

the drivers of these vehicles. Data collection is expected to take place over a 3–5 month period in the spring and summer of 2011. To minimize the survey start-up cost and to provide a trained cadre of data collectors, field data collection will be conducted through the infrastructure of the National Automotive Sampling System (NASS) Crashworthiness Data System (CDS). The NASS CDS consists of 24 Primary Sampling Units (PSUs) that are a probability sample selected from a sample frame of 1,195 PSUs across the United States. The NASS PSUs are used to obtain a nationally representative probability sample of police reported crashes in the U.S. Within each PSU, drivers will be approached at specific types of locations where children are likely to be riding in a passenger vehicle. Data collection sites may include gas stations, fast food restaurants, shopping centers, hospitals/clinics, and/or day care centers.

Estimate of the Total Annual Reporting and Record Keeping Burden Resulting from the Collection of Information: Each of the 5,000 interview/observation sessions will last 15 minutes including the initial screening. Therefore, the estimated annual burden is 1,250 hours. The respondents would not incur any reporting cost from the information collection. The respondents also would not incur any record keeping burden or record keeping cost from the information collection. Additionally, respondents would receive information on child passenger safety and a list of inspection stations where they may choose to have their child restraint system inspected. Consequently, the respondent is potentially receiving benefit in return for his/her participation.

Authority: 44 U.S.C. Section 3506(c)(2)(A).
