processing is denied, an appeal of that decision shall be acted on expeditiously.

(f) *Tolling of time limits.* (1) The Board may toll the 20-day time period to:

(i) Make one request for additional information from the requester; or

(ii) Clarify the applicability or amount of any fees, if necessary, with the requester.

(2) The tolling period ends upon the Board's receipt of information from the requester or resolution of the fee issue.

§ 201.8 Fees.

(a) *General.* The Board shall charge for processing requests under the FOIA in accordance with paragraph (c) of this section, except where fees are limited under § 201.9 or where a waiver or reduction of fees is granted under § 201.11. Fees must be paid before the copies of records are sent. Fees may be paid by check or money order payable to the Treasury of the United States.

(b) *Definitions for this section.* (1) *Commercial use request*—A request from, or on behalf of, a person who seeks information for a purpose that furthers his/her commercial, trade, or profit interests including furthering those interests through litigation. The

Board shall try to determine the use to which a record will be put. When the Board believes that a request is for commercial use either because of the nature of the request or because the Board has cause to doubt the stated use, the Board shall ask the requestor for clarification.

(2) *Direct costs*—Expenses that the Board incurs in searching for, duplicating, and reviewing records in response to a request. Direct costs include the full salary of the employee performing the work and the cost of duplication of the records. Overhead expenses, such as the cost of space, heating, and lighting, are not included.

(3) *Duplication*—Making a copy of a record or the information in the record, to respond to a request. Copies can be in paper, electronic, or other format. The Board shall honor a requestor's preference for format if the record is readily reproducible in that format at a reasonable cost.

(4) *Educational institution*—A public or private undergraduate, graduate, professional or vocational school that has a program of scholarly research. For a request to be in this category, a requestor must show that the request is authorized by and made under the auspices of the qualifying institution and that the records will be used for scholarly research.

(5) *Noncommercial scientific institution*—An institution that is not operated on a commercial basis, as defined in paragraph (b)(1) of this section and is operated solely for conducting scientific research that does not promote any particular product or industry. For a request to be in this category, the requestor must show that the request is authorized and made under the auspices of the qualifying institution and that the records will be used for further scientific research.

(6) *Representative of the news media*—Any person who, or entity that, gathers information of potential interest to a segment of the public, uses editorial skills to turn the raw materials into a distinct work, and distributes that work to an audience. A freelance journalist shall be regarded as working for a news media entity if the person can demonstrate a solid basis for expecting publication through that entity, whether or not the journalist is actually employed by that entity. A publication contract is one example of a basis for expecting publication that ordinarily would satisfy this standard. The Board may consider past publication records of the requester in determining whether he or she qualifies as a "representative of the news media."

(7) *Review*—Examining a record to determine whether any part of it is exempt from disclosure, and processing a record for disclosure. Review costs are recoverable even if a record is not disclosed. Review time includes time spent considering any formal objection to disclosure made by a business submitter under § 201.13 but does not include time spent resolving general legal or policy issues regarding the application of exemptions.

(8) *Search*—The process of looking for and retrieving records, including page-by-page or line-by-line identification of information within records and reasonable efforts to locate and retrieve information from records maintained in electronic form. The Board shall ensure that searches are done in the most efficient and least expensive way that is reasonably possible.

(c) *Fees.* In responding to FOIA requests, the Board shall charge the following fees unless a waiver or a reduction of fees has been granted under § 201.11.

(1) *Search.* (i) Search fees shall be charged for all requests subject to the limitations of § 201.9. The Board may charge for time spent searching even if no responsive record is located, or if the record(s) located are withheld as exempt from disclosure.

(ii) For each quarter hour spent by clerical personnel in searching for and retrieving a requested record, the fee will be \$5. If a search and retrieval requires the use of professional personnel, the fee will be \$8 for each quarter hour. If the time of managerial personnel is required, the fee will be \$10 for each quarter hour.

(iii) For computer searches for records, requestors will be charged the direct costs of conducting the search although certain requestors (*see* § 201.9(a)) will be charged no search fee and certain other requestors (*see* § 201.9(b)) will be entitled to two hours of manual search time without charge. Direct costs include the cost of operating a computer for the search time for requested records and the operator salary for the search.

(2) *Duplication.* Duplication fees for paper copies of a record will be 10 cents per page for black and white and 20 cents per page for color. For all other forms of duplication, the Board shall charge the direct costs of producing the copy. All charges are subject to the limitations of §§ 201.9 and 201.11.

(3) *Review.* When a commercial-use request is made, review fees shall be charged as stated in paragraph (c)(1) of this section. These fees apply only to the initial record review, when the Board determines whether an

exemption applies to a particular record. Charges shall not be imposed for review at the administrative appeal level if an exemption is applied. However, records withheld under an exemption that is subsequently determined not to apply may be reviewed again to determine whether any other exemption not previously considered applies. The costs of that review shall be charged. All review fees shall be charged at the same rates as those charged in paragraph (c)(1) of this section.

§ 201.9 Restrictions on charging fees.

(a) When determining search or review fees:

(1) No search fee shall be charged for requests by educational institutions, noncommercial scientific institutions, or representatives of the news media.

(2) The Board shall provide without charge to all but commercial users:

(i) The first 100 pages of black and white duplication (or the cost equivalent); and

(ii) The first two hours of search by a clerical staff member (or the cost equivalent).

(3) When the total fee for a request will be \$14.00 or less for any request, no fee shall be charged.

(b) The Board will not assess search and/or duplication fees, as applicable, if it fails to respond to a requester's FOIA request within the time limits specified under 4 CFR 201.7, and no "unusual" circumstances (as defined in 5 U.S.C. 552(a)(6)(B) and 4 CFR 201.7(d)) or "exceptional" circumstances (as defined in 5 U.S.C. 552(a)(6)(C)) apply to the processing of the request.

§ 201.10 Notice of anticipated fees.

(a) *General.* The Board shall advise the requestor in writing of any applicable fees. If only a part of the fee can be estimated readily, the Board shall advise the requestor that this may be only a part of the total fee. After the requestor has been sent a fee estimate, the request shall not be considered received until the requestor makes a firm commitment to pay the anticipated total fee. Any such agreement must be made by the requestor in writing and must be received within 60 days of the Board's notice. If the requestor does not provide a firm commitment to pay the anticipated fee within 60 days of the notice, the request shall be closed. The requestor may be given an opportunity to work with the Board to change the request and lower the cost.

(b) *Charges for other services.* When the Board chooses as a matter of administrative discretion to provide a special service, such as certifying that

records are true copies or sending them by other than ordinary mail, the Board shall pay the costs of providing the services unless previous arrangements have been made with the requestor.

(c) *Charging interest.* The Board may charge interest on any unpaid bill starting on the 31st day following the date of billing. Interest charges shall be assessed at the rate provided in 31 U.S.C. 3717 and shall accrue from the date of the billing until payment is received by the Board. The Board shall follow the provisions of the Debt Collection Act of 1982 (Pub. L. 97-365, 96 Stat. 1749), as amended.

(d) *Aggregating requests.* If the Board reasonably believes that a requestor or a group of requestors acting together is trying to divide a request into a series of smaller requests for the purpose of avoiding fees, the Board may aggregate the requests and charge accordingly. The Board shall assume that multiple requests of the same type made within a 30-day period have been made in order to avoid fees. If requests are separated by a longer period, the Board shall aggregate them only if there is a solid basis for determining that aggregation is warranted. Multiple requests involving unrelated matters shall not be aggregated.

(e) *Advance payments.* When a requestor has previously failed to pay promptly a properly charged FOIA fee to the Board or another agency, the Board shall require proof that full payment has been made to that agency before it begins to process that requestor's FOIA request. The Board shall also require advance payment of the full amount of the anticipated fee. When advance payment is required, the request is not considered received until payment has been made.

§ 201.11 Requirements for waiver or reduction of fees.

(a) Fees for processing your request may be waived if you meet the criteria listed in paragraph (b) of this section. The burden is on you to justify entitlement to a fee waiver. Requests for fee waivers are decided on a case-by-case basis. The fact that you have received a fee waiver in the past does not mean you are automatically entitled to a fee waiver for every request you may submit, because the essential element of any fee waiver determination is whether the release of the particular documents sought in the request will likely contribute significantly to public understanding of the operations or activities of the government. The Board will rely on the fee waiver justification you have submitted in your request letter. If you do not submit sufficient

justification, your fee waiver request will be denied. The Board may, at its discretion, communicate with you to request additional information if necessary. However, the Board must make a determination on the fee waiver request within the statutory time limit, even if the Board has not received such additional information. In certain circumstances, a partial fee waiver may be appropriate, if some, but not all, of the requested records are likely to contribute significantly to public understanding of the operations and activities of the government.

(b) The Board will waive fees (in whole or part) if disclosure of all or part of the information is in the public interest because its release:

(1) Is likely to contribute significantly to public understanding of the operations or activities of the government; and

(2) Is not primarily in the commercial interest of the requester.

§ 201.12 Denials.

(a) When denying a request in any respect, the Board shall notify the requestor of that determination in writing. The types of denials include:

(1) Denials of requests, including a determination:

(i) To withhold any requested record in whole or in part;

(ii) That a requested record does not exist or cannot be located;

(iii) That a record is not readily reproducible in the form or format sought;

(iv) That what has been requested is not a record subject to the FOIA; and

(v) That the material requested is not a Board record (e.g., material produced by another agency or organization).

(2) A determination on any disputed fee matter, including a denial of a request for a fee waiver.

(3) A denial of a request for expedited processing.

(b) The denial letter shall be signed by the FOIA Officer or designee and shall include all of the following:

(1) The name and title of the person responsible for the denial.

(2) A brief statement of the reason(s) for the denial, including any FOIA exemptions applied in denying the request.

(3) An estimate of the volume of records withheld, in number of pages or in some other reasonable form of estimation. This estimate does not need to be provided if it would harm an interest protected by an applicable exemption.

(4) A statement that the denial may be appealed under § 201.14 and a description of the requirements of § 201.14.

§ 201.13 Business information.

(a) *In general.* Business information obtained by the Board from a submitter shall be disclosed under the FOIA only under this section.

(b) *Definitions.* For purposes of this section:

(1) Business information—commercial or financial records obtained by the Board that may be protected from disclosure under Exemption 4 of the FOIA.

(2) Submitter—any person or entity from which the Board obtains business records, either directly or indirectly. The term includes but is not limited to corporations and state, local, tribal, and foreign governments.

(c) *Designation of business information.* Submitters of business information shall designate any part of the record considered to be protected from disclosure under Exemption 4 of the FOIA by appropriately marking the material. This may be done either at the time the record is submitted or at a reasonable time thereafter. This designation lasts for 10 years after submittal unless the submitter requests and provides justification for a longer period.

(d) *Notice to submitters.* The Board shall provide a business submitter with prompt written notice of any FOIA request or appeal that seeks its business information under paragraph (e) of this section, except as provided in paragraph (h) of this section, to give the submitter an opportunity to object to that disclosure under paragraph (f) of this section. The notice shall either describe the records requested or include copies of the records.

(e) *Required notice.* The Board shall give notice of a FOIA request seeking business information when:

(1) The submitter has designated that the information is considered protected from disclosure under Exemption 4 of the FOIA; or

(2) The Board has reason to believe that the information may be protected from disclosure under Exemption 4 of the FOIA.

(f)(1) *Objecting to disclosure.* A submitter shall have 30 days to respond to the notice described in paragraph (d) of this section. If a submitter has an objection to disclosure, it is required to submit a detailed written statement including:

(i) All grounds for withholding any of the information under any exemption of the FOIA, and

(ii) In the case of Exemption 4, the reason why the information is a trade secret, commercial, or financial information that is privileged or confidential.

(2) If a submitter fails to respond to the notice in paragraph (d) of this section within 30 days, the Board shall assume that the submitter has no objection to disclosure. The Board shall not consider information not received by the Board until after a disclosure decision has been made. Information provided by a submitter under this paragraph might itself be subject to disclosure under the FOIA.

(g) *Notice of intent to disclose.* The Board shall consider a submitter's objections and specific grounds for nondisclosure in deciding whether to disclose the business records. Whenever the Board decides to disclose business records over the objection of a submitter, it shall give the submitter written notice, that will include:

(1) A statement of the reason(s) the submitter's objections were not sustained;

(2) A description of the business records to be disclosed; and

(3) A specified disclosure date at a reasonable time subsequent to the notice.

(h) *Exceptions to notice requirements.* The notice requirements in paragraphs (d) and (g) of this section shall not apply if:

(1) The Board determines that the information should not be disclosed;

(2) The information has been published legally or has been officially made available to the public;

(3) Disclosure of the information is required by another statute or by a regulation issued in accordance with Executive Order 12600 (3 CFR, 1987 Comp., p. 235); or

(4) The objection made by the submitter under paragraph (f) of this section appears frivolous. In such a case, the Board shall promptly notify the submitter of its decision using the guidelines in paragraph (g) of this section.

(i) *Notice of FOIA lawsuit.* When a requestor files a lawsuit seeking to compel the disclosure of business information, the Board shall promptly notify the submitter.

(j) *Corresponding notice to requestors.* When the Board provides a submitter with either notice and an opportunity to object to disclosure under paragraph (d) of this section or with its intent to disclose requested information under paragraph (g) of this section, the Board also shall notify the requestor(s). When a submitter files a lawsuit seeking to prevent the disclosure of business information, the Board shall notify the requestor(s).

§ 201.14 Appeals.

(a)(1) *Appeals of adverse determinations.* If you are dissatisfied with the Board's response to your request, you may appeal to the Board's Executive Director:

(i) By mail to: Recovery Accountability and Transparency Board, 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006;

(ii) By e-mail to: FOIA@ratb.gov; or

(iii) By fax to: 202-254-7970.

(2) The appeal must be in writing and must be received within 30 days of the date of the Board's response. The appeal letter, e-mail or fax may include as much or as little related information as you wish, as long as it clearly identifies the Board determination that you are appealing, including the assigned request number, if known. For prompt handling, please mark your appeal "Freedom of Information Act Appeal."

(b) *Responses to appeals.* Requestors shall be notified in writing of the decision on the appeal. A decision affirming an adverse determination shall include a statement of the reason(s) for the affirmation, including any FOIA exemption(s) applied, and shall include the FOIA provisions for court review of the decision. If the adverse determination is reversed or modified on appeal, the request shall be reprocessed in accordance with that appeal decision.

(d) *Denial of appeal.* An adverse determination by the Executive Director shall be the final action of the Board.

§ 201.15 Preservation of records.

The Board shall preserve all correspondence pertaining to the requests that it receives under this subpart, as well as copies of all requested records, until disposition or destruction is authorized by title 44 of the United States Code of the National Archives and Records Administration's General Records Schedule 14. Records will not be disposed of while they are the subject of a pending request, appeal, or lawsuit.

§ 201.16 Other rights and services.

Nothing in this part shall be construed to entitle any person, as a right, to any service or to the disclosure of any record to which such person is entitled under the FOIA.

§ 201.17 How to track a FOIA request.

(a) *Tracking number.* The Board will issue a tracking number to all FOIA requesters within 5 days of the receipt of the request (as described in § 201.7(b)). The tracking number will be sent via electronic mail if the requester has provided an electronic mail address.

Otherwise, the Board will mail the tracking number to the requester's physical address, as provided in the FOIA request.

(b) *Status of request.* FOIA requesters may check the status of their FOIA request(s) by contacting the FOIA Officer at FOIA@ratb.gov or (202) 254-7900.

Ivan J. Flores,

Paralegal Specialist, Recovery Accountability and Transparency Board.

Risk-Based Capital Guidelines; Capital Adequacy Guidelines; Capital Maintenance; Capital—Residential Mortgage Loans Modified Pursuant to the Home Affordable Mortgage Program

AGENCY: Office of the Comptroller of the Currency, Department of the Treasury; Board of Governors of the Federal Reserve System; Federal Deposit Insurance Corporation; and Office of Thrift Supervision, Department of the Treasury (the agencies).

ACTION: Final rule.

SUMMARY: The agencies have adopted a final rule to allow banks, savings associations, and bank holding companies (collectively, banking organizations) to risk weight for purposes of the agencies' capital

guidelines mortgage loans modified pursuant to the Home Affordable Mortgage Program (Program) implemented by the U.S. Department of the Treasury (Treasury) with the same risk weight assigned to the loan prior to the modification so long as the loan continues to meet other applicable prudential criteria.

DATES: The final rule becomes effective December 21, 2009.

FOR FURTHER INFORMATION CONTACT:

OCC: Margot Schwadron, Senior Risk Expert, Capital Policy Division, (202) 874-6022, or Carl Kaminski, Senior Attorney, or Ron Shimabukuro, Senior Counsel, Legislative and Regulatory Activities Division, (202) 874-5090, Office of the Comptroller of the Currency, 250 E Street, SW., Washington, DC 20219.

Board: Barbara J. Bouchard, Associate Director, (202) 452-3072, or William Tiernay, Senior Supervisory Financial Analyst, (202) 872-7579, Division of Banking Supervision and Regulation; or April Snyder, Counsel, (202) 452-3099, or Benjamin W. SUPPLEMENTARY INFORMATION:

Background

Under the agencies' general risk-based capital rules, loans that are fully secured by first liens on one-to-four family residential properties, that are either owner-occupied or rented, and that meet certain prudential criteria (qualifying mortgage loans) are risk-weighted at 50 percent.¹ If a banking organization holds both a first-lien and a junior-lien mortgage on the same property, and no other party holds an intervening lien, the loans are treated as a single loan secured by a first-lien mortgage and risk-weighted at 50 percent if the two loans, when

aggregated, meet the conditions to be a qualifying mortgage loan. Other junior-lien mortgage loans are risk-weighted at 100 percent.²

In general, to qualify for a 50 percent risk weight, a mortgage loan must have been made in accordance with prudent underwriting standards and may not be 90 days or more past due. Mortgage loans that do not qualify for a 50 percent risk weight are assigned a 100 percent risk weight. Each agency has additional provisions that address the risk weighting of mortgage loans. Under the OCC's general risk-based capital rules for national banks, to receive a 50 percent risk weight, a mortgage loan must "not [be] on nonaccrual or restructured."³ Under the Board's general risk-based capital rules for bank holding companies and state member banks, mortgage loans must be "performing in accordance with their original terms" and not carried in nonaccrual status in order to receive a 50 percent risk weight.⁴ Generally, mortgage loans that have been modified are considered to have been restructured (OCC), or are not considered to be performing in accordance with their original terms (Board). Therefore, under the OCC's and Board's general risk-based capital rules, such loans generally must be risk weighted at 100 percent. Under the FDIC's general risk-based capital rules, a state nonmember bank may assign a 50 percent risk weight to any modified mortgage loan, so long as the loan, as modified, is not 90 days or more past due or in nonaccrual status and meets other applicable criteria for a 50 percent risk weight.⁵ Under the OTS's general risk-based capital rules, a savings association may assign a 50 percent risk weight to any modified residential mortgage loan, so long as the loan, as modified, is not 90 days or more past due and meets other applicable criteria for a 50 percent risk weight.⁶

On June 30, 2009, the agencies published in the **Federal Register** an interim final rule (interim rule) to allow banking organizations to risk weight mortgage loans modified under the Program using the same risk weight assigned to the loan prior to the modification, so long as the loan continues to meet other applicable

² See 12 CFR Part 3, Appendix A, section 3(a)(3)(iii) (OCC); 12 CFR parts 208 and 225, Appendix A, section III.C.4. (Board); 12 CFR part 325, Appendix A, section II.C. (FDIC); and 12 CFR 567.6(1)(iv) (OTS).

³ 12 CFR Part 3, Appendix A, section 3(a)(3)(iii) (OCC).

⁴ 12 CFR parts 208 and 225, Appendix A, section III.C.3. (Board).

¹ See 12 CFR Part 3, Appendix A, section 3(a)(3)(iii) (OCC); 12 CFR parts 208 and 225.

prudential criteria.⁷ In many circumstances, this means that an eligible mortgage loan modified in accordance with the Program will continue to receive a 50 percent risk weight for purposes of the agencies' general risk-based capital guidelines. The agencies are now adopting the interim rule as a final rule (final rule) with changes that clarify the regulatory capital treatment of mortgage loans during the Program's trial modification period (trial period). The revisions provided under the final rule relative to the FDIC's and OTS' general risk-based capital rules are clarifying in nature.

Home Affordable Mortgage Program

On March 4, 2009, Treasury announced guidelines under the Program to promote sustainable loan modifications for homeowners at risk of losing their homes due to foreclosure.⁸ The Program provides a detailed framework for servicers to modify mortgages on owner-occupied residential properties and offers financial incentives to lenders and servicers that participate in the Program.⁹ The Program also provides financial incentives for homeowners whose mortgages are modified pursuant to Program guidelines to remain current on their mortgages after modification.¹⁰ Taken together, these incentives are intended to help responsible homeowners remain in their homes and avoid foreclosure, which is in turn intended to help ease the current downward pressures on house prices and the costs that families, communities, and the economy incur from unnecessary foreclosures.

Under the Program, Treasury has partnered with lenders and loan servicers to offer at-risk homeowners loan modifications under which the homeowners may obtain more affordable monthly mortgage payments. The Program applies to a spectrum of outstanding loans, some of which meet all of the prudential criteria under the agencies' general risk-based capital rules and receive a 50 percent risk weight and

some of which otherwise receive a 100 percent risk weight under the agencies' general risk-based capital rules.¹¹ Servicers who elect to participate in the Program are required to apply the Program guidelines to all eligible loans¹² unless explicitly prohibited by the governing pooling and servicing agreement and/or other lender servicing agreements. If a mortgage loan qualifies for modification under the Program, the Program guidelines require the lender to first reduce payments on eligible first-lien loans to an amount representing no greater than a 38 percent initial front-end debt-to-income ratio.¹³ Treasury then will match further reductions in monthly payments with the lender dollar-for-dollar to achieve a 31 percent front-end debt-to-income ratio on the first-lien mortgage.¹⁴ Borrowers whose back-end debt-to-income ratio exceeds 55 percent must agree to work with a foreclosure prevention counselor approved by the Department of Housing and Urban Development.¹⁵

In addition to the incentives for lenders, servicers are eligible for other incentive payments to encourage participation in the Program. Servicers receive an up-front servicer incentive payment of \$1,000 for each eligible first-lien modification. Lenders and servicers are eligible for one-time incentive payments of \$1,500 and \$500, respectively, for early modifications of first-lien mortgages—that is, modifications made while the borrower is still current on mortgage payments but at risk of imminent default. To encourage ongoing performance of modified loans, servicers also will

receive "Pay for Success" incentive payments of up to \$1,000 per year for up to three years for first-lien mortgages as long as borrowers remain in the Program. A borrower can likewise receive "Pay for Performance Success" incentive payments that reduce the principal balance on the borrower's first-lien mortgage up to \$1,000 per year for up to five years if the borrower remains current on monthly payments on the modified first-lien mortgage. Lenders also may receive a home price depreciation reserve payment to offset certain losses if a modified loan subsequently defaults.

For second-lien mortgages, lenders are eligible to receive incentive payments based on the difference between the interest rate on the modified first-lien mortgage and the reduced interest rate (either 1 percent or 2 percent) on the second-lien mortgage following modification.¹⁶ Servicers may receive a one-time \$500 incentive payment for successful second-lien modifications, as well as additional incentive payments of up to \$250 per year for up to three years for second-lien mortgages as long as both the modified first-lien and second-lien mortgages remain current. A borrower also may receive incentive payments of up to \$250 per year for a modified second-lien mortgage loan for up to five years for remaining current on the loan, which will be paid to reduce the unpaid principal of the first-lien mortgage. However, second-lien modification incentives only will be paid with respect to a given property if the first-lien mortgage on the property also is modified under the Program.¹⁷

Before a loan may be modified under the Program, a borrower must successfully complete a trial period of at least 90 days. During the trial period, a borrower makes payments on the eligible mortgage loan under modified terms. To complete the trial period successfully, the borrower must be current at the end of the trial period and provide certain information.¹⁸ The Program provides no incentive payments to the lender, servicer, or

⁷ See 12 CFR Part 3, Appendix A, sections 3(a)(3)(iii) and 3(a)(4) (OCC); 12 CFR parts 208 and 225, Appendix A, sections III.C.3. and III.C.4. (Board); 12 CFR part 325, Appendix A, section II.C. (FDIC); and 12 CFR 567.1 and 567.6 (OTS).

¹² For a mortgage to be eligible for the Program, the property securing the mortgage loan must be a one-to-four family owner-occupied property that is the primary residence of the mortgagee. The property cannot be vacant or condemned, and the mortgage must have an unpaid principal balance (prior to capitalization of arrearages) at or below the Fannie Mae conforming loan limit for the type of property.

¹³ A front-end debt-to-income ratio measures how much of the borrower's gross (pretax) monthly income is represented by the borrower's required payment on the first-lien mortgage, including real estate taxes and insurance.

¹⁴ To qualify for the Treasury match, servicers must follow an established sequence of actions (capitalize arrearages, reduce interest rate, extend term or amortization period, and then defer principal) to reduce the front-end debt-to-income ratio on the loan from 38 percent to 31 percent. Servicers may reduce principal on the loan at any stage during the modification sequence to meet affordability targets.

¹⁵ A back-end debt-to-income ratio measures how much of a borrower's gross (pretax) monthly income would go toward monthly mortgage and nonmortgage debt service obligations.

¹⁶ Participating servicers are required to follow certain steps in modifying amortizing second-lien mortgages, including reducing the interest rate to 1 percent or 2 percent. Lenders may receive an incentive payment from Treasury equal to half of the difference between (i) the interest rate on the first lien as modified and (ii) 1 percent, subject to a floor.

¹⁷ In some cases, servicers may choose to accept a lump-sum payment from Treasury to extinguish some or all of a second-lien mortgage under a pre-set formula.

¹⁸ Under the Program, borrowers in certain states with unique foreclosure law requirements (foreclosure restart states) will be considered to have failed the trial period if they are not current at the time the foreclosure sale is scheduled.

⁷ 74 FR 31160 (June 30, 2009); 74 FR 34499 (July 16, 2009) (OCC technical correction).

⁸ Further details about the Program, including Program terms and borrower eligibility criteria, are available at <http://www.makinghomeaffordable.gov>.

⁹ For ease of reference, the term "servicer" refers both to servicers that service loans held by other entities and to lenders who service loans that they hold themselves. The term "lender" refers to the beneficial owner or owners of the mortgage.

¹⁰ A separate aspect of the Program, the Home Affordable Refinance Program, also provides incentives for refinancing certain mortgage loans owned or guaranteed by Fannie Mae or Freddie Mac. This final rule does not apply to mortgage loans refinanced under the Home Affordable Refinance Program.

borrower during the trial period and no payments if the borrower does not successfully complete the trial period.

Comments on the Interim Rule

The agencies received six comments on the interim rule, one from a banking organization, four from trade groups representing the financial industry, and one from an individual. The commenters that addressed the interim final rule unanimously supported it, asserting that it is consistent with the important policy objectives of the Program and does not compromise the goals of safety and soundness. Commenters requested that the agencies clarify whether the rule's capital treatment is available for a mortgage loan that has been modified on a preliminary basis under the Program, but which still is within the trial period (and, thus, has not been permanently modified). Commenters also requested clarification regarding the circumstances under which a mortgage loan that was risk-weighted at 100 percent immediately prior to modification under the Program could receive a 50 percent risk weight. Some commenters suggested that such a loan should receive a 50 percent risk weight following completion of the trial period or following receipt of the first pay-for-performance incentive payments. Other commenters requested that the agencies clarify that a sustained period of repayment performance could include payments made after a loan had been modified under the Program. The agencies also received a comment on the interaction between private mortgage insurance and loan modifications, which was beyond the scope of the interim rule.

Based on an analysis of the comments, the agencies have modified the rule to specify that a mortgage modified on a permanent or trial basis pursuant to the Program and that was risk-weighted at 50 percent may continue to receive a 50 percent risk weight provided it meets other prudential criteria.¹⁹

As noted in the preamble to the interim rule, under the agencies' existing practice, past due and nonaccrual loans that receive a 100 percent risk weight may return to a 50 percent risk weight under certain circumstances, including after demonstration of a sustained period of repayment performance. Because borrower characteristics, such as debt

service capacity, impact a borrower's creditworthiness, the degree of appropriate reliance on a fixed period of payment performance may vary for different borrowers.²⁰ For these reasons, the agencies have not established a specific period of repayments that would constitute a "sustained period of performance" for a particular loan. The agencies confirm that a borrower's payments on a mortgage loan modified under the Program, including during the trial period, may be considered in assessing whether the borrower has demonstrated a sustained period of repayment performance.

Commenters also requested that the agencies (1) allow a banking organization to risk weight at 50 percent, rather than 100 percent, a second-lien mortgage loan that is modified under the Program if the first-lien mortgage loan on the property is owned by another entity, that first-lien mortgage is also modified under the Program, and there is no intervening lien; and (2) allow loans modified pursuant to the Program or similar programs that continue to qualify for 50 percent risk weight to be excluded from troubled debt restructurings reported in quarterly bank regulatory reports. Under the general risk-based capital rules all second-lien mortgage loans receive a 100 percent risk weight, unless the banking organization that holds the loan also holds the first lien, there is no intervening lien, and the loan meets other prudential criteria. The agencies believe this treatment is commensurate with the risks of junior positions, as lenders have limited access to collateral in the event of default. Therefore, the agencies have determined that allowing a banking organization to risk weight junior-lien mortgage loans at less than 100 percent is not appropriate other than in those circumstances already permitted by the agencies general risk-based capital rules. With respect to whether mortgage loans modified under the Program are considered troubled debt restructurings, the question of how these loans should be classified and reported will be determined under

generally accepted accounting principles.

Final Rule

Based on the above considerations, the agencies have adopted the interim rule in final form with the modification discussed above. Under the final rule as under the interim rule mortgage loans modified under the Program will retain the risk weight appropriate to the mortgage loan prior to modification, as long as other applicable prudential criteria remain satisfied. Accordingly, under the final rule, a qualifying mortgage loan appropriately risk weighted at 50 percent before modification under the Program would continue to be risk weighted at 50 percent during the trial period and after modification, provided it meets other prudential criteria. If a borrower does not successfully complete the trial period and the loan is not modified under the Program on a permanent basis, the loan would qualify for the 50 percent risk weight category if it meets the conditions to be a qualifying mortgage loan under the general risk-based capital rules. If the loan does not meet the conditions, it would receive a 100 percent risk weight. A mortgage loan appropriately risk weighted at 100 percent prior to modification under the Program would continue to be risk weighted at 100 percent during and after the trial period.

Consistent with the OCC's and the Board's general risk-based capital rules, if a mortgage loan were to become 90 days or more past due or carried in non-accrual status or otherwise restructured after being modified under the Program, the loan would be assigned a risk weight of 100 percent. Consistent with the FDIC's general risk-based capital rules, if a mortgage loan were to again be restructured after being modified under the Program, the loan could be assigned a risk weight of 50 percent provided the loan, as modified, is not 90 days or more past due or in nonaccrual status and meets the other applicable criteria for a 50 percent risk weight. Consistent with the OTS's general risk-based capital rules, if a mortgage loan were to again be restructured after being modified under the Program, the loan could be assigned a risk weight of 50 percent provided the loan, as modified, is not 90 days or more past due and meets the other applicable criteria for a 50 percent risk weight.

Additionally, in certain circumstances under the general risk-based capital rules (as with, for example, a direct credit substitute or recourse obligation), a banking organization is permitted to look through an exposure to the risk

¹⁹The agencies intended the interim rule to apply to loans modified on both a trial and permanent basis under the Program. Accordingly, the modifications to the final rule are clarifying in nature.

²⁰The instructions for the Consolidated Reports of Condition and Income (Call Report) and the Thrift Financial Report (TFR) define a sustained period of repayment performance as a period generally lasting " * * * a minimum of six months and would involve payments of cash or cash equivalents. (In returning the asset to accrual status, sustained historical repayment performance for a reasonable time prior to the restructuring may be taken into account.)" Call Reports instructions are available at <http://www.federalreserve.gov/reportforms/CategoryIndex.cfm?WhichCategory=3> and TFR instructions are available at <http://files.ots.treas.gov/4210058.pdf>.

weight of a residential mortgage loan underlying that exposure. In such cases, the banking organizations would follow the capital treatment provided for in the agencies' general risk-based capital rules, as modified by the final rule, when the underlying residential mortgage loan has been modified pursuant to the Program.

The agencies believe that treating mortgage loans modified under the Program in the manner described above is appropriate in light of the special and unique incentive features of the Program and the fact that the Program is offered by the federal government in order to achieve the public policy objective of promoting sustainable loan modifications for homeowners at risk of foreclosure in a way that balances the interests of borrowers, servicers, and lenders. As previously described, the Program requires that a borrower's front-end debt-to-income ratio on a first-lien mortgage modified under the Program be reduced to no greater than 31 percent, which should improve the borrower's ability to repay the modified loan, and, importantly, provides for Treasury to match reductions in monthly payments dollar-for-dollar to reduce the borrower's front-end debt-to-income ratio from 38 percent to 31 percent. In addition, as described above, the Program provides material financial incentives for servicers and lenders to take actions to reduce the likelihood of defaults, as well as incentives for servicers and borrowers designed to help borrowers remain current on modified loans. The structure and amount of these cash payments meaningfully align the financial incentives for servicers, lenders, and borrowers to encourage and increase the likelihood of participating borrowers remaining current on their mortgages. Each of these incentives is important to the agencies' determination with respect to the appropriate regulatory capital treatment of mortgage loans modified under the Program.

Regulatory Analysis

Regulatory Flexibility Act

The Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.* (RFA), generally requires that, in connection with a notice of proposed rulemaking, an agency prepare and make available for public comment an initial regulatory flexibility analysis that describes the impact of a proposed rule on small entities.²¹ Under regulations issued by the Small Business Administration,²² a

small entity includes a commercial bank, bank holding company, or savings association with assets of \$175 million or less (a small banking organization). As of June 30, 2009, approximately 2,533 small bank holding companies, 386 small savings associations, 749 small national banks, 432 small state member banks, and 3,040 small state nonmember banks existed. As a general matter, the Board's general risk-based capital rules apply only to a bank holding company that has consolidated assets of \$500 million or more. Therefore, the changes to the Board's capital adequacy guidelines for bank holding companies will not affect small bank holding companies.

This rulemaking does not involve the issuance of a notice of proposed rulemaking and, therefore, the requirements of the RFA do not apply. However, the agencies note that the rule does not impose any additional obligations, restrictions, burdens, or reporting, recordkeeping or compliance requirements on banks or savings associations, including small banking organizations, nor does it duplicate, overlap or conflict with other federal rules. The rule also will benefit small banking organizations that are subject to the agencies' general risk-based capital rules by allowing mortgage loans modified under the Program to retain the risk weight assigned to the loan prior to the modification.

Paperwork Reduction Act

In accordance with the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 3506), the agencies have reviewed the final rule to assess any information collections. There are no collections of information as defined by the Paperwork Reduction Act in the final rule.

OCC/OTS Executive Order 12866

Executive Order 12866 requires federal agencies to prepare a regulatory impact analysis for agency actions that are found to be "significant regulatory actions." Significant regulatory actions include, among other things, rulemakings that "have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities." The OCC and the OTS each determined that its portion of the final rule is not a significant regulatory action under Executive Order 12866.

OCC/OTS Unfunded Mandates Reform Act of 1995 Determination

The Unfunded Mandates Reform Act of 1995²³ (UMRA) requires that an agency prepare a budgetary impact statement before promulgating a rule that includes a federal mandate that may result in the expenditure by state, local, and tribal governments, in the aggregate, or by the private sector of \$100 million or more (adjusted annually for inflation) in any one year. If a budgetary impact statement is required, section 205 of the UMRA also requires an agency to identify and consider a reasonable number of regulatory alternatives before promulgating a rule. The OCC and the OTS each have determined that its final rule will not result in expenditures by state, local, and tribal governments, in the aggregate, or by the private sector, of \$100 million or more in any one year. Accordingly, neither the OCC nor the OTS has prepared a budgetary impact statement or specifically addressed the regulatory alternatives considered.

**Department of the Treasury
Office of the Comptroller of the
Currency**

12 CFR Chapter I

Authority and Issuance

■ For the reasons stated in the common preamble, the Office of the Comptroller of the Currency amends Part 3 of chapter I of Title 12, Code of Federal Regulations as follows:

PART 3—MINIMUM CAPITAL RATIOS; ISSUANCE OF DIRECTIVES

■ 1. The authority citation for part 3 continues to read as follows:

Authority: 12 U.S.C. 93a, 161, 1818, 1828(n), 1828 note, 1831n note, 1835, 3907, and 3909.

■ 2. In appendix A to Part 3, in section 3, revise paragraph (a)(3)(iii) to read as follows:

Appendix A to Part 3—Risk-Based Capital Guidelines

* * * * *

Section 3. Risk Categories/Weights for On-Balance Sheet Assets and Off-Balance Sheet Items

* * * * *

(a) * * *

(3) * * *

(iii) Loans secured by first mortgages on one-to-four family residential properties, either owner occupied or rented, provided that such loans are not otherwise 90 days or more past due, or on nonaccrual or restructured. It is presumed that such loans will meet the prudent underwriting standards. For the purposes of the risk-based capital guidelines, a loan modified on a permanent or trial basis solely pursuant to the U.S. Department of Treasury's Home Affordable Mortgage Program will not be considered to have been restructured. If a bank holds a first lien and junior lien on a one-to-four family residential property and no other party holds an intervening lien, the transaction is treated as a single loan secured by a first lien for the purposes of both determining the loan-to-value ratio and assigning a risk weight to the transaction. Furthermore, residential property loans made for the purpose of construction financing are assigned to the 100% risk category of section 3(a)(4) of this appendix A; however, these loans may be included in the 50% risk category of this section 3(a)(3) of this appendix A if they are subject to a legally binding sales contract and satisfy the requirements of section 3(a)(3)(iv) of this appendix A.

Board of Governors of the Federal Reserve System

12 CFR Chapter II

Authority and Issuance

■ For the reasons stated in the common preamble, the Board of Governors of Federal Reserve System amends parts 208 and 225 of Chapter II of title 12 of the Code of Federal Regulations as follows:

PART 208—MEMBERSHIP OF STATE BANKING INSTITUTIONS IN THE FEDERAL RESERVE SYSTEM (REGULATION H)

■ 3. The authority for part 208 continues to read as follows:

Authority: 12 U.S.C. 24, 36, 92a, 93a, 248(a), 248(c), 321–338a, 371d, 461, 481–486, 601, 611, 1814, 1816, 1818, 1820(d)(9), 1833(j), 1828(o), 1831, 1831o, 1831p–1, 1831r–1, 1831w, 1831x, 1835a, 1882, 2901–2907, 3105, 3310, 3331–3351, and 3905–3909; 15 U.S.C. 78b, 78l(b), 78l(i), 780–4(c)(5), 78q, 78q–1, and 78w, 1681s, 1681w, 6801, and 6805; 31 U.S.C. 5318; 42 U.S.C. 4012a, 4104a, 4104b, 4106 and 4128.

■ 4. In appendix A to part 208, revise Section III. C.3., to read as follows:

Appendix A to Part 208—Capital Adequacy Guidelines for State Member Banks: Risk-Based Measure

* * * * *

III. * * *

C. * * *

3. *Category 3: 50 percent.* This category includes loans fully secured by first liens⁴¹ on 1- to 4-family residential properties, either owner-occupied or rented, or on multifamily residential properties,⁴² that meet certain

⁴¹ If a bank holds the first and junior lien(s) on a residential property and no other party holds an intervening lien, the transaction is treated as a single loan secured by a first lien for the purposes of determining the loan-to-value ratio and assigning a risk weight.

⁴² Loans that qualify as loans secured by 1- to 4-family residential properties or multifamily residential properties are listed in the instructions to the commercial bank Call Report. In addition, for risk-based capital purposes, loans secured by 1- to 4-family residential properties include loans to builders with substantial project equity for the construction of 1- to 4-family residences that have been presold under firm contracts to purchasers who have obtained firm commitments for permanent qualifying mortgage loans and have made substantial earnest money deposits. Such loans to builders will be considered prudently underwritten only if the bank has obtained sufficient documentation that the buyer of the home intends to purchase the home (*i.e.*, has a legally binding written sales contract) and has the ability to obtain a mortgage loan sufficient to purchase the home (*i.e.*, has a firm written commitment for permanent financing of the home upon completion).

The instructions to the Call Report also discuss the treatment of loans, including multifamily housing loans, that are sold subject to a pro rata loss sharing arrangement. Such an arrangement should

be treated by the selling bank as sold (and excluded from balance sheet assets) to the extent that the sales agreement provides for the purchaser of the loan to share in any loss incurred on the loan on a pro rata basis with the selling bank. In such a transaction, from the standpoint of the selling bank, the portion of the loan that is treated as sold is not subject to the risk-based capital standards. In connection with sales of multifamily housing loans in which the purchaser of a loan shares in any loss incurred on the loan with the selling institution on other than a pro rata basis, these other loss sharing arrangements are taken into account for purposes of determining the extent to which such loans are treated by the selling bank as sold (and excluded from balance sheet assets) under the risk-based capital framework in the same as prescribed for reporting purposes in the instructions to the Call Report.

⁴³ Residential property loans that do not meet all the specified criteria or that are made for the purpose of speculative property development are placed in the 100 percent risk category.

⁴⁴ Prudent underwriting standards include a conservative ratio of the current loan balance to the value of the property. In the case of a loan secured by multifamily residential property, the loan-to-value ratio is not conservative if it exceeds 80 percent (75 percent if the loan is based on a floating interest rate). Prudent underwriting standards also dictate that a loan-to-value ratio used in the case of originating a loan to acquire a property would not be deemed conservative unless the value is based on the lower of the acquisition cost of the property or appraised (or if appropriate, evaluated) value. Otherwise, the loan-to-value ratio generally would be based upon the value of the property as determined by the most current appraisal, or if appropriate, the most current evaluation. All appraisals must be made in a manner consistent with the Federal banking agencies' real estate appraisal regulations and guidelines and with the bank's own appraisal guidelines.

criteria.⁴³ Loans included in this category must have been made in accordance with prudent underwriting standards;⁴⁴ be performing in accordance with their original terms; and not be 90 days or more past due or carried in nonaccrual status. For purposes of this 50 percent risk weight category, a loan modified on a permanent or trial basis solely pursuant to the U.S. Department of Treasury's Home Affordable Mortgage Program will be considered to be performing in accordance with its original terms. The following additional criteria must also be applied to a loan secured by a multifamily residential property that is included in this category: all principal and interest payments on the loan must have been made on time for at least the year preceding placement in this category, or in the case where the existing property owner is refinancing a loan on that property, all principal and interest payments on the loan being refinanced must have been made on time for at least the year preceding placement in this category; amortization of the principal and interest must occur over a period of not more than 30 years and the minimum original maturity for repayment of principal must not be less than 7 years; and the annual net operating income (before debt service) generated by the property during its most recent fiscal year must not be less than 120 percent of the loan's current annual debt service (115 percent if the loan is based on a floating interest rate) or, in the case of a cooperative or other not-for-profit housing project, the property must generate sufficient cash flow to provide comparable protection

to the institution. Also included in this category are privately-issued mortgage-backed securities provided that:

(1) The structure of the security meets the criteria described in section III(B)(3) above;

(2) If the security is backed by a pool of conventional mortgages, on 1- to 4-family residential or multifamily residential properties each underlying mortgage meets the criteria described above in this section for eligibility for the 50 percent risk category at the time the pool is originated;

(3) If the security is backed by privately issued mortgage-backed securities, each underlying security qualifies for the 50 percent risk category; and

(4) If the security is backed by a pool of multifamily residential mortgages, principal and interest payments on the security are not 30 days or more past due.

Privately-issued mortgage-backed securities that do not meet these criteria or that do not qualify for a lower risk weight are generally assigned to the 100 percent risk category.

Also assigned to this category are revenue (non-general obligation) bonds or similar obligations, including loans and leases, that are obligations of states or other political subdivisions of the U.S. (for example, municipal revenue bonds) or other countries of the OECD-based group, but for which the government entity is committed to repay the debt with revenues from the specific projects financed, rather than from general tax funds.

Credit equivalent amounts of derivative contracts involving standard risk obligors (that is, obligors whose loans or debt securities would be assigned to the 100 percent risk category) are included in the 50 percent category, unless they are backed by collateral or guarantees that allow them to be placed in a lower risk category.

3. *Category 3: 50 percent.* This category includes loans fully secured by first liens⁴⁸ on 1- to 4-family residential properties, either

⁴⁸ If a banking organization holds the first and junior lien(s) on a residential property and no other party holds an intervening lien, the transaction is treated as a single loan secured by a first lien for the purposes of determining the loan-to-value ratio and assigning a risk weight.

owner-occupied or rented, or on multifamily residential properties,⁴⁹ that meet certain criteria.⁵⁰ Loans included in this category must have been made in accordance with prudent underwriting standards;⁵¹ be performing in accordance with their original terms; and not be 90 days or more past due or carried in nonaccrual status. For purposes of this 50 percent risk weight category, a loan modified on a permanent or trial basis solely pursuant to the U.S. Department of Treasury's Home Affordable Mortgage Program will be considered to be performing in accordance with its original terms. The following additional criteria must also be applied to a loan secured by a multifamily residential property that is included in this category: all principal and interest payments on the loan must have been made on time for at least the year preceding placement in this category, or in the case where the existing property owner is refinancing a loan on that property, all principal and interest payments on the loan being refinanced must have been made on time for at least the year preceding placement in this category; amortization of the principal and interest must occur over a period of not more than 30 years and the minimum original maturity for repayment of principal must not be less than 7 years; and the annual net operating income (before debt service) generated by the property during its most recent fiscal year must not be less than 120 percent of the loan's current annual debt service (115 percent if the loan is based on a floating interest rate) or, in the case of a

⁴⁹ Loans that qualify as loans secured by 1- to 4-family residential properties or multifamily residential properties are listed in the instructions to the FR Y-9C Report. In addition, for risk-based capital purposes, loans secured by 1- to 4-family residential properties include loans to builders with substantial project equity for the construction of 1- to 4-family residences that have been presold under firm contracts to purchasers who have obtained firm commitments for permanent qualifying mortgage loans and have made substantial earnest money deposits. Such loans to builders will be considered prudently underwritten only if the bank holding company has obtained sufficient documentation that the buyer of the home intends to purchase the home (*i.e.*, has a legally binding written sales contract) and has the ability to obtain a mortgage loan sufficient to purchase the home (*i.e.*, has a firm written commitment for permanent financing of the home upon completion).

⁵⁰ Residential property loans that do not meet all the specified criteria or that are made for the purpose of speculative property development are placed in the 100 percent risk category.

⁵¹ Prudent underwriting standards include a conservative ratio of the current loan balance to the value of the property. In the case of a loan secured by multifamily residential property, the loan-to-value ratio is not conservative if it exceeds 80 percent (75 percent if the loan is based on a floating interest rate). Prudent underwriting standards also dictate that a loan-to-value ratio used in the case of originating a loan to acquire a property would not be deemed conservative unless the value is based on the lower of the acquisition cost of the property or appraised (or if appropriate, evaluated) value. Otherwise, the loan-to-value ratio generally would be based upon the value of the property as determined by the most current appraisal, or if appropriate, the most current evaluation. All appraisals must be made in a manner consistent with the Federal banking agencies' real estate appraisal regulations and guidelines and with the banking organization's own appraisal guidelines.

cooperative or other not-for-profit housing project, the property must generate sufficient cash flow to provide comparable protection to the institution. Also included in this category are privately-issued mortgage-backed securities provided that:

(1) The structure of the security meets the criteria described in section III(B)(3) above;

(2) if the security is backed by a pool of conventional mortgages, on 1- to 4-family residential or multifamily residential properties, each underlying mortgage meets the criteria described above in this section for eligibility for the 50 percent risk category at the time the pool is originated;

(3) If the security is backed by privately-issued mortgage-backed securities, each underlying security qualifies for the 50 percent risk category; and

(4) If the security is backed by a pool of multifamily residential mortgages, principal and interest payments on the security are not 30 days or more past due. Privately-issued mortgage-backed securities that do not meet these criteria or that do not qualify for a lower risk weight are generally assigned to the 100 percent risk category.

Also assigned to this category are revenue (non-general obligation) bonds or similar obligations, including loans and leases, that are obligations of states or other political subdivisions of the U.S. (for example, municipal revenue bonds) or other countries of the OECD-based group, but for which the government entity is committed to repay the debt with revenues from the specific projects financed, rather than from general tax funds.

Credit equivalent amounts of derivative contracts involving standard risk obligors (that is, obligors whose loans or debt securities would be assigned to the 100 percent risk category) are included in the 50 percent category, unless they are backed by collateral or guarantees that allow them to be placed in a lower risk category.

FEDERAL RESERVE SYSTEM

12 CFR Part 226

[Regulation Z; Docket No. R-1378]

Truth in Lending

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Interim final rule; request for public comment.

SUMMARY: The Board is publishing for public comment an interim final rule amending Regulation Z (Truth in Lending). The interim rule implements Section 131(g) of the Truth in Lending Act (TILA), which was enacted on May 20, 2009, as Section 404(a) of the Helping Families Save Their Homes Act. TILA Section 131(g) became effective immediately upon enactment and established a new requirement for notifying consumers of the sale or transfer of their mortgage loans. The purchaser or assignee that acquires the loan must provide the required disclosures in writing no later than 30 days after the date on which the loan is sold or otherwise transferred or assigned. The Board is issuing this interim rule, effective immediately upon publication, so that parties subject to the statutory requirement have guidance on how to comply. However, to allow time for any necessary operational changes, compliance with the interim final rule is optional for 60 days from the date of publication; during this period, covered persons would continue to be subject to the statute's requirements. The Board seeks comment on all aspects of the interim rule.

DATES: This interim final rule is effective November 20, 2009; however, to allow time for any necessary

operational changes, compliance with this interim final rule is optional until January 19, 2010. Comments must be received on or before January 19, 2010.

ADDRESSES: You may submit comments, identified by Docket No. R-1378, by any of the following methods:

- **Agency Web Site:** <http://www.federalreserve.gov>. Follow the instructions for submitting comments at <http://www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm>.

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments.

- **E-mail:** regs.comments@federalreserve.gov.

Include the docket number in the subject line of the message.

- **Fax:** (202) 452-3819 or (202) 452-3102.

- **Mail:** Address to Jennifer J. Johnson, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue, NW., Washington, DC 20551.

All public comments will be made available on the Board's Web site at <http://www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm> as submitted, unless modified for technical reasons. Accordingly, comments will not be edited to remove any identifying or contact information. Public comments may also be viewed electronically or in paper in Room MP-500 of the Board's Martin Building (20th and C Streets, NW.) between 9 a.m. and 5 p.m. on weekdays.

FOR FURTHER INFORMATION CONTACT: Paul Mondor, Senior Attorney, or Stephen Shin, Attorney; Division of Consumer and Community Affairs, Board of Governors of the Federal Reserve System, Washington, DC 20551, at (202) 452-2412 or (202) 452-3667. For users of Telecommunications Device for the Deaf (TDD) only, contact (202) 263-4869.

SUPPLEMENTARY INFORMATION:

I. Background

The Truth in Lending Act (TILA), 15 U.S.C. 1601 *et seq.*, seeks to promote the informed use of consumer credit by requiring disclosures about its costs and terms. TILA requires additional disclosures for loans secured by consumers' homes and permits consumers to rescind certain transactions that involve their principal dwelling. TILA directs the Board to prescribe regulations to carry out its purposes and specifically authorizes the Board, among other things, to issue regulations that contain such classifications, differentiations, or other provisions, or that provide for such

adjustments and exceptions for any class of transactions, that in the Board's judgment are necessary or proper to effectuate the purposes of TILA, facilitate compliance with TILA, or prevent circumvention or evasion of TILA. 15 U.S.C. 1604(a). TILA is implemented by the Board's Regulation Z, 12 CFR part 226. An Official Staff Commentary interprets the requirements of the regulation and provides guidance to creditors in applying the rules to specific transactions. See 12 CFR part 226, Supp. I.

On May 20, 2009, the Helping Families Save Their Homes Act of 2009 (the "2009 Act") was signed into law. Public Law 111-22, 123 Stat. 1632. Section 404(a) of the 2009 Act amended TILA to establish a new requirement for notifying consumers of the sale or transfer of their mortgage loans. The purchaser or assignee that acquires the loan must provide the required disclosures no later than 30 days after the date on which the loan is acquired. This provision is contained in TILA Section 131(g), 15 U.S.C. 1641(g), which applies to any consumer credit transaction secured by the principal dwelling of a consumer. Consequently, the disclosure requirements in Section 131(g) apply to both closed-end mortgage loans and open-end home equity lines of credit (HELOCs).

Section 131(g) became effective immediately upon enactment on May 20, 2009, and did not require the issuance of implementing regulations. Mortgage loans sold or transferred on or after that date became subject to the requirements of Section 131(g), and failure to comply can result in civil liability under TILA Section 130(a). See 15 U.S.C. 1640(a). Accordingly, as discussed below, the Board finds there is good cause for issuing an interim rule that is effective immediately upon publication, so that parties subject to the rule have guidance on how to interpret and comply with the statutory requirements.

Under the Real Estate Settlement Procedures Act (RESPA), consumers must be notified when the servicer of their mortgage loan has changed.¹ The 2009 Act's legislative history reflects that, in addition to the information provided under RESPA, the Congress intended to provide consumers with information about the identity of the owner of their mortgage loan. In some cases, consumers that have an extended right to rescind the loan under TILA Section 125, 15 U.S.C. 1635, can assert

that right against the purchaser or assignee. See TILA Section 131(c), 15 U.S.C. 1641(c). Among other things, the 2009 Act seeks to ensure that consumers attempting to exercise this right know the identity of the assignee and how to contact the assignee or its agent for that purpose. See 155 Cong. Rec. S5098-99 (daily ed. May 5, 2009); 155 Cong. Rec. S5173-74 (daily ed. May 6, 2009). The legislative history indicates, however, that TILA Section 131(g) was not intended to require notice when a transaction "does not involve a change in the ownership of the physical note," such as when the note holder issues mortgage-backed securities but does not transfer legal title to the loan. 155 Cong. Rec. S5099.

II. Summary of the Interim Final Rule

Consistent with the legislative intent, this interim final rule implements Section 404(a) of the 2009 Act by applying the new disclosure requirements to any person or entity that acquires ownership of an existing consumer mortgage loan, whether the acquisition occurs as a result of a purchase or other transfer or assignment. A person is covered by the rule only if the person acquires legal title to the debt obligation. Although TILA and Regulation Z generally apply only to persons to whom the obligation is initially made payable and that regularly engage in extending consumer credit, Section 404(a) and the interim final rule apply to persons that acquire mortgage loans without regard to whether they also extend consumer credit by originating mortgage loans. However, the interim final rule applies only to persons that acquire more than one mortgage loan in any 12-month period.

To comply with the interim rule, a covered person must mail or deliver the required disclosures on or before the 30th day following the date that the covered person acquired the loan. The disclosure need not be given, however, if the covered person transfers or assigns the loan to another party on or before that date. This exception seeks to prevent the confusion that could result if consumers receive outdated contact information for parties that no longer own their loan. For example, a covered person that acquires a mortgage loan on March 1 must mail or deliver the disclosures on or before March 31. However, if the covered person sells or assigns the loan to a third party on March 31 (or earlier), the covered person need not provide the disclosures, but subsequent purchasers would have to comply with the rule.

III. Legal Authority

General Rulemaking Authority

As noted above, TILA Section 105(a) directs the Board to prescribe regulations to carry out the act's purposes. 15 U.S.C. 1604(a). Section 404 of the 2009 Act became effective immediately without any requirement that the Board first issue implementing rules. Nevertheless, the Board finds that the legislative purpose of Section 404 will be furthered and its effectiveness enhanced by the issuance of rules that specify the manner in which covered persons can comply with its provisions. In addition, the Board believes that implementing regulations will facilitate covered persons' compliance with the statutory provisions.

TILA also specifically authorizes the Board, among other things, to:

- Issue regulations that contain such classifications, differentiations, or other provisions, or that provide for such adjustments and exceptions for any class of transactions, that in the Board's judgment are necessary or proper to effectuate the purposes of TILA, facilitate compliance with the act, or prevent circumvention or evasion. 15 U.S.C. 1604(a).

- Exempt from all or part of TILA any class of transactions if the Board determines that TILA coverage does not provide a meaningful benefit to consumers in the form of useful information or protection. The Board must consider factors identified in the act and publish its rationale at the time it proposes an exemption for comment. 15 U.S.C. 1604(f).

Authority To Issue Interim Final Rules Without Notice and Comment

The Administrative Procedures Act (APA), 5 U.S.C. 551 *et seq.*, generally requires public notice before promulgation of regulations. See 5 U.S.C. 553(b). Unless notice or a hearing is specifically required by statute, however, the APA also provides an exception "when the agency for good cause finds (and incorporates the finding and a brief statement of reasons therefore in the rules issued) that notice and public procedure thereon are impracticable, unnecessary, or contrary to the public interest." 5 U.S.C. 553(b)(B).

As an initial matter, neither TILA nor the 2009 Act specifically requires the Board to provide notice or a hearing with respect to this rulemaking. See TILA Section 105(a), 15 U.S.C. 1604(a). In addition, the Board finds that there is good cause to conclude that providing notice and an opportunity to comment before issuing this interim final rule

¹ RESPA is implemented by Regulation X, 24 CFR part 3500, which is issued by the Department of Housing and Urban Development (HUD).

would be impracticable and contrary to the public interest. The statutory requirements in Section 404 became effective upon enactment on May 20, 2009, as noted above. Covered persons must comply with those requirements even if the Board does not issue this interim final rule.

This interim final rule implements the requirements contained in the 2009 Act but also interprets the statutory text to resolve issues and ambiguities not directly addressed by the statute. Providing notice and opportunity for comment on these matters before issuing these rules is not in the public interest because the legislation was effective upon enactment. As a result, persons covered by Section 404(a) already must be in compliance with the law or face potential liability for violations. The Board is issuing final rules at this time so that covered persons receive immediate guidance on how they can comply with the law in a manner that effectuates its purposes and avoids potential liability. The Board's issuance of a notice of proposed rulemaking for public comment would not serve this purpose because it would not provide certainty regarding a covered person's compliance obligations until the rules were finalized. By clarifying that Section 404(a) of the 2009 Act covers persons that acquire mortgage loans even if they are not "creditors" as defined under TILA, the interim final rule also ensures that consumers will receive the notice that was intended by the legislation. Consequently, the Board finds that the use of notice and comment procedures before issuing these rules would be impracticable and would not be in the public interest. Interested parties will still have an opportunity to submit comments in response to this interim final rule.

Authority To Issue Interim Final Rules That Are Effective Immediately

This interim final rule is effective upon publication in the **Federal Register**. Institutions may rely on the rules immediately to ensure they are complying with the statutory requirements. However, to allow time for any necessary operational changes, compliance with the interim final rules is optional until January 19, 2010. During this 60-day period, institutions continue to be subject to the statute's requirements.

The APA generally requires that rules be published not less than 30 days before their effective date. See 5 U.S.C. 553(d). As with the notice and comment requirement, however, the APA provides an exception when "otherwise

provided by the agency for good cause found and published with the rule." 5 U.S.C. 553(d)(3). Similarly, Section 302 of the Riegle Community Development and Regulatory Improvement Act of 1994 generally requires that new regulations and amendments to existing regulations prescribed by a Federal banking agency, which impose additional reporting, disclosure, or other new requirements on insured depository institutions, take effect on the first day of the calendar quarter that begins on or after the date on which the regulations are published in final form.² There is an exception, however, when "the agency determines, for good cause published with the regulation, that the regulations should become effective before such time." 12 U.S.C. 4802(b)(1)(A).

The interim final rule implements statutory disclosure requirements that have been in effect since May 20, 2009. For the reasons discussed above, the Board finds there is good cause to make these rules effective immediately. These rules are intended to interpret and clarify the statutory requirements and provide compliance guidance. The Board will consider public comments on the provisions before adopting further rules.

Finally, TILA Section 105(d) generally provides that a regulation requiring any disclosure that differs from the disclosures previously required shall have an effective date no earlier than "that October 1 which follows by at least six months the date of promulgation." To the extent that the interim rule contains disclosure requirements that are already in effect under the statute, Section 105(d) does not apply. Moreover, the Board believes that the effective date mandated by the 2009 Act for the specific disclosures required under section 404 overrides the general provision in TILA Section 105(d).

IV. Section-by-Section Analysis

Section 226.39—Mortgage Transfer Disclosures

39(a) Scope

Section 226.39(a) defines the scope of the interim rule's coverage. The disclosure requirements of § 226.39 apply to any "covered person," with certain exceptions that are specified in the rule. For purposes of the rule, a "covered person" includes any natural person or organization (as defined in section 226.2(a)(22) of the regulation) that acquires more than one existing

mortgage loan in any 12-month period. Consistent with the statute, the rule applies to all consumer mortgage transactions secured by the principal dwelling of a consumer, whether the transaction is a closed-end loan or an open-end line of credit.

Generally, TILA and Regulation Z apply to parties that regularly extend consumer credit. However, Section 404(a) of the 2009 Act is not limited to persons that extend credit by originating loans. Section 404(a) imposes the disclosure duty on the "creditor that is the new owner or assignee of the debt." The Board believes that to give effect to the legislative purpose, the term "creditor" in Section 404(a) must be construed to refer to the owner of the debt following the sale, transfer or assignment, without regard to whether that party would be a "creditor" for other purposes under TILA or Regulation Z. The Board declines to limit Section 404(a) to parties that originate consumer loans because such an interpretation would exempt a significant percentage of mortgage transfers which are acquisitions by secondary market investors that do not extend consumer credit and are not "creditors" for purposes of other provisions of Regulation Z.

The Board also believes that Section 404(a) of the 2009 Act does not alter the definition of "creditor" as currently used in TILA or Regulation Z. Thus, the fact that a person purchases mortgage loans and provides disclosures under § 226.39 does not by itself make that person a "creditor" for purposes of TILA and Regulation Z (even if the disclosure provided under Section 404(a) uses the term "creditor"). Accordingly, in describing the persons subject to the requirements of § 226.39, the interim final rule uses the term "covered person" rather than the term "creditor."

Under the interim final rule, the disclosure requirements in § 226.39 apply only to persons that acquire more than one consumer mortgage transaction in any 12-month period. Generally, TILA and Regulation Z cover only parties that are regularly engaged in consumer credit transactions, who are expected to have the capacity to put systems in place to ensure compliance with the rules. There is no indication in the legislative history that Section 404 was intended to apply more broadly. For example, individual homeowners might choose to facilitate the sale of their home by providing seller financing and accepting the buyer's promissory note for a portion of the purchase price. At a later date, ownership of the debt obligation might be transferred to

² See Public Law 103-325, Title III, § 302(b), Sept. 23, 1994, 108 Stat. 2214, codified at 12 U.S.C. 4802(b).

another family member or to a trust for estate planning purposes, or might be transferred to another person if the original note holder dies. The Board believes that a formal notice under Section 404 is not needed in situations involving individual transfers because the acquiring party is likely to provide adequate information to borrowers to ensure that they know to whom the loan payments should be made.

Accordingly, to prevent undue burden on individuals under the interim rule, a person who acquires only one existing mortgage loan in any 12-month period is not a covered person. The Board intends to exclude persons who are not regularly engaged in the business of purchasing or investing in consumer mortgages loans and are involved in such transactions infrequently and would not have systems in place to comply. The Board specifically solicits comment on this definition and whether the scope of the interim final rule's coverage is appropriate, or whether a different standard should apply in determining which persons must comply with the disclosure requirement in § 226.39. For example, comment is requested on whether the Board should use the same standard that applies in determining whether a person is regularly engaged in extending consumer credit, which would limit the application of § 226.39 to persons that have acquired more than five mortgage loans in the preceding or current calendar year. *See* § 226.2(a)(17)(i), footnote 3.

To become a "covered person" subject to § 226.39, a person must become the owner of an existing mortgage loan by acquiring legal title to the debt obligation. Consequently, § 226.39 does not apply to persons who acquire only a beneficial interest in the loan or a security interest in the loan, such as when the owner of the debt obligation uses the loan as security to obtain financing and the party providing the financing obtains only a security interest in the loan. Section 226.39 also does not apply to a party that assumes the credit risk without acquiring legal title to the loans. Accordingly, an investor who purchases an interest in a pool of loans (such as mortgage-backed securities, pass-through certificates, participation interests, or real estate mortgage investment conduits) but does not directly acquire legal title in the underlying mortgage loan, is not covered by § 226.39.

The Board has received a letter from the Department of Housing and Urban Development's Office of General Counsel, in its capacity as legal counsel for the Government National Mortgage

Association (Ginnie Mae), seeking to clarify Ginnie Mae's status under Section 404(a) of the 2009 Act. Ginnie Mae guarantees securities that are collateralized by mortgage loans. HUD's letter states that, as the guarantor of these securities, Ginnie Mae obtains equitable title in the mortgage loans but further states that the issuers of the securities retain legal title to the loans that collateralize the securities. According to HUD, legal title to the loans is not conveyed to Ginnie Mae unless the issuer of the securities defaults in its obligations. If the securities issuer defaults, Ginnie Mae can immediately extinguish the securities issuer's interest in the loans and take legal title. Based on HUD's representations and legal opinion regarding Ginnie Mae's status, the Board believes that the requirements of § 226.39 do not apply to Ginnie Mae until it finds the issuer in default and acquires legal title to the loans.

Section 131(f) of TILA addresses the treatment of loan servicers under the assignee liability provisions in Section 131 as well as the provisions of Section 131(g) which were added by the 2009 Act. Under TILA section 131(f)(2), a party servicing the mortgage loan is not treated as the owner of the obligation if the obligation was assigned to the servicer solely for the administrative convenience of the servicer in servicing the obligation. Accordingly, the requirements of § 226.39 do not apply to a loan servicer in this circumstance, even if the servicer holds legal title to the loan.

Some industry representatives have requested clarification whether a disclosure under § 226.39 is required in the case of a merger, acquisition, or reorganization. The Board believes that the statute covers acquisitions that occur in these situations when ownership of the loan is transferred to a different legal entity. Accordingly, the interim final rule does not provide an exception for such transactions.

39(b) Disclosure Required

Section 226.39(b) contains the general requirement for covered persons to provide the disclosures required under Section 404 of the 2009 Act, unless the exception specified in § 226.39(c) applies. The disclosures must be mailed or delivered to the consumer on or before the 30th calendar day following the date that the covered person acquires the loan. For purposes of this requirement, the date that the covered person acquires the loan is deemed to be the acquisition date that is recognized in the books and records of the acquiring party. If there is more than one covered

person, the interim rule provides that only one disclosure shall be given; the covered persons must determine among themselves which one of them will provide the disclosure. If there is more than one consumer, a covered person may mail or deliver the disclosures to any consumer who is primarily liable on the obligation.

The transfer of ownership of a mortgage loan is subject to the disclosure requirements of this section when the acquiring party is a separate legal entity from the transferor, even if the parties are affiliated entities. However, if a covered person acquires a mortgage loan and subsequently transfers the loan to another entity, the regulation does not prohibit the two entities from combining their disclosures on a single document. Comment 39(b)-2 clarifies how two entities may comply with the rules in certain circumstances by providing a single form that covers both entities. For example, a covered person that acquires a loan on August 31 might mail a single disclosure on or before September 30 with the knowledge that it will assign the loan to another entity on October 15. The covered person could mail a single disclosure providing the required information for both entities and indicating when the subsequent transfer will occur.

39(c) Exceptions

To comply with the interim final rule, a covered person must mail or deliver the required disclosures on or before the 30th day following the date that the covered person acquired the loan. Section 226.39(c)(1) provides an exception, however, if the covered person transfers or assigns the loan to another party on or before that date. This exception is made pursuant to the Board's authority to make exceptions and exemptions under TILA Sections 105(a) and 105(f). 15 U.S.C. 1604(a), 1604(f). This exception seeks to prevent the confusion that could result if consumers receive outdated contact information for parties that no longer own their loans. For example, if a mortgage loan is originated on February 22 and the original creditor sells the loan on March 1 to a covered person, the covered person must mail or deliver the disclosures required by § 226.39 on or before March 31. However, under the exception in § 226.39(c)(1) the covered person would not be required to provide the disclosures if the loan is sold or otherwise transferred or assigned to a third party on or before March 31.

The Board specifically solicits public comment on the need for this exception and its scope. The Board believes that

this exception is necessary and proper to effectuate the purposes of Section 404 and to facilitate compliance. The Board is concerned about the potential for consumers to receive multiple disclosures, some of which contain information that is outdated and inaccurate by the time it is received. This can occur because during the normal securitization process, several legal entities may be created to serve as acquisition vehicles to hold the loan for a short period before delivering the loan to an entity that ultimately holds it for the investors. After origination, a loan might be assigned to one or more entities for only a few days before it is transferred to an entity that will hold it for a much longer time period.

The Board believes that consumers may be confused if they receive one or more notices on or around the 30th day identifying multiple parties that no longer own the loan. Consequently, the interim final rule requires notices to be provided only by a covered person that still owns the loan on the 30th day after the acquisition. Thus consumers would be likely to receive notices only from parties actually holding the loan as of that date. In contrast, notices sent by temporary holders would provide information that most consumers are unlikely to need or use and could create information overload for many consumers, thereby hindering their ability to determine which party should be contacted to address a particular concern. The Board believes that the disclosure of short-term holdings of the debt obligation that do not reflect the current ownership status at the time the consumer receives the notice would be of minimal value to consumers and does not provide meaningful disclosure consistent with the purposes of TILA or the 2009 Act. Thus, the Board believes that a regulatory exception adopted pursuant to TILA Section 105(a) would effectuate TILA's purposes and facilitate compliance.

The Board has also considered the relevant statutory factors in TILA Section 105(f). The Board believes that the Section 105(f) exemption is appropriate because the disclosure of ownership interests that are held less than the 30-day period would not provide a meaningful benefit to consumers in the form of useful information or protection. It would also complicate compliance and impose unnecessary burden and expense for persons that would be required to comply, that would not be outweighed by the benefits to consumers.³ The

Board requests comment on whether the scope of this exemption is appropriate and whether the 30-day period should be shorter or longer.

In some cases, the original creditor or owner of the mortgage loan may sell or transfer the legal title to secure business financing, pursuant to a repurchase agreement that obligates the original creditor or owner to repurchase the loan within a short period, typically a month or less. Under § 226.39(c)(2) of the interim final rule, if the original creditor or owner does not recognize the transaction as a sale of the loan on its books and records for accounting purposes, the acquiring party is not subject to the disclosure requirements of § 226.39. However, if the transferor does not repurchase the mortgage loan, the acquiring party must make the disclosures required by § 226.39 within 30 days after the date that the transaction is recognized as an acquisition in its books and records. This exception is also being adopted pursuant to the Board's authority in TILA Sections 105(a) and 105(f). As with the exception in § 226.39(c)(1), the exception for repurchase agreements in § 226.39(c)(2) seeks to prevent consumer confusion from the receipt of outdated disclosures. The Board believes that providing disclosures for the transactions covered by the exception in § 226.39(c)(2) would not provide a meaningful benefit to consumers in the form of useful information or protection. The Board also believes that the disclosure of transfers that are subject to repurchase agreements would complicate compliance and impose unnecessary burden and expense for persons that would be required to comply, that would not be outweighed by the benefits to consumers. Comment is requested on this exception, and any unintended consequences that may result.

39(d) Content of Required Disclosures

Section 226.39(d) sets forth the contents of the notice that must be

coverage of such transactions provides a meaningful benefit to consumers in light of specific factors. 15 U.S.C. 1604(f)(2). These factors, which the Board has reviewed, are (1) the amount of the loan and whether the disclosure provides a benefit to consumers who are parties to the transaction involving a loan of such amount; (2) the extent to which the requirement complicates, hinders, or makes more expensive the credit process; (3) the status of the borrower, including any related financial arrangements of the borrower, the financial sophistication of the borrower relative to the type of transaction, and the importance to the borrower of the credit, related supporting property, and coverage under TILA; (4) whether the loan is secured by the principal residence of the borrower; and (5) whether the exemption would undermine the goal of consumer protection.

provided under this section. The disclosures must identify the loan that was acquired or transferred and, consistent with the statute, contain the following: (1) The identity, address, and telephone number of the covered person that owns the mortgage loan; (2) the date of the acquisition or transfer; (3) contact information that the consumer can use to reach an agent or party having authority to act on behalf of the covered person; (4) the location of the place where the transfer of the ownership of the debt is recorded.

Identity, address, and telephone number. Section 226.39(d)(1) requires acquiring parties to provide their name, as well as their address and telephone number. Under the interim final rule, the party identified must be the covered person who owns the mortgage loan, regardless of whether another party has been appointed to service the loan or otherwise serve as the covered person's agent. The covered person has the option of also providing an electronic mail address or Internet Web site address but is not required to do so.

Section 226.39(d)(1) provides that if there is more than one covered person, the required information must be provided for each of them. The Board specifically solicits comments on the benefits of this approach, or whether the identification of multiple parties may create confusion for consumers. Should there be limits on the number of covered persons identified and, if so, what limits would be appropriate consistent with the legislative intent?

Acquisition date. Section 226.39(d)(2) requires disclosure of the date that the covered person acquired the loan. For purposes of this section, this is defined as the date of acquisition recognized in the books and records of the covered person. The Board believes that this approach provides flexibility to accommodate a variety of circumstances in which the acquisition could occur.

Agent's contact information. Under § 226.39(d)(3), a covered person must identify and provide contact information for the agent or party having authority to act on behalf of the covered person. The notice must identify one or more persons who are authorized to receive legal notices on behalf of the covered person and resolve issues concerning the consumer's payments on the loan. However, contact information for an agent is not required to be provided under § 226.39(d)(3) if the consumer can use the information provided for the covered person provided under paragraph § 226.39(d)(1) for these purposes. Thus, the interim final rule implements the disclosure requirement in Section 404 but does not

³ In exercising its exemption authority under Section 105(f), Board must determine whether

require that the owner of a loan designate an agent or other party for any specific purpose. The rule simply requires that the owner disclose contact information when there is such an agent, so that consumers can direct their inquiries to the appropriate party.

The Board recognizes that separate entities may be authorized by the owner of the loan to act on its behalf for different purposes. Identifying the party authorized to receive legal notices is intended to ensure that consumers have sufficient information to assert legal claims, including a right to rescind the loan, if applicable. However, a covered person might appoint a different agent to resolve loan servicing issues. In such cases, the covered person must provide contact information for each agent. If multiple agents are listed, the disclosure must state the extent to which the authority of each agent differs, for example, by indicating if only one of the agents is authorized to receive legal notices or only one is authorized to resolve issues concerning payments.

A covered person may comply with § 226.39(d)(3) by providing a telephone number on the written disclosure if the consumer can use the telephone number to obtain the address of the agent or other authorized person identified. This differs from the requirement in § 226.39(d)(1), which requires covered persons who acquire a loan to provide their name, address, and telephone number in all cases. The flexibility in § 226.39(d)(3) is intended to allow covered persons to use a single disclosure form that contains a nationwide toll-free telephone number, even though there may be different physical locations to which documents should be sent in different regions of the country. Comment is specifically solicited on this approach and whether both a telephone number and address for the agent or authorized representative should be required to be included on each disclosure under § 226.39(d)(3).

Comment 39(d)(3)–2 clarifies that the covered person has the option of also providing the agent's electronic mail address or internet web site address but is not required to do so.

Recording location. Section 404 requires that the disclosure state the location of the place where the transfer of ownership of the debt is recorded. When a mortgage loan is sold, however, the transfer in ownership of the debt instrument typically is not recorded in public records. The new owner's security interest in the property that secures the debt may or may not be recorded in the public land records or, if it is recorded, it may not yet be

recorded at the time the disclosure is sent.

Consistent with the statute, § 226.39(d)(4) of the interim final rules requires covered persons to disclose the location where their ownership of the debt is recorded. However, if the transfer of ownership has not been recorded in public records at the time the disclosure is provided, the covered person can comply with the rule by stating this fact. Whether or not the transfer of ownership has been recorded in public records at the time the disclosure is made, the disclosure may state that the transfer "is or may be recorded" at the specified location.

The covered person also has the option of disclosing the location where the covered person's *security interest* in the property is or may be recorded. In light of the fact that the transfer in ownership of the debt instrument usually is not recorded in public records, the Board specifically solicits comment on whether disclosure of the location where the security interest is recorded should be required.

Comment 39(d)(4)–2 clarifies that the covered person is not required to provide the postal address for the governmental office where the covered person's ownership interest is recorded or the name of the jurisdiction where the property is located. For example, it would be sufficient in all cases to disclose that the transaction is or may be recorded in the office of public land records or the recorder of deeds office "for the county or local jurisdiction where the property is located."

The Board has taken this approach after considering the relative costs and benefits of requiring that the disclosure provide more detailed information. Industry representatives have noted that this information may not be readily accessible to the acquiring party. A requirement to provide the name and address of the governmental office would require parties that provide such notices to develop and maintain a system for matching the property address to the correct governmental office, and keeping the database up to date with correct address information. The Board does not believe that this would provide substantial benefit to consumers because they presumably know the county or jurisdiction in which the property is located and can easily obtain the address of the governmental office from public directories or other sources. The Board solicits comments on the approach taken in the interim final rule and the relative costs and benefits of requiring more detailed disclosures about the

location where the lender's security interest is or may be recorded.

39(e) Optional Disclosures

Section 404 provides that the party acquiring a loan shall notify the borrower of "any other relevant information" regarding the new owner of the loan. The Board interprets this statutory language as permitting the Board to impose additional disclosure requirements to further the legislative purpose. Any additional disclosure requirements would be imposed by regulation after notice and comment. The Board does not believe that the statutory language requires covered persons to determine independently what additional information a reviewing court might subsequently determine to be legally relevant in order to avoid liability. Although the interim final rule does not contain any additional disclosure requirements, the Board solicits comment on whether the rule should include any such requirements. The Board also believes that, under the statutory language, covered persons are permitted, in their sole discretion, to include additional information that they might deem relevant or helpful to consumers, which is reflected in § 226.39(e) of the interim final rule. For example, the covered person may choose to inform consumers that the location where they should send mortgage payments has not changed.

V. Initial Regulatory Flexibility Analysis

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires an initial and final regulatory flexibility analysis only when 15 U.S.C. 553 requires publication of a notice of proposed rulemaking. *See* 5 U.S.C. 603(a), 604(a). However, the Board has found good cause under 5 U.S.C. 553(b)(B) to conclude that, with respect to this interim final rule, publication of a notice of proposed rulemaking is impracticable and not in the public interest. Accordingly, the Board is not required to perform an initial or final regulatory flexibility analysis. Nonetheless, to solicit additional information from small entities subject to the interim final rule, the Board is publishing an initial regulatory flexibility analysis.

Based on its analysis and for the reasons stated below, the Board believes that this interim final rule will not have a significant economic impact on a substantial number of small entities. The Board invites comment on the effect of the interim final rule on small entities.

A. Reasons for the Interim Final Rule

As indicated above, the 2009 Act was signed into law on May 20, 2009. Section 404 amended TILA to establish a new requirement for notifying consumers of the sale or transfer of their mortgage loans. This requirement became effective immediately upon enactment on May 20, 2009, and did not require the issuance of implementing regulations. As discussed above, the Board believes there is good cause for an interim final rule so that parties subject to the rule have guidance on how to interpret and comply with the statutory requirements and consumers receive notices consistent with legislative intent.

Congress enacted TILA based on findings that economic stability would be enhanced and competition among consumer credit providers would be strengthened by the informed use of credit resulting from consumers' awareness of the cost of credit. One of the stated purposes of TILA is to provide a meaningful disclosure of credit terms to enable consumers to compare credit terms available in the marketplace more readily and avoid the uninformed use of credit.

B. Summary of 2009 Act

As described previously, the purchaser or assignee that acquires a loan must provide the required disclosures no later than 30 days after the date on which the loan is acquired. Section 226.39(c) of the rule provides an exception if the covered person transfers or assigns the loan to another party on or before that date. Section 226.39(d) sets forth the contents of the notice. Consistent with the statute, the interim final rule requires that the notice contain the following: (1) The identity, address, and telephone number of the covered person who owns the mortgage loan; (2) the acquisition date; (3) a mailing address and telephone number that the borrower can use to reach an agent of the covered person; and (4) the location where the covered person's interest in the property securing the loan is or may be recorded.

C. Statement of Objectives and Legal Basis

The **SUPPLEMENTARY INFORMATION** contains this information. The legal basis for the interim final rule is in TILA Sections 105(a), 105(f), 15 U.S.C. 1604(a), 1604(f). A more detailed discussion of the Board's rulemaking authority is set forth in the **SUPPLEMENTARY INFORMATION**.

D. Description of Small Entities to Which the Interim Final Rule Would Apply

The interim final rule would apply to all persons that acquire more than one existing mortgage loan in any 12-month period, other than servicers that take title solely as an administrative convenience to enable them to service the loans. The Board cannot identify with certainty the number of small entities that meet this definition. The Board can estimate, however, approximate numbers of small entities that purchase mortgage loans, as discussed below.

The Board can identify through data from Reports of Condition and Income ("call reports") approximate numbers of small depository institutions that would be subject to the interim final rules if they acquire more than one mortgage loan in a 12-month period. Approximately 16,345 depository institutions in the United States filed call report data in December of 2008, of which approximately 11,907 had total domestic assets of \$175 million or less and thus were considered small entities for purposes of the Regulatory Flexibility Act. Of 4231 banks, 565 thrifts and 7111 credit unions that filed call report data and were considered small entities, 4091 banks, 530 thrifts, and 4797 credit unions, totaling 9418 institutions, extended mortgage credit. For purposes of this analysis, thrifts include savings banks, savings and loan entities, co-operative banks and industrial banks.

The Board cannot identify with certainty the number of small non-depository institutions because they do not file call reports. Neither can the Board determine with certainty how many of the 11,907 institutions identified above as small entities acquired mortgage loans in 2008. Although an estimated 9418 such institutions extended mortgage credit, the Board recognizes that not all entities that extend mortgage credit also acquire existing mortgage loans. Moreover, the reverse is also true: there are entities that acquire existing mortgage loans but do not extend mortgage credit.

The Board has another source of information, data obtained under the Home Mortgage Disclosure Act (HMDA), 12 U.S.C. 2801 *et seq.*; 12 CFR part 203. Based on loan purchases reported for 2008 under HMDA, the Board estimates that 553 of the reporting institutions engaged in more than one mortgage acquisition. The 8388 lenders covered by HMDA in 2008 accounted for the majority, but not all, of the home lending in the United States.

Accordingly, the 553 institutions that reported loan purchases in 2008 probably do not represent all mortgage acquirers; institutions must report loan purchases only if they are required to report under HMDA based on loan originations and assets. Nevertheless, the Board's experience has been that the HMDA data are reasonably representative of the whole mortgage market.

A total of 2,921,684 loan purchases were reported under HMDA in 2008 by entities reporting more than one purchase (and thus subject to the interim final rule). Of those loan purchases, 2,773,918 were reported by depository institutions. Of those depository institution loan purchases, 2,122,288 (76.5%) were reported by large depository institutions (assets greater than \$175 million), and 651,630 (23.5%) were reported by small depository institutions (assets of \$175 million or less). Of the 553 HMDA reporters reporting more than one loan purchase, 502 were depository institutions. Of those 502 depository institutions, 387 (77.1%) were large and 115 (22.9%) were small. Those 115 small depository institutions represent just slightly less than one percent (0.97%) of the 11,907 total small institutions estimated above from call report data.

A total of 147,766 loan purchases were reported under HMDA by non-depository institutions that reported more than one loan purchase in 2008. The Board cannot tell from the HMDA data how many of those loan purchases were reported by small entities. Neither can the Board tell how many of the 51 non-depository institutions that reported those loan purchases are small entities. If the relative shares among small and large non-depository institutions do not differ significantly from those among depository institutions, however, the shares for non-depository institutions can be estimated. On that basis, the Board estimates that 12 small non-depository institutions reported 34,725 loan purchases and that 39 large non-depository institutions reported 113,041 loan purchases (estimates are rounded to whole numbers).

Using the foregoing numbers from 2008 HMDA data for depository institutions and the foregoing estimates for non-depository institutions, the Board estimates the following numbers for all entities reporting under HMDA combined: of the 2,921,684 loan purchases reported by 553 entities reporting more than one purchase, 2,235,329 (76.5%) were reported by 426 large entities (77%), and 686,355

(23.5%) were reported by 127 small entities (23%). Based on these estimates, less than one-quarter of the institutions reporting covered loan purchases under HMDA were small entities, and less than one-quarter of the covered loan purchases reported were reported by small entities.

The foregoing data are not complete in many respects. Not all depository institutions that file call reports are reporters under HMDA, and not all HMDA reporters file call reports. Further, some unknown number of entities purchase more than one mortgage loan in any 12-month period and yet file neither call reports nor HMDA data; how many of those are small entities also is unknown. Nevertheless, if one assumes that the existing data are reasonably representative of the market as a whole, they present an overall picture of minimal economic impact on small entities. For all these reasons, the Board believes that the interim final rule will not have a significant economic impact on a substantial number of small entities.

E. Projected Reporting, Recordkeeping, and Other Compliance Requirements

The compliance requirements of the interim final rules are described in the **SUPPLEMENTARY INFORMATION**. As indicated above, the Board is adopting a new disclosure rule requiring that consumers receive notice when ownership of their mortgage loan is transferred. The Board is aware that numerous covered persons are already complying with these statutory provisions, which became effective on May 20, 2009. Therefore the additional burden imposed by the Board's rule itself is likely to be minimal. Furthermore, the information required to be provided is easily obtainable by the covered person. The covered person must provide contact information for itself and any agent (but is not required to designate an agent), may use the acquisition date in its own books and records, and may generally describe the location where the covered person's interest in the property securing the mortgage loan is or may be recorded. This information generally is already required by the statute.

Based on informal surveys of industry representatives and practices in effect, the Board understands that entities are likely to designate servicers as their agents. Servicers already respond to consumer requests on the behalf of covered persons. Therefore, other than providing the notice itself, covered persons (including those who are small entities) are not likely to incur

significant burden in responding to consumer requests. Furthermore, the Board has provided an exception to the rule for mortgage owners who do not hold the loan more than 30 days. The Board believes that this exception balances the needs of consumers for information with the burdens on industry of compliance and the potential for confusion to consumers of multiple disclosures.

F. Other Federal Rules

The Board has not identified other rules that conflict with the rule. As indicated previously, under RESPA and HUD's Regulation X, consumers must be notified when the servicer of their mortgage loan has changed. Therefore, the disclosure of contact information for the agent of the owner of the mortgage loan, typically the servicer under applicable agreements, is already generally required by law. As a result of existing requirements, servicers are already subject to disclosure of their contact information and are already subject to calls regarding administration of payment information.

G. Significant Alternatives to the Interim Final Rule

As noted above, this interim final rule implements the statutory requirements of the 2009 Act that were effective on May 20, 2009. The Board has implemented these requirements to minimize burden while retaining benefits to consumers. The Board was not required to issue rules but has decided that rules are needed to clarify who is subject to the requirements and what information must be disclosed, and to ensure that consumers receive disclosures of ownership that are consistent with legislative intent. The Board welcomes comment on any significant alternatives that would minimize the impact of the interim final rule on small entities.

The Board welcomes further information and comment on any costs, compliance requirements, or changes in operating procedures arising from the application of the interim final rule to small businesses.

VI. Paperwork Reduction Act

In accordance with the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3506; 5 CFR part 1320 appendix A.1), the Board reviewed the interim final rule under the authority delegated to the Board by the Office of Management and Budget (OMB). The collection of information that is required by this final rule is found in 12 CFR 226.39. The Board may not conduct or sponsor, and an organization is not required to

respond to, this information collection unless the information collection displays a currently valid OMB control number. The OMB control number is 7100-0199.

This information collection is required to provide benefits for consumers and is mandatory (15 U.S.C. 1601 *et seq.*). Since the Board does not collect any information, no issue of confidentiality arises. The respondents/recordkeepers are persons or entities that acquire legal title to more than one mortgage loan in any 12-month period, including for-profit financial institutions and small businesses.

TILA and Regulation Z are intended to ensure effective disclosure of the costs and terms of credit to consumers. For closed-end loans, such as mortgage and installment loans, cost disclosures are required to be provided prior to consummation. Special disclosures are required in connection with certain products, such as reverse mortgages, certain variable-rate loans, and certain mortgages with rates and fees above specified thresholds. To ease the burden and cost of complying with Regulation Z (particularly for small entities), the Board provides model forms, which are appended to the regulation. TILA and Regulation Z also contain rules concerning credit advertising. Creditors are required to retain evidence of compliance with Regulation Z for 24 months (12 CFR 226.25), but Regulation Z does not specify the types of records that must be retained.

Under the PRA, the Board accounts for the paperwork burden associated with Regulation Z for the state member banks and other entities supervised by the Board that engage in activities covered by Regulation Z and, therefore, are respondents under the PRA. Appendix I of Regulation Z defines the institutions supervised by the Federal Reserve System as: state member banks, branches and agencies of foreign banks (other than federal branches, Federal agencies, and insured state branches of foreign banks), commercial lending companies owned or controlled by foreign banks, and organizations operating under section 25 or 25A of the Federal Reserve Act. Other Federal agencies account for the paperwork burden imposed on the entities for which they have administrative enforcement authority under TILA.

The current total annual burden to comply with the provisions of Regulation Z is estimated to be 1,011,311 hours for the 1,138 institutions supervised by the Federal Reserve that are deemed to be respondents for the purposes of the PRA.

As discussed in the preamble, the Board is adopting a new disclosure rule requiring that consumers receive notice when ownership of their mortgage loan is transferred. The new disclosure requirement will impose a one-time increase in the total annual burden under Regulation Z for respondents supervised by the Federal Reserve that engage in mortgage acquisitions. The Board estimates that 68 respondents⁴ supervised by the Federal Reserve will take, on average, 40 hours (one business week) to update their systems, internal procedure manuals, and provide training for relevant staff to comply with the new disclosure requirements in § 226.39. Accordingly, this revision is estimated to result in a one-time increase in the aggregate burden by 2,720 hours for these 68 respondents.

On a continuing basis, the Board estimates that 68 respondents supervised by the Federal Reserve would take, on average, 8 hours⁵ per month to comply with the new disclosure requirements, which would increase the ongoing aggregate burden by 6,528 hours annually for these respondents. Accordingly, the Board estimates that the new disclosure requirement will increase the total annual burden on a continuing basis for respondents supervised by the Federal Reserve from 1,011,311 to 1,017,839 hours (not including the one-time increase of 2,720 hours to implement the changes, as described above). This total estimated burden increase represents averages for all respondents supervised by the Federal Reserve. The Board expects that the amount of time required to implement each of the changes for a given institution may vary based on the size and complexity of the respondent.

The other federal financial institution supervisory agencies (the Office of the Comptroller of the Currency (OCC), the Office of Thrift Supervision (OTS), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA)) are responsible for estimating and reporting to OMB the

total paperwork burden for the domestically chartered commercial banks, thrifts, and federal credit unions and U.S. branches and agencies of foreign banks for which they have primary administrative enforcement jurisdiction under TILA Section 108(a), 15 U.S.C. 1607(a). These agencies may, but are not required to, use the Board's methodology for estimating burden. Using the Board's method, the total current estimated annual burden for the approximately 17,200 domestically chartered commercial banks, thrifts, and federal credit unions and U.S. branches and agencies of foreign banks supervised by the Board, OCC, OTS, FDIC, and NCUA under TILA would be approximately 17,765,525 hours. The final rule will impose a one-time increase in the estimated annual burden for the estimated 638 institutions thought to engage in mortgage acquisitions by 25,520 hours. On a continuing basis the annual burden would increase by 61,248 hours. The total annual burden is estimated to be 17,852,293 hours. The above estimates represent an average across all respondents and reflect variations between institutions based on their size, complexity, and practices.

The Board has a continuing interest in public opinion on its collections of information. At any time, comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for enhancing the quality of information collected and ways for reducing the burden on respondent. Comments on the collection of information may be sent to: Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW., Washington, DC 20551; and to the Office of Management and Budget, Paperwork Reduction Project (7100-0199), Washington, DC 20503.

List of Subjects in 12 CFR Part 226

Consumer protection, Federal Reserve System, Mortgages, Reporting and recordkeeping requirements, Truth in lending.

Authority and Issuance

■ For the reasons set forth in the preamble, the Board amends Regulation Z, 12 CFR part 226, as set forth below:

PART 226—TRUTH IN LENDING (REGULATION Z)

■ 1. The authority citation for part 226 continues to read as follows:

Authority: 12 U.S.C. 3806; 15 U.S.C. 1604, 1637(c)(5), and 1639(l); Public Law 111-24 § 2, 123 Stat. 1734.

Subpart E—Special Rules for Certain Home Mortgage Transactions

■ 2. Add a new § 226.39 to Subpart E of Part 226 to read as follows:

§ 226.39 Mortgage transfer disclosures.

(a) *Scope.* The disclosure requirements of this section apply to any covered person except as otherwise provided in this section. For purposes of this section:

(1) A “covered person” means any person, as defined in § 226.2(a)(22), that becomes the owner of an existing mortgage loan by acquiring legal title to the debt obligation, whether through a purchase, assignment, or other transfer, and who acquires more than one mortgage loan in any twelve-month period. For purposes of this section, a servicer of a mortgage loan shall not be treated as the owner of the obligation if the servicer holds title to the loan or it is assigned to the servicer solely for the administrative convenience of the servicer in servicing the obligation.

(2) A “mortgage loan” means any consumer credit transaction that is secured by the principal dwelling of a consumer.

(b) *Disclosure required.* Except as provided in paragraph (c) of this section, any person that becomes a covered person as defined in this section shall mail or deliver the disclosures required by this section to the consumer on or before the 30th calendar day following the acquisition date. If there is more than one covered person, only one disclosure shall be given and the covered persons shall agree among themselves which covered person shall comply with the requirements that this section imposes on any or all of them.

(1) *Acquisition date.* For purposes of this section, the date that the covered person acquired the mortgage loan shall be the date of acquisition recognized in the books and records of the acquiring party.

(2) *Multiple consumers.* If there is more than one consumer liable on the obligation, a covered person may mail or deliver the disclosures to any consumer who is primarily liable.

(c) *Exceptions.* Notwithstanding paragraph (b) of this section, a covered person is not subject to the requirements of this section with respect to a particular mortgage loan if:

(1) The covered person sells or otherwise transfers or assigns legal title to the mortgage loan on or before the 30th calendar day following the date that the covered person acquired the mortgage loan; or

⁴ Based on loan purchases reported for 2008 under the Home Mortgage Disclosure Act (HMDA), 12 U.S.C. 2801 *et seq.*, and Regulation C (12 CFR part 203), the Board estimates that 58 of the 553 institutions engaged in such mortgage acquisitions are supervised by the Federal Reserve. Based on average Call Report data for the past four quarters, approximately 95 institutions that do not report under HMDA also would be subject to these new disclosure requirements and 10 of these institutions are supervised by the Federal Reserve.

⁵ Because financial institutions are familiar with the existing RESPA provisions which require notification to consumers when the servicer of their mortgage loan has changed, the Federal Reserve believes that implementation of requirements in § 226.39 should not be overly burdensome.

(2) The mortgage loan is transferred to the covered person in connection with a repurchase agreement and the transferor that is obligated to repurchase the loan continues to recognize the loan as an asset on its own books and records. However, if the transferor does not repurchase the mortgage loan, the acquiring party must make the disclosures required by § 226.39 within 30 days after the date that the transaction is recognized as an acquisition in its books and records.

(d) *Content of required disclosures.* The disclosures required by this section shall identify the loan that was acquired or transferred and state the following:

(1) The identity, address, and telephone number of the covered person who owns the mortgage loan. If there is more than one covered person, the information required by this paragraph shall be provided for each of them.

(2) The acquisition date recognized by the covered person.

(3) How to reach an agent or party having authority to act on behalf of the covered person (or persons), which shall identify a person (or persons) authorized to receive legal notices on behalf of the covered person and resolve issues concerning the consumer's payments on the loan. However, no information is required to be provided under this paragraph if the consumer can use the information provided under paragraph (d)(1) of this section for these purposes. If multiple persons are identified under this paragraph, the disclosure shall provide contact information for each and indicate the extent to which the authority of each agent differs. For purposes of this paragraph (d)(3), it is sufficient if the covered person provides only a telephone number provided that the consumer can use the telephone number to obtain the address for the agent or other person identified.

(4) The location where transfer of ownership of the debt to the covered person is recorded. However, if the transfer of ownership has not been recorded in public records at the time the disclosure is provided, the covered person complies with this paragraph by stating this fact.

(e) *Optional disclosures.* In addition to the information required to be disclosed under paragraph (d) of this section, a covered person may, at its option, provide any other information regarding the transaction.

■ 3. In Supplement I to Part 226, under Subpart E, a new *Section 226.39—Mortgage Transfer Disclosures* is added to read as follows:

Supplement I to Part 226—Official Staff Interpretations

* * * * *

Subpart E—Special Rules for Certain Home Mortgage Transactions

* * * * *

Section 226.39—Mortgage transfer disclosures.

39(a) Scope.

Paragraph 39(a)(1).

1. *Covered persons.* The disclosure requirements of § 226.39 apply to any “covered person” that becomes the legal owner of an existing mortgage loan, whether through a purchase, assignment, or other transfer, regardless of whether the person also meets the definition of a “creditor” in Regulation Z. The fact that a person purchases or acquires mortgage loans and provides disclosures under § 226.39 does not by itself make that person a “creditor” as defined in the regulation.

2. *Acquisition of legal title.* To become a “covered person” subject to § 226.39, a person must become the owner of an existing mortgage loan by acquiring legal title to the debt obligation. The transfer of ownership of a mortgage loan is subject to the disclosure requirements of this section when the acquiring party is a separate legal entity from the transferor, even if the parties are affiliated entities. Section 226.39 does not apply to persons who acquire only a beneficial interest in the loan or a security interest in the loan. Section 226.39 also does not apply to a party that assumes the credit risk without acquiring legal title to the loan. Thus, an investor that acquires mortgage-backed securities, pass-through certificates, or participation interests and does not directly acquire legal title in the underlying mortgage loans is not covered by this section.

3. *Loan servicers.* Pursuant to TILA Section 131(f)(2), the servicer of a mortgage loan is not treated as the owner of the obligation for purposes of § 226.39 if the servicer holds title to the loan as a result of the assignment of the obligation to the servicer solely for the administrative convenience of the servicer in servicing the obligation.

4. *Mergers, corporate acquisitions, or reorganizations.* Disclosures are required under § 226.39 when, as a result of a merger, corporate acquisition, or reorganization the ownership of a mortgage loan is transferred to a different legal entity.

Paragraph 39(a)(2).

1. *Mortgage transactions covered.* Section 226.39 applies to any consumer credit transaction secured by the principal dwelling of a consumer, which includes closed-end mortgage loans as well as home equity lines of credit.

39(b) Disclosure required.

1. *Generally.* A covered person must mail or deliver the disclosures required by § 226.39 on or before the 30th calendar day following the date that the covered person acquired the loan, unless the exception in § 226.39(c) applies. For example, if a covered person acquires a mortgage loan on March 1, the required disclosure must be mailed or

delivered on or before March 31. For purposes of this requirement, the date that the covered person acquires the loan is the acquisition date recognized in its books and records.

2. *Disclosure provided on behalf of multiple entities.* A mortgage loan may be acquired by a covered person and subsequently transferred to an affiliate or other entity that is also a covered person required to provide disclosures under § 226.39. In such cases, a single disclosure may be provided on behalf of both entities instead of providing two separate disclosures, as long as the disclosure satisfies the timing and content requirements applicable to both entities. For example, if a covered person acquires a loan on August 31 with the knowledge that it will assign the loan to another entity on October 15, the covered person could mail a single disclosure on or before September 30 which provides the required information for both entities and indicates when the subsequent transfer is expected to occur. Even though one person delegates responsibility for the disclosures to another covered person, each has a duty to ensure that disclosures related to its acquisition are accurate and provided in a timely manner.

39(c) Exceptions.

Paragraph 39(c)(1).

1. *Example.* If a mortgage loan is originated on February 22nd and the original creditor sells the loan on March 1 to a covered person, under the exception in § 226.39(c) the covered person would not be required to provide disclosures under § 226.39 if the loan is sold or otherwise transferred or assigned to another party on or before March 31.

Paragraph 39(c)(2).

1. *Repurchase agreements.* The original creditor or owner of the mortgage loan might sell or transfer legal title to the loan to secure short-term business financing under an agreement where the original creditor or owner is also obligated to repurchase the loan within a brief period, typically a month or less. If the original creditor or owner does not recognize such transactions as a sale of the loan on its own books and records for accounting purposes, the transfer of the loan in connection with such a repurchase agreement is not covered by § 226.39 and the acquiring party is not required to provide disclosures. However, if the transferor does not repurchase the mortgage loan, the acquiring party must make the disclosures required by § 226.39 within 30 days after the date that the transaction is recognized as an acquisition in its books and records.

39(d) Content of required disclosures.

1. *Identifying the loan.* The disclosures required by this section should identify the loan that was acquired or transferred. The covered person has flexibility in determining what information to provide for this purpose. For example, the covered person may identify the loan by stating the address of the mortgaged property along with the account number or other identification number previously known to the consumer, which may appear in a truncated format. Alternatively, the covered person might identify the loan by specifying the date on which the credit was extended and the original amount of the loan or credit line.

Paragraph 39(d)(1).

1. *Identification of covered person.* Section 226.39(d)(1) requires acquiring parties to provide their name, address, and telephone number. The party identified must be the covered person who owns the mortgage loan, regardless of whether another party has been appointed to service the loan or otherwise serve as the covered person's agent. In addition to providing a postal address and a telephone number, the covered person may, at its option, provide an address for receiving electronic mail or an internet web site address but is not required to do so.

Paragraph 39(d)(3).

1. *Identifying agents.* Under § 226.39(d)(3), the covered person must provide contact information for the agent or other party having authority to act on behalf of the covered person and who is authorized to receive legal notices on behalf of the covered person and resolve issues concerning the consumer's payments on the loan. Section 226.39(d)(3) does not require that a covered person designate an agent or other party, but if the consumer cannot use the covered person's contact information for these purposes the disclosure must provide contact information for an agent or other party that can address these matters. If multiple agents are listed on the disclosure, the disclosure shall state the extent to which the authority of each agent differs by indicating if only one of the agents is authorized to receive legal notices, or only one of the agents is authorized to resolve issues concerning payments. For purposes of § 226.39(d)(3), it is sufficient to provide a telephone number as the contact information provided that consumers can use the telephone number to obtain the mailing address for the agent or other person identified.

2. *Other contact information.* The covered person may also provide an agent's electronic mail address or internet web site address but is not required to do so.

Paragraph 39(d)(4).

1. *Recording location.* Section 226.39(d)(4) requires disclosure of the location where transfer of ownership of the debt to the covered person is recorded. If the transfer of ownership has not been recorded in public records at the time the disclosure is provided, the covered person complies with § 226.39(d)(4) by stating this fact. Whether or not the transfer has been recorded at the time the disclosure is made, the disclosure may state that the transfer "is or may be recorded" at the specified location.

2. *Postal address not required.* In disclosing the location where the transfer of ownership is recorded, the covered person is not required to provide a postal address for the governmental office where the covered person's ownership interest is recorded. The covered person also is not required to provide the name of the county or jurisdiction where the property is located. For example, it would be sufficient to disclose that the transaction is or may be recorded in the office of public land records or the recorder of deeds office "for the county or local jurisdiction where the property is located."

39(e) Optional disclosures.

1. *Generally.* Section 226.39(e) provides that covered persons may, at their option,

include additional information about the mortgage transaction that they consider relevant or helpful to consumers. For example, the covered person may choose to inform consumers that the location where they should send mortgage payments has not changed.

By order of the Board of Governors of the Federal Reserve System, November 13, 2009.

Jennifer J. Johnson,

Secretary of the Board.

BILLING CODE 6210-01-P

DEPARTMENT OF ENERGY**Federal Energy Regulatory Commission****18 CFR Part 358**

[Docket No. RM07-1-002; Order No. 717-B]

Standards of Conduct for Transmission Providers; Order on Rehearing and Clarification

Issued November 16, 2009.

AGENCY: Federal Energy Regulatory Commission.

ACTION: Order on rehearing and clarification.

SUMMARY: The Federal Energy Regulatory Commission (Commission) issued Order No. 717-A to make even clearer the Standards of Conduct as implemented by Order No. 717. This order addresses requests for rehearing and clarification concerning paragraph 80 of Order No. 717-A and whether an employee who is not making business decisions about contract non-price terms and conditions is considered a "marketing function employee." **DATES:** *Effective Date:* This rule will become effective November 23, 2009. **FOR FURTHER INFORMATION CONTACT:** Leonard Tao, Office of the General Counsel—Energy Markets, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, (202) 502-8214.

SUPPLEMENTARY INFORMATION:

129 FERC ¶ 61,123

Before Commissioners: Jon Wellinghoff, Chairman; Suedeen G. Kelly, Marc Spitzer, and Philip D. Moeller.

I. Introduction

1. On October 16, 2008, the Commission issued Order No. 717 amending the Standards of Conduct for Transmission Providers (the Standards of Conduct or the Standards) to make them clearer and to refocus the rules on the areas where there is the greatest

potential for abuse.¹ On October 15, 2009, the Commission issued Order No. 717-A to address requests for rehearing and clarification of Order No. 717, largely affirming the reforms adopted in Order No. 717.² In this order, the Commission grants limited rehearing and clarification to address certain specific matters petitioners raised regarding one of the Commission's determinations in Order No. 717-A.

II. Discussion*Independent Functioning Rule: Marketing Function Employees*

2. In paragraph 80 of Order No. 717-A, the Commission stated the following:

The Commission clarifies that an employee in the legal, finance or regulatory division of a jurisdictional entity, whose intermittent day-to-day duties include the drafting and redrafting of non-price terms and conditions of, or exemptions to, umbrella agreements is a "marketing function employee." "Marketing functions" are not limited to only price terms and conditions of a contract, because non-price terms and conditions of a contract could contain information that an affiliate could use to its advantage. For example, delivery or hub locations in a contract are non-price terms that could be used to favor an affiliate. In addition, negotiated terms and conditions could affect the substantive rights of the parties. For this reason, we decline to make a generic finding to limit "marketing functions" to only price terms and conditions, but will consider waiver requests concerning an employee whose intermittent duties involve drafting non-price terms and conditions.³

Requests for Rehearing and Clarification

3. Several parties have requested expedited clarification regarding paragraph 80 of Order No. 717-A.⁴ Specifically, EEI and Western Utilities request that the Commission clarify that legal, finance, and regulatory personnel can be shared between an entity's transmission and marketing function units.⁵ Similarly, Otter Tail and Central Vermont seek clarification that lawyers, finance, and regulatory personnel may continue to provide support to

¹ *Standards of Conduct for Transmission Providers*, Order No. 717, 73 FR 63796 (Oct. 27, 2008), FERC Stats. & Regs. ¶ 31,280 (2008) ("Order No. 717").

² *Standards of Conduct for Transmission Providers*, Order No. 717-A, 74 FR 54463 (Oct. 22, 2009), FERC Stats. & Regs. ¶ 31,297 (2009) ("Order No. 717-A").

³ Order No. 717-A at P 80.

⁴ Edison Electric Institute (EEI) Oct. 30, 2009 Request for Clarification at 7; The Western Utilities Compliance Group (Western Utilities) Nov. 2, 2009 Request for Clarification at 6; Otter Tail Power Company (Otter Tail) Nov. 10, 2009 Request for Clarification at 1; Central Vermont Public Service Corporation (Central Vermont) Nov. 12, 2009 Request for Clarification at 1.

⁵ EEI at 7; Western Utilities at 6.

marketing function employees, including drafting and redrafting contract non-price terms, without being classified as marketing function employees.⁶

4. EEI also requests clarification that paragraph 80 in Order No. 717-A was “intended to convey that making business decisions about non-price terms and conditions can be a marketing function if the other ‘marketing function’ criteria are met.”⁷

5. If the Commission does not grant these requested clarifications prior to Order No. 717-A taking effect, EEL, Western Utilities, Otter Tail, and Central Vermont request that the Commission change the effective date of paragraph 80 until 90 days after the Commission issues an order addressing the merits of the issue.

Commission Determination

6. The Commission clarifies that the language in paragraph 80 of Order No. 717-A was overly broad. The Commission further clarifies that we intended to state in paragraph 80 of Order No. 717-A that an employee making business decisions about non-price terms and conditions can be considered a “marketing function employee” because that employee is actively and personally engaged in marketing functions. However, an employee who simply drafts or redrafts a contract, including non-price terms and conditions, without making business decisions is not a “marketing function employee.” In making our findings in paragraph 80 in Order No. 717-A, the Commission did not intend to depart from the finding in paragraph 131 in Order No. 717 that employees are not subject to the Independent Functioning Rule if they do not perform transmission functions or marketing functions or to depart from the following examples in P 131:

[I]f an attorney is rendering legal advice, he may consult with both transmission function employees and marketing function employees. Likewise, a risk management employee may develop risk guidelines for both transmission function employees and marketing function employees. And regulatory personnel may present before regulatory bodies filings that cover both transmission and marketing issues. Of course, all such employees would remain subject to the No Conduit Rule, and are prohibited from transmitting transmission function information to marketing function employees.⁸

7. In light of the above clarification to paragraph 80 of Order No. 717-A, we

will deny the petitioners’ request to extend the compliance date with respect to paragraph 80.

III. Document Availability

8. In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the Internet through FERC’s Home Page (<http://www.ferc.gov>) and in FERC’s Public Reference Room during normal business hours (8:30 a.m. to 5 p.m. Eastern time) at 888 First Street, NE., Room 2A, Washington, DC 20426.

9. From FERC’s Home Page on the Internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

10. User assistance is available for eLibrary and the FERC’s Web site during normal business hours from FERC Online Support at 202-502-6652 (toll free at 1-866-208-3676) or e-mail at ferconlinesupport@ferc.gov, or the Public Reference Room at (202) 502-8371, TTY (202) 502-8659. E-mail the Public Reference Room at public.referenceroom@ferc.gov.

IV. Effective Date

11. Changes to Order No. 717-A adopted in this order on rehearing and clarification are effective November 23, 2009.

By the Commission.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717-01-P

DELAWARE RIVER BASIN COMMISSION

18 CFR Part 410

Amendments to the Water Code and Comprehensive Plan To Implement a Revised Water Audit Approach To Identify and Control Water Loss

AGENCY: Delaware River Basin Commission.

ACTION: Final rule.

SUMMARY: By Resolution No. 2009-01 on March 11, 2009, the Delaware River Basin Commission (“Commission” or “DRBC”) approved amendments to its Water Code and Comprehensive Plan to

implement an updated water audit approach to identify and control water loss in the Basin.

DATES: *Effective Date:* November 20, 2009. The incorporation by reference of the publications listed in this rule is approved by the Director of the Federal Register as of November 20, 2009.

Applicability Date: Commencing January 1, 2012, the owners of water supply systems serving the public with sources or service areas located in the Delaware River Basin must implement an annual calendar year water audit program conforming to the IWA/AWWA Water Audit Methodology and corresponding AWWA guidance. Commencing January 1, 2013, reported “non-revenue water” must be computed in accordance with the new methodology and guidance.

FOR FURTHER INFORMATION CONTACT: Pamela M. Bush, Commission Secretary and Assistant General Counsel by phoning 609-883-9500 Ext. 203, or by e-mail to Pamela.Bush@drbc.state.nj.us.

SUPPLEMENTARY INFORMATION: The Delaware River Basin Commission (“Commission” or “DRBC”) is a federal-state regional agency charged with managing the water resources of the Delaware River Basin without regard to political boundaries. Its members are the governors of the four basin states—Delaware, New Jersey, New York, and Pennsylvania—and the North Atlantic Division Commander of the U.S. Army Corps of Engineers, representing the federal government.

Notice of the proposed amendments appeared in the **Federal Register** (73 FR 44945) on August 1, 2008 as well as in the Delaware Register of Regulations on September 1, 2008 (12 DE Reg. 275-278 (09/01/2008)), the New Jersey Register (40 N.J.R. 4499) on August 4, 2008, the New York State Register (page 2) on August 20, 2008 and the Pennsylvania Bulletin (38 Pa. B. 4373) on August 9, 2008.

The amendments to the Comprehensive Plan and Article 2 of the Water Code finalized by the Commission on March 11, 2009 phase in a program requiring water purveyors to perform a water audit and report their findings in accordance with a new audit structure established by the American Water Works Association (AWWA) and the International Water Association (IWA). Effective January 1, 2012, the owners of water supply systems serving the public with sources or service areas located in the Delaware River Basin must implement an annual calendar year water audit program conforming to the IWA/AWWA Water Audit Methodology and corresponding

⁶ Otter Tail at 1; Central Vermont at 1.

⁷ EEI at 7-8.

⁸ Order No. 717 at P 131.

AWWA guidance. Commencing January 1, 2013, reported “non-revenue water” must be computed in accordance with the new methodology and guidance. During the period between the effective date of the rule and ending December 31, 2011 (hereinafter, “phase-in period”) water purveyors are encouraged to implement the new methodology and guidance on a voluntary basis.

The Commission has determined that the new water audit methodology provides a rational approach that will facilitate more consistent tracking and reporting than the current approach allows. It will help water managers and regulators, including the Commission, state agencies, and utility managers, target their efforts to improve water supply efficiency, thereby reducing water withdrawals. Improving water accountability will contribute to achieving objective 1.3.C of the Water Resources Plan for the Delaware River Basin (DRBC 2004), which calls for ensuring maximum feasible efficiency of water use across all sectors.

The Commission conducted an informational meeting on the proposed amendments on September 10, 2008 and a public hearing on September 25, 2008, both in West Trenton, New Jersey. Written comment on the proposed amendments was accepted through October 3, 2008. The Commission received one written submission and no oral testimony on the proposed amendment. The agency made revisions to the proposed rule on its own initiative for clarification. A comment and response document summarizing the comments on the proposed rule and setting forth the Commission’s responses and revisions in detail was approved by the Commission simultaneously with adoption of the final rule.

The final form of the rule differs from the proposed rule in the following respects: For purposes of clarity, a definition of “non-revenue water” consistent with the AWWA definition was added to Section 2.1.6.A. of the rule. The definition of “unaccounted-for water” in the same section was amended to include a definition of “unaccounted-for water percent.” This change was made because the computation must return a percentage value so that it can be measured against the performance target of less than 15% unaccounted-for water.

The Commission also added language to establish that until use of the IWA/ AWWA Water Audit methodology becomes mandatory on January 1, 2012, DRBC’s regulatory standards for leak detection and repair (*i.e.*, measurement

and control of unaccounted-for-water), set forth in Section 2.1.6 of the Water Code, shall remain in force. System operators who voluntarily submit audits in a form consistent with the new methodology during the phase-in period are advised in the Commission’s comment and response document that non-revenue water volume expressed as a percentage of input volume will be treated as the equivalent of unaccounted-for-water, the measure applicable under the existing rule. The comment and response document explains that once the Water Audit method is introduced throughout the Delaware Basin and a body of data is available for analysis, a more meaningful measure of system performance will be established.

DRBC Resolution No. 2009–1 and a copy of the comment and response document are both available on the DRBC Web site, <http://www.drbc.net>. Resolution No. 2009–1 incorporates Article 2 of the Water Code, showing the amendments as proposed in August 2008 and as finally approved by the Commission on March 11, 2009. Copies of Resolution No. 2009–1 and the Water Code may be obtained from the Commission’s Secretary and Assistant General Counsel at the telephone number and e-mail address listed above. A charge for printing and mailing may apply.

BILLING CODE 6360–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 520

[Docket No. FDA–2009–N–0665]

Oral Dosage Form New Animal Drugs; Sulfadimethoxine

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the animal drug regulations to reflect approval of an original abbreviated new animal drug application (ANADA) filed by First Priority, Inc. The ANADA provides for use of Sulfadimethoxine Soluble Powder in medicated drinking water of cattle, chickens, and turkeys for the treatment of various bacterial infections.

DATES: This rule is effective November 20, 2009.

FOR FURTHER INFORMATION CONTACT: John K. Harshman, Center for Veterinary Medicine (HFV–104), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 240–276–8197, e-mail: john.harshman@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: First Priority, Inc., 1590 Todd Farm Dr., Elgin, IL 60123, filed ANADA 200–443 for use of Sulfadimethoxine Soluble Powder in medicated drinking water of cattle, chickens, and turkeys for the treatment of various bacterial infections. First Priority, Inc.’s Sulfadimethoxine Soluble Powder is approved as a generic copy of ALBON (sulfadimethoxine) Soluble Powder, sponsored by Pfizer, Inc., under NADA 46–285. The ANADA is approved as of October 28, 2009, and 21 CFR 520.2220a are amended to reflect the approval.

In accordance with the freedom of information provisions of 21 CFR part

20 and 21 CFR 514.11(e)(2)(ii), a summary of safety and effectiveness data and information submitted to support approval of this application may be seen in the Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852, between 9 a.m. and 4 p.m., Monday through Friday.

The agency has determined under 21 CFR 25.33 that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

This rule does not meet the definition of "rule" in 5 U.S.C. 804(3)(A) because it is a rule of "particular applicability." Therefore, it is not subject to the congressional review requirements in 5 U.S.C. 801-808.

List of Subjects in 21 CFR Part 520

Animal drugs.

■ Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Center for Veterinary Medicine, 21 CFR part 520 is amended as follows:

PART 520—ORAL DOSAGE FORM NEW ANIMAL DRUGS

■ 1. The authority citation for 21 CFR part 520 continues to read as follows:

Authority: 21 U.S.C. 360b.

§ 520.2220a [Amended]

■ 2. In § 520.2220a, in paragraph (a)(2), add in numerical sequence "058829".

Dated: November 16, 2009.

Bernadette Dunham,

Director, Center for Veterinary Medicine.

BILLING CODE 4160-01-S

DEPARTMENT OF LABOR

Employee Benefits Security Administration

29 CFR 2550

RIN 1210-AB13

Investment Advice—Participants and Beneficiaries

AGENCY: Employee Benefits Security Administration, Labor.

ACTION: Withdrawal of final rule.

SUMMARY: This document withdraws final rules under the Employee

Retirement Income Security Act, and parallel provisions of the Internal Revenue Code of 1986, relating to the provision of investment advice to participants and beneficiaries in individual account plans, such as 401(k) plans, and beneficiaries of individual retirement accounts (and certain similar plans). Final rules were published in the **Federal Register** on January 21, 2009 (74 FR 3822). The effective and applicability dates of the final rules had been deferred until May 17, 2010, in order to permit a review of policy and legal issues raised with respect to the rules. As discussed in this Notice, the Department has determined to withdraw the final rules. The Department also intends to soon propose a revised rule limited to the application of the statutory exemption relating to investment advice.

DATES: Effective January 19, 2010, the final rule published January 21, 2009 amending 29 CFR Part 2550 (74 FR 3822), for which the effective and applicability date was delayed on March 20, 2009 (74 FR 11847), May 22, 2009 (74 FR 23951) and November 17, 2009 (74 FR 59092), is withdrawn.

FOR FURTHER INFORMATION CONTACT: Fred Wong, Office of Regulations and Interpretations, Employee Benefits Security Administration (EBSA), (202) 693-8500. This is not a toll-free number.
SUPPLEMENTARY INFORMATION:

A. Background

On January 21, 2009, the Department of Labor published final rules on the provision of investment advice to participants and beneficiaries of participant-directed individual account plans and to beneficiaries of individual retirement accounts and certain similar plans (IRAs) (74 FR 3822). The rules implement a statutory prohibited transaction exemption under ERISA Section 408(b)(14) and Sec. 408(g), and under section 4975 of the Internal Revenue Code of 1986 (Code),¹ and also contain an administrative class exemption granting additional relief. As published, these rules were to be effective on March 23, 2009. On February 4, 2009, the Department published in the **Federal Register** (74 FR 6007) an invitation for public comment on a proposed 60-day extension for the effective dates of the final rules until May 22, 2009, and a proposed conforming amendment to the applicability date of Section 2550.408g-1, in order to afford the Agency the opportunity to review legal and policy

issues relating to the final rules. The Department also invited public comments on the provisions of those rules and on the merits of rescinding, modifying or retaining the rules. In response to this invitation, the Department received 28 comment letters.² On March 20, 2009, the Department adopted the 60-day extension of the final rule's effective and applicability date. (See 74 FR 11847). In order to afford the Department additional time to consider the issues raised by commenters, the effective and applicability dates were further delayed until November 18, 2009 (74 FR 23951), and then until May 17, 2010.

B. Comments Received

A number of the commenters expressed the view that the final rule raises significant issues of law and policy, and should be withdrawn. Several of these commenters argued that the class exemption contained in the final rule permits financial interests that would cause a fiduciary adviser, and individuals providing investment advice on behalf of a fiduciary adviser, to have conflicts of interest, but does not contain conditions that would adequately mitigate such conflicts. They asserted that investment advice provided under the class exemption therefore might be tainted by the fiduciary adviser's conflicts. Other commenters expressed concerns about those provisions of the rule relating to the "fee-leveling" requirement under the statutory exemption. In particular, some opined that the Department's interpretation of the statutory exemption's fee-leveling requirement is incorrect for permitting the receipt of varying fees by an affiliate of a fiduciary adviser. As a result, they argued, a fiduciary adviser under such a fee-leveling arrangement has a conflict of interest, and the final rule does not adequately protect against investment advice that is influenced by the financial interests of the fiduciary adviser's affiliates. Commenters who advocated retention of the final rule argued that it contains strong safeguards that would protect the interests of plan participants and beneficiaries.

C. Analysis and Determination

As documented in the Department's regulatory impact analysis (RIA) of the January 2009 final regulation and class exemption, defined contribution (DC) plan participants and IRA beneficiaries

¹ These provisions were added to ERISA and the Code by the Pension Protection Act of 2006 (PPA), Public Law 109-280, 120 Stat. 780 (Aug. 17, 2006).

² These comments are available on the Department's Web site at: <http://www.dol.gov/ebsa/regs/cmt-investmentadvicefinalrule.html>.

often make costly investment errors. Those who receive and follow quality investment advice can reduce such errors and thereby reap substantial financial benefit. The Department estimated that the PPA statutory exemption as implemented by the final regulation, together with the final class exemption, would extend investment advice to 21 million previously unadvised participants and beneficiaries, generating \$13 billion in annual financial benefits at a cost of \$5 billion, for a net annual financial benefit of \$8 billion.

In arriving at its estimates, the Department assumed that on average participants and beneficiaries who are advised make investment errors at one-half the rate of those who are not. The Department further assumed that different types of investment advice arrangements on average would be equally effective: Arrangements operating without need for exemptive relief, those operating pursuant to the PPA, and those operating pursuant to the class exemption all would reduce investment errors by one-half on average.

The Department's assumptions regarding the effectiveness of different advice arrangements were subject to uncertainty, particularly as applied to its assessment of the final class exemption's effects. In the preamble to the January 2009 final regulation and class exemption the Department noted evidence that conflicts of interest, such as those that might be attendant to advice arrangements operating pursuant to the class exemption, can sometimes taint advice. Conflicted advisers pursuing their own interests, and the investment managers who compensate them, may profit at the expense of participants and beneficiaries. The conditions attached to the class exemption were intended to ensure that advisers operating pursuant to the class exemption would honor the interests of participants and beneficiaries.

As discussed earlier, a number of commenters raised legal and policy issues concerning the exemption and, in particular, questioned the adequacy of the final class exemption's conditions to mitigate the potential for investment adviser self-dealing. The Department believes that the questions raised in these comments are sufficient to cast doubt on the conditions' adequacy to mitigate advisers' conflicts. If conflicts are not mitigated advice might be tainted. Therefore the Department has set aside its previous assumption that participants and beneficiaries who follow advice delivered pursuant to the final class exemption will commit

investment errors at one-half the rate of those who are unadvised, together with its previous conclusion that the final class exemption's benefits justify its cost. Instead the Department believes that doubts as to whether the final class exemption's conditions are adequate to mitigate conflicts justify withdrawal of the final class exemption. Accordingly, the Department is withdrawing the January 2009 final rule. With regard to the statutory prohibited transaction exemption under ERISA Section 408(b)(14) and Section 408(g), and Code Section 4975, in order to address the absence of regulatory guidance that results from withdrawal of the January 2009 final rule, the Department intends to propose regulations that, upon adoption, implement those provisions. Work is currently being completed on those proposed regulations, and the Department anticipates that they will be published in the **Federal Register** shortly.

For the reasons set forth above, the publication on January 21, 2009 (74 FR 3822), of the final rule amending 29 CFR Part 2550, for which the effective and applicability date was delayed on March 20, 2009 (74 FR 11847), May 22, 2009 (74 FR 23951) and November 17, 2009, is withdrawn.

Signed at Washington, DC, this 16th day of November 2009.

Phyllis C. Borzi,

Assistant Secretary, Employee Benefits Security Administration, Department of Labor.

BILLING CODE 4510-29-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG-2009-0946]

RIN 1625-AA00

Safety Zones; Blasting and Dredging Operations and Movement of Explosives, Columbia River, Portland to St. Helens, OR

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing two temporary safety zones on the Columbia River to help ensure the safety of the maritime public during blasting and dredging operations taking place near St. Helens, Oregon as well as the movement of explosives for those operations from Portland, Oregon to the

work site. The first temporary safety zone is a fixed zone around the area where the blasting and dredging operations will be taking place near St. Helens, Oregon. The second temporary safety zone is a moving zone around the barge KRS 200-6 at any time that it has explosives onboard.

DATES: This rule is effective from 12:01 a.m. on November 20, 2009 through 11:59 p.m. on February 28, 2010.

The safety zone has been enforced with actual notice since October 30, 2009.

ADDRESSES: Documents indicated in this preamble as being available in the docket are part of docket USCG-2009-0946 and are available online by going to <http://www.regulations.gov>, inserting USCG-2009-0946 in the "Keyword" box, and then clicking "Search." They are also available for inspection or copying at the Docket Management Facility (M-30), U.S. Department of Transportation, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary rule, call or e-mail MST1 Jaime Sayers, Waterways Management Division, U.S. Coast Guard Sector Portland; telephone 503-240-9319, e-mail Jaime.A.Sayers@uscg.mil. If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202-366-9826.

SUPPLEMENTARY INFORMATION:

Regulatory Information

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are "impracticable, unnecessary, or contrary to the public interest." Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) because the publishing of an NPRM would be impracticable and contrary to public interest since immediate action is needed to ensure the public's safety during blasting and dredging operations. Delaying the implementation of the safety zone would subject the public to the hazards associated with blasting and dredging operations and the movement of explosives for those operations. The

danger posed by the large volume of marine traffic on the Columbia River makes safety zone regulations necessary to provide for the safety of construction support vessels, spectator craft and other vessels transiting the event area. For the safety concerns noted, it is in the public interest to have these regulations in effect during blasting and dredging operations. The Coast Guard will issue broadcast notice to mariners to advise vessel operators of navigational restrictions. On-scene Coast Guard and local law enforcement vessels will also provide actual notice to mariners.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register** because to do otherwise would be contrary to the public interest of ensuring public safety during blasting and dredging operations, and immediate action is necessary to prevent possible loss of life and property.

Background and Purpose

As part of the Columbia River Deepening (Channel Improvement) Project, the Army Corps of Engineers must blast and dredge on portions of the Columbia River near St. Helens, Oregon. Due to the inherent dangers associated with blasting and dredging operations, a safety zone is necessary to help ensure the safety of the maritime public operating near the work site. The potential explosive arc for the work site of this project has been calculated to be approximately 832 feet.

The blasting and dredging operations also require the movement of explosives via barge from Portland, Oregon to the work site. Due to the inherent dangers associated with the movement of explosives, a safety zone is necessary to help ensure the safety of the maritime public operating near the barge when explosives are on board.

The project is also required to comply with applicable state laws.

Discussion of Rule

The Coast Guard is establishing two temporary safety zones. The first temporary safety zone applies to the navigable waters within a radius of 1500 feet centering on the Army Corps of Engineers Columbia River Deepening (Channel Improvement) Project work site near St. Helens, Oregon located on the Columbia River from Duck Club Light 6 across to Bachelor Island downstream to the point of Austin Point and across to Warrior Point, at 45°50'31.2" N/122°46'51.6" W; 45°50'31.2" N/122°46'51.6" W; 45°49'37.2" N/122°47'16.79" W;

45°49'47.9" N/122°47'42.00" W; 45°50'56.4" N/122°47'16.79" W (NAD 83). The second temporary safety zone applies to the navigable waters with a radius of 500 feet centering on the barge KRS 200-6 at any time that it has explosives onboard. Notice of the second safety zone will be issued via a Safety Marine Information Broadcast (SMIB) broadcast over Channel 16 and by actual notice on-site. Vessels will be able to transit the work site and/or barge safety zones with permission from the Captain of the Port, Portland or his designated representative. The Captain of the Port can be contacted at telephone number (503) 240-9310, or by radio on VHF Marine Band Radio, channel 16. The safety zones will be in effect from 12:01 a.m. on October 28, 2009 through 11:59 p.m. on February 28, 2010.

Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on 13 of these statutes or executive orders.

Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order. The Coast Guard has made this determination based primarily on the fact that maritime traffic will be allowed to transit the safety zones with permission from the Captain of the Port, Portland so there should be little to no economic impact.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601-612), we have considered whether this rule would have a significant economic impact on a substantial number of small entities. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities. The following entities may be affected by this rule, some of which may be small entities: The owners and operators of vessels intending to operate, transit, or anchor in a portion of the Columbia

River from 12:01 a.m. on October 28, 2009 through 11:59 p.m. on February 28, 2010. The safety zones will not have a significant impact on a substantial number of small entities for the following reasons. Maritime traffic will be allowed to transit the safety zones with permission from the Captain of the Port, Portland or his designated representative, and the Coast Guard will make notifications via maritime advisories so mariners can adjust their plans accordingly.

Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104-121), we offer to assist small entities in understanding the rule so that they can better evaluate its effects on them and participate in the rulemaking process.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1-888-REG-FAIR (1-888-734-3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520).

Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of compliance on them. We have analyzed this rule under that Order and have determined that it does not have implications for federalism.

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531-1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 or more in any one year.

Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

Taking of Private Property

This rule will not effect a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

Energy Effects

We have analyzed this rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. We have determined that it is not a "significant energy action" under that order because it is not a "significant regulatory action" under Executive Order 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The Administrator of the Office of Information and Regulatory Affairs has not designated it as a significant energy action. Therefore, it does not require a Statement of Energy Effects under Executive Order 13211.

Technical Standards

The National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note) directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through the Office of

Management and Budget, with an explanation of why using these standards would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., specifications of materials, performance, design, or operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023-01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321-4370f), and have concluded this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This rule is categorically excluded, under figure 2-1, paragraph (34)(g), of the Instruction. This rule involves regulations establishing safety zones. An environmental analysis checklist and a categorical exclusion determination are available in the docket where indicated under

ADDRESSES.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

■ For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05-1, 6.04-1, 6.04-6, 160.5; Public Law 107-295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. § 165.T13-114 is added to read as follows:

§ 165.T13-114 Safety Zones; Blasting and Dredging Operations and Movement of Explosives, Columbia River, Portland to St. Helens, OR

(a) *Location.* The following areas are safety zones: (1) All waters of the Columbia River from Duck Club Light 6

across to Bachelor Island downstream to the point of Austin Point and across to Warrior Point at 45°50'31.2" N/122°46'51.6" W; 45°50'31.2" N/122°46'51.6" W; 45°49'37.2" N/122°47'16.79" W; 45°49'47.9" N/122°47'42.00" W; 45°50'56.4" N/122°47'16.79" W (NAD 83). (2) All waters encompassed within a circle with a radius of 500 feet centered on the barge KRS 200-6 at any time that it has explosives onboard.

(b) *Definitions.* As used in this section, "designated representative" means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port (COTP) Portland in the enforcement of the safety zone.

(c) *Regulations.* In accordance with the general regulations in 33 CFR Part 165, Subpart C, no person may enter or remain in the safety zones established in paragraph (a) or bring, cause to be brought, or allow to remain in the safety zones established in paragraph (a) of this section any vehicle, vessel, or object unless authorized by the Captain of the Port, Portland or his designated representative.

(d) *Enforcement Period.* The safety zones established in paragraph (a) or this section are applicable from 12:01 a.m. on October 28, 2009 through 11:59 p.m. on February 28, 2010.

Dated: October 30, 2009.

F.G. Myer,

Captain, U.S. Coast Guard, Captain of the Port, Portland.

[FR Doc. E9-27725 Filed 11-19-09; 8:45 am]

BILLING CODE 9110-04-P

DEPARTMENT OF THE INTERIOR

National Park Service

36 CFR Part 7

RIN 1024-AD73

Special Regulations; Areas of the National Park System

AGENCY: National Park Service, Interior.

ACTION: Final rule.

SUMMARY: This rule governs winter visitation and certain recreational use in Yellowstone National Park for the 2009-2010 and 2010-2011 seasons. This final rule is issued to implement the Finding of No Significant Impact (FONSI) for the 2008 Winter Use Plans Environmental Assessment (2008 EA) approved October 15, 2009, and will provide

visitors a range of winter recreation opportunities that are appropriate to the national park setting and do not unacceptably impact or impair park resources or values. The rule requires that most recreational snowmobiles operating in the park meet certain NPS air and sound emissions requirements, requires that snowmobilers and snowcoach riders in Yellowstone be accompanied by a commercial guide, and sets daily entry limits on the numbers of snowmobiles and snowcoaches that may enter the park. Traveling off designated oversnow routes will remain prohibited.

DATES: The effective date for this rule is December 15, 2009.

FOR FURTHER INFORMATION CONTACT: John Sacklin, Management Assistant's Office, Yellowstone National Park, 307-344-2019.

SUPPLEMENTARY INFORMATION:

Background

The National Park Service (NPS) has been managing winter use issues in Yellowstone National Park, Grand Teton

National Park, and the John D. Rockefeller, Jr., Memorial Parkway for several decades under the guidance provided by a number of sources. The history of the issue was discussed at length in the notice for the proposed rule, 73 FR 65784 (November 5, 2008) and in the 2008 EA.

After the proposed rule was published on November 7, 2008, the U.S. District Court for the District of Wyoming issued an order reinstating the 2004 final rule on winter use in the parks, without its sunset provisions, "until such time as NPS can promulgate an acceptable rule to take its place." The NPS complied with the court order and on December 9, 2008, republished the 2004 regulation without its provisions terminating snowmobile and snowcoach use after the winter of 2006-2007. That regulation, among other things, imposed a limit of 720 snowmobiles per day for Yellowstone, required that all recreational snowmobiles in Yellowstone be accompanied by a commercial guide, and required that all recreational snowmobiles operating in

the park meet NPS air and sound emissions requirements for reducing noise and air pollution.

The NPS is promulgating this final regulation to replace the reinstated 2004 regulation. It provides that the park will be open to an appropriate level of oversnow vehicle use for the winter seasons of 2009-2010 and 2010-2011. During this time, NPS will determine a long-term strategy for Yellowstone winter use.

Rationale for the Final Rule

Overview of Winter Use Program

This rule provides for the enjoyment of the park's amenities by authorizing strictly managed snowmobile and snowcoach use in the park for the next two winter seasons. The rule is designed to be consistent with recent trends in oversnow vehicle use while a new long-term winter plan and rule are prepared. This rule allows for 318 snowmobiles per day in Yellowstone, as shown in the following chart, with an additional 50 snowmobiles allowed at Cave Falls.

Park entrance/location	Commercially guided snowmobiles	Commercially guided snowcoaches
(i) North Entrance*	12	13
(ii) West Entrance	160	34
(iii) South Entrance	114	13
(iv) East Entrance	20	2
(v) Old Faithful*	12	16
(vi) Cave Falls	50**	0

* Commercially guided snowmobile tours originating at the North Entrance and Old Faithful are currently provided solely by Xanterra Parks and Resorts. Because this concessioner is the sole provider at both of these areas, this regulation allows reallocation of snowmobiles between the North Entrance and Old Faithful as necessary, so long as the total daily number of snowmobiles originating from the two locations does not exceed 24. For example, the concessioner could operate 6 snowmobiles at Old Faithful and 18 at the North Entrance if visitor demand warranted it. This will allow the concessioner to respond to changing visitor demand for commercially guided snowmobile tours, thus enhancing the availability of visitor services in Yellowstone.

** These snowmobiles operate on an approximately 1-mile segment of road within the park where the use is incidental to other snowmobiling activities in the Caribou-Targhee National Forest. These snowmobiles do not need to be guided or to meet NPS air and sound emissions requirements.

This rule includes strict limits on the number of snowmobiles and snowcoaches allowed to operate within the park each day. Prior to the implementation of a managed winter use program in the winter of 2003-2004, an average of 795 snowmobiles entered Yellowstone each day, with peak days averaging approximately 1,400. This rule allows for 318 snowmobiles per day in Yellowstone, a reduction from the 720 snowmobiles authorized over the previous five winters (during which peak use never approached 720, and average use was about 36% of that limit).

For the past five winters, a managed winter use program has been in place. Visitors on snowmobiles must use snowmobiles that meet NPS

requirements for air and sound emissions (generally referred to in the 2008 EA as Best Available Technology (BAT)), but here referred to simply as NPS requirements to avoid confusion with use of the term best available technology under other environmental laws). Visitors must be accompanied by a commercial guide; visitors cannot snowmobile in Yellowstone without a guide. There is a daily limit on numbers of snowcoaches and snowmobiles. Speed limits are reduced in the busy travel corridors. The park is closed to oversnow vehicles (OSVs) at night. An extensive monitoring program is underway.

In the past five winters, an average of 259 snowmobiles (in an average of 35 commercially guided groups) have

travelled in the park each day, while snowcoach use averaged 31 per day. The peak day for snowmobiles was 557, while the peak day for snowcoaches was 60. During the past three winters, the park exceeded 318 snowmobiles on 63 of 252 days the park was open. This rule allows somewhat more than the recent annual average number of snowmobiles and snowcoaches to enter the park, but would not accommodate those recent higher use days for snowmobiles.

The most recent use levels indicate that the number of commercially guided snowmobile groups and the number of persons in those groups are very similar to those using commercial snowcoaches. In 2008-2009, the average number of snowmobile groups was 31 per day, while snowcoaches averaged 29 per day.

Each snowmobile group included an average of 8.9 people, while each snowcoach carried an average of 8.5 people.

Resource Impacts From Winter Use

Air quality is very good to excellent in the winter, despite frequent temperature inversions, which trap pollutants near the ground and affect air quality. NPS sound and air emission requirements, limits on numbers, and commercial guiding have all contributed to the improvements in air quality over historical (pre-2003) use. Only snowmobiles meeting NPS requirements are allowed. Currently, the snowmobiles use four-cycle engines that produce far less pollution than the two-cycle engines that were once used. Snowmobiles meeting NPS air emission requirements are very similar in their per passenger emissions to snowcoaches. Snowcoaches use more fuel on a per passenger basis than do snowmobiles. They average 2–4 miles per gallon while snowmobiles that meet NPS requirements get 20–26 miles per gallon. In addition, rough roads and soft snow conditions result in higher fuel consumption and high emissions for snowcoaches.

Winter use will have some effects on wildlife, just like every other form of visitor use of the park. Extensive studies of the behavioral responses of five species (bison, elk, bald eagle, trumpeter swan, and coyotes) to oversnow traffic showed that these animals rarely showed high-intensity responses (movement, defense postures, or flight) to approaching vehicles. The responses to normal snowmobile and snowcoach use that do occur do not cause the taking, frightening, or intentional disturbance that is prohibited by NPS regulations. Furthermore, thirty-five years of census data do not reveal any relationship between changing winter use patterns and elk or bison population dynamics. No wildlife populations are currently declining due to winter use (swan populations are declining, but this decline is being experienced regionally and due to factors unrelated to winter use in the park or region). Few animals are expected to be killed as a result of vehicle collisions. The best available information suggests negligible to minor effects for most species, with potential moderate effects for swans and eagles. Use will be well below levels previously studied by NPS wildlife biologists and well within the limits recommended by those studies. We conclude that winter use at the permitted levels does not pose a risk of unacceptable impacts or impairment to any wildlife population. All visitors

utilizing motorized oversnow vehicles travel with commercial guides, learning about and enjoying the abundant wildlife sightings.

Soundscapes are good to very good in the park. Snowmobiles that meet NPS sound requirements are noticeably quieter than traditional snowmobiles (at idle and while underway). In addition, snowmobiles with four-cycle engines that meet NPS requirements sound similar to snowcoaches in the winter and do not sound like traditional two-stroke snowmobiles. Commercial guiding further reduces sound levels and the amount of time that snowmobiles can be heard by reducing speeding and idling and by keeping the vehicles grouped. One concern is that some vehicles are too loud. However, monitoring results demonstrate that 94% of all high sound intensity events are caused by snowcoaches. Overly loud snowcoaches include both older, historic Bombardier snowcoaches that have not been modified or upgraded, as well as a number of modern snowcoaches. The NPS intends to implement sound and air emission requirements for snowcoaches in the long-term plan, subsequent to this rule, to address this concern. The percent of time that OSVs are heard has been a concern. As explained further below, however, NPS has determined that the percentage of time in which OSVs will be audible under this rule does not cause impairment or unacceptable impacts.

Based on a 2008 winter survey, NPS has found that visitors are enjoying the park, and they are satisfied with the management that is in place. Visitors will continue to find wildlife to be both wild and easily viewed. Under this rule, visitors will continue to find wildlife to be both wild and easily viewed. All visitors utilizing motorized vehicles will travel with commercial guides, learning about and enjoying the abundant wildlife sightings. A winter 2008 survey found a high level of satisfaction with soundscape conditions, wildlife, and the managed winter use program.

Personal exposure of employees to air pollutants has generally been greatly reduced from historic levels. Some monitoring from previous years indicated small exceedances of national standards for benzene and formaldehyde. The source could be snowcoaches or snowmobiles, or more likely both. Last winter's monitoring showed no exceedances of these standards.

Impairment, Unacceptable Impacts, and Appropriate Use

In addition to determining the environmental consequences of the alternatives, NPS policy requires consideration of impacts to determine whether actions would impair park resources. In managing National Park System units, the NPS may undertake actions that have both beneficial and adverse impacts on park resources and values. As the 2006 NPS Management Policies (Management Policies) explain (section 1.4.7.1), "Virtually every form of human activity that takes place within a park has some degree of effect on park resources or values, but that does not mean the impact is unacceptable or that the particular use must be disallowed." The NPS is generally prohibited by law from taking or authorizing any action that would or is likely to impair park resources or values. Impairment is an impact that, in the professional judgment of the responsible NPS manager, would harm the integrity of park resources or values, including the opportunities that otherwise would be present for the enjoyment of those resources or values. The responsible NPS manager generally has discretion to determine what impacts are allowed that would not impair park resources or values.

The NPS is also required to conserve the resources and values of the National Park System units and to prioritize the conservation of park resources over their use whenever the two are found to be in conflict. The NPS complies with this mandate by ensuring that a proposed use of the park will not result in unacceptable impacts to park resources or values, and by further allowing impacts to park resources only when allowing the impacts is appropriate to fulfill the purposes of the park and is necessary (meaning that the impacts are unavoidable and incapable of further mitigation in light of the authorized appropriate use).

Over the last five winter seasons, the park was intensively managed in order to provide heightened protection to the environment and prevent the impairment of park resources and values. As discussed in the FONSI and based on the analysis in the 2008 EA and monitoring and studies over the past five years, the NPS has determined that no impairment of park resources or values occurred during those five years.

The NPS has also determined that implementation of Alternative 2 (Selected Alternative) and the final rule would not result in unacceptable impacts or impairment to park resources or values. As disclosed in the 2008 EA,

the adverse impacts to wildlife would be negligible to minor, due to moderate levels of visitor use (with possible moderate effects on swans and eagles). Guiding would minimize most of these effects. For soundscapes, the adverse impacts would be negligible to moderate, due to audibility and maximum sound levels. Exceedances of maximum sound levels by snowcoaches will be mitigated while this rule is in place through driver education and reducing snowcoach travel speed. This will be communicated during pre-season meetings with commercial guides and outfitters, and to individual drivers during park-sponsored orientation training. Air quality impacts are forecast to be negligible because the air and sound emissions requirements and strict daily entry limits will reduce emissions. Impacts on visitor and employee health and safety in Yellowstone are expected to be moderately adverse due to possible high snowcoach noise exposure levels. Avalanche danger at Sylvan Pass also creates moderate adverse impacts. Both the noise exposure issues and the avalanche danger would be mitigated in several ways.

As described in the 2008 EA, the NPS's threshold for considering whether there could be an impairment is based on *major* (or significant) effects. The 2008 EA identified less than major effects on wildlife, natural soundscapes, and air quality for Alternative 2. Indeed, while some major effects have resulted from snowmobile or snowcoach use over the past five years—which included some days where snowmobile usage was nearly double the daily limit now adopted—the NPS has determined that none of the effects associated with that usage caused any impairment of park resources. Guided by this analysis and the professional judgment of National Park Service managers, the NPS has determined that there would be no impairment of park resources or values from implementation of the final rule.

Finally, the NPS has determined that the impacts associated with the OSV use permitted over the next two winter seasons, which are described at length in the 2008 EA, are both appropriate and necessary to fulfill the purposes of the park.

Section 1.5 of Management Policies, "Appropriate Use of the Parks," directs that the National Park Service must ensure that park uses that are allowed would not cause impairment of, or unacceptable impacts on, park resources or values. A new form of park use may be allowed within a park only after a determination has been made in the

professional judgment of the park manager that it will not result in unacceptable impacts. In addition, section 8.1.2 of the Management Policies, "Process for Determining Appropriate Uses," directs the NPS to evaluate the proposed use's consistency with applicable laws, executive orders, regulations, and policies; consistency with existing plans for public use and resource management; actual and potential effects on park resources or values; total costs to the NPS; and whether the public interest will be served. Finally, section 1.5 of the Management Policies directs park superintendents to continually monitor all park uses to prevent unanticipated and unacceptable impacts. If unanticipated and unacceptable impacts occur, section 1.5 directs the superintendent to engage in a thoughtful deliberative process to further manage or constrain the use, or discontinue it.

Environmental Assessment and Finding of No Significant Impact

The 2008 EA and the 2009 FONSI supporting this final rule contain the above-described evaluation of the permitted OSV use. In addition, they demonstrate that no unacceptable impacts are anticipated as a result of the use. Finally, the Preferred Alternative in the 2008 EA establishes a comprehensive monitoring and adaptive management plan to address any unanticipated unacceptable impacts. On this basis, the NPS has determined that the proposed OSV use permitted over the next two winter seasons is appropriate to fulfill the purposes of the park.

The NPS has also determined that the proposed OSV use permitted over the next two winter seasons is necessary to fulfill the purposes of the park. The National Park Service Organic Act directs the NPS to promote the use of the national parks by such means and measures as to conform to the fundamental purpose of said parks, which purpose includes providing for the enjoyment of the scenery, natural and historic objects, and wildlife within the parks (16 U.S.C. 1). Section 8.2 of Management Policies confirms that enjoyment of park resources and values by the people of the United States is one of the fundamental purposes of all parks. That section further states: "To provide for enjoyment of the parks, the National Park Service will encourage visitor use activities that are appropriate to the purpose for which the park was established, and are inspirational, educational, or healthful, and otherwise appropriate to the park environment; and will foster an understanding of and

appreciation for park resources and values, or will promote enjoyment through a direct association with, interaction with, or relation to park resources; and can be sustained without causing unacceptable impacts to park resources or values."

As explained in the 2008 EA, OSV use of Yellowstone National Park has been occurring since 1949, and snowmobiles have been used for 48 of the park's 137 years. Yellowstone is a large park, distances between attractions at Yellowstone are great, and some form of motorized vehicular access is needed to access various destination areas. Snowmobiles and snowcoaches are used for this purpose in the winter just as private vehicles and buses are used in the summer. They are both forms of transportation, not recreational activities unto themselves. Finally, snowmobiles and snowcoaches each provide very different experiences in that they provide varying levels of direct interaction with the park's resources and values.

The NPS received approximately 27,500 comments on the 2008 EA and 39,767 comments on the proposed rule. In many cases, the comments received on the proposed rule were very similar in content to those received on the 2008 EA. Numerous commenters expressed concerns that the Preferred Alternative and the rule, would violate the NPS Organic Act and would be inconsistent with the 2006 NPS Management Policies, among other things causing unacceptable impacts to park resources and values. The NPS believes most of these concerns are based on a belief that snowmobiles do not belong in the park, and should be replaced with snowcoaches. These concerns do not take into account recent monitoring and studies that show the nearly equal contribution of snowmobiles and snowcoaches to the concerns expressed by the commenters (and that snowcoaches are clearly the source of some concerns). Statistically, movement responses of wildlife were slightly higher for snowcoaches than for snowmobiles. Monitoring also indicates that commercially guided snowmobile groups and snowcoaches contribute similarly to the amount of time OSVs are heard. Snowcoaches also use more fuel on a per passenger basis than do snowmobiles. In short, neither OSV type provides a clear advantage with respect to environmental impacts. Recent monitoring and studies demonstrate that the regulated use of both snowcoaches and snowmobiles described in the Selected Alternative will not result in impairment of park resources or values,

nor will it result in unacceptable impacts on the park.

Air and Sound Emission Requirements

To mitigate impacts to air quality and the natural soundscape, the NPS is continuing the requirement that all recreational snowmobiles meet strict air and sound emissions requirements to operate in the park, with limited exceptions. For air emissions, all snowmobiles must achieve a 90% reduction in hydrocarbons and a 70% reduction in carbon monoxide, relative to EPA's baseline emissions assumptions for conventional two-stroke snowmobiles. For sound emissions, snowmobiles must operate at or below 73 dBA as measured at full throttle according to Society of Automotive Engineers (SAE) J192 test procedures (revised 1985). The Superintendent will maintain a list of approved snowmobile makes, models, and years of manufacture that meet NPS requirements. The certification is good for six years from the date on which a model is certified as meeting the requirements.

The NPS is continuing the requirement that began with the 2005 model year that all snowmobiles must be certified under 40 CFR part 1051 to a Family Emission Limit (FEL) no greater than 15 g/kW-hr for hydrocarbons (HC) and 120 g/kW-hr for carbon monoxide (CO). Snowmobiles must be tested on a five-mode engine dynamometer consistent with the test procedures specified by the EPA (40 CFR parts 1051 and 1065). Other test methods could be approved by the NPS.

The NPS is retaining the use of the FEL method for demonstrating compliance with its emissions requirements because it has several advantages. First, use of FEL will ensure that all individual snowmobiles entering the park achieve the NPS's emissions requirements, unless modified or damaged (under this regulation, snowmobiles which are modified in such a way as to increase air or sound emissions will not be in compliance with NPS requirements and therefore not permitted to enter the park). Use of FEL will also minimize any administrative burden on snowmobile manufacturers to demonstrate compliance with NPS requirements because they already provide FEL data to the EPA. Further, the EPA has the authority to ensure that manufacturers' emissions claims on their FEL applications are valid. EPA also requires that manufacturers conduct production line testing (PLT) to demonstrate that machines being manufactured actually meet the

certification levels. If PLT indicates that emissions exceed the FEL levels, then the manufacturer is required to take corrective action. Through EPA's ability to audit manufacturers' emissions claims, the NPS will have sufficient assurance that emissions information and documentation will be reviewed and enforced by the EPA. FEL also takes into account other factors, such as the deterioration rate of snowmobiles (some snowmobiles may produce more emissions as they age), lab-to-lab variability, test-to-test variability, and production line variance. In addition, under the EPA's regulations, all snowmobiles manufactured must be labeled with FEL air emissions information. This labeling will help to ensure that NPS emissions requirements are consistent with these labels. The use of FEL will avoid potential confusion for consumers.

The air emissions requirements for snowmobiles allowed to operate in the park should not be confused with standards adopted by the EPA in a final rule published in the **Federal Register** on November 8, 2002 (67 FR 68242). The EPA regulations require manufacturers to meet certain fleet averages for HC and CO emissions. For example, the Phase 1 standards required all snowmobile manufacturers to meet a fleet-wide average in 2007 of 275 g/kW-hr for CO and 100 g/kW-hr for HC, which represents a 30% reduction from the baseline emission rates for uncontrolled snowmobiles. Any particular make/model may emit more or less than the standard as long as the fleet average does not exceed the standard. Phase 2 and Phase 3 standards will be implemented in 2010 and 2012, respectively, effectively requiring the equivalent of a 50% reduction in both HC and CO as compared to average baseline levels. By comparison, NPS requires that all snowmobiles operating in the park meet a FEL of 120 g/kW-hr for CO and 15 g/kW-hr for HC. This means that snowmobiles operating in the park represent the cleanest that are commercially available.

To determine compliance with the sound emissions requirements, snowmobiles must be tested using SAE J192 test procedures (revised 1985; or potentially as further revised and adapted for use by NPS). The NPS recognizes that the SAE updated these test procedures in 2003; however, the changes between the 2003 and 1985 test procedures could yield different measurement results. The sound emissions requirement was initially established using 1985 test procedures (in addition to information provided by industry and modeling). To ensure

consistency in the test results, the NPS will at this time continue to use the 1985 test. The SAE J192 (revised 1985) test also allows for a tolerance of 2 dBA over the sound limit to account for variations in weather, snow conditions, and other factors. The NPS understands that an update to the 2003 J192 procedures may be underway, and the NPS will continue to evaluate these test procedures and possibly adopt them after these regulations are implemented. Other test methods could be approved by NPS on a case-by-case basis.

Snowmobiles may be tested at any barometric pressure equal to or above 23.4 inches Hg uncorrected (as measured at or near the test site). This exception to the SAE J192 test procedures maintains consistency with the testing conditions used to determine the sound requirement. This allowance for reduced barometric pressure is necessary since snowmobiles were tested at the elevation of Yellowstone National Park, where atmospheric pressure is lower than that under the SAE J192's requirements. Testing data indicate that snowmobiles test quieter at higher elevation, and therefore some snowmobiles may comply with the NPS's sound emissions requirements at higher elevations even though they do not when tests are conducted near sea level.

The NPS will annually publish a list of snowmobile makes, models, and years of manufacture that meet its emissions and sound requirements. Snowmobile manufacturers may demonstrate that snowmobiles are compliant with the air emissions requirements by submitting to the NPS a copy of their applications used to demonstrate compliance with EPA's general snowmobile regulation (indicating FEL). The NPS will accept this application information from manufacturers in support of conditionally certifying a snowmobile as meeting its air emissions requirements, pending ultimate review and certification by EPA at the same emissions levels identified in the application. Should EPA certify a snowmobile at an emission level that would no longer meet the NPS's requirements, this snowmobile would no longer be considered by NPS to be compliant with its requirements and would be phased-out according to a schedule that will be determined by the NPS to be appropriate. For sound emissions, snowmobile manufacturers may submit their existing Snowmobile Safety and Certification Committee (SSCC) sound level certification form. Under the SSCC machine safety standards program, snowmobiles are

certified by an independent testing company as complying with all SSCC safety standards, including sound standards. This regulation does not require the SSCC form specifically, as there could be other acceptable documentation in the future. The NPS will work cooperatively with the snowmobile manufacturers on appropriate documentation. The NPS intends to continue to rely on certified air and sound emissions data from the private sector rather than establish its own independent testing program. When the NPS certifies snowmobiles as meeting its requirements, NPS will announce how long that certification applies. Generally, each snowmobile model will be approved for entry into the park for six winter seasons after it is first listed. Based on NPS experience, six years represents the typical useful life of a snowmobile, and thus six years provides purchasers with a reasonable length of time where operation is allowed once a particular model is listed as being compliant. If a manufacturer recertifies a snowmobile model to NPS requirements for emissions and sound, it could be used for additional years. It is also based on EPA snowmobile emission regulations and the deterioration factors that are part of those regulations (EPA requires that if a manufacturer certifies its snowmobile will comply with EPA's emission regulations, the snowmobile will meet those regulations for a period of five years or 5,000 miles).

Individual snowmobiles modified in such a way as to increase sound and air emissions of hydrocarbons and carbon monoxide beyond the emission restrictions will be denied entry to the park. It is the responsibility of end users and guides and outfitters to ensure that their OSVs, whether snowmobiles or snowcoaches, comply with all applicable restrictions. Air and sound emission requirements for snowcoaches are described below. In Yellowstone, the requirement that all snowmobilers travel with commercial guides will assist NPS in enforcing these requirements, since businesses providing commercial guiding services in the park are responsible under their contracts with the park to ensure that their clients use only snowmobiles that meet the NPS's requirements. In addition, these businesses are required to ensure that snowmobiles used in the park are not modified in such a way as to increase sound or air emissions, and that snowmobiles are properly maintained.

Snowmobiles being operated on the Cave Falls Road, which extends approximately one mile into

Yellowstone from the adjacent national forest, will be exempt from air and sound emissions requirements. Because of the low level of impacts resulting from the light use of the Cave Falls Road, which is incidental to recreational use of the surrounding national forest, NPS has found it is not necessary to require these users to comply with requirements that address issues associated with use of the interior portions of the park.

Under concession contracts issued in 2003, 78 snowcoaches are currently authorized to operate in Yellowstone (and in the parkway between Flag Ranch and Yellowstone's South Entrance). Approximately 29 of these snowcoaches were manufactured by Bombardier and were designed specifically for oversnow travel. Those 29 snowcoaches were manufactured before 1983 and are referred to as "historic snowcoaches" for the purpose of this rulemaking. All other snowcoaches being used are passenger vans or light buses that have been converted for oversnow travel using tracks and/or skis. During the winter of 2008–2009, an average of 29 snowcoaches entered Yellowstone each day (during the prior winter, 2007–2008, an average of 35 snowcoaches entered the park each day).

As of the winter of 2009–2010, all snowcoaches must be commercially guided. These trained, knowledgeable operators help ensure that air and sound emission requirements are met, wildlife impacts are minimized, and visitor and employee safety is assured.

The University of Denver conducted winter emissions measurements in Yellowstone that involved the collection of emissions data from in-use snowcoaches and snowmobiles in February 2005 and February 2006. Results from that work indicate that snowcoaches and snowmobiles meeting NPS air emission requirements are now very similar in their per passenger emissions. This work also supports snowmobile air emissions requirements and the development of snowcoach air emission requirements. The snowcoach fleet should be modernized to reduce carbon monoxide and hydrocarbon emissions. However, road and snow conditions and low power-to-weight ratios of snowcoaches contribute considerably to air emissions. This means that even an upgraded snowcoach fleet operating in Yellowstone will have days for which fuel consumption and emission levels might be high.

In comparison with older carbureted snowcoaches, snowcoaches operating within EPA's Tier I standards are

cleaner. In 2004, EPA began phasing-in Tier II emissions standards for multi-passenger vans, and they will be fully phased-in during 2009. Tier II standards will require that vehicles be even cleaner than Tier I, and full emission controls will function more of the time.

During the duration of this temporary plan, all non-historic snowcoaches must meet air emission requirements, which will be the EPA emissions standards in effect when the vehicle was manufactured. This will be enforced by ensuring that all critical emission-related exhaust components are functioning properly. Malfunctioning critical emissions-related components must be replaced with the original equipment manufacturer (OEM) component where possible. If OEM parts are not available, aftermarket parts may be used. In general, catalysts that have exceeded their useful life must be replaced unless the operator can demonstrate the catalyst is functioning properly. Modifying or disabling a snowcoach's original pollution control equipment is prohibited except for maintenance purposes. Individual snowcoaches may be subject to periodic inspections to determine compliance with emission and sound requirements.

The restrictions on air and sound emissions in this rule are not a restriction on what manufacturers may produce but an end-use restriction on which commercially produced snowmobiles and snowcoaches may be used in the park. The NPS Organic Act (16 U.S.C. 1) authorizes the Secretary of the Interior to "promote and regulate" the use of national parks "by such means and measures as conform to the fundamental purpose of said parks * * * which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." Further, the Secretary is expressly authorized by 16 U.S.C. 3 to "make and publish such rules and regulations as he may deem necessary or proper for the use and management of the parks. * * *

" This exercise of the NPS Organic Act authority is not an effort by NPS to regulate manufacturers and is consistent with Section 310 of the Clean Air Act.

Since 2001, the park has been converting its own administrative fleet of snowmobiles to meet these NPS requirements. These newer machines have proven successful in fulfilling most of the NPS's administrative needs throughout the park. However, the NPS recognizes that some administrative applications, such as off-trail boundary

patrols in deep powder, towing heavy equipment or disabled sleds, search and rescue, or law enforcement uses, may require additional power beyond that supplied by currently available snowmobiles that meet the NPS's air and sound emissions requirements. In such limited cases, the NPS will sometimes need to use snowmobiles that do not meet the requirements this rule imposes upon recreational snowmobiles (which do not have these special needs because they travel only upon groomed roads as part of a tour group led by a commercial guide).

Guided Tours and Group Size

In order to mitigate impacts to natural soundscapes and wildlife, and for visitor and employee safety, all recreational snowmobiles and snowcoaches operated in Yellowstone must be led by a commercial guide, except for those snowmobiles being operated on the one-mile segment of the Cave Falls Road that extends into the park from the adjacent national forest. This guiding requirement has been found in practice to reduce conflicts with wildlife along roadways because these commercial guides are trained to lead visitors safely around the park with minimal disturbance to wildlife. Commercial guides are educated in safety, knowledgeable about park rules, and are required to exercise reasonable control over their clientele, which has reduced unsafe and illegal snowmobile use. Because of the contractual obligations to which commercial guides are subject, NPS has found this results in more effective enforcement of park rules. These guides receive rigorous multi-day training. They also are experts at interpreting the resources of the park to their clients. Commercial guides are employed by local businesses, not by NPS. Commercial guiding also tends to result in larger snowmobile parties than unguided use, which reduces the overall number of encounters with wildlife and reduces the amount of time that OSVs are audible (and, conversely, increases the interval of time that OSVs are not heard).

No more than eleven snowmobiles will be permitted in a group, including that of the guide. Except in emergency situations, guided parties must travel together and remain within a maximum distance of one-third mile of the first snowmobile in the group. These size and distance limits require that guided parties do not become separated, provide for sufficient and safe spacing between individual snowmobiles within the guided party, and allow the guide(s) to maintain control over the group to minimize the impacts on wildlife and

natural soundscapes. NPS thus expects that the continuation of the guiding requirement will facilitate compliance with park regulations and protect park resources.

Commercial snowmobile guides use a "follow-the-leader" approach, stopping often to talk with the group. They lead snowmobiles single-file through the park, using hand signals to pass information down the line from one snowmobile to the next, a system which has proven to be effective. Signals are used to warn group members about wildlife and other road hazards, indicate turns, reduce speed, and when to turn on or off the snowmobile. Further, all commercial guides are trained in basic first aid and CPR. In addition to first aid kits, they often carry satellite or cellular telephones, radios, and other equipment for emergency use. Guides are thus well-equipped to ensure that park regulations are enforced, wildlife are protected, and to provide a safer overall experience for visitors.

Since the winter of 2003–2004, all snowmobilers in Yellowstone have been led by commercial guides, resulting in considerable positive effects on visitor health and safety. Guides have been proven to be very effective at enforcing proper touring behavior, such as adherence to speed limits, staying on the groomed road surfaces, and other snowmobiling behaviors that are appropriate to safely and responsibly visit the park. Since implementation of the guiding program, there have been pronounced reductions in the number of law enforcement incidents and accidents associated with the use of snowmobiles, even when accounting for the reduced number of snowmobilers relative to historic use levels. The use of guides is also beneficial to wildlife, since guides are trained to respond appropriately when encountering wildlife.

Snowmobile and Snowcoach Routes

Snowmobiles and snowcoaches will continue to be restricted to designated oversnow routes, which are a subset of the same roads that are traveled by motor vehicles during the remainder of the year. In addition to most of the Grand Loop Road, certain side roads will be open for snowmobile use after noon, based on the successful experience of the NPS with temporal zoning on Firehole Canyon Drive. Virginia Cascades will be accessible only via ski and snowshoe.

The final rule also allows for up to 50 snowmobiles to enter Yellowstone on the Cave Falls Road, an approximately one-mile segment extending into the southwest corner of the park from the

Targhee National Forest. This short road segment does not connect to the rest of the oversnow routes in Yellowstone, and connects only to the national forest lands, which do not have air and sound requirements or guiding requirements. Use of this route is incidental to recreational use of the national forest lands, is far removed from the snowmobile use and the resulting impacts that occur within the interior of Yellowstone, and is therefore considered separately from the 318 snowmobile limit.

Snowmobile and snowcoach use in the two-mile road segment between Yellowstone's South Entrance and Flag Ranch in the John D. Rockefeller, Jr. Memorial Parkway will be governed by Yellowstone requirements (as is also discussed in the separate rule for the Parkway). That is all snowmobiles operating on this road segment must meet the commercial guiding, NPS air and sound requirements, daily use limits, and other requirements to operate in Yellowstone. Similarly, all snowcoaches operating on this road segment must meet Yellowstone requirements.

Monitoring and Adaptive Management

Scientific studies and monitoring of winter visitor use and park resources (including air quality, natural soundscapes, wildlife, employee health and safety, water quality, and visitor experience) will continue. As part of its adaptive management of winter use activities, NPS will close selected areas of the park to visitor use, including sections of roads, if these studies indicate that human presence or activities have unacceptable impacts on wildlife or other park resources that cannot otherwise be mitigated. A one-year notice will ordinarily be provided before any such closure is implemented unless immediate closure is deemed necessary to avoid impairment of park resources. The Superintendent will continue to have the authority under various provisions of this rule as well as 36 CFR 1.5 to take emergency actions to protect park resources and values.

The adaptive management program described in the 2008 EA provides park managers with a wide variety of tools to ensure that the goals and objectives of the winter use plans are being achieved. Some of the techniques available include adjustments in snowmobile or snowcoach use levels (up or down), adjustments in air and sound emissions requirements, visitor and guide education, timing of entries, and group sizes.

Adjustment to the daily entry limits for snowmobiles and snowcoaches is

one of several tools available to park managers to ensure that the goals and objectives of the winter use plan are maintained. Through adaptive management, if monitoring of use levels of snowmobiles and snowcoaches allowed under the FONSI indicates acceptable conditions, the NPS will increase use levels to the extent acceptable conditions can be maintained. Conversely, if monitoring of use levels of snowmobiles and snowcoaches allowed under the FONSI indicates unacceptable conditions, the NPS will reduce use levels to an extent that acceptable conditions can be maintained. In some cases, additional rulemaking would be required in order to adjust numbers.

The NPS is implementing a multi-year research proposal intended to specifically address the question of whether grooming of the Madison to Norris road segment in Yellowstone has led to alterations of bison movements and distribution. The question was identified in a report by Dr. Cormack Gates et al., entitled "The Ecology of Bison Movements and Distribution in and Beyond Yellowstone National Park" (2005). The research program will involve a linked series of experiments that will enable researchers to gain insight into how road grooming and other factors currently affect bison travel. The NPS has begun deploying cameras along travel routes to gain information on the relationship between road grooming and bison travel. The research program will include the analysis of existing data on GPS-collared bison, the tracking of additional GPS-collared bison, and use of the cameras, without necessitating the closure of the Gibbon Canyon road segment to public OSV travel. During the five year period, other roads or routes may be investigated to help understand the relationship between snow depth, grooming, and bison movement. For example, the Firehole Canyon Drive may be closed to oversnow travel and the Grand Loop Road gated to allow snowmobile and snowcoach travel, but not allow bison movement on the main road. Bison would then be forced to travel cross-country or along the ungroomed Firehole Canyon Road. Similarly, the Madison to Norris Road may be fenced or gated in the vicinity of the new bridge over the Gibbon River to restrict bison movement on the Madison to Norris Road and force bison to travel cross-country. Thus, bison movement in relation to snow depth may be tested without closing a main road. However, following the five years of data

gathering and analysis, the NPS, in consultation with the researchers, will consider closing the main Madison to Norris route to observe bison response. That decision will rely on the results of the data gathering and analysis and whether such a closure would be likely to yield informative data or conclusions. If implemented, such a closure would likely last several seasons.

Maintaining Entry by Sylvan Pass

Sylvan Pass will be open for oversnow travel (both motorized and non-motorized) for a limited core season, from December 22 through March 1 each year, subject to weather-related constraints and NPS capacities. A combination of avalanche mitigation techniques may be used, including risk assessment analyses as well as forecasting and helicopter- and howitzer-dispensed explosives. The NPS will continue to evaluate additional avalanche mitigation techniques and risk assessment tools in order to further improve safety and visitor access.

From March 2 to March 15, the NPS will maintain the road segment from the East Entrance to a point approximately four miles west of the entrance station to provide for opportunities for cross-country skiing and snowshoeing. Limited snowmobile and snowcoach use will be allowed in order to provide drop-offs for such purposes.

This approach both addresses the concerns of the communities and the National Park Service. The City of Cody, Wyoming, as well as Park County, Wyoming, and the State of Wyoming have clearly articulated the importance of this route to the community and the historical relationship between Cody and Yellowstone's East Entrance. They have spoken for the businesses near Yellowstone's East Entrance and how those businesses have been negatively impacted in recent years by the changing patterns of winter visitation and uncertainty regarding winter use in the park. They have stated how those businesses will continue to be adversely affected if the pass is closed to OSV travel in the winter. The community and businesses have also stated the value they place on the certainty of the road being open in the winter and the importance of that certainty to their businesses and guests. NPS acknowledges those values and concerns and has carefully weighed those considerations.

Avalanche control at Sylvan Pass has long represented a safety concern to the National Park Service. The 2000 Final Environmental Impact Statement (FEIS), the 2003 Supplemental Environmental

Impact Statement, the 2004 EA, and the 2007 FEIS all clearly identify the considerable avalanche danger on Sylvan Pass, which has been well known for many years. Approximately 20 avalanche paths cross the road at Sylvan Pass. They average over 600 feet of vertical drop, and the East Entrance Road crosses the middle of several of the paths, putting travelers at risk of being caught in an avalanche. NPS employees must cross several uncontrolled avalanche paths to reach the howitzer used for discharging those avalanches, and the howitzer is at the base of a cliff prone to both rock-fall and additional avalanche activity (the howitzer cannot be moved without compromising its ability to reach all avalanche zones). Artillery shells sometimes fail to explode on impact, and unexploded rounds remain on the slopes, presenting year-round hazards to both employees and visitors, both in Yellowstone and the Shoshone National Forest. Natural avalanches can and do occur, both before and after howitzer use. Using a helicopter instead of a howitzer also is a high-risk activity because of other risks, such as high winds, a helicopter contractor would have to incur.

The NPS may use a combination of techniques that have been used in the past (howitzer and helicopter), as well as techniques that may be available in the future. Area staff may use whichever tool is the safest and most appropriate for a given situation, with the full understanding that safety of employees and visitors comes first. Employees in the field make the operational determination when safety criteria have been met, and operations can be conducted with acceptable levels of risk. The NPS will not take unacceptable risks. When safety criteria have been met, the pass will be open; when they have not been met, the pass will remain closed. As with past winters, extended closures of the pass may occur, and the NPS will continue to provide notices of the road status.

Summary of and Responses to Public Comments

The NPS published a proposed rule on November 5, 2008 and accepted public comments through November 20, 2008. The NPS reopened the comment period on July 24, 2009 and accepted public comments through September 8, 2009. Comments were accepted through the mail, hand delivery, and through the Federal eRulemaking Portal: <http://www.regulations.gov>. A total of 39,767 comment documents were received.

1. *Comment:* The numbers of snowmobiles and snowcoaches that

should be permitted into the park should be set at numbers higher or lower than those proposed by the plan.

Response: A limit of 318 will produce an average considerably lower than those seen in recent years. With a limit of 720 over the last 5 years, snowmobile use did not average more than 300 per day. On most days, use was much lower than 300 (in January/February 2007, the average, for example, was 273), but the average was closer to 300 as a result of the higher numbers seen around Christmas 2006 and other peak days, when use rose as high as 543 per day. A limit of 318 will greatly reduce those peaks and thereby is expected to lower the overall average. For various reasons, it is not expected that the 318 daily limit will be reached during the next two winters. It will likely be difficult for all guides and outfitters to fill their allocations: different sizes of groups will probably create one or two unused snowmobiles per allocation, and last minute cancellations will probably leave some allocations unused. Also, using last winter as an example, one guide company had only 10 snowmobiles available to use, out of an allocation of 30. Thus, every day, 20 snowmobile allocations went unused. Finally, unless recent use patterns illustrated in the 2008 EA shift greatly, the 318 limit will not be reached every day or even often enough to produce an average more than 300. Also, as explained in the 2008 EA, NPS cannot allow higher numbers of snowmobile or snowcoaches to enter the park until the NPS analyzes their effects in an EIS, because higher numbers of snowmobiles and snowcoaches have the potential to create major adverse impacts. Additionally, at this time, NPS has not conducted sufficient analysis to determine whether higher numbers would cause unacceptable impacts or would otherwise be an appropriate use. In a long-term plan and EIS, alternatives with higher numbers of snowmobiles would be considered.

2. *Comment:* The method in which snowmobile limits should be set should be based on seasonal variations, adaptive management, annual maximums, high demand times (holidays), and/or concession contracts, as is the case for snowcoaches.

Response: As reflected in the analyses within the judicially vacated 2007 EIS providing for variable daily limits would have the potential to create major adverse impacts on park soundscapes, particularly on days when visitation exceeded 318 snowmobiles and 78 snowcoaches. Such impacts would have to be first analyzed in an EIS. Weekends are not necessarily the

busiest days; allowing higher visitation on weekends could deprive visitors the ability to enter on weekdays. Annual limits would provide variable daily limits as well and may result in major impacts. Such an alternative must be first analyzed in an EIS, and could be analyzed in the long-term plan and EIS. The decision includes an adaptive management program.

3. *Comment:* The NPS should phase out or ban snowmobiles, and transition to a snowcoach-only system.

Response: Current science suggests that a snowcoach-only system in Yellowstone could cause a number of impacts: major soundscape impacts, high fuel consumption, greater wildlife responses, and more damage to the snow road surface than from snowmobiles. At this time NPS has not conducted sufficient analysis to determine whether such a system would cause unacceptable impacts or would otherwise be an appropriate use. In a long-term plan and EIS, such a system would be considered.

4. *Comment:* The NPS should consider alternatives beyond the use of snowmobiles or snowcoaches, including plowing more roads in the winter to allow for vehicle use.

Response: As explained on 2008 EA pp. 2–8 to 2–9, plowing was dismissed as an alternative in this EA because doing so would add uncertainty and because many winter operators had already invested in oversnow equipment, assuming a plan similar to this one would indeed be implemented. The plowing option remains a possibility to consider in long-term winter use planning.

5. *Comment:* The current system of commercial guides should be modified to include non-commercial guides certifying individuals to lead groups, or the elimination of the requirement for a guide all together.

Response: The concept of non-commercial guiding or unguided access (both with training programs) has been analyzed in previous winter plans and will be evaluated in a long-term winter plan. Additionally, the NPS may consider the Certified Group Leader concept in its future long-term winter use planning. The NPS will consider non-commercial guides in long-term winter use planning. The interim plan will last for two winters, which is not sufficient time to design and implement pilot or test programs and study and report on their effects.

6. *Comment:* Snowmobile numbers should be regulated through variations in when and where snowmobiles can access the park, such as “snowmobile

only” days and/or limiting snowmobile use to certain areas of the park.

Response: Alternating kinds of visitation by week or day would be logistically difficult to implement and would not provide the consistency needed for effective trip planning for visitors in a short-term plan. In a long-term plan, the alternatives will consider a variety of spatial or temporal zoning as the comment suggests.

The requirement to use commercial guides has the effect of grouping all snowmobilers and many snowcoaches into certain time windows. Generally, these are two hour windows in the mornings and afternoons at the entrances and midday at Old Faithful. Outside of those periods commercial use is greatly reduced, and the opportunity to walk or ski in silence is more readily available. The NPS wishes to protect park soundscapes at all times of the winter, not just these less busy time periods. While visitors are certainly free to visit at less busy times to seek natural quiet, the NPS believes they also should be able to find it at other times. The NPS believes that adoption of the rule would offer ample opportunities for quiet.

7. *Comment:* The NPS should consider alternative elements that focus on non-motorized uses such as promoting cross country skiing, and snow shoeing.

Response: NPS will continue to facilitate non-motorized recreation and set ski tracks on the edges of snow roads. Snowshoers and cross-country skiers also have impacts on wildlife. The best available science indicates that cross-country skiers are more likely than snowmobiles to elicit a startle or flight response in wildlife as a result of their less regular use patterns and quiet approach to animals. Yellowstone is a large park, and it is 30 miles from West Yellowstone to Old Faithful and 50 miles from Mammoth Hot Springs to Old Faithful. Most visitors cannot ski or snowshoe these distances. For most visitors to enjoy locations in Yellowstone such as Old Faithful or the Grand Canyon of the Yellowstone, motorized access is necessary. Ski and snowshoe opportunities are available throughout the park, and many people access trailheads via snowmobile or snowcoach.

8. *Comment:* Only certain types of snowmobiles and/or snowcoaches with special technology should be allowed in the park.

Response: Electric snowmobiles could be used in Yellowstone under this winter use plan if they meet all other requirements. NPS is not aware of their commercial availability. Four-stroke

snowmobiles have been operated by concessioners within the park for the past six years. There are currently air and sound requirements for snowmobiles, and future requirements for snowcoaches are expected.

Snowmobiles that meet NPS air and sound requirements have considerably cleaner emissions and are quieter than snowmobiles that do not meet NPS requirements. The NPS continues to encourage snowmobiles (and snowcoaches) to employ improved technologies. NPS will continue to move towards air and sound requirements for snowcoaches, and snowcoaches will be required to adhere to noise and air emissions requirements, similar to those of snowmobiles.

9. *Comment:* The park should consider additional actions such as increasing law enforcement activities, lowering speed limits, stopping accommodation of winter use, prohibiting tours and allowing trips to set destinations only, and expansion of educational programs regarding winter use opportunities at Yellowstone.

Response: NPS will continue enforcement of its regulations. While an adjustment to speed limits may be analyzed further in the long-term winter use planning effort, a much lower speed limit would not allow access to Yellowstone's widely-spaced attractions. The NPS believes providing motorized oversnow access to the features of Yellowstone for the next two winter seasons helps fulfill the mission of the park to provide for visitor use and enjoyment of those resources. The current commercial guiding program provides an excellent way for the public to learn about the park and appropriate behavior. In the long-term plan, the NPS will evaluate alternatives that look at education programs for unguided or non-commercial guided opportunities.

10. *Comment:* The interim plan should be modified to include different timeframes for how long it would be in effect and different seasonal entry points.

Response: NPS believes the 2-year duration of the plan is necessary to provide adequate time to develop a new long-term winter use plan. In a long-term plan, the alternatives will consider a variety of spatial or temporal zoning as the comment suggests.

11. *Comment:* Winter use management should include either high fees for snowmobile use or subsidized snowcoach use.

Response: NPS will consider the fee suggestion in future long-term winter use planning.

12. *Comment:* NPS should create a lottery, permit, or reservation system to

limit winter use access, including a safety test or other educational component to assist the park in enforcement. Allocations among guides and outfitters should be fair and equal.

Response: Through the use of commercial guides, a reservation system is in place so that visitors can plan ahead for access to the park. Other allocation systems and education opportunities will be evaluated in the long-term winter use planning. The commercial guiding program has substantially assisted the park in improving compliance with park regulations.

13. *Comment:* Areas outside the park should be designated for snowmobile use, the park should be periodically shut down to allow for regeneration of the ecosystem, and snowmobiles should be required to stay on certain tracks if use is allowed in the Park.

Response: Whether areas outside the Park are also available for snowmobiling is not within the scope of this decision-making process. Snowmobiles in Yellowstone have always been restricted to park roads and have never been permitted off-road. The sheer size of Yellowstone means that more than one road is necessary to provide adequate visitor access. The No Action Alternative considered in the 2008 EA have closed the park and therefore better protected air quality. However, that alternative would have seriously limited access to much of the park for those not capable of skiing or snowshoeing long distances. Snowmobiles as well as snowcoaches offer visitors the opportunity to enjoy Yellowstone. With the requirement to use only snowmobiles that meet NPS air and sound requirements and are accompanied by a commercial guide, snowmobiles serve as a form of access to the features of Yellowstone, not a separate recreational activity.

14. *Comment:* NPS should require that winter users maintain 100 meter animal distance when stopping.

Response: The NPS requires visitors stay at least 100 yards (91 m) away from bears and wolves and at least 25 yards (23 m) away from all other animals—including bison, elk, bighorn sheep, deer, moose, and coyotes.

15. *Comment:* Snowmobiles should only be allowed for use by rangers, the disabled, or for emergency operations.

Response: Administrative use of snowmobiles is also managed by the NPS winter use plan, and as explained above, most NPS snowmobiles now meet NPS air and sound requirements. Similarly, researchers must also use snowmobiles that meet NPS air and sound requirements. Snowmobiles that

do not meet NPS air and sound requirements are used administratively only where necessary for the performance of park duties (for example, in deeper snow associated with boundary patrol).

Snowmobiles provide a different type of interaction with the park's attractions than do snowcoaches. Providing some level of access via both snowmobiles and snowcoaches provides for different kinds of enjoyment of the park's scenery and natural and historic objects and wildlife.

16. *Comment:* The interim plan should not use adaptive management to address existing park violations of NPS mandates.

Response: This rule does not authorize violations of any NPS mandates. NPS will continue enforcement of its regulations under any scenario, and the NPS will use adaptive management and monitoring results to make adjustments to the plan's implementation.

17. *Comment:* The 2004 rule should be retained, and the NPS should reaffirm its commitment to keeping Sylvan Pass open.

Response: Due to a pending appeal and other litigation related to reinstatement of the 2004 rule, relying on the reinstated 2004 rule would create substantial uncertainty regarding winter access, and NPS does not believe it is a viable option. In addition, there has been no current NEPA analysis or other determination that use at the levels authorized under that regulation is consistent with the NPS's statutory and other mandates. The findings of the 2007 EIS, as well as the court order vacating it, both suggest that those use levels are probably not consistent with those requirements. In order to help assure winter access to Yellowstone, the NPS is completing planning and rulemaking to replace the 2004 regulation reinstated by the Wyoming Court. A separate decision has been made, and separate regulations will be published, for Grand Teton National Park and the John D. Rockefeller, Jr. Memorial Parkway.

This decision continues the implementation of the Sylvan Pass Agreement (subject to weather-related constraints and NPS fiscal, staff, infrastructural, equipment, and other safety-related capacities) during this interim plan. Management of the Pass will continue to be evaluated in a long-term plan.

18. *Comment:* The NPS air and sound requirements should be eliminated so that individuals can drive their snowmobiles on park roads.

Response: The NPS continues to require snowmobiles (and encourage snowcoaches) to employ improved technologies. Eliminating the air and sound requirements could lead to a return of historical conditions, which were found in 2000 to constitute impairment of park resources. Even if such use could be authorized, it would at a minimum have to be analyzed in an EIS. This comment will be considered in the course of the long-term planning process.

19. *Comment:* The 2008 EA selected an incorrect “no-action”, as it did not represent the current level of activity.

Response: NPS disagrees. When the 2008 EA was prepared, the 2007 rule had been vacated. No snowmobile or snowcoach use would have been authorized without action by the NPS, because the authorizations in the 2004 rule had expired pursuant to the sunset date provisions. After the 2008 EA was issued, the U.S. District Court for the District of Wyoming reinstated the 2004 rule without the sunset clauses, and as a result, up to 720 snowmobiles per day were allowed for the winter of 2008–09. Due to a pending appeal, there is still uncertainty regarding that reinstatement. As explained above, there has been no current NEPA analysis or other determination that use at the levels authorized under that regulation is consistent with the NPS’s statutory and other mandates. Accordingly, the No Action Alternative analyzed in the 2008 EA represents a more logical and useful benchmark against which impacts can be compared, and therefore continues to better satisfy the purposes of the no action alternative under NEPA.

20. *Comment:* The snowcoach-only alternative was improperly dismissed.

Response: A snowcoach-only transportation system would have numerous impacts and might not be the least impacting form of transportation. While NPS agrees that preservation of resources is key to the fundamental mandate of Yellowstone and the entire National Park System, the suggestion that the Yellowstone National Park enabling statute and the NPS Organic Act mandate snowcoach use is incorrect. These acts direct the agency to protect park resources and provide for enjoyment without incurring impairment. If NPS is to provide for any sizeable visitor access to Yellowstone in the winter, motorized vehicle use is necessary, and NPS believes that a limit of 318 snowmobiles per day and 78 snowcoaches per day effectively allows the agency to protect its resources while providing for visitation during this two-winter period.

21. *Comment:* The NPS has received a larger percentage of comments from the past planning efforts supporting a transition from snowmobiles to snowcoaches.

Response: The NPS has reviewed all comments received throughout the past and present winter use planning efforts in compliance with the NEPA and other relevant laws and regulations. The NPS is mandated to consider all of these comments in order to provide the decision-maker with a fully informed environmental analysis to base their decision on. NPS cannot base its decision simply on the sheer numbers of comments in support or against snowmobile, snowcoach, or solely non-motorized winter use. Snowcoach use has slowly and steadily increased. Somewhat more visitors still prefer to visit Yellowstone via snowmobiles. Snowcoaches do facilitate conversations between guides and visitors, but the guiding requirement for snowmobiles also has a similar result. If visitors double up on snowmobiles, the cost is comparable to snowcoach tickets for multiple individuals. Snowmobiles and snowcoaches both cause similar soundscape, wildlife and air quality impacts. Snowcoaches may consume more fuel per capita than do the snowmobiles that meet NPS air and sound requirements for use in Yellowstone. As the FONSI indicates, it is no longer clear that snowcoaches are the “least impacting” oversnow vehicles.

22. *Comment:* The Park should work with surrounding communities to educate the public regarding responsible and appropriate behavior within Yellowstone National Park.

Response: The current commercial guiding program provides an excellent way for the public to learn about the park and appropriate behavior. In the long-term plan, the NPS will evaluate alternatives that look at education programs for unguided or non-commercial guided opportunities.

23. *Comment:* The NPS should provide the public and use a transparent and candid interpretation of the findings related to snowmobile impacts on park resources.

Response: The NPS has used the most current information available in preparing the 2008 EA and this decision. That information has led to a new and better understanding of the contribution of both snowmobiles and snowcoaches to impacts on park resources.

24. *Comment:* The proposed rule and impact analysis violates the NPS’s Organic Act of 1916, findings within the 2008 EA, the court ruling of the U.S.

District Court for Wyoming, other previous decisions on this issue, and other provided court precedents.

Response: As a result of the Wyoming District Court’s order, the reinstated 2004 rule was in effect for the winter of 2008–2009. This interim rule would be in effect for two winter seasons. NPS believes the two-year duration of the plan is necessary to provide adequate time to develop a new long-term winter use plan. NPS believes the rule is consistent with all applicable court decisions concerning prior winter use plans, and other applicable authorities.

25. *Comment:* The methodologies of the analyses were flawed because it did not compare the impacts of snowcoaches versus snowmobiles adequately, consider the historical precedent of snowmobile use, and used existing concessioner contracts as the basis for use numbers.

Response: The computations in the 2008 EA were based on actual field measurements in Yellowstone, not on hypothetical modeling or estimates. Given the average passenger load on snowmobiles and snowcoaches in Yellowstone and the actual fuel economies of these vehicles, snowcoaches consume more fuel per passenger than snowmobiles. As indicated by the August 2008 peer-reviewed paper, “Portable Emission Measurements of Yellowstone National Park Snowcoaches and Snowmobiles” by Gary A. Bishop, Ryan Stadtmuller, Donald H. Stedman, and John D. Ray in the Journal of the Air and Waste Management Association (59:936–942), snowcoaches and snowmobiles are very similar in the per-passenger emissions. The soundscape modeling in the 2007 EIS (which was not challenged on this issue) indicated that a snowcoach-only alternative would cause major adverse effects to soundscapes. More recent monitoring information indicates snowcoaches are audible for similar time periods as commercially guided snowmobile groups. Also work on snowcoach sound indicates that the loud coaches include some modern vehicles, as well as those historic coaches that have not been retrofitted.

26. *Comment:* The false studies like the two-stroke emission test (where they used a very old, very out of tune two-stroke engine and compared the results against a brand new fuel efficient car) are a criminal use of taxpayer money.

Response: Current snowmobile emission information was based on modern snowmobiles that meet NPS air and sound requirements. Two-stroke snowmobile air emissions information used standard EPA emission factors.

27. *Comment:* The economic baseline analysis used in the 2008 EA should be 540 snowmobiles per day, as opposed to zero.

Response: As discussed above, the No Action Alternative analyzed in the 2008 EA represents the most logical and useful benchmark against which impacts can be compared, and therefore continues to best satisfy the purposes of the no action alternative under NEPA.

As discussed below, the economic analysis in this rule used a different baseline, based on the reinstated 2004 rule and its limit of 720 snowmobiles per day.

28. *Comment:* The NPS methodology for determining a comment period was improper and does not need to relate to the winter use season.

Response: Little time was available to complete the 2008 EA, so the public comment period on the EA in 2008 was quite limited. The NPS regrets any difficulties entering comments into its Web-based public comment system, but notes that comments sent by regular mail were also accepted. The NPS also provided an additional 45-day comment period on the proposed rule and took into account all comments received on the rule and 2008 EA. Thus a full 60-day comment period was provided on the proposed action.

29. *Comment:* NPS Management Policies prohibit the impairment of park resources and values, and snowmobile use constitutes an impairment.

Response: No impairment to park resources was found for the Selected Alternative.

30. *Comment:* No limit should be established for snowmobile access until impairment of park resources has been identified and proven. The standard of how impairment is applied to soundscapes is too strict.

Response: The Organic Act charges NPS with providing for enjoyment of the national parks “by such means as will leave them unimpaired.” However, nothing in the Organic Act suggests that impairment is the only consideration that may justify imposing limitations on use. The Organic Act clearly authorizes appropriate limitations on use as needed to protect park resources and values. Recreational uses may be prohibited if they are not an appropriate use, which does not necessarily mean that they cause impairment. NPS also manages uses so as to minimize conflicts among them. The NPS Management Policies explain when recreational and other uses may be prohibited or restricted. The natural soundscape is one of the “park resources and values” that NPS is

required to conserve and protect from impairment under the NPS Organic Act.

31. *Comment:* A potential precedent may be set that would restrict un-guided automobile use inside the park during the summer.

Response: This is a winter use plan not a summer plan. Issues and concerns are different in the winter than in the summer, and this plan does not set a precedent for summer visitation.

32. *Comment:* Unacceptable impacts to park resources were not adequately addressed in the 2008 EA—more action is needed to prevent the unacceptable impacts caused by snowmobile use within the park.

Response: The NPS finds that the negligible to moderate impacts of the Selected Alternative described in the 2008 EA and FONSI do not meet the criteria described in the FONSI for either unacceptable impacts or impairment, and are therefore consistent with the NPS’s statutory requirements under the Organic Act.

33. *Comment:* Snowmobiles that meet NPS air and sound requirements are not impacting the air quality within the park and give off fewer emissions.

Response: All snowmobiles allowed into the parks (with certain minor exceptions) must meet NPS air and sound requirements. These are the cleanest snowmobiles on the market. Impacts on air quality were analyzed and discussed in the EA and FONSI.

34. *Comment:* Air quality is adversely affected by the use of snowmobiles in the park, primarily due to exhaust, and that it is the duty of the NPS to prevent adverse impacts to air quality.

Response: Alternative 1 considered in the 2008 EA would close the park to visitor oversnow vehicle use and therefore fully protect air quality. However, Alternative 1 would deny access to much of the park for those not capable of skiing or snowshoeing. The Selected Alternative would allow only snowmobiles that meet NPS air and sound requirements into the park. Recent use levels have been similar to or higher than the levels expected under the Selected Alternative, and air quality has been very good to excellent in the park. It is therefore expected to remain very good to excellent.

35. *Comment:* Snowmobiles and snowcoaches have the same impact on air quality.

Response: Snowcoach use has been carefully analyzed in the winter use plan, particularly since their impacts upon park soundscapes, wildlife, and air quality are at times greater than those of snowmobiles. As indicated by the August 2008 peer-reviewed paper, “Portable Emission Measurements of

Yellowstone National Park Snowcoaches and Snowmobiles” by Gary A. Bishop, Ryan Stadtmuller, Donald H. Stedman, and John D. Ray in the Journal of the Air and Waste Management Association (59:936–942), snowcoaches and snowmobiles are very similar in the per-passenger emissions. Snowcoaches also use more fuel than snowmobiles, even accounting for the different passenger loads.

36. *Comment:* While the NPS claims to have independent “authority and jurisdiction to administer some provisions of the Clean Air Act” in the 2008 EA, the State of Wyoming has primacy under the Clean Air Act; therefore, the NPS has no authority to rely on air quality standards to limit snowmobile access in the park.

Response: NPS agrees the States of Wyoming, Montana and Idaho play a primary role in implementation of the Clean Air Act as it affects the park. However, as the Federal Land Manager, the NPS also has responsibilities to protect air quality and air quality-related values in the park. The Clean Air Act is not the sole applicable authority. As explained above, this is an exercise of the NPS Organic Act authority over use within the park, not an effort by NPS to regulate manufacturers, and it is consistent with Section 310 of the Clean Air Act. Air quality is expected to remain very good to excellent under the rule. The Organic Act reserves ample discretion to the Park Service to determine how best to provide for enjoyment of the Park. Thus, NPS has exclusive responsibility to determine the appropriate level and type of public access into national parks; indeed, many other national parks are closed entirely to motorized access in the winter.

37. *Comment:* The analysis of air quality was flawed, since air quality monitoring was not conducted along road corridors and the range of impacts from pollution was not fully accounted for in the analysis. The analysis of air quality impacts was improper since the NPS has not properly explained how an action would have “major” impacts on air quality within the park.

Response: The 2008 EA used new impact threshold definitions in order to address exactly the sorts of issues raised by this comment. The definitions for this EA were intentionally adjusted downward to be more conservative—that is, more protective—of park resources. The definitions are not based on parkwide metrics; rather, they are based on actual monitoring data, which are gathered at the two places where oversnow vehicle use is highest, Old Faithful and West Yellowstone. The NPS used the National Ambient Air

Quality Standards (NAAQS) in assessing air quality impacts because they provide an objective standard established by the EPA in order to protect air quality and protect public health.

38. *Comment:* The compaction of snow is a benefit of snowmobile use, as it prevents erosion.

Response: Snowmobile and snowcoach use under this rule is confined to a portion of the existing road system. The area of compacted snow comprises a negligible portion of the park acreage and has a negligible effect on overall snowmelt, runoff patterns, and erosion.

39. *Comment:* National parks are for the entire public, not just for environmentalists or special interest groups.

Response: National parks are open to the general public. Winter use management is intended to address specific issues while providing opportunities for all visitors to enjoy the parks consistent with NPS legal mandates and policies.

40. *Comment:* Studies have shown that black carbon emissions have adverse effects on the snowpack and should be analyzed before a rule is enacted.

Response: Monitoring of pollution deposition in the snowpack has been underway for more than 10 years, and this concern has not been identified in Yellowstone. As indicated in the 2008 EA, this monitoring will continue.

41. *Comment:* Many snowmobile operators drive too fast in the park

Response: All snowmobiles are to be commercially guided, which generally has eliminated speeding and other past problems. This is demonstrated, among other things, by the reduction in citations for such violations.

42. *Comment:* Banning or limiting all automobiles within the park should be explored, since snowmobiles are not the only motorized type of vehicle that creates impacts.

Response: Regarding automobiles in the summer, this is not a summer use plan, but rather a winter use plan, so such decision-making is beyond the scope of the rule. In the winter, the majority of the park has long been closed to automobiles, with the roads groomed for oversnow vehicle use. Plowing the roads for automobile use will likely be analyzed in the long-term winter use plan.

43. *Comment:* Snowmobile use adversely affects human health and safety because of air pollution, snowmobile accidents and crashes, and improper snowmobile operation.

Response: Concerning health and safety, results of the most recent personal exposure monitoring from winter 2008–2009 shows no exceedances of standards. With the requirement for commercial guiding, law enforcement incidents related to snowmobile use have dropped dramatically in the past five years, as compared to the 1990s, thus indicating fewer accidents and violations.

44. *Comment:* The analysis of health and safety is flawed because NPS must utilize health and safety metrics that have reasoned basis in relevant health standards for determining major health and safety impacts resulting from snowmobile use.

Response: NPS safety managers use OSHA and NIOSH metrics for measuring exposure of employees to sound and air pollution, which are standard measures used by safety professionals in determining hazards.

45. *Comment:* Snowmobile operators use caution and are polite to other users; I did not see any blue haze.

Response: NPS monitoring has shown dramatic improvements in winter conditions relative to historical use.

46. *Comment:* The cost of continuing snowmobile use at the park, conducting studies on this matter, and maintaining the East Entrance Road would be too much for the amount of snowmobilers that currently access the park. Furthermore, keeping Sylvan Pass open is too dangerous for park staff.

Response: Winter operations in Yellowstone are expensive for snowmobile or snowcoach access. The interim plan continues to implement the Sylvan Pass Agreement reached with the City of Cody, Park County, Wyoming, and the State of Wyoming. Sylvan Pass will be open only when safety criteria have been met.

47. *Comment:* The Park's assertion that the snowcoach-only alternative would have hazardous effects on oversnow travel is erroneous.

Response: If travel were restricted to snowcoaches only, a consequent increase in such traffic would result assuming visitation levels remain anywhere near current levels. This increase could compound the problems already seen in the park with rutting and damage to snow roads from coaches. That is why the NPS is implementing size and weight restrictions on coaches.

48. *Comment:* The Park informed commercially guided snowmobile businesses that 14 snowmobiles a day would be allowed per concessioner, yet the number now being proposed has been decreased to nine per day.

Response: NPS recognizes that some visitors will not be able to take snowmobiles into Yellowstone. However, most visitors will be able to take a snowcoach instead. Some visitors may have to adjust their plans and visit the park on different days.

49. *Comment:* The Park needs the revenue from snowmobiling activities, so entrance fees would have to be increased as a result of banning snowmobiles from entering the Park. Otherwise, the entrance fees should be increased in order to increase law enforcement patrols.

Response: Decisions regarding the appropriate type of winter use and numbers of snowmobiles and snowcoaches are made without regard to entrance fee revenues. Entrance fees related to winter use are a small part of Yellowstone's overall budget and a small part of the fee revenue that Yellowstone receives. Winter use accounts for 100,000 of the approximately 3.2 million people that visit Yellowstone each year.

50. *Comment:* Law enforcement efforts would not necessarily be decreased with the commercial snowmobile guide requirement, as is stated in the 2008 EA. Snowmobile use within the park requires increased law enforcement, since many snowmobile operators do not abide by the rules and regulations of the park.

Response: The NPS has reviewed the methodology used to calculate law enforcement incidents and believes they correctly show a decrease with the implementation of the managed use program, including commercial guiding. With the managed use program, the NPS believes that many of the incidents observed in the past (for example, snowmobilers speeding or going off road) rarely occur today.

51. *Comment:* The potential banning or limitations placed on snowmobile access to the park would create adverse impacts to surrounding businesses, tourists, as well as the NPS, since snowmobile outfitters and businesses that benefit from tourism would have to increase the cost of snowmobile tours for tourists.

Response: The 2008 EA and rulemaking analyzed socioeconomic impacts using IMPLAN modeling. Though this model does not incorporate every potential factor in the socioeconomic setting, it allows an objective analysis structure that may be applied to the entire planning area and cumulative impact study area. With respect to the number of snowmobile and snowcoach entries permitted under the Selected Alternative and resulting impacts on operators and visitors, the

permitted entries (318 snowmobiles and 78 snowcoaches) represent an 8.2% increase in snowmobiles and a 123% increase in snowcoaches compared to the 2007–2008 average of 294 snowmobiles and 35 snowcoaches per day. The percentage increases represented by the Selected Alternative are even larger compared to the 2008–2009 average of 205 snowmobiles and 29 snowcoaches per day. While the 2008–2009 use likely reflects visitor uncertainty brought on by recent court decisions, NPS does not think that use levels will increase considerably over the next two years that the Selected Alternative will be in effect. This is because of the current economic slowdown and because NPS does not expect a considerable increase in use over such a short period of time.

52. *Comment:* The economic interests that currently depend on snowmobiling could switch to business ventures related to snowcoaches and the NPS needs to consider the value of the natural surroundings in their analysis, since the park does not exist to provide profit for businesses located outside the park. They may switch to business ventures related to cross country skiing and snowshoeing.

Response: Gateway communities provide services to park visitors that the NPS cannot provide or has chosen not to provide. Through the planning process, the NPS determines appropriate type of winter use and numbers of snowmobiles and snowcoaches. Through the concessions contract process, the NPS then determines the nature of the business opportunities available and provides potential concessioners the opportunity to submit bid to provide those services. Businesses may then compete to provide those services in the park. The NPS recognizes that each type of use and access (snowmobile, snowcoach, ski, snowshoe) creates impacts and the impacts must be weighed with regard to the protection of park resources while providing for visitor enjoyment.

53. *Comment:* Snowmobile use inside the park creates undesirable impacts to soundscapes within the park, disrupts the quiet serenity the park offers in the absence of snowmobiles, and may very well be inconsistent with desirable conditions.

Response: Even with sound from cumulative effects of all oversnow vehicles, NPS expects soundscapes impacts to stay within moderate levels, levels that would be fully acceptable and would be consistent with its desired conditions and with the 2006 Management Policies. NPS agrees that winter serenity is important and

believes that the level of use permitted by the Selected Alternative (by snowmobiles that meet NPS air and sound requirements, combined with snowcoach use) will result in large portions of the day without the sound of oversnow vehicles.

54. *Comment:* NPS should explain the adaptive management thresholds (primarily soundscape thresholds), consistency with other NPS mandates, obligation to conserve park resources and leave them unimpaired throughout the entire park, legal basis for considering soundscapes as a park resource, what an unacceptable impact is, and baseline in gauging the impacts on snowmobile use on soundscapes.

Response: The adaptive management thresholds are a management tool only; they do not represent the unacceptable impacts or impairment thresholds described in section 1.4 of the Management Policies. Rather, they are a conservative measure used to alert the NPS manager that additional attention to a particular park resource or value is merited. By reacting to the exceedance of a conservative adaptive management threshold, NPS can seek to ensure that no unacceptable impacts or impairment occur. Accordingly, the fact that these thresholds have been exceeded in the past in no way undermines NPS's determination that "sound from recreational oversnow vehicles [is] well within acceptable ranges."

In backcountry areas and travel corridors, the OSV impacts were essentially compared against natural ambient. That is, the natural ambient was the existing ambient (minus the low percentage of aircraft sounds). In the Old Faithful developed area, the natural ambient was not measurable due to other existing non-natural sounds (the heating and ventilating systems in buildings adjacent to the monitoring site are continuously audible).

The 2008 EA contains an explanation of the relationship between major impacts, unacceptable impacts, and impairment. NPS notes that the term "major" as used in the 2008 EA is equated with "significant" effects within the meaning of NEPA. Accordingly, if a major impact were predicted, the NPS would prepare an EIS.

For soundscapes, one of the "clear bright lines" separating acceptable impacts from unacceptable impacts is whether implementation of an alternative would unreasonably interfere with the natural soundscape, be inconsistent with Yellowstone's purposes or values, impede the attainment of Yellowstone's desired future conditions, create an unsafe or

unhealthy environment, or diminish opportunities for current or future generations.

NPS understands that this "line" does not establish a "quantitative" standard as the commenter requests. However, the intensity of many impacts, and the manner in which those impacts translate into impairment or unacceptable impacts, cannot be described quantitatively. In such instances, they must rely on qualitative standards which are based on the NPS manager's best professional judgment.

The soundscape impact threshold definitions in the 2008 EA make clear that recreational oversnow vehicle noise is a subject of this EA and rulemaking; however, overflights and administrative vehicles are clearly identified as contributing to the cumulative soundscapes impacts, with appropriate mitigations also identified.

55. *Comment:* Newer snowmobiles, specifically ones that meet NPS air and sound requirements, do not create noise pollution—a majority of the impacts to soundscapes within the park emanate from NPS contractors.

Response: Recent monitoring indicates that commercially guided snowmobile groups and snowcoaches contribute similarly to the audibility of oversnow vehicles. Early in the managed winter use program, some contractors were using snowmobiles that did not meet NPS requirements. Newer contracts are correcting this problem, and the NPS continues to move towards a requirement that NPS and concession employees only use snowmobiles that meet NPS air and sound requirements.

56. *Comment:* The soundscapes impacts presented in the 2008 EA could be mitigated through further management of snowmobiles and snowcoaches by the NPS.

Response: The NPS has only recently understood that modern snowcoaches are also significant contributors to the concerns regarding loud oversnow vehicles, and the NPS is still working on methodologies and test procedures for sound testing of snowcoaches. The lack of a stable, long-term plan has slowed implementation of snowcoach sound and air emission requirements. An individual snowcoach represents a significant investment, and snowcoaches are operating under 10-year contracts that were awarded in 2003. Therefore the NPS believes the long-term planning process should establish the test procedures and specifics of snowcoach sound and air emission requirements.

57. *Comment:* Experiences on a snowmobile could not be replaced with

a snowcoach, such as the feeling of openness, experience of the scenery, experience of the ability to access public lands.

Response: NPS recognizes that snowmobiles and snowcoaches offer different types of experiences for visitors.

58. *Comment:* Snowmobile use has a negative impact on visitor experience from the noise, exhaust, and wildlife disturbance.

Response: A visitor survey in 2008 specifically addressed soundscapes and wildlife and found a high level of visitor satisfaction.

59. *Comment:* Snowcoach use should be increased based on past visitation trends, as snowcoaches could enhance the visitor experience.

Response: Snowcoach ridership has increased (except for the winter of 2008–2009 when uncertainty and economic concerns reduced all winter use). With more snowcoaches, NPS now understands that snowmobiles and snowcoaches both contribute to air quality, soundscapes, and wildlife impacts. Snowcoach limits have not been reached (the peak day in the last three years was 60 of 78 authorized). Based on these concerns, the NPS cannot increase snowcoach numbers during this interim plan. The number of snowcoaches to be allowed will be addressed in the long-term winter use plan.

60. *Comment:* The mission and purpose of the NPS is to preserve national parks for future generations; snowmobile use is considered both consistent and inconsistent with this purpose.

Response: The NPS mission is to preserve and protect the park resources while providing for visitor enjoyment. The managed winter use program during the past five winters has allowed that to occur.

61. *Comment:* The interim rule should be finalized by November 15, 2009, so people could plan for the coming season. The opening date caveat that assumes accumulation of sufficient snow is improper.

Response: When the NPS reopened the comment period on the proposed rulemaking in July, it notified the public of its intent to have a rule in place for the upcoming winter season, so that people could plan accordingly. The December 15 opening date for oversnow vehicle access has been flexible for different types of vehicles, depending on snow accumulation. When there is insufficient snow for snowmobiles or steel-tracked snowcoaches, rubber tracked snowcoaches have been allowed.

62. *Comment:* Snowmobiles are an important historical use; any recent decline in use is not related to demand but the current litigation that has occurred.

Response: NPS believes that uncertainty brought on by litigation (and recently, the economic downturn) has contributed to reduced snowmobile numbers.

63. *Comment:* Current requirements for guided snowmobile use put experiencing the park out of the reach many visitors.

Response: Yellowstone has always been an expensive place to visit in the winter, and the NPS understands that guiding and snowmobile technology requirements can add to the cost of a visit. The northern areas of the park can be visited via wheeled vehicle, where visitors are able to view many features and wildlife from the roadside or via short walks, ski, or snowshoe trips.

64. *Comment:* The visitor use survey raises legitimacy concerns, and the survey may be biased.

Response: The survey used appropriate methodologies to help begin to understand the human dimensions of wildlife and soundscapes. The methods and draft instruments were made available for public review as part of the Paperwork Reduction Act process.

65. *Comment:* The NPS finding that there would be impacts on visitor access and circulation under Alternative 1 in the 2008 EA is incorrect because not all reasonable alternatives were considered, the beneficial impacts were not considered, and the thresholds applied did not take into consideration the expiration of the 2004 rule.

Response: For reasons explained therein, the NPS considered two alternatives in the 2008 EA: No Action, which presumed no snowmobile or snowcoach access, and the Proposed Action, which called for 318 snowmobiles and 78 snowcoaches. A wide range of alternatives was considered in the earlier 2007 EIS, including the alternative specifically recommended by the commenter (allow access only from South Entrance to Old Faithful in the winter). In the 2007 EIS, major adverse impacts were found to visitor access and experience with this alternative (3A in that document). A wide range of alternatives will be considered in the long-term plan and EIS.

66. *Comment:* Snowmobiles provide the opportunity to enjoy the scenic nature of the parks.

Response: Snowmobiles and snowcoaches each provide various opportunities for visitors to enjoy the

park, and each provides different experiences for visitors.

67. *Comment:* Snowmobile use affects the scenic quality and landscapes of the park as a result of exhaust and haze.

Response: The impacts that the commenters are describing seem to be those that were experienced before the managed winter program took effect. Snowmobiles that meet NPS air and sound requirements and snowcoaches produce similar air emissions on a per passenger basis. The blue haze no longer occurs.

68. *Comment:* The use of snowmobiles in the park is adversely impacting vegetation, including impacting critical habitat.

Response: Snowmobiles and snowcoaches have always been limited to the roads that visitors use in the summer months. Off-road travel is prohibited in the park. The NPS is not aware of any effects to vegetation as a result of snowmobile or snowcoach use.

69. *Comment:* Snowmobile use in the park disrupts wildlife during the winter months when the animals are more vulnerable from such impacts as noise. Others feel snowmobile and snowcoach use does not disturb wildlife. Referenced studies should be considered.

Response: Thousands of observations of wildlife reactions to nearby oversnow vehicles have extensively documented patterns of behavioral responses in some bird and ungulate species. Substantial changes in behavior are uncommon, and none of the observed responses suggest immediate threats to the health or welfare of these wildlife populations. Furthermore, the populations of these species within the park have either grown or remained stable during the decades in which winter use expanded dramatically. The exception—the trumpeter swan—declined throughout the region due to causes unrelated to winter use. Although important research questions remain regarding the ecological effects of winter use at Yellowstone, no compelling evidence has emerged regarding impacts to the studied wildlife populations from recent research to support dramatic reductions in winter access to the park.

The rule will continue winter use at approximately the same levels as experienced in the past five years. All winter visitors to Yellowstone will be required to travel in a guided group, whether with a commercial snowmobile guide or in a guided snowcoach. Effects on wildlife are expected to be similar to those seen in the last five years, primarily negligible to minor (with possible moderate effects to swans and eagles).

70. *Comment:* NPS findings regarding the impacts of snowcoaches and snowmobiles on wildlife are inconsistent with the recommendations of NPS biologists.

Response: As discussed in the FONSI, there have been some ambiguous and somewhat inconsistent statements in past papers on wildlife impacts. NPS has determined, however, that the Selected Alternative is consistent with the biologists' actual recommendations.

The 2008 EA states, "White et al. erred in stating winter use should be limited to 50,000 oversnow visitors. [emphasis in original] Rather, they intended that the phrase read '<50,000 over-snow vehicles'" (White 2008). White 2008 is a citation to a memo from Dr. White available at http://www.nps.gov/yell/parkmgmt/upload/correction_2006winuserpt.pdf which clarifies that the intended limit was indeed 50,000 vehicles, not visitors. Had the record actually suggested a limit of 50,000 visitors, rather than vehicles, NPS would have noted as much in its discussion of the snowcoach-only transportation system in the 2007 FEIS, which would accommodate 129,600 oversnow visitors (120 snowcoaches × 12 passengers per coach × 90 days per season).

In some reports, park wildlife biologists have recommended that oversnow use be limited to the numbers observed during the "past three years [2001–2004] of their study." One example, a memo by P.J. White of November 9, 2008, has been interpreted by some to mean that snowmobile use should be limited to no more than approximately 260 snowmobiles per day and snowcoaches be limited to no more than approximately 30 per day (which were the averages those years).

Other papers by the same authors, however, discussed a wider time frame (1999–2006) and higher levels of use. The peer-reviewed scientific journal article, "Behavioral Responses of Bison and Elk in Yellowstone to Snowmobiles and Snow Coaches" by John J. Borkowski, P.J. White, Robert A. Garrott, Troy Davis, Amanda R. Hardy and Daniel J. Reinhart. *Ecological Applications* 16(5) 2006, pp. 1911–1925) makes it clear that the monitoring period they are referring to is 1999 through 2004. Average daily oversnow vehicle use ranged from 593 per day during the 2002 winter to 178 oversnow vehicles per day in 2004. Maximum daily numbers ranged up to 1168 oversnow vehicles during the study. Cumulative oversnow vehicle entries for the winter season for the West Entrance alone ranged up to 46,885 for the winter season (data are found on page 1915 of

the paper). At the conclusion (p. 1924), the authors state:

This study documented that winter visitors traveling on OSVs were essentially confined to the groomed roads, typically behaved appropriately when viewing wildlife, and rarely approached wildlife except when animals were on or immediately adjacent to the road. These attributes have allowed elk and bison in Yellowstone to habituate somewhat to OSV recreation, commonly demonstrating no observable response, and rarely displaying "fight or flight" responses when animals were off road. Further, available data provide no evidence that levels and patterns of OSV traffic during the past 35 years adversely affected the population dynamics or demography of elk and bison. Thus, we suggest regulations restricting the levels and travel routes of OSVs during our study were effective at reducing disturbances to bison and elk below a level that would cause measurable fitness effects. We acknowledge the potential for fitness effects to develop if OSVs or other stressors become more severe or prolonged. Thus, we recommend park managers consider maintaining OSV traffic levels at or below those observed during our study [1999–2004]. Regardless, numerous studies have shown that scientific findings rarely persuade people to alter their values or beliefs (e.g., Meadow et al. 2005). Thus, we suspect that varying interpretations of the behavioral and physiological response data will continue to exist because of the diverse values and beliefs of the many constituencies of Yellowstone National Park.

The Selected Alternative maintains the restrictive regulations that reduced disturbances and maintains OSV traffic levels well below those observed from 1999–2004, and is thus fully consistent with the recommendations of this peer-reviewed article and the biologists' subsequent clarifications.

71. *Comment:* The NPS did not adequately show that major impacts to wildlife (such as the road packing/grooming impacts to bison) are avoided under the current interim winter use plan.

Response: The issue of bison use of groomed roadways is addressed in detail in the 2008 EA. Impact threshold definitions were based on the best information from NPS wildlife scientists, the 2006 Management Policies, and federal laws. The NPS notes that the Selected Alternative would result only in negligible to minor effects on park wildlife (with possible moderate effects on swans), and that wildlife monitoring will continue.

72. *Comment:* Sylvan Pass and the East Entrance are an important point of access to the Park—a higher number should be used to satisfy demand and justify keeping the East Entrance open.

Response: The NPS will honor the agreement reached with the State of

Wyoming, Park County, Wyoming, and the City of Cody regarding Sylvan Pass. To that end, 20 snowmobiles and 2 snowcoaches per day are allocated to the East Entrance.

73. *Comment:* The East Entrance and Sylvan Pass should not be used because of the costs to keep the entrance open versus the revenue generated—the funds saved by closing this area could be used for other park operations.

Response: The NPS reached an agreement with the Sylvan Pass Study Group and this plan continues to implement the agreement (which recognizes weather-related constraints and NPS fiscal, staff, infrastructural, equipment, and other safety-related capacities). Management of the pass will continue to be evaluated in a long-term plan.

74. *Comment:* The 15-day comment period on the draft rule was not sufficient time to offer comment, irrelevant of the NPS justification—this violates the intent of NEPA. Further, the NPS should have accepted email comments on this issue.

Response: The NPS provided 15 days for comment on the 2008 EA and a total of 60 days for comment on the proposed rule. The decision took into account all the comments received on the proposed rule and 2008 EA. The NPS Planning, Environment, and Public Comment (PEPC) web-based system allows for electronic submission of comments. The NPS regrets any difficulties entering comments into the PEPC system, but notes that comments sent by regular mail were also accepted.

75. *Comment:* The current interim plan did not include a full range of alternatives as required under NEPA. By changing the number of snowmobile allowed in the interim plan compared to what was previously allowed, and without providing a reasoned explanation, the NPS is not compliant with the Administrative Procedure Act (APA).

Response: As discussed in the purpose and need for the 2008 EA, this EA and rulemaking considered only those options that would have allowed the NPS to open the parks for an interim period without causing major impacts. NPS did not examine options that it knew, based on previous analyses, modeling data, or monitoring data, would cause major impacts. Such impacts must first be analyzed in an EIS. In order to ensure that some motorized access could occur for the upcoming winter, NPS proposed an approach it believed could likely be supported by a Finding of No Significant Impact, which required that

no major impacts from the decision could be experienced.

The past five years of monitoring and studies has provided the NPS with information that it did not have in earlier winter use decisions. Using current monitoring and science, the NPS is drawing different conclusions regarding winter use and the contributions of snowmobiles and snowcoaches to those impacts.

As the Supreme Court has recently clarified in *Federal Communications Commission v. Fox Television Stations* (2009), there is no heightened standard for agency policy changes. An agency need not provide a more detailed analysis for a new policy; it simply must provide the same level of reasoned analysis that should justify any agency decision. NPS has indicated the reasoning for the reduced numbers of snowmobiles in the 2008 EA.

76. *Comment:* The interim plan should have been an Environmental Impact Statement (EIS) level of analysis, as opposed to an EA, so the proposed rule is invalid. Furthermore, the level of analysis was flawed because the NPS has changed its definition of impacts between the various planning processes.

Response: The 2008 EA, which did not reveal any impacts greater than moderate, is an appropriate NEPA analysis document to support this interim winter use decision and rulemaking. The rule will continue a program which has been in place for the past five winters, and whose impacts are well understood through monitoring. While the interim plan is in place, a wider range of alternatives can be analyzed in a long-term plan and EIS.

Throughout the several recent winter use processes, NPS's desired conditions have remained the same. The definition of impacts has changed in recognition of the use of monitoring data versus modeling analysis to determine impacts. The 2007 EIS primarily used computer modeling, whereas the 2008 EA used the results from monitoring.

77. *Comment:* The interim plan/EA violated NEPA because it did not provide a proper level of analysis, would result in the impairment of park resources, and is pre-decisional because the proposed rule was released two days after the 2008 EA was available for public comment. The NPS should terminate the 2008 NEPA process.

Response: A final decision was not made in December 2008. NPS did not finalize this decision until nearly a year later, after also allowing an additional 45-day public comment period for the proposed rule. NPS sought to create an interim winter use plan that would probably not have a significant impact

on the environment, which among other things means that it would not require the preparation of an EIS. That does not mean, however, that NPS had prejudged the outcome of the process. The proposed rule called for implementing the Preferred Alternative in the 2008 EA, and the NPS solicited public comment on both. NPS issued its FONSI on October 15, 2009. That decision and this final rule took into account all the comments received on the 2008 EA and proposed rule.

78. *Comment:* There are potential inconsistencies with the NPS's previously published winter use National Environmental Policy Act (NEPA) documents. The 2008 proposed rule and the 2008 EA on which it is based do not address the bulk of EPA's written comments regarding the 2007 Final Environmental Impact Statement (EIS) for winter use plans in Yellowstone and Grand Teton National Parks. EPA has concerns with the proposed rule and has mitigation and monitoring recommendations. EPA will wait for the forthcoming EIS scoping period to revisit and clarify concerns with previous winter use analyses.

Response: The past five years of monitoring and studies have provided the NPS with information that it did not have in earlier winter use decisions. Using current monitoring and science, the NPS is drawing different conclusions regarding winter use and the contributions of snowmobiles and snowcoaches to those impacts. The definition of impacts has changed in recognition of the use of monitoring data versus modeling analysis to determine impacts. The 2007 EIS primarily used computer-based modeling, whereas the 2008 EA used monitoring.

79. *Comment:* Management should avoid unacceptable or major impacts and use a mitigated FONSI as one method to address impacts from snowmobile use.

Response: The Selected Alternative does do more than prevent unacceptable impacts: it avoids all impacts that are greater than moderate. It protects the very good to excellent air quality, minimizes impacts upon park wildlife, and protects park soundscapes. Also, the plan would implement an adaptive management program that managers could utilize to adjust visitation to protect park resources even more, if for some reason monitoring determines resources are not adequately protected during these two winter seasons. Furthermore, by reacting to the exceedance of a conservative adaptive management threshold, NPS can ensure

that no unacceptable impacts or impairment occur.

80. *Comment:* There is no evidence that my comments on previous efforts had been reviewed, so the NPS should ensure that comments submitted on the draft rule are reviewed and considered.

Response: All comments submitted on the 2008 EA and proposed rule were reviewed and considered. Comments made in prior planning processes are beyond the scope of this rule, but NPS did review and consider all timely comments in those processes and this one.

81. *Comment:* The NPS had conflicting statements about the environmentally preferred alternative between different NEPA efforts.

Response: The environmentally preferred alternative is determined by the range of alternatives that are being considered in the specific NEPA document. The 2007 EIS did not contain an alternative with the numbers of snowmobiles and snowcoaches that are in the Selected Alternative (318 and 78, respectively). Most alternatives called for more snowmobiles or snowcoaches, or had only limited portions of the park open to oversnow access. The Selected Alternative provides access to all park features in a highly managed program whose impacts are well understood.

82. *Comment:* Allowing snowmobile use is in conflict with purpose for which Yellowstone was established, the mandates of the NPS such as the National Park Service Act of 1916, and NPS Management Policies because of the impact this use has to wildlife, noise, and visitor experience.

Response: While NPS agrees that public enjoyment is part of the fundamental mandate of Yellowstone and the entire National Park System, the suggestion that the Yellowstone statute and the NPS Organic Act mandate some particular level or type of snowmobile use is incorrect.

While NPS agrees that preservation of resources is key to the fundamental mandate of Yellowstone and the entire National Park System, the suggestion that the Yellowstone statute and the NPS Organic Act mandate snowcoach use is incorrect. These acts merely direct the agency to conserve park resources and provide for enjoyment without incurring impairment. If NPS is to provide for any significant visitor access to Yellowstone in the winter, motorized vehicle use is necessary, and NPS believes that the limit of 318 snowmobiles per day and 78 snowcoaches per day is consistent with the park's mandate.

The NPS Management Policies state that "NPS managers must always seek

ways to avoid, or to minimize to the greatest extent practicable, adverse impacts on park resources and values.” (Section 1.4.3) This means that NPS managers must take reasonable, affirmative steps toward avoiding or minimizing adverse impacts, but it does not go so far so as to constrain the NPS’s discretion to allow impacts that the NPS deems necessary and appropriate to provide for the enjoyment or conservation of the park.

83. *Comment:* The scope of the interim plan was misdirected, as snowmobiles have a small impact when looking at the bigger picture.

Response: Historically, oversnow vehicle use (especially snowmobiles) caused most of the impacts associated with winter use in Yellowstone, for example, accounting for the majority of air pollution. During the past five years, with the managed use program, most of those historic issues have been addressed, and the NPS now understands that snowmobiles and snowcoaches are contributing similarly to winter use related impacts.

84. *Comment:* Because the definition of the word “natural” was misapplied by the NPS, and because snowmobiles travel along developed park highways and not off-road, the executive order that regulates off-road vehicles is not applicable and snowmobile use is not subject to special regulation.

Response: NPS recognizes that Executive Order 11644 (Use of Off-Road Vehicles on Public Lands, as amended by E.O. 11989) applies to all federal agencies that allow snowmobiling. The Executive Order defines off-road vehicle as “any motorized vehicle designed for or capable of cross-country travel * * *.” That Executive Order requires federal agencies to promulgate regulations. The NPS regulation, which is found at 36 CFR 2.18, requires promulgation of special regulations like this rule.

85. *Comment:* The desired conditions established in the 2008 EA were not subject to public review and that public comment must be solicited on these conditions.

Response: The desired conditions in the 2008 EA were similar to the desired conditions identified in the 2007, 2004, 2003 and 2000 winter use plans and have been subject to public review in all those past planning processes.

86. *Comment:* Including a winter use monitoring plan in the scope of the 2008 EA was unnecessary since oversnow motorized vehicle use should not be permitted.

Response: The winter-specific monitoring complements other monitoring programs. For example, the

park monitors atmospheric deposition (including mercury), visibility (including ozone), and fine particulates at other stations.

87. *Comment:* There are resources that the NPS needed to further analyze such as subnivian fauna and climate change.

Response: A review of long-term climate trends was presented in the 2007 EIS and will be considered in the new long-term winter use plan. Subnivian fauna were dismissed as an impact topic because snowmobile and snowcoach use is confined to paved and hard-packed gravel roads that visitors use in the summer. Impacts to subnivian fauna, which may occur elsewhere as a result of cross-country motorized use, do not occur in Yellowstone.

88. *Comment:* NPS misinterprets the Organic Act, Yellowstone Park Act, Clean Air Act, General Authorities Act, the NPS Management Policies, Executive Orders, and the Park’s Master Plan. The proposed rule is fundamentally flawed. Some argue that these laws require that snowmobiles be banned, while others argue that conservation should not predominate over recreation.

Response: While the NPS agrees that public enjoyment is part of the fundamental mandate of Yellowstone and the entire National Park System, the suggestion that the Yellowstone statute and the NPS Organic Act mandate some particular level or type of use is incorrect.

Under 36 CFR 2.18, snowmobile use is prohibited except where specific routes are designated, on terms that, among other things, are consistent with park values and do not damage park resources. That regulation implements Executive Order 11644, as amended by Executive Order 11989, which applies to all federal agencies that allow snowmobiling.

Nothing in the Organic Act suggests that impairment is the only consideration that may justify imposing limitations on use. For example, the portion of the Organic Act that charges NPS with conserving the scenery, natural and historic objects, and wildlife within the parks can also justify limitations on use.

NPS Management Policies state that “NPS managers must always seek ways to avoid, or to minimize to the greatest extent practicable, adverse impacts on park resources and values.” (section 1.4.3) This means that NPS managers must take reasonable, affirmative steps toward avoiding or minimizing adverse impacts, but it does not go so far so as to constrain the NPS’s discretion to allow impacts that the NPS deems necessary and appropriate to provide for

the enjoyment or conservation of the Park.

The NPS formulated this interim winter use plan for Yellowstone in full compliance with the appropriate laws, policies, and executive orders. The amount and type of snowmobile and snowcoach use, and the restrictions on that use, will allow visitors to enjoy the park while protecting park resources.

89. *Comment:* The proposed rule does not take into consideration the precedent related to providing non-commercial opportunities in national parks, as this action would set a precedent for banning other types of vehicles in other parks.

Response: The concept of non-commercial guiding or unguided access (both with training programs) has been analyzed in previous winter plans and will be evaluated in alternatives in a long-term plan. This is a winter plan, not a summer use plan and does not set a precedent for other seasons or types of visitor access, nor does it limit what may be studied in a long-term winter use plan.

90. *Comment:* The proposed rule is not consistent with the 2008 Wyoming Court Order, and does not provide the certainty that the order called for. The interim rule constitutes a final agency action subject to judicial review, so the NPS should not take final agency action on the interim rule.

Response: The NPS believes the interim rule is consistent with all applicable court orders.

91. *Comment:* Compared to snowmobiles, snowcoaches produce greater emissions so these snowmobiles that meet NPS air and sound requirements should be allowed in the park.

Response: As discussed above, snowmobiles and snowcoaches produce similar per-passenger emissions. NPS anticipates implementing NPS air and sound requirements for snowcoaches in the future, but not during these two winter seasons.

92. *Comment:* The plan is inaccurate because there is a lack of any measurable criteria.

Response: The adaptive management plan contains both quantitative and qualitative thresholds.

93. *Comment:* Poor air quality within the park stresses wildlife, deteriorates visitor experience, and contributes to climate change.

Response: The 2008 EA analysis looked at impacts to wildlife, soundscapes, and air quality which can directly or indirectly affect these resources. It identified minor impacts to wildlife, moderate impacts to

soundscapes, and negligible impacts to air quality.

94. *Comment:* Snowmobile use in the Park should be banned to reduce global warming, conserve oil resources, and to fight the “obesity epidemic.”

Response: Snowmobiles meeting NPS emission requirements get 20–26 miles per gallon—a fuel economy far better than traditional two-stroke snowmobiles, and similar on a per-passenger basis to snowcoaches. Skiers and snowshoers use snowmobiles and snowcoaches to access trails in the park.

95. *Comment:* The NPS overstated impacts to public and employee health and safety by analyzing the No Action Alternative.

Response: In taking a hard look at the impacts of the No Action Alternative (closing the park to guided snowmobile and snowcoach access), the NPS recognized some impacts would still occur as a result of administrative access needed to protect park resources. NPS deemed those impacts to be moderate for employee health and safety.

Changes to the Final Rule

After taking the public comments into consideration and after additional internal review, one change was made to the final rule, in addition to non-substantive editorial changes made to improve clarity of the rule. This change is as follows:

Paragraph 7.13(1)(6) has been revised to delete references to snowmobiles manufactured prior to 2004. The NPS certifies snowmobiles as meeting NPS requirements for a period of six years. Winter 2009–2010 will be the last winter model year 2004 snowmobiles that were certified as meeting NPS air and emission requirements will be allowed to operate in Yellowstone. Thus, in this final rule, previous

references to model year 2003 and earlier snowmobiles were deleted.

Summary of Economic Analysis

The results of the cost-benefit analysis indicate this regulation will have de minimis negative impacts. This determination is based on a consideration of current economic conditions, visitor trends from recent years and continued uncertainty of park policies from court decisions. In addition, this winter use plan will only be in place for a two-year interim period. In order to capture the widest range of possibilities, two scenarios were analyzed within this analysis. The “expected scenario” includes the impacts that are most likely to occur and the “maximum scenario” includes the worst possible impacts that might occur. NPS believes the expected scenario is most likely to occur. Given that, the selected alternative will not have an annual economic effect of \$100 million, and will not adversely affect an economic sector, productivity, jobs, the environment, or other units of government relative to the baseline. Additionally, the selected alternative will not impose significant impacts on small businesses.

Cost-Benefit Analysis

The baseline conditions for this regulatory action are influenced by recent court decisions. When the Environmental Analysis was issued in 2008, the 2007 winter use regulation had been vacated and the authorization for snowmobile access in the 2004 winter use regulation had expired pursuant to its sunset provision. Thus, without regulatory action by NPS at that time, no snowmobile access would have been permitted, wheeled vehicle travel would have continued on roads that had

been traditionally plowed, and the park would have been open to skiing and snowshoeing.

In November 2008 the Wyoming District Court ordered the reinstatement of the 2004 regulation, without its sunset provision, until NPS promulgates a regulation to take its place. The result of that decision was the continued authorization for snowmobile and snowcoach access as provided by the 2004 regulation. While there has been no current NEPA analysis or other determination that snowmobile use at the levels authorized under that regulation is consistent with NPS statutory and other mandates, these conditions describe baseline for purposes of this regulatory analysis.

In addition the recent economic downturn has also influenced winter use. Use in the winter of 2008–2009 dropped from the previous winter in part due to economic conditions.

NPS constructed two baseline scenarios to capture the possible range of impacts. The “expected scenario” assumes that under baseline conditions snowmobile and snowcoach use will not exceed the levels permitted under the selected alternative. Indeed, to be conservative, NPS assumed that snowmobile and snowcoach use under baseline conditions in this scenario would equal that permitted under the selected alternative. That assumption is considered most likely to hold given recent trends in snowmobile use, the current economic downturn, the short two-year interim period, and the likelihood of continued uncertainty of the public regarding the winter use plan. Given that assumption, changes in snowmobile and snowcoach use under the selected alternative will be de minimis, as indicated in Table 1.

TABLE 1—WINTER SEASON SNOWMOBILE AND SNOWCOACH USE UNDER THE EXPECTED SCENARIO

Alternative	Entries		
	Snowmobile	Snowcoach	Total
Baseline	28,620	7,020	35,640
Selected Alternative	28,620	7,020	35,640
Change	0	0	0

The “maximum scenario” assumes that under baseline conditions snowmobile and snowcoach use will match levels permitted under the 2004 regulation. That regulation permits 720 snowmobiles and 78 snowcoaches to access YNP per day. Therefore, under the maximum scenario the selected alternative would reduce snowmobile

use by 402 entries per day (720 entries per day under baseline minus 318 entries per day under the selected alternative). Snowcoach use would not be reduced (78 entries per day under baseline minus 78 entries per day under the selected alternative). Therefore, as many as 36,180 snowmobile entries would be reduced in the maximum

scenario over the 90-day winter use season. NPS does not believe the maximum scenario is likely to occur given the downward trend of snowmobile use in recent winter seasons, the current economic downturn, the short two-year interim period, and the likelihood of continued

uncertainty of the public regarding the winter use plan.

TABLE 2—WINTER SEASON SNOWMOBILE AND SNOWCOACH USE UNDER THE MAXIMUM SCENARIO

Alternative	Entries		
	Snowmobile	Snowcoach	Total
Baseline	64,800	7,020	71,820
Selected Alternative	28,620	7,020	35,640
Change	-36,180	0	-36,180

Benefits and Costs

As indicated in Tables 1 and 2, the impacts of the selected alternative to snowmobile use range from a reduction of zero to 402 entries per day, with zero being the most likely to occur. Impacts to visitors are quantified as “consumer surplus,” which includes the maximum willingness to pay for such activities minus the costs of participation. Therefore, consumer surplus measures

the net benefits of visitation. These total consumer surplus changes are presented in Table 3, including total present values over the two-year period that the regulation will be in effect.

NPS estimates that businesses will not incur impacts from the selected alternative under the expected scenario. That conclusion is based on the changes in snowmobile and snowcoach use presented in Table 1, which are considered most likely. However, in the

unlikely event that the maximum scenario would occur, negative impacts would be incurred. Those impacts would be associated with the decrease in snowmobile use presented in Table 2. These impacts are termed “producer surplus,” which are a net benefits that measure similar to the consumer surplus values accruing to visitors. Total producer surplus changes for businesses under the selected alternative are presented in Table 3.

TABLE 3—QUANTIFIED CONSUMER AND PRODUCER SURPLUS IMPACTS FOR THE SELECTED ALTERNATIVE

	Expected scenario		Maximum scenario	
	Total present value	Amortized annual value	Total present value	Amortized annual value
Discount Rate:				
3 percent	\$0	\$0	-\$31,305,000	-\$15,884,000
7 percent	0	0	-30,729,000	-15,884,000

Office of Management and Budget Circular A-4 recommends a 7 percent discount rate in general, and a 3 percent discount rate when analyzing the impacts to private consumption. Values are 2003 dollars rounded to the nearest 1,000.

It is possible for visitors who do not access the park by snowmobile or snowcoach to incur increases in consumer surplus from decreased snowmobile use. In the current analysis, the expected scenario is most likely to occur with de minimis changes in snowmobile and snowcoach use; therefore, no impacts associated with this phenomenon would likely occur. Under the maximum scenario, this phenomenon would increase the consumer surplus of visitors who do not access the park by snowmobile or snowcoach. However, given recent visitor trends and the relatively low level of snowmobile and snowcoach use contemplated under the selected alternative, it is not possible at this time to estimate any such changes in visitor use. Therefore, while recognizing that such impacts to visitors are possible under the selected alternative; NPS is unable to quantify those impacts.

In addition to the potential impacts described above, NPS believes there may be a positive impact on “passive” users under the maximum scenario.

These users are individuals who do not directly use park resources and perhaps never intend to do so. Economists refer to the values these users hold using several different terms, including non-use values, passive use values, and existence values. The underlying motivations for these values include the satisfaction of knowing that a particular resource is protected or a desire to preserve the resource for future generations. Under the maximum scenario, these passive users may be more confident that park resources are being protected, and will therefore incur benefits arising from the knowledge that park resources may be more protected by the Selected Alternative. Under the expected scenario, however, de minimis changes in snowmobile and snowcoach use would occur and with commensurate impacts to these passive users.

Other benefits that could not be quantified include the potential reduction in costs of road grooming and maintenance, winter staffing, snowmobile safety hazards, and law

enforcement. In general, decreasing snowmobile activity under the maximum scenario may allow the park to redirect resources towards other activities that will protect park resources and address park management needs. Under the expected scenario, these impacts are expected to be de minimis.

Explanation of the Selected Alternative

The Selected Alternative was chosen because it best balances winter use with protection of park resources to ensure that the impairment of, or unacceptable impacts to, park resources and values does not occur. The Selected Alternative demonstrates the NPS commitment to monitor winter use and to use the results to adjust the winter use program. The results of the monitoring program, including data obtained regarding air quality, wildlife, soundscapes, and health and safety, were used in formulating the alternatives in the 2008 EA. The Selected Alternative applies the lessons learned over the last several winters relative to commercial guiding, which demonstrated, among other

things, that 100% commercial guiding has been very successful and offers the best opportunity for achieving goals of protecting park resources and allowing balanced use of the park. Law enforcement incidents have been reduced well below historic numbers, even after taking into account reduced visitation. That reduction is attributed to the quality of the guided program.

The Selected Alternative uses strictly limited oversnow vehicle numbers, combined with air and sound emission requirements and 100% commercial guiding, to help ensure that the purpose and need for the environmental impact statement is best met. With access via snowmobile, snowcoaches, or non-motorized means, park visitors will have a range of appropriate winter recreational opportunities. With the significant restrictions built into snowmobile and snowcoach use, this plan also ensures that these recreational activities will not impair or irreparably harm park resources or values.

The Selected Alternative also supports the communities and businesses both near and far from the park and will encourage them to have an economically sustainable winter recreation program that relies on a variety of modes for access to the park in the winter. Peak snowmobile numbers allowed under the Selected Alternative are well below the historic averages, but the snowmobile and snowcoach limits should provide a viable program for winter access to the park.

Compliance With Other Laws

Regulatory Planning and Review (Executive Order 12866)

This document is a significant rule and has been reviewed by the Office of Management and Budget under Executive Order 12866.

(1) This rule will not have an effect of \$100 million or more on the economy. It will not adversely affect in a material way the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities. These conclusions are based on the report "Economic Analysis: Selected Winter Use Plan for Yellowstone National Park" (Best and Vigil, October 16, 2009).

(2) This rule will not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency. Implementing actions under this rule will not interfere with plans by other agencies or local government plans, policies, or controls since this is an agency specific change.

(3) This rule does not alter the budgetary effects of entitlements, grants, user fees, or loan programs or the rights or obligations of their recipients. It only affects the use of over-snow machines within specific national parks. No grants or other forms of monetary supplement are involved.

(4) OMB has determined that this rule raises novel legal or policy issues. The issue has generated local as well as national interest on the subject in the Greater Yellowstone Area. The NPS has been the subject of numerous lawsuits regarding winter use management.

Regulatory Flexibility Act

The Department of the Interior certifies that this document will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). A final Regulatory Flexibility Analysis has been conducted and contained in the report "Economic Analyses: Selected Winter Use Plan for Yellowstone National Park" (Best and Vigil, October 16, 2009).

Small Business Regulatory Enforcement Fairness Act (SBREFA)

This rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This rule:

- a. Does not have an annual effect on the economy of \$100 million or more.
- b. Will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions.
- c. Does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises. This rulemaking has no effect on methods of manufacturing or production and specifically affects the Greater Yellowstone Area, not national or U.S. based enterprises.

Unfunded Mandates Reform Act

This rule does not impose an unfunded mandate on State, local, or tribal governments or the private sector of more than \$100 million per year. The rule does not have a significant or unique effect on State, local or tribal governments or the private sector. A statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531 *et seq.*) is not required. This rule addresses public use of national park lands, and imposes no requirements on other agencies or governments.

Takings (Executive Order 12630)

Under the criteria in Executive Order 12630, this rule does not have significant takings implications. Access to private property located within or adjacent to the parks will be afforded the same access during winter as before this rule. No other property is affected.

Federalism (Executive Order 13132)

Under the criteria in Executive Order 13132, this rule does not have sufficient federalism implications to warrant the preparation of a Federalism summary impact statement. A Federalism summary impact statement is not required. It addresses public use of national park lands, and imposes no requirements on other agencies or governments.

Civil Justice Reform (E.O. 12988)

This rule complies with the requirements of Executive Order 12988. Specifically, this rule:

- (a) Meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and
- (b) Meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

Paperwork Reduction Act

This rule does not contain information collection requirements, and a submission under the Paperwork Reduction Act (PRA) is not required.

National Environmental Policy Act

The 2008 Winter Use Plans Environmental Assessment (2008 EA) was prepared and made available for public review and comment. A Finding of No Significant Impact (FONSI) was signed October 15, 2009. The 2008 EA and FONSI are available by contacting the Yellowstone National Park Management Assistant's Office or at <http://parkplanning.nps.gov/>.

Consultation With Indian Tribes (E.O. 13175)

Under the criteria in Executive Order 13175, we have evaluated this rule and determined that it has no potential effects on federally recognized Indian tribes.

The NPS has evaluated potential effects on federally recognized Indian tribes and have determined that there are no potential effects. Numerous tribes in the area were consulted in the development of the previous winter use planning documents. Their major concern was to reduce the adverse effects on wildlife by snowmobiles. This

rule does that through implementation of the guiding requirements and disbursement of snowmobile use through the various entrance stations.

Information Quality Act

In developing this rule we did not conduct or use a study, experiment, or survey requiring peer review under the Information Quality Act (Pub. L. 106–554).

Effects on the Energy Supply (E.O. 13211)

This rule is not a significant energy action under the definition in Executive Order 13211. A Statement of Energy Effects is not required.

Administrative Procedure Act:

Comment periods on the proposed rule were provided from November 5, 2008, through November 20, 2008, and from July 24, 2009, to September 8, 2009, for a total of 60 days.

This rule is effective on December 15, 2009. The National Park Service recognizes that new rules ordinarily go into effect thirty days after publication in the **Federal Register**. For this regulation, however, we have determined under 5 U.S.C. 553(d) and 318 DM 6.25 that this rule should be effective on December 15, 2009, the traditional date for commencement of the park's winter use season. This rule implements the winter use plans for Yellowstone and relieves the restrictions on the use of snowmobiles and snowcoaches that would exist in its absence. In addition, good cause exists for the effective date of December 15, 2009, for the following reasons:

(1) The NPS has in good faith publicly stated that the 2009–2010 winter season for Yellowstone National Park would commence on December 15, 2009, and the public and businesses have made decisions based on the widespread public knowledge of this opening date.

(2) The finding of no significant impact for this rule was signed on October 15, and was made available to the public for 30 days prior to the signing of this rule. By December 15, the public therefore will have had more than 60 days notice of the NPS decision.

(3) There would be no benefit to the public in delaying the effective date of this rule, given that there has already been substantial notice of the opening date and that the park will be open under conditions substantially similar to those in effect for the past three years, other than the reduced entry limits. The above-described harms to the public resulting from a procedural delay of this rule should therefore be avoided, and an effective date of December 15, 2009, is warranted.

Drafting Information: The primary authors of this regulation are John Sacklin, Management Assistant, Yellowstone National Park; Jason Waanders, Office of the Solicitor, and Phil Selleck, Regulations Program Manager, National Park Service, Washington DC.

List of Subjects in 36 CFR Part 7

District of Columbia, National parks, Reporting and recordkeeping requirements.

■ For the reasons given in the preamble, 36 CFR part 7 is amended as set forth below:

PART 7—SPECIAL REGULATIONS, AREAS OF THE NATIONAL PARK SYSTEM

■ 1. The authority for part 7 continues to read as follows:

Authority: 16 U.S.C. 1, 3, 9a, 462(k); Sec. 7.96 also issued under DC Code 10–137 (2001) and DC Code 50–2201 (2001).

■ 2. Amend § 7.13 by revising paragraph (l) to read as follows:

§ 7.13 Yellowstone National Park.

* * * * *

(l)(1) *What is the scope of this regulation?* The regulations contained in paragraphs (l)(2) through (l)(17) of this section apply to the use of snowcoaches and recreational snowmobiles. Except where indicated, paragraphs (l)(2) through (l)(17) do not apply to non-administrative oversnow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(2) *What terms do I need to know?* The definitions in this paragraph (l)(2) also apply to non-administrative oversnow vehicle use by NPS, contractor, or concessioner employees, and other non-recreational users authorized by the Superintendent.

Commercial guide means a guide who operates a snowmobile or snowcoach for a fee or compensation and is authorized to operate in the park under a concession contract. In this section, “guide” also means “commercial guide.”

Historic snowcoach means a Bombardier snowcoach manufactured in 1983 or earlier. Any other snowcoach is considered a non-historic snowcoach.

Oversnow route means that portion of the unplowed roadway located between the road shoulders and designated by snow poles or other poles, ropes, fencing, or signs erected to regulate oversnow activity. Oversnow routes include pullouts or parking areas that are groomed or marked similarly to roadways and are adjacent to designated

oversnow routes. An oversnow route may also be distinguished by the interior boundaries of the berm created by the packing and grooming of the unplowed roadway. The only motorized vehicles permitted on oversnow routes are oversnow vehicles.

Oversnow vehicle means a snowmobile, snowcoach, or other motorized vehicle that is intended for travel primarily on snow and has been authorized by the Superintendent to operate in the park. An oversnow vehicle that does not meet the definition of a snowcoach must comply with all requirements applicable to snowmobiles.

Snowcoach means a self-propelled mass transit vehicle intended for travel on snow, having a curb weight of over 1,000 pounds (450 kilograms), driven by a track or tracks and steered by skis or tracks, and having a capacity of at least 8 passengers. A snowcoach has a maximum size of 102 inches wide, plus tracks (not to exceed 110 inches overall); a maximum length of 35 feet; and a Gross Vehicle Weight Rating (GVWR) not exceeding 25,000 pounds.

Snowmobile means a self-propelled vehicle intended for travel on snow, with a curb weight of not more than 1,000 pounds (450 kg), driven by a track or tracks in contact with the snow, and which may be steered by a ski or skis in contact with the snow.

Snowplane means a self-propelled vehicle intended for oversnow travel and driven by an air-displacing propeller.

(3) *May I operate a snowmobile in Yellowstone National Park?* (i) You may operate a snowmobile in Yellowstone National Park in compliance with use limits, guiding requirements, operating hours and dates, equipment, and operating conditions established under this section. The Superintendent may establish additional operating conditions and must provide notice of those conditions in accordance with § 1.7(a) of this chapter or in the **Federal Register**.

(ii) The authority to operate a snowmobile in Yellowstone National Park established in paragraph (l)(3)(i) of this section is in effect through the winter season of 2010–2011.

(4) *May I operate a snowcoach in Yellowstone National Park?* (i) Snowcoaches may only be operated in Yellowstone National Park under a concessions contract. Snowcoach operation is subject to the conditions stated in the concessions contract and all other conditions identified in this section.

(ii) All non-historic snowcoaches must meet NPS air emissions

requirements, which mean the applicable EPA emissions standards for the vehicle that were in effect at the time it was manufactured.

(iii) All critical emission-related exhaust components (as listed in 40 CFR 86.004–25(b)(3)(iii) through (v)) must be functioning properly. Such critical emissions-related components may only be replaced with the original equipment manufacturer (OEM) component, where possible. Where OEM parts are not available, aftermarket parts may be used if they are certified not to worsen emission and sound characteristics.

(iv) Modifying or disabling a snowcoach's original pollution control equipment is prohibited except for maintenance purposes.

(v) Individual snowcoaches may be subject to periodic inspections to determine compliance with the requirements of paragraphs (l)(4)(ii) through (l)(4)(iv) of this section.

(vi) The authority to operate a snowcoach in Yellowstone National Park established in paragraph (l)(4)(i) of this section is in effect only through the winter season of 2010–2011.

(5) *Must I operate a certain model of snowmobile?* Only commercially available snowmobiles that meet NPS air and sound emissions requirements as set forth in this section may be operated in the park. The Superintendent will approve snowmobile makes, models, and years of manufacture that meet those requirements. Any snowmobile model not approved by the Superintendent may not be operated in the park.

(6) *How will the Superintendent approve snowmobile makes, models, and years of manufacture for use in the park?* (i) Beginning with the 2005 model year, all snowmobiles must be certified under 40 CFR part 1051, to a Family Emission Limit no greater than 15 g/kW-hr for hydrocarbons and to a Family Emission Limit no greater than 120 g/kW-hr for carbon monoxide.

(A) 2004 model year snowmobiles may use measured emissions levels (official emission results with no deterioration factors applied) to comply with the emission limits specified in paragraph (l)(6)(i) of this section.

(B) The snowmobile test procedures specified by EPA (40 CFR parts 1051 and 1065) must be used to measure air emissions from model year 2004 and later snowmobiles.

(ii) For sound emissions, snowmobiles must operate at or below 73 dBA as measured at full throttle according to Society of Automotive Engineers J192 test procedures (revised 1985). Snowmobiles may be tested at any barometric pressure equal to or

above 23.4 inches Hg uncorrected. The Superintendent may revise these testing procedures based on new information and/or updates to the SAE J192 testing procedures.

(iii) Snowmobiles meeting the requirements for air and sound emissions may be operated in the park for a period not exceeding 6 years from the date upon which first certified.

(iv) The Superintendent may prohibit entry into the park of any snowmobile that has been modified in a manner that may adversely affect air or sound emissions.

(v) These air and sound emissions requirements do not apply to snowmobiles being operated on the Cave Falls Road in Yellowstone.

(7) *Where may I operate my snowmobile in Yellowstone National Park?* (i) You may operate your snowmobile only upon designated oversnow routes established within the park in accordance with § 2.18(c) of this chapter. The following oversnow routes are so designated for snowmobile use through the winter of 2010–2011:

(A) The Grand Loop Road from its junction with Upper Terrace Drive to Norris Junction.

(B) Norris Junction to Canyon Junction.

(C) The Grand Loop Road from Norris Junction to Madison Junction.

(D) The West Entrance Road from the park boundary at West Yellowstone to Madison Junction.

(E) The Grand Loop Road from Madison Junction to West Thumb.

(F) The South Entrance Road from the South Entrance to West Thumb.

(G) The Grand Loop Road from West Thumb to its junction with the East Entrance Road.

(H) The East Entrance Road from Fishing Bridge Junction to the East Entrance.

(I) The Grand Loop Road from its junction with the East Entrance Road to Canyon Junction.

(J) The South Canyon Rim Drive.

(K) Lake Butte Road.

(L) In the developed areas of Madison Junction, Old Faithful, Grant Village, West Thumb, Lake, Fishing Bridge, Canyon, Indian Creek, and Norris.

(M) Firehole Canyon Drive, between noon and 9 p.m. each day.

(N) North Canyon Rim Drive, between noon and 9 p.m. each day.

(O) Riverside Drive, between noon and 9 p.m. each day.

(P) Cave Falls Road.

(ii) The Superintendent may open or close these routes, or portions thereof, for snowmobile travel after taking into consideration the location of wintering wildlife, appropriate snow cover, public

safety, avalanche conditions, and other factors. Notice of such opening or closing will be provided by one or more of the methods listed in § 1.7(a) of this chapter.

(iii) This paragraph (l)(7) also applies to non-administrative over-snow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(iv) Maps detailing the designated oversnow routes will be available from Park Headquarters.

(8) *What routes are designated for snowcoach use?* (i) Authorized snowcoaches may be operated on the routes designated for snowmobile use in paragraphs (l)(7)(i)(A) through (l)(7)(i)(O) of this section. The restricted hours of snowmobile use described in paragraphs (1)(7)(i)(M) through (1)(7)(i)(O) do not apply to snowcoaches. Snowcoaches may also be operated on the following additional oversnow routes through the winter of 2010–2011:

(A) Fountain Flat Road.

(B) The Grand Loop Road from Canyon Junction to Washburn Hot Springs overlook.

(C) For rubber-tracked snowcoaches only, the Grand Loop Road from Upper Terrace Drive to the junction of the Grand Loop Road and North Entrance Road, and within the Mammoth Hot Springs developed area.

(ii) The Superintendent may open or close these oversnow routes, or portions thereof, or designate new routes for snowcoach travel after taking into consideration the location of wintering wildlife, appropriate snow cover, public safety, and other factors. Notice of such opening or closing shall be provided by one of more of the methods listed in § 1.7(a) of this chapter.

(iii) This paragraph (l)(8) also applies to non-administrative snowcoach use by NPS, contractor, or concessioner employees, and other non-recreational users authorized by the Superintendent.

(9) *Must I travel with a commercial guide while snowmobiling in Yellowstone and what other guiding requirements apply?* (i) All recreational snowmobile operators must be accompanied by a commercial guide.

(ii) Snowmobile parties must travel in a group of no more than 11 snowmobiles, including that of the guide.

(iii) Guided parties must travel together within a maximum of one-third mile of the first snowmobile in the group.

(iv) The guiding requirements described in this paragraph (l)(9) do not apply to snowmobiles being operated on the Cave Falls Road.

(10) *Are there limits established for the number of snowmobiles and snowcoaches permitted to operate in the park each day?* The number of snowmobiles and snowcoaches allowed to operate in the park each day is limited to a certain number per entrance or location. The limits are listed in the following table:

Park entrance/location	Commercially guided snowmobiles	Commercially guided snowcoaches
(i) North Entrance *	12	13
(ii) West Entrance	160	34
(iii) South Entrance	114	13
(iv) East Entrance	20	2
(v) Old Faithful *	12	16
(vi) Cave Falls	**50	0

* Commercially guided snowmobile tours originating at the North Entrance and Old Faithful are currently provided solely by Xanterra Parks and Resorts. Because this concessioner is the sole provider at both of these areas, this regulation allows reallocation of snowmobiles between the North Entrance and Old Faithful as necessary, so long as the total daily number of snowmobiles originating from the two locations does not exceed 24. For example, the concessioner could operate 6 snowmobiles at Old Faithful and 18 at the North Entrance if visitor demand warranted it. This will allow the concessioner to respond to changing visitor demand for commercially guided snowmobile tours, thus enhancing the availability of visitor services in Yellowstone.

** These snowmobiles operate on an approximately 1-mile segment of road within the park where the use is incidental to other snowmobiling activities in the Caribou-Targhee National Forest. These snowmobiles do not need to be guided or to meet NPS air and sound emissions requirements.

(11) *When may I operate my snowmobile or snowcoach?* The Superintendent will determine operating hours and dates. Except for emergency situations, any changes to operating hours will be made on an annual basis, and the public will be notified of those changes through one or more of the methods listed in § 1.7(a) of this chapter.

(12) *What other conditions apply to the operation of oversnow vehicles?* (i) The following are prohibited:

(A) Idling an oversnow vehicle for more than 5 minutes at any one time.

(B) Driving an oversnow vehicle while the driver's motor vehicle license or privilege is suspended or revoked.

(C) Allowing or permitting an unlicensed driver to operate an oversnow vehicle.

(D) Driving an oversnow vehicle in willful or wanton disregard for the safety of persons, property, or park resources or otherwise in a reckless manner.

(E) Operating an oversnow vehicle without a lighted white headlamp and red taillight.

(F) Operating an oversnow vehicle that does not have brakes in good working order.

(G) The towing of persons on skis, sleds, or other sliding devices by oversnow vehicles, except in emergency situations.

(ii) The following are required:

(A) All oversnow vehicles that stop on designated routes must pull over to the far right and next to the snow berm. Pullouts must be used where available and accessible. Oversnow vehicles may not be stopped in a hazardous location or where the view might be obscured, or operated so slowly as to interfere with the normal flow of traffic.

(B) Oversnow vehicle drivers must possess a valid motor vehicle driver's license. A learner's permit does not satisfy this requirement. The license must be carried by the driver at all times.

(C) Equipment sleds towed by a snowmobile must be pulled behind the snowmobile and fastened to the snowmobile with a rigid hitching mechanism.

(D) Snowmobiles must be properly registered and display a valid registration from a state or province in the United States or Canada, respectively.

(iii) The Superintendent may impose other terms and conditions as necessary to protect park resources, visitors, or employees. The public will be notified of any changes through one or more methods listed in § 1.7(a) of this chapter.

(iv) This paragraph (I)(12) also applies to non-administrative over-snow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(13) *What conditions apply to alcohol use while operating an oversnow vehicle?* In addition to 36 CFR 4.23, the following conditions apply:

(i) Operating or being in actual physical control of an oversnow vehicle is prohibited when the driver is under 21 years of age and the alcohol concentration in the driver's blood or breath is 0.02 grams or more of alcohol per 100 milliliters of blood or 0.02 grams or more of alcohol per 210 liters of breath.

(ii) Operating or being in actual physical control of an oversnow vehicle is prohibited when the driver is a snowmobile guide or a snowcoach driver and the alcohol concentration in

the operator's blood or breath is 0.04 grams or more of alcohol per 100 milliliters of blood or 0.04 grams or more of alcohol per 210 liters of breath.

(iii) This paragraph (I)(13) also applies to non-administrative over-snow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(14) *Do other NPS regulations apply to the use of oversnow vehicles?* (i) The use of oversnow vehicles in Yellowstone is subject to §§ 2.18(a) and (c), but not subject to §§ 2.18 (b), (d), (e), and 2.19(b) of this chapter.

(ii) This paragraph (I)(14) also applies to non-administrative over-snow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(15) *Are there any forms of non-motorized oversnow transportation allowed in the park?* (i) Non-motorized travel consisting of skiing, skating, snowshoeing, or walking is permitted unless otherwise restricted under this section or other NPS regulations.

(ii) The Superintendent may designate areas of the park as closed, reopen such areas, or establish terms and conditions for non-motorized travel within the park in order to protect visitors, employees, or park resources. Notice will be made in accordance with § 1.7(a) of this chapter.

(iii) Dog sledding and ski-joring are prohibited.

(iv) Bicycles are prohibited on oversnow routes in Yellowstone.

(16) *May I operate a snowplane in Yellowstone National Park?* The operation of a snowplane in Yellowstone is prohibited.

(17) *Is violating any of the provisions of this section prohibited?* (i) Violating

any of the terms, conditions or requirements of paragraphs (l)(1) through (l)(16) of this section is prohibited.

(ii) Anyone who violates any of the terms, conditions or requirements of this regulation will be considered to have committed one separate offense for each term, condition or requirement that they violate.

Dated: November 16, 2009.

Thomas L. Strickland,

Assistant Secretary for Fish and Wildlife and Parks.

[FR Doc. E9-27893 Filed 11-17-09; 4:15 pm]

BILLING CODE P

DEPARTMENT OF THE INTERIOR

National Park Service

36 CFR Part 7

RIN 1024-AD82

Special Regulations; Areas of the National Park System

AGENCY: National Park Service, Interior.

ACTION: Final rule.

SUMMARY: This rule governs winter visitation and certain recreational use in Grand Teton National Park and the John D. Rockefeller, Jr. Memorial Parkway. This final rule is issued to implement the Finding of No Significant Impact (FONSI) for the 2008 Winter Use Plans Environmental Assessment (2008 EA) approved October 15, 2009, and will provide visitors a range of winter recreation opportunities that are appropriate to the national park setting, and that these activities do not unacceptably impact or impair park resources and values. The rule requires that recreational snowmobiles operating on Jackson Lake meet certain air and sound emissions requirements, and that such snowmobile use is for the sole purpose of accessing ice fishing opportunities on the lake. The rule sets daily entry limits on the numbers of snowmobiles allowed on Jackson Lake and on the Grassy Lake Road, and also designates the route between Flagg Ranch and the South Entrance of Yellowstone National Park for snowmobile and snowcoach use, subject to compliance with the daily entry limits and other requirements set out in the separate rule authorizing snowmobile and snowcoach use in Yellowstone National Park. Traveling off designated oversnow routes will remain prohibited.

DATES: The effective date for this rule is December 15, 2009.

FOR FURTHER INFORMATION CONTACT: Gary Pollock, Management Assistant, Grand Teton National Park, 307-344-3428.

SUPPLEMENTARY INFORMATION:

Background

The National Park Service (NPS) has been managing winter use issues in Yellowstone National Park, Grand Teton National Park, and the John D. Rockefeller, Jr., Memorial Parkway (the Parkway) for several decades under the guidance provided by a number of sources. The history of the issue was discussed at length in the notice for the proposed rule, 73 FR 65,784 (Nov. 5, 2008) and in the 2008 Winter Use Plans Environmental Assessment (2008 EA).

After the proposed rule was published, on November 7, 2008, the U.S. District Court for the District of Wyoming issued an order reinstating the 2004 final rule on winter use in the parks, without its sunset provisions, "until such time as NPS can promulgate an acceptable rule to take its place." The NPS complied with the court order and on December 9, 2008, republished the 2004 regulation without its provisions terminating snowmobile and snowcoach use after the winter of 2006-07.

The NPS is promulgating this final regulation to replace the reinstated 2004 regulation beginning with the winter season of 2009-2010.

The EA, FONSI, and other documents pertaining to winter use management in the parks can be found at <http://www.nps.gov/yell/planyourvisit/winteruse.htm>, and at <http://www.nps.gov/grte/parkmgmt/planning.htm>.

Rationale for the Final Rule

This rule allows for a limited amount of snowmobile use in Grand Teton and the Parkway to provide a range of appropriate winter activities while protecting the integrity of park resources. It allows for winter anglers to access ice fishing opportunities on the large expanse of Jackson Lake, and for snowmobile access from the adjacent Targhee National Forest to and from Flagg Ranch, via the Grassy Lake Road. The rule also designates the route between Flagg Ranch and the South Entrance of Yellowstone for use by snowmobiles and snowcoaches, subject to any daily entry limits, air and sound emissions, guiding, and other such requirements that apply to oversnow vehicle travel within Yellowstone. The designation is necessary since winter travel through the South Entrance of Yellowstone begins and ends at Flagg Ranch, approximately two miles south of the Yellowstone boundary.

The rule is designed to protect against the adverse impacts that occurred from the historical types and numbers of oversnow vehicle use in the Park and the Parkway. Experience over the past several winters has shown that a limited number of snowmobiles, in combination with the NPS requirements for air and sound emissions on Jackson Lake, allows for a range of appropriate visitor experiences while ensuring that the integrity of park resources and values is not harmed. The NPS found that the regulations that were in effect over the past several winter seasons resulted in quieter conditions, and that impacts on air quality, wildlife, other resources, and visitor experience were acceptable. This rule limits the daily number of snowmobiles allowed on Jackson Lake and the Grassy Lake Road in order to better protect park soundscapes and other resources, and includes requirements for snowmobile air and sound emissions. It also eliminates certain oversnow vehicle routes.

This rule is consistent with the 2006 NPS Management Policies. In managing units of the National Park System, the NPS may undertake actions that have both beneficial and adverse impacts on park resources and values. However, the NPS is generally prohibited by law from taking or authorizing any action that would or is likely to impair park resources and values. Impairment is defined in the 2006 NPS Management Policies in section 1.4.5 as an impact that, in the professional judgment of the responsible NPS manager, would harm the integrity of park resources or values, including the opportunities that otherwise would be present for the enjoyment of those resources and values.

The NPS is also required to conserve the resources and values of the National Park System units and to prioritize the conservation of park resources over their use whenever the two are found to be in conflict. The NPS complies with this mandate by ensuring that a proposed use of the parks will not result in unacceptable impacts to park resources and values, and by allowing impacts to park resources only when allowing the impacts is appropriate to fulfill the purposes of the park and is necessary (meaning that the impacts are unavoidable and incapable of further mitigation in light of the authorized appropriate use).

This rule initially limits the number of snowmobiles authorized in Grand Teton to 25 per day in order to provide access to ice fishing opportunities on the large expanse of Jackson Lake. The rule allows this limit to be adjusted upward or downward, not to exceed 40

snowmobiles per day, through a monitoring and adaptive management program. The daily limits, combined with a provision that all snowmobiles used on Jackson Lake must meet NPS air and sound emissions requirements, will mitigate impacts on park resources, including the natural soundscapes of the park. The rule also allows 25 snowmobiles per day on the Grassy Lake Road in the Parkway. This route is the easternmost portion of an approximately 40-mile route that traverses the Targhee National Forest from the vicinity of Ashton, Idaho, and which terminates at Flagg Ranch. The route serves as a connection to popular snowmobile touring opportunities in the vicinity of Island Park, Idaho, and West Yellowstone, Montana. Snowmobiling opportunities abound in the portion of the route that is within the national forest, and almost all use of the route within the Parkway is incidental to activities in the forest. In view of the low amount of use that has historically occurred on the Parkway portion of the Grassy Lake Road, the importance of ensuring that visitors to the remote portions of the national forest have access to the facilities and services at Flagg Ranch (including the ability to report emergencies and obtain food and gasoline), and to provide access from Flagg Ranch to the recreational opportunities available in the national forest, snowmobiles on the Grassy Lake Road are not required to meet the air and sound emission requirements.

Adjustment to the daily entry limits for snowmobiles through an adaptive management program is one of several tools available to park managers to ensure that the goals and objectives of the winter use plans are maintained. Through an adaptive management program, if monitoring of use levels indicates that conditions are acceptable and could accommodate greater use, the NPS may increase the daily entry limits on Jackson Lake to 40 snowmobiles per day. Conversely, if monitoring indicates unacceptable conditions, the NPS will reduce use levels to an extent that acceptable conditions can be maintained.

To mitigate impacts to air quality and the natural soundscape, the NPS is continuing the requirement that all recreational snowmobiles on Jackson Lake meet strict air and sound emissions requirements. For air emissions, all snowmobiles must achieve a 90% reduction in hydrocarbons and a 70% reduction in carbon monoxide, relative to EPA's baseline emissions assumptions for conventional two-stroke snowmobiles. For sound restrictions, snowmobiles

must operate at or below 73 dBA as measured at full throttle according to Society of Automotive Engineers (SAE) J192 test procedures (revised 1985). The Superintendent will maintain a list of approved snowmobile makes, models, and years of manufacture that meet NPS requirements.

The NPS is continuing the requirement that began with the 2005 model year that all snowmobiles must be certified under 40 CFR 1051 to a Family Emission Limit (FEL) no greater than 15 g/kW-hr for hydrocarbons (HC) and 120 g/kW-hr for carbon monoxide (CO). Snowmobiles must be tested on a five-mode engine dynamometer consistent with the test procedures specified by the EPA (40 CFR 1051 and 1065). Other test methods could be approved by the NPS.

The NPS is retaining the use of the FEL method for demonstrating compliance with its emissions requirements because it has several advantages. First, use of FEL will ensure that all individual snowmobiles entering the parks achieve the NPS's emissions requirements, unless modified or damaged (under this regulation, snowmobiles which are modified in such a way as to increase air or sound emissions will not be in compliance with NPS requirements and therefore not permitted to enter the parks). Use of FEL will also minimize any administrative burden on snowmobile manufacturers to demonstrate compliance with NPS requirements, because they already provide FEL data to the EPA. Further, the EPA has the authority to ensure that manufacturers' claims on their FEL applications are valid. EPA also requires that manufacturers conduct production line testing (PLT) to demonstrate that machines being manufactured actually meet the certification levels. If PLT indicates that emissions exceed the FEL levels, then the manufacturer is required to take corrective action. Through EPA's ability to audit manufacturers' emissions claims, the NPS will have sufficient assurance that emissions information and documentation will be reviewed and enforced by the EPA. FEL also takes into account other factors, such as the deterioration rate of snowmobiles (some snowmobiles may produce more emissions as they age), lab-to-lab variability, test-to-test variability, and production line variance. In addition, under the EPA's regulations, all snowmobiles manufactured must be labeled with FEL air emissions information. This will help to ensure that NPS emissions requirements are consistent with these

labels. The use of FEL will avoid potential confusion for consumers.

The air emissions requirements for snowmobiles allowed to operate in the park should not be confused with standards adopted by the EPA in a final rule published in the **Federal Register** on November 8, 2002 (67 FR 68242). The EPA regulations require manufacturers to meet certain fleet averages for HC and CO emissions. For example, the Phase 1 standards required all snowmobile manufacturers to meet a fleet-wide average in 2007 of 275 g/kW-hr for CO and 100 g/kW-hr for HC, which represents a 30-percent reduction from the baseline emission rates for uncontrolled snowmobiles. Any particular make/model may emit more or less than the standard as long as the fleet average does not exceed the standard. Phase 2 and Phase 3 standards will be implemented in 2010 and 2012, respectively, effectively requiring the equivalent of a 50% reduction in both HC and CO as compared to average baseline levels. By comparison, NPS requires that all snowmobiles operating in the Parks meet a FEL of 120 g/kW-hr for CO and 15 g/kW-hr for HC. This means that snowmobiles operating in the park represent the cleanest that are commercially available.

To determine compliance with the sound emissions requirements, snowmobiles must be tested using SAE J192 test procedures (revised 1985; or potentially as further revised and adapted for use by NPS). The NPS recognizes that the SAE updated these test procedures in 2003; however, the changes between the 2003 and 1985 test procedures could yield different measurement results. The sound emissions requirement was initially established using 1985 test procedures (in addition to information provided by industry and modeling). To ensure consistency in the test results, the NPS will at this time continue to use the 1985 test. The SAE J192 (revised 1985) test also allows for a tolerance of 2 dBA over the sound limit to account for variations in weather, snow conditions, and other factors. The NPS understands that an update to the 2003 J192 procedures may be underway, and the NPS will continue to evaluate these test procedures and possibly adopt them after these regulations are implemented. Other test methods could be approved by NPS on a case-by-case basis.

Snowmobiles may be tested at any barometric pressure equal to or above 23.4 inches Hg uncorrected (as measured at or near the test site). This exception to the SAE J192 test procedures maintains consistency with the testing conditions used to determine

the sound requirement. This allowance for reduced barometric pressure is necessary since snowmobiles were tested at the elevation of Yellowstone National Park, where atmospheric pressure is lower than that under the SAE J192's requirements. Testing data indicate that snowmobiles test quieter at high elevation, and therefore some snowmobiles may comply with the NPS's sound emissions requirements at higher elevations even though they do not when tests are conducted near sea level.

The NPS will annually publish a list of snowmobile makes, models, and years of manufacture that meet its emissions and sound requirements. Snowmobile manufacturers may demonstrate that snowmobiles are compliant with the air emissions requirements by submitting to the NPS a copy of their applications used to demonstrate compliance with EPA's general snowmobile regulation (indicating FEL). The NPS will accept this application information from manufacturers in support of conditionally certifying a snowmobile as meeting its air emissions requirements, pending ultimate review and certification by EPA at the same emissions levels identified in the application. Should EPA certify a snowmobile at an emission level that would no longer meet the NPS's requirements, this snowmobile would no longer be considered by NPS to be compliant with its requirements and would be phased out according to a schedule that will be determined by the NPS to be appropriate. For sound emissions, snowmobile manufacturers may submit their existing Snowmobile Safety and Certification Committee (SSCC) sound level certification form. Under the SSCC machine safety standards program, snowmobiles are certified by an independent testing company as complying with all SSCC safety standards, including sound standards. This regulation does not require the SSCC form specifically, as there could be other acceptable documentation in the future. The NPS will work cooperatively with the snowmobile manufacturers on appropriate documentation. The NPS intends to continue to rely on certified air and sound emissions data from the private sector rather than establish its own independent testing program. When the NPS certifies snowmobiles as meeting its requirements, it will announce how long that certification applies. Generally, each snowmobile model will be approved for entry into the parks for 6 winter seasons after it is

first listed. Based on NPS experience, 6 years represents the typical useful life of a snowmobile, and thus 6 years provides purchasers with a reasonable length of time where operation is allowed once a particular model is listed as being compliant. It is also based on EPA snowmobile emission regulations and the deterioration factors that are part of those regulations (EPA requires that if a manufacturer certifies its snowmobile will comply with EPA's emission regulations, the snowmobile will meet those regulations for a period of 5 years or 5,000 miles). The NPS recognizes that some privately owned snowmobiles used predominantly for ice fishing on Jackson Lake may have relatively low mileages even after 6 years of use, and therefore may not have experienced the type of deterioration that would cause them to fail NPS air and sound emissions requirements. The certification period for snowmobiles being operated on Jackson Lake will still be considered to be 6 years, but it may be extended up to a total of 10 years as long as the snowmobile's mileage does not exceed 6,000 miles.

Individual snowmobiles modified in such a way as to increase sound and air emissions of hydrocarbons (HC) and carbon monoxide (CO) beyond the proposed emission restrictions will be denied entry to the parks. It is the responsibility of end users to ensure that their oversnow vehicles, whether snowmobiles or snowcoaches, comply with all applicable restrictions.

Snowmobiles being operated on the Grassy Lake Road will not be required to meet air and sound emissions requirements regardless of whether they originate travel at Flagg Ranch or in the national forest. In light of the relatively short length of this segment and the very limited amount of snowmobile use, the NPS has determined that the impacts of this use of snowmobiles that does not meet NPS air and sound emissions requirements are acceptable.

Scientific studies and monitoring of winter visitor use and park resources will continue. If these studies indicate that human presence or activities have a substantial adverse effect on wildlife or other park resources that cannot otherwise be mitigated, as part of its adaptive management of winter use activities the NPS will close selected areas to visitor use. A one-year notice will ordinarily be provided before any such closure is implemented unless immediate closure is deemed necessary to avoid impairment of park resources. The Superintendent will continue to have the authority under 36 CFR 1.5 to take emergency actions to protect park resources or values.

Snowmobiles will continue to be restricted to designated routes, which are either roads that are traveled by motor vehicles during the remainder of the year, or in the case of Jackson Lake, by motorboats during the summer.

The NPS will close the Continental Divide Snowmobile Trail (CDST) as an oversnow vehicle route through most of Grand Teton and the Parkway. Experience over the past several winters strongly suggests that the minimal amount of use on this route would not substantially increase if it were to remain open, since much of the previous use of the CDST was associated with visitors traveling through to Yellowstone. The NPS recognizes that the guiding and air and sound emissions requirements for Yellowstone have contributed to a substantial reduction in the use of the CDST, since visitors have not been able to continue into Yellowstone without a guide and a snowmobile that meets the emissions requirements, as well as complying with the daily entrance caps.

The NPS also recognizes, however, that snowmobile access to and from the Targhee National Forest is important to some visitors. While the CDST will no longer be maintained or designated for snowmobile use, the air and sound emissions requirements for the Grassy Lake Road will be removed beginning with the 2009–2010 winter season. Snowmobilers will be able to transport their machines by trailer between Moran and Flagg Ranch using plowed roads, in order to connect to the Grassy Lake Road and the national forest lands to the west of the Parkway. The daily entry limit of 25 is sufficient to accommodate the levels of use that have typically occurred in the past and those which are reasonably foreseeable.

Summary of and Responses to Public Comments

The NPS published a proposed rule on November 5, 2008, (73 FR 65784) and initially accepted public comments through November 20, 2008. The comment period was reopened on July 24, 2009, and comments were accepted through September 8, 2009. Comments were accepted through the mail, hand delivery, and through the Federal eRulemaking Portal: <http://www.regulations.gov>. A total of 39,796 comment documents were received. Since the proposed rule was combined with rulemaking for winter use management in Yellowstone, many of the comments addressed issues primarily or entirely related to that park. The comments and responses below are those that were pertinent to the issues in Grand Teton and the Parkway.

Comments relevant to Yellowstone are included in a separate rulemaking.

1. *Comment:* The NPS should not require the use of BAT snowmobiles on Jackson Lake.

Response: The BAT requirement on Jackson Lake is important in mitigating the impacts of snowmobile use on Jackson Lake. Due to the large and unobstructed expanse of the frozen surface of the lake, sound from snowmobiles is able to propagate over long distances, and therefore could have a disproportionate impact on the natural soundscapes even at relatively low levels of use. The BAT requirement helps to mitigate that impact due to the reduced sound emissions compared to non-BAT snowmobiles, as well as the tonal qualities of the sound.

2. *Comment:* The daily limits for snowmobile use on Jackson Lake and the Grassy Lake Road are too low.

Response: The NPS recognizes that the levels of use on Jackson Lake in recent years may have been affected by the uncertainty over the winter use issue, and winter anglers may have been reluctant to purchase BAT snowmobiles. Should this reluctance diminish as a result of greater certainty regarding winter use management on Jackson Lake, some increase in BAT snowmobile use could be expected. In light of the amount of use in recent years, and after considering the historic levels of use on Jackson Lake, the NPS believes that the daily limits established will accommodate current and reasonably foreseeable future demand for snowmobile access on Jackson Lake. Similarly, the limits established for the Grassy Lake Road are sufficient to accommodate current use levels and those that are reasonably foreseeable.

3. *Comment:* Since the level of use analyzed in the Selected Alternative is considered less than a significant impact, the decision would unnecessarily restrict snowmobile use with no resulting benefit for park resources.

Response: The NPS believes that the snowmobile daily entry limits on Jackson Lake and the Grassy Lake Road are sufficient to accommodate current and reasonably foreseeable demand for use of those areas. At the same time, the NPS believes the Selected Alternative will be protective of park resources. The NPS is not obligated to increase the daily limits to a level that would be considered significant simply for the purpose of accommodating demand that may or may not be present. Should the need arise in the future, the NPS could revisit whether the daily entry limits should be adjusted.

4. *Comment:* The NPS should use the ongoing monitoring of the effects of snowmobile use to determine the appropriate number of snowmobiles that can access Jackson Lake.

Response: The Selected Alternative allows for an initial daily entry limit of 25 snowmobiles per day on Jackson Lake. This level of use is higher than the recent-years average of 3–5 snowmobiles per day, as well as the peak day of 17. The NPS believes that it is reasonable to expect that use will increase somewhat once the winter use management situation stabilizes, but does not have any information that suggests that the demand cannot be accommodated within the limits established in the Selected Alternative. Nevertheless, the decision allows for the entry limits to be adjusted up or down, not to exceed 40 per day based on monitoring and adaptive management.

5. *Comment:* The daily snowmobile limits on Jackson Lake and the Grassy Lake Road are too high in light of the low level of snowmobile use that has occurred in the Park and Parkway in recent years. The daily limits should be capped at current levels.

Response: The daily limits proposed in the Selected Alternative are low enough to ensure that no significant impacts will occur, but high enough to accommodate a reasonable amount of increased use. The NPS recognizes that the levels of use on Jackson Lake in recent years may have been affected by the uncertainty over the winter use issue, and winter anglers may have been reluctant to purchase BAT snowmobiles.

6. *Comment:* Snowmobile use should not be allowed on Jackson Lake because anglers can access the lake by non-motorized means, and because snowmobiles leave behind pollutants.

Response: Due to the large size of Jackson Lake, most of it would be inaccessible without the some form of motorized access.

7. *Comment:* Snowmobiles should not be allowed on Jackson Lake because they leave behind pollutants that enter the lake when the ice melts.

Response: The requirement that snowmobiles meet BAT requirements, combined with the daily entry limits, will result in negligible levels of pollutants entering the waters of Jackson Lake.

8. *Comment:* The Continental Divide Snowmobile Trail (CDST) through Grand Teton and the Parkway should be kept open. It is an important link between popular snowmobile touring opportunities portions of the CDST outside the park and in the Island Park/West Yellowstone areas.

Response: In recent years, use of the CDST through the parks was extremely low—in the neighborhood of 15 snowmobiles per season. Although use levels were higher than that prior to the initiation of guiding and BAT requirements in Yellowstone, the amount of use has always been modest. The amount of use on the CDST does not warrant the cost of continuing to construct and maintain the trail each year. Since BAT snowmobiles will no longer be required on the Grassy Lake Road, those wishing to complete a long-distance tour between other parts of the CDST and the Island Park/West Yellowstone areas will be able to trailer their snowmobiles through the parks to Flagg Ranch and continue traveling the trail from there.

9. *Comment:* The Continental Divide Snowmobile Trail between Moran Junction and Flagg Ranch should be discontinued.

Response: The CDST will no longer be designated or maintained for snowmobile use.

10. *Comment:* Implementation of a long-term plan for Grand Teton and the Parkway, while putting in place an interim plan for Yellowstone will cause further confusion and uncertainty for the public.

Response: Separate decisions regarding Yellowstone, Grand Teton, and the Parkway are not expected to create confusion and uncertainty. The oversnow vehicle use allowed under the Selected Alternative at Grand Teton and the Parkway is separate and distinct from that which occurs in Yellowstone. The use of snowmobiles on Jackson Lake for ice fishing has no connection with opportunities for touring Yellowstone, nor does use of the Grassy Lake Road. A long-term decision for Grand Teton and the Parkway will alleviate the existing confusion and uncertainty regarding winter use management in those two areas.

11. *Comment:* Snowmobiles should not be allowed on the Grassy Lake Road.

Response: The Grassy Lake Road within the Parkway is the easternmost segment of an approximately 40-mile route that extends from near Ashton, Idaho, to Flagg Ranch, mostly within the Targhee National Forest. Within the national forest, there are many opportunities for winter recreation, including snowmobile touring. Allowing snowmobile use on the portion of the Grassy Lake Road within the Parkway provides opportunities for visitors to the national forest to access the services available at Flagg Ranch, including emergency notification, and for visitors to access the adjacent national forest lands from Flagg Ranch.

12. *Comment:* The NPS should implement a winter shuttle service that would haul non-BAT snowmobiles through Grand Teton and Yellowstone so that tours to West Yellowstone would be possible without a long side trip through Island Park.

Response: The NPS would consider proposals from a potential service provider for such a service.

13. *Comment:* The EA did not include a sufficient range of alternatives.

Response: As discussed in the purpose and need for the 2008 EA, this EA and rulemaking considered only those options that would have allowed the NPS to open the parks for an interim period without causing major impacts. NPS did not examine options that it knew, based on previous analyses, modeling data, or monitoring data, would cause major impacts. Such impacts must first be analyzed in an EIS. In order to ensure that some motorized access could occur for the upcoming winter, NPS proposed an approach it believed could likely be supported by a Finding of No Significant Impact, which required that no major impacts from the decision could be experienced.

14. *Comment:* The decision to permanently allow snowmobile use in Grand Teton and the Parkway will impact future long-term decisions regarding winter access into Yellowstone.

Response: The snowmobile use authorized in Grand Teton and the Parkway is distinct and separate from oversnow vehicle access into Yellowstone. The plan for Grand Teton and the Parkway allows a limited amount of snowmobile access for ice fishing on Jackson Lake, and for use of the Grassy Lake Road between Flagg Ranch and the Targhee National Forest. Neither of these uses has any bearing on winter access into Yellowstone.

15. *Comment:* The comment period on the EA was too short.

Response: The EA and proposed rule were available for public comment for nearly concurrent 15-day periods ending on November 17, 2008, and November 20, 2008, respectively. The lengths of the comment periods were based on the time constraints that existed at the time, because NPS was attempting to complete a NEPA and rulemaking process in time for the 2008–2009 winter season. Subsequent events made it possible for NPS to reopen the proposed rule for an additional 45 days of public comment in July 2009. The issues are largely the same, and the NPS considered all of the comments made during both comment periods in the NEPA process.

16. *Comment:* By releasing a proposed rule contemporaneously with the 2008 EA, the NPS indicated that it had already made a decision regarding the outcome of the EA.

Response: Publication of the proposed rule did not prejudice or commit the NPS to a course of action since it was not a final rule. The rule could be altered any time prior to publication of a final rule in the **Federal Register**.

17. *Comment:* The NPS should disclose the amount of Federal funds that have been spent on winter use planning for the parks.

Response: Since 1997, the NPS has spent over \$11 million on planning for winter use management in Yellowstone, Grand Teton, and the Parkway.

18. *Comment:* The No-action alternative in the EA (Alt 1—Eliminate Motorized Recreational Oversnow Travel) was incorrect because it should have represented the “current level of activity,” meaning the daily entry limits that had been in effect the previous four winters.

Response: When the 2008 EA was prepared, the 2007 rule had been vacated. No snowmobile or snowcoach use would have been authorized without action by the NPS, because the authorizations in the 2004 rule had expired pursuant to the sunset date provisions. After the 2008 EA was issued, the U.S. District Court for the District of Wyoming reinstated the 2004 rule without the sunset clauses, and as a result, up to 720 snowmobiles per day were allowed for the winter of 2008–09. Due to a pending appeal, there is still uncertainty regarding that reinstatement. As explained above, there has been no current NEPA analysis or other determination that use at the levels authorized under that regulation is consistent with the NPS’s statutory and other mandates. Accordingly, the No Action Alternative analyzed in the 2008 EA represents a more logical and useful benchmark against which impacts can be compared, and therefore continues to better satisfy the purposes of the no action alternative under NEPA.

19. *Comment:* The NPS has no basis for reducing the number of snowmobiles allowed on Jackson Lake from 40 per day to 25.

Response: The rule provides an initial limit of 25 per day, but allows up to 40. The initial limit is sufficient to accommodate the amount of use that has been occurring in recent years, and the potentially higher limit of 40 is sufficient to accommodate reasonably foreseeable increases in fishing/snowmobiling demand.

20. *Comment:* The impacts associated with the use of snowmobiles violate the NPS Organic Act prohibition on the impairment of park resources.

Response: As described in the EA and FONSI, the impacts associated with the limited and carefully regulated use of snowmobiles under the Selected Alternative do not constitute impairment of park resources or cause unacceptable impacts.

21. *Comment:* The NPS must take into account its obligation to seek to perpetuate the best possible air quality in the parks.

Response: The limited amount of snowmobile use permitted in the Selected Alternative will have negligible impacts on the air quality of the parks.

22. *Comment:* The NPS should continue operating the parks under the 2004 rules.

Response: The 2004 rules were reinstated by the U.S. District Court for the District of Wyoming and were intended to provide guidance until such time as the NPS could promulgate new rules. Continued operation under the reinstated rule would lead to uncertainty, as a result of pending litigation in both the U.S. Court of Appeals for the Tenth Circuit and the U.S. District Court for the District of Columbia. In addition, there has been no current NEPA analysis or other determination that the use levels authorized under that regulation are consistent with the NPS’s statutory and other mandates.

23. *Comment:* The NPS should delay implementation of any new rules for one season in order to minimize confusion.

Response: The NPS is currently managing winter use activities under a 2004 rule that was reinstated by the U.S. District Court for the District of Wyoming. Continued operation under that rule would lead to uncertainty, as a result of pending litigation in both the U.S. Court of Appeals for the Tenth Circuit and the U.S. District Court for the District of Columbia. In addition, there has been no current NEPA analysis or other determination that the use levels authorized under that regulation are consistent with the NPS’s statutory and other mandates. In order to ensure that the Park and Parkway are open to oversnow vehicle use for the winter of 2009–2010, the NPS believes it is prudent to implement the Selected Alternative prior to the start of the season.

24. *Comment:* The NPS general regulation on snowmobiles, 36 CFR 2.18, requires that snowmobiles may only be allowed where they will not disturb wildlife.

Response: Winter use has some small and occasional effects on wildlife, just like every other form of visitor use of the park, but the impacts are expected to be acceptable, and are a necessary and unavoidable consequence of an appropriate use. Taking or intentionally disturbing wildlife are prohibited by the NPS's general regulations on natural resource preservation and wildlife protection, 36 CFR 2.1, 2.2. Section 2.18, which addresses the use of snowmobiles in the National Park System, requires that routes for snowmobile use may only be designated where the use will not disturb wildlife, but in doing so does not establish a different standard than sections 2.1 and 2.2. The wildlife responses to normal snowmobile use that are expected to occur do not cause the taking, frightening, or intentional disturbance that is prohibited by NPS regulations.

25. *Comment:* The NPS has not provided a reasoned explanation for its adaptive management thresholds and their consistency with its mandates.

Response: The adaptive management thresholds are a management tool only; they do not represent the unacceptable impacts or impairment thresholds described in section 1.4 of the Management Policies. Rather, they are a conservative measure used to alert the NPS manager that additional attention to a particular park resource or value is merited. By reacting to the exceedance of a conservative adaptive management threshold, NPS can seek to ensure that no unacceptable impacts or impairment occur.

26. *Comment:* The NPS should require winter users to maintain a 100 meter distance from animals when stopping.

Response: The NPS requires visitors to stay at least 100 yards (91 meters) away from bears and wolves, and at least 25 yards (21 meters) away from all other animals.

27. *Comment:* Promulgation of a long-term rule for winter use management at Grand Teton and the Parkway is a major Federal action pursuant to NEPA and should have required the preparation of an environmental impact statement.

Response: As disclosed in the 2008 environmental assessment and 2009 Finding of No Significant Impact, the Selected Alternative (and its implementation in the final rule) is not an action that normally requires the preparation of an environmental impact statement. Nor will it have a significant effect on the human environment.

Environmental impacts that could occur are limited in context and intensity, with generally adverse impacts that range from localized to widespread,

short- to long-term, and negligible to minor. As discussed in the EA, impacts would have to rise to the level of major to be considered significant, and these impacts fall well short of major impacts. There are no unmitigated adverse effects on public health, public safety, threatened or endangered species, sites or districts listed in or eligible for listing in the National Register of Historic Places, or other unique characteristics of the region. No highly uncertain or controversial impacts, unique or unknown risks, significant cumulative effects, or elements of precedence were identified. Implementation of the action will not violate any Federal, State, or local environmental protection law. Based on the foregoing, it has been determined that an EIS is not required for this project.

28. *Comment:* The NPS should allow the Wyoming Game and Fish Department to use non-BAT snowmobiles to access Jackson Lake.

Response: When the use of BAT snowmobiles is unsafe or impractical, or the use of non-BAT snowmobiles is otherwise necessary for the proper administration of the park, the Superintendent may allow NPS and other authorized parties to use non-BAT snowmobiles for specialized administrative purposes, such as law enforcement, search and rescue, or other management functions.

Changes to the Final Rule

After taking the public comments into consideration and after additional internal review, several changes were made to the final rule, in addition to non-substitutive editorial changes made to improve clarity of the rule. These changes are as follows:

First, paragraphs 7.21(a)(2) and 7.22(g)(2) for the Parkway and Grand Teton have been revised to fully describe all of the terms that are necessary to know, rather than simply referencing those terms in the corresponding section of the Yellowstone rule, § 7.13(l).

Second, paragraph 7.21(a)(4) was revised to eliminate the descriptions for snowcoach air emissions requirements. The revision does not necessarily remove emissions requirements, however, because any snowcoach use in the Parkway will only be pursuant to a concessions contract with Yellowstone National Park, and snowcoaches will be required to meet any emissions requirements in the Yellowstone regulations at § 7.13(l).

Third, paragraphs 7.21(a)(5) and (6) regarding the models of snowmobiles that may be operated in the Parkway, along with snowmobile air and sound

emissions requirements, were deleted and subsequent paragraphs were renumbered accordingly. The revision simply reflects the fact that snowmobile trips into Yellowstone through the South Entrance of the park begin and end at Flagg Ranch, and that all use of the two-mile route between Flagg Ranch and the South Entrance is in conjunction with those trips. Therefore, the final rule specifies at paragraph 7.21(a)(5) that snowmobiles traveling along the route between Flagg Ranch and the South Entrance must meet any air and sound emissions requirements and other conditions described in the Yellowstone regulations at § 7.13(l). The proposed rule did not include any air and sound emissions requirements for the Grassy Lake Road, and therefore the revision does not affect snowmobiles using that route.

Fourth, paragraph 7.21(a)(10), renumbered as 7.21(a)(8), was revised to remove the table showing snowmobile and snowcoach daily limits and simply describe those limits in the text. The revision also specifies that the daily entry limits for snowmobiles and snowcoaches on the route from Flagg Ranch to the South Entrance of Yellowstone are established in § 7.13(l).

Summary of the Economic Analysis

NPS analyzed the potential costs and benefits associated with the Selected Alternative as compared to the baseline conditions. The baseline conditions for this regulatory action are influenced by recent court decisions. When the Environmental Analysis was issued in 2008, the 2007 winter use regulation had been vacated and the authorization for snowmobile access in the 2004 winter use regulation had expired pursuant to its sunset provision. Thus, without regulatory action by NPS at that time, no snowmobile access would have been permitted, wheeled vehicle travel would have continued on roads that had been traditionally plowed, and the Park would have been open to skiing and snowshoeing.

However, in November 2008 the Wyoming District Court ordered the reinstatement of the 2004 regulation, without its sunset provision, until NPS promulgates an acceptable regulation to take its place. The result of that decision is the continued authorization for snowmobile access as provided by the 2004 regulation. While there has been no current NEPA analysis or other determination that snowmobile use at the levels authorized under that regulation is consistent with NPS statutory and other mandates, these conditions describe baseline for purposes of this regulatory analysis.

NPS has considered the Selected Alternative vis-à-vis these baseline conditions and determined that the resulting changes in winter season visitation will be de minimis. For example, in Grand Teton National Park, snowmobile use on Jackson Lake in recent years has averaged less than five machines per day. On a few days, snowmobile use has involved approximately 10 machines, and approximately 19 machines on the peak use day. On Grassy Lake Road, snowmobile use has typically been no more than five to 10 machines per day, and often less. Some increases beyond these levels may occur if uncertainty about authorized use levels is reduced by this regulatory action. However, such increases would be expected only gradually, if at all. The Selected Alternative will initially permit 25 snowmobiles per day on the Lake for ice fishing access, and as many as 40 snowmobiles per day if monitoring indicates acceptable resource impacts. Therefore, the Selected Alternative is not considered binding on snowmobile use within the Parks and any changes in visitation from the baseline conditions would likely be imperceptible.

Given that, NPS believes the incremental benefits and costs associated with the Selected Alternative are essentially zero for both visitors and businesses alike. Therefore, NPS estimates zero net benefits (benefits minus costs) as a result of the Selected Alternative.

NPS also analyzed the potential economic impacts of the Selected Alternative on small entities, considering the potential changes in business revenue that could occur under that alternative relative to the baseline conditions. As noted above, NPS believes that any changes in winter season visitation in the Parks resulting from the Selected Alternative will be de minimis. Therefore, NPS also believes that any revenue impacts on small entities will also be de minimis. Additionally, NPS notes that most of the visitors potentially affected by the Selected Alternative reside in the local area, and that these visitors do not utilize local hotels, restaurants, or other businesses to the extent that those coming from outside the GYA would. Therefore, NPS does not believe that significant impacts to a substantial number of small entities will occur as a result of the Selected Alternative. Given that, NPS has determined that the Selected Alternative will have de minimis impacts on the affordability or viability of local businesses, small or large.

Compliance With Other Laws

Regulatory Planning and Review (Executive Order 12866)

This document is not a significant rule and the Office of Management and Budget has not reviewed this rule under Executive Order 12866. We have made the assessments required by E.O. 12866 and the results are given below.

(1) This rule will not have an effect of \$100 million or more on the economy. It will not adversely affect in a material way the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or Tribal governments or communities. These conclusions are based on the report "Economic Analyses: Selected Winter Use Plan for Grand Teton National Park and John D. Rockefeller, Jr., Memorial Parkway" (Peacock, September 2009).

(2) This rule will not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency. Implementing actions under this rule will not interfere with plans by other agencies or local government plans, policies, or controls since this is an agency-specific change.

(3) This rule does not alter the budgetary effects of entitlements, grants, user fees, or loan programs or the rights or obligations of their recipients. It only affects the use of snowmobiles within specific units of the National Park System. No grants or other forms of monetary supplement are involved.

(4) While the NPS has been the subject of numerous lawsuits regarding winter use management, this rule does not raise novel legal or policy issues.

Regulatory Flexibility Act

The NPS has determined that this regulatory action will not have a significant effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). This conclusion is based on the report "Economic Analyses: Selected Winter Use Plan for Grand Teton National Park and John D. Rockefeller, Jr., Memorial Parkway" (Peacock, September 2009).

Small Business Regulatory Enforcement Fairness Act (SBREFA)

This rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This rule:

(a) Does not have an annual effect on the economy of \$100 million or more. This conclusion is based on the report "Economic Analyses: Selected Winter Use Plan for Grand Teton National Park

and John D. Rockefeller, Jr., Memorial Parkway" (Peacock, September 2009).

(b) Will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions.

(c) Does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises. This rulemaking has no effect on methods of manufacturing or production and specifically affects the immediate area surrounding Grand Teton National Park and the John D. Rockefeller, Jr. Memorial Parkway, not national or U.S.-based enterprises.

Unfunded Mandates Reform Act

This rule does not impose an unfunded mandate on State, local, or Tribal governments or the private sector of more than \$100 million per year. The rule does not have a significant or unique effect on State, local or Tribal governments or the private sector. It addresses public use of national park lands, and imposes no requirements on other agencies or governments.

Takings (Executive Order 12630)

Under the criteria in Executive Order 12630, this rule does not have significant takings implications. Access to private property located within or adjacent to the parks will still be afforded the same access during winter as before this rule. No other property is affected.

Federalism (Executive Order 13132)

In accordance with Executive Order 13132, the rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment. It addresses public use of national park lands, and imposes no requirements on other agencies or governments.

Civil Justice Reform (Executive Order 12988)

This rule complies with the requirements of Executive Order 12988. Specifically, this rule:

(a) Meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and

(b) Meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

Paperwork Reduction Act

This rule does not contain information collection requirements,

and a submission under the Paperwork Reduction Act (PRA) is not required.

National Environmental Policy Act

This rule does not constitute a major Federal action significantly affecting the quality of the human environment. We have prepared an Environmental Assessment (Winter Use Plans Environmental Assessment, November 2008) under the National Environmental Policy Act of 1969. A Finding of No Significant Impact (FONSI) has also been completed. The EA and FONSI are available for review by contacting the Superintendent's Office at Grand Teton National Park, or can be found online at: <http://www.nps.gov/grte/parkmgmt/planning.htm>.

Consultation With Indian Tribes (E.O. 13175)

Under the criteria in Executive Order 13175, we have evaluated this rule and determined that it has no potential effects on Federally recognized Indian Tribes. Numerous Tribes in the area were consulted, however, in the development of the previous NEPA processes. Their major concern was to reduce the adverse effects on wildlife by snowmobiles. This rule does that by limiting the numbers of snowmobiles allowed and authorizing such use only in areas where wildlife is not abundant during the winter.

Information Quality Act

In developing this rule NPS did not conduct or use a study, experiment, or survey requiring peer review under the Information Quality Act (Pub. L. 106–554).

Effects on the Energy Supply (E.O. 13211)

This rule is not a significant energy action under the definition in Executive Order 13211. A Statement of Energy Effects is not required.

Administrative Procedure Act

Comment periods on the proposed rule were provided from November 5, 2008, through November 20, 2008, and from July 24, 2009, to September 8, 2009, for a total of 60 days.

This rule is effective on December 15, 2009. The National Park Service recognizes that new rules ordinarily go into effect thirty days after publication in the **Federal Register**. For this regulation, however, we have determined under 5 U.S.C. 553(d) and 318 DM 6.25 that this rule should be effective on December 15, 2009, the traditional date for commencement of the park's winter use season. This rule implements the winter use plans for

Grand Teton National Park and the John D. Rockefeller, Jr. Memorial Parkway and relieves the restrictions on the use of snowmobiles that would exist in its absence. In addition, good cause exists for the effective date of December 15, 2009, for the following reasons:

(1) The NPS has in good faith publicly stated that the 2009–2010 winter season for Grand Teton National Park and the John D. Rockefeller, Jr. Memorial Parkway would commence on December 15, 2009, and the public and businesses have made decisions based on the widespread public knowledge of this opening date.

(2) The finding of no significant impact for this rule was signed on October 15, and was made available to the public for 30 days prior to the signing of this rule. By December 15, the public therefore will have had more than 60 days notice of the NPS decision.

(3) There would be no benefit to the public in delaying the effective date of this rule, given that there has already been substantial notice of the opening date and that the park will be open under conditions substantially similar to those in effect for the past three years. The above-described harms to the public resulting from a procedural delay of this rule should therefore be avoided, and an effective date of December 15, 2009, is warranted.

Drafting Information: The primary authors of this regulation are Gary Pollock, Management Assistant, Grand Teton National Park; John Sacklin, Management Assistant, Yellowstone National Park; Jason Waanders, Office of the Solicitor, and Philip Selleck, Regulations Program Manager, National Park Service, Washington, DC.

List of Subjects in 36 CFR Part 7

District of Columbia, National Parks, Reporting and recordkeeping requirements.

■ For the reasons given in the preamble, 36 CFR Part 7 is amended as set forth below:

PART 7—SPECIAL REGULATIONS, AREAS OF THE NATIONAL PARK SYSTEM

■ 1. The authority for Part 7 continues to read as follows:

Authority: 16 U.S.C. 1, 3, 9a, 462(k); Sec. 7.96 also issued under DC Code 10–137(2001) and DC Code 50–2201 (2001).

■ 2. Revise § 7.21 to read as follows:

§ 7.21 John D. Rockefeller, Jr. Memorial Parkway.

(a)(1) *What is the scope of this section?* The regulations contained in paragraphs (a)(2) through (a)(17) of this

section apply to the use of snowcoaches and recreational snowmobiles. Except where indicated, paragraphs (a)(2) through (a)(15) do not apply to non-administrative oversnow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(2) *What terms do I need to know?* The definitions in this paragraph (a)(2) also apply to non-administrative oversnow vehicle use by NPS, contractor, or concessioner employees, and other non-recreational users authorized by the Superintendent.

Commercial guide means a guide who operates a snowmobile or snowcoach for a fee or compensation and is authorized to operate in the park under a concession contract. In this section, “guide” also means “commercial guide.”

Historic snowcoach means a Bombardier snowcoach manufactured in 1983 or earlier. Any other snowcoach is considered a non-historic snowcoach.

Oversnow route means that portion of the unplowed roadway located between the road shoulders and designated by snow poles or other poles, ropes, fencing, or signs erected to regulate oversnow activity. Oversnow routes include pullouts or parking areas that are groomed or marked similarly to roadways and are adjacent to designated oversnow routes. An oversnow route may also be distinguished by the interior boundaries of the berm created by the packing and grooming of the unplowed roadway. The only motorized vehicles permitted on oversnow routes are oversnow vehicles.

Oversnow vehicle means a snowmobile, snowcoach, or other motorized vehicle that is intended for travel primarily on snow and has been authorized by the Superintendent to operate in the park. An oversnow vehicle that does not meet the definition of a snowcoach must comply with all requirements applicable to snowmobiles.

Snowcoach means a self-propelled mass transit vehicle intended for travel on snow, having a curb weight of over 1,000 pounds (450 kilograms), driven by a track or tracks and steered by skis or tracks, and having a capacity of at least 8 passengers. A snowcoach has a maximum size of 102 inches wide, plus tracks (not to exceed 110 inches overall); a maximum length of 35 feet; and a Gross Vehicle Weight Rating (GVWR) not exceeding 25,000 pounds.

Snowmobile means a self-propelled vehicle intended for travel on snow, with a curb weight of not more than 1,000 pounds (450 kg), driven by a track or tracks in contact with the snow, and

which may be steered by a ski or skis in contact with the snow.

Snowplane means a self-propelled vehicle intended for oversnow travel and driven by an air-displacing propeller.

(3) *May I operate a snowmobile in the Parkway?* You may operate a snowmobile in the Parkway in compliance with use limits, guiding requirements, operating hours and dates, equipment, and operating conditions established under this section. The Superintendent may establish additional operating conditions and will provide notice of those conditions in accordance with § 1.7(a) of this chapter or in the **Federal Register**.

(4) *May I operate a snowcoach in the Parkway?* Snowcoaches may only be operated in the Parkway under a concessions contract. Snowcoach operation is subject to the conditions stated in the concessions contract and all other conditions identified in this section.

(5) *Where may I operate my snowmobile in the Parkway?* (i) You may operate your snowmobile only upon designated oversnow routes established within the Parkway in accordance with § 2.18(c) of this chapter. The following oversnow routes are so designated for snowmobile use:

(A) On U.S. Highway 89/191/287 from Flagg Ranch to the northern boundary of the Parkway.

(B) Grassy Lake Road from Flagg Ranch to the western boundary of the Parkway.

(C) Flagg Ranch developed area.

(ii) The Superintendent may open or close these routes, or portions thereof, for snowmobile travel after taking into consideration the location of wintering wildlife, appropriate snow cover, public safety, and other factors. The Superintendent will provide notice of such opening or closing by one or more of the methods listed in § 1.7(a) of this chapter.

(iii) The route described in paragraph (a)(5)(i)(A) of this section is subject to the air and sound emissions requirements, guiding requirements, and daily entry limits described in § 7.13(l) of this part.

(iv) This paragraph (a)(5) also applies to non-administrative oversnow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(v) Maps detailing the designated oversnow routes will be available from Park Headquarters.

(6) *What routes are designated for snowcoach use?* (i) Authorized snowcoaches may only be operated on

the routes designated for snowmobile use in paragraphs (a)(6)(i)(A) and (C) of this section. No other routes are open to snowcoach use, except as provided in (a)(6)(ii) of this section.

(ii) The Superintendent may open or close these oversnow routes, or portions thereof, or designate new routes for snowcoach travel after taking into consideration the location of wintering wildlife, appropriate snow cover, public safety, and other factors. The Superintendent will provide notice of such opening or closing by one or more of the methods listed in § 1.7(a) of this chapter.

(iii) The routes described in paragraph (a)(6)(i) of this section are subject to the air and sound emissions requirements and daily entry limits in § 7.13(l) of this part.

(iv) This paragraph (a)(6) also applies to non-administrative snowcoach use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(7) *Must I travel with a commercial guide while snowmobiling in the Parkway?* Except as may be required under paragraph (a)(5)(iii) of this section, you are not required to use a guide while snowmobiling in the Parkway.

(8) *Are there limits established for the numbers of snowmobiles and snowcoaches permitted to operate in the Parkway each day?* (i) A limit of 25 snowmobiles per day applies to the Grassy Lake Road.

(ii) The daily entry limits for snowmobiles and snowcoaches on the route from Flagg Ranch to the South Entrance of Yellowstone are established in § 7.13(l) of this part.

(9) *When may I operate my snowmobile or snowcoach?* The Superintendent will determine operating hours and dates. Except for emergency situations, any changes to operating hours will be made on an annual basis and the public will be notified of those changes through one or more of the methods listed in § 1.7(a) of this chapter.

(10) *What other conditions apply to the operation of oversnow vehicles?* (i) The following are prohibited:

(A) Idling an oversnow vehicle more than 5 minutes at any one time.

(B) Driving an oversnow vehicle while the operator's motor vehicle license or privilege is suspended or revoked.

(C) Allowing or permitting an unlicensed driver to operate an oversnow vehicle.

(D) Driving an oversnow vehicle in willful or wanton disregard for the safety of persons, property, or parkway

resources or otherwise in a reckless manner.

(E) Operating an oversnow vehicle without a lighted white headlamp and red taillight.

(F) Operating an oversnow vehicle that does not have brakes in good working order.

(G) Towing persons on skis, sleds or other sliding devices by oversnow vehicles, except in emergency situations.

(ii) The following are required:

(A) All oversnow vehicles that stop on designated routes must pull over to the far right and next to the snow berm. Pullouts must be used where available and accessible. Oversnow vehicles may not be stopped in a hazardous location or where the view might be obscured, or operated so slowly as to interfere with the normal flow of traffic.

(B) Oversnow vehicle drivers must possess a valid motor vehicle driver's license. A learner's permit does not satisfy this requirement. The license must be carried by the driver at all times.

(C) Equipment sleds towed by a snowmobile must be pulled behind the snowmobile and fastened to the snowmobile with a rigid hitching mechanism.

(D) Snowmobiles must be properly registered and display a valid registration from the United States or Canada.

(iii) The Superintendent may impose other terms and conditions as necessary to protect park resources, visitors, or employees. The Superintendent will notify the public of any changes through one or more methods listed in § 1.7(a) of this chapter.

(iv) This paragraph (a)(10) also applies to non-administrative oversnow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(11) *What conditions apply to alcohol use while operating an oversnow vehicle?* In addition to 36 CFR 4.23, the following conditions apply:

(i) Operating or being in actual physical control of an oversnow vehicle is prohibited when the driver is under 21 years of age and the alcohol concentration in the driver's blood or breath is 0.02 grams or more of alcohol per 100 milliliters of blood or 0.02 grams or more of alcohol per 210 liters of breath.

(ii) Operating or being in actual physical control of an oversnow vehicle is prohibited when the driver is a snowmobile guide or a snowcoach driver and the alcohol concentration in the operator's blood or breath is 0.04

grams or more of alcohol per 100 milliliters of blood or 0.04 grams or more of alcohol per 210 liters of breath.

(iii) This paragraph (a)(11) also applies to non-administrative oversnow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(12) *Do other NPS regulations apply to the use of oversnow vehicles?* (i) The use of oversnow vehicles in the Parkway is subject to § 2.18(a), (b), and (c), but not to §§ 2.18(d), (e), and 2.19(b) of this chapter.

(ii) This paragraph (a)(12) also applies to non-administrative oversnow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(13) *Are there any forms of non-motorized oversnow transportation allowed in the Parkway?* (i) Non-motorized travel consisting of skiing, skating, snowshoeing, or walking is permitted unless otherwise restricted under this section or other NPS regulations.

(ii) The Superintendent may designate areas of the Parkway as closed, reopen such areas, or establish terms and conditions for non-motorized travel within the Parkway in order to protect visitors, employees, or park resources. Notice will be made in accordance with § 1.7(a) of this chapter.

(14) *May I operate a snowplane in the Parkway?* The operation of a snowplane in the Parkway is prohibited.

(15) *Is violating any of the provisions of this section prohibited?* (i) Violating any of the terms, conditions or requirements of paragraphs (a)(3) through (a)(14) of this section is prohibited.

(ii) Anyone who violates any of the terms, conditions or requirements of this regulation will be considered to have committed one separate offense for each term, condition or requirement that they violate.

(b) [Reserved]

■ 3. Amend § 7.22, by revising paragraph (g) to read as follows:

§ 7.22 Grand Teton National Park.

* * * * *

(g)(1) *What is the scope of this section?* The regulations contained in paragraphs (g)(2) through (g)(20) of this section are intended to apply to the use of snowcoaches and recreational snowmobiles. Except where indicated, paragraphs (g)(2) through (g)(20) do not apply to non-administrative oversnow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(2) *What terms do I need to know?* The definitions in this paragraph (g)(2) also apply to non-administrative oversnow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(i) *Commercial guide* means a guide who operates as a snowmobile or snowcoach guide for a fee or compensation and is authorized to operate in the park under a concession contract. In this section, "guide" also means "commercial guide."

(ii) *Historic snowcoach* means a Bombardier snowcoach manufactured in 1983 or earlier. Any other snowcoach is considered a non-historic snowcoach.

(iii) *Oversnow route* means that portion of the unplowed roadway located between the road shoulders and designated by snow poles or other poles, ropes, fencing, or signs erected to regulate oversnow activity. Oversnow routes include pullouts or parking areas that are groomed or marked similarly to roadways and are adjacent to designated oversnow routes. An oversnow route may also be distinguished by the interior boundaries of the berm created by the packing and grooming of the unplowed roadway. The only motorized vehicles permitted on oversnow routes are oversnow vehicles.

(iv) *Oversnow vehicle* means a snowmobile, snowcoach, or other motorized vehicle that is intended for travel primarily on snow and has been authorized by the Superintendent to operate in the park. An oversnow vehicle that does not meet the definition of a snowcoach must comply with all requirements applicable to snowmobiles.

(v) *Snowcoach* means a self-propelled mass transit vehicle intended for travel on snow, having a curb weight of over 1,000 pounds (450 kilograms), driven by a track or tracks and steered by skis or tracks, and having a capacity of at least 8 passengers. A snowcoach has a maximum size of 102 inches wide, plus tracks (not to exceed 110 inches overall); a maximum length of 35 feet; and a Gross Vehicle Weight Rating (GVWR) not exceeding 25,000 pounds.

(vi) *Snowmobile* means a self-propelled vehicle intended for travel on snow, with a curb weight of not more than 1,000 pounds (450 kg), driven by a track or tracks in contact with the snow, and which may be steered by a ski or skis in contact with the snow.

(vii) *Snowplane* means a self-propelled vehicle intended for oversnow travel and driven by an air-displacing propeller.

(3) *May I operate a snowmobile in Grand Teton National Park?* You may

operate a snowmobile in Grand Teton National Park in compliance with use limits, operating hours and dates, equipment, and operating conditions established under this section. The Superintendent may establish additional operating conditions and provide notice of those conditions in accordance with § 1.7(a) of this chapter or in the **Federal Register**.

(4) *May I operate a snowcoach in Grand Teton National Park?* It is prohibited to operate a snowcoach in Grand Teton National Park except as authorized by the Superintendent.

(5) *Must I operate a certain model of snowmobile in the park?* Only commercially available snowmobiles that meet NPS air and sound emissions requirements as set forth in this section may be operated in the park. The Superintendent will approve snowmobile makes, models, and years of manufacture that meet those requirements. Any snowmobile model not approved by the Superintendent may not be operated in the park.

(6) *How will the Superintendent approve snowmobile makes, models, and years of manufacture for use in Grand Teton National Park?* (i) Beginning with the 2005 model year, all snowmobiles must be certified under 40 CFR Part 1051, to a Family Emission Limit no greater than 15 g/kW-hr for hydrocarbons and to a Family Emission Limit no greater than 120 g/kW-hr for carbon monoxide.

(A) 2004 model year snowmobiles may use measured air emissions levels (official emission results with no deterioration factors applied) to comply with the air emission limits specified in paragraph (g)(6)(i) of this section.

(B) Snowmobiles manufactured before the 2004 model year may be operated only if they have shown to have air emissions no greater than the requirements identified in paragraph (g)(6)(i) of this section.

(C) The snowmobile test procedures specified by EPA (40 CFR parts 1051 and 1065) must be used to measure air emissions from model year 2004 and later snowmobiles. Equivalent procedures may be used for earlier model years.

(ii) For sound emissions, snowmobiles must operate at or below 73 dBA as measured at full throttle according to Society of Automotive Engineers J192 test procedures (revised 1985). Snowmobiles may be tested at any barometric pressure equal to or above 23.4 inches Hg uncorrected. The Superintendent may revise these testing procedures based on new information and/or updates to the SAE J192 testing procedures.

(iii) Snowmobiles meeting the requirements for air and sound emissions may be operated in the park for a period not exceeding 6 years from the date upon which first certified, except that snowmobiles being operated on Jackson Lake may continue to be operated up to 10 years, provided that these snowmobiles' mileage does not exceed 6,000 miles.

(iv) Snowmobiles will be exempt from these air and sound emissions requirements while in use to access lands authorized by paragraphs (g)(16) and (g)(18) of this section.

(v) The Superintendent may prohibit entry into the park of any snowmobile that has been modified in a manner that may adversely affect air or sound emissions.

(7) *Where may I operate my snowmobile in the park?* (i) You may operate your snowmobile upon the frozen water surface of Jackson Lake, a route established in accordance with § 2.18(c) of this chapter, under the following conditions:

(A) You are ice fishing, and licensed or otherwise permitted to fish in Wyoming;

(B) You possess the proper fishing gear; and

(C) You limit your snowmobile travel to a direct route to and from and between fishing locations on the lake.

(ii) The Superintendent may open or close this route, or portions thereof, for snowmobile travel, and may establish separate zones for motorized and non-motorized uses on Jackson Lake, after taking into consideration the location of wintering wildlife, appropriate snow cover, public safety and other factors. The Superintendent will provide notice of such opening or closing by one or more of the methods listed in § 1.7(a) of this chapter.

(iii) This paragraph (g)(7) also applies to non-administrative over-snow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(iv) Maps detailing the designated oversnow route will be available from Park Headquarters.

(8) *Must I travel with a commercial guide while snowmobiling in Grand Teton National Park?* You are not required to use a guide while snowmobiling in Grand Teton National Park.

(9) *Are there limits established for the number of snowmobiles permitted to operate in the park each day?* (i) The number of snowmobiles allowed to operate in the park each day on Jackson Lake is 25.

(ii) The Superintendent may adjust this number up or down, not to exceed

a daily limit of 40 snowmobiles, after taking into consideration the location of wintering wildlife, appropriate snow cover, noise monitoring results, public safety and other factors. The Superintendent will provide notice of such adjustment by one or more of the methods listed in § 1.7(a) of this chapter.

(10) *When may I operate my snowmobile?* The Superintendent will determine operating hours and dates. Except for emergency situations, any changes to operating hours or dates will be made on an annual basis, and the public will be notified of those changes through one or more of the methods listed in § 1.7(a) of this chapter.

(11) *What other conditions apply to the operation of oversnow vehicles?* (i) The following are prohibited:

(A) Idling an oversnow vehicle more than 5 minutes at any one time.

(B) Driving an oversnow vehicle while the operator's motor vehicle license or privilege is suspended or revoked.

(C) Allowing or permitting an unlicensed driver to operate an oversnow vehicle.

(D) Driving an oversnow vehicle in willful or wanton disregard for the safety of persons, property, or park resources or otherwise in a reckless manner.

(E) Operating an oversnow vehicle without a lighted white headlamp and red taillight.

(F) Operating an oversnow vehicle that does not have brakes in good working order.

(G) The towing of persons on skis, sleds or other sliding devices by oversnow vehicles.

(ii) The following are required:

(A) All oversnow vehicles that stop on designated routes must pull over to the far right and next to the snow berm. Pullouts must be used where available and accessible. Oversnow vehicles may not be stopped in a hazardous location or where the view might be obscured, or operated so slowly as to interfere with the normal flow of traffic.

(B) Oversnow vehicle drivers must possess a valid motor vehicle driver's license. A learner's permit does not satisfy this requirement. The license must be carried by the driver at all times.

(C) Equipment sleds towed by a snowmobile must be pulled behind the snowmobile and fastened to the snowmobile with a rigid hitching mechanism.

(D) Snowmobiles must be properly registered and display a valid registration from the United States or Canada.

(iii) The Superintendent may impose other terms and conditions as necessary to protect park resources, visitors, or employees. The Superintendent will notify the public of any changes through one or more methods listed in § 1.7(a) of this chapter.

(iv) This paragraph (g)(11) also applies to non-administrative over-snow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(12) *What conditions apply to alcohol use while operating an oversnow vehicle?* In addition to 36 CFR 4.23, the following conditions apply:

(i) Operating or being in actual physical control of an oversnow vehicle is prohibited when the driver is under 21 years of age and the alcohol concentration in the driver's blood or breath is 0.02 grams or more of alcohol per 100 milliliters of blood or 0.02 grams or more of alcohol per 210 liters of breath.

(ii) Operating or being in actual physical control of an oversnow vehicle is prohibited when the driver is a snowmobile guide or a snowcoach operator and the alcohol concentration in the driver's blood or breath is 0.04 grams or more of alcohol per 100 milliliters of blood or 0.04 grams or more of alcohol per 210 liters of breath.

(iii) This paragraph (g)(12) also applies to non-administrative over-snow vehicle use by NPS, contractor, or concessioner employees, or other non-recreational users authorized by the Superintendent.

(13) *Do other NPS regulations apply to the use of oversnow vehicles?* The use of oversnow vehicles in Grand Teton is subject to § 2.18(a), (b), and (c), but not subject to § 2.18(d) and (e) and § 2.19(b) of this chapter.

(14) *Are there any forms of non-motorized oversnow transportation allowed in the park?*

(i) Non-motorized travel consisting of skiing, skating, snowshoeing, or walking is permitted unless otherwise restricted under this section or other NPS regulations.

(ii) The Superintendent may designate areas of the park as closed, reopen such areas, or establish terms and conditions for non-motorized travel within the park in order to protect visitors, employees, or park resources.

(iii) Dog sledding and ski-joring are prohibited.

(15) *May I operate a snowplane in the park?* The operation of a snowplane in Grand Teton National Park is prohibited.

(16) *May I continue to access public lands via snowmobile through the park?*

Reasonable and direct access, via snowmobile, to adjacent public lands will continue to be permitted on the designated routes through the park identified in the following paragraphs (g)(16)(i) through (iv). Requirements established in this section related to air and sound emissions, daily entry limits, snowmobile operator age, guiding, and licensing do not apply on these oversnow routes. The following routes are designated for access via snowmobile to public lands:

(i) From the parking area at Shadow Mountain directly along the unplowed portion of the road to the east park boundary.

(ii) Along the unplowed portion of the Ditch Creek Road directly to the east park boundary.

(iii) The Continental Divide Snowmobile Trail (CDST) along U.S. 26/287 from the east park boundary to a point approximately 2 miles east of Moran Junction. If necessary for the proper administration of visitor use and resource protection, the Superintendent may extend this designated route to the Moran Entrance Station.

(iv) The Superintendent may designate additional routes if necessary to provide access to other adjacent public lands.

(17) *For what purpose may I use the routes designated in paragraph (g)(16) of this section?* You may only use those routes designated in paragraph (g)(16) of this section to gain direct access to public lands adjacent to the park boundary.

(18) *May I continue to access private property within or adjacent to the park via snowmobile?* The Superintendent may establish reasonable and direct snowmobile access routes to the inholding or to private property adjacent to park boundaries for which other routes or means of access are not reasonably available. Requirements established in this section related to air and sound emissions, snowmobile operator age, licensing, and guiding do not apply on these oversnow routes. The following routes are designated for access to private properties within or adjacent to the park:

(i) From the Antelope Flats Road off U.S. 26/89/191 to private lands in the Craighead Subdivision.

(ii) The unplowed portion of the Teton Park Road to the piece of land commonly referred to as the "Townsend Property."

(iii) From the Moose-Wilson Road to the land commonly referred to as the "Barker Property."

(iv) From the Moose-Wilson Road to the property commonly referred to as the "Halpin Property."

(v) From Highway 26/89/191 to those lands commonly referred to as the "Meadows", the "Circle EW Ranch", the "Moulton Property", the "Levinson Property" and the "Macmahon Property."

(vi) From Cunningham Cabin pullout on U.S. 26/89/191 near Triangle X to the piece of land commonly referred to as the "Lost Creek Ranch."

(vii) The Superintendent may designate additional routes if necessary to provide reasonable access to inholdings or adjacent private property.

(viii) Maps detailing designated routes will be available from Park Headquarters.

(19) *For what purpose may I use the routes designated in paragraph (g)(18) of this section?* The routes designated in paragraph (g)(18) of this section are only to access private property within or directly adjacent to the park boundary. Use of these roads via snowmobile is authorized only for the landowners and their representatives or guests. Use of these roads by anyone else or for any other purpose is prohibited.

(20) *Is violating any of the provisions of this section prohibited?* (i) Violating any of the terms, conditions or requirements of paragraphs (g)(3) through (g)(19) of this section is prohibited.

(ii) Anyone who violates any of the terms, conditions or requirements of this regulation will be considered to have committed one separate offense for each term, condition or requirement that they violate.

Dated: November 16, 2009.

Thomas L Strickland,

Assistant Secretary for Fish and Wildlife and Parks.

[FR Doc. E9-27894 Filed 11-17-09; 4:15 pm]

BILLING CODE 4310-CX-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R03-OAR-2009-0674; FRL-8983-1]

Approval and Promulgation of Air Quality Implementation Plans; Virginia; Transportation Conformity Regulations

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: EPA is taking direct final action to approve revisions to the State Implementation Plan (SIP) submitted by the Commonwealth of Virginia. This revision establishes Virginia's transportation conformity requirements.

After they have been approved, the Commonwealth's regulations will govern transportation conformity determinations in the Commonwealth of Virginia. EPA is approving these revisions in accordance with the requirements of the Clean Air Act (CAA).

DATES: This rule is effective on January 19, 2010 without further notice, unless EPA receives adverse written comment by December 21, 2009. If EPA receives such comments, it will publish a timely withdrawal of the direct final rule in the **Federal Register** and inform the public that the rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA-R03-OAR-2009-0674 by one of the following methods:

A. *http://www.regulations.gov.* Follow the on-line instructions for submitting comments.

B. *E-mail:*

fernandez.cristina@epa.gov.

C. *Mail:* EPA-R03-OAR-2009-0674, Cristina Fernandez, Associate Director, Office of Air Program Planning, Mailcode 3AP30, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103.

D. *Hand Delivery:* At the previously-listed EPA Region III address. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA-R03-OAR-2009-0674. EPA's policy is that all comments received will be included in the public docket without change, and may be made available online at *http://www.regulations.gov*, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or e-mail. The *http://www.regulations.gov* Web site is an anonymous access system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov*, your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your

name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the electronic docket are listed in the <http://www.regulations.gov> index. Although listed in the index, some information is not publicly available, i.e., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in <http://www.regulations.gov> or in hard copy during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Copies of the State submittal are available at the Virginia Department of Environmental Quality, 629 East Main Street, Richmond, Virginia 23219.

FOR FURTHER INFORMATION CONTACT: Martin Kotsch, (215) 814-3335 or by e-mail at kotsch.martin@epa.gov.

SUPPLEMENTARY INFORMATION: Throughout this document whenever "we," "us," or "our" is used, we mean EPA.

Table of Contents

- I. What Is Transportation Conformity?
- II. What Is the Background for This Action?
- III. What Did the State Submit and How Did We Evaluate It?
- IV. General Information Pertaining to SIP Submittals From the Commonwealth of Virginia
- V. What Action Is EPA Taking Today?
- VI. Statutory and Executive Order Reviews

I. What Is Transportation Conformity?

Transportation conformity is required under section 176(c) of the Clean Air Act to ensure that Federally supported highway, transit projects, and other activities are consistent with (conform to) the purpose of the SIP. Conformity currently applies to areas that are designated nonattainment, and those redesignated to attainment after 1990 (maintenance areas), with plans developed under section 175A of the Clean Air Act for the following transportation related criteria pollutants: Ozone, particulate matter (PM_{2.5} and PM₁₀), carbon monoxide (CO), and nitrogen dioxide (NO₂).

Conformity to the purpose of the SIP means that transportation activities will not cause new air quality violations, worsen existing violations, or delay timely attainment of the relevant national ambient air quality standards (NAAQS). The transportation conformity regulation is found in 40 CFR part 93 and provisions related to conformity SIPs are found in 40 CFR 51.390.

II. What Is the Background for This Action?

On August 10, 2005, the Safe, Accountable, Flexible, Efficient, Transportation Equity Act: A Legacy for Users (SAFETEA-LU) was signed into law. SAFETEA-LU revised certain provisions of section 176(c) of the Clean Air Act, related to transportation conformity. Prior to SAFETEA-LU, states were required to address all of the Federal conformity rule's provisions in their conformity SIPs. After SAFETEA-LU, state SIPs were required to contain all or portions of only the following three sections of the Federal rule, modified as appropriate to each state's circumstances: 40 CFR 93.105 (consultation procedures); 40 CFR 93.122(a)(4)(ii) (written commitments to implement certain kinds of control measures); and 40 CFR 93.125(c) (written commitments to implement certain kinds of mitigation measures). States are no longer required to submit conformity SIP revisions that address the other sections of the Federal conformity rule.

III. What Did the State Submit and How Did We Evaluate It?

On July 9, 2007, the Virginia Department of Environmental Quality (VADEQ) submitted a revision to its SIP for Transportation Conformity purposes. The SIP revision consists of the State Regulation for Transportation Conformity (9 VAC 5 Chapter 151). This SIP revision addresses the three provisions of the EPA Conformity Rule required under SAFETEA-LU: 40 CFR 93.105 (consultation procedures); 40 CFR 93.122(a)(4)(ii) (control measures) and 40 CFR 93.125(c) (mitigation measures).

We reviewed the submittal to assure consistency with the February 14, 2006 "Interim Guidance for Implementing the Transportation Conformity provisions in the Safe, Accountable, Flexible, Efficient, Transportation Equity Act: A Legacy for Users (SAFETEA-LU)." The guidance document can be found at <http://epa.gov/otaq/stateresources/transconf/policy.htm>. The guidance document states that each state is only required to address and tailor the afore-

mentioned three sections of the Federal Conformity Rule to be included in their state conformity SIPs.

EPA's review of Virginia's proposed SIP indicates that it is consistent with EPA's guidance in that it includes the three elements specified by SAFETEA-LU. Consistent with the EPA Conformity Rule at 40 CFR 93.105 (consultation procedures), Regulation 9 VAC 5 Chapter 151-70 identifies the appropriate agencies, procedures and allocation of responsibilities as required under 40 CFR 93.105 for consultation procedures. In addition, Regulation 9 VAC 5 Chapter 151-50 and Regulation 9 VAC 5 Chapter 151-60 provide for appropriate public consultation/public involvement consistent with 40 CFR 93.105. With respect to the requirements of 40 CFR 93.122(a)(4)(ii) and 40 CFR 93.125(c), Regulation 9 VAC 5 Chapter 151-50 also specifies that written commitments for control measures and mitigation measures for meeting these requirements will be provided as needed.

IV. General Information Pertaining to SIP Submittals From the Commonwealth of Virginia

In 1995, Virginia adopted legislation that provides, subject to certain conditions, for an environmental assessment (audit) "privilege" for voluntary compliance evaluations performed by a regulated entity. The legislation further addresses the relative burden of proof for parties either asserting the privilege or seeking disclosure of documents for which the privilege is claimed. Virginia's legislation also provides, subject to certain conditions, for a penalty waiver for violations of environmental laws when a regulated entity discovers such violations pursuant to a voluntary compliance evaluation and voluntarily discloses such violations to the Commonwealth and takes prompt and appropriate measures to remedy the violations. Virginia's Voluntary Environmental Assessment Privilege Law, Va. Code Section 10.1-1198, provides a privilege that protects from disclosure documents and information about the content of those documents that are the product of a voluntary environmental assessment. The Privilege Law does not extend to documents or information (1) That are generated or developed before the commencement of a voluntary environmental assessment; (2) that are prepared independently of the assessment process; (3) that demonstrate a clear, imminent and substantial danger to the public health or

environment; or (4) that are required by law.

On January 12, 1998, the Commonwealth of Virginia Office of the Attorney General provided a legal opinion that states that the Privilege Law, Va. Code Section 10.1-1198, precludes granting a privilege to documents and information "required by law," including documents and information "required by Federal law to maintain program delegation, authorization or approval," since Virginia must "enforce Federally authorized environmental programs in a manner that is no less stringent than their Federal counterparts * * *." The opinion concludes that "[r]egarding 10.1-1198, therefore, documents or other information needed for civil or criminal enforcement under one of these programs could not be privileged because such documents and information are essential to pursuing enforcement in a manner required by Federal law to maintain program delegation, authorization or approval."

Virginia's Immunity law, Va. Code Section 10.1-1199, provides that "[t]o the extent consistent with requirements imposed by Federal law," any person making a voluntary disclosure of information to a state agency regarding a violation of an environmental statute, regulation, permit, or administrative order is granted immunity from administrative or civil penalty. The Attorney General's January 12, 1998 opinion states that the quoted language renders this statute inapplicable to enforcement of any Federally authorized programs, since "no immunity could be afforded from administrative, civil, or criminal penalties because granting such immunity would not be consistent with Federal law, which is one of the criteria for immunity."

Therefore, EPA has determined that Virginia's Privilege and Immunity statutes will not preclude the Commonwealth from enforcing its program consistent with the Federal requirements. In any event, because EPA has also determined that a state audit privilege and immunity law can affect only state enforcement and cannot have any impact on Federal enforcement authorities, EPA may at any time invoke its authority under the CAA, including, for example, sections 113, 167, 205, 211 or 213, to enforce the requirements or prohibitions of the state plan, independently of any state enforcement effort. In addition, citizen enforcement under section 304 of the CAA is likewise unaffected by this, or any, state audit privilege or immunity law.

V. What Action Is EPA Taking Today?

EPA is approving the Virginia SIP revision for Transportation Conformity, which was submitted on July 9, 2007. EPA is publishing this rule without prior proposal because the Agency views this as a noncontroversial amendment and anticipates no adverse comment. However, in the Proposed Rules section of today's **Federal Register**, EPA is publishing a separate document that will serve as the proposal to approve the SIP revision if adverse comments are filed. This rule will be effective on January 19, 2010 without further notice unless EPA receives adverse comment by December 21, 2009. If EPA receives adverse comment, EPA will publish a timely withdrawal in the **Federal Register** informing the public that the rule will not take effect. EPA will address all public comments in a subsequent final rule based on the proposed rule. EPA will not institute a second comment period on this action. Any parties interested in commenting must do so at this time. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment.

VI. Statutory and Executive Order Reviews

A. General Requirements

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);

- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);

- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);

- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and

- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the state, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

B. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

C. Petitions for Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by *January 19, 2010*. Filing a

petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action to approve the Virginia Transportation Conformity Regulation may not be challenged later in proceedings to enforce its requirements. (See, section 307(b)(2)).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: November 5, 2009.

William C. Early,
Acting Regional Administrator, Region III.

■ 40 CFR part 52 is amended as follows:

PART 52—[AMENDED]

■ 1. The authority citation for 40 CFR part 52 continues to read as follows:
Authority: 42 U.S.C. 7401 *et seq.*

Subpart VV—Virginia

■ 2. In § 52.2420, the table in paragraph (c) is amended by adding an entry for Chapter 151 after the existing Chapter 140 to read as follows:

52.2420 Identification of plan.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R05-OAR-2009-0771; FRL-8980-4]

Approval and Promulgation of Air Quality Implementation Plans; Indiana

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: EPA is approving a request submitted by the Indiana Department of

Environmental Management (IDEM) on September 25, 2009, to revise the Indiana State Implementation Plan (SIP). The submission revises the Indiana Administrative Code (IAC) by amending and updating the definition of "References to the Code of Federal Regulations," to refer to the 2008 edition.

DATES: This rule is effective on January 19, 2010, unless EPA receives adverse written comments by December 21, 2009. If EPA receives adverse comments, EPA will publish a timely withdrawal of the rule in the **Federal Register** and inform the public that the rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-R05-

OAR-2009-0771 by one of the following methods:

- <http://www.regulations.gov>: Follow the on-line instructions for submitting comments.
- *E-mail:* mooney.john@epa.gov.
- *Fax:* (312) 692-2551.
- *Mail:* John Mooney, Chief, Criteria Pollutant Section, Air Programs Branch (AR-18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604.
- *Hand Delivery:* John Mooney, Chief, Criteria Pollutant Section, Air Programs Branch (AR-18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604. Such deliveries are only accepted during the Regional Office normal hours of operation, and special arrangements

should be made for deliveries of boxed information. The Regional Office official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m. excluding Federal holidays.

Instructions: Direct your comments to Docket ID No. EPA-R05-OAR-2009-0771. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at <http://www.regulations.gov>, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through <http://www.regulations.gov> or e-mail. The <http://www.regulations.gov> Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through <http://www.regulations.gov> your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the docket are listed in the <http://www.regulations.gov> index. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in <http://www.regulations.gov> or in hard copy at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This Facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. We recommend that you telephone Charles Hatten, Environmental Engineer, at (312) 886-6031 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT:

Charles Hatten, Environmental Engineer, Criteria Pollutant Section, Air Programs Branch (AR-18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886-6031, hatten.charles@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document whenever "we," "us," or "our" is used, we mean EPA. This supplementary information section is arranged as follows:

- I. What is the background for this action?
 - A. When did the State submit the requested SIP revision to EPA?
 - B. Did Indiana hold public hearings on this SIP revision?
- II. What revision did the State request be incorporated into the SIP?
- III. What action is EPA taking today?
- IV. Statutory and Executive Order Reviews

I. What is the background for this action?

A. When did the State submit the requested SIP revision to EPA?

IDEM submitted the requested SIP revision on September 25, 2009.

B. Did Indiana hold public hearings on this SIP revision?

IDEM held public hearings on March 4, 2009. IDEM did not receive any public comments concerning the SIP revision.

II. What revision did the State request be incorporated into the SIP?

The State has requested that EPA approve revisions to 326 IAC 1-1-3 to update references to the Code of Federal Regulations (CFR) at 326 IAC 1-1-3.

Rule 326 IAC 1-1-3, definition of "References to Code of Federal Regulations." IDEM updated the reference to the CFR in 326 IAC 1-1-3 from the 2007 edition to the 2008 edition. This is solely an administrative change that allows Indiana to reference a more current version of the CFR.

III. What action is EPA taking today?

We are approving a revision to the Indiana SIP to update the definition at 326 IAC 1-1-3, "References to the CFR", to refer to the 2008 edition.

We are publishing this action without prior proposal because we view this as a noncontroversial amendment and anticipate no adverse comments.

However, in the proposed rules section of this **Federal Register** publication, we are publishing a separate document that will serve as the proposal to approve the state plan if relevant adverse written comments are filed. This rule will be effective January 19, 2010 without further notice unless we receive relevant

adverse written comments by *December 21, 2009*. If we receive such comments, we will withdraw this action before the effective date by publishing a subsequent document that will withdraw the final action. All public comments received will then be addressed in a subsequent final rule based on the proposed action. The EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. If we do not receive any comments, this action will be effective January 19, 2010.

IV. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Clean Air Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);

- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);

- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);

- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);

- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);

- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would

be inconsistent with the Clean Air Act; and

- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the state, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by January 19, 2010. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: November 3, 2009.

Bharat Mathur,

Acting Regional Administrator, Region 5.

■ For the reasons stated in the preamble, part 52, chapter I, of title 40 of the Code of Federal Regulations is amended as follows:

PART 52—[AMENDED]

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart P—Indiana

■ 2. Section 52.770 is amended by adding paragraph (c)(192) to read as follows:

§ 52.770 Identification of plan.

* * * * *

(c) * * *

(192) The Indiana Department of Environmental Management submitted a revision to Indiana's State Implementation plan on September 25, 2009, to amend 326 IAC 1-1-3, "References to the Code of Federal Regulations". The revision to 326 IAC 1-1-3 updates the references to CFR from the 2007 edition to the 2008 edition.

(i) *Incorporation by reference.* Title 326 of the Indiana Administrative Code (IAC), section 1-1-3, "References to the Code of Federal Regulations" is incorporated by reference. The rule was filed with the Publisher of the Indiana Register on July 1, 2009, and became effective on July 31, 2009. Published in the Indiana Register, on July 29, 2009 (DIN: 20090729-IR-326080901FRA).

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R03-OAR-2009-0199; EPA-R03-OAR-2009-0547; FRL-8982-6]

Approval and Promulgation of Air Quality Implementation Plans; West Virginia; Maryland; Ohio; Determinations of Attainment for the 1997 Fine Particulate Matter Standard

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is making determinations that three areas designated nonattainment for the 1997 fine particulate (PM_{2.5}) National Ambient Air Quality Standard (NAAQS) have

attained the 1997 PM_{2.5} NAAQS. These are the Martinsburg-Hagerstown, WV-MD nonattainment area; the Parkersburg-Marietta, WV-OH nonattainment area; and the Wheeling, WV-OH nonattainment area. These determinations are based upon complete, quality assured, quality controlled, and certified ambient air monitoring data that show that these areas have monitored attainment of the 1997 PM_{2.5} NAAQS during the 2006-2008 monitoring period. Currently available monitoring data for 2009 are consistent with continued attainment of the standard. The intended effect of these actions is to finalize these attainment determinations for these areas. With these final determinations, the requirements for States to submit for these areas an attainment demonstration, associated reasonably available control measures, a reasonable further progress plan, contingency measures, and other planning State Implementation Plans (SIPs) related to attainment of the standard are suspended for so long as the areas continue to meet the 1997 PM_{2.5} NAAQS. EPA's determinations that these areas have attained the 1997 PM_{2.5} NAAQS are not equivalent to the redesignation of the areas to attainment. These actions do not constitute redesignations to attainment under section 107(d)(3) of the Clean Air Act (CAA), because we do not yet have an approved maintenance plan for these areas as required under that section and section 175A of the CAA, nor a determination that these areas have met the other requirements for redesignation. The designation status of these areas remains nonattainment for the 1997 PM_{2.5} NAAQS until such time as EPA determines that these areas meet the CAA requirements for redesignation to attainment.

DATES: *Effective Date:* These final rules are effective on November 20, 2009.

ADDRESSES: EPA has established dockets for this action under Docket ID Numbers EPA-R03-OAR-2009-0199 and EPA-R03-OAR-2009-0547. All documents in the dockets are listed in the <http://www.regulations.gov> Web site. Although listed in the electronic docket, some information is not publicly available, i.e., confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through <http://www.regulations.gov> or in hard

copy for public inspection during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103.

FOR FURTHER INFORMATION CONTACT: Marilyn Powers, (215) 814-2308, or by e-mail at powers.marilyn@epa.gov.

SUPPLEMENTARY INFORMATION: Throughout this document whenever “we,” “us,” or “our” is used, we mean EPA.

Organization of this document. The following outline is provided to aid in locating information in this preamble.

- I. What Actions is EPA Taking?
- II. Responses to Comments
- III. What is the Effect of these Actions?
- IV. When are these Actions Effective?
- V. What are EPA’s Final Actions?
- VI. What are the Statutory and Executive Order Reviews?

I. What Actions Is EPA Taking?

EPA is determining that the Martinsburg-Hagerstown, WV-MD, Parkersburg-Marietta, WV-OH, and Wheeling, WV-OH PM_{2.5} nonattainment areas have attained the 1997 PM_{2.5} NAAQS. These determinations are based upon three years of complete, quality assured, quality controlled, and certified ambient air monitoring data that show the areas have monitored attainment of the 1997 PM_{2.5} NAAQS during the 2006–2008 monitoring period. Currently available monitoring data for 2009 are consistent with continued attainment. Other specific details of the determinations and the rationale for EPA’s proposed actions are explained in the notices of proposed rulemaking (NPRs) published on July 31, 2009 (74 FR 38154 and 74 FR 38161) and the subsequent NPRs reopening the comment period, published on September 29, 2009 (74 FR 49833 and 74 FR 49834), and will not be restated here. Although on July 31, 2009 EPA issued separate notices of proposed rulemaking for the Maryland portion of the Martinsburg-Hagerstown nonattainment area (74 FR 38161) and the West Virginia portion (74 FR 38154), in this notice of final rulemaking EPA is addressing in combination both State portions of this nonattainment area. EPA considers its determination of attainment for the Hagerstown-Martinsburg area, and the comments and responses relating to it, as applicable to the entire nonattainment area.¹ Similarly, although EPA

articulated its proposals for determinations of attainment for the Parkersburg-Marietta, WV-OH and Wheeling, WV-OH nonattainment areas (74 FR 38154) in terms of the West Virginia and Ohio portions of the nonattainment area, in this final rulemaking EPA addresses in combination both State portions of the nonattainment area. EPA considers its determinations of attainment for those areas, and any comments and responses relating to them, as applicable to each entire nonattainment area.

II. Responses to Comments

EPA received comments in response to the NPRs published on July 31, 2009 (74 FR 38154 and 74 FR 38161) and the subsequent NPRs reopening the comment period, published on September 29, 2009 (74 FR 49833 and 74 FR 49834). EPA received both supporting and adverse comments. By this notice EPA is responding to adverse public comments received in response to these NPRs. EarthJustice, on behalf of the Sierra Club, submitted comments by letters dated August 31, 2009 and October 29, 2009. In its comment letter dated August 31, 2009, EarthJustice included a request that the NPRs either be revised or the comment period be reopened to allow the public to consider whether the 2009 data supports the proposed attainment determinations. EPA agreed to reopen the comment period to provide the requested data. In the technical support documents (TSDs) for the NPRs that reopened the comment period, the 2009 data were included, as was additional information that clarified the 2006–2008 data that formed the foundation for the proposed clean data determinations. EPA explained in the TSDs that its determinations were based on complete, quality assured 2006–2008 data, and that the available 2009 data, while not yet complete or quality assured, were consistent with continued attainment. On October 29, 2009, EarthJustice, on behalf of the Sierra Club, submitted additional comments on the supplemental proposals and TSDs.

The only adverse comments received were submitted by the Sierra Club and may be categorized as follows: (a) Comments specifically aimed at the 2006–2008 data that form the

PM_{2.5} nonattainment area. EarthJustice, on behalf of the Sierra Club, also submitted comments on this proposal in conjunction with its comments on the other proposed rulemakings discussed in this final notice. EPA is not finalizing its proposed attainment determination for the Baltimore, MD PM_{2.5} nonattainment area in this notice of final rulemaking, and is therefore not addressing the comments relating to Baltimore that were submitted by the commenter with respect to that proposal.

foundation of EPA’s attainment determination for the Martinsburg-Hagerstown nonattainment area and (b) comments relating generally to monitoring data for 2009. Through this notice, EPA first addresses the adverse comments specifically directed at the 2006–2008 data for the Martinsburg-Hagerstown nonattainment area, and then addresses the comments relating to monitoring data for 2009.

Martinsburg-Hagerstown Nonattainment Area

Comment

Through its comment letters dated August 31, 2009 and October 30, 2009, the commenter disagrees with EPA’s proposed attainment determination for the Martinsburg-Hagerstown nonattainment area, based on information relating to a Martinsburg, WV monitor that the commenter obtained from EPA’s AirData database (<http://www.epa.gov/air/data/index.html>). As part of its August 31, 2009 comments, the commenter submitted copies of three Monitor Values Reports obtained from EPA’s AirData Web site on August 18, 2009. Each of these reports provides data showing that the Martinsburg, WV monitor (monitor ID #540030003) located in Berkeley County, West Virginia monitored annual PM_{2.5} mean concentrations of 14.93 µg/m³ in 2006, 15.61 µg/m³ in 2007 and 15.36 µg/m³ in 2008. Based upon the data set forth in these three reports, the commenter asserts that the design value calculated from these annual means results in nonattainment of the annual NAAQS over the 2006–2008 period. The commenter believes this is contrary to the data provided in the July 31, 2009 NPRs, and that it renders EPA’s proposed determination of attainment for the Martinsburg-Hagerstown area inaccurate; the commenter contends that finalizing the determination would be arbitrary and unlawful. Through its October 30, 2009 comments, the commenter also noted that, in accordance with a September 4, 1992 memo entitled “Procedures for Processing Requests to Redesignate Areas to Attainment” from John Calcagni, Director, Air Quality Management Division, EPA’s Office of Air Quality Planning and Standards, data used to demonstrate attainment should be recorded in the Aerometric Information Retrieval System (AIRS) in order for it to be available to the public for review. The commenter asserted that EPA cannot rely on data that is not published in AIRS to support a finding of attainment.

¹ EPA’s proposed rulemaking for the Maryland portion of the Martinsburg-Hagerstown area also contained a separate and independent proposed determination of attainment for the Baltimore, MD

Response

EPA has reviewed the AirData Monitor Values Reports that were submitted by the commenter. The "airdata files" submitted by the commenter were obtained using EPA's "AirData" Web site which accesses an extracted static subset of the Aerometric Information Retrieval System Air Quality System (AQS) database. This distinction is relevant because, although, prior to February 2009, the "airdata files" were extracted from AQS on a monthly basis,² some values may be absent due to incomplete reporting and some values may be subsequently changed after being subjected to quality assurance activities. EPA does not rely on incomplete, non-quality assured data to make determinations of attainment with the NAAQS. Instead, EPA uses certified air monitoring data generally from AQS that meet requirements found in Appendices A, C, D, and E of 40 CFR Part 58, to determine compliance with the NAAQS. Each of the AirData Monitor Values Reports that was submitted by the commenter includes a disclaimer which states in part: "AirData reports are produced from a monthly extract of EPA's air pollution database, AQS. Data for this report were extracted on January 10, 2009. They represent the best information available to EPA from state agencies on that date. However, some values may be absent due to incomplete reporting, and some values subsequently may be changed due to quality assurance activities." This disclaimer is particularly relevant to the EPA's review of the data presented in the Monitor Values Report for the Martinsburg, WV monitor (monitor ID #540030003) located in Berkeley County, West Virginia ("the Martinsburg monitor") for the 2008 calendar year. The monitored data set forth in this 2008 Monitor Values Report were incomplete because this report did not include monitoring data for the fourth quarter of 2008. The submitted report included data for only the first three quarters of 2008. Due to the absence of the fourth quarter 2008 monitoring data, the 2008 design value

² EPA no longer supports the monthly updating of the AirData Web site from official data contained within AQS. Ambient data reported to AQS after January 2009 would not be available through this tool. Due to resources constraints and EPA's plan to replace AirData with a new method allowing up-to-date access by the public to data in AQS, as of the date of this response EPA has not updated the AirData summary data to reflect all 2008 data submitted to AQS. At the present time, the preferred method for the general public to access the publicly available PM_{2.5} AQS data is to use the data and information available as part of EPA's AirTrends Site at: <http://www.epa.gov/airtrends/values.html>.

for the Martinsburg monitor cannot be accurately calculated using the data set forth in the submitted 2008 Monitor Values Report. The fourth quarter monitored PM_{2.5} mean concentration level at the Martinsburg monitor, which became available after January 2009, was 10.68 µg/m³. The annual PM_{2.5} mean concentration for 2008 is derived from the average of the quarterly means for each of the four quarters of 2008: 15.70 µg/m³, 13.80 µg/m³, 16.57 µg/m³, and 10.68 µg/m³; and such calculation results in a finding that the annual PM_{2.5} mean concentration for 2008 is 14.19 µg/m³. The design value for the Martinsburg monitor for the 2006–2008 period is 14.9 µg/m³; this is the average of the monitored annual PM_{2.5} mean concentrations of: 14.93 µg/m³ in 2006, 15.61 µg/m³ in 2007, and 14.19 µg/m³ in 2008. The design value shown in the initial NPRs for the Martinsburg-Hagerstown, WV-MD nonattainment area published on July 31, 2009 (74 FR 38154 and 74 FR 38161) was 14.9 µg/m³. The annual PM_{2.5} mean concentrations data and additional 2008 data, that form the foundation for EPA's attainment determination were supplied and made available for public comment when EPA re-opened its public comment period and issued its supplemental NPRs and TSDs. For further information, see paragraph C(1) on page 3 of the TSDs for the September 29, 2009 NPR reopening of the comment period (74 FR 49833 and 74 FR 49834).

Comment

Based on the commenter's contention, set forth above in the preceding comment, that in 2006–2008 a monitor in Martinsburg, WV recorded a violation of the PM_{2.5} NAAQS, the commenter argues that EPA cannot make a determination of attainment solely for the Maryland portion of the Martinsburg-Hagerstown area.

Response

As set forth in the response to comment above, EPA disagrees that the Martinsburg monitor in the Martinsburg-Hagerstown nonattainment area shows a violation of the annual PM_{2.5} standard for the period 2006–2008. EPA agrees, however, that if, hypothetically, the commenter were correct and EPA determines that complete, quality assured data from any monitor in the area eligible for comparison to the NAAQS shows nonattainment, the violation would affect the attainment status of the entire area that had been designated nonattainment. As set forth in detail above, however, the complete, quality-assured data for both monitors in the

Martinsburg-Hagerstown area show that the entire area is in attainment of the NAAQS. EPA agrees that 40 CFR 51.1004(c) applies "upon a determination by EPA that an area designated nonattainment for the PM_{2.5} NAAQS has attained the standard." EPA is making the determination here that the entire Martinsburg-Hagerstown area has attained the PM_{2.5} NAAQS, based on monitors in both portions of the bi-state area.

2009 Data

Comment

In its August 31, 2009 comments, the commenter requested that the 2009 data referred to in the NPRs be made available to the public via either revised NPRs or a reopening of the comment period to enable the public to comment on whether the 2009 data supports a finding of attainment. In its October 29, 2009 comments, the commenter agreed that "EPA cannot rely on the 2009 data to make a finding of attainment as it is not complete and does not meet EPA requirements for demonstration of attainment."

Response

EPA granted the commenter's August 31, 2009 request, presented available 2009 data, and reopened the comment period. As requested by the commenter, the portion of the 2009 data that was available at the time of EPA's July 31, 2009 proposed rulemaking was included as part of the docket, and the public comment period was reopened on September 29, 2009 (74 FR 49833 and 74 FR 49834). In addition to the 2009 data, additional information was provided in the September 29, 2009 NPRs that clarifies how the design value was calculated for the 2006–2008 period. Thus the commenter and the public have been provided an opportunity to review data and analyses relating to EPA's determinations of attainment that are the subject of today's rulemakings.

At the time of EPA's proposed determinations EPA did not have complete, quality-assured, State-certified air quality data for the entire 2009 calendar year. Nor does EPA have those data at the time of this final rulemaking. The complete, quality assured, State certified air quality data for the entire 2009 calendar year will not be available until well into calendar year 2010, and, therefore, cannot be used at this time for purposes of design value calculations during calendar year 2009. In accordance with 40 CFR Part 50 Appendix N and standard EPA practice, EPA's determinations of attainment are

based on the three most recent years of complete, quality-assured data, from 2006 to 2008. Appendix N does not provide for examining partial years of data, because various seasons of the year reflect various influences on PM_{2.5} concentrations, and a partial year's data may not be representative of values that would be determined from a full year's data set. Nevertheless, EPA also examined currently available data from 2009 for the limited purpose of determining whether they are consistent with its determination of attainment. The available data for 2009, though not the basis of EPA determinations of attainment, indicate a continuing trend that is consistent with EPA's determination of attainment, based on 2006 to 2008 data, that the Martinsburg-Hagerstown, Parkersburg-Marietta, and Wheeling 1997 PM_{2.5} nonattainment areas are attaining the 1997 PM_{2.5} standards.

In its October 29, 2009 comments, which the Sierra Club submitted after having an opportunity to review the 2009 data it requested, the Sierra Club did not raise any additional concerns about the data apart from their incomplete and preliminary nature. EPA has addressed these concerns above and in its TSDs. EPA has thus fully explained the scope of its review of these data, and the basis for its determinations of attainment based on 2006–2008 data that are complete and quality assured.

III. What Is the Effect of These Actions?

These final actions, in accordance with 40 CFR 51.1004(c), suspend the requirements for the Martinsburg-Hagerstown, WV-MD nonattainment area, the Parkersburg-Marietta, WV-OH nonattainment area, and the Wheeling, WV-OH nonattainment area to submit attainment demonstrations, associated reasonably available control measures, reasonable further progress plans, contingency measures, and other planning SIPs related to attainment of the 1997 PM_{2.5} NAAQS for so long as that area continues to attain the 1997 PM_{2.5} NAAQS.

IV. When Are These Actions Effective?

EPA finds that there is good cause for these determinations to become effective on the date of publication of this action in the **Federal Register**, because a delayed effective date is unnecessary due to the nature of the approval. The expedited effective date for these actions is authorized under both 5 U.S.C. 553(d)(1), which provides that rule actions may become effective less than 30 days after publication if the rule “grants or recognizes an exemption

or relieves a restriction” and 5 U.S.C. 553(d)(3), which allows an effective date less than 30 days after publication “as otherwise provided by the agency for good cause found and published with the rule.” As noted above, these determinations of attainment suspend the requirements for the Martinsburg-Hagerstown, Parkersburg-Marietta, and Wheeling PM_{2.5} nonattainment areas to submit an attainment demonstration, associated reasonably available control measures, a reasonable further progress plan, contingency measures, and any other planning SIPs related to attainment of the standard for so long as these areas continue to meet the 1997 PM_{2.5} NAAQS. The suspension of these requirements is sufficient reason to allow an expedited effective date of this rule under 5 U.S.C. 553(d)(1). In addition, the suspension of these requirements provide good cause to make this rule effective on the date of publication of this action in the **Federal Register**, pursuant to 5 U.S.C. 553(d)(3). The purpose of the 30-day waiting period prescribed in 5 U.S.C. 553(d) is to give affected parties a reasonable time to adjust their behavior and prepare before the final rule takes effect. Where, as here, the final rules suspend requirements rather than imposing obligations, affected parties do not need time to adjust and prepare before the rule takes effect.

V. What Are EPA's Final Actions?

EPA is determining that the Martinsburg-Hagerstown, Parkersburg-Marietta, and Wheeling nonattainment areas have attained the standards for the 1997 PM_{2.5} NAAQS. These determinations are based upon complete, quality assured, quality controlled, and certified ambient air monitoring data showing that these areas have monitored attainment of the 1997 PM_{2.5} NAAQS based on the 2006–2008 data. In addition, preliminary air quality data available for 2009 are consistent with continuing attainment. These final actions, in accordance with 40 CFR 51.1004(c), will suspend the requirements for States to submit attainment demonstrations, associated reasonably available control measures, reasonable further progress plans, contingency measures, and other planning SIPs related to attainment of the 1997 PM_{2.5} NAAQS for each area, for so long as that area continues to meet the 1997 PM_{2.5} NAAQS. EPA's determination that these areas have attained the 1997 PM_{2.5} NAAQS are not equivalent to the redesignation of these areas to attainment. These actions do not constitute redesignations to attainment under section 107(d)(3) of

the CAA, because we do not yet have an approved maintenance plan for these areas as required under section 175A of the CAA, nor a determination that these areas have met the other requirements for redesignation. The designation status of these areas remains nonattainment for the 1997 PM_{2.5} NAAQS until such time as EPA determines that these areas meet the CAA requirements for redesignation to attainment.

VI. What Are the Statutory and Executive Order Reviews?

A. General Requirements

Under Executive Order 12866 (58 FR 51735, October 4, 1993), these actions are not “significant regulatory action” and therefore is not subject to review by the Office of Management and Budget. For this reason, these actions are not subject to Executive Order 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” (66 FR 28355, May 22, 2001). These actions make determinations based on air quality data and result in the suspension of certain Federal requirements. Accordingly, the Administrator certifies that these rules will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). Because these rules make determinations based on air quality data, and result in the suspension of certain Federal requirements, they do not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

These rules also do not have tribal applications because they will not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes, as specified by Executive Order 13175 (65 FR 67249, November 9, 2000). These actions also do not have Federalism implications because they do not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because they merely make determinations based on air quality data and result in the suspension of certain Federal requirements, and do not alter the relationship or the distribution of power and responsibilities established in the

CAA. These rules also are not subject to Executive Order 13045 "Protection of Children from Environmental Health Risks" (62 FR 19885, April 23, 1997) because they determine that air quality in the affected areas are meeting Federal standards.

The requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply because it would be inconsistent with applicable law for EPA, when determining the attainment status of an area, to use voluntary consensus standards in place of promulgated air quality standards and monitoring procedures to otherwise satisfy the provisions of the CAA.

These rules do not impose an information collection burden under the provisions of the Paper Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*)

Under Executive Order 12898, EPA finds that these rules involve determinations of attainment based on air quality data and will not have disproportionately high and adverse human health or environmental effects on any communities in these areas, including minority and low-income communities.

B. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing these actions and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. These actions are not "major rules" as defined by 5 U.S.C. 804(2).

C. Petitions for Judicial Review

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of these actions must be filed in the United States Court of Appeals for the appropriate circuit by January 19, 2010. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of these actions for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed,

and shall not postpone the effectiveness of such rule or actions.

These actions, pertaining to the determinations of attainment for the 1997 fine particulate matter standard for the Martinsburg-Hagerstown, Parkersburg-Marietta, and Wheeling PM_{2.5} nonattainment areas, may not be challenged later in proceedings to enforce requirements. (See section 307(b)(2).)

Federal Emergency Management Agency

44 CFR Part 206

[Docket ID FEMA-2006-0028]

RIN 1660-AA45

Public Assistance Eligibility

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Final rule.

SUMMARY: The Federal Emergency Management Agency (FEMA) provides financial assistance to State, local, and Tribal governments, as well as certain private non-profit organizations, for response and recovery activities required as a result of a presidentially-declared major disaster or emergency. Assistance may include reimbursement for sheltering and evacuation costs

incurred to assist individuals displaced by a declared major disaster or emergency. This rule finalizes the July 2006 interim rule which amended FEMA's Public Assistance eligibility regulations to allow grantees to seek reimbursement for sheltering and evacuation costs incurred outside of the area designated under a Presidential emergency or major disaster declaration, if such costs are otherwise eligible for FEMA Public Assistance. This rule further clarifies those regulations to specify which entities may be eligible for reimbursement for costs incurred from providing evacuation and sheltering services outside the area of the declared emergency or major disaster, and the procedures FEMA will use to reimburse those applicants. The rule also establishes the terms "impact-State" and "host-State" to differentiate between the State for which the President has issued a declaration and that requests evacuation and/or sheltering assistance, and the State (or Tribe) that provides the sheltering and/or evacuation assistance, respectively. Finally, the rule makes a procedural change to the way in which a host-State receives reimbursement for the regular salary or hourly wages and benefits paid to its permanent employees.

DATES: *Effective Date:* December 21, 2009.

ADDRESSES: The electronic docket for this rulemaking is available on the Federal eRulemaking Portal at www.regulations.gov, in Docket ID "FEMA-2006-0028." A hard copy of the docket may also be viewed at FEMA, Office of Chief Counsel, Room 835, 500 C Street, SW., Washington, DC 20472-3100.

SUPPLEMENTARY INFORMATION:

I. Background

FEMA, through its Public Assistance program, provides financial assistance to State, Tribal, and local governments, as well as certain private non-profit organizations to quickly respond to and assist communities to recover from major disasters or emergencies declared by the President. In providing assistance through this program, FEMA provides a grant to a "grantee," which is typically a State, but may also be an Indian Tribal government. 44 CFR 206.201(e) and 206.202(f). The grantee administers the program and provides funding directly

to "subgrantees," which may be local governments, eligible private non-profit organizations, and Indian Tribal governments. An Indian Tribal government may choose to be either a grantee or a subgrantee. The grantee submits eligible costs incurred by it and/or its subgrantees to FEMA for reimbursement.

Traditionally, the grantee is the State that requests and receives a major disaster or emergency declaration from the President, and the costs eligible for reimbursement from FEMA are costs incurred in the area designated in the major disaster or emergency declaration. Costs incurred outside the declared area were not reimbursable. When a State, Indian Tribal, or local government, or an eligible private non-profit incurred costs as a result of a disaster that occurred elsewhere, the State¹ was required to seek its own emergency declaration to have those costs reimbursed.

In response to Hurricanes Katrina and Rita in 2005, 45 States requested and received emergency declarations to recover sheltering costs for tens of thousands of evacuees from the Gulf Coast States. Declaring an emergency in each of these States² was an imperfect method of responding because each State incurred administrative costs to request an emergency declaration, and requesting States were subject to the cost share requirements of The Robert T. Stafford Disaster Relief and Emergency Assistance Act³ (Stafford Act). FEMA concluded that "host" States, Tribes, and local governments could better assist "impact" States needing assistance evacuating and sheltering their residents as a result of declared major disasters or emergencies if the host-State could obtain reimbursement directly from either the impact State, Tribe or local government or directly from FEMA without first obtaining an individual emergency declaration.

On July 14, 2006, FEMA published an interim rule amending its Public

Assistance eligibility regulations to allow grantees to seek reimbursement for sheltering and evacuation costs incurred outside of the area designated under a Presidential emergency or major disaster declaration, if such costs are otherwise eligible for FEMA Public Assistance funding. 71 FR 40025. FEMA, in promulgating the 2006 interim rule, recognized the benefit in reimbursing grantees outside of a designated area when they are requested to provide, and consequently incur, costs for sheltering and evacuation support to evacuees from another State, Tribe, or local government.

In making this change, the 2006 interim rule expanded eligible costs to include sheltering and evacuation costs that occur outside of a declared area, and allowed States to recover these costs through direct Federal reimbursement when such assistance was requested by the State with a declaration.

The expansion of eligible costs to include sheltering and evacuation activities that occur outside a declared area affected costs both within and outside a declared State. The evacuation and sheltering costs provided between local governments within a State may be covered by mutual aid agreements, whereas assistance provided outside a state may be covered either by a mutual aid agreement between States or direct Federal reimbursement to a State from FEMA pursuant to a disaster declaration.

Many local governments have pre-existing mutual aid agreements and share materials and services with one another in times of need. Under mutual aid agreements, a requesting jurisdiction within a designated area may request another jurisdiction outside of the designated area to provide evacuation and sheltering services for the requesting jurisdiction's residents. Additionally, many States participate in the Emergency Management Assistance Compact (EMAC), or have other similar agreements, through which the States agree to provide assistance to one another when requested. Under a mutual aid arrangement, the jurisdiction that requested the assistance reimburses the providing jurisdiction for its costs, and then in turn, seeks reimbursement from FEMA (through the State, if the requesting entity is an eligible subgrantee).

The 2006 interim rule also allowed other States that provide evacuation and sheltering services to recover their costs from FEMA after a declared State requests direct Federal assistance pursuant to 44 CFR 206.208. FEMA provides direct Federal assistance to the

¹ As defined in the Stafford Act, only States may receive major disaster or emergency declarations. Although Indian Tribal governments may be grantees under a State's declaration, the President does not have the authority to issue a declaration for a Tribe. See 42 U.S.C. 5122, 5170, and 5191.

² The standard Federal/State cost share rate is 75/25, although it may be raised to 90/10 or 100% Federal. See 42 U.S.C. 5170(b), 5193(a), and 44 CFR 206.47. The declarations issued to States that provided sheltering and/or evacuation services as a result of Hurricanes Katrina and Rita in 2005 and Hurricane Gustav in 2008 were set by the President at a 100 percent Federal rate. There is no guarantee, however, that future disasters will receive a 100 percent rate as the rate is set on a case by case basis at the President's discretion.

³ Disaster Relief Act of 1974, Public Law 93-288, 88 Stat. 143 (May 22, 1974), as amended 42 U.S.C. 5121 *et seq.*

declared State when a State or Indian Tribal government outside the declared area, at FEMA's request, provides sheltering and evacuation services to that declared State. States, Tribes, and local governments that provide sheltering and/or evacuation assistance do not seek direct Federal assistance; the State with the declaration makes the request, and then FEMA identifies States and Tribes that are willing and able to help. This change, therefore, only affects costs outside a State that was granted an emergency or major disaster declaration; it will not affect local governments or private non-profit entities within the declared State. Only when an impact-State is overwhelmed and lacks the capability to perform or contract for emergency work would it turn to FEMA for direct Federal assistance. Since a State must exhaust its resources before receiving direct Federal assistance from FEMA, there would be no resources available within the State to provide evacuation and sheltering services.

FEMA evaluated the effectiveness of the 2006 interim rule following mass evacuations from Louisiana, including the City of New Orleans, in advance of Hurricane Gustav in August 2008. Although FEMA has found that the changes made by the 2006 Public Assistance Eligibility interim rule significantly improved the reimbursement process during the 2008 hurricane season, FEMA identified several areas to further improve the procedures for reimbursing evacuation and sheltering assistance. For example, although some States preferred to be directly reimbursed by FEMA, they requested clarification regarding the reimbursement process and which entities would be eligible for direct reimbursement. In the Public Assistance program, typically the State for which the major disaster or emergency is declared (the "impact-State") is the grantee, but, in this case, a State without a major disaster or emergency declaration providing the evacuation services may receive a grant. This new situation raised questions as to whether the State without a declaration has the responsibilities of a grantee with respect to its grant, or whether it is a subgrantee of the impact-State. States did not understand who was responsible for the non-Federal cost share under the 2006 interim rule. The 2006 interim rule did not answer whether an undeclared State that provided sheltering and evacuation services stood as a grantee or as a subgrantee to the declared State, and there was no clear application process in place. Grantees are typically

responsible for paying the non-Federal cost share and for oversight under 44 CFR part 13.

This confusion led to delays and duplicative application requirements for those seeking to recover regular salary or hourly wages and benefits paid to an applicant's permanent employees, referred to as "straight-time force account labor costs." For example, because straight-time force account labor costs were eligible only when incurred through mutual aid agreements between States, States sought reimbursement for these costs through mutual aid agreements and would apply for direct funding from FEMA for the remaining costs. Thus, a clear understanding of the procedures for addressing out-of-state evacuation and sheltering is essential to FEMA's effective management of the Public Assistance program. This final rule clarifies the process for FEMA reimbursement of those entities outside a declared area that provide sheltering and/or evacuation assistance. Further, it will provide a more efficient grant process that is likely to result in more States being willing to provide their resources to protect residents of another State impacted by a major disaster or emergency.

FEMA recognized, in addition, the need to reimburse straight-time force account labor costs through the direct Federal assistance process. Public Assistance grants are generally not available to reimburse force account straight-time for emergency work. 44 CFR 206.228(a)(2). Since an applicant's costs for permanently employed personnel are pre-disaster existing resource costs the employer would incur in addressing its responsibilities regardless of whether the event occurred, these costs are not eligible. Overtime wages are reimbursable, however, for permanent employees working extra hours in performing eligible emergency work as a result of the declared emergency or major disaster. Labor costs, including overtime wages, moreover, to backfill employees assigned to perform eligible emergency work in support of the declared emergency or major disaster are also reimbursable.

FEMA currently reimburses straight-time force account labor costs when States use the mutual aid process (such as EMAC). These costs are eligible under mutual aid because the jurisdiction providing the assistance under the agreement is considered a contractor hired as a result of the declared event to address the needs of another jurisdiction. Contrary to the typical disaster assistance subgrantee,

States that host another State's residents are not expending pre-budgeted costs to address their own governmental responsibilities. FEMA has been repeatedly advised that States assisting other States' residents are unable and unwilling to assume this added expense should a future disaster occur. This final rule, therefore, makes a change in procedure that allows for the reimbursement of straight-time force account labor to host-States directly from FEMA, rather than solely through the mutual aid process. This change is strictly procedural, and does not otherwise affect the eligibility of those costs, or the amount reimbursed. This change is expected to result in more States being willing to provide host-State sheltering assistance.

FEMA, in this rule, addresses public comments received on the interim rule, finalizes the regulations, and implements these procedural improvements. This rule establishes definitions for "impact-State" and "host-State" to clearly differentiate between the State that is being directly impacted by the event resulting in a Presidential emergency or disaster declaration and has requested direct Federal assistance to address its evacuation and sheltering needs out of state, and the State that is, at FEMA's request, providing the evacuation and sheltering to residents from the designated areas. The rule more clearly articulates the entities that may be eligible to act as a host-State, and establishes application procedures for host-States seeking reimbursement for evacuation and sheltering activities directly from FEMA. Finally, the rule revises the procedure by which host-States receive reimbursement of straight-time force account labor costs. As with the 2006 interim rule, this rule allows for both mechanisms for reimbursement—a host-State may receive reimbursement either through a mutual aid agreement or by direct reimbursement from FEMA.

II. Discussion

A. Amendments to FEMA's Public Assistance Regulations Under This Final Rule

1. Designation of Affected Areas—Clarification of Terminology

FEMA's regulations occasionally refer to "disaster-affected" areas or "designated disaster" areas in sections that apply to both emergencies and major disasters. To remove the potential that one could misconstrue the use of the term "disaster" as FEMA's intent to exclude application during declared emergencies, FEMA has revised the

language to be more precise. The term “disaster-affected” has been replaced with the term “affected” in 44 CFR 206.40(b). The word “disaster” has been removed before “affected” in 44 CFR 206.2(a)(6). The term “designated disaster area” has been replaced with “designated area” in 44 CFR 206.223(a)(2), and the words “emergency or,” have been added before the phrase “major disaster event” in 44 CFR 206.223(a)(1). Similarly, to clarify that 44 CFR 206.208(a) applies to emergency assistance under an emergency declaration as well as a major disaster declaration, this rule adds Stafford Act citations to that section.

2. Direct Reimbursement for Host-State Evacuation and/or Sheltering—Clarification of Procedure and General Eligibility

As a result of the 2006 interim rule, a State or Tribe may be reimbursed for costs incurred from evacuation and sheltering activities performed outside the designated area. This rule amends FEMA regulations to align with the preamble of the 2006 interim rule and clarify that a State with a Stafford Act declaration may request direct Federal assistance from FEMA for evacuation and/or sheltering activities that occur outside the State. In doing so, the rule points applicants to the eligibility requirements for those who may provide evacuation and/or sheltering assistance when requested, what costs are eligible for reimbursement, and establishes the procedures the providing entity must follow to seek reimbursement. The State with a Presidential declaration may also request assistance from another State on its own, through a mutual aid agreement (such as EMAC), but this rule does not specifically address that option since mutual aid costs are already reimbursed by FEMA.

Direct Federal assistance under 44 CFR 206.208 applies when a State lacks the capability to perform or contract for emergency work. When this occurs, the State asks FEMA for assistance. In this rule the requesting State is referred to as the “impact-State.” When such a request is made, FEMA will ask another State or an Indian Tribal government if it is capable and willing to provide sheltering and/or evacuation assistance to the impact-State. If such State or Indian Tribal Government is capable and willing, FEMA will then provide direct reimbursement through a grant to the State or Indian Tribal government that provides evacuation and/or sheltering activities. The providing State or Indian Tribal government is referred to in this rule as the “host-State” or

“host-Tribe,” respectively, or collectively as the “host-State.” Through the direct Federal assistance process, the host-State is a grantee. Although it is obtaining assistance as a result of the impact-State’s declaration, it is not a subgrantee of the impact-State. This means that although the impact-State will continue to incur the Federal cost-share for the assistance, the impact-State is not responsible for the oversight of the host-State’s grant under the requirements of 44 CFR part 13 as it would for subgrantees. The cost-share requirements for impact-States are discussed more fully elsewhere in this preamble.

FEMA’s regulations set out the criteria that routinely apply when direct Federal assistance is requested by and provided to a State that has received a Stafford Act declaration. 44 CFR 206.208. This rule clarifies that the criteria also apply to a host-State and an impact-State. For example, the impact-State is responsible for the non-Federal cost share under 44 CFR 206.208(b)(iii) and as required in 44 CFR 206.208(c), the requested work must be eligible under the Public Assistance eligibility criteria contained in Subpart H, *Public Assistance Eligibility*. Since the criteria set out in 44 CFR 206.208 apply to an impact-State’s request for direct Federal assistance, as well as to how FEMA can provide such assistance, a provision has been added to 44 CFR 206.208 that specifically addresses host-State reimbursement.

The 2006 interim rule was also silent with respect to when and to which entity FEMA would award a grant for direct Federal reimbursement. FEMA must take into consideration the host-State’s evacuation and sheltering capabilities before it can award a grant to the host-State to protect against the possibility of individuals being sent to States that are unable to appropriately shelter them. Neither FEMA nor the impact-State should send people to a host-State, as a matter of policy, if that host-State is unable to meet the needs of the evacuees. A grant to a State that cannot host evacuees would not serve the purpose of aiding the impact-State. The determination of a host-State’s capability will be made on a case-by-case basis and the criteria will vary depending upon the specific needs of the impact-State, but will generally focus on the availability of short or mid-term housing, and equipment for evacuation activities. This rule adds a provision to 44 CFR 206.208 to address this need, providing that a grant to a host-State is available when FEMA determines that a host-State has sufficient capability to meet some or all

of the sheltering and/or evacuation needs of the impact-State.

To establish a record of the agreement and reduce confusion and miscommunication, this rule adds a requirement to 44 CFR 206.208 that the host-State must agree in writing to provide evacuation and/or sheltering assistance to individuals from the impact-State. This agreement is referred to as the commitment letter, and is provided to FEMA before the execution of the FEMA/Host-State Agreement.

The 2006 interim rule also lacked sufficient clarity with respect to the host-State’s obligation to enter into a written agreement with FEMA. This rule clarifies that a host-State must enter into a FEMA/Host-State Agreement (similar to a FEMA/State Agreement) before grant funds will be awarded. This FEMA/Host-State Agreement, which covers the conditions of the grant award, is consistent with that required of a declared State grantee pursuant to 44 CFR 206.44. The FEMA/Host-State Agreement also includes a provision on the cost share.

Grantees are required by the Stafford Act and FEMA’s implementing regulations to pay a percentage share of the costs of the Federal assistance, known as the non-Federal cost share. See 42 U.S.C. 5170(b), 5193(a), and 44 CFR 206.47. Such costs would include those for evacuation and sheltering activities. This cost share requirement applies whether the cost is incurred through mutual aid or through direct Federal assistance. The Federal/non-Federal cost share for a grant to a host-State to evacuate and/or shelter individuals from the impact-State is the same as the cost share established for all other Category B, Emergency Protective Measures, for the declared major disaster or emergency. As with all other assistance under the declaration, the non-Federal cost share for host-State sheltering is the responsibility of the impact-State under its declaration. This means that the host-State will be reimbursed for 100 percent of its eligible costs and the impact-State will continue to be responsible for the non-Federal cost share as agreed to in its FEMA/State Agreement. FEMA finds that the host-State should be reimbursed for 100 percent of its eligible costs because it is using its State resources to aid individuals from another State. Such costs are not part of a host-State’s annual budget. For impact-States, these costs would have been borne by the impact-State had they sheltered their residents in-State, or requested assistance from the host-State themselves through mutual aid. This clarification, therefore, adds no new

costs for the impact-State. An impact-State must agree, when requesting direct Federal assistance for evacuation and sheltering, to provide the non-Federal cost share for all eligible costs incurred by any host-State to ensure that no improper Federalism implications occur and that impact-States knowingly and willingly agree to incur these costs.

States have expressed some confusion as to whether host-State grantees are required to submit the same information, and undertake the same obligations as other grantees. The requirements for host-State direct reimbursement under 44 CFR 206.202(f)(1) and 206.208 should be read together. A host-State's responsibilities, including the requirement to assume the responsibilities of a Public Assistance grantee with respect to its grant award, are set out in 44 CFR 206.202(f). The host-State assumes these responsibilities because the host-State is receiving a direct grant from FEMA and is therefore acting as a grantee. For clarity, in 44 CFR 206.208, this rule specifically adds a reference to 44 CFR 206.202(f)(1), Host-State Evacuation and/or Sheltering.

This rule clearly states that, as a grantee, the host-State must submit a Standard Form 424, *Application for Federal Assistance*, to apply for reimbursement from FEMA. SF-424 is not a new requirement, as FEMA requires this form from all grantees under 44 CFR 206.202(e). The host-State is responsible for this and other grants management provisions in the regulation only with respect to its evacuation/sheltering grant. FEMA also requires all grantees to develop a State administrative plan. See 44 CFR 206.207. The State administrative plan includes the designation of State agencies responsible for program administration, identifies Public Assistance staffing functions, and includes procedures for conducting briefings, notifying potential applicants, processing appeal requests, and other procedures for administering the Public Assistance program. Grantees are required to update their administrative plans under 44 CFR 206.207. This rule clearly states that this requirement also applies to host-States under 44 CFR 206.202(f).

3. Straight-Time Force Account Labor

As discussed above, FEMA currently reimburses applicants for the overtime costs of their permanently employed personnel who perform emergency work as a result of a declared event when direct Federal assistance is provided. FEMA does not, however, reimburse the

straight-time wages for these employees. When a host-State provides evacuation and/or sheltering assistance under a mutual aid agreement, however, FEMA does reimburse host-State force account labor for both straight-time and overtime. FEMA treats the costs incurred by the host-State (referred to as a "providing entity") under a mutual aid agreement as contract labor, with regular time and overtime wages and certain benefits eligible, provided the labor rates are reasonable.

FEMA's reimbursement of regular- or "straight-time" salaries is generally governed by 44 CFR part 13 (*Uniform Administrative Requirements for Grants and Cooperative Agreements to State and Local Governments*); 2 CFR Part 225 (*Cost Principles for State, Local, and Indian Tribal Governments*); OMB Circular A-102, *Grants and Cooperative Agreements with State and Local Governments*; and OMB Circular A-87, *Principles for Determining Costs Applicable to Grants and Contracts with State, Local, and Federally Recognized Indian Tribal Governments*. FEMA has determined that it is appropriate to reimburse the regular- or straight-time salaries of a host-State's permanent employees' eligible evacuation and sheltering activities on behalf of an impact-State because a host-State is providing assistance to an impact-State's residents. The host-State is using its own resources for another State's residents, and, therefore, should be wholly compensated for the assistance that it has not budgeted. This assistance is not being provided for the benefit of the host-State's taxpayers.

As a result of Hurricanes Katrina and Rita, FEMA recognized the importance of host-State evacuation and sheltering activities in response to a large-scale event. Host-States should be encouraged to provide such assistance for future large scale events, as necessary, and delay in reimbursement through the impact-State discourages such assistance. Allowing reimbursement of straight-time force account labor under both the mutual aid and direct grant mechanisms ensures consistency and fairness in reimbursement of these eligible costs. Allowing this reimbursement also avoids any potential administrative burden of the States being required to consider differences in eligible costs when considering which reimbursement mechanism is most suitable. This rule, therefore, establishes a process for FEMA to provide direct Federal reimbursement to a host-State for straight-time salaries and benefits of a host-State's permanently employed personnel who perform evacuation and/or sheltering activities. A host-State's

straight and overtime costs may be directly reimbursed through the host-State's grant from FEMA.

4. Definitions of Host-State and Impact-State

FEMA makes frequent reference to entities within the designated area of a Presidential emergency or major disaster declaration and entities that provide evacuation and/or sheltering assistance outside the State receiving the emergency or major disaster declaration. FEMA has recognized the need to assign shorter, uniform terms to identify these entities. A uniform definition ensures consistency and clarity in implementation of this regulation. This final rule therefore adds definitions for "host-State" and "impact-State" to 44 CFR 206.201, which is the definitions section for the Public Assistance project administration regulations.

A "host-State" is a State or Indian Tribal government that by agreement with FEMA is providing sheltering and/or evacuation support to evacuees from an impact-State. An "impact-State" is the State for which the President has declared an emergency or major disaster and that, due to a need to protect its affected residents, requests assistance from FEMA pursuant to 44 CFR 206.208 to evacuate and/or shelter such individuals outside the State.

5. Definitions of Grantee and Indian Tribal Government

Since host-States are grantees, as described in this rulemaking, FEMA is updating the definition of "grantee." Typically, the declared State is the grantee eligible to receive assistance under the emergency or major disaster declaration, and is responsible for the administration and use of assistance provided under the Public Assistance program for that declaration. The revised definition of grantee states that for purposes of the Public Assistance regulations, the declared State is the grantee, except as noted in 44 CFR 206.202(f). The exception under paragraph (f) allows a host-State to apply for a grant for the specific purpose of providing sheltering and evacuation activities to the impact-State that requested direct Federal assistance from FEMA. Under this exception, a host-State reimbursed by FEMA pursuant to 44 CFR 206.208 for sheltering and/or evacuation activities has all of the responsibilities of the declared State in administering its Public Assistance grant. FEMA makes a similar clarifying amendment to the definition of "grantee" in 44 CFR 206.431 to note that the grantee is generally the declared State. FEMA has added this clarification

because before this rulemaking the “grantee” has always been presumed to be the declared State for both the Public Assistance and Hazard Mitigation Assistance programs. Without this change, FEMA was concerned that in the absence of express language to the contrary, the definition would leave the impression that a State is not required to be the declared one to receive assistance under the Hazard Mitigation Grant Program.

Before this final rule, the definition of grantee referred to a State, and 44 CFR 206.202(f) created an exception that allowed Indian Tribal governments affected by an emergency or major disaster to apply directly to FEMA for a grant when State law prohibits a State to act as grantee for an Indian Tribal government. This rule merges the exception for Indian Tribal governments that appeared in paragraph (f) into the definition of grantee to clarify that an Indian Tribal government in the affected area may choose to be a grantee, or it may act as a subgrantee under the State receiving the declaration. This merger gives Indian Tribal governments the level of recognition commensurate with the declared States because both can apply directly to FEMA for disaster assistance and is consistent with the other program definitions of the term “grantee” throughout FEMA’s regulations. This merger into the definition is consistent with FEMA’s established practice, recognition of, and commitment to, a government-to-government relationship with Indian Tribal governments. FEMA recognizes the tribal right of self-government that flows from the inherent sovereignty of Tribes as nations, and that Federally-recognized Tribes have a unique and direct relationship with the Federal government. This sovereign status also permits a qualified Indian Tribal government to deal directly with FEMA with respect to Public Assistance funding for which it is eligible under a Presidentially-declared emergency or major disaster declaration. In choosing to act as grantee, the Indian Tribal government assumes the responsibilities of grantees, including the reporting, recordkeeping, and other requirements contained in the program regulations. This choice and assumption also comports with the intent of FEMA’s policy, *Final Agency Policy for Government-to-Government Relations with American Indian and Alaska Native Tribal Governments*, 64 FR 2096 (Jan. 12, 1999), as available at <http://www.fema.gov/government/tribal/natamerpolcy.shtm>, which permits a qualified Tribal government to interact

directly with FEMA and act as its own grantee.

Finally, unlike many of FEMA’s other regulatory parts, Subpart G lacked a definition of the term “Indian Tribal government.” The definition added to 44 CFR 206.201 matches the definition of “Indian Tribal government” in other sections of FEMA regulations, such as at 44 CFR 201.2 (Mitigation Planning), 206.430 (Hazard Mitigation Grant Program), and 207.2 (Management Costs).

FEMA will be updating its guidance to the States to reflect the changes made in this rule. When these documents are available, they will be posted to FEMA’s Web site at <http://www.fema.gov>, as well as to the docket for this rulemaking at <http://www.regulations.gov>, Docket ID: FEMA–2006–0028.

B. Discussion of Public Comments on the 2006 Interim Rule

FEMA received four comments on the 2006 interim rule. The commenters included one emergency management organization, one State, and two local governments.

1. General Comments

The International Association of Emergency Managers (IAEM) stated that it received responses from 10 of its members, all in favor of the rule. The Georgia Emergency Management Agency (GEMA) stated that it was in favor of the rule because it facilitates a reasonable means of providing sheltering and evacuation support outside the impacted areas without imposing all of the other requirements associated with providing access to Public Assistance funding. The Onslow County North Carolina Emergency Services & Homeland Security Department (Onslow County) stated that the rule allowed non-affected counties to better support affected areas without absorbing the costs directly in their smaller budgets.

These comments reflect one of the main reasons FEMA promulgated the interim rule: to reduce the costs and administrative burden placed on the host-State. By eliminating the requirement that a host-State request and receive an emergency declaration from the President before recouping eligible costs for evacuation and sheltering activities, the host-State is not required to activate the same level of emergency management plans, staff, and resources that are normally required to manage and coordinate operations with FEMA.

2. Self-Evacuees

GEMA expressed concern that communities outside the designated areas that provide sheltering and evacuation for self-evacuees would not be eligible for direct reimbursement from FEMA. GEMA was concerned that the volume of individuals that may choose to evacuate and seek shelter without government support, could overwhelm existing resources and necessitate the opening of mass sheltering operations to provide basic services to the evacuees. For example, displaced individuals may choose to evacuate without government support temporarily to a more distant region due to family connections or other perceived advantages, even if FEMA-funded shelter operations were available in other jurisdictions nearer the impacted area. If a sufficient number of evacuees requiring shelter chose to relocate to areas other than those designated by the impacted communities or by FEMA, then, GEMA asserted, the receiving community should have some recourse to seek financial reimbursement in the event that the number of displaced, non-housed persons necessitates the opening of sheltering services.

FEMA generally does not have the authority to provide grant funds under the Stafford Act outside of the designated areas of the Presidential declaration. If a local government finds itself overwhelmed by self evacuees, but is not included in the State’s designated areas, the State may find it is appropriate to request that FEMA include the county among the designated areas under the declaration. As discussed elsewhere in this preamble, FEMA has been delegated the authority to amend emergency and major disaster declarations to add counties when appropriate, and frequently exercises this authority.

If a State without a Stafford Act declaration is burdened with providing sheltering support to self-evacuees, the State may ask the declared State to seek direct Federal assistance from FEMA under the provisions of this rule, or seek reimbursement through a mutual aid agreement with the declared State. Although FEMA recommends mutual aid, in some cases where there is a large-scale event, direct reimbursement from FEMA may be available in accordance with this rule.

3. Mutual Aid Agreements—Burden on Local Governments

The City of Plano was concerned that mutual aid agreements would burden local governments. The commenter stated that it would not be practical for

local governments to administer mutual aid agreements because it would be inefficient and a complex task for local governments to predetermine the host entities across the United States with which it should enter into a mutual aid agreement. The commenter also expressed concern that interstate agreements would be difficult to enforce and that local governments would not have sufficient funds to reimburse the host entities. Further, the City of Plano asserts that cities would be less likely to participate if, as stated in the 2006 interim rule, the eligible applicant will reimburse the providing entity and then be reimbursed by FEMA.

FEMA encourages the use of mutual aid agreements, including the Emergency Management Assistance Compact (EMAC). A mutual aid agreement is an efficient mechanism for providing evacuation and sheltering services when there are a relatively small number of disaster victims. States may enter into post-event mutual aid agreements, which would negate the difficulty local governments may have in determining host entities in advance. A providing entity's costs for evacuation and sheltering services under a mutual aid agreement are eligible for reimbursement by FEMA through the declared State, just as those costs are eligible if the declared State seeks direct assistance from FEMA.

The 2006 interim rule provides, and this rule clarifies, that a State (or Tribal government) may become a host-State when an impact-State requests direct Federal assistance from FEMA, FEMA approves the request, and requests the host-State to provide evacuation and sheltering services outside of the designated area. In this situation, the host-State would receive direct reimbursement from FEMA. This provides an alternate method to mutual aid agreements and may be more appropriate for large-scale events, such as Hurricanes Katrina and Rita, where the impact-State is overwhelmed and lacks the capability to respond to the need.

IV. Regulatory Requirements

A. Administrative Procedure Act

The Administrative Procedure Act requires FEMA to publish notice and consider public comments before promulgating substantive amendments to regulations, 5 U.S.C. 553(b), except when the amendment is a "rule[] of agency organization, procedure, or practice * * *." 5 U.S.C. 553(b)(3)(B). This rule makes one change that was not contemplated in the 2006 interim rule to the manner in which FEMA reimburses

a host-State for straight-time force account labor costs incurred in support of evacuation from an impacted State. As discussed throughout this preamble, straight-time force account labor costs are fully reimbursable by FEMA if the service is provided through a mutual aid agreement with the impact-State. This rule amends the regulations to permit these costs to be directly reimbursable by FEMA. The rule does not increase or decrease those costs, but merely changes the method by which host-States obtain the funds. This amendment is a rule of agency organization, procedure, or practice that is exempt from the notice and comments requirements under 5 U.S.C. 553(b)(A).

B. Executive Order 12866, Regulatory Planning and Review

FEMA has prepared and reviewed this rule consistent with Executive Order 12866, Regulatory Planning and Review. This rule has been deemed a significant, but not economically significant regulatory action by the Office of Management and Budget (OMB), and has, therefore, been reviewed by OMB.

This rule results in \$51,681 in cost savings for each large scale disaster that requires evacuation and sheltering activities to occur outside the area designated by the major disaster or emergency declaration. These savings are due to administrative savings resulting from States not being required to request Presidential declarations of their own for the event, but being able to act as "host-States" under another State's declaration. As a result, States do not need to prepare, and FEMA is not required to review and analyze, those declaration requests to make a recommendation to the President, thereby avoiding the administrative cost associated with such a review. This rule does not change the amount of assistance provided by FEMA for evacuation and sheltering activities, only the procedures by which States seek and receive reimbursement from FEMA for those costs.

Host-State evacuation and sheltering assistance is needed in only rare occurrences, and to date has only occurred twice—for Hurricanes Katrina and Rita in 2005 and Hurricane Gustav in 2008. In 2005, States not directly impacted by Hurricanes Katrina or Rita received a large number of evacuees from the impacted States of Louisiana, Mississippi, and Alabama. Although they were not actually struck by the storm, these States that provided evacuation and sheltering services to evacuees from the impacted States incurred costs. To reimburse these costs, the President declared emergencies in

many of these States, thereby making Federal assistance available for the eligible costs they incurred in providing evacuation and sheltering assistance to evacuees from the impacted States. Without obtaining a declaration, costs incurred by these States were not eligible for Federal reimbursement because the evacuation and sheltering assistance was provided outside the designated areas of the impacted States.

At the time Hurricanes Katrina and Rita struck, costs eligible for reimbursement were limited to those incurred within a designated area. Therefore, if a State incurred costs to evacuate and/or shelter residents from another State, that "host-State" was required to request and obtain its own emergency declaration to recoup eligible costs. Forty-five of the fifty States received Presidentially-declared emergencies so that they could receive Federal assistance for costs incurred after Hurricanes Katrina and Rita for evacuation and sheltering activities.⁴ FEMA provided approximately \$752.62 million in Public Assistance funding for reimbursement for host-State evacuation and sheltering activities for Hurricanes Katrina and Rita. The Federal cost share (which was 100 percent) for some States, such as Texas, Arkansas, and Tennessee, where costs totaled \$558.28 million, \$44.28 million and \$33.66 million, respectively, was substantial. Even States geographically distant from States directly struck by Katrina received Federal reimbursement for their costs. For example, Massachusetts received \$5.72 million. It became apparent that an emergency declaration was not the appropriate vehicle by which FEMA should reimburse a host-State for sheltering and evacuation activities. Sheltering and evacuation are a limited set of activities that normally, by themselves, would not warrant a Presidentially-declared emergency. FEMA needed a mechanism other than a host-State declaration to allow reimbursement for sheltering and evacuation activities outside of the areas contained in a Presidential declaration.

FEMA published the interim rule to address this need and to allow FEMA to reimburse sheltering and evacuation costs incurred by State, local, and Tribal governments that were located outside of a Presidentially-declared emergency or major disaster area, if the costs were otherwise eligible for Public Assistance funding.

Two mechanisms are provided for reimbursement. Under one mechanism,

⁴Data Source: National Emergency Management Information System (NEMIS), FEMA 2009; Enterprise Data Warehouse, FEMA 2009.

an impacted State may request an entity outside of the designated area to provide evacuation and sheltering services for the impacted State's citizens. The entity that provides the evacuation or sheltering services may seek reimbursement under a mutual aid or similar agreement with the impacted State. Under the other mechanism, the impacted State may seek direct Federal assistance from FEMA, and FEMA may, in turn, request an entity outside of the designated area to provide evacuation and sheltering services for the impacted State. This mechanism would allow the providing entity to directly receive reimbursement of its eligible costs from FEMA.

States that provide evacuation and sheltering services outside of the designated area(s) are no longer required to request and receive an emergency declaration from the President to recoup eligible Public Assistance costs for those services under the 2006 interim rule. States avoid the administrative requirements associated with requesting an emergency declaration or requesting

additional designated areas to an existing emergency or major disaster declaration. As a result, FEMA is not required to review and analyze those declaration requests to make a recommendation to the President, thereby avoiding the administrative cost associated with such a review.

The Governor of the State requesting an emergency declaration from the President submits:

- Confirmation that the Governor has executed the State Emergency Plan;
- Preliminary damage assessment;
- State resources committed (a description of State and local resources that have already been committed) and an estimate of Federal assistance needed; and
- Certification that the State will comply with the cost-sharing requirements of the Stafford Act.

States incur costs to gather and submit this information to FEMA. FEMA estimates 33 burden hours for a State to prepare and submit a major disaster or emergency declaration.⁴ To determine that figure, FEMA assumes that the 33 burden hours include 9

hours of work spent by management staff and 24 hours by technical staff per major disaster or emergency declaration.

FEMA obtained the national average hourly wages for managerial (\$46.91) and technical (\$24.03) positions in State government from the Bureau of Labor Statistics.⁵ The managerial wage rate was for the "Chief Executive" position (standard occupational classification (SOC) code #: 11-1021). The technical wage rate was for the "First-Line Supervisors/Managers of Office and Administrative Support Workers" position (SOC code #43-1011) in State government. The hourly wage reflects only the direct cost of employment. FEMA multiplied the wage rates by 1.4 to derive the full employment costs for managerial (\$65.67) and technical (\$33.64) positions in State governments. Using these figures, FEMA estimates the cost savings experienced by States for not having to request a major disaster or emergency declaration is \$1,398. Table 1 details the cost to a State for submitting a major disaster or emergency declaration.

Activities	Managerial (\$65.67)	Technical (\$33.64)	Hours by activities
Data gathering for Governor's request	0	24	24
Preparing and submitting Governor's request	9	0	9
Total burden hours	9	24	33
Estimated cost savings	\$591	\$807	\$1,398

As part of FEMA's review of a declaration request, FEMA regional staff analyzes the information obtained by joint Federal, State, and local preliminary damage assessments. FEMA's regional summary, regional analysis, and recommendation includes a discussion of State and local resources and capabilities, and other assistance available to meet disaster-related needs. The Administrator of FEMA then submits a recommendation to the President and provides a copy of the Governor's request. FEMA takes the following steps in reviewing a major disaster or emergency declaration request:

- Federal officials, with the assistance of State, local, and Tribal officials, prepare a preliminary damage assessment.
- The FEMA Regional Administrator evaluates the damage and requirements

for Federal assistance and makes a recommendation to the FEMA Administrator.

- The FEMA Administrator reviews the Governor's request and the regional analysis and then makes a recommendation to the President.

FEMA estimates that it expends 48 burden hours in reviewing a major disaster or emergency declaration request. The 48 burden hours represent 9.6 hours spent by 5 management-level employees. This time is not consecutive, as FEMA often submits recommendations to the President on declaration requests within the span of a single day. These individuals represent program specialists, attorneys, and other senior officials, and the time includes work to review the Governor's request, generate FEMA's recommendation to the President, and activities that occur after the President

grants or denies the Governor's request (such as publishing a **Federal Register** Notice).

FEMA obtained the hourly wages for a managerial (GS 15, Step 5, \$65.62), position in the Federal government from the U.S. Office of Personnel Management.⁶ This hourly wage includes the locality pay for the area of Washington, DC and reflects only the direct cost of employment. The full employment cost is \$91.87. FEMA used the same factor of 1.4 to derive the full cost wage for Federal employees as it used for State employees.

FEMA estimates that the cost to FEMA to review a request for a major disaster or emergency declaration and to make a recommendation to the President is \$4,410 (= \$91.87 × 48). Therefore, the total administrative cost savings both to FEMA and State governments per major disaster or

⁴ 74 FR 36498 (2009), Collection of Information Notice, The Declaration Process. On an annual basis, FEMA estimates 56 respondents average 6 responses per year at 33 hours per response, totaling an estimated 11,088 burden hours per year for submission of a declaration request.

⁵ The Bureau of Labor Statistics (2009). "May 2007 National Industry-specific Occupational Employment and Wage Estimates, NAICS 999200—State Government (OES Designation)." http://www.bls.gov/oes/current/naics4_999200.htm#b43-0000.

⁶ U.S. Office of Personnel Management (2009). Salary Table 2009—Washington, DC Area, http://www.opm.gov/flsa/oca/09tables/html/dcb_h.asp.

emergency declaration is \$5,808 (= \$1,398 + \$4,410).

Hurricane Gustav in August 2008 has been the only disaster event since the 2006 interim rule was published that required assistance⁷ from host-States for sheltering and evacuation. As a result of Hurricane Gustav, FEMA provided approximately \$42 million to the nine host-States: Alabama, Arkansas, Indiana, Kentucky, Missouri, New Mexico, Oklahoma, Tennessee, and Texas.⁸ After this disaster event, which was FEMA's first opportunity to implement the 2006 interim rule, FEMA realized a need to clarify the eligibility of host-States and the reimbursement process. As a result, this final rule clarifies the eligibility of host-States by adding definitions for the terms "host-State" and "impact-State," and by revising the definition of "grantee." The final rule also provides additional information to clarify how a host-State receives a direct Federal grant from FEMA. The final rule clarifies that the host-State must submit a Standard Form SF-424 (Application for Federal Assistance) directly to FEMA to apply for reimbursement, that a host-State must enter into a FEMA/Host-State agreement (similar to a FEMA/State Agreement), and that a host-State is required to prepare any amendments to the State administrative plan to meet current policy guidance. However, these changes are not new requirements for grantees and this rule simply clarifies that these requirements apply to host-States. FEMA does not expect that these changes will result in any additional costs to the States.

FEMA also requires that a host-State must agree in writing to provide evacuation and/or sheltering support to the impact-State. FEMA refers to this agreement as the commitment letter, which the host-State submits to FEMA before the execution of the FEMA/Host-State Agreement. FEMA estimates that it will take one managerial employee one hour to draft and submit this letter. FEMA does not expect to use the host-

State sheltering provisions regularly. Federal host-State sheltering assistance has only been needed twice—for Hurricanes Katrina and Rita in 2005, and Hurricane Gustav in 2008. However, for the purpose of this economic analysis, FEMA conservatively estimates that it will be implemented once a year. Using Hurricane Gustav as a "typical" example, FEMA expects nine states to submit this letter when FEMA uses host-State sheltering. Therefore, the cost to comply with this new requirement will be \$591 (= 1 × 9 × \$65.67) per year.

FEMA also added a provision in this final rule that allows the agency to directly reimburse the regular-time salaries and benefits of a host-State's permanently employed personnel that perform evacuation and/or sheltering activities. These costs assist individuals who are not taxpayers in the host-State. In providing these services, a host-State incurs costs for a task that is not otherwise its responsibility, and therefore the Federal government should wholly compensate host-States for those services provided. Currently, a host-State can seek reimbursement for force account labor costs from the impact-State under a mutual aid agreement,⁹ but these costs are not reimbursable via a direct grant from FEMA pursuant to 44 CFR 206.228.

Under a mutual aid agreement, the State requesting assistance would reimburse the State providing assistance for eligible regular-time and overtime force account labor costs it incurred. The State requesting assistance would then seek reimbursement of those eligible costs from FEMA, subject to a cost share. Regular-time force account labor is reimbursable under a mutual aid agreement because FEMA considers the eligible costs incurred as contract labor. The new provision in this final rule would allow a host-State to be reimbursed regular-time force account labor costs when it provides assistance under a direct grant with FEMA. This is consistent with the eligible costs that

can be reimbursed for services provided under a mutual aid agreement. In addition, it avoids the administrative burden of a host-State seeking reimbursement for these costs through mutual aid from an impact-State when it is otherwise being reimbursed through a direct grant from FEMA. For Hurricane Gustav, FEMA has reimbursed approximately \$1 million for regular-time force account costs incurred by three (Alabama, New Mexico, and Oklahoma) of the nine host-States as of April 8, 2009. The other six states have not submitted costs, if any, to FEMA for reimbursement. The total amount obligated will likely increase once FEMA takes into account the regular-time force account costs for the other six host-States. However, this change in the regulation, which allows for straight-time reimbursement via direct grant, will not affect the amount of eligible Public Assistance funding; it merely streamlines the process by which funds reach the host-State. The cost implications of this rule are solely administrative in nature.

Although we have only experienced three disasters to date that have required the type of mass evacuation that called for host-State sheltering and evacuation assistance, to produce conservative estimates of the impact of the rule, FEMA assumes that there will be one large-scale disaster on an annual basis that will require host-States to provide sheltering and evacuation. If there is one large-scale disaster (and nine host-States per large-scale disaster), this rule will result in a reduction in administrative costs of \$39,690 to FEMA and \$11,991 to the States. Therefore, the annual impact of this rule is estimated at \$51,681 per year (= \$39,690 + \$11,991). Table 2 details the annual impact of the interim final rule. FEMA has determined that this rule will not have a significant economic impact of \$100 million or more per year.

TABLE 2—ANNUAL IMPACT OF THE RULE

Assumptions	<ul style="list-style-type: none"> • Number of large-scale disaster events that will require host-States to provide sheltering and evacuation support per year: 1. • Number of host-States per large-scale disaster (based on Hurricane Gustav): 9. 	
Administrative Cost per Major Disaster/Emergency Declaration.	FEMA -\$4,410	State, Local, and Tribal Governments -\$1,398

⁷ As noted above, evacuation and sheltering activities also occurred as a result of Hurricane Ike, but no financial assistance was required from FEMA for those purposes for that event.

⁸ This is an estimate as of April 8, 2009. FEMA continues to process reimbursement for the nine host-States for Hurricane Gustav.

⁹ Mutual aid agreements where one State or local government reimburses another State or local

government for services provided take many forms, including the Emergency Management Assistance Compact. Granting the consent of Congress to the Emergency Management Assistance Compact, Public Law 104-321, 110 Stat. 3877 (Oct. 19, 1996).

TABLE 2—ANNUAL IMPACT OF THE RULE—Continued

The Commitment Letter		\$65.67
Number of Large-Scale Disaster Events per Year	1	1
Number of host-States per Large-Scale Disaster	9	9
Administrative Cost per Year	-\$39,690 (= -\$4,410 × 1 × 9)	-\$11,991 [= (-\$1,398 + \$65.67) × 1 × 9]
Total		= -\$51,681 (- \$39,690 + - \$11,991)

C. Regulatory Flexibility Act (RFA)

The Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), and section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121, 110 Stat. 847, 858–9 (March 29, 1996) (5 U.S.C. 601 note)) require that special consideration be given to the effects of proposed regulations on small entities. The RFA mandates that an agency conduct a RFA analysis when an agency is “required by section 553 * * * to publish general notice of proposed rulemaking for any proposed rule * * * 5 U.S.C. 603(a).” This rule finalizes an interim final rule and no initial or final regulatory flexibility analysis is required by the RFA.

D. National Environmental Policy Act (NEPA)

The National Environmental Policy Act, Public Law 91–190, 83 Stat. 852 (Jan. 1, 1970) (42 U.S.C. 4321 *et seq.*) (NEPA), as amended, requires the development of environmental impact statements in Federal actions “significantly affecting the quality of the human environment.” FEMA has adopted categorical exclusions from the preparation of an environmental assessment or environmental impact statement for essential assistance or emergency assistance. 44 CFR 10.8(d)(2)(xix)(B), (O); 44 CFR 10.8(d)(2)(ii). Actions taken or assistance provided under sections 403 and 502 of the Stafford Act are also statutorily excluded from NEPA review. 42 U.S.C. 5170b and 5192; 44 CFR 10.8(c)(1). The promulgation of this rule, accordingly, does not require the preparation of either an environmental assessment or an environmental impact statement as defined by NEPA.

E. Executive Order 12898, Environmental Justice

Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994, requires agencies to incorporate environmental justice into policies and programs, and to conduct programs, policies, and activities that substantially affect human health or the

environment in a manner that ensures that those programs, policies, and activities do not have the effect of excluding persons from participation in those programs, denying persons the benefits of those programs, or subjecting persons to discrimination because of their race, color, or national origin. FEMA does not anticipate any action under this rule would have a disproportionately high or adverse human health and environmental effect on any segment of the population.

F. Congressional Review of Agency Rulemaking

FEMA will send this rule to the Congress and to the General Accounting Office under the Congressional Review of Agency Rulemaking Act, (Congressional Review Act), Public Law 104–121, 110 Stat. 873 (March 29, 1996) (5 U.S.C. 804). This rule is not a “major rule” within the meaning of the Congressional Review Act.

G. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, 109 Stat. 48 (March 22, 1995) (2 U.S.C. 1501 *et seq.*), requires agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of \$100 million or more, adjusted for inflation, in any one year. 2 U.S.C. 1532(a). FEMA has determined that this rule will not result in the expenditure by State, local, and Tribal governments, in the aggregate, nor by the private sector, of \$100 million or more in any one year as a result of a Federal mandate, and it will not significantly or uniquely affect small governments.

H. Executive Order 13132, Federalism

Executive Order 13132, Federalism, 64 FR 43255, August 4, 1999, sets forth principles and criteria that agencies must adhere to in formulating and implementing policies that have federalism implications, that is, regulations that have substantial direct effects on the States, or on the

distribution of power and responsibilities among the various levels of government. Federal agencies must closely examine the statutory authority supporting any action that would limit the policymaking discretion of the States, and to the extent practicable, must consult with State and local officials before implementing any such action. This rule involves only principles and criteria that affect the eligibility for and manner in which FEMA reimburses States, Tribes and political subdivisions for costs incurred in support of disaster recovery and does not have federalism implications under Executive Order 13132.

I. Paperwork Reduction Act of 1995

The Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.*, requires government agencies to acquire approval from the Office of Management and Budget (OMB) for uses of forms and collections of information from the public. This final rule addresses the collection of four documents: The SF–424 Application for Federal Assistance, which is approved under OMB control number 1660–0025 until August 31, 2011, a State Administrative Plan, a FEMA/Host-State Agreement (similar to the FEMA/State Agreement), and the Commitment Letter. Collections of the State Administrative Plan, FEMA/Host-State Agreement, and Commitment Letter have not been approved by OMB under the Paperwork Reduction Act.

The PRA applies when a request for information is addressed to 10 or more persons. OMB has clarified that, “‘ten or more persons’ refers to the persons to whom a collection of information is addressed by the agency within any 12-month period.” 5 CFR 1320.3(c)(4). FEMA has determined, based on assessments of past disasters, that the likely number of respondents for host-State applications from non disaster-declared States in a 12-month period will not reach the threshold. FEMA estimates that there will be nine host-State applications and collections that would transpire in a 12-month period using Hurricane Gustav as an “average” disaster in which host-State sheltering is needed.

Collection of information from host-States is not expected to trigger the PRA because the number of host-State applicants is not likely to exceed nine. Therefore, FEMA has not sought approval from OMB for the collection of the State Administrative Plan, the FEMA/Host-State Agreement, or the Commitment Letter.

J. Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, 65 FR 67249, November 9, 2000, applies to agency regulations that have Tribal implications, that is, regulations that have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. Under this Executive Order, to the extent practicable and permitted by law, no agency may promulgate any regulation that has Tribal implications, that imposes substantial direct compliance costs on Indian Tribal governments, and that is not required by statute, unless funds necessary to pay the direct costs incurred by the Indian Tribal government or the Tribe in complying with the regulation are provided by the Federal Government, or the agency consults with Tribal officials.

There is no substantial direct compliance cost associated with this rule; the Public Assistance Program provides funding to impact-States and host-States, including Tribal governments, for sheltering and evacuation activities. This rule would not affect the distribution of power or responsibilities of Tribal governments.

K. Executive Order 12630, Governmental Actions and Interference With Constitutionally Protected Property Rights

FEMA has reviewed this rule under Executive Order 12630, "Governmental Actions and Interference with Constitutionally Protected Property Rights" (53 FR 8859, Mar. 18, 1988) as supplemented by Executive Order 13406, "Protecting the Property Rights of the American People" (71 FR 36973, June 28, 2006). This rule will not affect the taking of private property or otherwise have taking implications under Executive Order 12630.

L. Executive Order 12988, Civil Justice Reform

FEMA has reviewed this rule under Executive Order 12988, "Civil Justice

Reform" (61 FR 4729, Feb. 7, 1996). This rule meets applicable standards to minimize litigation, eliminate ambiguity, and reduce burden.

List of Subjects in 44 CFR Part 206

Administrative practice and procedure, Coastal zone, Community facilities, Disaster assistance, Fire prevention, Grant programs—housing and community development, Housing, Insurance, Intergovernmental relations, Loan programs—housing and community development, Natural resources, Penalties, Reporting and recordkeeping requirements.

■ For the reasons discussed in the preamble, the Federal Emergency Management Agency amends 44 CFR part 206, subparts B and G, as follows:

PART 206—FEDERAL DISASTER ASSISTANCE

■ 1. The authority citation for part 206 continues to read as follows:

Authority: Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 through 5207; Reorganization Plan No. 3 of 1978, 43 FR 41943, 3 CFR, 1978 Comp., p. 329; Homeland Security Act of 2002, 6 U.S.C. 101; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376; E.O. 12148, 44 FR 43239, 3 CFR, 1979 Comp., p. 412; and E.O. 13286, 68 FR 10619, 3 CFR, 2003 Comp., p. 166.

§ 206.40 [Amended]

■ 2. In § 206.40, amend paragraph (b) by removing "disaster-affected" and adding "affected" in its place in the first sentence and by removing "A disaster-affected" and adding "An affected" in its place in the third sentence.

■ 3. In § 206.201—

■ a. Revise paragraph (e) to read as set forth below;

■ b. Redesignate paragraphs (g) through (l) as paragraphs (j) through (o); and

■ c. Add new paragraphs (g) through (i).

§ 206.201 Definitions

* * * * *

(e) *Grantee.* Grantee means the government to which a grant is awarded, and which is accountable for the use of the funds provided. The grantee is the entire legal entity even if only a particular component of the entity is designated in the grant award document. Generally, except as provided in § 206.202(f), the State for which the emergency or major disaster is declared is the grantee. However, an Indian Tribal government may choose to be a grantee, or it may act as a subgrantee under the State. If an Indian Tribal government is the grantee, it will assume the responsibilities of the "grantee" or "State" as described in this

part with respect to administration of the Public Assistance program.

* * * * *

(g) *Host-State.* A State or Indian Tribal government that by agreement with FEMA provides sheltering and/or evacuation support to evacuees from an impact-State. An Indian Tribal government may also be referred to as a "Host-Tribe."

(h) *Impact-State.* The State for which the President has declared an emergency or major disaster and that, due to a need to evacuate and/or shelter affected individuals outside the State, requests such assistance from FEMA pursuant to § 206.208.

(i) *Indian Tribal government* means any federally recognized governing body of an Indian or Alaska Native Tribe, band, nation, pueblo, village, or community that the Secretary of the Interior acknowledges to exist as an Indian Tribe under the Federally Recognized Tribe List Act of 1994, 25 U.S.C. 479a. This does not include Alaska Native corporations, the ownership of which is vested in private individuals.

* * * * *

■ 4. In § 206.202, revise paragraph (f) introductory text and paragraph (f)(1) to read as follows:

§ 206.202 Application procedures.

* * * * *

(f) *Exceptions.* The following are exceptions to the procedures and time limitations outlined in this section.

(1) *Host-State Evacuation and/or Sheltering.* (i) *General.* A grant to a host-State for sheltering and/or evacuation support is available under this section when an impact-State requests direct Federal assistance for sheltering and/or evacuation support pursuant to § 206.208. To receive this grant, a host-State must enter into a FEMA-Host-State Agreement, amend its State Administrative Plan pursuant to § 206.207, and submit a Standard Form SF424 *Application for Federal Assistance* directly to FEMA to apply for reimbursement of eligible costs for evacuating and/or sheltering individuals from an impact-State. Upon award, the host-State assumes the responsibilities of the "grantee" or "State" under this part with respect to its grant award.

(ii) *Force Account Labor Costs.* For the performance of eligible evacuation and sheltering support under sections 403 or 502 of the Stafford Act, the straight-time salaries and benefits of a host-State's permanently employed personnel are eligible for

reimbursement. This is an exception to § 206.228(a)(2).

* * * * *

■ 5. In § 206.208-

■ a. In the first complete sentence of paragraph (a), remove the phrase “sections 402(4), 403 or 407” and add the phrase “sections 402(1) and (4), 403, 407, 502(a)(1), (5) and (7)” in its place; and

■ b. Add paragraph (c)(3) to read as follows:

§ 206.208 Direct Federal assistance.

* * * * *

(c) * * *

(3) If an impact-State requests assistance in providing evacuation and sheltering support outside an impact-State, FEMA may directly reimburse a host-State for such eligible costs through a grant to a host-State under an impact-State’s declaration, consistent with § 206.202(f)(1). FEMA may award a grant to a host-State when FEMA

determines that a host-State has sufficient capability to meet some or all of the sheltering and/or evacuation needs of an impact-State, and a host-State agrees in writing to provide such support to an impact-State.

* * * * *

■ 6. In § 206.223, revise paragraphs (a)(1) and (a)(2) to read as follows:

§ 206.223 General work eligibility.

(a) * * *

(1) Be required as the result of the emergency or major disaster event;

(2) Be located within the designated area of a major disaster or emergency declaration, except that sheltering and evacuation activities may be located outside the designated area; and

* * * * *

■ 7. In § 206.431, revise the definition of “grantee” to read as follows:

§ 206.431 Definitions.

* * * * *

Grantee means the government to which a grant is awarded and which is accountable for the use of the funds provided. The grantee is the entire legal entity even if only a particular component of the entity is designated in the grant award document. Generally, the State for which the major disaster is declared is the grantee. However, an Indian tribal government may choose to be a grantee, or it may act as a subgrantee under the State. An Indian tribal government acting as a grantee will assume the responsibilities of a “state”, under this subpart, for the purposes of administering the grant.

* * * * *

Dated: November 9, 2009.

W. Craig Fugate,

Administrator, Federal Emergency Management Agency.

[FR Doc. E9-27883 Filed 11-19-09; 8:45 am]

BILLING CODE 9111-23-P

Proposed Rules

Federal Register

Vol. 74, No. 223

Friday, November 20, 2009

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2009-1069; Directorate Identifier 2009-NM-036-AD]

RIN 2120-AA64

Airworthiness Directives; Boeing Model 747-100, 747-100B, 747-100B SUD, 747-200B, 747-200C, 747-200F, 747-300, 747-400, 747-400D, 747-400F, and 747SR Series Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to supersede an existing airworthiness directive (AD) that applies to all Boeing Model 747-100, 747-100B, 747-100B SUD, 747-200B, 747-200C, 747-200F, 747-300, 747-400, 747-400D, 747-400F, and 747SR series airplanes. The existing AD currently requires repetitive inspections to find cracking of the web, strap, inner chords, and inner chord angle of the forward edge frame of the number 5 main entry door cutouts, and repair, if necessary. This proposed AD would expand the inspection areas to include the frame segment between stringers 16 and 23. This proposed AD would reinstate the repetitive inspections specified above for certain airplanes. This proposed AD would also require repetitive inspections for cracking of repairs. This proposed AD results from additional reports of cracks that have been found in the strap and inner chord of the forward edge frame of the number 5 main entry door cutouts, between stringers 16 and 23. We are proposing this AD to detect and correct such cracks. This condition, if not corrected, could cause damage to the adjacent body structure, which could result in depressurization of the airplane in flight.

DATES: We must receive comments on this proposed AD by January 4, 2010.

ADDRESSES: You may send comments by any of the following methods:

- **Federal eRulemaking Portal:** Go to <http://www.regulations.gov>. Follow the instructions for submitting comments.
- **Fax:** 202-493-2251.
- **Mail:** U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue, SE., Washington, DC 20590.
- **Hand Delivery:** U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact Boeing Commercial Airplanes, Attention: Data & Services Management, P.O. Box 3707, MC 2H-65, Seattle, Washington 98124-2207; telephone 206-544-5000, extension 1; fax 206-766-5680; e-mail me.boecom@boeing.com; Internet <https://www.myboeingfleet.com>. You may review copies of the referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington. For information on the availability of this material at the FAA, call 425-227-1221 or 425-227-1152.

Examining the AD Docket

You may examine the AD docket on the Internet at <http://www.regulations.gov>; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (telephone 800-647-5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Ivan Li, Aerospace Engineer, Airframe Branch, ANM-120S, FAA, Seattle Aircraft Certification Office, 1601 Lind Avenue, SW., Renton, Washington 98057-3356; telephone (425) 917-6437; fax (425) 917-6590.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include "Docket No. FAA-2009-1069; Directorate Identifier 2009-NM-036-AD" at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to <http://www.regulations.gov>, including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

On July 26, 2001, we issued AD 2001-16-02, amendment 39-12370 (66 FR 41440, August 8, 2001), for certain Boeing Model 747 series airplanes. That AD requires repetitive inspections to find cracking of the web, strap, inner chords, and inner chord angle of the forward edge frame of the number 5 main entry door cutouts, and repair, if necessary. That AD resulted from reports of cracks in the web, strap, inner chords, and inner chord angle of the forward edge frame of the number 5 main entry door cutouts. We issued that AD to detect and correct such cracks, which could result in severing of the frame, inability of the frame to react loads from the door stops, and consequent rapid depressurization of the airplane in flight.

Actions Since Existing AD Was Issued

Since we issued AD 2001-16-02, Boeing stated that production line numbers 1305 and on have an improved frame design and issued Boeing Service Bulletin 747-53A2450, Revision 3, dated July 24, 2003, which removed those line numbers from the effectivity. We referred to Boeing Alert Service Bulletin 747-53A2450, Revision 2, including Appendix A, dated January 4, 2001, as the appropriate source of service information for accomplishing the required actions of AD 2001-16-02. Based on Revision 3 of the service bulletin, we approved an alternative

method of compliance (AMOC), dated September 22, 2003, which allowed an alternative applicability to AD 2001-16-02. AD 2001-16-02 is applicable to all Model 747 airplanes except Model 747SP series airplanes; the AMOC allowed an alternative applicability of Model 747 airplanes, production line numbers 1 through 1304, excluding Model 747SP airplanes.

After approving the AMOC, we have since received reports of cracks in the left and right Station 2231 frame inner chord and strap between stringers 16 and 23. Subsequently, we have determined that line numbers 1305 and on are again subject to the unsafe condition.

Relevant Service Information

We have reviewed Boeing Alert Service Bulletin 747-53A2450, Revision 5, dated January 29, 2009. Revision 5 of the service bulletin also adds airplanes having production line numbers 1305 and on to the effectivity. Revision 5 describes the same repetitive inspections as those specified in Revision 2 of the service bulletin but it also identifies expanded inspection areas that include the frame segment between stringers 16 and 23.

Revision 5 also specifies repetitive post-repair inspections of the repaired frame segments for cracks and repair if necessary. The post-repair inspections include a detailed inspection, an open hole high frequency eddy current (HFEC) inspection, a surface HFEC

inspection, and a subsurface low frequency eddy current inspection, and corrective actions if necessary.

FAA’s Determination and Requirements of the Proposed AD

We have evaluated all pertinent information and identified an unsafe condition that is likely to develop on other airplanes of the same type design. For this reason, we are proposing this AD, which would supersede AD 2001-16-02 and would retain the requirements of the existing AD. This proposed AD would also require accomplishing the actions specified in Relevant Service Information described previously, except as discussed under “Differences Between the Proposed AD and Relevant Service Information.”

Difference Between the Proposed AD and Relevant Service Information

The service bulletin specifies to contact the manufacturer for instructions on how to repair certain conditions, but this proposed AD would require repairing those conditions in one of the following ways:

- Using a method that we approve; or
- Using data that meet the certification basis of the airplane, and that have been approved by an

Authorized Representative for the Boeing Commercial Airplanes Delegation Option Authorization Organization whom we have authorized to make those findings.

Change to Existing AD

This proposed AD would retain all requirements of AD 2001-16-02. Since AD 2001-16-02 was issued, the AD format has been revised, and certain paragraphs have been rearranged. As a result, the corresponding paragraph identifiers have changed in this proposed AD, as listed in the following table.

REVISED PARAGRAPH IDENTIFIERS

Requirement in AD 2001-16-02	Corresponding requirement in this proposed AD
paragraph (a)	paragraph (g)
paragraph (b)	paragraph (h)
paragraph (c)	paragraph (i)

Boeing Commercial Airplanes has received a Delegation Option Authorization (DOA). In paragraph (l) of this AD, we have referred to paragraph (m) of this AD to delegate the authority to approve an alternative method of compliance for any repair required by this AD to an Authorized Representative for the Boeing Commercial Airplanes DOA rather than a Designated Engineering Representative (DER).

Costs of Compliance

There are about 163 airplanes of the affected design in the worldwide fleet. The following table provides the estimated costs for U.S. operators to comply with this proposed AD.

ESTIMATED COSTS

Action	Work hours	Average labor rate per hour	Parts	Cost per airplane	Number of U.S.-registered airplanes	Fleet cost
Inspections (required by AD 2001-16-02).	16	\$80	None	\$1,280, per inspection cycle.	163	\$208,640, per inspection cycle.
Inspections (new proposed action).	28 depending on airplane configuration.	80	None	Up to \$2,240, per inspection cycle; depending on airplane configuration.	163	Up to \$365,120, per inspection cycle; depending on airplane configuration.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701, “General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in

air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We have determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the

States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that the proposed regulation:

1. Is not a “significant regulatory action” under Executive Order 12866;
2. Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and
3. Will not have a significant economic impact, positive or negative, on a substantial number of small entities

under the criteria of the Regulatory Flexibility Act.

We prepared a regulatory evaluation of the estimated costs to comply with this proposed AD and placed it in the AD docket. See the **ADDRESSES** section for a location to examine the regulatory evaluation.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by removing amendment 39–12370 (66 FR

41440, August 8, 2001) and adding the following new AD:

Boeing: Docket No. FAA–2009–1069; Directorate Identifier 2009–NM–036–AD.

Comments Due Date

(a) The FAA must receive comments on this AD action by January 4, 2010.

Affected ADs

(b) This AD supersedes AD 2001–16–02.

Applicability

(c) This AD applies to Boeing Model 747–100, 747–100B, 747–100B SUD, 747–200B, 747–200C, 747–200F, 747–300, 747–400, 747–400D, 747–400F, and 747SR series airplanes, certificated in any category, as identified in Boeing Alert Service Bulletin 747–53A2450, Revision 5, dated January 29, 2009.

Subject

(d) Air Transport Association (ATA) of America Code 53: Fuselage.

Unsafe Condition

(e) This AD results from additional reports of cracks that have been found in the strap and inner chord of the forward edge frame of the number 5 main entry door cutouts, between stringers 16 and 23. Based on these reports, we have determined that the frame

segment between stringers 16 and 23 is also susceptible to the unsafe condition. The Federal Aviation Administration is issuing this AD to detect and correct such cracks. This condition, if not corrected, could cause damage to the adjacent body structure, which could result in depressurization of the airplane in flight.

Compliance

(f) You are responsible for having the actions required by this AD performed within the compliance times specified, unless the actions have already been done.

Restatement of AD 2001–16–02, With New Service Information

Repetitive Inspections for Frame Segment Between Stringers 23 and 31 (No Terminating Action)

(g) For airplanes having line numbers 1 through 1304 inclusive: Inspect the airplane for cracks between stringers 23 and 31 per Boeing Alert Service Bulletin 747–53A2450, Revision 2, including Appendix A, dated January 4, 2001; or Boeing Alert Service Bulletin 747–53A2450, Revision 5, dated January 29, 2009; at the later of the times specified in either paragraph (h) or (i) of this AD, per Table 1, as follows. After the effective date of this AD, use only Revision 5 of Boeing Service Bulletin 747–53A2450.

TABLE 1—INSPECTION REQUIREMENTS

Type of inspection	Area to inspect
(1) Detailed Visual	Strap inner chords forward and aft of the web, and exposed web adjacent to the inner chords on station 2231 frame from stringer 23 through 31 per Figure 5 or Figure 6 of the service bulletin, as applicable.
(2) Surface High Frequency Eddy Current (HFEC)	Station 2231 inner chord angles at lower main sill interface per Figure 5 or Figure 6 of the service bulletin, as applicable.
(3) Open Hole HFEC	Station 2231 frame fastener locations per Figures 4 and 7, and either Figure 5 or 6 of the service bulletin, as applicable.
(4) Surface HFEC	Around fastener locations on station 2231 inner chords from stringer 23 through 31 per Figure 5 or Figure 6 of the service bulletin, as applicable.
(5) Low Frequency Eddy Current	Station 2231 frame strap in areas covered by the reveal per Figure 5 or Figure 6 of the service bulletin, as applicable.

(h) Do the inspections specified in paragraph (g) of this AD at the applicable times specified in paragraph (h)(1) or (h)(2) of this AD. Repeat the inspections at intervals not to exceed 3,000 flight cycles.

(1) Do the inspections per Table 1 of this AD at the applicable time specified in the logic diagram in Figure 1 of Boeing Alert Service Bulletin 747–53A2450, Revision 2, including Appendix A, dated January 4, 2001. Where the compliance time in the logic diagram specifies a compliance time beginning, “from receipt of this service bulletin,” this AD requires that the compliance time begin “after September 12, 2001 (the effective date of AD 2001–16–02).”

(2) After the effective date of this AD, do the inspections per Table 1 of this AD at the applicable compliance time specified in paragraph 1.E., “Compliance” of the Boeing Alert Service Bulletin 747–53A2450, Revision 5, dated January 29, 2009. Where the compliance time in the service bulletin specifies a compliance time beginning, “after the date on Revision 2 of this service

bulletin,” this AD requires that the compliance time begin “after September 12, 2001 (the effective date of AD 2001–16–02).”

(i) Within 3,000 flight cycles after accomplishment of the inspections specified in Figure 1 of Boeing Alert Service Bulletin 747–53A2450, dated May 4, 2000, or Revision 1, dated July 6, 2000, repeat the inspections at intervals not to exceed 3,000 flight cycles.

Note 1: There is no terminating action currently available for the inspections required by paragraph (g) of this AD.

Note 2: Where there are differences between the AD and the alert service bulletin, the AD prevails.

New Requirements of This AD

Additional Repetitive Inspections (For Frame Segment Between Stringers 16 and 23)

(j) For all airplanes: Before the accumulation of 16,000 total flight cycles, or

within 1,500 flight cycles after the effective date of this AD, whichever occurs later, do a detailed inspection, an open hole high frequency eddy current (HFEC) inspection, a surface HFEC inspection, and a subsurface low frequency eddy current (LFEC) inspection for cracking of the forward edge frame of the number 5 main entry door cutouts, at station 2231, between stringers 16 and 23; in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 747–53A2450, Revision 5, dated January 29, 2009. Repeat the inspections thereafter at intervals not to exceed 3,000 flight cycles.

Repetitive Inspections for Line Numbers 1305 and On (For Frame Segment Between Stringers 23 and 31)

(k) For airplanes having line numbers 1305 and on: Before 16,000 total flight cycles or within 1,500 flight cycles after the effective date of this AD, whichever occurs later, do a detailed inspection, an open hole HFEC inspection, a surface HFEC inspection, and a

subsurface LFEC inspection for cracking of the forward edge frame of the number 5 main entry door cutouts, at station 2231, between stringers 23 and 31; in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 747-53A2450, Revision 5, dated January 29, 2009. Repeat the inspections thereafter at intervals not to exceed 3,000 flight cycles.

Corrective Action

(l) If any crack is found during any inspection required this AD, before further flight repair the crack per a method approved by the Manager, Seattle Aircraft Certification Office (SACO), FAA; Per data meeting the type certification basis of the airplane approved by a Boeing Company Designated Engineering Representative who has been authorized by the Manager, Seattle ACO, to make such findings; or in accordance with Boeing Alert Service Bulletin 747-53A2450, Revision 5, dated January 29, 2009. For a repair method to be approved by the Manager, Seattle ACO, as required by this paragraph, the approval letter must specifically reference this AD. As of the effective date of this AD, repair the crack using a method approved in accordance with the procedures specified in paragraph (o) of this AD.

Post-Repair Inspections

(m) Except as required by paragraph (n) of this AD, for airplanes on which the forward edge frame of the number 5 main entry door cutouts, at station 2231, between stringers 16 and 31, is repaired in accordance with Boeing Alert Service Bulletin 747-53A2450: Within 3,000 flight cycles after doing the repair or within 1,500 flight cycles after the effective date of this AD, whichever occurs later, do the detailed, LFEC, and HFEC inspections of the repaired area for cracks in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 747-53A2450, Revision 5, dated January 29, 2009. If no cracking is found, repeat the inspections thereafter at intervals not to exceed 3,000 flight cycles. If any crack is found, before further flight, repair using a method approved in accordance with the procedures specified in paragraph (o) of this AD. Doing the inspections specified in paragraph (m) of this AD terminates the repetitive inspections required by paragraphs (g), (h), (i), (j), and (k) of this AD for the repaired area.

(n) For any frame that is repaired in accordance with a method other than the Accomplishment Instructions of Boeing Alert Service Bulletin 747-53A2450, Revision 5, dated January 29, 2009, do the inspection in accordance with a method approved in accordance with the procedures specified in paragraph (o) of this AD.

Alternative Methods of Compliance (AMOCs)

(o)(1) The Manager, Seattle Aircraft Certification Office (SACO), FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. Send information to ATTN: Ivan Li, Aerospace Engineer, Airframe Branch, ANM-120S, FAA, Seattle Aircraft Certification Office, 1601 Lind Avenue, SW.,

Renton, Washington 98057-3356; telephone (425) 917-6437; fax (425) 917-6590; Or, e-mail information to 9-ANM-Seattle-ACO-AMOC-Requests@faa.gov.

(2) To request a different method of compliance or a different compliance time for this AD, follow the procedures in 14 CFR 39.19. Before using any approved AMOC on any airplane to which the AMOC applies, notify your principal maintenance inspector (PMI) or principal avionics inspector (PAI), as appropriate, or lacking a principal inspector, your local Flight Standards District Office. The AMOC approval letter must specifically reference this AD.

(3) An AMOC that provides an acceptable level of safety may be used for any repair required by this AD, if it is approved by an Authorized Representative for the Boeing Commercial Airplanes Delegation Option Authorization Organization who has been authorized by the Manager, Seattle ACO, to make those findings. For a repair method to be approved, the repair must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(4) AMOCs approved previously in accordance with AD 2001-16-02, amendment 39-12370, are approved as AMOCs for the corresponding provisions of paragraphs (g), (h), (i), and (l) of this AD.

Issued in Renton, Washington, on November 6, 2009.

Ali Bahrami,

Manager, Transport Airplane Directorate, Aircraft Certification Service.

[Docket No. FAA-2008-1154; Notice No. 09-13]

RIN 2120-AJ36

Restrictions on Operators Employing Former Flight Standards Service Aviation Safety Inspectors

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This proposed rule would prohibit any person holding a certificate to conduct certain operations from knowingly employing, or making a contractual arrangement with, certain individuals to act as an agent or a representative of the certificate holder in any matter before the FAA under certain conditions. These restrictions would apply if the individual, in the preceding 2-year period: Directly served as, or was directly responsible for the

oversight of, a Flight Standards Service Aviation Safety Inspector; and had direct responsibility to inspect, or oversee the inspection of, the operations of the certificate holder. This proposed rule would also apply to persons who own or manage fractional ownership program aircraft that are used to conduct operations under specific regulations described in this document. This proposed rule would establish these restrictions to prevent potential organizational conflicts of interests which could adversely affect aviation safety.

DATES: Send your comments to reach us on or before February 18, 2010.

ADDRESSES: You may send comments identified by Docket Number FAA-2008-1154 using any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov> and follow the online instructions for sending your comments electronically.

- *Mail:* Send comments to Docket Operations, M-30; U.S. Department of Transportation, 1200 New Jersey Avenue, SE., Room W12-140, West Building Ground Floor, Washington, DC 20590-0001.

- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue, SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

- *Fax:* Fax comments to Docket Operations at 202-493-2251.

For more information on the rulemaking process, see the **SUPPLEMENTARY INFORMATION** section of this document.

Privacy: We will post all comments we receive, without change, to <http://www.regulations.gov>, including any personal information you provide. Using the search function of our docket Web site, anyone can find and read the electronic form of all comments received into any of our dockets, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477-78) or you may visit <http://DocketsInfo.dot.gov>.

Docket: To read background documents or comments received, go to <http://www.regulations.gov> at any time and follow the online instructions for accessing the docket, or, go to the Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue, SE., Washington,

DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: For technical questions concerning this proposed rule, contact Nancy Lauck Claussen, Air Transportation Division, AFS-200, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone (202) 267-8166, e-mail Nancy.L.Claussen@faa.gov. For legal questions concerning this proposed rule, contact Paul G. Greer, Federal Aviation Administration, Office of the Chief Counsel, 800 Independence Avenue, SW., Washington, DC 20591; Telephone: 202-267-3073, e-mail: Paul.G.Greer@faa.gov.

SUPPLEMENTARY INFORMATION: Later in this preamble under the Additional Information section, we discuss how you can comment on this proposal and how we will handle your comments. Included in this discussion is related information about the docket, privacy, and the handling of proprietary or confidential business information. We also discuss how you can get a copy of related rulemaking documents.

Authority for This Rulemaking

The FAA's authority to issue rules on aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator, to include the authority to issue, rescind, and revise regulations. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Chapter 447, Safety Regulation. Under Section 44701(a) the FAA is charged with promoting the safe flight of civil aircraft in air commerce by prescribing regulations and minimum standards for other practices, methods, and procedures necessary for safety in air commerce and national security.

I. Background

On March 5, 2008, the FAA proposed a \$10.2 million civil penalty against a major airline for operating 46 airplanes without performing mandatory inspections for fuselage fatigue cracking. The FAA alleged that the airline operated 46 Boeing 737 airplanes on almost 60,000 flights from June 2006 to March 2007 while failing to comply with an existing FAA Airworthiness Directive (AD) that required repetitive inspections of certain fuselage areas to detect fatigue cracking.

After investigating these events, the FAA took steps to improve its safety systems and strengthen regulations to

minimize the risk of recurrence of these or similar events. One such step was to toughen Aviation Safety Inspector (ASI) post employment restrictions to prevent conflicts of interest. This proposed rulemaking would establish restrictions on persons employing former Flight Standards Service (AFS) ASIs and those responsible for their oversight.

Review of FAA's Safety Oversight of Airlines and Use of Regulatory Partnership Programs

On June 30, 2008, the Department of Transportation (DOT) Office of Inspector General issued its review of the FAA's oversight of airlines and use of regulatory partnership programs. The report concluded that the FAA Certificate Management Office overseeing the airline that failed to perform the required inspections had developed an overly collaborative relationship with the airline. That relationship allowed repeated self-disclosures of AD violations without ensuring that the airline had developed a comprehensive solution for those reported safety problems.

The report noted that the Regulatory Compliance Manager for the airline was a former FAA ASI who reported directly to the FAA Principal Maintenance Inspector assigned to the airline when the former ASI worked for the FAA. The former employee had become a manager at the airline two weeks after leaving the FAA. In his new position at the airline, the former ASI served as the liaison between the carrier and the FAA and managed both the airline's AD Compliance Program and its Voluntary Disclosure Reporting Program.

The report also concluded that the overly collaborative relationship with the air carrier occurred because the FAA lacked effective management controls over its partnership program. The report stated that effective management controls would address: (1) Adequate segregation of duties; (2) the avoidance of potential conflicts of interests among its employees dealing with the carrier; and (3) verification of the propriety and integrity of corrective actions taken.

The report recommended that the FAA should enhance management controls by implementing post-employment guidance that includes a "cooling-off" period to prohibit an air carrier from hiring an FAA ASI who previously inspected the air carrier from acting in any type of liaison capacity between that air carrier and the FAA. A full copy of the report is contained in the docket for this rulemaking.

Proposed Legislation

On July 15, 2008, Congressman James L. Oberstar introduced the Aviation Safety Enhancement Act of 2008 (H.R. 6493). Section 4 of the proposed legislation included post employment restrictions for AFS ASIs. The proposed legislation would prohibit certificate holders from employing or contracting with a former AFS ASI or other person with certificate holder oversight responsibilities to represent that certificate holder in any matter before the FAA for a 2-year period after leaving the FAA. The proposed legislation was passed unanimously by the House of Representatives on July 22, 2008. However, it was not subsequently passed by the Senate prior to adjournment of the 110th Congress.

On May 21, 2009, the House of Representatives passed the FAA Reauthorization Act of 2009 (H.R. 915). Section 333 of the proposed legislation contains language identical to that proposed earlier in section 4 of the Aviation Safety Enhancement Act of 2008. Similar provisions are also found in Section 513 of the FAA Air Transportation Modernization and Safety Improvement Act which was introduced in the Senate on July 14, 2009 (S. 1451).

Managing Risks in Civil Aviation: A Review of the FAA's Approach to Safety

On May 1, 2008, former Secretary of Transportation, Mary E. Peters, appointed an independent review team to examine the FAA's safety culture and its implementation of safety management systems. She asked the team to prepare recommendations that would optimize the FAA's regulatory effectiveness. On September 2, 2008, the independent review team issued its report titled, "Managing Risks in Civil Aviation: A Review of the FAA's Approach to Safety." A full copy of the report may be found in the docket for this rulemaking.

The report stated that "[t]he FAA, like all other regulators, faces the danger of regulatory capture. Capture occurs when a regulatory agency draws so close to those with whom it deals on a daily basis (*i.e.* the regulated) that the agency ends up elevating their concerns at the expense of the agency's core mission. One feature of the FAA's current structure has the potential to increase this risk: the inspection teams are mostly organized around airlines, rather than cutting across multiple airlines and organizing around some other dimension, like geography, or type of plane. Most regulatory agencies organize by broad functional areas (like

enforcement, education, etc.) and also by geography; as a result, any one inspector normally deals with multiple corporations on a daily basis. By contrast, the majority of FAA airline inspectors are assigned to a specific Certificate Management Office, and deal with one airline, full time, and for many years at a stretch * * *

Further, the report stated that the panel does “understand the enhanced risk of regulatory capture that long-standing relationships between regulators and regulated entities might produce. We understand also the countervailing value in accumulating a detailed knowledge of a specific airline’s operations. We believe that any enhanced risk of capture can be properly mitigated * * *” This proposal would serve to mitigate the risks associated with regulatory capture by establishing a “cooling off” period for former AFS ASIs, while allowing AFS ASIs assigned to a specific operator to acquire the level of knowledge necessary to conduct effective oversight.

Current Post Employment Restrictions of Former Employees

Section 207(a)(1) of Title 18, United States Code (18 U.S.C.) generally places a permanent restriction on former executive branch employees (including FAA employees) regarding their ability to represent any other person in connection with a particular matter in which the United States government has a direct and substantial interest and in which that person participated personally and substantially.

In addition, it also places a 2-year restriction on those same former employees concerning their ability to represent any other person in connection with a particular matter in which the U.S. government has a direct and substantial interest and which that person knew, or reasonably should have known, was pending under his or her official responsibility within 1 year of their separation. Section 207(a)(2) basically restricts a person’s ability to represent an entity before the FAA on particular matters in which they were involved. It does not limit a former FAA employee’s ability to obtain employment with any entity.

Current FAA Flight Standards Service Policy

In order to minimize the influence of a particular carrier on the FAA, AFS policy provides for a 2-year “cooling off” period for newly employed ASIs, which prohibits them from having certificate management responsibilities for their former aviation employer. The proposed rule would not change this

longstanding FAA policy. It would, however, create a corresponding requirement applicable to operators who seek to employ certain former FAA ASIs and those responsible for their oversight. Current AFS policy was first set forth in a memorandum, dated May 10, 1990 from the Director, Flight Standards Service (AFS–1) to all AFS staff. It was reiterated in two subsequent AFS–1 memoranda dated July 18, 1996 and April 9, 2008.

II. Discussion of the Proposal

The FAA has considered the proposed legislation, the current ethics regulations, and the recommendations raised in the previously discussed reports. Although 18 U.S.C. 207 establishes some general restrictions for Federal employees after they leave government service, the FAA proposes additional safety-based restrictions on certificate holders conducting operations under parts 121, 125, 133, 135, 137, 141, 142, 145 or 147. (Parts 121, 125, 133, 135, 137, 141, 142, 145 and 147 apply to: Air carriers conducting domestic, flag, or supplemental operations; operators of airplanes having a seating capacity of 20 or more passengers or a maximum payload capacity of 6,000 pounds or more; rotorcraft external-load operations; commuter and on-demand operations; agricultural aircraft operations; pilot schools; training centers; repair stations; and aviation maintenance technician schools, respectively). The proposed restrictions would apply if the certificate holder employs (or makes a contractual arrangement with) a former AFS ASI or a person directly responsible for the oversight of the ASI and either person had direct responsibility to inspect, or oversee the inspection of, the certificate holder. The proposed restrictions would also apply to persons who own or manage fractional ownership program aircraft that are used to conduct operations using fractional ownership program aircraft under subpart K of part 91.

The proposed rule would address a significant concern highlighted in the report issued by the independent review team—the need to address “regulatory capture” to mitigate risk. Although the report did not specifically recommend a “cooling off period” for former AFS ASIs after they leave the FAA, this proposed rule is consistent with the FAA’s commitment to take steps to mitigate the risk that a current FAA employee may engage inappropriately with a regulated party. This proposed rule would establish restrictions on these operators that exceed current

restrictions applicable to most businesses who hire former Federal employees.

The proposed rule would specifically apply to AFS ASIs and those persons directly responsible for their oversight. The FAA considers an AFS ASI to be a properly credentialed individual who holds FAA Form 110A and is authorized under the provisions of 49 U.S.C. 40113 to perform inspections and investigations.

This proposal would prohibit any person conducting operations under parts 121, 125, 133, 135, 137, 141, 142, 145, 147, or subpart K of part 91 from knowingly employing or contracting with a former AFS ASI (Avionics, Cabin Safety, Dispatch, Maintenance, or Operations), or other person with oversight responsibilities for that operator, to represent that operator in any matter before the FAA. These restrictions would apply if the person, in the preceding 2-year period has served as, or was directly responsible for the oversight of, an AFS ASI and had the direct responsibility to inspect, or oversee the inspection of, the operator. Operators, however, would only be restricted from employing or making a contractual arrangement with former AFS ASIs who had inspection or oversight responsibilities for that particular operator. The proposed rule would not apply if an operator employs or contracts with an AFS ASI who had inspection or oversight responsibilities for another operator that has (or may have had) a marketing, code share, business partnership, or similar relationship with the operator. The FAA contends that these often temporary business arrangements between separate and distinct operators do not warrant the application of the restrictions set forth in this proposed rule.

The FAA would consider the proposed restrictions to apply only to those operators employing persons who had an office location in a Flight Standards District Office or a Certificate Management Office with oversight responsibilities for the operator (e.g. Office Managers, Assistant Office Managers, Unit Supervisors, and Aviation Safety Inspectors). AFS ASIs directly engaged in certificate management typically develop extensive knowledge of an operator’s practices. They also develop close working relationships with other AFS ASIs with whom they share direct oversight responsibilities for that particular operator. The FAA believes that aviation safety could be compromised if a former AFS ASI, acting on behalf of the operator, is able to exert undue influence on current

FAA employees with whom he or she had established close working relationships while working at a Flight Standards District Office or a Certificate Management Office. This proposed rule would address these concerns.

The intent of the proposed rule is not to affect employment relationships entered into prior to the effective date of this rule. Therefore, the proposed rule would not affect any operator currently employing a former AFS ASI in any capacity. A former AFS ASI hired by an operator prior to the effective date of the rule may continue to act as a representative of that operator in any matter before the FAA. The proposal would only prohibit an operator from hiring or making a contractual arrangement with an individual to act as a representative of the operator in any matter before the FAA if the individual had direct certificate oversight responsibilities for that operator in the previous 2 years and that employment commenced on or after the effective date of the rule.

The following examples further explain the provisions of this proposed rule:

(1) A former AFS ASI who was assigned direct oversight responsibilities for air carrier X, who is currently working for air carrier X in any position which includes representing air carrier X to the FAA prior to the effective date of the rule, may continue in that position.

(2) In order to be hired by training center A for a position which includes representing the training center in any matter before the FAA, on or after the effective date of the rule, the former AFS ASI must be able to look back over the 2 years preceding his or her being hired by training center A and determine that during that preceding 2 years the former ASI was not assigned oversight responsibilities for training center A.

(3) A former AFS ASI who was assigned direct oversight responsibilities for repair station Q may immediately go to work for any repair station other than repair station Q in any position.

(4) A former AFS ASI who was assigned direct oversight responsibilities for aviation maintenance technician school Q may immediately go to work for aviation maintenance technician school Q in any position that does not require representing aviation maintenance technician school Q to the FAA.

The FAA has many employees other than AFS ASIs with direct oversight responsibilities for various regulated entities. However, after considering the

potential safety risks and in light of the findings of recent reports, the FAA proposes only to establish restrictions for operators who employ or make contractual arrangements with former AFS ASIs who previously had direct oversight responsibility for that operator. This action is necessary to address the development of overly collaborative relationships that may occur during routine AFS surveillance of certain operators. Such relationships occur when a regulatory agency draws so close to those with whom it deals on a daily basis (*i.e.* the regulated) that the agency ends up elevating their concerns at the expense of the agency's core safety mission.

The proposed rule would not prohibit an operator from employing a former AFS ASI to serve in any capacity if that former AFS ASI did not have direct oversight responsibilities for that operator within the previous 2 years. The FAA acknowledges that the skills and expertise former FAA employees bring to the aviation industry are valuable and enhance safety. The agency notes that there are many employment opportunities for former FAA employees that would not be restricted by the proposed rule. There are numerous positions that would typically not require representing an operator to the FAA, but would take advantage of the unique skill set that a former AFS ASI would possess. For example, under most circumstances, working in operations or maintenance as an aircraft dispatcher, flight attendant, maintenance technician, training instructor, or pilot would not be prohibited by the proposed rule. As long as the covered employee did not act as an agent or representative of the operator before the FAA, the employee would be able to provide highly beneficial expertise and enhance safety in areas such as safety management systems, continuous analysis programs, operational training programs, crewmember training programs, maintenance training programs, aircraft dispatcher training programs, ETOPs (Extended Range Operations), operational control systems, maintenance, accident investigation, and regulatory compliance.

Based on recent events and reviews of the FAA's safety oversight programs, the agency has determined that the proposed restrictions set forth in this notice must be placed on the employment of persons holding certain agency positions that could lead to organizational conflicts of interest. This proposed rule would enhance the FAA's ability to properly perform its safety

mission and ensure the integrity of the programs administered by the FAA.

During the development of this proposal, the FAA considered a prohibition on operators employing a former AFS ASI to serve in any capacity if that former AFS ASI had direct oversight responsibilities for that operator within the previous 2 years. The FAA determined that as long as the former AFS ASI did not act as an agent or a representative of the operator in any matter before the FAA, serving in other positions with the operator (e.g. aircraft dispatcher, flight attendant, maintenance technician, pilot, or training instructor) would not be prohibited by the proposed rule. The FAA also consulted with representatives of the Professional Aviation Safety Specialists (PASS) to determine their views on the scope of the restrictions; a record of that meeting is available in the docket. The FAA is seeking specific comments on whether the prohibition on operators should be more restrictive than as proposed.

In addition, the agency is proposing the period of restriction as a sliding timeline, with the 2-year clock starting on the last day the AFS ASI or supervisor had direct responsibility for oversight of the operator. The FAA is also seeking specific comments on whether the prohibition should instead begin on the date the individual's employment by the FAA is terminated.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires that the FAA consider the impact of paperwork and other information collection burdens imposed on the public. We have determined that there is no new information collection requirement associated with this proposed rule.

International Compatibility

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to comply with International Civil Aviation Organization (ICAO) Standards and Recommended Practices to the maximum extent practicable. The FAA has determined that there are no ICAO Standards and Recommended Practices that correspond to these proposed regulations.

III. Regulatory Evaluation, Regulatory Flexibility Determination, International Trade Impact Assessment, and Unfunded Mandates Assessment

Changes to Federal regulations must undergo several economic analyses. First, Executive Order 12866 directs that each Federal agency shall propose or

adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify its costs. Second, the Regulatory Flexibility Act of 1980 (Pub. L. 96–354) requires agencies to analyze the economic impact of regulatory changes on small entities. Third, the Trade Agreements Act (Pub. L. 96–39) prohibits agencies from setting standards that create unnecessary obstacles to the foreign commerce of the United States. In developing U.S. standards, this Trade Act requires agencies to consider international standards and, where appropriate, that they be the basis of U.S. standards. Fourth, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of \$100 million or more annually (adjusted for inflation with base year of 1995). This portion of the preamble summarizes the FAA’s analysis of the economic impacts of this proposed rule.

Department of Transportation Order DOT 2100.5 prescribes policies and procedures for simplification, analysis, and review of regulations. If the expected cost impact is so minimal that a proposed or final rule does not warrant a full evaluation, this order permits that a statement to that effect and the basis for it to be included in the preamble if a full regulatory evaluation of the cost and benefits is not prepared. Such a determination has been made for this proposed rule. The reasoning for this determination follows:

The proposed rule would prohibit any of the previously mentioned certificate holders from employing or making a contractual agreement with an individual who was responsible for the direct oversight of an operator as an FAA AFS ASI or who had responsibility to inspect or oversee the inspections of the operator during the preceding 2 years. This proposed rule would also apply to fractional owners or fractional ownership program managers who conduct operations under subpart K of part 91. These proposed restrictions would prevent potential organizational conflicts of interest that could adversely affect aviation safety or create a perception of such conflicts of interest. The proposed rule would have minimal economic impact. The affected former FAA employees would be allowed to work for other operators for which they did not have direct oversight responsibilities. In addition, they would be able to work for operators for which

they did have direct oversight responsibilities provided that they do not represent the operator in any matter before the FAA.

Who Would Be Potentially Affected by This Proposed Rule

This proposal would affect current and future AFS ASIs and persons responsible for their oversight who would perform work after the effective date of the rule for an operator for which they had direct oversight responsibilities when employed by the FAA. In addition, this proposal would affect operators that would have hired former FAA employees who had oversight responsibilities for those operators.

Potential Benefits and Costs

The benefits associated with this proposal would arise from preventing potential organizational conflicts of interest. There would also be benefits from reducing the potential public perception that: (1) A current AFS ASI who was offered post-FAA employment with an operator he or she regulates could compromise current aviation safety; and (2) future aviation safety could be compromised if a former FAA employee working for an operator would be able to exert undue influence on current FAA employees with whom he or she had established close working relationships. This prohibition would also apply to the more likely case of former AFS ASIs who would become consultants to the operator. By prohibiting such a close relationship between a former AFS ASI and the operator for which he or she had direct oversight responsibilities, the potential for an overly collaborative relationship leading to a possible lapse in safety standards would be avoided, increasing the public’s confidence in the safety and integrity of the FAA inspection system. Such benefits cannot be quantified.

The proposed rule would also create some minor inefficiencies. In general, an operator can benefit from employing a former AFS ASI because that ASI knows more about FAA processes than someone who had not worked for the FAA. In addition, that ASI would know more about the operator than some other former AFS ASI. Further, a former AFS ASI from a specific Flight Standards District Office or Certificate Management Office will have greater knowledge about that office (as well as be better acquainted with the people in that office) than would a former AFS ASI from a different office.

For example, some operators may believe that employing a former AFS ASI who recently had direct oversight

responsibilities for their operations would reduce the time to obtain FAA approval for manual revisions partially due to the personal relationships between the former ASI and current FAA employees. Due to the general similarities among the groups of operators, the potential inefficiencies from employing a former ASI who had not had direct oversight responsibilities for that operator would not be significant. Thus, from the societal point of view, the overall losses to some individual former FAA inspectors would be largely offset by gains to other former FAA inspectors or qualified personnel. Although the proposed rule would create income transfers among individuals, at this time, we cannot quantify this overall loss on an individual basis. From a societal basis, the safety differential paid for the incremental loss in knowledge will be very small.

The number of former AFS ASIs who leave the FAA varies from year to year. We took the time period of October 1, 2007 to October 2, 2008 as a representative year-long period. As shown in Table 1, of the 208 AFS ASIs who left FAA employment, 138 voluntarily retired, 8 retired due to disability, 27 resigned, 10 were removed, 10 were terminated during their probation period, 4 had their appointments terminated, and 11 died. Of the voluntary retirements, 13 personnel were from FAA headquarters and were not specifically assigned to an operator. They would not be affected by the proposed rule. The maximum number of AFS ASIs who would have been affected had the proposed rule been in effect are the 160 non-headquarters personnel who retired, resigned, or became disabled. (We assumed that ASIs terminated or removed from their FAA position would be unlikely to be hired by an operator to work with their former FAA office in the absence of this proposed rule, and therefore would not be part of the potential economically affected population.)

TABLE 1—THE NUMBER OF AFS ASIS WHO LEFT FAA EMPLOYMENT BETWEEN 10/1/07 AND 10/2/08

Reason for separation	Number of inspectors
Voluntary Retirement	138
Disability Retirement	8
Resignation	27
Removal	10
Termination During Probation Period	10
Termination of Appointment	4

TABLE 1—THE NUMBER OF AFS ASIS WHO LEFT FAA EMPLOYMENT BETWEEN 10/1/07 AND 10/2/08—Continued

Reason for separation	Number of inspectors
Death	11
Total	208

Currently, the FAA does not officially track the status of former AFS ASIs. We believe that few of these former AFS ASIs would become involved in post-FAA employment that would be subject to the restrictions of the proposed rule. Although the proposal may affect only a small number of former AFS ASIs, inappropriate action by a single ASI could potentially lead to significant safety issues. We further believe that this overall economic impact would be minimal, with the potential benefits exceeding the costs. We request comments on this analysis.

The FAA has, therefore, determined that this proposed rule would impose minimal cost, and under DOT 2100.5 we did not prepare a full regulatory evaluation.

Regulatory Flexibility Determination

The Regulatory Flexibility Act of 1980 (Pub. L. 96–354) (RFA) establishes “as a principle of regulatory issuance that agencies shall endeavor, consistent with the objectives of the rule and of applicable statutes, to fit regulatory and informational requirements to the scale of the businesses, organizations, and governmental jurisdictions subject to regulation. To achieve this principle, agencies are required to solicit and consider flexible regulatory proposals and to explain the rationale for their actions to assure that such proposals are given serious consideration.” The RFA covers a wide range of small entities, including small businesses, not-for-profit organizations, and small governmental jurisdictions.

Agencies must perform a review to determine whether a rule will have a significant economic impact on a substantial number of small entities. If the agency determines that it will, the agency must prepare a regulatory flexibility analysis as described in the RFA.

However, if an agency determines that a rule is not expected to have a significant economic impact on a substantial number of small entities, section 605(b) of the RFA provides that the head of the agency may so certify and a regulatory flexibility analysis is not required. The certification must

include a statement providing the factual basis for this determination, and the reasoning should be clear.

The proposed rule would only prevent an AFS ASI and persons responsible for their oversight from being employed by the operator for which he or she had direct oversight responsibilities. The cost to an operator of being unable to employ a specific individual would be minimal because other individuals with similar professional qualifications as those possessed by the former AFS ASI would be available.

Therefore the FAA certifies that this proposed rule would not have a significant economic impact on a substantial number of small entities. The FAA requests comments on this certification.

International Trade Impact Analysis

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standards have a legitimate domestic objective, such as the protection of safety, and do not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards. The FAA notes the purpose is to ensure the safety of the American public, and has assessed the effects of this rule to ensure that it does not exclude imports that meet this objective. As a result, this rule is not considered as creating an unnecessary obstacle to foreign commerce.

Unfunded Mandates Assessment

Title II of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed or final agency rule that may result in an expenditure of \$100 million or more (in 1995 dollars) in any one year by State, local, and tribal governments, in the aggregate, or by the private sector; such a mandate is deemed to be a “significant regulatory action.” The FAA currently uses an inflation-adjusted value of \$136.1 million in lieu of \$100 million. This proposed rule does not contain such a mandate; therefore, the

requirements of Title II of the Act do not apply.

Executive Order 13132, Federalism

The FAA has analyzed this proposed rule under the principles and criteria of Executive Order 13132, Federalism. We determined that this action would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, would not have federalism implications.

Environmental Analysis

FAA Order 1050.1E identifies FAA actions that are categorically excluded from preparation of an environmental assessment or environmental impact statement under the National Environmental Policy Act in the absence of extraordinary circumstances. The FAA has determined this proposed rulemaking action qualifies for the categorical exclusion identified in paragraph 312f and involves no extraordinary circumstances.

Regulations That Significantly Affect Energy Supply, Distribution, or Use

The FAA has analyzed this NPRM under Executive Order 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use (May 18, 2001). While this NPRM is a “significant regulatory action” under Executive Order 12866, we have determined that it is not a “significant energy action” under the executive order because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

Additional Information

Comments Invited

The FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. We also invite comments relating to the economic, environmental, energy, or federalism impacts that might result from adopting the proposals in this document. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, please send only one copy of written comments, or if you are filing comments electronically, please submit your comments only one time.

We will file in the docket all comments we receive, as well as a report summarizing each substantive public contact with FAA personnel

concerning this proposed rulemaking. Before acting on this proposal, we will consider all comments we receive on or before the closing date for comments. We will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. We may change this proposal in light of the comments we receive.

Proprietary or Confidential Business Information

Do not file in the docket information that you consider to be proprietary or confidential business information. Send or deliver this information directly to the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this document. You must mark the information that you consider proprietary or confidential. If you send the information on a disk or CD-ROM, mark the outside of the disk or CD-ROM and also identify electronically within the disk or CD-ROM the specific information that is proprietary or confidential.

Under 14 CFR 11.35(b), when we are aware of proprietary information filed with a comment, we do not place it in the docket. We hold it in a separate file to which the public does not have access, and we place a note in the docket that we have received it. If we receive a request to examine or copy this information, we treat it as any other request under the Freedom of Information Act (5 U.S.C. 552). We process such a request under the DOT procedures found in 49 CFR part 7.

Availability of Rulemaking Documents

You can get an electronic copy of rulemaking documents using the Internet by—

1. Searching the Federal eRulemaking Portal (<http://www.regulations.gov>);
2. Visiting the FAA's Regulations and Policies Web page at: http://www.faa.gov/regulations_policies/; or
3. Accessing the Government Printing Office's Web page at: <http://www.gpoaccess.gov/fr/index.html>.

You can also get a copy by sending a request to the Federal Aviation Administration, Office of Rulemaking, ARM-1, 800 Independence Avenue, SW., Washington, DC 20591, or by calling (202) 267-9680. Make sure to identify the docket or notice number of this rulemaking.

You may access all documents the FAA considered in developing this proposed rule, including economic analyses and technical reports, from the Internet through the Federal eRulemaking Portal referenced in paragraph (1).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend Chapter I of Title 14, Code of Federal Regulations, as follows:

PART 91—GENERAL OPERATING AND FLIGHT RULES

1. The authority citation for part 91 continues to read as follows:

Authority: 49 U.S.C. 106(g), 1155, 40103, 40113, 40120, 44101, 44111, 44701, 44704, 44709, 44711, 44712, 44715, 44716, 44717, 44722, 46306, 46315, 46316, 46504, 46506–46507, 47122, 47508, 47528–47531, articles 12 and 29 of the Convention on International Civil Aviation (61 Stat. 1180).

2. Add § 91.1050 to read as follows:

§ 91.1050 Employment of former FAA employees.

(a) Except as specified in paragraph (c) of this section, no fractional owner or fractional ownership program manager may knowingly employ or make a contractual arrangement which permits an individual to act as an agent or representative of the fractional owner or fractional ownership program manager in any matter before the Federal Aviation Administration if the individual, in the preceding 2 years—

(1) Served as, or was directly responsible for the oversight of, a Flight Standards Service aviation safety inspector; and

(2) Had direct responsibility to inspect, or oversee the inspection of, the

operations of the fractional owner or fractional ownership program manager.

(b) For the purpose of this section, an individual shall be considered to be acting as an agent or representative of a fractional owner or fractional ownership program manager in a matter before the agency if the individual makes any written or oral communication on behalf of the fractional owner or fractional ownership program manager to the agency (or any of its officers or employees) in connection with a particular matter, whether or not involving a specific party and without regard to whether the individual has participated in, or had responsibility for, the particular matter while serving as a Flight Standards Service aviation safety inspector.

(c) The provisions of this section do not prohibit a fractional owner or fractional ownership program manager from knowingly employing or making a contractual arrangement which permits an individual to act as an agent or representative of the fractional owner or fractional ownership program manager in any matter before the Federal Aviation Administration if the individual was employed by the fractional owner or fractional ownership program manager before [effective date of the rule].

PART 119—CERTIFICATION: AIR CARRIERS AND COMMERCIAL OPERATORS

3. The authority citation for part 119 continues to read as follows:

Authority: 49 U.S.C. 106(g), 1153, 40101, 40102, 40103, 40113, 44105, 44106, 44111, 44701–44717, 44722, 44901, 44903, 44904, 44906, 44912, 44914, 44936, 44938, 46103, 46105.

4. Add § 119.73 to read as follows:

§ 119.73 Employment of former FAA employees.

(a) Except as specified in paragraph (c) of this section, no certificate holder conducting operations under part 121 or 135 of this chapter may knowingly employ or make a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual, in the preceding 2 years—

(1) Served as, or was directly responsible for the oversight of, a Flight Standards Service aviation safety inspector; and

(2) Had direct responsibility to inspect, or oversee the inspection of, the operations of the certificate holder.

(b) For the purpose of this section, an individual shall be considered to be

acting as an agent or representative of a certificate holder in a matter before the agency if the individual makes any written or oral communication on behalf of the certificate holder to the agency (or any of its officers or employees) in connection with a particular matter, whether or not involving a specific party and without regard to whether the individual has participated in, or had responsibility for, the particular matter while serving as a Flight Standards Service aviation safety inspector.

(c) The provisions of this section do not prohibit a certificate holder from knowingly employing or making a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual was employed by the certificate holder before [effective date of the rule].

PART 125—CERTIFICATION AND OPERATIONS: AIRPLANES HAVING A SEATING CAPACITY OF 20 OR MORE PASSENGERS OR A MAXIMUM PAYLOAD CAPACITY OF 6,000 POUNDS OR MORE; AND RULES GOVERNING PERSONS ON BOARD SUCH AIRCRAFT

5. The authority citation for part 125 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701–44702, 44705, 44710–44711, 44713, 44716–44717, 44722.

6. Add § 125.26 to read as follows:

§ 125.26 Employment of former FAA employees.

(a) Except as specified in paragraph (c) of this section, no certificate holder may knowingly employ or make a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual, in the preceding 2 years—

(1) Served as, or was directly responsible for the oversight of, a Flight Standards Service aviation safety inspector; and

(2) Had direct responsibility to inspect, or oversee the inspection of, the operations of the certificate holder.

(b) For the purpose of this section, an individual shall be considered to be acting as an agent or representative of a certificate holder in a matter before the agency if the individual makes any written or oral communication on behalf of the certificate holder to the agency (or any of its officers or employees) in connection with a particular matter, whether or not involving a specific

party and without regard to whether the individual has participated in, or had responsibility for, the particular matter while serving as a Flight Standards Service aviation safety inspector.

(c) The provisions of this section do not prohibit a certificate holder from knowingly employing or making a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual was employed by the certificate holder before [effective date of the rule].

PART 133—ROTORCRAFT EXTERNAL-LOAD OPERATIONS

7. The authority citation for part 133 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701–44702.

8. Add § 133.22 to read as follows:

§ 133.22 Employment of former FAA employees.

(a) Except as specified in paragraph (c) of this section, no certificate holder may knowingly employ or make a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual, in the preceding 2 years—

(1) Served as, or was directly responsible for the oversight of, a Flight Standards Service aviation safety inspector; and

(2) Had direct responsibility to inspect, or oversee the inspection of, the operations of the certificate holder.

(b) For the purpose of this section, an individual shall be considered to be acting as an agent or representative of a certificate holder in a matter before the agency if the individual makes any written or oral communication on behalf of the certificate holder to the agency (or any of its officers or employees) in connection with a particular matter, whether or not involving a specific party and without regard to whether the individual has participated in, or had responsibility for, the particular matter while serving as a Flight Standards Service aviation safety inspector.

(c) The provisions of this section do not prohibit a certificate holder from knowingly employing or making a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual was employed by the

certificate holder before [effective date of the rule].

PART 137—AGRICULTURAL AIRCRAFT OPERATIONS

9. The authority citation for part 137 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 44701–44702.

10. Add § 137.40 to read as follows:

§ 137.40 Employment of former FAA employees.

(a) Except as specified in paragraph (c) of this section, no certificate holder may knowingly employ or make a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual, in the preceding 2 years—

(1) Served as, or was directly responsible for the oversight of, a Flight Standards Service aviation safety inspector; and

(2) Had direct responsibility to inspect, or oversee the inspection of, the operations of the certificate holder.

(b) For the purpose of this section, an individual shall be considered to be acting as an agent or representative of a certificate holder in a matter before the agency if the individual makes any written or oral communication on behalf of the certificate holder to the agency (or any of its officers or employees) in connection with a particular matter, whether or not involving a specific party and without regard to whether the individual has participated in, or had responsibility for, the particular matter while serving as a Flight Standards Service aviation safety inspector.

(c) The provisions of this section do not prohibit a certificate holder from knowingly employing or making a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual was employed by the certificate holder before [effective date of the rule].

PART 141—PILOT SCHOOLS

11. The authority citation for part 141 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701–44703, 44707, 44709, 44711, 45102–45103, 45301–45302.

12. Add § 141.34 to read as follows:

§ 141.34 Employment of former FAA employees.

(a) Except as specified in paragraph (c) of this section, no holder of a pilot

school certificate or a provisional pilot school certificate may knowingly employ or make a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual, in the preceding 2 years—

(1) Served as, or was directly responsible for the oversight of, a Flight Standards Service aviation safety inspector; and

(2) Had direct responsibility to inspect, or oversee the inspection of, the operations of the certificate holder.

(b) For the purpose of this section, an individual shall be considered to be acting as an agent or representative of a certificate holder in a matter before the agency if the individual makes any written or oral communication on behalf of the certificate holder to the agency (or any of its officers or employees) in connection with a particular matter, whether or not involving a specific party and without regard to whether the individual has participated in, or had responsibility for, the particular matter while serving as a Flight Standards Service aviation safety inspector.

(c) The provisions of this section do not prohibit a holder of a pilot school certificate or a provisional pilot school certificate from knowingly employing or making a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual was employed by the certificate holder before [effective date of the rule].

PART 142—TRAINING CENTERS

13. The authority citation for part 142 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 40119, 44101, 44701–44703, 44705, 44707, 44709–44711, 45102–45103, 45301–45302.

14. Add § 142.14 to read as follows:

§ 142.14 Employment of former FAA employees.

(a) Except as specified in paragraph (c) of this section, no holder of a training center certificate may knowingly employ or make a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual, in the preceding 2 years—

(1) Served as, or was directly responsible for the oversight of, a Flight Standards Service aviation safety inspector; and

(2) Had direct responsibility to inspect, or oversee the inspection of, the operations of the certificate holder.

(b) For the purpose of this section, an individual shall be considered to be acting as an agent or representative of a certificate holder in a matter before the agency if the individual makes any written or oral communication on behalf of the certificate holder to the agency (or any of its officers or employees) in connection with a particular matter, whether or not involving a specific party and without regard to whether the individual has participated in, or had responsibility for, the particular matter while serving as a Flight Standards Service aviation safety inspector.

(c) The provisions of this section do not prohibit a holder of a training center certificate from knowingly employing or making a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual was employed by the certificate holder before [effective date of the rule].

PART 145—REPAIR STATIONS

15. The authority citation for part 145 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701–44702, 44707, 44709, 44717.

16. Add § 145.160 to read as follows:

§ 145.160 Employment of former FAA employees.

(a) Except as specified in paragraph (c) of this section, no holder of a repair station certificate may knowingly employ or make a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual, in the preceding 2 years—

(1) Served as, or was directly responsible for the oversight of, a Flight Standards Service aviation safety inspector; and

(2) Had direct responsibility to inspect, or oversee the inspection of, the operations of the certificate holder.

(b) For the purpose of this section, an individual shall be considered to be acting as an agent or representative of a certificate holder in a matter before the agency if the individual makes any written or oral communication on behalf of the certificate holder to the agency (or any of its officers or employees) in connection with a particular matter, whether or not involving a specific party and without regard to whether the individual has participated in, or had

responsibility for, the particular matter while serving as a Flight Standards Service aviation safety inspector.

(c) The provisions of this section do not prohibit a holder of a repair station certificate from knowingly employing or making a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual was employed by the certificate holder before [effective date of the rule].

PART 147—AVIATION MAINTENANCE TECHNICIAN SCHOOLS

17. The authority citation for part 147 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701–44702, 44707–44709.

18. Add § 147.8 to read as follows:

§ 147.8 Employment of former FAA employees.

(a) Except as specified in paragraph (c) of this section, no holder of an aviation maintenance technician certificate may knowingly employ or make a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual, in the preceding 2 years—

(1) Served as, or was directly responsible for the oversight of, a Flight Standards Service aviation safety inspector; and

(2) Had direct responsibility to inspect, or oversee the inspection of, the operations of the certificate holder.

(b) For the purpose of this section, an individual shall be considered to be acting as an agent or representative of a certificate holder in a matter before the agency if the individual makes any written or oral communication on behalf of the certificate holder to the agency (or any of its officers or employees) in connection with a particular matter, whether or not involving a specific party and without regard to whether the individual has participated in, or had responsibility for, the particular matter while serving as a Flight Standards Service aviation safety inspector.

(c) The provisions of this section do not prohibit a holder of an aviation maintenance technician school certificate from knowingly employing or making a contractual arrangement which permits an individual to act as an agent or representative of the certificate holder in any matter before the Federal Aviation Administration if the individual was employed by the

certificate holder before [effective date of the rule].

Issued in Washington, DC, on November 9, 2009.

John M. Allen,

Director, Flight Standards Service.

BILLING CODE 4910-13-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R05-OAR-2009-0771; FRL-8980-5]

Approval and Promulgation of Air Quality Implementation Plans; Indiana

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing to approve a request submitted by the Indiana Department of Environmental Management on September 25, 2009, to revise the Indiana State Implementation Plan (SIP). The submission revises the Indiana Administrative Code (IAC) by amending and updating the definition of "References to Code of Federal Regulations," to refer to the 2008 edition.

DATES: Comments must be received on or before December 21, 2009.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-R05-OAR-2009-0771 by one of the following methods:

- <http://www.regulations.gov>: Follow the on-line instructions for submitting comments.

- *E-mail:* mooney.john@epa.gov.

- *Fax:* (312) 692-2551.

- *Mail:* John Mooney, Chief, Criteria Pollutant Section, Air Programs Branch (AR-18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604.

- *Hand Delivery:* John Mooney, Chief, Criteria Pollutant Section, Air Programs Branch (AR-18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604. Such deliveries are only accepted during the Regional Office normal hours of operation, and special arrangements should be made for deliveries of boxed information. The Regional Office official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m. excluding Federal holidays.

Please see the direct final rule which is located in the Rules section of this **Federal Register** for detailed instructions on how to submit comments.

FOR FURTHER INFORMATION CONTACT:

Charles Hatten, Environmental Engineer, Criteria Pollutant Section, Air Programs Branch (AR-18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886-6031, hatten.charles@epa.gov.

SUPPLEMENTARY INFORMATION: In the Final Rules section of this **Federal Register**, EPA is approving the State's SIP submittal as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this rule, no further activity is contemplated. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule, and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment. For additional information, see the direct final rule which is located in the Rules section of this **Federal Register**.

Dated: November 3, 2009.

Bharat Mathur,

Acting Regional Administrator, Region 5.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R03-OAR-2009-0674; FRL-8983-2]

Approval and Promulgation of Air Quality Implementation Plans; Virginia; Transportation Conformity Regulations

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA proposes to approve the State Implementation Plan (SIP) revision submitted by the Commonwealth of Virginia for Transportation Conformity regulations. In the Final Rules section of this **Federal Register**, EPA is approving the State's SIP submittal as a direct final

rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this action, no further activity is contemplated. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time.

DATES: Comments must be received in writing by December 21, 2009.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA-R03-OAR-2009-0674 by one of the following methods:

- A. <http://www.regulations.gov>: Follow the on-line instructions for submitting comments.

- B. *E-mail:* fernandez.cristina@epa.gov.

- C. *Mail:* EPA-R03-OAR-2009-0674, Cristina Fernandez, Associate Director, Office of Air Program Planning, Mailcode 3AP30, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103.

- D. *Hand Delivery:* At the previously-listed EPA Region III address. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA-R03-OAR-2009-0674. EPA's policy is that all comments received will be included in the public docket without change, and may be made available online at <http://www.regulations.gov>, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI (or otherwise protected) through <http://www.regulations.gov> or e-mail. The <http://www.regulations.gov> Web site is an anonymous access system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through <http://www.regulations.gov>, your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you

submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the electronic docket are listed in the <http://www.regulations.gov> index. Although listed in the index, some information is not publicly available, *i.e.*, CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in <http://www.regulations.gov> or in hard copy during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Copies of the State submittal are available at the Virginia Department of the Environmental Quality, 629 East Main Street, Richmond, Virginia 23219.

FOR FURTHER INFORMATION CONTACT: Martin Kotsch, (215) 814-3335, or by e-mail at kotsch.martin@epa.gov.

SUPPLEMENTARY INFORMATION: For further information, please see the information provided in the direct final action, with the same title, that is located in the Rules and Regulations section of this **Federal Register** publication. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment.

Dated: November 5, 2009.

RIN 1018-AW67

Migratory Bird Subsistence Harvest in Alaska; Harvest Regulations for Migratory Birds in Alaska During the 2010 Season

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: The U.S. Fish and Wildlife Service (Service or we) proposes migratory bird subsistence harvest regulations in Alaska for the 2010 season. These regulations will enable the continuation of customary and traditional subsistence uses of migratory birds in Alaska and prescribe regional information on when and where the harvesting of birds may occur. These regulations were developed under a co-management process involving the Service, the Alaska Department of Fish and Game, and Alaska Native representatives. The rulemaking is necessary because the regulations governing the subsistence harvest of migratory birds in Alaska are subject to annual review. This rulemaking proposes region-specific regulations that go into effect on April 2, 2010, and expire on August 31, 2010.

DATES: We will accept comments received or postmarked on or before January 19, 2010. We must receive requests for public hearings, in writing, at the address shown in **FOR FURTHER INFORMATION CONTACT** by January 4, 2010.

ADDRESSES: You may submit comments by one of the following methods:

- Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments to Docket No. FWS-R7-MB-2009-0082.

- U.S. mail or hand-delivery: Public Comments Processing, Attn: FWS-R7-MB-2009-0082; Division of Policy and Directives Management; U.S. Fish and Wildlife Service; 4401 N. Fairfax Drive, Suite 222; Arlington, VA 22203.

We will not accept e-mail or faxes. We will post all comments on <http://www.regulations.gov>. This generally means that we will post any personal information you provide us (see the Public Comment Procedures section below for more information).

FOR FURTHER INFORMATION CONTACT: Fred Armstrong, (907) 786-3887, or Donna

Dewhurst, (907) 786-3499, U.S. Fish and Wildlife Service, 1011 E. Tudor Road, Mail Stop 201, Anchorage, AK 99503.

SUPPLEMENTARY INFORMATION:

Public Comment Procedures

To ensure that any final action resulting from this proposed rule will be as accurate and as effective as possible, we request that you send relevant information for our consideration. The comments that will be most useful and likely to influence our decisions are those that you support by quantitative information or studies and those that include citations to, and analyses of, the applicable laws and regulations. Please make your comments as specific as possible and explain the bases for them. In addition, please include sufficient information with your comments to allow us to authenticate any scientific or commercial data you include.

You must submit your comments and materials concerning this proposed rule by one of the methods listed above in the **ADDRESSES** section. We will not accept comments sent by e-mail or fax or to an address not listed in **ADDRESSES**. If you submit a comment via <http://www.regulations.gov>, your entire comment—including any personal identifying information, such as your address, telephone number, or e-mail address—will be posted on the Web site. Please note that comments submitted to this Web site are not immediately viewable. When you submit a comment, the system receives it immediately. However, the comment will not be publicly viewable until we post it, which might not occur until several days after submission.

If you mail or hand-carry a hardcopy comment directly to us that includes personal information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. To ensure that the electronic docket for this rulemaking is complete and all comments we receive are publicly available, we will post all hardcopy comments on <http://www.regulations.gov>.

In addition, comments and materials we receive, as well as supporting documentation used in preparing this proposed rule, will be available for public inspection in two ways:

(1) You can view them on <http://www.regulations.gov>. In the Search Documents box, enter FWS-R7-MB-2009-0082, which is the docket number for this rulemaking. Then, in the Search panel on the left side of the screen, select the type of documents you want

to view under the Document Type heading.

(2) You can make an appointment, during normal business hours, to view the comments and materials in person at the Division of Migratory Bird Management, U.S. Fish and Wildlife Service; 4501 N. Fairfax Drive, Room 4107, Arlington, VA 22203-1610.

Public Availability of Comments

As stated above in more detail, before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. Though you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Why Is This Rulemaking Necessary?

This rulemaking is necessary because, by law, the migratory bird harvest season is closed unless opened by the Secretary of the Interior, and the regulations governing subsistence harvest of migratory birds in Alaska are subject to public review and annual approval. This rule proposes regulations for the taking of migratory birds for subsistence uses in Alaska during the spring and summer of 2010. This rule lists proposed migratory bird season openings and closures in Alaska by region.

How Do I Find the History of These Regulations?

Background information, including past events leading to this action, accomplishments since the Migratory Bird Treaties with Canada and Mexico were amended, and a history addressing conservation issues can be found in the following **Federal Register** documents:

Date	Federal Register Citation
August 16, 2002	67 FR 53511
July 21, 2003	68 FR 43010
April 2, 2004	69 FR 17318
April 8, 2005	70 FR 18244
February 28, 2006 ...	71 FR 10404
April 11, 2007	72 FR 18318
March 14, 2008	73 FR 13788
May 19, 2009	74 FR 23336

These final rules setting forth the annual harvest regulations, are available at <http://alaska.fws.gov/ambcc/regulations.htm>.

What Is the Process for Issuing Regulations for the Subsistence Harvest of Migratory Birds in Alaska?

The U.S. Fish and Wildlife Service (Service or we) proposes migratory bird subsistence harvest regulations in Alaska for the 2010 season. These regulations will enable the continuation of customary and traditional subsistence uses of migratory birds in Alaska and prescribe regional information on when and where the harvesting of birds may occur. These regulations were developed under a co-management process involving the Service, the Alaska Department of Fish and Game, and Alaska Native representatives.

We opened the process to establish regulations for the 2010 spring and summer subsistence harvest of migratory birds in Alaska this past spring in a proposed rule published in the **Federal Register** on April 10, 2009 (74 FR 16339). While that proposed rule dealt primarily with the regulatory process for hunting migratory birds for all purposes throughout the United States, we also discussed the background and history of the Alaska subsistence regulations, explained the annual process for their establishment, and requested proposals for the 2010 season. The rulemaking processes for both types of migratory bird harvest are related, and the April 10, 2009, proposed rule explained the connection between the two.

The Alaska Migratory Bird Co-management Council (Co-management Council) held a meeting in April 2009 to develop recommendations for changes effective for the 2010 harvest season. The April 10, 2009, proposed rule set a deadline of June 15, 2009, for the Co-management Council to submit proposals for the 2010 spring and summer migratory bird subsistence harvest season to us and the Flyway Councils. This timeframe allowed the Flyway Councils and the Service to consider the proposals and present recommendations to the Service Regulations Committee at the committee's meeting on July 29 and 30, 2009.

Who Is Eligible To Hunt Under These Regulations?

Eligibility to harvest under the regulations established in 2003 was limited to permanent residents, regardless of race, in villages located within the Alaska Peninsula, Kodiak Archipelago, the Aleutian Islands, and

in areas north and west of the Alaska Range (50 CFR 92.5). These geographical restrictions opened the initial subsistence migratory bird harvest to only about 13 percent of Alaska residents. High-population areas such as Anchorage, the Matanuska-Susitna and Fairbanks North Star boroughs, the Kenai Peninsula roaded area, the Gulf of Alaska roaded area, and Southeast Alaska were excluded from the eligible subsistence harvest areas.

Based on petitions requesting inclusion in the harvest, in 2004, we added 13 additional communities based on criteria set forth in 50 CFR 92.5(c). These communities were Gulkana, Gakona, Tazlina, Copper Center, Mentasta Lake, Chitina, Chistochina, Tatitlek, Chenega, Port Graham, Nanwalek, Tyonek, and Hoonah, with a combined population of 2,766. In 2005, we added three additional communities for glaucous-winged gull egg gathering only, based on petitions requesting inclusion. These southeastern communities were Craig, Hydaburg, and Yakutat, with a combined population of 2,459.

In 2007, we enacted the Alaska Department of Fish and Game's request to expand the Fairbanks North Star Borough excluded area to include the Central Interior area. This action excluded the following communities from participation in this harvest: Big Delta/Fort Greely, Healy, McKinley Park/Village and Ferry, with a combined population of 2,812. These removed communities reduced the percentage of the State population included in the subsistence harvest to 13 percent.

How Will the Service Ensure That the Subsistence Harvest Will Not Raise Overall Migratory Bird Harvest or Threaten the Conservation of Endangered and Threatened Species?

We have monitored subsistence harvest for the past 15 years through the use of annual household surveys in the most heavily used subsistence harvest areas, such as the Yukon-Kuskokwim Delta. Continuation of this monitoring enables tracking of any major changes or trends in levels of harvest and user participation after legalization of the harvest. This rule proposes for the second year to restrict hunting on the North Slope to times of day with sufficient daylight to enable hunters to distinguish and avoid shooting closed species. In addition, three conservation measures, which focus on increased migratory bird hunter outreach prior to hunts, increased regulatory enforcement and in-season harvest verification of Steller's eider mortality, would continue to provide additional protection for

threatened spectacled and Steller's eiders. Finally, we have an emergency closure provision (50 CFR 92.21), which specifies that the harvest may be closed or temporarily suspended upon a finding that a continuation of the regulation allowing the harvest would pose an imminent threat to the conservation of any endangered or threatened species or other migratory bird population.

With regard to Steller's eiders, the proposed regulation at 50 CFR 92.32, carried over from last year, clarifies that we will take action under 50 CFR 92.21 as is necessary to prevent further take of Steller's eiders, which could include temporary or long-term closures of the harvest in all or a portion of the geographic area open to harvest. If mortality of threatened eiders occurs, we will evaluate each mortality event by criteria such as: cause, quantity, sex, age, location, and date. We will consult the Co-management Council when an emergency closure is being considered. Any emergency closure deemed necessary will be designed to minimize its impact on the subsistence harvest.

What Is Different in the Region-Specific Regulations for 2010?

Yellow-billed Loons

Consistent with the request of the North Slope Borough Fish and Game Management Committee and the recommendation of the Co-management Council, this proposed rule continues into 2010 the provisions originally established in 2005 to allow subsistence use of yellow-billed loons (*Gavia adamsii*) inadvertently entangled in subsistence fishing (gill) nets on the North Slope. Yellow-billed loons are culturally important for the Inupiat Eskimo of the North Slope for use in traditional dance regalia. A maximum of 20 yellow-billed loons may be caught in 2010 under this provision. This provision does not authorize intentional harvest of yellow-billed loons, but allows use of those loons inadvertently entangled during normal subsistence fishing activities. Individual reporting to the North Slope Borough Department of Wildlife is required by the end of each season. However, the North Slope Borough has asked fishermen, through announcements on the radio and through personal contact, to report inadvertent entanglements of loons as they occur, to better estimate the level of mortality caused by gill nets. In 2008, one yellow-billed loon was reported to be found dead in a fishing net; one severely injured yellow-billed loon was observed by Borough staff; and two were

released uninjured from fishing nets by Borough staff.

Aleutian and Arctic Terns

We propose to remove the provision that opened a season May 15–June 30 for harvesting Aleutian (*Onychoprion aleutica*) and arctic tern (*Sterna paradisaea*) eggs in the Yakutat Harvest area, from Icy Bay (Icy Cape to Point Riou) and the coastal islands bordering the Gulf of Alaska from Point Manby southeast to and including Dry Bay. The Yakutat Tlingit Tribe requested this regulation be removed at the April 2009 Co-Management Council meeting, stating that they will not be able to adequately monitor the tern subsistence take as requested by the Service, so they would prefer to withdraw the regulation at this time.

Spectacled and Steller's Eiders

Spectacled eiders (*Somateria fischeri*) and the Alaska-breeding population of Steller's eiders (*Polysticta stelleri*) are listed as threatened species, and their migration and breeding distribution overlaps with the spring and summer subsistence harvest on the Yukon-Kuskokwim Delta and the North Slope. Both spectacled and Steller's eiders are closed to hunting in the subsistence harvest, but harvest surveys and Service documentation indicate substantial numbers of both species have been taken during recent subsistence harvests on the North Slope.

The North Slope breeding population of spectacled eiders was estimated to be 12,916 (10,942–14,890, 95% Confidence Limits) individual birds during 2002–06 (Service unpublished data), and they nest relatively widely across the North Slope. It is estimated that 35 (33–40, 95% Confidence Limits) spectacled eiders were taken on the North Slope during the 2005 subsistence season (Service unpublished data, 2006); 99 (44–155, 95% Confidence Limits) were taken during the 2007 subsistence season; and 9 (1–25, 184% confidence limits) were taken during the 2008 subsistence season (Alaska Department of Fish and Game, preliminary data).

The North Slope breeding population of Steller's eider was estimated to be 576 annually (292–859, 90% Confidence Limits) individual birds during 1993–2008 (Service, unpublished data), and most of their nesting appears to be concentrated near Barrow, the northernmost point in Alaska. It is estimated that 19 (9–37, 95% Confidence Limits) Steller's eiders were taken on the North Slope during the 2005 subsistence season; 36 (1–85, 135% Confidence Limits) were taken during the 2007 subsistence season; and

0 were taken during the 2008 subsistence season (Alaska Department of Fish and Game, preliminary data). However, during the 2008 subsistence season, the Service documented 20 Steller's eiders shot at Barrow, with another 7 found dead but too heavily scavenged to determine cause of death.

Therefore, harvest survey estimates and direct observation of shot birds indicated that direct shooting occurs during the subsistence harvest, with impacts probably on the order of tens of each threatened eider species taken per year. Take is not authorized for either species during the subsistence harvest, and, in the case of Steller's eider, this amount of shooting mortality is likely not sustainable for the small Alaska-breeding population. Because of the Steller's eider small breeding population size, their breeding concentration near Barrow, and the relatively high proportion of the estimated population shot during recent subsistence harvests, the Service focused on considering regulations and conservation efforts on the North Slope to benefit the Alaska-breeding population of Steller's eiders.

Several spectacled and Steller's eider management needs are addressed by this proposed rule. It restricts hunting on the North Slope, from Barrow through Point Hope, to time of day with sufficient daylight to ensure hunters can distinguish and avoid shooting species closed for harvest; it clarifies for subsistence users that Service law enforcement personnel have authority to verify species of birds possessed by hunters; it clarifies that it is illegal to possess any bird closed to harvest; and it describes how the Service's existing authority of emergency closure would be implemented, if necessary, to protect Steller's eiders. The regulations, implemented in accordance with conservation measures (described below), are considered the principal way in which shooting mortality of threatened eider will be substantially reduced or eliminated. The emergency closure authority provides an additional level of assurance that, if an unexpected amount of Steller's eider shooting mortality occurs, it will be curtailed to avoid approaching jeopardy to the existence of the species.

The Service developed three conservation measures that are an integral part of the proposed harvest and were approved for implementation by the Alaska Regional Director on April 6, 2009. The conservation measures substantially increased protection for spectacled and, particularly, Steller's eiders on the North Slope in 2009, and described how the Service would detect,

remedy, and quickly curtail any shooting mortality or injury of Steller's eiders that might occur during the harvest. In January 2009, the Service commenced planning for implementation of each measure in anticipation of the subsistence harvest. The three conservation measures were:

1. Increase Migratory Bird Hunter Outreach Prior to the Hunts

The Service with North Slope partners would provide migratory bird hunter outreach in Wainwright, Point Hope, Point Lay, and Barrow prior to each subsistence harvest. The outreach educational objectives included: hunter understanding of the hunting regulations; ability to distinguish among the open and closed species of eiders in flight; the need to reduce crippling loss; and an understanding of the Service's role and obligation for enforcement and monitoring. This was done prior to and during the 2009 subsistence season.

2. Increased Service Enforcement of Migratory Bird Regulations

During the 2009 subsistence season, the Service sustained a law enforcement presence on the North Slope during the migratory bird hunts. The Service believes this action was necessary to increase community understanding and acceptance of the shooting mortality problem, deter violations, and obtain compliance with the regulations. The Service conducted real-time monitoring of the harvest to meet the primary objective of detecting Steller's eider mortality during the hunts so that appropriate and timely corrective action could be taken. Regulatory enforcement objectives will continue to be achieved through a two-part strategy: (i) pre-season community and hunter education and outreach, and (ii) in-season implementation of the law enforcement portion of this plan and enforcement of all Service regulations.

3. In-season Harvest Verification of Steller's Eider Mortality and Injury

Three types of monitoring efforts were used during the 2009 subsistence harvest and fall hunts on the North Slope: (i) Steller's eider breeding surveys to inform the coordination of the conservation measures, (ii) harvest verification by Service law enforcement to meet the objective of detecting Steller's eider mortality during the hunts so appropriate and timely corrective action can be taken to prevent further mortality; and (iii) monitoring for injured and dead birds to begin to quantify crippling rate and loss. We will continue to use all in-season monitoring information to independently evaluate

harvest survey reports, the efficiency of the regulations, conservation measures, and outreach efforts.

To summarize, the Service has dual goals and responsibilities of authorizing a subsistence harvest while protecting migratory birds and threatened species. Although these goals were and continue to be challenging, they are not irreconcilable with sufficient recognition of the need to protect threatened species, measures to remedy documented threats, and commitment from the subsistence community and other conservation partners to work together toward these dual goals. With these dual goals in mind, the Service is proposing to continue the provision that restricts hunting on the North Slope to times of day with sufficient daylight to enable hunters to avoid shooting closed species. Moreover, the Service, working with partners, developed additional measures to eliminate the potential for shooting mortality or injury of the Alaska-breeding population of Steller's eider on the North Slope. These measures include: (1) increased waterfowl hunter outreach and community awareness; (2) increased enforcement of the migratory bird regulations that are protective of listed eiders; and (3) in-season Service verification of the harvest to detect any Steller's eider mortality.

For the 2009 season, the Service and the community planned to immediately address and remedy any detected Steller's eider mortality; and, as a matter of Service policy, any detected Steller's eider shooting mortality was curtailed to an amount estimated to be sustainable by the population. The summer of 2009 was not a breeding year for Steller's eiders in the Barrow area. Even so, the Service conducted an extensive outreach program including eight public meetings in all of the affected eider communities, three radio shows, and five newspaper articles. The Service increased its law enforcement presence in Barrow as well as harvest monitoring. No Steller's eiders were found shot during monitoring of the subsistence harvest.

In 2009, the Service also continued working into July refining and implementing the Memorandum of Understanding (MOU) established between the Service and North Slope government and Native organizations. The reason to initiate an MOU was to increase involvement by Alaska Native organizations in the conservation of Steller's eiders on the North Slope of Alaska. The purposes outlined were to: (1) conserve and manage Steller's eiders; (2) preserve the customary and traditional subsistence hunt, and (3)

reduce or eliminate the take of Steller's eiders.

A review of the conservation strategy implemented by the Service in 2009 based on the conservation measures developed, showed that overall the Service made advancements in several areas. These conservation measures and the subsequent MOU engaged our partners on the North Slope, encouraging local ownership of the conservation goal, and ultimately heightening awareness of what actions were necessary to move in a positive direction to protect Steller's eiders. Based on these successes, the Service proposes to continue these conservation measures into the 2010 season with some modification as to the amount of effort and emphasis each will receive. The Service also proposes to continue the regulatory changes implemented in 2009 for the North Slope through the 2010 subsistence season, including the emergency closure provisions.

Statutory Authority

We derive our authority to issue these regulations from the Migratory Bird Treaty Act of 1918, 16 U.S.C. 712(1), which authorizes the Secretary of the Interior, in accordance with the treaties with Canada, Mexico, Japan, and Russia, to "issue such regulations as may be necessary to assure that the taking of migratory birds and the collection of their eggs, by the indigenous inhabitants of the State of Alaska, shall be permitted for their own nutritional and other essential needs, as determined by the Secretary of the Interior, during seasons established so as to provide for the preservation and maintenance of stocks of migratory birds."

Required Determinations

Regulatory Planning and Review (Executive Order 12866)

The Office of Management and Budget (OMB) has determined that this rule is not significant and has not reviewed this rule under Executive Order 12866 (E.O. 12866). OMB bases its determination upon the following four criteria:

(a) Whether the rule will have an annual effect of \$100 million or more on the economy or adversely affect an economic sector, productivity, jobs, the environment, or other units of the government.

(b) Whether the rule will create inconsistencies with other Federal agencies' actions.

(c) Whether the rule will materially affect entitlements, grants, user fees, loan programs, or the rights and obligations of their recipients.

(d) Whether the rule raises novel legal or policy issues.

Regulatory Flexibility Act

The Department of the Interior certifies that this rule will not have a significant economic impact on a substantial number of small entities as defined under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). An initial regulatory flexibility analysis is not required. Accordingly, a Small Entity Compliance Guide is not required. The rule legalizes a pre-existing subsistence activity, and the resources harvested will be consumed by the harvesters or persons within their local community.

Small Business Regulatory Enforcement Fairness Act

This rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This rule:

(a) Will not have an annual effect on the economy of \$100 million or more. It will legalize and regulate a traditional subsistence activity. It will not result in a substantial increase in subsistence harvest or a significant change in harvesting patterns. The commodities being regulated under this rule are migratory birds. This rule deals with legalizing the subsistence harvest of migratory birds and, as such, does not involve commodities traded in the marketplace. A small economic benefit from this rule derives from the sale of equipment and ammunition to carry out subsistence hunting. Most, if not all, businesses that sell hunting equipment in rural Alaska would qualify as small businesses. We have no reason to believe that this rule will lead to a disproportionate distribution of benefits.

(b) Will not cause a major increase in costs or prices for consumers; individual industries; Federal, State, or local government agencies; or geographic regions. This rule does not deal with traded commodities and, therefore, does not have an impact on prices for consumers.

(c) Does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises. This rule deals with the harvesting of wildlife for personal consumption. It does not regulate the marketplace in any way to generate effects on the economy or the ability of businesses to compete.

Unfunded Mandates Reform Act

We have determined and certified under the Unfunded Mandates Reform Act (2 U.S.C. 1501 *et seq.*) that this rule

will not impose a cost of \$100 million or more in any given year on local, State, or tribal governments or private entities. The rule does not have a significant or unique effect on State, local, or tribal governments or the private sector. A statement containing the information required by the Unfunded Mandates Reform Act is not required. Participation on regional management bodies and the Co-management Council will require travel expenses for some Alaska Native organizations and local governments. In addition, they will assume some expenses related to coordinating involvement of village councils in the regulatory process. Total coordination and travel expenses for all Alaska Native organizations are estimated to be less than \$300,000 per year. In the Notice of Decision (65 FR 16405; March 28, 2000), we identified 12 partner organizations (Alaska Native nonprofits and local governments) to administer the regional programs. The Alaska Department of Fish and Game will also incur expenses for travel to Co-management Council and regional management body meetings. In addition, the State of Alaska will be required to provide technical staff support to each of the regional management bodies and to the Co-management Council. Expenses for the State's involvement may exceed \$100,000 per year, but should not exceed \$150,000 per year. When funding permits, we make annual grant agreements available to the partner organizations and the Alaska Department of Fish and Game to help offset their expenses.

Takings (Executive Order 12630)

Under the criteria in Executive Order 12630, this rule does not have significant takings implications. This rule is not specific to particular land ownership, but applies to the harvesting of migratory bird resources throughout Alaska. A takings implication assessment is not required.

Federalism (Executive Order 13132)

Under the criteria in Executive Order 13132, this rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment. We discuss effects of this proposed rule on the State of Alaska in the Unfunded Mandates Reform Act section above. We worked with the State of Alaska to develop these regulations. Therefore, a Federalism Assessment is not required.

Civil Justice Reform (Executive Order 12988)

The Department, in promulgating this rule, has determined that it will not unduly burden the judicial system and that it meets the requirements of sections 3(a) and 3(b)(2) of Executive Order 12988.

Government-to-Government Relations With Native American Tribal Governments

Because eligibility to hunt under these regulations is not limited to tribal members, but rather extends to all indigenous inhabitants of the subsistence harvest areas, we are not required to engage in formal consultation with tribes. However, in keeping with the spirit of the President's memorandum of April 29, 1994, "Government-to-Government Relations With Native American Tribal Governments" (59 FR 22951), and Executive Order 13175 (65 FR 67249; November 6, 2000), concerning consultation and coordination with Indian Tribal Governments, we conducted meetings with the affected tribes and tribal nonprofit organizations to discuss the proposed changes in the regulations for possible effects on tribes or trust resources, and have determined that there are no significant effects. The rule will legally recognize the subsistence harvest of migratory birds and their eggs for indigenous inhabitants including tribal members. In 1998, we began a public involvement process to determine how to structure management bodies in order to provide the most effective and efficient involvement of subsistence users. We began by publishing in the **Federal Register** stating that we intended to establish management bodies to implement the spring and summer subsistence harvest (63 FR 49707, September 17, 1998). We held meetings with the Alaska Department of Fish and Game and the Native Migratory Bird Working Group to provide information regarding the amended treaties and to listen to the needs of subsistence users. The Native Migratory Bird Working Group was a consortium of Alaska Natives formed by the Rural Alaska Community Action Program to represent Alaska Native subsistence hunters of migratory birds during the treaty negotiations. We held forums in Nome, Kotzebue, Fort Yukon, Allakaket, Naknek, Bethel, Dillingham, Barrow, and Copper Center. We led additional briefings and discussions at the annual meeting of the Association of Village Council Presidents in Hooper Bay and

for the Central Council of Tlingit & Haida Indian Tribes in Juneau.

On March 28, 2000, we published in the **Federal Register** (65 FR 16405) the Notice of Decision: "Establishment of Management Bodies in Alaska To Develop Recommendations Related to the Spring/Summer Subsistence Harvest of Migratory Birds." This notice described the way in which management bodies would be established and organized. Based on the wide range of views expressed on the options document, the decision incorporated key aspects of two of the modules. The decision established one statewide management body consisting of 1 Federal member, 1 State member, and 7–12 Alaska Native members, with each component serving as equals.

Paperwork Reduction Act

This rule has been examined under the Paperwork Reduction Act of 1995 and does not contain new collections of information that require Office of Management and Budget approval. OMB has approved our collection of information associated with the voluntary annual household surveys used to determine levels of subsistence take. The OMB control number is 1018–0124, which expires on January 31, 2010. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

Endangered Species Act Consideration

Prior to issuance of annual spring and summer subsistence regulations, we will consult under section 7 of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531–1543; hereinafter the Act), to ensure that the 2010 subsistence harvest is not likely to jeopardize the continued existence of any species designated as endangered or threatened, or modify or destroy its critical habitats, and that the regulations are consistent with conservation programs for those species. Consultation under section 7 of the Act for the annual subsistence take regulations may cause us to change these regulations. Our biological opinion resulting from the section 7 consultation is a public document available from the person listed under **FOR FURTHER INFORMATION CONTACT**.

National Environmental Policy Act Consideration

The annual regulations and options were considered in the Environmental Assessment, "Managing Migratory Bird Subsistence Hunting in Alaska: Hunting Regulations for the 2010 Spring/

Summer Harvest," issued October 9, 2009. Copies are available from the person listed under **FOR FURTHER INFORMATION CONTACT** or at www.Regulations.gov.

Energy Supply, Distribution, or Use (Executive Order 13211)

Executive Order 13211 requires agencies to prepare Statements of Energy Effects when undertaking certain actions. This is not a significant regulatory action under this Executive Order; it would allow only for traditional subsistence harvest and would improve conservation of migratory birds by allowing effective regulation of this harvest. Further, this rule is not expected to significantly affect energy supplies, distribution, or use. Therefore, this action is not a significant energy action under Executive Order 13211 and no Statement of Energy Effects is required.

List of Subjects in 50 CFR Part 92

Exports, Hunting, Imports, Reporting and recordkeeping requirements, Subsistence, Treaties, Wildlife.

For the reasons set out in the preamble, we propose to amend title 50, chapter I, subchapter G, of the Code of Federal Regulations as follows:

PART 92—MIGRATORY BIRD SUBSISTENCE HARVEST IN ALASKA

1. The authority citation for part 92 continues to read as follows:

Authority: 16 U.S.C. 703–712.

Subpart D—Annual Regulations Governing Subsistence Harvest

2. In subpart D, add § 92.31 to read as follows:

§ 92.31 Region-specific regulations.

The 2010 season dates for the eligible subsistence harvest areas are as follows:

- (a) *Aleutian/Pribilof Islands Region*.
 - (i) Northern Unit (Pribilof Islands):
 - (i) Season: April 2–June 30.
 - (ii) Closure: July 1–August 31.
 - (2) Central Unit (Aleut Region's eastern boundary on the Alaska Peninsula westward to and including Unalaska Island):
 - (i) Season: April 2–June 15 and July 16–August 31.
 - (ii) Closure: June 16–July 15.
 - (iii) Special Black Brant Season Closure: August 16–August 31, only in Izembek and Moffet lagoons.
 - (iv) Special Tundra Swan Closure: All hunting and egg gathering closed in units 9(D) and 10.
 - (3) Western Unit (Umnak Island west to and including Attu Island):
 - (i) Season: April 2–July 15 and August 16–August 31.

(ii) Closure: July 16–August 15.

(b) *Yukon/Kuskokwim Delta Region*.

(1) Season: April 2–August 31.

(2) Closure: 30–day closure dates to be announced by the Service's Alaska Regional Director or his designee, after consultation with local subsistence users, field biologists, and the Association of Village Council President's Waterfowl Conservation Committee. This 30–day period will occur between June 1 and August 15 of each year. A press release announcing the actual closure dates will be forwarded to regional newspapers and radio and television stations and posted in village post offices and stores.

(3) Special Black Brant and Cackling Goose Season Hunting Closure: From the period when egg laying begins until young birds are fledged. Closure dates to be announced by the Service's Alaska Regional Director or his designee, after consultation with field biologists and the Association of Village Council President's Waterfowl Conservation Committee. A press release announcing the actual closure dates will be forwarded to regional newspapers and radio and television stations and posted in village post offices and stores.

(c) *Bristol Bay Region*.

(1) Season: April 2–June 14 and July 16–August 31 (general season); April 2–July 15 for seabird egg gathering only.

(2) Closure: June 15–July 15 (general season); July 16–August 31 (seabird egg gathering).

(d) *Bering Strait/Norton Sound Region*.

(1) Stebbins/St. Michael Area (Point Romanof to Canal Point):

(i) Season: April 15–June 14 and July 16–August 31.

(ii) Closure: June 15–July 15.

(2) Remainder of the region:

(i) Season: April 2–June 14 and July 16–August 31 for waterfowl; April 2–July 19 and August 21–August 31 for all other birds.

(ii) Closure: June 15–July 15 for waterfowl; July 20–August 20 for all other birds.

(e) *Kodiak Archipelago Region*, except for the Kodiak Island roaded area, which is closed to the harvesting of migratory birds and their eggs. The closed area consists of all lands and waters (including exposed tidelands) east of a line extending from Crag Point in the north to the west end of Saltery Cove in the south and all lands and water south of a line extending from Termination Point along the north side of Cascade Lake extending to Anton Larson Bay. Waters adjacent to the closed area are closed to harvest within 500 feet from the water's edge. The offshore islands are open to harvest.

(1) Season: April 2–June 30 and July 31–August 31 for seabirds; April 2–June 20 and July 22–August 31 for all other birds.

(2) Closure: July 1–July 30 for seabirds; June 21–July 21 for all other birds.

(f) *Northwest Arctic Region.*

(1) Season: April 2–June 9 and August 15–August 31 (hunting in general); waterfowl egg gathering May 20–June 9 only; seabird egg gathering May 20–July 12 only; hunting molting/non-nesting waterfowl July 1–July 31 only.

(2) Closure: June 10–August 14, except for the taking of seabird eggs and molting/non-nesting waterfowl as provided in paragraph (f)(1) of this section.

(g) *North Slope Region.*

(1) Southern Unit (Southwestern North Slope regional boundary east to Peard Bay, everything west of the longitude line 158°30'W and south of the latitude line 70°45'N to the west bank of the Ikpiqpuq River, and everything south of the latitude line 69°45'N between the west bank of the Ikpiqpuq River to the east bank of Sagavinirktok River):

(i) Season: April 2–June 29 and July 30–August 31 for seabirds; April 2–June 19 and July 20–August 31 for all other birds.

(ii) Closure: June 30–July 29 for seabirds; June 20–July 19 for all other birds.

(iii) Special Black Brant Hunting Opening: From June 20–July 5. The open area would consist of the coastline, from mean high water line outward to include open water, from Nokotlek Point east to longitude line 158°30'W. This includes Peard Bay, Kugrua Bay, and Wainwright Inlet, but not the Kuk and Kugrua river drainages.

(2) Northern Unit (At Peard Bay, everything east of the longitude line 158°30'W and north of the latitude line 70°45'N to west bank of the Ikpiqpuq River, and everything north of the latitude line 69°45'N between the west bank of the Ikpiqpuq River to the east bank of Sagavinirktok River):

(i) Season: April 6–June 6 and July 7–August 31 for king and common eiders; April 2–June 15 and July 16–August 31 for all other birds.

(ii) Closure: June 7–July 6 for king and common eiders; June 16–July 15 for all other birds.

(3) Eastern Unit (East of eastern bank of the Sagavinirktok River):

(i) Season: April 2–June 19 and July 20–August 31.

(ii) Closure: June 20–July 19.

(4) All Units: yellow-billed loons. Annually, up to 20 yellow-billed loons total for the region may be inadvertently

entangled in subsistence fishing nets in the North Slope Region and kept for subsistence use. Individuals must report each yellow-billed loon inadvertently entangled while subsistence gill net fishing to the North Slope Borough Department of Wildlife Management by the end of the season.

(5) North Coastal Zone (Cape Thompson north to Point Hope and east along the Arctic Ocean coastline around Point Barrow to Ross Point, including Iko Bay, and 5 miles inland).

(i) Migratory bird hunting is permitted from one-half hour before sunrise until sunset, during August.

(ii) No person may at any time, by any means, or in any manner, possess or have in custody any migratory bird or part thereof, taken in violation of subpart C and D of this part.

(iii) Upon request from a Service law enforcement officer, hunters taking, attempting to take, or transporting migratory birds taken during the subsistence harvest season must present them to the officer for species identification.

(h) *Interior Region.*

(1) Season: April 2–June 14 and July 16–August 31; egg gathering May 1–June 14 only.

(2) Closure: June 15–July 15.

(i) *Upper Copper River Region* (Harvest Area: Units 11 and 13) (Eligible communities: Gulkana, Chitina, Tazlina, Copper Center, Gakona, Mentasta Lake, Chistochina and Cantwell).

(1) Season: April 15–May 26 and June 27–August 31.

(2) Closure: May 27–June 26.

(3) The Copper River Basin communities listed above also documented traditional use harvesting birds in Unit 12, making them eligible to hunt in this unit using the seasons specified in paragraph (h) of this section.

(j) *Gulf of Alaska Region.*

(1) Prince William Sound Area (Harvest area: Unit 6 [D]), (Eligible Chugach communities: Chenega Bay, Tatitlek).

(i) Season: April 2–May 31 and July 1–August 31.

(ii) Closure: June 1–30.

(2) Kachemak Bay Area (Harvest area: Unit 15[C] South of a line connecting the tip of Homer Spit to the mouth of Fox River) (Eligible Chugach Communities: Port Graham, Nanwalek).

(i) Season: April 2–May 31 and July 1–August 31.

(ii) Closure: June 1–30.

(k) *Cook Inlet* (Harvest area: portions of Unit 16[B] as specified below) (Eligible communities: Tyonek only).

That portion of (1) Season: April 2–May 31 Unit 16(B) south of the

Skwentna River and west of the Yentna River That, and August 1–31 portion of Unit 16(B) south of the Beluga River, Beluga Lake, and the Triumvirate Glacier.

(2) Closure: June 1–July 31.

(l) *Southeast Alaska.*

(1) Community of Hoonah (Harvest area: National Forest lands in Icy Strait and Cross Sound, including Middle Pass Rock near the Inian Islands, Table Rock in Cross Sound, and other traditional locations on the coast of Yakobi Island. The land and waters of Glacier Bay National Park remain closed to all subsistence harvesting (50 CFR Part 100.3(a)).

(i) Season: glaucous-winged gull egg gathering only: May 15–June 30.

(ii) Closure: July 1–August 31.

(2) Communities of Craig and Hydaburg (Harvest area: small islands and adjacent shoreline of western Prince of Wales Island from Point Baker to Cape Chacon, but also including Coronation and Warren islands).

(i) Season: glaucous-winged gull egg gathering only: May 15–June 30.

(ii) Closure: July 1–August 31.

(3) Community of Yakutat (Harvest area: Icy Bay (Icy Cape to Point Riou), and coastal lands and islands bordering the Gulf of Alaska from Point Manby southeast to Dry Bay).

(i) Season: glaucous-winged gull egg gathering: May 15–June 30.

(ii) Closure: July 1–August 31.

3. In subpart D, add § 92.32 to read as follows:

§ 92.32 Emergency regulations to protect Steller's eiders.

Upon finding that continuation of these subsistence regulations would pose an imminent threat to the conservation of threatened Steller's eiders (*Polysticta stelleri*), the U.S. Fish and Wildlife Service Alaska Regional Director, in consultation with the Co-management Council, will immediately under § 92.21 take action as is necessary to prevent further take. Regulation changes implemented could range from a temporary closure of duck hunting in a small geographic area to large-scale regional or State-wide long-term closures of all subsistence migratory bird hunting. Such closures or temporary suspensions will remain in effect until the Regional Director, in consultation with the Co-management Council, determines that the potential for additional Steller's eiders to be taken no longer exists.

Dated: November 3, 2009.

Thomas L. Strickland,

Assistant Secretary for Fish and Wildlife and Parks.

Federal Register

Vol. 74, No. 223

Friday, November 20, 2009

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Forest Service

Ochoco National Forest, Lookout Mountain Ranger District; Oregon; Ochoco Summit; OHV Trail EIS

AGENCY: Forest Service, USDA.

ACTION: Notice of Intent to prepare an Environmental Impact Statement.

SUMMARY: The Ochoco National Forest is preparing an Environmental Impact Statement (EIS) to analyze the effects of changing the existing motorized trail system to create and designate a sustainable system of roads, trails and areas open to motor vehicles that will provide legal public access, enhance regulation of unmanaged wheeled motor vehicle travel, protect resources, and decrease conflicts between motorized and non-motorized use on the Ochoco National Forest. Consistent with the Ochoco National Forest Land and Resource Management Plan, as amended, this action is needed to provide to the public a diversity of road and trail opportunities for experiencing a variety of environments and modes of travel.

DATES: Comments concerning the scope of the analysis must be received by December 21, 2009. The draft environmental impact statement is expected to be completed and available for public comment in May 2010. The final environmental impact statement is expected to be completed in August 2010.

ADDRESSES: Send written comments to Ochoco Summit OHV Trail Planning Team, Ochoco National Forest, 3160 NE Third Street, Prineville, Oregon 97754. Alternately, electronic comments may be sent to comments-pacificnorthwest-ochoco@fs.fed.us. Electronic comments must be submitted as part of the actual e-mail message, or as an attachment in plain text (.txt), Microsoft Word (.doc),

rich text format (.rtf), or portable document format (.pdf).

FOR FURTHER INFORMATION CONTACT: Dede Steele, Project Leader, at 3160 NE Third Street, Prineville, Oregon 97754, or at (541) 416-6500, or by e-mail at dsteeler@fs.fed.us.

Responsible Official: The responsible official will be Jeff Walter, Forest Supervisor, Ochoco National Forest, 3160 NE Third Street, Prineville, Oregon 97754.

SUPPLEMENTARY INFORMATION:

Purpose and Need. The Deschutes and Ochoco National Forests are working to complete a Travel Management EIS. If implemented, the two-forest Travel Management EIS would identify specific roads as open for motorized mixed use, and would prohibit off-road travel except where specifically allowed. Opportunities for recreation with off-road vehicles would be reduced. There currently is only one motorized trail in a forested setting on the Ochoco National Forest: The Green Mountain Trail. At just over eight miles, it is not of sufficient length to provide a day of riding to an experienced rider, let alone a weekend of opportunity. As a result, riders are currently venturing off the trail and have created a network of loops. This represents an unauthorized expansion of an undersized trail system. To provide a successful OHV trail system, the system must contain adequate length, diversity, difficulty, loops, alternative routes and other features to provide a quality experience and to keep the use on the designated system.

OHV riders have indicated a desire for additional motorized opportunities other than on mixed use roads. NFS roads are designed primarily for highway-legal vehicles such as passenger cars or log trucks, and are often too wide and too smooth to provide a course with sufficient technical difficulty to keep OHV riders interested and challenged. The intent of providing trails for OHVs is to provide routes with sufficient technical difficulty, diversity of experience and interesting features to keep the riders interested, challenged and engaged with staying on the designated route. The intent of providing mixed use roads is to provide riders with access to a variety of locations on the forest and to provide easy routes for riders who are not

looking for a technically difficult experience.

Proposed Action. The Proposed Action focuses on designating motorized trails and supporting areas, in conjunction with opportunities that would remain on mixed use roads identified in the forest-level Travel Management EIS. The Proposed Action would:

- Designate a system of trails and areas (including staging areas, play areas, riding areas where young riders may be supervised by adults, learner/warm-up loops, picnic and camping areas) by class of vehicle and season of use.
 - Utilize designated open motorized mixed use roads as connectors between trail segments.
 - Designate areas for developed and dispersed camping activities with legal trail access.
 - Implement rehabilitation or restoration activities in previously damaged areas and interconnecting unauthorized or user-created routes to promote recovery, and to prevent confusion about which routes are open and which are not.
 - Establish directional, informational and interpretive signing to: Facilitate proper trail use, safety and enforcement; to provide public information and education; to define trail, riding area, staging area and camp sites locations; to promote recovery of rehabilitation and restoration sites; and to encourage reporting of violations, restoration or maintenance needs.
 - Trails would be designed with width and difficulty appropriate for each intended vehicle type, while roads designated as open in the forest-level Travel Management EIS would not be narrowed to trail standards (*i.e.* designated open roads would remain designated open roads).
- Issues.** Preliminary issues identified include:
- Resource concerns including effects to wildlife, fish, streams, sensitive habitats, forage and weeds.
 - Inadequate quality of experience for off-highway vehicle use on open roads.
 - Retention of non-motorized use experience, potential noise levels.
 - Retention of traditional motorized recreational experience, noise/traffic levels.
 - Concern for increasing off-highway vehicle use on the Forest.

- User conflicts associated with motorized/non-motorized recreation.
- Economic sustainability of road and trail system.
- Monitoring, maintenance and enforcement of appropriate use.
- Potential economic benefits to communities that rely on recreation-tourism.
- Potential impacts to adjacent land owners.
- Potential impacts to livestock and range improvements on permitted allotments.

Comment. Public comments about this proposal are requested in order to assist in identifying issues, determine how to best manage the resources, and to focus the analysis. Comments received to this notice, including names and addresses of those who comment, will be considered part of the public record on this proposed action and will be available for public inspection. Comments submitted anonymously will be accepted and considered; however, those who submit anonymous comments will not have standing to appeal the subsequent decision under 36 CFR parts 215 and 217. Additionally, pursuant to 7 CFR 1.27(d), any person may request the agency to withhold a submission from the public record by showing how the Freedom of Information Act (FOIA) permits such confidentiality. Persons requesting such confidentiality should be aware that, under FOIA, confidentiality may be granted in only very limited circumstances, such as to protect trade secrets. The Forest Service will inform the requester of the agency's decision regarding the request for confidentiality, and where the request is denied, the agency will return the submission and notify the requester that the comments may be resubmitted with or without name and address within a specified number of days.

A draft EIS will be filed with the Environmental Protection Agency (EPA) and available for public review by May, 2010. The EPA will publish a Notice of Availability (NOA) of the draft EIS in the **Federal Register**. The final EIS is scheduled to be available August, 2010.

The comment period on the draft EIS will be 45 days from the date the EPA publishes the notice of availability in the **Federal Register**.

The Forest Service believes, at this early stage, it is important to give reviewers notice of several court rulings related to public participation in the environmental review process. First, reviewers of a draft EIS must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the

reviewer's position and contentions [*Vermont Yankee Nuclear Power Corp. v. NRDC*, 435 U.S. 519, 553 (1978)]. Also, environmental objections that could be raised at the draft EIS stage but that are not raised until after completion of the final EIS may be waived or dismissed by the courts [*City of Angoon v. Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980)]. Because of these court rulings, it is very important that those interested in this proposed action participate by the close of the 45-day comment period so that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them and respond to them in the final EIS.

To assist the Forest Service in identifying and considering issues and concerns on the proposed action, comments on the draft EIS should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the draft EIS of the merits of the alternatives formulated and discussed in the statement. Reviewers may wish to refer to the Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.

In the final EIS, the Forest Service is required to respond to substantive comments received during the comment period for the draft EIS. The Forest Service is the lead agency and the responsible official is the Forest Supervisor, Ochoco National Forest. The responsible official will decide whether and how to change the existing motorized trail system on the Ochoco National Forest. The responsible official will also decide how to mitigate impacts of this action and will determine when and how monitoring of effects will take place.

The Ochoco Summit OHV Trail decision and the reasons for the decision will be documented in the record of decision. That decision will be subject to Forest Service Appeal Regulations (35 CFR Part 215).

Dated: November 12, 2009.

William R. Queen,
District Ranger.

DEPARTMENT OF COMMERCE

International Trade Administration

[A-570-951]

Certain Woven Electric Blankets From the People's Republic of China: Postponement of Preliminary Determination of Antidumping Duty Investigation

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

DATES: *Effective Date:* November 20, 2009.

FOR FURTHER INFORMATION CONTACT: Drew Jackson or Howard Smith, AD/CVD Operations, Office 4, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC, 20230; telephone: (202) 482-4406 or (202) 482-5193, respectively.

SUPPLEMENTARY INFORMATION:

Postponement of Preliminary Determination

On July 20, 2009, the Department of Commerce (the "Department") initiated the antidumping duty investigation of Certain Woven Electric Blankets from the People's Republic of China. See *Certain Woven Electric Blankets From the People's Republic of China: Initiation of Antidumping Duty Investigation*, 74 FR 37001 (July 27, 2009) ("*Initiation Notice*"). The *Initiation Notice* stated that, "{i}n accordance with section 733(b)(1)(A) of the Act, unless postponed, we will make our preliminary determination no later than 140 days after the date of this initiation." Id. at 37004.

On November 5, 2009, the petitioner made a timely request pursuant to 19 CFR 351.205(e) for a 50-day postponement of the preliminary determination in this investigation. The petitioner requested postponement of the preliminary determination because "the number of factors of production is usually high in this case and will require additional time to research and analyze". There are no compelling reasons to deny the petitioner's request. Therefore, the Department is postponing this preliminary determination under section 733 (c) (1)(A) of the Tariff Act of 1930, as amended (the "Act") by 50 days from December 7, 2009 to January 26, 2010. The deadline for the final determination will continue to be 75 days after the date of the preliminary determination, unless extended.

This notice is issued and published pursuant to sections 733(c) (2) and

777(i)(1) of the Act and 19 CFR 351.205(f)(1).

Dated: November 16, 2009.

John M. Andersen,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

International Trade Administration

[A-570-849]

Certain Cut-to-Length Carbon Steel Plate from the People's Republic of China: Notice of Extension of Time Limit for Final Results of Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

EFFECTIVE DATE: November 20, 2009.

FOR FURTHER INFORMATION CONTACT: Demitri Kalogeropoulos, AD/CVD Operations, Office 8, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, DC 20230; telephone: (202) 482-2623.

Background

On August 10, 2009, the Department of Commerce ("Department") published the preliminary results of the administrative review of the antidumping duty order on certain cut-to-length carbon steel plate from the People's Republic of China, covering the period November 1, 2007, through October 31, 2008. See *Certain Cut-to-Length Carbon Steel Plate From the People's Republic of China: Preliminary Results and Partial Rescission of Antidumping Duty Administrative Review*, 74 FR 39921 (August 10, 2009) ("*Preliminary Results*"). The final results are currently due no later than December 8, 2009.

Extension of Time Limits for Final Results

Pursuant to section 751(a)(3)(A) of the Tariff Act of 1930, as amended ("the Act"), the Department shall issue the final results of an administrative review within 120 days after the date on which the preliminary results are published. However, if it is not practicable to complete the review within this time period, section 751(a)(3)(A) of the Act allows the Department to extend the time period to a maximum of 180 days. Completion of the final results of this

review within the 120-day period is not practicable because the Department needs additional time to analyze and address complicated separate rate and affiliation issues for the final results. Therefore, in accordance with section 751(a)(3)(A) of the Act, given the complexity of issues in this case, we are extending the time limit for completion of the final results by 60 days.

An extension of 60 days from the current deadline of December 8, 2009, would result in a new deadline of February 6, 2010. However, since February 6, 2010, falls on a Saturday, a non-business day, the final results will now be due no later than February 8, 2010, the next business day.

This notice is published in accordance with sections 751(a)(3)(A) and 777(i) of the Act.

Dated: November 16, 2009.

John M. Andersen,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

[FR Doc. E9-27935 Filed 11-19-09; 8:45 am]

BILLING CODE 3510-DS-S

International Trade Administration

[A-533-838]

Carbazole Violet Pigment 23 From India: Extension of Time Limit for Preliminary Results of Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

FOR FURTHER INFORMATION CONTACT: Jerrold Freeman or Richard Rimlinger, AD/CVD Operations, Office 5, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, DC, 20230; telephone: (202) 482-0180 or (202) 482-4477, respectively.

SUPPLEMENTARY INFORMATION:

Background

At the request of interested parties, the Department of Commerce (the Department) initiated an administrative review of the antidumping duty order on carbazole violet pigment 23 from India for the period December 1, 2007, through November 30, 2008. See *Initiation of Antidumping and Countervailing Duty Administrative Reviews and Requests for Revocation in Part*, 74 FR 5821 (February 2, 2009). On September 3, 2009, we extended the due date for the completion of the

preliminary results of review by 75 days. See *Carbazole Violet Pigment 23 From India: Extension of Time Limit for Preliminary Results of Antidumping Duty Administrative Review*, 74 FR 45610 (September 3, 2009). The preliminary results of the review are currently due no later than November 16, 2009.

Extension of Time Limit for Preliminary Results

Section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act), requires the Department to make a preliminary determination within 245 days after the last day of the anniversary month of an order for which a review is requested and a final determination within 120 days after the date on which the preliminary determination is published. If it is not practicable to complete the review within these time periods, section 751(a)(3)(A) of the Act allows the Department to extend the time limit for the preliminary determination to a maximum of 365 days after the last day of the anniversary month. See also 19 CFR 351.213(h)(2).

We determine that it is not practicable to complete the preliminary results of this administrative review by the current deadline of November 16, 2009, because we are in the process of analyzing the respondent's recent response to our supplemental questionnaire. Therefore, in accordance with section 751(a)(3)(A) of the Act and 19 CFR 351.213(h)(2), we are extending the time period for issuing the preliminary results of this review by 29 additional days until December 15, 2009. The final results continue to be due 120 days after the publication of the preliminary results.

This notice is published in accordance with sections 751(a)(3)(A) and 777(i)(1) of the Act and 19 CFR 351.213(h)(2).

Dated: November 13, 2009.

John M. Andersen,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

[FR Doc. E9-27934 Filed 11-19-09; 8:45 am]

BILLING CODE 3510-DS-S

DEPARTMENT OF COMMERCE**Foreign-Trade Zones Board**

[Docket 51–2009]

Foreign-Trade Zone 37—Orange County, NY; Application for Expansion and Reorganization Under Alternative Site Framework

An application has been submitted to the Foreign-Trade Zones (FTZ) Board (the Board) by the County of Orange, New York, grantee of FTZ 37, requesting authority to expand the zone and reorganize under the alternative site framework (ASF) adopted by the Board (74 FR 1170, 01/12/09; correction 74 FR 3987, 01/22/09). The ASF is an option for grantees for the establishment or reorganization of general-purpose zones and can permit significantly greater flexibility in the designation of new “usage-driven” FTZ sites for operators/users located within a grantee’s “service area” in the context of the Board’s standard 2,000-acre activation limit for a general-purpose zone project. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a-81u), and the regulations of the Board (15 CFR part 400). It was formally filed on November 12, 2009.

The grantee’s proposed service area under the ASF would be Orange County, New York. If approved, the grantee would be able to serve sites throughout the service area based on companies’ needs for FTZ designation. The proposed service area is adjacent to or within the New York/Newark Customs and Border Protection port of entry.

FTZ 37 was approved by the Board on May 4, 1978 (Board Order 130, 43 FR 20526, 5/12/1978) and expanded on July 9, 1999 (Board Order 1044, 64 FR 38887, 7/20/1999). The applicant is requesting to include its current sites 3 and 7 as “magnet sites”. The applicant proposes that Site 3 be exempt from “sunset” time limits that otherwise apply to sites under the ASF. The applicant is requesting removal of sites 1, 2 and 5. Sites 4 and 6 have lapsed. The applicant is also requesting approval of the following initial “usage-driven” site: *Proposed Site 8* (36 acres)—within the Chester Industrial Park, 29 Elizabeth Drive, Chester, NY.

In accordance with the Board’s regulations, Maureen Hinman of the FTZ staff is designated examiner to evaluate and analyze the facts and information presented in the application and case record and to report findings and recommendations to the Board.

Public comment is invited from interested parties. Submissions (original and 3 copies) shall be addressed to the Board’s Executive Secretary at the address listed below. The closing period for their receipt is January 19, 2010. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period (to February 3, 2010).

A copy of the application will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 2111, U.S. Department of Commerce, 1401 Constitution Avenue, NW., Washington, DC 20230–0002, and in the “Reading Room” section of the Board’s Web site, which is accessible via <http://www.trade.gov/ftz>. For further information, contact Maureen Hinman at maureen.hinman@trade.gov or (202) 482–0627.

Dated: November 12, 2009.

Andrew McGilvray,
Executive Secretary.

[FR Doc. E9–27931 Filed 11–19–09; 8:45 am]

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE**International Trade Administration**

[C–489–502]

Certain Welded Carbon Steel Standard Pipe from Turkey: Extension of Time Limit for Preliminary Results of Countervailing Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

EFFECTIVE DATE: November 20, 2009.

FOR FURTHER INFORMATION CONTACT: Kristen Johnson, AD/CVD Operations, Office 3, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–4793.

SUPPLEMENTARY INFORMATION:**Background Information**

On April 27, 2009, the U.S. Department of Commerce (the Department) published a notice of initiation of the administrative review of the countervailing duty order on certain welded carbon steel standard pipe from Turkey covering the period of review January 1, 2008, through December 31, 2008. See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 74 FR 19042 (April 27, 2009).

The preliminary results are currently due no later than December 1, 2009.

Extension of Time Limit for Preliminary Results

Section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act), requires the Department to make a preliminary determination within 245 days after the last day of the anniversary month of an order or finding for which a review is requested. Section 751(a)(3)(A) of the Act further states that if it is not practicable to complete the review within the time period specified, the administering authority may extend the 245-day period to issue its preliminary results by up to 120 days.

The respondents under review are Borusan Mannesmann Boru Sanayi ve Ticaret A.S., Borusan Istikbal Ticaret T.A.S., Tosiya dis Ticaret A.S., Toscelik Profil ve Sac Endustrisi A.S. and the Government of Turkey. In this review, there are 12 programs and new subsidies allegations, which the Department continues to examine. As such, we have determined that it is not practicable to complete the preliminary results of this review within the 245-day period. Therefore, in accordance with section 751(a)(3)(A) of the Act, we are extending the time period for issuing the preliminary results of the review by 120 days. The preliminary results are now due no later than March 31, 2010. The final results continue to be due 120 days after publication of the preliminary results.

This notice is issued and published in accordance with sections 751(a)(3)(A) and 777(i)(1) of the Act.

Dated: November 13, 2009.

John M. Andersen,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

BILLING CODE 3510–DS–S

DEPARTMENT OF COMMERCE**International Trade Administration**

[C–580–851]

Dynamic Random Access Memory Semiconductors from the Republic of Korea: Final Results of Countervailing Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce

SUMMARY: The Department of Commerce has completed an administrative review of the countervailing duty order on dynamic random access memory semiconductors from the Republic of

Korea for the period January 1, 2007, through December 31, 2007. We find that Hynix Semiconductor, Inc. received countervailable subsidies during the period of review, which result in a de minimis subsidy rate.

EFFECTIVE DATE: November 20, 2009.

FOR FURTHER INFORMATION CONTACT: David Neubacher or Shane Subler, Office of AD/CVD Operations, Office 1, Import Administration, International Trade Administration, U.S. Department of Commerce, Room 3069, 14th Street and Constitution Avenue, NW, Washington, DC 20230; telephone: (202) 482-5823 and (202) 482-0189, respectively.

SUPPLEMENTARY INFORMATION:

Background

On August 4, 2009, we published the *Preliminary Results* of the review. See *Dynamic Random Access Memory Semiconductors from the Republic of Korea: Preliminary Results of Countervailing Duty Administrative Review*, 74 FR 38579 (August 4, 2009) (“Preliminary Results”). No interested parties requested a hearing or submitted briefs.

Scope of the Order

The products covered by the order are dynamic random access memory semiconductors (“DRAMs”) from the Republic of Korea (“ROK”), whether assembled or unassembled. Assembled DRAMs include all package types. Unassembled DRAMs include processed wafers, uncut die, and cut die. Processed wafers fabricated in the ROK, but assembled into finished semiconductors outside the ROK are also included in the scope. Processed wafers fabricated outside the ROK and assembled into finished semiconductors in the ROK are not included in the scope.

The scope of the order additionally includes memory modules containing DRAMs from the ROK. A memory module is a collection of DRAMs, the sole function of which is memory. Memory modules include single in-line processing modules, single in-line memory modules, dual in-line memory modules, small outline dual in-line memory modules, Rambus in-line memory modules, and memory cards or other collections of DRAMs, whether unmounted or mounted on a circuit board. Modules that contain other parts that are needed to support the function of memory are covered. Only those modules that contain additional items which alter the function of the module to something other than memory, such as video graphics adapter boards and

cards, are not included in the scope. The order also covers future DRAMs module types.

The scope of the order additionally includes, but is not limited to, video random access memory and synchronous graphics random access memory, as well as various types of DRAMs, including fast page-mode, extended data-out, burst extended data-out, synchronous dynamic RAM, Rambus DRAM, and Double Data Rate DRAM. The scope also includes any future density, packaging, or assembling of DRAMs. Also included in the scope of the order are removable memory modules placed on motherboards, with or without a central processing unit, unless the importer of the motherboards certifies with U.S. Customs and Border Protection (“CBP”) that neither it, nor a party related to it or under contract to it, will remove the modules from the motherboards after importation. The scope of the order does not include DRAMs or memory modules that are re-imported for repair or replacement.

The DRAMs subject to the order are currently classifiable under subheadings 8542.21.8005, 8542.21.8020 through 8542.21.8030, and 8542.32.0001 through 8542.32.0023 of the Harmonized Tariff Schedule of the United States (“HTSUS”). The memory modules containing DRAMs from the ROK, described above, are currently classifiable under subheadings 8473.30.1040, 8473.30.1080, 8473.30.1140, and 8473.30.1180 of the HTSUS. Removable memory modules placed on motherboards are classifiable under subheadings 8443.99.2500, 8443.99.2550, 8471.50.0085, 8471.50.0150, 8517.30.5000, 8517.50.1000, 8517.50.5000, 8517.50.9000, 8517.61.0000, 8517.62.0010, 8517.62.0050, 8517.69.0000, 8517.70.0000, 8517.90.3400, 8517.90.3600, 8517.90.3800, 8517.90.4400, 8542.21.8005, 8542.21.8020, 8542.21.8021, 8542.21.8022, 8542.21.8023, 8542.21.8024, 8542.21.8025, 8542.21.8026, 8542.21.8027, 8542.21.8028, 8542.21.8029, 8542.21.8030, 8542.31.0000, 8542.33.0000, 8542.39.0000, 8543.89.9300, and 8543.89.9600 of the HTSUS. Although the HTSUS subheadings are provided for convenience and customs purposes, the Department’s written description of the scope of this order remains dispositive.

Scope Rulings

On December 29, 2004, the Department received a request from Cisco Systems, Inc., to determine

whether removable memory modules placed on motherboards that are imported for repair or refurbishment are within the scope of the order. See *Notice of Countervailing Duty Order: Dynamic Random Access Memory Semiconductors from the Republic of Korea*, 68 FR 47546 (August 11, 2003) (“CVD Order”). The Department initiated a scope inquiry pursuant to 19 CFR 351.225(e) on February 4, 2005. On January 12, 2006, the Department issued a final scope ruling, finding that removable memory modules placed on motherboards that are imported for repair or refurbishment are not within the scope of the CVD Order provided that the importer certifies that it will destroy any memory modules that are removed for repair or refurbishment. See Memorandum from Stephen J. Claeys to David M. Spooner, regarding Final Scope Ruling, Countervailing Duty Order on DRAMs from the Republic of Korea (January 12, 2006).

Period of Review

The period for which we are measuring subsidies, *i.e.*, the period of review (“POR”), is January 1, 2007, through December 31, 2007.

Final Results of Review

In accordance with 19 CFR 351.221(b)(4)(i), in the *Preliminary Results* we calculated an individual subsidy rate for Hynix Semiconductor, Inc. (“Hynix”), the producer/exporter covered by this administrative review. Neither the petitioner, Micron Technology, Inc., nor the respondent commented on the *Preliminary Results*, and we find that no changes were warranted.

Listed below are the programs we examined in the review and our findings with respect to each of these programs. For a complete analysis of the programs found to be countervailable, not countervailable, and terminated, see *Preliminary Results*.

- I. Programs Determined to Confer Subsidies During the POR
 - A. GOK Entrustment or Direction Prior to 2004
 - B. Operation G-7/HAN Program
 - C. 21st Century Frontier R&D Program
 - D. Import Duty Reduction Program for Certain Factory Automation Items
 - E. Import-Export Bank of Korea Import Financing
- II. Programs Found Not to Have Been Used or Provided No Benefits During the POR
 - A. Short-Term Export Financing
 - B. Reserve for Research and Human Resources Development (formerly Technological Development Reserve) (Article 9 of RSTA /

- formerly, Article 8 of TERCL)
 - C. Tax Credit for Investment in Facilities for Productivity Enhancement (Article 24 of RSTA / Article 25 of TERCL)
 - D. Tax Credit for Investment in Facilities for Special Purposes (Article 25 of RSTA)
 - E. Reserve for Overseas Market Development (formerly, Article 17 of TERCL)
 - F. Reserve for Export Loss (formerly, Article 16 of TERCL)
 - G. Tax Exemption for Foreign Technicians (Article 18 of RSTA)
 - H. Reduction of Tax Regarding the Movement of a Factory That Has Been Operated for More Than Five Years (Article 71 of RSTA)
 - I. Tax Reductions or Exemption on Foreign Investments under Article 9 of the Foreign Investment Promotion Act ("FIPA")/ FIPA (formerly, Foreign Capital Inducement Law)
 - J. Duty Drawback on Non-Physically Incorporated Items and Excessive Loss Rates
 - K. Export Insurance
 - L. Electricity Discounts Under the RLA Program
 - M. Import Duty Reduction for Cutting Edge Products
 - N. System IC 2010 Project
- The calculations will be disclosed to the interested parties in accordance with 19 CFR 351.224(b).

We determine that the total estimated net countervailable subsidy rate for Hynix for calendar year 2007 is 0.06 percent *ad valorem*, which is *de minimis* in accordance with 19 CFR 351.106(c)(1). The Department will instruct CBP to liquidate shipments of DRAMS by Hynix entered or withdrawn from warehouse, for consumption from January 1, 2007, through December 31, 2007, without regard to countervailing duties. See 19 CFR 351.106(c)(1). We intend to issue these instructions 15 days after publication of these final results of review.

On October 3, 2008, the Department published a **Federal Register** notice that, *inter alia*, revoked this order, effective August 11, 2008. See *Dynamic Random Access Memory Semiconductors From the Republic of Korea: Final Results of Sunset Review and Revocation of Order*, 73 FR 57594 (October 3, 2008). As a result, CBP is no longer suspending liquidation for entries of subject merchandise occurring after the revocation. Therefore, there is no need to issue new cash deposit instructions for these final results of review.

This notice serves as a reminder to parties subject to administrative

protective order ("APO") of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

We are issuing and publishing these results in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: November 13, 2009.

Ronald K. Lorentzen,

Acting Assistant Secretary for Import Administration.

BILLING CODE 3510-DS-S

DEPARTMENT OF COMMERCE

Patent and Trademark Office

[Docket No. PTO-P-2009-0052]

Grant of Interim Extension of the Term of U.S. Patent No. 5,407,914; SURFAXIN® (lucinactant)

AGENCY: United States Patent and Trademark Office.

ACTION: Notice of interim patent term extension.

SUMMARY: The United States Patent and Trademark Office has issued an order granting interim extension under 35 U.S.C. 156(d)(5) for a one-year interim extension of the term of U.S. Patent No. 5,407,914.

FOR FURTHER INFORMATION CONTACT:

Mary C. Till by telephone at (571) 272-7755; by mail marked to her attention and addressed to the Commissioner for Patents, Mail Stop Hatch-Waxman PTE, P.O. Box 1450, Alexandria, VA 22313-1450; by fax marked to her attention at (571) 273-7755, or by e-mail to Mary.Till@uspto.gov.

SUPPLEMENTARY INFORMATION: Section 156 of Title 35, United States Code, generally provides that the term of a patent may be extended for a period of up to five years if the patent claims a product, or a method of making or using a product, that has been subject to certain defined regulatory review, and that the patent may be extended for interim periods of up to one year if the regulatory review is anticipated to extend beyond the expiration date of the patent.

On October 6, 2009, Discovery Laboratories Inc., on behalf of patent owner Scripps Research Institute, timely filed an application under 35 U.S.C.

156(d)(5) for an interim extension of the term of U.S. Patent No. 5,407,914. The patent claims the human drug product, SURFAXIN® (lucinactant) and a method of using SURFAXIN® (lucinactant). The application indicates that a New Drug Application, NDA No. 21-746, for the human drug product SURFAXIN® (lucinactant) has been filed, and is currently undergoing regulatory review before the Food and Drug Administration for permission to market or use the product commercially.

Review of the application indicates that except for permission to market or use the product commercially, the subject patent would be eligible for an extension of the patent term under 35 U.S.C. 156, and that the patent should be extended for one year as required by 35 U.S.C. 156(d)(5)(B). Because it is apparent that the regulatory review period will continue beyond the original expiration date of the patent November 17, 2009, interim extension of the patent term under 35 U.S.C. 156(d)(5) is appropriate.

An interim extension under 35 U.S.C. 156(d)(5) of the term of U.S. Patent No. 5,407,914 is granted for a period of one year from the original expiration date of the patent, *i.e.*, until November 17, 2010.

Dated: November 16, 2009.

David J. Kappos,

Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office.

[FR Doc. E9-27903 Filed 11-19-09; 8:45 am]

BILLING CODE 3510-16-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XT03

South Atlantic Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meetings.

SUMMARY: The South Atlantic Fishery Management Council (Council) will hold meetings of its Scientific and Statistical Committee (SSC), Spiny Lobster Committee, Law Enforcement Committee, a joint meeting of its Executive and Finance Committees, Protected Resources Committee, Ecosystem-Based Management Committee, Personnel Committee (Closed Session), Dolphin/Wahoo Committee, Mackerel Committee,

Snapper Grouper Committee, and a meeting of the full Council. The Council will hold an informal public question and answer session with the NMFS Regional Administrator and Council Chairman as well as open public comment periods relative to agenda items. See **SUPPLEMENTARY INFORMATION** for additional details.

DATES: The meeting will be held December 6 - 11, 2009. See

SUPPLEMENTARY INFORMATION for specific dates and times.

ADDRESSES: The meeting will be held at the Sheraton Atlantic Beach Oceanfront Hotel, 2717 W. Fort Macon Road, Atlantic Beach, NC 28512; telephone: (800) 624-8875 or (252) 240-1155; fax: (252) 240-1452. Copies of documents are available from Kim Iverson, Public Information Officer, South Atlantic Fishery Management Council, 4055 Faber Place Drive, Suite 201, North Charleston, SC 29405.

FOR FURTHER INFORMATION CONTACT: Kim Iverson, Public Information Officer; telephone: (843) 571-4366 or toll free at (866) SAFMC-10; fax: (843) 769-4520; email: kim.iverson@safmc.net.

SUPPLEMENTARY INFORMATION:

Meeting Dates:

1. Scientific and Statistical Committee (SSC) Meeting: December 6, 2009, 3 p.m. until 6 p.m., December 7, 2009, 8 a.m. until 5:30 p.m., and December 8, 2009, 8 a.m. until 3 p.m.

The SSC will review and provide recommendations as appropriate on administrative and planning documents relative to the Southeast Data, Assessment, and Review (SEDAR) stock assessment program, and review and finalize terms of reference for SEDAR assessments as appropriate. The Committee will receive updates on the status of Amendments 15B and 16 to the Snapper Grouper Fishery Management Plan (FMP), the Fishery Ecosystem Plan (FEP), and Comprehensive Ecosystem-Based Amendment 1. The SSC will review and provide recommendations as appropriate relative to draft Amendment 18 to the Coastal Migratory Pelagics (mackerel) FMP to address requirements of the reauthorized Magnuson-Stevens Fisheries Conservation and Management Act, Amendments 17A, 17B, 18, and 20 to the Snapper Grouper FMP, Amendment 5 to the Golden Crab FMP, and draft Amendment 10 to the Joint Gulf of Mexico and South Atlantic Spiny Lobster FMP. The SSC will also review and provide recommendations as appropriate on the Comprehensive Annual Catch Limit (ACL) Amendment and Comprehensive Ecosystem-Based Amendment (CE-BA) 2.

Amendment 17A to the Snapper Grouper FMP addresses requirements of the reauthorized Magnuson-Stevens Act to end overfishing and rebuild the red snapper stock in the South Atlantic and establishes a monitoring program, and Amendment 17B addresses requirements of the Act regarding nine other species in the snapper grouper fishery management complex currently listed as undergoing overfishing. Amendment 18 to the Snapper Grouper FMP addresses several management measures relative to the management complex, including expansion of the management unit northward of the Council's current jurisdiction, limiting participation in the commercial fishery for golden tilefish, modifications of management for the black sea bass pot fishery, allocations, changes to the golden tilefish fishing year, improvements to fisheries statistics, and designation of Essential Fish Habitat in northern areas. Amendment 20 to the Snapper Grouper FMP addresses changes to the Wreckfish commercial fishery Individual Transferable Quota (ITQ) program. Amendment 5 to the Golden Crab FMP addresses requirements of the reauthorized Magnuson-Stevens Act to establish ACLs and Accountability Measures for the golden crab fishery. The draft joint Spiny Lobster Amendment 10 currently includes measures addressing tailing permits, the use of "shorts" or undersized lobster in the fishery, and management authority issues. The Comprehensive ACL Amendment addresses requirements to establish ACLs and AMs for all species under the Council's jurisdiction not currently listed as undergoing overfishing as required by the reauthorized Magnuson-Stevens Act. Comprehensive Ecosystem-Based Amendment 2 addresses management measures relative to the harvest of octocorals.

2. Spiny Lobster Committee Meeting: December 7, 2009, 1 p.m. until 2 p.m.

The Spiny Lobster Committee will provide recommendations for the appointment of individuals to serve on the SEDAR stock assessment update for spiny lobster and terms of reference. The Committee will also review results of the Gulf of Mexico Fishery Management Council's scoping meetings and actions, review NOAA Fisheries Service's Biological Opinion, and provide guidance to staff regarding draft Amendment 10 to the Spiny Lobster FMP.

3. Law Enforcement Committee: December 7, 2009, 2 p.m. until 3 p.m.

The Law Enforcement Committee will discuss criteria for a Law Enforcement Officer of the Year award and provide recommendations, receive briefings on the Surveillance and Enforcement of Remote Marine Protected Areas (SERMA) Workshop and a Coral Program FY 2010 proposal, and discuss alternatives related to mackerel nets and provide recommendations as appropriate.

4. Joint Executive and Finance Committees Meeting: December 7, 2009, 3 p.m. until 4 p.m.

The Committees will review the status of the Calendar Year (CY) 2009 budget, the FMP/Amendment timelines, and the Congressional 2010 budget. The Committees will also review the Council's proposed CY 2010 budget.

5. Protected Resources Committee Meeting: December 7, 2009, 4 p.m. until 5:30 p.m.

The Protected Resources Committee will receive presentations regarding the bycatch of shortnose sturgeon, and an update from NOAA Fisheries Southeast Regional Office regarding the following: Petition to list shortnose sturgeon under the Endangered Species Act (ESA); sea turtle take in the large mesh flounder fishery in NC; Biological Opinion for the shrimp fishery due to the incidental take of smalltooth sawfish; and the Center for Biological Diversity's petition to list 80 species of coral under the ESA.

6. Ecosystem-Based Management Committee Meeting: December 8, 2009, 8:30 a.m. until 11 a.m.

The Ecosystem-Based Management Committee will receive an overview of changes to Comprehensive Ecosystem-Based Amendment 2 options paper, the SSC's recommendations on CE-BA 2, a briefing on Florida's Marine Life regulations, and provide guidance to staff regarding CE-BA 2. The Committee will also receive updates from the SERMA Workshop, Coral Reef Conservation Program FY2010 proposal, and Ecosystem Coordination Activities.

7. Dolphin Wahoo Committee Meeting: December 8, 2009, 11 a.m. until 12 noon

The Dolphin Wahoo Committee will review SSC input on the draft ACL Amendment and provide recommendations to staff.

8. Mackerel Committee Meeting: December 8, 2009, 1:30 p.m. until 2:30 p.m.

The Mackerel Committee will review the results from the Gulf of Mexico

Fishery Management Council's public scoping meetings and the Amendment 18 decision document addressing requirements of the Magnuson-Stevens Act, discuss alternatives to address cutting mackerel nets/ trip limits, and discuss legal issues relative to the State of South Carolina regulating dolphin prior to federal regulations.

9. Snapper Grouper Committee Meeting: December 8, 2009, 2:30 p.m. until 5 p.m., December 9, 2009, 8:30 a.m. until 5:30 p.m., and December 10, 2009, 9:30 a.m. until 12 noon

The Snapper Grouper Committee will receive updates on Oculina Bank outreach, status of the Red Snapper Interim Rule request, and a presentation on red snapper rebuilding projections. The Committee will also receive a report relative to snapper grouper management from the SSC. The Committee will review management alternatives in Amendment 17A and modify the document as necessary, including the selection of preferred alternatives. The Committee will review Amendment 17B and the Proposed Rule, modify the document as necessary and develop recommendations on submission of the amendment to the Secretary of Commerce. The Committee will review Amendments 18 and 20, modify the documents as necessary and provide guidance as appropriate. The Committee will review the Comprehensive ACL Amendment alternatives, modify the document as necessary and provide guidance to staff. The Committee will also recommend participants and terms of reference for the black sea bass 2010 SEDAR stock assessment update.

NOTE: There will be an informal public question and answer session with NOAA Fisheries Services' Regional Administrator and the Council Chairman, on December 9, 2009 beginning at 5:30 p.m.

10. Personnel Committee Meeting: December 10, 2009, 8:30 a.m. until 9:30 a.m. (CLOSED SESSION)

The Personnel Committee will meet in a closed session to discuss personnel issues.

11. Council Session: December 10, 2009, 1:30 p.m. until 6 p.m. and December 11, 2009, 8:30 a.m. until 12 noon

Council Session: December 10, 1:30 p.m. until 6 p.m.

From 1:30 p.m. - 1:45 p.m., the Council will call the meeting to order, adopt the agenda, and approve the September 2009 meeting minutes.

From 1:45 p.m. - 2 p.m., the Council will receive a report from the SSC.

NOTE: Interested persons will be provided the opportunity to present oral or written statements regarding matters on the Council agenda beginning at 2 p.m. on Thursday, December 10, 2009. The amount of time provided to individuals will be determined by the Chairman based on the number of individuals wishing to comment.

The Council will also take public comment regarding Amendment 17B to the Snapper Grouper FMP during this time period.

From 4:30 p.m. - 5:15 p.m., the Council will receive a report from the Snapper Grouper Committee, consider recommendations, and take action as appropriate.

From 5:15 p.m. - 5:30 p.m., the Council will receive a report from the SSC Selection Committee.

From 5:30 p.m. - 5:45 p.m., the Council will receive a report from the Spiny Lobster Committee, consider recommendations and take action as appropriate.

From 5:45 p.m. - 6 p.m., the Council will receive a report from the Law Enforcement Committee, consider recommendations and take action as appropriate.

Council Session: December 11, 2009, 8:30 a.m. until 12 noon

From 8:30 a.m. - 9 a.m., the Council will receive legal briefing on litigation (CLOSED SESSION)

From 9 a.m. - 9:15 a.m., the Council will receive a report from the Joint Executive Finance Committee, consider recommendations, and take action as appropriate.

From 9:15 a.m. - 9:30 a.m., the Council will receive a report from the Protected Resources Committee, consider recommendations and take action as appropriate.

From 9:30 a.m. - 9:45 a.m., the Council will receive a report from the Ecosystem-Based Management Committee, consider recommendations and take action as appropriate.

From 9:45 a.m. - 10 a.m., the Council will receive a report from the Dolphin Wahoo Committee, consider recommendations and take action as appropriate.

From 10 a.m. - 10:15 a.m., the Council will receive a report from the Mackerel Committee, consider recommendations and take action as appropriate.

From 10:15 a.m. - 10:30 a.m., the Council will review and develop recommendations on Experimental Fishing Permits as necessary.

From 10:30 a.m. - 12 noon, the Council will receive a status report from NOAA Fisheries Service on commercial quotas by fishing year for: Atlantic king

mackerel, Gulf king mackerel (eastern zone), Atlantic Spanish mackerel, snowy grouper, golden tilefish, wreckfish, greater amberjack, South Atlantic Octocorals and dolphin (soft quota ratios). The Council will also receive a status report on Snapper Grouper Amendment 13C quotas, status of data collection programs to address the black sea bass stock assessment update, and the status of recreational catches versus allocations for Atlantic king mackerel, Atlantic Spanish mackerel, black sea bass, golden tilefish, snowy grouper, red pogy, greater amberjack, and dolphin. The Council will also receive agency and liaison reports, discuss other business, and upcoming meetings.

Documents regarding these issues are available from the Council office (see **ADDRESSES**).

Although non-emergency issues not contained in this agenda may come before this Council for discussion, those issues may not be the subjects of formal final Council action during this meeting. Council action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305 (c) of the Magnuson-Stevens Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Except for advertised (scheduled) public hearings and public comment, the times and sequence specified on this agenda are subject to change.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to the Council office (see **ADDRESSES**) by December 4, 2009.

Dated: November 17, 2009.

Tracey L. Thompson,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Ball Bearings and Parts Thereof From France: Preliminary Results of Changed-Circumstances Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce is conducting a changed-circumstances review of the antidumping duty order on ball bearings and parts thereof from France pursuant to section 751(b) of the Tariff Act of 1930, as amended. We preliminarily determine that, after acquisition by NTN Corporation, SNR Roulements S.A. is the successor-in-interest to pre-acquisition SNR Roulements S.A. Interested parties are invited to comment on these preliminary results.

DATES: *Effective Date:* November 20, 2009.

FOR FURTHER INFORMATION CONTACT: Thomas Schauer or Richard Rimlinger, AD/CVD Operations, Office 5, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; (202) 482-0410 or (202) 482-4477, respectively.

SUPPLEMENTARY INFORMATION:

Background

On August 21, 2009, SNR Roulements S.A. (SNR) requested that, because NTN Corporation (NTN) acquired a 51-percent interest in SNR, the Department of Commerce (the Department) initiate a changed-circumstances review to determine whether post-acquisition SNR is the successor-in-interest to pre-acquisition SNR.

On September 18, 2009, we initiated a changed-circumstances review. See *Ball Bearings and Parts Thereof From France: Initiation of Antidumping Duty Changed-Circumstances Review*, 74 FR 47920 (September 18, 2009) (*CCR Initiation*).

On September 22, 2009, we sent a questionnaire to SNR. After granting SNR an extension of the deadline, SNR submitted a response on October 23, 2009.

Since the initiation of the review, no other interested party has submitted comments.

Scope of the Order

The products covered by the order are ball bearings and parts thereof. These products include all antifriction bearings that employ balls as the rolling element. Imports of these products are classified under the following categories: Antifriction balls, ball bearings with integral shafts, ball bearings (including radial ball bearings) and parts thereof, and housed or mounted ball bearing units and parts thereof.

Imports of these products are classified under the following Harmonized Tariff Schedule of the

United States (HTSUS) subheadings: 3926.90.45, 4016.93.10, 4016.93.50, 6909.19.50.10, 8431.20.00, 8431.39.00.10, 8482.10.10, 8482.10.50, 8482.80.00, 8482.91.00, 8482.99.05, 8482.99.35, 8482.99.25.80, 8482.99.65.95, 8483.20.40, 8483.20.80, 8483.30.40, 8483.30.80, 8483.50.90, 8483.90.20, 8483.90.30, 8483.90.70, 8708.50.50, 8708.60.50, 8708.60.80, 8708.93.30, 8708.93.60.00, 8708.99.06, 8708.99.31.00, 8708.99.40.00, 8708.99.49.60, 8708.99.58, 8708.99.80.15, 8708.99.80.80, 8803.10.00, 8803.20.00, 8803.30.00, 8803.90.30, 8803.90.90.

As a result of changes to the HTSUS, effective February 2, 2007, the subject merchandise is also classifiable under the following additional HTSUS item numbers: 8708.30.50.90, 8708.40.75, 8708.50.79.00, 8708.50.89.00, 8708.50.91.50, 8708.50.99.00, 8708.70.60.60, 8708.80.65.90, 8708.93.75.00, 8708.94.75, 8708.95.20.00, 8708.99.55.00, 8708.99.68, 8708.99.81.80.

Although the HTSUS item numbers above are provided for convenience and customs purposes, the written description of the scope of the order remains dispositive.

Preliminary Results

In conducting this changed-circumstances review pursuant to section 751(b) of the Tariff Act of 1930, as amended (the Act), the Department has conducted a successor-in-interest analysis. In making a successor-in-interest determination, the Department examines several factors including, but not limited to, changes in the following: (1) Management; (2) production facilities; (3) supplier relationships; (4) customer base. See, e.g., *Brake Rotors From the People's Republic of China: Final Results of Changed Circumstances Antidumping Duty Administrative Review*, 70 FR 69941 (November 18, 2005), and *Notice of Final Results of Changed Circumstances Antidumping Duty Administrative Review: Polychloroprene Rubber From Japan*, 67 FR 58 (January 2, 2002). While no single factor or combination of factors will necessarily provide a dispositive indication of a successor-in-interest relationship, the Department will generally consider the new company to be the successor to the previous company if the new company's resulting operation is not materially dissimilar to that of its predecessor. See *Fresh and Chilled Atlantic Salmon From Norway: Final Results of Changed Circumstances Antidumping Duty Administrative Review*, 64 FR 9979 (March 1, 1999), and *Industrial Phosphoric Acid From*

Israel; Final Results of Antidumping Duty Changed Circumstances Review, 59 FR 6944 (February 14, 1994).

Thus, if the evidence demonstrates that, with respect to the production and sale of subject merchandise, the new company operates as the same business entity as the former company, the Department will accord the new company the same antidumping treatment as its predecessor.

We preliminarily determine that post-acquisition SNR is the successor-in-interest to pre-acquisition SNR. In its August 21, 2009, and October 23, 2009, submissions, SNR provided evidence supporting its claim to be the successor-in-interest to pre-acquisition SNR. Specifically, SNR demonstrated that there were no changes in corporate structure or product mix and only minor changes in management, production facilities,¹ supplier base, or customer base. Moreover, NTN stated that it does not plan to make any significant changes to the pre-acquisition SNR production facilities, management personnel, sources of supply, and customer bases. NTN stated further that it intends to maintain, market, and promote the NTN and SNR brands separately in all markets and for all applications.

In summary, post-acquisition SNR has presented evidence to establish a *prima facie* case of its successorship status. The record indicates that the acquisition of SNR by NTN has not changed the operations of the company in a meaningful way. SNR's management, production facilities, supplier relationships, and customer base are substantially unchanged from their status or circumstances prior to the acquisition. The record evidence demonstrates that the new entity operates essentially in the same manner as the predecessor company. Consequently, we preliminarily determine that post-acquisition SNR should be assigned the same antidumping-duty treatment as pre-acquisition SNR.

Public Comment

Case briefs from interested parties may be submitted not later than 30 days after the date of publication of this notice of preliminary results of changed-circumstances review. Rebuttal briefs from interested parties, limited to the issues raised in the case briefs, may be submitted not later than five days after the time limit for filing the case briefs or comments. Parties who submit case briefs or rebuttal briefs in this

¹ The only changes in production facilities were minor changes in production capacity.

proceeding are requested to submit with each argument a statement of the issue, a summary of the arguments not exceeding five pages, and a table of statutes, regulations, and cases cited.

Interested parties who wish to request a hearing or to participate in a hearing if a hearing is requested must submit a written request to the Assistant Secretary for Import Administration within 30 days of the date of publication of this notice. See 19 CFR 351.310(c). Such requests should contain the following information: (1) The party's name, address, and telephone number; (2) the number of participants; (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those discussed in the case briefs. If requested, any hearing will be held two days after the scheduled date for submission of rebuttal briefs.

The Department will publish in the **Federal Register** a notice of the final results of this changed-circumstances review, including the results of its analysis of issues raised in any written briefs or at the hearing if requested.

As indicated in the *CCR Initiation*, during the course of this changed-circumstances review we will not change any cash-deposit requirements on entries of merchandise subject to the antidumping duty order unless a change is determined to be warranted pursuant to the final results of this changed-circumstances review.

We are issuing and publishing these preliminary results and notice in accordance with sections 751(b) and 777(i)(1) of the Act and 19 CFR 351.216.

Dated: November 16, 2009.

John M. Andersen,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

CONSUMER PRODUCT SAFETY COMMISSION

Sunshine Act Meetings

TIME AND DATE: Wednesday, November 18, 2009, 10 a.m.–12 noon.

PLACE: Hearing Room 420, Bethesda Towers, 4330 East West Highway, Bethesda, Maryland.

STATUS: Closed to the Public.

Matter To Be Considered

Compliance Weekly and Monthly Reports—Commission Briefing

The staff will brief the Commission on various compliance matters.

For a recorded message containing the latest agenda information, call (301) 504-7948.

CONTACT PERSON FOR MORE INFORMATION:

Todd A. Stevenson, Office of the Secretary, U.S. Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814 (301) 504-7923.

Dated: November 13, 2009.

Todd A. Stevenson,

Secretary.

BILLING CODE 6355-01-M

DEPARTMENT OF DEFENSE

Department of the Navy

Notice of Availability of Record of Decision for the Swimmer Interdiction Security System

AGENCY: Department of the Navy, DoD.

ACTION: Notice.

SUMMARY: The Department of the Navy (Navy), after carefully weighing the operational and environmental consequences of the proposed action, announces its decision to construct and operate a Swimmer Interdiction Security System at Naval Base Kitsap-Bangor, Washington to find, identify, and interdict surface and underwater intruders for engagement by harbor security forces, in furtherance of the Navy's statutory obligations under Title 10 of the United States Code governing the roles and responsibilities of the Navy. In its decision, the Navy considered applicable laws and executive orders, including an analysis of the effects of its actions in compliance with the Endangered Species Act, the Coastal Zone Management Act, and the National Historic Preservation Act, and the requirements of Executive Order (EO) 12898, *Federal Actions to Address Environmental Justice in Minority Populations and Low Income Populations and EO 13045, Protection of Children from Environmental Health Risks and Safety Risks.*

The proposed action will be accomplished as set out in Alternative 1, described in the Final Environmental Impact Statement (FEIS) as the preferred alternative. Implementation of the preferred alternative could begin immediately.

SUPPLEMENTARY INFORMATION: The Record of Decision (ROD) has been distributed to all those individuals who requested a copy of the FEIS and agencies and organizations that received

a copy of the FEIS. The complete text of the Navy's ROD is available for public viewing on the project Web site at <http://www.nbkeis.gcsaic.com> along with copies of the FEIS and supporting documents. Single copies of the ROD will be made available upon request by contacting Ms. Shannon Kasa, 619-553-3889.

Dated: November 16, 2009.

A.M. Vallandingham,

Lieutenant Commander, Judge Advocate General's Corps, U.S. Navy, Federal Register Liaison Officer.

BILLING CODE 3810-FF-P

DEPARTMENT OF DEFENSE

Department of the Navy

Notice of Availability and Notice of Public Hearings for the Draft Environmental Impact Statement/ Overseas Environmental Impact Statement for the Guam and Commonwealth of the Northern Mariana Islands Military Relocation

AGENCY: Department of the Navy, DoD.

ACTION: Notice.

SUMMARY: Pursuant to section 102(2)(c) of the National Environmental Policy Act (NEPA); the Council of Environmental Quality (CEQ) Regulations for implementing the procedural provisions of NEPA (Title 40 Code of Federal Regulations [CFR] Parts 1500-1508) and the Department of Navy (DON) regulations for implementing NEPA (32 CFR 775), DON announces the availability of the Draft Environmental Impact Statement/ Overseas Environmental Impact Statement (hereafter called the Draft EIS) to evaluate the potential environmental impacts associated with relocating Marines from Okinawa, Japan to Guam, constructing transient nuclear aircraft carrier berthing facilities, and establishing a U.S. Army Air and Missile Defense Task Force (AMDTF) on Guam.

The DON is the lead Federal agency for development of the Draft EIS. The agencies that have accepted the invitation to participate as cooperating agencies are U.S. Fish and Wildlife Service, Federal Highways Administration, Federal Aviation Administration, U.S. Environmental Protection Agency Region 9, U.S. Office of Insular Affairs, U.S. Department of Agriculture, U.S. Army Corps of Engineers, and U.S. Air Force.

The Draft EIS examines potential environmental impacts from the three

proposed actions included in the Guam and Commonwealth of the Northern Mariana Islands (CNMI) Military Relocation. The Draft EIS also examines off base mission critical, mission support, and community support infrastructure improvements needed to ensure that Joint Region Marianas can provide expanded direct support of the DoD strategic mission and operational readiness in the Western Pacific Region.

The Draft EIS considers reasonable alternatives for siting operational, training, and support facilities on Guam and CNMI in addition to the no-action alternative.

The DON will conduct six (6) public hearings to receive oral and written comments on the Draft EIS. Federal agencies, territorial/local governmental agencies, and interested individuals are invited to be present or represented at the public hearings. This notice announces the dates and locations of the public hearings for this Draft EIS.

A Notice of Intent for this Draft EIS/OEIS was published in the **Federal Register** on March 7, 2007 (72 FR 10186).

DATES: The public comment period for the Draft EIS will start at 8:45 a.m. (Eastern Standard Time) on November 20, 2009, with the publication of a Notice of Availability in the **Federal Register** by the U.S. Environmental Protection Agency and will end at midnight (Eastern Standard Time) on February 17, 2010. All comments on the Draft EIS must be postmarked or submitted by midnight (Eastern Standard Time) on February 17, 2010.

The DON will hold six (6) public hearings to receive oral and written comments from the public on the Draft EIS. These six (6) public hearings will include a two-hour open house session at the beginning of the public hearings where the public can learn more about the proposed actions and potential environmental impacts from project team members and subject matter experts.

Public hearings and open house sessions will be held as follows: Thursday, January 7, 2010, open house from 5 p.m. to 7 p.m. and public hearing from 7 p.m. to 9 p.m., Southern High School, Santa Rita, Guam; Saturday, January 9, 2010, open house from 1 p.m. to 3 p.m. and public hearing from 3 p.m. to 5 p.m., University of Guam Field House, Mangilao, Guam; Monday, January 11, 2010, open house from 5 p.m. to 7 p.m. and public hearing from 7 p.m. to 9 p.m., Yigo Gymnasium, Yigo, Guam; Tuesday, January 12, 2010, open house from 5 p.m. to 7 p.m. and public hearing from 7 p.m. to 9 p.m., Okkodo

High School, Dededo, Guam; Thursday, January 14, 2010, open house from 5 p.m. to 7 p.m. and public hearing from 7 p.m. to 9 p.m., Tinian Elementary School, San Jose, Tinian; and Friday, January 15, 2010, open house from 5 p.m. to 7 p.m. and public hearing from 7 p.m. to 9 p.m., Multi-Purpose Center, Susupe, Saipan.

More information about the public hearings and open house sessions can be found on the official project Web site at <http://www.guambuildupeis.us/>.

ADDRESSES: The public can provide comments during the open houses/public hearings through the Web site at <http://www.guambuildupeis.us/>, or by mail at: Joint Guam Program Office, c/o Naval Facilities Engineering Command Pacific, 258 Makalapa Drive, Suite 100, Pearl Harbor, Hawaii 96860-3134, *Attention:* GPMO.

Electronic copies of the Draft EIS can be downloaded from the official project Web site at <http://www.guambuildupeis.us/>. Copies of the Draft EIS are available for public review at the following libraries: University of Guam Robert F. Kennedy Memorial Library, Government Documents, Tan Siu Lin Building, UOG Station, Mangilao, GU 96923; Nieves M. Flores Memorial Library, 254 Martyr Street, Hagåtña, GU 96910; Joeten-Kiyu Public Library, P.O. Box 501092, Saipan, MP 96950; Olympio T. Borja Memorial Library, P.O. Box 501250, Saipan, MP 96950 and Tinian Public Library, P.O. Box 520704, Tinian, MP 96952.

Electronic copies of the Draft EIS and copies of the executive summary can also be obtained on the project Web site at <http://www.guambuildupeis.us/>, or by contacting the Joint Guam Program Office, c/o Naval Facilities Engineering Command Pacific, 258 Makalapa Drive, Suite 100, Pearl Harbor, Hawaii 96860-3134, *Attention:* GPMO.

SUPPLEMENTARY INFORMATION: The overarching purpose for the proposed actions is to locate U.S. military forces to meet international agreement and treaty obligations and fulfill U.S. government national security to provide mutual defense, deter aggression, and dissuade coercion in the Western Pacific Region. The need of the proposed actions is to meet various criteria based upon U.S. policy, international agreements, and treaties, including but not limited to positioning forces to defend the homeland and U.S. Pacific territories; respond within a timely response range; maintain regional stability; provide flexibility to respond to regional threats; defend U.S., Japan, and allied interests, and other defense related criteria. Guam's location as the

westernmost part of the United States is critical to U.S. national security interests. In implementing U.S. national security policy, the Department of Defense would increase the role of Guam and the CNMI through the relocation of Marines to Guam, increased presence of a transient aircraft carrier, and enhanced capability to protect the U.S. homeland, Pacific territories, forces, and its allies from ballistic missile attacks.

As a result of reviews of the U.S. defense posture in the Pacific region and a parallel review of U.S. force posture supporting the U.S. alliance with Japan, a portion of U.S. Marine Corps forces currently located in Okinawa, Japan would be relocated to Guam. This relocation is proposed to occur concurrent with proposed wharf construction in Guam's Apra Harbor to support the Navy transiting nuclear aircraft carriers. An Army AMDTF is also proposed for Guam to protect the U.S. homeland, Pacific territories, forces and its allies against the threat of harm from ballistic missile attacks.

The Draft EIS was prepared to support inform decision making based on an understanding of the environmental impacts of the proposed Guam and CNMI military relocation and take measures to protect, restore, and enhance the environment. The decisions to be made are whether and how to implement the proposed actions.

The three proposed actions are briefly stated as follows: (1) Develop and construct facilities and infrastructure to support approximately 8,600 Marines and their 9,000 dependents relocated from Okinawa to Guam and to support training and operations on Guam and CNMI for those relocated Marines; (2) Develop and construct a new deep-draft wharf with shore side infrastructure improvements creating the capability in Apra Harbor, Guam to support a transient nuclear-powered aircraft carrier; and (3) Develop and construct facilities and infrastructure on Guam to support approximately 600 military personnel and their 900 dependents and to establish and operate an Army AMDTF.

The project locations addressed in Draft EIS are on Guam and CNMI. Guam and CNMI are part of the Mariana Islands archipelago.

Facilities construction and improvements would be necessary to accommodate the proposed actions. The proposed actions would entail increased operational activities associated with Marine Corps and Army basing, more frequent ship berthing, and the establishment of aviation maintenance operations and facilities. There would

also be increased opportunities for additional military personnel to meet critical training requirements. Training could take the form of communications, command and control, combat skills, aviation, logistics, amphibious vehicle maneuvers, and weapons firing activities. Thus, required construction would include the facilities and infrastructure for maintaining a permanent Marine Corps and Army presence on Guam, and the creation of new training ranges to accommodate training a larger population of military personnel. In summary, implementation of the proposed actions would result in the following: a temporary increase in population related to the construction-related work force; a permanent increase in number of military and civilian personnel and dependents on Guam; an increase in transient presence on Guam and Tinian; an increase in number and type of major equipment assets to support military personnel and operations (e.g., aircraft, ships, amphibious watercraft); an increase in number and type of training activities; construction of new facilities; improvements to existing facilities; improvements to existing infrastructure (including roads and utilities); and the potential acquisition or long-term leasing of additional land to support the Marine Corps main cantonment area and live fire training ranges on Guam.

To accomplish the Guam and CNMI proposed actions, the DoD has considered developmental and operational alternatives as required by NEPA. The Draft EIS analyzes a range of alternatives for the proposed actions including the no action alternative, which represents the baseline.

The Draft EIS provides information on the affected environment and impacts of the proposed actions for eighteen distinct resource areas. Volume 1 of the Draft EIS provides an overview of the proposed actions and alternatives. Volumes 2 through 5 of the Draft EIS provide details on the impacts of individual proposed Marine Corps, Navy and Army actions while Volume 6 addresses island-wide impacts of utilities and proposed roadway improvement projects. Volume 7 provides a summary of the impacts of all of the proposed actions should the preferred alternatives be implemented as well as a discussion of cumulative impacts. The Draft EIS evaluates the following resource areas: groundwater, marine water quality, coral, terrestrial biology, socioeconomic, cultural resources, recreation, roadways, air quality, noise, and utilities (including water, power and wastewater), among others.

FOR FURTHER INFORMATION CONTACT: Joint Guam Program Office in Guam at (671) 333-2302 or in Washington, DC at (703) 602-4716.

Dated: November 16, 2009.

BILLING CODE 3810-FF-P

DEPARTMENT OF EDUCATION

**Submission for OMB Review;
Comment Request**

AGENCY: Department of Education.

SUMMARY: The Acting Director, Information Collection Clearance Division, Regulatory Information Management Services, Office of Management invites comments on the submission for OMB review as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before December 21, 2009.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs, *Attention:* Education Desk Officer, Office of Management and Budget, 725 17th Street, NW., Room 10222, New Executive Office Building, Washington, DC 20503, be faxed to (202) 395-5806 or send e-mail to oir_submission@omb.eop.gov.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Acting Director, Information Collection Clearance Division, Regulatory Information Management Services, Office of Management, publishes that notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g., new, revision, extension, existing

or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Recordkeeping burden. OMB invites public comment.

Dated: November 16, 2009.

Sheila Carey,

Acting Director, Information Collection Clearance Division, Regulatory Information Management Services, Office of Management.

**Office of Special Education and
Rehabilitative Services**

Type of Review: Extension.

Title: Annual Performance Report for the State Grant for Assistive Technology Program.

Frequency: Annually.

Affected Public: Federal Government; Not-for-profit institutions; State, Local, or Tribal Gov't, SEAs or LEAs.

Reporting and Recordkeeping Hour Burden:

Responses: 56.

Burden Hours: 26,768.

Abstract: Section 4 of the Assistive Technology (AT) Act of 1998, as amended, requires states to submit annual data reports. This instrument helps the grantees report annual data related to the required activities implemented by the State under the AT Act. This data is used by Rehabilitation Services Administration (RSA) in order to prepare required annual reports to Congress. RSA calls this data collection an Annual Progress Report.

Requests for copies of the information collection submission for OMB review may be accessed from <http://edicsweb.ed.gov>, by selecting the "Browse Pending Collections" link and by clicking on link number 4131. When you access the information collection, click on "Download Attachments" to view. Written requests for information should be addressed to U.S. Department of Education, 400 Maryland Avenue, SW., LBJ, Washington, DC 20202-4537. Requests may also be electronically mailed to the Internet address ICDocketMgr@ed.gov or faxed to 202-401-0920. Please specify the complete title of the information collection when making your request.

Comments regarding burden and/or the collection activity requirements should be electronically mailed to ICDocketMgr@ed.gov. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339.

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION**Notice of Proposed Information Collection Requests**

AGENCY: Department of Education.

SUMMARY: The Acting Director, Information Collection Clearance Division, Regulatory Information Management Services, Office of Management, invites comments on the proposed information collection requests as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before January 19, 2010.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Acting Director, Information Collection Clearance Division, Regulatory Information Management Services, Office of Management, publishes that notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g., new, revision, extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Recordkeeping burden. OMB invites public comment.

The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology.

Dated: November 17, 2009.

OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Acting Director, Information Collection Clearance Division, Regulatory Information Management Services, Office of Management, publishes that notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g. new, revision, extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Recordkeeping burden. OMB invites public comment.

Dated: November 16, 2009.

Sheila Carey,

*Acting Director, Information Collection
Clearance Division, Regulatory Information
Management Services, Office of Management.*

**Office of Elementary and Secondary
Education**

Type of Review: New.

Title: Guidance on Title I, Part A
Waivers.

Frequency: One time.

Affected Public: Business or other for-
profit; State, Local, or Tribal Gov't,
SEAs or LEAs.

*Reporting and Recordkeeping Hour
Burden:*

Responses: 947.

Burden Hours: 29,640.

Abstract: The U.S. Department of Education (ED) plans to issue guidance inviting waivers related to the use of FY 2009 Title I, Part A funds available through the America Recovery and Reinvestment Act of 2009 (ARRA), waivers related to certain Title I, Part A statutory and regulatory provisions related to public school choice and supplemental educational services, and waivers related to maintenance of effort requirements. The guidance provides instructions for State educational agencies (SEA) on how they may apply to ED for waivers and instructions for local educational agencies (LEAs) on how they may implement the waivers obtained by their SEA.

Requests for copies of the information collection submission for OMB review may be accessed from <http://edicsweb.ed.gov>, by selecting the "Browse Pending Collections" link and by clicking on link number 4002. When you access the information collection, click on "Download Attachments" to view. Written requests for information should be addressed to U.S. Department of Education, 400 Maryland Avenue, SW., LBJ, Washington, DC 20202-4537. Requests may also be electronically mailed to the Internet address ICDocketMgr@ed.gov or faxed to 202-401-0920. Please specify the complete title of the information collection when making your request.

Comments regarding burden and/or the collection activity requirements should be electronically mailed to ICDocketMgr@ed.gov. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339.

BILLING CODE 4000-01-P

DEPARTMENT OF ENERGY

**Environmental Management Site-
Specific Advisory Board, NV**

AGENCY: Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Nevada Test Site. The Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770) requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Wednesday, December 16, 2009, 5 p.m.

ADDRESSES: Centennial Hills Library, 6711 North Buffalo Drive, Las Vegas, Nevada 89131.

FOR FURTHER INFORMATION CONTACT:

Denise Rupp, Board Administrator, 232 Energy Way, M/S 505, North Las Vegas, Nevada 89030. *Phone:* (702) 657-9088; *Fax* (702) 295-5300 or *E-mail:* ntscab@nv.doe.gov.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to make recommendations to DOE in the areas of environmental restoration, waste management, and related activities.

Tentative Agenda:

Sub-Committee Updates

- Industrial Sites Committee
- Membership Committee
- Outreach Committee
- Soils Committee
- Transportation/Waste Committee
- Underground Test Area Committee

Public Participation: The EM SSAB, Nevada Test Site, welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with physical disabilities or special needs. If you require special accommodations due to a disability, please contact Denise Rupp at least seven days in advance of the meeting at the phone number listed above. Written statements may be filed with the Board either before or after the meeting. Individuals who wish to make oral presentations pertaining to agenda items should contact Denise Rupp at the telephone number listed above. The request must be received five days prior to the meeting and reasonable provision will be made to include the presentation in the agenda. The Deputy Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Individuals wishing to make public comment will be provided a

maximum of five minutes to present their comments.

Minutes: Minutes will be available by writing to Denise Rupp at the address listed above or at the following Web site: <http://www.ntscab.com/MeetingMinutes.htm>.

Issued at Washington, DC on November 17, 2009.

Rachel Samuel,

Deputy Committee Management Officer.

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

State Energy Advisory Board (STEAB)

AGENCY: Department of Energy.

ACTION: Notice of open teleconference.

SUMMARY: This notice announces a meeting of the State Energy Advisory Board (STEAB). The Federal Advisory Committee Act (Pub. L. 2-463; 86 Stat. 770) requires that public notice of these meetings be announced in the **Federal Register**.

DATES: December 17, 2009, 1 to 2 p.m. EDT.

FOR FURTHER INFORMATION CONTACT: Gary Burch, STEAB Designated Federal Officer, Office of Commercialization and Project Management, Energy Efficiency Division, Golden Field Office, U.S. Department of Energy, 1617 Cole Boulevard, Golden, CO 80401, Telephone 303-275-4801.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: To make recommendations to the Assistant Secretary for the Office of Energy Efficiency and Renewable Energy regarding goals and objectives, programmatic and administrative policies, and to otherwise carry out the Board's responsibilities as designated in the State Energy Efficiency Programs Improvement Act of 1990 (Pub. L. 101-440).

Tentative Agenda: Discuss ways STEAB can support DOE's implementation of the Economic Recovery Act and update members of the Board on routine business matters.

Public Participation: The meeting is open to the public. Written statements may be filed with the Board either before or after the meeting. Members of the public who wish to make oral statements pertaining to agenda items should contact Gary Burch at the address or telephone number listed above. Requests to make oral comments must be received five days prior to the meeting; reasonable provision will be made to include requested topic(s) on

the agenda. The Chair of the Board is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business.

Minutes: The minutes of the meeting will be available for public review and copying within 60 days on the STEAB Web site, <http://www.steab.org>.

Issued at Washington, DC, on November 17, 2009.

Rachel Samuel,

Deputy Committee Management Officer.

Federal Energy Regulatory Commission

Combined Notice of Filings #1

November 10, 2009.

Take notice that the Commission received the following electric corporate filings:

Docket Numbers: EC10-15-000.

Applicants: West Georgia Generating Company, LLC; DeSoto County Generating Company, LLC; Broadway Gen Funding, LLC; Southern Power Company.

Description: West Georgia Generating Co, LLC *et al.* (Joint Applicants) submits the joint application for authorization under Section 203 of the Federal Power Act and Request for Expedited and Privileged Treatment.

Filed Date: 11/02/2009.

Accession Number: 20091105-0154.

Comment Date: 5 p.m. Eastern Time on Thursday, November 30, 2009.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER01-3121-022; ER02-2085-017; ER02-417-021; ER02-418-021; ER03-1326-020; ER03-296-024; ER03-416-024; ER03-951-024; ER04-94-021; ER05-1146-021; ER05-1262-024; ER05-332-021; ER05-365-021; ER05-481-022; ER06-1093-020; ER06-200-020; ER07-1378-013; ER07-195-016; ER07-242-015; ER07-254-014; ER07-287-014; ER07-460-011; ER08-387-011; ER08-912-008; ER08-933-008; ER09-1284-003; ER09-1285-002; ER09-1723-002; ER09-279-004; ER09-281-003; ER09-282-004; ER09-30-005; ER09-31-005; ER09-32-006; ER09-382-004; ER08-934-009; ER07-240-015.

Applicants: Klamath Energy LLC; Northern Iowa Windpower LLC; Phoenix Wind Power LLC; Klamath Generation LLC; Colorado Green Holdings, LLC; Flying Cloud Power Partners, LLC; Klondike Wind Power

LLC; Moraine Wind LLC; Mountain View Power Partners III, LLC; Shiloh I Wind Project LLC; Flat Rock Windpower LLC; Klondike Wind Power II LLC; Elk River Windfarm LLC; Trimont Wind I LLC; Flat Rock Windpower II LLC; Big Horn Wind Project LLC; Providence Heights Wind, LLC; Locust Ridge Wind Farm, LLC; MinnDakota Wind LLC; Casselman Windpower, LLC; Klondike Wind Power III LLC; Dillon Wind LLC; Atlantic Renewables Projects II LLC; Iberdrola Renewables MBR Sellers; Lempster Wind, LLC; Rugby Wind, LLC; Stretator-Cayuga Ridge Wind Power, LLC; Dry Lake Wind Power, LLC; Buffalo Ridge I LLC; Pebble Springs Wind, LLC; Moraine Wind II LLC; Elm Creek Wind, LLC; Farmers City Wind, LLC; Barton Windpower LLC; Hay Canyon Wind LLC; Locust Ridge Wind Farm II, LLC; Twin Buttes Wind LLC.

Description: Quarterly Report Pursuant to 18 CFR 35.42(d) of Iberdrola Renewables MBR Sellers.

Filed Date: 10/30/2009.

Accession Number: 20091030-5183.

Comment Date: 5 p.m. Eastern Time on Friday, November 20, 2009.

Docket Numbers: ER05-764-005.

Applicants: MATL LLP, Montana Alberta Tie Ltd.

Description: Notice of Non-Material Change in Facts of Montana Alberta Tie Ltd. and MATL LLP.

Filed Date: 11/09/2009.

Accession Number: 20091109-5086.

Comment Date: 5 p.m. Eastern Time on Monday, November 30, 2009.

Docket Numbers: ER10-149-000.

Applicants: Elk City Wind, LLC.

Description: Request for authorization to sell energy and capacity at market-based rates, and waiver of the 60-day notice requirement re Elk City Wind, LLC.

Filed Date: 11/02/2009.

Accession Number: 20091104-0032.

Comment Date: 5 p.m. Eastern Time on Monday, November 23, 2009.

Docket Numbers: ER10-224-000.

Applicants: E. ON. U.S. LLC.

Description: E. ON. U.S. LLC submits a pro forma Emergency Energy Transaction Protocol Agreement.

Filed Date: 11/05/2009.

Accession Number: 20091106-0090.

Comment Date: 5 p.m. Eastern Time on Friday, November 27, 2009.

Docket Numbers: ER10-227-000.

Applicants: Nevada Power Company.

Description: Nevada Power Company submits amendments to the Related Power Purchase Agreement between Sierra Pacific Power Company.

Filed Date: 11/05/2009.

Accession Number: 20091106-0093.

Comment Date: 5 p.m. Eastern Time on Friday, November 27, 2009.

Docket Numbers: ER10–230–000.

Applicants: Kansas City Power & Light Company, KCP&L Greater Missouri Operations Company.

Description: Kansas City Power & Light Company *et al.* submits revised tariff sheets for the GMO open access transmission tariff, revised tariff sheets for schedule 1 *etc.*

Filed Date: 11/06/2009.

Accession Number: 20091110–0047.

Comment Date: 5 p.m. Eastern Time on Friday, November 27, 2009.

Docket Numbers: ER10–234–000.

Applicants: Arizona Public Service Company.

Description: Arizona Public Service Company submits Amendment 1 and 2 Contract 87–BCA–10031, as Restated and Superseded *et al.* designated as APS' FERC Electric Rate 217 *etc.*

Take notice that the Commission received the following electric securities filings:

Docket Numbers: ES10–2–001.

Applicants: Trans-Allegheny Interstate Line Company.

Description: Trans-Allegheny Interstate Line Company, Additional Information to Section 204 Application (2009).

Filed Date: 11/09/2009.

Accession Number: 20091109–5150.

Comment Date: 5 p.m. Eastern Time on Thursday, November 19, 2009.

Take notice that the Commission received the following public utility holding company filings:

Docket Numbers: PH10–2–000.

Applicants: ITC Holdings Corp., *et al.*
Description: FERC–65B Joint Waiver Notification of ITC Holdings Corp.

Filed Date: 11/06/2009.

Accession Number: 20091106–5150.

Comment Date: 5 p.m. Eastern Time on Friday, November 27, 2009.

Any person desiring to intervene or to protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Rules of

Practice and Procedure (18 CFR 385.211 and 385.214) on or before 5 p.m. Eastern time on the specified comment date. It is not necessary to separately intervene again in a subdocket related to a compliance filing if you have previously intervened in the same docket. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant. In reference to filings initiating a new proceeding, interventions or protests submitted on or before the comment deadline need not be served on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First St., NE., Washington, DC 20426.

The filings in the above proceedings are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail FERCOnlineSupport@ferc.gov or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings #1

November 13, 2009.

Take notice that the Commission received the following electric corporate filings:

Docket Numbers: EC10–17–000.

Applicants: Astoria Energy LLC, SUEZ Energy Astoria LLC, CDPQ Investments (U.S.) Inc., WE Energy Investment LLC, USPF Holdings, LLC, Robert O. Gurman, JEMB Family LP, EIF Astoria III, LLC, AE Bowery Bay LLC.

Description: Astoria Energy LLC *et al.* submits application for authorization of indirect disposition of jurisdictional facilities and acquisition of securities, and request for expedited consideration.

Filed Date: 11/04/2009.

Accession Number: 20091106–0038.

Comment Date: 5 p.m. Eastern Time on Wednesday, November 25, 2009.

Docket Numbers: EC10–18–000.

Applicants: First Solar, Inc., FSE Blythe 1, LLC, NRG Energy, Inc.

Description: NRG Energy, Inc. *et al.* submits Joint Application for Authorization under Section 203 of the Federal Power Act, requesting expedited treatment and request for confidential treatment *etc.*

Filed Date: 11/04/2009.

Accession Number: 20091106–0091.

Comment Date: 5 p.m. Eastern Time on Wednesday, November 25, 2009.

Docket Numbers: EC10–19–000.

Applicants: Illinois Power Company.

Description: Illinois Power Company *et al.* submits request for approvals pursuant to section 203 of the Federal Power Act and expedited consideration and shortened notice period.

Filed Date: 11/10/2009.

Accession Number: 20091112–0104.

Comment Date: 5 p.m. Eastern Time on Tuesday, December 01, 2009.

Docket Numbers: EC10–20–000.

Applicants: Locust Ridge Wind Farm, LLC, Fortis Energy Marketing & Trading GP.

Description: Application for Authorization under Section 203 of the Federal Power Act of Fortis Energy Marketing & Trading GP and Locust Ridge Wind Farm, LLC.

Filed Date: 11/10/2009.

Accession Number: 20091110–5119.

Comment Date: 5 p.m. Eastern Time on Tuesday, December 01, 2009.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER08–374–004;

EL08–38–003.

Applicants: Atlantic Path 15, LLC.
Description: Atlantic Path 15, LLC's Refund Report.

Filed Date: 11/12/2009.

Accession Number: 20091112-5164.

Comment Date: 5 p.m. Eastern Time on Thursday, December 03, 2009.

Docket Numbers: ER09-153-001; ER09-154-001; ER09-155-001; ER09-156-001.

Applicants: Southern Company Services, Inc.

Description: Refund Report of Southern Company Services, Inc., in Compliance with Settlement.

Filed Date: 11/12/2009.

Accession Number: 20091112-5236.

Comment Date: 5 p.m. Eastern Time on Thursday, December 03, 2009.

Docket Numbers: ER10-191-001; EC06-4-003.

Applicants: LG&E Energy Corporation, E.ON U.S. LLC.

Description: E.ON U.S. LLC seeks approval to change Applicants method of (i) complying with Order 888, 889 and 890.

Filed Date: 11/05/2009.

Accession Number: 20091106-0086.

Comment Date: 5 p.m. Eastern Time on Friday, November 27, 2009.

Docket Numbers: ER10-210-000.

Applicants: VIRIDIAN ENERGY PA LLC.

Description: Viridian Energy PA LLC submits petition for acceptance of initial tariff, waivers and blanket authority.

Filed Date: 11/09/2009.

Accession Number: 20091110-0036.

Comment Date: 5 p.m. Eastern Time on Monday, November 30, 2009.

Docket Numbers: ER10-225-000.

Applicants: Major Energy Electric Services.

Description: Major Energy Electric Services, LLC submits Petition for Acceptance of Initial Rate Schedule, Waivers and Blanket Authority.

Filed Date: 11/10/2009.

Accession Number: 20091113-0135.

Comment Date: 5 p.m. Eastern Time on Tuesday, December 01, 2009.

Docket Numbers: ER10-226-000.

Applicants: Clean Currents, LLC.

Description: Clean Currents, LLC submits petition for acceptance of initial rate schedule, waivers and blanket authority.

Filed Date: 11/09/2009.

Accession Number: 20091110-0037.

Comment Date: 5 p.m. Eastern Time on Monday, November 30, 2009.

Docket Numbers: ER10-228-000.

Applicants: Star Point Wind Project LLC.

Description: Star Point Wind Project LLC submits FERC Electric Tariff, Original Volume No 1.

Filed Date: 11/06/2009.

Accession Number: 20091110-0038.

Comment Date: 5 p.m. Eastern Time on Friday, November 27, 2009.

Take notice that the Commission received the following PURPA 210(m)(3) filings:

Docket Numbers: QM09-7-001.

Applicants: Old Dominion Electric Cooperative, Inc.

Description: Old Dominion Electric Cooperative Supplemental Information in support of its Application to Terminate Purchase Obligation.

Filed Date: 11/13/2009.

Accession Number: 20091113-5042.

Comment Date: 5 p.m. Eastern Time on Friday, December 11, 2009.

Take notice that the Commission received the following electric reliability filings:

Docket Numbers: RR10-2-000.

Applicants: North American Electric Reliability Corp.

Description: Petition of the North American Electric Reliability Corporation for Approval of Amendment to its Delegation Agreements with Regional Entities to Extend Initial Term of Agreements to May 2011.

Filed Date: 11/12/2009.

Accession Number: 20091112-5187.

Comment Date: 5 p.m. Eastern Time on Thursday, December 03, 2009.

Docket Numbers: RR10-3-000.

Applicants: North American Electric Reliability Corp.

Description: Petition of the North American Electric Reliability Corporation for Approval of Amendments to its Rules of Procedure to Reflect Elimination of the Reliability Readiness Evaluation and Improvement Program.

Filed Date: 11/12/2009.

Accession Number: 20091112-5188.

Comment Date: 5 p.m. Eastern Time on Thursday, December 03, 2009.

Any person desiring to intervene or to protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) on or before 5 p.m. Eastern time on the specified comment date. It is not necessary to separately intervene again in a subdocket related to a compliance filing if you have previously intervened in the same docket. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant. In reference

to filings initiating a new proceeding, interventions or protests submitted on or before the comment deadline need not be served on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First St., NE., Washington, DC 20426.

The filings in the above proceedings are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail FERCOnlineSupport@ferc.gov or call (866) 208-3676 (toll free). For TTY, call (202) 502-8659.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2306-143-VT]

Great Bay Hydro Corporation; Notice of Availability of Environmental Assessment

November 10, 2009.

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission) regulations, 18 CFR Part 380 (Order No. 486, 52 FR 47879), the Office of Energy Projects has reviewed the application filed by Great Bay Hydro Corporation on February 19, 2009, requesting Commission approval to amend the license for the Clyde River Hydroelectric Project. The project is

located on the Clyde River in the City of Newport, in Orleans County, Vermont.

The Commission has prepared an environmental assessment (EA) that evaluates the environmental impacts of the licensee's proposal. The EA finds that approval of the application would not constitute a major federal action significantly affecting the quality of the human environment.

The EA is attached to a Commission order titled "Order Amending License", issued November 9, 2009, and is available for review and reproduction at the Commission's Public Reference Room, located at 888 First Street, NE., Room 2-A, Washington, DC 20426. The EA may also be viewed on the Commission's Web site at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number (P-2306) excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll-free at 1-866-208-3676, or for TTY, (202) 502-8659.

[Docket No. ER10-226-000]

Clean Currents, L.L.C.; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

November 13, 2009.

This is a supplemental notice in the above-referenced proceeding of Clean Currents, L.L.C.'s application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR Part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and § 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard

to the applicant's request for blanket authorization, under 18 CFR Part 34, of future issuances of securities and assumptions of liability, is December 3, 2009.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Western Area Power Administration

Boulder Canyon Project—Post-2017 Application of the Energy Planning and Management Program Power Marketing Initiative

AGENCY: Western Area Power Administration, DOE.

ACTION: Notice of proposal.

SUMMARY: The Western Area Power Administration (Western), Desert Southwest Region, a Federal power marketing agency of the Department of Energy (DOE) announces its Post-2017 remarketing effort for the Boulder Canyon Project (BCP). Current BCP long-term contracts will expire on September 30, 2017. In 1995, Western adopted the Power Marketing Initiative (PMI) in Subpart C of the Energy Planning and Management Program (Program) (10 CFR part 905). The Record of Decision for the Program states that application of the PMI will be done on a project-specific basis. If, by means of a public process, Western applies the PMI to the BCP, the current long-term contractors of the project would receive an extension of a major portion of the

resources available to them at the time their contracts expire. Western now proposes to apply the PMI to the long-term power contracts of the BCP.

DATES: Western will hold three public information forums regarding the BCP remarketing on the following dates: December 1, 2009, 1 p.m., PST, Las Vegas, Nevada; December 2, 2009, 1 p.m., PST, Ontario, California; December 3, 2009, 1 p.m., MST, Phoenix, Arizona.

Western will also hold three public comment forums. The dates for these forums are: January 19, 2010, 1 p.m., PST, Las Vegas, Nevada; January 20, 2010, 1 p.m., MST, Phoenix, Arizona; January 21, 2010, 1 p.m., PST, Ontario, California. Western will accept written comments on or before January 29, 2010. Western reserves the right to not consider any comments received after the prescribed date and time.

ADDRESSES: Comments may be submitted to: Mr. Darrick Moe, Western Area Power Administration, Desert Southwest Regional Manager, P.O. Box 6457, Phoenix, AZ 85005-6457. Comments may also be faxed to (602) 605-2490 or e-mailed to Post2017BCP@wapa.gov.

The public information and public comment forum locations are: Las Vegas Tropicana, 3801 Las Vegas Boulevard, South Las Vegas, Nevada; Western Area Power Administration, Desert Southwest Regional Office, 615 S. 43rd Ave, Phoenix, Arizona; DoubleTree Ontario Airport, 222 N. Vineyard, Ontario, California.

As access to Western facilities is controlled, any U.S. citizen wishing to attend any meeting held at Western must present an official form of picture identification, such as a U.S. driver's license, U.S. passport, U.S. Government ID, or U.S. Military ID, at the time of the meeting. Foreign nationals shall contact Western at least 45 days in advance of the meeting to obtain the necessary admittance to Western.

FOR FURTHER INFORMATION CONTACT: Mr. Mike Simonton, Remarketing Specialist, Desert Southwest Region, Western Area Power Administration, P.O. Box 6457, Phoenix, AZ 85005, telephone (602) 605-2675, e-mail Post2017BCP@wapa.gov. Program information and the Conformed General Consolidated Power Marketing Criteria or Regulations for Boulder City Area Projects (Conformed Criteria) published in the **Federal Register** (49 FR 50582) on December 28, 1984, are available at <http://www.wapa.gov/dsw/pwrnkt>.

SUPPLEMENTARY INFORMATION: In 1987, Western marketed the power resources of the BCP and entered into 30-year

term contracts with the current BCP contractors in accordance with the Hoover Power Plant Act of 1984, and the Conformed Criteria. These events resulted in the allocation of 1,951 megawatts (MW) of contingent capacity with an associated 4,527,001 megawatt-hours (MWh) of annual firm energy. Pursuant to 43 U.S.C. 619a(4), these long-term contracts will expire on September 30, 2017. Western must determine if the PMI, as outlined in the Program, will be applied to the BCP for commitments beyond that date, the quantity of resources to be extended to existing contractors, the size of the proposed resource pool, excess energy provisions, and the term of the contract.

Western first proposed the Program on April 19, 1991 (56 FR 16093). The goals of the Program were to encourage efficient energy use by Western's power customers by requiring Integrated Resource Planning and to extend Western's firm power resource commitments. In the final rule of the Program, Western stated that application of the PMI, including the amount of resources extended, would initially apply only to the Pick-Sloan Missouri Basin Program-Eastern Division and the Loveland Area Projects. Applicability to other projects would be determined through future, project-specific public processes. Specific to the BCP, Western stated that it would evaluate application of the PMI to the BCP no more than 10 years before existing contracts expire. 60 FR 54151, 54157 (Oct. 20, 1995).

Consistent with the application of the PMI to other recent Western marketing efforts, Western proposes to apply the PMI (10 CFR parts 905.30 through 905.37) to the BCP. In consultation with the Bureau of Reclamation and referencing the most recent hydrologic studies, Western proposes to market 2,044 MW of contingent capacity with an associated 4,116,000 MWh of annual firm energy from the BCP. Western proposes to extend 100 percent of the existing contractors' contingent capacity allocations, totaling 1,951 MW, and 95 percent of the proposed marketable firm energy, totaling 3,910,200 MWh annually to the existing contractors based proportionally upon their existing allocations of marketed annual firm energy. This proposal would result in the creation of a single, one-time resource pool consisting of 93 MW of contingent capacity with an associated 205,800 MWh of annual firm energy. Western proposes that all contract terms be a length of 30 years commencing on October 1, 2017.

The marketing area is generally defined as consisting of southern

California, southern Nevada, most of Arizona, and a small part of New Mexico; and is more specifically defined in the Conformed Criteria. New customers meeting the requirements established in the BCP marketing criteria and qualifying Native American Tribes within the BCP marketing area will be eligible to request an allocation of capacity and energy from the BCP resource pool. Native American Tribes need not have utility status to qualify for an allocation. As provided in the current BCP Implementation Agreement, new contractors, or contractors who receive an increased allocation will be required to reimburse existing BCP contractors for replacement capital advances to the extent existing contractors' allocations are reduced as a result of creating the resource pool.

Western is seeking comments regarding the applicability of the PMI to the BCP, the quantity of resources to be extended to existing contractors, the size of the proposed resource pool, excess energy provisions, and the term of contracts.

Under their respective State laws the Colorado River Commission (CRC) and the Arizona Power Authority (APA) have been the designated agents for acquiring and remarketing BCP power within Nevada and Arizona respectively. Western seeks comments regarding CRC and APA's role in Western's allocation process.

Following the public comment period, Western will analyze the comments received and publish its policy regarding the application of PMI to BCP in the **Federal Register**.

Regulatory Procedure Requirements

Determination Under Executive Order 12866

Western has an exemption from centralized regulatory review under Executive Order 12866; accordingly, no clearance of this notice by the Office of Management and Budget is required.

Environmental Compliance

In accordance with the DOE National Environmental Policy Act Implementing Procedures (10 CFR 1021), Western has determined that this action fits within class of action B4.1 Contracts/marketing plans/policies for excess electric power, in Appendix B to Subpart D to part 1021—Categorical Exclusions Applicable to Specific Agency Actions.

Dated: November 10, 2009.

Timothy J. Meeks,

Administrator.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 13571-000]

Goshen Powerhouse, LLC: Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

November 10, 2009.

On August 24, 2009, Goshen Powerhouse, LLC filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of the Goshen Dam Hydroelectric Project No. 13571, to be located at the existing Goshen Dam, on the Elkhart River, in Elkhart County, Indiana. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The existing dam is owned and operated by Elkhart County, Indiana and the existing powerhouse and headrace canal is owned and operated by the City of Goshen, Indiana. The proposed project would consist of: (1) The existing 12.5-foot-high concrete dam equipped with a 200-foot-long ogee spillway; (2) an existing 765-acre impoundment with a normal water surface elevation of 790.9 feet mean sea level; (3) an existing 25-foot-long by 49-foot-wide powerhouse to contain two new hydrokinetic turbine-generator systems for a total installed capacity of 80 kilowatts; (4) a new 60-foot-long, 12.5-kilovolt transmission line; and (5) appurtenant facilities. The proposed project would operate in a run-of-river mode and generate an estimated average annual generation of 578,160 kilowatt-hours.

Applicant Contact: Edward L. Kurth, Goshen Powerhouse, LLC, San Antonio Zanesville, Texas 78216, (210) 496-5902.

FERC Contact: Michael Watts, (202) 502-6123.

Deadline for filing comments, motions to intervene, competing applications (without notices of intent), or notices of intent to file competing applications: 60 days from the issuance of this notice.

Comments, motions to intervene, notices of intent, and competing applications may be filed electronically via the Internet. See 18 CFR 385.2001(a)(1)(iii) and the instructions

on the Commission's Web site under the "eFiling" link. If unable to be filed electronically, documents may be paper-filed. To paper-file, an original and eight copies should be mailed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. For more information on how to submit these types of filings please go to the Commission's Web site located at <http://www.ferc.gov/filing-comments.asp>. More information about this project can be viewed or printed on the "eLibrary" link of Commission's Web site at <http://www.ferc.gov/docs-filing/elibrary.asp>. Enter the docket number (P-13571) in the docket number field to access the document. For assistance, call toll-free 1-866-208-3372.

Federal Energy Regulatory Commission

[Docket No. RM98-1-000]

Records Governing Off-the-Record Communications: Public Notice

November 10, 2009.

This constitutes notice, in accordance with 18 CFR 385.2201(b), of the receipt of prohibited and exempt off-the-record communications.

Order No. 607 (64 FR 51222, September 22, 1999) requires Commission decisional employees, who make or receive a prohibited or exempt off-the-record communication relevant to the merits of a contested proceeding, to deliver to the Secretary of the Commission, a copy of the communication, if written, or a summary of the substance of any oral communication.

Prohibited communications are included in a public, non-decisional file associated with, but not a part of, the decisional record of the proceeding. Unless the Commission determines that the prohibited communication and any responses thereto should become a part of the decisional record, the prohibited off-the-record communication will not be considered by the Commission in reaching its decision. Parties to a proceeding may seek the opportunity to respond to any facts or contentions made in a prohibited off-the-record communication, and may request that the Commission place the prohibited

communication and responses thereto in the decisional record. The Commission will grant such a request only when it determines that fairness so requires. Any person identified below as having made a prohibited off-the-record communication shall serve the document on all parties listed on the official service list for the applicable proceeding in accordance with Rule 2010, 18 CFR 385.2010.

Exempt off-the-record communications are included in the

decisional record of the proceeding, unless the communication was with a cooperating agency as described by 40 CFR 1501.6, made under 18 CFR 385.2201(e)(1)(v).

The following is a list of off-the-record communications recently received by the Secretary of the Commission. The communications listed are grouped by docket numbers in ascending order. These filings are available for review at the Commission in the Public Reference Room or may be

viewed on the Commission's Web site at <http://www.ferc.gov> using the eLibrary link. Enter the docket number, excluding the last three digits, in the docket number field to access the document. For assistance, please contact FERC, Online Support at FERCOnlineSupport@ferc.gov or toll free at (866) 208-3676, or for TTY, contact (202) 502-8659.

BILLING CODE 6717-01-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPPT-2008-0717; FRL-8983-7; EPA ICR No. 2328.01; OMB Control No. 2070-TBD]

Agency Information Collection Activities; Submission to OMB for Review and Approval; Comment Request; Pressed Wood Manufacturing Industry Survey

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), this document announces that an Information Collection Request (ICR) has been forwarded to the Office of Management and Budget (OMB) for review and approval: Pressed Wood Manufacturing Industry Survey; ICR No. 2328.01, OMB No. 2070-TBD. The ICR, which is abstracted below, describes the nature of the information collection activity and its expected burden and costs.

DATES: Additional comments may be submitted on or before December 21, 2009.

ADDRESSES: Submit your comments, referencing docket ID Number EPA-HQ-OPPT-2008-0717 to (1) EPA online using <http://www.regulations.gov> (our preferred method), by e-mail to oppt.ncic@epa.gov or by mail to: Document Control Office (DCO), Office of Pollution Prevention and Toxics (OPPT), Environmental Protection Agency, Mail Code: 7407T, 1200 Pennsylvania Ave., NW., Washington, DC 20460, and (2) OMB at: Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), Attention: Desk Officer for EPA, 725 17th Street, NW., Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Barbara Cunningham, Director, Environmental Assistance Division, Office of Pollution Prevention and Toxics, Environmental Protection Agency, Mailcode: 7408-M, 1200 Pennsylvania Ave., NW., Washington, DC 20460; telephone number: 202-554-1404; e-mail address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION: EPA has submitted the following ICR to OMB for review and approval according to the procedures prescribed in 5 CFR 1320.12. On December 24, 2008 (73 FR 79083), EPA sought comments on this ICR pursuant to 5 CFR 1320.8(d). EPA received four comments during the comment period, which are addressed in the ICR. Any comments related to this ICR should be submitted to EPA and OMB within 30 days of this notice.

EPA has established a public docket for this ICR under Docket ID No. EPA-HQ-OPPT-2008-0717, which is available for online viewing at <http://www.regulations.gov>, or in person inspection at the OPPT Docket in the EPA Docket Center (EPA/DC), EPA

West, Room 3334, 1301 Constitution Ave., NW., Washington, DC. The EPA/DC Public Reading Room is open from 8 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Reading Room is 202-566-1744, and the telephone number for the Pollution Prevention and Toxics Docket is 202-566-0280.

Use EPA's electronic docket and comment system at <http://www.regulations.gov> to submit or view public comments, access the index listing of the contents of the public docket, and to access those documents in the public docket that are available electronically. Once in the system, select "docket search," then key in the docket ID number identified above. Please note that EPA's policy is that public comments, whether submitted electronically or in paper, will be made available for public viewing in <http://www.regulations.gov> as EPA receives them and without change, unless the comment contains copyrighted material, confidential business information (CBI), or other information whose public disclosure is restricted by statute. When EPA identifies a comment containing copyrighted material, EPA will provide a reference to that material in the version of the comment that is placed in <http://www.regulations.gov>. The entire printed comment, including the copyrighted material, will be available in the public docket. Although identified as an item in the official docket, information claimed as CBI, or whose disclosure is otherwise restricted by statute, is not included in the official public docket, and will not be available for public viewing in <http://www.regulations.gov>. For further information about the electronic docket, go to <http://www.regulations.gov>.

¹ Memo to file from staff attaching correspondence—seven responsive letters from Captain Raymond J. Perry, U.S. Coast Guard, with respect to Weaver's Cove Bay Berth Amendment.

² Telephone communication record.

Title: Pressed Wood Manufacturing Industry Survey.

ICR Numbers: EPA ICR No. 2328.01, OMB Control No. 2070-TBD.

ICR Status: This ICR is for a new information collection activity. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: EPA has initiated a proceeding to investigate whether and what type of regulatory or other action might be appropriate to control the levels of formaldehyde emitted from pressed wood products, as described in EPA's Advanced Notice of Proposed Rulemaking (ANPR) for Formaldehyde Emissions from Pressed Wood Products, which published in the **Federal Register** on December 3, 2008 (73 FR 73620). As part of this investigation, EPA seeks to survey U.S. pressed wood manufacturers to collect information on the categories and volume of pressed wood manufactured; the types of resins used in the manufacturing process; the formaldehyde emissions levels from the pressed wood; recent or planned changes to reduce formaldehyde emissions and the resulting costs; and any issues that may affect the ability to reduce formaldehyde emissions. The survey will be sent to all U.S. pressed wood manufacturers identified by EPA (*i.e.*, it will be a census). This survey asks for readily obtainable information, so the plant does not have to generate new information (for example, by testing product emissions) to complete the survey.

When EPA sought comments on the ICR on December 24, 2008 (73 FR 79083), the Agency intended to use the same questionnaire for all pressed wood manufacturers. EPA has now modified the survey so that there are two different questionnaires. One questionnaire is for manufacturers of hardwood plywood, particleboard, and medium density fiberboard (which are the products subject to the CARB rule). The second questionnaire is for manufacturers of hardboard or structural composites (glued laminated timber, I-joists, oriented strandboard, softwood plywood, and structural composite

lumber) that are not subject to the CARB rule. These manufacturers are unlikely to have as much readily available information to use responding to the survey, this questionnaire asks for a more limited set of information.

EPA will request that all U.S. pressed wood manufacturers voluntarily complete the survey. If EPA does not achieve a sufficient survey response rate to accurately characterize the industry, EPA will consider whether to exercise the authority available to it under TSCA section 11(c), 15 U.S.C. 2610(c). TSCA section 11(c) provides EPA with the authority to issue subpoenas requiring the production of reports, papers, documents, answers to questions, and other information that the Administrator deems necessary. EPA could potentially use its TSCA section 11(c) authority to issue subpoenas requiring recipients (*i.e.*, non-respondents) to complete and return the survey.

Respondents may elect to claim certain submitted information as confidential business information (CBI) if there is a legitimate need to do so as described in EPA's regulations at 40 CFR part 2. These claims will be handled according to EPA procedures described in the regulation at 40 CFR part 2. EPA will disclose information that is covered by a claim of confidentiality only to the extent permitted by, and in accordance with, the procedures in TSCA section 14, 15 U.S.C. 2613, and the regulation at 40 CFR part 2.

The information collected through the survey will allow EPA to predict a future baseline for the types of resins that will be used in pressed wood, and the levels of formaldehyde that will be emitted from them. EPA will also use this information to assess the incremental benefits and costs of potential actions at the national level on formaldehyde emissions from pressed wood products. This information is necessary to inform Agency decisionmaking about the need for and scope of regulatory or other actions to control the levels of formaldehyde emitted from pressed wood products. If this survey is not conducted, EPA will not have this data to establish the baseline for its actions nor insight into the adjustments that plants in the industry are planning to make. Therefore, this survey is necessary for the proper performance of Agency functions.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to range between 14 and 20 hours per response, depending upon the nature of the respondent. Burden means

the total time, effort or financial resources expended by persons to generate, maintain, retain or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install and utilize technology and systems for the purposes of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Entities potentially affected by this action are facilities engaged in the manufacturing of pressed wood products, including glued laminated timber, hardboard, medium density fiberboard, oriented strandboard, particleboard, hardwood and softwood plywood, prefabricated I-joists, and structural composite lumber (which includes laminated veneer lumber, laminated strand lumber, parallel strand lumber, and oriented strand lumber).

Frequency of Collection: Once.

Estimated average number of responses for each respondent: 1.

Estimated No. of Respondents: 343.

Estimated Total Annual Burden on Respondents: 5,804 hours.

Estimated Total Annual Costs: \$324,220.

Changes in Burden Estimates: This is a new ICR. This estimated burden for this new ICR is estimated to be 5,804 hours and is a program change.

Dated: November 16, 2009.

John Moses,

Acting Director, Collection Strategies Division.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[ER-FRL-8599-5]

Environmental Impact Statements and Regulations; Availability of EPA Comments

Availability of EPA comments prepared pursuant to the Environmental Review Process (ERP), under Section 309 of the Clean Air Act and Section 102(2)(c) of the National Environmental Policy Act as amended. Requests for copies of EPA comments can be directed

to the Office of Federal Activities at 202-564-7146 or <http://www.epa.gov/compliance/nepa/>.

An explanation of the ratings assigned to draft environmental impact statements (EISs) was published in FR dated July 17, 2009 (74 FR 34754).

Draft EISs

EIS No. 20090312, ERP No. D-COE-F39043-OH, Cleveland Harbor Dredged Material Management Plan, Operations and Maintenance, Cuyahoga County, OH.

Summary: EPA expressed environmental concerns about air quality impacts, and recommended implementation of mitigation measures. Rating EC2.

EIS No. 20090315, ERP No. D-FTA-K40273-CA, Crenshaw Transit Corridor Project, Proposes to Improve Transit Services, Funding, Los Angeles County Metropolitan Transportation Authority (LACMTA), Los Angeles County, CA.

Summary: EPA expressed environmental concerns about the air quality analysis, and offered additional suggestions for water quality impact analysis and mitigation. Rating EC2.

EIS No. 20090382, ERP No. D-IBR-K39123-CA, Central Valley Project Water Supply Contracts Under Public Law 101-514 (Section 206), Proposed Water Service Contracts with the El Dorado County Water Agency, El Dorado County, CA.

Summary: EPA does not object to the proposed action. Rating LO.

Final EISs

EIS No. 20090340, ERP No. F-AFS-J65499-UT, Pockets Resource Management Project, Additional Information on Analysis and Disclosure on the Effect of the PA and Alternatives on Three Unroaded and Undeveloped Areas Identified on a 2005 Draft Map, Proposes to Salvage Dead and Dying Spruce/Fir, Regenerate Aspen, and Manage Travel, Escalante Ranger District, Dixie National Forest, Garfield County, UT.

Summary: No formal comment letter was sent to the preparing agency.

EIS No. 20090375, ERP No. F-AFS-L65575-OR, Deadlog Vegetation Management Project, To Implement Treatments that would Reduce the Risk of High Intensity, Stand Replacement Wildlife and the Risk of Heavy Tree Mortality from Insects and Disease, Deschutes National Forest Lands, Deschutes County, OR.

Summary: EPA does not object to the proposed action.

Dated: November 17, 2009.

Robert W. Hargrove,

Director, NEPA Compliance Division, Office of Federal Activities.

ENVIRONMENTAL PROTECTION AGENCY

[FRL-8983-8]

National Drinking Water Advisory Council's Climate Ready Water Utilities Working Group Meeting Announcement**AGENCY:** Environmental Protection Agency.**ACTION:** Notice.

SUMMARY: The Environmental Protection Agency (EPA or Agency) is announcing the first in-person meeting of the Climate Ready Water Utilities (CRWU) Working Group of the National Drinking Water Advisory Council (NDWAC). The purpose of this meeting is for the Working Group to begin addressing its charge, including defining the attributes of climate ready water utilities.

DATES: The first in-person CRWU Working Group meeting will take place on December 3, 2009, from 8:30 a.m. to 5 p.m., Eastern Standard Time (EST) and on December 4, 2009, from 8:30 am to 1:30 p.m., EST.

ADDRESSES: The meeting will take place at the Marriott Washington, which is located at 1221 22nd Street, NW., Washington, DC 20037.

FOR FURTHER INFORMATION CONTACT: Interested participants from the public should contact Lauren Wisniewski, Designated Federal Officer, U.S. Environmental Protection Agency, Office of Ground Water and Drinking Water, Water Security Division (Mail Code 4608T), 1200 Pennsylvania Avenue, NW., Washington, DC 20460. Please contact Lauren Wisniewski at wisniewski.lauren@epa.gov or call 202-564-2918 to receive additional details.

SUPPLEMENTARY INFORMATION:

Public Participation: There will be an opportunity for public comment during the CRWU Working Group meeting. Oral statements will be limited to five minutes, and it is preferred that only one person present the statement on behalf of a group or organization. Any person who wishes to file a written statement can do so before or after the CRWU Working Group meeting. Written statements received prior to the meeting will be distributed to all members of the Working Group before any final discussion or vote is completed. Any statements received after the meeting will become part of the permanent meeting file and will be forwarded to the CRWU Working Group members for their information. Any person needing special accommodations for this meeting, including wheelchair access, should contact the Designated Federal

Officer at the number or e-mail listed under the **FOR FURTHER INFORMATION CONTACT** section, at least five business days before the meeting so that appropriate arrangements can be made.

Background: The Agency's *National Water Program Strategy: Response to Climate Change* (2008) identified the need to provide drinking water and wastewater utilities with easy-to-use resources to assess the risk associated with climate change and to identify potential adaptation strategies. The NDWAC, established under the Safe Drinking Water Act, as amended (42 U.S.C. 300f *et seq.*), provides practical and independent advice, consultation and recommendations to the Agency on the activities, functions and policies related to the implementation of the Safe Drinking Water Act. On May 28, 2009, the NDWAC voted on and approved the formation of the CRWU Working Group. EPA anticipates that the Working Group will have five face-to-face meetings over the course of the next year in addition to conference calls and/or video conferencing on an as needed basis. After the Working Group completes its charge, it will make recommendations to the full NDWAC. The full NDWAC will, in turn, make appropriate recommendations to the EPA.

Working Group Charge: The charge for the CRWU Working Group is to evaluate the concept of "Climate Ready Water Utilities" and provide recommendations to the full NDWAC on the development of an effective program for drinking water and wastewater utilities, including recommendations to:

- (1) Define and develop a baseline understanding of how to use available information to develop climate change adaptation and mitigation strategies, including ways to integrate this information into existing complementary programs such as the Effective Utility Management and Climate Ready Estuaries Program;
- (2) Identify climate change-related tools, training, and products that address short-term and long-term needs of water and wastewater utility managers, decision makers, and engineers, including ways to integrate these tools and training into existing programs; and
- (3) Incorporate mechanisms to provide recognition or incentives that facilitate broad adoption of climate change adaptation and mitigation strategies by the water sector into existing EPA Office of Water recognition and awards programs or new recognition programs.

Dated: November 16, 2009.

Cynthia C. Dougherty,*Director, Office of Ground Water and Drinking Water.*

FEDERAL ELECTION COMMISSION

[Notice 2009-25]

Filing Dates for the Florida Special Election in the 19th Congressional District**AGENCY:** Federal Election Commission.**ACTION:** Notice of filing dates for special election.

SUMMARY: Florida has scheduled elections on February 2, 2010, and April 6, 2010, to fill the U.S. House seat in the 19th Congressional District being vacated by Representative Robert Wexler.

Committees required to file reports in connection with the Special Primary Election on February 2, 2010, shall file a 12-day Pre-Primary Report. Committees required to file reports in connection with both the Special Primary and Special General Election on April 6, 2010, shall file a 12-day Pre-Primary Report, a 12-day Pre-General Report, and a 30-day Post-General Report.

FOR FURTHER INFORMATION CONTACT: Mr. Kevin R. Salley, Information Division, 999 E Street, NW., Washington, DC 20463; *Telephone:* (202) 694-1100; Toll Free (800) 424-9530.

SUPPLEMENTARY INFORMATION:

Principal Campaign Committees

All principal campaign committees of candidates who participate in the Florida Special Primary and Special General Elections shall file a 12-day Pre-Primary Report on January 21, 2010; a 12-day Pre-General Report on March 25, 2010; and a 30-day Post-General Report on May 6, 2010. (See chart below for the closing date for each report).

All principal campaign committees of candidates participating *only* in the Special Primary Election shall file a 12-day Pre-Primary Report on January 21, 2010. (See chart below for the closing date for each report).

Note that these reports are in addition to the campaign committee's quarterly filings in April and July. (See chart below for the closing date for each report).

Unauthorized Committees (PACs and Party Committees)

Political committees filing on a quarterly basis in 2010 are subject to special election reporting if they make previously undisclosed contributions or expenditures in connection with the

Florida Special Primary or Special General Elections by the close of books for the applicable report(s). (See chart below for the closing date for each report).

Since disclosing financial activity from two different calendar years on one report would conflict with the calendar year aggregation requirements stated in the Commission's disclosure rules, unauthorized committees that trigger the filing of the Pre-Primary Report will be required to file this report on two separate forms: One form to cover 2009 activity, labeled as the Year-End Report; and the other form to cover only 2010 activity, labeled as the Pre-Primary Report. Both forms must be filed by January 21, 2010.

Committees filing monthly that make contributions or expenditures in connection with the Florida Special Primary or Special General Elections will continue to file according to the monthly reporting schedule.

Additional disclosure information in connection with the Florida Special Election may be found on the FEC Web site at http://www.fec.gov/info/report_dates.shtml.

Disclosure of Lobbyist Bundling Activity

Campaign committees, party committees and Leadership PACs that are otherwise required to file reports in connection with the special elections must simultaneously file FEC Form 3L if they receive two or more bundled contributions from lobbyists/registrants or lobbyist/registrant PACs that aggregate in excess of the lobbyist bundling disclosure threshold during the special election reporting periods (see charts below for closing date of each period). 11 CFR 104.22(a)(5)(v).

The lobbyist bundling disclosure threshold for calendar year 2009 is \$16,000. This threshold amount may increase in 2010 based upon the annual cost of living adjustment (COLA). As soon as the adjusted threshold amount is available, the Commission will publish it in the **Federal Register** and post it on its Web site. 11 CFR 104.22(g) and 110.17(e)(2). For more information on these requirements, see **Federal Register** Notice 2009-03, 74 FR 7285 (February 17, 2009).

CALENDAR OF REPORTING DATES FOR FLORIDA SPECIAL ELECTION

Report	Close of books ¹	Reg./cert. & overnight mailing deadline	Filing deadline
Committees Involved in <i>Only</i> the Special Primary (02/02/10) Must File:			
Year-End		—WAIVED—	
Pre-Primary	01/13/10	² 01/18/10	01/21/10
April Quarterly	03/31/10	04/15/10	04/15/10
Committees Involved in Both the Special Primary (02/02/10) and Special General (04/06/10) Must File:			
Year-End		—WAIVED—	
Pre-Primary	01/13/10	² 01/18/10	01/21/10
Pre-General	03/17/10	03/22/10	03/25/10
April Quarterly	03/31/10	04/15/10	04/15/10
Post-General	04/26/10	05/06/10	05/06/10
July Quarterly	06/30/10	07/15/10	07/15/10
Committees Involved in <i>Only</i> the Special General (04/06/10) Must File:			
Pre-General	03/17/10	03/22/10	03/25/10
April Quarterly	03/31/10	04/15/10	04/15/10
Post-General	04/26/10	05/06/10	05/06/10
July Quarterly	06/30/10	07/15/10	07/15/10

¹ The reporting period always begins the day after the closing date of the last report filed. If the committee is new and has not previously filed a report, the first report must cover all activity that occurred before the committee registered as a political committee with the Commission up through the close of books for the first report due.

² Notice that the registered/certified & overnight mailing deadline falls on a federal holiday. The report should be postmarked on or before that date.

Dated: November 16, 2009.
On behalf of the Commission.

Steven T. Walther,
Chairman, Federal Election Commission.

BILLING CODE 6715-01-P

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisition of Shares of Bank or Bank Holding Companies

The notificants listed below have applied under the Change in Bank

Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the office of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than December 4, 2009.

A. Federal Reserve Bank of Philadelphia (Michael E. Collins, Senior Vice President) 100 North 6th Street, Philadelphia, Pennsylvania 19105-1521:

1. *Patriot Financial Partners, GP, L.P., Patriot Financial Partners, L.P., Patriot Financial Partners Parallel, L.P., Patriot Financial Partners, GP, LLC, Patriot Financial Managers, L.P., and Ira M. Lubert, W. Kirk Wycoff and James J. Lynch*, all of Philadelphia, Pennsylvania; to acquire voting shares of Square 1 Financial, Inc., and thereby indirectly acquire voting shares of Square 1 Bank, both of Durham, North Carolina.

B. Federal Reserve Bank of Atlanta (Steve Foley, Vice President) 1000 Peachtree Street, N.E., Atlanta, Georgia 30309:

1. *Serguei Kouzmine*, Atlanta, Georgia; to acquire voting shares of UCB Financial Group, Inc., and thereby indirectly acquire voting shares of Atlanta Business Bank, both of Atlanta, Georgia.

C. Federal Reserve Bank of Kansas City (Todd Offenbacher, Assistant Vice President) 1 Memorial Drive, Kansas City, Missouri 64198-0001:

1. *The Estate of Catherine G. Eisemann*, Trinidad, Colorado, and Roger Dean Eisemann, Houston, Texas, individually, as a member of the Eisemann Family and as Co-Executor of the Estate of Catherine G. Eisemann, to retain control of Republic Trinidad Corporation, Houston, Texas, and thereby indirectly retain control of First National Bank in Trinidad, Trinidad, Colorado.

Board of Governors of the Federal Reserve System, November 16, 2009.

Robert deV. Frierson,

Deputy Secretary of the Board.

BILLING CODE 6210-01-S

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company

Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR Part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The applications also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States. Additional information on all bank holding companies may be obtained from the National Information Center website at www.ffiec.gov/nic/.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than December 14, 2009.

A. Federal Reserve Bank of Dallas (E. Ann Worthy, Vice President) 2200 North Pearl Street, Dallas, Texas 75201-2272:

1. *Community Trust Financial Corporation*, Ruston, Louisiana; to merge with Madison Financial Corporation, and thereby indirectly acquire Madison County Bank, both of Madison, Mississippi.

Board of Governors of the Federal Reserve System, November 16, 2009.

Robert deV. Frierson,

Deputy Secretary of the Board.

BILLING CODE 6210-01-S

DEPARTMENT OF HEALTH AND HUMAN SERVICES

[Document Identifier OS-0990-New]

Agency Information Collection Request; 60-Day Public Comment Request

AGENCY: Office of the Secretary, HHS.

In compliance with the requirement of section 3506(c)(2)(A) of the

Paperwork Reduction Act of 1995, the Office of the Secretary (OS), Department of Health and Human Services, is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden. To obtain copies of the supporting statement and any related forms for the proposed paperwork collections referenced above, e-mail your request, including your address, phone number, OMB number, and OS document identifier, to Sherette.funncoleman@hhs.gov, or call the Reports Clearance Office on (202) 690-6162. Written comments and recommendations for the proposed information collections must be directed to the OS Paperwork Clearance Officer at the above e-mail address within 60 days.

Proposed Project: Evaluation of the Parents Speak Up National Campaign (PSUNC): Focus Groups with Adolescents. OMB No. 0990-NEW-Office of the Secretary/Office of Public Health and Science/Office Adolescent Pregnancy Programs.

Abstract: The data collection will take place once, over a three day period, in early 2010. An estimated 2000 adults will be screened to identify parents who are willing for their child to participate in the study and whose child is eligible. Screening will take an estimated 3 minutes, on average. Study participants will total 160 adolescents ages 13-15. Participation in the study will take an estimated 2 hours on average; including time spent responding to a mini-questionnaire and participating in a bulletin board focus group. Participants will self-administer the mini-questionnaire at home on personal computers and will also participate in the focus group online. The specific aim of this study is to assess qualitatively what kinds of information about sex adolescents want to hear from their parents and their perspectives on the factors that either hinder or facilitate effective communication.

ESTIMATED ONE-YEAR ANNUALIZED BURDEN TABLE

Forms (if necessary)	Type of respondent	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
Screener	Adults	2,000	1	3/60	100
Focus group discussion guide and mini-questionnaire.	Adolescents ages 13–15.	160	1	2	320
Total	2,160	420

Seleda M. Perryman,
Office of the Secretary, Paperwork Reduction Act Reports Clearance Officer.

BILLING CODE 4150–30–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Delegation of Authority

Notice is hereby given that I have delegated to the Assistant Secretary for Aging the authorities vested in the Secretary of Health and Human Services under Section 1701(a)(3)(A–B), Section 1701(a)(4), and Section 1703(a)(4) of the Public Health Service Act (42 U.S.C. 300u(a)(3)(A–B), 300u(a)(4), and 300u–2(a), as amended), as they pertain to the exercise of the funds transferred by the Secretary to the Administration on Aging under the “Prevention and Wellness Fund” of the American Recovery and Reinvestment Act of 2009, Public Law 111–5 (Feb. 17, 2009) to carry out evidence-based clinical and community-based prevention and wellness strategies through chronic disease self-management programs targeted to improving the health of seniors under the “Communities Putting Prevention to Work” initiative.

These authorities may be redelegated.

Exercise of these authorities is concurrent to and does not supplant existing delegations of authority from the Secretary. Exercise of these authorities shall be in accordance with established policies, procedures, guidelines, and regulations as prescribed by the Secretary.

I hereby affirm and ratify any actions taken by the Assistant Secretary for Aging or his or her subordinates, which involved the exercise of the authorities delegated herein prior to the effective date of this delegation. This delegation is effective immediately.

Dated: November 12, 2009.

Kathleen Sebelius,
Secretary.

BILLING CODE 4150–03–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Indian Health Service

Request for Public Comment: 30-Day Notice; Proposed Information Collection: Indian Health Service Forms

AGENCY: Indian Health Service, HHS.
ACTION: Request for Public Comment: 30-day Proposed Information Collection: Indian Health Service Forms to Implement the Privacy Rule (45 CFR parts 160 & 164).

SUMMARY: The Indian Health Service (IHS), as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) (44 U.S.C. 3506(c)(2)(A)). This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. As required by section 3507(a)(1)(D) of the PRA95, the proposed information collection has been submitted to the Office of Management and Budget (OMB) for review and approval.

The IHS received no comments in response to the 60-day **Federal Register** notice (74 FR 30095) published on June 24, 2009. The purpose of this notice is to allow an additional 30 days for public comment to be submitted directly to OMB.

Proposed Collection: Title: 0917–0030, “Indian Health Service Forms to Implement the Privacy Rule (45 CFR parts 160 & 164)”. *Type of Information Collection Request:* Extension, with revisions, of currently approved information collection, 0917–0030, “Indian Health Service Forms to Implement the Privacy Rule (45 CFR

parts 160 & 164)”. *Form Number:* IHS–810, IHS–912–1, IHS–912–2, IHS–913, and IHS–917. *Need and Use of Information Collection:* The IHS will use the following data collection instructions to continue the implementation of the information collection requirements contained in the Privacy Rule.

Request for Comments: Your written comments and/or suggestions are invited on one or more of the following points: (a) Whether the information collection activity is necessary to carry out an agency function; (b) whether the agency processes the information collected in a useful and timely fashion; (c) the accuracy of public burden estimate (the estimated amount of time needed for individual respondents to provide the requested information); (d) whether the methodology and assumptions used to determine the estimate are logical; (e) ways to enhance the quality, utility, and clarity of the information being collected; and (f) ways to minimize the public burden through the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Direct Comments to OMB: Send your written comments and suggestions regarding the proposed information collection contained in this notice, especially regarding the estimated public burden and associated response time, directly to: Office of Management and Budget, Office of Regulatory Affairs, New Executive Office Building, Room 10235, Washington, DC 20503, Attention: Allison Eydt, Desk Officer for IHS.

For Further Information: Send requests for more information on the proposed collection or to obtain a copy of the data collection instrument(s) and instructions to: Ms. Betty Gould, IHS Reports Clearance Officer, 801 Thompson Avenue, TMP, Suite 450, Rockville, MD 20852–1601, call non-toll free (301) 443–7899, send via facsimile to (301) 443–9879, or send your e-mail requests, comments, and return address to: betty.gould@ihs.gov.

Comment Due Date: Your comments regarding this information collection are best assured of having full effect if received within 30 days of the date of this publication.

Dated: November 6, 2009.

Yvette Roubideaux,

Director, Indian Health Service.

[FR Doc. E9-27541 Filed 11-19-09; 8:45 am]

BILLING CODE 4165-16-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2009-N-0556]

Agency Information Collection Activities; Proposed Collection; Comment Request; Records and Reports Concerning Experience With Approved New Animal Drugs; Proposed New Data Elements for Adverse Event Reports on Revised Forms FDA 1932 and 1932a

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act of 1995 (the PRA), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information and to allow for public comment in response to the notice. This notice solicits comments on requirements for recordkeeping and reports concerning experience with approved new animal drugs, specifically on new data elements to be used in revised versions of Forms FDA 1932 and 1932a. The information contained in the reports required by this regulation enables FDA to monitor the use of new animal drugs after approval and to ensure their continued safety and efficacy.

DATES: Submit written or electronic comments on the collection of information by December 21, 2009.

ADDRESSES: Submit electronic comments on the collection of information to <http://www.regulations.gov>. Submit written comments on the collection of information to the Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. All comments should be identified with the

docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Denver Presley, Office of Management Programs (HFA-710), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-796-3793.

SUPPLEMENTARY INFORMATION:

I. Background

Under the PRA (44 U.S.C. 3501-3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. "Collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal agencies to provide a notice in the **Federal Register** concerning each proposed collection of information before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

II. Records and Reports Concerning Experience With Approved New Animal Drugs; Proposed New Data Elements for Adverse Event Reports on Revised Forms FDA 1932 and 1932a; 21 CFR 514.80 (OMB Control No. 0910-0645)—Revision

Section 512(l) of the Federal Food, Drug and Cosmetic Act (the act) (21 U.S.C. 360b(l)) and § 514.80(b) of FDA regulations (21 CFR 514.80) require applicants of approved new animal drug applications (NADAs) and approved abbreviated new animal drug applications (ANADAs) to report adverse drug experiences and product/manufacturing defects.

This continuous monitoring of approved NADAs and ANADAs affords the primary means by which FDA obtains information regarding potential problems with the safety and efficacy of marketed approved new animal drugs as well as potential product/manufacturing problems. Postapproval marketing surveillance is important because data previously submitted to FDA may no longer be adequate, as animal drug effects can change over time and less apparent effects may take years to manifest.

An applicant must report adverse drug experiences and product/manufacturing defects on Form FDA 1932, "Veterinary Adverse Drug Reaction, Lack of Effectiveness, Product Defect Report." Periodic drug experience reports and special drug experience reports must be accompanied by a completed Form FDA 2301, "Transmittal of Periodic Reports and Promotional Material for New Animal Drugs" (see § 514.80(d)). Form FDA 1932a, "Veterinary Adverse Drug Reaction, Lack of Effectiveness or Product Defect Report," allows for voluntary reporting of adverse drug experiences or product/manufacturing defects.

Collection of information using existing paper forms FDA 2301, 1932, and 1932a is currently approved under OMB control number 0910-0284, set to expire on January 31, 2010. FDA currently is seeking renewal of that information collection.

FDA recently proposed to collect information using electronic versions of Forms FDA 1932 and 1932a as part of the agency-wide information collection (MedWatch^{Plus} Portal and Rational Questionnaire) that was announced for public comment in the **Federal Register** on October 23, 2008 (73 FR 63153). The MedWatch^{Plus} Portal and Rational Questionnaire are components of a new electronic system for collecting, submitting, and processing adverse event reports and other safety information for all FDA-regulated products.

In this 30-day notice, FDA is requesting public comment on data elements associated with revisions to forms FDA 1932 and 1932a (both paper and electronic) under revised OMB control number 0910-0645, described below. We will publish separately in the **Federal Register** a 30-day notice to complete the renewal of OMB control number 0910-0284, the collection of information using existing paper forms FDA 2301, 1932, and 1932a, to provide time for development of the revised FDA Forms 1932 and 1932a and their incorporation into the MedWatch OMB

control number 0910–0645. After these forms have been incorporated under MedWatch OMB control number 0910–0645, they will cease to exist under OMB control number 0910–0284. FDA Form 2301 will continue without revision under OMB control number 0910–0284.

This 30-day notice lists the data elements associated with revised versions of both paper and electronic forms 1932 and 1932a under a revision

to OMB control number 0910–0645. It is estimated that, during the first 3 years that the MedWatch^{Plus} Portal is in use, half of the reports will be submitted in paper format and half will be submitted electronically.

The reporting and recordkeeping burden estimates, including the total number of annual responses, are based on the submission of reports to the Division of Surveillance, Center for Veterinary Medicine. The hours per

response for both paper and electronic versions of revised Forms FDA 1932 and 1932a are assumed to be the time it will take to gather the required information and complete each form. The annual frequency of responses was calculated as the total annual responses divided by the number of respondents.

FDA estimates the burden of this collection of information as follows:

TABLE 1.—ESTIMATED ANNUAL REPORTING BURDEN¹

21 CFR Section or Section of the Act	FDA Form No.	No. of Respondents	Annual Frequency per Response	Total Annual Responses	Hours per Response	Total Hours
514.80(b)(1), (b)(2)(i), (b)(2)(ii), and (b)(3); Paper Version	1932 ²	404	44.264	17,882.5	1.5	26,824
514.80(b)(1), (b)(2)(i), (b)(2)(ii), and (b)(3); Electronic Version	1932 ²	404	44.264	17,882.5	1	17,882.5
Voluntary reporting FDA Form 1932a for public; Paper Version	1932a ³	81.5	1	81.5	1	81.5
Voluntary reporting FDA Form 1932a for public; Electronic Version	1932a ³	81.5	1	81.5	0.6	48.9
Total Hours						44,836.9

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

² FDA received 35,765 mandatory reports (Form FDA 1932) during 2007 from 808 respondents. Based on this experience, and taking into account the data element revisions, we estimate that CVM will receive 35,765 mandatory reports from 808 respondents annually. We estimate that one half of the respondents (404) will use the paper form, while the other half (404) will submit electronically; that is, we will receive 17,882.5 reports in paper form, and 17,882.5 reports electronically. We estimate the reporting burden for mandatory reporting to be: Paper form: 26,824 hours (404 respondents x 44.264 annual frequency of response x 1.5 hours ≈ 26,824 hours). Electronic form: 17,882.5 hours (404 respondents x 44.264 annual frequency of response x 1 hour ≈ 17,882.5 hours).

³ FDA received 163 voluntary reports (Form FDA 1932a) during 2007. Based on this experience, and taking into account the data element revisions, we estimate that CVM will receive 163 voluntary reports from 163 respondents annually. We estimate that one half of the respondents (81.5) will use the paper form, while the other half (81.5) will submit electronically; that is, we will receive 81.5 reports in paper form, and 81.5 reports electronically. We estimate the reporting burden for voluntary reporting to be: Paper form: 81.5 hours (81.5 respondents x 1 annual frequency of response x 1 hour per report = 81.5 hours). Electronic form: 48.9 hours (81.5 respondents x 1 annual frequency of response x 0.6 hours per report = 48.9 hours).

TABLE 2.—ESTIMATED ANNUAL RECORDKEEPING BURDEN¹

21 CFR Section	No. of Recordkeepers	Annual Frequency per Recordkeeping	Total Annual Records	Hours per Record	Total Hours
514.80(e) ²	90	55	4,949	0.5	2,475 ³

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

² Section 514.80(e) covers recordkeeping hours for adverse event reporting on revised forms 1932 and 1932a.

³ The annual frequency of responses was calculated as the total annual responses divided by the number of respondents.

III. Revisions to Forms FDA 1932 and 1932a and Request for Comments

A. Background on Revisions

Section 514.80(d) of FDA’s regulations requires applicants of approved NADAs and ANADAs to report adverse drug experiences and product and manufacturing defects associated with their new animal drug products using Form FDA 1932. For voluntary reporting, Form FDA 1932a should be used instead.

As part of FDA’s ongoing effort to harmonize the agency’s adverse event (AE) regulatory reporting requirements

with those of other nations and streamline reporting for product and manufacturing defects, FDA is contemplating changes to the data elements reported on Forms FDA 1932 and 1932a. Furthermore, the contemplated changes to Forms FDA 1932 and 1932a are based on FDA’s experience in determining the safety and effectiveness of product(s) and need for efficient data capture and entry.

The contemplated changes to the AE reporting requirements for Form FDA 1932 are the product of discussions undertaken between the United States, Japan, and the European Union as part

of the International Cooperation on Harmonisation of Technical Requirements for Registration of Veterinary Medicinal Products (VICH). FDA is considering revisions to Form FDA 1932 that would bring the AE reporting data elements on the form more in line with the data elements developed as a result of the VICH discussions.¹ The agency also is

¹ FDA will implement all of the VICH data elements verbatim from the draft guidance document entitled “Pharmacovigilance of Veterinary Medicinal Products Data Elements for Submission of Adverse Event Reports” (VICH GL–42), in Form FDA 1932. VICH GL–42 is currently

contemplating the inclusion of additional new data elements that would gather information specific only to FDA. Collecting this FDA-specific information is essential for the processing, review, and regulatory disposition of the electronic and paper reports. Inclusion of some of the new data elements is necessitated by the Rational Questionnaire.

In addition, the agency is considering adding new data elements for product and manufacturing defect reports on Form FDA 1932 and 1932a. These changes are the product of internal FDA discussions and are intended to capture additional pertinent product and manufacturing defect information.

B. Proposed Revisions

1. Form FDA 1932

This section describes data elements on the current Form FDA 1932,

proposed new data elements, and data elements we propose to delete from the current form. These AE and product and manufacturing defect data elements will be collected electronically, through the MedWatch^{Plus} Portal and Rational Questionnaire (currently under development), and in the paper form.

Table 3 of this document, entitled "Data Elements for Form FDA 1932," presents the data elements for the collection of animal drug adverse event reports and manufacturing and product defect reports. The data elements are listed in the column entitled "Data Elements." The column entitled "Current, New, or Deleted Data Element" indicates whether the data element is currently being collected (Current)², is a proposed new data element (New), or is a data element FDA proposes to delete (Deleted).

As previously mentioned in this document, the agency has had

discussions with VICH regarding the data elements to be collected for animal drug adverse events. As a result, the agency is proposing new data elements that have been negotiated with VICH. The column entitled "VICH-Negotiated or FDA-Proposed Data Element" differentiates between VICH-negotiated and FDA-proposed data elements.

The agency intends to allow the regulated industry to submit this information collection in three different submission/transmission formats. Industry will be able to submit these reports using a paper form, the Web-based Rational Questionnaire, or an electronic file through the FDA electronic Gateway-to-Gateway transmission. The column entitled "Submission/Transmission Format" presents the submission/transmission format(s) that will be used with each particular data element.

TABLE 3.—DATA ELEMENTS FOR FORM FDA 1932

Line No.	Data Elements	Current, New, or Deleted Data Element	VICH-Negotiated or FDA-Proposed Data Element	Submission/Transmission Format (Paper Form, Electronic Web-based Rational Questionnaire (EWBRQ), and/or Electronic Gateway-to-Gateway (EGG))
1	United States-Only Specific Information, including:			
2	Report Identifier (The Report Identifier is the FDA application or file number of the AER being sent.)	Current	FDA Proposed	All Formats
3	Domestic vs. Foreign Category (This is a list of values describing whether the product is an FDA-approved product, a foreign-approved product, or other type of product, e.g., an unapproved drug.)	New	FDA Proposed	All Formats
4	United States Pharmacovigilance Contact Person for the Applicant or Nonapplicant (This is the person within the United States acting on behalf of the applicant or nonapplicant and is the contact person for the FDA for any pharmacovigilance issues about the report.), including:			
5	Title, First and Last Name	Current	FDA Proposed	All Formats
6	Telephone Number, Fax Number, and E-Mail Address	New	FDA Proposed	All Formats
7	Message Sender Identifier (Name and contact information of person responsible for any corresponding communications regarding the whole batch electronic transmission.), including:			
8	Street Address, City, State/County, and Mail/Zip Code	New	FDA Proposed	EGG Only
9	Three-character Country Code (This is the list of country codes from the International Organization for Standardization (ISO) 3166 standard.)	New	FDA Proposed	EGG Only
10	First and Last Name	New	FDA Proposed	EGG Only
11	Telephone Number, Fax Number, and E-Mail Address	New	FDA Proposed	EGG Only
12	Profile Identifier Code (This information indicates the type of report contained in the electronic message.)	New	FDA Proposed	EWBRQ and EGG Only

under discussion at Step 6. This guidance is available on the Internet at <http://www.fda.gov/RegulatoryInformation/Guidances/default.htm>.

²In general, the information being collected is the same, but the data element has been renamed or restructured to facilitate data collection.

TABLE 3.—DATA ELEMENTS FOR FORM FDA 1932—Continued

Line No.	Data Elements	Current, New, or Deleted Data Element	VICH-Negotiated or FDA-Proposed Data Element	Submission/Transmission Format (Paper Form, Electronic Web-based Rational Questionnaire (EWBRQ), and/or Electronic Gateway-to-Gateway (EGG))
13	Batch ID (This information identifies the reports in this batch as a whole electronic message.)	New	FDA Proposed	EGG Only
14	Message Date (This information indicates the date this batch report is created.)	New	FDA Proposed	EGG Only
15	Message Version Number & Release Number (This information indicates the Health Level Seven, Inc. (HL7) "Message Version" and "Release Number" on which this batch report electronic submission is based.)	New	FDA Proposed	EGG Only
16	Adverse Event Report (AER) Information, including:			
17	Unique AER Identification Number (This globally unique AER identification number is created by and assigned by the applicant or nonapplicant.)	New	VICH Negotiated	All Formats
18	Original Receive Date (The original receive date is the date on which the first full communication of the AER was received by the applicant or nonapplicant responsible for reporting the AER to the FDA.)	Current	VICH Negotiated	All Formats
19	Date of Current Submission (This is the date the current AER was submitted to the Regulatory Authority (RA).)	Current	VICH Negotiated	All Formats
20	Type of Report, including:			
21	Type of Submission (This is a list of values describing the regulatory type of report being submitted to the RA, e.g., 15-day NADA/ANADA alert report, 3-day NADA/ANADA field alert report, followup report, nullification report, periodic drug experience report, and other report.)	Current	VICH Negotiated	All Formats
22	Reason for Nullification Report (This is a text description of why this AER is being nullified.)	Current	VICH Negotiated	All Formats
23	Type of Information in Report (This is a list of values for the categorization of the type of information in the AER, e.g., spontaneous safety and lack of expected effectiveness information, clinical study safety information, product and manufacturing defect information, product and manufacturing defect with safety and lack of expected effectiveness information, and other type of information.)	New	VICH Negotiated	All Formats
24	Regulatory Authority (RA) Information (This is the RA to which this AE report (AER) is to be initially submitted based on the RA that has authority to regulate the product.), including:			
25	RA Name	Current	VICH Negotiated	All Formats
26	Street Address, City, State/County, and Mail/Zip Code	Current	VICH Negotiated	All Formats
27	Three-character Country Code	Current	VICH Negotiated	All Formats
28	Marketing Authorization Holder (MAH) information. (The MAH is the applicant or the nonapplicant who is responsible for reporting the AER to the RA.), including:			
29	Business Name	Current	VICH Negotiated	All Formats
30	Street Address, City, State/County, and Mail/Zip Code	Current	VICH Negotiated	All Formats
31	Three-character Country Code	Current	VICH Negotiated	All Formats
32	Person Acting on Behalf of the MAH information, including:			
33	Title, First and Last Name	Current	VICH Negotiated	All Formats

TABLE 3.—DATA ELEMENTS FOR FORM FDA 1932—Continued

Line No.	Data Elements	Current, New, or Deleted Data Element	VICH-Negotiated or FDA-Proposed Data Element	Submission/Transmission Format (Paper Form, Electronic Web-based Rational Questionnaire (EWBRQ), and/or Electronic Gateway-to-Gateway (EGG))
34	Telephone Number, Fax Number, and E-Mail Address	New	VICH Negotiated	All Formats
35	Primary Reporter's information (The primary reporter is the person or organization, as determined by the MAH, which holds or provides the most pertinent information related to this AER.), including:			
36	First and Last Name	Current	VICH Negotiated	All Formats
37	Telephone and Fax Number	Current	VICH Negotiated	All Formats
38	E-Mail Address	New	VICH Negotiated	All Formats
39	Business Name	Current	VICH Negotiated	All Formats
40	Street Address, City, State/County, and Mail/Zip Code	Current	VICH Negotiated	All Formats
41	Three-character Country Code	Current	VICH Negotiated	All Formats
42	Primary Reporter Category (This is a list of values describing the role/involvement of the primary reporter, e.g., animal owner, physician, et cetera.)	New	VICH Negotiated	All Formats
43	Other Reporter's information (The other reporter is the person or organization, determined by the MAH, who also possesses pertinent information related to this AER.), including:			
44	First and Last Name	Current	VICH Negotiated	All Formats
45	Telephone and Fax Number	Current	VICH Negotiated	All Formats
46	E-Mail Address	New	VICH Negotiated	All Formats
47	Business Name	Current	VICH Negotiated	All Formats
48	Street Address, City, State/County, and Mail/Zip Code	Current	VICH Negotiated	All Formats
49	Three-character Country Code	Current	VICH Negotiated	All Formats
50	Other Reporter Category (This is a list of values describing the role/involvement of the other reporter, e.g., animal owner, physician, et cetera.)	New	VICH Negotiated	All Formats
51	Veterinary Medical Product (VMP) and Data Usage (for all VMPs), including:			
52	Registered or Brand Name (This is the name by which the product is presented by the MAH, also known as the Proprietary Name or Trade Name of the product.)	Current	VICH Negotiated	All Formats
53	Product Code (The product code is the National Drug Code (NDC) number for U.S. FDA-regulated products.)	New	VICH Negotiated	All Formats
54	Registration Identifier (The Registration Identifier is the code for where the VMP is approved, what RA is responsible for regulating VMP, and the registration number of the VMP.)		VICH Negotiated	All Formats
55	ATCvet Code (ATCvet stands for Anatomic Therapeutic Chemical System for Veterinary Medicine. It is used for the classification of substances intended for therapeutic use and can serve as a tool for the classification of veterinary medicinal products. More information about the ATCvet code is available at http://www.whocc.no/atcvet/)	New	VICH Negotiated	All Formats
56	Who Administered the VMP (This is a list of values describing the person who administered the VMP(s) to the animal involved in the AE, e.g., veterinarian, animal owner, et cetera.)	Current	VICH Negotiated	All Formats

TABLE 3.—DATA ELEMENTS FOR FORM FDA 1932—Continued

Line No.	Data Elements	Current, New, or Deleted Data Element	VICH-Negotiated or FDA-Proposed Data Element	Submission/Transmission Format (Paper Form, Electronic Web-based Rational Questionnaire (EWBRQ), and/or Electronic Gateway-to-Gateway (EGG))
57	Company or MAH (This is the name(s) of the company or MAH that owns the VMP(s) involved in the AE.)	Current	VICH Negotiated	All Formats
58	MAH Assessment (This is the assessment by the MAH of the association between the use of the VMP and the AE.)	Current	VICH Negotiated	All Formats
59	FDA, Office of Regulatory Affairs (ORA) District Field Office (This is a list of values identifying the ORA District Field Office or local FDA residence post to which the product and manufacturing defect information was submitted. This field is used for product and manufacturing defect reports and if the report is both an AE and a product and manufacturing defect report.)	New	FDA Proposed	All Formats
60	Use According to Label (This element requests information regarding whether the VMP(s) was used according to its label.)	Current	VICH Negotiated	All Formats
61	Explanation for Off-Label Use Code (This is the list of values describing how the VMP was used in an off-label (extralabel) manner.)	New	VICH Negotiated	All Formats
62	Active Ingredient information, including:			
63	Active Ingredient(s) (These are the names of the pharmaceutical substances that comprise the active component of the VMP.)	Current	VICH Negotiated	All Formats
64	Strength and Strength Unit (Numerator and Denominator) (Strength is the concentration of the active ingredient.)	Current	VICH Negotiated	All Formats
65	Active Ingredient Code (The active ingredient code is the Unique Ingredient Identifier (UNII) code. The UNII code is generated by the joint FDA/United States Pharmacopeia (USP) Substance Registration System (SRS).)	New	VICH Negotiated	All Formats
66	Dosage Form (This is a selection for a list of values for the labeled dosage form of the VMP(s).)	Current	VICH Negotiated	All Formats
67	Dosing Information, including:			
68	Date of First Exposure (Day, Month, Year) (This is the date on which the animal was first treated with the VMP.)	Current	VICH Negotiated	All Formats
69	Date of Last Exposure (Day, Month, Year) (This is the date on which the animal was last treated with the VMP.)	Current	VICH Negotiated	All Formats
70	Numeric Value and Unit for Interval of Administration (This is the frequency of administration of the VMP(s).)	Current	VICH Negotiated	All Formats
71	Numeric Value and Unit for Dose (This is the actual quantity of the dose administered.)	Current	VICH Negotiated	All Formats
72	Route of Exposure (This is a selection from a list of values for the route by which the VMP was administered.)	Current	VICH Negotiated	All Formats
73	Lot Number Information, including:			
74	Lot Number (This is the lot number associated with the VMP in this AER.)	Current	VICH Negotiated	All Formats
75	Expiration Date (Day, Month, Year) (This is the expiration date associated with the lot number.)	New	VICH Negotiated	All Formats
76	Manufacturing Site Identifier Number (This is the FDA Establishment Number (FEI Number) or the Data Universal Number System (D-U-N-S® Number).)	New	FDA Proposed	All Formats

TABLE 3.—DATA ELEMENTS FOR FORM FDA 1932—Continued

Line No.	Data Elements	Current, New, or Deleted Data Element	VICH-Negotiated or FDA-Proposed Data Element	Submission/Transmission Format (Paper Form, Electronic Web-based Rational Questionnaire (EWBRQ), and/or Electronic Gateway-to-Gateway (EGG))
77	Manufacturer's Identifier Type (This is a list of values describing the type of manufacturing site identifier number, i.e., FEI Number or D-U-N-S® Number.)	New	FDA Proposed	All Formats
78	Manufacturing Date (Day, Month, Year) (This is the date the VMP was manufactured.)	New	FDA Proposed	All Formats
79	Number of Defective Units (This is the number of defective units associated with this VMP.)	New	FDA Proposed	All Formats
80	Number of Units Returned (This is the number of defective units associated with this VMP returned to the applicant or non-applicant.)	New	FDA Proposed	All Formats
81	Adverse Event Information, including:			
82	Attending Veterinarian's Assessment (This is a list of values describing the assessment of the attending veterinarian regarding the association between the VMP(s) and the AE (other than human).)	Current	VICH Negotiated	All Formats
83	Previous Exposure to the VMP (Was the animal previously exposed to the VMP(s)?)	Current	VICH Negotiated	All Formats
84	Previous AE to the VMP (Did the animal have a previous AE to the VMP(s)?)	Current	VICH Negotiated	All Formats
85	Duration and Time Units (This is the length of time the AE lasted.)	Current	VICH Negotiated	All Formats
86	Serious AE (Was the AE serious?)	Current	VICH Negotiated	All Formats
87	Treatment of AE (Was the AE treated?)	Current	VICH Negotiated	All Formats
88	Outcome to Date, including: (number of)			
89	Recovered/Normal, Ongoing, Recovered with Sequela, and Unknown	Current	VICH Negotiated	All Formats
90	Euthanized	New	VICH Negotiated	All Formats
91	Died	Current	VICH Negotiated	All Formats
92	Length of Time Between Exposure to VMP(s) and Onset of AE (This is a list of values describing the length of time between the first exposure to the VMP and the onset of the AE.)	Current	VICH Negotiated	All Formats
93	Date of Onset of AE (Day, Month, Year) (This is the date of the first clinical manifestation of the AE.)	Current	VICH Negotiated	All Formats
94	Adverse Clinical Manifestations (This is a list of values describing the clinical signs that occurred during the AE.)	Current	VICH Negotiated	All Formats
95	Narrative of AE (open text field) (This is a detailed description of the case, regardless of the type of information contained in the report.)	Current	VICH Negotiated	All Formats
96	Did the AE Abate After Stopping the VMP?	Current	VICH Negotiated	All Formats
97	Did the AE Reappear After Re-Introduction of the VMP?	Current	VICH Negotiated	All Formats
98	Animal Data, including:			
99	Species (This is a list of values describing the species of the animal(s) involved in the AER.)	Current	VICH Negotiated	All Formats

TABLE 3.—DATA ELEMENTS FOR FORM FDA 1932—Continued

Line No.	Data Elements	Current, New, or Deleted Data Element	VICH-Negotiated or FDA-Proposed Data Element	Submission/Transmission Format (Paper Form, Electronic Web-based Rational Questionnaire (EWBRQ), and/or Electronic Gateway-to-Gateway (EGG))
100	Breeds and Crossbreed Information (This is a list of values describing the breed(s) of animal(s) involved in the AER.)	Current	VICH Negotiated	All Formats
101	Gender (This is a list of values for the selection of the gender(s) of animal(s) involved in the AER.)	Current	VICH Negotiated	All Formats
102	Reproductive Status (This is a list of values describing if the animal is intact, neutered, etc.)	Current	VICH Negotiated	All Formats
103	Female Physiological Status. (This is a list of values describing the animal's pregnancy and lactation status.)	Current	VICH Negotiated	All Formats
104	Age (Measured, Estimated, Unknown), including:			
105	Precision Value for Age (Measured, Estimated, Unknown Age. This is a list of values describing whether the age(s) provided are measured or estimated, or if age is not known.)	New	VICH Negotiated	All Formats
106	Minimum Age Value and Units.	Current	VICH Negotiated	All Formats
107	Maximum Age Value and Units.	Current	VICH Negotiated	All Formats
108	Weight, including:			
109	Precision Value for Weight (Measured, Estimated, Unknown Weights) (This is a list of values describing whether the weight(s) provided are measured or estimated, or if weight is not known.)	New	VICH Negotiated	All Formats
110	Minimum Weight	Current	VICH Negotiated	All Formats
111	Maximum Weight	Current	VICH Negotiated	All Formats
112	Attending Veterinarian's Assessment of Animal Health Status Prior to VMP. (This is a list of values describing the attending veterinarian's assessment of the health status of the animal(s) involved in the AE prior to their exposure to the VMP.)	Current	VICH Negotiated	All Formats
113	Number of Animals Treated (This is the number of animal(s) being directly treated by the VMP(s).)	Current	VICH Negotiated	All Formats
114	Number of Animals Affected (This is the total number of animals affected in the AER, whether by direct or indirect exposure.)	Current	VICH Negotiated	All Formats
115	Supplemental Documents, including:			
116	Attached Document (These are additional documents containing information relevant to the AE, such as medical record, radiology, clinical chemistry reports, newspaper articles, and letters.)	Current	VICH Negotiated	All Formats
117	Attached Document Filename (This is the name of the document for paper documents or the electronic file for electronic transmissions.)	Current	VICH Negotiated	All Formats
118	Attached Document Type (This is a list of values describing the type of document that is attached, e.g., necropsy report)	Current	VICH Negotiated	All Formats
119	The following data elements are being deleted from the information collection:			
120	2c. Number of Days Between 2a and b:	Deleted		
121	11. Illness/reason for use of this drug	Deleted		

TABLE 3.—DATA ELEMENTS FOR FORM FDA 1932—Continued

Line No.	Data Elements	Current, New, or Deleted Data Element	VICH-Negotiated or FDA-Proposed Data Element	Submission/Transmission Format (Paper Form, Electronic Web-based Rational Questionnaire (EWBRQ), and/or Electronic Gateway-to-Gateway (EGG))
122	17. Did any new illness develop or did initial diagnosis change after suspect drug started?	Deleted		
123	25. Outcome of Reaction to Date - Died	Deleted		
124	26. When reaction appeared, treatment with suspect drug: has already been completed, discontinued, replaced with another drug; continued at altered dose, other (explain)—and the reaction: continued, stopped, recurred, or other (explain)	Deleted		
125	29. Had animal(s) previously reacted to other drugs?	Deleted		
126	30. Has the attending veterinarian seen similar reactions to this drug in any other animals?	Deleted		
127	32. Signature of individual responsible for accuracy of reported information	Deleted		

2. Form FDA 1932a

This section describes data elements on the current Form FDA 1932a and the proposed new data elements. These AE and product and manufacturing defect data elements will be collected electronically, through the MedWatch^{Plus} Portal Rational Questionnaire, and in the paper form. All the data elements will be captured

using the MedWatch^{Plus} Portal Rational Questionnaire or the paper form.

Table 4 of this document, entitled “Data Element Information Collection for Form FDA 1932a,” presents the data elements the agency is proposing for the collection of animal drug adverse events reports and manufacturing and product problem reports for individuals who choose to report information voluntarily to FDA. The current and proposed new

data elements are listed in the column entitled “Data Elements.” In general, the information being collected is the same, but the data element has been renamed or restructured to facilitate data collection. As stated previously in this document, the proposed changes are based on FDA’s experience in determining the safety and effectiveness of product(s) and need for efficient data capture and entry.

TABLE 4.—DATA ELEMENT INFORMATION COLLECTION FOR FORM FDA 1932A

Line No.	Data Elements	Current or New Data Element
1	Individual Case Safety Report Number (FDA-Assigned Number)	New
2	Date of Initial Report. (This is the date the sender sent the first report of the information.)	New
3	Date Reported (This is the date of this current report.)	Current
4	Submission Type (This is a list of values describing the type of submission, e.g., Initial or Followup Report)	New
5	Report Type (This is a list of values describing the type of information in the report, e.g., adverse event, product problem, or both)	New
6	Manufacturer’s Case Number. (The manufacturer’s case number is given to the sender by the manufacturer of the product if the sender contacted the manufacturer.)	Current
7	Sender Information (The sender is the person or organization which fills out the report and submits or transmits the report to FDA.), including:	
8	Sender First and Last Name	New
9	Sender Street Address, City, State/Province, Postal/Zip Code, and Country	New
10	Sender Primary and Other Telephone Number, E-Mail Address, and Fax Number	New
11	Sender Category. (This is a list of values describing the role/involvement of the sender, e.g., animal owner, physician, etc.)	New

TABLE 4.—DATA ELEMENT INFORMATION COLLECTION FOR FORM FDA 1932A—Continued

Line No.	Data Elements	Current or New Data Element
12	Did the sender report to other sources?	New
13	Sender also reported to other sources. (This is a list of values describing the sources to which the sender reported the AE or product problem, e.g., manufacturer, distributor, etc.)	New
14	No identity disclosure (This data element indicates whether the sender wants their identity disclosed to the manufacturer.)	Current
15	Preferred Method of Contact. (This is a list of values describing the preferred method of contacting the sender, e.g., telephone, e-mail.)	New
16	Healthcare Professional Information, including:	
17	Healthcare Professional First and Last Name.	Current
18	Healthcare Professional Street Address, City, State/Province, and Postal/Zip Code	Current
19	Healthcare Professional Primary and Other Phone Number	Current
20	Healthcare Professional e-mail address	New
21	Healthcare Professional Country	New
22	Owner's Information (This is the owner of the animal involved in the case.), including:	
23	Owner First and Last Name.	Current
24	Owner Primary and Other Phone Number, and E-Mail Address	New
25	Owner Street Address, City, State/Province, Postal/Zip Code, and Country	New
26	Product Information:	
27	Name of Suspected Product. (This is the name of the product suspected of causing the AE or the product with the product problem.)	Current
28	Name of Manufacturer	Current
29	Lot Number	Current
30	Expiration Date	Current
31	Diagnosis and/or Reason for Use of the Product	Current
32	Product Use Information: Dose Administered (amount of product administered), Interval of Administration (frequency of administration—every 12 hours or for 5 days), and Route of Administration (oral, injection, topical, etc.).	Current
33	Dosage Form. (This is how the product was supplied to the animal, e.g., chewable tablet, topical, injection)	Current
34	Date of First and Last Exposure. (This is the date the product(s) was first administered and last administered to the animal.)	Current
35	Duration of Product Use (Number) and Units of Measurement. (This is the duration the product was given, e.g., 2 weeks.)	New
36	Product Administered By (This is a list of values describing who administered the product(s), e.g., veterinarian/veterinary staff, Owner)	Current
37	Concurrent Drugs Administered (Were concurrent product(s) given to the animal(s)?)	Current
38	Concurrent Products Names. (This is the name of all concurrent products involved in the case.)	Current
39	Animal Information:	
40	Species. (This is a list of values for selecting the species of the animal(s) involved in the case.)	Current
41	Breed and Crossbreed (This is the breed(s) of animal(s) involved in the report.)	Current
42	Gender. (This a list of values for the selection of the gender(s) of animal(s) involved in the AER.)	Current

TABLE 4.—DATA ELEMENT INFORMATION COLLECTION FOR FORM FDA 1932A—Continued

Line No.	Data Elements	Current or New Data Element
43	Reproductive Status. (This is a list of values describing whether the animal is intact, neutered, et cetera.)	Current
44	Age and Age Units	Current
45	Weight and Weight Units	Current
46	Overall Health Status When Suspected Product Given. (This is a list of values describing the health status of the animal(s) involved in the AE prior to their exposure to the product(s).)	Current
47	Number of Animals Treated (This is the number of animal(s) being directly treated by the product(s).)	New
48	Number of Animals Affected. (This is the total number of animals affected in the AER, whether by direct or indirect exposure.)	New
49	Adverse Event Information:	
50	Veterinarian's Level of Suspicion that Product Caused the AE. (This is a list of values describing the veterinarian's level of suspicion, e.g., high, medium, low, or unknown.)	Current
51	Treatment of AE. (This is a description of how the AE was treated.)	Current
52	Did the AE Abate After Stopping the Product?	Current
53	Did the AE Reappear After Reintroduction of the product?	Current
54	Outcome. (This is a list of values describing the overall animal health status after exposure to the product.)	Current
55	Length of Time Between Initial Exposure to Suspected Product and Onset of AE, numeric value and units of measurement	Current
56	Length of Time Between Last Administration of Suspected Product and Onset of AE, numeric value and units of measurement	Current
57	Date of Onset of AE. (This is the date that the first adverse clinical sign(s) occurred.)	New
58	Date of Product Problem Discovery. (This is the date that the product problem was discovered.)	New
59	When the AE Occurred, Treatment with Suspected Product. (This is a list of values describing the use of the suspected product after the AE occurred)	Current
60	Other Relevant Clinical Information:	
61	Concurrent Clinical Problem (Does the animal(s) have concurrent clinical problems?)	Current
62	List Concurrent Clinical Problem(s)	Current
63	AE/Product Problem (Long Narrative) (This is a detailed description of the case.)	Current
64	Supplemental Documents:	
65	Attached Document Name/File name (if electronic) (This is the name of the document for paper documents or the name of the electronic file for electronic transmissions.)	Current
66	Attached Document Type (This is a list of values describing the type of document that is attached, e.g., necropsy report)	Current
67	Attached Document(s) (These are additional documents containing information relevant to the AE, e.g., medical record, radiology, clinical chemistry reports, newspaper articles, and letters.)	Current
68	Attached Document Description. (This is a description of the document.)	New

C. Request for Comments

FDA invites comments on all aspects of the revised collection of the data elements for Forms FDA 1932 and 1932a as set forth in section III.B of this notice, including whether such lists

incorporate all data elements necessary to report an adverse event and a product or manufacturing defect, and whether certain data elements should be deleted or modified. Interested persons may submit to the Division of Dockets Management (see **ADDRESSES**) electronic

or written comments regarding the proposed changes. Submit a single copy of electronic comments or two paper copies of any mailed comments, except that individuals may submit one paper copy. Comments are to be identified with the docket number found in

brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

Dated: November 16, 2009.

David Horowitz,

Assistant Commissioner for Policy.

[FR Doc. E9-27956 Filed 11-19-09; 8:45 am]

BILLING CODE 4160-01-S

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, Public Health Service, HHS.

ACTION: Notice.

SUMMARY: The inventions listed below are owned by an agency of the U.S. Government and are available for licensing in the U.S. in accordance with 35 U.S.C. 207 to achieve expeditious commercialization of results of Federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing.

ADDRESSES: Licensing information and copies of the U.S. patent applications listed below may be obtained by writing to the indicated licensing contact at the Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, Maryland 20852-3804; *telephone:* 301/496-7057; *fax:* 301/402-0220. A signed Confidential Disclosure Agreement will be required to receive copies of the patent applications.

Phage Display Plasmids With Improved Expression Properties for Human and Chimeric Nonhuman/Human Fab Libraries

Description of Invention: The Fab molecule was the first generated antibody fragment and still dominates basic research and clinical applications. New phage display vectors were designed to generate and select Fab libraries with human constant domains. These vectors facilitate bacterial expression of human, humanized, and chimeric nonhuman/human Fab antibody fragments. They differ from currently available pComb3H and pComb3X phage display vectors by assembling human and chimeric nonhuman/human Fab libraries in two rather than three PCR steps. As a result,

these novel constructs retain the initial variable light and heavy chain sequences and improve the resulting Fab library's complexity in terms of number, diversity, and affinity. These constructs were developed with and without a His tag and yield approximately 100 µg to 2 mg of protein, which can be used for evaluation and characterization of Fab binding properties such as affinity and specificity. Notably, the His tag provides a handle to easily purify Fab.

Applications

- Generation of human, humanized, and chimeric nonhuman/human Fab antibody fragments.
- Research tool to characterize Fab antibody fragments.

Advantages

- Improved Fab library with complexity and number, diversity, and affinity.
 - His tag construct allows for simplified purification assays.
- Inventor:* Christoph Rader (NCI).

Potent and Selective Inhibitors of Human Lipoxygenase for Prostate Cancer Therapy

Description of Invention: With more than \$2 billion in revenues in the US in 2007, the market for diagnostic and therapeutic products for prostate cancer is substantial. More than 2,000,000 American men currently live with prostate cancer and more than 200,000 new cases are diagnosed each year.

Researchers led by Dr. David Maloney at the National Human Genome Research Institute (NHGRI) have discovered several novel compounds that selectively and potently inhibit lipoxygenase (LOX), an enzyme that metabolizes polyunsaturated fatty acids which has been implicated in the

pathogenesis of prostate cancers. These novel compounds are small molecules, and as such have an advantage over antibody-based technologies in this market. As prostate cancer is the most commonly diagnosed malignancy among men in the USA and Europe, the significant need for new therapies suggests that these novel LOX inhibitor compounds have a strong potential of reaching the marketplace.

Applications

- Therapeutics for prostate cancer.
- Therapeutics for several other LOX-associated pathologies including atherosclerosis, asthma, other cancers, glomerulonephritis, osteoporosis, and Alzheimer's disease.

Advantages

- Potent and selective inhibitory activity to reduce negative side effects.
- Compounds are small molecules (less immunogenic than antibodies).

Development Status: Pre-clinical.

Inventors: David Maloney *et al.* (NHGRI).

Food and Drug Administration

[Docket No. FDA-2008-D-0614]

Guidance for Industry on Changes to Approved New Animal Drug Applications—New Animal Drug Applications Versus Category II Supplemental New Animal Drug Applications; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of a guidance for industry #191 entitled “Changes to Approved NADAs—New NADAs vs. Category II Supplemental NADAs.” This guidance is intended to assist sponsors who wish to apply for approval of changes to approved new animal drugs that require FDA to reevaluate safety and/or effectiveness data. The goal of this guidance is to create greater consistency in how such applications are handled by sponsors and by FDA’s Center for Veterinary Medicine (CVM).

DATES: Submit written or electronic comments on agency guidances at any time.

ADDRESSES: Submit written requests for single copies of the guidance to the Communications Staff (HFV-12), Center for Veterinary Medicine, Food and Drug Administration, 7519 Standish Pl., Rockville, MD 20855. Send one self-addressed adhesive label to assist that office in processing your requests.

Submit written comments on the guidance to the Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. Submit electronic comments to <http://www.regulations.gov>. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT: Suzanne J. Sechen, Center for Veterinary Medicine (HFV-126), Food and Drug

Administration, 7500 Standish Pl., Rockville, MD 20855, 240-276-8105, e-mail: suzanne.sechen@fda.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance for industry #191 entitled “Changes to Approved NADAs—New NADAs vs. Category II Supplemental NADAs.” This guidance is intended to assist sponsors who wish to apply for approval of changes to approved new animal drugs that require FDA to reevaluate safety and/or effectiveness data. The guidance explains how the Office of New Animal Drug Evaluation (ONADE) categorizes possible changes to approved new animal drugs that require reevaluation of safety and/or effectiveness data and explains which administrative vehicle—a new original new animal drug application (NADA) (new NADA) or a Category II supplemental application to the original new animal drug application (Category II supplemental NADA)—a sponsor should use when applying for approval of these changes. The goal of this guidance is to create greater consistency in how such applications are handled by sponsors and by ONADE.

In the **Federal Register** of December 16, 2008 (73 FR 76363), FDA published the notice of availability for a draft guidance entitled “Changes to Approved NADAs—New NADAs vs. Category II Supplemental NADAs,” which gave interested persons until February 17, 2009, to comment on the draft guidance. FDA received a few comments on the draft guidance and those comments were considered as the guidance was finalized. In addition to some of the changes based on the comments received, CVM made a few minor changes to the guidance to add clarity and accuracy. The guidance announced in this notice finalizes the draft guidance dated December 16, 2008.

II. Significance of Guidance

This level 1 guidance is being issued consistent with FDA’s good guidance practices regulation (21 CFR 10.115). The guidance represents the agency’s current thinking on the topic. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statutes and regulations.

III. Paperwork Reduction Act of 1995

This guidance refers to previously approved collections of information found in FDA regulations. These

collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information have been approved under OMB control no. 0910-0032 (expiration date April 30, 2010).

IV. Comments

Submit written requests for single copies of the guidance to the Communications Staff (HFV-12), Center for Veterinary Medicine, Food and Drug Administration, 7519 Standish Pl., Rockville, MD 20855. Send one self-addressed adhesive label to assist that office in processing your requests.

Interested persons may submit to the Division of Dockets Management (see **ADDRESSES**) written or electronic comments regarding this document. Submit a single copy of electronic comments or two paper copies of any mailed comments, except that individuals may submit one paper copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

V. Electronic Access

Persons with access to the Internet may obtain the guidance at either <http://www.fda.gov/AnimalVeterinary/default.htm> or <http://www.regulations.gov>.

Dated: November 13, 2009.

BILLING CODE 4140-01-P

ADVISORY COUNCIL ON HISTORIC PRESERVATION

Notice of Program Comment for the Rural Utilities Service, the National Telecommunications and Information Administration, and the Federal Emergency Management Agency To Avoid Duplicative Section 106 Reviews for Wireless Communication Facilities Construction and Modification

AGENCY: Advisory Council on Historic Preservation.

ACTION: The Advisory Council on Historic Preservation has issued a Program Comment for the Rural Utilities Service, the National Telecommunications and Information Administration, and the Federal Emergency Management Agency to avoid duplicative Section 106 reviews for wireless communication facilities construction and modification.

SUMMARY: The Advisory Council on Historic Preservation has issued a Program Comment for the Rural Utilities Service, the National Telecommunications and Information Administration, and the Federal Emergency Management Agency to relieve them of the need to conduct duplicate reviews under Section 106 of the National Historic Preservation Act when these agencies assist a telecommunications project that is exempt from, or subject to, Section 106 review by the Federal Communications Commission under existing nationwide programmatic Agreements.

DATES: The Program Comment went into effect on October 23, 2009.

ADDRESSES: Address all questions concerning the Program Comment to Blythe Semmer, Office of Federal Agency Programs, Advisory Council on Historic Preservation, 1100 Pennsylvania Avenue, NW., Suite 803, Washington, DC 20004. Fax (202) 606-8647. You may submit electronic questions to: bsemmer@achp.gov.

FOR FURTHER INFORMATION CONTACT: Blythe Semmer, (202) 606 8552, bsemmer@achp.gov.

SUPPLEMENTARY INFORMATION: Section 106 of the National Historic Preservation Act requires Federal

agencies to consider the effects of their undertakings on historic properties and to provide the Advisory Council on Historic Preservation (ACHP) a reasonable opportunity to comment with regard to such undertakings. The ACHP has issued the regulations that set forth the process through which Federal agencies comply with these duties. Those regulations are codified under 36 CFR part 800 (Section 106 regulations)

Under Section 800.14(e) of those regulations, agencies can request the ACHP to provide a "Program Comment" on a particular category of undertakings in lieu of conducting individual reviews of each individual undertaking under such category, as set forth in 36 CFR 800.3 through 800.7. An agency can meet its Section 106 responsibilities with regard to the effects of particular aspects of those undertakings by taking into account ACHP's Program Comment and following the steps set forth in that comment.

I. Background

The ACHP has issued a Program Comment to the U.S. Department of Agriculture Rural Utilities Service (RUS), the U.S. Department of Commerce National Telecommunications and Information Administration (NTIA), and the Federal Emergency Management Agency (FEMA) to relieve them from conducting duplicate reviews under Section 106 of the National Historic Preservation Act when these agencies assist a telecommunications project subject to Section 106 review by the Federal Communications Commission (FCC). The ACHP membership voted in favor of issuing the Program Comment via an unassembled vote on October 23, 2009.

The American Recovery and Reinvestment Act (ARRA) provides NTIA and RUS with \$7.2 billion to expand access to broadband services in the United States. NTIA will implement the Broadband Technology Opportunities Program (BTOP), which will award grants to expand public computer capacity, encourage sustainable adoption of broadband of broadband service, and deploy broadband infrastructure to unserved and underserved areas. RUS, through its Broadband Initiatives Program (BIP), will use loan and grant combinations to support broadband deployment in rural areas.

Broadband deployment can include the construction and placement of communication towers and antennas. Some of those towers and antennas are also regulated by the FCC, and therefore undergo, or are exempted from, Section 106 review under the Nationwide

Programmatic Agreement for Review of Effect on Historic Properties for Certain Undertakings Approved by the FCC and the Nationwide Programmatic Agreement for the Collocation of Wireless Antennas (FCC NPAs). RUS, NTIA, or FEMA will be relieved by the Program Comment of the need to conduct a separate Section 106 review for undertakings subject to review under the FCC NPAs.

The ACHP took steps to inform the public and stakeholders about the proposed Program Comment, including an e-mail distribution, posting on the agency Web site, and a notice published in the **Federal Register**. ACHP also sent a letter to the Indian tribal leaders requesting their comments on the Program Comment. Public comments resulting from the September 17, 2009 public notice in the **Federal Register** (74 FR 47807-47809) were received by the ACHP by October 8, 2009.

Various substantive comments from the public were received and considered by the ACHP, as noted below.

FEMA requested inclusion in the provisions of the Program Comment given that its grant programs provide funding for emergency communications facilities that are also subject to review by FCC under the FCC NPAs. FEMA's request would not expand the types of undertakings covered by the Program Comment, so FEMA has been added to the Program Comment.

Two comments objected to how tribal consultation appeared to have been coordinated for the Program Comment, but the characterization of early coordination with intertribal organizations by RUS and NTIA prior to the agencies' formal request to the ACHP did not constitute ACHP's tribal consultation on this program alternative.

Two comments expressed concern about how State and Tribal Historic Preservation Officers (SHPOs and THPOs) and Indian tribes will be notified when the Program Comment is applied. SHPOs and THPOs and Indian tribes will be notified according to the regular FCC NPAs review processes. There is no change to the FCC NPAs procedures.

Two comments expressed objections or concerns about the FCC NPAs and two comments expressed positive views on the functioning of the FCC NPAs. Nothing in the Program Comment will alter the FCC NPAs, but these comments will be referred to FCC for their consideration on the operation of their NPAs. One comment expressed concerns about towers that may have been constructed before undergoing a Section 106 review. The Program

Comment deals with the construction of towers and collocation on existing towers. It does not address or affect pre-existing Section 106 issues. Those issues should be referred to the FCC.

Four comments expressed support for the efficiencies the Program Comment will offer in Section 106 reviews.

Two comments offered views on a concept plan for a nationwide programmatic agreement circulated separately by RUS and NTIA. Those comments will be considered in the context of that program initiative.

The Colorado Historical Society requested clarification about the 6-year term of the Program Comment. This time period recognizes that ARRA-assisted communications facilities construction may be ongoing for several years. The ACHP and others will be able to reevaluate the Program Comment, and whether to extend its duration prior to the conclusion of those 6 years.

The Texas Historical Commission questioned what would happen should an FCC NPA Section 106 review yield a finding of adverse effect within a larger RUS or NTIA undertaking of multiple components. As explicitly stated in the Program Comment, RUS, NTIA, or FEMA will be conducting its own Section 106 review for the larger undertaking, but will not have to consider the effects of the FCC-regulated component of that larger undertaking. RUS, NTIA, or FEMA will make effect determinations based on the non-tower components of the undertaking. Since it is possible that the larger undertaking may not be able to proceed until the FCC review of the tower component has concluded, it is expected that RUS, NTIA, FEMA, and the FCC will coordinate their review efforts accordingly and keep consulting parties appraised.

II. Final Text of the Program Comment

The text of the issued Program Comment is included below:

Program Comment for Streamlining Section 106 Review for Wireless Communication Facilities Construction and Modification Subject to Review Under the FCC Nationwide Programmatic Agreement and/or the Nationwide Programmatic Agreement for the Collocation of Wireless Antennas.

I. Background

The Rural Utilities Service (RUS), the National Telecommunications and Information Administration (NTIA), and the Federal Emergency Management Agency (FEMA) provide financial assistance to applicants for various undertakings, including broadband deployment, which can involve the construction and placement of communications towers and antennas. RUS,

NTIA, and FEMA must therefore comply with Section 106 of the National Historic Preservation Act, 16 U.S.C. 470f, and its implementing regulations at 36 CFR part 800 (Section 106) for these undertakings. Some of those communications towers and antennas are also regulated by the Federal Communications Commission (FCC), and therefore undergo, or are exempted from, Section 106 review under the Nationwide Programmatic Agreement for Review of Effects on Historic Properties for Certain Undertakings Approved by the FCC (FCC Nationwide PA) and the Nationwide Programmatic Agreement for the Collocation of Wireless Antennas (FCC Collocation PA). The FCC Nationwide PA was executed by the FCC, the Advisory Council on Historic Preservation (ACHP), and the National Conference of State Historic Preservation Officers (NCSHPO) on October 4, 2004. The FCC Collocation PA was executed by the FCC, ACHP, and NCSHPO on March 16, 2001. The undertakings addressed by the FCC Nationwide PA primarily include the construction and modification of communication towers. The undertakings addressed by the FCC Collocation PA include the collocation of communications equipment on existing structures and towers.

This Program Comment is intended to streamline Section 106 review of the construction and modification of communication towers and antennas for which FCC and RUS, NTIA, or FEMA share Section 106 responsibility.

Nothing in this Program Comment alters or modifies the FCC Nationwide PA or the FCC Collocation PA, or imposes Section 106 responsibilities on the FCC for elements of a RUS, NTIA, or FEMA undertaking that are unrelated to a communications facility within the FCC's jurisdiction or are beyond the scope of the FCC Nationwide PA.

II. Establishment and Authority

This Program Comment was issued by the ACHP on October 23, 2009 pursuant to 36 CFR 800.14(e).

III. Date of Effect

This Program Comment went into effect on October 23, 2009.

IV. Use of This Program Comment To Comply With Section 106 for the Effects of Facilities Construction or Modification Reviewed Under the FCC Nationwide PA and/or the FCC Collocation PA

RUS, NTIA and FEMA will not need to comply with Section 106 with regard to the effects of communication facilities construction or modification that has either undergone or will undergo Section 106 review, or is exempt from Section 106 review, by the FCC under the FCC Nationwide PA and/or the FCC Collocation PA. For purposes of this program comment, review under the FCC Nationwide PA means the historic preservation review that is necessary to complete the FCC's Section 106 responsibility for an undertaking that is subject to the FCC Nationwide PA.

When an RUS, NTIA, or FEMA undertaking includes both communications facilities construction or modification covered by the FCC Nationwide PA or

Collocation PA and components in addition to such communication facilities construction or modification, RUS, NTIA, or FEMA, as applicable, will comply with Section 106 in accordance with the process set forth at 36 CFR 800.3 through 800.7, or 36 CFR 800.8(c), or another applicable alternate procedure under 36 CFR 800.14, but will not have to consider the effects of the communication facilities construction or modification component of the undertaking on historic properties. Whenever RUS, NTIA, or FEMA uses this Program Comment for such undertakings, RUS, NTIA or FEMA will apprise the relevant State Historic Preservation Officer (SHPO) or Tribal Historic Preservation Officer (THPO) of the use of this Program Comment for the relevant communication facilities construction or modification component.

V. Amendment

The ACHP may amend this Program Comment after consulting with FCC, RUS, NTIA, FEMA, and other parties as appropriate, and publishing notice in the **Federal Register** to that effect.

VI. Sunset Clause

This Program Comment will terminate on September 30, 2015, unless it is amended to extend the period in which it is in effect.

VII. Termination

The ACHP may terminate this Program Comment by publication of a notice in the **Federal Register** thirty (30) days before the termination takes effect.

Authority: 36 CFR 800.14(e).

Dated: November 10, 2009.

Reid Nelson,

Acting Executive Director.

[FR Doc. E9-27798 Filed 11-19-09; 8:45 am]

BILLING CODE 4310-K6-M

DEPARTMENT OF HOMELAND SECURITY

Customs and Border Protection

Agency Information Collection Activities: Visa Waiver Program Carrier Agreement (Form I-775)

AGENCY: U.S. Customs and Border Protection (CBP), Department of Homeland Security.

ACTION: 60-Day notice and request for comments; Revision of an existing information collection: 1651-0110.

SUMMARY: As part of its continuing effort to reduce paperwork and respondent burden, CBP invites the general public and other Federal agencies to comment on the Visa Waiver Program Carrier Agreement (Form I-775). This request for comment is being made pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104-13; 44 U.S.C. 3505(c)(2)).

DATES: Written comments should be received on or before January 19, 2010, to be assured of consideration.

ADDRESSES: Direct all written comments to U.S. Customs and Border Protection, Attn: Tracey Denning, Office of Regulations and Rulings, 799 9th Street, NW., 7th Floor, Washington, DC 20229-1177.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to Tracey Denning, U.S. Customs and Border Protection, Office of Regulations and Rulings, 799 9th Street, NW., 7th Floor, Washington, DC 20229-1177, at 202-325-0265.

SUPPLEMENTARY INFORMATION: CBP invites the general public and other Federal agencies to comment on proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104-13; 44 U.S.C. 3505(c)(2)). The comments should address: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimates of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden including the use of automated collection techniques or the use of other forms of information technology; and (e) estimates of capital or start-up costs and costs of operations, maintenance, and purchase of services to provide information. The comments that are submitted will be summarized and included in the request for Office of Management and Budget (OMB) approval. All comments will become a matter of public record. In this document the CBP is soliciting comments concerning the following information collection:

Title: Visa Waiver Program Carrier Agreement.

OMB Number: 1651-0110.

Form Number: I-775.

Abstract: Pursuant to section 217 of the Immigration and Nationality Act (INA), paragraphs (a) and (e) and 8 CFR 217.6, all carriers must enter into an agreement with CBP in order to transport passengers to the United States under the Visa Waiver Program (VWP). Form I-775 functions as the agreement between CBP and carriers, serving to hold the carriers liable for transportation costs and to ensure the completion of required forms. CBP is proposing to adjust the burden hours for this collection of information because

the estimated response time has decreased from 2 hours to 30 minutes.

CBP is also proposing to add new provisions to this Agreement including: (1) A prohibition on transporting any alien who is not authorized by the Electronic System for Travel Authorization (ESTA) to travel to the United States under the VWP; (2) a requirement that carriers applying to become signatory to a visa waiver contract with CBP have must have paid all their User Fee obligations and any previous penalties under the INA or U.S. Customs laws; (3) a requirement that carriers applying to become signatory to the VWP with CBP must post a bond sufficient to cover the total penalty amounts for violations that were imposed against the carrier during the previous fiscal year; (4) a provision that if the carrier ceases operations in the United States, then the agreement becomes null and void; and, (5) a provision that the Agreement must be renewed every seven years. In addition, CBP proposes to add a statement to Form I-775 regarding the submission of electronic arrival and departure manifests by carriers, which is an existing requirement provided under 8 CFR 217.7(a) and (b).

Current Actions: This submission is being made to extend the expiration date with a revision to the burden hours.

Type of Review: Extension (with change).

Affected Public: Businesses.

Estimated Number of Respondents: 400.

Estimated Time per Respondent: 30 minutes.

Estimated Total Annual Burden Hours: 200.

Dated: November 17, 2009.

Tracey Denning,

Agency Clearance Officer, U.S. Customs and Border Protection.

[FR Doc. E9-27904 Filed 11-19-09; 8:45 am]

BILLING CODE 9111-14-P

DEPARTMENT OF HOMELAND SECURITY

U.S. Citizenship and Immigration Services

Agency Information Collection Activities: Form N-400, Extension of an Existing Information Collection; Comment Request

ACTION: 30-Day Notice of Information Collection Under Review; Form N-400, Application for Naturalization; OMB Control No. 1615-0052.

The Department of Homeland Security, U.S. Citizenship and Immigration Services (USCIS) has submitted the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995. The information collection was previously published in the **Federal Register** on September 3, 2009, at 74 FR 45648, announcing a revision to the form and instructions. However, USCIS has decided not to revise the form or instructions at this time. Should USCIS decide to revise the form and instructions in the near future it will once again publish a 60-day notice in the **Federal Register** and allow the public 60-days to submit comments. USCIS did receive two comments on the September 3, 2009, notice. USCIS responded to those two comments in item 8 of the supporting statement that will be posted on <http://www.regulations.gov>.

The purpose of this notice is to allow an additional 30 days for public comments on the extension. Comments are encouraged and will be accepted until December 21, 2009. This process is conducted in accordance with 5 CFR 1320.10.

Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the Department of Homeland Security (DHS), and to the Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), USCIS Desk Officer. Comments may be submitted to: USCIS, Chief, Regulatory Products Division, Clearance Office, 111 Massachusetts Avenue, Washington, DC 20529-2210. Comments may also be submitted to DHS via facsimile to 202-272-8352 or via e-mail at rfs.regs@dhs.gov, and to the OMB USCIS Desk Officer via facsimile to 202-395-5806 or via e-mail at oir_submission@omb.eop.gov.

When submitting comments by e-mail, please make sure to add OMB Control No. 1615-0052 in the subject box. Written comments and suggestions from the public and affected agencies should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information,

including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Extension of an existing information collection.

(2) *Title of the Form/Collection:* Application for Naturalization.

(3) *Agency form number, if any, and the applicable component of the Department of Homeland Security sponsoring the collection:* Form N-400; U.S. Citizenship and Immigration Services.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Individuals or households. USCIS uses the information on this form to determine an applicant's eligibility for naturalization.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* 700,000 responses at 6 hours and 8 minutes (6.13 hours) per response.

(6) *An estimate of the total public burden (in hours) associated with the collection:* 4,291,000 annual burden hours.

If you need a copy of the information collection instrument, please visit the Web site at: <http://www.regulations.gov/>.

We may also be contacted at: USCIS, Regulatory Products Division, 111 Massachusetts Avenue, NW., Washington, DC 20529-2210, Telephone number 202-272-8377.

Dated: November 17, 2009.

Stephen Tarragon,

Deputy Chief, Regulatory Products Division, U.S. Citizenship and Immigration Services.

BILLING CODE 9111-97-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG-2009-0800]

Notification of the Imposition of Conditions of Entry for Certain Vessels Arriving to the United States, Madagascar

AGENCY: Coast Guard, DHS.

ACTION: Notice.

SUMMARY: The Coast Guard announces that it will impose conditions of entry on vessels arriving to the United States from Madagascar, with the exception of vessels arriving from the port of Toamasina (also known as Tamatave).

DATES: The requirements announced in this notice will become effective December 4, 2009.

ADDRESSES: This notice will be available for inspection and copying at the Docket Management Facility at the U.S. Department of Transportation, Room W12-140 on the Ground Floor of the West Building, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The telephone number is 202-366-9329.

FOR FURTHER INFORMATION CONTACT: If you have questions on this notice, call Mr. Michael Brown, International Port Security Evaluation Division, Coast Guard, telephone 202-372-1081. If you have questions on viewing or submitting material to the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202-366-9826.

SUPPLEMENTARY INFORMATION:

Background and Purpose

Section 70110 of the Maritime Transportation Security Act of 2002 (Pub. L. 107-295, Nov. 25, 2002) (46 U.S.C. 70110) provides that the Secretary of Homeland Security may impose conditions of entry on vessels arriving from ports that are not maintaining effective anti-terrorism measures, may deny entry into the United States to any vessel that does not meet such conditions set forth herein, and shall provide public notice for passengers of the ineffective antiterrorism measures. The Coast Guard has been delegated the authority by the Secretary to carry out the provisions of this section. Previous notices have imposed or removed conditions of entry on vessels arriving from certain countries and those conditions of entry and the countries

they pertain to remain in effect unless modified by this notice.

Based on an assessment conducted pursuant to the provisions of 46 U.S.C. 70108 and the International Ship and Port Facility Security (ISPS) Code, the Coast Guard has determined that ports in Madagascar are not maintaining effective anti-terrorism measures. Inclusive to this determination is an assessment that Madagascar presents significant risk of introducing instruments of terror into international maritime commerce.

Consistent with 46 U.S.C. 70109, the United States notified Madagascar of this determination on May 17, 2007, and identified steps necessary to improve the antiterrorism measures in Madagascar. To date, the United States cannot confirm that the identified deficiencies have been corrected.

Accordingly, effective December 4, 2009 the Coast Guard will impose the following conditions of entry on vessels that visited ports in Madagascar, with the exception of vessels arriving from the port of Toamasina (also known as Tamatave) during their last five port calls. Vessels must:

- Implement measures per the ship's security plan equivalent to "Security Level 2" while in a port in Madagascar. As defined in the ISPS Code and incorporated herein, "Security Level 2" refers to the "level for which appropriate additional protective security measures shall be maintained for a period of time as a result of heightened risk of a security incident."
- Ensure that each access point to the ship is guarded and that the guards have total visibility of the exterior (both landside and waterside) of the vessel while the vessel is in ports in Madagascar. Guards may be provided by the ship's crew, however additional crewmembers should be placed on the ship if necessary to ensure that limits on maximum hours of work are not exceeded and/or minimum hours of rest are met. Guards may also be provided by outside security forces approved by the ship's master and "Company Security Officer." As defined in the ISPS Code and incorporated herein, "Company Security Officer" refers to the "person designated by the Company for ensuring that a ship security assessment is carried out; that a ship security plan is developed, submitted for approval, and thereafter implemented and maintained and for liaison with port facility security officers and the ship security officer."

- Attempt to execute a Declaration of Security while in port in Madagascar;
- Log all security actions in the ship's log; and

• Report actions taken to the cognizant Coast Guard Captain of the Port prior to arrival into U.S. waters. In addition, based on the findings of a Coast Guard boarding or examination, vessels may be required to ensure that each access point to the ship is guarded by armed security guards and that they have total visibility of the exterior (both landside and waterside) of the vessel while in U.S. ports. The number and position of the guards has to be acceptable to the cognizant Coast Guard Captain of the Port prior to the vessel's arrival. Consistent with 46 U.S.C. 70110, the United States may deny entry into the United States to any vessel that does not meet the conditions set forth herein. This notice also informs passengers of the ineffective antiterrorism measures at ports in Madagascar with the exception of the Port of Toamasina, also known as Tamatave.

This notice is issued under authority of 46 U.S.C. 70110(a).

Dated: October 15, 2009.

Sally Brice-O'Hara,

USCG, Deputy Commandant for Operations.

[FR Doc. E9-27876 Filed 11-19-09; 8:45 am]

BILLING CODE 9110-04-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-5280-N-45]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for possible use to assist the homeless.

FOR FURTHER INFORMATION CONTACT: Kathy Ezzell, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7266, Washington, DC 20410; telephone (202) 708-1234; TTY number for the hearing- and speech-impaired (202) 708-2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800-927-7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist

the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless v. Veterans Administration*, No. 88-2503-OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for "off-site use only" recipients of the property will be required to relocate the building to their own site at their own expense. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to Theresa Rita, Division of Property Management, Program Support Center, HHS, room 5B-17, 5600 Fishers Lane, Rockville, MD 20857; (301) 443-2265. (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1-800-927-7588 for detailed instructions or write a letter to Mark Johnston at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (*i.e.*, acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses: *Army:* Ms. Veronica Rines, Department of the Army, Office of the Assistant Chief of Staff for Installation Management, DAIM-ZS, Room 8536, 2511 Jefferson Davis Hwy., Arlington, VA 22202; (703) 601-2545; (These are not toll-free numbers).

Dated: November 12, 2009.

Mark R. Johnston,

Deputy Assistant Secretary for Special Needs.

Alaska Native Claims Selection

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of decision approving lands for conveyance.

SUMMARY: As required by 43 CFR 2650.7(d), notice is hereby given that an appealable decision approving the surface estate in certain lands for conveyance pursuant to the Alaska Native Claims Settlement Act will be issued to Chalkyitsik Native Corporation. The lands are in the vicinity of Chalkyitsik, Alaska, and are located in:

Lot 2, U.S. Survey No. 4133, Alaska.
Containing 2.34 acres.

Fairbanks Meridian, Alaska

T. 23 N., R. 16 E.,

Sec. 29;

Secs. 32 to 36, inclusive.

Containing approximately 2,580 acres.

T. 22 N., R. 17 E.,

Secs. 25 to 36, inclusive.

Containing approximately 6,192 acres.

T. 23 N., R. 18 E.,

Secs. 4 to 8, inclusive;

Secs. 18, 19, and 30.

Containing approximately 3,891 acres.

T. 22 N., R. 19 E.,

Secs. 11 to 14, inclusive;

Secs. 23 to 36, inclusive.

Containing approximately 9,086 acres.

T. 21 N., R. 20 E.,

Secs. 1 to 6, inclusive;

Secs. 9 to 14, inclusive.

Containing approximately 6,335 acres.

Aggregating approximately 28,087 acres.

The subsurface estate in these lands will be conveyed to Doyon, Limited, when the surface estate is conveyed to Chalkyitsik Native Corporation. Notice of the decision will also be published four times in the Fairbanks Daily News-Miner.

DATES: The time limits for filing an appeal are:

1. Any party claiming a property interest which is adversely affected by the decision shall have until December 21, 2009 to file an appeal.

2. Parties receiving service of the decision by certified mail shall have 30 days from the date of receipt to file an appeal.

Parties who do not file an appeal in accordance with the requirements of 43 CFR part 4, subpart E, shall be deemed to have waived their rights.

ADDRESSES: A copy of the decision may be obtained from: Bureau of Land Management, Alaska State Office, 222 West Seventh Avenue, #13, Anchorage, Alaska 99513-7504.

FOR FURTHER INFORMATION CONTACT: The Bureau of Land Management by phone at 907-271-5960, or by e-mail at ak.blm.conveyance@ak.blm.gov. Persons who use a telecommunication device (TTD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339, 24 hours a day, seven days a

week, to contact the Bureau of Land Management.

Endangered and Threatened Species Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of applications; request for public comment.

SUMMARY: The following applicants have applied for scientific research permits to conduct certain activities with endangered species under the Endangered Species Act of 1973, as amended (Act). The Act requires that we invite public comment on these permit applications.

DATES: To ensure consideration, written comments must be received on or before December 21, 2009.

ADDRESSES: Written comments should be submitted to the Chief, Endangered Species Division, Ecological Services, P.O. Box 1306, Room 6034, Albuquerque, NM 87103. Documents and other information submitted with these applications are available for review, subject to the requirements of the Privacy Act and Freedom of Information Act. Documents will be available for public inspection, by appointment only, during normal business hours at the U.S. Fish and Wildlife Service, 500 Gold Ave., SW., Room 6034, Albuquerque, NM. Please refer to the respective permit number for each application when submitting comments.

FOR FURTHER INFORMATION CONTACT: Susan Jacobsen, Chief, Endangered Species Division, P.O. Box 1306, Albuquerque, NM 87103; (505) 248-6920.

SUPPLEMENTARY INFORMATION:

Public Availability of Comments

Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Bayou Teche National Wildlife Refuge, St. Mary Parish, LA

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability: final comprehensive conservation plan and finding of no significant impact.

SUMMARY: We, the Fish and Wildlife Service (Service), announce the availability of our final comprehensive conservation plan (CCP) and finding of no significant impact (FONSI) for the environmental assessment for Bayou Teche National Wildlife Refuge (NWR). In the final CCP, we describe how we will manage this refuge for the next 15 years.

ADDRESSES: You may obtain a copy of the CCP by writing to: Mr. Paul Yakupzack, Refuge Manager, Mandalay NWR, 3599 Bayou Black Drive, Houma, LA 70360. You may also access and download the document from the Service's Web site: <http://southeast.fws.gov/planning>.

FOR FURTHER INFORMATION CONTACT: Mr. Paul Yakupzack; *telephone:* 985/853-1078; *fax:* 985/853-1079; *e-mail:* paul_yakupzack@fws.gov.

SUPPLEMENTARY INFORMATION:**Introduction**

With this notice, we finalize the CCP process for Bayou Teche NWR. We started this process through a notice in the **Federal Register** on March 19, 2007 (72 FR 12811). For more about the process, see that notice.

Bayou Teche NWR is located near the town of Franklin in St. Mary Parish, Louisiana. The refuge contains 9,028 acres and is composed of wet bottomland hardwood forests laced with bayous and canals. The refuge was established on October 31, 2001, on lands important to the coastal subpopulation of the Louisiana black bear. The refuge consists of six separate units, ranging in size from 3,724 acres to 80 acres.

We announce our decision and the availability of the final CCP and FONSI for Bayou Teche NWR in accordance with the National Environmental Policy Act (NEPA) [40 CFR 1506.6(b)] requirements. We completed a thorough analysis of impacts on the human environment, which we included in the draft comprehensive conservation plan and environmental assessment (Draft CCP/EA). The CCP will guide us in managing and administering Bayou Teche NWR for the next 15 years.

The compatibility determinations for boating, recreational fishing, recreational hunting, wildlife observation/photography, and environmental education/interpretation are available in the CCP.

Background

The National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd–668ee) (Administration Act), as amended by the National Wildlife Refuge System Improvement Act of 1997, requires us to develop a CCP for each national wildlife refuge. The purpose for developing a CCP is to provide refuge managers with a 15-year plan for achieving refuge purposes and contributing toward the mission of the National Wildlife Refuge System, consistent with sound principles of fish and wildlife management, conservation, legal mandates, and our policies. In addition to outlining broad management direction on conserving wildlife and their habitats, CCPs identify wildlife-dependent recreational opportunities available to the public, including opportunities for hunting, fishing, wildlife observation, wildlife photography, and environmental education and interpretation. We will review and update the CCP at least every 15 years in accordance with the Administration Act.

Comments

Approximately 100 copies of the Draft CCP/EA were made available for a 30-day public review period as announced in the **Federal Register** on June 8, 2009 (74 FR 27174). Several comments were received from local citizens and the Louisiana Department of Wildlife and Fisheries.

Selected Alternative

After considering the comments we received, and based on the sound professional judgment of the planning team, we selected Alternative B to implement the CCP. The primary focuses of the CCP are to optimize Louisiana black bear and wetland habitats, monitor targeted flora and fauna representative of the lower Atchafalaya Basin, and provide quality public use programs and wildlife-dependent recreational activities. Based on the mission of the National Wildlife Refuge System, the purposes for which Bayou Teche NWR was established, and the focus of the Lower Mississippi River Ecosystem priorities, we believe Alternative B best fits the goals of the refuge.

Authority

This notice is published under the authority of the National Wildlife Refuge System Improvement Act of 1997, Public Law 105–57.

Dated: August 24, 2009.

Patrick Leonard,

Acting Regional Director.

Notice of Intent to Prepare an Environmental Impact Statement and Initiate Public Scoping for the Proposed Mohave County Wind Farm Project, Mohave County, AZ

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of intent.

SUMMARY: In compliance with the National Environmental Policy Act (NEPA) of 1976, as amended, the Bureau of Land Management (BLM) Kingman Field Office, Kingman, Arizona, intends to prepare an Environmental Impact Statement (EIS) for the Proposed Mohave County Wind Farm Project and by this notice is announcing the beginning of the scoping process to solicit public comments and identify issues.

DATES: This notice initiates the public scoping process for the EIS. Comments may be submitted in writing until January 4, 2010. The date(s) and location(s) of any scoping meetings will be announced at least 15 days in advance through local news media, newspapers, and the BLM–Arizona Web site at: <http://www.blm.gov/az/st/en.html>. In order to be included in the Draft EIS, all comments must be received prior to the close of the scoping period or 15 days after the last public meeting, whichever is later. We will provide additional opportunities for public participation upon publication of the Draft EIS.

ADDRESSES: You may submit comments related to the Proposed Mohave County Wind Farm Project, Mohave County, Arizona by any of the following methods:

- *Web site:* <http://www.blm.gov/az/st/en.html>.
- *E-mail:* KFO_WindEnergy@blm.gov.
- *Fax:* (928) 718–3761.
- *Mail:* Ruben Sanchez, Field Manager, BLM, Kingman Field Office, 2755 Mission Boulevard, Kingman, Arizona 86401.

Documents pertinent to this proposal may be examined at the Bureau of Land Management Kingman Field Office, Kingman, Arizona.

FOR FURTHER INFORMATION CONTACT: For further information and/or to have your name added to our mailing list, contact Jerry Crockford, BLM-contracted Project Manager at (505) 360–0473 or e-mail KFO_WindEnergy@blm.gov.

SUPPLEMENTARY INFORMATION: On November 1, 2002, the BLM received a right-of-way (ROW) application from BP Wind Energy North America (BPWE) for meteorological testing and monitoring for a wind energy project area. The BLM issued BPWE a ROW grant (AZA 32315) for a wind energy testing and monitoring project area of approximately 41,900 acres. Having gathered wind data for more than four years, BPWE is now moving forward to develop the project area, including an additional 3,520 acres, with a proposal to construct, operate, maintain, and decommission facilities and improvements associated with wind energy generation on the site, including wind turbine generators (WTG), access roads, operations and maintenance buildings, power lines, substations and other ancillary facilities and improvements, and an interconnection with one of two transmission lines which transect the project area. BPWE also proposes installing WTGs on approximately 4,360 acres of private lands adjacent to the ROW over which BPWE holds or anticipates holding wind development leases or easements. Zoning approval for development on private lands will be sought from Mohave County. The project area ROW includes approximately 45,420 acres of public land under jurisdiction of the BLM Kingman Field Office and potentially 4,360 acres of private land in the White Hills area approximately 40 miles northwest of Kingman, Arizona, approximately nine miles south of the Colorado River, and approximately 20 miles southeast of Hoover Dam. The project area is generally located within Townships 27 through 29 North, Ranges 18 and 19 West, and Townships 28 and 29 North, Range 20 West.

Total electric generation capacity of the project is anticipated to be up to 500 megawatts (MW). The project will consist of up to 335 WTGs and consist of construction in multiple phases.

Phase I is proposed to be located on the northwest portion of the BLM project area ROW, and may consist of up to 235 WTGs, access roads, and ancillary facilities. The WTGs are anticipated to range in size from 1.5 to 3.0 MW each. To the extent possible, existing roads would be used for access to the project, supplemented with internal access/service roads to each WTG. Ancillary facilities may include

pad-mounted transformers, an underground 34.5 kilovolt (kV) electrical collection system between the turbines, either a 345 or 500 kV electrical substation, and either a 345 or 500 kV overhead transmission line from the substation to a new switchyard where the project would interconnect to one of the two major existing transmission lines in the area. Up to 10 WTGs could be installed on adjacent private lands during Phase I.

Subsequent phases are proposed to include comparable facilities with additional wind generation capacity of up to 150 MW on the balance of the area within the ROW and the private lands adjacent to the ROW area. A total of 50 to 100 WTGs may be installed on public or adjacent private lands in the subsequent phases of the project. These turbines also are anticipated to range in size from 1.5 to 3.0 MW.

A map of the proposed project area with the news release announcing the public meetings, is available on the BLM-Arizona Web site at: <http://www.blm.gov/az/st/en.html>.

The EIS will consider the impacts of the proposed action, alternatives, and a no action alternative.

The public is invited to submit comments and resource information and identify issues or concerns to be considered in the Draft EIS. Public comments will aid the BLM in identifying alternatives and mitigating measures and will help assure all relevant issues are considered in the EIS.

Preliminary issues that have been identified by the BLM for analysis include: access requirements; air quality during construction; cultural and historical resources; areas with high mineral potential; noise; sensitive soils and geology; recreation resources; socioeconomic; threatened and endangered species; visual resources; water resources; and wildlife habitats.

The BLM will use and coordinate the NEPA commenting process to satisfy the public involvement process for Section 106 of the National Historic Preservation Act (16 U.S.C. 470f) as provided for in 36 CFR 800.2(d)(3). Native American Tribal consultations will be conducted in accordance with policy and Tribal concerns and will be given due consideration, including impacts on Indian trust assets. Federal, State, and local agencies, as well as individuals, organizations, or tribes that may be interested or affected by the BLM's decision on this project are invited to participate in the scoping process and, if eligible, may request or be requested by the BLM to participate as a cooperating agency.

Before including your phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 43 CFR 2800.

James G. Kenna,
State Director.

Notice of Availability of the Draft Supplemental Environmental Impact Statement for the One Nevada Transmission Line, NV

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969 (NEPA), the Bureau of Land Management (BLM) has prepared a Draft Supplemental Environmental Impact Statement (SEIS) for the One Nevada Transmission Line and by this Notice is announcing the opening of the comment period.

DATES: To ensure comments will be considered, the BLM must receive written comments on the Draft SEIS for the One Nevada Transmission Line within 60 days following the date the Environmental Protection Agency publishes its Notice of Availability in the **Federal Register**. The BLM will announce future meetings or hearings and any other public involvement activities at least 15 days in advance through public notices, media news releases, and/or mailings.

ADDRESSES: You may submit comments by any of the following methods:

- *Web site:* www.blm.gov/nv.
- *E-mail:* michael_dwyer@blm.gov.
- *Fax:* (775) 289-1910.
- *Mail:* Michael Dwyer, BLM, HC 33 Box 33500, Ely, NV 89301.

Copies of the Draft SEIS for the One Nevada Transmission Line are available at the following locations in Nevada:

—BLM Ely District Office, 702 North Industrial Way, Ely.

—White Pine County Library, 950 Campton Street, Ely.

—BLM Nevada State Office, 1340 Financial Blvd., Reno.

—BLM Caliente Field Station, U.S. Highway 93, Caliente.

—Caliente Branch Library, 100 Depot Avenue, Caliente.

—BLM Southern Nevada District Office, 4701 North Torrey Pines, Las Vegas.

—North Las Vegas Library, 2300 Civic Center Drive, North Las Vegas.

FOR FURTHER INFORMATION CONTACT: Michael Dwyer, (702) 821-7102; e-mail: michael_dwyer@blm.gov.

SUPPLEMENTARY INFORMATION: On March 30, 2009, the BLM received an amended right-of-way application and Plan of Development from NV Energy for the One Nevada Transmission Line Project (ON Line Project). The Draft SEIS analyzes the construction, operation, and abandonment of a 236-mile, 500 kilovolt transmission line and telecommunication facilities running generally from Ely to Las Vegas, one new substation near Ely, and an expansion of one existing substation on private land near Battle Mountain, Nevada. The Notice of Intent to Prepare a Supplemental Environmental Impact Statement for the Proposed One Nevada Transmission Line, Nevada was published in the **Federal Register** on July 29, 2009 (74 FR 37728).

The components of the ON Line Project had been part of the original Ely Energy Center (EEC) proposal. In February 2009, during the public comment period for the EEC Draft Environmental Impact Statement (EIS), NV Energy made public their intention to postpone including the coal-fired power generation facilities associated with the EEC in their proposal until carbon capture technology becomes commercially feasible.

Two north-south utility corridors exist in Nevada that could accommodate a transmission line linking the northern and southern grids: one on the eastern side of the state and the other on the Western side of the State. The westerly corridor was considered as a potential location for the ON Line Project, but was eliminated because it would not provide access to transmission infrastructure for renewable energy resource areas in Eastern Nevada. Two alternative alignments within the eastern corridor (except in a few locations) are assessed in the SEIS. The "action" alternative generally follows the western boundary of the corridor and is the proponent's preferred

alternative for engineering and operational reasons. The other alternative generally follows the eastern boundary of the corridor, but would be more costly to construct. A no-action alternative is also assessed.

Applicable comments collected during the public comment period on the EEC Draft EIS were carried forward into the SEIS process.

Please note that public comments and information submitted, including names, street addresses, and e-mail addresses of persons who submit comments will be available for public review and disclosure at the above address during regular business hours (8 a.m. to 4 p.m.), Monday through Friday, except holidays.

Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1506.6 and 1506.10.

Rosemary Thomas,

District Manager, Ely District Office.

BILLING CODE 4310-HC-P

DEPARTMENT OF THE INTERIOR

National Park Service

Intent To Prepare an Environmental Impact Statement for the Comprehensive Management Plan, Lewis and Clark National Historic Trail, in Illinois, Missouri, Kansas, Nebraska, Iowa, South Dakota, North Dakota, Montana, Idaho, Washington, and Oregon

AGENCY: National Park Service, DOI.

ACTION: Notice.

SUMMARY: Pursuant to Section 102(2)(C) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)(C)), the National Park Service (NPS) is announcing its intent to prepare an environmental impact statement (EIS) for a comprehensive management plan (CMP) for the Lewis and Clark National Historic Trail (Trail) in the states of Illinois, Missouri, Kansas, Nebraska, Iowa, South Dakota, North Dakota, Montana, Idaho, Washington, and Oregon. The EIS will be approved by the Regional Director, Midwest Region.

The CMP will prescribe the resource conditions and visitor experiences that are to be achieved and maintained for the Trail over the next 15 to 20 years. The clarification of what must be achieved according to law and policy will be based on review of the Trail's purpose, significance, special mandates, and the body of laws and policies that direct Trail administration. Based on determinations of desired conditions, the CMP will outline the kinds of resource management activities, visitor activities, and development that would be appropriate in the future. A range of reasonable management alternatives will be developed through this planning process and will include, at a minimum, no-action and the preferred alternative.

Major issues to be addressed in the CMP include: issues surrounding preserving Trail resources (such as developing management strategies to preserve and maintain historic structures and cultural landscapes, and protect archeological sites in the face of a predicted increase in visitation); issues surrounding visitor understanding; education and appreciation of park resources; and issues surrounding ensuring organizational effectiveness (such as identifying existing and potential partnerships with the state, federal, local, tribal, nonprofit organizations).

DATES: Any comments on the scope of issues to be addressed in the EIS can be received at any time after the publication of this notice in the FR. Public meetings regarding the CMP will be held during the scoping period. Specific dates, times, and locations will be made available in the local media, on the Trail Web site (<http://www.nps.gov/lecl>), on the NPS Planning, Environment and Public Comment (PEPC) Web site (<http://parkplanning.nps.gov/lecl>), or by contacting the Superintendent at the address and telephone number below.

ADDRESSES: Information on the planning process will be available from Mark Weekley, Superintendent, Lewis and Clark National Historic Trail, 601 Riverfront Drive, Omaha, Nebraska 68182, telephone 402-661-1806.

SUPPLEMENTARY INFORMATION: If you wish to comment on any issues associated with the CMP, you may submit your comments by any one of several methods. You may mail comments to Lewis and Clark National Historic Trail, 601 Riverfront Drive, Omaha, Nebraska 68182. You may provide comments electronically by entering them into the PEPC Web site at the address above. Finally, you may deliver comments to the Trail located at

601 Riverfront Drive, Omaha, Nebraska 68182.

Before including your address, telephone number, electronic mail address, or other personal identifying information in your comments, you should be aware that your entire comment (including your personal identifying information) may be made publicly available at any time. While you can ask us in your comments to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: September 30, 2009.

Martin A. Sterkel,

Acting Regional Director, Midwest Region.

BILLING CODE P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLCAD0000L14300000.DS0000]

Notice of Intent To Prepare an Environmental Impact Statement for the Proposed Desert Renewable Energy Conservation Plan, Kern, Los Angeles, San Bernardino, Inyo, Riverside, Imperial, San Diego, and Tulare Counties, CA and Possible Land Use Plan Amendment

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Intent.

SUMMARY: In compliance with the National Environmental Policy Act (NEPA) of 1969, as amended, and the Federal Land Policy and Management Act of 1976, as amended, the Bureau of Land Management (BLM) California Desert District, Moreno Valley, California, intends to prepare an Environmental Impact Statement (EIS), which may include an amendment to the California Desert Conservation Area (CDCA) Plan of 1980, as amended, and by this notice is announcing the beginning of the scoping process to solicit public comments and identify issues.

DATES: This notice initiates the public scoping process for the EIS and possible plan amendment. Comments on issues may be submitted in writing until December 21, 2009. The dates and locations of any scoping meetings will be announced at least 15 days in advance through local media, newspapers, and the BLM Web site at: <http://www.blm.gov/ca/st/en/fo/cdd.html>. In order to be considered in the Draft EIS, all comments must be

received before the close of the scoping period or 15 days after the last public meeting, whichever is later. We will provide additional opportunities for public participation upon publication of the Draft EIS.

ADDRESSES: You may submit comments on issues and planning criteria related to the Desert Renewable Energy Conservation Plan (DRECP) by any of the following methods:

- *Web site:* <http://www.blm.gov/ca/st/en/fo/cdd.html>.

- *E-mail:* DRECP@blm.gov.

- *Fax:* (916) 978-4657.

- *Mail or hand delivery:* ATTN:

DRECP, BLM California State Office, 2800 Cottage Way, Suite W-1623, Sacramento, California 95825.

Documents pertinent to this proposal may be examined at the BLM California State office or the BLM California Desert District office, 22835 Calle San Juan de Los Lagos, Moreno Valley, California 92553-9046.

FOR FURTHER INFORMATION CONTACT: For further information or to have your name added to our mailing list, contact Amy Fesnock, Project Manager, telephone (916) 978-4646; address BLM California State Office, 2800 Cottage Way, Suite W-1623, Sacramento, California 95825; e-mail DRECP@blm.gov.

SUPPLEMENTARY INFORMATION: The BLM, along with the California Department of Fish and Game, the California Energy Commission, and the U.S. Fish and Wildlife Service, propose to develop the DRECP to advance State and Federal conservation goals in the Mojave and Colorado desert regions in California, while also facilitating the timely permitting of renewable energy projects under applicable State and Federal laws. Specifically, the planning goals for the DRECP include, but are not limited to, the following:

- Provide for the long-term conservation and management of identified species in the planning area;
 - Preserve, restore, and enhance natural communities and ecosystems that support identified species in the planning area;

- Build on the Competitive Renewable Energy Zones identified by the State's Renewable Energy Transmission Initiative that depict areas where renewable energy generation project permitting may be expedited;

- Identify the most appropriate locations in the planning area for the development of utility-scale renewable energy projects, taking into account potential impacts to threatened and endangered species, sensitive natural communities, and cultural resources;

- Coordinate and standardize mitigation and compensation requirements for renewable energy activities in the planning area; and
- Develop an efficient process for authorizing renewable energy projects in the planning area that results in greater conservation values than the process provided by project-by-project or species-by-species reviews.

The purpose of the public scoping process is to determine relevant issues that will influence the scope of the environmental analysis, including alternatives, and guide the process for developing the EIS. The BLM has identified the following preliminary issues: Special status species, mitigation measures for special status species, vegetation communities, cultural resources, special area designations, and areas of high potential for renewable energy development.

Authorization of this proposal may require amendment of the CDCA Plan. By this notice, the BLM is complying with requirements in 43 CFR 1610.2(c) to notify the public of potential amendments to land use plans, predicated on the findings of the EIS. If a land use plan amendment is necessary, the BLM will integrate the land use planning process with the NEPA process for this proposal.

The BLM will use the NEPA commenting process to satisfy the public involvement process for Section 106 of the National Historic Preservation Act (16 U.S.C. 470f), as provided for in 36 CFR 800.2(d)(3). Native American Tribal consultations will be conducted in accordance with policy and Tribal concerns will be given due consideration, including impacts on Indian trust assets. Federal, State, Tribes, and local agencies, along with other stakeholders that may be interested or affected by the BLM's decision on this project, are invited to participate in the scoping process and, if eligible, may request or be requested by the BLM to participate as a cooperating agency.

Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1501.7 and 43 CFR 1610.2.

Tom Pogacnik,

Deputy State Director for Natural Resources.

BILLING CODE P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[L12100000.PH0000 CO 912]

Notice of Intent To Solicit Nominations for the Dominguez-Escalante National Conservation Area Advisory Council

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The Secretary of the Interior (Secretary) is directed by the Omnibus Public Lands Act of 2009 to establish the Dominguez-Escalante National

Conservation Area (D-E NCA) Advisory Council (Council). The Secretary is requesting nominations for 10 members to sit on the Council. The Council will advise the Secretary, through the Bureau of Land Management (BLM), on matters regarding the preparation and implementation of the D-E NCA Resource Management Plan (RMP).

DATES: Submit nomination packages on or before December 21, 2009.

ADDRESSES: Send completed Council nominations to D-E NCA Interim Manager, Grand Junction Field Office, 2815 H Road, Grand Junction, Colorado 81506. Nomination forms may be obtained at the Grand Junction Field Office at the above address or at the Uncompahgre Field Office, Bureau of Land Management, 2465 S. Townsend Avenue, Montrose, Colorado 81401.

FOR FURTHER INFORMATION CONTACT: Katie A. Stevens, D-E NCA Interim Manager, (970) 244-3049, Katie_A_Stevens@blm.gov.

SUPPLEMENTARY INFORMATION: The D-E NCA and Dominguez Canyon Wilderness Area, located within the D-E NCA, was established by the Omnibus Public Land Management Act of 2009, Public Law 111-11 (Act). The D-E NCA is comprised of approximately 209,610 acres of public land, including approximately 66,280 acres of wilderness, located in Delta, Montrose, and Mesa counties. The purposes of the D-E NCA are to conserve and protect, for the benefit and enjoyment of present and future generations, the unique and important resources and values of the land. These resources and values include the geological, cultural, archaeological, paleontological, natural, scientific, recreational, wilderness, wildlife, riparian, historical, educational, and scenic resources of the public lands, and the water resources of area streams that are necessary to support aquatic, riparian, and terrestrial species and communities. The Act also calls for the establishment of the D-E NCA Council, comprised of 10 members, to advise the Secretary, through the BLM, on matters regarding the preparation and implementation of an RMP for the area. These 10 members shall include, to the extent practicable:

- (1) One member appointed after considering the recommendations of the Mesa County Commission;
- (2) One member appointed after considering the recommendations of the Montrose County Commission;
- (3) One member appointed after considering the recommendations of the Delta County Commission;
- (4) One member appointed after considering the recommendations of the

permittees holding grazing allotments within the D-E NCA; and

(5) Six members who reside in, or within reasonable proximity to Mesa, Delta, or Montrose Counties, Colorado, with backgrounds that reflect:

(A) The purposes for which the D-E NCA was established; and

(B) The interests of the stakeholders that are affected by the planning and management of the D-E NCA.

Any individual or organization may nominate one or more persons to serve on the Council. Individuals may nominate themselves for Council membership. Nomination forms may be obtained from the BLM Grand Junction or Uncompahgre Field Offices, or may be downloaded from the following Web site: <http://www.blm.gov/co/st/en/fo/denca.html>.

Nomination packages must include a completed nomination form, letters of reference from the represented interests or organizations, as well as any other information relevant to the nominee's qualifications.

The Grand Junction and Uncompahgre Field Offices will review the nomination packages in coordination with the affected counties and the Governor of Colorado before forwarding its recommendations to the Secretary, who will make the appointments.

The Council shall be subject to the Federal Advisory Committee Act, 5 U.S.C. App. 2; and the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1701 *et seq.*

Authority: Sec. 2407 of Public Law 111-11.

Dated: November 2, 2009.

David B. Hunsaker,

Acting State Director.

[FR Doc. E9-27865 Filed 11-19-09; 8:45 am]

BILLING CODE 4310-JB-P

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Under the Comprehensive Environmental Response Compensation, and Liability Act

Notice is hereby given that on November 13, 2009, a proposed Consent Decree (the "Decree") in *United States v. Cabot Corporation, et al.*, Civil Action No. 1:09-cv-5783, was lodged with the United States District Court for the District of New Jersey.

In a complaint, filed simultaneously with the Decree, the United States alleges that Cabot Corporation, KB Alloys, Inc., Shieldalloy Metallurgical Corporation, E.I. du pont de Nemours and Company, International Wire

Group, Inc. and its subsidiary Omega Wire, Inc., are liable pursuant to Section 107(a)(3) of the Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA"), 42 U.S.C. 9607(a)(3), for response costs incurred by the Environmental Protection Agency ("EPA") in cleaning up the Pioneer Smelting Superfund Site located at Factory Road, Route 532, in Chatsworth, New Jersey.

Pursuant to the Decree, the parties will jointly and severally be responsible for paying the United States \$750,000 to resolve any claim the United States has associated with costs incurred by EPA at the Pioneer Smelting Superfund Site.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, comments relating to the Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and either e-mailed to pubcomment-ees.enrd@usdoj.gov or mailed to P.O. Box 7611, U.S. Department of Justice, Washington, DC 20044-7611, and should refer to *United States v. Cabot Corporation et al.*, D.J. Ref. 90-11-2-09344/1.

During the public comment period, the Decree may be examined on the following Department of Justice Web site, http://www.usdoj.gov/enrd/Consent_Decrees.html. A copy of the Decree may also be obtained by mail from the Consent Decree Library, P.O. Box 7611, U.S. Department of Justice, Washington, DC 20044-7611 or by faxing or e-mailing a request to Tonia Fleetwood (tonia.fleetwood@usdoj.gov), fax no. (202) 514-0097, phone confirmation number (202) 514-1547. In requesting a copy from the Consent Decree Library, please enclose a check in the amount of \$7.75 (25 cents per page reproduction cost) payable to the U.S. Treasury or, if by e-mail or fax, forward a check in that amount to the Consent Decree Library at the stated address.

Maureen Katz,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE P

DEPARTMENT OF JUSTICE**Drug Enforcement Administration****[Docket No. DEA-326F]****Established Assessment of Annual Needs for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2010****AGENCY:** Drug Enforcement Administration (DEA), Justice.**ACTION:** Notice of Assessment of Annual Needs for 2010.

SUMMARY: This notice establishes the initial 2010 Assessment of Annual Needs for certain List I chemicals in accordance with the Combat Methamphetamine Epidemic Act of 2005 (CMEA), enacted on March 9, 2006.

DATES: *Effective Date:* November 20, 2009.

FOR FURTHER INFORMATION CONTACT: Christine A. Sannerud, Ph.D., Chief, Drug and Chemical Evaluation Section, Drug Enforcement Administration, 8701 Morrisette Drive, Springfield, Virginia 22152, *Telephone:* (202) 307-7183.

SUPPLEMENTARY INFORMATION: Section 713 of the Combat Methamphetamine Epidemic Act of 2005 (Title VII of Pub. L. 109-177) (CMEA) amended Section 306 of the Controlled Substances Act (CSA) (21 U.S.C. 826) by adding ephedrine, pseudoephedrine, and phenylpropanolamine to existing language to read as follows: "The Attorney General shall determine the total quantity and establish production quotas for each basic class of controlled substance in schedules I and II and for ephedrine, pseudoephedrine, and phenylpropanolamine to be manufactured each calendar year to provide for the estimated medical, scientific, research, and industrial needs of the United States, for lawful export requirements, and for the establishment and maintenance of reserve stocks." Further, section 715 of the CMEA amended 21 U.S.C. 952 "Importation of Controlled Substances" by adding the same List I chemicals to the existing language in paragraph (a), and by adding a new paragraph (d) to read as follows:

(a) Controlled substances in schedule I or II and narcotic drugs in schedule III, IV, or V; exceptions

It shall be unlawful to import into the customs territory of the United States from any place outside thereof (but within the United States), or to import into the United

States from any place outside thereof, any controlled substance in schedule I or II of subchapter I of this chapter, or any narcotic drug in schedule III, IV, or V of subchapter I of this chapter, or ephedrine, pseudoephedrine, and phenylpropanolamine, except that—

(1) such amounts of crude opium, poppy straw, concentrate of poppy straw, and coca leaves, and of ephedrine, pseudoephedrine, and phenylpropanolamine, as the Attorney General finds to be necessary to provide for medical, scientific, or other legitimate purposes * * * may be so imported under such regulations as the Attorney General shall prescribe.

(d)(1) With respect to a registrant under section 958 who is authorized under subsection (a)(1) to import ephedrine, pseudoephedrine, or phenylpropanolamine, at any time during the year the registrant may apply for an increase in the amount of such chemical that the registrant is authorized to import, and the Attorney General may approve the application if the Attorney General determines that the approval is necessary to provide for medical, scientific, or other legitimate purposes regarding the chemical.

Editor's Note: This excerpt of the amendment is published for the convenience of the reader. The official text is published at 21 U.S.C. 952(a) and (d)(1).

Background and Legal Authority

Section 713 of the CMEA of 2005 (Title VII of Pub. L. 109-177) amended section 306 of the CSA (21 U.S.C. 826) to require that the Attorney General establish quotas to provide for the annual needs for ephedrine, pseudoephedrine, and phenylpropanolamine. Section 715 of the CMEA amended 21 U.S.C. 952 by adding ephedrine, pseudoephedrine, and phenylpropanolamine to the existing language concerning importation of controlled substances.

The 2010 Assessment of Annual Needs represents those quantities of ephedrine, pseudoephedrine, and phenylpropanolamine which may be manufactured domestically and/or imported into the United States in 2010 to provide adequate supplies of each chemical for: The estimated medical, scientific, research, and industrial needs of the United States; lawful export requirements; and the establishment and maintenance of reserve stocks.

The responsibility for establishing the assessment has been delegated to the Administrator of the DEA by 28 CFR 0.100. The Administrator, in turn, has re-delegated this function to the Deputy Administrator, pursuant to 28 CFR 0.104.

On September 14, 2009, a notice entitled, "Assessment of Annual Needs

for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2010" was published in the **Federal Register** (74 FR 47021). That notice proposed the 2010 Assessment of Annual Needs for ephedrine (for sale), ephedrine (for conversion), pseudoephedrine (for sale), phenylpropanolamine (for sale) and phenylpropanolamine (for conversion). All interested persons were invited to comment on or object to the assessments on or before October 14, 2009.

Comments Received

DEA did not receive any comments to the Assessment of Annual Needs for ephedrine (for sale), ephedrine (for conversion), pseudoephedrine (for sale), phenylpropanolamine (for sale) and phenylpropanolamine (for conversion). DEA is finalizing the assessments for these List I chemicals based on information contained in additional applications for 2010 import, manufacturing and procurement quotas provided by DEA registered importers and manufacturers whose quota applications were received as of October 21, 2009. DEA is providing the data used in developing the established assessments for each of the listed chemicals. DEA also notes that the Assessment of Annual Needs may be adjusted at a later date pursuant to 21 CFR 1315.13.

Underlying Data and DEA's Analysis

In determining the final 2010 assessments, DEA has considered the total net disposals (i.e., sales) of the List I chemicals for the current and preceding two years, actual and estimated inventories, projected demand (2010), industrial use, and export requirements from data provided by DEA registered manufacturers and importers in procurement quota applications (DEA 250), from manufacturing quota applications (DEA 189), and from import quota applications (DEA 488).¹

DEA further considered trends as derived from information provided in applications for import, manufacturing, and procurement quotas and in import and export declarations. DEA notes that the inventory, acquisitions (purchases) and disposition (sales) data provided by DEA registered manufacturers and importers reflects the most current information available.

Ephedrine Data

¹ Applications and instructions for procurement, import and manufacturing quotas can be found at

http://www.deadiversion.usdoj.gov/quotas/quota_apps.htm.

** Reported imports from applications for 2010 import quotas (DEA 488).

*** IMS Health, IMS National Sales Perspectives™, January 2007 to December 2008, Retail and Non-Retail Channels, Data Extracted October 21, 2009.

Ephedrine Analysis

DEA calculated the established 2010 Assessment of Annual Needs for ephedrine using the calculation developed to determine the 2009 Assessment of Annual Needs. This calculation considers the criteria defined in 21 U.S.C. 826: estimated medical, scientific, research, and industrial needs of the United States; lawful export requirements; and the establishment and maintenance of reserve stocks.

As of October 21, 2009, DEA registered manufacturers of dosage form products containing ephedrine requested the authority to purchase a total of 2,861 kg ephedrine (for sale) in 2010. DEA registered manufacturers of ephedrine reported sales totaling approximately 2,508 kg in 2008 and 2,431 kg in 2009; this represents a 3% decrease in sales reported by these firms from 2008 to 2009. Additionally, exports of ephedrine products from the United States as reported on export

declarations (DEA 486) totaled 91 kg in 2008 and 10 kg in 2009; this represents a 90% decrease from levels observed in 2008. The average of the 2008 and 2009 exports of ephedrine products is approximately 51 kg. DEA also considered information on trends in the national rate of net disposals from sales data provided by IMS Health's National Sales Perspective™ (NSP) database. IMS NSP data reported the average sales volume of ephedrine for the calendar years 2007 and 2008 to be approximately 1,348 kg. DEA notes that the 2009 sales figure reported by manufacturers (2,431 kg) is higher than the average sales reported by IMS for the previous two years (1,348 kg). This is expected because a manufacturer's reported sales include quantities which are necessary to provide reserve stocks for distributors and retailers. DEA, in considering the manufacturer's reported sales, thus believes that 2,431 kg fairly represents the U.S. sales of ephedrine for 2010 and that 51 kg fairly represents the export requirements of ephedrine.

For the establishment and maintenance of reserve stocks, DEA notes that 21 CFR 1315.24 allows for an inventory allowance (reserve stock) of 50% of a manufacturer's estimated sales. DEA also considered the estimated 2009 year end inventory as reported by DEA registrants in determining the inventory allowance.

DEA calculated the ephedrine (for sale) assessment by the following methodology:

2009 sales + reserve stock + export requirement – existing inventory = AAN

$2,431 + (50\% * 2,431) + 51 - 181 = 3,517$
kg ephedrine (for sale) for 2010

This calculation suggests that DEA's Assessment of Annual Needs for ephedrine should be established as 3,600 kg. Accordingly, DEA is establishing the 2010 Assessment of Annual Needs for ephedrine (for sale) at 3,600 kg.

Phenylpropanolamine (for Sale) Data

PHENYLPROPANOLAMINE (FOR SALE) DATA FOR 2010 ASSESSMENT OF ANNUAL NEEDS
[Kilograms]

Phenylpropanolamine (for sale)	2007	2008	2009	2010 Request
Sales* (DEA 250)	3,770	4,274	4,638	6,288
Imports** (DEA 488)	73	79	134	263
Export Declarations (DEA 486)	1,002	0	3	n/a
Inventory* (DEA 250)	3,597	2,093	596	n/a

* Reported sales and inventory from applications for 2010 procurement quotas (DEA 250) received as of October 21, 2009.

** Reported imports from applications for 2010 import quotas (DEA 488) received as of October 21, 2009.

Phenylpropanolamine (for Sale) Analysis

DEA utilized the same general methodology and calculation to establish the assessment for phenylpropanolamine (for sale) as was described for the assessment of ephedrine (for sale), above.

As of October 21, 2009, DEA registered manufacturers of dosage form products containing

phenylpropanolamine requested the authority to purchase 6,288 kg phenylpropanolamine (for sale) in 2010. DEA registered manufacturers of phenylpropanolamine reported sales totaling approximately 4,274 kg in 2008 and 4,638 kg in 2009; this represents an 8% increase in sales reported by these firms from 2008 to 2009. Additionally, exports of phenylpropanolamine products from the U.S. as reported on

export declarations (DEA 486) totaled 0 kg in 2008 and 3 kg in 2009; this represents a 3 kg increase from levels observed in 2008. The average of the 2008 and 2009 exports of phenylpropanolamine products is approximately 2 kg. DEA thus believes that 4,638 kg fairly represents the U.S. sales of phenylpropanolamine for 2010 and that 2 kg fairly represents the export requirements of phenylpropanolamine.

DEA notes that phenylpropanolamine is sold primarily as a veterinary product for the treatment for canine incontinence and is not approved for human consumption. IMS Health's NSP Data does not capture sales of phenylpropanolamine to these channels and is therefore not included. DEA calculated the phenylpropanolamine (for sale)

assessment by the following methodology:
 2009 sales + reserve stock + export requirement - existing inventory = AAN
 $4,638 + (50\% * 4,638) + 2 - 596 = 6,363$ kg phenylpropanolamine (for sale) for 2010

This calculation suggests that DEA's 2010 Assessment of Annual Needs for phenylpropanolamine (for sale) should be established as 6,400 kg. Accordingly, DEA is establishing the 2010 Assessment of Annual Needs for phenylpropanolamine (for sale) at 6,400 kg.

Pseudoephedrine (for Sale) Data

PSEUDOEPHEDRINE (FOR SALE) DATA FOR 2010 ASSESSMENT OF ANNUAL NEEDS

[Kilograms]

Pseudoephedrine (for sale)	2007	2008	2009	2010 Request
Sales* (DEA 250)	238,608	223,196	286,516	225,116
Sales* (DEA 189)	100,300	64,781	33,600	32,760
Imports** (DEA 488)	232,822	170,995	267,808	233,569
Export Declarations (DEA 486)	42,132	47,194	25,526	n/a
Inventory* (DEA 250)	135,097	119,515	62,748	n/a
IMS*** (NSP)	180,204	149,159	n/a	n/a

* Reported sales and inventory from applications for 2010 procurement quotas (DEA 250) and manufacturing quotas (DEA 189) received as of October 21, 2009.

** Reported imports from applications for 2010 import quotas (DEA 488) received as of October 21, 2009.

*** IMS Health, IMS National Sales Perspectives™, January 2007 to December 2008, Retail and Non-Retail Channels, Data Extracted October 21, 2009.

Pseudoephedrine (for Sale) Analysis

DEA utilized the same general methodology and calculations to establish the assessment for pseudoephedrine (for sale) as were described for the assessment of ephedrine (for sale), above.

As of October 21, 2009, DEA registered manufacturers of dosage form products containing pseudoephedrine requested the authority to purchase 225,116 kg pseudoephedrine. DEA registered manufacturers of pseudoephedrine reported sales totaling approximately 223,196 kg in 2008 and 286,516 kg in 2009; this represents a 22% increase in sales reported by these firms from 2008 to 2009. During the same period exports of pseudoephedrine products from the U.S. as reported on export declarations (DEA 486) totaled 47,194 kg in 2008 and

25,526 kg in 2009; this represents a 54% decrease from levels observed in 2008. The average of the 2008 and 2009 exports is 36,360 kg. Additionally, DEA considered information on trends in the national rate of net disposals from sales data provided by IMS Health. IMS NSP data reported the average retail sales volume of pseudoephedrine for the calendar years 2007 and 2008 to be approximately 164,682 kg. DEA thus believes that 286,516 kg of sales reported by manufacturers fairly represents the U.S. sales of pseudoephedrine for 2010 and that 36,360 kg fairly represents the export requirements of pseudoephedrine. DEA notes that manufacturer reported sales for 2009 (286,516 kg) are higher than the average retail sales reported by IMS for the previous two years (164,682 kg). This is expected because a manufacturer's reported sales include

quantities which are necessary to provide reserve stocks for distributors and retailers.

DEA calculated the pseudoephedrine (for sale) assessment by the following methodology:

2009 sales + reserve stock + export requirement - existing inventory = AAN
 $286,516 + (50\% * 286,516) + 36,360 - 62,748 = 403,386$ kg pseudoephedrine (for sale) for 2010.

This calculation suggests that DEA's 2010 Assessment of Annual Needs for pseudoephedrine (for sale) should be established at 404,000 kg. Accordingly, DEA is establishing the 2010 Assessment of Annual Needs for pseudoephedrine (for sale) at 404,000 kg.

Phenylpropanolamine (for Conversion) Data

PHENYLPROPANOLAMINE (FOR CONVERSION) DATA FOR 2010 ASSESSMENT OF ANNUAL NEEDS

[Kilograms]

Phenylpropanolamine (for conversion)	2007	2008	2009	2010 Request
Sales* (DEA 250)	3,621	10,834	13,582	14,900
Imports** (DEA 488)	1,000	3,225	6,514	7,108
Export Declarations (DEA 486)	0	0	0	n/a
Inventory* (DEA 250)	3,581	5,533	4,103	n/a
APQ Amphetamine***	17,000	22,000	22,000	n/a

* Reported sales and inventory from applications for 2010 procurement quotas (DEA 250) received as of October 21, 2009.

** Reported imports from applications for 2010 import quotas (DEA 488) received as of October 21, 2009.

*** Amphetamine Aggregate Production Quota History http://www.deadiversion.usdoj.gov/quotas/quota_history.htm.

Phenylpropanolamine (for Conversion) Analysis

As of October 21, 2009, DEA registered manufacturers of phenylpropanolamine (for conversion) requested the authority to purchase a total of 14,900 kg phenylpropanolamine for the manufacture of amphetamine. DEA registered manufacturers of phenylpropanolamine reported sales of phenylpropanolamine totaling approximately 10,834 kg in 2008 and 13,582 kg in 2009; this represent a 20% increase in sales reported by these firms from 2008 to 2009. There were no reported exports of phenylpropanolamine (for conversion). DEA has not received any requests to synthesize phenylpropanolamine in

2010. DEA has concluded that the 2009 sales of phenylpropanolamine (for conversion), 13,582 kg, fairly represents U.S. requirements for 2010 and zero kg fairly represents the export requirements of phenylpropanolamine (for conversion).

Phenylpropanolamine is used in the production of legitimate amphetamine products. DEA has established an Aggregate Production Quota (APQ) for amphetamine of 22,000 kg for 2009. DEA notes amphetamine is primarily manufactured by the conversion of the schedule II controlled substance phenylacetone to amphetamine. DEA did not consider this alternative synthesis route in the 2009 Assessment of Annual Needs for phenylpropanolamine (for conversion).

DEA calculated the phenylpropanolamine (for conversion) for the manufacture of amphetamine as follows:

$$(2009 \text{ sales}) + \text{reserve stock} + \text{export requirement} - \text{inventory} = \text{AAN}$$

$$(13,582) + 50\% * (13,582) + 0 - 4,103 = 16,270 \text{ kg PPA (for conversion) for 2010}$$

This calculation suggests that DEA's 2010 Assessment of Annual Needs for phenylpropanolamine (for conversion) should be established at 16,500 kg. Accordingly, DEA is establishing the 2010 Assessment of Annual Needs for phenylpropanolamine (for conversion) at 16,500 kg.

Ephedrine (for Conversion) Data

EPHEDRINE (FOR CONVERSION) DATA FOR 2010 ASSESSMENT OF ANNUAL NEEDS
[Kilograms]

Ephedrine (for conversion)	2007	2008	2009	2010 Request
Sales* (DEA 250)	99,622	64,522	40,403	40,646
Imports** (DEA 488)	99,594	64,128	39,897	40,000
Inventory* (DEA 250)	13	160	254	n/a
APQ Methamphetamine***	3,130	3,130	3,130	n/a

* Reported sales and inventory from applications for 2010 procurement quotas (DEA 250) and manufacturing quotas (DEA 189) received as of October 21, 2009.

** Reported imports from applications for 2010 import quotas (DEA 488) received as of October 21, 2009.

*** Methamphetamine Aggregate Production Quota History http://www.deadiversion.usdoj.gov/quotas/quota_history.htm.

Ephedrine (for Conversion) Analysis

As of October 21, 2009, DEA registered manufacturers of ephedrine (for conversion) requested the authority to purchase a total of 40,646 kg ephedrine (for conversion) for the manufacture of two substances: methamphetamine and pseudoephedrine.

DEA considered the ephedrine (for conversion) requirements for the manufacture of methamphetamine and pseudoephedrine. DEA has determined that the established assessments for the manufacture of these two substances are the best indicators of the need for ephedrine (for conversion). The assessment of need for methamphetamine was determined by DEA as the Aggregate Production Quota (APQ) for methamphetamine. DEA determined that the estimated sales of pseudoephedrine, as referenced in the Assessment of Annual Needs (AAN) for pseudoephedrine, represents the need for pseudoephedrine. Reported sales of ephedrine (for conversion) are included as reference to DEA's methodology.

DEA further considered the reported conversion yields of these substances. DEA registered manufacturers reported a conversion yield of 39% for the

synthesis of methamphetamine from ephedrine. DEA cannot disclose the conversion yield for the synthesis of pseudoephedrine because this information is proprietary to the one manufacturer involved in this type of manufacturing.

DEA calculated the ephedrine (for conversion) assessment by the following methodology:

$$\text{methamphetamine requirement} + \text{pseudoephedrine requirement} = \text{AAN}$$

DEA calculated the ephedrine (for conversion) requirement for the manufacture of methamphetamine as follows:

$$(2009 \text{ APQ methamphetamine}/39\% \text{ yield}) + \text{reserve stock} - \text{inventory} = \text{ephedrine (for manufacture of methamphetamine)}$$

$$(3,130/39\% \text{ yield}) + 50\% * (3,130/39\% \text{ yield}) - 46 = 11,993 \text{ kg}$$

The calculation for the ephedrine (for conversion) requirement for the manufacture of pseudoephedrine leads to a result of 63,157 kg. DEA cannot provide the details of the calculation because this would reveal the conversion yield for the synthesis of pseudoephedrine, which is proprietary to the one manufacturer involved in this

type of manufacturing. Therefore, the assessment for ephedrine was determined by the sum total of the ephedrine (for conversion) requirements as described by the following methodology:

$$\text{methamphetamine requirement} + \text{pseudoephedrine requirement} = \text{AAN}$$

$$11,993 + 63,157 = 75,150 \text{ kg ephedrine (for conversion) for 2010}$$

This calculation suggests that DEA's 2010 Assessment of Annual Needs for ephedrine (for conversion) should be established at 75,000 kg. Accordingly, DEA is establishing the 2010 Assessment of Annual Needs for ephedrine (for conversion) at 75,000 kg.

Conclusion

DEA did not receive any comments on its Assessment of Annual Needs for ephedrine (for sale), ephedrine (for conversion), pseudoephedrine (for sale), phenylpropanolamine (for sale) and phenylpropanolamine (for conversion). DEA is finalizing the assessments for these List I chemicals based on information contained in additional applications for 2010 import, manufacturing and procurement quotas provided by DEA registered importers

and manufacturers whose quota applications were received as of October 21, 2009.

Therefore, under the authority vested in the Attorney General by Section 306 of the CSA (21 U.S.C. 826), and delegated to the Administrator of the DEA by 28 CFR 0.100, and redelegated to the Deputy Administrator pursuant to 28 CFR 0.104, the Deputy Administrator hereby orders that the 2010 Assessment of Annual Needs for ephedrine, pseudoephedrine, and phenylpropanolamine, expressed in kilograms of anhydrous acid or base, be established as follows:

List I chemical	Established 2010 assessment of annual needs
Ephedrine (for sale)	3,600
Phenylpropanolamine (for sale)	6,400
Pseudoephedrine (for sale)	404,000
Phenylpropanolamine (for conversion)	16,500
Ephedrine (for conversion)	75,000

The Office of Management and Budget has determined that notices of quotas are not subject to centralized review under Executive Order 12866.

This action does not preempt or modify any provision of state law; nor does it impose enforcement responsibilities on any state; nor does it diminish the power of any state to enforce its own laws. Accordingly, this action does not have any federalism implications warranting the application of Executive Order 13132.

The Deputy Administrator hereby certifies that this action will not have a significant economic impact upon a substantial number of small entities whose interests must be considered under the Regulatory Flexibility Act, 5 U.S.C. 601–612. The establishment of Assessment of Annual Needs for ephedrine, pseudoephedrine, and phenylpropanolamine is mandated by law. The assessments are necessary to provide for the estimated medical, scientific, research and industrial needs of the United States; for lawful export requirements; and the establishment and maintenance of reserve stocks. Accordingly, the Deputy Administrator has determined that this action does not require a regulatory flexibility analysis.

This action meets the applicable standards set forth in Sections 3(a) and 3(b)(2) of Executive Order 12988 Civil Justice Reform.

This action will not result in the expenditure by State, local, and tribal governments, in the aggregate, or by the

private sector, of \$120,000,000 or more (adjusted for inflation) in any one year, and will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

This action is not a major rule as defined by Section 804 of the Small Business Regulatory Enforcement Fairness Act of 1996 (Congressional Review Act). This action will not result in an annual effect on the economy of \$100,000,000 or more; a major increase in costs or prices; or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based companies to compete with foreign-based companies in domestic and export markets.

Dated: November 11, 2009.

Michele M. Leonhart,

Deputy Administrator.

BILLING CODE 4410–09–P

DEPARTMENT OF LABOR

Bureau of Labor Statistics

Solicitation of Comments on a Proposal To Revise Method for Estimation of Monthly Labor Force Statistics for Certain Subnational Areas

AGENCY: Bureau of Labor Statistics, Labor.

ACTION: Notice of solicitation of comments.

SUMMARY: The Department of Labor, through the Bureau of Labor Statistics (BLS), is responsible for the development and publication of local area labor force statistics. This program includes the issuance of monthly estimates of the labor force, employment, unemployment, and the unemployment rate for each State and labor market area in the nation. A hierarchy of estimation methods is used to produce the 7,300 estimates covered by the Local Area Unemployment Statistics (LAUS) program (<http://thomas.loc.gov/bss/d111/d111laws.html>), based on the availability and quality of data from the Current Population Survey (CPS). The strongest estimating method—signal-plus-noise models with real-time benchmarking for current estimation and historical benchmarking—is employed for all States and the District of Columbia, the Los Angeles-Long Beach-Glendale, CA metropolitan division, New York City, and the

respective balances of New York and California. Models are also employed for five additional substate areas and their State balances. The areas are: the Chicago-Naperville-Joliet, IL metropolitan division; the Cleveland-Elyria-Mentor, OH metropolitan area; the Detroit-Warren-Livonia, MI metropolitan area; the Miami-Miami Beach-Kendall, FL metropolitan division; and the Seattle-Bellevue-Everett, WA metropolitan division.

As part of a program of continuing improvements in LAUS methodology, BLS is proposing the implementation of smoothed-seasonally-adjusted series for current and historical estimates. This approach is an innovative alternative to an annual historical benchmark for seasonally-adjusted State estimates that will address longstanding issues related to end-of-year revision, and also will enhance the analytical capability of the estimates.

BLS proposes to implement the revised methodology beginning with January 2010 current estimates, with historical estimates revised to 1976 for States, the District of Columbia, Los Angeles, New York City, and the respective balances of California and New York. The five other substate model estimates will be revised back to 1983.

DATES: Submit written comments on or before December 21, 2009.

ADDRESSES: Send comments to Sharon Brown, Division Chief, Division of Local Area Unemployment Statistics, Bureau of Labor Statistics, Room 4675, 2 Massachusetts Avenue, NE., Washington, DC 20212, by FAX at 202–691–6459, or by e-mail at Brown.Sharon@bls.gov.

FOR FURTHER INFORMATION CONTACT: Sharon Brown, Division Chief, Division of Local Area Unemployment Statistics, Bureau of Labor Statistics, Room 4675, 2 Massachusetts Avenue, NE., Washington DC 20212, by telephone at 202–691–6390, or by e-mail at LAUSRM@bls.gov.

SUPPLEMENTARY INFORMATION:

I. Background

The Department of Labor, through the BLS, has been responsible for the development and publication of local area labor force statistics since 1972. In 1978, the BLS broadened the use data from the CPS in the LAUS program by extending the annual reliability criterion to monthly data. Monthly CPS levels were used directly for the 10 largest States, two substate areas (New York City, Los Angeles), and the respective balances of New York and California. In 1985, the sample redesign

and other efficiencies improved the reliability of CPS data at the State level, resulting in the current criterion on monthly and annual average data of an 8 percent coefficient of variation on the level of unemployment when the unemployment rate is 6 percent. In addition, North Carolina joined the group of direct-use States. In 1989, variable coefficient time-series models for monthly estimation of State employment and unemployment were introduced for 39 States and the District of Columbia. Further improvement was effected with the implementation of signal-plus-noise models in 1994. These models rely heavily on monthly CPS data, as well as current wage and salary employment and unemployment insurance statistics. State labor force estimation for the direct-use States was based the time series modeling approach beginning in January 1996.

Improvements introduced with the redesign in January 2005 ensured that State estimates add to the national estimates of employment and unemployment each month, through real-time benchmarking. In doing so, the benchmark changed from annual State-level estimates of employment and unemployment to monthly national estimates of these measures. In this way, economic shocks are reflected in the State estimates on a real-time basis, and end-of-year revisions are significantly smaller.

Historical benchmarking is part of the annual processing activities performed on the models. The first two steps, revision of inputs and model re-estimation, are the same for both the not-seasonally-adjusted (NSA) series and the seasonally-adjusted series. The final step, benchmarking to historical control totals, differs by series. The NSA estimates are benchmarked to monthly Division model controls which have been controlled to monthly national CPS estimates. This ensures that the monthly State NSA estimates sum to the national CPS estimates. The annual average of the NSA estimates is used to control the monthly seasonally-adjusted model estimates. This process preserves the underlying smoothness in the model estimates that would be lost by applying the monthly benchmarking procedure.

However, the current procedure had an unanticipated impact on the historical benchmarking for the seasonally-adjusted estimates during 2008. Unemployment rose steeply in the nation and all States during 2008. The benchmark methodology that required the use of the annual average as the historical control total for the seasonally-adjusted estimates meant that unemployment rates were adjusted

downward during the latter months of 2008. This impacted comparisons with January 2009 unemployment estimates that continued to reflect the steep economic decline. In addition to issues with historical benchmarking, the monthly real-time benchmarking procedure introduces volatility into the current seasonally-adjusted estimates, producing estimates with spurious turning points that are difficult to explain to data users.

II. Current Action

To address these serious issues, the BLS proposes modifying the procedures for the seasonally-adjusted estimates and implementing a smoothing methodology for both current and historical seasonally-adjusted series. Smoothing the current series will reduce the number of spurious turning points in the estimates. For historical estimates, the first two steps in annual processing: revising model inputs and re-estimating the series, are unchanged. The last step, benchmarking to control totals, will be revised for the seasonally-adjusted estimates. The use of the annual average of the NSA series as the control total will be dropped. Instead, as in current monthly estimation, the historical seasonally-adjusted series will be adjusted by the same pro-rata factor used in adjusting the NSA estimates to the national control totals. Since the pro-rata factors fluctuate from month-to-month, this procedure will introduce additional variability into the historical series, which could dominate the monthly change in the benchmarked series. Smoothing the series following the application of the pro-rata adjustment will reduce the volatility added. The smoother selected is the Henderson Trend Filter (H13).

Detailed descriptions of the current and proposed approaches are available from the office listed above.

III. Desired Focus of Comments

Comments and recommendations are requested from the public on the use of the Henderson Trend Filter (H13) to smooth the LAUS current and historical seasonally adjusted estimates.

Signed at Washington, DC, this 17th day of November 2009.

Kimberley Hill,

Acting Chief, Division of Management Systems, Bureau of Labor Statistics.

DEPARTMENT OF LABOR

Employment and Training Administration

Request for Certification of Compliance—Rural Industrialization Loan and Grant Program

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice.

SUMMARY: The Employment and Training Administration is issuing this notice to announce the receipt of a "Certification of Non-Relocation and Market and Capacity Information Report" (Form 4279-2) for the following:

Applicant/Location: Legacy Senior Care Group, LLC/Richfield, Ohio.

Principal Product/Purpose: The loan, guarantee, or grant application is to enable a new business venture to construct and manage an assisted living facility that also offers memory care. The NAICS industry code for this enterprise is: 623311 Continuing Care Retirement Communities.

DATES: All interested parties may submit comments in writing no later than December 4, 2009. Copies of adverse comments received will be forwarded to the applicant noted above.

ADDRESSES: Address all comments concerning this notice to Anthony D. Dais, U.S. Department of Labor, Employment and Training Administration, 200 Constitution Avenue, NW., Room S-4231, Washington, DC 20210; or e-mail Dais.Anthony@dol.gov; or transmit via fax (202) 693-3015 (this is not a toll-free number).

FOR FURTHER INFORMATION CONTACT: Anthony D. Dais, at telephone number (202) 693-2784 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION: Section 188 of the Consolidated Farm and Rural Development Act of 1972, as established under 29 CFR Part 75, authorizes the United States Department of Agriculture to make or guarantee loans or grants to finance industrial and business activities in rural areas. The Secretary of Labor must review the application for financial assistance for the purpose of certifying to the Secretary of Agriculture that the assistance is not calculated, or likely, to result in: (a) A transfer of any employment or business activity from one area to another by the loan applicant's business operation; or, (b) An increase in the production of goods, materials, services, or facilities in an area where there is not sufficient

demand to employ the efficient capacity of existing competitive enterprises unless the financial assistance will not have an adverse impact on existing competitive enterprises in the area. The Employment and Training Administration within the Department of Labor is responsible for the review and certification process. Comments should address the two bases for certification and, if possible, provide data to assist in the analysis of these issues.

Signed at Washington, DC this 10th of November, 2009.

Jane Oates,

Assistant Secretary for Employment and Training.

BILLING CODE 4510-FN-P

NATIONAL SCIENCE FOUNDATION

Agency Information Collection Activities: Proposed Collection, Comment Request

AGENCY: National Science Foundation.

ACTION: Notice.

SUMMARY: The National Science Foundation (NSF) is announcing plans to request clearance for this collection. In accordance with the requirement of Section 3506 (c)(2)(A) of the Paperwork Reduction Act of 1995, we are providing opportunity for public comment on this action. After obtaining and considering public comment, NSF will prepare the submission requesting OMB clearance of this collection for no longer than three years.

Comments are invited on (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information shall have practical utility; (b) the accuracy of the Agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information on respondents, including through the use of automated collection techniques or other forms of information technology; and (d) ways to minimize the burden of the collection of information of respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Written comments should be received by January 19, 2010, to be assured of consideration. Comments received after that date will be considered to the extent practicable.

ADDRESSES: Written comments regarding the information collection and

requests for copies of the proposed information collection request should be addressed to Suzanne Plimpton, Reports Clearance Officer, National Science Foundation, 4201 Wilson Boulevard, Room 295, Arlington, VA 22230, or by e-mail to splimpton@nsf.gov.

FOR FURTHER INFORMATION CONTACT:

Suzanne Plimpton on (703) 292-7556 or send e-mail to splimpton@nsf.gov.

Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 between 8 a.m. and 8 p.m., Eastern time, Monday through Friday.

SUPPLEMENTARY INFORMATION:

Title of Collection: Quantitative Evaluation of the ADVANCE Program.
OMB Control No.: 3145-NEW.
Expiration Date of Approval: Not applicable.

Abstract: The ADVANCE Program was established by the National Science Foundation in 2001 to address the underrepresentation and inadequate advancement of women on STEM (Science, Technology, Engineering, and Mathematics) faculties at postsecondary institutions. The evaluation being conducted by Westat focuses on the outcomes of two ADVANCE program components: (a) The first two (2001 and 2003) cohorts of Institutional Transformation (IT) awardees, and (b) both (2002 and 2004) cohorts of individuals receiving ADVANCE Fellows awards. The study will rely on a thorough review of project documents and relevant literature; a survey (facilitated online via WebEx) and an outcome indicator data form (distributed and completed electronically) for the 19 IT awardee institutions; and, a mail survey, with telephone followup as needed, of all 59 former Fellows. In addition, the study will use data from the 2001 and 2008 administrations of the Survey of Doctorate Recipients (SDR) for comparison purposes.

The evaluation of the IT component has two primary goals: to compare selected gender equity outcomes for STEM faculty at the 19 IT Cohorts 1 and 2 institutions and at other similar U.S. four-year colleges and universities that have not subsequently received ADVANCE IT awards, and to develop innovative institutional-level measures of changes in gender equity climate and practices that can be applied to evaluating the outcomes of the IT award. The primary goal of the Fellows evaluation is to compare the career trajectories of ADVANCE Fellows with those of similar individuals who were not awarded these fellowships.

Respondents: Faculty and staff at institutions of higher education and individuals holding doctoral degrees in STEM fields awarded an NSF ADVANCE Fellowship.

Estimated Number of Annual Respondents: 139.

Burden on the Public: 1859 hours.

Dated: November 17, 2009.

Suzanne H. Plimpton,

Reports Clearance Officer, National Science Foundation.

BILLING CODE 7555-01-P

NUCLEAR REGULATORY COMMISSION

[Docket No. 50-282 and 50-306; NRC-2009-0507]

Northern States Power Company; Prairie Island Nuclear Generating Plant, Units 1 and 2; Notice of Availability of the Draft Supplement 39 to the Generic Environmental Impact Statement for License Renewal of Nuclear Plants, the License Renewal of Prairie Island Nuclear Generating Plants, Units 1 and 2

Notice is hereby given that the U.S. Nuclear Regulatory Commission (NRC or Commission) has published a draft plant-specific supplement to the Generic Environmental Impact Statement for License Renewal of Nuclear Plants (GEIS), NUREG-1437, regarding the renewal of operating licenses DPR-42 and DPR-60 for an additional 20 years of operation for Prairie Island Nuclear Generating Plant, Unit 1 and Unit 2 (PINGP 1 and 2). PINGP 1 and 2 are located in Red Wing, Minnesota, on the west bank of the Mississippi River in Goodhue County. Possible alternatives to the proposed action (license renewal) include no action and reasonable alternative energy sources.

The draft Supplement 39 to the GEIS is publicly available at the NRC Public Document Room (PDR), located at One White Flint North, 11555 Rockville Pike, Rockville, Maryland, 20852, or from the NRC's Agencywide Documents Access and Management System (ADAMS). The ADAMS Public Electronic Reading Room is accessible at <http://adamswebsearch.nrc.gov/dologin.htm>. The Accession Number for the draft Supplement 39 to the GEIS is ML093170484. Persons who do not have access to ADAMS, or who encounter problems in accessing the documents located in ADAMS, should contact the NRC's PDR reference staff by telephone at 1-800-397-4209, or 301-415-4737,

or by e-mail at pdr.resource@nrc.gov. In addition, a copy of the draft supplement to the GEIS is available to local residents near the site at the Red Wing Public Library, 225 East Avenue, Red Wing, Minnesota 55066.

Any interested party may submit comments on the draft supplement to the GEIS for consideration by the NRC staff. To be considered, comments on the draft supplement to the GEIS and the proposed action must be received by January 30, 2010; the NRC staff is able to ensure consideration only for comments received on or before this date. Comments received after the due date will be considered only if it is practical to do so. Written comments on the draft supplement to the GEIS should be sent to: Chief, Rulemaking and Directives Branch, Division of Administrative Services, Office of Administration, Mailstop TWB 5B01, U.S. Nuclear Regulatory Commission, Washington, DC, 20555-0001.

Electronic comments may be submitted to the NRC by e-mail at PrairieIslandEIS@nrc.gov. All comments received by the Commission, including those made by Federal, State, local agencies, Native American Tribes, or other interested persons, will be made available electronically at the Commission's PDR in Rockville, Maryland, and through ADAMS.

The NRC staff will hold public meetings prior to the close of the public comment period to present an overview of the draft plant-specific supplement to the GEIS and to accept public comments on the document. The times, date, and location of the meetings will be announced in a meeting notice at a later date. The meetings will be transcribed and will include: (1) A presentation of the contents of the draft plant-specific supplement to the GEIS, and (2) the opportunity for interested government agencies, organizations, and individuals to provide comments on the draft report. Additionally, the NRC staff will host informal discussions one hour prior to the start of each session at the same location. No comments on the draft supplement to the GEIS will be accepted during the informal discussions. To be considered, comments must be provided either at the transcribed public meeting or in writing. Persons may pre-register to attend or present oral comments at the meeting by contacting Ms. Elaine Keegan, the NRC Environmental Project Manager at 1-800-368-5642, extension 8517, or by e-mail at Elaine.Keegan@nrc.gov, no later than Friday, December 4, 2009. Members of the public may also register to provide oral comments within 15 minutes of the start of each session. Individual, oral

comments may be limited by the time available, depending on the number of persons who register. If special equipment or accommodations are needed to attend or present information at the public meeting, the need should be brought to Ms Keegan's attention no later than December 1, 2009, to provide the NRC staff adequate notice to determine whether the request can be accommodated.

FOR FURTHER INFORMATION CONTACT: Ms. Elaine Keegan, Projects Branch 2, Division of License Renewal, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Mail Stop O-11F1, Washington, DC, 20555-0001. Ms. Keegan may be contacted at the aforementioned telephone number or e-mail address.

Dated at Rockville, Maryland, this 16th day of November 2009.

For the Nuclear Regulatory Commission.

David J. Wrona,

Chief, Projects Branch 2, Division of License Renewal, Office of Nuclear Reactor Regulation.

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

[Docket No. 50-005; NRC-2009-0495]

Pennsylvania State University: Penn State Breazeale Reactor; Environmental Assessment and Finding of No Significant Impact; Correction

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of Environmental Assessment and Finding of No Significant Impact; Correction.

SUMMARY: This document corrects a notice appearing in the *Federal Register* on November 12, 2009 (74 FR 58319), that considers issuance of a renewal of Facility Operating License No. R-2, to be held by Pennsylvania State University. This action is necessary to correct a typographical error where the International System of Units symbol for the prefix "micro" (μ) was incorrectly displayed as \pm and $\pm m$.

FOR FURTHER INFORMATION CONTACT: Linh Tran, Senior Project Manager, Research and Test Reactors Branch A, Division of Policy and Rulemaking, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, telephone (301) 415-4103, e-mail Linh.Tran@nrc.gov.

SUPPLEMENTARY INFORMATION:

In FR doc. E9-27282, published on November 12, 2009, make the following corrections:

1. On page 58320, in the second column, under the headings I. Radiological Impact Environmental Effects of Reactor Operations, the fifth sentence is corrected to read as follows:

Licensee calculations, based on those measurements, indicate that annual Argon-41 releases result in an offsite concentration of $3.2E-10$ microCuries per milliliter ($\mu\text{Ci/ml}$), which is below the limit of $1.0E-8$ $\mu\text{Ci/ml}$ specified in 10 CFR Part 20, Appendix B for air effluent releases.

2. On page 58320, in the third column, first complete paragraph, the seventh and eighth sentences are corrected to read as follows:

According to the licensee, the leakage resulted in the release of approximately 1.3 milliCuries of tritium, at a concentration of $2.8E-5$ $\mu\text{Ci/ml}$. This concentration is a fraction of the limit of $1E-3$ $\mu\text{Ci/ml}$ specified in 10 CFR Part 20, Appendix B for liquid effluents.

Dated at Rockville, Maryland, this 16th day of November 2009.

For the Nuclear Regulatory Commission.

Michael T. Lesar,

Liaison Officer, Nuclear Regulatory Commission.

[FR Doc. E9-27912 Filed 11-19-09; 8:45 am]

BILLING CODE 7590-01-P

POSTAL REGULATORY COMMISSION

[Docket No. CP2010-10; Order No. 341]

New Postal Product

AGENCY: Postal Regulatory Commission.
ACTION: Notice.

SUMMARY: The Commission is noticing a recently-filed Postal Service request to add a Global Expedited Package Services 2 contract to the Competitive Product List. The Postal Service has also filed a related contract. This notice addresses procedural steps associated with these filings.

DATES: Comments are due: November 23, 2009.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at <http://www.prc.gov>. Commenters who cannot submit their views electronically should contact the person identified in **FOR FURTHER INFORMATION CONTACT** by telephone for advice on alternatives to electronic filing.

FOR FURTHER INFORMATION CONTACT: Stephen L. Sharfman, General Counsel, 202-789-6820 or stephen.sharfman@prc.gov.

SUPPLEMENTARY INFORMATION:

- I. Introduction
- II. Notice of Filing
- III. Ordering Paragraphs

I. Introduction

On November 12, 2009, the Postal Service filed a notice announcing that it has entered into an additional Global Expedited Package Services 2 (GEPS 2) contract.¹

GEPS 2 provides volume-based incentives for mailers that send large volumes of Express Mail International (EMI) and/or Priority Mail International (PMI). The Postal Service believes the instant contract is functionally equivalent to the previously submitted GEPS 2 contracts and is supported by the Governors' Decision filed in Docket No. CP2008-4.² *Id.* at 1.

The instant contract. The Postal Service filed the instant contract pursuant to 39 CFR 3015.5. In addition, the Postal Service contends that the contract is in accordance with Order No. 290.³ In Order No. 328, the Commission approved an extension of the current contract with this customer in order for the Postal Service to complete its internal procedures and file the instant contract for regulatory review.⁴ The term of the instant contract is 1 year from the completion of the regulatory review. Notice at 2-3.

In support of its Notice, the Postal Service filed four attachments as follows:

1. Attachment 1—an application for non-public treatment of materials to maintain the contract and supporting documents under seal;
2. Attachment 2—a redacted copy of Governors' Decision No. 08-7 which establishes prices and classifications for GEPS contracts, a description of applicable GEPS contracts, formulas for prices, an analysis and certification of the formulas and certification of the Governors' vote;
3. Attachment 3—a redacted copy of the contract and applicable annexes; and

¹ Notice of United States Postal Service Filing of Functionally Equivalent Global Expedited Package Services 2 Negotiated Service Agreement and Application for Non-Public Treatment of Materials Filed Under Seal, November 12, 2009 (Notice).

² See Docket No. CP2008-4, Notice of United States Postal Service of Governors' Decision Establishing Prices and Classifications for Global Expedited Package Services Contracts, May 20, 2008.

³ See Docket No. CP2009-50, Order Granting Clarification and Adding Global Expedited Package Services 2 to the Competitive Product List, August 28, 2009 (Order No. 290).

⁴ See Docket No. CP2008-23, Order Granting Motion for Temporary Relief, October 29, 2009 (Order No. 328).

4. Attachment 4—a certified statement required by 39 CFR 3015.5(c)(2).

Functional equivalency. The Postal Service asserts that the instant contract is functionally equivalent to the contract in Docket No. CP2009-50 and prior GEPS 2 contracts. *Id.* at 3-4. It also contends that the instant contract meets the requirements of Governors' Decision No. 08-7 for rates for GEPS contracts. *Id.* at 3. The Postal Service states that the basic difference between the contract in Docket No. CP2009-50 and the instant contract is customer-specific information including the customer's name, address, representative to receive notices, identity of the signatory, and provisions clarifying tender locations, minimum revenue and/or volume requirements, and liquidated damages. *Id.* at 3-4. It asserts that the instant contract and all GEPS 2 contracts have similar cost and market characteristics and is functionally equivalent in all relevant aspects. *Id.* at 4. The Postal Service concludes that this contract is in compliance with 39 U.S.C. 3633, and requests that this contract be included within the GEPS 2 product. *Id.*

II. Notice of Filing

The Commission establishes Docket No. CP2010-10 for consideration of matters related to the contract identified in the Postal Service's Notice.

Interested persons may submit comments on whether the Postal Service's contract is consistent with the policies of 39 U.S.C. 3632, 3633 or 3642. Comments are due no later than November 23, 2009. The public portions of these filings can be accessed via the Commission's Web site (<http://www.prc.gov>).

The Commission appoints Paul L. Harrington to serve as Public Representative in this proceeding.

III. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket No. CP2010-10 for consideration of the issues raised in this docket.
2. Comments by interested persons in these proceedings are due no later than November 23, 2009.
3. Pursuant to 39 U.S.C. 505, Paul L. Harrington is appointed to serve as officer of the Commission (Public Representative) to represent the interests of the general public in this proceeding.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

Judith M. Grady,

Acting Secretary.

[FR Doc. E9-27936 Filed 11-19-09; 8:45 am]

BILLING CODE 7710-FW-S

RECOVERY ACCOUNTABILITY AND TRANSPARENCY BOARD**Privacy Act of 1974; System of Records**

AGENCY: Recovery Accountability and Transparency Board

ACTION: Notice of new Privacy Act systems of records.

SUMMARY: The Recovery Accountability and Transparency Board (Board or RATB) proposes two new systems of records subject to the Privacy Act of 1974, as amended (Privacy Act or the Act), entitled "RATB Investigative Files" and "RATB Fraud Hotline Program Files."

ADDRESSES: Comments may be submitted:

By Mail or Hand Delivery: Jennifer Dure, Office of General Counsel, Recovery Accountability and Transparency Board, 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006;

By Fax: (202) 254-7970; or

By E-mail to the Board:

comments@ratb.gov.

All comments on the proposed new systems of records should be clearly identified as such.

FOR FURTHER INFORMATION CONTACT:

Jennifer Dure, General Counsel, Recovery Accountability and Transparency Board, 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006, (202) 254-7900.

SUPPLEMENTARY INFORMATION: Title 5 U.S.C. 552a(e)(4) and (11) provide that the public be given a 30-day period in which to comment on any new routine use of a system of records. The Office of Management and Budget (OMB), which has oversight responsibilities under the Act, requires a 40-day period in which to conclude its review of the new systems. Therefore, please submit any comments by December 30, 2009.

In accordance with 5 U.S.C. 552a(r), the Board has provided a report to OMB and the Congress on the proposed systems of records.

Recovery Accountability and Transparency Board**Table of Contents**

RATB-11—RATB Investigative Files.

RATB-12—RATB Fraud Hotline Program Files.

RATB—11**SYSTEM NAME:**

RATB Investigative Files.

SECURITY CLASSIFICATION:

The majority of the information in the system is Sensitive but Unclassified.

SYSTEM LOCATION:

Recovery Accountability and Transparency Board, located at 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

In connection with its investigative duties, the RATB maintains records on the following categories of individuals:

(a) Individuals or entities who are or have been the subject of investigations identified by the RATB;

(b) Individuals who are or have been witnesses, complainants, or informants in investigations identified by the RATB; and

(c) Individuals or entities that have been identified as potential subjects or parties to an RATB investigation.

CATEGORIES OF RECORDS IN THE SYSTEM:

Information relating to investigation, including:

(a) Letters, memoranda, and other documents describing complaints or alleged criminal, civil, or administrative misconduct.

(b) Investigative files which include general intelligence and relevant data, leads for Inspectors General (or other applicable oversight and law enforcement entities), reports of investigations and related exhibits, statements, affidavits, and records obtained during an investigation.

AUTHORITY FOR MAINTENANCE OF SYSTEM:

The RATB's enabling legislation, the American Recovery and Reinvestment Act of 2009 (Pub. L. 111-5) (Recovery Act), sections 1521 *et seq.*

PURPOSE(S):

The purpose of this system of records is to enable the RATB to carry out its responsibilities under its enabling legislation, the Recovery Act. The RATB is statutorily directed to coordinate and conduct oversight of covered funds to prevent fraud, waste, and abuse.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, these records or information contained therein may specifically be disclosed outside the RATB as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

A. To the appropriate federal, state, local, or tribal agency responsible for investigating, prosecuting, enforcing, or implementing a statute, rule, regulation, or order, if the information is relevant to a violation or potential violation of civil or criminal law or regulation within the jurisdiction of the receiving entity.

B. To any individual or entity when necessary to elicit information that will assist an RATB review or audit.

C. To appropriate officials and employees of a federal agency or entity which requires information relevant to a decision concerning the hiring, appointment, or retention of an individual; the issuance, renewal, suspension, or revocation of a security clearance; the execution of a security or suitability investigation; the letting of a contract; or the issuance or revocation of a grant or other benefit.

D. To a Member of Congress or staff acting upon the Member's behalf when the Member or staff requests the information on behalf of, and at the request of, the individual who is the subject of the record.

E. Information may be disclosed to the Department of Justice (DOJ), or in a proceeding before a court, adjudicative body, or other administrative body before which the RATB is authorized to appear, when:

1. The RATB, or any component thereof; or

2. Any employee of the RATB in his or her official capacity; or

3. Any employee of the RATB in his or her individual capacity where the DOJ or the RATB has agreed to represent the employee; or

4. The United States, if the RATB determines that litigation is likely to affect the RATB or any of its components, is a party to litigation or has an interest in such litigation, and the use of such records by the DOJ or the RATB is deemed by the RATB to be relevant and necessary to the litigation, provided, however, that in each case it has been determined that the disclosure is compatible with the purpose for which the records were collected.

F. Information may be disclosed to the National Archives and Records Administration in records management inspections.

G. Information may be disclosed to contractors, grantees, consultants, or volunteers performing or working on a contract, service, grant, cooperative agreement, job, or other activity for the RATB and who have a need to have access to the information in the performance of their duties or activities for the RATB.

DISCLOSURE TO CONSUMER REPORTING AGENCIES:

Not applicable.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM: STORAGE:

Information in this system is stored electronically in office automation equipment.

RETRIEVABILITY:

Each lead or investigation is assigned a file number and all records relating to a particular investigation are filed and retrieved by that number. Records may also be retrievable by the names of subjects.

SAFEGUARDS:

Computer records are maintained in a secure, password-protected computer system. Paper records are maintained in lockable file cabinets. All records are maintained in secure, access-controlled areas.

RETENTION AND DISPOSAL:

Records will be retained and disposed of in accordance with RATB Records Control Schedules approved by the National Archives and Records Administration.

SYSTEM MANAGER AND ADDRESS:

Assistant Director, Investigations, Recovery Accountability and Transparency Board, 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006.

NOTIFICATION PROCEDURE:

Address inquiries to the System Manager listed above.

RECORD ACCESS PROCEDURES:

The major part of this system is exempt from this requirement pursuant to 5 U.S.C. 552a(j)(2) and (k)(2). To the extent that this system is not subject to exemption, it is subject to access. A determination as to exemption shall be made at the time a request for access is received. A request for access to records contained in this system shall be made in writing, with the envelope and the letter clearly marked "Privacy Access Request." Include in the request the full name of the individual involved, his or her current address, date and place of birth, notarized signature (or submitted with date and signature under penalty of perjury), and any other identifying number or information which may be of assistance in locating the record. The requester shall also provide a return address for transmitting the information. Access requests shall be directed to the System Manager listed above.

CONTESTING RECORDS PROCEDURES:

Requesters shall direct their request to the System Manager listed above, stating clearly and concisely what information is being contested, the reason for contesting it, and the proposed amendment to the information.

RECORD SOURCE CATEGORIES:

The subjects of investigations; individuals with whom the subjects of investigations are associated; federal, state, local, and foreign law enforcement and non-law enforcement agencies; private citizens; witnesses; informants; and public source materials.

RATB—12**SYSTEM NAME:**

RATB Fraud Hotline Program Files

SECURITY CLASSIFICATION:

The majority of the information in the system is Sensitive but Unclassified.

SYSTEM LOCATION:

Recovery Accountability and Transparency Board, located at 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Persons who report information to the RATB concerning the possible existence of activities constituting a violation of law, rules, or regulations, fraud, abuse, mismanagement, or gross waste of funds, and the subject of the complaints.

CATEGORIES OF RECORDS IN THE SYSTEM:

Letters, memoranda, other communications and documents describing complaints of alleged criminal, civil, or administrative misconduct relating to covered funds.

AUTHORITY FOR MAINTENANCE OF SYSTEM:

The RATB's enabling legislation, the American Recovery and Reinvestment Act of 2009 (Pub. L. 111-5) (Recovery Act), sections 1521 *et seq.*

PURPOSE(S):

The purpose of this system of records is to enable the RATB to carry out its responsibilities under its enabling legislation, the Recovery Act. The RATB is statutorily directed to coordinate and conduct oversight of covered funds to prevent fraud, waste, and abuse.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, these records or information contained therein may specifically be disclosed outside the

RATB as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

A. To the appropriate federal, state, local, or tribal agency responsible for investigating, prosecuting, enforcing, or implementing a statute, rule, regulation, or order, if the information is relevant to a violation or potential violation of civil or criminal law or regulation within the jurisdiction of the receiving entity.

B. To any individual or entity when necessary to elicit information that will assist an RATB review or audit.

C. To appropriate officials and employees of a federal agency or entity which requires information relevant to a decision concerning the hiring, appointment, or retention of an individual; the issuance, renewal, suspension, or revocation of a security clearance; the execution of a security or suitability investigation; the letting of a contract; or the issuance or revocation of a grant or other benefit.

D. To a Member of Congress or staff acting upon the Member's behalf when the Member or staff requests the information on behalf of, and at the request of, the individual who is the subject of the record.

E. Information may be disclosed to the Department of Justice (DOJ), or in a proceeding before a court, adjudicative body, or other administrative body before which the RATB is authorized to appear, when:

1. The RATB, or any component thereof; or
2. Any employee of the RATB in his or her official capacity; or
3. Any employee of the RATB in his or her individual capacity where the DOJ or the RATB has agreed to represent the employee; or
4. The United States, if the RATB determines that litigation is likely to affect the RATB or any of its components, is a party to litigation or has an interest in such litigation, and the use of such records by the DOJ or the RATB is deemed by the RATB to be relevant and necessary to the litigation, provided, however, that in each case it has been determined that the disclosure is compatible with the purpose for which the records were collected.

F. Information may be disclosed to the National Archives and Records Administration in records management inspections.

G. Information may be disclosed to contractors, grantees, consultants, or volunteers performing or working on a contract, service, grant, cooperative agreement, job, or other activity for the RATB and who have a need to have access to the information in the

performance of their duties or activities for the RATB.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:**STORAGE:**

Hard copy files and a computer database.

RETRIEVABILITY:

Records are retrievable by case number or subject name.

SAFEGUARDS:

Computer records are maintained in a secure, password protected computer system. Paper records are maintained in lockable file cabinets. All records are maintained in secure, access-controlled areas or buildings.

RETENTION AND DISPOSAL:

Records will be retained and disposed of in accordance with RATB Records Control Schedules approved by the National Archives and Records Administration.

SYSTEM MANAGER AND ADDRESS:

Assistant Director, Investigations, Recovery Accountability and Transparency Board, 1717 Pennsylvania Avenue, NW., Suite 700, Washington, DC 20006.

NOTIFICATION PROCEDURE:

Address inquiries to the System Manager listed above.

RECORD ACCESS PROCEDURES:

The major part of this system is exempt from this requirement pursuant to 5 U.S.C. 552a(k)(2) and (k)(5). To the extent that this system is not subject to exemption, it is subject to access. A determination as to exemption shall be made at the time a request for access is received. A request for access to records contained in this system shall be made in writing, with the envelope and the letter clearly marked "Privacy Access Request." Include in the request the full name of the individual involved, his or her current address, date and place of birth, notarized signature (or submitted with date and signature under penalty of perjury), and any other identifying number or information which may be of assistance in locating the record. The requester shall also provide a return address for transmitting the information. Access requests shall be directed to the System Manager listed above.

CONTESTING RECORDS PROCEDURES:

Requesters shall direct their request to the System Manager listed above, stating clearly and concisely what information is being contested, the reason for

contesting it, and the proposed amendment to the information.

RECORD SOURCE CATEGORIES:

Complainants who are employees of federal, state, and local agencies, and private citizens. Records in the system come from complainants through the telephone, mail, electronic mail, facsimile, and the web site <http://www.recovery.gov>.

Ivan J. Flores,

Paralegal Specialist, Recovery Accountability and Transparency Board.

BILLING CODE 6820-GA-P

DEPARTMENT OF STATE

[Public Notice 6815]

Notice of Information Collection Under Emergency Review: Forms DS-2053, DS-2054; Medical Examination for Immigrant or Refugee Applicant; DS-3030, Chest X-Ray and Classification Worksheet; OMB Control Number 1405-0113

AGENCY: Department of State.

ACTION: Notice of request for emergency OMB approval.

SUMMARY: The Department of State has submitted the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the emergency review procedures of the Paperwork Reduction Act of 1995.

- *Title of Information Collection:* Medical Examination for Immigrant or Refugee Applicant.
- *OMB Control Number:* 1405-0113.
- *Type of Request:* Emergency Review.
- *Originating Office:* Bureau of Consular Affairs, Office of Visa Services (CA/VO)
- *Form Number:* DS-2053, DS-2054, DS-3030.
- *Respondents:* Immigrant visa and refugee applicants.
- *Estimated Number of Respondents:* 630,000 per year.
- *Estimated Number of Responses:* 630,000 per year.
- *Average Hours Per Response:* 1 hour.
- *Total Estimated Burden:* 630,000 hours annually.
- *Frequency:* Once per application.
- *Obligation To Respond:* Required to Obtain Benefit.

The proposed information collection is published to obtain comments from the public and affected agencies. Emergency review and approval of this

collection has been requested from OMB by January 4, 2010. If granted, the emergency approval is only valid for 180 days. Direct comments to the Department of State Desk Officer in the Office of Information and Regulatory Affairs at the Office of Management and Budget (OMB).

You may submit comments by the following methods:

- *E-mail:* oir_submission@omb.eop.gov. You must include the DS form number, information collection title, and OMB control number in the subject line of your message.
- *Fax:* 202-395-5806. *Attention:* Desk Officer for Department of State.

During the first 60 days of the emergency approval period, a regular review of this information collection is also being undertaken. The submitting agency requests written comments and suggestions from the public and affected agencies concerning the proposed collection of information. Comments will be accepted until 60 days from the date that this notice is published in the **Federal Register**.

You may submit comments by any of the following methods:

- *E-mail:* VisaRegs@state.gov (Subject line must read OMB 1405-0113 Reauthorization).

- *Mail (paper, disk, or CD-ROM submissions):* Chief, Legislation and Regulations Division, Visa Services—OMB 1405-0113 Reauthorization, 2401 E Street, NW., Washington, DC 20520-30106.

- *Fax:* (202) 663-3898.

You must include the DS form number (if applicable), information collection title, and OMB control number in any correspondence.

FOR FURTHER INFORMATION CONTACT:

Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed information collection and supporting documents, to Lauren Prosnik of the Office of Visa Services, U.S. Department of State, 2401 E Street, NW., L-603, Washington, DC 20522, who may be reached at (202) 663-2951.

SUPPLEMENTARY INFORMATION: *We are soliciting public comments to permit the Department to:*

- Evaluate whether the proposed information collection is necessary for the proper performance of our functions.
- Evaluate the accuracy of our estimate of the burden of the proposed collection, including the validity of the methodology and assumptions used.

- Enhance the quality, utility, and clarity of the information to be collected.

- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of technology.

Abstract of proposed collection:

INA Section 221(d) requires that prior to the issuance of an immigrant visa the applicant undergo a physical and mental examination. INA Section 412(b)(4)(B) requires that the United States Government “provide for the identification of refugees who have been determined to have medical conditions affecting the public health and requiring treatment.” Form DS-2053, Medical Examination for Immigrant or Refugee Applicant (1991 Technical Instructions); Form DS-2054, Medical Examination for Immigrant or Refugee Applicant (2007 Technical Instructions); and DS-3030, Chest X-Ray and Classification Worksheet (2007 Technical Instructions) are designed to record the results of the medical examination. A panel physician performs the medical examination of the applicant and completes the forms.

A final rule was published by the Department of Health and Human Services (HHS) in the **Federal Register** on November 2, 2009 that amends HHS regulations to remove the Human Immunodeficiency Virus (HIV) from the definition of *communicable disease of public health significance* and to remove references to HIV from medical examinations for aliens. In order to comply with this rule, effective January 4, 2010, an emergency approval review has been requested from OMB.

The Department must make available to panel physicians conducting medical exams for visa applicants revised medical exam forms. Forms DS-2053, DS-2054 and DS-3030 are being revised to remove references to HIV.

Methodology:

The medical forms are sent to the applicant in the applicant’s package. The applicant takes the forms to the panel physician to use during the medical examination. The panel physician completes the medical examination and fills out the forms. The forms are then submitted in hard copy to the consular officer for processing.

November 16, 2009.

Edward Ramotowski,

Acting Deputy Assistant Secretary, Bureau of Consular Affairs, Department of State.

[FR Doc. E9-27967 Filed 11-19-09; 8:45 am]

BILLING CODE 4710-06-P

DEPARTMENT OF TRANSPORTATION**Surface Transportation Board****[STB Finance Docket No. 35315]****Standard Railroad Corporation—
Acquisition and Operation
Exemption—General Railway
Corporation d/b/a Iowa Northwestern
Railroad**

Standard Railroad Corporation (SRC), a noncarrier, has filed a verified notice of exemption under 49 CFR 1150.31 to acquire from General Railway Corporation d/b/a Iowa Northwestern Railroad (IANW), and to operate a rail line approximately 0.4 miles long. The line extends between milepost 215.0, west of Superior, and milepost 215.4, west of Mackenzie Junction, in Dickinson County, IA.

The transaction is expected to be consummated on or after December 4, 2009 (30 days after the verified notice was filed).

SRC certifies that its projected annual revenues as a result of this transaction will not result in SRC becoming a Class II or Class I rail carrier. SRC further certifies that its projected annual revenues upon becoming a Class III carrier will not exceed \$5 million.

Pursuant to the Consolidated Appropriations Act, 2008, Public Law 110-161, § 193, 121 Stat. 1844 (2007), nothing in this decision authorizes the following activities at any solid waste rail transfer facility: collecting, storing, or transferring solid waste outside of its original shipping container; or separating or processing solid waste (including baling, crushing, compacting, and shredding). The term "solid waste" is defined in section 1004 of the Solid Waste Disposal Act, 42 U.S.C. 6903.

If SRC's verified notice contains false or misleading information, the exemption is void *ab initio*. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Stay petitions must be filed no later than November 27, 2009 (at least 7 days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to STB Finance Docket No. 35315, must be filed with the Surface Transportation Board, 395 E Street, SW., Washington, DC 20423-0001. In addition, one copy of each pleading must be served on Fritz R. Kahn, Fritz R. Kahn P.C., 1920 N Street, NW, (8th floor), Washington, DC 20036.

Board decisions and notices are available on our Web site at <http://www.stb.dot.gov>.

Decided: November 17, 2009.

By the Board, Rachel D. Campbell,
Director, Office of Proceedings.

Kulunie L. Cannon,

Clearance Clerk.

BILLING CODE 4915-01-P

DEPARTMENT OF TRANSPORTATION**Federal Transit Administration****[FTA Docket No. FTA-2009-0055]****Notice of Request for the Approval of
Information Collection**

AGENCY: Federal Transit Administration (FTA), DOT.

ACTION: Notice of request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the intention of the Federal Transit Administration (FTA) to request the Office of Management and Budget (OMB) to approve the following information collection:

49 U.S.C. 5308—Clean Fuels Grant Program.

DATES: Comments must be submitted before January 19, 2010.

ADDRESSES: To ensure that your comments are not entered more than once into the docket, submit comments identified by the docket number by only one of the following methods:

1. *Web site:* <http://www.regulations.gov>. Follow the instructions for submitting comments on the U.S. Government electronic docket site. (**Note:** The U.S. Department of Transportation's (DOT's) electronic docket is no longer accepting electronic comments.) All electronic submissions must be made to the U.S. Government electronic docket site at <http://www.regulations.gov>. Commenters should follow the directions below for mailed and hand-delivered comments.

2. *Fax:* 202-366-7951.

3. *Mail:* U.S. Department of Transportation, 1200 New Jersey Avenue, SE., Docket Operations, M-30, West Building, Ground Floor, Room W12-140, Washington, DC 20590-0001.

4. *Hand Delivery:* U.S. Department of Transportation, 1200 New Jersey Avenue, SE., Docket Operations, M-30, West Building, Ground Floor, Room W12-140, Washington, DC 20590-0001 between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Instructions: You must include the agency name and docket number for this notice at the beginning of your comments. Submit two copies of your comments if you submit them by mail.

For confirmation that FTA has received your comments, include a self-addressed stamped postcard. Note that all comments received, including any personal information, will be posted and will be available to Internet users, without change, to <http://www.regulations.gov>. You may review DOT's complete Privacy Act Statement in the **Federal Register** published April 11, 2000, (65 FR 19477), or you may visit <http://www.regulations.gov>.

Docket: For access to the docket to read background documents and comments received, go to <http://www.regulations.gov> at any time. Background documents and comments received may also be viewed at the U.S. Department of Transportation, 1200 New Jersey Avenue, SE., Docket Operations, M-30, West Building, Ground Floor, Room W12-140, Washington, DC 20590-0001 between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Kimberly Sledge, FTA Office of Program Management (202) 366-2053, or *e-mail:* kimberly.sledge@dot.gov.

SUPPLEMENTARY INFORMATION: Interested parties are invited to send comments regarding any aspect of this information collection, including: (1) The necessity and utility of the information collection for the proper performance of the functions of the FTA; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the collected information; and (4) ways to minimize the collection burden without reducing the quality of the collected information. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection.

Title: 49 U.S.C. Section 5308—Clean Fuels Grant Program (*OMB Number:* 2132-NEW).

Background: The Section 5308 Clean Fuels Grant Program was initiated as a formula program under the Transportation Equity Act for the 21st Century (TEA-21) in June 1998. The program was reauthorized in August 2005 under the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) as a grant program. The program supports the development and deployment of clean fuel and advanced propulsion technologies for transit buses by providing funds for clean fuel vehicles and facilities. To meet program oversight responsibilities, FTA needs information on the operations and performance of clean fuel technology buses to help assess the reliability,

benefits and costs of these technologies compared to conventional vehicle technologies.

Respondents: State and local government and public transportation authorities located in areas designated as non-attainment or maintenance for ozone or carbon monoxide.

Estimated Annual Burden on Respondents: 32 hours for each respondent.

Estimated Total Annual Burden: 512.
Frequency: Semi-annual.

Issued: November 16, 2009.

Ann M. Linnertz,

Associate Administrator for Administration.

BILLING CODE 4910-57-P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[STB Finance Docket No. 35237]

City of Davenport, IA—Construction and Operation Exemption—in Scott County, IA

AGENCY: Surface Transportation Board, DOT.

ACTION: Correction to Notice of Availability of the Environmental Assessment.

SUMMARY: This document contains a correction to the title of the Notice of Availability of the Environmental Assessment served and published in the *Federal Register* on Monday, October 26, 2009 (74 FR 55085) by the Board's Section of Environmental Analysis. That notice, published in this docket, was titled "Eastern Iowa Industrial Center Rail Project—Construction and Operation Exemption—City of Davenport, Iowa." The correct title should read, "City of Davenport, IA—Construction and Operation Exemption—in Scott County, IA."

FOR FURTHER INFORMATION CONTACT:

Christa Dean, (202) 245-0299.

[Assistance for the hearing impaired is available through the Federal Information Relay Service (FIRS) at: (800) 877-8339.]

SUPPLEMENTARY INFORMATION: On October 26, 2009, the Board served a Notice of Availability of the Environmental Assessment in this docket. The notice is related to a petition filed on July 21, 2009, by the City of Davenport, IA, seeking an exemption under 49 U.S.C. 10502 from the prior approval requirements¹ of 49

U.S.C. 10901 to construct approximately 2.8 miles of rail line in Scott County, IA. The Board instituted a proceeding in this matter under 49 U.S.C. 10502(b) by decision served October 19, 2009. This notice corrects the title of the Notice of Availability of the Environmental Assessment.

Decided: November 16, 2009.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Kulunie L. Cannon,

Clearance Clerk.

[FR Doc. E9-27884 Filed 11-19-09; 8:45 am]

BILLING CODE 4915-01-P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[STB Docket No. AB-331 (Sub-No. 1X)]

Bi-State Development Agency of the Missouri-Illinois Metropolitan District—Discontinuance of Service Exemption—in the City of St. Louis, MO

On November 2, 2009, Bi-State Development Agency of the Missouri-Illinois Metropolitan District (Bi-State) filed with the Surface Transportation Board a petition under 49 U.S.C. 10502 for exemption from the provisions of 49 U.S.C. 10903 to discontinue service over a 1.43-mile line of railroad extending from milepost 1.8 in St. Louis, MO, to milepost 3.23 in St. Louis, MO. The line traverses U.S. Postal Service Zip Codes 63110 and 63108.¹

According to Bi-State, the line does not contain federally granted rights-of-way. Any documentation in Bi-State's possession will be made available promptly to those requesting it.

The interest of railroad employees will be protected by the conditions set forth in *Oregon Short Line R. Co.—Abandonment—Goshen*, 360 I.C.C. 91 (1979).

By issuance of this notice, the Board is instituting an exemption proceeding pursuant to 49 U.S.C. 10502(b). A final decision will be issued by February 19, 2010.

¹ Bi-State initially filed this petition for exemption on October 1, 2009, but supplemented it on November 2, 2009, to comply with the newspaper publication requirements of 49 CFR 1105.12. Under that provision, a petitioner must notify the public by publishing a notice of the proposed action in a newspaper of general circulation in each county that the line traverses and must certify to the Board that it has done so by the date its petition is filed. On November 2, 2009, Bi-State certified to the Board that it has satisfied the newspaper publication requirement. Therefore, November 2, 2009, will be considered the official filing date of the petition for exemption.

Any offer of financial assistance (OFA) under 49 CFR 1152.27(b)(2) to subsidize continued rail service will be due no later than 10 days after service of a decision granting the petition for exemption. Each offer must be accompanied by a \$1,500 filing fee. See 49 CFR 1002.2(f)(25).²

All filings in response to this notice must refer to STB Docket No. AB-331 (Sub-No. 1X), and must be sent to: (1) Surface Transportation Board, 395 E Street, SW., Washington, DC 20423-0001; and (2) Theodore J. Williams, Jr., Williams Venker & Sanders LLC, 100 North Broadway, Suite 2100, St. Louis, MO 63102. Replies to the Bi-State petition are due on or before December 10, 2009.

Persons seeking further information concerning discontinuance procedures may contact the Board's Office of Public Assistance, Governmental Affairs, and Compliance at (202) 245-0230 or refer to the full abandonment and discontinuance regulations at 49 CFR part 1152. Questions concerning environmental issues may be directed to the Board's Section of Environmental Analysis (SEA) at (202) 245-0305. Assistance for the hearing impaired is available through the Federal Information Relay Service (FIRS) at 1-800-877-8339.

Board decisions and notices are available on our Web site at: <http://www.stb.dot.gov>.

Decided: November 13, 2009.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Anne K. Quinlan,

Acting Secretary.

[FR Doc. E9-27794 Filed 11-19-09; 8:45 am]

BILLING CODE 4915-01-P

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

Intent To Prepare an Environmental Impact Statement for Proposed Intermodal Transit Improvements in Hercules, CA

AGENCY: Federal Transit Administration (FTA), U.S. Department of Transportation.

ACTION: Notice of Intent (NOI) to prepare an Environmental Impact Statement (EIS).

² Because this is a discontinuance proceeding and not an abandonment, trail use/rail banking and public use conditions are not appropriate. Similarly, no environmental or historic documentation is required under 49 CFR 1105.6(c)(2) and 1105.8.

¹ In an amendment filed on September 8, 2009, the City clarified that it also seeks operation authority.

SUMMARY: The Federal Transit Administration (FTA) in cooperation with the City of Hercules, CA (City) is planning to prepare a joint Environmental Impact Statement/ Environmental Impact Report (EIS/EIR) for the construction of a proposed intermodal transit center project which includes a new passenger train station on the existing Capitol Corridor line, a transit bus terminal, access roadways, and parking facilities, located in Hercules, California. The project would serve commuters, visitors and recreational users who desire an alternative way to travel to and from the City of Hercules and the San Francisco Bay area and the Sacramento area to access employment, entertainment, and recreational destinations. This EIS/EIR will not study a ferry terminal as part of the proposed project. Any future ferry terminal will be evaluated under a separate environmental document. However, the potential for a future ferry terminal will be considered in the cumulative impact analysis for this project. The purpose of this Notice of Intent (NOI) is to alert interested parties on the preparation of an EIS/EIR, to provide information on the proposed transit project, to invite participation in the EIS/EIR process, including comments on the scope of the EIS/EIR, and to announce the public scoping meeting that will be conducted.

DATES: The City of Hercules has already initiated coordination with Federal, State and local agencies. On November 18th, 2009, the City of Hercules participated in an interagency meeting hosted at the U.S. Army Corps of Engineers office in San Francisco, California and presented an overview of the project and invited agency comment on the proposed project. Through the development of a public and agency coordination plan, coordination with responsible and cooperating agencies will continue throughout the review of the EIR/EIS and through permit coordination.

A scoping meeting will be held on December 8th, 2009 at 5:30 p.m. at the Hercules Library, Large Conference Room, 109 Civic Drive, Hercules, CA. Written comments on the scope of the EIS/EIR including the project's purpose and need, the alternatives to be considered, the impacts to be evaluated, and the methodologies to be used in the evaluations should be sent to Lisa Hammon, Assistant City Manager, City of Hercules, 111 Civic Drive, Hercules CA 94547 by December 23, 2009. Comments may also be offered at the scoping meeting.

The general public and agency representatives with an interest in the proposed project are encouraged to attend this public meeting. The project's purpose and need and the description of alternatives for the proposed project will be presented at this meeting. Representatives of Native American Tribal governments and all Federal, State, regional and local agencies that may have an interest in any aspect of the project will be invited to be participating or cooperating agencies, as appropriate.

ADDRESSES: The scoping meeting will be held on December 8th, 2009 at 5:30 p.m. at the Hercules Library, Large Conference Room, 109 Civic Drive, Hercules, CA. The meeting facilities will be accessible to persons with disabilities. If special translation or signing services or other special accommodations are needed, please contact Lisa Hammon, Assistant City Manager, at (510) 799-8251, or by e-mail at: LHammon@ci.hercules.ca.us at least 48 hours before the scoping meeting. Paper copies of scoping materials may be obtained from Lisa Hammon. Also, scoping materials will be available at the meetings and on the City of Hercules Web site [<http://www.ci.hercules.ca.us>].

Written comments on proposed project should be sent to Lisa Hammon, Assistant City Manager, City of Hercules, 111 Civic Drive, Hercules, CA 94547 by December 23, 2009.

Further Information: For further information contact Paul Page, Federal Transit Administration, San Francisco Regional Office at (415) 744-3133.

SUPPLEMENTARY INFORMATION: Scoping: The FTA and the City of Hercules invite all interested individuals, and organizations, public agencies and Native American Tribes to comment on the scope of the EIS, including the project's purpose and need, the alternatives to be studied, the impacts to be evaluated and the evaluation methods to be used. Comments should focus on: alternatives that may be less costly or have fewer environmental or community impacts while achieving similar transportation objectives, and the identification of any significant social, economic or environmental issues related to alternatives. This is not considered a transit project of unusual complexity. Therefore, in line with CEQ 1502.7 (page limits) FTA is setting a limit of 250 pages (exclusive of technical appendices) for this EIS. The document should emphasize graphics, maps and visual simulations, minimize technical jargon and be accessible to

members of the public with limited technical expertise.

Description of Study Area and Proposed Project: The project site is located in Hercules, California, on the shoreline of San Pablo Bay (a part of San Francisco Bay), approximately 1 mile northwest of Interstate 80 (I-80). This is the City's Waterfront District which has been planned for transit oriented development. Project components would include: (1) Grade separation and realignment of a portion of the existing Union Pacific railroad tracks, including the construction of a rail platform, retaining walls and the replacement of a bridge crossing Refugio Creek; (2) construction of a station building; (3) extension of John Muir Parkway, including the construction of Bayfront Boulevard over Refugio Creek, a new Transit Loop Drive, Civic Plaza and surface parking; (4) realignment and restoration of a portion of Refugio Creek from San Pablo Bay upstream approximately 1000 feet to the existing restored segment; (5) construction of segments of the East Bay Park Regional District's recreational trail along the shoreline from Pinole trail to Victoria by the Bay; and, (6) a pedestrian walkway over the railroad tracks to provide a connection to the Hercules Point open space area. The project will also require the relocation of existing utility and gas lines and an outfall to Refugio Creek.

Purpose and Need for the Project: Residents of the San Francisco Bay Area depend heavily on region wide and transbay commuting. Despite the use of existing public transit services, particularly rail and buses, traffic congestion continues to increase, affecting hundreds of thousands of Bay Area residents and creating both economic and environmental costs. The severity of congestion will increase in the future as population and employment in the Bay Area increase. The purpose of the proposed project is to increase local and regional mobility and transportation options by providing new and expanded transit services with intermodal connections that will encourage use of public transit. The project would provide bus-to-train connections, in addition to providing car commuters with access to new transit options that would divert traffic from I-80, the most congested corridor in the Bay Area for the past six years. An expanded and more convenient transit system with new train connections to existing bus services would provide commuters with more options and would primarily decrease car usage and its associated impacts, rather than divert riders from existing

buses, BART, or Capitol Corridor. Key project objectives are to:

1. Reduce vehicle trips on Interstate 80, the most congested freeway in the Bay Area, by providing alternatives to commuting in single occupant vehicles.

2. Provide coordinated, intermodal transit connections by bus, train, and a potential future ferry and human-powered connections by bicycling and walking for transport to/from jobs, recreational uses, educational opportunities, etc.

3. Improve emergency response by having rail and (ultimately) ferry service available in case of a natural or man-made disaster that disables the Bay Bridge or other highways/roadways. Ferry and rail service could also deliver goods and services in an emergency.

4. Support transit-oriented development and "new urbanist" standards by providing the transportation links within the 43-acre waterfront development which also includes housing (including affordable housing), retail, office, and commercial space.

5. Improve safety along the railroad corridor by providing completely grade-separated access to the railroad tracks from the adjacent development by constructing a series of retaining walls and fences for approximately one mile along the waterfront and by constructing over-crossings to Hercules Point and the future ferry terminal.

6. Implement the Goals, Policies and Programs in the City of Hercules General Plan to:

- Develop transportation facilities to provide access to the region, particularly public transit systems (buses, ridesharing, rail transit, as well as potential over-water transit) (Land Use Policy 3A, Circulation Policy e).
- Establish trail linkage between Pinole and Rodeo as part of the regional bay access trail system (Land Use Program 14A.2 and Open Space/Conservation Policy 1b) and continue to improve and protect Refugio Creek as a major environmental amenity (Program 14.A.3).

7. Improve Refugio Creek to allow adequate flows into the Bay without resulting in flooding.

8. Implement the City of Hercules Waterfront Master Plan Initiative and its directive to construct an intermodal transit center on Block I.

Alternatives: The EIS/EIR will include a Build alternative. Included in the Build analysis will be design alternatives to the proposed project that will meet both NEPA and CEQA requirements and are intended to reduce potential environmental effects, including impacts to sensitive biological

habitat. A No Action (No Build) alternative will also be evaluated in the EIS/EIR which would continue with the existing bus services without the construction of a train station and a new bus terminal at the same location. This alternative serves as the baseline against which the environmental effects of the proposed project and other alternatives will be evaluated.

Traffic congestion is an ongoing and steadily increasing problem in the Bay Area, regardless of economic conditions. Alternatives to reduce traffic congestion have been explored in numerous previous studies. According to the Metropolitan Transportation Commission (MTC), the Bay Bridge approach corridor along Interstate 80 (I-80) from State Route 4 (SR-4) in Hercules to the Bay Bridge experiences the worst congestion in the Bay Area. Caltrans' Bay Area monitoring program found that between 1992 and 2005, traffic delay in the region as a whole more than doubled from 64,100 hours to 135,700 hours. According to Caltrans' 2006 report, between 2001 and 2005, traffic delay on the I-80 segment from SR-4 to the Bay Bridge metering lights increased by 16 percent, from 9,410 hours to 10,930 hours (MTC 2007). This segment includes the stretch of I-80 that passes near the proposed HITC project. MTC projects that traffic congestion will continue to worsen; by 2020, MTC expects that Bay Bridge traffic will increase by 50 percent and be "at capacity" for nearly five hours a day during the morning and afternoon peak hours. MTC also predicts that many more Bay Area workers, due to high housing costs, will be living far from their jobs, demanding that they spend more time commuting and polluting on roadways. Even during an economic downturn, BART runs at capacity through the Transbay Tube during peak hours. Improvements in commuter bus service are dependent upon traffic flow, and are limited by the need for more road capacity and more dedicated High Occupancy Vehicle (HOV) lanes for significant expansion. Increased train and transit services would provide expanded commute capacity while avoiding corresponding increases in traffic congestion.

Additionally, the San Francisco Bay Area Water Transit Authority (WTA), now the Water Emergency Transportation Authority (WETA), is a regional agency authorized by the State of California to operate a comprehensive San Francisco Bay Area public water transit system. In 2003, the WTA's plan, "A Strategy to Improve Public Transit with an Environmentally Friendly Ferry System" (the Plan) was approved by

statute (Senate Bill 915, Ch. 714, stats of 2003). The Plan drew on extensive technical studies that examined ridership demand, cost effectiveness, vessel design, environmental impacts, safety, and operations. A Hercules-San Francisco route was identified in the Plan as a potential future ferry route. The potential environmental effects of proposed new ferry service on San Francisco Bay under the WTA Plan were studied at a program planning level in the Program Environmental Impact Report (Program EIR) prepared in 2003. The 2003 Program EIR included analysis of a Hercules/Rodeo location and seven other potential new ferry service locations around the Bay and Delta. While ferry service is anticipated for the city of Hercules, current planning for the ferry is still in development and is considered a future project. The current project proposes only to construct a rail and bus transit facility.

As part of the General Plan for the City of Hercules, the proposed project is intended to be the central element of a transit-oriented development (TOD) project that will include residential and commercial development clustered around transit facilities to enable local residents to use public transit and reduce the need for automobile use. The planned TOD, known as Hercules Bayfront, is not part of the project considered in this EIR/EIS, and will be the subject of a separate environmental review.

Probable Effects/Potential Impacts for Analysis: The purpose of the EIS process is to explore in a public setting potentially significant effects of implementing the proposed project and alternatives on the physical, human, and natural environment.

Implementation of the project components will result in direct effects to the physical environment and may include the loss of special aquatic sites such as tidal wetlands, mudflats, and riparian areas. Mitigation will be incorporated into the project design by first avoiding and minimizing impacts to resources. Compensatory mitigation will be provided for unavoidable impacts. Based on preliminary investigations for special status species the project may affect, but is unlikely to adversely affect, any species listed as threatened or endangered under the State or Federal endangered species acts.

The proposed project would extend the John Muir Parkway, provide parking for short-term and long-term parking, and develop a new access point to commuter rail. Each of these activities may encourage automobile traffic in the

area that could adversely affect levels of service at nearby intersections.

FTA Procedures: Regulations implementing NEPA, as well as provisions of SAFETEA-LU, call for public involvement in the EIS process. Section 6002 of SAFETEA-LU requires that FTA do the following: (1) Extend an invitation to other Federal and non-Federal agencies and Indian Tribes that may have an interest in the proposed project to become participating agencies; (2) provide an opportunity for involvement by participating agencies and the public in helping to define the purpose and need for a proposed project, as well as the range of alternatives for consideration; and (3) establish a plan for coordinating public and agency participation in and comment on the environmental review process. An invitation to become a participating agency will be extended to other Federal and non-Federal agencies and Indian Tribes that may have an interest in the proposed project. It is possible that we may not be able to identify all Federal and non-Federal agencies and Indian Tribes that may have such an interest. Any Federal or non-Federal agency or Indian Tribe interested in the proposed project that does not receive an invitation to become a participating agency should notify, at the earliest opportunity, the City at the **ADDRESSES** or phone number above.

A comprehensive public involvement program has been developed. A technical advisory committee called the Project Development Team, consisting of representatives of State, regional and local agencies, is in place. The program also includes a public scoping process, a public review/comment period and public hearing on the Draft Environmental Impact Statement, development and distribution of project newsletters and posting of information on the project Web site. The purposes of and need for the proposed project have been preliminarily identified in this notice. We invite the public and participating agencies to consider the preliminary statement of purposes of and need for the proposed project, as well as potential alternatives, and the public is welcome to use the public scoping process to further define the issues of concern among all parties interested in the project. Comments on potential significant environmental impacts that may be associated with the proposed project are also welcomed. All comments and suggestions will be given serious consideration. Comments on potentially significant environmental impacts that may be associated with the proposed project are also welcomed. There will be additional opportunities

to participate in the scoping process at the public meetings announced in this notice. In accordance with 23 CFR 771.105(a) and 771.133, FTA will comply with all Federal environmental laws, regulations and executive orders applicable to the proposed project during the environmental review process to the maximum extent practicable. These requirements include, but are not limited to, the regulations of the Council on Environmental Quality implementing NEPA (40 CFR parts 1500–1508 and 23 CFR part 771), the project-level air quality conformity regulation of the U.S. Environmental Protection Agency (EPA) (40 CFR part 93), section 404(b)(1) guidelines of EPA (40 CFR part 230), Executive Orders 11988, 11990 and 12898 regarding floodplains, wetlands, and environmental justice, respectively; Section 106 of the National Historic Preservation Act (36 CFR Part 800); Section 7 of the Endangered Species Act (50 CFR part 402); and Section 4(f) of the Department of Transportation Act (23 CFR 774). The EIR portion of the document will be prepared in accordance with the California Environmental Quality Act (CEQA) and the California Code of Regulations, Title 14, section 15000 *et seq.*

Dated: November 13, 2009.

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[USCG–2006–24644]

TORP Terminal LP, Bienville Offshore Energy Terminal Liquefied Natural Gas Deepwater Port License Application; Preparation of Supplemental Environmental Impact Statement

AGENCY: Maritime Administration, DOT.

ACTION: Notice of availability; Notice of public meeting; Request for comments.

SUMMARY: The Maritime Administration, in cooperation with the U.S. Coast Guard announces the availability of the Draft Supplemental Environmental Impact Statement (DSEIS) for the TORP Terminal LP, Bienville Offshore Energy Terminal (BOET) Liquefied Natural Gas (LNG) Deepwater Port license amended application. The amended application describes a project that would be located in the Gulf of Mexico, in Main Pass block MP 258, approximately 63 miles south of Mobile Point, Alabama.

Publication of this notice begins a 45 day comment period and provides information on how to participate in the process.

DATES: The public meeting will be held in Mobile, Alabama on December 9, 2009, from 6 p.m. to 8 p.m., and will be preceded by an open house from 5 p.m. to 6 p.m. The public meeting may end later than the stated time, depending on the number of persons wishing to speak. Material submitted in response to this request for comments must reach the Docket Management Facility by January 4, 2010.

ADDRESSES: The open house and public meeting will be held at the: Mobile Convention Center, One South Water Street, Mobile, Alabama 36602; *telephone:* 251–208–2100.

The amended application, comments and associated documentation are available for viewing at the Federal Docket Management System (FDMS) Web site: <http://www.regulations.gov> under docket number USCG–2006–24644.

Docket submissions for USCG–2006–24644 should be addressed to: Department of Transportation, Docket Management Facility, West Building, Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590–0001.

The Docket Management Facility accepts hand-delivered submissions, and makes docket contents available for public inspection and copying at the above address between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The Facility telephone number is 202–366–9329, the fax number is 202–493–2251, and the Web site for electronic submissions or for electronic access to docket contents is <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Mr. Patrick Marchman, Maritime Administration, telephone: 202–366–8805, e-mail:

Patrick.Marchman@dot.gov; or Mr.

Linden Houston, Maritime Administration, telephone: 202–366–4839, e-mail: Linden.Houston@dot.gov.

If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–493–0402.

SUPPLEMENTARY INFORMATION:

Public Meeting and Open House

We invite you to learn about the proposed deepwater port at an informational open house and to comment at a public meeting immediately afterwards on the proposed action and the evaluation contained in the DSEIS. In order to allow everyone a

chance to speak at the public meeting, we may limit speaker time, or extend the meeting hours, or both. You must identify yourself, and any organization you represent, by name. Your remarks will be recorded or transcribed for inclusion in the public docket.

You may submit written material at the public meeting, either in place of or in addition to speaking. Written material must include your name and address and will be included in the public docket.

Public docket materials will be made available to the public on the Federal Docket Management Facility (*see* Request for Comments).

Our public meeting location is wheelchair-accessible. If you plan to attend the open house or public meeting and need special assistance such as sign language interpretation or other reasonable accommodation, please notify the Maritime Administration (*see* **FOR FURTHER INFORMATION CONTACT**) at least 3 business days in advance. Include your contact information as well as information about your specific needs.

Request for Comments

We request public comments or other relevant information on the DSEIS. The public meeting is not the only opportunity you have to comment. In addition to or in place of attending this meeting, you may submit comments to the Docket Management Facility during the public comment period (*see* **DATES**). We will consider all comments and material received during the comment period.

Submissions should include:

- Docket number USCG–2006–24644.
- Your name and address.

Submit comments or material using only one of the following methods:

- Electronic submission to FDMS, <http://www.regulations.gov>.
- Fax, mail, or hand delivery to the Docket Management Facility (*see* **ADDRESSES**). Faxed or hand delivered submissions must be unbound, no larger than 8½ by 11 inches, and suitable for copying and electronic scanning. If you mail your submission and want to know when it reaches the Facility, include a stamped, self-addressed postcard or envelope.

Regardless of the method used for submitting comments or material, all submissions will be posted, without change, to the FDMS Web site (<http://www.regulations.gov>) and will include any personal information you provide. Therefore, submitting this information makes it public. You may wish to read the Privacy and Use Notice that is available on the FDMS Web site and the

Department of Transportation Privacy Act Notice that appeared in the **Federal Register** on April 11, 2000 (65 FR 19477) (*see* Privacy Act). You may view docket submissions at the Department of Transportation Docket Management Facility or electronically on the FDMS Web site (*see* **ADDRESSES**).

Background

The Notice of Intent to Prepare a Supplemental EIS for the proposed action was published in the **Federal Register** at 74 FR 39136, August 5, 2009. The DSEIS, application materials and associated comments are available on the docket. Information from the “Summary of the Application” from previous **Federal Register** notices is included below for your convenience.

Proposed Action and Alternatives

The proposed action requiring environmental review is the Federal licensing of the proposed deepwater port described in the “Summary of the Application” below. The alternatives to approving and licensing the proposed port are: (1) Approving and licensing with conditions (including conditions designed to mitigate environmental impact), or (2) denying the application, which for purposes of environmental review is the “no-action” alternative. These alternatives are more fully discussed in the DSEIS. The Maritime Administration and the U.S. Coast Guard are the lead Federal agencies for the preparation of the Supplemental EIS. You can address any questions about the proposed action or the DSEIS to the Maritime Administration project managers identified in **FOR FURTHER INFORMATION CONTACT**.

Summary of the Application

TORP Terminal LP proposes to own, construct, and operate a deepwater port, the Bienville Offshore Energy Terminal (BOET), in the Federal waters of the Outer Continental Shelf on Main Pass Block MP 258, approximately 63 miles south of Mobile Point, Alabama, in a water depth of approximately 425 feet. The proposed BOET deepwater port would be capable of mooring a single LNG carrier (LNGC) of up to approximately 265,000 cubic meters (m³) (8.8 million cubic feet [ft³]) in capacity.

The LNGC would be off-loaded using a HiLoad LNG off-loading and regasification unit (HiLoad), which is proprietary technology consisting of a remotely operated floating LNG transfer and regasification unit that connects to the hull of the LNGC. The HiLoad unit would regasify the LNG and deliver the gas via flexible gas pipes to the floating

regasification unit (FRU) located approximately 250 ft (150 m) from the HiLoad unit. Ambient air vaporizers (AAVs) with methanol as an intermediate fluid (IF) would be located aboard the FRU and would provide the heat required to regasify the LNG, all in a closed-loop vaporization system design.

At the FRU, the gas would be metered and sent out via interconnect pipelines to four existing offshore pipelines (Dauphin Natural Gas Pipeline, Williams Natural Gas Pipeline, Destin Natural Gas Pipeline, and Viosca Knoll Gathering System [VKGS] Gas Pipeline) that connect to the onshore natural gas transmission pipeline system. The natural gas would be delivered to customers through existing facilities. BOET would have an average throughput capacity of 1.2 billion standard cubic feet of gas per day (Bscfd) (33.9 million cubic meters of gas per day [m³/day]).

BOET’s major components would include a turret mooring system (TMS), a FRU, a HiLoad unit, two mooring lines that connect the HiLoad to the FRU, two high pressure (HP) flexible gas pipes, two floating IF hoses, two umbilicals, and 22.7 mi (36 km) of new subsea pipelines.

No new onshore pipelines or LNG storage facilities are proposed with this action. A shore based facility will be used to facilitate movement of personnel, equipment, supplies, and disposable materials between the terminal and shore.

BOET will also require permits from the Environmental Protection Agency (EPA) pursuant to the provisions of the Clean Air Act, as amended, and the Clean Water Act, as amended.

Should a license be issued, construction of the deepwater port would be expected to take 30 months with startup of commercial operations anticipated in 2014. The deepwater port, if licensed, would be designed, constructed, and operated in accordance with applicable codes and standards and would have an expected operating life of approximately 25 years.

Privacy Act

Electronic copies of all comments received into the Federal Docket Management System can be searched by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, *etc.*). The DOT Privacy Act Statement can be viewed in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70, pages 19477–78) or you may visit <http://www.regulations.gov>.

Authority: 49 CFR 1.66.

Dated: November 16, 2009.

By order of the Maritime Administrator.

Christine Gurland,

Secretary, Maritime Administration.

BILLING CODE 4910-81-P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA-2009-0271]

Identification of Interstate Motor Vehicles: New York City, Cook County and New Jersey Tax Identification Requirements; Petition for Determination

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of Petition for Determination; extension of comment period.

SUMMARY: The Federal Motor Carrier Safety Administration (FMCSA) extends until December 3, 2009 the comment period for the Petition for Determination that was published on October 19, 2009.

DATES: Comments are due on or before December 3, 2009.

ADDRESSES: You may submit comments identified by the Federal Docket Management System Number in the heading of this document by any of the following methods—Internet, facsimile, regular mail, or hand-delivery. Do not submit the same comments by more than one method. However, to allow effective public participation before the comment period deadline, the Agency encourages use of the Web site that is listed first. It will provide the most efficient and timely method of receiving and processing your comments.

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>. Follow the online instructions for submitting comments.

- *Fax:* 1-202-493-2251.

- *Mail:* Docket Management Facility; U.S. Department of Transportation, Room W12-140, 1200 New Jersey Avenue, SE., Washington, DC 20590-0001.

- *Hand Delivery:* Ground floor, Room W12-140, 1200 New Jersey Avenue, SE., Washington, DC, between 9 a.m. and 5 p.m., ET., Monday through Friday, except Federal holidays.

Instructions: All submissions must include the Agency name and docket number for this action. Note that all comments received will be posted

without change to <http://www.regulations.gov>, including any personal information provided. Refer to the Privacy Act heading on <http://www.regulations.gov> for further information.

Public Participation: The regulations.gov system is generally available 24 hours each day, 365 days each year. You can find electronic submission and retrieval help and guidelines under the “Help” section of the Web site. For notification that FMCSA received the comments, please include a self-addressed, stamped envelope or postcard, or print the acknowledgement page that appears after submitting comments on line. Copies or abstracts of all documents referenced in this notice are in the docket: FMCSA-2009-0271. For access to the docket to read background documents or comments received, go to <http://www.regulations.gov> at any time or to Room W12-140, 1200 New Jersey Avenue, SE., Washington, DC, between 9 a.m. and 5 p.m., ET., Monday through Friday, except Federal holidays. All comments received before the close of business on the comment closing date indicated above will be considered and will be available for examination in the docket at the above address. Comments received after the closing date will be considered to the extent practicable. FMCSA may, however, issue a final determination at any time after the close of the comment period. In addition to late comments, FMCSA will also continue to file in the public docket relevant information that becomes available after the comment closing date. Interested persons should monitor the public docket for new material.

FOR FURTHER INFORMATION CONTACT:

Genevieve D. Sapir, Office of the Chief Counsel, Federal Motor Carrier Safety Administration, 1200 New Jersey Avenue SE., Washington, DC 20590, (202) 366-7056; e-mail Genevieve.Sapir@dot.gov.

SUPPLEMENTARY INFORMATION: On October 19, 2009, FMCSA published a Notice of Petition for Determination inviting public comment on three petitions submitted by the American Trucking Associations (ATA) requesting determinations that the Commercial Motor Vehicle (CMV) identification requirements imposed by the State of New Jersey, New York City, and Cook County, Illinois, are preempted by Federal law (74 FR 53578). The Agency provided the public with a 30-day comment period scheduled to expire on November 18, 2009. Because of the level of interest this notice has generated,

FMCSA extends the comment period until December 3, 2009.

Issued on: November 16, 2009.

David K. Tochen,

Acting Chief Counsel.

RIN 0938-AP41

Medicare Program: Changes to the Hospital Outpatient Prospective Payment System and CY 2010 Payment Rates; Changes to the Ambulatory Surgical Center Payment System and CY 2010 Payment Rates**AGENCY:** Centers for Medicare & Medicaid Services (CMS), HHS.**ACTION:** Final rule with comment period.

SUMMARY: This final rule with comment period revises the Medicare hospital outpatient prospective payment system (OPPS) to implement applicable statutory requirements and changes arising from our continuing experience with this system. In this final rule with comment period, we describe the changes to the amounts and factors used to determine the payment rates for Medicare hospital outpatient services paid under the prospective payment system. These changes are applicable to services furnished on or after January 1, 2010.

In addition, this final rule with comment period updates the revised Medicare ambulatory surgical center (ASC) payment system to implement applicable statutory requirements and changes arising from our continuing experience with this system. In this final rule with comment period, we set forth the applicable relative payment weights and amounts for services furnished in ASCs, specific HCPCS codes to which these changes will apply, and other pertinent ratesetting information for the CY 2010 ASC payment system. These changes are applicable to services furnished on or after January 1, 2010.

DATES: *Effective Date:* The provisions of this rule are effective January 1, 2010.

Comment Period: We will consider comments on the subject areas listed in the **SUPPLEMENTARY INFORMATION** section of this rule that are received at one of the addresses provided in the **ADDRESSES** section of this rule no later than 5 p.m. EST on December 29, 2009.

Application Deadline for New Class of New Technology Intraocular Lenses: Request for review of applications for a new class of new technology intraocular lenses must be received by 5 p.m. EST on March 8, 2010.

ADDRESSES: In commenting, please refer to file code CMS-1414-FC. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (no duplicates, please):

1. *Electronically.* You may submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the instructions for "Comment or Submission" and enter the file code to find the document accepting comments.

2. *By regular mail.* You may mail written comments (one original and two copies) to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, *Attention:* CMS-1414-FC, P.O. Box 8013, Baltimore, MD 21244-1850.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments (one original and two copies) to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, *Attention:* CMS-1414-FC, Mail Stop C4-26-05, 7500 Security Boulevard, Baltimore, MD 21244-1850.

4. *By hand or courier.* If you prefer, you may deliver (by hand or courier) your written comments (one original and two copies) before the close of the comment period to one of the following addresses:

a. Room 445-G, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201.

(Because access to the interior of the HHH Building is not readily available to persons without Federal Government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

b. 7500 Security Boulevard, Baltimore, MD 21244-1850.

If you intend to deliver your comments to the Baltimore address, please call the telephone number (410) 786-9994 in advance to schedule your arrival with one of our staff members.

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

Applications for a new class of new technology intraocular lenses: Requests

for review of applications for a new class of new technology intraocular lenses must be sent by regular mail to ASC/NTOL, Division of Outpatient Care, Mailstop C4-05-17, Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244-1850.

FOR FURTHER INFORMATION CONTACT:

Alberta Dwivedi, (410) 786-0378, Hospital outpatient prospective payment issues.

Dana Burley, (410) 786-0378,

Ambulatory surgical center issues.

Michele Franklin, (410) 786-4533, and

Partial hospitalization and community mental health center issues.

James Poyer, (410) 786-2261, Reporting of quality data issues.

SUPPLEMENTARY INFORMATION:

Comment Subject Areas: We will consider comments on the following subject areas discussed in this final rule with comment period that are received by the date and time indicated in the **DATES** section of this final rule with comment period:

(1) The payment classifications assigned to HCPCS codes identified in Addenda B, AA, and BB to this final rule with comment period with the "NI" comment indicator;

(2) Recognition of plasma protein fraction as a blood product or a biological for OPPS payment, as discussed in section II.A.1.d.(2) of this final rule with comment period;

(3) Potential alternative coding schemes for reporting hospital clinic visits for new and established patients, as discussed in section IX.B.1. of this final rule with comment period;

(4) The possibility of extending the direct supervision requirements for hospital-based partial hospitalization program services to those same services in community mental health centers, as discussed in section XII.D.3. of this final rule with comment period; and

(5) The possibility of establishing direct physician supervision requirements for ASC services, as discussed in section XV.A.3. of this final rule with comment period.

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have been received: <http://www.regulations.gov>. Follow the search

instructions on that Web site to view public comments.

Comments received timely will also be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244, on Monday through Friday of each week from 8:30 a.m. to 4 p.m. EST. To schedule an appointment to view public comments, phone 1-800-743-3951.

Electronic Access

This **Federal Register** document is also available from the **Federal Register** online database through *GPO Access*, a service of the U.S. Government Printing Office. Free public access is available on a Wide Area Information Server (WAIS) through the Internet and via asynchronous dial-in. Internet users can access the database by using the World Wide Web; the Superintendent of Documents' home page address is <http://www.gpoaccess.gov/index.html>, by using local WAIS client software, or by telnet to *swais.access.gpo.gov*, then login as guest (no password required). Dial-in users should use communications software and modem to call (202) 512-1661; type swais, then login as guest (no password required).

In this document, we address two payment systems under the Medicare program: the hospital outpatient prospective payment system (OPPS) and the revised ambulatory surgical center (ASC) payment system. The provisions relating to the OPPS are included in sections I. through XIV., and XVI. through XXI. of this final rule with comment period and in Addenda A, B, C (Addendum C is available on the Internet only; we refer readers to section XVIII.A. of this final rule with comment period), D1, D2, E, L, and M to this final rule with comment period. The provisions related to the revised ASC payment system are included in sections XV., XVI., and XVIII. through XXI. of this final rule with comment period and in Addenda AA, BB, DD1, DD2, and EE to this final rule with comment period. (Addendum EE is available on the Internet only; we refer readers to section XVIII.B. of this final rule with comment period.)

Table of Contents

I. Background and Summary of the CY 2010 OPPS/ASC Final Rule With Comment Period
A. Legislative and Regulatory Authority for the Hospital Outpatient Prospective Payment System
B. Excluded OPPS Services and Hospitals
C. Prior Rulemaking
D. Advisory Panel on Ambulatory Payment Classification (APC) Groups
1. Authority of the APC Panel
2. Establishment of the APC Panel
3. APC Panel Meetings and Organizational Structure
E. Background and Summary of the CY 2010 OPPS/ASC Proposed Rule
1. Updates Affecting OPPS Payments

2. OPSS Ambulatory Payment Classification (APC) Group Policies
3. OPSS Payment for Devices
4. OPSS Payment Changes for Drugs, Biologicals, and Radiopharmaceuticals
5. Estimate of OPSS Transitional Pass-Through Spending for Drugs, Biologicals, Radiopharmaceuticals, and Devices
6. OPSS Payment for Brachytherapy Sources
7. OPSS Payment for Drug Administration Services
8. OPSS Payment for Hospital Outpatient Visits
9. Payment for Partial Hospitalization Services
10. Procedures That Will Be Paid Only as Inpatient Services
11. OPSS Nonrecurring Technical and Policy Changes and Clarifications
12. OPSS Payment Status and Comment Indicators
13. OPSS Policy and Payment Recommendations
14. Updates to the Ambulatory Surgical Center (ASC) Payment System
15. Reporting Quality Data for Annual Payment Rate Updates
16. Healthcare-Associated Conditions
17. Regulatory Impact Analysis
- F. Public Comments Received in Response to the CY 2010 OPSS/ASC Proposed Rule
- G. Public Comments Received in Response to the November 18, 2008 OPSS/ASC Final Rule With Comment Period
- II. Updates Affecting OPSS Payments
 - A. Recalibration of APC Relative Weights
 1. Database Construction
 - a. Database Source and Methodology
 - b. Use of Single and Multiple Procedure Claims
 - c. Calculation of CCRs
 - (1) Development of the CCRs
 - (2) Charge Compression
 2. Data Development Process and Calculation of Median Costs
 - a. Claims Preparation
 - b. Splitting Claims and Creation of "Pseudo" Single Claims
 - (1) Splitting Claims
 - (2) Creation of "Pseudo" Single Claims
 - c. Completion of Claim Records and Median Cost Calculations
 - d. Calculation of Single Procedure APC Criteria-Based Median Costs
 - (1) Device-Dependent APCs
 - (2) Blood and Blood Products
 - (3) Single Allergy Tests
 - (4) Echocardiography Services
 - (5) Nuclear Medicine Services
 - (6) Hyperbaric Oxygen Therapy
 - (7) Payment for Ancillary Outpatient Services When Patient Expires (CA Modifier)
 - e. Calculation of Composite APC Criteria-Based Median Costs
 - (1) Extended Assessment and Management Composite APCs (APCs 8002 and 8003)
 - (2) Low Dose Rate (LDR) Prostate Brachytherapy Composite APC (APC 8001)
 - (3) Cardiac Electrophysiologic Evaluation and Ablation Composite APC (APC 8000)
 - (4) Mental Health Services Composite APC (APC 0034)
 - (5) Multiple Imaging Composite APCs (APCs 8004, 8005, 8006, 8007, and 8008)
 3. Calculation of OPSS Scaled Payment Weights
 4. Changes to Packaged Services
 - a. Background
 - b. Packaging Issues
 - (1) Packaged Services Addressed by the February 2009 APC Panel Recommendations
 - (2) Packaged Services Addressed by the August 2009 APC Panel Recommendations
 - (3) Other Service-Specific Packaging Issues
 - B. Conversion Factor Update
 - C. Wage Index Changes
 - D. Statewide Average Default CCRs
 - E. OPSS Payment to Certain Rural and Other Hospitals
 1. Hold Harmless Transitional Payment Changes Made by Public Law 110–275 (MIPPA)
 2. Adjustment for Rural SCHs Implemented in CY 2006 Related to Pub. L. 108–173 (MMA)
 - F. Hospital Outpatient Outlier Payments
 1. Background
 2. Outlier Calculation
 3. Final Outlier Calculation
 4. Outlier Reconciliation
 - G. Calculation of an Adjusted Medicare Payment From the National Unadjusted Medicare Payment
 - H. Beneficiary Copayments
 1. Background
 2. Copayment Policy
 3. Calculation of an Adjusted Copayment Amount for an APC Group
- III. OPSS Ambulatory Payment Classification (APC) Group Policies
 - A. OPSS Treatment of New CPT and Level II HCPCS Codes
 1. Treatment of New Level II HCPCS Codes and Category I CPT Vaccine Codes and Category III CPT Codes
 2. Process for New Level II HCPCS Codes and Category I and Category III CPT Codes for Which We Are Soliciting Public Comments on the CY 2010 OPSS/ASC Final Rule With Comment Period
 - B. OPSS Changes—Variations Within APCs
 1. Background
 2. Application of the 2 Times Rule
 3. Exceptions to the 2 Times Rule
 - C. New Technology APCs
 1. Background
 2. Movement of Procedures From New Technology APCs to Clinical APCs
 - D. OPSS APC-Specific Policies
 1. Cardiovascular Services
 - a. Cardiovascular Telemetry (APC 0209)
 - b. Implantable Loop Recorder Monitoring (APC 0689)
 - c. Transluminal Balloon Angioplasty (APC 0279)
 2. Gastrointestinal Services
 - a. Change of Gastrostomy Tube (APC 0676)
 - b. Laparoscopic Liver Cryoablation (APC 0131)
 - c. Cholangioscopy (APC 0151)
 - d. Laparoscopic Hernia Repair (APC 0131)
 3. Genitourinary Services
 - a. Percutaneous Renal Cryoablation (APC 0423)
 - b. Hemodialysis (APC 0170)
 - c. Radiofrequency Remodeling of Bladder Neck (APC 0165)
 - d. Change of Bladder Tube (APC 0121)
 4. Nervous System Services
 - a. Pain-Related Procedures (APCs 0203, 0204, 0206, 0207, 0221, 0224, and 0388)
 - b. Magnetoencephalography (APCs 0065 and 0067)
 5. Ocular Services
 - a. Insertion of Anterior Segment Aqueous Drainage Device (APC 0234)
 - b. Backbench Preparation of Corneal Allograft
 6. Orthopedic and Musculoskeletal Services
 - a. Arthroscopic Procedures (APCs 0041 and 0042)
 - b. Knee Arthroscopy (APCs 0041 and 0042)
 - c. Shoulder Arthroscopy (APC 0042)
 - d. Fasciotomy Procedures (APC 0049)
 - e. Fibula Repair (APC 0062)
 - f. Forearm Orthopedic Procedures (APCs 0050, 0051, and 0052)
 - g. Low Energy Extracorporeal Shock Wave Therapy (Low Energy ESWT)
 - h. Insertion of Posterior Spinous Process Distraction Device (APC 0052)
 7. Radiation Therapy Services
 - a. Proton Beam Therapy (APCs 0664 and 0667)
 - b. Stereotactic Radiosurgery (SRS) Treatment Delivery Services (APCs 0065, 0066, 0067, and 0127)
 - c. Clinical Brachytherapy (APCs 0312 and 0651)
 8. Other Services
 - a. Low Frequency, Non-Contact, Non-Thermal Ultrasound (APC 0013)
 - b. Skin Repair (APCs 0134 and 0135)
 - c. Group Psychotherapy (APC 0325)
 - d. Portable X-Ray Services
 - e. Home Sleep Study Tests (APC 0213)
- IV. OPSS Payment for Devices
 - A. Pass-Through Payments for Devices
 1. Expiration of Transitional Pass-Through Payments for Certain Devices
 2. Provisions for Reducing Transitional Pass-Through Payments To Offset Costs Packaged Into APC Groups

- I. Background and Summary of the CY 2010 OPSS/ASC Final Rule With Comment Period**
- A. Legislative and Regulatory Authority for the Hospital Outpatient Prospective Payment System*
- When Title XVIII of the Social Security Act (the Act) was enacted, Medicare payment for hospital outpatient services was based on hospital-specific costs. In an effort to ensure that Medicare and its beneficiaries pay appropriately for services and to encourage more efficient delivery of care, the Congress mandated replacement of the reasonable cost-based payment methodology with a prospective payment system (PPS). The Balanced Budget Act (BBA) of 1997 (Pub. L. 105-33) added section 1833(t) to the Act authorizing implementation of a PPS for hospital outpatient services. The OPSS was first implemented for services furnished on or after August 1, 2000. Implementing regulations for the OPSS are located at 42 CFR part 419.
- The Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act (BBRA) of 1999 (Pub. L. 106-113) made major changes in the hospital outpatient prospective payment system (OPSS). The following Acts made additional changes to the OPSS: the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act (BIPA) of 2000 (Pub. L. 106-554); the Medicare Prescription Drug, Improvement, and Modernization Act (MMA) of 2003 (Pub. L. 108-173); the Deficit Reduction Act (DRA) of 2005 (Pub. L. 109-171), enacted on February 8, 2006; the Medicare Improvements and Extension Act under Division B of Title I of the Tax Relief and Health Care Act (MIEA-TRHCA) of 2006 (Pub. L. 109-432), enacted on December 20, 2006; the Medicare, Medicaid, and SCHIP Extension Act (MMSEA) of 2007 (Pub. L. 110-173), enacted on December 29, 2007; and the Medicare Improvements for Patients and Providers Act (MIPPA) of 2008 (Pub. L. 110-275), enacted on July 15, 2008.
- Under the OPSS, we pay for hospital outpatient services on a rate-per-service basis that varies according to the ambulatory payment classification (APC) group to which the service is assigned. We use the Healthcare Common Procedure Coding System (HCPCS) codes (which include certain Current Procedural Terminology (CPT) codes) and descriptors to identify and

group the services within each APC group. The OPPS includes payment for most hospital outpatient services, except those identified in section I.B. of this final rule with comment period. Section 1833(t)(1)(B)(ii) of the Act provides for payment under the OPPS for hospital outpatient services designated by the Secretary (which includes partial hospitalization services furnished by community mental health centers (CMHCs) and hospital outpatient services that are furnished to inpatients who have exhausted their Part A benefits, or who are otherwise not in a covered Part A stay. Section 611 of Public Law 108–173 added provisions for Medicare coverage for an initial preventive physical examination, subject to the applicable deductible and coinsurance, as an outpatient department service, payable under the OPPS.

The OPPS rate is an unadjusted national payment amount that includes the Medicare payment and the beneficiary copayment. This rate is divided into a labor-related amount and a nonlabor-related amount. The labor-related amount is adjusted for area wage differences using the hospital inpatient wage index value for the locality in which the hospital or CMHC is located.

All services and items within an APC group are comparable clinically and with respect to resource use (section 1833(t)(2)(B) of the Act). In accordance with section 1833(t)(2) of the Act, subject to certain exceptions, services and items within an APC group cannot be considered comparable with respect to the use of resources if the highest median (or mean cost, if elected by the Secretary) for an item or service in the APC group is more than 2 times greater than the lowest median cost for an item or service within the same APC group (referred to as the “2 times rule”). In implementing this provision, we generally use the median cost of the item or service assigned to an APC group.

For new technology items and services, special payments under the OPPS may be made in one of two ways. Section 1833(t)(6) of the Act provides for temporary additional payments, which we refer to as “transitional pass-through payments,” for at least 2 but not more than 3 years for certain drugs, biological agents, brachytherapy devices used for the treatment of cancer, and categories of other medical devices. For new technology services that are not eligible for transitional pass-through payments, and for which we lack sufficient data to appropriately assign them to a clinical APC group, we have established special APC groups based

on costs, which we refer to as New Technology APCs. These New Technology APCs are designated by cost bands which allow us to provide appropriate and consistent payment for designated new procedures that are not yet reflected in our claims data. Similar to pass-through payments, an assignment to a New Technology APC is temporary; that is, we retain a service within a New Technology APC until we acquire sufficient data to assign it to a clinically appropriate APC group.

B. Excluded OPPS Services and Hospitals

Section 1833(t)(1)(B)(i) of the Act authorizes the Secretary to designate the hospital outpatient services that are paid under the OPPS. While most hospital outpatient services are payable under the OPPS, section 1833(t)(1)(B)(iv) of the Act excludes payment for ambulance, physical and occupational therapy, and speech-language pathology services, for which payment is made under a fee schedule. Section 614 of Public Law 108–173 amended section 1833(t)(1)(B)(iv) of the Act to exclude payment for screening and diagnostic mammography services from the OPPS. The Secretary exercised the authority granted under the statute to also exclude from the OPPS those services that are paid under fee schedules or other payment systems. Such excluded services include, for example, the professional services of physicians and nonphysician practitioners paid under the Medicare Physician Fee Schedule (MPFS); laboratory services paid under the clinical diagnostic laboratory fee schedule (CLFS); services for beneficiaries with end-stage renal disease (ESRD) that are paid under the ESRD composite rate; and services and procedures that require an inpatient stay that are paid under the hospital inpatient prospective payment system (IPPS). We set forth the services that are excluded from payment under the OPPS in § 419.22 of the regulations.

Under § 419.20(b) of the regulations, we specify the types of hospitals and entities that are excluded from payment under the OPPS. These excluded entities include: Maryland hospitals, but only for services that are paid under a cost containment waiver in accordance with section 1814(b)(3) of the Act; critical access hospitals (CAHs); hospitals located outside of the 50 States, the District of Columbia, and Puerto Rico; and Indian Health Service hospitals.

C. Prior Rulemaking

On April 7, 2000, we published in the **Federal Register** a final rule with comment period (65 FR 18434) to implement a prospective payment system for hospital outpatient services. The hospital OPPS was first implemented for services furnished on or after August 1, 2000. Section 1833(t)(9) of the Act requires the Secretary to review certain components of the OPPS, not less often than annually, and to revise the groups, relative payment weights, and other adjustments that take into account changes in medical practices, changes in technologies, and the addition of new services, new cost data, and other relevant information and factors.

Since initially implementing the OPPS, we have published final rules in the **Federal Register** annually to implement statutory requirements and changes arising from our continuing experience with this system. These rules can be viewed on the CMS Web site at: <http://www.cms.hhs.gov/HospitalOutpatientPPS/>. We published in the **Federal Register** on November 18, 2008 the CY 2009 OPPS/ASC final rule with comment period (73 FR 68502). In that final rule with comment period, we revised the OPPS to update the payment weights and conversion factor for services payable under the CY 2009 OPPS on the basis of claims data from January 1, 2007, through December 31, 2007, and to implement certain provisions of Public Law 110–173 and Public Law 110–275. In addition, we responded to public comments received on the provisions of the November 27, 2007 final rule with comment period (72 FR 66580) pertaining to the APC assignment of HCPCS codes identified in Addendum B to that rule with the new interim (“NI”) comment indicator, and public comments received on the July 18, 2008 OPPS/ASC proposed rule for CY 2009 (73 FR 41416).

Subsequent to publication of the CY 2009 OPPS/ASC final rule with comment period, we published in the **Federal Register** on January 26, 2009, a correction notice (74 FR 4343 through 4344) to correct certain technical errors in the CY 2009 OPPS/ASC final rule with comment period.

On July 20, 2009, we issued in the **Federal Register** (74 FR 35232) a proposed rule for the CY 2010 OPPS/ASC payment system to implement statutory requirements and changes arising from our continuing experience with both systems.

D. Advisory Panel on Ambulatory Payment Classification (APC) Groups

1. Authority of the APC Panel

Section 1833(t)(9)(A) of the Act, as amended by section 201(h) of Public Law 106–113, and redesignated by section 202(a)(2) of Public Law 106–113, requires that we consult with an outside panel of experts to review the clinical integrity of the payment groups and their weights under the OPSS. The Act further specifies that the panel will act in an advisory capacity. The Advisory Panel on Ambulatory Payment Classification (APC) Groups (the APC Panel), discussed under section I.D.2. of this final rule with comment period, fulfills these requirements. The APC Panel is not restricted to using data compiled by CMS, and it may use data collected or developed by organizations outside the Department in conducting its review.

2. Establishment of the APC Panel

On November 21, 2000, the Secretary signed the initial charter establishing the APC Panel. This expert panel, which may be composed of up to 15 representatives of providers (currently employed full-time, not as consultants, in their respective areas of expertise) subject to the OPSS, reviews clinical data and advises CMS about the clinical integrity of the APC groups and their payment weights. The APC Panel is technical in nature, and it is governed by the provisions of the Federal Advisory Committee Act (FACA). Since its initial chartering, the Secretary has renewed the APC Panel's charter four times: on November 1, 2002; on November 1, 2004; on November 21, 2006; and on November 2, 2008. The current charter specifies, among other requirements, that: the APC Panel continues to be technical in nature; is governed by the provisions of the FACA; may convene up to three meetings per year; has a Designated Federal Officer (DFO); and is chaired by a Federal official designated by the Secretary.

The current APC Panel membership and other information pertaining to the APC Panel, including its charter, **Federal Register** notices, membership, meeting dates, agenda topics, and meeting reports, can be viewed on the CMS Web site at: http://www.cms.hhs.gov/FACA/05_AdvisoryPanelonAmbulatoryPaymentClassificationGroups.asp#TopOfPage.

3. APC Panel Meetings and Organizational Structure

The APC Panel first met on February 27 through March 1, 2001. Since the

initial meeting, the APC Panel has held 16 meetings, with the last meeting taking place on August 5 and 6, 2009. Prior to each meeting, we publish a notice in the **Federal Register** to announce the meeting and, when necessary, to solicit nominations for APC Panel membership and to announce new members.

The APC Panel has established an operational structure that, in part, includes the use of three subcommittees to facilitate its required APC review process. The three current subcommittees are the Data Subcommittee, the Visits and Observation Subcommittee, and the Packaging Subcommittee. The Data Subcommittee is responsible for studying the data issues confronting the APC Panel and for recommending options for resolving them. The Visits and Observation Subcommittee reviews and makes recommendations to the APC Panel on all technical issues pertaining to observation services and hospital outpatient visits paid under the OPSS (for example, APC configurations and APC payment weights). The Packaging Subcommittee studies and makes recommendations on issues pertaining to services that are not separately payable under the OPSS, but whose payments are bundled or packaged into APC payments. Each of these subcommittees was established by a majority vote from the full APC Panel during a scheduled APC Panel meeting, and their continuation as subcommittees was last approved at the August 2009 APC Panel meeting. At that meeting, the APC Panel recommended that the work of these three subcommittees continue, and we accept those recommendations of the APC Panel. All subcommittee recommendations are discussed and voted upon by the full APC Panel.

Discussions of the other recommendations made by the APC Panel at the August 2009 meeting are included in the sections of this final rule with comment period that are specific to each recommendation. For discussions of earlier APC Panel meetings and recommendations, we refer readers to previously published hospital OPSS/ASC proposed and final rules, the CMS Web site mentioned earlier in this section, and the FACA database at: <http://fido.gov/facadata/base/public.asp>.

Comment: Several commenters requested that CMS include ASC representation on the APC Panel. Because the revised ASC payment system is based upon the same APC groups and relative payment weights as the OPSS, the commenters believed that

ASC representation on the APC Panel would ensure input from representatives of all care settings that provide surgical services whose payment groups and payment weights are affected by the OPSS. Further, the commenters urged CMS to revise the APC Panel's charter to reflect the current alignment of the OPSS and the revised ASC payment system by including representation from the ASC industry on the APC Panel, as the commenters believed is permitted by the statute.

Response: We acknowledge that the revised ASC payment system provides Medicare payments to ASCs for surgical procedures that are based, in most cases, on the relative payment weights of the OPSS. However, CMS is statutorily required to have an appropriate selection of representatives of "providers" as members of the APC Panel. The current APC Panel charter requires that "Each Panel member must be employed full-time by a hospital, hospital system, or other Medicare provider subject to payment under the OPSS," which does not include ASCs because ASCs are not providers. We refer readers to section 1833(t)(9)(A) of the Act and § 400.202 of our regulations for specific requirements and definitions. ASCs are suppliers, not providers. The charter must comply with the statute, which does not include representatives of suppliers on the APC Panel. Therefore, although we understand the concerns of the commenters regarding ASC input on the APC Panel now that the ASC payment system is based on the OPSS relative payment weights, we cannot revise the charter to include ASC representation.

E. Background and Summary of the CY 2010 OPSS/ASC Proposed Rule

A proposed rule appeared in the July 20, 2009 **Federal Register** (74 FR 35232) that set forth proposed changes to the Medicare hospital OPSS for CY 2010 to implement statutory requirements and changes arising from our continuing experience with the system. In addition, we set forth proposed changes to the revised Medicare ASC payment system for CY 2010, including updated payment weights, covered surgical procedures, and covered ancillary items and services based on the proposed OPSS update. Finally, we set forth proposed quality measures for the Hospital Outpatient Quality Data Reporting Program (HOP QDRP) for reporting quality data for annual payment rate updates for CY 2011 and subsequent calendar years, the requirements for data collection and submission for the annual payment

update, and a proposed reduction in the OPSS payment for hospitals that fail to meet the HOP QDRP requirements for the CY 2010 payment update, in accordance with the statutory requirement. The following is a summary of the major proposed changes included in the CY 2010 OPSS/ASC proposed rule:

1. Updates Affecting OPSS Payments

In section II. of the proposed rule, we set forth—

- The methodology used to recalibrate the APC relative payment weights.
- The proposed changes to packaged services.
- The proposed update to the conversion factor used to determine payment rates under the OPSS. In this section, we set forth proposed changes in the amounts and factors for calculating the full annual update increase to the conversion factor.
- The proposed retention of our current policy to use the IPPS wage indices to adjust, for geographic wage differences, the portion of the OPSS payment rate and the copayment standardized amount attributable to labor-related cost.
- The proposed update of statewide average default CCRs.
- The proposed application of hold harmless transitional outpatient payments (TOPs) for certain small rural hospitals.
- The proposed payment adjustment for rural SCHs.
- The proposed calculation of the hospital outpatient outlier payment.
- The calculation of the proposed national unadjusted Medicare OPSS payment.
- The proposed beneficiary copayments for OPSS services.

2. OPSS Ambulatory Payment Classification (APC) Group Policies

In section III. of the proposed rule, we discussed—

- The proposed additions of new HCPCS codes to APCs.
- The proposed establishment of a number of new APCs.
- Our analyses of Medicare claims data and certain recommendations of the APC Panel.
- The application of the 2 times rule and proposed exceptions to it.
- The proposed changes to specific APCs.
- The proposed movement of procedures from New Technology APCs to clinical APCs.

3. OPSS Payment for Devices

In section IV. of the proposed rule, we discussed the proposed pass-through

payment for specific categories of devices and the proposed adjustment for devices furnished at no cost or with partial or full credit.

4. OPSS Payment Changes for Drugs, Biologicals, and Radiopharmaceuticals

In section V. of the proposed rule, we discussed the proposed CY 2010 OPSS payment for drugs, biologicals, and radiopharmaceuticals, including the proposed payment for drugs, biologicals, and radiopharmaceuticals with and without pass-through status.

5. Estimate of OPSS Transitional Pass-Through Spending for Drugs, Biologicals, Radiopharmaceuticals, and Devices

In section VI. of the proposed rule, we discussed the estimate of CY 2010 OPSS transitional pass-through spending for drugs, biologicals, and devices.

6. OPSS Payment for Brachytherapy Sources

In section VII. of the proposed rule, we discussed payment for brachytherapy sources.

7. OPSS Payment for Drug Administration Services

In section VIII. of the proposed rule, we set forth our proposed policy concerning coding and payment for drug administration services.

8. OPSS Payment for Hospital Outpatient Visits

In section IX. of the proposed rule, we set forth our proposed policies for the payment of clinic and emergency department visits and critical care services based on claims data.

9. Payment for Partial Hospitalization Services

In section X. of the proposed rule, we set forth the proposed payment for partial hospitalization services, including the proposed separate threshold for outlier payments for CMHCs.

10. Procedures That Will Be Paid Only as Inpatient Procedures

In section XI. of the proposed rule, we discussed the procedures that we proposed to remove from the inpatient list and assign to APCs for payment under the OPSS.

11. OPSS Nonrecurring Technical and Policy Changes and Clarifications

In section XII. of the proposed rule, we discussed nonrecurring technical issues, proposed policy changes, and provided policy clarifications.

12. OPSS Payment Status and Comment Indicators

In section XIII. of the proposed rule, we discussed our proposed changes to the definitions of status indicators assigned to APCs and presented our proposed comment indicators for the final rule with comment period.

13. OPSS Policy and Payment Recommendations

In section XIV. of the proposed rule, we addressed recommendations made by the Medicare Payment Advisory Commission (MedPAC) in its March 2009 report to Congress, by the Office of Inspector General (OIG), and by the APC Panel regarding the OPSS for CY 2010.

14. Updates to the Ambulatory Surgical Center (ASC) Payment System

In section XV. of the proposed rule, we discussed the proposed updates of the revised ASC payment system and payment rates for CY 2010.

15. Reporting Quality Data for Annual Payment Rate Updates

In section XVI. of the proposed rule, we discussed the proposed quality measures for reporting hospital outpatient (HOP) quality data for the annual payment update factor for CY 2011 and subsequent calendar years; set forth the requirements for data collection and submission for the annual payment update; and discussed the reduction in the OPSS payment for hospitals that fail to meet the HOP Quality Data Reporting Program (QDRP) requirements for CY 2010.

16. Healthcare-Associated Conditions

In section XVII. of the proposed rule, we discussed public responses to a December 2008 CMS public listening session addressing the potential extension of the principle of Medicare not paying more under the IPPS for the care of preventable hospital-acquired conditions experienced by a Medicare beneficiary during a hospital inpatient stay to medical care in other settings that are paid under other Medicare payment systems, including the OPSS, for those healthcare-associated conditions that occur or result from care in those other settings.

17. Regulatory Impact Analysis

In section XXI. of the proposed rule, we set forth an analysis of the impact the proposed changes would have on affected entities and beneficiaries.

F. Public Comments Received in Response to the CY 2010 OPSS/ASC Proposed Rule

We received approximately 1,527 timely pieces of correspondence containing multiple comments on the CY 2010 OPSS/ASC proposed rule. We note that we received some public comments that were outside of the scope of the CY 2010 OPSS/ASC proposed rule. These out-of-scope public comments are not addressed in this final rule with comment period.

New (and substantially revised) CY 2010 HCPCS codes are designated with comment indicator "NI" in Addenda B, AA, and BB of this final rule with comment period to signify that their CY 2010 interim OPSS and/or ASC treatment are open to public comment on this final rule with comment period. Summaries of the public comments that are within the scope of the CY 2010 proposals and our responses to those comments are set forth in the various sections of this final rule with comment period under the appropriate headings.

G. Public Comments Received in Response to the November 18, 2008 OPSS/ASC Final Rule With Comment Period

We received approximately 41 timely pieces of correspondence on the CY 2009 OPSS/ASC final rule with comment period, some of which contained multiple comments on the interim APC assignments and/or status indicators of HCPCS codes identified with comment indicator "NI" in Addendum B of that final rule with comment period. Summaries of those public comments on topics open to comment in the CY 2009 OPSS/ASC final rule with comment period and our responses to them are set forth in the various sections of this final rule with comment period under the appropriate headings.

II. Updates Affecting OPSS Payments

A. Recalibration of APC Relative Weights

1. Database Construction

a. Database Source and Methodology

Section 1833(t)(9)(A) of the Act requires that the Secretary review and revise the relative payment weights for APCs at least annually. In the April 7, 2000 OPSS final rule with comment period (65 FR 18482), we explained in detail how we calculated the relative payment weights that were implemented on August 1, 2000 for each APC group.

For CY 2010, we proposed to use the same basic methodology that we

described in the April 7, 2000 OPSS final rule with comment period to recalibrate the APC relative payment weights for services furnished on or after January 1, 2010, and before January 1, 2011 (CY 2010). That is, we proposed to recalibrate the relative payment weights for each APC based on claims and cost report data for hospital outpatient department (HOPD) services. We proposed to use the most recent available data to construct the database for calculating APC group weights. Therefore, for the purpose of recalibrating the APC relative payment weights for CY 2010, we used approximately 141 million final action claims for hospital outpatient department services furnished on or after January 1, 2008, and before January 1, 2009. (For exact counts of claims used, we refer readers to the claims accounting narrative under supporting documentation for this final rule with comment period on the CMS Web site at: <http://www.cms.hhs.gov/HospitalOutpatientPPS/HORD/>.)

Of the 141 million final action claims for services provided in hospital outpatient settings used to calculate the CY 2010 OPSS payment rates for this final rule with comment period, approximately 107 million claims were the type of bill potentially appropriate for use in setting rates for OPSS services (but did not necessarily contain services payable under the OPSS). Of the 107 million claims, approximately 50 million claims were not for services paid under the OPSS or were excluded as not appropriate for use (for example, erroneous cost-to-charge ratios (CCRs) or no HCPCS codes reported on the claim). From the remaining 58 million claims, we created approximately 99 million single records, of which approximately 68 million were "pseudo" single or "single session" claims (created from 26 million multiple procedure claims using the process we discuss later in this section). Approximately 657,000 claims were trimmed out on cost or units in excess of ± 3 standard deviations from the geometric mean, yielding approximately 99 million single bills for median setting. As described in section II.A.2. of this final rule with comment period, our data development process is designed with the goal of using appropriate cost information in setting the APC relative weights. The bypass process is described in section II.A.1.b. of this final rule with comment period. This section discusses how we develop "pseudo" single claims, with the intention of using more appropriate data from the available claims. In some cases, the bypass process allows us to use

some portion of the submitted claim for cost estimation purposes, while the remaining information on the claim continues to be unusable. Consistent with the goal of using appropriate information in our data development process, we only use claims (or portions of each claim) that are appropriate for ratesetting purposes. Ultimately, we were able to use for CY 2010 ratesetting some portion of 95 percent of the CY 2008 claims containing services payable under the OPSS.

As proposed, the APC relative weights and payments for CY 2010 in Addenda A and B to this final rule with comment period were calculated using claims from CY 2008 that were processed before January 1, 2009 and continue to be based on the median hospital costs for services in the APC groups. We selected claims for services paid under the OPSS and matched these claims to the most recent cost report filed by the individual hospitals represented in our claims data. We continue to believe that it is appropriate to use the most current full calendar year claims data and the most recently submitted cost reports to calculate the median costs underpinning the APC relative payment weights and the CY 2010 payment rates.

We did not receive any public comments on our proposal to base the CY 2010 APC relative weights on the most currently available cost reports and on claims for services furnished in CY 2008. Therefore, for the reasons noted above in this section, we are finalizing our data source for the recalibration of the CY 2010 APC relative payment weights as proposed, without modification, as described in this section of this final rule with comment period.

b. Use of Single and Multiple Procedure Claims

For CY 2010, in general, we proposed to continue to use single procedure claims to set the medians on which the APC relative payment weights would be based, with some exceptions as discussed below in this section. We generally use single procedure claims to set the median costs for APCs because we believe that the OPSS relative weights on which payment rates are based should be derived from the costs of furnishing one procedure and because, in many circumstances, we are unable to ensure that packaged costs can be appropriately allocated across multiple procedures performed on the same date of service.

We agree that, optimally, it is desirable to use the data from as many claims as possible to recalibrate the APC relative payment weights, including

those claims for multiple procedures. As we have for several years, we continued to use date of service stratification and a list of codes to be bypassed to convert multiple procedure claims to “pseudo” single procedure claims. Through bypassing specified codes that we believe do not have significant packaged costs, we are able to use more data from multiple procedure claims. In many cases, this enables us to create multiple “pseudo” single claims from claims that were submitted as multiple procedure claims spanning multiple dates of service, or claims that contained numerous separately paid procedures reported on the same date on one claim. We refer to these newly created single procedure claims as “pseudo” single claims. The history of our use of a bypass list to generate “pseudo” single claims is well documented, most recently in the CY 2009 OPSS/ASC final rule with comment period (73 FR 68512 through 68519). In addition, for CY 2008, we increased packaging and created the first composite APCs. This also increased the number of bills that we were able to use for median calculation by enabling us to use claims that contained multiple major procedures that previously would not have been usable. Further, for CY 2009, we expanded the composite APC model to one additional clinical area, multiple imaging services (73 FR 68559 through 68569), which also increased the number of bills we were able to use to calculate APC median costs. We refer readers to section II.A.2.e. of this final rule with comment period for discussion of the use of claims to establish median costs for composite APCs.

In the CY 2010 OPSS/ASC proposed rule (74 FR 35239 through 35241), we proposed to continue to apply these processes to enable us to use as much claims data as possible for ratesetting for the CY 2010 OPSS. This process enabled us to create, for this final rule with comment period, approximately 68 million “pseudo” single claims, including multiple imaging composite “single session” bills (we refer readers to section II.A.2.e.(5) of this final rule with comment period for further discussion), to add to the approximately 32 million “natural” single bills. For this final rule with comment period, “pseudo” single and “single session” procedure bills represent 68 percent of all single bills used to calculate median costs.

In the CY 2010 OPSS/ASC proposed rule (74 FR 35239 through 35241), we proposed to bypass 438 HCPCS codes for CY 2010. Since the inception of the bypass list, we have calculated the

percent of “natural” single bills that contained packaging for each HCPCS code and the amount of packaging on each “natural” single bill for each code. Each year, we generally retain the codes on the previous year’s bypass list and use the update year’s data (for CY 2010, data available for the February 2009 APC Panel meeting from CY 2008 claims processed through September 30, 2008 and CY 2007 claims data processed through June 30, 2008 used to model the final payment rates for CY 2009) to determine whether it would be appropriate to propose to add additional codes to the previous year’s bypass list. For CY 2010, we proposed to continue to bypass all of the HCPCS codes on the CY 2009 OPSS bypass list. We also proposed to add to the bypass list for CY 2010 all HCPCS codes not on the CY 2009 bypass list that, using both CY 2009 final rule and February 2009 APC Panel data, met the same previously established empirical criteria for the bypass list that are summarized below. Because we must make some assumptions about packaging in the multiple procedure claims in order to assess a HCPCS code for addition to the bypass list, we assume that the representation of packaging on “natural” single claims for any given code is comparable to packaging for that code in the multiple claims. The proposed criteria for the bypass list were:

- There are 100 or more “natural” single claims for the code. This number of single claims ensures that observed outcomes are sufficiently representative of packaging that might occur in the multiple claims.

- Five percent or fewer of the “natural” single claims for the code have packaged costs on that single claim for the code. This criterion results in limiting the amount of packaging being redistributed to the separately payable procedures remaining on the claim after the bypass code is removed and ensures that the costs associated with the bypass code represent the cost of the bypassed service.

- The median cost of packaging observed in the “natural” single claims is equal to or less than \$50. This criterion also limits the amount of error in redistributed costs. Throughout the bypass process, we do not know the dollar value of the packaged cost that should be appropriately attributed to the other procedures on the claim. Ensuring that redistributed costs associated with a bypass code are small in amount and volume protects the validity of cost estimates for low cost services billed with the bypassed service.

- The code is not a code for an unlisted service.

In addition, we proposed to continue to include on the bypass list HCPCS codes that CMS medical advisors believe have minimal associated packaging based on their clinical assessment of the complete CY 2010 OPSS proposal. Some of these codes were identified by CMS medical advisors and some were identified in prior years by commenters with specialized knowledge of the packaging associated with specific services, especially on a multiple procedure claim. We also proposed to continue to include on the bypass list certain HCPCS codes in order to purposefully direct the assignment of packaged costs to a companion code where services always appear together and where there would otherwise be few single claims available for ratesetting. For example, we have previously discussed our reasoning for adding HCPCS code G0390 (Trauma response team associated with hospital critical care service) and the CPT codes for additional hours of drug administration to the bypass list (73 FR 68513 and 71 FR 68117 through 68118).

As a result of the multiple imaging composite APCs that we established in CY 2009, we note that the program logic for creating “pseudo” singles from bypassed codes that are also members of multiple imaging composite APCs changed. When creating the set of “pseudo” single claims, claims that contain “overlap bypass codes,” that is, those HCPCS codes that are both on the bypass list and are members of the multiple imaging composite APCs, were identified first. These HCPCS codes were then processed to create multiple imaging composite “single session” bills, that is, claims containing HCPCS codes from only one imaging family, thus suppressing the initial use of these codes as bypass codes. However, these “overlap bypass codes” were retained on the bypass list because, at the end of the “pseudo” single processing logic, we reassessed the claims without suppression of the “overlap bypass codes” under our longstanding “pseudo” single process to determine whether we could convert additional claims to “pseudo” single claims. (We refer readers to section II.A.2.b. of this final rule with comment period for further discussion of the treatment of “overlap bypass codes.”) This process also created multiple imaging composite “single session” bills that could be used for calculating composite APC median costs. “Overlap bypass codes” that would be members of the proposed multiple imaging composite APCs were

identified by asterisks (*) in Table 1 of the CY 2010 OPPS/ASC proposed rule (74 FR 35242 through 35252).

At the February 2009 APC Panel Meeting, the APC Panel recommended that CMS place CPT code 76098 (Radiological examination, surgical specimen) on the bypass list and reassign the code to APC 0260 (Level I Plain Film Except Teeth) in response to a public presentation requesting that CMS make these changes. Although CPT code 76098 would not be eligible for addition to the bypass list because the frequency and magnitude of packaged costs in its "natural" single claims exceed the empirical criteria, the presenter suggested that the "natural" single claims represented aberrant billing with inappropriate packaged services and pointed out that the packaged services support the surgical procedures that commonly are also reported on claims for CPT code 76098. The presenter suggested that bypassing CPT code 76098 would properly allocate packaged costs to surgical procedures on these claims, and would increase the number of single claims available for ratesetting for both CPT code 76098 and the associated surgical breast procedures. The APC Panel indicated that the issues raised by the presenter appeared to be consistent with clinical practice and subsequently made the recommendation to bypass CPT code 76098 and reassign the code to APC 0260 based on the code's revised cost.

Based on the APC Panel's specific recommendation for CPT code 76098, we studied the billing patterns for the code in the "natural" single and multiple major claims in the CY 2008 claims data available for the February 2009 APC Panel. The presenter asserted that CPT code 76098 is commonly billed with surgical breast procedures and our claims data from the multiple procedure claims confirm this observation. However, as noted above, there are also a significant number of "natural" single bills in those data (1,303), and these "natural" single claims include costly packaged services, such as CPT code 19290 (Preoperative placement of needle localization wire, breast) and CPT 77032 code (Mammographic guidance for needle placement, breast (eg, for wire localization or for injection), each lesion, radiological supervision and interpretation). We have received anecdotal information indicating that hospitals may place guidance wires prior to surgery in the hospital's radiology department and then examine the surgical specimen in the radiology department after its surgical removal. This information,

along with the number of observed "natural" single claims, suggests that the packaged costs might appropriately be associated with the radiological examination of the breast specimen. Although bypassing CPT code 76098 would allow for the creation of more "pseudo" single claims for ratesetting, it would also require the assumption that all packaging on the claim would be correctly assigned to the remaining major procedure where it exists and that on "natural" single bills no packaging would be appropriately associated with CPT code 76098. Given the number of "natural" single bills for CPT code 76098 and the significant packaged costs on these claims, we are not confident that placement of this code on the bypass list is appropriate.

While we did not propose to place CPT code 76098 on the bypass list, we wanted to continue to provide separate payment for this procedure when appropriate. We believe that CPT code 76098 is generally ancillary and supportive to surgical breast procedures. In CY 2008 we established a group of conditionally packaged codes, called "T-packaged codes," whose payment is packaged when one or more separately paid surgical procedures with status indicator "T" are provided during a hospital encounter. In order to provide separate payment for CPT code 76098 when not provided with a separately payable surgical procedure and also to recognize its ancillary and supportive nature when it accompanies separately payable procedures, we proposed to conditionally package CPT code 76098 as a "T-packaged code" for CY 2010, identified with status indicator "Q2" in Addendum B to the CY 2010 OPPS/ASC proposed rule. As a "T-packaged code," CPT code 76098 would receive separate payment except where it appears with a surgical procedure, in which case its payment would be packaged. Designating CPT 76098 in this way allows the separate payment to appropriately account for the packaged costs that appear on the code's "natural" single bills, while also allowing us to use more multiple procedure claims that include both a surgical procedure and CPT code 76098 to set the payment rates for the related surgical procedures. The CPT code-specific median cost of CPT code 76098 in the CY 2008 claims data available for the February 2009 APC Panel meeting was approximately \$346, consistent with its CY 2009 assignment to APC 0317 (Level II Miscellaneous Radiology Procedures), which had an observed APC median cost in those data of approximately \$339. In contrast, the

median cost of APC 0260, the APC reassignment recommended by the APC Panel, was much lower in the APC Panel data, approximately \$46. Therefore, we did not accept the APC Panel's recommendation to reassign CPT code 76098. Instead, we proposed to continue its assignment to APC 0317 for CY 2010 in those cases where CPT code 76098 is separately paid.

Comment: Several commenters requested that CMS add CPT code 76098 to the bypass list and reassign it to APC 0260. The commenters believed that CPT 76098 is similar with respect to resource use to the other codes assigned to APC 0260. The commenters also claimed that including CPT code 76098 on the bypass list would appropriately make more claims available for ratesetting purposes for the CPT code itself and the surgical breast procedures that appear with CPT code 76098 in the multiple major procedure claims. Another commenter supported the proposal to not include CPT code 76098 on the CY 2010 bypass list.

Response: The hospital claims data show that there is significant packaging associated with CPT code 76098. Therefore, we believe CPT code 76098 is not appropriate for inclusion on the bypass list.

In examining the billing patterns for CPT 76098, we noted its failure to meet the empirical criteria for inclusion on the bypass list. The significant number of "natural" single claims suggests that these claims are an accurate representation of hospital billing practices in certain clinical situations. Further, we believe the packaging on these claims is properly associated with the code. Anecdotal information on the placement of wires prior to surgery suggests that the packaging on the "natural" single claims reflects appropriate billing in some clinical scenarios, such as when hospitals place guidance wires prior to surgery in the hospital's radiology department and then examine the surgical specimen in the radiology department after its surgical removal. This example illustrates appropriate billing on "natural" single claims for CPT code 76098 because the hospital has accurately reported all services that the hospital provided to the patient on the claim. In this case, the hospital did not provide the associated surgical breast procedure; therefore, all packaging would be appropriately associated with CPT code 76098, which is the separately payable service that the hospital provided to the patient. This scenario contradicts the commenter's belief that the significant packaging on the "natural" single claims for CPT code

76098 would represent aberrant hospital billing. As a result, for the CY 2010 proposed rule, we did not propose to add CPT code 76098 to the bypass list. However, based on our examination of the claims data for the proposed rule, we agreed that CPT 76098 is generally ancillary and supportive to surgical breast procedures. In order to provide appropriate separate payment for CPT code 76098 when the service is not furnished with a separately payable surgical procedure, and also to recognize its ancillary and supportive nature when it accompanies separately payable procedures, we proposed to conditionally package CPT code 76098 as a "T-packaged code" for CY 2010, identified with status indicator "Q2" in Addendum B to the proposed rule. Designating CPT code 76098 as a "T-packaged code" allows the separate payment to appropriately account for the packaged costs that appear on the code's "natural" single bills, while also allowing us to use more multiple procedure claims that include a surgical procedure and CPT code 76098 to set the payment rates for the related surgical procedures. In turn, we are able to use more data from the multiple procedure claims with CPT code 76098 to set payment rates for the surgical breast procedures on those claims. We continue to believe that classifying CPT code 76098 as a conditionally packaged code with status indicator "Q2" is the proper policy to both provide appropriate payment when the service is billed by itself and appropriate payment for the associated surgical breast procedures that it supports.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to assign status indicator "Q2" to CPT code 76098. When the service is furnished with a separately payable surgical procedure with status indicator "T" on the same day, payment for CPT code 76098 is packaged. Otherwise, payment for CPT code 76098 is made separately through APC 0317, which has a final APC median cost of approximately \$374. We are not adding CPT code 76098 to the bypass list for CY 2010.

Comment: Many commenters supported the current methodology of bypassing HCPCS codes and the goal of using more data from the multiple major claims. A few commenters noted that some of the HCPCS codes on the proposed CY 2010 bypass list do not meet the empirical criteria described above and observed that many codes that meet the empirical criteria were not included on the proposed bypass list. The commenters highlighted findings

from supporting data analysis to illustrate their points. Several commenters also raised concerns about the transparency of the bypass process. The commenters suggested that the empirical criteria were not explained clearly and were applied inconsistently. Other commenters believed that there is a lack of transparency regarding the addition of codes to the bypass list and the bypass process in general.

The commenters requested detailed explanations about which codes are included on the bypass list, asking that CMS identify any codes on the bypass list that do not meet the empirical criteria and the reason for their inclusion. Several commenters believed that modifying the specific empirical criteria that the median packaged cost be less than \$50 on less than 5 percent of "natural" single bills would increase the number of potential bypass codes and "pseudo" single claims. Some commenters suggested adopting a different threshold of some low percentage of total packaged costs on the code's single claims as a percent of total costs on all single claims. They believed that a percentage approach could provide more stability in the ratesetting process. One commenter also suggested that more generous empirical thresholds could be appropriate for a select set of HCPCS codes by subtracting the average packaged cost of the bypass code from other costs on the date of service where the code appears and is used as a bypass code, specifically to increase the number of claims available for setting payment rates for APCs for low dose rate brachytherapy services. A few commenters recommended that the median packaged cost threshold of \$50 on less than 5 percent of "natural" single bills be updated as CMS has not updated the threshold since its introduction, and one commenter claimed the packaged cost threshold was arbitrary. Several commenters also indicated that the HCPCS codes CMS proposed to add to the CY 2010 OPPS bypass list were not actually incorporated into CMS' ratesetting process.

Response: As discussed above in this section, we only apply the empirical criteria to the "natural" single claims. The bypass list is intended to consist of services that have minimal or no associated packaging, and in recent years, also includes codes for services that we wish to explicitly treat as not having packaged costs for purposes of OPPS payment. We refer readers to our previous discussions regarding the inclusion of additional hours of drug administration services (73 FR 68513) and HCPCS G0390 (71 FR 68117

through 68118) on the bypass list for further detail. Extracting "pseudo" single bills or unique estimates of a single service's total resource cost from claims containing multiple procedures requires making some assumptions about the amount of packaging associated with every service. As reflected in the CY 2005 proposed rule (69 FR 50474 through 50475), our empirical criteria of 100 "natural" single claims, 5 percent or fewer "natural" single claims with packaging, and median packaged cost less than \$50 are intended to be conservative, that is, to limit the amount and impact of redistributed packaging from expanding the bypass list. These criteria ensure that the packaged costs associated with bypass codes are limited, based on the best information that we have in the "natural" single procedure claims. Bypassing codes with significant associated packaging would inappropriately redistribute these packaged costs to major procedures billed with the bypass codes in the multiple procedure claims, when the individual line-items for the bypass codes are removed to create "pseudo" single claims. Because we recognize that the "natural" single claims are not always good representations of the code when it is reported on multiple major claims, for example, a service with only 20 "natural" single claims, we also judiciously include procedures on the bypass list that both CMS' medical advisors and public commenters identify as not including significant packaging and for which our own data analyses do not suggest that inclusion on the bypass list would result in an inappropriate redistribution of packaged costs. Finally, our general policy each year has been to retain codes from the previous year's bypass list without reevaluation of these codes in the context of the empirical criteria based upon updated data. We listed and discussed these empirical criteria most recently in the CY 2010 OPPS/ASC proposed rule (74 FR 35240 through 35241). The empirical criteria have remained unchanged since first implemented because it has been our experience that they effectively limit the inappropriate redistribution of packaged costs when we create "pseudo" single procedure claims.

In examining the empirical data provided by commenters supporting their requests for additions to the bypass list, we believe that the research supporting these public comments applied the empirical criteria to all single claims rather than only to the "natural" single claims. We note that

this application of the empirical criteria is inconsistent with our methodology of generalizing about packaging in the multiple procedure claims from the “natural” single procedure claims. We do not believe that it would be appropriate to expand the bypass list by assuming that our packaging redistribution after application of the current bypass list should be used to identify additional candidates for the bypass list. Clearly comparing all single bills, not just “natural” single bills, would lead to the conclusion that many more codes are eligible for inclusion on the bypass list but could also compound any inappropriate cost redistribution created by the current “pseudo” single claim development process. The OPSS pays for individual items and services and some APCs do not contain many services and some of these services are low cost. Further, some payment rates are based on a small sample of single procedure claims. Because redistributing even a small amount of packaging could have a potentially large impact on median costs for small volume or low cost APCs, we believe our current empirical criteria and reliance on “natural” single procedure claims provide the most appropriate bypass policy.

Some commenters indicated that a packaged cost threshold based on a percentage of low packaged costs out of total costs for all single bills would be more appropriate. We believe that using a percentage could allow some significant packaged costs to be redistributed. Specifically, implementing this change to the empirical criteria could redistribute a low percentage of packaged cost out of total cost for all single bills to a very inexpensive service, leading to potential distortions in the APC relative weights. This would be contrary to one primary purpose of the empirical criteria, which is to limit the inappropriate redistribution of packaged costs in the bypass process. We also do not understand how adopting this policy would introduce greater stability. If the policy increased the size of the bypass list, it could introduce greater instability by inappropriately redistributing more variable packaged costs from year to year. With regard to the suggestion that we subtract an average packaged cost for the bypass code from each multiple procedure claim, we believe that this would inappropriately remove cost information from the claims used for ratesetting and assume that the removal of that average cost is appropriate in most cases.

While we are not adopting the commenters' suggested revisions to the

empirical criteria for the CY 2010 OPSS bypass list, we acknowledge that the \$50 median packaged cost threshold has not been updated for several years and that the real value of this packaged cost threshold criterion has declined due to inflation. Consequently, we will consider whether it would be appropriate to update the \$50 dollar packaged cost threshold for inflation when identifying potential bypass codes in future rulemaking.

The bypass list we used to calculate payment rates for this final rule with comment period omits 11 of the 14 HCPCS codes that we newly proposed to add to the bypass list for the CY 2010 OPSS. Although these 14 proposed codes met the empirical criteria for inclusion on the bypass list for CY 2010 and although we listed them in Table 1 of the proposed rule (74 FR 35242 through 35352), we inadvertently omitted them from the bypass list that we used to calculate the median costs and payment rates that we proposed for CY 2010. To ensure consistency between the proposed rule and the final rule with comment period, we began our modeling for this final rule with comment period using the same list of bypass codes that we used to create the median costs and payment rates that we proposed for CY 2010. Three proposed radiation oncology code additions are an exception to this approach. In this final rule with comment period, we are including these three proposed bypass codes both because they meet the empirical criteria and because commenters on the CY 2010 OPSS/ASC proposed rule specifically requested that we add them to the CY 2010 bypass list. These three codes are: CPT code 77300 (Basic radiation dosimetry, central axis depth dose calculation, TDF, NSD, gap calculation, off axis factor, tissue inhomogeneity factors, calculation of non-ionizing radiation surface and depth dose, as required during course of treatment, only when prescribed by the treating physician); CPT code 77331 (Special dosimetry (e.g., TLD, microdosimetry)(specify), only when prescribed by the treating physician); and CPT code 77370 (Special medical radiation physics consultation).

Thus, the bypass list that we used to calculate the payment rates in this final rule with comment period does not include 11 of the 14 codes proposed for inclusion on the CY 2010 bypass list. These 11 HCPCS codes are identified in Table 1 of this final rule with comment period. In response to commenters' requests that we document additions to the bypass list, we have included a column in the list of bypass codes in

Table 2 to identify additions for the CY 2010 update year, and we will continue to identify new additions in future rulemaking.

Comment: A few commenters noted that CMS removed radiation oncology HCPCS codes that did not meet the empirical criteria from the bypass list for the CY 2009 OPSS/ASC final rule with comment period. Observing that this action had an adverse effect on the median costs for those codes and services frequently billed with those codes, the commenters requested that a number of the radiation oncology CPT codes be added to the bypass list, including CPT codes 77295 (Therapeutic radiology simulation-aided field setting, 3-dimensional); 77299 (Unlisted procedure, therapeutic radiology clinical treatment planning); 77300 (Basic radiation dosimetry calculation, central axis depth dose calculation, TDF, NSD, gap calculation, off axis factor, tissue inhomogeneity factors, calculation of non-ionizing radiation surface and depth dose, as required during course of treatment, only when prescribed by treating physician); 77301 (Intensity modulated radiotherapy plan, including dose-volume histograms for target and critical structure partial tolerance specifications); 77310 (Teletherapy, isodose plan (whether hand or computer calculated); intermediate (three or more treatment ports directed to a single area of interest)); 77315 (Teletherapy, Isodose plan (whether hand or computer calculated); complex (mantle or inverted Y, tangential ports, the use of wedges, compensators, complex blocking, rotational beam, or special beam considerations)); 77327 (Brachytherapy isodose plan; intermediate (multiplane dosage calculations, application involving 5 to 10 sources/ribbons, remote afterloading brachytherapy, 9 to 12 sources)); 77328 (Brachytherapy isodose plan; complex (multiplane isodose plan, volume implant calculations, over 10 sources/ribbons used, special spatial reconstruction, remote afterloading brachytherapy, over 12 sources)); 77331 (Special dosimetry (e.g., TLD, microdosimetry) (specify), only when prescribed by the treating physician); 77336 (Continuing medical physics consultation, including assessment of treatment parameters, quality assurance of dose delivery, and review of patient treatment documentation in support of the radiation oncologist, reporter per week of therapy); 77370 (Special medical radiation physics consultation); 77371 (Radiation treatment delivery, stereotactic radiosurgery (SRS),

complete course of treatment of cranial lesion(s) consisting of 1 session; multi-source Cobalt 60 based); 77401 (Radiation treatment delivery, superficial and/or ortho voltage); 77470 (Special treatment procedure (e.g., total body irradiation, hemibody radiation, per oral, endocavitary or intraoperative cone irradiation)); 77600 (Hyperthermia, externally generated; superficial (i.e., heating to a depth of 4 cm or less)); 77783 (Remote afterloading high intensity brachytherapy; 9–12 source positions or catheters); and 77789 (Surface application of radiation source).

Response: Some of the HCPCS codes that commenters suggested that we add to the bypass list are already included on the bypass list for this final rule with comment period, including CPT codes 77301, 77315, 77336, and 77401. These codes met the empirical criteria in earlier years and, because of our policy to retain codes once they have been added to the bypass list, these codes continue on the bypass list. However, many of the codes that commenters requested for addition the CY 2010 bypass list do not meet the empirical criteria because the percentage of “natural” single procedure claims with packaging exceeds 5 percent and, for some, the low volume of “natural” single claims prevents us from making an accurate assessment about packaging in the multiple procedure claims. Most of these codes have a low packaged median cost in the “natural” single procedure claims.

We examined the billing patterns for these HCPCS codes in the multiple major claims to better understand the potential impact that adding the recommended codes that do not meet the empirical criteria to the bypass list might have on the redistribution of packaged costs. We specifically analyzed the amount of packaged cost on the same date of service as the suggested bypass codes and other codes in the same clinical series as the recommended bypass codes in the multiple procedure claims, as well as the number of other procedures appearing on the same date of service, the APCs associated with these procedures, and whether any of these other procedures were already included on the bypass list. For three codes, specifically CPT codes 77600 (Hyperthermia, externally generated; superficial (i.e. heating to a depth of 4cm or less)); 77605 (Hyperthermia, externally generated; deep (i.e. heating to depths greater than 4 cm)); and 77610 (Hyperthermia generated by interstitial probe(s); 5 or fewer interstitial applicators), we did not observe a

significant amount of additional packaging on the multiple procedure claims or many other services, so we believe that including these codes on the bypass list would result in a limited amount of redistributed packaged cost. Therefore, we added these three codes to the CY 2010 bypass list. We also observed packaged costs associated with CPT code 77327, but the amount was proportionally limited relative to the procedure costs on the same date of service, and we believe that we can appropriately add this code to the CY 2010 bypass list.

As discussed above in this section, we also are adding the radiation oncology codes that we proposed to include on the CY 2010 bypass list, specifically CPT codes 77300, 77331, and 77370, because these codes meet the empirical criteria, they were proposed for addition to the bypass list, and several commenters specifically requested these codes be included on the bypass list. However, several codes in the commenters’ suggested additions to the bypass list not only failed the empirical criteria in the “natural” single procedure claims, but also were associated with significant packaged costs proportional to the costs of the other procedures appearing on the same date of service and the presence of many other separately paid procedures. Most of this packaged cost on claims for the candidate bypass codes was reported as revenue code charges without HCPCS codes, and we could not ascertain whether some of the packaging should be associated with the suggested bypass code or with one of the many other procedures appearing on the same date of service in the multiple claims. Because we would be unable to allocate the packaged cost among services or to determine that it was not associated with the candidate bypass list code, we believe it would be inappropriate to add these HCPCS codes to the bypass list. Although previous commenters have suggested that packaging of radiation guidance services in CY 2008 reduced the number of claims available for setting payment rates for radiation oncology services, it is notable that only a small portion of the packaged costs on the claims for radiation oncology services could be attributed to the radiation guidance services. In summary, we are not adding CPT codes 77295, 77299, 77310, 77328, 77371, 77470, 77783, and 77789 to the final CY 2010 bypass list.

We always appreciate the empirical information that commenters submitted regarding their suggested additions to the bypass list. However, we note that, due to the redistributive properties of

the bypass list and our process for creating “pseudo” single procedure claims, we always must examine the redistributive impact of additions to the bypass list on all HCPCS code and APC median costs. Future recommendations from the public for additions to the bypass list should consider the global impact on APCs and HCPCS codes of changes to the bypass list in order to facilitate our evaluation of codes suggested for inclusion on the bypass list in the future.

Comment: Some commenters supported the inclusion of the HCPCS codes for additional hours of drug administration on the bypass list. In addition, several commenters requested that CPT 90768 (Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); concurrent infusion (List separately in addition to code for primary procedure)) be made separately payable and added to the bypass list to ensure consistent treatment of codes for additional hours of drug administration under the bypass list.

Response: We appreciate the commenters’ support and have continued to include the separately payable codes for additional hours of drug administration on the CY 2010 bypass list. Bypassing these drug administration codes, and associating all the packaging with the code for the initial hour of drug administration, enables us to use many correctly coded claims for initial drug administration services that would otherwise not be available for ratesetting. We did not include CPT 90768 on the CY 2010 bypass list because we proposed to unconditionally package its successor code (CPT code 96368 (Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); concurrent infusion (List separately in addition to code for primary procedure))) in CY 2010 and, therefore, CPT code 90768 is not a candidate for the bypass list. Our final CY 2010 policy to package payment for CPT code 96368 is discussed in section VIII.B. of this final rule with comment period.

As discussed above, the bypass list consists of separately paid services with no or minimal packaging or separately paid services that CMS knowingly prices without including packaged costs and associates any packaging with the other service(s) billed on the same date of service. The purpose of the bypass list is to help develop better estimates of total resource costs for a given separately payable procedure through creating “pseudo” single procedure claims from the multiple procedure claims by removing line-items without

packaging from each claim's date of service. Including packaged codes on the bypass list would remove valid packaging from a multiple procedure claim and would not allow CMS to derive more estimates of a service's total resource costs from multiple procedure claims. We have previously discussed our reasons for packaging CPT code 90768 in the CY 2009 OPPS/ASC final rule with final period (73 FR 68674).

Comment: Several commenters supported the inclusion of HCPCS code G0340 (Image-guided robotic linear accelerator-based stereotactic radiosurgery, delivery including collimator changes and custom plugging, fractionated treatment, all lesion, per session, second through fifth session, maximum) on the bypass list.

Response: We appreciate the commenters' support and have continued to include HCPCS code G0340 on the CY 2010 bypass list.

Comment: One commenter requested that CMS examine whether changes to the bypass list or other edits included in CMS' ratesetting processes negatively affected the proposed CY 2010 payment

rates for APC 0651 (Complex Interstitial Radiation Source Application) and composite APC 8001 (LDR Prostate Brachytherapy Composite).

Response: In analyzing the impact of the final CY 2010 bypass list changes on APCs 0651 and 8001, we noted modest changes in both single procedure claim frequency and median costs. In the case of composite APC 8001, bypass list changes increased the single procedure claims available for ratesetting purposes and reduced the median cost by roughly 2 percent. APC 0651 experienced a modest increase of 3 percent in the single procedure claims available for ratesetting and its median cost also increased by about 3 percent. Neither APC 0651 nor composite APC 8001 experienced significant fluctuations in median cost or single procedure claim frequency due to the line-item trim discussed in section II.A.2.(a) of this final rule with comment period.

After consideration of the public comments received, we are adopting, as final, our proposed methodology to use a bypass list to create "pseudo" single claims. To ensure consistency between

the CY 2010 proposed and final rules, we began our consideration of comments using the same list of bypass codes for this final rule with comment period that we used to calculate the median costs and payment rates that we proposed for CY 2010, which was the CY 2009 final rule bypass list. We added HCPCS codes to the CY 2010 bypass list based on whether they met the empirical criteria and, if they did not, whether we believe that the amount of redistributed packaged cost that their inclusion on the bypass list would generate would be appropriate. We ultimately added seven codes to the CY 2010 bypass list. The list of CY 2010 bypass code additions that we proposed in the CY 2010 OPPS/ASC proposed rule but did not implement in this final rule with comment period appears in Table 1. Table 2 below is the final list of bypass codes for CY 2010. "Overlap bypass codes" that are members of the multiple imaging composite APCs are identified by asterisks (*) in Table 2. HCPCS codes that have been added for CY 2010 are also identified by asterisks (*) in Table 2.

TABLE 1—PROPOSED CY 2010 BYPASS CODE ADDITIONS EXCLUDED FROM FINAL CY 2010 BYPASS LIST

CY 2010 HCPCS Code	CY 2010 Short descriptor
57452	Exam of cervix w/scope.
76120	Cine/video x-rays.
76813	Ob us nuchal meas, 1 gest.
88314	Histochemical stain.
88367	Insitu hybridization, auto.
92700	Ent procedure/service.
94660	Pos airway pressure, CPAP.
95971	Analyze neurostim, simple.
99406	Behav chng smoking 3–10 min.
99407	Behav chng smoking >10 min.
G0249	Provide INR test mater/equip.

BILLING CODE 4120-01-C

c. Calculation of CCRs

(1) Development of the CCRs

We calculated hospital-specific overall ancillary CCRs and hospital-specific departmental CCRs for each hospital for which we had CY 2008 claims data from the most recent available hospital cost reports, in most cases, cost reports beginning in CY 2007. For the CY 2010 OPPS ratesetting, we used the set of claims processed during CY 2008. We applied the hospital-specific CCR to the hospital's charges at the most detailed level possible, based on a revenue code-to-cost center crosswalk that contains a hierarchy of CCRs used to estimate costs from charges for each revenue code. That crosswalk is available for review

and continuous comment on the CMS Web site at: http://www.cms.hhs.gov/HospitalOutpatientPPS/03_crosswalk.asp#TopOfPage. We calculated CCRs for the standard and nonstandard cost centers accepted by the electronic cost report database. In general, the most detailed level at which we calculated CCRs was the hospital-specific departmental level. For a discussion of the hospital-specific overall ancillary CCR calculation, we refer readers to the CY 2007 OPPS/ASC final rule with comment period (71 FR 67983 through 67985).

In the CY 2010 OPPS/ASC proposed rule (74 FR 35253), we proposed to continue using the hospital-specific overall ancillary and departmental CCRs to convert charges on the claims reported under specific revenue codes

to estimated costs through application of a revenue code-to-cost center crosswalk for CY 2010.

We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal for CY 2010, without modification, to calculate hospital-specific overall and departmental CCRs as described above in this section.

(2) Charge Compression

Since the implementation of the OPPS, some commenters have raised concerns about potential bias in the OPPS cost-based weights due to "charge compression," which is the practice of applying a lower charge markup to higher-cost services and a higher charge markup to lower-cost services. (We discuss our CCR calculation in section

II.A.1.c. of this final rule with comment period and how we use these CCRs to estimate cost on hospital outpatient claims in detail in section II.A.2.a. of this final rule with comment period). As a result, the cost-based weights incorporate aggregation bias, undervaluing high cost items and overvaluing low cost items when an estimate of average markup, embodied in a single CCR, is applied to items of widely varying costs in the same cost center. Commenters on previous rules have expressed increased concern about the impact of charge compression when CMS began setting the relative weights for payment under the IPPS based on the costs of inpatient hospital services, rather than the charges for the services.

To explore this issue, in August 2006 we awarded a contract to RTI International (RTI) to study the effects of charge compression in calculating the IPPS relative weights, particularly with regard to the impact on inpatient diagnosis-related group (DRG) payments, and to consider methods to capture better the variation in cost and charges for individual services when calculating costs for the IPPS relative weights across services in the same cost center. Of specific note was RTI's analysis of a regression-based methodology estimating an average adjustment for CCR by type of revenue code from an observed relationship between provider cost center CCRs and proportional billing of high and low cost services in the revenue codes associated with the cost center in the claims data. RTI issued a report in March 2007 with its findings on charge compression. The report is available on the CMS Web site at: <http://www.cms.hhs.gov/reports/downloads/Dalton.pdf>. Although this report was focused largely on charge compression in the context of the IPPS cost-based relative weights, several of the findings were relevant to the OPSS. Therefore, we discussed the findings and our responses to that report in the CY 2008 OPSS/ASC proposed rule (72 FR 42641 through 42643) and reiterated them in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66599 through 66602).

RTI noted in its 2007 report that its research was limited to IPPS DRG cost-based weights and that it did not examine potential areas of charge compression specific to hospital outpatient services. We were concerned that the analysis was too limited in scope because typically hospital cost report CCRs encompass both inpatient and outpatient services for each cost center. Further, because both the IPPS and OPSS rely on cost-based weights, we preferred to introduce any

methodological adjustments to both payment systems at the same time. We believe that because charge compression affects the cost estimates for services paid under both IPPS and OPSS in the same way, it is appropriate that we would use the same or, at least, similar approaches to address the issue. Finally, we noted that we wished to assess the educational activities being undertaken by the hospital community to improve cost reporting accuracy in response to RTI's findings, either as an adjunct to or in lieu of regression-based adjustments to CCRs.

We expanded RTI's analysis of charge compression to incorporate outpatient services. In August 2007, we again contracted with RTI. Under this contract, we asked RTI to evaluate the cost estimation process for the OPSS relative weights. This research included a reassessment of the regression-based CCR models using hospital outpatient and inpatient charge data, as well as a detailed review of the OPSS revenue code-to-cost center crosswalk and the OPSS' hospital-specific CCR methodology. In evaluating cost-based estimation, in general, the results of RTI's analyses impact both the OPSS APC relative weights and the IPPS MS-DRG (Medicare severity) relative weights. The RTI final report can be found on RTI's Web site at: http://www.rti.org/reports/cms/HHSM-500-2005-00291/PDF/Refining_Cost_to_Charge_Ratios_200807_Final.pdf. For a complete discussion of the RTI recommendations, public comments, and our responses, we refer readers to the CY 2009 OPSS/ASC final rule with comment period (73 FR 68519 through 68527).

In the FY 2009 IPPS final rule, we finalized our proposal for both the OPSS and IPPS to add one cost center to the cost report so that, in general, the costs and charges for relatively inexpensive medical supplies would be reported separately from the costs and charges for more expensive implantable devices (such as pacemakers and other implantable devices). Specifically, we created one cost center for "Medical Supplies Charged to Patients" and one cost center for "Implantable Devices Charged to Patients." This change split the CCR for "Medical Supplies and Equipment" into one CCR for medical supplies and another CCR for implantable devices. In response to the majority of commenters on the proposal set forth in the FY 2009 IPPS proposed rule, we finalized a definition of the "Implantable Devices Charged to Patients" cost center as capturing the costs and charges billed with the following UB-04 revenue codes: 0275

(Pacemaker), 0276 (Intraocular lens), 0278 (Other implants), and 0624 (FDA investigational devices). We made this change to the cost report form for cost reporting periods beginning in the spring of 2009. Because there is generally a 3-year lag between the availability of cost report data for IPPS and OPSS ratesetting purposes in a given calendar year, we believe we will be able to use data from the revised cost report form to estimate costs from charges associated with UB-04 revenue codes 0275, 0276, 0278, and 0624 for implantable devices in order to more accurately estimate the costs of device-related procedures for the CY 2013 OPSS relative weights. For a complete discussion of the proposal, public comments, and our responses, we refer readers to the FY 2009 IPPS final rule (73 FR 48458 through 45467).

For the CY 2009 OPSS/ASC proposed rule, we made a similar proposal for drugs, proposing to split the "Drugs Charged to Patients" cost center into two cost centers: one for drugs with high pharmacy overhead costs and one for drugs with low pharmacy overhead costs (73 FR 41492). We noted that we expected that CCRs from the proposed new cost centers would be available in 2 to 3 years to refine OPSS drug cost estimates by accounting for differential hospital markup practices for drugs with high and low pharmacy overhead costs. However, after consideration of the public comments received and the APC Panel recommendations, we did not finalize our proposal to split the single standard "Drugs Charged to Patients" cost center into two cost centers, and instead indicated in the CY 2009 OPSS/ASC final rule with comment period (73 FR 68659) that we would continue to explore other potential approaches to improve our drug cost estimation methodology. Unlike implantable devices, we do not currently have a policy to address charge compression in our cost estimation for expensive drugs and biologicals. In section V.B.3. of the CY 2010 OPSS/ASC proposed rule (74 FR 35326 through 35333), we proposed an adjustment to our cost estimation methodology for drugs and biologicals to address charge compression by proposing to shift a portion of the pharmacy overhead cost associated with packaged drugs and biologicals from those packaged drugs and biologicals to separately payable drugs and biologicals; proposing payment for separately payable drugs and biologicals at ASP+4 percent; and proposing a proportional reduction in the total amount of pharmacy overhead cost

associated with packaged drugs and biologicals prior to our estimating the total resource costs of individual OPSS services.

Finally, in the CY 2009 OPSS/ASC final rule with comment period, we indicated that we would be making some OPSS-specific changes in response to the RTI report recommendations. With regard to modifying the cost reporting preparation software in order to impose fixed descriptions for nonstandard cost centers, we indicated that the change would be made for the next release of the cost report software. We anticipate that these changes will be made to the cost reporting software in CY 2010 and will act as a quality check for hospitals to review their choice of nonstandard cost center code to ensure that the reporting of nonstandard cost centers is accurate, while not significantly increasing provider burden. In addition to improving the reporting mechanism for the nonstandard cost centers, we indicated in the CY 2009 OPSS/ASC final rule with comment period that we also planned to add the new nonstandard cost centers for Cardiac Rehabilitation, Hyperbaric Oxygen Therapy, and Lithotripsy. We expect that changes to add these nonstandard cost centers also will be made for cost reports beginning in CY 2010. Furthermore, we noted in the FY 2010 IPPS final rule (74 FR 43781 through 43782) that we are updating the cost report form to eliminate outdated requirements, in conjunction with the Paperwork Reduction Act (PRA), and that we had proposed actual changes to the cost reporting form, the attending cost reporting software, and the cost report instructions in Chapters 36 and 40 of the PRM-II. The comment period for this proposal (74 FR 31738) ended on August 31, 2009. We believe that improved cost report software, the incorporation of new nonstandard cost centers, and elimination of outdated requirements will improve the accuracy of the cost data contained in the electronic cost report data files and, therefore, the accuracy of our cost estimation processes for the OPSS relative weights. As has been described above, CMS has taken steps to address charge compression in the IPPS and OPSS, and continues to examine ways in which it can improve the accuracy of its cost estimation process.

Comment: Several commenters expressed support for the policy adopted in the FY 2009 IPPS final rule, with application to both the OPSS and IPPS, to create one cost center for "Medical Supplies Charged to Patients" and one cost center for "Implantable

Devices Charged to Patients." Some commenters recommended that CMS verify the accuracy of the CCRs derived from the new cost centers by comparing CCRs calculated from the new cost center against regression-based CCRs or by undertaking other activities to ensure that data reported in these revised cost centers are consistent and accurate.

One commenter stated that hospitals are reluctant to bill for devices that do not remain in the patient upon discharge, specifically cryoablation probes, under revenue code 0278 (*Medical/Surgical Supplies: Other Implants*). The commenter requested that CMS work with hospitals to revise the common hospital practice of billing for cryoablation probes under revenue code 0272 (*Medical/Surgical Supplies: Sterile Supplies*) rather than revenue code 0278. The commenter asserted that billing cryoablation probes under revenue code 0272 would result in estimating costs from charges using a CCR derived from the revised cost center for "Medical Supplies Charged to Patients," rather than one derived from the "Implantable Devices Charged to Patients," even though cryoablation probes are high cost implantable devices. The commenter believed that, without a change in the revenue code under which many hospitals report cryoablation probes, the recent cost center changes for medical supplies would negatively bias the estimated cost of cryoablation probes and the accuracy of the APC payment rates for cryoablation procedures.

Some commenters suggested that CMS engage in outreach and educational activities to hospitals on the changes to the cost report and the reporting of charges with respect to the medical device and medical supply cost centers so that hospitals can appropriately report data. The commenters recommended that the outreach activities go beyond the "distribution of bulletins that are used to inform providers about changes to the Medicare program."

Response: We appreciate the commenters' support for our CY 2009 policy to split the "Medical Supplies Charged to Patients" into one cost center for "Medical Supplies Charged to Patients" and one cost center for "Implantable Devices Charged to Patients". In the FY 2009 IPPS final rule (73 FR 48458 through 48467), we explained in detail the reasoning behind the development of the cost center split and our decision to ultimately have hospitals use the American Hospital Association's National Uniform Billing Committee (NUBC) revenue codes to determine what would be reported in

the "Medical Supplies Charged to Patients" and the "Implantable Devices Charged to Patients" cost centers. In that discussion, we noted that while we require that the device broadly be considered implantable to have its costs and charges included in the new "Implantable Devices Charged to Patients" cost center, our final policy did not require the device to remain in the patient at discharge (73 FR 48462 through 48463). We typically do not specify a revenue code-to-cost center crosswalk that hospitals must adopt to prepare their cost report, recognizing hospitals' need to interpret the NUBC definitions and cost reporting requirements within the context of their own financial systems. In response to comments on our proposal to create the new cost center in the FY 2009 IPPS final rule, we did define the new "Implantable Devices Charged to Patients" cost center by the revenue codes that we believe would map to this cost center to facilitate ease of reporting by hospitals. We note that revenue code definitions are established by the NUBC, and we fully expect hospitals to follow existing guidelines regarding revenue code use. Specifically with regard to reporting cryoablation probes, we do not believe that the current NUBC definition of revenue code 0278 (*Medical/Surgical Supplies and Devices* (also see 062x, an extension of 027x); *Other implants* (a)) precludes reporting hospital charges for cryoablation probes under this revenue code. Therefore, we believe hospitals can report charges for cryoablation probes under the revenue code 0278 using the definitions in the official UB 04 Data Specifications Manual.

As discussed in the FY 2010 IPPS final rule (74 FR 43780), we reiterated that we had not proposed any policy changes with respect to the use of revenue codes or alternative ways of identifying high-cost devices. We refer readers to the discussion in the FY 2009 IPPS final rule concerning our current policy on these matters (73 FR 48462). Hospitals were able to report costs and charges for the new "Implantable Devices Charged to Patients" cost center for cost reporting periods beginning on or after May 1, 2009 as line 55.30 on Form 2552-96 and, at the time of development of this final rule with comment period, we anticipate that hospitals will be able to report costs and charges for the new cost center as line 69 on the revised draft Medicare hospital cost report form CMS-2552-10 beginning February 1, 2010.

In the FY 2009 IPPS final rule (73 FR 48463), we agreed that once the data reflecting the cost center changes become available for ratesetting, we

would evaluate the CCRs that we derive from the new “Medical Supplies Charged to Patients” and “Implantable Devices Charged to Patients” cost centers and that we would continue to analyze cost report data. In the FY 2010 IPPS final rule (74 FR 43782), we indicated that we might consider the results of regression analyses as one way to evaluate costs and charges reported in the new cost center. However, we point out that we do not believe it is appropriate to “pick and choose” between CCRs; rather, the determining factor should be payment accuracy, regardless of whether one method increases or decreases payment for devices (73 FR 48463). That is, the validity of the CCRs resulting from the newly implemented cost center cannot be determined to be accurate simply because they will result in higher overall cost estimates for procedures that rely on implantable devices and, therefore, higher APC payment rates.

As discussed in the FY 2010 IPPS rule, we believe it is early to plan specific outreach activities on the revised cost report form CMS-2552-10 and the new “Implantable Devices Charged to Patients” cost center, given that the comment period for the revised cost reporting forms closed on August 31, 2009. We agree that such educational activities are important, and we have been considering various options for educating the provider community that would involve fiscal intermediaries, Medicare administrative contractors, and cost report vendors. We look forward to working with the provider community on these initiatives.

Comment: A few commenters noted that two revenue codes became effective for reporting radiopharmaceuticals, specifically 0343 (Nuclear Medicine; Diagnostic Radiopharmaceuticals) for diagnostic preparations and 0344 (Nuclear Medicine; Therapeutic Radiopharmaceuticals) for therapeutic preparations in October 2004; and that this more specific revenue code reporting should help capture the unique costs and charges of radiopharmaceuticals. The commenters also pointed out that the costs and charges associated with these revenue codes likely would be reported by hospitals under the broader radiology cost center on the Medicare hospital cost report. They expressed concern that, because the CCR used to estimate charges for these revenue codes encompasses a large volume of many different services, the specificity of charge information in the claims data gained through use of the new revenue codes would not translate into better

cost estimation for diagnostic and therapeutic radiopharmaceuticals under the OPSS. The commenters suggested that CMS require hospitals to report costs and charges for these two revenue codes as unique cost centers on the cost report.

Response: We agree with the commenters that the broader the range and volume of services included in a given cost center, the more the resulting CCR calculated from the costs and charges for that cost center represents a weighted average of included services. To the extent that the revenue codes implemented in October 2004, specifically 0343 (Nuclear Medicine; Diagnostic Radiopharmaceuticals) for diagnostic preparations and 0344 (Nuclear Medicine; Therapeutic Radiopharmaceuticals) for therapeutic preparations, have no specific associated cost center in which to capture their unique costs and charges and to the extent hospitals report these costs and charges in cost center 4100 “Radiology—Diagnostic” or 4200 “Radiology—Therapeutic,” the CCRs for cost centers 4100 and 4200 that CMS uses to estimate costs from charges on claims for specific radiopharmaceuticals will reflect the average cost and markup associated with all diagnostic and therapeutic radiology procedures. However, our policy for establishing new cost centers requires a public review process that allows commenters the opportunity to provide input on any changes, and many commenters historically have not been interested in adding cost centers to the cost report because of the associated hospital administrative burden.

As we have noted above, we have recently undertaken regulatory comment and response on our effort to update the cost report. The proposed draft hospital cost report Form CMS-2552-10 went on **Federal Register** public display at the Office of the Federal Register on July 2, 2009, for a 60-day review and comment period, which ended on August 31, 2009. As we stated in the CY 2009 OPSS/ASC final rule with comment period (73 FR 68525 through 68526), that notice and comment procedure is the process by which we are considering public comments requesting additional cost centers. We will consider all comments for new cost centers submitted through that process as we work to improve and modify the hospital cost report. We also note that we make the revenue code-to-cost center crosswalk that we use to match Medicare hospital cost report information with claims data continually available for inspection and comment on the CMS Web site: [\[www.cms.hhs.gov/HospitalOutpatientPPS\]\(http://www.cms.hhs.gov/HospitalOutpatientPPS\).](http://</p></div><div data-bbox=)

Comment: One commenter believed that the proposed drug cost center split discussed in the CY 2009 OPSS/ASC proposed rule would represent an unnecessary burden for hospitals.

Response: While we welcome comments regarding OPSS policy, we note that the drug cost center proposal was a CY 2009 proposal which was not finalized (73 FR 68654 through 68657). We have not proposed a policy to split the drug cost center for CY 2010.

Comment: One commenter requested that CMS issue clarifying instructions for reporting computed tomography (CT) and magnetic resonance imaging (MRI) equipment and supported the creation of new cost centers to capture the unique costs and charges of CT scanning, MRI, and other radiology procedures.

Response: We did not propose to implement separate standard radiology cost centers for CT Scanning, MRI, and other radiology procedures due to the significant number of comments we received in response to our general request in the CY 2009 OPSS/ASC proposed rule for comments and reactions to RTI’s recommendations. The commenters on the CY 2009 OPSS/ASC proposed rule were generally in favor of these cost centers in theory, but suggested that the allocation of capital cost across these cost centers was not consistent or consistently accurate across hospitals and that smaller hospitals might not have sufficiently sophisticated accounting systems to accurately allocate costs (73 FR 68526). In that discussion, we expressed our preference for establishing these cost centers as standard cost centers because standard cost centers constitute the minimum set of cost centers that a hospital is required to report, assuming that the hospital maintains separate departments for those services and reports the costs and charges for these departments in separate accounts within its own internal accounting systems. We believe this step would improve the accuracy of radiology payment by encouraging greater and more consistent reporting of the costs and charges specifically associated with advanced imaging services. However, we also noted that nonstandard cost centers already are available for CT Scanning and MRI and that hospitals that provide these services and maintain a separate account for each of these services in their internal accounting records to capture the costs and charges are currently required, in accordance with § 413.53(a)(1), to report these cost centers on the cost report, even if CMS

does not identify a nonstandard cost center code for the department(s).

As we stated in the CY 2009 OPPS/ASC final rule with comment (73 FR 68525 through 68526) and in response to an earlier comment in this section, we will consider public comments requesting additional cost centers in response to the PRA **Federal Register** notice for the proposed draft cost report form CMS–2552–10. The comment period for this proposal ended August 31, 2009.

Comment: A few commenters expressed concern about the timing for implementing the nonstandard cost center for cardiac rehabilitation, suggesting that a delay could limit beneficiary access to cardiac rehabilitation services because the proposed CY 2010 payment was too low. The commenters noted that the new CCRs would not be available for setting OPPS payment rates until CY 2013.

Response: While we understand the commenters' concern regarding the timing of implementing the cardiac rehabilitation nonstandard cost center, in our CY 2009 OPPS/ASC final rule with comment period discussion (73 FR 68524), we explained our preference for improving the accuracy of the APC relative weights through long-term changes to the cost report rather than implementing short-term statistical adjustments, in order to ensure that actual hospital data are used to set payment rates. As discussed above, we currently anticipate we will implement new nonstandard cost centers for Cardiac Rehabilitation, Hyperbaric Oxygen Therapy, and Lithotripsy with the revised Medicare hospital cost report form in CY 2010.

We have approximately 2.5 million CY 2008 claims from almost 2,000 hospitals for cardiac rehabilitation sessions available for setting the CY 2010 payment rates for these services. Given that the OPPS payment for the services has been highly stable for the past several years, we have no reason to believe that Medicare beneficiaries' access to cardiac rehabilitation will be limited in CY 2010 based on the final OPPS payment rates for the services. Further discussion of CY 2010 payment for traditional and intensive cardiac rehabilitation services is included in section XII.B. of this final rule with comment period.

Comment: One commenter believed that CMS continues to expand and complicate the antiquated Medicare cost report rather than to design a helpful tool. The commenter believes that the current "piecemeal" approach to revising the cost report is costly and

burdensome. Based on that impression, the commenter recommended that CMS partner with the hospital industry to consider more comprehensive changes to the cost report.

Response: In the FY 2009 IPPS proposed and final rules (73 FR 23546 and 73 FR 48461) and CY 2009 OPPS/ASC proposed rule and final rule with comment period (73 FR 41431 and 73 FR 68526), we stated that we began a comprehensive review of the Medicare hospital cost report, and splitting the current cost center for "Medical Supplies Charged to Patients" into one line for "Medical Supplies Charged to Patients" and another line for "Implantable Devices Charged to Patients" is part of that initiative to update and revise the cost report. We also explained that in the context of the effort to update the cost report and eliminate outdated requirements, we would make changes to the cost report form and cost report instructions that would be available to the public for comment. Thus, the public would have an opportunity to suggest the more comprehensive reforms that one commenter on the CY 2010 OPPS/ASC proposed rule advocates. Similarly, the public would be able to offer suggestions for ensuring that these reforms are made in a manner that is not disruptive to hospitals' billing and accounting systems, and within the guidelines of General Accepted Accounting Principles (GAAP), which are consistent with the Medicare principles of reimbursement and sound accounting practices. The proposed draft hospital cost report Form CMS–2552–10 went on **Federal Register** public display at the Office of the Federal Register on July 2, 2009, for a 60-day review and comment period, which ended on August 31, 2009. We will consider comments from the public as we work to improve and modify the hospital cost report. The cost center for "Implantable Devices Charged to Patients" is available for use for cost reporting periods beginning on or after May 1, 2009. The revised hospital cost report Form CMS–2552–10 will be effective for cost reporting periods beginning on or after February 1, 2010 (74 FR 43781 through 43782).

2. Data Development Process and Calculation of Median Costs

In this section of this final rule with comment period, we discuss the use of claims to calculate final OPPS payment rates for CY 2010. The hospital OPPS page on the CMS Web site on which this final rule with comment period is posted provides an accounting of claims used in the development of the final

payment rates at: <http://www.cms.hhs.gov/HospitalOutpatientPPS>. The accounting of claims used in the development of this final rule with comment period is included on the CMS Web site under supplemental materials for the CY 2010 OPPS/ASC final rule with comment period. That accounting provides additional detail regarding the number of claims derived at each stage of the process. In addition, below in this section we discuss the file of claims that comprise the data set that is available for purchase under a CMS data use agreement. Our CMS Web site, <http://www.cms.hhs.gov/HospitalOutpatientPPS>, includes information about purchasing the "OPPS Limited Data Set," which now includes the additional variables previously available only in the OPPS Identifiable Data Set, including ICD–9–CM diagnosis codes and revenue code payment amounts. This file is derived from the CY 2008 claims that were used to calculate the final payment rates for the CY 2010 OPPS.

As proposed, we used the methodology described in sections II.A.2.b. through e. of this final rule with comment period to establish the relative weights used in calculating the final OPPS payment rates for CY 2010 shown in Addenda A and B to this final rule with comment period.

a. Claims Preparation

For the CY 2010 OPPS/ASC proposed rule, we used the CY 2008 hospital outpatient claims processed before January 1, 2009 to calculate the median costs of APCs, which in turn are used to set the proposed relative weights for CY 2010. To begin the calculation of the relative weights for CY 2010, we pulled all claims for outpatient services furnished in CY 2008 from the national claims history file. This is not the population of claims paid under the OPPS, but all outpatient claims (including, for example, critical access hospital (CAH) claims and hospital claims for clinical laboratory services for persons who are neither inpatients nor outpatients of the hospital). In the discussion that follows, we have updated the information to reflect the claims available for this final rule with comment period, specifically CY 2008 claims processed through June 30, 2009.

We then excluded claims with condition codes 04, 20, 21, and 77. These are claims that providers submitted to Medicare knowing that no payment would be made. For example, providers submit claims with a condition code 21 to elicit an official denial notice from Medicare and

document that a service is not covered. We then excluded claims for services furnished in Maryland, Guam, the U.S. Virgin Islands, American Samoa, and the Northern Mariana Islands because hospitals in those geographic areas are not paid under the OPSS.

We divided the remaining claims into the three groups shown below. Groups 2 and 3 comprise the 107 million claims that contain hospital bill types paid under the OPSS.

1. Claims that were not bill types 12X, 13X (hospital bill types), 14X (laboratory specimen bill types), or 76X (CMHC bill types). Other bill types are not paid under the OPSS and, therefore, these claims were not used to set OPSS payment.

2. Claims that were bill types 12X, 13X or 14X. Claims with bill types 12X and 13X are hospital outpatient claims. Claims with bill type 14X are laboratory specimen claims, of which we use a subset for the limited number of services in these claims that are paid under the OPSS.

3. Claims that were bill type 76X (CMHC). (These claims are later combined with any claims in item 2 above with a condition code 41 to set the per diem partial hospitalization rates determined through a separate process.)

To convert charges on the claims to estimated cost, we needed to multiply those charges by the CCR associated with each revenue code as discussed in section II.A.1.c.(1) of this final rule with comment period. For the CCR calculation process, we used the same general approach that we used in developing the final APC rates for CY 2007, using the revised CCR calculation that excluded the costs of paramedical education programs and weighted the outpatient charges by the volume of outpatient services furnished by the hospital. We refer readers to the CY 2007 OPSS/ASC final rule with comment period for more information (71 FR 67983 through 67985). We first limited the population of cost reports to only those for hospitals that filed outpatient claims in CY 2008 before determining whether the CCRs for such hospitals were valid.

We then calculated the CCRs for each cost center and the overall ancillary CCR for each hospital for which we had claims data. We did this using hospital-specific data from the Hospital Cost Report Information System. We used the most recent available cost report data, in most cases, cost reports with cost reporting periods beginning in CY 2007. As proposed, for this final rule with comment period, we used the most recently submitted cost reports to

calculate the CCRs to be used to calculate median costs for the final CY 2010 OPSS payment rates. If the most recent available cost report was submitted but not settled, we looked at the last settled cost report to determine the ratio of submitted to settled cost using the overall ancillary CCR, and we then adjusted the most recent available submitted but not settled cost report using that ratio. We then calculated both an overall ancillary CCR and cost center-specific CCRs for each hospital. We used the overall ancillary CCR referenced in section II.A.1.c.(1) of this final rule with comment period for all purposes that require use of an overall ancillary CCR.

We then flagged CAH claims, which are not paid under the OPSS, and claims from hospitals with invalid CCRs. The latter included claims from hospitals without a CCR; those from hospitals paid an all-inclusive rate; those from hospitals with obviously erroneous CCRs (greater than 90 or less than .0001); and those from hospitals with overall ancillary CCRs that were identified as outliers (3 standard deviations from the geometric mean after removing error CCRs). In addition, we trimmed the CCRs at the cost center (that is, departmental) level by removing the CCRs for each cost center as outliers if they exceeded ± 3 standard deviations from the geometric mean. We used a four-tiered hierarchy of cost center CCRs, which is the revenue code-to-cost center crosswalk, to match a cost center to every possible revenue code appearing in the outpatient claims that is relevant to OPSS services, with the top tier being the most common cost center and the last tier being the default CCR. If a hospital's cost center CCR was deleted by trimming, we set the CCR for that cost center to "missing" so that another cost center CCR in the revenue center hierarchy could apply. If no other cost center CCR could apply to the revenue code on the claim, we used the hospital's overall ancillary CCR for the revenue code in question. For example, if a visit was reported under the clinic revenue code but the hospital did not have a clinic cost center, we mapped the hospital-specific overall ancillary CCR to the clinic revenue code. The revenue code-to-cost center crosswalk is available for inspection and comment on the CMS Web site: <http://www.cms.hhs.gov/HospitalOutpatientPPS>. Revenue codes not used to set medians or to model impacts are identified with an "N" in the revenue code-to-cost center crosswalk.

As we proposed, we updated the revenue code-to-cost center crosswalk to

more accurately reflect the current use of revenue codes. We indicated in the CY 2009 OPSS/ASC final rule with comment period (73 FR 68531) that we intended to assess the NUBC revenue codes to determine whether any changes to the list of packaged revenue codes should be proposed for the CY 2010 OPSS. We expanded this evaluation to review all revenue codes in the revenue code-to-cost center crosswalk that we have used for OPSS ratesetting purposes in recent years against the CY 2008 NUBC definitions of revenue codes in place for CY 2008. As a result of that review, we proposed to revise the revenue code-to-cost center crosswalk as described in Table 2 of the CY 2010 OPSS/ASC proposed rule (74 FR 35256 through 35261).

Comment: Two commenters specifically addressed the proposed OPSS treatment of a number of revenue codes for CY 2010 and submitted identical, detailed recommendations. In general, the commenters agreed with the proposed treatment of revenue codes 0253 (Pharmacy; Take Home Drugs); 0290 (Durable Medical Equipment (other than renal); General Classification); 0291 (Durable Medical Equipment; Rental); 0292 (Durable Medical Equipment; Purchase of New DME); 0293 (Durable Medical Equipment; Purchase of Used DME); 0294 (Durable Medical Equipment; Supplies/Drugs for DME); 052x (Free-Standing Clinic; All Classifications); 066X (Respite Care; All Classifications); 0749, 0759, 0779, 0799, and 0910 (All Reserved); and 0948 (Other Therapeutic Services—Pulmonary Rehabilitation). The commenters disagreed with the proposed treatment of the revenue codes as displayed in Table 3 below, which provides the commenters' perspective on each revenue code.

Response: Specifically, our revenue proposal addressed: (1) Acknowledging that costs estimated from charges are associated with specific revenue codes when calculating OPSS payment rates; (2) identifying the appropriate cost center CCR that should be used to estimate costs for certain revenue codes; and (3) packaging of revenue center costs into the costs of separately paid procedures when revenue charges are reported without a HCPCS code. The commenters addressed some revenue codes that were explicitly identified and discussed in the CY 2010 OPSS/ASC proposed rule (74 FR 35256 through 35266), as well as some additional revenue codes. Table 3 below displays our response to each area where the commenters disagreed with our proposed treatment of the revenue code.

We note that we continually make our review and comment, and we welcome revenue code-to-cost center crosswalk available on the CMS Web site for

further comments on the crosswalk from the public at any time.

BILLING CODE 4120-01-P

TABLE 3.--COMMENTS AND RESPONSES ON CMS TREATMENT OF REVENUE CODES TO WHICH COMMENTERS OBJECTED

Revenue Code	Public Comment	CMS Response
0273 (Medical/Surgical Supplies and Devices; Take Home Supplies)	The commenters disagreed that estimated costs associated with 0273 should be included in OPPS ratesetting and, more specifically, disagreed that CMS should package the costs for revenue code 0273 when it appears without a HCPCS code because to do so would not be consistent with the exclusion and absence of packaging for revenue code 0253 (Pharmacy - Take Home Drugs).	We agree and will exclude the costs estimated from charges reported under revenue code 0273. We have removed revenue code 0273 from the final CY 2010 packaged revenue code list.
0274 (Medical/Surgical Supplies and Devices; Prosthetic/Orthotic Devices)	The commenters indicated that nonimplantable prosthetics/orthotics are not covered under the OPPS and that if CMS excludes charges reported under revenue codes 0290 (Durable Medical Equipment) and 0292 (Purchase of new DME), CMS should also exclude charges reported under revenue code 0274.	We disagree. The definition of revenue code 0274 for CY 2008 (the year on which the CY 2010 claims data are based) is not limited to nonimplantable prosthetics/orthotics. Therefore, it is possible that a hospital would report charges for implantable prosthetic devices under this revenue code and it would be appropriate to include those charges in the calculation of payments under the OPPS.

Revenue Code	Public Comment	CMS Response
0299 (Durable Medical Equipment; Other Equipment)	The commenters claimed that costs estimated from charges reported under revenue code 0299 should not be considered in OPSS ratesetting and agreed that estimated costs associated with revenue code 0299 should be excluded from the packaged revenue code list because the commenter asserted that all costs estimated from charges reported with DME revenue codes should be excluded from OPSS ratesetting in general.	We disagree. We will continue to recognize costs estimated from charges reported under revenue code 0299 because we believe that hospitals may infrequently report charges for DME used to care for hospital outpatients under this revenue code. We note that for CY 2007, hospitals reported approximately \$1,700 in total charges under this revenue code.
030X (Laboratory; All Classifications)	The commenters objected to the inclusion of costs estimated from charges reported under revenue code 030X in the OPSS ratesetting methodology because they believe that these charges are attributable to services paid under the clinical laboratory fee schedule.	We disagree and will continue to recognize costs estimated from charges reported with revenue code 030X because clinical pathology services that are paid under the OPSS are sometimes reported under this revenue code. To disallow charges under this revenue code would exclude valid cost estimates for services that are paid under the OPSS.
0500 (Outpatient Services; General Classification)	The commenters disagreed with the current exclusion of revenue code 0500 because the commenters believe that exclusion of charges under this revenue code may exclude charges for Part B inpatients that are covered under the OPSS when those patients have exhausted their Part A benefit.	We disagree and will exclude this revenue code from the OPSS because Medicare's longstanding policy is not to recognize this revenue code for Medicare payment (Medicare Claims Processing Manual 100-04, Chapter 25).

Revenue Code	Public Comment	CMS Response
0509 (Outpatient Services; Other Outpatient)	The commenters disagreed with the exclusion of revenue code 0509 because the commenters believe that exclusion of charges under this revenue code may exclude charges for Part B inpatients that are covered under the OPSS when those patients have exhausted their Part A benefit.	We disagree that charges for revenue code 0509 would be for services for inpatients receiving covered part B services. This revenue code is for services provided to outpatients, and inpatients are not outpatients. Without additional rationale, we are unwilling to include estimated costs associated with this revenue code.
056X (Home Health (hh) Medical Social Services; All Classifications)	The commenters agreed that these codes should not be allowed for the OPSS and recommended for that reason they should be excluded from the packaged revenue code list.	We agree and will remove them from the packaged revenue code list. We note that because we excluded charges reported under these revenue codes from OPSS, there were no costs to package, regardless of whether they were on the packaged revenue code file.

Revenue Code	Public Comment	CMS Response
0623 (Medical/surgical Supplies – Extension of 027X; Surgical Dressings)	The commenters disagreed with the proposal to include costs estimated from charges for revenue code 0623 in OPSS ratesetting and the proposal to add this revenue code to the list of packaged revenue codes because the commenters believe that Medicare instructions require items billed under this revenue code to be paid based on the DMEPOS fee schedule. The commenter stated that if CMS excludes DME charges under revenue codes 0290 and 0292, then for consistency, CMS should also exclude charges for surgical supplies under revenue code 0623.	We do not believe that this revenue code contains only implantable DME items, unlike revenue codes 0290 and 0292. In particular, the instructions in the NUBC Data Specifications Manual and the Medicare Claims Processing Manual (100-04; Chapter 25) identify revenue codes in the 062X series as being an extension of the revenue code 027X series (medical supplies). Further, we are unable to identify instructions that require CMS to pay for items charged under revenue code 0623 through the DMEPOS fee schedule. Therefore, we will recognize costs estimated from charges associated with revenue code 0623 for ratesetting and include revenue code 0623 on the packaged revenue code list for the CY 2010 OPSS.
0709 (Cast Room; Reserved) 0719 (Recovery Room; Reserved)	The commenters agreed that these codes should not be allowed for the OPSS and recommended for that reason they should be excluded from the packaged revenue code file.	We agree and will remove them from the packaged revenue code list. We note that because we excluded charges reported under these revenue codes from OPSS, there were no costs to package, regardless of whether they were on the packaged revenue code file.

Revenue Code	Public Comment	CMS Response
<p>0722 (Labor Room/Delivery – Delivery Room)</p> <p>0723 (Labor Room/Delivery; Circumcision)</p> <p>0724 (Labor Room/Delivery; Birthing Center)</p> <p>0729 (Labor Room/Delivery; Other Labor Room/Delivery)</p>	<p>The commenters requested that revenue codes 0722, 0723, 0724, and 0729 be included on the list of packaged revenue codes and that CMS package any associated estimated costs appearing without a HCPCS code into the major separately paid code with which they appear.</p>	<p>We disagree. We believe that these revenue codes are largely associated with major separately paid procedures and that hospitals should report these revenue codes together with the HCPCS codes for the procedures. We do not believe that hospitals should report uncoded charges in these procedure-specific revenue codes, and we do not recognize these revenue codes as containing unspecified charges in the I/OCE. We note that for CY 2007, hospitals reported only \$3,400 in charges without HCPCS codes across all of these revenue codes.</p>
<p>0931 (Medical Rehabilitation Day Program; Half Day)</p> <p>0932 (Medical Rehabilitation Day Program; Full Day)</p>	<p>The commenters agreed that these codes should not be allowed for OPPS and recommend for that reason they should be excluded from the packaged revenue code list and should not have a cost center assignment.</p>	<p>We agree and will remove the cost center assignment. We note that because we excluded charges reported under these revenue codes from OPPS, there were no allowed charges to which to apply the cost center 6000.</p>

Revenue Code	Public Comment	CMS Response
0942 (Other Therapeutic Services; Education/Training)	The commenters stated that education and training occur in many areas of the hospital and that CMS should use the hospital overall ancillary CCR, rather than the clinic CCR, to estimate costs from charges reported under revenue code 0942.	We do not disagree with the commenter on the potential varied hospital locations of education and training services, but we do not believe this is a reason to use the overall ancillary CCR. We believe that the charges and costs associated with delivery of education and training would more likely resemble the costs associated with clinic services, such as visits, than the costs and charges of surgical and radiology services that dominate the overall ancillary CCR. In addition, our claims data document that hospitals rarely use this revenue code. For CY 2007, total charges reported under revenue code 0942 were approximately \$700.

BILLING CODE 4120-01-C

Comment: One commenter suggested that CMS include dates in the revenue code-to-cost center crosswalk document to allow hospitals and CMS to easily track the effective dates for each change.

Response: We appreciate the desire to track changes to the revenue code-to-cost center crosswalk. However, rather than document changes to individual revenue codes in the crosswalk, we will provide the public with the current and past copies of the same revenue code-to-cost center crosswalk that we directly

incorporate into our modeling of the OPPS payment rates each year.

Table 4 below shows the update to the revenue codes for which estimated costs on each claim for this final rule with comment period are based and incorporates the costs for those revenue codes into APC median cost estimates. Column A of Table 4 provides the 2008 revenue code and description. Column B indicates whether the charges reported with the revenue code will be converted to cost and incorporated into median cost estimates for CY 2010.

Column C indicates whether the charges reported with the revenue code were converted to cost and incorporated into median cost estimates for the CY 2009 OPPS. In both columns, a "Y" indicates that the charges will be converted to cost in CY 2010 (or were converted for CY 2009), and an "N" indicates that charges reported under the revenue code will not be converted to cost and incorporated into median cost estimates. Finally, Column D provides our rationale for the CY 2010 final change.

BILLING CODE 4120-01-P

**TABLE 4.—CHANGES TO CY 2010 OPPTS REVENUE CODES
INCLUDED IN THE REVENUE CODE-TO-COST CENTER CROSSWALK**

A	B	C	D
2008 Revenue Code and Description	CY 2010 Inclusion in Median Cost Estimates	CY 2009 Inclusion in Median Cost Estimates	Rationale for CY 2010 Change
0290 -- Durable Medical Equipment (Other than Renal); General classification 0292 -- Durable Medical Equipment (Other than Renal); Purchase of New DME	N	Y	We are not considering charges reported under revenue codes 0290 and 0292 for OPPTS ratesetting because we believe that these charges are not for items for which payment may be made under the OPPTS. Only implantable DME is paid under the OPPTS and we believe that implantable DME is reported as a supply or implant under revenue code 0270, 0278, or 0279.
0392 -- Administration, Processing and Storage for Blood and Blood Components; Processing and Storage	Y	Missing	We are adding revenue 0392, which was previously omitted from the crosswalk, and considering these charges for OPPTS ratesetting because we believe that hospitals may correctly choose to report charges for blood processing and storage under this revenue code.
0500 -- Outpatient Services; General Classification 0509 -- Outpatient Services; Other Outpatient	N	Missing	We are adding previously omitted revenue codes 0500 and 0509 to the crosswalk because they are valid revenue codes, but we are not considering charges reported under them for OPPTS ratesetting because Medicare historically has not recognized revenue code 0500 for payment. Furthermore, we believe that hospitals primarily use revenue code 0509 to report charges that are paid under methodologies other than the OPPTS.

A	B	C	D
2008 Revenue Code and Description	CY 2010 Inclusion in Median Cost Estimates	CY 2009 Inclusion in Median Cost Estimates	Rationale for CY 2010 Change
<p>0520 -- Free-Standing Clinic; General Classification</p> <p>0523 -- Free-Standing Clinic: Family Practice Clinic</p> <p>0524 -- Free-Standing Clinic ; Visit by RHC/FQHC practitioner to a Member in a Covered Part A Stay at SNF</p> <p>0525 -- Free-Standing Clinic; Visit by RHC/FQHC practitioner to a Member in a SNF (not in a Covered Part A Stay) or NF, or ICF MR or Other Residential Facility</p> <p>0527 -- Free-Standing Clinic; Visiting Nurse Service(s) to a Member's Home when in a Home Health Shortage Area</p> <p>0528 -- Free-Standing Clinic; RHC/FQHC Practitioner to Other non RHC/FQHC site</p> <p>0529 -- Other Free-Standing Clinic</p>	N	<p>Y for 0520, 0523, 0526 and 0529;</p> <p>Missing for 0524, 0525, 0527, 0528</p>	<p>We are not considering charges reported under revenue codes 0520, 0523, 0524, 0525, 0527, 0528 and 0529 for purposes of OPSS ratesetting because we do not believe that services that would be reported under these revenue codes would be paid under the OPSS. To be paid under the OPSS, therapeutic services must be furnished directly by a hospital or under arrangements with the hospital, and all must be furnished in the hospital or a provider-based department of the hospital. A freestanding clinic or RHC is not a hospital or a provider-based department of a hospital. An FQHC may, under rare circumstances, be a provider-based department of a hospital if it meets the requirements in §413.65(n), but covered FQHC services furnished by an FQHC that is a provider-based department of a hospital are not paid under the OPSS.</p> <p>We also are adding revenue codes 0524, 0525, 0527, and 0528 which are now omitted from the crosswalk, to the crosswalk because they are valid revenue codes. We believe the crosswalk should reflect the existence of these revenue codes in the data, but we are not considering their charges for OPSS ratesetting because, as noted above, we do not believe that services that would be reported under these revenue codes would be paid under the OPSS.</p>

A	B	C	D
2008 Revenue Code and Description	CY 2010 Inclusion in Median Cost Estimates	CY 2009 Inclusion in Median Cost Estimates	Rationale for CY 2010 Change
<p>0560 -- Home Health (HH)-Medical Social Services; General Classification</p> <p>0561 -- Home Health (HH) Medical Social Services; Visit Charge</p> <p>0562 -- Home Health (HH) Medical Social Services; Hourly Charge</p> <p>0569 -- Home Health (HH) Medical Social Services; Other Medical Social Service</p>	N	Y	<p>We are not considering charges reported under revenue codes 0560, 0561, 0562 and 0569 because to be paid under the OPSS, therapeutic services must be furnished directly by a hospital or under arrangements with the hospital, and all must be furnished in the hospital or a provider-based department of the hospital. Home health care is furnished in a home and, therefore, does not meet the criteria for payment under the OPSS.</p>
<p>0623 -- Medical Surgical Supplies -- Extension of 027X; Surgical Dressings</p>	Y	N	<p>We are considering charges reported under revenue code 0623 because we believe that these charges may be associated with surgical dressings applied during procedures for which payment is made under the OPSS and should be allowed for purposes of ratesetting.</p>
<p>0660 -- Respite Care; General Classification</p> <p>0661 -- Respite Care; Hourly Charge -Nursing</p> <p>0662 -- Respite Care; Hourly Charge/Aide/Homemaker/Companion</p> <p>0663 -- Respite Care; Daily Respite Charge</p> <p>0669 -- Respite Care; Other Respite Care</p>	N	Missing	<p>We are adding previously omitted revenue codes 0660, 0661, 0662, 0663, and 0669 to the crosswalk, but not considering charges reported under these revenue codes for OPSS ratesetting. We do not believe that respite care services would meet the requirements for payment under the OPSS. We are adding these revenue codes to the crosswalk to reflect the existence of these codes in the data. However, we will not consider charges reported under these codes for ratesetting because we do not believe that services reported under these revenue codes would be paid under the OPSS and, therefore, we believe the charges would be inappropriate for use in OPSS ratesetting.</p>

A	B	C	D
2008 Revenue Code and Description	CY 2010 Inclusion in Median Cost Estimates	CY 2009 Inclusion in Median Cost Estimates	Rationale for CY 2010 Change
0709 – Cast Room; RESERVED 0719 -- Recovery Room; RESERVED 0749 – EEG (Electroencephalogram); RESERVED 0759 – Gastro-Intestinal (GI) Services; RESERVED 0779 – Preventive Care Services; RESERVED 0799 – Extra-Corporeal Shock Wave Therapy (Formerly Lithotripsy); RESERVED 0910 – Behavioral Health Treatments/Services – Extension of 090X; RESERVED (Use 090 for General Classification)	N	Y	We are not considering charges under revenue codes 0709, 0719, 0749, 0759, 0779, 0799, and 0910 for OPSS ratesetting because no charges should be reported under a revenue code that is reserved.
0931 -- Medical Rehabilitation Day Program; Half Day 0932 -- Medical Rehabilitation Day Program; Full Day	N	Missing	We are adding previously omitted revenue codes 0931 and 0932 to the crosswalk to reflect their existence in the NUBC dataset. However, we will not consider charges reported using these revenue codes for ratesetting because the NUBC rules prohibit hospitals from reporting charges under these revenue codes.
0948 -- Other Therapeutic Services (also see 095x, an extension of 094x); Pulmonary Rehabilitation	Y	Missing	We are considering charges reported under revenue code 0948 for purposes of OPSS ratesetting. Through our assessment of the NUBC revenue code definitions, we believe that hospitals report charges for services paid under the OPSS under revenue code 0948.

BILLING CODE 4120-01-C

Also, as a result of our comprehensive review of the revenue codes included in the revenue code-to-cost center crosswalk, as we proposed, we are adding revenue codes to the hierarchy of primary, secondary, and tertiary hospital cost report cost centers that

result in the departmental CCRs that we use to estimate cost from charges for some revenue codes or to revise the applicable cost centers associated with a given revenue code. Table 5 below lists the revenue codes for which we made changes to the revenue code-to-cost center crosswalk for CY 2010

ratesetting and our rationale for each change. With the exception of revenue code 0942 (Other Therapeutic Services; Education/Training), the revenue codes for which we made changes to the designated departmental CCRs are those identified in our comprehensive review that are also listed above in Table 4.

TABLE 5—CHANGES TO CY 2010 OPPTS HIERARCHY OF COST CENTERS IN THE REVENUE CODE-TO-COST CENTER CROSSWALK

2008 Revenue code and description	Rationale for CY 2010 change
0392—Administration, Processing and Storage for Blood and Blood Components; Processing and Storage.	We crosswalked charges under revenue code 0392 to cost center 4700 (Blood Storing, Processing, & Transfusing) because we believe that cost center 4700 is the most likely departmental cost center to which hospitals would assign the costs of blood processing and storage. We made no secondary or tertiary cost centers because we believe that no other departmental cost centers are appropriate.
0623—Medical Surgical Supplies—Extension of 027X; Surgical Dressings.	We crosswalked the charges reported under revenue code 0623 to cost center 5500 (Medical Supplies Charged to Patients) as the primary cost center because we believe that the costs associated with the charges for surgical dressings are most likely to be assigned by hospitals to cost center 5500. We made no secondary or tertiary cost centers because we believe that no other departmental cost centers are appropriate.
0942—Other Therapeutic Services (also see 095x, an extension of 094x); Educ/Training.	We crosswalked the charges under revenue code 0942 to cost center 6000 (Clinic) as the primary cost center. Previously, the charges under revenue code 0942 were crosswalked to the overall ancillary CCR. As discussed above, we believe that cost center 6000 is a more appropriate primary cost center. We made no secondary or tertiary cost centers because we believe that no other departmental cost centers are appropriate.
0948—Other Therapeutic Services (also see 095x, an extension of 094x); Pulmonary Rehabilitation.	We crosswalked the charges under revenue code 0948 to cost center 4900 (Respiratory Therapy) as primary and to cost center 6000 (Clinic) as secondary because we believe that hospitals are most likely to assign the costs of these services to these cost centers. We are not establishing a tertiary cost center.

Having revised the revenue code-to-cost center crosswalk, we then converted the charges to costs on each claim by applying the CCR that we believed was best suited to the revenue code indicated on the line with the charge. One exception to this general methodology for converting charges to costs on each claim is the calculation of median blood costs, as discussed in section II.A.2.d.(2) of the proposed rule and this final rule with comment period.

Thus, we applied CCRs as described above to claims with bill type 12X, 13X, or 14X, excluding all claims from CAHs and hospitals in Maryland, Guam, the U.S. Virgin Islands, American Samoa, and the Northern Mariana Islands and claims from all hospitals for which CCRs were flagged as invalid.

We identified claims with condition code 41 as partial hospitalization services of hospitals and moved them to another file. These claims were combined with the 76X claims identified previously to calculate the partial hospitalization per diem rates. We note that the separate file containing partial hospitalization claims is included in the files that are available for purchase as discussed above.

We then excluded claims without an HCPCS code. We moved to another file claims that contained nothing but influenza and pneumococcal pneumonia (PPV) vaccines. Influenza and PPV vaccines are paid at reasonable cost and, therefore, these claims are not used to set OPPTS rates.

We next copied line-item costs for drugs, blood, and brachytherapy sources (the lines stay on the claim, but are copied onto another file) to a separate

file. No claims were deleted when we copied these lines onto another file. These line-items are used to calculate a per unit mean and median cost and a per day mean and median cost for drugs, therapeutic radiopharmaceutical agents, and brachytherapy sources, as well as other information used to set payment rates, such as a unit-to-day ratio for drugs.

To implement our policy to redistribute some portion of total cost for packaged drugs and biologicals to the separately payable drugs and biologicals as acquisition and pharmacy overhead and handling costs discussed in section V.B.3. of this final rule with comment period, we used the line-item cost data for drugs and biologicals for which we had an HCPCS code with ASP pricing information to calculate the ASP+X values first for all drugs and biologicals, and then for separately payable drugs and biologicals and for packaged drugs and biologicals, respectively, by taking the ratio of total claim cost for each group relative to total ASP dollars (per unit of each drug or biological HCPCS code's July 2009 ASP amount multiplied by total units for each drug or biological in the CY 2008 claims data). These values are ASP+11 percent, ASP-3 percent, and ASP+259 percent, respectively. As we discuss in greater detail in section V.B.3. of this final rule with comment period, we are finalizing a policy to redistribute \$150 million of the total cost in our claims data for packaged drugs and biologicals that have an associated ASP from packaged drugs with an ASP to separately payable drugs and biologicals. The \$150 million is, roughly, one-third of the difference of

\$445 million between the total cost of packaged drugs and biologicals with an associated ASP in our CY 2008 claims data (\$616 million) and ASP for the same drugs and biologicals (\$171 million). In response to comments that CMS excluded valid overhead and handling costs associated with drugs lacking ASP information, largely costs estimated from uncoded charges reported under pharmacy revenue codes, we also are finalizing a policy to redistribute an additional \$50 million of the total cost in our claims data for drugs and biologicals lacking an ASP, largely for estimated costs associated with uncoded charges billed under pharmacy revenue code series 025X (Pharmacy (also see 063X, an extension of 025X)), 026X (IV Therapy), and 063X (Pharmacy—Extension of 025X). As we state in section V.B.3. of this final rule with comment period, because we do not know ASP for this subset of drug costs, we do not know the amount of associated pharmacy overhead. We observe about \$656 million for drugs lacking an ASP in our CY 2008 claims data. This total excludes the cost of diagnostic and therapeutic radiopharmaceuticals because they are not reported under pharmacy revenue codes or under the pharmacy cost center on the cost report.

Removing a total of \$150 million in pharmacy overhead cost from packaged drugs and biologicals reduces the \$616 million to \$466 million, a 24 percent reduction. Removing \$50 million from the cost of drugs lacking an ASP reduces the \$656 million to \$606 million, an 8 percent reduction. To implement our final CY 2010 policy to redistribute \$150 million in claim cost from

packaged drugs and biologicals with an ASP to separately payable drugs and biologicals and \$50 million in claim cost from packaged drugs and biologicals lacking an ASP, including uncoded pharmacy revenue code charges, we multiplied the cost of each packaged drug or biological with an HCPCS code and ASP pricing information in our CY 2008 claims data by 0.76, and we multiplied all other packaged drug costs in our CY 2008 claims data, excluding those for diagnostic radiopharmaceuticals, by 0.92. We also added the redistributed \$200 million to the total cost of separately payable drugs and biologicals in our CY 2008 claims data, which increased the relationship between the total cost for separately payable drugs and biologicals and ASP dollars for the same drugs and biologicals to ASP+4 percent.

For CY 2010, we added an additional trim in our claims preparation to remove line-items that were not paid during claim processing, presumably for a line-item rejection or denial. The number of edits for valid OPSS payment in the Integrated Outpatient Code Editor (I/OCE) and elsewhere has grown significantly in the past few years, especially with the implementation of the full spectrum of National Correct Coding Initiative (NCCI) edits. To ensure that we are using valid claims that represent the cost of payable services to set payment rates, we removed line-items with an OPSS status indicator for the claim year (CY 2008) and a status indicator of "S," "T," "V," or "X" when separately paid under the final CY 2010 payment system. This logic preserves charges for services that would not have been paid in the claim year but for which some estimate of cost is needed for the prospective year, such as services newly proposed to come off the inpatient list for CY 2010 which were assigned status indicator "C" in the claim year.

Using February 2009 APC Panel data, we estimate that the impact of removing line-items with valid status indicators that received no CY 2008 payment was limited to approximately 1.4 percent of all line-items for separately paid services. This additional trim reduced the number of single bills available for ratesetting by 1.5 percent. For approximately 92 percent of procedural APCs, we observed a change in the APC median cost of less than 1 percent. A handful of APCs experienced greater changes in median cost. For example, APC 0618 (Trauma Response with Critical Care) experienced declines in both the number of single bills used to set the median cost and the estimated

median cost itself. This occurred because the I/OCE has an edit to ensure that HCPCS code G0390 (Trauma response team activation associated with hospital critical care service), which is assigned to APC 0618, receives payment only when one unit of G0390 appears with both a revenue code in the 68x series and CPT code 99291 (Critical care, evaluation and management of the critically ill or critically injured patient; first 30–74 minutes) on the claim for the same date of service, as described in the CY 2007 OPSS/ASC final rule with comment period (71 FR 68134). If the I/OCE criteria are not met, HCPCS code G0390 is not separately paid, and we found that a number of CY 2008 claims including HCPCS code G0390 did not meet the criteria for payment. On the other hand, a few APCs had greater estimated median costs and greater numbers of single bills as a result of this additional trim, presumably because removing lines from the claim allowed us to identify more single bills. We believe that removing lines with valid status indicators that were edited and not paid during claims processing increases the accuracy of the single bills used to determine the APC median costs for ratesetting.

Comment: One commenter claimed that the removal of charges and costs from denied lines was in contrast to longstanding policy for hospital inpatient services. A few commenters expressed concern about APC 0312 (Radioelement Applications), noting that there has been significant fluctuation in the payment rates for this APC in the past. They believe that implementing the proposed line-item trim, which removed a significant number of single claims, may have contributed to that instability. The commenters suggested that historical data would not indicate any reason for significant line-items to be trimmed. One commenter believed that the payment rates for low dose rate prostate brachytherapy were arbitrary and unfair. Based on the commenters' impression that the purpose of the line-item trim was to act as a quality check, the commenters requested that the line-item trim be suppressed for APC 0312.

Response: While payment systems such as the IPPS do not remove charge and cost data, this is largely due to the differences in the fundamental structures of the two payment systems. The IPPS is a system based on DRGs that relies on significant bundling of services under common clinical scenarios, while the OPSS is largely based on payment for a specific individual service. These differences in payment approach under each system

are reflected in the way that data are used to establish the payment weights, from the CCRs used to reduce charges to cost to the structure of how charge and cost information is classified. One byproduct of the differences between the IPPS and the OPSS is the level of editing in each system to ensure that a correct payment is made. Similarly, there are many NCCI edits to ensure that payment is made to hospitals for outpatient services only when there is correct coding because there are hundreds of APCs that may contribute to inappropriate unbundling of services when those services are reported for a hospital outpatient encounter. In the CY 2010 OPSS/ASC proposed rule (74 FR 35262), we indicated that removing lines with valid status indicators that were edited and not paid during claims processing increases the accuracy of the single bills used for ratesetting. Doing so allows the single bills used for ratesetting purposes to be representative of those services as they would be paid in the prospective year.

In studying the billing patterns for HCPCS codes that are assigned to APC 0312, we noted that the line-item trim removes a number of unpaid single bills for this APC, as the commenters had suggested. However, we also observed a general decline in the reporting of services assigned to this APC that was unrelated to the line-item trim, suggesting that a portion of the observed decline in the number of single bills available for ratesetting is due to an actual reduction in the frequency that the services assigned to APC 0312 are furnished. While we understand the commenters' concern regarding the reduction of single bills used in ratesetting for APC 0312, the data suggest that the reduction is due in part to a decline in the billing of individual services assigned to the APC. Further, we believe that removing these line-items which have likely been rejected or denied is appropriate in light of the goal of using accurate single procedure claims for ratesetting under the OPSS.

After consideration of the public comments received relating to our CY 2010 proposal for claims preparation, we are adopting it as final, with modification to the treatment of certain revenue codes as described in Table 4 in this section.

b. Splitting Claims and Creation of "Pseudo" Single Claims

(1) Splitting Claims

We then split the remaining claims into five groups: single majors, multiple majors, single minors, multiple minors, and other claims. (Specific definitions

of these groups follow below.) In the CY 2010 OPPS/ASC proposed rule (74 FR 35262), we proposed to continue our current policy of defining major procedures as any HCPCS code having a status indicator of “S,” “T,” “V,” or “X;” defining minor procedures as any code having a status indicator of “F,” “G,” “H,” “K,” “L,” “R,” “U,” or “N,” and classifying “other” procedures as any code having a status indicator other than one that we have classified as major or minor. For CY 2010, we proposed to continue assigning status indicator “R” to blood and blood products; status indicator “U” to brachytherapy sources; status indicator “Q1” to all “STVX-packaged codes;” status indicator “Q2” to all “T-packaged codes;” and status indicator “Q3” to all codes that may be paid through a composite APC based on composite-specific criteria or paid separately through single code APCs when the criteria are not met. As discussed in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68709), we established status indicators “Q1,” “Q2,” and “Q3” to facilitate identification of the different categories of codes. We proposed to treat these codes in the same manner for data purposes for CY 2010 as we have treated them since CY 2008. Specifically, we proposed to continue to evaluate whether the criteria for separate payment of codes with status indicator “Q1” or “Q2” are met in determining whether they are treated as major or minor codes. As discussed earlier in this section, because we proposed to treat CPT code 76098 as conditionally packaged, this logic now includes the addition of CPT code 76098 as a “Q2” code. Codes with status indicator “Q1” or “Q2” are carried through the data either with status indicator “N” as packaged or, if they meet the criteria for separate payment, they are given the status indicator of the APC to which they are assigned and are considered as “pseudo” single major codes. Codes assigned status indicator “Q3” are paid under individual APCs unless they occur in the combinations that qualify for payment as composite APCs and, therefore, they carry the status indicator of the individual APC to which they are assigned through the data process and are treated as major codes during both the split and “pseudo” single creation process. The calculation of the median costs for composite APCs from multiple major claims is discussed in section II.A.2.e. of this final rule with comment period.

Specifically, we divided the remaining claims into the following five groups:

1. *Single Major Claims:* Claims with a single separately payable procedure (that is, status indicator “S,” “T,” “V,” or “X,” which includes codes with status indicator “Q3”); claims with one unit of a status indicator “Q1” code (“STVX-packaged”) where there was no code with status indicator “S,” “T,” “V,” or “X” on the same claim on the same date; or claims with one unit of a status indicator “Q2” code (“T-packaged”) where there was no code with a status indicator “T” on the same claim on the same date.

2. *Multiple Major Claims:* Claims with more than one separately payable procedure (that is, status indicator “S,” “T,” “V,” or “X,” which includes codes with status indicator “Q3”), or multiple units of one payable procedure. These claims include those codes with a status indicator “Q2” code (“T-packaged”) where there was no procedure with a status indicator “T” on the same claim on the same date of service but where there was another separately paid procedure on the same claim with the same date of service (that is, another code with status indicator “S,” “V,” or “X”). We also include in this set, claims that contained one unit of one code when the bilateral modifier was appended to the code and the code was conditionally or independently bilateral. In these cases, the claims represented more than one unit of the service described by the code, notwithstanding that only one unit was billed.

3. *Single Minor Claims:* Claims with a single HCPCS code that was assigned status indicator “F,” “G,” “H,” “K,” “L,” “R,” “U,” or “N” and not status indicator “Q1” (“STVX-packaged”) or status indicator “Q2” (“T-packaged”) code.

4. *Multiple Minor Claims:* Claims with multiple HCPCS codes that are assigned status indicator “F,” “G,” “H,” “K,” “L,” “R,” “U,” or “N;” claims that contain more than one code with status indicator “Q1” (“STVX-packaged”) or more than one unit of a code with status indicator “Q1” but no codes with status indicator “S,” “T,” “V,” or “X” on the same date of service; or claims that contain more than one code with status indicator “Q2” (T-packaged), or “Q2” and “Q1,” or more than one unit of a code with status indicator “Q2” but no code with status indicator “T” on the same date of service.

5. *Non-OPPS Claims:* Claims that contain no services payable under the OPPS (that is, all status indicators other than those listed for major or minor

status). These claims were excluded from the files used for the OPPS. Non-OPPS claims have codes paid under other fee schedules, for example, durable medical equipment or clinical laboratory tests, and do not contain a code for a separately payable or packaged OPPS service. Non-OPPS claims include claims for therapy services paid sometimes under the OPPS but billed, in these non-OPPS cases, with revenue codes indicating that the therapy services would be paid under the Medicare Physician Fee Schedule (MPFS).

The claims listed in numbers 1, 2, 3, and 4 above are included in the data file that can be purchased as described above. Claims that contain codes to which we have assigned status indicators “Q1” (“STVX-packaged”) and “Q2” (“T-packaged”) appear in the data for the single major file, the multiple major file, and the multiple minor file used in this final rule with comment period. Claims that contain codes to which we have assigned status indicator “Q3” (composite APC members) appear in both the data of the single and multiple major files used in this final rule with comment period, depending on the specific composite calculation.

Because we did not receive any public comments on our proposed process of organizing claims by type, we are finalizing our CY 2010 proposal without modification.

(2) Creation of “Pseudo” Single Claims

As we proposed, to develop “pseudo” single claims for this final rule with comment period, we examined both the multiple major claims and the multiple minor claims. We first examined the multiple major claims for dates of service to determine if we could break them into “pseudo” single procedure claims using the dates of service for all lines on the claim. If we could create claims with single major procedures by using dates of service, we created a single procedure claim record for each separately payable procedure on a different date of service (that is, a “pseudo” single).

We also used the bypass codes listed earlier in Table 1 and discussed in section II.A.1.b. of this final rule with comment period to remove separately payable procedures that we determined contained limited or no packaged costs or that were otherwise suitable for inclusion on the bypass list from a multiple procedure bill. As discussed above, we ignore the “overlap bypass codes,” that is, those HCPCS codes that are both on the bypass list and are members of the multiple imaging

composite APCs, in this initial assessment for “pseudo” single claims. The CY 2010 “overlap bypass codes” are listed in Table 1 in section II.A.1.b. of this final rule with comment period. When one of the two separately payable procedures on a multiple procedure claim was on the bypass list, we split the claim into two “pseudo” single procedure claim records. The single procedure claim record that contained the bypass code did not retain packaged services. The single procedure claim record that contained the other separately payable procedure (but no bypass code) retained the packaged revenue code charges and the packaged HCPCS code charges. We also removed lines that contained multiple units of codes on the bypass list and treated them as “pseudo” single claims by dividing the cost for the multiple units by the number of units on the line. Where one unit of a single, separately payable procedure code remained on the claim after removal of the multiple units of the bypass code, we created a “pseudo” single claim from that residual claim record, which retained the costs of packaged revenue codes and packaged HCPCS codes. This enabled us to use claims that would otherwise be multiple procedure claims and could not be used.

We then assessed the claims to determine if the criteria for the multiple imaging composite APCs, discussed in section II.A.2.e.(5) of this final rule with comment period, were met. Where the criteria for the imaging composite APCs were met, we created a “single session” claim for the applicable imaging composite service and determined whether we could use the claim in ratesetting. For HCPCS codes that are both conditionally packaged and are members of a multiple imaging composite APC, we first assessed whether the code would be packaged and if so, the code ceased to be available for further assessment as part of the composite APC. Because the packaged code would not be a separately payable procedure, we considered it to be unavailable for use in setting the composite APC median cost. Having identified “single session” claims for the imaging composite APCs, we reassessed the claim to determine if, after removal of all lines for bypass codes, including the “overlap bypass codes,” a single unit of a single separately payable code remained on the claim. If so, we attributed the packaged costs on the claim to the single unit of the single remaining separately payable code other than the bypass code to create a “pseudo” single

claim. We also identified line-items of overlap bypass codes as a “pseudo” single claim. This allowed us to use more claims data for ratesetting purposes.

We also examined the multiple minor claims to determine whether we could create “pseudo” single procedure claims. Specifically, where the claim contained multiple codes with status indicator “Q1” (“STVX-packaged”) on the same date of service or contained multiple units of a single code with status indicator “Q1,” we selected the status indicator “Q1” HCPCS code that had the highest CY 2008 relative weight, set the units to one on that HCPCS code to reflect our policy of paying only one unit of a code with a status indicator of “Q1.” We then packaged all costs for the following into a single cost for the “Q1” HCPCS code that had the highest CY 2008 relative weight to create a “pseudo” single claim for that code: additional units of the status indicator “Q1” HCPCS code with the highest CY 2008 relative weight; other codes with status indicator “Q1;” and all other packaged HCPCS codes and packaged revenue code costs. We changed the status indicator for selected codes from the data status indicator of “N” to the status indicator of the APC to which the selected procedure was assigned for further data processing and considered this claim as a major procedure claim. We used this claim in the calculation of the APC median cost for the status indicator “Q1” HCPCS code.

Similarly, where a multiple minor claim contained multiple codes with status indicator “Q2” (“T-packaged”) or multiple units of a single code with status indicator “Q2,” we selected the status indicator “Q2” HCPCS code that had the highest CY 2008 relative weight, set the units to one on that HCPCS code to reflect our policy of paying only one unit of a code with a status indicator of “Q2.” We then packaged all costs for the following into a single cost for the “Q2” HCPCS code that had the highest CY 2008 relative weight to create a “pseudo” single claim for that code: additional units of the status indicator “Q2” HCPCS code with the highest CY 2008 relative weight; other codes with status indicator “Q2;” and other packaged HCPCS codes and packaged revenue code costs. We changed the status indicator for the selected code from a data status indicator of “N” to the status indicator of the APC to which the selected code was assigned, and we considered this claim as a major procedure claim.

Lastly, where a multiple minor claim contained multiple codes with status indicator “Q2” (“T-packaged”) and

status indicator “Q1” (“STVX-packaged”), we selected the status indicator “Q2” HCPCS code (“T-packaged”) that had the highest relative weight for CY 2008 and set the units to one on that HCPCS code to reflect our policy of paying only one unit of a code with a status indicator of “Q2.” We then packaged all costs for the following into a single cost for the selected (“T-packaged”) HCPCS code to create a “pseudo” single claim for that code: additional units of the status indicator “Q2” HCPCS code with the highest CY 2008 relative weight; other codes with status indicator “Q2;” codes with status indicator “Q1” (“STVX-packaged”); and other packaged HCPCS codes and packaged revenue code costs. We favor status indicator “Q2” over “Q1” HCPCS codes because “Q2” HCPCS codes have higher CY 2008 relative weights. If a status indicator “Q1” HCPCS code had a higher CY 2008 relative weight, it would become the primary code for the simulated single bill process. We changed the status indicator for the selected status indicator “Q2” (“T-packaged”) code from a data status indicator of “N” to the status indicator of the APC to which the selected code was assigned and we considered this claim as a major procedure claim.

We excluded those claims that we were not able to convert to single claims even after applying all of the techniques for creation of “pseudo” singles to multiple major and to multiple minor claims. As has been our practice in recent years, we also excluded claims that contained codes that were viewed as independently or conditionally bilateral and that contained the bilateral modifier (Modifier 50 (Bilateral procedure)) because the line-item cost for the code represented the cost of two units of the procedure, notwithstanding that the code appeared with a unit of one.

Comment: One commenter noted that the bilateral procedure logic did not appear to appropriately exclude claims with bilateral codes from the single major claims, having observed bilateral procedure codes in that claims subset. Also, the commenter suggested that the conditional packaging of the status indicator “Q2” (“T-packaged”) codes did not appear to be treated consistently with the policy we proposed, which was that a “Q2” procedure with the highest scaled weight would be paid separately when there is no status indicator “T” procedure on the claim and that the costs of any other “Q2” codes on the claim would be packaged.

Response: In seeking to address the commenter’s observations, we discovered that the bilateral logic was

not processed correctly as we proposed. Similarly, inaccurate program logic in the weight comparison for status indicator “Q2” (“T-packaged”) codes caused the packaging to be assigned based on order of precedence rather than by weight.

For this final rule with comment period, we accurately applied the bilateral and status indicator “Q2” (“T-packaged”) weight comparison packaging logic, consistent with the proposed and final policy. The national unadjusted payments for CY 2010 accurately reflect the policy that we proposed to continue for CY 2010 OPPS and that we are finalizing in this final rule with comment period.

After consideration of the public comment received, we are finalizing our CY 2010 proposal, without modification, for the process by which we develop “pseudo” single procedure claims.

c. Completion of Claim Records and Median Cost Calculations

We then packaged the costs of packaged HCPCS codes (codes with status indicator “N” listed in Addendum B to this final rule with comment period and the costs of those lines for codes with status indicator “Q1” or “Q2” when they are not separately paid), and the costs of packaged revenue codes into the cost of the single major procedure remaining on the claim. For CY 2010, this packaging also included the redistributed packaged pharmacy overhead cost relative to the units of separately payable drugs on each single procedure claim.

As noted in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66606), for the CY 2008 OPPS, we adopted an APC Panel recommendation that requires CMS to review the final list of packaged revenue codes for consistency with OPPS policy and ensure that future versions of the I/OCE edit accordingly. We compared the packaged revenue codes in the I/OCE to the final list of packaged revenue codes for the CY 2009 OPPS (73 FR 68531 through 68532) that we used for packaging costs in median calculation. As a result of that analysis, we proposed to use the packaged revenue codes for CY 2010 that were displayed in Table 4 of the CY 2010 OPPS/ASC proposed rule (74 FR 35265 through 35266).

As noted in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68531), we replaced the NUBC standard abbreviations for the revenue codes listed in Table 2 of the CY 2009 OPPS/ASC proposed rule with the most current NUBC descriptions of the

revenue code categories and subcategories to better articulate the meanings of the revenue codes without actually changing the proposed list of revenue codes. In the course of making the changes in labeling for the revenue codes in Table 2 of the CY 2009 OPPS/ASC final rule with comment period, we noticed some changes to revenue categories and subcategories that we believed warranted further review for future OPPS updates. Although we finalized the list of packaged revenue codes in Table 2 for CY 2009, we indicated in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68531) that we intended to assess the NUBC revenue codes to determine whether any changes to the list of packaged revenue codes should be proposed for the CY 2010 OPPS. We specifically requested public input and discussion on this issue during the comment period of the CY 2009 OPPS/ASC final rule with comment period. We did not receive any public comments on this issue. As we discuss in section II.A.2.a. of this final rule with comment period, we have completed that analysis for all revenue codes in the revenue code-to-cost center crosswalk. As discussed in the CY 2010 OPPS/ASC proposed rule (74 FR 35264 through 35265), as a result, we proposed to add several revenue codes to the list of packaged revenue codes for the CY 2010 OPPS. Specifically, we believe that the costs derived from charges reported under revenue codes 0261 (IV Therapy; Infusion Pump); 0392 (Administration, Processing and Storage for Blood and Blood Components; Processing and Storage); 0623 (Medical Supplies—Extension of 027X, Surgical Dressings); 0943 (Other Therapeutic Services (also see 095X, an extension of 094X), Cardiac Rehabilitation); and 0948 (Other Therapeutic Services (also see 095X, an extension of 094X), Pulmonary Rehabilitation) are appropriately packaged into payment for other OPPS services when charges appear on lines with these revenue codes but no HCPCS code appears on the line. Revenue codes that we proposed to add to the CY 2010 packaged revenue code list were identified by asterisks (*) in Table 4 of the CY 2010 OPPS/ASC proposed rule.

The public comments that we received that resulted in our changing the list of packaged revenue codes for CY 2010 are discussed in section II.A.2.a. of this final rule with comment period. Thus, we are finalizing the proposed packaged revenue codes for CY 2010, with modification. The final CY 2010 packaged revenue codes are listed in Table 6 below. Revenue codes

that we are adding to the CY 2010 packaged revenue code list are identified by asterisks (*) in Table 6.

TABLE 6—FINAL CY 2010 PACKAGED REVENUE CODES

Revenue code	Description
0250	Pharmacy; General Classification.
0251	Pharmacy; Generic Drugs.
0252	Pharmacy; Non-Generic Drugs.
0254	Pharmacy; Drugs Incident to Other Diagnostic Services.
0255	Pharmacy; Drugs Incident to Radiology.
0257	Pharmacy; Non-Prescription.
0258	Pharmacy; IV Solutions.
0259	Pharmacy; Other Pharmacy.
0260	IV Therapy; General Classification.
*0261	IV Therapy; Infusion Pump.
0262	IV Therapy; IV Therapy/Pharmacy Svcs.
0263	IV Therapy; IV Therapy/Drug/Supply Delivery.
0264	IV Therapy; IV Therapy/Supplies.
0269	IV Therapy; Other IV Therapy.
0270	Medical/Surgical Supplies and Devices; General Classification.
0271	Medical/Surgical Supplies and Devices; Non-sterile Supply.
0272	Medical/Surgical Supplies and Devices; Sterile Supply.
0275	Medical/Surgical Supplies and Devices; Pacemaker.
0276	Medical/Surgical Supplies and Devices; Intraocular Lens.
0278	Medical/Surgical Supplies and Devices; Other Implants.
0279	Medical/Surgical Supplies and Devices; Other Supplies/Devices.
0280	Oncology; General Classification.
0289	Oncology; Other Oncology.
0343	Nuclear Medicine; Diagnostic Radiopharmaceuticals.
0344	Nuclear Medicine; Therapeutic Radiopharmaceuticals.
0370	Anesthesia; General Classification.
0371	Anesthesia; Anesthesia Incident to Radiology.
0372	Anesthesia; Anesthesia Incident to Other DX Services.
0379	Anesthesia; Other Anesthesia.
0390	Administration, Processing and Storage for Blood and Blood Components; General Classification.

TABLE 6—FINAL CY 2010 PACKAGED REVENUE CODES—Continued

Revenue code	Description
*0392	Administration, Processing and Storage for Blood and Blood Components; Processing and Storage.
0399	Administration, Processing and Storage for Blood and Blood Components; Other Blood Handling.
0621	Medical Surgical Supplies—Extension of 027X; Supplies Incident to Radiology.
0622	Medical Surgical Supplies—Extension of 027X; Supplies Incident to Other DX Services.
*0623	Medical Supplies—Extension of 027X, Surgical Dressings.
0624	Medical Surgical Supplies—Extension of 027X; FDA Investigational Devices.
0630	Pharmacy—Extension of 025X; Reserved.
0631	Pharmacy—Extension of 025X; Single Source Drug.
0632	Pharmacy—Extension of 025X; Multiple Source Drug.
0633	Pharmacy—Extension of 025X; Restrictive Prescription.
0681	Trauma Response; Level I Trauma.
0682	Trauma Response; Level II Trauma.
0683	Trauma Response; Level III Trauma.
0684	Trauma Response; Level IV Trauma.
0689	Trauma Response; Other.
0700	Cast Room; General Classification.
0710	Recovery Room; General Classification.
0720	Labor Room/Delivery; General Classification.
0721	Labor Room/Delivery; Labor.
0732	EKG/ECG (Electrocardiogram); Telemetry.
0762	Specialty Room—Treatment/Observation Room; Observation Room.
0801	Inpatient Renal Dialysis; Inpatient Hemodialysis.
0802	Inpatient Renal Dialysis; Inpatient Peritoneal Dialysis (Non-CAPD).
0803	Inpatient Renal Dialysis; Inpatient Continuous Ambulatory Peritoneal Dialysis (CAPD).
0804	Inpatient Renal Dialysis; Inpatient Continuous Cycling Peritoneal Dialysis (CCPD).
0809	Inpatient Renal Dialysis; Other Inpatient Dialysis.

TABLE 6—FINAL CY 2010 PACKAGED REVENUE CODES—Continued

Revenue code	Description
0810	Acquisition of Body Components; General Classification.
0819	Inpatient Renal Dialysis; Other Donor.
0821	Hemodialysis-Outpatient or Home; Hemodialysis Composite or Other Rate.
0824	Hemodialysis-Outpatient or Home; Maintenance—100%.
0825	Hemodialysis-Outpatient or Home; Support Services.
0829	Hemodialysis-Outpatient or Home; Other OP Hemodialysis.
0942	Other Therapeutic Services (also see 095X, an extension of 094x); Education/Training.
*0943	Other Therapeutic Services (also see 095X, an extension of 094X), Cardiac Rehabilitation.
*0948	Other Therapeutic Services (also see 095X, an extension of 094X), Pulmonary Rehabilitation.

In addition, we excluded: (1) claims that had zero costs after summing all costs on the claim, and (2) claims containing packaging flag number 3. Effective for services furnished on or after July 1, 2004, the I/OCE assigned packaging flag number 3 to claims on which hospitals submitted token charges for a service with status indicator “S” or “T” (a major separately payable service under the OPSS) for which the fiscal intermediary or MAC was required to allocate the sum of charges for services with a status indicator equaling “S” or “T” based on the relative weight of the APC to which each code was assigned. We do not believe that these charges, which were token charges as submitted by the hospital, are valid reflections of hospital resources. Therefore, we deleted these claims. We also deleted claims for which the charges equaled the revenue center payment (that is, the Medicare payment) on the assumption that where the charge equaled the payment, to apply a CCR to the charge would not yield a valid estimate of relative provider cost.

For the remaining claims, we then standardized 60 percent of the costs of the claim (which we have previously determined to be the labor-related portion) for geographic differences in labor input costs. We made this adjustment by determining the wage index that applied to the hospital that

furnished the service and dividing the cost for the separately paid HCPCS code furnished by the hospital by that wage index. As has been our policy since the inception of the OPSS, we proposed to use the pre-reclassified wage indices for standardization because we believe that they better reflect the true costs of items and services in the area in which the hospital is located than the post-reclassification wage indices and, therefore, would result in the most accurate unadjusted median costs.

We also excluded claims that were outside 3 standard deviations from the geometric mean of units for each HCPCS code on the bypass list (because, as discussed above, we used claims that contain multiple units of the bypass codes).

After removing claims for hospitals with error CCRs, claims without HCPCS codes, claims for immunizations not covered under the OPSS, and claims for services not paid under the OPSS, approximately 58 million claims were left. Using these 58 million claims, we created approximately 99 million single and “pseudo” single claims, of which we used 99 million single bills (after trimming out approximately 657,000 claims as discussed above in this section) in the CY 2010 median development and ratesetting.

We used these claims to calculate the CY 2010 median costs for each separately payable HCPCS code and each APC. The comparison of HCPCS code-specific and APC medians determines the applicability of the 2 times rule. Section 1833(t)(2) of the Act provides that, subject to certain exceptions, the items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest median (or mean cost, if elected by the Secretary) for an item or service in the group is more than 2 times greater than the lowest median cost for an item or service within the same group (the 2 times rule). Finally, we reviewed the median costs for this final rule with comment period and reassigned HCPCS codes to different APCs where we believed that it was appropriate. Section III. of this final rule with comment period includes a discussion of certain HCPCS code assignment changes that resulted from examination of the median costs, review of the public comments, and for other reasons. The APC medians were recalculated after we reassigned the affected HCPCS codes. Both the HCPCS code-specific medians and the APC medians were weighted to account for the inclusion of multiple units of the bypass codes in the creation of “pseudo” single bills.

Comment: Several commenters objected to the volatility of the OPPS rates from year to year. The commenters asserted that the absence of stability in the OPPS rates creates budgeting, planning, and operating problems for hospitals, and that as more care is provided on an outpatient, rather than inpatient basis, the need for stable payment rates from one year to the next becomes more important to hospitals. Some commenters suggested that CMS limit reductions in APC payments to a set percentage, with one commenter noting that CMS dampened payment decreases for blood and blood products to mitigate large payment fluctuations in order to limit provider losses. One commenter suggested that the median costs from claims be adjusted to limit changes from year to year. Another commenter suggested that CMS perform a thorough examination of the payment rates and examine billed charges, costs, median and mean costs, and CCRs to isolate the source of the fluctuations as well as mandate a review of all APCs that fluctuate above a certain percentage, similar to the 2 times rule.

Response: There are a number of factors pertinent to the OPPS that may cause median costs to change from one year to the next. Some of these are a reflection of hospital behavior, and some of them are a reflection of fundamental characteristics of the OPPS as defined in statute. For example, the OPPS payment rates are based on hospital cost report and claims data. However, hospital costs and charges change each year and this results in both changes to the CCRs taken from the most currently available cost reports and also differences in the charges on the claims that are the basis of the calculation of the median costs on which OPPS rates are based. Similarly, hospitals adjust their mix of services from year to year by offering new services and ceasing to furnish services and changing the proportion of the various services they furnish, which have an impact on the CCRs that we derive from their cost reports. CMS cannot stabilize these hospital-driven fundamental inputs to the calculation of OPPS payment rates.

Moreover, there are other essential elements of the OPPS which contribute to the changes in relative weights each year. These include, but are not limited to, reassignments of HCPCS codes to APCs to rectify 2 times violations as required by the law, to address the costs of new services, to address differences in hospitals' costs that may result from changes in medical practice, and to respond to public comments. Our efforts to improve payment accuracy may also

contribute to payment volatility in the short run, as may be the case when we are eventually able to use more specific CCRs to estimate the costs of implantable devices, based on the final policy that we adopted to disaggregate the single cost center for medical supplies into two more specific cost centers, as described in the FY 2009 IPPS final rule (73 FR 48458 through 48467). Moreover, for some services, we cannot avoid using small numbers of claims, either because the volume of services is naturally low or because the claims data do not facilitate the calculation of a median cost for a single service. Where there are small numbers of claims that are used in median calculation, there is more volatility in the median cost from one year to the next. Lastly, changes to OPPS payment policy (for example, changes to packaging) also contribute to some extent to the fluctuations in the OPPS payment rates for the same services from year to year.

We cannot avoid the naturally occurring volatility in the cost report and claims data that hospitals submit and on which the payment rates are based. Moreover (with limited exceptions), we reassign HCPCS codes to APCs where it is necessary to avoid 2 times violations. However, we have made other changes to resolve some of the other potential reasons for instability from year to year. Specifically, we continue to seek ways to use more claims data so that we have fewer APCs for which there are small numbers of single bills used to set the APC median costs. Moreover, we have tried to eliminate APCs with very small numbers of single bills where we could do so. We recognize that changes to payment policies, such as the packaging of payment for ancillary and supportive services and the implementation of composite APCs, may contribute to volatility in payment rates in the short term, but we believe that larger payment packages and bundles should help to stabilize payments in future years by enabling us to use more claims data and by establishing payments for larger groups of services.

While we recognize the reasoning behind a policy that would dampen both increases and decreases in the weights or payment rates of the OPPS, this would not be as simple or beneficial as commenters have implied. Implementing such a dampening policy would require the assumption that payment policy is static from year to year. Based on the commenters' own acknowledgement, and the data used to develop the OPPS, we know that this is not true. Further, in seeking to mitigate

fluctuations in the OPPS, implementing such a system would make payments less reflective of the true service costs. Dampening payments across all APCs in this way could unfairly harm those hospitals whose true cost for a service increases significantly, while inappropriately benefiting those hospitals whose true cost for a service decreases significantly. While one commenter requested that CMS adopt a policy to investigate any APCs that fluctuate above a certain threshold, this mandate would be unnecessary since we already examine all APCs that experience significant median cost fluctuations, as described in the CY 2010 OPPS/ASC proposed rule (74 FR 35626 through 35627).

Comment: Some commenters asked that CMS provide an adjustment for medical education costs under the OPPS because many of the costs of teaching services are now incurred in the HOPD as services previously furnished only in the inpatient setting are now being furnished in the HOPD. They also noted that the OPPS did not have a teaching adjustment while many of the other Medicare payment systems, such as inpatient, psychiatric, and rehabilitation facilities, already include one. These commenters stated that CMS indicated that it would study the costs and payment differential among different classes of providers in the April 7, 2000 OPPS final rule but has not done so. They recommended that CMS study whether the hospital outpatient costs of teaching hospitals are higher than the costs of other hospitals for purposes of determining whether there should be a teaching hospital adjustment. The commenters explained that analysis of 2007 Medicare cost reports showed that the average outpatient margins were -30.4 for major teaching hospitals, -13.8 for other teaching hospitals, and -14.4 for nonteaching hospitals. They believed that these findings demonstrated that the hospital outpatient costs of major teaching hospitals are significantly greater than the costs of other hospitals. The commenters requested that CMS conduct its own analysis and that if that analysis showed a difference due to the unique missions of teaching hospitals, CMS should add a teaching adjustment to the OPPS.

Response: Unlike payment under the IPPS, the law does not provide for payment for indirect medical education costs to be made under the OPPS. Section 1833(t)(2)(E) of the Act states that the Secretary shall establish, in a budget neutral manner " * * * other adjustments as determined to be necessary to ensure equitable payments,

such as adjustments for certain classes of hospitals.” We have not found such an adjustment to be necessary to ensure equitable payments to teaching hospitals and, therefore, have not developed such an adjustment. Furthermore, in this final rule with comment period, we have developed payment weights that we believe provide appropriate and adequate payment for the complex medical services, such as new technology services and device-dependent procedures, which we understand are furnished largely by teaching hospitals. We note that teaching hospitals benefit from the recalibration of the APCs in this final rule with comment period. The final CY 2010 impacts by class of hospital are displayed in Table 73 in section XXI.B. of this final rule with comment period.

After consideration of the public comments we received, we are finalizing our proposed CY 2010 methodology for calculating the median costs upon which the CY 2010 OPSS payment rates are based, with modifications as discussed throughout this section.

In some cases, APC median costs are calculated using variations of the process outlined above. Section II.A.2.d. of this final rule with comment period that follows addresses the calculation of single APC criteria-based median costs. Section II.A.2.e. of this final rule with comment period discusses the calculation of composite APC criteria-based median costs. Section X.B. of this final rule with comment period addresses the methodology for calculating the median cost for partial hospitalization services.

At the February 2009 APC Panel Meeting, the APC Panel recommended that CMS study the claims data for any APC in which the calculated payment reduction would be greater than 10 percent. The APC Panel also recommended that CMS provide a list of APCs to the APC Panel at the next meeting with a proposed payment rate change of greater than 10 percent. While we recognize the concerns the APC Panel expressed with regards to cost variability in the system, we already engage in a standard review process for all APCs that experience significant changes in median costs. We study all significant changes in estimated cost to determine the effect that proposed and final payment policies have on the APC payment rates and ensure that these policies are appropriate and that the intended cost estimation methodologies have been correctly applied. We note that there are a number of factors that cause APC median costs to change from

one year to the next. Some of these are a reflection of hospital behavior, and some of them are a reflection of fundamental characteristics of the OPSS as defined in the statute. With limited exceptions, we are required by law to reassign HCPCS codes to APCs where it is necessary to avoid 2 times violations. Thus, there are various mechanisms already in place to ensure that we assess changes in cost and adjust APC weights accordingly or justify why we have not made adjustments. We plan to continue our examination of all APCs that experience changes of greater than 10 percent. In the CY 2010 OPSS/ASC proposed rule (74 FR 35267), we indicated that we would provide the APC Panel with a list of the APCs with proposed changes in costs of more than 10 percent for CY 2010 at the next CY 2009 APC Panel meeting. Accordingly, we accepted this recommendation of the APC Panel in full.

At the August 2009 meeting of the APC Panel, we provided the APC Panel a list of all APCs fluctuating by more than 10 percent when comparing the CY 2010 proposed rule APC median costs to those based on CY 2009 final rule data. We found that the median costs for 7 APCs decreased by 10 percent or more and the median costs for 63 APCs increased by 10 percent or more. These changes occurred due to some of the reasons described earlier, including reassignment of HCPCS codes from one APC to another to resolve 2 times violations, modeling changes such as the removal of lines for codes that were not payable in CY 2008 under the OPSS payment rules, low volumes of services influencing the claims used to determine APC median costs, and updated cost and charge information from hospital claims and cost reports. We noted that the median costs for 63 APCs increased by 10 percent or more and that the reasons for the increases were similar to the reasons for the decreases of more than 10 percent but, in general, we found nothing that raised concern regarding the data process we used to calculate the proposed median costs. The APC Panel discussed the different APCs on the list but did not express any significant concern with the fluctuations. As a result, they did not make any further recommendations related to the list of APCs with median costs fluctuating by greater than 10 percent.

At the February 2009 APC Panel meeting, we reviewed and examined the data process in preparation for the CY 2010 rulemaking cycle. At this meeting, the APC Panel recommended that the Data Subcommittee continue its work and we accepted that recommendation.

The APC Panel further recommended at the August 2009 meeting that the Data Subcommittee continue its work. We are accepting this most recent recommendation, and we will continue to work closely with the APC Panel's Data Subcommittee to prepare and review data and analyses relevant to the APC configurations and OPSS payment policies for hospital outpatient items and services.

d. Calculation of Single Procedure APC Criteria-Based Median Costs

(1) Device-Dependent APCs

Device-dependent APCs are populated by HCPCS codes that usually, but not always, require that a device be implanted or used to perform the procedure. For a full history of how we have calculated payment rates for device-dependent APCs in previous years and a detailed discussion of how we developed the standard device-dependent APC ratesetting methodology, we refer readers to the CY 2008 OPSS/ASC final rule with comment period (72 FR 66739 through 66742). Overviews of the procedure-to-device edits and device-to-procedure edits used in ratesetting for device-dependent APCs are available in the CY 2005 OPSS final rule with comment period (69 FR 65761 through 65763) and the CY 2007 OPSS/ASC final rule with comment period (71 FR 68070 through 68071).

In the CY 2010 OPSS/ASC proposed rule (74 FR 35267), we proposed to revise our standard methodology for calculating median costs for device-dependent APCs, which utilizes claims data that generally represent the full cost of the required device, to exclude claims that contain the “FC” modifier. Specifically, we proposed to calculate the median costs for device-dependent APCs for CY 2010 using only the subset of single procedure claims from CY 2008 claims data that pass the procedure-to-device and device-to-procedure edits; do not contain token charges (less than \$1.01) for devices; do not contain the “FB” modifier signifying that the device was furnished without cost to the provider, supplier, or practitioner, or where a full credit was received; and do not contain the “FC” modifier signifying that the hospital received partial credit for the device. The “FC” modifier became effective January 1, 2008, and is present for the first time on claims that would be used in OPSS ratesetting for CY 2010. We stated in the CY 2010 OPSS/ASC proposed rule (74 FR 35267) that we believe the standard methodology for calculating median costs for device-

dependent APCs, further refined to exclude claims with the "FC" modifier, gives us the most appropriate median costs for device-dependent APCs in which the hospital incurs the full cost of the device.

The median costs for the majority of device-dependent APCs that were calculated using the CY 2010 proposed rule claims data were generally stable, with most median costs increasing moderately compared to the median costs upon which the CY 2009 OPPS payment rates were based. However, the median costs for APC 0225 (Implantation of Neurostimulator Electrodes, Cranial Nerve) and APC 0418 (Insertion of Left Ventricular Pacing Electrode) demonstrated significant fluctuation. Specifically, the proposed CY 2010 median cost for APC 0225 increased approximately 49 percent compared to the final CY 2009 median cost, although this APC median cost had declined by approximately the same proportion from CY 2008 to CY 2009. The proposed CY 2010 median cost for APC 0418, which had decreased approximately 45 percent from CY 2008 to CY 2009, showed an increase of approximately 56 percent based on the claims data available for the CY 2010 proposed rule. As indicated in the CY 2010 OPPS/ASC proposed rule (74 FR 35267), we believe the fluctuations in median costs for these two APCs are a consequence of the small number of single bills upon which the median costs are based and the small number of providers of these services. As we have stated in the past, some fluctuation in relative costs from year to year is to be expected in a prospective payment system for low volume device-dependent APCs, particularly where there are small numbers of single bills from a small number of providers.

At the February 2009 meeting of the APC Panel, one presenter stated that the assignment of the single-array cranial neurostimulator pulse generator implantation procedure described by CPT code 61885 (Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array) to APC 0039 (Level I Implantation of Neurostimulator Generator), along with the peripheral/gastric neurostimulator pulse generator implantation procedure described by CPT code 64590 (Insertion or replacement of peripheral or gastric neurostimulator pulse generator or receiver, direct or inductive coupling) is not appropriate, given the clinical and cost differences between the two procedures. According to the presenter, the cranial procedure described by CPT

code 61885 is more similar clinically and in terms of resource utilization to the spinal neurostimulator pulse generator implantation procedure described by CPT code 63685 (Insertion or replacement of spinal neurostimulator pulse generator or receiver, direct or inductive coupling), which is the only CPT code assigned to APC 0222 (Level II Implantation of Neurostimulator) for CY 2009. The presenter requested that the APC Panel recommend that CMS restructure the existing configuration of neurostimulator pulse generator implantation APCs for CY 2010 by splitting APC 0039, so that procedures involving peripheral/gastric neurostimulators and cranial neurostimulators would be in distinct APCs, or by reassigning the cranial neurostimulator pulse generator implantation procedure described by CPT code 61885 from APC 0039 to APC 0222. In response to this request, the APC Panel recommended that CMS combine APC 0039 and APC 0222 for CY 2010, given the overall similarity in median costs among the cranial, peripheral/gastric, and spinal neurostimulator pulse generator implantation procedures assigned to these two APCs. The APC Panel also recommended that CMS maintain the configuration of APC 0315 (Level III Implantation of Neurostimulator Generator) as it currently exists in CY 2009 for CY 2010. The dual-array cranial neurostimulator pulse generator implantation procedure described by CPT code 61886 (Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to two or more electrode arrays) is currently the only procedure assigned to APC 0315.

In the CY 2010 OPPS/ASC proposed rule (74 FR 35267 through 35268), we stated that we agree with the APC Panel that the median costs of the procedures described by CPT codes 61885, 63685, and 64590 are sufficiently similar to warrant placement of the CPT codes into a single APC, rather than two APCs. We accepted the APC Panel's recommendation and, therefore, proposed to reassign CPT code 63685 to APC 0039, to delete APC 0222, and to maintain the current configuration of APC 0315 for CY 2010. We also proposed to change the title of APC 0315 to "Level II Implantation of Neurostimulator Generator" to reflect the proposed two-level, rather than three-level, structure of the neurostimulator pulse generator implantation APCs.

In reviewing the APC Panel recommendation for consolidating APC 0039 and APC 0222, we observed that the median costs of the procedures assigned to APC 0425 (Level II Arthroplasty or Implantation with Prosthesis) and APC 0681 (Knee Arthroplasty) also are sufficiently similar to warrant combining these two APCs into one APC. The proposed median cost for the only procedure currently assigned to APC 0681, described by CPT code 27446 (Arthroplasty, knee, condyle and plateau; medial OR lateral compartment), was approximately \$7,464 based on the claims data available for the CY 2010 OPPS/ASC proposed rule. This proposed median cost was very similar to the proposed median cost of approximately \$7,852 calculated for APC 0425, which included other procedures involving the implantation of prosthetic devices into bone, similar to the procedure described by CPT code 27446. Given the shared resource and clinical characteristics of the procedures included in APC 0425 and the only procedure assigned to APC 0681 for CY 2009, in the CY 2010 OPPS/ASC proposed rule, we proposed to consolidate these two APCs by reassigning CPT code 27446 to APC 0425, and deleting APC 0681. We also noted that, over the past several years, the median cost for CPT code 27446 has fluctuated due to a low volume of services being performed by a small number of providers, and to a single provider performing the majority of services (73 FR 68535). We indicated in the CY 2010 OPPS/ASC proposed rule (74 FR 35268) that we believe by reassigning CPT code 27446 to APC 0425 and deleting APC 0681, we can maintain greater stability from year to year in the payment rate for this knee arthroplasty service, while also paying appropriately for the service.

At its August 2009 meeting, the APC Panel heard a joint presentation from neurostimulator manufacturers who asserted that CMS' proposal to consolidate spinal, peripheral/gastric, and single-array cranial neurostimulator pulse generator implantation procedures into a single APC does not adequately capture facility resources associated with the different types of neurostimulator pulse generators involved in these procedures and would undermine access to rechargeable neurostimulators. The neurostimulator manufacturers asked the APC Panel to recommend to CMS a revised, three-level APC configuration for neurostimulator pulse generator implantation procedures that would

differentiate payment for procedures involving rechargeable and nonrechargeable neurostimulators. Following discussion of this request, the APC Panel recommended that CMS adopt the two-level neurostimulator pulse generator implantation APC configuration proposed by CMS for CY 2010.

Comment: Many commenters supported CMS' proposal to continue using the standard methodology for calculating median costs for device-dependent APCs, revised to exclude claims that contain the "FC" modifier. The commenters stated that the exclusion of partial credit claims would result in APC median costs that more appropriately reflect true hospital costs. Some commenters also supported the mandatory reporting of all HCPCS device C-codes to encourage hospitals to remain vigilant in reporting the costs of performing services involving devices. The commenters urged CMS to continue educating hospitals on the importance of accurate coding for devices, supplies, and other technologies to help ensure these items are more appropriately reflected in future years' payment rates for outpatient services.

Some commenters recommended CMS continue examining and refining the ratesetting methodology for procedures involving devices in order to encourage the continued development and proliferation of new technology. The commenters also encouraged CMS to develop mechanisms for capturing the costs of devices included on multiple procedure claims.

Response: We appreciate the commenters' support of the standard device-dependent APC ratesetting methodology, including our proposal to refine the methodology to exclude claims that contain the "FC" modifier. As we have stated in the past (73 FR 68535 through 68536), we agree that accurate reporting of device, supply, and technology charges will help to ensure that these items are appropriately accounted for in future years' OPSS payment rates. We encourage stakeholders to carefully review HCPCS code descriptors, as well as any guidance CMS may have provided for specific HCPCS codes. In addition, we have provided further instructions on the billing of medical and surgical supplies in the October 2008 OPSS update (Transmittal 1599, Change Request 6196, dated September 19, 2008) and the April 2009 OPSS update (Transmittal 1702, Change Request 6416, dated March 13, 2009). For HCPCS codes that are paid under the OPSS, providers may also submit inquiries to the AHA Central Office on

HCPCS, which serves as a clearinghouse on the proper use of Level I HCPCS codes for hospitals and certain Level II HCPCS codes for hospitals, physicians, and other health professionals. Inquiries must be submitted using the approved form, which may be downloaded from the AHA Web site (<http://www.ahacentraloffice.org>) and either faxed to 312-422-4583 or mailed directly to the AHA Central Office: Central Office on HCPCS, American Hospital Association, One North Franklin, Floor 29, Chicago, IL 60606.

We agree with the commenters that we should continue to encourage the development and proliferation of new technology under the OPSS. We have special mechanisms to provide payment for new technologies and services under the OPSS, including new technology APCs and transitional pass-through payments for certain devices. We refer readers to sections III.C. and IV.A., respectively, of this final rule with comment period for more information on these payment methodologies. For all OPSS services, we continue our efforts to use the data from as many multiple procedure claims as possible, through approaches such as use of the bypass list and date splitting of claims as described further in section II.A. of this final rule with comment period, and through methodologies such as increased packaging and composite APCs. We refer readers to section II.A.2.e. of this final rule with comment period for a detailed summary of the public comments related to the establishment of a composite payment methodology for procedures involving cardiac resynchronization therapy defibrillators and pacemakers and our responses.

Comment: Many commenters responded to CMS' proposal to revise the APC configuration for neurostimulator pulse generator implantation procedures from a three-level structure to a two-level structure. While one commenter supported the proposal to combine the single-array cranial neurostimulator pulse generator implantation procedure, described by CPT code 61885 and used for vagus nerve stimulation, with the spinal neurostimulator pulse generator implantation procedure, described by CPT code 63685, many commenters argued that the proposed two-level configuration for neurostimulator pulse generator implantation procedures would threaten patient access to rechargeable spinal neurostimulators. These commenters asserted that hospitals may be unable to offer rechargeable spinal neurostimulator pulse generators at the proposed CY

2010 payment rate for APC 0039, which, according to the commenters, is substantially less than the cost of the device and the CY 2009 payment rate for the procedure. Some commenters presented an analysis of CY 2008 OPSS claims data available for the CY 2010 OPSS/ASC proposed rule that demonstrated a \$4,132 difference in costs for spinal neurostimulator pulse generator implantation procedures involving rechargeable devices compared to the same procedures involving nonrechargeable devices. According to these commenters, this difference in cost warrants a separate APC for rechargeable spinal neurostimulator pulse generator procedures. They argued that while the cost difference does not violate the 2 times rule, it is large enough to influence hospitals to choose the lower cost nonrechargeable spinal neurostimulator pulse generators instead of the rechargeable devices if hospitals receive the same payment for the implantation procedure, regardless of the type of technology that is used. Several commenters noted that the threat to patient access to rechargeable spinal neurostimulators should be of particular concern to CMS, given the Agency's past recognition of the technology's ability to reduce the need for device replacements and the associated surgical risks, thereby reducing costs while providing optimal therapy.

Some commenters also stated that the consolidation of APC 0039 and APC 0222 would result in a disproportionately small number of single claims for procedures involving spinal neurostimulator pulse generators being used in ratesetting compared to the number of single claims for other types of neurostimulator pulse generator implantation procedures (specifically, peripheral/gastric and single-array cranial), further reducing the payment for these procedures relative to their costs. The commenters pointed out that, because spinal neurostimulator pulse generator implantation procedures are almost always performed with permanent lead placement procedures, rather than being staged as is common with other neurostimulator implantation procedures, they are typically not captured in the single claims used to calculate the median cost for consolidated APC 0039, upon which payment for that APC would be based. Many commenters argued that the proposed policy would be inconsistent with CMS' rationale in the CY 2008 OPSS/ASC final rule with comment period for implementing the current

APC configuration for neurostimulator pulse generator implantation procedures, which places the spinal neurostimulator pulse generator implantation procedure in its own APC. According to the commenters, CMS implemented a separate APC for this procedure because, unlike other neurostimulator pulse generator implantation procedures that involve only the less costly nonrechargeable devices, spinal neurostimulator pulse generator implantation procedures utilize either the more costly rechargeable device or the less costly nonrechargeable device. The commenters summarized CMS' assessment in the CY 2008 OPPTS/ASC final rule with comment period that the placement of the procedure described by CPT code 63685 as the only procedure in APC 0222 would enable CMS to calculate payment rates for spinal neurostimulator implantation procedures that reflect changes in surgical practice based on clinical, rather than financial, considerations.

Many commenters asserted that CMS' proposed APC configuration for neurostimulator pulse generator implantation procedures would result in APC 0039 being overly broad and clinically heterogeneous. The commenters stated that the spinal, peripheral/gastric, and single-array cranial neurostimulator pulse generator implantation procedures proposed for assignment to APC 0039 are clinically disparate and involve widely diverse neurostimulator technologies (including vagus nerve stimulators for epilepsy, sacral nerve stimulators for urinary incontinence, gastric pacemakers for chronic nausea and vomiting, and spinal neurostimulators for chronic neuropathic pain). One commenter requested that the CY 2010 proposal for neurostimulator pulse generator implantation procedures be reviewed by a pain management physician and a certified coder working in pain management.

According to the commenters, in order to address these concerns, CMS should differentiate payment for procedures involving rechargeable and nonrechargeable neurostimulators by revising the current (CY 2009) three-level APC payment structure for neurostimulator pulse generator implantation procedures. The commenters stated that their recommended configuration would group peripheral/gastric and spinal neurostimulator pulse generator implantation procedures (described by CPT codes 64590 and 63685, respectively) involving nonrechargeable devices in Level 1; single-array cranial

neurostimulator pulse generator implantation procedures (described by CPT code 61885) involving nonrechargeable devices in Level 2; and dual-array cranial neurostimulator pulse generator implantation procedures (described by CPT code 61886) and any neurostimulator pulse generator implantation procedure involving rechargeable devices in Level 3. According to the commenters, this APC configuration for neurostimulator pulse generator implantation procedures could be implemented by assigning APCs based on the presence of HCPCS device C-codes present on claims or through the creation of new Level II HCPCS G-codes that would distinguish procedures performed to implant nonrechargeable neurostimulator pulse generators from those performed to implant rechargeable neurostimulator pulse generators. The commenters asserted that CMS has shown a willingness to use alternative mapping schemes in the past to differentiate resource costs for procedures involving technologies such as drug-eluting coronary stents, implantable cardioverter defibrillators (ICDs), and linear accelerator-based stereotactic radiosurgery (LINAC-SRS), when there are important technology and facility resource cost differences that cannot be identified through the use of existing CPT codes.

The commenters urged CMS to maintain the current neurostimulator pulse generator implantation APC configuration as adopted in CY 2008 if the Agency decides not to implement their recommended three-level technology-specific APC configuration, or to create a four-level APC configuration in which the existing APC 0039 is split, with one APC for single-array cranial neurostimulator pulse generator implantation procedures and a separate APC for peripheral/gastric neurostimulator pulse generator implantation procedures. According to the commenters, either approach would yield more accurate payment rates than CMS' proposal for CY 2010.

Response: We do not agree with the commenters who argued that we should not implement our CY 2010 proposal to revise the APC configuration of neurostimulator pulse generator implantation procedures from a three-level structure to a two-level structure. We are finalizing our CY 2010 proposal to reassign CPT code 63685 to APC 0039, to delete APC 0222, and to maintain the current configuration of APC 0315. We believe that the final CY 2010 median costs for the neurostimulator pulse generator implantation procedures, described by

CPT codes 61885, 63685, and 64590, are sufficiently similar to warrant their placement in a single APC, as demonstrated in Table 7 below. The difference between the procedure with the highest median cost in APC 0039, described by CPT code 63685, and the procedure with the lowest median cost in APC 0039, described by CPT code 64590, is approximately \$3,000. Even if we were to consider the difference in costs between spinal neurostimulator pulse generator implantation procedures described by CPT code 63685 when they are performed with a rechargeable device compared to when they are performed with a nonrechargeable device, estimated by the commenters to be approximately \$4,000, the grouping of these procedures in the same APC would not violate the 2 times rule. We also point out that, as demonstrated in Table 7, we use a similar number of single claims with each of the CPT codes assigned to APC 0039 to calculate the median cost upon which the final CY 2010 payment rate for APC 0039 is based.

We do not agree with the commenters that these modest differences in costs, either among the various types of neurostimulator pulse generator implantation procedures assigned to APC 0039 or among the same types of procedures involving rechargeable versus nonrechargeable devices, are sufficiently substantial to result in hospitals denying access to the limited subset of patients for whom the more expensive rechargeable technology is clinically indicated. We note that payment based on a measure of central tendency is a principle of any prospective payment system. As we have stated in the past (73 FR 68562), in some individual cases, payment exceeds the average cost, and in other cases, payment is less than the average cost. On balance, however, payment should approximate the relative cost of the average case, recognizing that, as a prospective payment system, the OPPTS is a system of averages.

In addition to being similar in terms of resource utilization, we believe the procedures described by CPT codes 61885, 63685, and 64590 are comparable from a clinical perspective because they all involve the subcutaneous placement of a neurostimulator pulse generator. We do not agree with the commenters who argued that these procedures should be considered clinically disparate because they use widely diverse technologies for very different clinical indications. It is not uncommon under the OPPTS to group procedures described by relatively general HCPCS codes that

may utilize a wide variety of technologies and may be performed to treat different patient populations in the same APC. Furthermore, as stated in the CY 2009 OPPS/ASC final rule with comment period (73 FR 66537), the standard device-dependent APC ratesetting methodology does not take into consideration patient diagnoses. In response to the commenter who requested that the CY 2010 proposal for neurostimulator pulse generator implantation procedures be reviewed by a pain management physician and a certified coder working in pain management, we note that the CMS staff involved in reviewing the clinical characteristics of the APC groups include medical advisors from a variety of specialties as well as certified coders.

We also do not agree that we should not implement the two-level APC configuration for neurostimulator pulse generator implantation procedures as proposed for CY 2010 because, as argued by some commenters, it would be inconsistent with our rationale in the CY 2008 OPPS/ASC final rule with comment period to maintain a separate APC solely for spinal neurostimulator pulse generator implantation procedures. It is our standard process under the OPPS to reassess the composition of APCs, including reviewing the median costs of individual HCPCS codes, annually when we have the most current claims and Medicare cost report data, and to propose through our annual rulemaking cycle changes that we believe are necessary to maintain and improve the clinical and resource homogeneity of APCs based on the updated data. In CY 2008, the median costs for the single-array cranial and peripheral/gastric neurostimulator pulse generator implantation procedures described by CPT codes 61885 and 64590 of \$12,799 and \$10,954, respectively, were more divergent from the median cost calculated for the spinal neurostimulator pulse generator implantation procedure of \$15,150 using the CY 2006 claims and cost report data available at that time, compared to the median costs for these procedures calculated from the CY 2008 claims and cost report data available for this CY 2010 OPPS/ASC final rule with comment period, as demonstrated in Table 7 below.

Finally, we do not agree with the commenters that we should differentiate payment for neurostimulator pulse generator implantation procedures based on the type of technology that is implanted (that is, rechargeable or nonrechargeable), nor do we agree with the commenters that past CMS policy to

use alternative mapping schemes to differentiate resource costs for certain procedures, such as those involving drug-eluting stents, ICDs, and LINAC-SRS, serves as a precedent to do so. As we have stated in the past (72 FR 66715 through 66716 and 73 FR 68538), a policy to provide different payments for the same procedures according to the types of devices implanted would not be consistent with our overall strategy under the OPPS to encourage hospitals to use resources more efficiently by increasing the size of the payment bundles. The circumstances surrounding the payment policies and coding configurations for drug-eluting stents (67 FR 66732 through 66734), ICDs (72 FR 66702 through 66703), and LINAC-SRS (72 FR 66734 through 66737) are markedly different from the circumstances surrounding neurostimulator pulse generator implantation procedures. We developed HCPCS G-codes to distinguish payment for procedures involving drug-eluting stents from procedures involving non-drug-eluting stents because drug-eluting stents did not meet the criteria for transitional pass-through payment or for payment under a New Technology APC. Unlike drug-eluting stents, rechargeable spinal neurostimulators were granted pass-through status under the OPPS in CY 2006, which lasted until December 31, 2007. In the case of ICDs, we created HCPCS G-codes to gather cost data on single and dual chamber ICDs, but we did not differentiate payment for ICD insertion based on the type of technology that was used (72 FR 66703). Finally, our policy to utilize HCPCS G-codes rather than CPT codes for payment under the OPPS for LINAC-SRS treatment delivery services recognizes the vastly different capital equipment costs required for various LINAC-SRS services, rather than differences in the costs of single-use devices implanted in patients during the same procedure.

Comment: Some commenters disagreed with CMS' presentation at the August 2009 APC Panel meeting of the proposed CY 2010 line-item median costs for the two device HCPCS C-codes that describe neurostimulator pulse generators, specifically HCPCS code C1767 (Generator, neurostimulator (implantable), nonrechargeable) and HCPCS code C1820 (Generator, neurostimulator (implantable), with rechargeable battery and charging system). The commenters disputed the accuracy of the data presented by CMS, specifically that the line-item median costs for HCPCS codes C1767 and C1820 are \$9,606 and \$9,636, respectively,

based on CY 2008 claims available for the CY 2010 OPPS/ASC proposed rule. According to the commenters, these line-item median costs are inconsistent with the commenters' analyses of CY 2010 OPPS/ASC proposed rule data, which indicated that the line-item median costs for HCPCS codes C1767 and C1820 are \$10,580 and \$13,587, respectively. One commenter urged CMS to reanalyze the data and to disregard the APC Panel's support of the proposed CY 2010 APC configuration for neurostimulator pulse generator implantation procedures if the data were found to be erroneous. Another commenter characterized CMS' presentation of the line-item median costs for HCPCS codes C1767 and C1820 as incomplete because OPPS payment rates are based upon median costs that include all packaged items and services associated with providing a procedure as they appear on single claims, and not the line-item median costs for individual devices. The commenter asked CMS to ensure that all data presented to the APC Panel in the future is full and appropriate information for decisionmaking.

Response: In response to the commenters' concerns, we reassessed our methodology for calculating the proposed CY 2010 line-item median costs for HCPCS codes C1767 and C1820 and verified that the information presented to the APC Panel is accurate based on the CY 2008 claims data available for the CY 2010 OPPS/ASC proposed rule. The line-item statistics for these HCPCS codes, along with all other HCPCS codes recognized under the OPPS, are released to the public as part of the OPPS limited data set. We do not agree with the commenters that the presentation of these data was incomplete or inappropriate. We frequently consider line-item median costs for devices and other packaged items and services as one data element among several when we evaluate the clinical and resource homogeneity of APCs, particularly when stakeholders voice concerns that the costs of different items are driving procedure costs or influencing hospitals' decisions to provide certain services. An advantage of the line-item median costs is that they represent data from all OPPS claims, and not just the single claims that we are able to use in ratesetting for procedures. Therefore, we believe that a comparison of line-item costs is particularly appropriate for different types of neurostimulator pulse generators because one of the commenters' concerns was that there are relatively few single claims available

for ratesetting for the implantation of spinal neurostimulator pulse generators. We would expect the device costs on multiple procedure claims to be reflective of the hospital costs of these neurostimulator pulse generators, because commenters stated that multiple procedure claims resulted from the most typical spinal neurostimulator

implantation procedures. Furthermore, we would not expect there to be significant packaged costs associated with the neurostimulator pulse generators described by these device HCPCS codes. Therefore, we would expect the line-item median costs to accurately reflect the differential costs of non-rechargeable and rechargeable

neurostimulator technology. We note that the APC Panel members are well-acquainted with the OPPS ratesetting methodology, including the use of single procedure claims and not line-item median costs for individual items, to calculate the median costs upon which OPPS payment rates are based.

TABLE 7—CY 2010 APC CONFIGURATION FOR PAYMENT OF NEUROSTIMULATOR PULSE GENERATOR IMPLANTATION PROCEDURES

CY 2010 APC	Revised APC Title for CY 2010	CY 2010 CPT Code	CY 2010 CPT Code Descriptor	CY 2010 CPT Code Median Cost	CY 2010 CPT Code Single Claims	CY 2010 APC Median Cost
0039	Level I Implantation of Neurostimulator Generator.	61885	Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array.	\$14,141	1,260	\$13,766
		63685	Insertion or replacement of spinal neurostimulator pulse generator or receiver, direct or inductive coupling.	15,802	1,262	13,766
		64590	Insertion or replacement of peripheral or gastric neurostimulator pulse generator or receiver, direct or inductive coupling.	12,726	1,978	13,766
0315	Level II Implantation of Neurostimulator Generator.	61886	Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to two or more electrode arrays.	18,350	1,004	18,350

Comment: Several commenters expressed support for the proposed CY 2010 payment rate for the implantation of auditory osseointegrated devices, described by CPT codes 69714 (Implantation, osseointegrated implant, temporal bone, with percutaneous attachment to external speech processor/cochlear stimulator; without mastoidectomy); 69715 (Implantation, osseointegrated implant, temporal bone, with percutaneous attachment to external speech processor/cochlear stimulator; with mastoidectomy); 69717 (Replacement (including removal of existing device), osseointegrated implant, temporal bone, with percutaneous attachment to external speech processor/cochlear stimulator; without mastoidectomy); and 69718 (Replacement (including removal of existing device), osseointegrated implant, temporal bone, with percutaneous attachment to external speech processor/cochlear stimulator; with mastoidectomy) and assigned to APC 0425. Other commenters, however, stated that the proposed payment rate for APC 0425 is less than hospitals' device and service-related costs associated with the procedures described by these CPT codes and urged CMS to consider a slight increase in the payment for APC 0425.

Response: We agree with the commenters that the payment rate for APC 0425, calculated from the standard device-dependent APC ratesetting methodology, appropriately reflects hospitals' relative costs for providing the procedures assigned to APC 0425 as reported to us in the claims and cost report data. We used 1,410 single claims from CY 2008 to calculate the median cost upon which the final CY 2010 payment rate for APC 0425 is based. The final CY 2010 median cost for APC 0425 is approximately \$7,932, slightly higher than the final CY 2009 median cost for APC 0425 of \$7,863. We note that we were able to use significantly more single claims in ratesetting for APC 0425 for CY 2010 compared to CY 2009 (1,410 single claims from CY 2008 compared to 668 single claims from CY 2007). We disagree with the commenters who requested an additional increase in the payment rate for APC 0425, because this would artificially and inaccurately inflate payment rates. A fundamental principle of the OPPS is that it is based on relative weights, and as we have stated in the past (73 FR 68541), it is the relativity of the costs to one another, rather than absolute cost, that is important in setting payment rates. To deviate from our standard OPPS ratesetting methodology and increase the payment rates for certain procedures

beyond their relative costs as derived from claims and cost report data would skew this relativity.

Comment: Some commenters supported CMS' proposal to reassign CPT code 27446 to APC 0425 and to delete APC 0681. Other commenters, however, opposed the consolidation of these two APCs, arguing that the procedure described by CPT code 27446 is clinically dissimilar from the arthroplasty procedures currently assigned to APC 0425. The commenters recommended that CMS continue to maintain APC 0681 for CY 2010 and to add other total knee arthroplasty procedures to this APC, along with the procedure described by CPT code 27446.

Response: We disagree with the commenters who argued that it is necessary to maintain APC 0681 specifically for knee arthroplasty procedures because we do not believe it is appropriate to maintain an APC that is not necessary to classify services into groups that are similar clinically and in terms of resource utilization. We continue to believe that CPT code 27446 is most appropriately assigned to APC 0425 for CY 2010, as we proposed, based on consideration of the procedure's clinical and resource characteristics. As described in section XI.B. of this final rule with comment

period, we are not removing any total knee arthroplasty procedures from the inpatient list.

Comment: Several commenters supported the proposed payment rate for the implantation of cochlear implants, described by CPT code 69930 (Cochlear device implantation, with or without mastoidectomy) and assigned to APC 0259 (Level VII ENT Procedures). These commenters stated that while hospitals' device and service-related costs for these procedures likely still exceed the proposed payment rate for APC 0259, they represent an improvement in payment relative to CY 2009 that may lead to better access to care for Medicare beneficiaries.

Response: We appreciate the commenters' support of the proposed payment rate for APC 0259. We believe that the standard device-dependent APC ratesetting methodology results in a payment rate that reflects hospitals' relative costs for providing the procedure assigned to this APC as reported to us in the claims and cost report data.

Comment: One commenter concurred with CMS' proposal that APC 0385 (Level I Prosthetic Urological Procedures) and APC 0386 (Level II Prosthetic Urological Procedures) continue to be recognized as device-

dependent APCs. The commenter supported CMS' continued application of procedure-to-device edits for procedures assigned to these APCs.

Response: We appreciate the commenter's support of the continued recognition of APC 0385 and 0386 as device-dependent APCs. We agree that claims processing edits for devices that are integral to the performance of procedures assigned to device-dependent APCs are an important element of the standard device-dependent APC ratesetting methodology.

Comment: One commenter urged CMS not to reduce the payment for the procedure described by CPT code 62361 (Implantation or replacement of device for intrathecal or epidural drug infusion; nonprogrammable pump), which is assigned to APC 0227 (Implantation of Drug Infusion Device). The commenter stated that patient access to this procedure is limited due to recent payment cuts.

Response: The final CY 2010 median cost for APC 0227 of approximately \$13,268 is approximately 10 percent higher than the median cost of \$12,006, upon which the final CY 2009 payment rate was based, and approximately 13 percent higher than the median cost of \$11,569, upon which the final CY 2008

payment rate was based. We believe that the final CY 2010 median cost for APC 0227 of \$13,268, which is calculated using the standard device-dependent APC methodology, results in a final CY 2010 payment rate that accurately and appropriately reflects hospitals' costs for providing the service described by CPT code 62361 and will not result in any barriers to patient care.

In summary, after consideration of the public comments we received, we are finalizing our proposed CY 2010 payment policies for device-dependent APCs, without modification. The CY 2010 OPPS payment rates for device-dependent APCs are based on their median costs calculated from CY 2008 claims and the most recent cost report data, using only claims that pass the device edits, do not contain token charges for devices, and do not have a modifier signifying that the device was furnished without cost or with full or partial credit. We continue to believe that the median costs calculated from the single claims that meet these criteria represent the most valid estimated relative costs of these services to hospitals when they incur the full cost of the devices required to perform the procedures. The CY 2010 device-dependent APCs are listed in Table 8 below.

TABLE 8—CY 2010 DEVICE-DEPENDENT APCs

CY 2010 APC	CY 2010 Status indicator	CY 2010 APC Title
0039	S	Level I Implantation of Neurostimulator Generator
0040	S	Percutaneous Implantation of Neurostimulator Electrodes
0061	S	Laminectomy, Laparoscopy, or Incision for Implantation of Neurostimulator Electrodes
0082	T	Coronary or Non-Coronary Atherectomy

(2) Blood and Blood Products

Since the implementation of the OPSS in August 2000, we have made separate payments for blood and blood products through APCs rather than packaging payment for them into payments for the procedures with which they are administered. Hospital payments for the costs of blood and blood products, as well as for the costs of collecting, processing, and storing blood and blood products, are made through the OPSS payments for specific blood product APCs.

In the CY 2010 OPSS/ASC proposed rule (74 FR 35269), we proposed to continue to establish payment rates for blood and blood products using our blood-specific CCR methodology, which utilizes actual or simulated CCRs from the most recently available hospital cost reports to convert hospital charges for blood and blood products to costs. This methodology has been our standard ratesetting methodology for blood and blood products since CY 2005. It was developed in response to data analysis indicating that there was a significant difference in CCRs for those hospitals with and without blood-specific cost centers, and past comments indicating that the former OPSS policy of defaulting to the overall hospital CCR for hospitals not reporting a blood-specific cost center often resulted in an underestimation of the true hospital costs for blood and blood products. Specifically, in order to address the differences in CCRs and to better reflect hospitals' costs, we proposed to continue to simulate blood CCRs for each hospital that does not report a blood cost center by calculating the ratio of the blood-specific CCRs to hospitals' overall CCRs for those hospitals that do report costs and charges for blood cost centers. We would then apply this mean ratio to the overall CCRs of hospitals not reporting costs and charges for blood cost centers on their cost reports in order to simulate blood-specific CCRs for those hospitals. We calculated the median costs upon which the proposed CY 2010 payment rates for blood and blood products were based using the

actual blood-specific CCR for hospitals that reported costs and charges for a blood cost center and a hospital-specific simulated blood-specific CCR for hospitals that did not report costs and charges for a blood cost center.

We stated in the CY 2010 OPSS/ASC proposed rule (74 FR 35269) that we continue to believe the hospital-specific, blood-specific CCR methodology better responds to the absence of a blood-specific CCR for a hospital than alternative methodologies, such as defaulting to the overall hospital CCR or applying an average blood-specific CCR across hospitals. Because this methodology takes into account the unique charging and cost accounting structure of each provider, we believe that it yields more accurate estimated costs for these products. We indicated that we believe continuing with this methodology in CY 2010 would result in median costs for blood and blood products that appropriately reflect the relative estimated costs of these products for hospitals without blood cost centers and, therefore, for these blood products in general.

Comment: One commenter expressed appreciation for CMS' recognition of the complexities of calculating payment rates for blood and blood products and the accommodations CMS has made through the blood and blood product ratesetting methodology to ensure the calculated rates are as fair as possible. However, several commenters stated that the proposed payment rates for many blood and blood products are less than the costs hospitals incur acquiring, managing, and processing them, and that the claims-based cost data for blood and blood products are error-prone and subject to significant and unexplained fluctuations. They noted that the payment decreases for several blood and blood products seem inexplicable because prices for blood have been increasing due to new technologies and tests required to ensure the continued safety of the blood supply and increasingly expensive donor recruitment and retention efforts. According to the commenters, a

comparison of the proposed APC payment changes for blood and blood products to the producer price index (PPI) for blood and organ banks, which increased 3.1 percent from July 2008 to July 2009, indicates that the blood product payment rates in the CY 2010 OPSS/ASC proposed rule do not reflect overall pricing trends in the blood banking industry. The commenters asked CMS to adjust the CY 2010 payment rates for blood and blood products by increasing all of the CY 2009 payment rates by 3.1 percent, or by implementing a 3.1 percent payment floor for CY 2010 payment rates compared to CY 2009 payment rates for blood and blood products. One commenter particularly urged CMS to apply a 3 percent minimum increase in payment for the highest volume blood product, described by HCPCS code P9016 (Red blood cells, leukocytes reduced, each unit). The commenters asserted that the use of the PPI for blood and organ banks in calculating hospital payment is not unprecedented. They stated that in the CY 2005 OPSS final rule, CMS used the PPI for blood and derivatives for human use in calculating the payment rates for low-volume blood products. They also pointed out that CMS recognized the value of the PPI for blood and organ banks by using it to update blood and blood product prices in the market basket under the IPPS for CY 2010.

Response: We continue to believe that using blood-specific CCRs applied to hospital claims data results in payments that appropriately reflect hospitals' relative costs of providing blood and blood products as reported to us by hospitals. We do not believe it is necessary or appropriate to use the PPI for blood and organ banks as a benchmark for updating the payment rates for blood and blood products from year to year, because it is not our standard process under the OPSS for any item or service to update payment rates by implementing across-the-board, product-specific inflation updates to the payment rates that were in place the year before. Rather, we annually update

payment groups and payment weights using the most recently available hospital claims and cost report data. This process allows us to recalibrate the payment groups and payment weights in response to changes in hospitals' costs from year to year. A fundamental principle of the OPPS is that it is based on relative weights, and as we have stated in the past (73 FR 68541), it is the relativity of the costs to one another, rather than absolute cost, that is important in setting payment rates. To deviate from our standard OPPS ratesetting methodology and update the payment rates for blood and blood products by the PPI would skew this relativity.

We also note that, as discussed in section II.B. of this final rule with comment period, we are required by law to update the conversion factor used to determine payment rates under the OPPS. For CY 2010, the update is equal to the hospital inpatient market basket increase. The PPI for blood and organ banks is one of several price proxies used to calculate the hospital inpatient market basket (74 FR 43847), which represents the change in price over time of the same mix (quantity and intensity) of goods and services purchased to provide hospital services. In this way, the PPI for blood and blood products is already incorporated in the CY 2010 payment rates for blood and blood products.

Comment: One commenter noted that the proposed CY 2010 median costs for several blood and blood products fluctuated significantly relative to CY 2009. The commenter expressed concern about potentially large payment decreases and noted that, in the past, CMS dampened payment decreases for blood and blood products to limit product losses. The commenter requested that CMS disclose the source of the fluctuations in CY 2010 median costs for blood and blood products and implement a dampening policy to mitigate significant payment fluctuations, not only for blood and blood products but for all other services.

Response: As stated previously, we continue to believe that using blood-specific CCRs applied to hospital claims data results in payments that appropriately reflect hospitals' relative costs of providing blood and blood products as reported to us by hospitals. We do not believe it is necessary or appropriate to implement a dampening policy to mitigate significant payment fluctuations, for blood and blood products or for any other items and services payable under the OPPS, as described in section II.A.2.c. of this final rule with comment period. As we have

stated in the past (73 FR 68541), it is our common practice to review significant changes in median costs from year to year and from the proposed rule to the final rule for a given calendar year. The final CY 2010 median costs for more than two-thirds of all blood and blood products changed by a margin of less than 10 percent compared to the CY 2009 median costs. Of the remaining blood and blood products, 8 demonstrated decreases in median costs of greater than 10 percent, and 5 demonstrated increases in median costs of greater than 10 percent. We determined that the fluctuations in median costs for these 13 blood and blood products were due to contributions of additional claims, the addition or removal of individual hospitals furnishing particular blood and blood products, and revised cost report data. For all APCs whose payment rates are based upon relative payment weights, we note that the quality and accuracy of reported units and charges significantly influence the median costs that are the basis for our payment rates, especially for low volume items and services. Beyond our standard OPPS trimming methodology (described in section II.A.2. of this final rule with comment period) that we apply to those claims that have passed various types of claims processing edits, it is not our general policy to judge the accuracy of hospital coding and charging for purposes of ratesetting.

Comment: One commenter recommended that CMS recognize plasma protein fraction (PPF) products as drugs under the OPPS and assign status indicator "K" (Nonpass-Through Drugs and Nonimplantable Biologicals, Including Therapeutic Radiopharmaceuticals) to HCPCS codes P9043 (Infusion, plasma protein fraction (human), 5%, 50 ml) and P9048 (Infusion, plasma protein fraction (human), 5%, 250 ml), rather than assigning them status indicator "R" (Blood and Blood Products). The commenter also requested that CMS instruct providers to use the appropriate infusion CPT codes for administration of PPF, rather than blood transfusion codes. According to the commenter, PPF is similar clinically to albumin in terms of how it is derived and the patients for whom it is indicated. The commenter also stated that, according to the AABB, both albumin and PPF are blood derivatives that should be billed with pharmacy revenue codes. According to the commenter, the AABB also indicates that the administration of blood derivatives, including PPF, should be billed with injection or infusion CPT

codes rather than blood transfusion CPT codes.

Response: We did not propose to change the status indicators for the PPF products described by HCPCS codes P9043 and P9048 from "R" to "K" for CY 2010. Because changing the status indicators for these products as the commenter recommended could have significant payment implications, we believe we should not consider such a potential change in policy without seeking input from all interested stakeholders through our annual rulemaking cycle. Specifically, changing the status indicator from "R" to "K" would require us to calculate the payment rates for PPF using mean unit cost from hospital claims, as we currently do for albumin products, rather than using our standard blood-specific CCR methodology for blood and blood products.

We last addressed the issue of whether plasma-derived therapies and their recombinant analogs should be considered blood and blood products for purposes of payment under the OPPS in the CY 2003 OPPS final rule with comment period (67 FR 66774) and the CY 2004 OPPS final rule with comment period (68 FR 63455). We stated that, because these products are highly processed and not manufactured by local blood banks, they do not have the same access and safety concerns as other blood and blood products. Therefore, we did not consider any plasma-derived products and their recombinant analogs, including albumin and immune globulins, to fall under the category of blood and blood products (67 FR 66774).

We are requesting comments on this final rule with comment period that address whether PPF should be recognized as a blood and blood product, designated with status indicator "R," or as a nonpass-through drug and biological, designated with status indicator "K." Specifically, we are interested in how PPF is derived and manufactured, and whether the same access and safety concerns that apply to the blood and blood products recognized under the OPPS for payment purposes also apply to PPF. Finally, we are interested in the relationship between albumin and PPF, from clinical, manufacturing, and safety perspectives, and whether there would be a rationale for treating these products similarly for payment purposes under the OPPS. We will consider these comments as we prepare for the CY 2011 annual rulemaking cycle.

Comment: One commenter asked if the product "prepoled cryoprecipitate"

would be added to the list of blood and blood products.

Response: The existing HCPCS code that describes cryoprecipitate products, P9012 (Cryoprecipitate, each unit), is recognized under the OPPS for payment purposes as a blood and blood product. We note there is an established process in place for requesting a revision to the Level II HCPCS codes if stakeholders believe the current codes cannot adequately address all clinical circumstances. The Level II HCPCS coding system is a comprehensive and standardized system that classifies similar products that are medical in nature into categories for the purpose of efficient claims processing. The process and criteria for revising Level II HCPCS codes is available on the CMS Web site at: http://www.cms.hhs.gov/MedHCPCSGenInfo/02_HCPCSCODING_PROCESS.asp#TopOfPage.

After consideration of the public comments we received, we are finalizing, without modification, our proposal to calculate the median costs upon which the CY 2010 payment rates for blood and blood products are based using the blood-specific CCR methodology that we have utilized since CY 2005. We believe that continuing this methodology in CY 2010 results in median costs for blood and blood products that appropriately reflect the relative estimated costs of these products for hospitals without blood cost centers and, therefore, for these products in general.

We refer readers to Addendum B to this final rule with comment period for the final CY 2010 payment rates for blood and blood products, which are identified with status indicator "R." For more detailed discussion of the blood-specific CCR methodology, we refer readers to the CY 2005 OPPS proposed rule (69 FR 50524 through 50525). For a full history of OPPS payment for blood and blood products, we refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66807 through 66810).

(3) Single Allergy Tests

In the CY 2010 OPPS/ASC proposed rule (74 FR 35269), we proposed to continue with our methodology of differentiating single allergy tests ("per test") from multiple allergy tests ("per visit") by assigning these services to two different APCs to provide accurate payments for these tests in CY 2010. Multiple allergy tests are currently assigned to APC 0370 (Allergy Tests), with a median cost calculated based on the standard OPPS methodology. We provided billing guidance in CY 2006 in Transmittal 804 (issued on January 3,

2006) specifically clarifying that hospitals should report charges for the CPT codes that describe single allergy tests to reflect charges "per test" rather than "per visit" and should bill the appropriate number of units of these CPT codes to describe all of the tests provided. However, as noted in the CY 2010 OPPS/ASC proposed rule (74 FR 35269), our CY 2008 claims data available for that proposed rule for APC 0381 did not reflect improved and more consistent hospital billing practices of "per test" for single allergy tests. The median cost of APC 0381, calculated for the proposed rule according to the standard single claims OPPS methodology, was approximately \$55, significantly higher than the CY 2009 median cost of APC 0381 of approximately \$23 calculated according to the "per unit" methodology, and greater than we would expect for these procedures that are to be reported "per test" with the appropriate number of units. Some claims for single allergy tests still appear to provide charges that represent a "per visit" charge, rather than a "per test" charge. Therefore, consistent with our payment policy for single allergy tests since CY 2006, we proposed to calculate a "per unit" median cost for APC 0381, based upon 530 claims containing multiple units or multiple occurrences of a single CPT code. The proposed CY 2010 median cost for APC 0381 using the "per unit" methodology was approximately \$29. For a full discussion of this methodology, we refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66737).

We did not receive any public comments on our CY 2010 proposal for payment of single allergy tests. Therefore, we are finalizing our CY 2010 proposal, without modification, to calculate a "per unit" median cost for APC 0381 as described above in this section. The final CY 2010 median cost of APC 0381 is approximately \$29.

(4) Echocardiography Services

In CY 2008, we implemented a policy whereby payment for all contrast agents is packaged into the payment for the associated imaging procedure, regardless of whether the contrast agent met the OPPS drug packaging threshold. Section 1833(t)(2)(G) of the Act requires us to create additional APC groups of services for procedures that use contrast agents to classify them separately from those procedures that do not utilize contrast agents. To reconcile this statutory provision with our final policy of packaging all contrast agents, for CY 2008, we calculated HCPCS code-specific median costs for all separately

payable echocardiography procedures that may be performed with contrast agents by isolating single and "pseudo" single echocardiography claims with the following CPT codes where a contrast agent was also billed on the claim:

- 93303 (Transthoracic echocardiography for congenital cardiac anomalies; complete);
- 93304 (Transthoracic echocardiography for congenital cardiac anomalies; follow-up or limited study);
- 93307 (Echocardiography, transthoracic, real-time with image documentation (2D) with or without M-mode recording; complete);
- 93308 (Echocardiography, transthoracic, real-time with image documentation (2D) with or without M-mode recording; follow-up or limited study);
- 93312 (Echocardiography, transesophageal, real time with image documentation (2D) (with or without M-mode recording); including probe placement, image acquisition, interpretation and report);
- 93315 (Transesophageal echocardiography for congenital cardiac anomalies; including probe placement, image acquisition, interpretation and report);
- 93318 (Echocardiography, transesophageal (TEE) for monitoring purposes, including probe placement, real time 2-dimensional image acquisition and interpretation leading to ongoing (continuous) assessment of (dynamically changing) cardiac pumping function and to therapeutic measures on an immediate time basis); and
- 93350 (Echocardiography, transthoracic, real-time with image documentation (2D), with or without M-mode recording, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report).

After reviewing HCPCS code-specific median costs, we determined that all echocardiography procedures that may be performed with contrast agents are reasonably similar both clinically and in terms of resource use. In CY 2008, we created APC 0128 (Echocardiogram with Contrast) to provide payment for echocardiography procedures that are performed with a contrast agent. We refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66643 through 66646) for more information on this methodology.

In order for hospitals to identify and receive appropriate payment for echocardiography procedures performed with contrast beginning in CY 2008, we created eight new HCPCS codes (C8921

through C8928) that corresponded to the related CPT echocardiography codes and assigned them to the newly created APC 0128. We instructed hospitals to report the CPT codes when performing echocardiography procedures without contrast and to report the new HCPCS C-codes when performing echocardiography procedures with contrast, or without contrast followed by with contrast. As is our standard policy with regard to new codes, the APC assignment of these codes was then open to comment in that final rule.

We used the same process to calculate median costs for these codes for CY 2009 as we used for CY 2008 to separately identify echocardiography services provided with contrast and those provided without contrast because the data reported under these new codes were not yet available for CY 2009 ratesetting.

In addition, for CY 2009, the American Medical Association (AMA) revised several CPT codes in the 93000 series to more specifically describe particular services provided during echocardiography procedures. The CY 2009 descriptor for new CPT code 93306 (Echocardiography, transthoracic real-time with image documentation (2D), includes M-mode recording, when performed, complete, with spectral Doppler echocardiography, and with color flow Doppler echocardiography) includes the services described in CY 2008 by three CPT codes: 93307; 93320 (Doppler echocardiography, pulsed wave and/or continuous wave with spectral display; complete); and 93325 (Doppler echocardiography color flow velocity mapping). Therefore, the service described in CY 2009 by new CPT code 93306 was reported in the CY 2008 data with three CPT codes, specifically CPT codes 93307, 93320, and 93325. In CY 2008, the hospital received separate payment for CPT code 93307 through APC 0269 (Level II Echocardiogram without Contrast Except Transesophageal), into which payment for the other two services was packaged. The revised CY 2009 descriptor of CPT code 93307 explicitly excludes services described by CPT codes 93320 and 93325.

To estimate the hospital costs of CPT codes 93306 and 93307 based on their CY 2009 descriptors and the corresponding HCPCS codes C8929 and C8923 for CY 2009, we used claims data from CY 2007. As described in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68542 through 68544), we manipulated our CY 2007 single and "pseudo" single claims data to simulate the new CY 2009 definitions of these services. Specifically, we

selected claims for CPT code 93307 on which CPT codes 93320 and 93325 were also present and we treated the summed costs on these claims as if they were a single procedure claim for CPT code 93306. Similarly, we selected single claims for CPT code 93307 to reflect the newly revised descriptor for CY 2009; that is, we included those claims where CPT code 93307 was not billed with packaged CPT code 93320 or CPT code 93325 on the same claim. We then applied our CY 2009 methodology for calculating HCPCS code-specific median costs for these echocardiography procedures with and without contrast by dividing the new set of claims for CPT codes 93306 and 93307 into those billed with and without contrast agents. We assigned the costs for simulated CPT codes 93306 and 93307 reported without contrast to those CPT codes. We then assigned the costs for simulated CPT codes 93306 and 93307 reported with contrast to new HCPCS code C8929 (Transthoracic echocardiography with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, complete, with spectral Doppler echocardiography, and with color flow Doppler echocardiography) and revised HCPCS code C8923 (Transthoracic echocardiography with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, complete, without spectral or color Doppler echocardiography), respectively. In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68542 through 68544), we assigned these CPT and HCPCS codes to APCs for CY 2009 based on their simulated median costs and clinical characteristics. New CY 2009 CPT code 93306 and HCPCS code C8929 were assigned comment indicator "NI" in that final rule with comment period, to signify that they were new codes whose interim final OPPS treatment was open to comment on that final rule with comment period.

The CY 2010 OPPS/ASC proposed rule was the first opportunity to have claims data available from hospitals for echocardiography services performed with contrast (or without contrast followed by with contrast) and reported with HCPCS codes C8921 through C8928. With the exception of HCPCS code C8923, which had a significant change in its code descriptor for CY 2009, in the CY 2010 OPPS/ASC proposed rule (74 FR 35271), we proposed to use our standard

methodology to set the CY 2010 OPPS payment rates for these echocardiography services performed with contrast, taking into consideration their HCPCS code-specific median costs from CY 2008 claims.

For CY 2010 ratesetting, we proposed to employ an alternative ratesetting methodology for CPT codes 93306 and 93307 and HCPCS codes C8929 and C8923 that is similar to the approach we used for CY 2009 in order to account for the new codes and revised code descriptors for which CY 2008 data are unavailable. However, in the case of the proposed CY 2010 cost estimation, our CY 2008 claims for CPT code 93307 were only for services performed without contrast, and we have CY 2008 claims for HCPCS C8923 for the comparable services performed with contrast. Specifically, we selected claims for CPT code 93307 on which CPT codes 93320 and 93325 were also present and we treated the summed costs on these claims as if they were a single procedure claim for CPT code 93306 in order to simulate the median cost for CPT code 93306, for which CY 2008 claims data are not available. We then selected single claims for CPT code 93307 to reflect the newly revised descriptor for CY 2009; that is, we included those claims where CPT code 93307 was not billed with either packaged CPT code 93320 or CPT code 93325 on the same claim in order to simulate an appropriate CY 2010 proposed median cost for CPT code 93307. We assigned the costs of HCPCS code C8923 when reported with CPT codes 93320 and 93325 to HCPCS code C8929 and the costs of HCPCS code C8923 when reported without CPT code 93320 or 93325 to HCPCS code C8923.

Following publication of the CY 2009 OPPS/ASC final rule with comment period, several stakeholders brought a number of concerns to our attention, including the interim APC assignment of new CPT code 93351 (Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with physician supervision) and the corresponding new HCPCS code C8930 (Transthoracic echocardiography, with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using

treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with physician supervision). These stakeholders noted that new CY 2009 CPT code 93351 was created to include the services reported previously by CPT codes 93015 (Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with physician supervision, with interpretation and report) and 93350 (Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report). Because new CY 2009 CPT code 93351 was meant to include the services previously reported with both the CPT codes for a transthoracic echocardiogram during rest and stress (CPT code 93350 is recognized under the OPPS) and a cardiovascular stress test (CPT code 93017 is recognized under the OPPS, rather than CPT code 93015), these stakeholders disagreed with our assignments of both CPT codes 93350 and 93351 to APC 0269 for CY 2009.

Upon review of these concerns and our CY 2008 data, in the CY 2010 OPPS/ASC proposed rule (74 FR 35271), we proposed for CY 2010 to use an alternative methodology to simulate median costs for CPT code 93351 and corresponding HCPCS code C8930, for which CY 2008 claims data are unavailable, and for CPT code 93350 and corresponding HCPCS code C8928 (Transthoracic echocardiography with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report). That is, we proposed to use claims that contain both CPT codes 93350 and 93017 (Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; tracing only, without interpretation and report) to simulate the median cost for CPT code 93351. We also proposed to use the remaining claims that contain CPT code 93350 but that do not contain CPT code 93017 to develop the proposed CY 2010 median cost for CPT code 93350. For

our proposed rule analysis, we identified over 74,000 CY 2008 claims with both CPT code 93350 and CPT code 93017 on the same date of service and no other separately paid services appearing on the same date after applying our bypass processing logic, discussed in section II.A.1.b. of the proposed rule (74 FR 35240 through 35241). We treated these modified claims containing both CPT codes 93350 and 93017 as a single service and we calculated a proposed median cost of approximately \$604. Therefore, for CY 2010, we proposed to reassign CPT code 93351 to revised APC 0270 (Level III Echocardiogram without Contrast), which had a proposed APC median cost of approximately \$596. We proposed to continue to assign CPT code 93350 to APC 0269, which had a proposed APC median cost of approximately \$456, based on its proposed HCPCS code-specific median cost of approximately \$406 based on approximately 11,000 single claims. Furthermore, we proposed to use claims for HCPCS code C8928 that are reported with CPT code 93017 on the same claim to simulate the CY 2010 median cost for HCPCS code C8930. We identified over 4,000 claims in the proposed rule data with both HCPCS code C8930 and CPT code 93017 on the same date of service and no other separately paid services appearing on the same date after applying our bypass processing logic, discussed in section II.A.1.b. of the proposed rule (74 FR 35240 through 35241), that we modified to treat HCPCS code C8930 and CPT code 93017 as a single service. We calculated a HCPCS code-specific proposed median cost of approximately \$706. Therefore, we proposed to continue to assign HCPCS code C8930 to APC 0128 with a proposed APC median cost of approximately \$660. We also proposed to continue to assign HCPCS code C8928 to APC 0128, based on its HCPCS code-specific proposed median cost of approximately \$595 based on approximately 1,000 single claims.

Comment: One commenter on the CY 2009 OPPS/ASC final rule with comment period addressed the interim final treatment of new CPT code 93306 for CY 2009. The commenter requested that CMS not recognize CPT code 93306 under the OPPS because this code represents the combination of three services already described by existing CPT codes 93307, 93320, and 93325. Alternatively, the commenter recommended that CMS could instruct hospitals to continue billing CPT codes 93320 and 93325 in association with CPT code 93306 in order to encourage

consistent reporting of services described by CPT codes 93320 and 93325 when they are furnished with any echocardiography service. The commenter believed that requiring the use of CPT code 93306 may confuse hospitals, as other echocardiography services require the separate reporting of CPT codes 93320 and 93325 when these additional procedures are performed. Because there are already existing codes for the services described by CPT code 93306 and hospitals could inappropriately stop reporting CPT codes 93320 and 93325 in association with other echocardiography services, the commenter requested that CMS not recognize CPT code 93306 for payment under the OPPS. According to the commenter, under all circumstances, hospitals would continue to report CPT code 93320 or CPT code 93325 when they are performed with any echocardiography procedure, a practice preferred by the commenter. Similarly, the commenter recommended that CMS not recognize the corresponding HCPCS code C8929 that describes CPT code 93306 when furnished with contrast because the contrast echocardiography procedure could also be reported using existing HCPCS code C8921 and CPT codes 93320 and 93325.

Response: As is our standard methodology, we review new CPT codes annually and assign status indicators to all new codes and provide APC assignments, if applicable, for codes that describe services that may be performed in the hospital outpatient department (which includes provider-based clinics located on and off campus). We consider CPT code 93306 to be part of the standard CPT code set hospitals use for reporting services under the OPPS, and the service described by the code is one that we believe could be furnished to a hospital outpatient and potentially covered and, therefore, paid by Medicare under the OPPS. We incorporated CPT code 93306 in the CY 2009 OPPS/ASC final rule with comment period, assigning it a separately payable status indicator and APC, consistent with our belief that the service described by this code could be appropriately reported by hospitals when they furnish the service in the HOPD. Furthermore, as described in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68543), we used a special cost estimation methodology to estimate the expected cost of CPT code 93306 based on hospital claims data for the individual predecessor codes in order to inform our interim final assignment of CPT code 93306 to a clinical APC for CY 2009.

Regarding the commenter's alternative suggestion that we instruct hospitals to continue to report CPT codes 93320 and 93325 when performed in association with the procedure described by CPT code 93306, we will not instruct hospitals to continue to report CPT codes 93320 and 93325 when billing for CPT code 93306 because CPT code 93306 incorporates the services described by CPT codes 93320 and 93325 in its code descriptor. Billing separately for these services when reporting CPT 93306 would not be consistent with correct coding principles and could create greater confusion and unnecessary burden for hospitals. Whenever possible, hospitals have repeatedly encouraged us to follow standard coding guidelines in order to reduce their administrative burden in reporting services differently for Medicare, and our recognition of CPT code 93306 for payment under the OPSS is consistent with hospitals' general request to us.

Finally, as we are continuing to instruct hospitals to use CPT code 93306 for CY 2010, it continues to be appropriate for hospitals to bill using HCPCS code C8929 when furnishing the service described by CPT code 93306 with contrast. In the case of CPT code 93306 and other CPT codes for echocardiography services, we have developed parallel HCPCS C-codes to report each procedure when furnished with contrast in order to provide payment through separate APCs for those echocardiography services furnished with and without contrast.

Comment: Several commenters on the CY 2010 OPSS/ASC proposed rule expressed support for the revisions to the echocardiography APCs included in the CY 2010 OPSS/ASC proposed rule. One commenter noted appreciation for the proposed reassignment of CPT code 93351 from APC 0269 to APC 0270. However, one commenter on the CY 2009 OPSS/ASC final rule with comment period suggested that the new CY 2009 CPT code 93351 should not be recognized for payment under the OPSS. The commenter reasoned that the comprehensive service described by CPT code 93351 is comprised of two services previously reported with CPT codes 93350 and 93015: CPT code 93015 includes physician supervision and interpretation, which are not hospital outpatient services; and CPT code 93015 is reported by nonhospital practitioners and is not recognized for payment under the OPSS.

In addition, a commenter on the CY 2010 OPSS/ASC proposed rule stated that a more appropriate treatment of CPT code 93351 under the OPSS would

be to not recognize this code for payment under the OPSS but, rather, to continue to recognize for payment several existing CPT codes which, when reported in combination, would describe the service that would otherwise be reported with CPT code 93351 alone. The commenter believed that CPT code 93351 was created specifically for services performed in nonfacility settings and that the intent of the CPT Editorial Committee was to limit the use of the code to nonfacility settings only. The commenter stated that correspondence from CMS indicated that CPT code 93351 would be billable only when provided in a physician's office or independent laboratory settings.

Response: As is our standard methodology, we review new CPT codes annually and assign status indicators to all new codes and provide APC assignments, if applicable, for codes that describe services that may be performed in the HOPD (which includes provider-based clinics located on and off campus). The CPT code descriptor for CPT code 93351 makes no mention that the code is restricted from use in the HOPD, or that its use is limited to nonfacility settings. Further, there are no additional CPT instructions that would limit the reporting of CPT code 93351 to nonfacility or nonhospital settings. We consider this CPT code to be part of the standard CPT code set hospitals use for reporting services under the OPSS, and the service described by the code is one that we believe could be furnished to a hospital outpatient and potentially covered and, therefore, paid by Medicare under the OPSS. CPT code 93351 describes a service that would previously have been reported with CPT codes 93350 and 93017 under the OPSS. While the commenter was correct that we do not recognize CPT code 93015 for payment under the OPSS, a code that describes a cardiovascular stress test with interpretation and report, we do recognize CPT code 93017, which describes the tracing only for the cardiovascular stress test. We incorporated CPT code 93351 in the CY 2009 OPSS/ASC final rule with comment period, assigning it a separately payable status indicator and APC, consistent with our belief that the service described by this code could be appropriately reported by hospitals when they furnish the service in the HOPD. Furthermore, we established professional component (PC) and technical component (TC) payments under the MPFS for CPT code 93351, also consistent with our belief that the

CPT code may be reported for services in facility settings, such as independent laboratory settings. We have communicated no information to the public that states that Medicare hospital outpatient payment would not be made if this CPT code were reported by a hospital for services furnished to hospital outpatients.

We proposed a methodology for identifying the hospital outpatient claims and isolating the hospital charges that would be associated with this procedure for CY 2010 in order to develop an appropriate hospital outpatient payment for the associated facility resources for the existing services that would be reported and paid under the new CPT code. Specifically, we proposed to use claims that contain both CPT codes 93350 and 93017 to simulate the median cost for CPT code 93351 and proposed to reassign CPT code 93351 from APC 0269 to revised APC 0270 for CY 2010 based on its simulated median cost. We continue to believe that this CPT code may be reported for OPSS services described by the code, and that our proposed CY 2010 cost estimation methodology accurately simulates a median cost for this new code that reflects the associated hospital resources for the component services that are newly described by this single CPT code.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to reassign CPT code 93351 to APC 0270 based on a simulated CPT-specific median cost identified from over 80,000 CY 2008 claims with both CPT code 93350 and CPT code 93017 on the same date of service and no other separately paid services appearing on the same date after applying our bypass processing logic, as discussed above. We calculated a final CPT-specific median cost of approximately \$605 for CPT code 93351 and a final CY 2010 APC median cost for APC 0270 of approximately \$591.

Comment: One commenter on the CY 2009 OPSS/ASC final rule with comment period requested that CMS delete HCPCS code C8930 (Transthoracic echocardiography, with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with physician supervision) as the services

described by this code could be reported using CPT code 93017 (Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; tracing only, without interpretation and report) and HCPCS code C8928 (Transthoracic echocardiography with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report).

Response: As described above, we are continuing to recognize the service described by CPT code 93351, which is the noncontrast echocardiography procedure that is parallel to HCPCS code C8930 for the same procedures provided with contrast. As previously noted, we have developed parallel HCPCS C-codes to report each echocardiography procedure when furnished with contrast in order to provide payment through separate APCs for those echocardiography services furnished with and without contrast. While we understand that the service reported under HCPCS code C8930 may be reported using a combination of a CPT code and a HCPCS C-code, we do not believe that this would be appropriate because the noncontrast echocardiography service is reported with a single CPT code. Hospitals are generally instructed to use the HCPCS code that most appropriately and specifically describes the service that was provided, including not unbundling component services that could otherwise be separately reported. In this instance, HCPCS code C8930 would be the most specific code that describes the full service provided when the component services that would otherwise be reported by CPT code 93017 and HCPCS code C8928 are provided together. Our CY 2010 ratesetting methodology for HCPCS code C8928 is based on claims data and specifically excludes those cases when the service was furnished along with the procedure described by CPT code 93017. On the other hand, our CY 2010 ratesetting methodology for HCPCS code C8930 specifically includes cases where the services described by HCPCS code C8928 and CPT code 93017 were provided together. In that way, we are able to base CY 2010 payment for all of these services on their actual or simulated hospital costs in the context

of the CPT and HCPCS C-codes that will be reported in CY 2010.

After consideration of the public comment we received, we are finalizing our CY 2010 proposal, without modification, to continue to recognize HCPCS code C8930 for OPSS payment. For CY 2010, HCPCS code C8930 continues to be assigned to APC 0128, with a final CY 2010 APC median cost of approximately \$645.

Comment: One commenter on the CY 2009 OPSS/ASC final rule with comment period requested that CMS not recognize CPT code 93352 (Use of echocardiographic contrast agent during stress echocardiography), as the OPSS has already developed Level II HCPCS C-codes to identify echocardiography procedures performed with contrast.

Response: During our review of CPT code 93352 for the CY 2009 OPSS/ASC final rule with comment period, we assigned an interim final status indicator "M" (Not paid under the OPSS) to CPT code 93352 for CY 2009. In our CY 2010 OPSS/ASC proposed rule, we proposed to continue this status indicator assignment for CY 2010.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to assign status indicator "M" to CPT code 93352.

Comment: A few commenters requested that CPT code 93318 (Echocardiography, transesophageal (TEE) for monitoring purposes, including probe placement, real time 2-dimensional image acquisition and interpretation leading to ongoing (continuous) assessment of (dynamically changing) cardiac pumping function and to therapeutic measures on an immediate time basis) not be reassigned to APC 0269 as proposed for CY 2010. Instead, these commenters requested that CPT code 93318 continue to be assigned to APC 0270 for CY 2010. Commenters stated that CPT code 93318 is clinically similar to CPT code 93312 (Echocardiography, transesophageal, real time with image documentation (2D) (with or without M-mode recording); including probe placement, image acquisition, interpretation and report), and because CPT code 93312 is assigned to APC 0270, CPT code 93318 should be assigned to APC 0270 as well. While these commenters noted that the reassignment of CPT code 93318 to APC 0269 would be most consistent with its CPT-specific median cost presented in the proposed rule, they stated that the unexplained volatility in the cost of CPT code 93318 suggests that clinical homogeneity should be the deciding

factor when assigning this service to an APC.

Response: As is our standard process, for the CY 2010 proposed rule, we reviewed each APC for clinical cohesiveness and resource homogeneity. As the commenters noted, we proposed to reassign CPT code 93318 to APC 0269 as we believed that the proposed CPT-specific median cost more closely matched the median cost of APC 0269. While we continue to believe that the CPT-specific median cost of CPT 93318 (approximately \$472) closely resembles the median cost of APC 0269 (approximately \$447), upon further review, we agree with the commenter that the clinical characteristics of the procedure described by CPT code 93318 are similar to the procedure described by CPT code 93312. We also note that we have only 344 single and 593 total claims for CPT code 93318 from only 188 providers in comparison to 29,987 single and 52,342 total claims for CPT code 93312 from 2,093 providers. We believe the limited claims data from relatively few providers contribute to the variability in cost observed for CPT code 93318 and agree with the commenters that this procedure should remain assigned to APC 0270 for CY 2010.

After consideration of the public comments we received, we are not finalizing our proposal to reassign CPT code 93318 to APC 0269. Instead, for CY 2010, we are continuing to assign CPT code 93318 to APC 0270, with a final CY 2010 APC median cost of approximately \$591.

Comment: Several commenters supported the continuation of separate APCs for payment of echocardiography procedures with contrast and without contrast. While these commenters were generally supportive of the proposed ratesetting methodology, they were concerned that the proposed payment rate for APC 0128 of approximately \$683 was insufficient to cover the costs associated with providing the echocardiogram and the related contrast materials and services for HCPCS codes C8921 (Transthoracic echocardiography with contrast, or without contrast followed by with contrast, for congenital cardiac anomalies; complete); C8925 (Transthoracic echocardiography (TEE) with contrast, or without contrast followed by with contrast, real time with image documentation (2D) (with or without M-mode recording); including probe placement, image acquisition, interpretation and report); C8926 (Transthoracic echocardiography (TEE) with contrast, or without contrast followed by with contrast, for congenital cardiac anomalies; including probe

placement, image acquisition, interpretation and report); and C8930 (Transthoracic echocardiography, with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with physician supervision). Specifically, the commenters noted that the noncontrast equivalent procedures (described by CPT codes 93303, 93312, 93315, and 93351) were all proposed for assignment to APC 0270, with a proposed payment rate of approximately \$600. The commenters believed that the difference between the proposed payment rate for these procedures with contrast and without contrast is too small to cover the cost of the contrast material used in these procedures. The commenters suggested that CMS reassign HCPCS codes C8921, C8925, C8926, and C8930 to a new APC for echocardiography procedures performed with contrast or that CMS provide separate payment for the contrast material used in these procedures.

Response: The final payment differential between APC 0270, where CPT codes 99303, 99312, 99315, and 99351 are assigned, and APC 0128, where the corresponding HCPCS codes for the same procedures with contrast (HCPCS codes C8921, C8925, C8926, and C8930) are assigned, is the difference between approximately \$645 and approximately \$591 of \$54. We believe this differential provides an appropriate higher payment to those

hospitals that furnish these procedures with contrast and appropriately accounts for the cost of the contrast material, which is required for all of the services assigned to APC 0128. HCPCS codes C8921, C8925, C8926, and C8930 have median costs that range from a low of approximately \$178 to a high of approximately \$712. Each of these HCPCS codes was reported by fewer than 170 providers in CY 2008. The median costs of these services span most of the range of median costs of HCPCS codes assigned to APC 0128, and they do not form a cluster of high cost procedures in the APC such that they would warrant assignment to a new clinical APC. In contrast, the median costs of CPT codes 99303, 99312, 99315, and 99351 span a much narrower range, from a low of approximately \$505 to a high of approximately \$605. Two of these CPT codes were reported by more than 1,500 providers in CY 2008. Clearly, fewer providers are reporting the echocardiogram procedures with contrast, and we expect that the hospital cost distribution for that subset of hospitals could be different than the cost distribution of the large number of providers reporting the procedures without contrast. Therefore, no conclusions can be drawn about the aggregate OPPS payment to that subset of hospitals for all of their echocardiogram services in comparison to the aggregate echocardiogram costs of the subset of hospitals specifically based on the payment rates for APCs 0128 and 0270. The OPPS is a prospective payment system that relies on hospital charge and cost report data from the hospitals that furnish the services in order to determine relative costs. Therefore, we believe that our

prospective payment rates calculated based on the costs of those providers furnishing the procedures in CY 2008 provide appropriate payment to the providers that will furnish the services in CY 2010.

In summary, after consideration of the public comments we received, we are finalizing our CY 2010 proposals for payment of echocardiography procedures with and without contrast, with modifications. We are finalizing our proposed methodologies for simulating the median costs of CPT codes 93306, 93307, 93351, and 93350 for which there are no CY 2008 hospital claims data for these specific CPT codes, as discussed above. In addition, we are finalizing our proposed methodologies for simulating the median costs of HCPCS codes C8929, C8923, C8930, and C8928 for which there are no CY 2008 hospital claims data for these specific HCPCS codes, as discussed above. We are not finalizing our proposal to reassign CPT code 93318 to APC 0369; instead, we are maintaining the assignment of CPT code 93318 to APC 0270 for CY 2010. Finally, we are finalizing our proposal to assign HCPCS codes C8921, C8925, C8926, and C8930 to APC 0128 for CY 2010.

Table 9 below shows CY 2010 CPT codes for billing echocardiography services without contrast, their final APC assignments for CY 2010, and the corresponding HCPCS codes for use when echocardiography services are performed with contrast (or without contrast followed by with contrast), along with their final APC assignments for CY 2010.

BILLING CODE 4120-01-P

**TABLE 9.—CY 2010 OPPS HCPCS CODES FOR BILLING
ECHOCARDIOGRAPHY SERVICES**

Echocardiography Without Contrast			Echocardiography With Contrast		
CY 2010 HCPCS Code	CY 2010 Descriptor	Final CY 2010 APC	CY 2010 HCPCS Code	CY 2010 Descriptor	Final CY 2010 APC
93303	Transthoracic echocardiography for congenital cardiac anomalies; complete	0270	C8921	Transthoracic echocardiography with contrast, or without contrast followed by with contrast, for congenital cardiac anomalies; complete	0128
93304	Transthoracic echocardiography for congenital cardiac anomalies; follow-up or limited study	0269	C8922	Transthoracic echocardiography with contrast, or without contrast followed by with contrast, for congenital cardiac anomalies; follow-up or limited study	0128
93306	Echocardiography, transthoracic real-time with image documentation (2D), includes M-mode recording, when performed, complete, with spectral Doppler echocardiography, and with color flow Doppler echocardiography	0269	C8929	Transthoracic echocardiography with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, complete, with spectral Doppler echocardiography, and with color flow Doppler echocardiography	0128

Echocardiography Without Contrast			Echocardiography With Contrast		
93307	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, without spectral or color Doppler echocardiography	0697	C8923	Transthoracic echocardiography with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, complete, without spectral or color Doppler echocardiography	0128
93308	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, follow-up or limited study	0697	C8924	Transthoracic echocardiography with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, follow-up or limited study	0128
93312	Echocardiography, transesophageal, real time with image documentation (2D) (with or without M-mode recording); including probe placement, image acquisition, interpretation and report	0270	C8925	Transesophageal echocardiography (TEE) with contrast, or without contrast followed by with contrast, real time with image documentation (2D) (with or without M-mode recording); including probe placement, image acquisition, interpretation and report	0128
93313	Echocardiography, transesophageal, real time with image documentation (2D) (with or without M-mode recording); placement of transesophageal probe only	0269	No corresponding C-code		

Echocardiography Without Contrast			Echocardiography With Contrast		
93315	Transesophageal echocardiography for congenital cardiac anomalies; including probe placement, image acquisition, interpretation and report	0270	C8926	Transesophageal echocardiography (TEE) with contrast, or without contrast followed by with contrast, for congenital cardiac anomalies; including probe placement, image acquisition, interpretation and report	0128
93316	Transesophageal echocardiography for congenital cardiac anomalies; placement of transesophageal probe only	0270	No corresponding C-code		
93318	Echocardiography, transesophageal (TEE) for monitoring purposes, including probe placement, real time 2-dimensional image acquisition and interpretation leading to ongoing (continuous) assessment of (dynamically changing) cardiac pumping function and to therapeutic measures on an immediate time basis	0270	C8927	Transesophageal echocardiography (TEE) with contrast, or without contrast followed by with contrast, for monitoring purposes, including probe placement, real time 2-dimensional image acquisition and interpretation leading to ongoing (continuous) assessment of (dynamically changing) cardiac pumping function and to therapeutic measures on an immediate time basis.	0128

Echocardiography Without Contrast			Echocardiography With Contrast		
93350	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report	0269	C8928	Transthoracic echocardiography with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report	0128
93351	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with physician supervision	0270	C8930	Transthoracic echocardiography, with contrast, or without contrast followed by with contrast, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with physician supervision	0128

BILLING CODE 4120-01-C

Finally, in the CY 2010 OPPS/ASC proposed rule (74 FR 35275), for CY 2010, based upon our proposed APC configurations, we also proposed to revise the titles of our existing series of echocardiography APCs to more accurately describe the groups of services identified by CPT codes 93303

through 93352 and HCPCS codes C8921 through C8930 that are assigned to these APCs. We proposed to rename APCs 0269, 0270, and 0697 as described in Table 7 of the proposed rule.

Comment: One commenter supported the proposed revisions to the echocardiography APC titles and configurations.

Response: We appreciate the support for our proposal.

We are finalizing our proposal to rename APCs 0269, 0270, and 0697 without modification. Therefore, we are adopting as final the titles of these APCs as reflected in Table 10 below:

TABLE 10—CY 2010 ECHOCARDIOGRAPHY APCs

Final CY 2010 APC	CY 2010 APC title	Final CY 2010 approximate APC median cost
0128	Echocardiogram With Contrast	\$645
0269	Level II Echocardiogram Without Contrast	447

TABLE 10—CY 2010 ECHOCARDIOGRAPHY APCs—Continued

(5) Nuclear Medicine Services

In CY 2008, we began packaging payment for diagnostic radiopharmaceuticals into the payment for the associated nuclear medicine procedure. (For a discussion regarding the distinction between diagnostic and therapeutic radiopharmaceuticals, we refer readers to the CY 2008 OPPTS/ASC final rule with comment period at 72 FR 66636.) Prior to the implementation of this policy, diagnostic radiopharmaceuticals were subject to the standard OPPTS drug packaging methodology whereby payments are packaged when the estimated mean per day product costs fall at or below the annual packaging threshold for drugs, biologicals (other than implantable biologicals), and radiopharmaceuticals.

Packaging costs into a single aggregate payment for a service, encounter, or episode-of-care is a fundamental principle that distinguishes a prospective payment system from a fee schedule. In general, packaging the costs of supportive items and services into the payment for the independent procedure or service with which they are associated encourages hospital efficiencies and also enables hospitals to manage their resources with maximum flexibility. All nuclear medicine procedures require the use of at least one radiopharmaceutical or other radiolabeled product, and there are only a small number of radiopharmaceuticals that may be appropriately billed with each diagnostic nuclear medicine procedure. For the OPPTS, we distinguish diagnostic radiopharmaceuticals from therapeutic radiopharmaceuticals for payment purposes, and this distinction is recognized in the Level II HCPCS codes for diagnostic radiopharmaceuticals that include the term “diagnostic” along with a radiopharmaceutical in their HCPCS code descriptors. As we stated in the CY 2008 OPPTS/ASC final rule with comment period (72 FR 66635), we believe that our policy to package payment for diagnostic radiopharmaceuticals (other than those already packaged when their per day costs are below the packaging threshold for OPPTS drugs, biologicals, and radiopharmaceuticals) is consistent with

OPPTS packaging principles, provides greater administrative simplicity for hospitals, and encourages hospitals to use the most clinically appropriate and cost efficient diagnostic radiopharmaceutical for each study. For more background on this policy, we refer readers to discussions in the CY 2008 OPPTS/ASC proposed rule (72 FR 42667 through 42672) and the CY 2008 OPPTS/ASC final rule with comment period (72 FR 66635 through 66641).

For CY 2008 ratesetting, we used only claims for nuclear medicine procedures that contained a diagnostic radiopharmaceutical in calculating the median costs for APCs that include nuclear medicine procedures (72 FR 66639). This is similar to the established methodology used for device-dependent APCs before claims reflecting the procedure-to-device edits were included in our claims data. For CY 2008, we also implemented claims processing edits (called procedure-to-radiolabeled product edits) requiring the presence of a radiopharmaceutical (or other radiolabeled product) HCPCS code when a separately payable nuclear medicine procedure is present on a claim. Similar to our practice regarding the procedure-to-device edits that have been in place for some time, we continually review comments and requests for changes related to these edits and, based on our review, may update the edit list during our quarterly update process if necessary. The radiolabeled product and procedure HCPCS codes that are included in these edits can be viewed on the CMS Web site at: http://www.cms.hhs.gov/HospitalOutpatientPPS/01_overview.asp.

The CY 2008 OPPTS claims that are subject to the procedure-to-radiolabeled product edits were not available for setting payment rates in CY 2009. Therefore, as described in the CY 2009 OPPTS/ASC final rule with comment period (73 FR 68545), we continued to use our established CY 2008 methodology for setting the payment rates for APCs that included nuclear medicine procedures for CY 2009. We used an updated list of radiolabeled products, including but not limited to diagnostic radiopharmaceuticals, from

the procedure-to-radiolabeled product edit file to identify single and “pseudo” single claims for nuclear medicine procedures that also included at least one eligible radiolabeled product. Using this subset of claims, we followed our standard OPPTS ratesetting methodology to calculate median costs for nuclear medicine procedures and their associated APCs. As in CY 2008, when we set APC median costs based on single and “pseudo” single claims that also included at least one radiolabeled product on our edit file, we observed an equivalent or higher median cost than that calculated from all single and “pseudo” single bills. We believe that this methodology appropriately ensured that the costs of diagnostic radiopharmaceuticals were included in the CY 2009 ratesetting process for these APCs.

As discussed in section II.A.4.b.(1) of the proposed rule (74 FR 35287) and this final rule with comment period, during the September 2007 APC Panel meeting, the APC Panel requested that CMS evaluate the impact of expanded packaging on beneficiaries. Also, during the March 2008 APC Panel meeting, the APC Panel requested that CMS report to the APC Panel at the first meeting in CY 2009 the impact of packaging on net payments for patient care. In response to these requests, we shared data with the APC Panel at the February 2009 APC Panel meeting that compared the frequency of the billing of diagnostic radiopharmaceuticals billed under the OPPTS in CY 2007, before the packaging of all diagnostic radiopharmaceuticals went into effect, to the frequency of the billing of those same products in CY 2008, their first year of packaged payment. We also reviewed information about the aggregate payment for diagnostic radiopharmaceuticals and nuclear medicine procedures during those same 2 years. A summary of these data analyses is provided in section II.A.4.b.(1) of this final rule with comment period.

In addition to these aggregate analyses of total frequency and payment, we also presented our analyses of the number of hospitals performing nuclear medicine scans and the specific diagnostic radiopharmaceuticals appearing with

cardiac and tumor imaging nuclear medicine procedures, excluding positron emission tomography (PET) scans, by classes of hospitals between the CY 2007 claims processed through September 30, 2007 and the CY 2008 claims processed through September 30, 2008. At the March 2008 APC Panel meeting, the APC Panel also recommended that we evaluate the usage and frequency, geographic distribution, and size and type of hospitals performing nuclear medicine studies using radioisotopes to assess beneficiaries' access and that we present these analyses at the first APC Panel meeting in CY 2009. The number of all hospitals reporting any nuclear medicine procedure declined by 2 percent between the CY 2007 claims data and the CY 2008 claims data. Across several classes of hospitals (urban and rural, teaching and nonteaching, and small and large OPPS service volume), the number of hospitals billing any nuclear medicine procedure declined by up to 4 percent over that same time period. With regard to the specific diagnostic radiopharmaceuticals reported with cardiac and tumor imaging nuclear medicine procedure, we generally observed comparable distributions of radiopharmaceuticals between the CY 2007 claims data and the CY 2008 claims data. However, the utility of this analysis was limited due to the introduction of the procedure-to-radiolabeled product claims processing edits discussed above. There are nuclear medicine procedures reported with a diagnostic radiopharmaceutical HCPCS code on the CY 2008 claims that would have not necessarily been billed with a diagnostic radiopharmaceutical HCPCS code on the CY 2007 claims. Specifically, we observed an increase in billing for many radiopharmaceuticals, some new and costly, between the CY 2007 claims data and the CY 2008 claims data. We do not know how much of this was attributable to changes in hospitals' use of radiopharmaceuticals or to the CY 2008 introduction of the procedure-to-radiolabeled product edits that require a radiolabeled product on the claim for payment of the nuclear medicine procedure. With the exception of the notable increases in the frequencies of certain radiopharmaceutical HCPCS codes that potentially resulted from the introduction of these edits, in general, hospital billing patterns for diagnostic radiopharmaceuticals associated with cardiac and tumor imaging nuclear medicine scans did not change dramatically between CY 2007 and CY

2008 for all hospitals and classes of hospitals. We concluded that very few hospitals stopped providing nuclear medicine procedures as a result of our CY 2008 policy to package payment for diagnostic radiopharmaceuticals and that, in general, hospitals did not decrease their use of expensive radiopharmaceuticals.

As a result of the discussions of the APC Panel following our presentation of the analyses of the impact of packaging payment for all diagnostic radiopharmaceuticals in the OPPS, the APC Panel further recommended that CMS continue to analyze the impact on beneficiaries of increased packaging of diagnostic radiopharmaceuticals and provide more detailed analyses at the next APC Panel meeting. Further, the APC Panel requested that, in the more detailed analyses of packaging of diagnostic radiopharmaceuticals by type of nuclear medicine scan, CMS analyze the data according to the specific CPT codes billed with the diagnostic radiopharmaceuticals. We stated in the CY 2010 OPPS/ASC proposed rule (74 FR 35277) that we are accepting the APC Panel's recommendation and would provide additional data to the APC Panel at an upcoming meeting. We did not share additional data related to diagnostic radiopharmaceuticals with the APC Panel at the most recent August 2009 meeting because we believe the APC Panel's discussions would benefit from analyses of an additional year of claims data after CY 2008. Therefore, we plan to incorporate analysis of CY 2009 claims into the information we will present to the APC Panel for its review at the winter 2010 meeting.

At the February 2009 meeting of the APC Panel, the Panel commended CMS for its effort to date to tailor the resource-based APC system to facilitate appropriate payment for diagnostic and therapeutic radiopharmaceuticals. The APC Panel recommended that CMS continue its dialogue with professional societies, vendors, and other stakeholders to improve the accuracy of APC payments for these complex items and services, including consideration of developing composite APCs. We appreciate the support of the APC Panel, and we are accepting the APC Panel's recommendation to continue to communicate with interested stakeholders regarding payment for radiopharmaceuticals and the associated procedures. We regularly accept meetings from interested parties throughout the year, and we encourage stakeholders to continue a dialogue with us during the rulemaking cycle and throughout the year. Our response to the APC Panel's recommendation regarding

composite APCs is included in our response to the public comments summarized below.

For CY 2010 ratesetting, we are able to use CY 2008 OPPS claims that were subject to the procedure-to-radiolabeled product claims processing edits incorporated into the I/OCE prior to payment of claims in order to develop single and "pseudo" single claims for nuclear medicine procedures according to our standard methodology. We believe that using the CY 2008 claims data for these services without further editing for the presence of a radiolabeled product is now appropriate for CY 2010 because these claims reflect all possible relationships between the nuclear medicine procedures and their associated radiolabeled products that we have accommodated for payment of nuclear medicine procedures. Moreover, as we indicated in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68548 through 68549), in the rare circumstance where a diagnostic radiopharmaceutical is not provided in association with a nuclear medicine procedure, for example, because a beneficiary receives a therapeutic radiopharmaceutical as part of a hospital inpatient stay and then returns to the HOPD for a nuclear medicine scan without needing a diagnostic radiopharmaceutical to be administered again for the study, we believe it is appropriate to use these claims for ratesetting purposes. We believe that just as these situations are representative of the performance of a nuclear medicine scan, it is also appropriate to include them for ratesetting purposes.

Comment: A number of commenters opposed CMS' proposed policy to package payment for all diagnostic radiopharmaceuticals into payment for their associated nuclear medicine procedures. They noted that the majority of diagnostic radiopharmaceuticals are not interchangeable and, for that reason, CMS' policy of packaging payment for all diagnostic radiopharmaceuticals into their associated nuclear medicine procedures does not foster hospital efficiencies. Some commenters expressed concern that packaging diagnostic radiopharmaceuticals into payment for associated nuclear medicine procedures results in overpayment of many procedures, especially those using existing low-cost radiopharmaceuticals, while the bundled payment would be insufficient for newer, and likely more expensive, radiopharmaceuticals.

In addition, the commenters requested that, if CMS continues to

package payment for diagnostic radiopharmaceuticals into payment for their associated nuclear medicine procedures. CMS revise the nuclear medicine APCs to provide differential payments for nuclear medicine procedures when used with different radiopharmaceuticals. Several commenters identified the series of tumor/infection imaging APCs, including APCs 0406 (Level I Tumor/Infection Imaging), 0408 (Level III Tumor/Infection Imaging), and 0414 (Level II Tumor/Infection Imaging), for CMS' attention to ensure appropriate payment for low volume, high cost radiopharmaceuticals. One commenter specifically suggested a composite APC for certain combinations of a tumor imaging scan and specific diagnostic radiopharmaceuticals.

Several commenters noted that there is wide variation in the costs of diagnostic radiopharmaceuticals, and that composite APCs for specific combinations of procedures and diagnostic radiopharmaceuticals would be necessary to ensure adequate payment to hospitals using expensive diagnostic radiopharmaceuticals. Other commenters suggested that the significant clinical and resource diversity of radiopharmaceuticals packaged into nuclear imaging procedures amounted to a violation of the 2 times rule. The commenters explained that, just as diagnostic radiopharmaceuticals are not interchangeable, certain radiopharmaceuticals are indicated for particular types of diseases, such as cancer, and are not clinically similar to other radiopharmaceuticals used for other purposes, such as tumor imaging.

Response: As we discussed in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68547), we understand that the selection of a diagnostic radiopharmaceutical for a particular nuclear medicine procedure is a complex decision based on many factors, including patient-specific factors, and that not every diagnostic radiopharmaceutical is fully interchangeable with others. However, as stated in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66617) and in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68546), we believe that nonspecific packaging (as opposed to selected code packaging) based on combinations of items and services observed on hospital claims is fully appropriate because of the myriad combinations of items and services that can be appropriately provided together. Under the OPPS, we package payment for ancillary, supportive, and interrelated items and

services into payment for the independent services they accompany. As we discuss in section II.A.4. of this final rule with comment period, packaging promotes hospital efficiencies through numerous means, not only just through the choice of which radiopharmaceutical to use for a specific nuclear medicine scan. While all diagnostic radiopharmaceuticals may not be interchangeable, we believe that packaging the costs of diagnostic radiopharmaceuticals, however differential those costs may be, into the payment for nuclear medicine services that use these products is appropriate, whether there is one product or multiple products that could be used to furnish the particular service provided to an individual patient. The OPPS has a history of packaging items that are not necessarily interchangeable. It is our longstanding practice to package payment for nonpass-through implantable medical devices into payment for the procedure in which they are used, notwithstanding that there may be different devices or combinations of devices that could be used to furnish a service. (For a more complete discussion of the history of packaging items, we refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66639).) Therefore, in accordance with our understanding that a diagnostic radiopharmaceutical is never provided without an accompanying nuclear medicine scan, we believe that it is appropriate to package the payment for all diagnostic radiopharmaceuticals into the payment for the associated nuclear medicine procedure.

With regard to suggested composites or other revisions designed to isolate specific nuclear medicine scans with a subset of diagnostic radiopharmaceuticals, as we discussed in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68546), we do not believe that the inability to substitute one diagnostic radiopharmaceutical for another is a compelling reason for creating composite APCs, as explained below. We developed composite APCs to provide a single payment for two or more services that are typically performed together during a single clinical encounter and that result in the provision of a complete service. Composite APCs differ from packaging. Composite APCs provide a single payment for specific combinations of independent services that would otherwise be separately payable if they were not provided together, while packaging entails associating the cost of

ancillary, supportive, and interrelated services and supplies with a distinct service or composite service. Composite APCs are intended to expand the OPPS payment bundles to encourage hospital efficiencies. Providing a single payment for a specific combination of a diagnostic radiopharmaceutical with a particular nuclear medicine procedure would not constitute a composite APC and would provide no incentives for hospital efficiency. Specifically, a diagnostic radiopharmaceutical would never be separately payable under the OPPS when furnished alone, so the combination of a diagnostic radiopharmaceutical and a nuclear medicine procedure would not meet the definition of a composite APC as described above. From the perspective of value-based purchasing, we see no benefit to paying for many individual diagnostic radiopharmaceutical and nuclear medicine procedure combinations over paying separately for both the item and service, beyond an appearance of bundling. Such an approach would add complexity to ratesetting and would create challenges and cost instability because payments would be based on data from small numbers of claims for certain HCPCS code pairs. As noted above, there are many items and services that we package under the OPPS that are similarly not interchangeable with other related items and services. Therefore, we are not accepting the APC Panel's recommendation to explore developing composite APCs for diagnostic radiopharmaceuticals and nuclear medicine procedures.

We understand that, by packaging payment for a range of products such as diagnostic radiopharmaceuticals, payment for the associated nuclear medicine procedure may be more or less than the hospital's cost for these services in a given case. As stated in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66639) and the CY 2009 OPPS/ASC final rule with comment period (73 FR 68546), we note that a fundamental characteristic of a prospective payment system is that payment is to be set at an average for the service which, by definition, means that some services are paid more or less than the average.

We discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66640) and the CY 2009 OPPS/ASC final rule with comment period (73 FR 68546) the issue of variability in radiopharmaceutical costs or other packaged costs creating potential 2 times violations. We note that 2 times violations are specific to the total cost of the primary service, nuclear medicine

scans in this case, including packaged costs. We have performed our standard review of the APCs using updated CY 2008 claims data for this final rule with comment period and, as a result, have not identified any 2 times violations in the APCs containing nuclear medicine procedures, when calculated as described above. (For more information on the 2 times rule, we refer readers to sections III.B.2. and III.B.3. of this final rule with comment period.)

Comment: Several commenters expressed concern that CMS was relying on edits in the claims processing system in order to identify those claims that would be used for CY 2010 ratesetting purposes. These commenters suggested that CMS continue to require a diagnostic radiopharmaceutical in order to use a nuclear medicine claim for ratesetting purposes for at least another 2 years in order to ensure that the claims editing process is working properly and that all hospital costs are reflected in the median costs of nuclear medicine procedures.

One commenter noted that CMS' methodology for setting payment rates for nuclear medicine services may be flawed. This commenter contended that CMS should not solely rely on the claims processing edits in order to determine which claims are to be used for ratesetting purposes. The commenter suggested that, even though CMS is using claims that have passed the nuclear medicine-to-radiolabeled product edits, CMS' ratesetting methodology may exclude the cost of diagnostic radiopharmaceuticals when calculating median costs for associated nuclear medicine procedures. Specifically, the commenter stated that the program logic that creates "pseudo" single procedure claims may separate a nuclear medicine scan and the associated diagnostic radiopharmaceutical when the diagnostic radiopharmaceutical appears on a different day and, therefore, CMS would not package the cost of the diagnostic radiopharmaceutical when setting the median cost for the nuclear medicine procedure. The commenter added that CMS' ratesetting methodology for "pseudo" single procedure claims relies on the date of service to identify associated packaged costs. Therefore, the commenter requested that CMS use only single and "pseudo" single nuclear medicine procedure claims that also contain a diagnostic radiopharmaceutical in order to set payment rates for nuclear medicine procedures. More specifically, several commenters requested that CMS not reassign CPT code 78803 (Radiopharmaceutical localization of

tumor or distribution of tomographic agent(s); tomographic (SPECT)) to APC 0414 (Level II Tumor/Infection Imaging) as proposed, but instead assign CPT code 78803 to APC 0408 (Level III Tumor/Infection Imaging). One commenter believed that the use of "pseudo" single procedure claims to calculate payment rates may have neglected to include the cost of the radiopharmaceutical or other scans that may have been performed on other dates of service and reported on other claims.

Response: As we indicated in the CY 2008 OPPTS/ASC final rule with comment period (72 FR 42669), we are aware that several diagnostic radiopharmaceuticals may be used for multiple day studies; that is, a particular diagnostic radiopharmaceutical may be administered on one day and a related diagnostic nuclear medicine procedure may be performed on a subsequent day. While we understand that multiple-day episodes for diagnostic radiopharmaceuticals and the related diagnostic nuclear medicine procedures occur, we found the occurrence of nuclear medicine scans on a different date of service to be a small proportion of all diagnostic nuclear medicine imaging procedures appearing with the radiopharmaceutical. Specifically, our analysis at that time indicated that, roughly, 15 diagnostic radiopharmaceuticals have a half-life longer than one day such that they could support diagnostic nuclear medicine scans on different days. Excluding the 5 percent of diagnostic radiopharmaceutical claims that had no matching diagnostic nuclear medicine scan for the same beneficiary, we found that a diagnostic nuclear medicine scan was reported on the same day as a coded diagnostic radiopharmaceutical 90 percent or more of the time for 10 of these 15 diagnostic radiopharmaceuticals. Further, we found that between 80 and 90 percent of single bills for each of the remaining 5 diagnostic radiopharmaceuticals had a diagnostic nuclear medicine scan on the same day.

Moreover, as the commenter noted, the potential separation of a diagnostic radiopharmaceutical and the associated nuclear medicine procedure would only be relevant to the "pseudo" single procedure claims. In the "natural" single bills we use for ratesetting, we package costs across dates of service. Overall, in examining the CY 2008 claims data available for this final rule with comment period, we observed that "natural" single claims constituted a majority of all single procedure claims used to calculate median costs for APCs

with nuclear medicine procedures. Further, we acknowledge that we expect to lose packaged costs on a small proportion of claims when we create "pseudo" single procedure claims by splitting claims based on dates of service. This is an inevitable consequence of the "pseudo" single procedure claim creation process. We believe that the tradeoff is a minor one given the significant benefit of additional claims data, and the vast majority of commenters generally supported our "pseudo" single procedure claim methodology. Finally, we note that the nuclear medicine procedure-to-radiolabeled product I/OCE claims processing edits (http://www.cms.hhs.gov/HospitalOutpatientPPS/02_device_procedure.asp) to which the commenters referred include therapeutic radiopharmaceuticals and brachytherapy sources. Claims that pass these claims processing edits and enter into the ratesetting methodology without a diagnostic radiopharmaceutical reported on the claim are factored into ratesetting for nuclear medicine procedures as we do not expect that every nuclear medicine procedure would be billed with a diagnostic radiopharmaceutical, although we do expect each to be billed with a radiolabeled product. We note that the only time that we would not expect a nuclear medicine procedure to be billed with a radiolabeled product on an outpatient claim would be in the rare circumstance where a therapeutic radiopharmaceutical is provided in an inpatient setting and a nuclear medicine procedure associated with this radiopharmaceutical is subsequently furnished in the HOPD. In this specific circumstance, we would expect that hospitals would bill HCPCS code C9898 (Radiolabeled product provided during a hospital inpatient stay) in place of the radiolabeled product. Nuclear medicine scans are sometimes performed after the application of brachytherapy sources or the provision of a therapeutic radiopharmaceutical and in these cases the administration of an additional source of radioactivity (a diagnostic radiopharmaceutical) may not be required. While brachytherapy sources and therapeutic radiopharmaceuticals would be paid separately under the OPPTS, we believe it is appropriate for us to include the costs of the scans that include a brachytherapy source or therapeutic radiopharmaceutical (or where a therapeutic radiopharmaceutical used for the scan was furnished to an inpatient) but lack a diagnostic radiopharmaceutical in

calculating the median cost of the nuclear medicine procedure because these claims represent the hospital costs for the scans furnished under these circumstances. We previously discussed this issue in the CY 2009 OPPTS/ASC final rule with comment period (73 FR 68647 through 68648).

We believe that the single and “pseudo” single procedure claims resulting from our standard ratesetting methodology accurately capture the cost of providing nuclear medicine scans under a variety of clinical scenarios for several reasons discussed above and summarized again here. First, previous analyses demonstrated that a significant percentage of nuclear medicine procedures are reported on the same day as diagnostic radiopharmaceuticals with an extended half-life and, in these cases, our ratesetting methodology would capture these diagnostic radiopharmaceutical costs. We acknowledge that diagnostic radiopharmaceuticals with an extended half-life may be administered on a different day than the performance of the accompanying nuclear medicine scan. However, administration of the diagnostic radiopharmaceutical on a different day does not mean that these costs are not captured in our APC median costs for nuclear medicine procedures. The majority of the single procedure claims that we use to estimate APC median cost for APCs with nuclear medicine scans are “natural” single procedure claims that package all identified packaged costs (including diagnostic radiopharmaceuticals) into the nuclear medicine procedures, irrespective of the dates of service. While our standard ratesetting methodology also relies on “pseudo” single procedure claims that, by definition, represent only a single service date and potentially eliminate the cost of a packaged diagnostic radiopharmaceutical with an extended half-life billed on a different date of service than the nuclear medicine scan, the potential to ignore packaged costs on other dates of service is true for all procedures for which we use “pseudo” single procedure claims in ratesetting. This small loss of packaging is a tradeoff in adopting our methodology for breaking down multiple procedure claims through the bypass process, as discussed in section II.A.1.b. of this final rule with comment period. Finally, not all claims for nuclear medicine procedures should include a diagnostic radiopharmaceutical because they may include another type of radiolabeled product (such as a brachytherapy source or therapeutic radiopharmaceutical),

and these additional radiolabeled products are not packaged. In short, we believe that, overall, the single procedure claims for nuclear medicine scans, both “natural” and “pseudo” single procedure claims, together appropriately represent the full cost of providing various nuclear medicine procedures and result in accurate APC median costs. Therefore, our standard OPPTS ratesetting methodology of using median costs calculated from claims data according to our standard methodology from those claims that passed the I/OCE claims processing edits adequately captures the costs of diagnostic radiopharmaceuticals associated with diagnostic nuclear medicine procedures that are not provided on the same date of service.

Specifically with regard to our proposed reassignment of CPT code 78803, with a CPT code-specific median cost of approximately \$561, to APC 0414, with an APC median cost of approximately \$506, we note that we have almost 3,000 single claims upon which the median cost of CPT code 78803 is based. This CPT code-specific median cost is significantly lower than the median cost of APC 0408 of approximately \$954, the APC assignment requested by the commenters and the highest level APC in the tumor/infection imaging series. Therefore, we believe the most appropriate CY 2010 APC assignment for CPT code 78803 is APC 0414, as we proposed for CY 2010. As stated above, we believe that our standard ratesetting methodology adequately incorporates the packaged diagnostic radiopharmaceutical costs associated with nuclear medicine procedures, including the procedure described by CPT code 78803.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to package the costs of all diagnostic radiopharmaceuticals into payment for the associated nuclear medicine procedures utilizing our standard OPPTS ratesetting methodology that is applied to claims that passed the nuclear medicine procedure-to-radiolabeled product I/OCE claims processing edits in CY 2008. We also are finalizing our CY 2010 proposal, without modification, to reassign CPT code 78003 to APC 0414, with an APC median cost of approximately \$506.

Comment: A number of commenters cited concerns regarding the proposed APC assignments and proposed payment rates for a number of nuclear medicine procedures. These commenters believed that the proposed

APC assignments of certain nuclear medicine procedures led to clinically diverse procedures being grouped together for payment purposes.

Specifically, one commenter requested that: (1) CPT code 78645 (Cerebrospinal fluid flow, imaging (not including introduction of material); shunt evaluation) be reassigned from APC 0403 (Level I Nervous System Imaging) to APC 0402 (Level II Nervous System Imaging); (2) CPT code 78608 (Brain imaging, positron emission tomography (PET); metabolic evaluation) be reassigned from APC 0308 (Non-Myocardial Positron Emission Tomography (PET) Imaging) to a more appropriate APC; and (3) CPT codes 78000 (Thyroid uptake; single determination) and 78001 (Thyroid uptake; multiple determinations) be reassigned from APC 0389 (Level I Non-imaging Nuclear Medicine) to APC 0392 (Level II Non-Imaging Nuclear Medicine).

Response: We have performed our annual review of all the procedures and APC groupings for this final rule with comment period based on updated CY 2008 claims data. The CPT code-specific median cost of CPT code 78645 is approximately \$246 based on 434 single claims, which is reasonably close to the median cost of APC 0403 of approximately \$195, where we proposed to assign the service. The commenter recommended assignment of CPT code 78645 to APC 0402, in the same nervous system imaging series, with a significantly higher APC median cost of approximately \$573. Based on this review of the costs and clinical characteristics of other services assigned to these nervous system imaging APCs, we continue to believe CPT code 78645 is most appropriately assigned to APC 0403 as we proposed.

There is a single APC for nonmyocardial PET scans, APC 0308, with an APC median cost of approximately \$1,028. The median costs of all CPT codes assigned to that APC, including CPT codes for positron emission tomography (PET) scans and PET/computed tomography (CT) scans and CPT code 78608 for a metabolic evaluation of the brain using PET range from approximately \$849 to \$1,093, demonstrating very significant resource similarity across all of these procedures. Therefore, we do not agree with the commenter that the proposed configuration of APC 0308 should be modified because all of these nonmyocardial services that use PET technology demonstrate very similar costs and share clinical similarity as well.

With regard to the thyroid scans described by CPT codes 78000 and 78001, these procedures have CPT code-specific median costs of approximately \$91 and \$121 based on 1,167 and 982 single claims, respectively. The CPT code-specific median costs of these two procedures are very close to the median cost of APC 0389 of approximately \$112, where we proposed to assign them for CY 2010. CPT codes 78000 and 78001 are the only services assigned to this APC with significant volume, and the APC median cost is mostly a reflection of the costs of procedures reported with two codes. In contrast, the median cost of APC 0392, their recommended placement according to the commenter, is approximately \$179, substantially greater than the median costs of the two thyroid studies. Furthermore, if we were to reassign CPT codes 78000 and 78001 to APC 0392 as the commenter suggested, the median cost of APC 0392 would decrease to reflect the costs of these two procedures because, based on number of single claims for CPT codes 78000 and 78001, their costs would significantly affect the median cost of the APC. Therefore, we do not believe any changes to the proposed APC assignments of CPT codes 78000 or 78001 are justified.

After consideration of the public comments we received, we are finalizing our CY 2010 proposals, without modification, to assign CPT code 78645 to APC 0403, CPT code 79608 to APC 0308, CPT code 78000 to APC 0389, and CPT code 78001 to APC 0389. The approximate APC median costs of these APCs are as follows: APC 0403 at \$195; APC 0308 at \$1,028; and APC 0389 at \$112.

Comment: A few commenters requested that CMS not reassign CPT code 78807 (Radiopharmaceutical localization of inflammatory process; tomographic (SPECT)) to APC 0406 (Level I Tumor/Infection Imaging) as proposed. These commenters noted that CPT code 78807 is more clinically similar to CPT codes 78805 (Radiopharmaceutical localization of inflammatory process; limited area) and 78806 (Radiopharmaceutical localization of inflammatory process; whole body) that are assigned to APC 0414. Therefore, the commenters requested that CMS continue to assign CPT code 78807 to APC 0414 for CY 2010.

Response: We proposed to assign CPT code 78807, with a CPT code-specific median cost of approximately \$371 based on 251 single claims, to APC 0406, with an APC median cost of approximately \$287. The significant individual services included in APC

0406 have a range of median costs, from approximately \$232 to approximately \$371. APC 0406 includes a number of tumor or infection imaging nuclear medicine procedures. Comparatively, APC 0414, where the commenters requested that we assign CPT code 78807, has an APC median cost of approximately \$506 and includes significant services with CPT code-specific median costs from approximately \$382 to approximately \$561. CPT codes 78805 and 78806 are both assigned to APC 0414 and have CPT code-specific median costs of approximately \$477 and \$538, respectively, significantly higher than the median cost of CPT code 78807. Therefore, we do not believe that there is a reason to assign CPT code 78807 to APC 0414, which principally includes services with significantly higher median costs than CPT code 78807. We note that CPT code 78807 is a SPECT scan to localize an inflammatory process, while the other two codes do not describe services that use SPECT technology. Therefore, we do not believe that CPT code 78807 is sufficiently similar to CPT codes 78805 and 78806 from clinical or resource perspectives to warrant assignment to the mid-level tumor/infection imaging APC along with the other two services.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to assign CPT code 78807 to APC 0406, with an APC median cost of approximately \$287.

Comment: Several commenters requested that CMS: (1) Not reassign CPT code 78610 (Brain imaging, vascular flow only) to APC 0403 as proposed but instead assign CPT code 78610 to APC 0402; (2) not reassign CPT code 78601 (Brain imaging, less than 4 static views; with vascular flow) to APC 0402 as proposed but instead assign CPT code 78601 to APC 0403; and (3) not reassign CPT code 78003 (Radiopharmaceutical localization of tumor or distribution of radiopharmaceutical agent(s); tomographic (SPECT)) to APC 0389 as proposed but instead assign CPT code 78003 to APC 0392.

Response: We proposed to assign CPT code 78610, with a CPT-specific median cost of approximately \$211, to APC 0403, with an APC median cost of approximately \$195. The significant services included in APC 0403 have a range of median costs, from approximately \$156 to approximately \$246. Comparatively, APC 0402, where the commenters requested that we assign CPT code 78610, has an APC median cost of approximately \$573 and

includes significant services with CPT code-specific median costs from approximately \$540 to approximately \$587. We do not believe that reassignment of CPT code 78610 to APC 0402 would be appropriate, given the procedure's relatively low median cost, although we recognize that we have few claims for the procedures. We continue to believe that payment for the resources required to provide CPT code 78610 is appropriately reflected through the procedure's assignment to APC 0403.

We proposed to assign CPT code 78601, with a CPT code-specific median cost of approximately \$436, to APC 0402 with an APC median cost of approximately \$573. The significant services included in APC 0402 have a range of median costs from approximately \$540 to approximately \$587. Comparatively, APC 0403, where the commenters requested that we assign CPT code 78601, has an APC median cost of approximately \$195 and includes significant services with CPT code-specific median costs ranging from approximately \$156 to approximately \$246. Although we have few claims for CPT code 78601, we continue to believe it is most appropriately assigned to APC 0402 for CY 2010.

We proposed to assign CPT code 78003, with a CPT code-specific median cost of approximately \$82, to APC 0389 with an APC median cost of approximately \$112. There are two services included in APC 0389 that have a significant volume, CPT codes 78000 and 78001. These two CPT codes both have higher CPT code-specific median costs than CPT code 78003, approximately \$91 and \$121, respectively. Comparatively, APC 0392, where the commenters requested that we assign CPT code 78003, has an APC median cost of approximately \$179. Based on its median cost, we continue to believe that the resources required for CPT code 78003 are appropriately reflected through its assignment to APC 0389.

Comment: A few commenters expressed their appreciation that the CY 2010 OPPS/ASC proposed rule included a proposed increase in payment for PET services compared to CY 2009 payment rates. These commenters also noted their concerns that hospital claims data for PET services are not predictable and that volatile data over the last several years may limit access to PET services. Some commenters urged CMS to use external data when setting payment rates for these services, while others suggested that CMS continue to monitor data to ensure that payment for these services is sufficient to cover the hospital costs for these resources.

Response: As we stated in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68547), while we utilized external data in the early years of the OPPS for ratesetting for a few services, we now rely on the cost data from claims as the system has matured and we have gained additional experience in ratesetting for HOPD services. The foundation of a system of relative weights like the OPPS is the relativity of the costs of all services to one another, as derived from a standardized system that uses standardized inputs and a consistent methodology. Further, the OPPS is a prospective payment system that relies on hospital charges and cost report data from the hospitals that furnish the services in order to determine relative costs. Therefore, we believe that our prospective payment rates, calculated based on the costs of those providers furnishing the procedures in CY 2008, provide appropriate payment to the providers who will furnish the services in CY 2010. We continue to believe that this standard ratesetting methodology accurately provides payment for PET services provided to hospital outpatients.

In summary, after consideration of the public comments we received, we are finalizing our CY 2010 proposals, without modification, for the configuration of nuclear medicine APCs. The final CY 2010 median costs for these APCs, as proposed, are calculated according to the standard OPPS ratesetting methodology as applied to claims for nuclear medicine procedures that passed the CY 2008 nuclear medicine procedure-to-radiolabeled product I/OCE claims processing edits. These edits ensure that the claims that are taken through our standard ratesetting process, as described in section II.A.2.b. of this final rule with comment period, that incorporates the creation of "natural" single and "pseudo" single claims, include the radiolabeled product necessary for the performance of the associated nuclear medicine procedure.

(6) Hyperbaric Oxygen Therapy

Since the implementation of the OPPS in August 2000, the OPPS has recognized HCPCS code C1300 (Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval) for hyperbaric oxygen therapy (HBOT) provided in the hospital outpatient setting. In the CY 2005 OPPS final rule with comment period (69 FR 65758 through 65759), we finalized a "per unit" median cost calculation for APC 0659 (Hyperbaric Oxygen) using only claims with multiple units or multiple

occurrences of HCPCS code C1300 because delivery of a typical HBOT service requires more than 30 minutes. We observed that claims with only a single occurrence of the code were anomalies, either because they reflected terminated sessions or because they were incorrectly coded with a single unit. In the same rule, we also established that HBOT would not generally be furnished with additional services that might be packaged under the standard OPPS APC median cost methodology. This enabled us to use claims with multiple units or multiple occurrences. Finally, we also used each hospital's overall CCR to estimate costs for HCPCS code C1300 from billed charges rather than the CCR for the respiratory therapy or other departmental cost centers. The public comments on the CY 2005 OPPS proposed rule effectively demonstrated that hospitals report the costs and charges for HBOT in a wide variety of cost centers. Since CY 2005, we have used this methodology to estimate the median cost for HBOT. The median costs of HBOT using this methodology have been relatively stable for the last 4 years. In the CY 2010 OPPS/ASC proposed rule (74 FR 35277), we proposed to continue using the same methodology to estimate a "per unit" median cost for HCPCS code C1300 for CY 2010 of approximately \$108, using 279,139 claims with multiple units or multiple occurrences.

We did not receive any public comments on our proposal to continue to use our established ratesetting methodology for calculating the median cost of APC 0659 for payment of HBOT. Therefore, we are finalizing, without modification, our CY 2010 proposal to continue to use our established ratesetting methodology for calculating the median cost of APC 0659 for payment of HBOT, with a final CY 2010 median cost of approximately \$106.

(7) Payment for Ancillary Outpatient Services When Patient Expires (-CA Modifier)

In the November 1, 2002 final rule with comment period (67 FR 66798), we discussed the creation of the new HCPCS CA modifier to address situations where a procedure on the OPPS inpatient list must be performed to resuscitate or stabilize a patient (whose status is that of an outpatient) with an emergent, life-threatening condition, and the patient dies before being admitted as an inpatient. In Transmittal A-02-129, issued on January 3, 2003, we instructed hospitals on the use of this modifier. For a complete description of the history of the policy and the development of the

payment methodology for these services, we refer readers to the CY 2007 OPPS/ASC final rule with comment period (71 FR 68157 through 68158).

In the CY 2010 OPPS/ASC proposed rule (74 FR 35277 through 35278), we proposed to continue to use our established ratesetting methodology for calculating the median cost of APC 0375 (Ancillary Outpatient Services When Patient Expires) and to continue to make one payment under APC 0375 for the services that meet the specific conditions for using modifier -CA. We proposed to calculate the relative payment weight for APC 0375 by using all claims reporting a status indicator "C" procedure appended with the -CA modifier, using estimated costs from claims data for line-items with a HCPCS code assigned status indicator "G," "H," "K," "N," "Q1," "Q2," "Q3," "R," "S," "T," "U," "V," and "X" and charges for packaged revenue codes without a HCPCS code. We continue to believe that this methodology results in the most appropriate aggregate median cost for the ancillary services provided in these unusual clinical situations.

We believe that hospitals are reporting the -CA modifier according to the policy initially established in CY 2003. We note that the claims frequency for APC 0375 has been relatively stable over the past few years. Although the median cost for APC 0375 has increased, the median in the CY 2008 data used for development of rates for CY 2010 was only slightly higher than that for CY 2009. Variation in the median cost for APC 0375 is expected because of the small number of claims and because the specific cases are grouped by the presence of the -CA modifier appended to an inpatient procedure and not according to the standard APC criteria of clinical and resource homogeneity. Cost variation for APC 0375 from year to year is anticipated and acceptable as long as hospitals continue judicious reporting of the -CA modifier. Table 8 of the proposed rule (74 FR 35278) showed the number of claims and the proposed median costs for APC 0375 for CYs 2007, 2008, and 2009. For CY 2010, we proposed a median cost for APC 0375 of approximately \$5,784.

We did not receive any public comments regarding this proposal. Therefore, we are finalizing our CY 2010 proposal, without modification, to continue to use our established ratesetting methodology for calculating the median cost of APC 0375, which has a final CY 2010 APC median cost of approximately \$5,911.

Table 11 below shows the number of claims and the final median cost for APC 0375 from CY 2007 to CY 2010.

TABLE 11—CLAIMS FOR ANCILLARY OUTPATIENT SERVICES WHEN PATIENT EXPIRES (-CA MODIFIER) FOR CYs 2007 TO 2010

Prospective payment year	Number of claims	APC median cost
CY 2007	260	\$3,549
CY 2008	183	4,945
CY 2009	168	5,545
CY 2010	182	5,911

e. Calculation of Composite APC Criteria-Based Median Costs

As discussed in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66613), we believe it is important that the OPSS enhance incentives for hospitals to provide only necessary, high quality care and to provide that care as efficiently as possible. For CY 2008, we developed composite APCs to provide a single payment for groups of services that are typically performed together during a single clinical encounter and that result in the provision of a complete service. Combining payment for multiple independent services into a single OPSS payment in this way enables hospitals to manage their resources with maximum flexibility by monitoring and adjusting the volume and efficiency of services themselves. An additional advantage to the composite APC model is that we can use data from correctly coded multiple procedure claims to calculate payment rates for the specified combinations of services, rather than relying upon single procedure claims which may be low in volume and/or incorrectly coded. Under the OPSS, we currently have composite APC policies for extended assessment and management services, low dose rate (LDR) prostate brachytherapy, cardiac electrophysiologic evaluation and ablation services, mental health services, and multiple imaging services. We refer readers to the CY 2008 OPSS/ASC final rule with comment period for a full discussion of the development of the composite APC methodology (72 FR 66611 through 66614 and 66650 through 66652).

While we continue to consider the development and implementation of larger payment bundles, such as composite APCs (a long-term policy objective for the OPSS), and continue to explore other areas where this payment model may be utilized, in the CY 2010 OPSS/ASC proposed rule, we did not propose any new composite APCs for CY 2010 so that we may monitor the

effects of the existing composite APCs on utilization and payment. In response to our CY 2009 proposal to apply a composite payment methodology to multiple imaging procedures provided on the same date of service, several public commenters stated that we should proceed cautiously as we expand service bundling. They commented that we should not implement additional composite methodologies until adequate data are available to evaluate the composite policies' effectiveness and impact on beneficiary access to care (73 FR 68561 through 68562).

In response to the concerns of the public commenters and the APC Panel, in the CY 2010 OPSS proposed rule (74 FR 35278 through 35279) we reviewed the CY 2008 claims data for claims processed through September 30, 2008, for the services in the following composite APCs: APC 8000 (Cardiac Electrophysiologic Evaluation and Ablation Composite); APC 8001 (Low Dose Rate Prostate Brachytherapy Composite); APC 8002 (Level I Extended Assessment and Evaluation Composite); and APC 8003 (Level II Extended Assessment and Evaluation Composite). Our analyses did not consider inflation, changes in beneficiary population, or other comparable variables that can affect changes in aggregate payment from year to year. We found that the average payment for the package of services in both APC 8000 and APC 8001 increased from CY 2007, when payments were made for all individual services, to CY 2008 under the composite payment methodology. We also noted that the proposed median costs for these composite APCs for CY 2010 were higher than the median costs upon which the CY 2009 payments were based. We believe that, in part, this is because we used more claims data for common clinical scenarios to calculate the median costs of these APCs than we were able to use prior to the implementation of the composite payment methodology.

With regard to APCs 8002 and 8003, we compared payment for all visits appearing with observation services in CY 2007 with payments for all visits appearing with observation services in CY 2008 and found that total payment for visits and observation services increased from approximately \$197 million to \$270 million for claims processed through September 30 in each year. We attribute this increase in payments, in part, to the introduction of a composite payment for visits and observation through the extended assessment and management composite methodology that occurred for CY 2008 and that did not incorporate the International Classification of Diseases, Ninth Edition, Clinical Modification (ICD-9-CM) diagnosis criteria previously necessary for separate payment of observation.

At its February 2009 meeting, the APC Panel recommended that CMS evaluate the implications of creating composite APCs for cardiac resynchronization therapy (CRT) services with a defibrillator or pacemaker and report its findings to the APC Panel. The APC Panel also recommended at its August 2009 meeting that CMS reconsider creating a new composite APC or group of composite APCs for CRT procedures. While we did not propose any new composite APCs for CY 2010, we are accepting both of these APC Panel recommendations. We will reconsider creating composite APCs for CRT services and evaluate the implications of such a potential policy change, and report our findings to the APC Panel at a future meeting. We also will consider bringing other potential composite APCs to the APC Panel for further discussion.

In the CY 2010 OPSS/ASC proposed rule (74 FR 35279), we proposed to continue for CY 2010 our established composite APC policies for extended assessment and management, LDR prostate brachytherapy, cardiac electrophysiologic evaluation and ablation, mental health services, and multiple imaging services, as discussed

in sections II.A.2.e.(1), II.A.2.e.(2), II.A.2.e.(3), II.A.2.e.(4), and II.A.2.e.(5), respectively, of this final rule with comment period.

Comment: Several commenters supported the development and implementation of the composite APC methodology, remarking that it is consistent with the principles of a prospective payment system and provides more appropriate payment rates through the use of multiple procedure claims for certain services. Many of these commenters also supported CMS' decision to monitor the existing composite APCs' effects on beneficiary access, utilization, and payment for at least another year before implementing additional composite APCs.

Other commenters, however, expressed disappointment that CMS did not propose additional composite APCs for CY 2010 in order to improve OPSS payment accuracy and include more correctly coded, multiple procedure claims in ratesetting. Some commenters recommended the development of composite APCs for nuclear medicine tumor or infection imaging services that encompass multiple days and multiple procedures, with separate payment for the associated diagnostic radiopharmaceuticals.

In addition, many commenters supported the development of composite APCs for CRT with defibrillator (CRT-D) or pacemaker (CRT-P) implantation. They indicated that the procedures involved in the implantation of CRT-D and CRT-P are separately payable services that, if coded correctly, are always represented by the submission of two CPT codes. According to the commenters, the number of single procedure CRT claims available for CY 2010 ratesetting is very low compared to the total number of claims submitted for CRT-D and CRT-P procedures. They argued that the establishment of a composite APC methodology for CRT-D and CRT-P would greatly increase the number of claims used in ratesetting, thereby lessening the year-to-year fluctuations in payment rates for CRT. The commenters also stated that the APC Panel advised CMS to use its discretion in forming one or a group of composite APCs for CRT without the need to report back to the APC Panel. They urged CMS to take this advice and move forward with the composite APC methodology for CRT-D and CRT-P for CY 2010.

Response: We appreciate the commenters' support of the composite APC methodology. As stated in the CY 2010 OPSS/ASC proposed rule (74 FR 35279), we will continue to review the

claims data for the impact of all of the composite APCs on payments to hospitals and on services to beneficiaries and will take such data into consideration before proposing or implementing new composite APCs. We recognize the concerns expressed with respect to our CY 2009 proposal by the public commenters that moving ahead too quickly with any nonstandard OPSS payment methodology (even one such as composite APCs that may improve the accuracy of the OPSS payment rates by utilizing more complete claims for common clinical scenarios in ratesetting) could have unintended consequences and requires close monitoring. Because the multiple imaging composite APCs were implemented for the first time in CY 2009, we will not have data available for such monitoring until early CY 2010. Therefore, we continue to believe that it is in the best interest of hospitals and the continuing refinement of the OPSS that we not implement any new composite APC policies for at least one year.

As previously stated, we are accepting the recommendation made by the APC Panel at its August 2009 meeting that we reconsider creating a new composite APC or group of composite APCs for CRT-D and CRT-P procedures. We will evaluate the implications of such a potential policy change and report our findings to the APC Panel at a future meeting. We note that, while the APC Panel did recommend we reconsider creating a new composite APC or group of composite APCs for CRT-D and CRT-P, the Panel did not specify that we should move forward with the composite APC methodology for CRT-D and CRT-P for CY 2010 without first reporting back to the APC Panel, as some commenters indicated. We do not believe it would be appropriate to implement new composite APCs for CRT-D and CRT-P procedures for CY 2010 because neither we nor the public have had the opportunity to evaluate fully all of the implications of such a potential policy change, which may require complex claims processing logic or new claims processing edits and may have significant, unanticipated effects on the payment rates of other services. We also note that the total volume of claims that would qualify for a CRT-P composite APC in particular would be very low; in the past, we have explored composite APCs only for combinations of services that are commonly performed together (73 FR 68551). Because of the complex issues for these procedures with significant device costs, we believe that it is particularly

important that the APC Panel and the public, through the annual rulemaking cycle, have the opportunity to comment on the development of composite APCs for CRT-D and CRT-P procedures.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to continue our established composite APC policies for extended assessment and management, LDR prostate brachytherapy, cardiac electrophysiologic evaluation and ablation, mental health services, and multiple imaging services, as discussed in sections II.A.2.e.(1), II.A.2.e.(2), II.A.2.e.(3), II.A.2.e.(4), and II.A.2.e.(5), respectively, of this final rule with comment period.

(1) Extended Assessment and Management Composite APCs (APCs 8002 and 8003)

In the CY 2010 OPSS/SC proposed rule (74 FR 35279 through 35280), we proposed to continue to include composite APC 8002 (Level I Extended Assessment and Management Composite) and composite APC 8003 (Level II Extended Assessment and Management Composite) in the OPSS. For CY 2008, we created these two composite APCs to provide payment to hospitals in certain circumstances when extended assessment and management of a patient occur (an extended visit). In most circumstances, observation services are supportive and ancillary to the other services provided to a patient. In the circumstances when observation care is provided in conjunction with a high level visit or direct referral and is an integral part of a patient's extended encounter of care, payment is made for the entire care encounter through one of two composite APCs as appropriate.

As defined for the CY 2008 OPSS, composite APC 8002 describes an encounter for care provided to a patient that includes a high level (Level 5) clinic visit or direct referral for observation services in conjunction with observation services of substantial duration (72 FR 66648 through 66649). Composite APC 8003 describes an encounter for care provided to a patient that includes a high level (Level 4 or 5) Type A emergency department visit, a high level (Level 5) Type B emergency department visit, or critical care services in conjunction with observation services of substantial duration. HCPCS code G0378 (Observation services, per hour) is assigned status indicator "N," signifying that its payment is always packaged. As noted in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66648 through 66649), the Integrated Outpatient Code Editor

(I/OCE) evaluates every claim received to determine if payment through a composite APC is appropriate. If payment through a composite APC is inappropriate, the I/OCE, in conjunction with the OPSS Pricer, determines the appropriate status indicator, APC, and payment for every code on a claim. The specific criteria that must be met for the two extended assessment and management composite APCs to be paid are provided below in the description of the claims that were selected for the calculation of the proposed CY 2010 median costs for these composite APCs. We did not propose to change these criteria for the CY 2010 OPSS.

When we created composite APCs 8002 and 8003 for CY 2008, we retained as general reporting requirements for all observation services those criteria related to physician order and evaluation, documentation, and observation beginning and ending time as listed in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66812). These are more general requirements that encourage hospitals to provide medically reasonable and necessary care and help to ensure the proper reporting of observation services on correctly coded hospital claims that reflect the full charges associated with all hospital resources utilized to provide the reported services. We did not propose to change these reporting requirements for the CY 2010 OPSS. However, as discussed below, the APC Panel at its February 2009 meeting requested that CMS issue guidance clarifying the correct method for reporting the starting time for observation services. The APC Panel noted that the descriptions of the start time for observation services located in the Medicare Claims Processing Manual (Pub. 100-4), Chapter 4, sections 290.2.2 through 290.5, cause confusion for hospitals. We accepted this recommendation and issued clarifying guidance in the Claims Processing Manual through Transmittal 1745, Change Request 6492, issued May 22, 2009 and implemented July 6, 2009.

As noted in detail in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66802 through 66805 and 66814), we saw a normal and stable distribution of clinic and emergency department visit levels in the OPSS claims data through CY 2006 available at that time. We stated that we did not expect to see an increase in the proportion of visit claims for high level visits as a result of the new composite APCs adopted for CY 2008. Similarly, we stated that we expected that hospitals would not purposely change their visit guidelines or otherwise

upcode clinic and emergency department visits reported with observation care solely for the purpose of composite payment. As stated in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66648), we expect to carefully monitor any changes in billing practices on a service-specific and hospital-specific level to determine whether there is reason to request that Quality Improvement Organizations (QIOs) review the quality of care furnished, or to request that Benefit Integrity contractors or other contractors review the claims against the medical record.

When we compared total payments for all visits appearing with observation services in CY 2007 to payments in CY 2008, using claims processed through September 30 in CY 2007 and CY 2008, we observed a 37 percent increase in total payments. We believe this increase is, in part, attributable to the expansion of payment under the extended assessment and management composites to all ICD-9-CM diagnoses. To confirm this, we calculated the percentage of visit HCPCS codes billed with HCPCS code G0378 (Observation services, per hour) between CY 2007 and CY 2008 and compared the percentage associated with visit codes included in the extended assessment and management composites in each year. If hospitals had inappropriately changed their visit reporting behavior to maximize payment through the new composite APCs, we would expect to see significant changes in the percentage of visit HCPCS codes included in the composite APCs billed with observation services relative to all other visit HCPCS codes billed with observation services between CY 2007 and CY 2008. We did not observe a sizable increase in the proportion of visit HCPCS codes included in the composite APCs relative to the proportion of all other visit HCPCS codes billed with observation services. For example, the percentage of claims billed with CPT code 99285 (Emergency department visit for the evaluation and management of a patient (Level 5)) and HCPCS code G0378 was 51 percent in the CY 2007 data and 54 percent in the CY 2008 data. Similarly, the percentage of claims billed with CPT code 99284 (Emergency department visit for the evaluation and management of a patient (Level 4)) and HCPCS code G0378 decreased only slightly from 28 percent in the CY 2007 data to 27 percent in the CY 2008 data. We concluded that, although the volume of visits billed with HCPCS code G0378 increased between CY 2007 and CY 2008, the overall pattern of billing visit

levels did not change significantly. We stated that we will continue to carefully monitor any changes in billing practices on a service-specific and hospital-specific level.

In the CY 2010 OPSS/ASC proposed rule (74 FR 35280), we proposed to continue for CY 2010 the extended assessment and management composite APC payment methodology for APCs 8002 and 8003. As stated earlier, we also proposed to continue the general reporting requirements for observation services reported with HCPCS code G0378. We continue to believe that the composite APCs 8002 and 8003 and related policies provide the most appropriate means of paying for these services. We proposed to calculate the median costs for APCs 8002 and 8003 using all single and "pseudo" single procedure claims for CY 2008 that meet the criteria for payment of each composite APC.

Specifically, to calculate the proposed median costs for composite APCs 8002 and 8003, we selected single and "pseudo" single claims that met each of the following criteria:

1. Did not contain a HCPCS code to which we have assigned status indicator "T" that is reported with a date of service 1 day earlier than the date of service associated with HCPCS code G0378. (By selecting these claims from single and "pseudo" single claims, we had already assured that they would not contain a code for a service with status indicator "T" on the same date of service.);

2. Contained 8 or more units of HCPCS code G0378; and
3. Contained one of the following codes:

- In the case of composite APC 8002, HCPCS code G0379 (Direct referral of patient for hospital observation care) on the same date of service as G0378; or CPT code 99205 (Office or other outpatient visit for the evaluation and management of a new patient (Level 5)); or CPT code 99215 (Office or other outpatient visit for the evaluation and management of an established patient (Level 5)) provided on the same date of service or one day before the date of service for HCPCS code G0378. We refer readers to section XII.E. of the CY 2010 OPSS/ASC proposed rule (74 FR 35370 through 35371) and section XII.E. of this final rule with comment period for a full discussion of our proposed revision of the code descriptor for HCPCS code G0379 and the final policy for CY 2010.

- In the case of composite APC 8003, CPT code 99284 (Emergency department visit for the evaluation and management of a patient (Level 4)); CPT code 99285 (Emergency department visit for the

evaluation and management of a patient (Level 5)); CPT code 99291 (Critical care, evaluation and management of the critically ill or critically injured patient; first 30–74 minutes); or HCPCS code G0384 (Level 5 Hospital Emergency Department Visit Provided in a Type B Emergency Department) provided on the same date of service or one day before the date of service for HCPCS code G0378. (As discussed in detail in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68684), we finalized our proposal to add HCPCS code G0384 to the eligibility criteria for composite APC 8003 for CY 2009.)

We applied the standard packaging and trimming rules to the claims before calculating the proposed CY 2010 median costs. The proposed CY 2010 median cost resulting from this process for composite APC 8002 was approximately \$384, which was calculated from 14,981 single and “pseudo” single bills that met the required criteria. The proposed CY 2010 median cost for composite APC 8003 was approximately \$709, which was calculated from 154,843 single and “pseudo” single bills that met the required criteria. This is the same methodology we used to calculate the medians for composite APCs 8002 and 8003 for the CY 2008 OPPS (72 FR 66649).

As discussed further in section IX. of the CY 2010 OPPS/ASC proposed rule (74 FR 35350) and this final rule with comment period, and consistent with our CY 2008 and CY 2009 final policies, when calculating the median costs for the clinic, Type A emergency department visit, Type B emergency department visit, and critical care APCs (0604 through 0617 and 0626 through 0630), we utilize our methodology that excludes those claims for visits that are eligible for payment through the two extended assessment and management composite APCs, that is APC 8002 or APC 8003. We believe that this approach results in the most accurate cost estimates for APCs 0604 through 0617 and 0626 through 0630 for CY 2010.

At the August 2009 meeting of the APC Panel, the APC Panel recommended that CMS provide the Visits and Observation Subcommittee with an analysis of calendar year 2009 claims data for clinic, ED (Type A and B), and extended assessment and management composite APCs at the next meeting of the APC Panel. The APC Panel also recommended that CMS provide the Visits and Observation Subcommittee with continued analyses of observation services, as previously provided to the APC Panel, including

data on frequency, length of stay, and common diagnoses, as well as recovery audit contractor (RAC) data on these subjects if available. Furthermore, the APC Panel recommended that CMS provide the Visits and Observation Subcommittee with analyses of the most common diagnoses and services associated with Type A and Type B ED visits at the next meeting of the APC Panel, including analysis by hospital-specific characteristics. Finally, the APC Panel recommended that the work of the Visits and Observation Subcommittee continue. We accept all of these recommendations and will present the available requested data at the winter 2010 meeting of the APC Panel.

In summary, in the CY 2010 OPPS/ASC proposed rule (74 FR 35279 through 35280), we proposed to continue to include for CY 2010 composite APC 8002 (Level I Extended Assessment and Management Composite) and composite APC 8003 (Level II Extended Assessment and Management Composite) in the OPPS. We proposed to continue the extended assessment and management composite APC payment methodology and criteria that we finalized for CY 2009. We also proposed to calculate the median costs for APCs 8002 and 8003 using all single and “pseudo” single procedure claims from CY 2008 that meet the criteria for payment of each composite APC. We did not propose to change the reporting requirements for observation services for the CY 2010 OPPS. However, in CY 2009 we did issue further clarifying guidance in the Medicare Claims Processing Manual related to observation start time.

Comment: Several commenters expressed appreciation for CMS’ issuance of clarifying guidance for reporting the beginning and ending times of observation services.

Response: We appreciate these comments and note again that the guidance was issued in the Claims Processing Manual through Transmittal 1745, Change Request 6492, issued May 22, 2009, and implemented July 6, 2009.

Comment: Several commenters requested clarification of the reporting of observation services in relation to maternity care paid under another payer’s policies and in relation to changes in patient status from inpatient to outpatient using Condition Code 44. One commenter pointed out that references to “observation status” versus “inpatient admission” are potentially confusing for beneficiaries and physicians.

Response: Each of these comments/questions is outside of the scope of the proposals in the CY 2010 OPPS/ASC

proposed rule. However, we will consider the possibility of addressing these concerns through other available mechanisms, as appropriate. We note that we have continued to emphasize that observation care is a hospital outpatient service, ordered by a physician and reported with a HCPCS code, like any other outpatient service. It is not a patient status for Medicare purposes.

After consideration of the public comments we received, we are finalizing, without modification, our CY 2010 proposal to continue to include composite APC 8002 and composite APC 8003 in the OPPS and to continue the extended assessment and management composite APC payment methodology and criteria that we finalized for CY 2009. We also are calculating the median costs for APCs 8002 and 8003 using all single and “pseudo” single procedure claims from CY 2008 that meet the criteria for payment of each composite APC. The final CY 2010 median cost resulting from this methodology for composite APC 8002 is approximately \$378, which was calculated from 17,074 single and “pseudo” single bills that met the required criteria. The final CY 2010 median cost for composite APC 8003 is approximately \$699, which was calculated from 176,226 single and “pseudo” single bills that met the required criteria.

(2) Low Dose Rate (LDR) Prostate Brachytherapy Composite APC (APC 8001)

LDR prostate brachytherapy is a treatment for prostate cancer in which hollow needles or catheters are inserted into the prostate, followed by permanent implantation of radioactive sources into the prostate through the needles/catheters. At least two CPT codes are used to report the composite treatment service because there are separate codes that describe placement of the needles/catheters and the application of the brachytherapy sources: CPT code 55875 (Transperineal placement of needles or catheters into prostate for interstitial radioelement application, with or without cystoscopy) and CPT code 77778 (Interstitial radiation source application; complex). Generally, the component services represented by both codes are provided in the same operative session in the same hospital on the same date of service to the Medicare beneficiary being treated with LDR brachytherapy for prostate cancer. As discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66653), OPPS payment rates for CPT code 77778, in

particular, had fluctuated over the years. We were frequently informed by the public that reliance on single procedure claims to set the median costs for these services resulted in use of only incorrectly coded claims for LDR prostate brachytherapy because a correctly coded claim should include, for the same date of service, CPT codes for both needle/catheter placement and application of radiation sources, as well as separately coded imaging and radiation therapy planning services (that is, a multiple procedure claim).

In order to base payment on claims for the most common clinical scenario, and to further our goal of providing payment under the OPPTS for a larger bundle of component services provided in a single hospital encounter, beginning in CY 2008, we provide a single payment for LDR prostate brachytherapy when the composite service, reported as CPT codes 55875 and 77778, is furnished in a single hospital encounter. We base the payment for composite APC 8001 (LDR Prostate Brachytherapy Composite) on the median cost derived from claims for the same date of service that contain both CPT codes 55875 and 77778 and that do not contain other separately paid codes that are not on the bypass list. In uncommon occurrences in which the services are billed individually, hospitals continue to receive separate payments for the individual services. We refer readers to the CY 2008 OPPTS/ASC final rule with comment period (72 FR 66652 through 66655) for a full history of OPPTS payment for LDR prostate brachytherapy and a detailed description of how we developed the LDR prostate brachytherapy composite APC.

In the CY 2010 OPPTS/ASC proposed rule (74 FR 35281), we proposed for CY 2010 to continue paying for LDR prostate brachytherapy services using the composite APC methodology proposed and implemented for CY 2008 and CY 2009. That is, we proposed to use CY 2008 claims on which both CPT codes 55875 and 77778 were billed on the same date of service with no other separately paid procedure codes (other than those on the bypass list) to calculate the payment rate for composite APC 8001. Consistent with our CY 2008 and CY 2009 practice, we proposed not to use the claims that meet these criteria in the calculation of the median costs for APCs 0163 (Level IV Cystourethroscopy and Other Genitourinary Procedures) and 0651 (Complex Interstitial Radiation Source Application), the APCs to which CPT codes 55875 and 77778 are assigned, respectively. The median costs for APCs 0163 and 0651 would continue to be

calculated using single and “pseudo” single procedure claims. We continue to believe that this composite APC contributes to our goal of creating hospital incentives for efficiency and cost containment, while providing hospitals with the most flexibility to manage their resources. We also continue to believe that data from claims reporting both services required for LDR prostate brachytherapy provide the most accurate median cost upon which to base the composite APC payment rate.

Using partial year CY 2008 claims data available for the CY 2010 OPPTS/ASC proposed rule, we were able to use 669 claims that contained both CPT codes 77778 and 55875 to calculate the median cost upon which the proposed CY 2010 payment for composite APC 8001 was based. The proposed median cost for composite APC 8001 for CY 2010 was approximately \$3,106. This was an increase compared to the CY 2009 OPPTS/ASC final rule with comment period in which we calculated a final median cost for this composite APC of approximately \$2,967 based on a full year of CY 2007 claims data. The CY 2010 proposed median cost for this composite APC was slightly less than \$3,268, the sum of the proposed median costs for APCs 0163 and 0651 (\$2,453+\$815), the APCs to which CPT codes 55875 and 77778 map if one service is billed on a claim without the other. We stated in the CY 2010 OPPTS/ASC proposed rule (74 FR 35281) that we believe the proposed CY 2010 median cost for composite APC 8001 of approximately \$3,106, calculated from claims we believe to be correctly coded, would result in a reasonable and appropriate payment rate for this service in CY 2010.

Comment: Several commenters requested changes to the bypass list that could potentially affect the number of claims used to calculate the median costs upon which payments for several APCs involving radiation oncology services, including APC 8001, are based. In particular, some commenters requested CMS add CPT code 77470 (Special treatment procedure (eg, total body irradiation, hemibody radiation, per oral, endocavitary or intraoperative cone irradiation)), CPT code 77328 (Brachytherapy isodose plan; complex (multiplane isodose plan, volume implant calculations, over 10 sources/ribbons used, special spatial reconstruction, remote afterloading brachytherapy, over 12 sources), and CPT code 77295 (Therapeutic radiology simulation-aided field setting; 3-dimensional) to the bypass list in order to utilize more single claims in

calculating the median costs of APC 8001 and other APCs for radiation oncology services. According to one commenter's analysis, the addition of these CPT codes to the bypass list would result in a 17 percent increase in the median cost for APC 8001.

Response: As discussed in detail in section II.A.1.b. of this final rule with comment period, we are not adding CPT codes 77470, 77328, and 77295 to the list of bypass codes for CY 2010 ratesetting, but we are adding several other CPT codes for radiation oncology services. The addition of these codes to the bypass list results in a modest increase in the number of single claims used to calculate the median cost upon which the final payment rate for CY 2010 for APC 8001 is based, but does not result in a significant increase or decrease in the median cost itself.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to continue paying for LDR prostate brachytherapy services using the composite APC methodology implemented in CY 2008. We were able to use 906 claims that contained both CPT codes 77778 and 55875 to calculate the median cost upon which the CY 2010 final payment for composite APC 8001 is based. The final median cost for composite APC 8001 for CY 2010 is approximately \$3,084. We note that this is slightly less than \$3,303, the approximate sum of the median costs for APC 0163 and APC 0651 (\$2,418 + \$885), the APCs to which CPT codes 55875 and 77778 map if one service is billed on a claim without the other. These CPT codes are assigned status indicator “Q3” in Addendum B to this final rule with comment period to identify their status as potentially payable through a composite APC. Their composite APC assignment is identified in Addendum M to this final rule with comment period.

(3) Cardiac Electrophysiologic Evaluation and Ablation Composite APC (APC 8000)

Cardiac electrophysiologic evaluation and ablation services frequently are performed in varying combinations with one another during a single episode-of-care in the hospital outpatient setting. Therefore, correctly coded claims for these services often include multiple codes for component services that are reported with different CPT codes and that, prior to CY 2008, were always paid separately through different APCs (specifically, APC 0085 (Level II Electrophysiologic Evaluation), APC 0086 (Ablate Heart Dysrhythm Focus),

and APC 0087 (Cardiac Electrophysiologic Recording/Mapping). As a result, there would never be many single bills for cardiac electrophysiologic evaluation and ablation services, and those that are reported as single bills would often represent atypical cases or incorrectly coded claims. As described in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66655 through 66659), the APC Panel and the public expressed persistent concerns regarding the limited and reportedly unrepresentative single bills available for use in calculating the median costs for these services according to our standard OPPS methodology.

Effective January 1, 2008, we established APC 8000 (Cardiac Electrophysiologic Evaluation and Ablation Composite) to pay for a composite service made up of at least one specified electrophysiologic evaluation service and one specified electrophysiologic ablation service. Calculating a composite APC for these services allowed us to utilize many more claims than were available to establish the individual APC median costs for these services, and we also saw this composite APC as an opportunity to advance our stated goal of promoting hospital efficiency through larger payment bundles. In order to calculate the median cost upon which the payment rate for composite APC 8000 is based, we used multiple procedure claims that contained at least one CPT code from group A for evaluation services and at least one CPT code from group B for ablation services reported on the same date of service on an individual claim. Table 9 in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66656) identified the CPT codes that are assigned to groups A and B. For a full discussion of how we identified the group A and group B procedures and established the payment rate for the cardiac electrophysiologic evaluation and ablation composite APC, we refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66655 through 66659). Where a service in group A is furnished on a date of service that is different from the date of service for a code in group B for the same beneficiary, payments are made under

the appropriate single procedure APCs and the composite APC does not apply.

In the CY 2010 OPPS/ASC proposed rule (74 FR 35282), we proposed to continue for CY 2010 to pay for cardiac electrophysiologic evaluation and ablation services using the composite APC methodology proposed and implemented for CY 2008 and CY 2009. Consistent with our CY 2008 and CY 2009 practice, we proposed not to use the claims that meet the composite payment criteria in the calculation of the median costs for APC 0085 and APC 0086, to which the CPT codes in both groups A and B for composite APC 8000 are otherwise assigned. Median costs for APCs 0085 and 0086 would continue to be calculated using single procedure claims. We continue to believe that the composite APC methodology for cardiac electrophysiologic evaluation and ablation services is the most efficient and effective way to use the claims data for the majority of these services and best represents the hospital resources associated with performing the common combinations of these services that are clinically typical. Furthermore, this approach creates incentives for efficiency by providing a single payment for a larger bundle of major procedures when they are performed together, in contrast to continued separate payment for each of the individual procedures.

Using partial year CY 2008 claims data available for the proposed rule, we were able to use 6,975 claims containing a combination of group A and group B codes and calculated a proposed median cost of approximately \$10,105 for composite APC 8000. This was an increase compared to the CY 2009 OPPS/ASC final rule with comment period in which we calculated a final median cost for this composite APC of approximately \$9,206 based on a full year of CY 2007 claims data. We stated in the CY 2010 OPPS/ASC proposed rule (74 FR 35282) that we believe the proposed median cost of \$10,105 calculated from a high volume of correctly coded multiple procedure claims would result in an accurate and appropriate proposed payment for cardiac electrophysiologic evaluation and ablation services when at least one evaluation service is furnished during the same clinical encounter as at least one ablation service. Table 9 of the CY

2010 OPPS/ASC proposed rule (74 FR 35282) listed the groups of procedures upon which we proposed to base composite APC 8000 for CY 2010.

Comment: Several commenters supported CMS' proposal to continue using the composite APCs created in CY 2008, in particular the composite APC for cardiac electrophysiologic evaluation and ablation services. One commenter also supported the modest increase in payment for this APC, stating that it is reflective of the increased costs of providing these important services to patients.

Response: We appreciate commenters' support for the composite payment methodology in general and the composite APC for cardiac electrophysiologic evaluation and ablation in particular.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to continue paying for cardiac electrophysiologic evaluation and ablation services using the composite APC methodology implemented for CY 2008. For this final rule with comment period, we were able to use 7,599 claims from CY 2008 containing a combination of group A and group B codes and calculated a final median cost of approximately \$10,026 for composite APC 8000. This is an increase compared to the CY 2009 OPPS/ASC final rule with comment period in which we calculated a final median cost of approximately \$9,206 based on a full year of CY 2007 claims data. We believe that the final median cost of \$10,026 calculated from a high volume of correctly coded multiple procedure claims results in an accurate and appropriate final payment for cardiac electrophysiologic evaluation and ablation services when at least one evaluation service is furnished during the same clinical encounter as at least one ablation service. Table 12 below lists the groups of procedures upon which we are basing composite APC 8000 for CY 2010. These CPT codes are assigned status indicated "Q3" in Addendum B to this final rule with comment period to identify their status as potentially payable through a composite APC. Their composite APC assignment is identified in Addendum M to this final rule with comment period.

TABLE 12—GROUPS OF CARDIAC ELECTROPHYSIOLOGIC EVALUATION AND ABLATION PROCEDURES UPON WHICH COMPOSITE APC 8000 IS BASED

Codes used in combinations: At least one in Group A and one in Group B	CY 2010 CPT code	Final single code CY 2010 APC	Final CY 2010 SI (composite)
Group A: Comprehensive electrophysiologic evaluation with right atrial pacing and recording, right ventricular pacing and recording, His bundle recording, including insertion and repositioning of multiple electrode catheters, without induction or attempted induction of arrhythmia	93619	0085	Q3.
Comprehensive electrophysiologic evaluation including insertion and repositioning of multiple electrode catheters with induction or attempted induction of arrhythmia; with right atrial pacing and recording, right ventricular pacing and recording, His bundle recording	93620	0085	Q3.
Group B: Intracardiac catheter ablation of atrioventricular node function, atrioventricular conduction for creation of complete heart block, with or without temporary pacemaker placement	93650	0085	Q3.
Intracardiac catheter ablation of arrhythmogenic focus; for treatment of supraventricular tachycardia by ablation of fast or slow atrioventricular pathways, accessory atrioventricular connections or other atrial foci, singly or in combination	93651	0086	Q3.
Intracardiac catheter ablation of arrhythmogenic focus; for treatment of ventricular tachycardia	93652	0086	Q3.

(4) Mental Health Services Composite APC (APC 0034)

In the CY 2010 OPSS/ASC proposed rule (74 FR 35282 through 35283), we proposed to continue our longstanding policy of limiting the aggregate payment for specified less resource-intensive mental health services furnished on the same date to the payment for a day of partial hospitalization, which we consider to be the most resource-intensive of all outpatient mental health treatment for CY 2010. We refer readers to the April 7, 2000 OPSS final rule with comment period (65 FR 18455) for the initial discussion of this longstanding policy. We stated in the CY 2010 OPSS/ASC proposed rule that we continue to believe that the costs associated with administering a partial hospitalization program represent the most resource-intensive of all outpatient mental health treatment. Therefore, we do not believe that we should pay more for a day of individual mental health services under the OPSS than the partial hospitalization per diem payment.

As discussed in the CY 2010 OPSS/ASC proposed rule (74 FR 35356 through 35357), for CY 2010 we proposed to continue using the two tiered payment approach for partial hospitalization services that we implemented in CY 2009: one APC for days with three services (APC 0172) (Level I Partial Hospitalization (3 services)) and one APC for days with four or more services (APC 0173) (Level II Partial Hospitalization (4 or more services)) (74 FR 35282 through 35283). When a CMHC or hospital provides three units of partial hospitalization services and meets all other partial hospitalization payment criteria, we

proposed that the CMHC or hospital be paid through APC 0172. When the CMHC or hospital provides 4 or more units of partial hospitalization services and meets all other partial hospitalization payment criteria, we proposed that the CMHC or hospital be paid through APC 0173. We proposed to set the CY 2010 payment rate for mental health services composite APC 0034 (Mental Health Services Composite) at the same rate as we proposed for APC 0173, which is the maximum partial hospitalization per diem payment. We stated in the CY 2010 OPSS/ASC proposed rule that we believe this APC payment rate would provide the most appropriate payment for composite APC 0034, taking into consideration the intensity of the mental health services and the differences in the HCPCS codes for mental health services that could be paid through this composite APC compared with the HCPCS codes that could be paid through partial hospitalization APC 0173. When the aggregate payment for specified mental health services provided by one hospital to a single beneficiary on one date of service based on the payment rates associated with the APCs for the individual services exceeds the maximum per diem partial hospitalization payment, we proposed that those specified mental health services would be assigned to APC 0034. We proposed that APC 0034 would continue to have the same payment rate as APC 0173 and that the hospital would continue to be paid one unit of APC 0034. The I/OCE currently determines, and we proposed for CY 2010 that it would continue to determine, whether to pay these

specified mental health services individually or to make a single payment at the same rate as the APC 0173 per diem rate for partial hospitalization for all of the specified mental health services furnished by the hospital on that single date of service.

We also proposed to continue assigning status indicator “Q3” (Codes that May be Paid Through a Composite APC) to the HCPCS codes that are assigned to composite APC 0034 in Addendum M, and to continue assigning status indicator “S” (Significant Procedure, Not Discounted when Multiple), as adopted for CY 2009, to APC 0034 for CY 2010 (74 FR 35283).

Comment: One commenter expressed concern that using claims data from CMHCs and hospitals to calculate the payment rate for APC 0173 would result in reduced access not only for hospital-based partial hospitalization services but also for other less intensive mental health services provided in hospital outpatient departments. The commenter stated that CMS should use hospital data to calculate the payment rates for hospital services.

Response: As discussed in section X. of this final rule with comment period, the final CY 2010 payment rates for APCs 0172 and 0173 are calculated using hospital-only cost data for CY 2010, rather than using both hospital and CMHC cost data. This final policy results in an increase in the median cost for APC 0173 from approximately \$200 in CY 2009 to approximately \$209. As noted in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66739), we continue to believe that the costs associated with administering a partial hospitalization program

represent the most resource intensive of all outpatient mental health treatment, and we do not believe that we should pay more for a day of individual mental health services under the OPPS. The mental health payment limitation will rise and fall in the same manner as payment for partial hospitalization services.

After consideration of the public comment we received, we are finalizing our CY 2010 proposal, without modification, to limit the aggregate payment for specified less intensive outpatient mental health services furnished on the same date by a hospital to the payment for a day of partial hospitalization, specifically APC 0173. For CY 2010, we also are finalizing our proposal, without modification, to assign status indicator "Q3" to those HCPCS codes that describe the specified mental health services to which APC 0034 applies in Addendum B to this final rule with comment period. Lastly, we are finalizing our proposal to continue assigning status indicator "S" (Significant Procedure, Not Discounted When Multiple) to APC 0034.

(5) Multiple Imaging Composite APCs (APCs 8004, 8005, 8006, 8007, and 8008)

Prior to CY 2009, hospitals received a full APC payment for each imaging service on a claim, regardless of how many procedures were performed during a single session using the same imaging modality. Based on extensive data analysis, we determined that this practice neither reflected nor promoted the efficiencies hospitals can achieve when performing multiple imaging procedures during a single session (73 FR 41448 through 41450). As a result of our data analysis, and in response to ongoing recommendations from MedPAC to improve payment accuracy for imaging services under the OPPS, we expanded the composite APC model developed in CY 2008 to multiple imaging services. Effective January 1, 2009, we provide a single payment each time a hospital bills more than one imaging procedure within an imaging family on the same date of service. We utilize three imaging families based on imaging modality for purposes of this methodology: ultrasound, computed tomography (CT) and computed tomographic angiography (CTA), and magnetic resonance imaging (MRI) and magnetic resonance angiography (MRA). The HCPCS codes subject to the multiple imaging composite policy, and their respective families, are listed in Table 8 of the CY 2009 OPPS/ASC final rule with comment period (73 FR 68567 through 68569).

While there are three imaging families, there are five multiple imaging composite APCs due to the statutory requirement at section 1833(t)(2)(G) of the Act that we differentiate payment for OPPS imaging services provided with and without contrast. While the ultrasound procedures included in the policy do not involve contrast, both CT/CTA and MRI/MRA scans can be provided either with or without contrast. The five multiple imaging composite APCs established in CY 2009 are: APC 8004 (Ultrasound Composite); APC 8005 (CT and CTA without Contrast Composite); APC 8006 (CT and CTA with Contrast Composite); APC 8007 (MRI and MRA without Contrast Composite); and APC 8008 (MRI and MRA with Contrast Composite). We define the single imaging session for the "with contrast" composite APCs as having at least one or more imaging procedures from the same family performed with contrast on the same date of service. For example, if the hospital performs an MRI without contrast during the same session as at least one other MRI with contrast, the hospital will receive payment for APC 8008, the "with contrast" composite APC.

Hospitals continue to use the same HCPCS codes to report imaging procedures, and the I/OCE determines when combinations of imaging procedures qualify for composite APC payment or map to standard (sole service) APCs for payment. We make a single payment for those imaging procedures that qualify for composite APC payment, as well as any packaged services furnished on the same date of service. The standard (noncomposite) APC assignments continue to apply for single imaging procedures and multiple imaging procedures performed across families. For a full discussion of the development of the multiple imaging composite APC methodology, we refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68559 through 68569).

As we discussed in the CY 2010 OPPS/ASC proposed rule (74 FR 35283), during the February 2009 meeting of the APC Panel, the APC Panel heard from stakeholders who claimed that a composite payment is not appropriate when multiple imaging procedures are provided on the same date of service but at different times. Some APC Panel members expressed concern that the same efficiencies that may be gained when multiple imaging procedures are performed during the same sitting may not be gained if a significant amount of time passes between the second and subsequent imaging procedures, when

the patient may leave not only the scanner, but also the radiology department or hospital. The APC Panel recommended that CMS continue to work with stakeholders to examine different options for APCs for multiple imaging sessions and multiple imaging procedures.

We accepted the APC Panel recommendation that CMS continue to work with stakeholders to examine different options for APCs for multiple imaging sessions and multiple imaging procedures. However, as we stated in the CY 2010 OPPS/ASC proposed rule (74 FR 35283 through 35284), we do not believe it is appropriate to make modifications to the multiple imaging composite policy for CY 2010. We indicated that we continue to believe that composite payment is appropriate even when procedures are provided on the same date of service but at different times, because hospitals do not expend the same facility resources each and every time a patient is seen for a distinct imaging service in a separate imaging session. In most cases, we expect that patients in those circumstances would receive imaging procedures at different times during a single prolonged hospital outpatient encounter, and that the efficiencies that may be gained from providing multiple imaging procedures during a single session are achieved in such ways as not having to register the patient again, or not having to re-establish new intravenous access for an additional study when contrast is required. Furthermore, we stated that even if the same level of efficiencies could not be gained for multiple imaging procedures performed on the same date of service but at different times, we expect that any higher costs associated with these cases would be reflected in the claims data and cost reports we use to calculate the median costs for the multiple imaging composite APCs and, therefore, in their payment rates.

In summary, in the CY 2010 OPPS/ASC proposed rule (74 FR 35284), for CY 2010 we proposed to continue paying for all multiple imaging procedures within an imaging family performed on the same date of service using the multiple imaging composite payment methodology, and we proposed no changes from the final CY 2009 policy. The proposed CY 2010 payment rates for the five multiple imaging composite APCs (APC 8004, APC 8005, APC 8006, APC 8007, and APC 8008) were based on median costs calculated from the partial year CY 2008 claims available for the proposed rule that would have qualified for composite payment under the current policy (that

is, those claims with more than one procedure within the same family on a single date of service). To calculate the proposed median costs, we used the same methodology that we used to calculate the final CY 2009 median costs for these composite APCs. That is, we removed any HCPCS codes in the OPPI imaging families that overlapped with codes on our bypass list ("overlap bypass codes") to avoid splitting claims with multiple units or multiple occurrences of codes in an OPPI imaging family into new "pseudo" single claims. The imaging HCPCS codes that we removed from the bypass list for purposes of calculating the proposed multiple imaging composite APC median costs appeared in Table 11 of the CY 2010 OPPI/ASC proposed rule (74 FR 35286). We integrated the identification of imaging composite "single session" claims, that is, claims with multiple imaging procedures within the same family on the same date of service, into the creation of "pseudo" single claims to ensure that claims were split in the "pseudo" single process into accurate reflections of either a composite "single session" imaging service or a standard sole imaging service resource cost. Like all single bills, the new composite "single session" claims were for the same date of service and contained no other separately paid services in order to isolate the session imaging costs. Our last step after processing all claims through the "pseudo" single process was to reassess the remaining multiple procedure claims using the full bypass list and bypass process in order to determine if we could make other "pseudo" single bills. That is, we assessed whether a single separately paid service remained on the claim after removing line-items for the "overlap bypass codes."

We were able to identify 1.7 million "single session" claims out of an estimated 2.5 million potential composite cases from our ratesetting claims data, or well over half of all eligible claims, to calculate the proposed CY 2010 median costs for the multiple imaging composite APCs. The HCPCS codes subject to the proposed multiple imaging composite policy and their respective families were listed in Table 10 of the proposed rule (74 FR 35284 through 35285).

Comment: Many commenters asserted that a single composite APC payment is not appropriate when multiple imaging services of the same modality are provided on the same date of service but at different times. They argued that the same efficiencies that may be gained when multiple imaging procedures are

performed during the same sitting may not be realized if a significant amount of time passes between the first and subsequent imaging procedures, when the patient may have to be repositioned or may have to leave not only the scanner, but also the radiology department or hospital. The commenters stated that, in such cases, facilities must expend equivalent facility resources in each sitting as if the sittings occurred on different dates of service. They noted that not all of these costs are reflected in claims data and, therefore, would not be reflected in the multiple imaging composite APC payment rates. The commenters requested that CMS allow hospitals to report modifier -59 when multiple imaging services of the same modality are provided at different times on the same date of service, and that such cases be excluded from the multiple imaging composite payment methodology. They stated that such an approach is necessary to recognize the provider costs when imaging services must be provided at different sittings due to clinical need or safety requirements. One commenter also asked CMS to work with the AMA to create new CPT codes that describe combined procedures so that providers could use those codes when they provide multiple imaging services in a single session. The commenter argued that utilization of such codes would be easier for providers and would facilitate the capturing of charge data that could be used to create new APCs or payment policies that reflect economies of scale for combined procedures reported through claims data.

Response: We do not agree with the commenters that multiple imaging procedures of the same modality provided on the same date of service but at different times should be exempt from the multiple imaging composite payment methodology. As we indicated in the CY 2010 OPPI/ASC proposed rule (74 FR 35283 through 35284) and the CY 2009 OPPI/ASC final rule with comment period (73 FR 68565), we believe that composite payment is appropriate even when procedures are provided on the same date of service but at different times because hospitals do not expend the same facility resources each and every time a patient is seen for a distinct imaging service in a separate imaging session. In most cases, we expect that patients in these circumstances would receive imaging procedures at different times during a single prolonged hospital outpatient encounter. The efficiencies that may be gained from providing multiple imaging

procedures during a single session are achieved in ways other than merely not having to reposition the patient. For example, a patient who has two MRI procedures 3 hours apart during a single hospital outpatient encounter would not have to be registered again, and hospital staff might not have to explain the procedure in detail prior to the second scan. In the case of multiple procedures involving contrast that are provided at different times during a single hospital outpatient encounter, establishment of new intravenous access for the second study would not be necessary. Even if the same level of efficiencies could not be gained for multiple imaging procedures performed on the same date of service but at different times, we expect that any higher costs associated with these cases would be reflected in the claims data and cost reports we use to calculate the median costs for the multiple imaging composite APCs and, therefore, in the payment rates for the multiple imaging composite APCs. We do not believe it is necessary or appropriate for hospitals to report imaging procedures provided on the same date of service but during different sittings any differently than they would report imaging procedures performed consecutively in one sitting with no time in between the imaging services.

We also do not agree with the commenter that it is necessary to create new CPT codes that describe combined services to ease the burden of hospital billing and improve claims data for ratesetting. As we stated in the CY 2009 OPPI/ASC final rule with comment period (73 FR 68565), certain combination CPT codes, specifically those single codes that describe imaging procedures without contrast and then followed by contrast, already allow for hospitals to report commonly performed combinations of imaging procedures in one anatomic area using a single CPT code. Hospitals can continue to use existing codes to report multiple imaging services by reporting multiple HCPCS codes, and for ratesetting, we use the charges reported to us by hospitals on claims for those multiple imaging services to calculate composite APC payment rates. The I/OCE determines whether composite APC payment applies to a claim, so the composite payment policy creates no additional administrative burden for hospitals.

Comment: Several commenters asserted that the multiple imaging composite payment methodology could have a disproportionately negative effect on cancer centers and trauma units, where patients frequently require more than two imaging services during a

hospital encounter. They argued that the use of a single composite APC payment for an imaging modality regardless of the number of services provided is only appropriate if the underlying claims data used to set the "average" payment rate reflect an average number of services furnished by all providers. According to the commenters, certain providers, such as cancer centers and trauma hospitals, face systematic underpayment of multiple imaging services due to their unique patient population because they routinely provide a greater than average number of imaging services in one sitting or multiple sittings on the same date of service. The commenters stated that, at the same time, all other hospitals experience systematic overpayment.

Response: We do not agree with the commenters that the underlying claims data used to calculate the median costs upon which the payment rates for the multiple imaging composite APCs are inappropriate for payment of all hospitals, or that the multiple imaging composite payment methodology is likely to have a disproportionately negative effect on cancer centers and trauma units. In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68562 through 68563), we explored data from CY 2007 claims in response to similar concerns from commenters and a recommendation by the APC Panel at its August 2008 meeting. An analysis of diagnosis codes present on the CY 2007 multiple imaging "single session" claims did show more variability in the number of scans for cancer patients compared to patients with noncancer diagnoses, consistent with commenters' concerns. We observed that, for several of the more commonly reported cancer diagnoses, more than half of the patients received more than two imaging procedures on the same day, while generally lower proportions of patients with noncancer diagnoses received more than two imaging procedures on a single date of service. We did not observe the same pattern for trauma diagnoses. As we stated in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68562), we do not believe that the higher rate of variability that we observed in the number of scans cancer patients receive was so extreme, however, that the mix of services hospitals provide to patients with diagnoses other than cancer would not balance out higher numbers of scans for cancer patients.

We continue to believe that OPPS hospitals demonstrate sufficient variability in the number of imaging procedures they provide to a single patient on the same day that it is

unlikely any particular class of hospital would experience disproportionate financial effects from the multiple imaging composite payment methodology. For CY 2009, the first year of implementation of the multiple imaging composite APC methodology, the modeled impacts of payment changes by class of hospital due to APC recalibration (where the effects of the multiple imaging composite payment methodology and other APC recalibration would be observed), were very modest across classes of hospital, ranging from -2.5 percent to +1.9 percent (73 FR 68799 through 68800).

The goal of the multiple imaging composite payment methodology is to establish incentives for efficiency through larger payment bundles based on the practice patterns of OPPS hospitals as a whole. We acknowledge that there may be a small number of dedicated cancer centers that, relative to other hospitals paid under the OPPS, may provide a higher proportion of imaging services to cancer patients that involve three or more scans. However, as discussed above, our prior analyses do not lead us to believe that any class of hospitals would experience significantly negative effects from the multiple imaging composite payment methodology. We note that we establish national payment policies for the OPPS and, while certain policies may have greater or lesser impact on individual hospitals, on average we believe that the total OPPS payment to a hospital for all of its services is appropriate. Our modeled estimates of changes in total payment for classes of hospitals between CY 2008 and CY 2009 support this conclusion. We do not believe it would be appropriate to establish national policy based on considerations of the service mix of individual hospitals, or to exclude individual hospitals from national policy because of the impact a specific policy may have on one component of a hospital's operations as a result of a particular hospital's service mix. Furthermore, we note that several cancer centers are held permanently harmless under section 1833(t)(7)(D)(ii) of the Act in order to account for the fact that they may be more costly and have different practice patterns than other hospitals paid under the OPPS.

Comment: Some commenters questioned the adequacy of the proposed multiple imaging composite APC payment rates for sessions involving three or more imaging procedures, and expressed general concern that multiple imaging composite payment methodology would limit beneficiary access to imaging

services. For example, these commenters asserted that the multiple imaging composite payment methodology could create incentives for hospitals to require patients who need more than two imaging procedures to return for additional sittings on other days if the costs for sessions in which more than two procedures are performed far exceed the multiple imaging composite APC payment rates.

Response: As we stated in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68562), we do not believe that, in aggregate, OPPS payment for multiple imaging services will be inadequate under the multiple imaging composite payment methodology so as to limit beneficiary access, even considering the minority of cases in which hospitals provide more than two imaging procedures on a single date of service. The median costs upon which the payment rates for the multiple imaging composite APCs are based are calculated using CY 2008 claims that would have qualified for composite payment, including those with only two imaging procedures and those with substantially higher numbers of imaging procedures. Payment based on a measure of central tendency is a principle of any prospective payment system. In some individual cases payment exceeds the average cost and in other cases payment is less than the average cost. On balance, however, payment should approximate the relative cost of the average case, recognizing that, as a prospective payment system, the OPPS is a system of averages.

We also do not agree with the commenters that the multiple imaging composite payment methodology will result in hospitals requiring patients who need more than two imaging procedures to return for additional sittings on other days. As we stated in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68562), we do not believe that, in general, hospitals would routinely and for purposes of financial gain put patients at unnecessary risk of harm from radiation or contrast exposure, or inconvenience them or risk lack of timely followup to the point of making them return to the hospital on separate days to receive medically necessary diagnostic studies. However, we again note that we do have the capacity to examine our claims data for patterns of fragmented care. If we were to find a pattern in which a hospital appears to be fragmenting imaging services across multiple days for individual beneficiaries, we could refer it for review by the Quality Improvement Organizations (QIOs) with

respect to the quality of care furnished, or for review by the Program Safeguard Contractors of claims against the medical record, as appropriate to the circumstances we found.

Comment: Several commenters urged CMS to standardize cost reporting for both advanced imaging procedures and other problematic cost centers before it makes any methodological changes to OPSS payment methodologies, including a composite policy for multiple imaging procedures. One commenter was concerned that observed efficiencies in the multiple imaging composite APC median costs are the result of inaccurate cost report data only and do not reflect true efficiencies from multiple imaging services provided during a single session. According to the commenter, CMS should implement separate cost centers for CT and MRI procedures and the revised revenue code-to-cost center crosswalk, as recommended in the July 2008 report by RTI International (RTI) entitled, "Refining Cost to Charge Ratios for Calculating APC and DRG Relative Payment Weights." The commenter stated that the creation of the new standard cost centers and the adoption of the revised revenue code-to-cost center crosswalk would provide much more accurate charge and cost data for these imaging modalities, and that the true efficiencies associated with providing multiple imaging procedures in a single session may only be discernable once these data are available. The commenter also remarked that the adoption of these changes would result in significant shifts in the underlying CCRs for all APCs, thereby impacting all relative weights and payment rates across all services over time.

Response: We published information regarding the proposed draft hospital cost report CMS-2552-10 in the **Federal Register** on July 2, 2009 and the proposed agency information collection activities were open for a 60-day review and comment period (74 FR 31738). The comment period ended August 31, 2009. The proposed cost report can be viewed at: <http://www.cms.hhs.gov/PaperworkReductionActof1995/PRAL/itemdetail.asp?filterType=none&filterByDID=-99&sortByDID=2&sortOrder=descending&itemID=CMS1224069&intNumPerPage=10>. We will consider all comments received during the comment period in our determination of whether to create new modality-specific standard diagnostic radiology cost centers.

As noted in our response to a comment regarding the recommendations included in RTI's July 2008 report entitled, "Refining Cost to

Charge Ratios for Calculating APC and DRG Relative Payment Weights" (73 FR 68526), the current cost report form already includes nonstandard cost centers for CT Scanning and MRI. We also explained that under the principle of departmental apportionment of costs at \$413.53 hospitals are required to report separately the costs and charges for each ancillary department for which charges are customarily billed if the corresponding cost and charge information is accumulated separately in the provider's accounting system. We believe the nonstandard cost center information for CT Scanning and MRI that we currently collect reflects costs and charges for CT Scanning and MRI and we use these data to estimate median costs for ratesetting.

In the meantime, we believe it is fully appropriate to continue the multiple imaging composite payment methodology, which we believe improves the accuracy of OPSS payment rates and promotes efficiency among hospitals. As we stated in the CY 2009 OPSS/ASC final rule with comment period (73 FR 68563), the most recent hospital cost report data are the best and most consistent estimate of relative costs that we have available to us for all hospitals for all hospital services. We will continue to use these data to estimate APC median costs. Should revised cost report data become available for CT and MRI procedures, our composite methodology would automatically incorporate that additional precision into the multiple imaging composite APC median cost estimates.

Comment: One commenter stated that the differential in the CY 2010 proposed payment rates for APC 8007 and APC 8008 appears adequate to account for the substantial differences in costs between magnetic resonance procedures when performed with and without contrast. The commenter asked CMS to evaluate the claims available for the CY 2010 OPSS/ASC final rule with comment period to ensure that payment rates for the two APCs reflect the incremental costs for the contrast agent and contrast administration included in APC 8008.

Response: We agree with the commenter regarding the appropriateness of the proposed differential in payment rates for APC 8007 and APC 8008 for CY 2010. The median costs upon which the CY 2010 final payment rates for APC 8007 and APC 8008 are based (\$706 and \$986, respectively) also appropriately reflect differences in costs for MRI and MRA imaging sessions with and without the administration of contrast.

Comment: One commenter stated that there was a discrepancy in CMS' estimated volume of APC 8005 single claims for the CY 2010 OPSS/ASC proposed rule. The commenter indicated that CMS' estimated volume of APC 8005 single claims increased by approximately one-third from the CY 2007 claims used in CY 2009 ratesetting to the CY 2008 claims available for the CY 2010 OPSS/ASC proposed rule. The commenter noted that this increase was inconsistent with the commenter's data analysis, which indicated that the total volume of single claims for APC 8005 did not increase significantly over this same time period.

Response: We reviewed the CY 2007 "single session" claims data used in ratesetting for APC 8005 for the CY 2009 OPSS/ASC final rule with comment period, and the CY 2008 "single session" claims data used in ratesetting for APC 8005 for the CY 2010 OPSS/ASC proposed rule. For the CY 2009 final rule, we identified 429,525 "single session" claims out of 809,483 potential composite cases to calculate the median cost for APC 8005. For the CY 2010 OPSS/ASC proposed rule, we identified 423,890 "single session" claims out of 810,469 potential composite cases to calculate the median cost for APC 8005. These published data do not demonstrate an increase of approximately one-third in the volume of "single session" claims from the CY 2007 claims used to calculate the median costs upon which the CY 2009 final payment rates are based compared to the CY 2008 claims used to calculate the median costs upon which the CY 2010 proposed payment rates are based, as the commenter indicated. For this final rule with comment period, we identified 455,191 "single session" claims (an increase of approximately 6 percent compared to CY 2009) out of 882,581 potential composite cases (an increase of approximately 9 percent compared to CY 2009) to calculate the median cost of APC 8005.

Comment: Many commenters requested that CMS thoroughly evaluate the impact of the multiple imaging composite payment methodology and commended CMS for not proposing to expand the multiple imaging composite payment methodology for CY 2010. Commenters asked CMS to review claims data to ensure that hospitals are being adequately paid for providing multiple imaging services, that patients are not being required by hospitals to return to the hospital on multiple days for imaging services, and that certain types or classes of hospitals are not being negatively affected before moving forward with any additional imaging

composite policies. One commenter noted that while CMS will have data available from CY 2009 to analyze for the winter 2010 APC Panel meeting, the commenter believed that such analyses would be more meaningful if claims data through CY 2012 are used to show impacts and a change in hospital behavior under the composite payment policy. Commenters also stated that any expansion of the multiple imaging composite payment methodology should be subject to full public comment.

Response: We appreciate the commenters' support of our proposal not to implement any significant changes to the composite APC methodology for CY 2010 so that we may monitor the effects of the existing composite APCs on utilization and payment. We also appreciate the commenters' thoughtful suggestions for data analysis that can be performed toward that end once CY 2009 claims data become available and in the longer term. We will take commenters' suggestions into consideration as we review the CY 2009 claims data for the impact of the multiple imaging composite APCs on payments to hospitals and on services to beneficiaries.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to continue paying for all multiple imaging procedures within an imaging family performed on the same date of service using the multiple imaging composite payment methodology. The CY 2010 payment rates for the five multiple imaging composite APCs (APC 8004, APC 8005, APC 8006, APC 8007, and APC 8008) are based on median costs calculated from the CY 2008 claims that would have qualified for composite payment under the current policy (that is, those claims with more than one procedure within the same family on a single date of service). Using the same ratesetting methodology described in the CY 2010 OPPS/ASC proposed rule (74 FR 35284), we were able to identify 1.8 million "single session" claims out of an estimated 2.7 million potential composite cases from our ratesetting claims data, or well over half of all eligible claims, to calculate the final CY 2010 median costs for the multiple imaging composite APCs.

Table 13 below lists the HCPCS codes subject to the final multiple imaging composite policy and their respective families for CY 2010. We note that we

have updated Table 13 to reflect HCPCS coding changes for CY 2010. Specifically, we added CPT code 74261 (Computed tomographic (CT) colonography, diagnostic, including image postprocessing; without contrast material) and CPT code 74262 (Computed tomographic (CT) colonography, diagnostic, including image postprocessing, with contrast material(s) including non-contrast images, if performed) to the CT and CTA family, and removed CPT code 0067T (Computed tomographic (CT) colonography (ie, virtual colonoscopy); diagnostic), which was replaced by these CPT codes. The HCPCS codes listed in Table 13 are assigned status indicated "Q3" in Addendum B to this final rule with comment period to identify their status as potentially payable through a composite APC. Their composite APC assignment is identified in Addendum M to this final rule with comment period. Table 14 below lists the imaging services subject to the composite methodology that overlap with HCPCS codes on the CY 2010 bypass list.

BILLING CODE 4120-01-C**3. Calculation of OPPS Scaled Payment Weights**

Using the APC median costs discussed in sections II.A.1. and II.A.2. of this final rule with comment period, we calculated the final relative payment weights for each APC for CY 2010 shown in Addenda A and B to this final rule with comment period. In years

prior to CY 2007, we standardized all the relative payment weights to APC 0601 (Mid Level Clinic Visit) because mid-level clinic visits were among the most frequently performed services in the hospital outpatient setting. We assigned APC 0601 a relative payment weight of 1.00 and divided the median cost for each APC by the median cost for APC 0601 to derive the relative payment weight for each APC.

Beginning with the CY 2007 OPPS (71 FR 67990), we standardized all of the relative payment weights to APC 0606 (Level 3 Clinic Visits) because we deleted APC 0601 as part of the reconfiguration of the clinic visit APCs. We selected APC 0606 as the base because APC 0606 was the mid-level clinic visit APC (that is, Level 3 of five levels). Therefore, for CY 2010, to maintain consistency in using a median

for calculating unscaled weights representing the median cost of some of the most frequently provided services, we proposed to continue to use the median cost of the mid-level clinic visit APC, APC 0606, to calculate unscaled weights. Following our standard methodology, but using the proposed CY 2010 median cost for APC 0606, for CY 2010 we assigned APC 0606 a relative payment weight of 1.00 and divided the median cost of each APC by the proposed median cost for APC 0606 to derive the proposed unscaled relative payment weight for each APC. The choice of the APC on which to base the proposed relative weights for all other APCs did not affect the payments made under the OPSS because we scale the weights for budget neutrality.

Section 1833(t)(9)(B) of the Act requires that APC reclassification and recalibration changes, wage index changes, and other adjustments be made in a budget neutral manner. Budget neutrality ensures that the estimated aggregate weight under the OPSS for CY 2010 is neither greater than nor less than the estimated aggregate weight that would have been made without the changes. To comply with this requirement concerning the APC changes, we proposed to compare the estimated aggregate weight using the CY 2009 scaled relative weights to the estimated aggregate weight using the CY 2010 unscaled relative weights. For CY 2009, we multiply the CY 2009 scaled APC relative weight applicable to a service paid under the OPSS by the volume of that service from CY 2008 claims to calculate the total weight for each service. We then add together the total weight for each of these services in order to calculate an estimated aggregate weight for the year. For CY 2010, we perform the same process using the CY 2010 unscaled weights rather than scaled weights. We then calculate the weight scaler by dividing the CY 2009 estimated aggregate weight by the CY 2010 estimated aggregate weight. The service mix is the same in the current and prospective years because we use the same set of claims for service volume in calculating the aggregate weight for each year. For a detailed discussion of the weight scaler calculation, we refer readers to the OPSS claims accounting document available on the CMS Web site at: <http://www.cms.hhs.gov/HospitalOutpatientPPS/>. We included payments to CMHCs in our comparison of estimated unscaled weight in CY 2010 to estimated total weight in CY 2009 using CY 2008 claims data and holding all other things constant. Based

on this comparison, we adjusted the unscaled relative weights for purposes of budget neutrality. In our proposal for CY 2010, the proposed CY 2010 unscaled relative payment weights were adjusted by multiplying them by a proposed weight scaler of 1.2863 to ensure budget neutrality of the proposed CY 2010 relative weights.

Section 1833(t)(14)(H) of the Act, as added by section 621(a)(1) of Public Law 108–173, states that, “Additional expenditures resulting from this paragraph shall not be taken into account in establishing the conversion factor, weighting and other adjustment factors for 2004 and 2005 under paragraph (9) but shall be taken into account for subsequent years.” Section 1833(t)(14) of the Act provides the payment rates for certain “specified covered outpatient drugs.” Therefore, the cost of those specified covered outpatient drugs (as discussed in section V.B.3. of the proposed rule (74 FR 35324 through 35333) and this final rule with comment period) was included in the proposed budget neutrality calculations for the CY 2010 OPSS.

We did not receive any public comments on the proposed methodology for calculating scaled weights from the median costs for the CY 2010 OPSS. Therefore, we are finalizing our proposed methodology, without modification, including updating of the budget neutrality scaler for this final rule with comment period. Under this methodology, the final unscaled payment weights were adjusted by a weight scaler of 1.3222 for this final rule with comment period. The final scaled relative payment weights listed in Addenda A and B to this final rule with comment period incorporate the recalibration adjustments discussed in sections II.A.1. and II.A.2. of this final rule with comment period.

4. Changes to Packaged Services

a. Background

The OPSS, like other prospective payment systems, relies on the concept of averaging, where the payment may be more or less than the estimated cost of providing a service or bundle of services for a particular patient, but with the exception of outlier cases, the payment is adequate to ensure access to appropriate care. Packaging and bundling payment for multiple interrelated services into a single payment create incentives for providers to furnish services in the most efficient way by enabling hospitals to manage their resources with maximum flexibility, thereby encouraging long-

term cost containment. For example, where there are a variety of supplies that could be used to furnish a service, some of which are more expensive than others, packaging encourages hospitals to use the least expensive item that meets the patient’s needs, rather than to routinely use a more expensive item. Packaging also encourages hospitals to negotiate carefully with manufacturers and suppliers to reduce the purchase price of items and services or to explore alternative group purchasing arrangements, thereby encouraging the most economical health care. Similarly, packaging encourages hospitals to establish protocols that ensure that necessary services are furnished, while carefully scrutinizing the services ordered by practitioners to maximize the efficient use of hospital resources. Finally, packaging payments into larger payment bundles promotes the stability of payment for services over time. Packaging and bundling also may reduce the importance of refining service-specific payment because there is more opportunity for hospitals to average payment across higher cost cases requiring many ancillary services and lower cost cases requiring fewer ancillary services.

Decisions about packaging and bundling payment involve a balance between ensuring that payment is adequate to enable the hospital to provide quality care and establishing incentives for efficiency through larger units of payment. In the CY 2008 OPSS/ASC final rule with comment period (72 FR 66610 through 66659), we adopted the packaging of payment for items and services in the seven categories listed below into the payment for the primary diagnostic or therapeutic modality to which we believe these items and services are typically ancillary and supportive. The seven categories are guidance services, image processing services, intraoperative services, imaging supervision and interpretation services, diagnostic radiopharmaceuticals, contrast media, and observation services. We specifically chose these categories of HCPCS codes for packaging because we believe that the items and services described by the codes in these categories are the HCPCS codes that are typically ancillary and supportive to a primary diagnostic or therapeutic modality and, in those cases, are an integral part of the primary service they support.

We assign status indicator “N” to those HCPCS codes that we believe are always integral to the performance of the primary modality; therefore, we always package their costs into the costs

of the separately paid primary services with which they are billed. Services assigned status indicator "N" are unconditionally packaged.

We assign status indicator "Q1" ("STVX-Packaged Codes"), "Q2" ("T-Packaged Codes"), or "Q3" (Codes that may be paid through a composite APC) to each conditionally packaged HCPCS code. An "STVX-packaged code" describes a HCPCS code whose payment is packaged when one or more separately paid primary services with the status indicator of "S," "T," "V," or "X" are furnished in the hospital outpatient encounter. A "T-packaged code" describes a code whose payment is packaged when one or more separately paid surgical procedures with the status indicator of "T" are provided during the hospital encounter. "STVX-packaged codes" and "T-packaged codes" are paid separately in those uncommon cases when they do not meet their respective criteria for packaged payment. "STVX-packaged codes" and "T-packaged HCPCS codes" are conditionally packaged. We refer readers to section XIII.A.1. of this final rule with comment period for a complete listing of status indicators.

We use the term "dependent service" to refer to the HCPCS codes that represent services that are typically ancillary and supportive to a primary diagnostic or therapeutic modality. We use the term "independent service" to refer to the HCPCS codes that represent the primary therapeutic or diagnostic modality into which we package payment for the dependent service. We note that, in future years as we consider the development of larger payment groups that more broadly reflect services provided in an encounter or episode-of-care, it is possible that we might propose to bundle payment for a service that we now refer to as "independent."

In addition, in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66650 through 66659), we finalized additional packaging for the CY 2008 OPPS, which included the establishment of new composite APCs for CY 2008, specifically APC 8000 (Cardiac Electrophysiologic Evaluation and Ablation Composite), APC 8001 (LDR Prostate Brachytherapy Composite), APC 8002 (Level I Extended Assessment & Management Composite), and APC 8003 (Level II Extended Assessment & Management Composite). In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68559 through 68569), we expanded the composite APC model to one new clinical area, multiple imaging services. We created five multiple imaging composite APCs for payment in CY

2009 that incorporate statutory requirements to differentiate between imaging services provided with contrast and without contrast as required by section 1833(t)(2)(G) of the Act. The multiple imaging composite APCs are: APC 8004 (Ultrasound Composite); APC 8005 (CT and CTA without Contrast Composite); APC 8006 (CT and CTA with Contrast Composite); APC 8007 (MRI and MRA without Contrast Composite); and APC 8008 (MRI and MRA with Contrast Composite). We discuss composite APCs in more detail in section II.A.2.e. of this final rule with comment period.

Hospitals include charges for packaged services on their claims, and the estimated costs associated with those packaged services are then added to the costs of separately payable procedures on the same claims in establishing payment rates for the separately payable services. We encourage hospitals to report all HCPCS codes that describe packaged services that were provided, unless the CPT Editorial Panel or CMS provide other guidance. If a HCPCS code is not reported when a packaged service is provided, it can be challenging to track utilization patterns and resource costs.

b. Packaging Issues

(1) Packaged Services Addressed by the February 2009 APC Panel Recommendations

The Packaging Subcommittee of the APC Panel was established to review packaged HCPCS codes. In deciding whether to package a service or pay for a code separately, we have historically considered a variety of factors, including whether the service is normally provided separately or in conjunction with other services; how likely it is for the costs of the packaged code to be appropriately mapped to the separately payable codes with which it was performed; and whether the expected cost of the service is relatively low. As discussed in section II.A.4.a. of this final rule with comment period regarding our packaging approach for CY 2008, we established packaging criteria that apply to seven categories of codes whose payments are packaged.

During the September 2007 APC Panel meeting, the APC Panel requested that CMS evaluate the impact of expanded packaging on beneficiaries. During the March 2008 APC Panel meeting, the APC Panel requested that CMS report to the Panel at the first Panel meeting in CY 2009 regarding the impact of packaging on net payments for patient care. In response to these requests, we shared data with the APC

Panel at the February 2009 APC Panel meeting that compared the frequency of specific categories of services billed under the OPPS in CY 2007, before the expanded packaging went into effect, to the frequency of those same categories of services in CY 2008, their first year of packaged payment. In each category, the HCPCS codes that we compared are the ones that we identified in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66659 through 66664) as fitting into one of the seven packaging categories listed in section II.A.4.a. of this final rule with comment period. The data shared with the APC Panel at the February 2009 APC Panel meeting compared CY 2007 claims processed through September 30, 2007 to CY 2008 claims processed through September 30, 2008. We did not make any adjustments for inflation, changes in Medicare population, or other variables that potentially influenced billing between CY 2007 and CY 2008. These data represent about 60 percent of the full year data. A summary of these data analyses is provided below.

Analysis of the diagnostic radiopharmaceuticals category showed that the frequency of the reporting of diagnostic radiopharmaceuticals increased by 1 percent between the first 9 months of CY 2007 and the first 9 months of CY 2008. In CY 2007, some diagnostic radiopharmaceuticals were packaged and others were separately payable, depending on whether their per day mean costs fell above or below the \$55 drug packaging threshold for CY 2007. All diagnostic radiopharmaceuticals were uniformly packaged in CY 2008. Two percent more hospitals reported one or more diagnostic radiopharmaceuticals during CY 2008 as compared to CY 2007. Effective for CY 2008, we first required reporting of a radiolabeled product (including diagnostic radiopharmaceuticals) when billing a nuclear medicine procedure, and we believe that the increases in frequency and the number of reporting hospitals reflect hospitals meeting this reporting requirement.

We also found that nuclear medicine procedures (into which diagnostic radiopharmaceuticals were packaged) and associated diagnostic radiopharmaceuticals were billed approximately 3 million times during the first 9 months of both CY 2007 and CY 2008. Further analysis revealed that we paid hospitals over \$637 million for nuclear medicine procedures and diagnostic radiopharmaceuticals during the first 9 months of CY 2007, when diagnostic radiopharmaceuticals were separately payable, and over \$619

million for nuclear medicine procedures and diagnostic radiopharmaceuticals during the first 9 months of CY 2008, when payment for diagnostic radiopharmaceuticals was packaged. This represented a 3 percent decrease in aggregate payment between the first 9 months of CY 2007 and the first 9 months of CY 2008.

Using the same data, we calculated an average payment per service or item billed (including nuclear medicine procedures and packaged or separately payable diagnostic radiopharmaceuticals) of \$203 in CY 2007 and \$198 in CY 2008 for nuclear medicine procedures. This represented a decrease of 2 percent in average payment per item or service billed between CY 2007 and CY 2008. It is unclear how much of the decrease in estimated aggregate or average per service or item billed payment may be due to packaging payment for diagnostic radiopharmaceuticals (and other services that were newly packaged for CY 2008) and how much may be due to the usual annual APC recalibration and typical fluctuations in service frequency. However, we believe that all of these factors likely contributed to the slight decrease in aggregate payment in CY 2008, as compared to CY 2007. Overall, the observed changes between CY 2007 and CY 2008 were very small and indicated that there has been very little change in frequency or aggregate payment in this clinical area between CY 2007 and CY 2008.

We similarly analyzed 9 months of CY 2007 and CY 2008 data related to all services that were packaged during CY 2008 because they were categorized as guidance services. Analysis of the guidance category (which includes image-guided radiation therapy services) showed that the frequency of guidance services increased by 2 percent between the first 9 months of CY 2007 and the first 9 months of CY 2008. One percent fewer hospitals reported one or more guidance services during CY 2007 as compared to CY 2008.

We further analyzed 9 months of CY 2007 and CY 2008 claims data for radiation oncology services that would be accompanied by radiation oncology guidance. We found that radiation oncology services (including radiation oncology guidance services) were billed approximately 4 million times in CY 2007 and 3.9 million times in CY 2008, representing a decrease in frequency of approximately 5 percent between CY 2007 and CY 2008. These numbers represented each instance where a radiation oncology service or a radiation oncology guidance service was billed.

Our analysis indicated that hospitals were paid over \$818 million for radiation oncology services and radiation oncology guidance services under the OPSS during the first 9 months of CY 2007, when radiation oncology guidance services were separately payable. During the first 9 months of CY 2008, when payments for radiation oncology guidance were packaged, hospitals were paid over \$740 million for radiation oncology services under the OPSS. This \$740 million included packaged payment for radiation oncology guidance services and represented a 10 percent decrease in aggregate payment from CY 2007 to CY 2008. Using the first 9 months of data for both CY 2007 and CY 2008, we calculated an average payment per radiation oncology service or item billed of \$201 in CY 2007 and \$190 in CY 2008, representing a decrease of 5 percent from CY 2007 to CY 2008. It is unclear how much of the decrease in aggregate payment and the decrease in average payment per service provided may be due to packaging payment for radiation oncology guidance services (and other services that were newly packaged for CY 2008) and how much may be due to the usual annual APC recalibration and typical fluctuations in service frequency. This analysis is discussed in further detail below, under "Recommendation 1" in this section of this final rule with comment period. In that analysis, we demonstrated that the volume of some packaged radiation oncology guidance services increased during the period, leading us to conclude that, irrespective of the decline in the frequency of radiation oncology services in general, hospitals did not appear to be changing their practice patterns specifically in response to packaged payment for radiation oncology guidance services.

We similarly analyzed 9 months of CY 2007 and CY 2008 data related to all services that were packaged during CY 2008 because they were categorized as intraoperative services. Analysis of the intraoperative category (which includes intravascular ultrasound (IVUS), intracardiac echocardiography (ICE), and coronary fractional flow reserve (FFR)) showed minimal changes in the frequency and the number of reporting hospitals between CY 2007 and CY 2008.

We found that cardiac catheterization and other percutaneous vascular procedures that would typically be accompanied by IVUS, ICE and FFR (including IVUS, ICE, and FFR) were billed approximately 375,000 times in CY 2007 and approximately 400,000 times in CY 2008, representing an

increase of 8 percent in the number of services and items billed between CY 2007 and CY 2008. Further analysis revealed that the OPSS paid hospitals over \$912 million for cardiac catheterizations, other related services, and IVUS, ICE, and FFR in CY 2007, when IVUS, ICE, and FFR were separately payable. In the first 9 months of CY 2008, the OPSS paid hospitals approximately \$1.1 billion for cardiac catheterization and other percutaneous vascular procedures and IVUS, ICE, and FFR, when payments for IVUS, ICE, and FFR were packaged. This represented a 25 percent increase in payment from CY 2007 to CY 2008. Using the 9 months of data for both CY 2007 and CY 2008, we calculated an average payment per service or item provided of \$2,430 in CY 2007 and \$2,800 in CY 2008 for cardiac catheterization and other related services. This represented an increase of 15 percent in average payment per item or service from CY 2007 to CY 2008.

We could not determine how much of the 25 percent increase in aggregate payment for these services may be due to the packaging of payment for IVUS, ICE, and FFR (and other services that were newly packaged for CY 2008) and how much may be due to the usual annual APC recalibration and typical fluctuations in service frequency. However, we believe that all of these factors contributed to the increase in payment between these 2 years.

The three remaining packaging categories (excluding observation services, which are further discussed in section II.A.2.e.(1) of this final rule with comment period), contrast agents, image processing services, and imaging supervision and interpretation services, showed minimal changes in frequency between CY 2007 and CY 2008, ranging from a 2 percent increase to a 1 percent decrease in frequency. Similarly, when examining the number of hospitals reporting these services, the data showed similar numbers of hospitals reporting these services in CY 2007, when these services were separately payable, and CY 2008, when they were packaged. Specifically, the percentage change in the number of reporting hospitals for these categories between CY 2007 and CY 2008 ranged from 0 percent to a decrease of 1 percent.

In summary, these preliminary data indicated that hospitals in aggregate did not appear to have significantly changed their service reporting patterns as a result of the expanded packaging adopted for the OPSS beginning in CY 2008.

The APC Panel's Packaging Subcommittee reviewed the packaging status of several CPT codes and reported

its findings to the APC Panel at its February 2009 meeting. The full report of the February 18 and 19, 2009 APC Panel meeting can be found on the CMS Web site at: http://www.cms.hhs.gov/FACA/05_AdvisoryPanelonAmbulatoryPaymentClassificationGroups.asp. The APC Panel accepted the report of the Packaging Subcommittee, heard several presentations related to packaged services, discussed the deliberations of the Packaging Subcommittee, and recommended that—

1. CMS pay separately for radiation therapy guidance services performed in the treatment room for 2 years and then reevaluate packaging on the basis of claims data. (Recommendation 1)

2. CMS continue to analyze the impact of increased packaging on beneficiaries and provide more detailed versions of the analyses presented at the February 2009 meeting of services initially packaged in CY 2008 at the next Panel meeting. In addition, the Panel requested that, in the more detailed analyses of radiation oncology services that would be accompanied by radiation oncology guidance, CMS stratify the data according to the type of radiation oncology service, specifically, intensity modulated radiation therapy, stereotactic radiosurgery, brachytherapy, and conventional radiation therapy. (Recommendation 2)

3. CMS continue to analyze the impact on beneficiaries of increased packaging of diagnostic radiopharmaceuticals and provide more detailed analyses at the next Panel meeting. In addition, the Panel requested that, in the more detailed analyses of packaging of diagnostic radiopharmaceuticals by type of nuclear medicine scan, CMS break down the data according to the specific CPT codes billed with the diagnostic radiopharmaceuticals. (Recommendation 3)

4. CPT code 36592 (Collection of blood specimen using established central or peripheral catheter, venous, not otherwise specified) remain assigned to APC 0624 (Phlebotomy and Minor Vascular Access Device Procedures) for CY 2010. (Recommendation 4)

5. The Packaging Subcommittee continue its work until the next APC Panel meeting. (Recommendation 5)

In the proposed rule, we addressed each of these recommendations in turn in the discussion that follows.

Recommendation 1

In the CY 2010 OPPS/ASC proposed rule (74 FR 35289), we did not propose to pay separately for radiation therapy guidance services provided in the

treatment room for CY 2010, which would have been consistent with the APC Panel's recommendation. Instead, we proposed to maintain the packaged status of radiation therapy guidance services performed in the treatment room for CY 2010.

As discussed below in this section, during the February 2009 APC Panel meeting, we presented data that estimated that aggregate payment for radiation oncology services, including the payment for radiation oncology guidance services, decreased by approximately 10 percent between the first 9 months of CY 2007 (before the expanded packaging went into effect) and the first 9 months of CY 2008 (after the expanded packaging went into effect). This decline may be attributable to many factors, including lower payment rates for common radiation oncology services in CY 2008 specifically and generally reduced volume for separately paid radiation oncology services. The APC Panel expressed concern that this aggregate payment decrease could inhibit patient access to technologically advanced and clinically valuable radiation oncology guidance services whose payment became packaged effective January 1, 2008.

While we presented data to the APC Panel comparing payment between CY 2007 and CY 2008 in response to past APC Panel recommendations, we note that we made changes to the bypass list for CY 2009 to ensure that we more fully captured all packaged costs on each claim, which resulted in significantly increased payment rates for many of these radiation oncology services for CY 2009, as compared to the CY 2008 payment rates for these services.

Specifically, as discussed in detail in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68575), in response to public comments received, several radiation oncology CPT codes had been included on the bypass list for the CY 2008 OPPS, although they failed to meet the empirical criteria for inclusion on the bypass list. For CY 2009, we removed from the bypass list those radiation oncology codes that did not meet the empirical criteria. As a result of these changes to the bypass list, the CY 2009 median costs for several common radiation oncology APCs increased by more than 9 percent as compared to the CY 2008 median costs, while the median costs for some of the other lower volume radiation oncology APCs, most notably the brachytherapy source application APCs, declined. For example, as noted in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68575), these changes to the bypass

list resulted in payment for the common combination of intensity modulated radiation therapy (IMRT) and image-guided radiation therapy (IGRT) increasing from \$348 in CY 2008 to \$411 in CY 2009. Notably, the CY 2007 total payment rate for this combination of services, before the expanded packaging went into effect, was \$403.

We do not yet have CY 2009 claims data reflecting utilization based on the payment rates in effect for CY 2009. However, we do not expect that an overall per-service payment comparison between CY 2007 and CY 2009 would likely demonstrate a significant decrease in payment for radiation oncology services because we have adopted a significant increase in the CY 2009 payment rates for the most common radiation oncology services. In addition, we note that CY 2010 proposed rule data indicated that the CY 2010 APC median costs applicable to most radiation oncology services experienced increases of approximately 2 to 15 percent when compared to their CY 2009 final rule median costs. Although a small number of other lower volume radiation oncology APCs, most notably the brachytherapy and stereotactic radiosurgery APCs, experienced declines in median costs, we do not expect that an overall per-service payment comparison between CY 2007 and CY 2010 would likely demonstrate a significant decrease in payment for radiation oncology services over this time period.

While we understand that the CY 2007 to CY 2008 aggregate payment comparison provided to the APC Panel during the February 2009 meeting may have contributed to the APC Panel's particular concern about payment for radiation oncology services for CY 2010, we do not believe that packaging payment for radiation oncology guidance services has primarily caused this decline. In addition, we do not believe that beneficiaries' access to these services has been limited as a result of packaging payment for radiation oncology guidance services. In the data presented to the APC Panel at the February 2009 meeting, the number of all packaged guidance services provided during the first 9 months of CY 2008 represented a 2 percent increase from the number of guidance services provided during the first 9 months of CY 2007. Further, although the CY 2008 volume of the radiation oncology guidance codes that we newly packaged for CY 2008 varied, with some of the services experiencing increases in volume and others experiencing decreases in volume, in aggregate, the reporting of radiation oncology

guidance services increased by 4 percent in the first 9 months of claims for CY 2008, as compared to the first 9 months of CY 2007, and the number of hospitals reporting these services also increased. This further supports our belief that, irrespective of the decline in the frequency of radiation oncology services in general, hospitals do not appear to be changing their practice patterns specifically in response to packaged payment for radiation oncology guidance services.

Therefore, in the CY 2010 OPPS/ASC proposed rule (74 FR 35289), we did not propose to pay separately for radiation therapy guidance services performed in the treatment room for 2 years as the APC Panel recommended. Instead, for CY 2010, we proposed to maintain the packaged status of all radiation therapy guidance services, including those radiation therapy guidance services performed in the treatment room.

A summary of the public comments and our response on the CY 2010 proposal to package payment for radiation therapy guidance services are included in section II.A.4.b.(2) of this final rule with comment period.

Recommendation 2

In the CY 2010 OPPS/ASC proposed rule (74 FR 35290), we stated that we are accepting the APC Panel recommendation to continue to analyze the impact of increased packaging on beneficiaries and to share more data with the APC Panel. We noted that we would carefully consider which additional data would be most informative for the APC Panel and would discuss these data with the APC Panel at the next CY 2009 APC Panel meeting and/or the first CY 2010 APC Panel meeting. We did not share additional packaging data with the APC Panel at the most recent August 2009 meeting because we believe the APC Panel's discussions would benefit from analyses of an additional year of claims data after CY 2008. Therefore, we plan to incorporate analysis of CY 2009 claims into the information we will bring to the APC Panel for its review at the winter 2010 meeting. Similarly, in the proposed rule, we noted that we would determine what additional detailed data related to radiation oncology services would be helpful to the APC Panel and would share these data at the next CY 2009 APC Panel meeting and/or the first CY 2010 APC Panel meeting. We did not share additional data related to radiation oncology services with the APC Panel at the most recent August 2009 meeting because we believe the APC Panel's discussions would benefit from analyses

of an additional year of claims data after CY 2008. Therefore, we plan to incorporate analysis of CY 2009 claims into the information we will bring to the APC Panel for its review at the winter 2010 meeting.

A summary of the public comments and our response regarding the impact of the CY 2010 packaging proposal are included in section II.A.4.b.(2) of this final rule with comment period.

Recommendation 3

In the CY 2010 OPPS/ASC proposed rule (74 FR 35290), we stated that we are accepting the APC Panel's recommendation that CMS continue to analyze the impact on beneficiaries of increased packaging of diagnostic radiopharmaceuticals and provide more detailed analyses at the next APC Panel meeting. In these analyses of diagnostic radiopharmaceuticals by type of nuclear medicine scan, the APC Panel further recommended that CMS analyze the data according to the specific CPT codes billed with the diagnostic radiopharmaceuticals. This APC Panel recommendation is discussed in detail in section II.A.2.d.(5) of this final rule with comment period. In the proposed rule, we noted that we are accepting the APC Panel's recommendation and would provide additional data to the APC Panel at an upcoming meeting. We did not share additional data related to diagnostic radiopharmaceuticals and nuclear medicine scans with the APC Panel at the most recent August 2009 meeting because we believe the APC Panel's discussions would benefit from analyses of an additional year of claims data after CY 2008. Therefore, we plan to incorporate analysis of CY 2009 claims into the information we will bring to the APC Panel for its review at the winter 2010 meeting.

A summary of the public comments and our response on the CY 2010 proposal to package payment for diagnostic radiopharmaceuticals into payment for the associated nuclear medicine procedures are included in sections II.A.2.d.(5) and V.B.2.d. of this final rule with comment period.

Recommendation 4

In the CY 2010 OPPS/ASC proposed rule (74 FR 35290), we proposed to continue for CY 2010 to treat CPT code 36592 (Collection of blood specimen using established central or peripheral catheter, venous, not otherwise specified) as an "STVX packaged code" and to assign it to APC 0624 (Phlebotomy and Minor Vascular Access Device Procedures), the same APC to which CPT code 36591 (Collection of blood specimen from a completely

implantable venous access device) is currently assigned as the APC Panel recommended. CPT code 36592 became effective January 1, 2008 and was assigned interim status indicator "N" in the CY 2008 OPPS/ASC final rule with comment period. For CY 2009, in response to public comments, we proposed to treat CPT code 36592 as a conditionally packaged code, with assignment to APC 0624. In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68576), we discussed the public comments we received regarding our proposed treatment of CPT code 36592. Several of these commenters supported our proposal to treat CPT code 36592 as a conditionally packaged code with assignment to APC 0624. We stated in the CY 2009 OPPS/ASC final rule with comment period that when cost data for CPT code 36592 became available for the CY 2010 OPPS annual update, we would reevaluate whether assignment to APC 0624 continued to be appropriate.

Based on our analysis of claims data, our clinical understanding of the service, and our discussion with the APC Panel Packaging Subcommittee, in the CY 2010 OPPS/ASC proposed rule (74 FR 35290), we proposed to maintain the assignment of CPT code 36592 to APC 0624 for CY 2010, consistent with the APC Panel recommendation, and we proposed to continue to treat CPT code 36592 as an "STVX packaged code" and assign it to APC 0624. We noted that we expect hospitals to follow the CPT guidance related to CPT codes 36591 and 36592 regarding when these services should be appropriately reported.

We received no public comments on the CY 2010 proposal to maintain the assignment of CPT code 36592 to APC 0624 and treat it as an "STVX packaged code," so we are finalizing our proposal, without modification.

Recommendation 5

In response to the APC Panel's recommendation for the Packaging Subcommittee to remain active until the next APC Panel meeting, in the CY 2010 OPPS/ASC proposed rule (74 FR 35290) we noted that we have accepted this recommendation and the APC Panel Packaging Subcommittee remains active. We stated that additional issues and new data concerning the packaging status of codes would be shared for its consideration as information becomes available. We continue to encourage submission of common clinical scenarios involving currently packaged HCPCS codes to the Packaging Subcommittee for its ongoing review. We also encourage recommendations of

specific services or procedures whose payment would be most appropriately packaged under the OPPS. Additional detailed suggestions for the Packaging Subcommittee should be submitted by e-mail to APCPanel@cms.hhs.gov with Packaging Subcommittee in the subject line.

The Packaging Subcommittee has remained active; the Subcommittee's last meeting to discuss packaging issues was the August 2009 meeting.

(2) Packaged Services Addressed by the August 2009 APC Panel Recommendations

The APC Panel met again on August 5 and 6, 2009 to hear public presentations on the proposals set forth in the CY 2010 OPPS/ASC proposed rule. The APC Panel's Packaging Subcommittee reviewed the packaging status of several CPT codes and reported its findings to the APC Panel. The full report of the August 5 and 6, 2009 APC Panel meeting can be found on the CMS Web site at: http://www.cms.hhs.gov/FACA/05_Advisory_PanelonAmbulatoryPaymentClassificationGroups.asp. The APC Panel accepted the report of the Packaging Subcommittee, heard several presentations related to packaged services, discussed the deliberations of the Packaging Subcommittee, and recommended that—

1. CMS submit to the Packaging Subcommittee, for its ongoing review, common clinical scenarios involving currently packaged HCPCS codes and recommendations of specific services or procedures for which payment would be most appropriately packaged under the OPPS. (Recommendation 6)

2. When CMS changes the dollar amount of the drug packaging threshold and determines that some drugs within a single therapeutic class fall on either side of the packaging threshold, CMS consider packaging all of the drugs within that class on the basis of feedback from providers, the APC Panel, and stakeholders. (Recommendation 7)

3. CMS continue to study the impact of increased packaging on beneficiaries. (Recommendation 8)

4. The work of the APC Packaging Subcommittee continue. (Recommendation 9)

With respect to these August 2009 APC Panel recommendations, we are accepting recommendations 6, 8, and 9. We are continuing the work of the APC Panel Packaging Subcommittee, and we appreciate the Packaging Subcommittee's expertise and experience regarding packaging under the OPPS and the valuable advice the Subcommittee continues to provide to us. We will

continue to bring to the Subcommittee's attention clinical scenarios identified by us or the public regarding services that are currently packaged or are candidates for future packaging under the OPPS. As discussed above, we also will continue to study the impact of increased packaging on Medicare beneficiaries, as the APC Panel has previously recommended to us. We did not share additional packaging data with the APC Panel at the most recent August 2009 meeting because we believe the APC Panel's discussions would benefit from analyses of an additional year of claims data after CY 2008. Therefore, we plan to incorporate analysis of CY 2009 claims into the information we will bring to the APC Panel for its review at the winter 2010 meeting. Finally, our response to recommendation 7 regarding the packaging of payment for all drugs in the same therapeutic class is discussed in section V.B.2.c. of this final rule with public comment.

Comment: Many commenters expressed a wide range of views on the existing policies for packaging payment for categories of services that CMS proposed to continue for CY 2010. One commenter claimed that while packaging provides an incentive for providers to deliver services in the most efficient, cost-effective manner possible, payment bundles that are too small do not enhance efficiencies, while payment bundles that are too large may carry excessive copayments for patients who need only a small proportion of services in the bundle. Another commenter suggested that CMS' packaging policy is likely to lead to less efficient use of resources, limited access to innovative treatment options, and greater instability in payments because, unlike the incentives from packaging under the IPPS, under the OPPS, the hospital would receive greater payment by bringing the outpatient back for a second visit or admitting the patient for inpatient care than by utilizing a more costly approach to providing an outpatient service that would be paid the same, regardless of the approach. The commenter also stated that when an APC's payment rate is significantly less than the cost of a technology, hospitals have a strong disincentive to use that technology, even if it could reduce the costs of care at a later date and provide better care to the patient.

Several commenters asserted that the implications of OPPS packaging policies are unknown due to a lack of transparency in the OPPS ratesetting process and methodology used to determine payment for packaged services, potentially leading to inappropriate payment and

underutilization of image-guidance services. The commenters believed that packaging payment for image-guidance leads to hospitals discouraging physicians from using guidance services and that, therefore, CMS should not package payment for image-guidance services. Several commenters urged CMS to consider establishing a 2 to 3 year data collection period during which separate payment would be made for new technology or new applications of existing technology. The commenters further suggested that the data could then be used to evaluate the impact of packaging on clinical utilization and payment and could also be used to determine whether to package or maintain separate payment for the services in the future. Another commenter recommended that CMS adopt a threshold policy that would be similar to the existing policy used to identify packaged drugs, under which separate payment would be made for all services with a median cost in excess of a nominal threshold amount.

Response: We continue to believe that packaging creates incentives for hospitals and their physician partners to work together to establish appropriate protocols that eliminate unnecessary services where they exist and institutionalize approaches to providing necessary services more efficiently. With respect to new services or new applications of existing technology, we believe that packaging payment for ancillary and dependent services creates appropriate incentives for hospitals to seriously consider whether a new service or a new technology offers a benefit that is sufficient to justify the cost of the new service or technology. Where this review results in reductions in services that are only marginally beneficial or hospitals' choices not to utilize certain technologies, we believe that this could improve, rather than harm, the quality of care for Medicare beneficiaries because every service furnished in a hospital carries some level of risk to the patient. Moreover, we believe that hospitals strive to provide the best care they can to the patients they serve so that when new technologies are proven to improve the quality of care, their utilization will increase appropriately, whether the payment for them is packaged or not.

However, we are aware that there are financial pressures on hospitals that might motivate some providers to split services among different hospital encounters in such a way as to maximize payments. While we do not expect that hospitals would routinely change the way they furnish services or the way they bill for services in order

to maximize payment, we recognize that it would be possible and we consider that possibility as we annually review hospital claims data. We will to continue examine claims data for patterns of fragmented care, and if we find a pattern in which a hospital appears to be dividing care across multiple days, we will refer it for investigation to the QIO or to the program safeguard contractor, as appropriate to the circumstances we find.

In section II.A.1. of this final rule with comment period, we discuss the established methodology we use to incorporate the costs of packaged services into payment for the associated independent procedures. In response to those commenters with concerns about transparency of the ratesetting process that incorporates packaged costs, in general, we package the costs of services into the payment for the major separately paid procedure on the same claim on which the packaged service appears. Hence, it is the practice of hospitals with regard to reporting and charging for packaged services that determines the separately paid service into which the cost of a packaged service is incorporated and the amount of packaged cost included the payment for that separately paid procedure.

Regarding the recommendation that we establish a cost threshold that would guide the packaging of services, we do not agree that this approach would result in appropriate packaging of costs for dependent ancillary services. A threshold policy could create incentives for hospitals to increase charges to ensure that payment for certain services was made separately, and the result would be contrary to the creation of incentives for prudent assessment of the costs and benefits of these services. Furthermore, as we stated in the CY 2009 OPPS/ASC final with comment period (73 FR 68572), it is not clear whether one set of packaging principles or one threshold could apply to the wide variety of services under the OPPS. Finally, to adopt a policy that would only package services that are low cost ancillary and supportive services would essentially negate the concept of averaging that is an underlying premise of a prospective payment system because hospitals would not have a particular incentive to provide care more efficiently.

We believe it is important to continue to advance value-based purchasing by Medicare in the hospital outpatient setting by furthering the focus on value of care rather than volume. While we acknowledge the concerns of the commenters and, as discussed below,

are committed to considering the impact of packaging payment on Medicare beneficiaries further in the future, we must balance the concerns of the commenters with our goal of continuing to encourage efficient use of hospital resources. As we noted in the CY 2009 OPPS/ASC final rule with comment period in our response to comments on the CY 2009 OPPS/ASC proposed rule (73 FR 68572) and as we note in our responses to public comments on the CY 2010 OPPS/ASC proposed rule, the suggestions and packaging criteria recommended by most commenters are focused almost exclusively on preventing packaging, rather than on determining when packaging would be appropriate. We also welcome suggestions from the public on approaches to packaging that would encourage efficient use of hospital resources.

Comment: Several commenters commended CMS for reviewing and accepting the APC Panel's February 2009 recommendation that CMS continue to analyze the impact of increased packaging on Medicare beneficiaries. The commenters expressed concern about CMS' current packaging policy and urged CMS to conduct a more detailed review of the hospital claims data in order to verify that current OPPS packaging policies and methodologies are accomplishing CMS' goals. A few commenters offered recommendations for additional data analyses for CMS to consider in the ongoing efforts to study the impact of increased packaging under the OPPS. The commenters recommended that CMS compare utilization of currently packaged services billed and paid separately under the OPPS in CY 2007, before the packaging of additional categories of services went into effect, to the frequency of those same services that were packaged in CY 2008 and later, after the packaging of additional categories of services went into effect. The commenters requested that CMS conduct these studies at the CPT code level. The commenters also recommended that CMS conduct a hospital-level review of the data, in addition to an overall review, and compare overall utilization by packaged HCPCS code for CYs 2005 and 2006 to CYs 2007, 2008, and 2009. Another commenter, in support of a provider-level review of the data, asserted that reviewing the data for packaged services at a national aggregate level can easily mask the behavioral changes of classes of hospitals and, therefore, concluded that more detailed analysis is needed to determine the impact of the policy.

Several commenters requested that CMS present its analyses in the final rule with comment period and at upcoming APC Panel meetings and consult with relevant stakeholders before proposing any additional packaging changes. The commenters also recommended that CMS make the data underlying payments for packaged services, including utilization rates and median costs, publicly available to enhance the transparency of its decision making so that stakeholders could assess whether the payment rates truly reflect the costs of providing the bundle of services.

Response: We agree that it is important to examine our claims data to assess the impact of packaging to the extent we can do so. During the September 2007 APC Panel meeting, the APC Panel requested that CMS evaluate the impact of expanded packaging on Medicare beneficiaries. At the March 2008 APC Panel meeting, the APC Panel requested that CMS report to the APC Panel at the first meeting in CY 2009 regarding the impact of packaging on net payments for patient care. In response to these requests, we shared the first available CY 2008 claims data with the APC Panel at the February 2009 APC Panel meeting. In that analysis, we compared the frequency of specific categories of services we newly packaged for CY 2008 as they were billed under the OPPS in CY 2007, before expanded packaging went into effect, to the frequency of those same categories of services in CY 2008, their first year of packaged payment. In each category, the HCPCS codes that we compared are the ones that we identified in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66659 through 66664) as fitting into one of the seven packaging categories listed in section II.A.4.a. of this final rule with comment period. The data shared with the APC Panel at the February 2009 APC Panel meeting compared CY 2007 claims processed through September 30, 2007, to CY 2008 claims processed through September 30, 2008, and represented about 60 percent of the full year data. We did not make any adjustments for inflation, changes in Medicare population, or other variables that potentially influenced billing between CY 2007 and CY 2008. A summary of these data analyses was included in the CY 2010 OPPS/ASC proposed rule (74 FR 35287 through 35289) and is reiterated above.

We note that we plan to present subsequent analyses that compare CY 2007 claims processed through September 30, 2007, to CY 2008 claims processed through September 30, 2008, and to CY 2009 claims processed

through September 30, 2009, to the APC panel at the APC Panel's winter 2010 meeting. We do not anticipate providing analyses using claims for services furnished during CY 2005 or CY 2006 because the packaging of the seven categories of services was effective for services furnished on and after January 1, 2008, and, therefore, we view CY 2007, the year immediately preceding the year that the packaging expansion went into effect, to be the base year for our comparisons. In addition, we do not anticipate providing the analyses at a provider-specific level or at a HCPCS code level. It is not clear to us how we would be able to use an analysis at the provider-specific level or the HCPCS code level or what value such an analysis would have in the context of national packaging policies for the OPSS.

We note that we make available a considerable amount of data for public analysis each year through the supporting data files that are posted on the CMS Web site in association with the display of the proposed and final rules. In addition, we make available the public use files of claims and a detailed narrative description of our data process for the annual OPSS/ASC proposed and final rules that the public can use to perform any desired analyses. Therefore, commenters are able to examine and analyze these data to develop specific information to support their requests for changes to payments under the OPSS, whether with regard to separate payment for a packaged service or other issues. We understand that the OPSS is a complex payment system and that it may be difficult to determine the quantitative amount of packaged cost included in the median cost for every independent service. However, based on the complex and detailed public comments on prior proposed rules that we have received, some commenters have performed meaningful analyses at a detailed and service-specific level based on the public claims data available.

With regard to the commenters' request that we not expand OPSS packaging until after we have produced data on the impact of packaging policy changes and consulted with stakeholders, we note that we establish all significant OPSS payment policies, including the packaging status of each HCPCS code, through the annual rulemaking process. Integral to this process is a detailed explanation of the claims data on which we base our proposals and the availability of the claims from which we develop those data for the use of the public to perform any level of analysis they choose.

Moreover, the OPSS/ASC annual rulemaking process provides a 60-day public comment period, as well as public presentations and discussion of the proposals at the summer APC Panel meeting. We also reply to all public comments that are within the scope of the OPSS/ASC proposed rule when we issue the OPSS/ASC final rule with comment period. In addition, we regularly meet with parties throughout the year who want to share their views on topics of interest to them. All of these activities and discussions provide significant information and opportunities for the public to influence and inform policy changes that we may be considering.

Comment: Some commenters expressed concern about the impact that packaging payment for services described by separate HCPCS codes could have on the submission of claims data by hospitals for those packaged codes and, therefore, with the validity of conclusions that could be drawn from impact analyses performed by CMS. One commenter questioned CMS' assumption that the OPSS packaging policies would allow continued collection of the data necessary to set appropriate, stable payment rates in the future. The commenter believed that greater packaging may eliminate hospitals' incentive to code for items and services for which separate payment is not made. The commenter further argued that CMS' past experiences with packaging payment for ancillary items and services indicate that hospitals do not report HCPCS codes for items and services that do not directly affect hospital payment. Similarly, the commenter explained that, under the IPPS, hospitals report only the data required to assign a case to the highest paying appropriate diagnosis-related group (DRG), even though other data might affect payment in the long term. The commenter saw no reason to believe that the current OPSS packaging approach would have a different outcome unless CMS gives clear instructions that hospitals should continue coding for all items and services used in the care of patients and provides an incentive to report packaged items and services.

Several commenters argued that the costs of new services are not reflected in the historical claims data CMS uses to set payment rates. The commenters believed that if CMS were to package payment for a new imaging service under the same criteria proposed for many existing imaging services, not only would CMS have no basis for determining how much the new service costs in its first 2 years of availability,

but also CMS would provide no incentive to hospitals to report codes and charges for the new service for use in future OPSS ratesetting. The commenters further asserted that the resulting incomplete data would lead to inappropriate payments for independent services that, in turn, would limit access to care and would discourage continued innovation to improve patient care.

Response: We do not believe that there will be a significant change in what hospitals report and charge for the outpatient services they furnish to Medicare beneficiaries and other patients as a result of our current packaging methodology. Medicare cost reporting standards specify that hospitals must impose the same charges for Medicare patients as for other patients. We are often told by hospitals that many private payers pay based on a percentage of charges and that, in accordance with Medicare cost reporting rules and generally accepted accounting principles, hospital chargemasters do not differentiate between the charges to Medicare patients and other patients. Therefore, we have no reason to believe that hospitals will stop reporting HCPCS codes and charges for packaged services they provide to Medicare beneficiaries. As we stated in the CY 2009 OPSS/ASC final rule with comment period (74 FR 68575), we strongly encourage hospitals to report a charge for each packaged service they furnish, either by billing the packaged HCPCS code and a charge for that service if separate reporting is consistent with CPT and CMS instructions, by increasing the charge for the separately paid associated service to include the charge for the packaged service, or by reporting the charge for the packaged service with an appropriate revenue code but without a HCPCS code. Any of these means of charging for the packaged service will result in the cost of the packaged service being incorporated into the cost we estimate for the separately paid service. If a HCPCS code is not reported when a packaged service is provided, we acknowledge that it can be challenging to specifically track the utilization patterns and resource cost of the packaged service itself. However, we have no reason to believe that hospitals have not considered the cost of the packaged service in reporting charges for the independent, separately paid service.

We expect that hospitals, as other prudent businesses, have a quality review process that ensures that they accurately and completely report the services they furnish, with appropriate charges for those services to Medicare

and all other payers. We encourage hospitals to report all HCPCS codes that describe packaged services that were furnished, unless the CPT Editorial Panel or CMS provides other guidance. To the extent that hospitals include separate charges for packaged services on their claims, the estimated costs of those packaged services are then added to the costs of separately paid procedures on the same claims and used

in establishing payment rates for the separately paid services.

Comment: One commenter argued that CMS' packaging methodology for guidance services used in radiation oncology procedures is not transparent. Specifically, the commenter claimed that CMS packaged payment for the radiation oncology image-guidance services (shown in Table 15) into the payment for independent radiation

therapy services (shown in Table 16) without publishing its packaging methodology. The commenter further stated that the lack of transparency regarding CMS' packaging methodology is of concern to the radiation oncology community, and that it would be helpful if CMS published the information used in the APC Panel's determination of packaging and payment rates.

TABLE 15—PACKAGED RADIATION ONCOLOGY GUIDANCE SERVICES

CY 2010 CPT code	CY 2010 Long descriptor
77421	Stereoscopic X ray guidance for localization of target volume for the delivery of radiation therapy.
77014	Computed tomography guidance for placement of radiation fields.
77417	Therapeutic radiology port film(s).
76950	Ultrasonic guidance for aspiration of ova, imaging supervision and interpretation.

TABLE 16—SEPARATELY PAID RADIATION THERAPY SERVICES

CY 2010 CPT code	CY 2010 Long descriptor
77402	Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; up to 5MeV.
77403	Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; 6–10MeV.
77404	Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; 11–19 MeV.
77406	Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; 20 MeV or greater.
77407	Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks; up to 5 MeV.
77408	Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks; 6–10 MeV.
77409	Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks; 11–19 MeV.
77411	Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks; 20 MeV or greater.
77412	Radiation treatment delivery, 3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; up to 5 MeV.
77413	Radiation treatment delivery, 3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; 6–10 MeV.
77414	Radiation treatment delivery, 3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; 11–19 MeV.
77416	Radiation treatment delivery, 3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; 20 MeV or greater.
77417	Therapeutic radiology port film(s).
77418	Intensity modulated treatment delivery, single or multiple fields/arcs, via narrow spatially and temporally modulated beams, binary, dynamic MLC, per treatment session.

Response: Although the APC Panel provides valuable advice with regard to the establishment of OPPS payment policies and payment rates, the APC Panel does not, as the commenter suggested, determine what services are packaged under the OPPS or establish OPPS payment rates. We adopt the OPPS payment policies regarding packaging and other issues and establish payment rates through the annual rulemaking cycle.

In general, payment for a packaged HCPCS code is included in the payment for the independent service with which it is associated, to the extent that the cost of the packaged service is reflected

on the single procedure claims that are used to calculate the median cost for the independent, separately paid service. We intend to further examine the packaging of image-guidance for radiation therapy in the analyses of the impact of packaging that we plan to discuss with the APC Panel at the winter 2010 meeting. However, as we describe earlier in this section, we make available a considerable amount of data for public analysis each year, provide the claims we use to calculate median costs, and provide a detailed narrative description of our data process that the public can use to analyze any topic of interest to them.

Comment: One commenter supported CMS' goal of increased efficiency in hospital outpatient care. However, the commenter was concerned that packaging payment for services too soon could create access problems for technologies that would otherwise improve patient outcomes and reduce costs. The commenter urged CMS to reinstate separate payment in CY 2010 for ICE, FFR, and IVUS until a thorough analysis has been performed on the impact of packaging payment for these services, including the rate of change in their utilization over time and market penetration.

Response: As discussed earlier in this section, in response to the request from the APC Panel that CMS evaluate the impact of expanded packaging on Medicare beneficiaries, we analyzed 9 months of CY 2007 and CY 2008 data related to all services that were packaged during CY 2008. Analysis of the intraoperative category (which includes IVUS, ICE, and FFR) showed minimal changes in the frequency and the number of hospitals reporting these packaged services between CY 2007 and CY 2008. The IVUS, ICE, and FFR services studied specifically included CPT codes 37250 (Intravascular ultrasound (non-coronary vessel) during diagnostic evaluation and/or therapeutic intervention; initial vessel); 37251 (Intravascular ultrasound (non-coronary vessel) during diagnostic evaluation and/or therapeutic intervention; each additional vessel); 92978 (Intravascular ultrasound (coronary vessel or graft) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; initial vessel); 92979 (Intravascular ultrasound (coronary vessel or graft) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; each additional vessel); 93662 (Intracardiac echocardiography during therapeutic/diagnostic intervention, including imaging supervision and interpretation); 93571 (Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress, initial vessel); and 93572 (Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress, each additional vessel).

As discussed previously, in February 2009 we presented an analysis to the APC Panel that showed an increase of 8 percent in the number of services billed and an increase in aggregate payment of 25 percent in CY 2008, when IVUS, ICE and FFR were packaged, in comparison to CY 2007 when IVUS, ICE and FFR were paid separately. Additionally, we intend to continue our analysis of the impact of greater packaging on Medicare beneficiaries and to present additional data to the APC Panel at the winter 2010 meeting.

We note that IVUS, ICE, and FFR services are existing, established technologies and that hospitals have provided some of these services in the

HOPD since the implementation of the OPPI in CY 2000. IVUS, FFR, and ICE are all dependent services that are always provided in association with independent services. Given the increase in the number of services furnished and the associated payment between CY 2007 and CY 2008, we have seen no evidence from our claims data that beneficiary access to care is being harmed by packaging payment for IVUS, ICE, and FFR services. We believe that packaging creates appropriate incentives for hospitals and their physician partners to carefully consider the technologies that are used in the care of patients, in order to ensure that technologies are selected for use in each case based on their expected benefit to a particular Medicare beneficiary.

After consideration of the public comments we received, we are finalizing our CY 2010 proposals, without modification, to packaged payment for the seven categories of services, including guidance services, image processing services, intraoperative services, imaging supervision and interpretation services, diagnostic radiopharmaceuticals, contrast media, and observation services. We refer readers to section V.B.2.d. of this final rule with comment period for further discussion of our final policy to package payment for contrast agents and diagnostic radiopharmaceuticals. We refer readers to section II.A.2.e.(1) for further discussion of our final policy to pay for observation services through extended assessment and management composite APCs under certain circumstances. We plan to discuss with the APC Panel additional analyses of the impact of packaging these categories of services at the winter 2010 APC Panel meeting.

(3) Other Service-Specific Packaging Issues

The APC Panel also recommended that CMS reassign CPT code 76098 (Radiological examination, surgical specimen) from APC 0317 (Level II Miscellaneous Radiology Procedures) to APC 0260 (Level I Plain Film), and to place CPT code 76098 on the bypass list. Based on our analysis of the CY 2010 claims containing CPT 76098 and clinical review of the services being furnished, in the CY 2010 OPPI/ASC proposed rule (74 FR 35241), we proposed to treat CPT code 76098 as a "T-packaged" code for CY 2010 with continued assignment to APC 0317. As discussed above, a "T-packaged code," identified with status indicator "Q2," describes a code whose payment is packaged when one or more separately paid surgical procedures with a status

indicator of "T" are provided during the hospital encounter. The assignment of status indicator "Q2" to CPT code 76098 would result in more claims data being available to set the median costs for the surgical procedures with which CPT code 76098 is most commonly billed (for example, CPT code 19101 (Biopsy of breast, percutaneous, needle core, not using image guidance; open incisional)), while continuing to provide appropriate separate payment that reflects the costs of the service, including its packaged costs, when it is not billed with a surgical procedure. Further discussion related to the proposal is included in section II.A.1.b. of this final rule with comment period.

Comment: One commenter requested that CPT code 76098 remain separately payable instead of conditionally packaged. The commenter acknowledged that radiological examination of a surgical specimen is performed in conjunction with a surgical procedure most of the time but asserted that when the service is conditionally packaged, surgical procedure payment would not cover the cost of the radiological examination of a surgical specimen.

Response: We continue to believe that when CPT code 76098 is furnished on the same date of service as a major separately payable procedure, CPT code 76098 is a dependent service that is ancillary and supportive to the independent service with which it is performed and that, therefore, it is most appropriate to package the cost of CPT code 76098 into the payment for the independent, separately paid procedure. The full cost of CPT code 76098 is packaged into the cost of the independent, separately paid procedure to the extent that the hospital's charge for the packaged service, when reduced to cost by the hospital's applicable CCR, results in an accurate reflection of the cost of the packaged service. As we stated in the CY 2009 OPPI/ASC final rule with comment period (74 FR 68575), we strongly encourage hospitals to report a charge for each packaged service they furnish, either by billing the packaged HCPCS code and a charge for that service if separate reporting is consistent with CPT and CMS instructions, by increasing the charge for the separately paid associated service to include the charge for the packaged service, or by reporting the charge for the packaged service with an appropriate revenue code but without a HCPCS code. Any of these means of charging for the packaged service will result in the costs of the packaged service being incorporated into the cost we estimate for the separately paid

service. We note that further discussion of CPT code 76098 as it relates to the commenters' requests to add this code to the bypass list is included in section II.A.1.b. of this final rule with comment period.

After consideration of the public comment we received, we are finalizing our CY 2010 proposal, without modification, to assign CPT code 76098 status indicator "Q2" to signify that the service is packaged when it is reported with a separately paid procedure that has a status indicator of "T" on the same date of service and separately paid under APC 0317 when it is not reported on the same date of service with a separately paid surgical procedure that has a status indicator of "T." The final CY 2010 APC median cost of APC 0317 is approximately \$374.

Comment: A number of commenters disagreed with CMS' proposal to package electrodiagnostic guidance for chemodenervation procedures. The commenters asserted that paying chemodenervation procedures at the same rate, regardless of the use of electrodiagnostic guidance, may discourage providers from using guidance to place a needle filled with a potentially fatal substance like botulinum toxin. They urged CMS to consider providing a separate payment for electrodiagnostic needle guidance to ensure that quality of care is not compromised.

Response: While the commenters did not identify specific chemodenervation guidance CPT codes, we note that the costs of chemodenervation guidance services, specifically CPT codes 95873 (Electrical stimulation for guidance in conjunction with chemodenervation (List separately in addition to code for primary procedure)) and 95874 (Needle electromyography for guidance in conjunction with chemodenervation (list separately in addition to code for primary procedure)) are reflected in the median costs of the independent, separately paid chemodenervation procedures as a function of the frequency that chemodenervation services are reported with a particular guidance CPT code. We recognize that, in some cases, supportive and ancillary dependent services are furnished at a high frequency with independent services, and in other cases, they are furnished with independent services at a low frequency. Nonetheless, we believe that packaging should reflect the reality of how these services are furnished. Moreover, we believe that hospitals make prudent and appropriate patient care decisions with regard to when they furnish packaged services.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to unconditionally package payment for chemodenervation guidance services described by CPT codes 95873 and 95874. These CPT codes are, therefore, assigned status indicator "N" in Addendum B to this final rule with comment period.

Comment: One commenter objected to the assignment of status indicator "N" to a number of guidance procedures and requested that CMS conditionally package these services so that they could be paid separately if they are the only services furnished in a hospital encounter. The commenter believed that it is not appropriate that the hospital receives no payment when these services are furnished in preparation for a surgical procedure that is canceled after the services have been furnished but before the patient is taken to the operating room. The procedures of concern to the commenter include CPT codes 19290 (Preoperative placement of needle localization wire, breast;); 19291 (Preoperative placement of needle localization wire, breast; each additional lesion (List separately in addition to code for primary procedure)); 19295 (Image guided placement, metallic localization clip, percutaneous, during breast biopsy (List separately in addition to code for primary procedure)); 77031 (Stereotactic localization guidance for breast biopsy or needle placement (e.g., for wire localization or for injection), each lesion, radiological supervision and interpretation); 77032 (Mammographic guidance for needle placement, breast (e.g., for wire localization or for injection), each lesion, radiological supervision and interpretation); and 76942 (Ultrasonic guidance for needle placement (e.g., biopsy, aspiration, injection, localization device), imaging supervision and interpretation).

Response: We appreciate the commenter's submission of this clinical scenario for our review. The APC Panel Packaging Subcommittee provides substantive advice to us on the packaging of services, either conditionally or unconditionally under the OPPS, and the Subcommittee members bring broad and deep expertise and experience to their review of clinical scenarios. Therefore, we will review these services and the scenario described by the commenter with the APC Panel's Packaging Subcommittee at the winter 2010 APC Panel meeting.

After review of the public comment we received, we are finalizing our CY 2010 proposal, without modification, to

unconditionally package payment for CPT codes 19290, 19291, 19295, 77031, 77032, and 76942. These CPT codes are assigned status indicator "N" in Addendum B to this final rule with comment period. We will review the OPPS treatment of these CPT codes with the APC Panel Packaging Subcommittee at the winter 2010 APC Panel meeting.

Comment: One commenter suggested that it is very challenging for hospitals to determine they were paid correctly for services furnished because of CMS' "Q" status indicators and the complexity of determining which HCPCS codes should be separately paid. The commenter asked that CMS make the claims processing system more transparent.

Response: We acknowledge that the OPPS is a complex payment system and that it is difficult to determine the correct payment for a service that is subject to conditional packaging. Addendum D1 to this final rule with comment period describes how services that appear in Addendum B with status indicators "Q1," "Q2," and "Q3" are treated in claims processing. In the case of conditionally packaged codes with status indicators "Q1" or "Q2," where the criteria for separate payment are not met, these codes are treated as packaged services. We assign status indicators "Q1" and "Q2" to conditionally packaged services to indicate that they are usually packaged, except for special circumstances when they are separately payable. Through the I/OCE claims processing logic, the status indicator of a conditionally packaged service reported on a claim is changed either to "N" or the status indicator of the APC to which the code is assigned for separate payment, depending upon the presence or absence of other OPPS services also reported on the claim with the same date of service. Status indicator "Q3" indicates that the code is a member of a composite APC. Addendum M includes the HCPCS codes for all services that are paid either through single code APCs or composite APCs when the criteria for composite APC payment are met. A full discussion of the composite criteria for each composite APC (to which status indicator "Q3" applies) is included in section II.A.2.e. of this final rule with comment period.

In addition to the availability of these resources that describe whether a service is separately payable or packaged (in the case of services with status indicators "Q1" or "Q2") or a member of a composite APC (in the case of services with status indicator "Q3"), the quarterly I/OCE and the OPPS Pricer that are used by the Fiscal Intermediary

Standard System (FISS) to process claims paid under the OPSS are both available to the public each calendar quarter. The I/OCE instructions and specifications that are utilized for OPSS and non-OPSS payment for hospital outpatient services are available quarterly for download on the CMS Web site at: http://www.cms.hhs.gov/OutpatientCodeEdit/02_OCEQtrReleaseSpecs.asp#TopOfPage. Providers interested in purchasing the I/OCE software should visit the authorized distributor's Web site at <http://www.ntis.gov/products/oceapc.aspx> for more information on how to obtain the software. There is no OPSS Pricer application for personal computers at this time. However, providers can download the files that contain the logic, rates, wage indices, and off-set amounts used by the OPSS Pricer program to calculate APC rates, copayments, and deductibles from the CMS Web site at: http://www.cms.hhs.gov/PCPricer/08_OPSS.asp.

B. Conversion Factor Update

Section 1833(t)(3)(C)(ii) of the Act requires us to update the conversion factor used to determine payment rates under the OPSS on an annual basis. Under the authority in section 1833(t)(3)(C)(iv) of the Act, for CY 2010, the update is equal to the hospital inpatient market basket percentage increase applicable to hospital discharges under section 1886(b)(3)(B)(iii) of the Act. The final hospital market basket increase for FY 2010 published in the FY 2010 IPPS/LTCH PPS final rule (74 FR 44002) is 2.1 percent. To set the OPSS conversion factor for CY 2010, we increased the CY 2009 conversion factor of \$66.059, as specified in the CY 2009 OPSS/ASC final rule with comment period (73 FR 68584 through 68585), by 2.1 percent. Hospitals that fail to meet the reporting requirements of the Hospital Outpatient Quality Data Reporting Program (HOP QDRP) are subject to a reduction of 2.0 percentage points from the market basket update to the conversion factor. For a complete discussion of the HOP QDRP requirements and the payment reduction for hospitals that fail to meet those requirements, we refer readers to section XVI. of this final rule with comment period.

In accordance with section 1833(t)(9)(B) of the Act, we further adjusted the conversion factor for CY 2010 to ensure that any revisions we made to our updates for a revised wage index and rural adjustment are made on a budget neutral basis. We calculated an overall budget neutrality factor of

0.9997 for wage index changes by comparing total payments from our simulation model using the FY 2010 IPPS final wage index values to those payments using the current (FY 2009) IPPS wage index values. For CY 2010, we did not propose a change to our rural adjustment policy. Therefore, the budget neutrality factor for the rural adjustment is 1.0000.

For this final rule with comment period, we estimated that pass-through spending for both drugs and biologicals and devices for CY 2010 will equal approximately \$45.5 million, which represents 0.14 percent of total projected CY 2010 OPSS spending. Therefore, the conversion factor was also adjusted by the difference between the 0.11 percent estimate of pass-through spending set aside for CY 2009 and the 0.14 percent estimate of CY 2010 pass-through spending. Finally, estimated payments for outliers remain at 1.0 percent of total OPSS payments for CY 2010.

The market basket increase update factor of 2.1 percent for CY 2010, the required wage index budget neutrality adjustment of approximately 0.9997, and the adjustment of 0.03 percent of projected OPSS spending for the difference in the pass-through spending set aside resulted in a full market basket conversion factor for CY 2010 of \$67.406. To calculate the CY 2010 reduced market basket conversion factor for those hospitals that fail to meet the requirements of the HOP QDRP for the full CY 2010 payment update, we made all other adjustments discussed above, but used a reduced market basket increase update factor of 0.1 percent. This resulted in a reduced market basket conversion factor for CY 2010 of \$66.086 for those hospitals that fail to meet the HOP QDRP requirements.

We did not receive any public comments on the calculation of the conversion factor. Therefore, we are finalizing our CY 2010 proposal, without modification, to update the OPSS conversion factor by the FY 2010 IPPS market basket increase update factor of 2.1 percent, resulting in a final full conversion factor of \$67.406 and in a reduced conversion factor of \$66.086 for those hospitals that fail to meet the HOP QDRP reporting requirements for the full CY 2010 payment update.

C. Wage Index Changes

Section 1833(t)(2)(D) of the Act requires the Secretary to determine a wage adjustment factor to adjust, for geographic wage differences, the portion of the OPSS payment rate, which includes the copayment standardized amount, that is attributable to labor and

labor-related cost. This adjustment must be made in a budget neutral manner and budget neutrality is discussed in section II.B. of this final rule with comment period.

The OPSS labor-related share is 60 percent of the national OPSS payment. This labor-related share is based on a regression analysis that determined that approximately 60 percent of the costs of services paid under the OPSS were attributable to wage costs. We confirmed that this labor-related share for outpatient services is still appropriate during our regression analysis for the payment adjustment for rural hospitals in the CY 2006 OPSS final rule with comment period (70 FR 68553). Therefore, in the CY 2010 OPSS/ASC proposed rule (74 FR 35291), we did not propose to revise this policy for the CY 2010 OPSS. We refer readers to section II.G. of this final rule with comment period for a description and example of how the wage index for a particular hospital is used to determine the payment for the hospital.

As discussed in section II.A.2.c. of this final rule with comment period, for estimating national median APC costs, we standardize 60 percent of estimated claims costs for geographic area wage variation using the same FY 2010 pre-reclassified wage indices that the IPPS uses to standardize costs. This standardization process removes the effects of differences in area wage levels from the determination of a national unadjusted OPSS payment rate and the copayment amount.

As published in the original OPSS April 7, 2000 final rule with comment period (65 FR 18545), the OPSS has consistently adopted the final IPPS wage indices as the wage indices for adjusting the OPSS standard payment amounts for labor market differences. Thus, the wage index that applies to a particular acute care short-stay hospital under the IPPS also applies to that hospital under the OPSS. As initially explained in the September 8, 1998 OPSS proposed rule, we believed and continue to believe that using the IPPS wage index as the source of an adjustment factor for the OPSS is reasonable and logical, given the inseparable, subordinate status of the HOPD within the hospital overall. In accordance with section 1886(d)(3)(E) of the Act, the IPPS wage index is updated annually. Therefore, in accordance with our established policy, we proposed to use the final FY 2010 version of the IPPS wage indices used to pay IPPS hospitals to adjust the CY 2010 OPSS payment rates and copayment amounts for geographic differences in labor cost for all providers that participate in the

OPPS, including providers that are not paid under the IPPS (referred to in this section as “non-IPPS” providers).

We note that the final FY 2010 IPPS wage indices continue to reflect a number of adjustments implemented over the past few years, including revised Office of Management and Budget (OMB) standards for defining geographic statistical areas (Core-Based Statistical Areas or CBSAs), reclassification to different geographic areas, rural floor provisions and the accompanying budget neutrality adjustment, an adjustment for out-migration labor patterns, an adjustment for occupational mix, and a policy for allocating hourly wage data among campuses of multicampus hospital systems that cross CBSAs. For the FY 2010 wage indices, these changes include a continuing transition to the new reclassification threshold criteria that were finalized in the FY 2009 IPPS final rule (73 FR 48568 through 48570), updated 2007–2008 occupational mix survey data, and a continuing transition to state-level budget neutrality for the rural and imputed floors. We refer readers to the FY 2010 IPPS/LTCH PPS final rule (74 FR 43823) for a detailed discussion of all final changes to the FY 2010 IPPS wage indices. In addition, we refer readers to the CY 2005 OPPS final rule with comment period (69 FR 65842 through 65844) and subsequent OPPS rules for a detailed discussion of the history of these wage index adjustments as applied under the OPPS.

The IPPS wage indices that we proposed to adopt in the CY 2010 OPPS/ASC proposed rule (74 FR 35291) include all reclassifications that are approved by the Medicare Geographic Classification Review Board (MGCRB) for FY 2010.

As noted in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68585), after issuance of the CY 2009 OPPS/ASC proposed rule, section 124 of Public Law 110–275 further extended geographic reclassifications under section 508 and certain special exception reclassifications until September 30, 2009. We did not make any proposals related to these provisions for the CY 2009 OPPS wage indices in our CY 2009 proposed rule because Public Law 110–275 was enacted after issuance of the CY 2009 OPPS/ASC proposed rule. In accordance with section 124 of Public Law 110–275, for CY 2009, we adopted all section 508 geographic reclassifications through September 30, 2009. Similar to our treatment of section 508 reclassifications extended under Public Law 110–173 as described in the CY 2009 OPPS/ASC final rule with

comment period (73 FR 68586), hospitals with section 508 reclassifications revert to their home area wage index, with out-migration adjustment if applicable, or a current MGCRB reclassification, from October 1, 2009 to December 31, 2009. As we did for CY 2008, we also have extended the special exception wage indices for certain hospitals through December 31, 2009, under the OPPS, in order to give these hospitals the special exception wage indices under the OPPS for the same time period as under the IPPS. We refer readers to the **Federal Register** notice published subsequent to the FY 2009 IPPS final rule for a detailed discussion of the changes to the wage indices as required by section 124 of Public Law 110–275 (73 FR 57888). Because the provisions of section 124 of Public Law 110–275 expire in 2009 and are not applicable to FY 2010, we did not make any proposals related to those provisions for the OPPS wage indices for CY 2010.

For purposes of the OPPS, we proposed to continue our policy in CY 2010 to allow non-IPPS hospitals paid under the OPPS to qualify for the out-migration adjustment if they are located in a section 505 out-migration county. We note that because non-IPPS hospitals cannot reclassify, they are eligible for the out-migration wage adjustment. Table 4J in the FY 2010 IPPS final rule (74 FR 44118 through 44125), as subsequently corrected at 74 FR 51506, identifies counties eligible for the out-migration adjustment and providers receiving the adjustment. As we have done in prior years, we are reprinting Table 4J, as corrected, as Addendum L to this final rule with comment period, with the addition of non-IPPS hospitals that will receive the section 505 out-migration adjustment under the CY 2010 OPPS.

As stated earlier in this section, we continue to believe that using the IPPS wage indices as the source of an adjustment factor for the OPPS is reasonable and logical, given the inseparable, subordinate status of the HOPD within the hospital overall. Therefore, we proposed to use the final FY 2010 IPPS wage indices for calculating the OPPS payments in CY 2010. With the exception of the out-migration wage adjustment table (Addendum L to this final rule with comment period), which includes non-IPPS hospitals paid under the OPPS, we are not reprinting the FY 2010 IPPS final wage indices referenced in this discussion of the wage index. We refer readers to the CMS Web site for the OPPS at: <http://www.cms.hhs.gov/HospitalOutpatientPPS/>. At this link,

readers will find a link to the FY 2010 IPPS final wage index tables.

Comment: Several commenters expressed support for the CMS proposal to extend the IPPS wage indices to the OPPS in CY 2010, consistent with prior year policies under the OPPS.

Response: We appreciate the support expressed by commenters for our proposed CY 2010 wage index policies.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to use the final FY 2010 IPPS wage indices to adjust the OPPS standard payment amounts for labor market differences.

D. Statewide Average Default CCRs

In addition to using CCRs to estimate costs from charges on claims for ratesetting, CMS uses overall hospital-specific CCRs calculated from the hospital's most recent cost report to determine outlier payments, payments for pass-through devices, and monthly interim transitional corridor payments under the OPPS during the PPS year. Medicare contractors cannot calculate a CCR for some hospitals because there is no cost report available. For these hospitals, CMS uses the statewide average default CCRs to determine the payments mentioned above until a hospital's Medicare contractor is able to calculate the hospital's actual CCR from its most recently submitted Medicare cost report. These hospitals include, but are not limited to, hospitals that are new, have not accepted assignment of an existing hospital's provider agreement, and have not yet submitted a cost report. CMS also uses the statewide average default CCRs to determine payments for hospitals that appear to have a biased CCR (that is, the CCR falls outside the predetermined ceiling threshold for a valid CCR) or for hospitals whose most recent cost report reflects an all-inclusive rate status (Medicare Claims Processing Manual, Pub. 100–04, Chapter 4, Section 10.11). In the CY 2010 OPPS/ASC proposed rule (74 FR 35292), we proposed to update the default ratios for CY 2010 using the most recent cost report data. We discuss our policy for using default CCRs, including setting the ceiling threshold for a valid CCR, in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68594 through 68599) in the context of our adoption of an outlier reconciliation policy for cost reports beginning on or after January 1, 2009.

For CY 2010, we used our standard methodology of calculating the statewide average default CCRs using the same hospital overall CCRs that we

use to adjust charges to costs on claims data for setting the CY 2010 proposed OPPS relative weights. Table 12 that was published in the CY 2010 OPPS/ASC proposed rule (74 FR 35293 through 35294) listed the proposed CY 2010 default urban and rural CCRs by State and compared them to last year's default CCRs. These CCRs are the ratio of total costs to total charges from each hospital's most recently submitted cost report, for those cost centers relevant to outpatient services weighted by Medicare Part B charges. We also adjusted ratios from submitted cost reports to reflect final settled status by applying the differential between settled to submitted overall CCR for the cost centers relevant to outpatient services from the most recent pair of final settled and submitted cost reports. We then weighted each hospital's CCR by the volume of separately paid line-items on

hospital claims corresponding to the year of the majority of cost reports used to calculate the overall CCRs. We refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66680 through 66682) and prior OPPS rules for a more detailed discussion of our established methodology for calculating the statewide average default CCRs, including the hospitals used in our calculations and our trimming criteria.

For this CY 2010 OPPS/ASC final rule with comment period, approximately 44 percent of the submitted cost reports utilized in the default ratio calculations represented data for cost reporting periods ending in CY 2008 and 55 percent were for cost reporting periods ending in CY 2007. For Maryland, we used an overall weighted average CCR for all hospitals in the nation as a substitute for Maryland CCRs. Few hospitals in Maryland are eligible to

receive payment under the OPPS, which limits the data available to calculate an accurate and representative CCR. In general, observed changes in the statewide average default CCRs between CY 2009 and CY 2010 are modest and the few significant changes are associated with areas that have a small number of hospitals.

We did not receive any public comments concerning our CY 2010 proposal to apply our standard methodology of calculating the statewide average default CCRs using the same hospital overall CCRs that we use to adjust charges to costs on claims data for setting the CY 2010 proposed OPPS relative weights. Therefore, we are finalizing the statewide average default CCRs as shown in Table 17 below for OPPS services furnished on or after January 1, 2010.

BILLING CODE 4120-01-C

E. OPSS Payment to Certain Rural and Other Hospitals

1. Hold Harmless Transitional Payment Changes Made by Public Law 110-275 (MIPPA)

When the OPSS was implemented, every provider was eligible to receive an

additional payment adjustment (called either transitional corridor payments or transitional outpatient payment (TOPs)) if the payments it received for covered OPD services under the OPSS were less than the payments it would have received for the same services under the

prior reasonable cost-based system (referred to as the pre-BBA amount). Section 1833(t)(7) of the Act provides that the transitional corridor payments are temporary payments for most providers and were intended to ease their transition from the prior reasonable cost-based payment system to the OPSS system. There are two exceptions to this provision, cancer hospitals and children's hospitals, and those hospitals receive the transitional corridor payments on a permanent basis. Section 1833(t)(7)(D)(i) of the Act originally provided for transitional corridor payments to rural hospitals with 100 or fewer beds for covered OPD services furnished before January 1, 2004. However, section 411 of Public Law 108-173 amended section 1833(t)(7)(D)(i) of the Act to extend these payments through December 31, 2005, for rural hospitals with 100 or fewer beds. Section 411 also extended the transitional corridor payments to SCHs located in rural areas for services furnished during the period that began with the provider's first cost reporting period beginning on or after January 1, 2004, and ended on December 31, 2005. Accordingly, the authority for making transitional corridor payments under section 1833(t)(7)(D)(i) of the Act, as amended by section 411 of Public Law 108-173, for rural hospitals having 100 or fewer beds and SCHs located in rural areas expired on December 31, 2005.

Section 5105 of Public Law 109-171 reinstated the TOPs for covered OPD services furnished on or after January 1, 2006, and before January 1, 2009, for rural hospitals having 100 or fewer beds that are not SCHs. When the OPSS payment was less than the provider's pre-BBA amount, the amount of payment was increased by 95 percent of the amount of the difference between the two payment systems for CY 2006, by 90 percent of the amount of that difference for CY 2007, and by 85 percent of the amount of that difference for CY 2008.

For CY 2006, we implemented section 5105 of Public Law 109-171 through Transmittal 877, issued on February 24, 2006. In the Transmittal, we did not specifically address whether TOPs apply to essential access community hospitals (EACHs), which are considered to be SCHs under section 1886(d)(5)(D)(iii)(III) of the Act. Accordingly, under the statute, EACHs are treated as SCHs. In the CY 2007 OPSS/ASC final rule with comment period (71 FR 68010), we stated that EACHs were not eligible for TOPs under Public Law 109-171. However, we stated they were eligible for the adjustment for rural SCHs. In the CY

2007 OPSS/ASC final rule with comment period (71 FR 68010 and 68228), we updated § 419.70(d) of our regulations to reflect the requirements of Public Law 109-171.

In the CY 2009 OPSS/ASC proposed rule (73 FR 41461), we stated that, effective for services provided on or after January 1, 2009, rural hospitals having 100 or fewer beds that are not SCHs would no longer be eligible for TOPs, in accordance with section 5105 of Public Law 109-171. However, subsequent to issuance of the CY 2009 OPSS/ASC proposed rule, section 147 of Public Law 110-275 amended section 1833(t)(7)(D)(i) of the Act by extending the period of TOPs to rural hospitals with 100 beds or fewer for 1 year, for services provided before January 1, 2010. Section 147 of Public Law 110-275 also extended TOPs to SCHs (including EACHs) with 100 or fewer beds for covered OPD services provided on or after January 1, 2009, and before January 1, 2010. In accordance with section 147 of Public Law 110-275, when the OPSS payment is less than the provider's pre-BBA amount, the amount of payment is increased by 85 percent of the amount of the difference between the two payment systems for CY 2009.

For CY 2009, we revised our regulations at §§ 419.70(d)(2) and (d)(4) and added a new paragraph (d)(5) to incorporate the provisions of section 147 of Public Law 110-275. In addition, we made other technical changes to § 419.70(d)(2) to more precisely capture our existing policy and to correct an inaccurate cross-reference. We also made technical corrections to the cross-references in paragraphs (e), (g), and (i) of § 419.70. In the CY 2010 OPSS/ASC proposed rule (74 FR 35295), for CY 2010, we proposed to make a technical correction to the heading of § 419.70(d)(5) to correctly identify the policy as described in the subsequent regulation text. The paragraph heading should indicate that the adjustment applies to small SCHs, rather than to rural SCHs.

Effective for services provided on or after January 1, 2010, rural hospitals and SCHs (including EACHs) having 100 or fewer beds will no longer be eligible for hold harmless TOPs, in accordance with section 147 of Public Law 110-275.

2. Adjustment for Rural SCHs Implemented in CY 2006 Related to Public Law 108-173 (MMA)

In the CY 2006 OPSS final rule with comment period (70 FR 68556), we finalized a payment increase for rural SCHs of 7.1 percent for all services and procedures paid under the OPSS, excluding drugs, biologicals,

brachytherapy sources, and devices paid under the pass-through payment policy in accordance with section 1833(t)(13)(B) of the Act, as added by section 411 of Public Law 108-173. Section 411 gave the Secretary the authority to make an adjustment to OPSS payments for rural hospitals, effective January 1, 2006, if justified by a study of the difference in costs by APC between hospitals in rural areas and hospitals in urban areas. Our analysis showed a difference in costs for rural SCHs. Therefore, for the CY 2006 OPSS, we finalized a payment adjustment for rural SCHs of 7.1 percent for all services and procedures paid under the OPSS, excluding separately payable drugs and biologicals, brachytherapy sources, and devices paid under the pass-through payment policy, in accordance with section 1833(t)(13)(B) of the Act.

In CY 2007, we became aware that we did not specifically address whether the adjustment applies to EACHs, which are considered to be SCHs under section 1886(d)(5)(D)(iii)(III) of the Act. Thus, under the statute, EACHs are treated as SCHs. Therefore, in the CY 2007 OPSS/ASC final rule with comment period (71 FR 68010 and 68227), for purposes of receiving this rural adjustment, we revised § 419.43(g) to clarify that EACHs are also eligible to receive the rural SCH adjustment, assuming these entities otherwise meet the rural adjustment criteria. Currently, fewer than 10 hospitals are classified as EACHs and as of CY 1998, under section 4201(c) of Public Law 105-33, a hospital can no longer become newly classified as an EACH.

This adjustment for rural SCHs is budget neutral and applied before calculating outliers and copayment. As stated in the CY 2006 OPSS final rule with comment period (70 FR 68560), we would not reestablish the adjustment amount on an annual basis, but we may review the adjustment in the future and, if appropriate, would revise the adjustment. We provided the same 7.1 percent adjustment to rural SCHs, including EACHs, again in CY 2008 and CY 2009. Further, in the CY 2009 OPSS/ASC final rule with comment period (73 FR 68590), we updated the regulations at § 419.43(g)(4) to specify, in general terms, that items paid at charges adjusted to costs by application of a hospital-specific CCR are excluded from the 7.1 percent payment adjustment.

In the CY 2010 OPSS/ASC proposed rule (74 FR 35295), for the CY 2010 OPSS, we proposed to continue our policy of a budget neutral 7.1 percent payment adjustment for rural SCHs, including EACHs, for all services and procedures paid under the OPSS,

excluding separately payable drugs and biologicals, devices paid under the pass-through payment policy, and items paid at charges reduced to costs. We intend to reassess the 7.1 percent adjustment in the near future by examining differences between urban and rural hospitals' costs using updated claims, cost reports, and provider information.

Comment: A number of commenters generally supported the proposal to continue the rural SCH (including EACHs) adjustment for CY 2010 OPPS. Several commenters also asked that CMS extend for CY 2010 the TOPs payment policies that were in effect for CY 2009. The commenters recommended that CMS evaluate the differences in cost between urban and rural hospitals over an extended 3-year period using updated claims, cost reports, and provider information. They further suggested that, during the 3-year period in which CMS would be gathering data, CMS pay SCHs and rural hospitals with less than 100 beds that are not SCHs the greater of the TOPs payment in effect for CY 2009 or the OPPS payment for the applicable calendar year plus the 7.1 percent rural adjustment, whichever is greater. The commenters claimed that CMS' reversal of the TOPs allowance after only 1 year of reimplementation for certain rural hospitals was unreasonable and could irreparably harm those rural hospitals absent a safety net mechanism in place.

Response: We agree that it is appropriate to continue the 7.1 percent adjustment for rural SCHs (including EACHs) as we proposed for CY 2010. However, we are not extending the CY 2009 TOPs payment policies for rural hospitals with 100 beds or less and for SCHs (including EACHs) with 100 or fewer beds for CY 2010. Section 1833(t)(7)(D)(i)(II) of the Act provides that, in the case of a hospital located in a rural area with 100 beds or fewer and that is not a sole community hospital, for covered OPD services furnished on or after January 1, 2006 and before January 1, 2010, for which the PPS amount is less than the pre-BBA amount, the amount of payment should be increased by the applicable percentage of the amount of such difference. Section 1833(t)(7)(D)(i)(III) of the Act also extends TOPs to SCHs (including EACHs) with 100 or fewer beds for covered OPD services provided on or after January 1, 2009 and before January 1, 2010, under the specific circumstances outlined in the statute. Therefore, sections 1833(t)(D)(i)(II) and (III) of the Act specifically expire TOPs payment to these categories of hospitals for services furnished on and after January 1, 2010. Accordingly, in CY

2010, neither rural SCHs nor rural hospitals with less than 100 beds will receive payment at whichever is greater, the TOPs payment in place for CY 2009 or payment for CY 2010, which includes the rural adjustment for rural SCHs, because sections 1833(t)(7)(D)(i)(II) and (III) of the Act expire TOPs payments as explained above. As we indicate above, we intend to reassess the 7.1 percent rural adjustment in the near future by examining differences between urban and rural hospitals' costs using updated claims, cost reports, and provider information.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to apply the 7.1 percent payment adjustment to rural SCHs for most services paid under the CY 2010 OPPS, excluding drugs, biologicals, and devices paid under the pass-through payment policy, and items paid at charges adjusted to cost. We also are making a technical correction to the heading of § 419.70(d)(5) to correctly identify the policy described in the regulation text of § 419.70(d)(5). The paragraph heading indicates that the adjustment applies to small SCHs, rather than to rural SCHs.

F. Hospital Outpatient Outlier Payments

1. Background

Currently, the OPPS pays outlier payments on a service-by-service basis. For CY 2009, the outlier threshold is met when the cost of furnishing a service or procedure by a hospital exceeds 1.75 times the APC payment amount and exceeds the APC payment rate plus a \$1,800 fixed-dollar threshold. We introduced a fixed-dollar threshold in CY 2005 in addition to the traditional multiple threshold in order to better target outliers to those high cost and complex procedures where a very costly service could present a hospital with significant financial loss. If the cost of a service meets both of these conditions, the multiple threshold and the fixed-dollar threshold, the outlier payment is calculated as 50 percent of the amount by which the cost of furnishing the service exceeds 1.75 times the APC payment rate. Before CY 2009, this outlier payment had historically been considered a final payment by longstanding OPPS policy. We implemented a reconciliation process similar to the IPPS outlier reconciliation process for cost reports with cost reporting periods beginning on or after January 1, 2009 (73 FR 68594 through 68599).

It has been our policy for the past several years to report the actual amount

of outlier payments as a percent of total spending in the claims being used to model the proposed OPPS. We previously estimated that CY 2008 outlier payments were approximately 0.73 percent of the total CY 2008 OPPS payments (73 FR 68592). Our current estimate of total outlier payments as a percent of total CY 2008 OPPS payment, using CY 2008 claims processed through June 30, 2009, and the revised OPPS expenditure estimate for the 2009 Trustees Report, is approximately 1.2 percent of the total aggregated OPPS payments. Therefore, for CY 2008, we estimate that we paid approximately 0.2 percent more than the CY 2008 outlier target of 1.0 percent of total aggregated OPPS payments.

As explained in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68594), we set our projected target for aggregate outlier payments at 1.0 percent of the aggregate total payments under the OPPS for CY 2009. The outlier thresholds were set so that estimated CY 2009 aggregate outlier payments would equal 1.0 percent of the total aggregated payments under the OPPS. Using our final rule CY 2008 claims data and CY 2009 payment rates, we currently estimate that the aggregate outlier payments for CY 2009 would be approximately 1.03 percent of the total CY 2009 OPPS payments. The difference between 1.0 percent and 1.03 percent is reflected in the regulatory impact analysis in section XXI.B. of this final rule with comment period. We note that we provide estimated CY 2010 outlier payments for hospitals and CMHCs with claims included in the claims data that we used to model impacts in the Hospital-Specific Impacts—Provider-Specific Data file on the CMS Web site at: <http://www.cms.hhs.gov/HospitalOutpatientPPS/>.

2. Outlier Calculation

In the CY 2010 OPPS/ASC proposed rule (74 FR 35296), we proposed to continue our policy of estimating outlier payments to be 1.0 percent of the estimated aggregate total payments under the OPPS in CY 2010. We proposed that a portion of that 1.0 percent, specifically 0.02 percent, would be allocated to CMHCs for PHP outlier payments. This is the amount of estimated outlier payments that would result from the proposed CMHC outlier threshold as a proportion of total estimated outlier payments. As discussed in section X.C. of this final rule with comment period, for CMHCs, we proposed that if a CMHC's cost for partial hospitalization services, paid under either APC 0172 (Level I Partial

Hospitalization (3 services)) or APC 0173 (Level II Partial Hospitalization (4 or more services)), exceeds 3.40 times the payment for APC 0173, the outlier payment would be calculated as 50 percent of the amount by which the cost exceeds 3.40 times the APC 0173 payment rate. For further discussion of CMHC outlier payments, we refer readers to section X.C. of this final rule with comment period.

To ensure that the estimated CY 2010 aggregate outlier payments would equal 1.0 percent of estimated aggregate total payments under the OPSS, we proposed that the hospital outlier threshold be set so that outlier payments would be triggered when the cost of furnishing a service or procedure by a hospital exceeds 1.75 times the APC payment amount and exceeds the APC payment rate plus a \$2,225 fixed-dollar threshold. This proposed threshold reflected the methodology discussed below in this section, as well as the proposed APC recalibration for CY 2010.

We calculated the fixed-dollar threshold for the CY 2010 OPSS/ASC proposed rule using largely the same methodology as we did in CY 2009 (73 FR 41462). For purposes of estimating outlier payments for the CY 2010 OPSS/ASC proposed rule, we used the hospital-specific overall ancillary CCRs available in the April 2009 update to the Outpatient Provider-Specific File (OPSF). The OPSF contains provider-specific data, such as the most current CCR, which are maintained by the Medicare contractors and used by the OPSS Pricer to pay claims. The claims that we use to model each OPSS update lag by 2 years. For the CY 2010 OPSS/ASC proposed rule, we used CY 2008 claims to model the CY 2010 OPSS. In order to estimate the CY 2010 hospital outlier payments for the CY 2010 OPSS/ASC proposed rule, we inflated the charges on the CY 2008 claims using the same inflation factor of 1.1511 that we used to estimate the IPPS fixed-dollar outlier threshold for the FY 2010 IPPS/LTCH PPS proposed rule (74 FR 24245). For 1 year, the inflation factor we used was 1.0729. The methodology for determining this charge inflation factor was discussed in the FY 2010 IPPS/LTCH PPS proposed rule (74 FR 24245). As we stated in the CY 2005 OPSS final rule with comment period (69 FR 65845), we believe that the use of this charge inflation factor is appropriate for the OPSS because, with the exception of the routine service cost centers, hospitals use the same cost centers to capture costs and charges across inpatient and outpatient services.

As noted in the CY 2007 OPSS/ASC final rule with comment period (71 FR 68011), we are concerned that we could systematically overestimate the OPSS hospital outlier threshold if we did not apply a CCR inflation adjustment factor. Therefore, we proposed to apply the same CCR inflation adjustment factor that we proposed to apply for the FY 2010 IPPS outlier calculation to the CCRs used to simulate the CY 2010 OPSS outlier payments that determine the fixed-dollar threshold. Specifically, for CY 2010, we proposed to apply an adjustment of 0.9840 to the CCRs that were in the April 2009 OPSF to trend them forward from CY 2009 to CY 2010. The methodology for calculating this adjustment is discussed in the FY 2010 IPPS/LTCH PPS proposed rule (74 FR 24245 through 24247) and the FY 2010 IPPS/LTCH PPS final rule (74 FR 44007 through 44011).

Therefore, to model hospital outlier payments for the CY 2010 OPSS/ASC proposed rule, we applied the overall CCRs from the April 2009 OPSF file after adjustment (using the proposed CCR inflation adjustment factor of 0.9840 to approximate CY 2010 CCRs) to charges on CY 2008 claims that were adjusted (using the proposed charge inflation factor of 1.1511 to approximate CY 2010 charges). We simulated aggregated CY 2010 hospital outlier payments using these costs for several different fixed-dollar thresholds, holding the 1.75 multiple threshold constant and assuming that outlier payment would continue to be made at 50 percent of the amount by which the cost of furnishing the service would exceed 1.75 times the APC payment amount, until the total outlier payments equaled 1.0 percent of aggregated estimated total CY 2010 OPSS payments. We estimated that a proposed fixed-dollar threshold of \$2,225, combined with the proposed multiple threshold of 1.75 times the APC payment rate, would allocate 1.0 percent of aggregated total OPSS payments to outlier payments. We proposed to continue to make an outlier payment that equals 50 percent of the amount by which the cost of furnishing the service exceeds 1.75 times the APC payment amount when both the 1.75 multiple threshold and the proposed fixed-dollar \$2,225 threshold are met. For CMHCs, if a CMHC's cost for partial hospitalization services, paid under either APC 0172 or APC 0173, exceeds 3.40 times the payment for APC 0173, the outlier payment would be calculated as 50 percent of the amount by which the cost exceeds 3.40 times the APC 0173 payment rate.

Section 1833(t)(17)(A) of the Act, which applies to hospitals as defined under section 1886(d)(1)(B) of the Act, requires that hospitals that fail to report data required for the quality measures selected by the Secretary, in the form and manner required by the Secretary under 1833(t)(17)(B) of the Act, incur a 2.0 percentage point reduction to their OPD fee schedule increase factor, that is, the annual payment update factor. The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that will apply to certain outpatient items and services furnished by hospitals that are required to report outpatient quality data and that fail to meet the HOP QDRP requirements. For hospitals that fail to meet the HOP QDRP requirements, we proposed to continue our policy that we implemented in CY 2009 that the hospitals' costs would be compared to the reduced payments for purposes of outlier eligibility and payment calculation. For more information on the HOP QDRP, we refer readers to section XVI. of this final rule with comment period.

Comment: Several commenters supported the proposal to increase the outlier fixed-dollar threshold to maintain a target outlier spending percentage of 1.0 percent. One commenter requested that CMS not overestimate the fixed-dollar outlier threshold by decreasing the CY 2010 proposed threshold proportionally to only account for the amount Medicare paid in excess of the 1 percent target outlier percentage in CY 2009. A few commenters suggested that the target outlier spending percentage be raised. One commenter recommended that the target outlier spending percentage be raised to maintain the \$1,800 fixed-dollar threshold that is in effect for CY 2009. Another commenter requested that CMS increase the amount of outlier payment from 50 percent to 80 percent of the difference between the OPSS payment and the estimated provider cost for the service to make OPSS outlier policy more consistent with IPPS outlier policy. One commenter expressed concern that changes in outlier payments disproportionately affected the safety net hospitals. One commenter supported the proposal to use the same assumptions regarding charge inflation and CCR inflation as under the IPPS.

Response: We appreciate the commenters' support regarding the development of the OPSS outlier policy. We are not raising the threshold to recover the 0.03 percent of OPSS payment that we estimate was paid in

addition to the target outlier percent of 1 percent for CY 2009 because we do not adjust the fixed-dollar threshold in future years for either paying too much or too little in outlier payments in past years. We are not increasing the percent of total OPPS payment that we attribute to outlier payments, either for general purposes or to maintain the \$1,800 threshold for CY 2010, because we continue to believe that it is appropriate to maintain the target outlier percentage of 1 percent of total payment under the OPPS and to have a fixed-dollar threshold so that OPPS outlier payments are made only where the hospital would experience a significant loss for supplying a particular service. Similarly, we are not increasing the outlier payment percentage from 50 percent to 80 percent of the difference between the amount by which the cost of furnishing the service exceeds 1.75 times the APC payment rate because we do not believe that hospitals carry the same level of risk when they furnish outpatient hospital services as when they furnish inpatient hospital services. OPPS outlier payments are intended to protect hospitals from excessive losses when providing an extraordinarily costly service, and we believe that the potential for loss when furnishing OPPS services is limited. Payment bundles under the OPPS are small relative to those under the IPPS, and the OPPS pays separately for many services. The OPPS would pay hospitals for many individual services provided to a very costly patient reducing their financial risk. Patients for whom a hospital may incur extraordinary costs for providing individual OPPS services would usually require hospital admission. As described above, outlier payments are designed to protect hospitals from financial risk in providing services to costly patients, and are not designed to affect any specific hospital classes, such as safety net hospitals. With regard to the application of charge inflation factors, we agree that the charge inflation factors that apply to inpatient hospital services are equally applicable to services provided under the OPPS. Therefore, as specified below, we are applying the charge inflation factors that were used to calculate the outlier fixed-dollar threshold for the IPPS in the calculation of the fixed-dollar threshold for the CY 2010 OPPS.

Comment: Several commenters asked that CMS eliminate outlier payments for CMHCs and use the funds allocated to outlier payments for CMHCs to increase payments for services provided by CMHCs.

Response: Outlier payments to CMHCs are discussed in section X.C. of

this final rule with public comment. We respond to this comment as part of that discussion.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal for the outlier calculation, without modification, as outlined below.

3. Final Outlier Calculation

For CY 2010, we are applying the overall CCRs from the July 2009 OPSF file with a CCR adjustment factor of 0.988 to approximate CY 2010 CCRs to charges on the final CY 2008 claims that were adjusted to approximate CY 2010 charges (using the final 2-year charge inflation factor of 1.1418). We simulated aggregated CY 2010 hospital outlier payments using these costs for several different fixed-dollar thresholds, holding the 1.75 multiple threshold constant and assuming that outlier payment would continue to be made at 50 percent of the amount by which the cost of furnishing the service would exceed 1.75 times the APC payment amount, until the total outlier payments equaled 1.0 percent of aggregated estimated total CY 2010 OPPS payments. We estimate that a fixed-dollar threshold of \$2,175, combined with the multiple threshold of 1.75 times the APC payment rate, will allocate 1.0 percent of aggregated total OPPS payments to outlier payments.

In summary, for CY 2010, we will continue to make an outlier payment that equals 50 percent of the amount by which the cost of furnishing the service exceeds 1.75 times the APC payment amount when both the 1.75 multiple threshold and the final fixed-dollar \$2,175 threshold are met. For CMHCs, if a CMHC's cost for PHP services, paid under either APC 0172 or APC 0173, exceeds 3.40 times the payment for APC 0173, the outlier payment is calculated as 50 percent of the amount by which the cost exceeds 3.40 times the APC 0173 payment rate. We estimate that this threshold will allocate 0.03 percent of outlier payments to CMHCs for PHP outlier payments.

4. Outlier Reconciliation

In the CY 2009 OPPS/ASC final rule with comment period (73 CFR 68599), we adopted as final policy a process to reconcile hospital or CMHC outlier payments at cost report settlement for services furnished during cost reporting periods beginning in CY 2009. OPPS outlier reconciliation ensures accurate outlier payments for those facilities whose CCRs fluctuate significantly relative to the CCRs of other facilities, and who receive a significant amount of outlier payments. OPPS outlier

reconciliation thresholds are provided in the Medicare Claims Processing Manual (Pub. 100-4), Chapter 4, Section 10.7.2.1, reevaluated annually, and modified if necessary. When the cost report is settled, reconciliation of outlier payments will be based on the hospital-specific overall ancillary CCR, calculated as the ratio of costs and charges computed from the cost report at the time the cost report coinciding with the service dates is settled. Reconciling outlier payments ensures that the outlier payments made are appropriate and that final outlier payments reflect the most accurate cost data. In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68599), we also finalized a proposal to adjust the amount of final outlier payments determined during reconciliation for the time value of money. The OPPS outlier reconciliation process will require recalculating outlier payments for individual claims in order to accurately determine the net effect of a change in a hospital's or CMHC's overall CCR on the facility's total outlier payments. For cost reporting periods beginning in CY 2009, Medicare contractors will begin to identify cost reports that require outlier reconciliation as a component of cost report settlement. At this time, CMS continues to develop a method for reexamining claims to calculate the change in total outlier payments in order to reconcile outlier payments for these cost reports.

As under the IPPS, we do not adjust the fixed-dollar threshold or amount of total OPPS payment set aside for outlier payments for reconciliation activity. The predictability of the fixed-dollar threshold is an important component of a prospective payment system. We do not adjust the prospectively set outlier threshold for the amount of outlier payment reconciled at cost report settlement because such action would be contrary to the prospective nature of the system. Our outlier threshold calculation assumes that overall ancillary CCRs accurately estimate hospital costs based on the information available to us at the time we set the prospective fixed-dollar outlier threshold. For these reasons, we are not incorporating any assumptions about the effects of reconciliation into our calculation of the OPPS fixed-dollar outlier threshold.

Comment: A number of commenters asked that CMS report the amount of outlier reconciliation activity, including aggregate amounts recovered by provider type and region. They suggested that, if the reconciled amounts are significant, these amounts

should be factored into the annual fixed-dollar outlier threshold. Several commenters supported the current reconciliation thresholds identified in the CMS manual (Medicare Claims Processing Manual (Pub. 100-04), Chapter 4, Section 10.7.2.1). One commenter asked that CMS apply the outlier reconciliation thresholds established in manual instructions to the claims used for estimating outlier payment and the fixed-dollar threshold to achieve the most accurate estimates possible.

Response: We revised Worksheet E, Part B, of the Medicare hospital cost report form CMS 2552-10 to collect OPSS outlier reconciliation information for cost reports beginning on or after January 1, 2009. This information will be available to the public through the Hospital Cost Report Information System (HCRIS). We do not expect to take outlier reconciliation amounts into account in our projections of future outlier payments. We believe that the reconciliation CCR and outlier payment thresholds implemented in the final rule (73 CFR 68599) are generous and that most hospitals will not be subject to outlier reconciliation upon cost report settlement. Further, it is difficult to predict the specific hospitals that will have CCRs and outlier payments reconciled in any given year. We also note that reconciliation occurs because hospitals' actual CCRs for the cost reporting period are different than the interim CCRs used to calculate outlier payment when a bill is processed. Our fixed-dollar threshold calculation assumes that CCRs accurately estimate hospital costs based on information available to us at the time we set the prospective fixed-dollar outlier threshold. We do not believe that estimating the fixed-dollar threshold to estimate the amount of payment that may be recovered as a result of outlier reconciliation in any given year would necessarily result in a more accurate estimate of outlier payments or a more accurate calculation of the fixed-dollar threshold for outlier payment for the prospective payment year. For these reasons, we will not make any assumptions about the amount of anticipated reconciliation of outlier payments on the outlier threshold calculation.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, for an OPSS outlier reconciliation policy. We are implementing the outlier reconciliation policy for each hospital and CMHC for services furnished during cost reporting periods beginning in CY 2010, and we

are including an adjustment for the time value of money.

G. Calculation of an Adjusted Medicare Payment From the National Unadjusted Medicare Payment

The basic methodology for determining prospective payment rates for HOPD services under the OPSS is set forth in existing regulations at 42 CFR part 419, subparts C and D. The payment rate for most services and procedures for which payment is made under the OPSS is the product of the conversion factor calculated in accordance with section II.B. of this final rule with comment period and the relative weight determined under section II.A. of this final rule with comment period. Therefore, the final national unadjusted payment rate for most APCs contained in Addendum A to this final rule with comment period and for most HCPCS codes to which separate payment under the OPSS has been assigned in Addendum B to this final rule with comment period was calculated by multiplying the final CY 2010 scaled weight for the APC by the final CY 2010 conversion factor.

We note that section 1833(t)(17) of the Act, which applies to hospitals as defined under section 1886(d)(1)(B) of the Act, requires that hospitals that fail to submit data required to be submitted on quality measures selected by the Secretary, in the form and manner and at a time specified by the Secretary, receive a 2.0 percentage point reduction to their OPD fee schedule increase factor, that is, the annual payment update factor. The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that apply to certain outpatient items and services provided by hospitals that are required to report outpatient quality data and that fail to meet the Hospital Outpatient Quality Data Reporting Program (HOP QDRP) requirements. For further discussion of the payment reduction for hospitals that fail to meet the requirements of the HOP QDRP, we refer readers to section XVI.D. of this final rule with comment period.

We demonstrate in the steps below how to determine the APC payments that would be made in a calendar year under the OPSS to a hospital that fulfills the HOP QDRP requirements and to a hospital that fails to meet the HOP QDRP requirements for a status indicator has any of the following status indicator assignments: "P," "Q1," "Q2," "Q3," "R," "S," "T," "U," "V," or "X" (as defined in Addendum D1 to this final rule with comment period), in a circumstance in which the multiple

procedure discount does not apply, the procedure is not bilateral, and conditionally packaged services (status indicator of "Q1" and "Q2") qualify for separate payment. We note that blood and blood products with status indicator "R" are not subject to wage adjustment but are subject to reduced payments when a hospital fails to meet the HOP QDRP requirements, as outlined in the steps and examples below.

Individual providers interested in calculating the payment amount that they would receive for a specific service from the national unadjusted payment rates presented in Addenda A and B to this final rule with comment period should follow the formulas presented in the following steps. For purposes of the payment calculations below, we refer to the national unadjusted payment rate for hospitals that meet the requirements of the HOP QDRP as the "full" national unadjusted payment rate. We refer to the national unadjusted payment rate for hospitals that fail to meet the requirements of the HOP QDRP as the "reduced" national unadjusted payment rate. The reduced national unadjusted payment rate is calculated by multiplying the reporting ratio of 0.98 times the "full" national unadjusted payment rate. The national unadjusted payment rate used in the calculations below is either the full national unadjusted payment rate or the reduced national unadjusted payment rate, depending on whether the hospital met its HOP QDRP requirements in order to receive the full CY 2010 OPSS increase factor.

Step 1. Calculate 60 percent (the labor-related portion) of the national unadjusted payment rate. Since the initial implementation of the OPSS, we have used 60 percent to represent our estimate of that portion of costs attributable, on average, to labor. We refer readers to the April 7, 2000 OPSS final rule with comment period (65 FR 18496 through 18497) for a detailed discussion of how we derived this percentage. We confirmed that this labor-related share for hospital outpatient services is still appropriate during our regression analysis for the payment adjustment for rural hospitals in the CY 2006 OPSS final rule with comment period (70 FR 68553).

The formula below is a mathematical representation of Step 1 and identifies the labor-related portion of a specific payment rate for a specific service.

X is the labor-related portion of the national unadjusted payment rate.
 $X = .60 * (\text{national unadjusted payment rate})$

Step 2. Determine the wage index area in which the hospital is located and identify the wage index level that applies to the specific hospital. The wage index values assigned to each area reflect the geographic statistical areas (which are based upon OMB standards) to which hospitals are assigned for FY 2010 under the IPPS, reclassifications through the MGCRB, section 1886(d)(8)(B) "Lugar" hospitals, reclassifications under section 1886(d)(8)(E) of the Act, as defined in § 412.103 of the regulations and hospitals designated as urban under section 601(g) of Public Law 98–21. We note that the reclassifications of hospitals under section 508 of Public Law 108–173, as extended by section 124 of Public Law 110–275, expired on September 30, 2009, and will not be applicable under the IPPS for FY 2010. Therefore, these reclassifications will not apply to the CY 2010 OPSS. For further discussion of the changes to the FY 2010 IPPS wage indices, as applied to the CY 2010 OPSS, we refer readers to section II.C. of this final rule with comment period. The wage index values include the occupational mix adjustment described in section II.C. of this final rule with comment period that was developed for the FY 2010 IPPS final payment rates published in the **Federal Register** on August 27, 2009 (74 FR 43827).

Step 3. Adjust the wage index of hospitals located in certain qualifying counties that have a relatively high percentage of hospital employees who reside in the county, but who work in a different county with a higher wage index, in accordance with section 505 of Public Law 108–173. Addendum L to this final rule with comment period contains the qualifying counties and the final wage index increase developed for the FY 2010 IPPS and published as Table 4J in the FY 2010 IPPS final rule (74 FR 44118 through 44125), as corrected in the **Federal Register** on October 2, 2009 (74 FR 51506) This step is to be followed only if the hospital is not reclassified or redesignated under section 1886(d)(8) or section 1886(d)(10) of the Act.

Step 4. Multiply the applicable wage index determined under Steps 2 and 3 by the amount determined under Step 1 that represents the labor-related portion of the national unadjusted payment rate.

The formula below is a mathematical representation of Step 4 and adjusts the labor-related portion of the national payment rate for the specific service by the wage index.

X_a is the labor-related portion of the national unadjusted payment rate (wage adjusted).

$X_a = .60 * (\text{national unadjusted payment rate}) * \text{applicable wage index}.$

Step 5. Calculate 40 percent (the nonlabor-related portion) of the national unadjusted payment rate and add that amount to the resulting product of Step 4. The result is the wage index adjusted payment rate for the relevant wage index area.

The formula below is a mathematical representation of Step 5 and calculates the remaining portion of the national payment rate, the amount not attributable to labor, and the adjusted payment for the specific service.

Y is the nonlabor-related portion of the national unadjusted payment rate.

$Y = .40 * (\text{national unadjusted payment rate})$

Adjusted Medicare Payment = $Y + X_a$

Step 6. If a provider is a SCH, set forth in the regulations at § 412.92, or an EACH, which is considered to be a SCH under section 1886(d)(5)(D)(iii)(III) of the Act, and located in a rural area, as defined in § 412.64(b), or is treated as being located in a rural area under § 412.103, multiply the wage index adjusted payment rate by 1.071 to calculate the total payment.

The formula below is a mathematical representation of Step 6 and applies the rural adjustment for rural SCHs.

Adjusted Medicare Payment (SCH or EACH) = Adjusted Medicare Payment * 1.071

We have provided examples below of the calculation of both the full and reduced national unadjusted payment rates that would apply to certain outpatient items and services performed by hospitals that meet and that fail to meet the HOP QDRP requirements, using the steps outlined above. For purposes of this example, we use a provider that is located in Wayne, New Jersey that is assigned to CBSA 35644. This provider bills one service that is assigned to APC 0019 (Level I Excision/Biopsy). The CY 2010 full national unadjusted payment rate for APC 0019 is \$294.06. The reduced national unadjusted payment rate for a hospital that fails to meet the HOP QDRP requirements is \$288.17. This reduced rate is calculated by multiplying the reporting ratio of 0.98 by the full unadjusted payment rate for APC 0019.

The FY 2010 wage index for a provider located in CBSA 35644 in New Jersey is 1.3005. The labor-related portion of the full national unadjusted payment is \$229.45 (.60 * \$294.06 * 1.3005). The labor-related portion of the reduced national unadjusted payment is

\$224.85 (.60 * \$288.17 * 1.3005). The nonlabor-related portion of the full national unadjusted payment is \$117.62 (.40 * \$294.06). The nonlabor-related portion of the reduced national unadjusted payment is \$115.26 (.40 * \$288.17). The sum of the labor-related and nonlabor-related portions of the full national adjusted payment is \$347.07 (\$229.45 + \$117.62). The sum of the reduced national adjusted payment is \$340.11 (\$224.85 + \$115.26).

We did not receive any public comments concerning our proposed methodology for calculating an adjusted payment from the national unadjusted Medicare payment amount for CY 2010. Therefore, we are finalizing our proposed CY 2010 methodology, without modification.

H. Beneficiary Copayments

1. Background

Section 1833(t)(3)(B) of the Act requires the Secretary to set rules for determining the unadjusted copayment amounts to be paid by beneficiaries for covered OPD services. Section 1833(t)(8)(C)(ii) of the Act specifies that the Secretary must reduce the national unadjusted copayment amount for a covered OPD service (or group of such services) furnished in a year in a manner so that the effective copayment rate (determined on a national unadjusted basis) for that service in the year does not exceed a specified percentage. As specified in section 1833(t)(8)(C)(ii)(V) of the Act, for all services paid under the OPSS in CY 2010, and in calendar years thereafter, the percentage is 40 percent of the APC payment rate.

Section 1833(t)(3)(B)(ii) of the Act provides that, for a covered OPD service (or group of such services) furnished in a year, the national unadjusted copayment amount cannot be less than 20 percent of the OPD fee schedule amount. Sections 1834(d)(2)(C)(ii) and (d)(3)(C)(ii) of the Act further require that the copayment for screening flexible sigmoidoscopies and screening colonoscopies be equal to 25 percent of the payment amount. Since the beginning of the OPSS, we have applied the 25-percent copayment to screening flexible sigmoidoscopies and screening colonoscopies.

2. Copayment Policy

In the CY 2010 OPSS/ASC proposed rule (74 FR 35298), for CY 2010, we proposed to determine copayment amounts for new and revised APCs using the same methodology that we implemented beginning in CY 2004. (We refer readers to the November 7,

2003 OPPS final rule with comment period (68 FR 63458)). In addition, we proposed to use the same standard rounding principles that we have historically used in instances where the application of our standard copayment methodology would result in a copayment amount that is less than 20 percent and cannot be rounded, under standard rounding principles, to 20 percent. (We refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66687) in which we discuss our rationale for applying these rounding principles.) The national unadjusted copayment amounts for services payable under the OPPS that will be effective January 1, 2010, are shown in Addenda A and B to this final rule with comment period. As discussed in section XVI.D. of this final rule with comment period, as we proposed, we are providing that, for CY 2010, the Medicare beneficiary's minimum unadjusted copayment and national unadjusted copayment for a service to which a reduced national unadjusted payment rate applies will equal the product of the reporting ratio and the national unadjusted copayment, or the product of the reporting ratio and the minimum unadjusted copayment, respectively, for the service.

Comment: One commenter recommended that CMS continue its educational outreach and keep Medicare beneficiaries informed about the benefits of supplemental/secondary insurance in reducing their out-of-pocket costs for orthopedic procedures.

Response: We appreciate the commenter's support for our educational efforts on the availability of supplemental/secondary insurance and refer beneficiaries seeking information about their Medicare benefits and supplemental/secondary insurance coverage to the Web site at: <http://www.medicare.gov>.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, for determining APC copayment amounts.

3. Calculation of an Adjusted Copayment Amount for an APC Group

Individuals interested in calculating the national copayment liability for a Medicare beneficiary for a given service provided by a hospital that met or failed to meet its HOP QDRP requirements should follow the formulas presented in the following steps.

Step 1. Calculate the beneficiary payment percentage for the APC by dividing the APC's national unadjusted copayment by its payment rate. For example, using APC 0019, \$64.51 is 22

percent of the full national unadjusted payment rate of \$294.06. For APCs with only a minimum unadjusted copayment in Addendum A and B of this final rule with comment period, identify a beneficiary payment percentage of 20 percent.

The formula below is a mathematical representation of Step 1 and calculates national copayment as a percentage of national payment for a given service.

B is the beneficiary payment percentage.
 $B = \text{National unadjusted copayment for APC} / \text{national unadjusted payment rate for APC}$

Step 2. Calculate the appropriate wage-adjusted payment rate for the APC for the provider in question, as indicated in Steps 2 through 4 under section II.G. of this final rule with comment period. Calculate the rural adjustment for eligible providers as indicated in Step 6 under section II.G. of this final rule with comment period.

Step 3. Multiply the percentage calculated in Step 1 by the payment rate calculated in Step 2. The result is the wage-adjusted copayment amount for the APC.

The formula below is a mathematical representation of Step 3 and applies the beneficiary percentage to the adjusted payment rate for a service calculated under section II.G. of this final rule with comment period, with and without the rural adjustment, to calculate the adjusted beneficiary copayment for a given service.

Wage-adjusted copayment amount for the APC = Adjusted Medicare Payment * B

Wage-adjusted copayment amount for the APC (SCH or EACH) = (Adjusted Medicare Payment * 1.071) * B

Step 4. For a hospital that failed to meet its HOP QDRP requirements, multiply the copayment calculated in Step 3 by the reporting ratio of 0.98.

The unadjusted copayments for services payable under the OPPS that will be effective January 1, 2010, are shown in Addenda A and B to this final rule with comment period. We note that the national unadjusted payment rates and copayment rates shown in Addenda A and B to this final rule with comment period reflect the full market basket conversion factor increase, as discussed in section XVI.D. of this final rule with comment period.

III. OPPS Ambulatory Payment Classification (APC) Group Policies

A. OPPS Treatment of New CPT and Level II HCPCS Codes

CPT and Level II HCPCS codes are used to report procedures, services,

items, and supplies under the hospital OPPS. Specifically, CMS recognizes the following codes on OPPS claims: (1) Category I CPT codes, which describe medical services and procedures; (2) Category III CPT codes, which describe new and emerging technologies, services, and procedures; and (3) Level II HCPCS codes, which are used primarily to identify products, supplies, temporary procedures, and services not described by CPT codes. CPT codes are established by the AMA and the Level II HCPCS codes are established by the CMS HCPCS Workgroup. These codes are updated and changed throughout the year. CPT and HCPCS code changes that affect the OPPS are published both through the annual rulemaking cycle and through the OPPS quarterly update Change Requests (CRs). CMS releases new Level II HCPCS codes to the public or recognizes the release of new CPT codes by the AMA and makes these codes effective (that is, the codes can be reported on Medicare claims) outside of the formal rulemaking process via OPPS quarterly update CRs. This quarterly process offers hospitals access to codes that may more accurately describe items or services furnished and/or provides payment or more accurate payment for these items or services in a timelier manner than if CMS waited for the annual rulemaking process. We solicit comments on these new codes and finalize our proposals related to these codes through our annual rulemaking process.

We note that we sought public comments in the CY 2009 OPPS/ASC final rule with comment period on the new CPT and Level II HCPCS codes that were effective January 1, 2009. We also sought public comments in the CY 2009 OPPS/ASC final rule with comment period on the new Level II HCPCS codes effective October 1, 2008. These new codes with an effective date of October 1, 2008 or January 1, 2009 were flagged with comment indicator "NI" (New code, interim APC assignment; comments will be accepted on the interim APC assignment for the new code) in Addendum B to the CY 2009 OPPS/ASC final rule with comment period to indicate that we were assigning them an interim payment status and an APC and payment rate, if applicable, which were subject to public comment following publication of the CY 2009 OPPS/ASC final rule with comment period. Summaries of public comments on the codes flagged with comment indicator "NI" in the CY 2009 OPPS/ASC final rule with comment period and our responses are included in the sections of this final rule with

comment period that are relevant to the services described by those codes.
 In Table 13 of the CY 2010 OPPS/ASC proposed rule (74 FR 35299), which is

reproduced as Table 18 in this final rule with comment period, we summarized our process for updating codes through

our OPPS quarterly update CRs, seeking public comment, and finalizing their treatment under the OPPS.

TABLE 18—COMMENT TIMEFRAME FOR NEW OR REVISED HCPCS CODES

OPPS quarterly update CR	Type of code	Effective date	Comments sought	When finalized
April 1, 2009	Level II HCPCS Codes	April 1, 2009	CY 2010 OPPS/ASC proposed rule.	CY 2010 OPPS/ASC final rule with comment period.
July 1, 2009	Level II HCPCS Codes	July 1, 2009	CY 2010 OPPS/ASC proposed rule.	CY 2010 OPPS/ASC final rule with comment period.
	Category I (certain vaccine codes) and Category III CPT Codes.	July 1, 2009	CY 2010 OPPS/ASC proposed rule.	CY 2010 OPPS/ASC final rule with comment period.
October 1, 2009	Level II HCPCS Codes	October 1, 2009	CY 2010 OPPS/ASC final rule with comment period.	CY 2011 OPPS/ASC final rule with comment period.
January 1, 2010	Level II HCPCS Codes	January 1, 2010	CY 2010 OPPS/ASC final rule with Comment Period.	CY 2011 OPPS/ASC final rule with comment period.
	Category I and Category III CPT Codes.	January 1, 2010	CY 2010 OPPS/ASC final rule with comment period.	CY 2011 OPPS/ASC final rule with comment period.

1. Treatment of New Level II HCPCS Codes and Category I CPT Vaccine Codes and Category III CPT Codes

In the April 1 and July 1 CRs for CY 2009, we made effective a total of 13 new Level II HCPCS codes that were not addressed in the CY 2009 OPPS/ASC final rule with comment period that updated the OPPS and we allowed separate payment for 12 of these new codes. Through the April 1, 2009 CR, we also changed the OPPS status indicator for one existing Level II HCPCS code from the interim status indicator designated in the CY 2009 OPPS/ASC final rule with comment period to a status indicator that allowed separate pass-through payment for this code. In addition to the changes for Level II HCPCS codes, we made effective 5 new Category I vaccine and Category III CPT codes that were not addressed in the CY 2009 OPPS/ASC final rule with comment period that updated the OPPS and we allowed separate payment for 3 of these new codes.

Through the April 2009 OPPS quarterly update CR (Transmittal 1702, Change Request 6416, dated March 13, 2009), we allowed separate payment for a total of 2 additional Level II HCPCS codes, specifically existing HCPCS code C9247 (Iobenguane, I-123, diagnostic, per study dose, up to 10 millicuries) and new HCPCS code C9249 (Injection, certolizumab pegol, 1 mg). HCPCS code C9249, which received separate payment as a result of its pass-through status under the OPPS, was made effective on April 1, 2009. HCPCS code C9247 was released January 1, 2009

through the January 2009 OPPS quarterly update CR (Transmittal 1657, Change Request 6320, dated December 31, 2008). From January 1, 2009 through March 31, 2009, HCPCS code C9247 was packaged under the OPPS and assigned status indicator “N” (Items and Services Packaged into APC Rates). We note that between January 1, 2009 through March 31, 2009, HCPCS code C9247 was recognized as a nonpass-through diagnostic radiopharmaceutical. Because nonpass-through diagnostic radiopharmaceuticals are packaged under the OPPS, there was no separate APC payment for HCPCS code C9247 from January 1, 2009 through March 31, 2009. However, effective April 1, 2009, HCPCS code C9247 was allowed separate pass-through payment and its status indicator was revised from “N” to “G” (Pass-Through Drugs and Biologicals).

In the CY 2010 OPPS/ASC proposed rule, we solicited public comments on the status indicators and APC assignments of HCPCS codes C9247 and C9249, which were listed in Table 14 of that proposed rule (74 FR 35301) and now appear in Table 19 of this final rule with comment period.

We did not receive any public comments on the proposed APC assignments and status indicators for HCPCS codes C9247 and C9249. However, for CY 2010, the HCPCS Workgroup replaced both HCPCS C-codes with permanent HCPCS codes. Specifically, C9247 was replaced with A9582 (Iodine I-123 iobenguane, diagnostic, per study dose, up to 15

millicuries) and C9249 was replaced with J0718 (Injection, certolizumab pegol, 1 mg). Consistent with our general policy of using permanent HCPCS codes if appropriate rather than HCPCS C-codes for the reporting of drugs under the OPPS in order to streamline coding, we are showing the replacement HCPCS codes in Table 19 that will replace the HCPCS C-codes effective January 1, 2010. Both HCPCS C-codes will be deleted December 31, 2009. Because HCPCS code J0718 describes the same drug and the same dosage currently designated by HCPCS code C9249 and this drug will continue on pass-through status in CY 2010, we are assigning HCPCS code J0718 the same status indicator and APC as its predecessor C-code, as shown in Table 19. Although the dosage descriptor of HCPCS code A9582 indicates “per study dose, up to 15 millicuries” and the descriptor of its predecessor C-code designates “per study dose, up to 10 millicuries,” because we believe that the reporting of one unit for a study dose would be the same in almost all cases under either HCPCS code, we are assigning HCPCS code A9582 to the same APC as its predecessor C-code, as shown in Table 19. The recommended dose of I-123 iobenguane is 10 millicuries for adult patients, so we expect that hospitals would report 1 unit of new HCPCS code A9582 for the typical dose in CY 2010, just as they would have reported one unit of HCPCS code C9247 previously for the typical dose. We also note this diagnostic radiopharmaceutical will continue on

pass-through status in CY 2010; therefore, its CY 2010 status indicator remains as “G.” Because we did not receive any public comments on the new Level II HCPCS codes that were

implemented in April 2009, we are adopting as final, without modification, our proposal to assign the Level II HCPCS codes listed in Table 19 to the

APCs and status indicators as proposed for CY 2010.

Table 19 below shows the final APC and status indicator assignments for both HCPCS codes A9582 and J0718.

TABLE 19—LEVEL II HCPCS CODES WITH A CHANGE IN OPSS STATUS INDICATOR OR NEWLY IMPLEMENTED IN APRIL 2009

CY 2010 HCPCS code	CY 2009 HCPCS code	CY 2010 long descriptor	Final CY 2010 status indicator	Final CY 2010 APC
A9582	C9247	Iodine I-123 iobenguane, diagnostic, per study dose, up to 15 millicuries	G	9247
J0718	C9249	Injection, certolizumab pegol, 1 mg	G	9249

Through the July 2009 OPSS quarterly update CR (Transmittal 107, Change Request 6492, dated May 22, 2009), which included HCPCS codes that were made effective July 1, 2009, we allowed separate payment for a total of 11 new Level II HCPCS codes for pass-through drugs and biologicals and nonpass-through drugs and nonimplantable biologicals. Specifically, we provided separate payment for HCPCS codes C9250 (Human plasma fibrin sealant, vapor-heated, solvent-detergent (Artiss), 2ml); C9251 (Injection, C1 esterase inhibitor (human), 10 units); C9252 (Injection, plerixafor, 1 mg); C9253 (Injection, temozolomide, 1 mg); C9360 (Dermal substitute, native, non-denatured collagen, neonatal bovine origin (SurgiMend Collagen Matrix), per 0.5 square centimeters); C9361 (Collagen matrix nerve wrap (NeuroMend Collagen Nerve Wrap), per 0.5 centimeter length); C9362 (Porous purified collagen matrix bone void filler (Integra Mozaik Osteoconductive Scaffold Strip), per 0.5 cc); C9363 (Skin substitute, Integra Meshed Bilayer Wound Matrix, per square centimeter); C9364 (Porcine implant, Permacol, per square centimeter); Q2023 (Injection, factor viii (antihemophilic factor, recombinant) (Xyntha), per i.u.); and Q4116 (Skin substitute, Alloderm, per square centimeter).

Although HCPCS code Q4115 (Skin substitute, Alloskin, per square centimeter) was made effective July 1, 2009, because ASP pricing information was not available at the time the code was made effective, the HCPCS code was not paid separately and it was assigned status indicator “M” (Items and Services Not Billable to the Fiscal Intermediary/MAC) in the CY 2010 OPSS/ASC proposed rule (74 FR 35300 through 35301). For the October 2009 OPSS quarterly update, the status indicator for HCPCS code Q4115 was revised from “M” to “K” (Nonpass-Through Drugs and Biologicals)

effective October 1, 2009 because pricing information was available, and this product was paid separately as a new biological HCPCS code based on the ASP methodology, consistent with the final CY 2009 policy and the final CY 2010 policy for payment of new drug and biological HCPCS codes without pass-through status. The change in status indicator assignment was announced through the October 2009 OPSS quarterly update CR (Transmittal 1803, Change Request 6626, dated August 28, 2009).

In the CY 2010 OPSS/ASC proposed rule, we solicited public comments on the status indicators, APC assignments, and payment rates of these codes, which were listed in Table 15 of that proposed rule (74 FR 35301) and now appear in Table 20 of this final rule with comment period. Because of the timing of the proposed rule, the codes implemented in the July 2009 OPSS update were not included in Addendum B of that proposed rule, while those codes based upon the April 2009 OPSS update were included in Addendum B. In the CY 2009 OPSS/ASC proposed rule, we proposed to assign the new HCPCS codes for CY 2010 to the designated APCs listed in Table 15 for each HCPCS code and incorporate them into our final rule with comment period for CY 2010, which is consistent with our annual APC updating policy.

We did not receive any public comments on the proposed APC assignments, payment rates, and status indicators designated for the codes listed in Table 15 of the proposed rule. However, for CY 2010, the HCPCS Workgroup created permanent HCPCS J-codes for 4 of the 11 separately payable drug codes. Consistent with our general policy of using permanent HCPCS codes if appropriate rather than HCPCS C-codes for the reporting of drugs under the OPSS in order to streamline coding, we are showing the HCPCS J-codes in Table 20 of this final rule with comment

period that will replace the HCPCS C-codes effective January 1, 2010. HCPCS code C9251 is replaced with J0598 (Injection, C1 esterase inhibitor (human), 10 units); C9252 with J2562 (Injection, plerixafor, 1 mg); C9253 is replaced with J9328 (Injection, temozolomide, 1 mg); and Q2023 is replaced with J7185 (Injection, factor viii (antihemophilic factor, recombinant) (Xyntha), per i.u.). The HCPCS J-codes describe the same drugs and the same dosages as the HCPCS C-codes that will be deleted December 31, 2009. We note that HCPCS C-codes are temporary national HCPCS codes. To avoid duplication, temporary national HCPCS codes, such as “C,” “G,” “K,” and “Q” codes, are generally deleted once permanent national HCPCS codes are created that describe the same item, service, or procedure. Because three of the four new HCPCS J-codes describe the same drugs and the same dosages that are currently designated by HCPCS codes C9251, C9252, and C9253 and all three of these drugs will continue on pass-through status in CY 2010, we are assigning the HCPCS J-codes to the same APCs and status indicators as their predecessor HCPCS C-codes, as shown in Table 20. That is, HCPCS code J0598 is assigned to the same APC and status indicator as HCPCS code C9251 (APC 9251); HCPCS code J2562 is assigned to APC 9252; and HCPCS J9328 is assigned to APC 9253. Also, we note that, effective January 1, 2010, HCPCS code Q2023 will be replaced with HCPCS code J7185, which has the same descriptor and is assigned to the same APC and status indicator as HCPCS code Q2023.

Because we did not receive any public comments on the new Level II HCPCS codes that were implemented in July 2009, we are adopting as final, without modification, our proposal to assign the Level II HCPCS codes listed in Table 20 to the APCs and status indicators as proposed for CY 2010.

TABLE 20—NEW LEVEL II HCPCS CODES IMPLEMENTED IN JULY 2009

CY 2010 HCPCS code	CY 2009 HCPCS code	CY 2010 Long descriptor	Final CY 2010 status indicator	Final CY 2010 APC
C9250	C9250	Human plasma fibrin sealant, vapor-heated, solvent-detergent (Artiss), 2ml.	G	9250
J0598	C9251	Injection, C1 esterase inhibitor (human), 10 units	G	9251
J2562	C9252	Injection, plerixafor, 1 mg	G	9252
J9328	C9253	Injection, temozolomide, 1 mg	G	9253
C9360	C9360	Dermal substitute, native, non-denatured collagen, neonatal bovine origin (SurgiMend Collagen Matrix), per 0.5 square centimeters.	G	9360
C9361	C9361	Collagen matrix nerve wrap (NeuroMend Collagen Nerve Wrap), per 0.5 centimeter length.	G	9361
C9362	C9362	Porous purified collagen matrix bone void filler (Integra Mozaik Osteoconductive Scaffold Strip), per 0.5 cc.	G	9362
C9363	C9363	Skin substitute, Integra Meshed Bilayer Wound Matrix, per square centimeter.	G	9363
C9364	C9364	Porcine implant, Permacol, per square centimeter	G	9364
J7185	Q2023	Injection, factor viii (antihemophilic factor, recombinant) (Xyntha), per i.u..	K	1268
Q4115	Q4115	Skin substitute, Alloskin, per square centimeter	K	1287
Q4116	Q4116	Skin substitute, Alloderm, per square centimeter	K	1270

In the CY 2010 OPPS/ASC proposed rule (74 FR 35300), we proposed to continue our established policy of recognizing Category I CPT vaccine codes for which FDA approval is imminent and Category III CPT codes that the AMA releases in January of each year for implementation in July through the OPPS quarterly update process. Under the OPPS, Category I vaccine codes and Category III CPT codes that are released on the AMA Web site in January are made effective in July of the same year through the July OPPS quarterly update CR, consistent with the AMA's implementation date for the codes. Through the July 2009 OPPS quarterly update CR, we allowed separate payment for 3 of the 5 new Category I vaccine and Category III CPT Codes effective July 1, 2009. Specifically, as displayed in Table 16 of the CY 2010 OPPS/ASC proposed rule (74 FR 35301) and reproduced in this final rule with comment period as Table 21, we allowed payment for CPT codes 0199T (Physiologic recording of tremor using accelerometer(s) and gyroscope(s), (including frequency and amplitude) including interpretation and report); 0200T (Percutaneous sacral augmentation (sacroplasty), unilateral

injection(s), including the use of a balloon or mechanical device (if utilized), one or more needles); and 0201T (Percutaneous sacral augmentation (sacroplasty), bilateral injections, including the use of a balloon or mechanical device (if utilized), two or more needles). We note that CPT code 0202T (Posterior vertebral joint(s) arthroplasty (e.g., facet joint[s] replacement) including facetectomy, laminectomy, foraminotomy and vertebral column fixation, with or without injection of bone cement, including fluoroscopy, single level, lumbar spine) was assigned status indicator "C" (Inpatient Procedures) because we believe that this procedure may only be safely performed on Medicare beneficiaries in the hospital inpatient setting. In addition, CPT code 90670 (Pneumococcal conjugate vaccine, 13 valent, for intramuscular use), a Category I CPT vaccine code, was assigned status indicator "E" (Items, Codes, and Services not paid by Medicare when submitted on outpatient claims (any outpatient bill type)) because the drug has not yet been approved by the FDA for marketing. Because the July 2009 OPPS quarterly update CR was issued close to the

publication of the CY 2010 OPPS/ASC proposed rule, the Category I vaccine and Category III CPT codes implemented through the July 2009 OPPS quarterly update CR were not be included in Addendum B to the proposed rule, but these codes were listed in Table 16 of the proposed rule. Additionally, we proposed to incorporate them into Addendum B to this CY 2010 OPPS/ASC final rule with comment period, which is consistent with our annual OPPS update policy.

In the CY 2010 OPPS/ASC proposed rule (74 FR 35301), we solicited public comments on the proposed status indicators, APC assignments, and payment rates for the new Category I and III CPT codes. We did not receive any public comments on our proposals for CPT codes 0199T, 0200T, 0201T, 0202T, and 90670. Therefore, we are finalizing our CY 2010 proposals for these codes, without modification. The final CY 2010 status indicators and APC assignments for CPT codes 0199T, 0200T, 0201T, 0202T, and 90670 are listed in Table 21 below, as well as in Addendum B to this final rule with comment period.

TABLE 21—CATEGORY I VACCINE AND CATEGORY III CPT CODES IMPLEMENTED IN JULY 2009

CY 2010 HCPCS code	CY 2010 long descriptor	Final CY 2010 status indicator	Final CY 2010 APC
0199T	Physiologic recording of tremor using accelerometer(s) and gyroscope(s), (including frequency and amplitude) including interpretation and report.	S	0215
0200T	Percutaneous sacral augmentation (sacroplasty), unilateral injection(s), including the use of a balloon or mechanical device (if utilized), one or more needles.	T	0049

TABLE 21—CATEGORY I VACCINE AND CATEGORY III CPT CODES IMPLEMENTED IN JULY 2009—Continued

CY 2010 HCPCS code	CY 2010 long descriptor	Final CY 2010 status indicator	Final CY 2010 APC
0201T	Percutaneous sacral augmentation (sacroplasty), bilateral injections, including the use of a balloon or mechanical device (if utilized), two or more needles.	T	0050
0202T	Posterior vertebral joint(s) arthroplasty (e.g., facet joint[s] replacement) including facetectomy, laminectomy, foraminotomy and vertebral column fixation, with or without injection of bone cement, including fluoroscopy, single level, lumbar spine.	C	Not applicable.
90670	Pneumococcal conjugate vaccine, 13 valent, for intramuscular use	E	Not applicable.

2. Process for New Level II HCPCS Codes and Category I and Category III CPT Codes for Which We Are Soliciting Public Comments on the CY 2010 OPPS/ASC Final Rule With Comment Period

As has been our practice in the past, we incorporate those new Category I and III CPT codes and new Level II HCPCS codes that are effective January 1 in the final rule with comment period updating the OPPS for the following calendar year. These codes are released to the public via the CMS HCPCS (for Level II HCPCS codes) and AMA Web sites (for CPT codes), and also through the January OPPS quarterly update CRs. In the past, we also have released new Level II HCPCS codes that are effective October 1 through the October OPPS quarterly update CRs and incorporated these new codes in the final rule with comment period updating the OPPS for the following calendar year. All of these codes are flagged with comment indicator “NI” in Addendum B to the OPPS/ASC final rule with comment period to indicate that we are assigning them an interim payment status which is subject to public comment. Specifically, the status indicator and the APC assignment, and payment rate, if applicable, for all such codes flagged with comment indicator “NI” are open to public comment in this final rule with comment period, and we respond to these comments in the final rule with comment period for the next calendar year’s OPPS/ASC update. In the CY 2010 OPPS/ASC proposed rule (74 FR 35302), we proposed to continue this process for CY 2010. Specifically, for CY 2010, we proposed to include in Addendum B to the CY 2010 OPPS/ASC final rule with comment period the new Category I and III CPT codes effective January 1, 2010 (including those Category I vaccine and Category III CPT codes that were released by the AMA in July 2009) that would be incorporated in the January 2010 OPPS quarterly update CR and the new Level II HCPCS codes, effective October 1, 2009 or January 1,

2010, that would be released by CMS in its October 2009 and January 2010 OPPS quarterly update CRs. Excluding those Category I vaccine and Category III CPT codes that were released by the AMA in July 2009 which were subject to comment in the CY 2010 OPPS/ASC proposed rule as described above, these codes would be flagged with comment indicator “NI” in Addendum B to this CY 2010 OPPS/ASC final rule with comment period to indicate that we have assigned them an interim OPPS payment status. We proposed that their status indicators and their APC assignments and payment rates, if applicable, would be open to public comment in the CY 2010 OPPS/ASC final rule with comment period and would be finalized in the CY 2011 OPPS/ASC final rule with comment period.

Comment: One commenter requested that CMS solicit public comments on APC assignments for the newly implemented CPT codes that go into effect January 1 and, when necessary, revise their APC assignments and implement the changes in the next quarterly OPPS update to promote payment accuracy.

Response: For new HCPCS codes with an interim final APC and/or status indicator designation in a final rule, we are only able to finalize their assignments in another OPPS final rule in order to allow for the necessary public notice and comment period and to allow for CMS to respond to such comments. Therefore, we only assign HCPCS codes permanently for the year through the annual regulatory process. Because we are not able to revise APC and/or status indicator assignments for the newly implemented HCPCS codes in CY 2010 that are assigned an interim final status in this CY 2010 OPPS/ASC final rule with comment period outside of the rulemaking process, the next available opportunity to update an APC or status indicator for these codes is in the CY 2011 OPPS update. These HCPCS codes retain their interim final APC and status indicator assignments

for all of CY 2010. Therefore, only in the CY 2011 OPPS/ASC final rule with comment period will we be able to finalize the APC and/or status indicator assignments of the new CY 2010 HCPCS codes and respond to all public comments received on their interim designations.

After consideration of the public comment we received, we are finalizing our proposal, without modification, to provide interim final status indicators and APC assignments and payment rates, if applicable, for all CPT codes newly implemented in January 2010 and all HCPCS codes newly implemented in October 2009 or January 2010 in Addendum B to this final rule with comment period. The interim final OPPS treatment of these codes is open to public comment in the CY 2010 OPPS/ASC final rule with comment period and will be finalized in the CY 2011 OPPS/ASC final rule with comment period.

B. OPPS Changes—Variations Within APCs

1. Background

Section 1833(t)(2)(A) of the Act requires the Secretary to develop a classification system for covered outpatient department services. Section 1833(t)(2)(B) of the Act provides that the Secretary may establish groups of covered outpatient department services within this classification system, so that services classified within each group are comparable clinically and with respect to the use of resources (and so that an implantable item is classified to the group that includes the service to which the item relates). In accordance with these provisions, we developed a grouping classification system, referred to as APCs, as set forth in § 419.31 of the regulations. We use Level I and Level II HCPCS codes and descriptors to identify and group the services within each APC. The APCs are organized such that each group is homogeneous both clinically and in terms of resource use. Using this classification system, we have

established distinct groups of similar services, as well as medical visits. We also have developed separate APC groups for certain medical devices, drugs, biologicals, therapeutic radiopharmaceuticals, and brachytherapy devices.

We have packaged into payment for each procedure or service within an APC group the costs associated with those items or services that are directly related to and supportive of performing the main independent procedures or furnishing the services. Therefore, we do not make separate payment for these packaged items or services. For example, packaged items and services include: (1) Use of an operating, treatment, or procedure room; (2) use of a recovery room; (3) observation services; (4) anesthesia; (5) medical/surgical supplies; (6) pharmaceuticals (other than those for which separate payment may be allowed under the provisions discussed in section V.3. of this final rule with comment period); (7) incidental services such as venipuncture; and (8) guidance services, image processing services, intraoperative services, imaging supervision and interpretation services, diagnostic radiopharmaceuticals, and contrast media. Further discussion of packaged services is included in section II.A.4. of this final rule with comment period.

In CY 2008 (72 FR 66650), we implemented composite APCs to provide a single payment for groups of services that are typically performed together during a single clinical encounter and that result in the provision of a complete service. Under our CY 2010 OPPS policy, we provide composite APC payment for certain extended assessment and management services, low dose rate (LDR) prostate brachytherapy, cardiac electrophysiologic evaluation and ablation, mental health services, and multiple imaging services. Further discussion of composite APCs is included in section II.A.2.e. of this final rule with comment period.

Under the OPPS, we generally pay for hospital outpatient services on a rate-per-service basis, where the service may be reported with one or more HCPCS codes. Payment varies according to the APC group to which the independent service or combination of services is assigned. Each APC weight represents the hospital median cost of the services included in that APC relative to the hospital median cost of the services included in APC 0606 (Level 3 Hospital Clinic Visits). The APC weights are scaled to APC 0606 because it is the middle level clinic visit APC (that is,

where the Level 3 clinic visit CPT code of five levels of clinic visits is assigned), and because middle level clinic visits are among the most frequently furnished services in the hospital outpatient setting.

Section 1833(t)(9)(A) of the Act requires the Secretary to review not less often than annually and revise the groups, relative payment weights, and the wage and other adjustments under the OPSS to take into account changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors. Section 1833(t)(9)(A) of the Act, as amended by section 201(h) of the BBRA, also requires the Secretary to consult with an outside panel of experts to review (and advise the Secretary concerning) the clinical integrity of the APC groups and the relative payment weights (the APC Panel recommendations for specific services for the CY 2010 OPPS and our responses to them are discussed in the relevant specific sections throughout this final rule with comment period).

Finally, section 1833(t)(2) of the Act provides that, subject to certain exceptions, the items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest median cost (or mean cost as elected by the Secretary) for an item or service in the group is more than 2 times greater than the lowest median cost (or mean cost, if so elected) for an item or service within the same group (referred to as the "2 times rule"). We use the median cost of the item or service in implementing this provision. In performing this analysis, we examine data from the significant services assigned to an APC, specifically those HCPCS codes with a single claim frequency of greater than 1,000 or a frequency of greater than 99 and a percentage of all single claims that is equal to or greater than 2 percent. Because, as a matter of policy, HCPCS codes that are unlisted procedures, not otherwise classified, or not otherwise specified codes are assigned to the lowest level APC that is appropriate to the clinical nature of the service (69 FR 65724 through 65725), we do not consider the costs of these services in assessing APCs for 2 times violations. Section 1833(t)(2) of the Act authorizes the Secretary to make exceptions to the 2 times rule in unusual cases, such as low-volume items and services (but the Secretary may not make such an exception in the case of a drug or biological that has been designated as an orphan drug under section 526 of the Federal Food, Drug, and Cosmetic Act).

2. Application of the 2 Times Rule

In accordance with section 1833(t)(2) of the Act and § 419.31 of the regulations, we annually review the items and services within an APC group to determine, with respect to comparability of the use of resources, if the median cost of the highest cost item or service within an APC group is more than 2 times greater than the median of the lowest cost item or service within that same group. In the CY 2010 OPPS/ASC proposed rule (74 FR 35303), we proposed to make exceptions to this limit on the variation of costs within each APC group in unusual cases, such as low-volume items and services for CY 2010.

During the APC Panel's February 2009 meeting, we presented median cost and utilization data for services furnished during the period of January 1, 2008 through September 30, 2008, because we had concerns or the public had raised concerns regarding their APC assignments, status indicator assignments, or payment rates. In addition to the assignment of specific services to APCs that we discussed with the APC Panel, we also identified APCs with 2 times violations that were not specifically discussed with the APC Panel but for which we proposed changes to their HCPCS codes' APC assignments in Addendum B to the CY 2010 OPPS/ASC proposed rule. In these cases, to eliminate a 2 times violation or to improve clinical and resource homogeneity, we proposed to reassign the codes to APCs that contain services that are similar with regard to both their clinical and resource characteristics. We also proposed to rename existing APCs or create new clinical APCs to complement proposed HCPCS code reassignments. In many cases, the proposed HCPCS code reassignments and associated APC reconfigurations for CY 2010 included in the proposed rule were related to changes in median costs of services that were observed in the CY 2008 claims data newly available for CY 2010 ratesetting. In addition, we proposed changes to the status indicators for some codes that were not specifically and separately discussed in the proposed rule. In these cases, we proposed to change the status indicators for some codes because we believed that another status indicator would more accurately describe their payment status from an OPPS perspective based on the policies that we proposed for CY 2010.

Addendum B to the CY 2010 OPPS/ASC proposed rule identified, with comment indicator "CH," those HCPCS codes for which we proposed a change to the APC assignment or status

indicator that were initially assigned in the April 2009 Addendum B update (Transmittal 1702, Change Request 6416, dated March 13, 2009).

Comment: One commenter generally supported CMS' adherence to the 2 times rule to ensure appropriate payment for OPPS services and to provide incentives for patients to be treated in the most suitable clinical setting. In particular, the commenter supported the proposed reassignments of the following CPT codes: CPT code 20103 (Exploration of penetrating wound (separate procedure); extremity) from APC 0136 (Level IV Skin Repair) to APC 0007 (Level II Incision & Drainage); and CPT code 29888 (Arthroscopically aided anterior cruciate ligament repair/augmentation or reconstruction) and CPT code 29889 (Arthroscopically aided posterior cruciate ligament repair/augmentation or reconstruction) from APC 0042 (Level II Arthroscopy) to APC 0052 (Level IV Musculoskeletal Procedures Except Hand and Foot).

Response: We appreciate the commenter's support for the 2 times rule in general and for the proposed APC reassignments of CPT codes 20103, 29888, and 29889 in particular. We agree with the commenter that the 2 times rule is an important mechanism for ensuring appropriate payment for OPPS services. Based on the CY 2008 claims and cost report data available for this final rule with comment period, we also agree with the commenter that we should adopt the proposed reassignments of CPT codes 20103, 29888, and 29889 in order to improve clinical and resource homogeneity.

Therefore, after consideration of the public comment we received, we are finalizing, without modification, our CY 2010 proposals to reassign CPT code 20103 to APC 0007, with a final CY 2010 APC median cost of approximately \$843 and CPT codes 29888 and 29889 to APC 0052, with a final CY 2010 APC median cost of approximately \$5,921.

3. Exceptions to the 2 Times Rule

As discussed earlier, we may make exceptions to the 2 times limit on the variation of costs within each APC group in unusual cases such as low-volume items and services. We stated in the CY 2010 OPPS/ASC proposed rule (74 FR 35303) that we took into account the APC changes that we proposed for CY 2010 based on the APC Panel recommendations, the other proposed changes to status indicators and APC assignments as identified in Addendum B to the proposed rule, and the use of CY 2008 claims data available for the proposed rule to calculate the median

costs of procedures classified in the APCs. We then reviewed all of the APCs to determine which APCs would not satisfy the 2 times rule and to determine which APCs should be proposed as exceptions to the 2 times rule for CY 2010. We used the following criteria to decide whether to propose exceptions to the 2 times rule for affected APCs:

- Resource homogeneity;
- Clinical homogeneity;
- Hospital outpatient setting;
- Frequency of service (volume); and
- Opportunity for upcoding and code fragments.

For a detailed discussion of these criteria, we refer readers to the April 7, 2000 OPPS final rule with comment period (65 FR 18457).

Table 17 of the CY 2010 OPPS/ASC proposed rule (74 FR 35303) listed 14 APCs that we proposed to exempt from the 2 times rule for CY 2010 based on the criteria cited above. For cases in which a recommendation by the APC Panel appeared to result in or allow a violation of the 2 times rule, we generally accepted the APC Panel's recommendation because those recommendations were based on explicit consideration of resource use, clinical homogeneity, hospital specialization, and the quality of the CY 2008 claims data used to determine the APC payment rates that we proposed for CY 2010. The median costs for hospital outpatient services for these and all other APCs that were used in the development of the CY 2010 OPPS/ASC proposed rule and this final rule with comment period can be found on the CMS Web site at: http://www.cms.hhs.gov/HospitalOutpatientPPS/01_overview.asp.

For the CY 2010 OPPS/ASC proposed rule, we based the listed exceptions to the 2 times rule on claims data for dates of service between January 1, 2008, and December 31, 2008, that were processed before January 1, 2009. For this final rule with comment period, we used claims data for dates of service between January 1, 2008, and December 31, 2008, that were processed on or before June 30, 2008, and updated CCRs, if available. Thus, after responding to all of the public comments on the CY 2010 OPPS/ASC proposed rule and making changes to APC assignments based on those comments, we analyzed the CY 2008 claims data used for this final rule with comment period to identify the APCs with 2 times violations. Based on the final CY 2008 claims data, we found that there are 15 APCs with 2 times rule violations, a cumulative increase of 1 APC from the proposed rule. We applied the criteria as described earlier

to identify the APCs that are exceptions to the 2 times rule for CY 2010, and identified 4 additional APCs that meet the criteria for exception to the 2 times rule for this final rule with comment period: APC 0057 (Bunion Procedures); APC 0060 (Manipulation Therapy); APC 0341 (Skin Tests); and APC 0409 (Red Blood Cell Tests). These APC exceptions are listed in Table 22 below. We also determined that there are 3 APCs that no longer violate the 2 times rule: APC 0237 (Level II Posterior Segment Eye Procedures); APC 0325 (Group Psychotherapy); and APC 0436 (Level I Drug Administration). We have not included in this count those APCs where a 2 times violation is not a relevant concept, such as APC 0375 (Ancillary Outpatient Services when Patient Expires), with an APC median cost set based on multiple procedure claims, so that we have identified only final APCs, including those with criteria-based median costs, such as device-dependent APCs, with 2 times violations.

Comment: One commenter requested that CMS not exempt any imaging and radiation therapy APCs from the 2 times rule. According to the commenter, violations of the 2 times rule should demonstrate to CMS that a particular APC is incorrectly constructed. The commenter recommended that, rather than exempting these APCs from the 2 times rule, CMS review the configurations of the APCs and make any necessary revisions.

Response: We do not agree with the commenter that we should not exempt any imaging and radiation therapy APCs from the 2 times rule. As stated earlier in this section, we may make exceptions to the 2 times limit on the variation of costs within each APC group in unusual cases such as low-volume items and services. In the CY 2010 OPPS/ASC proposed rule (74 FR 35303), we proposed to exempt one imaging APC and one radiation therapy APC from the 2 times rule, specifically APC 0128 (Echocardiogram with Contrast) and APC 0664 (Level I Proton Beam Radiation Therapy), respectively. As discussed in greater detail in section II.A.2.d.(4) of this final rule with comment period, we believe that the median costs of the echocardiography procedures assigned to APC 0128 do not warrant assignment of any of those procedures to a new clinical APC. APC 0664 includes CPT code 77520 (Proton treatment delivery; simple, without compensation), with a median cost of approximately \$396 (based on 243 single claims of 251 total claims), and CPT code 77522 (Proton treatment delivery; simple, with compensation),

with a median cost of approximately \$934 (based on 11,012 single claims of 12,252 total claims). We continue to believe that the resources and clinical characteristics of the low-volume procedure described by CPT code 77520 are sufficiently similar to the procedure described by CPT code 77522 to warrant continued assignment of both CPT codes to APC 0664. Therefore, we are finalizing our proposal to exempt APC 0128 and APC 0664 from the 2 times rule for CY 2010. Consistent with our

standard policy, we will continue to review, on an annual basis, the APC assignments for all OPSS services to ensure appropriate placement.

We also received a number of specific public comments regarding some of the procedures assigned to APCs that we proposed to exempt from the 2 times rule for CY 2010. Discussions of those public comments are included elsewhere in this final rule with comment period in the specific sections

related to the types of procedures that were the subjects of the comments.

After consideration of the public comments we received and our review of the CY 2008 costs from claims available for this final rule with comment period, we are exempting 15 APCs from the 2 times rule for CY 2010, as described previously in this section. Our final list of 15 APCs exempted from the 2 times rule is displayed in Table 22 below.

TABLE 22—FINAL APC EXCEPTIONS TO THE 2 TIMES RULE FOR CY 2010

Final CY 2010 APC	Final CY 2010 APC Title
0057	Bunion Procedures.
0060	Manipulation Therapy.
0080	Diagnostic Cardiac Catheterization.
0105	Repair/Revision/Removal of Pacemakers, AICDs, or Vascular Devices.
0128	Echocardiogram with Contrast.
0141	Level I Upper GI Procedures.
0142	Small Intestine Endoscopy.
0245	Level I Cataract Procedures without IOL Insert.
0303	Treatment Device Construction.
0341	Skin Tests.
0381	Single Allergy Tests.
0409	Red Blood Cell Tests.
0432	Health and Behavior Services.
0604	Level 1 Hospital Clinic Visits.
0664	Level I Proton Beam Radiation Therapy.

C. New Technology APCs

1. Background

In the November 30, 2001 final rule (66 FR 59903), we finalized changes to the time period a service was eligible for payment under a New Technology APC. Beginning in CY 2002, we retain services within New Technology APC groups until we gather sufficient claims data to enable us to assign the service to a clinically appropriate APC. This policy allows us to move a service from a New Technology APC in less than 2 years if sufficient data are available. It also allows us to retain a service in a New Technology APC for more than 2 years if sufficient data upon which to base a decision for reassignment have not been collected.

We note that the cost bands for New Technology APCs range from \$0 to \$50 in increments of \$10, from \$50 to \$100 in increments of \$50, from \$100 through \$2,000 in increments of \$100, and from \$2,000 through \$10,000 in increments of \$500. These cost bands identify the APCs to which new technology procedures and services with estimated service costs that fall within those cost bands are assigned under the OPSS. Payment for each APC is made at the mid-point of the APC's assigned cost

band. For example, payment for New Technology APC 1507 (New Technology—Level VII (\$500–\$600)) is made at \$550. Currently, there are 82 New Technology APCs, ranging from the lowest cost band assigned to APC 1491 (New Technology—Level IA (\$0–\$10)) through the highest cost band assigned to APC 1574 (New Technology—Level XXXVII (\$9,500–\$10,000)). In CY 2004 (68 FR 63416), we last restructured the New Technology APCs to make the cost intervals more consistent across payment levels and refined the cost bands for these APCs to retain two parallel sets of New Technology APCs, one set with a status indicator of “S” (Significant Procedures, Not Discounted when Multiple. Paid under OPSS; separate APC payment) and the other set with a status indicator of “T” (Significant Procedure, Multiple Reduction Applies. Paid under OPSS; separate APC payment). These current New Technology APC configurations allow us to price new technology services more appropriately and consistently.

2. Movement of Procedures From New Technology APCs to Clinical APCs

As we explained in the November 30, 2001 final rule (66 FR 59902), we

generally keep a procedure in the New Technology APC to which it is initially assigned until we have collected sufficient data to enable us to move the procedure to a clinically appropriate APC. However, in cases where we find that our original New Technology APC assignment was based on inaccurate or inadequate information (although it was the best information available at the time), or where the New Technology APCs are restructured, we may, based on more recent resource utilization information (including claims data) or the availability of refined New Technology APC cost bands, reassign the procedure or service to a different New Technology APC that most appropriately reflects its cost.

Consistent with our current policy, in the CY 2010 OPSS/ASC proposed rule (74 FR 35304), for CY 2010, we proposed to retain services within New Technology APC groups until we gather sufficient claims data to enable us to assign the service to a clinically appropriate APC. The flexibility associated with this policy allows us to move a service from a New Technology APC in less than 2 years if sufficient data are available. It also allows us to retain a service in a New Technology APC for more than 2 years if sufficient

hospital claims data upon which to base a decision for reassignment have not been collected.

Table 18 of the proposed rule (74 FR 35304) listed the HCPCS code and its associated status indicator that we proposed to reassign from a New Technology APC to a clinically appropriate APC for CY 2010. Based on the CY 2008 OPPS claims data available for the proposed rule, we believe we had sufficient claims data to propose reassignment of CPT code 0182T to a clinically appropriate APC. Specifically, we proposed to reassign this electronic brachytherapy service from APC 1519 (New Technology—Level IXX (\$1,700–\$1,800)) to APC 0313 (Brachytherapy), where other brachytherapy services also reside. Based on hospital claims data for CPT code 0182T, its hospital resource costs are similar to those of other services assigned to APC 0313.

The proposed CY 2010 APC reassignment of CPT code 0182T was discussed with the APC Panel at its August 2009 meeting. One public presenter indicated that CPT code 0182T describes both single-fraction and multiple-fraction electronic brachytherapy, and that most of the claims on which CMS based its CY 2010 proposal were from hospitals reporting multi-fraction electronic brachytherapy. The presenter believed that the hospital resources required for these two types of brachytherapy were significantly different from one another. The presenter also stated that, unlike the conventional brachytherapy procedures that are assigned to APC 0313 and for which the associated brachytherapy sources are all paid separately under the OPPS, payment for the brachytherapy source associated with CPT code 0182T is packaged into the procedure payment. The APC Panel noted that the problem of distinguishing single-fraction from multiple-fraction electronic brachytherapy is a coding issue that would not be resolved by additional claims data because the two types of procedures are reported with the same CPT code. After discussion of the median cost of CPT code 0182T observed in claims data and the potential contribution of the brachytherapy source cost to the overall procedure cost, the APC Panel made no recommendation on the CY 2010 APC assignment for CPT code 0182T.

Comment: Several commenters disagreed with the CMS proposal to reassign CPT code 0182T to APC 0313 for CY 2010. Commenters responding regarding both single-fraction and multiple-fraction electronic brachytherapy procedures reported with CPT code 0182T asserted that the

proposed payment of approximately \$747 does not cover the full costs of providing these services. They indicated that the current payment rate of \$1,750 that is associated with APC 1519, where CPT code 0182T is assigned, includes the cost of the electronic brachytherapy source, whereas the payment rate for APC 0313 does not. Several commenters noted that the claims data used in determining the reassignment for CPT code 0182T are very limited and pointed out that the claims data for this service came from only a few hospitals that were early adopters of the multiple-source electronic brachytherapy technology. They argued that data from these hospitals represented pre-commercial clinical site data and that, therefore, these hospitals had received equipment and sources at reduced cost. One commenter suggested that CMS should develop coding that would distinguish between single-fraction and multiple-fraction electronic brachytherapy procedures in order to pay appropriately for each type of service because the current single payment for both technologies provides a financial incentive for the use of multiple-fraction electronic brachytherapy. Most commenters urged CMS to continue to assign CPT code 0182T to APC 1519 for at least another year to enable CMS to gather sufficient claims data from more hospitals in order to appropriately reassign CPT code 0182T to a clinical APC based on the clinical and resource costs of the procedure.

Response: CPT code 0182T was initially assigned to New Technology APC 1519 with a payment rate of \$1,750 when the code was implemented in July 2007, and it has been assigned to that same APC through CY 2009. For CY 2010, we proposed to reassign CPT code 0182T from New Technology APC 1519 to APC 0313, which had a proposed payment rate of approximately \$747 and a proposed median cost of approximately \$753 (and now has a final rule median cost of \$770). Analysis of hospital claims data from CY 2007 and CY 2008 revealed that the procedure described by CPT code 0182T is not commonly performed on Medicare patients. For CY 2008, claims data show 223 total claims with a median cost of about \$506 for this procedure. For CY 2007, claims data (6 months due to implementation of the code in July 2007) show only 21 total claims with a median cost of about \$495. Therefore, we believe that the hospital resources required for CPT code 0182T are consistent with the costs of other services assigned to APC 0313

and payment for CPT code 0182T would be appropriately made through that clinical APC.

We are not creating a new Level II HCPCS code for single-fraction electronic brachytherapy at this time because we believe that the two forms of electronic brachytherapy, whether provided in a single-fraction or multiple-fraction regimen, depending on the technology, are both described by CPT code 0182T, which is appropriately assigned to a single APC. We note that the payment is per-fraction according to the code descriptor for CPT code 0182T, and that would include a single-fraction treatment as well. While we recognize that CPT code 0182T describes both single- and multiple-fraction electronic brachytherapy, we commonly pay for different technologies under the OPPS that are reported in a single CPT code and we expect the hospital claims data to reflect the resources required for all of the different technologies reported under the one code. To the extent that one technology is predominantly used by hospitals, then the costs of that technology will have a greater effect on the procedure's median cost, but we do not believe payment through such groupings inappropriately encourages the use of certain technologies, such as the provision of multiple-fraction electronic brachytherapy in the case of CPT code 0182T. Our standard OPPS ratesetting methodology provides a single payment based on historical hospital costs that reflect utilization patterns of the various technologies, consistent with prospective payment for groups of similar services in order to encourage hospital efficiencies. The hospital cost information for services always reflects the discounts available to hospitals in the claims year, such as the commenters indicate was the case for multiple-fraction electronic brachytherapy in CY 2008, that may not be available in the payment year for those services, and those discounts may vary from year to year for different HOPD services. Nevertheless, we rely on the relativity of median costs as reflected in claims data to be appropriate. Payment based on a measure of central tendency is a principle of any prospective payment system like the OPPS. In some individual cases payment exceeds the average cost and in other cases payment is less than the average cost. On balance, however, payment should approximate the relative cost of the average case, recognizing that, as a prospective payment system, the OPPS is a system of averages. In the case of CPT code 0182T, we believe that its assignment to

APC 0313 for CY 2010 is fully consistent with our standard ratesetting methodology that provides appropriate incentives for efficiency.

As of January 2010, CPT code 0182T will have been assigned to New Technology APC 1519 for 2½ years. While we have relatively few claims data from CY 2007 and CY 2008 for electronic brachytherapy, a commenter on a prior rule has indicated that this service may only be used to treat a small number of patients (72 FR 66691). To the extent that more hospitals furnish electronic brachytherapy in future years and that hospital costs from commercialization of the technology change, we expect to see those costs reflected in our claims data for those future years, which we will annually review for electronic brachytherapy, just as we do for all OPPS services. Moreover, while we acknowledge that, in the case of conventional brachytherapy procedures where distinct radioactive sources are implanted, the statute requires separate payment of the associated radioactive brachytherapy source so that APC 0313 only pays for the application of those sources, we have no reason to believe that reported hospital costs for CPT code 0182T do not include the cost of the source. As we stated in the CY 2007 OPPS/ASC final rule with comment period (71 FR 68113), we do not consider specific devices, beams of radiation, or equipment that do not constitute separate sources that utilize radioactive isotopes to deliver radiation to be brachytherapy sources for separate

payment, as such items do not meet the statutory requirements provided in section 1833(t)(2)(H) of the Act. Electronic brachytherapy, described by CPT code 0182T, utilizes such devices, beams of radiation, or equipment to generate the radiation for the treatment, rather than distinct radioactive sources. Therefore, in CY 2008, hospitals would have included the costs of the devices or equipment that are necessary to generate the radiation in their charges for the electronic brachytherapy procedures, in contrast to the conventional brachytherapy procedures also assigned to APC 0313 where the sources would have been separately reported and paid. Therefore, just as in the case of other OPPS services, our ratesetting methodology relies upon hospitals' consideration of all costs associated with furnishing services, including the costs of those items and services for which payment is packaged, in setting hospital charges for separately payable procedures such as electronic brachytherapy. Although the hospital median costs for other HCPCS codes assigned to APC 0313 do not include the cost of radioactive brachytherapy sources that are separately paid, we believe the hospital cost of CPT code 0182T includes the cost of the devices or equipment used to generate the radiation for the treatment. This difference in packaging source payment between conventional and electronic brachytherapy procedures alone does not lead us to conclude that these procedures do not share sufficient cost and clinical similarity to be assigned to

the same clinical APC. The overall hospital costs for conventional and electronic brachytherapy procedures, including the associated packaged costs, that are paid through the procedure codes for electronic and conventional brachytherapy are comparable and the procedures are clinically similar so we believe that their assignment to the same APC is appropriate, regardless of the differences in their packaged costs.

Therefore, we continue to believe that APC 0313 is an appropriate APC for assignment of CPT code 0182T based on our consideration of the clinical characteristics of electronic brachytherapy and hospital costs from claims data. Maintaining CPT code 0182T in APC 0313 for another year would pay at a rate that is three times the cost of this service as reflected in the hospital outpatient claims data, and we do not believe continued payment at \$1,750 is appropriate. To the extent that hospitals' costs change over time if the procedure is more broadly furnished, consistent with our current policy to annually assess the appropriateness of the APC assignments for all services under the hospital OPPS, we will continue to monitor our claims data for CPT code 0182T in the future.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to assign CPT code 0182T to APC 0313, which has a final CY 2010 APC median cost of approximately \$770. Table 23 below lists the HCPCS code and its associated status indicator for CY 2010.

TABLE 23.—CY 2010 REASSIGNMENT OF A NEW TECHNOLOGY PROCEDURE TO A CLINICAL APC

CY 2010 HCPCS code	Short descriptor	CY 2009 SI	CY 2009 APC	Final CY 2010 SI	Final CY 2010 APC
0182T	Hdr elect brachytherapy	S	1519	S	0313

D. OPPS APC-Specific Policies

In this section, we discuss HCPCS codes and their proposed status indicators and APC reassignments for which we provided explicit discussion in section III.D. of the CY 2010 OPPS/ASC proposed rule or for which we received public comments on their proposed CY 2010 OPPS treatment. Certain HCPCS codes are discussed in other sections of this final rule with comment period, as appropriate to the items or services they describe. The final CY 2010 OPPS/ASC treatment of all other HCPCS not explicitly discussed in this final rule with comment period

is displayed in Addendum B to this final rule with comment period.

1. Cardiovascular Services
a. Cardiovascular Telemetry (APC 0209)

For CY 2010, we proposed to continue to assign CPT code 93229 (Wearable mobile cardiovascular telemetry with electrocardiographic recording, concurrent computerized real time data analysis and greater than 24 hours of accessible ECG data storage (retrievable with query) with ECG-triggered and patient-selected events transmitted to a remote attended surveillance center for up to 30 days; technical support for connection and patient instructions for

use, attended surveillance, analysis and physician prescribed transmission of daily and emergent data reports) to APC 0209 (Level II Extended EEG, Sleep, and Cardiovascular Studies), with a proposed payment rate of approximately \$774. Because CPT code 93229 was a new code for CY 2009, in the CY 2009 OPPS/ASC final rule with comment period, we finalized an interim final APC assignment for this code of APC 0209, with a payment rate of approximately \$754.

Comment: Some commenters recommended that CMS assign status indicator "A" (Services furnished to a hospital outpatient that are paid under a fee schedule or payment system other

than OPPS) to CPT code 93229 in order to make this service nonpayable under the OPPS for CY 2010. The commenters argued that there are currently no hospitals that can provide the type of constant monitoring the service described by CPT code 93229 requires. For this reason, according to the commenters, any claims submitted for CPT code 93229 by hospitals are incorrectly coded. The commenters stated that, if CMS chose not to adopt their recommendation and instead chose to continue recognizing CPT code 93229 as payable under the OPPS, CMS should reconsider the proposed assignment of the service to APC 0209. According to the commenters, the service described by CPT code 93229 is not similar clinically or in terms of resource utilization to the other procedures assigned to APC 0209, in particular, the polysomnography procedures described by CPT codes 95810 (Polysomnography; sleep staging with 4 or more additional parameters of sleep, attended by a technologist) and 95811 (Polysomnography; sleep staging with 4 or more additional parameters of sleep, with initiation of continuous positive airway pressure therapy or bilevel ventilation, attended by a technologist), which are the most commonly reported procedures in APC 0209 with the highest number of single claims contributing to the APC's median cost. The commenters urged CMS to assign CPT code 93229 to New Technology APC 1513 (New Technology—Level XIII (\$1,100–\$1,200)) with a payment rate of \$1,150, or New Technology APC 1514 (New Technology—Level XIV (\$1,200–\$1,300)) with a payment rate of \$1,250. The commenters argued that, if any hospitals were to provide the remote cardiac monitoring service described by CPT code 93229, the proposed payment rate for APC 0209 would be less than hospitals' costs for providing this service.

Response: We do not agree with the commenters that we should assign status indicator "A" to CPT code 93229 in order to make the service nonpayable under the OPPS for CY 2010. For each new calendar year, we typically recognize for OPPS payment purposes new HCPCS codes describing services that could be covered by Medicare when provided to hospital outpatients, regardless of whether those services are actually being provided by hospitals at the time the OPPS/ASC final rule with comment period for the upcoming year is issued. We believe that CPT code 93229 describes a diagnostic study that could be provided to Medicare

beneficiaries in the hospital outpatient setting and, therefore, could be covered by Medicare. We also do not agree that the service described by CPT code 93229 is not similar clinically and in terms of resource utilization to the other procedures assigned to APC 0209 for CY 2010. For example, similar to the remote cardiac monitoring service described by CPT code 93229, the polysomnography procedures described by CPT codes 95810 and 95811 involve continuous and simultaneous monitoring and recording of various physiological and pathophysiological parameters, with attendance by a technologist.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to assign CPT code 93229 to APC 0209, with a final CY 2010 APC median cost of approximately \$764.

b. Implantable Loop Recorder Monitoring (APC 0689)

For CY 2010, we proposed to reassign CPT code 93299 (Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular monitor system or implantable loop recorder system, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results) to APC 0689 (Level II Electronic Analysis of Devices), with a proposed payment rate of approximately \$40. In CY 2009, this CPT code was assigned to APC 0209 (Level II Extended EEG, Sleep, and Cardiovascular Studies), with a payment rate of approximately \$754.

Comment: One commenter supported the proposed reassignment of CPT code 93299 to APC 0689 for CY 2010. According to the commenter, the procedure described by CPT code 93299 is similar clinically and in terms of resource utilization to other procedures assigned to APC 0689.

Response: We appreciate the commenter's support of our proposal to reassign CPT code 93299 to APC 0689 for CY 2010. We agree that the procedure described by CPT code 93299 is similar clinically and in terms of resource utilization to other procedures assigned to APC 0689.

After consideration of the public comment we received, we are finalizing our CY 2010 proposal, without modification, to reassign CPT code 93299 to APC 0689, which has a final CY 2010 APC median cost of approximately \$38.

c. Transluminal Balloon Angioplasty (APC 0279)

For CY 2010, we proposed to reassign CPT code 75978 (Transluminal balloon angioplasty, venous (eg, subclavian stenosis), radiological supervision and interpretation) from APC 0083 (Coronary or Non-Coronary Angioplasty and Percutaneous Valvuloplasty) to APC 0279 (Level II Angiography and Venography), with a proposed payment rate of approximately \$2,000.

Comment: Some commenters disagreed with the proposed APC reassignment of CPT code 75978. The commenters noted that CPT code 75978 is a therapeutic interventional procedure that is not similar to the other diagnostic procedures assigned to APC 0279. The commenters requested that CMS continue to assign CPT code 75978 to APC 0083 where they believe the service is most appropriately placed based on considerations of clinical coherence and resource costs.

Response: The proposed CY 2010 median cost for APC 0083 of approximately \$3,380 is significantly higher than the proposed CY 2010 median cost of CPT code 75978 of approximately \$2,597. Given the difference in median costs, we do not believe that we should continue to assign this procedure to APC 0083. After further analysis and review by CMS medical advisors, we believe that CPT code 75978 would be most appropriately assigned to APC 0093 (Vascular Reconstruction/Fistula Repair without Device) for CY 2010 because it is a therapeutic procedure performed on veins, similar to other therapeutic blood vessel procedures that are currently assigned to APC 0093. Further, the CY 2010 final median cost of CPT code 75978 of approximately \$2,597 is very similar to the CY 2010 final median cost of APC 0093 of approximately \$2,378.

After consideration of the public comments we received, we are modifying our proposed CY 2010 reassignment of CPT code 75978 from APC 0083 to APC 0279. In this final rule with comment period, for CY 2010, we are reassigning CPT code 75978 from APC 0083 to APC 0093, which has a final CY 2010 APC median cost of approximately \$2,378.

2. Gastrointestinal Services

a. Change of Gastrostomy Tube (APC 0676)

For CY 2010, we proposed to reassign CPT code 43760 (Change of gastrostomy tube, percutaneous, without imaging or endoscopic guidance) from APC 0121 (Level I Tube or Catheter Changes or Repositioning) to APC 0676

(Thrombolysis and Other Device Revisions), with a proposed CY 2010 payment rate of approximately \$160.

Comment: Some commenters disagreed with the proposed APC reassignment and requested that CMS continue to assign CPT code 43760 to APC 0121 because they believe the gastrostomy tube change procedure shares significant clinical and resource characteristics with other procedures assigned to APC 0121.

Response: Prior to CY 2008, OPSS payment for CPT code 43760 captured both the procedure and the imaging or endoscopic guidance, if used, that was associated with percutaneously changing a gastrostomy tube because its descriptor read, "Change of gastrostomy tube," and the OPSS packages payment for all guidance into payment for the associated procedures. However, effective January 1, 2008, the CPT Editorial Panel revised the code descriptor by adding the words "without imaging or endoscopic guidance" to further clarify that the code should be reported for tube change procedures that do not require imaging or endoscopic guidance. The CPT Editorial Panel further determined that gastrostomy tube placement requiring fluoroscopic or endoscopic guidance should be reported with either CPT code 49450 (Replacement of gastrostomy or cecostomy (or other colonic) tube, percutaneous, under fluoroscopic guidance including contrast injection(s), image documentation and report) or CPT code 43246 (Upper gastrointestinal endoscopy including esophagus, stomach, and either the duodenum and/or jejunum as appropriate; with directed placement of percutaneous gastrostomy tube). Based on the median cost from CY 2008 claims data that reflects the new service reported under CPT code 43760, we believe a reassignment of the CPT code for CY 2010 is necessary.

We disagree with the commenters that CPT code 43760 would be appropriately assigned to APC 0121, which has a median cost of approximately \$426 for CY 2010. We note that the median cost for CPT code 43760 from CY 2007, when the code represented services provided with and without guidance, was higher at approximately \$216, compared with the CY 2008 median cost of the revised procedure code. Claims data from CY 2008 reveal that we have 21,178 single claims (out of 38,246 total claims) for CPT code 43760, with a lower median cost of approximately \$160. The median cost for CPT code 43760 closely aligns with the median cost of approximately \$160 for APC 0676. We note that the procedure for gastrostomy tube placement using

fluoroscopic guidance, specifically CPT code 49450, is assigned to APC 0121, and the procedure for gastrostomy tube placement using endoscopic guidance, specifically CPT code 43246, is assigned to APC 0141 (Level I Upper GI Procedures). We believe that both of these other procedures are appropriately assigned to APCs 0121 and 0141, respectively, based on considerations of clinical and resource homogeneity. As expected, their CPT code-specific median costs that include the cost of fluoroscopy or endoscopic guidance are significantly higher than the median cost of CPT code 43760, which is provided without guidance.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to reassign CPT code 43760 from APC 0121 to APC 0676, which has a final CY 2010 APC median cost of approximately \$160.

b. Laparoscopic Liver Cryoablation (APC 0131)

For CY 2010, we proposed to continue to assign CPT code 47371 (Laparoscopy, surgical, ablation of one or more liver tumor(s); cryosurgical) to APC 0131 (Level II Laparoscopy), with a proposed payment rate of approximately \$3,181.

Comment: One commenter requested that CMS reassign CPT code 47371 from APC 0131 to APC 0174 (Level IV Laparoscopy), which had a proposed payment rate of approximately \$7,766, to better reflect the actual costs of the procedure. The commenter stated that CPT code 47371 is neither similar in resource costs nor clinical characteristics to the other procedures assigned to APC 0131, and that the four single claims for procedure available for ratesetting are not reflective of the costs of the procedure. In addition, the commenter indicated that most of the procedures assigned to APC 0131 describe abdominal biopsy or repair procedures, in contrast to CPT code 47371, which describes cryosurgical ablation of a liver tumor. The commenter noted that there are other similar laparoscopic liver tumor ablation procedures already assigned to APC 0174.

Response: We agree with the commenter's argument that CPT code 47371 would be more appropriately assigned to APC 0174, where other laparoscopic liver and renal ablation procedures are assigned. Although we have few CY 2008 claims for CPT code 47371, our claims data show a higher median cost of approximately \$4,229 for CPT code 47371 based on four single claims out of seven total claims,

compared to the APC median cost of approximately \$3,128 for APC 0131.

We also note that since CPT code 47371 was made effective in CY 2002, the procedure for the code is rarely performed on Medicare beneficiaries in the HOPD based on analysis of our hospital outpatient claims data. Based upon OPSS claims submitted from CY 2002 through CY 2008, the median cost for this code has varied widely, perhaps due to the small volume of claims annually. Specifically, the historical median cost for CPT code 47371 has ranged from \$1,850 based on two single claims to \$6,839 based on one single claim. Although this procedure is not commonly performed on Medicare beneficiaries in the HOPD, because we believe CPT code 47371 is similar in clinical characteristics and resource costs to the other procedures currently assigned to APC 0174, we agree with the commenter's recommendation.

After consideration of the public comment we received, we are modifying our CY 2010 proposal and assigning CPT code 47371 to APC 0174, which has a final CY 2010 APC median cost of approximately \$7,342.

c. Cholangioscopy (APC 0151)

The CPT Editorial Panel created a new add-on code for cholangioscopy, CPT code 43273 (Endoscopic cannulation of papilla with direct visualization of common bile duct(s) and/or pancreatic ducts (List separately in addition to code(s) for primary procedure), effective January 1, 2009. We assigned CPT code 43273 to APC 0151 (Endoscopic Retrograde Cholangio-Pancreatography (ERCP)) on an interim final basis in the CY 2009 OPSS/ASC final rule with comment period (73 FR 69030), and the CPT code was flagged with comment indicator "NI" to indicate that its OPSS treatment was open to comment on that final rule with comment period. For CY 2010, we proposed to continue the assignment of CPT code 43273 to APC 0151, with a proposed payment rate of approximately \$1,527.

At the August 2009 APC Panel meeting, the APC Panel heard a public presentation recommending that CPT code 43273 be reassigned to APC 0152 (Level I Percutaneous Abdominal and Biliary Procedures). However, the APC Panel recommended that CPT code 43273 continue to be assigned to APC 0151.

Comment: One commenter on the CY 2009 OPSS/ASC final rule with comment period and again on the CY 2010 OPSS/ASC proposed rule recommended that CPT code 43273 be reassigned to APC 0152 and that CMS

rename APCs 0151 and 0152 to accommodate the reassignment. The commenter provided cost information for CPT code 43273 in a New Technology APC application previously filed with CMS, estimating that the cost of the cholangioscopy procedure is approximately \$2,958. Because the procedure is always performed with an ERCP procedure, the commenter estimated that the combined cost of ERCP and cholangioscopy is approximately \$4,484 by adding the CY 2008 median cost of APC 0151 to the estimated cost of the cholangioscopy procedure. The commenter pointed out that, because all ERCP CPT codes, which are assigned to APC 0151, have a status indicator of "T" (Significant Procedure, Multiple Reduction Applies), under CMS' proposal, CPT code 43273 would be paid at 50 percent of the CY 2010 proposed payment rate for APC 0151, or \$757, a rate that is approximately \$2,200 less than the reported cost of \$2,958 for the cholangioscopy procedure alone. The commenter further estimated the cost of disposable devices alone for cholangioscopy in combination with ERCP to be approximately \$2,064. The commenter argued that the proposed CY 2010 payment hospitals would receive for the two procedures of approximately \$2,271 would barely cover the device costs of \$2,064, and not the additional procedure costs. The commenter maintained that if CMS reassigned CPT code 43273 to APC 0152, payment for the combination of the two procedures would be approximately \$2,821, partially closing the gap between OPPS payment and the commenter's estimated combined cost of the two procedures of \$4,484.

The commenter explained that cholangioscopy is a complex, resource-intensive procedure requiring additional physician training, which adds 45 minutes to the ERCP procedure, for a total of approximately 112 minutes for the two procedures. The commenter also asserted that the clinical intensity of cholangioscopy is closer to the non-draining percutaneous procedures assigned to APC 0152 than to the ERCP procedures assigned to APC 0151. Further, the commenter explained that the primary clinical difference between non-draining percutaneous procedures and CPT code 43273 is the method of access to the biliary and pancreatic area, noting that a small incision is required for the percutaneous procedures and the use of an additional endoscope for cholangioscopy.

The commenter also recommended that APC 0151 be renamed "Level I Hepatobiliary Procedures" and APC

0152 be renamed "Level II Hepatobiliary Procedures," and that lower complexity hepatobiliary procedures be assigned to APC 0151 and higher complexity hepatobiliary procedures, including percutaneous procedures and cholangioscopy, be assigned to APC 0152. The commenter believed that renaming and reconfiguring APCs 0151 and 0152 would improve the clinical homogeneity of the APCs and appropriately account for differences in the resource costs of biliary procedures. The commenter argued that CMS has previously renamed existing APCs, created multilevel APCs for specific clinical areas, and configured APCs to incorporate surgical procedures that include a variety of access types.

Response: Because CPT code 43273 was new for CY 2009, we do not yet have cost information for the procedure based upon hospital claims for CY 2010 ratesetting. According to our established policy, a New Technology APC applicant's cost estimate is only one source of information we consider in determining the cost of a new service for purposes of its initial APC assignment under the OPPS (66 FR 59900; 73 FR 68614). We generally assign new CPT codes to an APC based on input from a variety of sources, including, but not limited to, review of the resource costs and clinical similarity of the service to existing procedures; input from CMS medical advisors; information from interested specialty societies; and review of all other information available to us. We note that, while CPT code 43273 is new for CY 2009, cholangioscopy in association with ERCP procedures has been performed, using a variety of technologies, for many years. We expect that its costs have already been incorporated into the OPPS, either packaged into payment for the associated ERCP procedures or under an unlisted CPT procedure code.

We continue to believe that APC 0151 is an appropriate APC assignment for CPT code 43273 for CY 2010, based on consideration of the procedure's clinical and resource characteristics. CPT code 43273, which is an add-on code to ERCP procedures, clinically resembles the ERCP procedures that also are assigned to APC 0151 because they all use an endoscope to examine various components of the hepatobiliary system. While cholangioscopy extends ERCP procedures to visualize the common bile duct(s) and/or pancreatic duct(s) through use of an additional endoscope, many of the other ERCP procedures assigned to APC 0151 also have additional procedures associated with them that require the use of other devices or equipment as well. We do not

agree with the commenter that percutaneous biliary procedures that require incisions and, in some cases drainage tubes, are more clinically similar to cholangioscopy than ERCP procedures that also examine the hepatobiliary system with an endoscope.

Furthermore, we understand that there are a variety of technologies that can be used to perform cholangioscopy with variable resource costs. Therefore, we do not believe that the commenter's estimate based on one type of new cholangioscopy technology is necessarily an appropriate representation of the cost of the procedure described by CPT code 43273 to hospitals. We believe that the cost of cholangioscopy is similar to the cost of ERCP procedures that require similar procedure time and devices, and that CPT code 43273 is appropriately assigned to APC 0151 along with these ERCP procedures. Moreover, we believe that applying the multiple procedure discount to payment for cholangioscopy as a result of its status indicator "T" and its routine performance with ERCP procedures that also are assigned status indicator "T" is appropriate because cholangioscopy is performed directly after ERCP and much of the preparatory procedure work is performed during the ERCP.

Finally, because we are not reassigning CPT code 43273 to APC 0152, no renaming of APCs 0151 and 0152 is warranted because we are maintaining the endoscopic and percutaneous biliary procedures in separate APCs.

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to maintain the assignment of CPT code 43273 to APC 0151, which has a final CY 2010 APC median cost of approximately \$1,510.

d. Laparoscopic Hernia Repair (APC 0131)

For CY 2010, we proposed to reassign the following six laparoscopic hernia repair CPT codes that were new for CY 2009 from APC 0130 (Level I Laparoscopy), with a proposed payment rate of approximately \$2,538, to APC 0131 (Level II Laparoscopy), with a proposed payment rate of approximately \$3,181: CPT code 49652 (Laparoscopy, surgical, repair, ventral, umbilical, spigelian or epigastric hernia (includes mesh insertion, when performed); reducible); CPT code 49653 (Laparoscopy, surgical, repair, ventral, umbilical, spigelian or epigastric hernia (includes mesh insertion, when performed); incarcerated or

strangulated); CPT code 49654 (Laparoscopy, surgical, repair, incisional hernia (includes mesh insertion, when performed); reducible); CPT code 49655 (Laparoscopy, surgical, repair, incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated); CPT code 49656 (Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); reducible); and CPT code 49657 (Laparoscopy, surgical, repair, recurrent incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated).

Comment: One commenter indicated that the resource costs associated with the six laparoscopic hernia repair CPT codes are significantly greater than the proposed payment rate of approximately \$3,181 for APC 0131 and suggested that the procedures in APC 0132 (Level III Laparoscopy) are more similar to the six laparoscopic hernia repair codes because they have similar resource costs. The commenter requested that CMS review the clinical characteristics and resource costs associated with the six CPT codes and consider reassigning these codes to APC 0132, which had a CY 2010 proposed payment rate of approximately \$4,903. In addition, the commenter provided an analysis of CY 2008 claims data for cases reported under the unlisted CPT code that would previously have been reported for these procedures (CPT code 49659 (Unlisted laparoscopy procedure, hernioplasty, herniorrhaphy, herniotomy)), combined with the ICD-9 diagnoses codes specific to hernia of the abdominal cavity. Because these codes were new for CY 2009, they were assigned comment indicator "NI" in the CY 2009 OPSS/ASC final rule with comment period to indicate that they were subject to comment. For the CY 2009 OPSS/ASC final rule with comment period, the same commenter submitted a similar comment and data analysis of CY 2007 OPSS claims. The commenter found 3,456 claims that met the same case criteria in the analysis, with a median cost of approximately \$4,261. The commenter believed that this cost from historical hospital claims data represented the hospital cost of procedures that would be reported with one of the laparoscopic hernia repair CPT codes in CY 2010.

Response: We have no hospital claims data for CPT codes 49652 through 49657 because these CPT codes were new for CY 2009. However, we agree with the commenter that procedures described by these CPT codes were likely commonly furnished in the HOPD in CY 2008 and reported under CPT code

49659. Taking into consideration the commenter's analyses of CY 2007 and CY 2008 claims and performing a detailed clinical review, we agree with the commenter that the resource costs for the six laparoscopic hernia repair CPT codes, specifically CPT codes 49652 through 49657, more closely align with other services assigned to APC 0132. In addition, from a clinical perspective, we also believe that APC 0132 is an appropriate APC assignment for these codes because APC 0132 most accurately recognizes the complexity of the laparoscopic hernia repair codes.

After consideration of the public comments we received, we are modifying our CY 2010 proposals and reassigning CPT codes 49652, 49653, 49654, 49655, 49656, and 49657 from APC 0130 to APC 0132, which has a final CY 2010 APC median cost of approximately \$4,873.

3. Genitourinary Services

a. Percutaneous Renal Cryoablation (APC 0423)

For CY 2010, we proposed to continue to assign CPT code 50593 (Ablation, renal tumor(s), unilateral, percutaneous, cryotherapy) to APC 0423 (Level II Percutaneous Abdominal and Biliary Procedures), with a proposed payment rate of approximately \$3,329. This CPT code was new in CY 2008. However, the same service was previously described by CPT code 0135T (Ablation renal tumor(s), unilateral, percutaneous, cryotherapy). We note that, for CY 2007, based upon the APC Panel's recommendation made at its March 2006 meeting, we reassigned CPT code 50593 (then CPT code 0135T) from APC 0163 (Level IV Cystourethroscopy and other Genitourinary Procedures) to APC 0423, effective January 1, 2007.

Comment: One commenter expressed concern that the proposed payment rate of approximately \$3,329 for CPT code 50593 is inadequate because the payment does not accurately account for the costs incurred by hospitals in performing this procedure. The commenter argued that the low proposed payment rate for CPT code 50593 is attributable to claims data that do not accurately capture the full costs of CPT code 50593 because almost half of the single claims do not contain the HCPCS code and associated charge for the required device, specifically HCPCS code C2618 (Probe, cryoablation). The commenter requested that CMS designate CPT code 50593 as a device-dependent procedure, which would require hospitals to submit claims with the appropriate device HCPCS code, assign the procedure to its own APC,

and set the payment rate for that APC based on claims for CPT code 50593 reported with HCPCS code C2618. The commenter's analysis concluded that the median cost on which payment for CPT code 50593 would be based if these recommendations were adopted would be approximately \$5,469, resulting in more accurate payment for the procedure and continued Medicare beneficiary access to percutaneous renal cryoablation in the HOPD.

Response: We believe that CPT code 50593 is appropriately assigned to APC 0423 based on clinical and resource considerations when compared to other procedures also proposed for assignment to APC 0423 for CY 2010. As we stated in the CY 2007 OPSS final rule with comment period (71 FR 68049 through 68050), the CY 2008 OPSS/ASC final rule with comment period (72 FR 66709), and the CY 2009 OPSS/ASC final rule with comment period (73 FR 68611), we initially revised the APC assignment for the percutaneous renal cryoablation procedure from APC 0163 to APC 0423 in CY 2007 based on the APC Panel's recommendation to reassign the procedure to APC 0423. The median costs of the four HCPCS codes assigned to APC 0423 for CY 2010 range from approximately \$3,159 to \$4,670, well within the 2 times rule for the OPSS payment groups. Even if we were to calculate the median cost for CPT code 50593 using only claims that also contain HCPCS code C2618, estimated by the commenter to be approximately \$5,469 using proposed rule data, the grouping of these procedures in the same APC would not violate the 2 times rule. Further, we note that all four of these procedures are relatively low volume, with fewer than 1,100 total claims each for CY 2008 and fewer than 700 single claims each for ratesetting. We believe that grouping these clinically similar, low volume procedures for the percutaneous ablation of renal, liver, or pulmonary tumors in the same payment group helps to promote payment stability for these low volume services.

We also do not agree that CPT code 50593 should be designated as a device-dependent procedure and assigned to its own separate APC. We have only 226 single claims (out of 513 total claims) for CPT code 50593 from CY 2008 and, as such, the procedure has the second lowest frequency of the four procedures assigned to APC 0423. We believe this relatively low volume procedure should be assigned to a payment group with similar services, as we have proposed, in order to promote payment stability and encourage hospital efficiency. In addition, we do not identify individual

HCPCS codes as device-dependent HCPCS codes under the OPPS. Rather, we first consider the clinical and resource characteristics of a procedure and determine the most appropriate APC assignment. When we determine that we should assign a procedure to an APC that is device-dependent, based on whether that APC has been historically identified under the OPPS as having very high device costs, we then consider the implementation of device edits, as appropriate. We note that the identification of device-dependent APCs was particularly important in the early years of the OPPS when separate pass-through payment for many implantable devices expired. At that time, a variety of methodologies to package the costs of those devices into procedural APCs was utilized over several years to ensure appropriate incorporation of the device costs into the procedure payments. At this point in time, hospitals have significantly more experience reporting HCPCS codes for packaged and separately payable items and services under the OPPS and the payment groups are more mature. We believe our standard ratesetting methodology typically results in appropriate payment rates for new procedures that utilize devices, as well as those that do not use high cost devices. In recent years, we have not encountered circumstances whereby we have had to establish new device-dependent APCs because we were not able to accommodate the clinical and resource characteristics of a procedure by assigning it to an existing APC (whether device-dependent or non-device-dependent), and the procedure described by CPT code 50593 is no exception.

While all of the procedures assigned to APC 0423 require the use of implantable devices, for many of the procedures, there are no Level II HCPCS codes that describe all of the technologies that may be used in the procedures. Therefore, it would not be possible for us to develop procedure-to-device edits for all of the CPT codes assigned to APC 0423. Under the OPPS, there are many other procedures that require the use of implantable devices that, because they are assigned to OPPS APCs that are not device-dependent, do not have procedure-to-device edits applied, even if those claims processing edits would be feasible. We believe that our payments for procedures that utilize high cost devices are appropriate for those services, even when those services are grouped with other procedures that either do not require the use of implantable devices or that utilize

devices that are not described by specific Level II HCPCS codes.

When reporting CPT code 50593, we expect hospitals to also report the device HCPCS code C2618, which is associated with this procedure. We also remind hospitals that they must report all of the HCPCS codes that appropriately describe the items used to provide services, regardless of whether the HCPCS codes are packaged or paid separately. If hospitals use more than one probe in performing CPT code 50593, we expect hospitals to report this information on the claim and adjust their charges accordingly. Hospitals should report the number of cryoablation probes used to perform CPT code 50593 as the units of HCPCS code C2618 which describes these devices, with their charges for the probes. Since CY 2005, we have required hospitals to report device HCPCS codes for all devices used in procedures if there are appropriate HCPCS codes available. In this way, we can be confident that hospitals have included charges on their claims for costly devices used in procedures when they submit claims for those procedures.

After consideration of the public comment we received, we are finalizing our CY 2010 proposal, without modification, to continue to assign CPT code 50593 to APC 0423, which has a final CY 2010 APC median cost of approximately \$3,430.

b. Hemodialysis (APC 0170)

Currently, APC 0170 (Dialysis) contains two HCPCS codes: CPT code 90935 (Hemodialysis procedure with single physician evaluation) and HCPCS code G0257 (Unscheduled or emergency dialysis treatment for an ESRD patient in an HOPD that is not certified as an ESRD facility). Hospital outpatient and emergency departments sometimes must furnish hemodialysis to patients who do not have ESRD and, in these cases, they would report CPT code 90935 for the service. Under the Medicare ESRD benefit, to be covered by Medicare, routine dialysis required by a Medicare ESRD beneficiary must be furnished in a certified ESRD facility. Most HOPDs and emergency departments are not certified by Medicare to furnish routine dialysis to Medicare ESRD patients and, therefore, are not paid under the ESRD benefit. However, there are a limited number of specific cases in which Medicare pays under the OPPS for an ESRD patient to receive unscheduled dialysis in an outpatient department of a hospital that does not have an ESRD-certified facility. These provisions were established in the CY 2003 OPPS final rule with comment period (67 FR 66803

through 66805). Specifically, Medicare pays hospitals under the OPPS for dialysis for ESRD patients under the following limited circumstances as specified in the Medicare Claims Processing Manual, Pub. 100-04, Chapter 4, Section 200.2:

- Dialysis is performed following or in connection with a dialysis-related procedure such as a vascular access procedure or a blood transfusion;
- Dialysis is performed following treatment for an unrelated medical emergency; or
- Emergency dialysis is performed for ESRD patients who would otherwise have to be admitted as inpatients in order for the hospital to receive payment.

When these criteria are met, the hospital reports HCPCS code G0257, which we proposed to assign to APC 0170 for CY 2010, with a proposed payment of approximately \$442.

Comment: One commenter, who recognized that Medicare pays under the OPPS for hemodialysis for ESRD patients under very specific, limited circumstances, asked whether hospitals are permitted to bill and be paid under the OPPS for routine hemodialysis for ESRD patients who are unable to arrange for routine hemodialysis at a Medicare-certified ESRD facility.

Response: As the commenter noted, Medicare pays under OPPS for dialysis for a beneficiary with ESRD only under the exceptional circumstances specified in the Medicare Claims Processing Manual, Pub. 100-04, Chapter 4, Section 200.2 that are listed above. Routine treatments in hospitals that do not have an ESRD facility are not payable under the OPPS. A hospital that would like to provide routine hemodialysis to ESRD patients should contact the State survey and certification agency to pursue ESRD certification of an outpatient dialysis unit.

After consideration of the public comment we received, we continue to believe that our policy governing the payment of dialysis services in HOPDs and emergency departments is appropriate. We are not making any change to this policy for CY 2010. The final CY 2010 median cost of APC 0170 for hemodialysis is approximately \$456.

c. Radiofrequency Remodeling of Bladder Neck (APC 0165)

For CY 2010, we proposed to continue to assign Category III CPT code 0193T (Transurethral, radiofrequency micro-remodeling of the female bladder neck and proximal urethra for stress urinary incontinence) to APC 0165 (Level IV Urinary and Anal Procedures) with a

proposed payment rate of approximately \$1,353. This CPT code was new for CY 2009 and was assigned to APC 0165 on an interim final basis in the CY 2009 OPPI/ASC final rule with comment period.

At the August 2009 APC Panel meeting, a presenter requested that the APC Panel recommend that CMS reassign CPT code 0193T to either APC 0202 (Level VII Female Reproductive Procedures) or APC 0168 (Level II Urethral Procedures) for CY 2010 based on resource intensity and therapeutic benefit. The presenter claimed that the device cost associated with CPT code 0193T is comparable to the single-use devices that are used with certain procedures assigned to APC 0202, specifically those procedures described by CPT codes 58356 (Endometrial cryoablation with ultrasonic guidance, including endometrial curettage, when performed); 58565 (Hysteroscopy, surgical; with bilateral fallopian tube cannulation to induce occlusion by placement of permanent implants); and 57288 (Sling operation for stress incontinence (e.g., fascia or synthetic)). The presenter indicated that, unlike procedures assigned to APC 0202 that require costly medical devices, the costs of single-use medical devices for procedures assigned to APC 0165 are very minimal. After a discussion, the APC Panel recommended that CMS maintain the APC assignment of CPT code 0193T to APC 0165, as proposed, for CY 2010.

Comment: Some commenters disagreed with CMS' proposal to continue to assign CPT code 0193T to APC 0165. The commenters believed that the proposed payment for the procedure would not pay appropriately for the costs incurred by hospitals to perform the procedure, especially because the procedure utilizes a costly, single-use, disposable medical device. The commenters argued that APC 0202, which had a proposed CY 2010 proposed payment rate of approximately \$2,991, contains procedures that are very similar to CPT code 0193T. Specifically, the commenters indicated that CPT code 0193T is similar in clinical characteristics and resource costs to CPT codes 58356, 58565, and 57288. The commenters added that the probe used in the procedure reported with CPT code 0193T costs \$1,095 and, overall, the total procedure cost that includes the cost of the probe is approximately \$2,473, which is comparable to the proposed CY 2010 payment rate for APC 0202.

Another commenter was concerned that, at the August 2009 APC Panel meeting, the APC Panel members may

have been confused about the surgical nature of CPT code 0193T. Specifically, the commenter believed that the APC Panel concluded that all of the procedures assigned to APC 0202 are surgical in nature, whereas the procedure described by CPT code 0193T is not, which resulted in the APC Panel's recommendation to continue to assign this code to APC 0165. The commenter clarified that CPT code 0193T is similar to surgical CPT codes 58565 and 58356, which are both assigned to APC 0202 based on their resource use and clinical characteristics. The commenter further noted that, although CPT code 0193T may be performed in the physician's office, in the Medicare population, this procedure is more likely to be performed in the hospital outpatient setting because of medical conditions and comorbidities experienced by Medicare patients.

Response: As a new Category III CPT code for CY 2009, we do not yet have hospital claims data for the procedure. Category III CPT codes are temporary codes that describe emerging technology, procedures, and services, and they are created by the AMA to allow for data collection for new services or procedures. Under the OPPI, we generally assign a payment rate to a new Category III CPT code based on input from a variety of sources, including but not limited to, review of resource costs and clinical homogeneity of the service to existing procedures, information from specialty societies, input from CMS medical advisors, and other information available to us. Based on our review of the clinical characteristics of CPT code 0193T, as well as the other procedures assigned to APC 0165 and APC 0202 that was recommended by the commenters, and the APC Panel discussion and recommendation regarding the procedure, we continue to believe that APC 0165 is the most appropriate APC assignment for CPT code 0193T for CY 2010. We understand that CPT code 0193T is a minimally invasive procedure for female stress urinary incontinence that requires a relative brief time in the procedure room. We do not agree with the commenters that the procedures assigned to APC 0202 that involve fallopian tube cannulation, endometrial ablation, or implantation of a sling for stress urinary incontinence are sufficiently similar to the procedure described by CPT code 0193T based on procedure duration, device utilization, use of guidance, or other characteristics to warrant reassignment of CPT code 0193T to APC 0202 based on considerations of clinical homogeneity.

Rather, we believe that assignment to APC 0165 will appropriately account for the device and procedure costs of CPT code 0193T.

After consideration of the public comments we received and the APC Panel recommendation from the August 2009 meeting, we are finalizing our CY 2010 proposal, without modification, to continue to assign CPT code 0193T to APC 0165, which has a final CY 2010 APC median cost of approximately \$1,337.

d. Change of Bladder Tube (APC 0121)

For CY 2010, we proposed to reassign CPT code 51710 (Change of cystostomy tube; complicated) from APC 0427 (Level II Tube or Catheter Changes or Repositioning) to APC 0121 (Level I Tube or Catheter Changes or Repositioning), with a proposed CY 2010 payment rate of approximately \$428.

Comment: One commenter supported the proposed APC reassignment of CPT code 51710 from APC 0427 to APC 0121.

Response: We appreciate the commenter's support. Hospital outpatient claims data revealed that we have approximately 267 single claims (out of 431 total claims) for CPT code 51710, with a final CY 2010 median cost of approximately \$446. The final CY 2010 median cost for CPT code 51710 closely aligns with the final CY 2010 median cost of approximately \$426 for APC 0121. We believe that CPT code 51710 is appropriately reassigned to APC 0121 based on clinical and resource considerations.

After consideration of the public comment we received, we are finalizing our CY 2010 proposal, without modification, to reassign CPT code 51710 from APC 0427 to APC 0121, which has a final CY 2010 APC median cost of approximately \$426.

4. Nervous System Services

a. Pain-Related Procedures (APCs 0203, 0204, 0206, 0207, 0221, 0224, and 0388)

We proposed to set the CY 2010 payment rates for APCs 0203 (Level IV Nerve Injections), 0204 (Level I Nerve Injections), 0206 (Level II Nerve Injections), 0207 (Level III Nerve Injections), 0221 (Level II Nerve Procedures), 0224 (Implantation of Catheter/Reservoir/Shunt) and 0388 (Discography) based on the median costs determined under the OPPI standard ratesetting. Among the CPT codes included in these APCs are: 62350 (Implantation, revision, or repositioning of tunneled intrathecal or epidural catheter for long-term medication

administration via an external pump or implantable reservoir/infusion pump; with laminectomy); 62355 (Removal of previously implanted intrathecal or epidural catheter); 62365 (Removal of subcutaneous reservoir or pump, previously implanted for intrathecal or epidural infusion); 64472 (Injection, anesthetic agent and/or steroid, paravertebral facet joint or facet joint nerve; cervical or thoracic, each additional level (list separately in addition to code for primary procedure)); 64476 (Injection, anesthetic agent and/or steroid, paravertebral facet joint or facet joint nerve; lumbar or sacral, each additional level (list separately in addition to code for primary procedure)); 64480 (Injection, anesthetic agent and/or steroid, transforminal epidural; cervical or thoracic, each additional level (list separately in addition to code for primary procedure)); 64623, (Destruction by neurolytic agent, paravertebral facet joint nerve; lumbar or sacral, each additional level, (list separately in addition to code for primary procedure)); 64627 (Destruction by neurolytic agent, paravertebral facet joint nerve; cervical or thoracic, each additional level, (list separately in addition to code for primary procedure)); 72285 (Discography, cervical or thoracic, radiological supervision and interpretation); and 72295 (Discography, lumbar, radiological supervision and interpretation).

Comment: One commenter objected to the proposed CY 2010 payment rates for CPT codes 64472, 64476, 64480, 64623, and 64627, which the commenter believed have declined 28 percent to 48 percent since CY 2007. The commenter also objected to the proposed CY 2010 increase in payments for CPT codes 72285 and 72295 on the basis that their proposed payment rates are unreasonable because they are not procedures. The commenter added that CPT codes 62290 (Injection procedure for discography, each level, lumbar) and 62291 (Injection procedure for discography, each level, cervical or thoracic) are the related procedures,

which are paid at an unreasonably low rate.

Response: OPPS payment rates fluctuate based on a variety of factors, including, but not limited to, changes in the mix of hospitals billing the services, differential changes in hospital charges and costs for the services, and changes in the volumes of services reported. Therefore, the median costs on which the OPPS payment rates are based vary from one year to another. We note that the median costs of all of the APCs to which CPT codes 64472, 64476, 64480, 64623, and 64627 are assigned increased between CY 2009 and CY 2010. For CPT codes 64472 and 64480, the median cost of APC 0206 to which they are assigned increased from approximately \$236 in CY 2009 to approximately \$249 in CY 2010. In the case of CPT codes 64476 and 64627, the median cost of APC 0204 to which they are assigned increased from approximately \$161 in CY 2009 to approximately \$171 in CY 2010. Lastly, for CPT code 64623, the median cost of APC 0207 to which the code is assigned increased from approximately \$463 in CY 2009 to approximately \$481 in CY 2010.

CPT codes 72285 and 72295, both of which are assigned to APC 0388, are “T” packaged codes and, as such, are paid separately only if there is no separately paid surgical procedure with a status indicator of “T” on the same claim. When there is a separate payment made for these codes, the payment is not only payment for the code itself but also includes payment for all services reported on the claim that are always packaged (that is, those with a status indicator of “N”). The median cost of APC 0388 to which CPT codes 72285 and 72295 are assigned for payment when separate payment can be made increased from approximately \$1,470 in CY 2009 to approximately \$1,727 in CY 2010, reflecting the cost of all conditionally and unconditionally packaged services on the claim. Payment for CPT codes 62290 and 62291 is always packaged into payment for the independent, separately paid procedures with which these codes are reported because we believe that these codes are ancillary and supportive to other major separately paid procedures

and that they are furnished only as an ancillary and dependent part of an independent separately paid procedure.

Comment: One commenter disagreed with the proposed CY 2010 payment rates for CPT codes 62355, 62350, 62363 (we note that this code did not exist in CY 2008 and does not exist in CY 2009; the commenter did not provide a description of the procedure that would enable us to identify the code and respond to the comment), and 62365. The commenter believed that access to these services is very limited as a result of payment reductions for these procedures.

Response: The final median costs for the APCs to which CPT codes 62350 and 62365 are assigned for CY 2010 increased from CY 2009 to CY 2010, while the final median cost for APC 0203 to which CPT code 62355 is assigned declined over that same time period. Specifically, CPT code 62350 is assigned to APC 0224, which has a CY 2009 median cost of approximately \$2,715 and a final CY 2010 median cost of approximately \$2,740. Similarly, CPT code 62365 is assigned to APC 0221, which has a CY 2009 median cost of approximately \$2,322 and a final CY 2010 median cost of approximately \$2,490. In contrast, CPT code 62355 is assigned to APC 0203, which has a CY 2009 median cost of approximately \$928 that declined to approximately \$885 in CY 2010. The increased median costs of APCs 0221 and 0224 do not create barriers to care for these procedures. Moreover, we do not believe that the modest reduction in median cost for APC 0203 would cause hospitals to cease to furnish the service.

After consideration of the public comments we received, we are finalizing our CY 2010 proposals, without modification, to pay for CPT codes 62350, 62355, 62365, 64472, 64476, 64480, 64623, 64627, 72285, and 72295 through APCs 0203, 0204, 0206, 0207, 0221, 0224, and 0388. The final CY 2010 median costs of the relevant APCs are displayed in Table 24 below. For comparative purposes, we also are showing in the table the median costs on which the CY 2009 OPPS payments are based.

TABLE 24—MEDIAN COSTS FOR SELECTED APCs FOR PAIN-RELATED PROCEDURES MENTIONED BY COMMENTERS

APC	APC title	CY 2009 approximate median cost	Proposed CY 2010 approximate median cost	Final CY 2010 approximate median cost
0203	Level IV Nerve Injections	\$929	\$1,066	\$885
0204	Level I Nerve Injections	161	181	171
0206	Level IV Nerve Injections	236	254	249
0207	Level III Nerve Injections	463	504	481

TABLE 24—MEDIAN COSTS FOR SELECTED APCs FOR PAIN-RELATED PROCEDURES MENTIONED BY COMMENTERS—
Continued

APC	APC title	CY 2009 approximate median cost	Proposed CY 2010 approximate median cost	Final CY 2010 approximate median cost
0221	Level II Nerve Procedures	2,322	2,521	2,490
0224	Implantation of Catheter/Reservoir/Shunt	2,715	2,769	2,740
0388	Discography	1,470	1,769	1,727

b. Magnetoencephalography (APCs 0065 and 0067)

Three CPT codes describe magnetoencephalography services: 95965 (Magnetoencephalography (MEG), recording and analysis; for spontaneous brain magnetic activity (e.g. epileptic cerebral cortex localization)); 95966 (Magnetoencephalography (MEG), recording and analysis; for spontaneous brain magnetic activity (e.g. epileptic cerebral cortex localization) for evoked magnetic fields, single modality (e.g. sensory, motor, language or visual cortex localization)); and 95967 (Magnetoencephalography (MEG), recording and analysis; for spontaneous brain magnetic activity (e.g. epileptic cerebral cortex localization), for evoked magnetic fields, each additional modality (e.g. sensory, motor language, or visual cortex localization (List separately in addition to code for primary procedure)). These CPT codes were originally assigned to New Technology APCs but, beginning in CY 2006 and for every year thereafter, these codes have been assigned to clinical APCs on the basis of the clinical and resource characteristics of the services. For CY 2010, we proposed to continue to assign CPT code 95965 to APC 0067 (Level III Stereotactic Radiosurgery, MRgFUS and MEG) with a proposed payment rate of approximately \$3,507, and we proposed to continue to assign CPT codes 95966 and 96967 to APC 0065 (Level II Stereotactic Radiosurgery, MRgFUS and MEG), with a proposed payment rate of approximately \$894.

Comment: Several commenters requested that CMS restore the payment rates for CPT codes 95965, 95966, and 95967 to the levels at which they were paid under New Technology APCs in CY 2005 of \$5,250, \$1,450, and \$950, respectively. They believed the payment rates for CYs 2006, 2007, 2008, and 2009 and the proposed rate for CY 2010 were based on median cost calculations that understated the full costs of the services. The commenters asked CMS to create a cost center on the Medicare cost report that would be used solely to house hospitals' costs of MEG and

indicated that the NUBC had approved a request for a dedicated revenue code for the reporting of charges for MEG. The commenters argued that if CMS would create a cost center for the costs of MEG from which a specific CCR could be developed for application to MEG charges, the resulting median cost would be a more accurate reflection of the cost of MEG and would, therefore, result in more appropriate payment. One commenter submitted eight claims for MEG, stating that its Medicare contractor had approved use of a subscript for a specific cost center on the cost report to house the costs of MEG. The commenter asked if these claims were used in ratesetting, provided the CCR the commenter calculated using the costs and charges for MEG that would be reported on the cost report line that contained only MEG costs, and asked if CMS calculated the costs of these claims using the specific CCR for MEG services.

Response: We assign new services to New Technology APCs only until we believe that we have sufficient historical hospital claims data reflecting hospital costs to reassign them to appropriate clinical APCs. We initially assigned MEG services to New Technology APCs based on the information available to us at the time about the expected hospital costs. For CY 2006, we believed that we had sufficient claims data to enable us to make informed decisions regarding the proper clinical APCs for assignment of MEG services. We note that the volumes of claims for MEG services have remained stable since we moved them to clinical APCs in CY 2006. We have no reason to believe that the costs that we have derived from our standard cost estimation process for the CY 2010 OPPS fail to appropriately reflect the relative costs of MEG services in relation to the costs of other services paid under the OPPS, nor do we have reason to believe that payment at the rates under which these services were paid under the New Technology APCs in CY 2005 are justified.

With regard to whether individual claims that were submitted by one commenter were used to set the median

costs on which the CY 2010 MEG payment rates are based, we note that the claims we use to set the payment rates under the OPPS are available for purchase and a provider that wishes to see if particular claims were used can attain the claims file and perform any analysis they choose. We are not able to create provider-specific revenue code-to-cost center crosswalks that would use unique cost report subscripts that hospitals choose to create for particular services. In the case of a hospital reporting MEG costs on a subscripted line 54.01, the costs would be included as costs in cost center 5400 (the cost center to which 54.01 is a subscripted line), the standard cost center for electroencephalography. In accordance with our standard revenue code-to-cost center crosswalk, we would apply the CCR for this cost center to the charges reported under revenue code 0740 (EEG (Electroencephalogram); General Classification)) if there is no CCR available for nonstandard cost center 3280 (EKG and EEG).

We recognize that the NUBC created a new revenue code for MEG on August 11, 2009, to be effective for services reported on or after April 1, 2010, if a hospital chooses to use it. We anticipate that we will propose to use claims for services furnished in CY 2010 to calculate OPPS payment rates for CY 2012. Therefore, for the CY 2012 OPPS, we expect that we will propose to determine the primary, secondary and tertiary (if any) CCRs to be applied to the new revenue code as part of our standard ratesetting process for the CY 2012 OPPS. With regard to requests for a dedicated cost center for MEG services, the revised draft hospital cost report Form CMS-2552-10 went on public display through the **Federal Register** (74 FR 31738), with a comment period that ended on August 31, 2009. We will consider whether creation of such a cost center is appropriate in our review of all public comments on the proposed revisions to the cost report.

After consideration of the public comments we received, we are finalizing our CY 2010 proposals, without modification, to continue to

assign CPT code 95965 to APC 0067, with a final CY 2010 median cost of approximately \$3,539, and to continue to assign CPT codes 95966 and 96967 to APC 0065, with a final CY 2010 median cost of approximately \$954.

5. Ocular Services

a. Insertion of Anterior Segment Aqueous Drainage Device (APC 0234)

The CPT Editorial Panel created Category III CPT code 0191T (Insertion of anterior segment aqueous drainage device, without extraocular reservoir; internal approach), effective on July 1, 2008. We assigned CPT code 0191T to APC 0234 (Level III Anterior Segment Eye Procedures), effective July 1, 2008, and maintained this APC assignment for CY 2009. For CY 2010, we proposed to continue the assignment of CPT code 0191T to APC 0234, with a proposed payment rate of approximately \$1,639.

Comment: One commenter asserted that the assignment of CPT code 0191T to APC 0234 for CY 2010 would not provide sufficient payment to hospitals and ASCs to cover the cost of the procedure and, therefore, is inappropriate. The commenter indicated that the manufacturer of the device system inserted in the procedure reported by CPT code 0191T currently has an Investigational Device Exemption (IDE) from the FDA and has filed a premarket approval (PMA) application with the FDA with the expectation that the device will be available for use in the United States as early as the first quarter of CY 2010. The commenter noted that the CY 2010 proposed median cost of CPT code 0191T of approximately \$2,380, based on only three single claims, was much higher than the CY 2010 proposed median cost of APC 0234 of approximately \$1,639 and the CY 2010 proposed ASC payment of approximately \$962. The commenter explained that the relatively low number of Medicare hospital outpatient claims for CPT code 0191T resulted from the limited use of the procedure in IDE studies and its predominant performance in ASCs in association with cataract surgery. The commenter also noted that none of the other procedures assigned to APC 0234 involve the placement of an implantable device, while CPT code 0191T requires the insertion of a device that costs about \$2,500.

Response: CPT code 0191T is a new CPT code with very few Medicare claims from CY 2008, possibly because this procedure has been limited to IDE studies, as noted by the commenter. Furthermore, because this CPT code was effective on July 1, 2008, CY 2008

claims reflect only 6 months of hospital data, rather than a full year. We note that there are a number of other surgical eye procedures to treat glaucoma that are also assigned to APC 0234 for CY 2010. Moreover, the final CY 2010 median cost of CPT code 0191T based on a small number of CY 2008 claims is approximately \$1,962, close to the final CY 2010 median cost of APC 0234 of approximately \$1,630. Therefore, based on considerations of clinical and resource homogeneity, we continue to believe that APC 0234 is the most appropriate APC assignment for CPT code 0191T for CY 2010.

After consideration of the public comment we received, we are finalizing our CY 2010 proposal, without modification, to continue to assign CPT code 0191T to APC 0234, with a final CY 2010 APC median cost of approximately \$1,630.

b. Backbench Preparation of Corneal Allograft

For CY 2010, we proposed to continue to assign CPT code 65757 (Backbench preparation of corneal endothelial allograft prior to transplantation) status indicator "N" (Items and Services Packaged into APC Rates). In the CY 2009 OPPTS/ASC final rule with comment period (73 FR 69076), we assigned CPT code 65757 status indicator "N" and flagged the code with comment indicator "NI" to indicate that, as a new CPT code for CY 2009, its interim final CY 2009 OPPTS treatment was subject to comment on that final rule with comment period.

Comment: One commenter requested that CMS pay separately for CPT code 65757 under the OPPTS through an APC. According to the commenter, this service represents the preparation process for corneal transplants. The commenter argued that because this service is time-consuming and requires specialized skills and equipment, CPT code 65757 should not be packaged under the OPPTS but, instead, should be paid separately.

Response: We packaged CPT code 65757 because we consider it to be an intraoperative service that is ancillary and supportive to another service that is paid separately under the OPPTS, specifically the corneal transplant. Our general packaging policies for certain categories of services are discussed in section II.A.4. of this final rule with comment period. Although OPPTS payment for CPT code 65757 is packaged, we will consider its costs in setting the payment rates for the associated surgical procedures under the OPPTS, according to the standard OPPTS cost estimation methodology that

is discussed in section II.A.2. of this final rule with comment period.

After consideration of the public comment we received, we are finalizing our CY 2010 proposal, without modification, to continue to assign CPT code 65757 status indicator "N."

6. Orthopedic and Musculoskeletal Services

a. Arthroscopic Procedures (APCs 0041 and 0042)

For CY 2010, we proposed to continue the assignment of various arthroscopy procedures to APCs 0041 (Level I Arthroscopy) and APC 0042 (Level II Arthroscopy), with proposed payment rates of approximately \$2,014 and \$3,279, respectively.

Comment: One commenter expressed concern about the variety of procedures assigned to APC 0041, whose HCPCS code-specific median costs ranged from \$50 to \$22,000, and to APC 0042, whose HCPCS code-specific median costs ranged from \$143 to \$20,000. In particular, the commenter indicated that the current designation of only two APCs for the more than 60 distinct arthroscopic procedures assigned to these APCs does not appropriately reflect the unique clinical and resource characteristics associated with arthroscopic procedures that are provided to Medicare beneficiaries. The commenter urged CMS to create several new APCs to ensure clinical homogeneity and similar resource utilization for the arthroscopy procedures assigned to them and provided recommended APC configurations.

To pay appropriately for arthroscopic procedures under the OPPTS, the commenter recommended that CMS restructure the arthroscopy procedures into 11 new APCs based on the following three clinical categories: (1) Diagnostic arthroscopies; (2) lower extremity versus upper extremity arthroscopies; and (3) arthroscopies with implants. The commenter further recommended specific payment rates associated with each of the 11 recommended APCs, ranging from \$1,400 to \$5,400. According to the commenter, the recommended clinical distinctions parallel the distinctions CMS has created for other classes of procedures, including other orthopedic procedures, and would more accurately reflect the clinical characteristics and resource utilization of the services provided.

Alternatively, the commenter provided, in the event a reconfiguration of APCs 0041 and 0042 is not possible at this time, two more limited

suggestions: Finalize the proposal to reassign CPT codes 29888 (Arthroscopically aided anterior cruciate ligament repair/augmentation or reconstruction) and 29889 (Arthroscopically aided posterior cruciate ligament repair/augmentation or reconstruction) from APC 0042 to APC 0052 (Level IV Musculoskeletal Procedures Except Hand and Foot) and reassign CPT code 29892 (Arthroscopically aided repair of large osteochondritis dissecans lesion, talar dome fracture, or tibial plafond fracture, with or without internal fixation (includes arthroscopy)) from APC 0042 to APC 0052.

Response: We believe the existing clinical APCs 0041 and 0042 sufficiently account for the different clinical and resource characteristics of the procedures assigned to them. To reduce the size of the APC payment groups and establish new APC payment groups to pay more precisely would be inconsistent with our overall strategy to encourage hospitals to use resources more efficiently by increasing the size of the payment bundles. Moreover, many of the services that are assigned to APCs 0041 and 0042 are low volume services, with even fewer single claims available for ratesetting. Including low volume services in APCs with clinically similar higher volume services and similar median costs generates more stability in the payment rates that are set for these low volume services.

For APC 0041, based on significant services with a total claim frequency of greater than 1,000 or a frequency of greater than 99 and percentage of single claims equal to or greater than 2 percent, CY 2008 hospital outpatient claims data showed that the median cost of the lowest cost service is approximately \$1,463 and the median cost of the highest cost service is approximately \$2,086. Likewise, for APC 0042, claims data showed that the median cost of the lowest cost significant procedure is approximately \$2,730 and the median cost of the highest cost significant procedure is approximately \$4,592. Based on the CY 2008 claims data, there is no 2 times violation in either APC 0041 or APC 0042. Therefore, we see no reason for a reconfiguration into many more APCs in light of our interest in promoting hospital efficiency, as discussed earlier.

With respect to the reassignment of CPT code 29892 from APC 0042 to APC 0052 as recommended by the commenter, we agree that this reassignment would be appropriate for CY 2010. While we have very few claims for this procedure upon which to accurately estimate its cost, we

reviewed the clinical characteristics associated with CPT code 29892 and agree that, based on the complexity of this procedure, it would be more appropriately assigned to APC 0052 based on its clinical characteristics and expected resource utilization. Furthermore, we appreciate the commenter's support for our proposed reassignment of CPT codes 29888 and 29889 from APC 0042 to APC 0052 for CY 2010.

After consideration of the public comment we received, we are finalizing our CY 2010 proposals to reassign CPT codes 29888 and 29889 from APC 0042 to APC 0052, with a final CY 2010 APC median cost of approximately \$5,921. In addition, we are also finalizing the reassignment of CPT code 29892 from APC 0042 to APC 0052 for CY 2010. We are making no other changes to the proposed configurations of APC 0041 and 0042 for CY 2010. The final CY 2010 APC median cost for APC 0041 is approximately \$1,998 and approximately \$3,261 for APC 0042.

b. Knee Arthroscopy (APCs 0041 and 0042)

For CY 2010, we proposed to continue to assign CPT codes 29882 (Arthroscopy, knee, surgical; with meniscus repair (medial or lateral)) and 29883 (Arthroscopy, knee, surgical; with meniscus repair (medial and lateral)) to APC 0041 (Level I Arthroscopy), with a proposed payment rate of approximately \$2,014. In addition, we proposed to continue to assign CPT code 29867 (Arthroscopy, knee, surgical; osteochondral allograft (eg, mosaicplasty)) to APC 0042 (Level II Arthroscopy), with a proposed payment rate of approximately \$3,279.

Comment: One commenter recommended that CMS reassign CPT code 29882 and 29883 from APC 0041 to APC 0042 because of their similarity to procedures assigned to APC 0042. The commenter also requested that CMS reassign CPT code 29867 from APC 0042 to APC 0052 (Level IV Musculoskeletal Procedures Except Hand and Foot), with a proposed payment rate of approximately \$5,889. The commenter believed that CPT code 29867 is clinically comparable to the other procedures assigned to APC 0052.

Response: We reviewed the clinical and resource characteristics of CPT codes 29882 and 29883 and continue to believe these CPT codes are appropriately assigned to APC 0041 for CY 2010. Analysis of CY 2008 claims data showed that the median cost for CPT code 29882, based on 165 single claims (out of 334 total claims), is approximately \$2,224 and for CPT code

29883, based on 116 claims (out of 182 total claims), is approximately \$2,075. These median costs are consistent with the final CY 2010 median cost of APC 0041, which is approximately \$1,998. Furthermore, these procedures are clinically similar to the majority of other knee arthroscopy procedures that are also assigned to APC 0041.

In addition, we do not agree with the commenter's assertion that CPT code 29867 is similar to the other procedures in APC 0052. Our claims data show that CPT code 29867 has a median cost of approximately \$3,652, which is significantly lower than the median cost of approximately \$5,921 for APC 0052, but close to the median cost of approximately \$3,261 for APC 0042, where we proposed to assign the code for CY 2010. Furthermore, the knee arthroscopy procedure described by CPT code 29867 is not clinically similar to other procedures assigned to APC 0052, which are generally not performed arthroscopically.
