SUPPLEMENTARY INFORMATION:

I. Abstract

USGS Geography supports some of the most pressing resource management, environmental and climate change science issues faced by our Nation. Light Detection And Ranging (LiDAR) is the leading technology for collecting highly-accurate three-dimensional measurements of the Earth's topography and surface features such buildings, bridges, coastlines, rivers, forests and other landscape characteristics. These data provide an unprecedented tool for scientific understanding and informed National decisions related to ecosystem management, energy development, natural resource conservation and mitigating geologic and flood-related hazards. The USGS now collects LiDAR data to a limited extent and primarily for upgrading bare-earth elevation data for The National Map. This study seeks to establish a baseline of national business needs and associated benefits for LiDAR to enhance the responsiveness of USGS programs, and to design an efficient future program that balances requirements, benefits and costs. The study advances coordinated program development among the numerous federal and state agencies that increasingly rely on LiDAR to enable the fulfillment of their missions. The study is sponsored by the National Digital

Elevation Program steering committee and supported by several member agencies.

The information collection process will be guided by an interagency management team led by USGS with support from a professional services contractor. The information collection will be conducted using a standardized template. We will protect information from respondents considered proprietary under the Freedom of Information Act (5 U.S.C. 552) and its implementing regulations (43 CFR part 2), and under regulations at 30 CFR 250.197, "Data and information to be made available to the public or for limited inspection." Responses are voluntary. No questions of a "sensitive" nature are asked.

II. Data

OMB Control Number: None. This is a new collection.

Title: Assessment of the Business Requirements and Benefits of Enhanced National Elevation Data.
