[Project No. 13722–000]

Douglas County, OR; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

June 24, 2010.

On May 5, 2010, Douglas County, Oregon, filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of the Douglas County Wave and Tidal Energy Power

Project, in the Pacific Ocean, off the coast of Douglas County, Oregon. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners’ express permission.

The proposed project would consist of: (1) An approximately 600-foot-long, 30-foot-wide, 46-foot-high cason to house the oscillating water column collecting system (OWCCS); (2) an OWCCS consisting of 15 oscillating water column chambers, each containing two, 110-kilowatt turbine/generator units; and (3) a 1.9- to 2.3-mile-long transmission line, depending on the final location and selection of the transmission line. The project would have a total installed capacity of 1 megawatt (MW) to 3 MW, and an estimated annual generation of 3.4 gigawatt-hours (GWh) to 10.2 GWh. The OWCCS is operated by external wave action, which causes water to oscillate up and down within an underwater chamber. As the air in the chamber above the water is compressed and decompressed, air is forced through a turbine/generator unit. There are four locations under evaluation for the proposed project installation.
