

which, according to ATSDR and U.S. EPA, pose the most significant potential threat to human health. The availability of the revised priority list of 275 hazardous substances was announced in the **Federal Register** on March 6, 2008 (73 FR 12178). In addition, ATSDR has the authority to prepare toxicological profiles for substances not found at sites on the National Priorities List, in an effort to “* * * establish and maintain inventory of literature, research, and studies on the health effects of toxic substances” under CERCLA Section 104(i)(1)(B), to respond to requests for consultation under section 104(i)(4), and as otherwise necessary to support the site-specific response actions conducted by ATSDR.

For previous versions of the list of substances, see **Federal Register** notices dated April 17, 1987 (52 FR 12866); October 20, 1988 (53 FR 41280); October 26, 1989 (54 FR 43619); October 17, 1990 (55 FR 42067); October 17, 1991 (56 FR 52166); October 28, 1992 (57 FR 48801); February 28, 1994 (59 FR 9486); April 29, 1996 (61 FR 18744); November 17, 1997 (62 FR 61332); October 21, 1999 (64 FR 56792); October 25, 2001 (66 FR 54014); November 7, 2003 (68 FR 63098); and December 7, 2005 (70 FR 72840). [CERCLA also requires that ATSDR initiate a research program to fill data needs associated with the substances.] Section 104(i)(3) of CERCLA [42 U.S.C. 9604(i)(3)] outlines the content of these profiles. Each profile will include an examination, a summary, and an interpretation of available toxicological information and epidemiological evaluations. This information and these data identify the levels of significant human exposure for the substance and for the associated health effects. The profiles must also include a determination of whether adequate information on the health effects of each substance is available or is in the process of development. If adequate information is not available, ATSDR, in cooperation with the National Toxicology Program (NTP), is required to ensure the initiation of research to determine such health effects.

Although during the profile development process ATSDR considered key studies for each of the substances, this **Federal Register** notice solicits any relevant, additional studies, particularly unpublished data and ongoing studies. ATSDR will evaluate such data or studies for possible addition to the profiles, now or in the future.

The following draft toxicological profiles have been made available to the public:

Toxicological profile	CAS Number
1. Acrylamide	79-06-1
2. Carbon Monoxide	630-08-0
3. 1,3-Butadiene	106-99-0
4. Phosphate Ester Flame Retardants	78-51-3 126-73-8 126-71-6 115-86-6
5. Vanadium	13674-84-5 13674-87-8 115-96-8 7440-62-2

All profiles issued as “Drafts for Public Comment” represent ATSDR’s best efforts to provide important toxicological information on priority hazardous substances. We seek public comment and additional information that may supplement these profiles. ATSDR remains committed to providing a public comment period for these documents as the best means to serve public health and our clients.
