

j. *The Takatz Lake project would consist of:* (1) A newly constructed concrete arch dam with a crest elevation of 1,052 feet mean sea level (msl), a spillway elevation of 1,040 feet msl, and a structural height of 200 feet; (2) a 30-foot-high secondary saddle dam; (3) an increase in the Takatz Lake impoundment with a 740-acre surface area and a 124,000 acre-feet storage capacity at spillway elevation of 1,040 feet msl; (4) an intake structure for a 2,800-foot-long, 6.5-foot by 7-foot modified unlined horseshoe tunnel, leading to a 72-inch-diameter 1,000-foot-long steel penstock; (5) a 4,000 square foot powerhouse; (6) two Francis-type generating units, having a total installed capacity of 27.6 megawatts; (7) an approximately 4-mile-long access road; (8) an approximately 21-mile-long, 115 kilovolt (kv) or 138 kv transmission line that consists of either a combination of a submerged marine and lake, overhead, and underground segments (Marine Alternative Segment), or a combination of a submerged lake, overhead, and underground segments (Overland Alternative Segment); and (9) other appurtenant equipment.

k. *Scoping Process:* The City and Borough of Sitka (City) is using the Federal Energy Regulatory Commission's (Commission) alternative licensing process (ALP). Under the ALP, the City will prepare an Applicant Prepared Environmental Assessment (APEA) and license application for the Takatz Lake Hydroelectric Project.

Although it is our intent to prepare an EA, there is a possibility the Commission will prepare an Environmental Impact Statement (EIS) for the project.

The project as proposed in Scoping Document 2 (SD2) differs from the City's proposal described in their Pre-application document and Scoping Document 1, filed March, 20, 2009, and August 27, 2009, respectfully. Therefore, to support and assist our environmental review, we are conducting additional paper scoping on the current proposal to ensure that all pertinent issues and alternatives are identified and analyzed, and that the EA is thorough and balanced. Commission staff does not propose to conduct any on-site scoping meetings at this time. Instead, we are soliciting comments, recommendations, and information, on the Scoping Document 2 (SD2) issued on June 16, 2010.

Copies of the SD2 outlining the subject areas to be addressed in the EA were distributed to the parties on the Commission's mailing list and the applicant's distribution list. Copies of the SD2 may be viewed on the Web at

- a. Are the current processes for timely development of new or revised standards working? If not, how can they be revised? Are additional resources needed?
- b. How well are the current approaches for identifying and resolving ambiguities in reliability standards working (*e.g.*, formal interpretations, NERC advisories, NERC “lessons learned” procedures)? Should streamlined procedures be developed for resolving ambiguities?
- c. What is the best process for identifying the highest priority reliability standards?
- d. How can the reliability standards development process better account for and timely respond to Commission directives?
- e. The need to revise FERC processes to be more open and to fully accommodate industry participation, *e.g.*, lengthening the comment period in NOPRs, and prioritizing standards development and NERC’s compliance with directives.
- f. How can the reliability standards development process better use individual events to produce reliability improvements nationwide?
- g. How can a balance be achieved between documentation requirements needed to ensure compliance and a focus on improving reliability?
