The purpose of the proposed research is to continue long-term studies on northern elephant seals in California, including population growth and status, reproductive strategies, behavioral and physiological adaptations for diving and fasting, general physiology and metabolism, and sensory capacities. Northern elephant seals, totaling a maximum of 3,930 animals per year over 5 years, would be taken by harassment during some or all of the following: behavioral observations, marking, flipper tagging, capture and biological sampling, attachment of instrumentation for tracking, translocation studies, short-term capture for laboratory studies, use of standard clinical tracer techniques, and acoustic studies (recordings, playbacks of natural calls, and tagging devices). The applicant requests unintentional mortality of up to 5 elephant seals per year; and euthanasia of up to 10 moribund pups per year. Incidental harassment of northern elephant seals and California sea lions is also requested.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.
