SUPPLEMENTARY INFORMATION:

Proposed Project

Development and Evaluation of AHRQ's Quality Indicators Improvement Toolkit

An important part of AHRQ's mission is to disseminate information and tools that can support improvement in quality and safety in the U.S. health care community. See 42 U.S.C. 299(b)(1)(F); 299a(a)(1) and (2). This proposed information collection supports that part of AHRQ's mission by developing and evaluating a toolkit that will enable

hospitals to effectively use AHRQ's Quality Indicators (QIs).

AHRQ has developed sets of QIs that can be used by the Agency and others to document quality and safety conditions at U.S. hospitals. Two sets of QIs will be used in this proposed toolkit: the Inpatient Quality Indicators (IQIs) and the Patient Safety Indicators (PSIs). The IQIs contain measures of volume, mortality, and utilization for common medical conditions and major surgical procedures. The PSIs are a set of measures to screen for potentially preventable adverse events that patients may experience during hospitalization. These QIs have been previously developed and evaluated by AHRQ, and are in use at a number of hospitals throughout the country. The QIs and supportive documentation on how to work with them are posted on AHRQ's Web site at <http://www.qualityindicators.ahrq.gov>. Many of the QIs have been endorsed by the National Quality Forum through its consensus review process.

Values for each QI can be estimated for a given hospital by applying computations in SAS programs developed by AHRQ to the hospital's pre-existing inpatient encounter data. To identify potential areas for improving the quality and safety of the care that a hospital provides, the hospital can use these data to examine its current performance on each QI measure, changes in its performance over time, and how its performance compares to that of other hospitals. However, despite the availability of the QIs as tools to help hospitals assess their performance, many U.S. hospitals
