**Agenda:**

- On March 23, 2010, the committee will discuss and make recommendations on issues relevant to FDA’s reevaluation of the Regen Collagen Scaffold (CS) device (marketed as the Menaflex®), which FDA cleared in K082079 on December 18, 2008, sponsored by Regen Biologics, Inc. The indications for use statement for this device states that the device is intended for use in surgical procedures for the reinforcement and repair of soft tissue injuries of the medial meniscus. In repairing and reinforcing medial meniscal defects, the patient must have an intact meniscal rim and anterior and posterior horns for attachment of the mesh. In addition, the surgically prepared site for the CS must extend at least into the red/white zone of the meniscus to provide sufficient vascularization. The CS reinforces soft tissue and provides a resorbable scaffold that is replaced by the patient’s own soft tissue. The CS is not a prosthetic device and is not intended to replace normal body structure.

FDA intends to make background material available to the public no later than 7 business days before the meeting. If FDA is unable to post the background material on its Web site prior to the meeting, the background material will be made publicly available at the location of the advisory committee meeting, and the background material will be posted on FDA’s Web site after the meeting. These views may be submitted in writing to the contact person on or before March 16, 2010. Oral presentations from the public will be scheduled at approximately 1 p.m., immediately following lunch. Those desiring to make formal oral presentations should notify the contact person and submit a brief statement of the general nature of the arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time requested to make their presentation on or before March 8, 2010. Time allotted for each presentation may be limited.
