**SUPPLEMENTARY INFORMATION:**

**A. Purpose**

Subpart 27.4, Rights in Data and Copyrights is a regulation which concerns the rights of the Government and contractors with whom the Government contracts, regarding the use, reproduction, and disclosure of information developed under such contracts. The delineation of such rights is necessary in order to protect the contractor’s rights to not disclose proprietary data and to insure that data developed with public funds is available to the public.

The information collection burdens and recordkeeping requirements included in this regulation fall into the following four categories:

- **A provision**, which is to be included in solicitations where the offeror would identify any proprietary data it would use during contract performance in order that the contracting officer might ascertain if such proprietary data should be delivered.
- **Contract provisions** which, in unusual circumstances, would be included in a contract and require a contractor to deliver proprietary data to the Government for use in evaluating work results, or is software to be used in a Government computer. These situations would arise only when the very nature of the contractor’s work is comprised of limited rights data or restricted computer software and if the Government would need to see that data in order to determine the extent of the work.
