i. Project Description: The Marseilles Lock and Dam Project would utilize the head created by the existing 24-foot-high Army Corps of Engineers (Corps) Marseilles Lock and Dam and two existing Corps headgate structures and would consist of: (1) The existing north and south headraces in which a portion of the south headrace would be filled in and joined to the existing north headracthe which would be deepened to accommodate the flow from both headraces leading to; (2) a new intake structure and forebay leading to; (3) a new powerhouse containing four generating units with a total installed capacity of 10.26 megawatts (MW); (4) a new tailrace discharging water back to the Illinois River; (5) a new powerhouse containing four generating units with a total installed capacity of 534 kW and an estimated hydraulic capacity of 280 cfs. The proposed unit will draw water from the existing hydro canal to provide minimum-flow releases to the bypass reach. The installed capacity of the Project will increase to 18.5 megawatts (MW) with the installation of the new unit.

j. Description of Request: The applicant proposes to install a single submersible turbine/generator unit in the hydro canal bank and provide for seasonal fluctuations of head pond levels up to 5 feet for the months of July and August when necessitated by peak power demands. The generating unit would have an installed capacity of 534 kW and an estimated hydraulic capacity of 280 cfs. The proposed unit will draw water from the existing hydro canal to provide minimum-flow releases to the bypass reach. The installed capacity of the Project will increase to 18.5 megawatts (MW) with the installation of the new unit.
