• *Average Hourly Earnings (AHEs):* AHEs are available for production and nonsupervisory workers for specific industries, as well as for the nonfarm business economy. They are calculated by dividing gross payrolls for wages & salaries by total hours. The series reflects shifts in employment mix and, thus, is representative of actual changes in hourly earnings for industries or for the nonfarm business economy.

• *ECIs for Wages & Salaries:* These ECIs measure the rate of change in employee wage rates per hour worked. These fixed-weight indexes are not affected by employment shifts among industries or occupations and thus, measure only the pure rate of change in wages.

• *ECIs for Employee Benefits:* These ECIs measure the rate of change in employer costs of employee benefits, such as the employer's share of Social Security taxes, pension and other retirement plans, insurance benefits (life, health, disability, and accident), and paid leave. Like ECIs for wages & salaries, the ECIs for employee benefits are not affected by employment shifts among industries or occupations.

When choosing wage and price proxies for each expense category, we evaluate the strengths and weaknesses of each proxy variable using the following four criteria.

- *Relevance:* The price proxy should appropriately represent price changes for specific goods or services within the expense category. Relevance may encompass judgments about relative efficiency of the market generating the price and wage increases.
- *Reliability:* If the potential proxy demonstrates a high sampling variability, or inexplicable erratic patterns over time, its viability as an appropriate price proxy is greatly diminished. Notably, low sampling variability can conflict with relevance—since the more specifically a price variable is defined (in terms of service, commodity, or geographic area), the higher the possibility of high sampling variability. A well-established time series is also preferred.
- *Timeliness of actual published data:* For greater granularity and the need to be as timely as possible, we prefer monthly and quarterly data to annual data.
- *Public availability:* For transparency, we prefer to use data sources that are publicly available.

The BLS price proxy categories previously described meet the criteria of relevance, reliability, timeliness, and public availability. Below we discuss the proposed price-wage proxies for the rebased and revised MEI (as shown in Table 23).

(1) Expense Categories in the MEI

(A) Physician's Own Time (Physician Compensation)

In the proposed revised and rebased MEI, we are using the AHE for the private nonfarm economy as the proxy for the Physician Wages & Salaries component (BLS series code: CEU0500000008).

As discussed extensively in the November 2, 1998 final rule (63 FR 58848), and again in the December 31, 2002 final rule (67 FR 80019), we believe that this price proxy represents the most appropriate proxy for use in the MEI. The AHE for the nonfarm business economy reflects the impacts of supply, demand, and economy-wide productivity for the average worker in the economy. As such, use of this proxy is consistent with the original legislative intent that the change in the physicians' earnings portion of the MEI follow the change in general earnings for the economy. Since earnings are expressed per hour, a constant quantity of labor input per unit of time is reflected. Finally, the use of the AHE data is also consistent with our using the BLS economy-wide private nonfarm business sector multifactor productivity measures since economy-wide wage increases reflect economy-wide productivity increases.

The current 2000-based MEI uses the ECI for Total Benefits (BLS series code: CIU2030000000000I) for total private industry as the price proxy for Physician Benefits. We are proposing to use the same proxy for the 2006-based MEI. This means that both the wage and benefit proxies for physician earnings are derived from the private nonfarm business sector and are computed on a per-hour basis.

(B) Nonphysician Employee Compensation

For the 2006-based MEI, we are proposing to use Current Population Survey (CPS) data on employment by occupation and earnings from the BLS Occupational Employment Statistics for NAICS 6211, Office of Physicians, to develop labor cost shares for the nonphysician occupational groups shown in Table 23. The 2000-based MEI was based on CPS data for the Standard Industrial Classification 801 and 803, which included both office of physicians and outpatient care centers. Beginning in 2003, BLS began publishing CPS data on a NAICS basis which provided data for office of physicians (NAICS 6211)and outpatient care centers (NAICS 6214) separately. We believe using data for office of physicians is appropriate for the 2006-based MEI. The BLS maintains an ECI for each selected industry group. We propose to use these ECIs as price proxies for nonphysician employee wages in the same manner they are used in the current MEI.

As described in the CY 2008 PFS proposed rule (72 FR 38190), as a result of the discontinuation of the White Collar Benefit ECI for private workers, we are currently using a composite ECI benefit index. We are proposing to continue to use the composite ECI for nonphysician employees in the proposed rebased and revised MEI; however, we are proposing to revise the weights within that blend in order to reflect the more recent 2006 data. Table 26 lists the four ECI series and corresponding weights used to construct the 2006 composite benefit index.

TABLE 26—CMS COMPOSITE PRICE INDEX FOR NONPHYSICIAN EMPLOYEE BENEFITS

ECI series	2006 Weight (%)
Benefits, Private, Professional & Related	44
Benefits, Private, Management, Business, Financial	11
Benefits, Private, Office & Administrative Support	32
Benefits, Private, Service Occupations	13

(C) Utilities

For the 2006-based MEI, we are proposing to use the CPI for Fuel and Utilities (BLS series code #CUUR0000SAH2) to measure the price growth of this cost category. This cost category was not broken-out separately in the 2000-based MEI.

(D) Chemicals

For the 2006-based MEI, we are proposing to use the PPI for Other Basic Organic Chemical Manufacturing (BLS series code #PCU32519–32519) to measure the price changes of this cost category. We are proposing this industry-based PPI because BEA's 2002 benchmark I/O data show that the majority of the office of physicians' chemical expenses are attributable to Other Basic Organic Chemical Manufacturing (NAICS 32519). This cost category was not broken-out separately in the 2000-based MEI.

(E) Paper

For the 2006-based MEI, we are proposing to use the PPI for Converted Paper and Paperboard (BLS series code #WPU0915) to measure the price growth of this cost category. This cost category was not broken-out separately in the 2000-based MEI.

(F) Rubber and Plastics

For the 2006-based MEI, we are proposing to use the PPI for Rubber and Plastic Products (BLS series code #WPU07) to measure the price growth of this cost category. This cost category was not broken-out separately in the 2000-based MEI.

(G) Telephone

For the 2006-based MEI, we are proposing to use the CPI for Telephone Services (BLS series code #CUUR0000SEED) to measure the price growth of this cost category. This cost category was not broken-out separately in the 2000-based MEI.

(H) Postage

For the 2006-based MEI, we are proposing to use CPI for Postage (BLS series code #CUUR0000SEEC01) to measure the price growth of this cost category. This cost category was not broken-out separately in the 2000-based MEI.

(I) All Other Services

For the 2006-based MEI, we are proposing to use the ECI for Compensation for Service Occupations (private industry) (BLS series code #CIU2010000300000I) to measure the price growth of this cost category. This cost category was not broken-out separately in the 2000-based MEI.

(J) Fixed Capital

For the 2006-based MEI, we are proposing to use the CPI for Owner's Equivalent Rent (BLS series code #CUUS0000SEHC) to measure the price growth of this cost category. This price index represents about 50 percent of the CPI for Housing which was used to in the 2000-based MEI to proxy total office expenses.

(K) Moveable Capital

For the 2006-based MEI, we are proposing to use the PPI for Machinery and Equipment (series code #WPU11) to measure the price growth of this cost category. This cost category was not broken-out separately in the 2000-based MEI.

(L) Professional Liability Insurance

In order to accurately reflect the price changes associated with PLI, each year, we solicit PLI premium data for physicians from a sample of commercial carriers. This information is not collected through a survey form, but instead is requested directly from, and provided by (on a voluntary basis), several national commercial carriers. As we require for our other price proxies, the professional liability price proxy is intended to reflect the pure price change associated with this particular cost category. Thus, it does not include changes in the mix or level of liability coverage. To accomplish this result, we obtain premium information from a sample of commercial carriers for a fixed level of coverage, currently $1 million per occurrence and a $3 million annual limit. This information is collected for every State by physician specialty and risk class. Finally, the State-level, physician-specialty data are aggregated by effective premium date to compute a national total, using counts of physicians by State and specialty as provided in the AMA publication, *Physician Characteristics and Distribution in the U.S.*

The resulting data provide a quarterly time series, indexed to a base year consistent with the MEI, and reflect the national trend in the average professional liability premium for a given level of coverage, generally $1 million/$3 million of claims-made mature policies. From this series, quarterly and annual percent changes in PLI are estimated for inclusion in the MEI.

The most comprehensive data on professional liability costs are held by the State insurance commissioners, but these data are available only with a substantial time lag and hence, the data currently incorporated into the MEI are much timelier. We believe that, given the limited data available on professional liability premiums, the information and methodology described above adequately reflect the PLI price trends facing physicians.

(M) Medical Equipment

The Medical Equipment cost category includes depreciation, leases, and rent on medical equipment. We are proposing to use the PPI for Medical Instruments and Equipment (BLS series code: WPU1562) as the price proxy for this category, consistent with the price proxy used in the 2000-based MEI and other CMS input price indexes.

(N) Medical Materials and Supplies

As is used in the 2000-based MEI, we are proposing to use a blended index comprised of 50/50 blend of the PPI Surgical Appliances (BLS series code: WPU156301) and the CPI–U for Medical Equipment and Supplies (BLS series code: CUUR0000SEMG). We believe physicians purchase the types of supplies contained within these proxies, including such items as bandages, dressings, catheters, I.V. equipment, syringes, and other general disposable medical supplies, via wholesale purchase, as well as at the retail level. Consequently, we are proposing to combine the two aforementioned indexes to reflect those modes of purchase.

(O) Other Professional Expenses

This category includes the residual subcategory of other professional expenses such as accounting services, legal services, office management services, continuing education, professional association memberships, journals, professional car expenses, and other professional expenses. Given this heterogeneous mix of goods and services, we are proposing to use the CPI–U for All Items Less Food and Energy, consistent with the price proxy used in the 1996 and 2000-based MEI.

(2) Productivity Adjustment to the MEI

The MEI has been adjusted for changes in productivity since its inception. In the CY 2003 PFS final rule (67 FR 80019), we implemented a change in the way the MEI was adjusted to account for those changes in productivity The MEI used for the 2003 physician payment update incorporated changes in the 10-year moving average of private nonfarm business (economy-wide) multifactor productivity that were applied to the entire index. Previously, the index incorporated changes in productivity by adjusting the labor portions of the index by the 10-year moving average of economy-wide private nonfarm business labor productivity.

We are proposing to continue to use the current method for adjusting the full MEI for multifactor productivity in the rebased and revised MEI.

As described in the CY 2003 PFS final rule, we believe this adjustment is appropriate because it explicitly reflects the productivity gains associated with all inputs (both labor and non-labor). We believe that using the 10-year moving average percent change in economy-wide multifactor productivity is appropriate for deriving a stable measure that helps alleviate the influence that the peak (or a trough) of a business cycle may have on the measure. The adjustment will be based on the latest available historical economy-wide nonfarm business multifactor productivity data as measured and published by BLS.

e. Results of Rebasing

Table 27 illustrates the results of updating the MEI from the following changes to the weights for the Physician Compensation, Practice Expenses (excluding PLI), and PLI.

TABLE 27—PERCENT DISTRIBUTION OF SELECTED PHYSICIAN EXPENSES USED TO CALIBRATE RVUS: CYS 2006 AND 2000

	CY 2006 weight (%)	CY 2000 weight (%)
Physician Compensation (Own Time)	48.266	52.466
Practice Expenses (less PLI)	47.439	43.669
PLI	4.295	3.865

The rebased and revised MEI has several differences as compared to the 2000-based MEI; these changes have been discussed in detail in prior

sections of this rule. Table 28 shows the average calendar year percent change from CY 2004 to CY 2011 for both the 2000- and 2006-based MEIs. The 2006-based MEI annual percent changes differ from the 2000-based MEI annual percent changes by 0.0 to 0.8 percentage point. In the 5 most recent years (CYs 2007–2011), the annual percent change in the rebased and revised MEI was within 0.3 percentage point of the percent change in the 2000-based MEI. In the earlier years, there were bigger differences between the annual percent change in the rebased and revised MEI and the 2000-based MEI. The majority of these differences can be attributed to the lower benefit cost weight, as measured by the 2006 AMA data, and the exclusion of the drug cost weight. The remaining differences are attributable to the higher cost weight for PLI, as measured by the 2006 AMA data.

TABLE 28—ANNUAL PERCENT CHANGE IN THE CURRENT AND PROPOSED REVISED AND REBASED MEI

Update year [A]	Proposed 2006-based MEI	Current 2000-based MEI
CY 2004	2.4	2.7
CY 2005	2.1	2.9
CY 2006	2.0	2.5
CY 2007	1.7	2.0
CY 2008	1.9	1.8
CY 2009	1.7	1.7
CY 2010	1.4	1.2
CY 2011 [B]	0.3	0.3
Avg. Change for CYs 2004–2011	1.7	1.9

[A] Update year based on historical data through the second quarter of the prior calendar year. For example, the 2010 update is based on historical data through the second quarter 2009.

[B] Based on the 1st quarter 2010 forecast by HIS Global Insight. With historical data through the 4th quarter 2009.

As shown in Table 29, the projection of the proposed rebased and revised MEI for the CY 2011 PFS proposed rule is an increase of 0.3 percent, identical to the projected increase using the 2000-based MEI. In the CY 2011 PFS final rule, we will incorporate historical data through the second quarter of 2010; therefore, the current estimated increase of 0.3 percent for 2011 may differ in the final rule.

TABLE 29—FORECASTED ANNUAL PERCENT CHANGE IN THE CURRENT AND PROPOSED REVISED AND REBASED MEI FOR CY 2011

	Proposed 2006-based MEI	2000-based MEI
CY 2011	0.3	0.3

TABLE 30—FORECASTED ANNUAL PERCENT CHANGE IN THE PROPOSED REVISED AND REBASED MEI CY 2011, ALL CATEGORIES [1]

Cost categories	2006 Weight [2] (%)	Projected CY 2011 percent changes
MEI Total, productivity adjusted	100.000	0.3
Productivity: 10-year moving average of MFP	N/A	1.3
MEI Total, without productivity adjustment	100.000	1.6
Physician Compensation (Own Time) [3]	48.266	2.4
Wages and Salaries	43.880	2.5
Benefits	4.386	1.5
Practice Expenses	51.734	0.9
Nonphysician Compensation	19.153	1.5
Nonphysician Wages	13.752	1.5
P&T	6.006	1.2
Management	1.446	1.0
Clerical	4.466	1.8
Services	1.834	2.0
Nonphysician Benefits	5.401	1.4
Other Practice Expenses	26.308	0.4
Office Expenses	20.035	0.8
Utilities	1.139	−3.0
Chemicals	0.679	−1.1
Paper	0.616	−1.0
Rubber & Plastics	0.563	−0.7
Telephone	1.415	1.1
Postage	0.661	5.5
All Other Services	4.718	2.0

TABLE 30—FORECASTED ANNUAL PERCENT CHANGE IN THE PROPOSED REVISED AND REBASED MEI CY 2011, ALL CATEGORIES [1]—Continued

Cost categories	2006 Weight [2] (%)	Projected CY 2011 percent changes
Fixed Capital	8.410	0.9
Moveable Capital	1.834	−0.1
PLI [4]	4.295	−2.2
Medical Equipment	1.978	0.8
Medical supplies	1.760	0.5
All Other Expenses	4.513	1.4

[1] The forecasts are based upon the latest available Bureau of Labor Statistics data as of December 2009.
[2] The weights shown for the MEI components are the 2006 base-year weights, which may not sum to subtotals or totals because of rounding. The MEI is a fixed-weight, Laspeyres-type input price index whose category weights indicate the distribution of expenditures among the inputs to physicians' services for CY 2006. To determine the MEI level for a given year, the price proxy level for each component is multiplied by its 2006 weight. The sum of these products (weights multiplied by the price index levels) overall cost categories yields the composite MEI level for a given year. The annual percent change in the MEI levels is an estimate of price change over time for a fixed market basket of inputs to physicians' services.
[3] The measures of productivity, average hourly earnings, Employment Cost Indexes, as well as the various Producer and Consumer Price Indexes can be found on the Bureau of Labor Statistics Web site at *http://stats.bls.gov*.
[4] Derived from a CMS survey of several major commercial insurers N/A Productivity is factored into the MEI categories as an adjustment to the price variables; therefore, no explicit weight exists for productivity in the MEI.

In addition to the proposed revisions to the MEI mentioned earlier in this section, we are also proposing to convene a technical advisory panel later this year to review all aspects of the MEI, including the inputs, input weights, price-measurement proxies, and productivity adjustment. We will ask the panel to assess the relevance and accuracy of these inputs to current physician practices. The panel's analysis and recommendations will be considered in future rule making to ensure that the MEI accurately and appropriately meets its intended statutory purpose. We are requesting comments from the physician community and other interested members of the public on any other specific issues that should be considered by the technical panel.

f. Adjustments to the RVU Shares To Match the Proposed Rebased MEI Weights

As described in the previous section, we are proposing to rebase the MEI for CY 2011 based on the most current data and establish new weights for physician work, PE, and malpractice under the MEI. As stated in the previous section, the MEI was rebased to a CY 1996 base year beginning with the CY 1999 MEI (63 FR 58845), and to a CY 2000 base year beginning with the CY 2004 MEI (68 FR 63239). For both the CY 1999 and CY 2004 rebasing, we made adjustments to ensure that our estimates of aggregate PFS payments for work, PE, and malpractice were in proportion to the weights for these categories in the rebased MEI (63 FR 58829 and 69 FR 1095).

Consistent with our past practice when the MEI has been rebased, we are proposing to make adjustments to ensure that estimates of aggregate CY 2011 PFS payments for work, PE, and malpractice are in proportion to the weights for these categories in the rebased CY 2011 MEI.

Our proposal would necessitate increasing the proportion of aggregate CY 2011 PFS payments for PE and malpractice and decreasing the proportion for work. This could be accomplished by applying adjustments directly to the work, PE, and malpractice RVUs. However, we are cognizant of the public comments made during prior rulemaking on issues related to scaling the work RVUs. Many commenters have indicated a preference for the work RVUs to remain stable over time and for any necessary adjustments that would otherwise be made broadly to the work RVUs to be accomplished in an alternative manner. For example, in past 5-Year Reviews of the work RVUs, many commenters have cited stability in the work RVUs, among other reasons, in their requests that any required budget neutrality adjustments not be made directly to the work RVUs. Given these prior comments, we are proposing to make the necessary MEI rebasing adjustments without adjusting the work RVUs. Instead, we are proposing to increase the PE RVUs by an adjustment factor of 1.168 and the malpractice RVUs by an adjustment factor of 1.413. The RVUs in Addendum B to this proposed rule reflect the application of these adjustment factors. We note that an application of the 1.413 adjustment factor to the malpractice RVUs for services with malpractice RVUs of 0.01 will, due to rounding, result in malpractice RVUs of 0.01.

Section 1848(c)(2)(B)(ii)(II) of the Act requires that changes to RVUs cannot cause the amount of expenditures for a year to differ by more than $20 million from what expenditures would have been in the absence of the changes. Therefore, as required by section 1848(c)(2)(B)(ii) of the Act, we are proposing to make an adjustment of 0.921 to the CY 2011 conversion factor to ensure that the 1.168 adjustment to the PE RVUs and the 1.413 adjustment to the malpractice RVUs do not cause an increase in CY 2011 PFS expenditures. The current law estimate of the CY 2011 CF is $26.6574.

III. Code-Specific Issues for the PFS

A. Therapy Services

1. Outpatient Therapy Caps for CY 2011

Section 1833(g) of the Act applies an annual, per beneficiary combined cap on expenses incurred for outpatient physical therapy and speech-language pathology services under Medicare Part B. A similar separate cap for outpatient occupational therapy services under Medicare Part B also applies. The caps do not apply to expenses incurred for therapy services furnished in an outpatient hospital setting. The caps were in effect during 1999, from September 1, 2003 through December 7, 2003, and beginning January 1, 2006. The caps are a permanent provision, that is, there is no end date specified in the statute for therapy caps. Beginning January 1, 2006, the Deficit Reduction Act (Pub. L. 109–171) (DRA) provided for exceptions to the therapy caps until December 31, 2006. The exceptions

process for therapy caps has been extended through December 31, 2009 pursuant to three subsequent amendments (in MEIA–TRHCA, MMSEA, and MIPPA).

Section 1833(g)(5) of the Act (as amended by section 3103 of the ACA) extended the exceptions process for therapy caps through December 31, 2010. We will announce the amount of the therapy cap for CY 2011 in the CY 2011 PFS final rule with comment period. The annual change in the therapy cap is computed by multiplying the cap amount for CY 2010, which is $1,860, by the MEI for CY 2011, and rounding to the nearest $10. This amount is added to the CY 2010 cap to obtain the CY 2011 cap. The agency's authority to provide for exceptions to therapy caps (independent of the outpatient hospital exception) will expire on December 31, 2010, unless the Congress acts to extend it. If the current exceptions process expires, the caps will be applicable in accordance with the statute, except for services furnished and billed by outpatient hospitals.

2. Alternatives to Therapy Caps

a. Background

In section 4541 of the Balanced Budget Act of 1997 (Pub. L. 105–33) (BBA), the Congress enacted the financial limitations on outpatient therapy services (the "therapy caps" discussed above for physical therapy, occupational therapy, and speech-language pathology). At the same time, the Congress requested that the Secretary submit a Report to Congress that included recommendations on the establishment of a revised coverage policy for outpatient physical therapy services and outpatient occupational therapy services under the statute. The Balanced Budget Refinement Act of 1999 (Pub. L. 106–113) (BBRA) placed the first of a series of moratoria on implementation of the limits. In addition, it required focused medical review of claims and revised the report requirements in section 4541(d)(2) of the BBA to request a report that included recommendations on the following: (A) The establishment of a mechanism for assuring appropriate utilization of outpatient physical therapy services, outpatient occupational therapy services, and speech-language pathology services; and (B) the establishment of an alternative payment policy for such services based on classification of individuals by diagnostic category, functional status, prior use of services (in both inpatient and outpatient settings), and such other criteria as the Secretary determines appropriate, in place of the limits.

In 1999, therapy services were not defined, but services documented as therapy were billed and reported when furnished by a variety of individuals in many different settings. These services were not identified in a way that would allow analysis of utilization or development of alternative payment policies.

We have studied therapy services with the assistance of a number of contractors over the past 11 years. Reports of these projects are available on the CMS Web site at *http://www.cms.gov/TherapyServices/*. On November 9, 2004, we delivered the Report to Congress, Number 137953, "Medicare Financial Limitations on Outpatient Therapy Services" that referenced two utilization analyses. We periodically updated the utilization analyses and posted other contracted reports in order to further respond to the requirements of the BBRA. Subsequent reports highlighted the expected effects of limiting services in various ways and presented plans to collect data about patient condition using available tools. The general belief was that if patient condition could be reliably determined, an objective payment policy could be developed that would ensure appropriate payment for appropriately utilized services.

Over the past decade, significant progress has been made in identifying the outpatient therapy services that are billed to Medicare, the demographics of the beneficiaries who utilize those services, the types of services, the HCPCS codes used to bill the services, the allowed and paid amounts of the services, and the settings, geographic locations, and provider types where services are furnished.

Some of the information that is necessary to ensure appropriate utilization and develop objective and equitable payment alternatives to therapy caps based on patient condition has proven difficult to develop. The influence of prior use of inpatient services on outpatient use of therapy services was not accessible due to systems issues and differences in the policies, billing, and reporting practices for inpatient and outpatient therapy services. The weakness of the ICD–9–CM diagnostic codes in describing the condition of the rehabilitation patient obscured analyses of claims to assess the need for therapy services. The primary diagnosis on the claim is a poor predictor for the type and duration of therapy services required, which complicates assignment of patient cohorts for analysis. Although changes to the guidance in the Medicare Benefit Policy Manual (Pub. 100–02) on documentation of therapy services in 2005 improved the consistency of records and facilitated chart review, it became increasingly obvious that neither claims analysis nor chart review could serve as a reliable and valid method to determine a patient's need for services or to form the basis for equitable payment. We concluded that in order to develop alternative payment approaches to the therapy caps, we needed a method to identify patients with similar risk-adjusted conditions (cohorts) and then we would identify the therapy services that are necessary for the patients to attain the best outcomes with the most efficient use of resources.

While we studied therapy utilization, a number of proprietary tools were developed by researchers in the professional community to assess the outcomes of therapy. Some tool sponsors collected sufficient information to predict with good reliability the amount or length of treatment that would result in the best expected outcomes. We encouraged the use of these proprietary tools in manual instructions, but proprietary tools do not serve CMS' purposes because modification of proprietary tools may only be done by the tool sponsor. There now are some versions of the tools in the public domain and they are being utilized widely to identify patient conditions and, by some insurers, to pay for efficient and effective treatment. Examples of such tools including the National Outcomes Measurement System (NOMS) by the American Speech-Language Hearing Association and Patient Inquiry by Focus On Therapeutic Outcomes, Inc. (FOTO).

In 2006, Focus on Therapeutic Outcomes, Inc. delivered to CMS a report titled, "Pay for Performance for Physical Therapy and Occupational Therapy," which is also available on the CMS Web site at *http://www.cms.gov/TherapyServices*. The purpose of this project was to simulate a pay-for-performance implementation, designed to align financial incentives with the achievement of better clinical outcomes from services that were delivered efficiently. The project, funded by HHS/CMS Grant #18–P–93066/9–01, demonstrated the predictive validity of the risk-adjusted pay-for-performance model and the feasibility of reducing payments without affecting services to beneficiaries who need them.

b. Current Activities

The Tax Relief and Health Care Act of 2006 (TRHCA) extended the therapy cap

exceptions process through December 31, 2007 and provided funds used for two CMS projects related to developing alternative payment approaches for therapy services that are based on beneficiary needs. A 5-year project titled "Development of Outpatient Therapy Alternatives" (DOTPA), awarded to RTI International, was initiated in order to develop a comprehensive and uniform therapy-related data collection instrument, assess its feasibility, and determine the subset of the measures that we could routinely and reliably collect in support of payment alternatives. While DOTPA will identify measurement items relevant to payment, the project will not deliver a standardized measurement tool. We may either develop a tool or allow other tools to be used for payment purposes when they include those items that identify the following: (a) Beneficiary need; and (b) outcomes (that is effectiveness of therapy services). In addition to therapy caps, the DOTPA project addresses our interest in value-based purchasing by identifying components of value, including beneficiary need and the effectiveness of therapy services.

The DOTPA project reports are available on the contractor's Web site at *http://optherapy.rti.org/*. The data collection design and instrument development have been completed, and a Paperwork Reduction Act (PRA) package was submitted for approval of the data collection forms by the Office of Management and Budget (OMB). The **Federal Register** notice for the second round of public comment on this package was published on April 23, 2010 (75 FR 21296). Once the PRA package is approved, the contractor will begin data collection. While approval is pending, the contractor is recruiting potential participants in the data collection, developing training materials for participants, and updating the project web site. We are not seeking public comments on the DOTPA project in this proposed rule.

The TRCHA also funded the 2-year project contracted to Computer Sciences Corporation (CSC) titled "Short Term Alternatives for Therapy Services" (STATS). STATS will provide recommendations regarding alternative payment approaches to therapy caps that could be considered before completion of the DOTPA project. The STATS project draws upon the analytical and clinical expertise of contractors and stakeholders to consider policies, measurement tools, and claims data that are currently available to provide further information about patient condition and the outcomes of therapy services. The final report, due in the fall of CY 2010, will include recommended actions we could take within 2 or 3 calendar years to replace the current cap limits on therapy services with a policy that pays appropriately for necessary therapy services.

c. Potential Short-Term Approaches to Therapy Caps

On June 30, 2009, we received a draft of the CSC report titled "STATS Outpatient Therapy Practice Guidelines," a summary of expert workgroup discussions, and several short-term payment alternatives for consideration. CSC discussed options based on the assumption that short-term policy changes should facilitate the development of adequate function and/or outcomes reporting tools. In the long-term, CSC recommended that payment be based on function or quality measurements that adequately perform risk adjustment for episode-based payment purposes.

Based on the draft report, additional stakeholder input, and subsequent communications with the contractor, in this proposed rule we are discussing several potential alternatives to the therapy caps that could lead to more appropriate payment for medically necessary and effective therapy services that are furnished efficiently. We are soliciting public comments on this proposed rule regarding all aspects of these alternatives, including the potential associated benefits or problems, clinical concerns, practitioner administrative burden, consistency with other Medicare and private payer payment policies, and claims processing considerations. We are not proposing either short-term or long-term payment alternatives to the therapy caps at this time. However, we refer readers to section II.C.4.(c) of this proposed rule for our CY 2011 proposal to expand the MPPR policy to "always therapy" services furnished in a single session in order to pay more appropriately for therapy services, taking into consideration the expected efficiencies when services are furnished together. While we are not proposing the adoption of an MPPR policy for therapy services specifically as an alternative to the therapy caps, we acknowledge that by paying more appropriately for combinations of therapy services that are commonly furnished in a single session, practitioners would be able to furnish more medically necessary therapy services to a given beneficiary before surpassing the caps. This proposed policy would have the potential to reduce the number of beneficiaries impacted by the therapy caps in a given year.

The three specific short-term options that we are discussing in this proposed rule would not require statutory changes. Some would require moderate reporting changes that would yield more detailed information about patient function and progress to inform future payment approaches and facilitate the medical review of services above the therapy caps at the present time. Others require new coding and bundled per-session payment that would be a first step toward episode-based payment. They are not necessarily independent of each other. Under each of these alternatives, administrative simplification with respect to current policies, such as HCPCS code edits and "ICD–9–CM to HCPCS code" crosswalk edits that serve to limit utilization without regard to the patient's clinical presentation, could be pursued in the context of these options.

The first option would modify the current therapy caps exceptions process to capture additional clinical information regarding therapy patient severity and complexity in order to facilitate medical review. This approach would complement the DOTPA project, which is identifying items to measure patient condition and outcomes. We believe the first option may have the greatest potential for rapid implementation that could yield useful information in the short-term. We are especially interested in detailed public comments on this option that could inform a potential proposal to adopt such an alternative through future rulemaking. The second option would involve introducing additional claims edits regarding medical necessity, in order to reduce overutilization. The third option would be to adopt a per-session bundled payment that would vary based on patient characteristics and the complexity of evaluation and treatment services furnished in the session. Each option would require significant provider and contractor education, and all would necessitate major claims processing systems changes. Moreover, some of the options may affect beneficiaries by changing the type or amount of services covered by Medicare or the beneficiary's cost sharing obligations.

Option (1): Revise therapy caps exceptions process by requiring the reporting of new patient function-related Level II HCPCS codes and severity modifiers.

This option would require that clinicians submit beneficiary function-related nonpayable HCPCS codes to replace the –KX modifier (Specific

required documentation on file). Codes would not be submitted on every claim, but at episode onset and at periodic intervals (for example, progress report intervals of 12 sessions or 30 days—whichever is less). Codes would be submitted for all patients in order for the claims to be paid and not only those claims approaching or surpassing the therapy caps. The current –KX modifier is not useful to identify claims exceeding therapy caps, because it is used for services both before and after the caps are exceeded, and it must be used on the entire claim for facilities. New codes also would not identify claims above the cap, but they would perform the same function as the current –KX modifier to signal that documentation in the medical record supported medical necessity that should lead to an exception to the therapy caps. The codes would also provide more information for medical review.

Six Level II HCPCS G-codes representing functions addressed in the plan of care and 5 (or 7) modifiers representing severity/complexity would be utilized to report information on the claim.

Examples of six new function-related G-codes:

- GXXXU—Impairments to body functions and/or structures—current.
- GXXXV—Impairments to body functions and/or structures—goal.
- GXXXW—Activity limitations and/or participation restrictions—current.
- GXXXX—Activity limitations and/or participation restrictions—goal.
- GXXXY—Environmental barriers—current.
- GXXXZ—Environmental barriers—goal.

Two potential severity/complexity scales have been suggested that would require the adoption of 5 or 7 new severity modifiers, respectively. Under one scenario, modifiers based on the International Classification of Function could identify severity as follows:

- None (0 to 4 percent);
- MILD (5 to 24 percent);
- MODERATE (25 to 49 percent);
- SEVERE (50 to 95 percent); or
- COMPLETE (96 to 100 percent).

Alternatively, a proportional severity/complexity scale would use 7 modifiers to describe impairments, limitations, or barriers:

- 0 percent;
- 1 to 19 percent;
- 20 to 39 percent;
- 40 to 59 percent;
- 50 to 79 percent;
- 80 to 99 percent; or
- 100 percent.

Implementation of this general approach would require 6 months to 2 years to modify claims processing for the current therapy caps and exceptions processing of claims, and to develop, pilot test, and refine coding before applying the approach nationally. While therapists initially would need to learn the new codes and update their billing systems, ultimately their reporting burden would be reduced because the –KX modifier would not be required on each claim line for patients with expenditures approaching or exceeding the therapy caps. This option could potentially result in a small reduction in outpatient therapy expenditures due to increased Medicare contractor scrutiny of episodes where functional severity scores did not change over time, or to other atypical reporting patterns associated with the new codes.

In the long-term, these codes and modifiers could be mapped to reliable and validated measurement tools (either currently available tools in the public domain or newly developed tools from items on the DOTPA instrument or the Continuity Assessment Record and Evaluation (CARE) tool). When statistically robust patient condition information has been collected from claims data, it may be possible to develop Medicare payment approaches for outpatient therapy services that would pay appropriately and similarly for efficient and effective services furnished to beneficiaries with similar conditions who have good potential to benefit from the services furnished. At a minimum, the new codes would allow contractors to more easily identify and limit the claims for beneficiaries that show no improvement over reasonable periods of time.

Option (2): Enhance existing therapy caps exceptions process by applying medical necessity edits when per-beneficiary expenditures reach a predetermined value.

The existing automatic process for exceptions, and the revised exceptions process described in Option 1 above, pay practitioners indefinitely for services if they attest on the claim by appending a specific modifier to therapy HCPCS codes that the services being furnished are medically necessary and that supporting documentation is included in the medical record. Unless the contractor uses claims edits or does post payment review, these processes do not identify or limit unusually high annual per-beneficiary utilization. High utilization is not limited to beneficiaries with multiple or complex conditions. We could use existing therapy utilization data to develop annual per-beneficiary medical necessity payment edits, such as limits to the number of services per session, per episode, or per diagnostic grouping, for exceptions to the therapy caps which could be set at benchmark payment levels that only a small percentage of beneficiaries would surpass in a single year. Once these levels were reached, additional claims would be denied and practitioners would need to appeal those denials if they wished to challenge Medicare's nonpayment.

This alternative would require 1 to 2 years to implement as an expansion of existing policy, and its effects could be anticipated by analysis of the current utilization of therapy services. Additional practitioner burden would be incurred in the small number of cases exceeding the per-beneficiary expenditure edits when the practitioner chooses to appeal the medical necessity denial.

Option (3): Introduce per-session "Evaluation/Assessment and Intervention" (E&I) codes to bundle payment for groups of current therapy HCPCS codes into a single per-session payment.

As discussed in section II.C.4.(c) of this proposed rule, multiple therapy services are often furnished in a single session, and we are proposing to expand the MPPR policy to "always therapy" services in CY 2011 in order to take into consideration the efficiencies that occur when multiple services (the typical therapy scenario) are furnished in one session to a beneficiary. Furthermore, we note that section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) regarding potentially misvalued codes under the PFS specifies that the Secretary may make appropriate coding changes, which may include consolidation of individual services into bundled codes for payment under the PFS, as part of her review and adjustment of the relative values for services identified as potentially misvalued.

This option would require that practitioners submit a single new Level II HCPCS code to represent all the therapy services currently reported and paid separately for an outpatient therapy session. Payment for the HCPCS code would be based on patient characteristics (as identified through prior CMS contractor analyses) and the complexity of the evaluation/assessment and intervention services furnished during the session. The new coding requirements would not disrupt the current exceptions process or the revised exceptions process described in Option (1) above. Approximately 12 E&I codes would be needed, taking into consideration the basic algorithm shown in Table 31.

TABLE 31—EVALUATION/ASSESSMENT & INTERVENTION LEVEL II HCPCS CODES

	Evaluation/Assessment complexity		
	Minimal	Moderate	Significant
Intervention Level:			
None	E&I Code #1	E&I Code #2	E&I Code #3.
Minimal	E&I Code #4	E&I Code #5	E&I Code #6.
Moderate	E&I Code #7	E&I Code #8	E&I Code #9.
Significant	E&I Code #10	E&I Code #11	E&I Code #12.

We would need to develop and test operational definitions for each E&I code so that practitioners would be able to properly report services and appropriate relative values could be established for each per-session code. We believe that a pilot study might reveal that the different practice patterns for the three therapy professions (physical therapy, occupational therapy, and speech-language pathology) could necessitate separate relative value determinations for each E&I code by type of therapy service furnished. As a result, up to 36 total new Level II HCPCS codes could be needed (12 per discipline).

We anticipate that the definitions of E&I codes 1 through 3 and 7 through 12 would describe services that may only be furnished by a "clinician" (therapist, physician, or nonphysician practitioner). E&I codes 1 through 3 would be reported for sessions that consisted only of evaluations. In addition, the definitions of E&I codes 4 through 6 would describe services that could be furnished by or under the permissible supervision of all qualified outpatient therapy professionals. Based upon historical therapy utilization patterns, the vast majority of E&I codes submitted would likely fall in the 4 through 9 code range. We would expect the RVUs under the PFS for all E&I codes to take into consideration the efficiencies when multiple services (those that would be currently reported under multiple CPT codes) are furnished.

This option would require 2 to 4 years to add new codes and conduct a short-term pilot study to refine coding and value the 12 new HCPCS codes (or 36 if they are specific to each therapy discipline). There would be significant initial practitioner administrative burden to learn new codes and update billing systems. However, ultimately, with elimination of the practitioner's reporting of 76 different codes and many of the associated claims processing edits, the administrative burden of reporting therapy services to Medicare would be minimized. This bundled approach to reporting and payment could result in more appropriate valuation of therapy services that reflects efficiencies when individually reported services are furnished in the same session. As a result, it could lead to reduced therapy expenditures, as well as a reduction in the number of beneficiaries affected by the therapy caps in a given year.

In conclusion, we emphasize that we continue to be committed to developing alternatives to the therapy caps that would provide appropriate payment for medically necessary and effective therapy services furnished to Medicare beneficiaries based on patient needs, rather than the current therapy caps which establish financial limitations on Medicare payment for therapy services in some settings regardless of medical necessity. The Congress has repeatedly intervened to allow exceptions to these caps for certain time periods, and the current exceptions are automatically processed based on a practitioner's attestation that medical necessity is documented in the chart for an individual patient. We believe that, ultimately, payment for therapy services should incentivize the most effective and efficient care, consistent with Medicare's focus on value in its purchasing.

Therefore, we are soliciting public comments on potential alternatives to the therapy caps, including those discussed in this section of this proposed rule. The STATS contractor has worked closely with a broad variety of clinicians, administrators, scientists, researchers, and other contractors to develop the 3 alternatives presented this discussion. We welcome all public comments on this propose rule from interested stakeholders, including individual therapists from both facility and nonfacility settings treating Part B (outpatient) beneficiaries. Among the topics of interest to us are the following:

- Recommendations for alternative payment policies (options discussed in this proposed rule or others) that address patient needs, while minimizing payment for inefficient services or those of limited patient benefit;
- Assessment of the practitioner burden associated with the recommended policies;
- Likelihood that recommended changes would minimize fraud, abuse, and waste;
- Whether the recommendations could assist CMS in obtaining meaningful information on patient function and how that information could be utilized;
- Whether measurement tools relevant to assessing the need for therapy services exist in the public domain and how they might be utilized;
- What function information should be collected and how it could be utilized to ensure necessary care, while minimizing payment for inefficient services or those of limited patient benefit; and
- How therapist behavior, plans of care, or patient scheduling would be affected by the recommended alternatives.

We are committed to finding alternatives to the current therapy cap limitations on expenditures for outpatient therapy services that will ensure that beneficiaries continue to receive those medically necessary therapy services that maximize their health outcomes. We continue to dedicate our resources to identifying alternatives that would encourage the most efficient and cost-effective treatments. We believe motivated therapists, with attention to the most cost-effective practices, can incorporate practice efficiencies that benefit patients by achieving the best possible results at the lowest cost.

Our STATS and DOTPA projects, which are currently engaged in data collection and analysis to inform short-term and long-term alternatives to the therapy caps, respectively, lay the foundation for future payment alternatives for outpatient therapy services. We are optimistic that the STATS project will identify short-term, feasible alternatives that may be tested in the future. The DOTPA project will create a tool and test its use to collect patient condition information that can then be applied to identify patient need

for therapy services. Together, these projects may provide the basis for a long-term plan to reshape Medicare's payment policy for outpatient therapy services to align with the value-based purchasing principles that are now guiding principles of the Medicare program. We encourage the public to provide comments so that we may consider all perspectives as we continue our work in this important area.

B. Diabetes Self-Management Training (DSMT) Services (HCPCS Codes G0108 and G0109)

1. Background

Section 4105(a) of BBA provided coverage for DSMT in outpatient settings without limiting this coverage to hospital outpatient departments. DSMT services consist of educational and training services furnished to an individual with diabetes by a certified provider in an outpatient setting.

Section 4105(a) of the BBA stipulated that training would be furnished by a "certified provider" which is a physician or other individual or entity that also provides other items or services for which payment may be made under Medicare. This program is intended to educate beneficiaries in the successful self-management of diabetes. The program includes instructions in self-monitoring of blood glucose; education about diet and exercise; an insulin treatment plan developed specifically for the patient who is insulin-dependent; and motivation for patients to use the skills for self-management. DSMT services are reported under HCPCS codes G0108 (Diabetes outpatient self-management training services, individual, per 30 minutes) and G0109 (Diabetes outpatient self-management training services, group session (2 or more), per 30 minutes).

2. Proposed Payment for DSMT Services

In accordance with section 4105(a) of the BBA, Medicare payment for outpatient DSMT services is made under the PFS as specified in § 414.1 through § 414.48. When we created HCPCS codes G0108 and G0109, the only direct costs included in the PE were registered nurse labor. Section 410.144(a)(4)(a) states that the DSMT team includes at least a registered dietitian and a certified diabetes educator. We did not establish work RVUs for DSMT services because we believed training would typically be performed by individuals other than a physician, such as a registered nurse (65 FR 83130). However, since that time, we have received requests from a number of stakeholders, including the American Association of Clinical Endocrinologists (AACE), the American Association of Diabetes Educators (AADE), and the Juvenile Diabetes Research Foundation, to include physician work in valuing DSMT services that is similar to the physician work that has been included in medical nutrition therapy (MNT) services since CY 2007 and kidney disease education (KDE) services since CY 2010. The stakeholders argued that because physicians coordinate DSMT programs, provide patient instruction, and communicate with referring physicians, physician work should be included in the RVUs for DSMT services. The stakeholders also requested that we reconsider the direct PE inputs for DMST services and include clinical labor for diabetes educators at a higher hourly rate instead of registered nurse labor. In addition, they stated that the supplies and equipment in the PE for DSMT services should be the same as for KDE services, with additional direct PE inputs for a diabetic educator curriculum, data tracking software, and DSMT program accreditation.

For CY 2011, we are proposing to assign physician work RVUs to DSMT services that are comparable, as adjusted for the service times of the HCPCS codes, to the work RVUs for MNT services. We are proposing that HCPCS G0108 for 30 minutes of individual DSMT services would be crosswalked to CPT code 97803 (Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes) for purposes of assigning work RVUs, with the physician work RVUs for CPT code 97803 multiplied by two to account for the greater time associated with HCPCS code G0108 (that is, 30 minutes). We are also proposing that HCPCS G0109 for 30 minutes of group DSMT services would be crosswalked to CPT code 97804 (Medical nutrition therapy; group (2 or more individuals(s)), each 30 minutes) for purposes of assigning work RVUs. The rationale for the proposed work RVUs for the DSMT HCPCS G-codes is based on the similarity of DSMT services to MNT services in the individual (CPT code 97803) and group (CPT code 97804) setting.

For CY 2011, we are also proposing to modify the PE inputs for DSMT services to reflect the current equipment and supplies for the KDE HCPCS G-codes implemented in the CY 2010 PFS final rule with comment period (74 FR 61901) (that is, HCPCS codes G0420 (Face-to-face educational services related to the care of chronic kidney disease; individual, per session, per one hour) and G0421 (Face-to-face educational services related to the care of chronic kidney disease; group, per session, per one hour)), based on the similarity in the equipment and supplies necessary for DSMT and KDE services. We have made adjustments to some of the equipment times for the 30 minute DSMT individual and group services as compared to the 1 hour individual and group KDE services. We are also including a diabetic educator curriculum and data tracking software in the PE inputs for DSMT services, but it is our general practice not to include program accreditation costs in those PE inputs. With respect to clinical labor, rather than changing the current labor type for DSMT services, we are proposing to utilize the same approach as we adopted for MNT services when we provided physician work RVUs for those services in CY 2007 (71 FR 69645). Specifically, we are removing all of the clinical labor from the group DSMT code and most of the clinical labor from the individual DSMT code, given that we are proposing work RVUs for both DSMT codes for CY 2011.

We believe these proposals would value DSMT services more consistently with other similar services that are paid under the PFS. As a result of our proposed CY 2011 changes, the proposed work RVUs for HCPCS codes G0108 and G0109 are 0.90 and 0.25, respectively. As described above, we are also proposing to modify the direct PE inputs for these codes for CY 2011.

C. End-Stage Renal Disease Related Services for Home Dialysis (CPT Codes 90963, 90964, 90965, and 90966)

1. End-Stage Renal Disease Home Dialysis Monthly Capitation Payment Services (CPT Codes 90963, 90964, 90965, and 90966)

In the CY 2004 PFS final rule with comment period (68 FR 63216), we established new Level II HCPCS G-codes for end-stage renal disease (ESRD) monthly capitation payment (MCP) services. For center-based patients, payment for the G-codes varied based on the age of the beneficiary and the number of face-to-face visits furnished each month (for example, 1 visit, 2–3 visits and 4 or more visits). Under the MCP methodology, the lowest payment applied when a physician provided one visit per month; a higher payment was provided for two to three visits per month. To receive the highest payment, a physician would have to provide at least four ESRD-related visits per month. However, payment for home dialysis MCP services only varied by the age of beneficiary. Although we did not initially specify a frequency of required

visits for home dialysis MCP services, we stated that we "expect physicians to provide clinically appropriate care to manage the home dialysis patient" (68 FR 63219).

Effective January 1, 2009, the CPT Editorial Panel created new CPT codes to replace the G-codes for monthly ESRD-related services, and we accepted the new codes for use under the PFS in CY 2009. The CPT codes for monthly ESRD-related services for home dialysis patients include the following, as displayed in Table 32: 90963, 90964, 90965, and 90966. In addition, the clinical vignettes used for the valuation of CPT codes 90963, 90964, 90965, and 90966 include scheduled (and unscheduled) examinations of the ESRD patient.

Given that we pay for a physician (or practitioner) to evaluate the ESRD patient over the course of an entire month under the MCP, we believe that it is clinically appropriate for the physician (or practitioner) to have at least one in-person, face-to-face encounter with the patient per month. Therefore, we are proposing to require the MCP physician (or practitioner) to furnish at least one in-person patient visit per month for home dialysis MCP services (as described by CPT codes 90963 through 90966). This requirement would be effective for home dialysis MCP services beginning January 1, 2011. We believe this requirement reflects appropriate, high quality medical care for ESRD patients being dialyzed at home and generally would be consistent with the current standards of medical practice.

2. Daily and Monthly ESRD–Related Services (CPT Codes 90951 through 90970)

In CY 2008, the AMA RUC submitted recommendations for valuing the new CY 2009 CPT codes displayed in Table 32 that replaced the MCP HCPCS G-codes for monthly ESRD-related services. We accepted these codes for use under the PFS.

TABLE 32—MCP CODES RECOGNIZED UNDER THE PFS

MCP code	Long descriptor
90951	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face physician visits per month.
90952	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2–3 face-to-face physician visits per month.
90953	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face physician visit per month.
90954	End-stage renal disease (ESRD) related services monthly, for patients 2–11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face physician visits per month.
90955	End-stage renal disease (ESRD) related services monthly, for patients 2–11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2–3 face-to-face physician visits per month.
90956	End-stage renal disease (ESRD) related services monthly, for patients 2–11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face physician visit per month.
90957	End-stage renal disease (ESRD) related services monthly, for patients 12–19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face physician visits per month.
90958	End-stage renal disease (ESRD) related services monthly, for patients 12–19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2–3 face-to-face physician visits per month.
90959	End-stage renal disease (ESRD) related services monthly, for patients 12–19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face physician visit per month.
90960	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 4 or more face-to-face physician visits per month.
90961	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 2–3 face-to-face physician visits per month.
90962	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face physician visit per month.
90963	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents.
90964	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 2–11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents.
90965	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 12–19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents.
90966	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 20 years of age and older.

There are four additional CPT codes for ESRD-related services that are reported on a per-day basis. These daily CPT codes are: 90967 (End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients younger than 2 years of age); 90968 (End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 2–11 years of age); 90969 (End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 12–19 years of age); and 90970 (End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older).

For the MCP codes displayed in Table 32, the AMA RUC initially

recommended 36 minutes of clinical labor time for the pre-service period. They also recommended an additional 6 minutes in the post-period for CPT codes 90960, 90961, 90962, and 90966. For the four codes describing daily services (CPT codes 90967 through 90970), the AMA RUC recommended including 1.2 minutes of clinical labor per day, which is the prorated amount of pre-service clinical labor included in the monthly codes. The AMA RUC also recommended that CPT codes 90952 and 90953 be contractor-priced.

In the CY 2009 PFS final rule with comment period (73 FR 69898), we asked the AMA RUC to reconsider their recommended PE inputs in the interest of making certain that they accurately reflected the typical direct PE resources required for these services. In addition, we asked the AMA RUC to review the physician times for CPT codes 90960 and 90961 that are used in the calculation of the PE RVUs. We accepted the work values for the new CPT codes for ESRD-related services that were recommended by the AMA RUC.

Since CY 2009, we have continued to calculate the PE RVUs for the entire series of MCP codes displayed in Table 32 by using the direct PE inputs from the predecessor HCPCS G-codes, except for CPT codes 90952 and 90953 which are contractor-priced. We have also continued to use the physician time associated with the predecessor HCPCS G-codes for CPT codes 90960 and 90961 for purposes of calculating the PE RVUs.

In CY 2009, the AMA RUC submitted new recommendations for CPT codes 90951 and 90954 through 90970. For each of the MCP codes (CPT code 90951 and CPT codes 90954 through 90966), the AMA RUC recommended an increased pre-service clinical staff time of 60 minutes. For each of the daily dialysis service codes (CPT codes 90967 through 90970), the AMA RUC recommended an increased clinical labor time of two minutes, which is the prorated amount of clinical labor included in the monthly codes. The AMA RUC also recommended an additional 38 minutes of physician time for CPT codes 90960 and 90961. This resulted in a total physician time of 128 minutes and 113 minutes, respectively, for these codes. The AMA RUC continued to recommend that CPT codes 90952 and 90953 be contractor-priced.

For CY 2011, we are proposing to accept these AMA RUC recommendations as more accurate reflections of the typical direct PE resources required for these services. Therefore, we are proposing to develop the PE RVUs for CPT code 90951 and CPT codes 90954 through 90970 using the direct PE inputs as recommended by the AMA RUC and reflected in the proposed CY 2011 PE database, which is available on the CMS Web site under the supporting data files for the CY 2011 PFS proposed rule at: *http://www.cms.gov/PhysicianFeeSched/.* We are also proposing to use the AMA RUC-recommended physician times for CPT codes 90960 and 90961. Consistent with the AMA RUC's recommendations, we are proposing to continue to contractor-price CPT codes 90952 and 90953.

D. Portable X-Ray Set-Up (HCPCS Code Q0092)

When a portable x-ray is furnished to a single patient, as many as four component HCPCS codes may be billed and paid for the service, including the portable x-ray transportation (HCPCS code R0070 (Transportation of portable x-ray equipment and personnel to home or nursing home, per trip to facility or location, one patient seen)); the portable x-ray set-up (HCPCS code Q0092 (Set-up of portable x-ray equipment)); and the professional and technical components of the x-ray service itself (CPT 70000 series). Currently, the direct PE database contains x-ray equipment in both the radiology codes in the 70000 series of CPT and HCPCS code Q0092, the code for the set-up of a portable x-ray. In the technical component of the x-ray service is the direct PE input of a radiology room which contains x-ray equipment for the various radiology codes in the 70000 series of CPT. In addition, portable x-ray equipment is included as a direct PE input for HCPCS code Q0092. Thus, x-ray equipment currently is recognized within the direct PE values for two of the HCPCS codes that would be reported for the portable x-ray service, resulting in an overvaluation of the comprehensive portable x-ray service.

Therefore, for CY 2011 we are proposing to remove portable x-ray equipment as a direct PE input for HCPCS code Q0092, in order to pay more appropriately for the x-ray equipment used to furnish a portable x-ray service. We believe the resulting payment for the comprehensive portable x-ray service would more appropriately reflect the resources used to furnish portable x-ray services by providing payment for the x-ray equipment solely through payment for the technical component of the x-ray service that is furnished.

E. Pulmonary Rehabilitation Services (HCPCS Code G0424)

In the CY 2010 PFS proposed rule (74 FR 33614), we proposed to create new HCPCS G-code G0424 (Pulmonary rehabilitation, including aerobic exercise (includes monitoring), per session, per day) to describe the services of a pulmonary rehabilitation (PR) program as specified in section 144(a) of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA). Using CPT code 93797 (Cardiac rehab without telemetry) as a reference code, we proposed to assign 0.18 work RVUs and 0.01 malpractice RVUs to G0424. To establish PE RVUs, we reviewed the PE inputs of similar services, particularly those of the respiratory therapy HCPCS codes G0237 (Therapeutic procedures to increase strength or endurance or respiratory muscles, face to face, one on one, each 15 minutes (includes monitoring)) and G0238 (Therapeutic procedures to improve respiratory function, other than described by G0237, one on one, face to face, per 15 minutes (includes monitoring)), as well as the cardiac rehabilitation codes, CPT codes 93797 and 93798 (Physician services for outpatient cardiac rehabilitation; with continuous ECG monitoring (per session)). In the CY 2010 PFS final rule with comment period (74 FR 61886), we finalized our proposal with modifications to the code descriptor and PE inputs, as recommended by some commenters.

Based on commenters' recommendations from the CY 2010 PFS final rule with comment period and further information furnished by stakeholders, we are proposing to increase the work RVUs for HCPCS code G0424 to 0.28 for CY 2011 to be comparable to the work RVUs for cardiac rehabilitation with monitoring (CPT code 93798) in view of the monitoring required for HCPCS code G0424.

In addition, we are also proposing to increase the clinical labor time for the respiratory therapist from 15 minutes to 30 minutes and to crosswalk the PE equipment inputs for HCPCS code G0424 to those for respiratory treatment services (HCPCS code G0238), which include a 1-channel ECG and a pulse oximeter. We would retain the treadmill currently assigned to HCPCS code G0424 and adjust the equipment time to 45 minutes. While several public commenters recommended this equipment, these commenters also requested a full 60 minutes of respiratory therapist time be included in the PE for HCPCS code G0424, comparable to the 15 minutes of

respiratory therapist time included in the one-on-one codes for 15 minutes of respiratory treatment services (HCPCS codes G0237 and G0238). However, because PR services reported under HCPCS code G0424 can be furnished either individually or in groups, we believe that 30 minutes of respiratory therapist time would be more appropriate for valuing the typical PR service.

F. Application of Tissue-Cultured Skin Substitutes to Lower Extremities (HCPCS Codes GXXX1 and GXXX2)

There are currently two biological products, Apligraf and Dermagraft, which are FDA-approved for the treatment of diabetic foot ulcers. While commonly used by podiatrists for this purpose, these products are also used by other specialists in the treatment of other clinical conditions, such as burns.

Many Medicare contractors have established local coverage determinations specifying the circumstances under which these services are covered. In the case of diabetic foot ulcers, clinical studies of Apligraf weekly application were based on up to 5 treatments over a 12-week period. In contrast, Dermagraft was applied weekly, up to 8 treatments over a 12-week period.

The skin substitute CPT codes were reviewed and new codes were last created by the CPT Editorial Panel for CY 2006. There are currently 2 skin repair CPT codes that describe Apligraf application, one primary code, CPT code 15340 (Tissue cultured allogeneic skin substitute; first 25 sq cm or less) and one add-on code, CPT code 15341 (Tissue cultured allogeneic skin substitute; each additional 25 sq cm, or part thereof (List separately in addition to code for primary procedure)) and 4 codes that describe Dermagraft application, two initial codes based on body area, CPT codes 15360 (Tissue cultured allogeneic dermal substitute, trunk, arms, legs; first 100 sq cm or less, or 1 percent of body area of infants and children) and 15365 (Tissue cultured allogeneic dermal substitute, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 100 sq cm or less, or 1 percent of body area of infants and children) and two add-on codes, CPT codes 15361 (Tissue cultured allogeneic dermal substitute, trunk, arms, legs; each additional 100 sq cm, or each additional 1 percent of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)) and 15366 (Tissue cultured allogeneic dermal substitute, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1 percent of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)).

Several stakeholders have expressed concern about the appropriateness and equity of the coding and payment for these services, given their similar uses and the office resources required when the products are applied repeatedly over a number of weeks for treatment of lower extremity ulcers. They are concerned that current coding, with the associated payment policies and relative values, does not provide for appropriate payment for the services based on how they are furnished. In addition, some stakeholders believe that the current coding and payment provides a financial incentive for the selection of one tissue-cultured product over another, rather than facilitating clinical decisionmaking based solely on the most clinically appropriate product for the patient's case. For example, the Dermagraft and Apligraf application codes have 90-day and 10-day global periods, respectively, and their current values include several follow-up office visits. When patients are treated periodically with repeated applications of the products over several weeks, the patients may be seen in follow-up by the physician. However, those encounters would not be evaluation and management visits but, instead, would be procedural encounters that would typically be valued differently under the PFS than the follow-up office visits currently included in the values for the Dermagraft and Apligraf application codes. Furthermore, while different stakeholders have indicated that debridement and site preparation are variably performed when these products are applied, the CPT codes for Dermagraft application allow separate reporting of these preparation services when they are performed, while the Apligraf application codes bundle these services. Since CY 2006, the PFS has accepted the RUC work and PE recommendations for the Dermagraft and Apligraf application codes and has paid accordingly.

With respect to Medicare payment policy, some Medicare contractors allow the use of modifier -58 (Staged or related procedure or service by the same physician during the postoperative period) to be reported with the skin substitute application codes and provide full payment for the service each time it is performed, even if the subsequent application(s) is within the global period of the service. Other contractors do not allow the use of modifier -58, and therefore, provide a single payment for a series of applications over 90 days or 10 days, as applicable to the particular code reported for the product's initial application.

Because of the current inconsistencies in valuing similar skin substitute application services and the common clinical scenarios for their use for Medicare beneficiaries, we believe that it would be appropriate to temporarily create Level II HCPCS G-codes to report application of tissue-cultured skin substitutes applied to the lower extremities in order to provide appropriate and consistent payment for the services as they are commonly furnished. Therefore, we are proposing to create two new HCPCS G-codes for CY 2011, GXXX1 (Application of tissue cultured allogeneic skin substitute or dermal substitute; for use on lower limb, includes the site preparation and debridement if performed; first 25 sq cm or less) and GXXX2 (Application of tissue cultured allogeneic skin or dermal substitute; for use on lower limb, includes the site preparation and debridement if performed; each additional 25 sq cm), that would be recognized for payment under the PFS for the application of Apligraf or Dermagraft to the lower limb. These codes would not allow separate reporting of CPT codes for site preparation or debridement. We emphasize that we would expect that the use of these HCPCS G-codes for payment under Medicare would be temporary, while stakeholders work through the usual channels to establish appropriate coding for these services that reflects the current common clinical scenarios in which the skin substitutes are applied. Furthermore, we would expect to receive recommendations from the AMA RUC for appropriate work values and direct practice expense inputs for the applicable codes, according to the usual process for new or revised codes.

Under the PFS, as a temporary measure, the HCPCS G-codes would be assigned a 0-day global period so payment would be made each a time a covered service was furnished. We are proposing to base payment on the physician work relative values and the direct PE inputs for the existing CPT codes for Apligraf application, with adjustments for the global period differences because the HCPCS G-codes and the Apligraf application CPT codes. These CPT codes resemble the new HCPCS G-codes in terms of wound size description and the inclusion of site preparation and debridement in their current values so we believe they

appropriately represent the physician work involved in the proposed HPCPCS G-codes. However, we would adjust the work RVUs of the Apligraf application codes to derive the HCPCS G-code proposed CY 2011 work values by extracting the values for any office visits and discharge day management services because the HCPCS G-codes have a 0-day global period. In addition, we would adjust the direct PE inputs of the Apligraf application codes to develop the proposed CY 2011 direct PE inputs of the HPCPS G-codes that have a 0-day global period.

Our crosswalks and adjustments result in proposed CY 2011 work RVUs of 2.22 for HPCPCS code GXXX1 and 0.50 for HCPCPS GXXX2. The proposed direct PE inputs for HCPCS codes GXXX1 and GXXX2 are included in the direct PE database for the CY 2011 proposed rule that is posted on the CMS Web site at *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp.*

We note that many Medicare contractors currently have local coverage policies that specify the circumstances under which Medicare covers the application of skin substitutes. The local coverage policies may include diagnostic or prior treatment requirements, as well as frequency limitations on the number and periodicity of treatments. We expect that these policies would be updated in the context of the temporary new HCPCS G-codes that we are proposing for use in CY 2011 to report the application of tissue cultured allogeneic skin or dermal substitutes. We are proposing to establish the HCPCS G-codes for temporary use in CY 2011 in order to improve the consistency and resource-based nature of PFS payments for skin substitute application services that require similar resources. However, we note our continued interest in ensuring that skin substitutes are properly utilized for Medicare beneficiaries who will benefit from that treatment. We will continue to monitor the utilization of these services and plan to identify any concerning trends in utilization that contractors may want to examine further through medical review or other approaches.

G. Canalith Repositioning (CPT Code 95992)

For CY 2009, CPT created a new code for canalith repositioning, specifically CPT code 95992 (Canalith repositioning procedure(s) (*e.g.,* Epley maneuver, Semont maneuver), per day). This service may be furnished by both physicians and therapists. Although we accepted the RUC-recommended work RVUs and PE inputs, we initially bundled this procedure on an interim basis in the CY 2009 PFS final rule with comment period (73 FR 69896), indicating that we believed it would be paid through the E/M service that it would accompany. Subsequently, in view of concerns from therapists who cannot furnish E/M services, we clarified that therapists could report one of the generally defined therapy CPT codes when canalith repositioning was furnished. In the CY 2010 PFS final rule with comment period (74 FR 61766), we changed the code's status under the PFS to "not recognized for payment under Medicare," consistent with our expectation that another payable code would be reported when the service was furnished.

Based on further information from stakeholders regarding the distinct and separate nature of this procedure from an E/M service and their request that we recognize this CPT code for payment, similar to our separate payment for most other procedures commonly furnished in association with an E/M service, we are proposing to recognize CPT code 95992 for payment under the CY 2011 PFS, consistent with our typical treatment of most other codes for minor procedures. In doing so, we are proposing to change the code's status to "A" and utilize the CY 2009 RUC recommendations for work RVUs (0.75) and PE inputs for establishing its payment in CY 2011. (That is, status "A" means Active code. These codes are separately payable under the PFS if covered.) Because canalith repositioning (CPT code 95992) can be furnished by physicians or therapists as therapy services under a therapy plan of care or by physicians as physicians' services outside of a therapy plan of care, we would add CPT code 95992 to the "sometimes therapy" list on the therapy code abstract file.

H. Intranasal/Oral Immunization Codes (CPT Codes 90467, 90468, 90473, and 90474)

To ensure that the PE RVUs are consistent between the intranasal/oral and injectable immunization administration CPT codes that describe services that utilize similar PE resources, we are proposing to crosswalk the PE values for CPT code 90471 (Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); one vaccine (single or combination vaccine/toxoid)) to CPT codes 90467 (Immunization administration younger than age 8 years (includes intranasal or oral routes of administration) when the physician counsels the patient/family; first administration (single or combination vaccine/toxoid), per day) and 90473 (Immunization administration by intranasal or oral route; one vaccine (single or combination vaccine/toxoid)).

Similarly, we are also proposing to crosswalk the PE values for CPT code 90472 (Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure)) to CPT codes 90468 (Immunization administration younger than age 8 years (includes intranasal or oral routes of administration) when the physician counsels the patient/family; each additional administration (single or combination vaccine/toxoid), per day (List separately in addition to code for primary procedure)) and 90474 (Immunization administration by intranasal or oral route; each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure)).

I. Refinement Panel Process

As discussed in the November 25, 1992 PFS final rule (57 FR 55938), we adopted a refinement panel process to assist us in reviewing the public comments on interim physician work RVUs for CPT codes with that status in each year and developing final work values for the subsequent year. Our decision to convene multispecialty panels of physicians was based on our need to balance the interests of those who commented on the work RVUs against the budgetary and redistributive effects that could occur if we accepted extensive increases in work RVUs across a broad range of services. The refinement panel reviews and discusses the work involved in each procedure and then each member individually rates the work of the procedure. Since 1992, the refinement panels' recommendation to change a work value or to retain the interim value has hinged solely on the outcome of a statistical test on the ratings (an F-test).

Depending on the number and range of codes that public commenters, typically specialty societies, request be subject to refinement, we establish refinement panels with representatives from 4 groups of physicians: Clinicians representing the specialty most identified with the procedures in question; physicians with practices in related specialties; primary care physicians; and contractor medical directors (CMDs). Typically the refinement panels meet in the summer prior to the promulgation of the final rule finalizing the RVUs for the codes.

Typical panels have included 8 to 10 physicians across the 4 groups. Over time, the statistical test used to evaluate the RVU ratings of individual panel members have become less reliable as the physicians in each group have tended to select a previously discussed value, rather than independently evaluating the work. In addition, the resulting RVUs have occasionally exhibited rank order anomalies (that is, a more complex procedure is assigned lower RVUs than a less complex procedure).

Most recently, section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) authorizes the Secretary to review potentially misvalued codes and make appropriate adjustments to the relative values. In addition, MedPAC has encouraged CMS to critically review the values assigned to the services under the PFS. MedPAC has stated its belief that CMS has historically relied too heavily on specialty societies to identify services that are misvalued by accepting so many recommendations of the RUC.

We believe the refinement panel process continues to provide stakeholders with a meaningful opportunity for review and discussion of the interim work RVUs with a clinically diverse group of experts that then provides informed recommendations to CMS. Therefore, we would like to continue the refinement process, including the established composition that includes representatives from the 4 groups of physicians, but with administrative modification and clarification. Specifically, for refinement panels beginning in CY 2011 (that is, for those codes with CY 2011 interim values that would be subject to refinement during CY 2011), we are proposing to eliminate the use of the F-test and instead base revised RVUs on the median work value of the panel members' ratings. We believe this approach will simplify the refinement process administratively, while resulting in a final panel recommendation that reflects the summary opinion of the panel members based on a commonly used measure of central tendency that is not significantly affected by outlier values. In addition, we are clarifying that we have the final authority to set the RVUs, and therefore, may make adjustments to the work RVUs resulting from refinement if policy concerns warrant their modification.

J. Remote Cardiac Monitoring Services (CPT Codes 93012, 93229, 93268, and 93271)

In the CY 2010 PFS final rule with comment period (74 FR 61755), we indicated that we continued to have concerns about the issue of developing PE RVUs for services that are utilized 24 hours a day, 7 days a week (24/7), such as those that require certain monitoring system equipment. The PE equipment methodology was developed for equipment that is in use during standard physician's office business hours and not this type of 24/7 equipment. We stated that we would conduct further analysis of this issue. Services that were contractor-priced in CY 2009 remained contractor-priced in CY 2010. We also indicated that any proposed changes will be communicated through future rulemaking.

Since publication of the CY 2010 PFS final rule with comment period, we have focused our additional analysis on four of the CPT codes that commenters have brought to our attention because they involve concurrent, remote, 24/7 attended monitoring of multiple patients from a central location: CPT code 93012 (Telephonic transmission of post-symptom electrocardiogram rhythm strip(s); 24-hour attended monitoring, per 30 day period of time; tracing only); CPT code 93229 (Wearable mobile cardiovascular telemetry with electrocardiographic recording, concurrent computerized real time data analysis and greater than 24 hours of accessible ECG data storage (retrievable with query) with ECG triggered and patient selected events transmitted to a remote attended surveillance center for up to 30 days; technical support for connection and patient instructions for use, attended surveillance, analysis and physician prescribed transmission of daily and emergent data reports); CPT code 93268 (Wearable patient activated electrocardiographic rhythm derived event recording with presymptom memory loop, 24-hour attended monitoring, per 30 day period of time; includes transmission, physician review and interpretation); and CPT 93271 code (Wearable patient activated electrocardiographic rhythm derived event recording with presymptom memory loop, 24-hour attended monitoring, per 30 day period of time; monitoring, receipt of transmissions, and analysis).

Of these four codes, CPT code 93229 is currently contractor-priced in CY 2010, meaning that the local Medicare contractors determine payment rates for the service within the PFS geographic areas in their jurisdiction. The three services that are currently nationally-priced on the PFS are in the first year of a 4-year transition to lower payment rates based on the use of the PPIS data adopted in the CY 2010 PFS final rule with comment period. We refer readers to section II.A.2. of this proposed rule for a description of the general PFS PE methodology that is the basis for the following discussion of approaches to establishing PE RVUs for these four CPT codes.

We examined several alternative methods for developing PE RVUS upon which PFS payment rates for these four CPT codes could be based. Each of these services involves transmission of information from multiple patients who wear individual monitoring devices that transmit patient-specific information to centralized equipment that is simultaneously in use for multiple patients. We believe it would be most consistent with the principles underlying the PFS PE methodology to classify the centralized monitoring equipment as an indirect cost since it is servicing multiple patients at the same time. After classifying this equipment as an indirect cost, we used our standard methodology to calculate an indirect practice cost index value for each code based on the PE/HR survey data of the historical mix of specialties providing these services. Establishing payment rates for these codes based on this approach would result in decreases in the payment rates for these services, including the typical contractor's price for CPT code 93229. For the three services that are nationally priced, these decreases would be relative to the lower payment rates based on the use of the PPIS data after the 4-year transition.

We also received PE/HR data from the Remote Cardiac Services Provider Group (RCSPG), a group of IDTF suppliers of these types of services. For sensitivity analysis purposes, we substituted these data for the PE/HR data of the specialties performing these services, while continuing to treat the centralized monitoring equipment as an indirect cost. We found that establishing payment rates for these codes based on the approach of using the submitted RCSPG PE/HR data would again result in decreases in the payment rates for these services, including the typical contractor's price for CPT code 93229. As in the prior alternative, the decreases for the nationally priced codes would be relative to the payment rates reflecting the 4-year transition to the PPIS data.

Although we believe that it would be most consistent with the principles underlying the PE methodology to classify the centralized monitoring equipment as an indirect cost, we also performed a sensitivity analysis of the payment rates if the centralized monitoring equipment were classified as a direct cost. In this simulation, we

assumed that the centralized monitoring equipment was in year-round use, 7 days per week for 24 hours per day. We found that establishing payment rates for these codes based on the approach of classifying the centralized monitoring equipment as a direct cost would again result in decreases in the payment rates for the nationally priced services relative to their payment rates after the 4-year transition to the use of the PPIS data, as well as to the typical current contractor's price for CPT code 93229.

Finally, we considered proposing contractor-pricing for all four of these services for CY 2011. However, we are cognizant of past public comments on this issue that have requested that all of these services be priced nationally on the PFS, including the one service (CPT code 93229) that is currently contractor-priced.

We also considered that the services currently priced nationally on the PFS are scheduled to receive lower payment rates under the 4-year transition to the PPIS data and that the contractor's price for CPT 93229 was recently reduced in the area where the majority of the billings for this service currently occur.

After taking all these factors into consideration, we are not proposing CY 2011 methodological or direct cost input changes for CPT codes 93012, 93268, or 93271—the services that are currently nationally priced under the PFS. We are also proposing to continue contractor-pricing for CPT 93229 for CY 2011. We continue to be interested in public comments on this issue, including responses to our analysis of alternative approaches to establishing PE RVUs for 24/7 services, and further discussion of the issues we have identified in our alternative pricing methodologies. In addition, while we have focused the 24/7 services analysis to date on developing the PE RVUs for remote cardiac monitoring services, there may be 24/7 services in other areas of medicine, either currently paid under the PFS or in development for the future. Therefore, we are also interested in public comments on these current or emerging 24/7 services, including descriptions of the similarities or differences between these other services and remote cardiac monitoring services, particularly with respect to the issues we have identified in our analysis of alternative approaches to establishing PE RVUs for remote cardiac monitoring services under the PFS.

IV. Medicare Telehealth Services for the Physician Fee Schedule

A. Billing and Payment for Telehealth Services

1. History

Prior to January 1, 1999, Medicare coverage for services delivered via a telecommunications system was limited to services that did not require a face-to-face encounter under the traditional model of medical care. Examples of these services included interpretation of an x-ray or electrocardiogram or electroencephalogram tracing, and cardiac pacemaker analysis.

Section 4206 of the BBA provided for coverage of, and payment for, consultation services delivered via a telecommunications system to Medicare beneficiaries residing in rural health professional shortage areas (HPSAs) as defined by the Public Health Service Act. Additionally, the BBA required that a Medicare practitioner (telepresenter) be with the patient at the time of a teleconsultation. Further, the BBA specified that payment for a teleconsultation had to be shared between the consulting practitioner and the referring practitioner and could not exceed the fee schedule payment which would have been made to the consultant for the service provided. The BBA prohibited payment for any telephone line charges or facility fees associated with the teleconsultation. We implemented this provision in the CY 1999 PFS final rule with comment period (63 FR 58814).

Effective October 1, 2001, section 223 of the Medicare, Medicaid and SCHIP Benefits Improvement Protection Act of 2000 (Pub. L. 106–554) (BIPA) added a new section 1834(m) to the Act which significantly expanded Medicare telehealth services. Section 1834(m)(4)(F)(i) of the Act defines Medicare telehealth services to include consultations, office visits, office psychiatry services, and any additional service specified by the Secretary, when delivered via a telecommunications system. We first implemented this provision in the CY 2002 PFS final rule with comment period (66 FR 55246). Section 1834(m)(4)(F)(ii) required the Secretary to establish a process that provides for annual updates to the list of Medicare telehealth services. We established this process in the CY 2003 PFS final rule with comment period (67 FR 79988).

As specified in regulations at § 410.78(b), we generally require that a telehealth service be furnished via an interactive telecommunications system. Under § 410.78(a)(3), an interactive telecommunications system is defined as multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and the practitioner at the distant site. Telephones, facsimile machines, and electronic mail systems do not meet the definition of an interactive telecommunications system. An interactive telecommunications system is generally required as a condition of payment; however, section 1834(m)(1) of the statute does allow the use of asynchronous "store-and-forward" technology in delivering these services when the originating site is a Federal telemedicine demonstration program in Alaska or Hawaii. As specified in regulations at § 410.78(a)(1), store and forward means the asynchronous transmission of medical information from an originating site to be reviewed at a later time by the practitioner at the distant site.

Medicare telehealth services may be provided to an eligible telehealth individual notwithstanding the fact that the individual practitioner providing the telehealth service is not at the same location as the beneficiary. An eligible telehealth individual means an individual enrolled under Part B who receives a telehealth service furnished at an originating site. As specified in BIPA, originating sites are limited under section 1834(m)(3)(C) of the statute to specified medical facilities located in specific geographic areas. The initial list of telehealth originating sites included the office of a practitioner, a critical access hospital (CAH), a rural health clinic (RHC), a federally qualified health center (FQHC) and a hospital. More recently, section 149 of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275) (MIPPA) expanded the list of telehealth originating sites to include hospital-based renal dialysis centers, skilled nursing facilities (SNFs), and community mental health centers (CMHCs). In order to serve as a telehealth originating site, these sites must be located in an area designated as a rural health professional shortage area (HPSA), in a county that is not in a metropolitan statistical area (MSA), or must be an entity that participates in a Federal telemedicine demonstration project that has been approved by (or receives funding from) the Secretary of Health and Human Services as of December 31, 2000. Finally, section 1834(m) of the statute does not require the eligible telehealth individual to be

presented by a practitioner at the originating site.

2. Current Telehealth Billing and Payment Policies

As noted above, Medicare telehealth services can only be furnished to an eligible telehealth beneficiary in an originating site. An originating site is defined as one of the specified sites where an eligible telehealth individual is located at the time the service is being furnished via a telecommunications system. In general, originating sites must be located in a rural HPSA or in a county outside of an MSA. The originating sites authorized by the statute are as follows:

- Offices of a physician or practitioner
- Hospitals
- CAHs
- RHCs
- FQHCs
- Hospital-Based or Critical Access Hospital-Based Renal Dialysis Centers (including Satellites)
- SNFs
- CMHCs

Currently approved Medicare telehealth services include the following:

- Initial inpatient consultations
- Follow-up inpatient consultations
- Office or other outpatient visits
- Individual psychotherapy
- Pharmacologic management
- Psychiatric diagnostic interview examination
- End Stage Renal Disease (ESRD) related services
- Individual medical nutrition therapy (MNT)
- Neurobehavioral status exam
- Individual health and behavior assessment and intervention (HBAI)

In general, the practitioner at the distant site may be any of the following, provided that the practitioner is licensed under State law to furnish the service being furnished via a telecommunications system:

- Physician
- Physician assistant (PA)
- Nurse practitioner (NP)
- Clinical nurse specialist (CNS)
- Nurse midwife
- Clinical psychologist
- Clinical social worker
- Registered dietitian or nutrition professional

Practitioners furnishing Medicare telehealth services are located at a distant site, and they submit claims for telehealth services to the Medicare contractors that process claims for the service area where their distant site is located. Section 1834(m)(2)(A) of the Act requires that a practitioner who furnishes a telehealth service to an eligible telehealth individual be paid an amount equal to the amount that the practitioner would have been paid if the service had been furnished without the use of a telecommunications system. Distant site practitioners must submit the appropriate HCPCS procedure code for a covered professional telehealth service, appended with the –GT (Via interactive audio and video telecommunications system) or –GQ (Via asynchronous telecommunications system) modifier. By reporting the –GT or –GQ modifier with a covered telehealth procedure code, the distant site practitioner certifies that the beneficiary was present at a telehealth originating site when the telehealth service was furnished. The usual Medicare deductible and coinsurance policies apply to the telehealth services reported by distant site practitioners.

Section 1834(m)(2)(B) of the Act provides for payment of a facility fee to the originating site. To be paid the originating site facility fee, the provider or supplier where the eligible telehealth individual is located must submit a claim with HCPCS code Q3014 (Telehealth originating site facility fee), and the provider or supplier is paid according to the applicable payment methodology for that facility or location. The usual Medicare deductible and coinsurance policies apply to HCPCS code Q3014. By submitting HCPCS code Q3014, the originating site authenticates that it is located in either a rural HPSA or non-MSA county or is an entity that participates in a Federal telemedicine demonstration project that has been approved by (or receives funding from) the Secretary of Health and Human Services as of December 31, 2000 as specified in section 1834(m)(4)(C)(i)(III) of the Act.

As described above, certain professional services that are commonly furnished remotely using telecommunications technology, but that do not require the patient to be present in-person with the practitioner when they are furnished, are covered and paid in the same way as services delivered without the use of telecommunications technology when the practitioner is in-person at the medical facility furnishing care to the patient. Such services typically involve circumstances where a practitioner is able to visualize some aspect of the patient's condition without the patient being present and without the interposition of a third person's judgment. Visualization by the practitioner can be possible by means of x-rays, electrocardiogram or electroencephalogram tracings, tissue samples, *etc.* For example, the interpretation by a physician of an actual electrocardiogram or electroencephalogram tracing that has been transmitted via telephone (that is, electronically, rather than by means of a verbal description) is a covered physician's service. These remote services are not Medicare telehealth services as defined under section 1834(m). Rather, these remote services that utilize telecommunications technology are considered physicians' services in the same way as services that are furnished in-person without the use of telecommunications technology; they are paid under the same conditions as in-person physicians' services (with no requirements regarding permissible originating sites), and should be reported in the same way (that is, without the –GT or –GQ modifier appended).

B. Requests for Adding Services to the List of Medicare Telehealth Services

As noted above, in the December 31, 2002 **Federal Register** (67 FR 79988), we established a process for adding services to or deleting services from the list of Medicare telehealth services. This process provides the public with an ongoing opportunity to submit requests for adding services. We assign any request to make additions to the list of Medicare telehealth services to one of the following categories:

- Category 1: Services that are similar to professional consultations, office visits, and office psychiatry services. In reviewing these requests, we look for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site and, if necessary, the telepresenter. We also look for similarities in the telecommunications system used to deliver the proposed service, for example, the use of interactive audio and video equipment.
- Category 2: Services that are not similar to the current list of telehealth services. Our review of these requests includes an assessment of whether the use of a telecommunications system to deliver the service produces similar diagnostic findings or therapeutic interventions as compared with the in-person delivery of the same service. Requestors should submit evidence showing that the use of a telecommunications system does not affect the diagnosis or treatment plan as compared to in-person delivery of the requested service.

Since establishing the process to add or remove services from the list of approved telehealth services, we have added the following to the list of Medicare telehealth services: Individual HBAI services; psychiatric diagnostic interview examination; ESRD services with 2 to 3 visits per month and 4 or more visits per month (although we require at least 1 visit a month to be furnished in-person by a physician, CNS, NP, or PA in order to examine the vascular access site); individual MNT; neurobehavioral status exam; and initial and follow-up inpatient telehealth consultations for beneficiaries in hospitals and skilled nursing facilities (SNFs).

Requests to add services to the list of Medicare telehealth services must be submitted and received no later than December 31 of each calendar year to be considered for the next rulemaking cycle. For example, requests submitted before the end of CY 2010 are considered for the CY 2012 proposed rule. Each request for adding a service to the list of Medicare telehealth services must include any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as a vehicle for making changes to the list of Medicare telehealth services, requestors should be advised that any information submitted is subject to public disclosure for this purpose. For more information on submitting a request for an addition to the list of Medicare telehealth services, including where to mail these requests, we refer readers to the CMS Web site at *http://www.cms.gov/telehealth/.*

C. Submitted Requests for Addition to the List of Telehealth Services for CY 2011

We received requests in CY 2009 to add the following services as Medicare telehealth services effective for CY 2011: (1) Individual kidney disease education (KDE) services; (2) individual diabetes self-management training (DSMT) services; (3) group KDE, DSMT, MNT, and HBAI services; (4) initial, subsequent, and discharge day management hospital care services; (5) initial, subsequent, discharge day management, and other nursing facility care services; (6) neuropsychological testing services; (7) speech-language pathology services; and (8) home wound care services. The following presents a discussion of these requests, including our proposals for additions to the CY 2011 telehealth list.

1. Individual KDE Services

The American Society of Nephrology, Dialysis Patient Citizens, AMGEN, and Kidney Care Partners submitted requests to add individual KDE services, reported by HCPCS code G0420 (Face-to-face educational services related to the care of chronic kidney disease; individual, per session, per one hour), to the list of approved telehealth services for CY 2011 on a category 1 basis.

Individual KDE services, covered under the new Medicare KDE benefit effective for services furnished beginning in CY 2010, are defined as face-to-face educational services provided to a patient with stage IV chronic kidney disease (CKD). We believe the interaction between a practitioner and a beneficiary receiving individual KDE services is similar to the education, assessment, and counseling elements of individual MNT services, reported by HCPCS code G0270 (Medical nutrition therapy; reassessment and subsequent intervention(s) following second referral in same year for change in diagnosis, medical condition or treatment regimen (including additional hours needed for renal disease), individual, face to face with the patient, each 15 minutes); CPT code 97802 (Medical nutrition therapy; initial assessment and intervention, individual, face-to-face with the patient, each 15 minutes); and CPT code 97803 (Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes), all services that are currently on the telehealth list.

Therefore, we are proposing to add HCPCS code G0420 to the list of telehealth services for CY 2011 on a category 1 basis. Consistent with this proposal, we are also proposing to revise our regulations at § 410.78(b) and § 414.65(a)(1) to include individual KDE as a Medicare telehealth service.

2. Individual DSMT Services

The Tahoe Forest Health System and the Marshfield Clinic submitted requests to add individual DSMT services, reported by HCPCS code G0108 (Diabetes outpatient self-management training services, individual, per 30 minutes), to the list of telehealth services for CY 2011 on a category 1 basis. In the CY 2009 PFS final rule with comment period (73 FR 69743), we stated that we believe individual DSMT services are not analogous to individual MNT services because of the element of skill-based training that is encompassed within individual DSMT services that is not an aspect of individual MNT services (or any other services currently approved for telehealth). Due to the statutory requirement that DSMT services include teaching beneficiaries the skills necessary for the self-administration of injectable drugs, we have stated our belief that DSMT, whether provided to an individual or a group, must be evaluated as a category 2 service as specified in the CY 2009 PFS proposed rule (73 FR 38516). We have considered several previous requests to add DSMT to the list of Medicare telehealth services. We have not added individual DSMT to the list of telehealth services because we believe that skill-based training, such as teaching patients how to inject insulin, would be difficult to accomplish effectively without the physical presence of the teaching practitioner (70 FR 45787 and 70157, and 73 FR 38516 and 69743).

In considering the new request to add individual DSMT services to the list of telehealth services in CY 2011, we have taken into account requestors' argument that individual DSMT services are highly similar to individual MNT services and that injection training constitutes just a small proportion of DSMT services. Except for the component of individual DSMT services that involves instruction in self-administration of injectable drugs for eligible beneficiaries, we agree with the requestors that individual DSMT services are similar to individual MNT services, which are currently on the list of Medicare telehealth services. We note that Medicare coverage of DSMT services was initially authorized in the Balanced Budget Act of 1997. After more than a decade of Medicare coverage, the most recent information shows that DSMT continues to be significantly underutilized in the context of the eligible population of Medicare beneficiaries. While we are uncertain to what extent geographic barriers to care contribute to this underutilization, given the morbidity associated with poorly managed diabetes and the growing evidence-base regarding effective DSMT services, we believe it is very important to facilitate Medicare beneficiary access to these underutilized services. While we have previously been concerned about treating the components of DSMT services differently in the context of considering DSMT services for the telehealth list, we believe that our concern regarding the skill-based injection training component of DSMT services can be addressed by imposing a requirement that a minimum portion of the training be furnished in-person.

We note that for beneficiaries who meet the coverage criteria, Medicare covers 10 hours of DSMT services in the year following the initial training, as described in the Medicare Benefit Policy Manual (Pub. 100–02, Chapter 15, Section 300.3). Taking into consideration the initial year coverage of DSMT services, we are proposing that a minimum of 1 hour of instruction in injection training must be furnished in-person during the year following the initial DSMT service. Imposing this condition would allow us to expand access to DSMT services by adding individual DSMT services to the list of telehealth services, while ensuring effective injection training for beneficiaries.

Therefore, we are proposing to add HCPCS code G0108 to the list of telehealth services beginning in CY 2011. We are also proposing that, as a condition of payment for individual DSMT services furnished as telehealth services to an eligible telehealth individual, a minimum of 1 hour of in-person instruction in the self-administration of injectable drugs must be furnished to the individual during the year following the initial DSMT service. The injection training may be furnished through either individual or group DSMT services. By reporting the –GT or –GQ modifier with HCPCS code G0108 as a telehealth service, the distant site practitioner would certify that the beneficiary has received or will receive 1 hour of in-person DSMT services for purposes of injection training during the year following the initial DSMT service. Consistent with this proposal, we are proposing to revise our regulations at § 410.78(b) and § 414.65(a)(1) to include individual DSMT services as a Medicare telehealth service, with the exception of 1 hour of in-person instruction in self-administration of injectable drugs which must be furnished to the eligible telehealth individual as individual or group DSMT services during the year following the initial DSMT service.

We note that, as specified in § 410.141(e), individual DSMT services may be furnished by a physician, individual, or entity that furnishes other services for which direct Medicare payment may be made and that submits necessary documentation to, and is accredited by, an accreditation organization approved by CMS. However, consistent with the statutory requirements of section 1834(m)(1) of the Act and as provided in § 410.78(b)(1) and (b)(2) of our regulations, Medicare telehealth services, including individual DSMT furnished as a telehealth service, could only be furnished by a licensed PA, NP, CNS, certified nurse-midwife, clinical psychologist, clinical social worker, or registered dietitian or nutrition professional.

3. Group KDE, MNT, DSMT, and HBAI Services

The American Society of Nephrology, Dialysis Patient Citizens, AMGEN, Tahoe Forest Health Systems, Kidney Care Partners, the American Telemedicine Association, and the Marshfield Clinic submitted requests to add one or more of the following group services to the telehealth list for CY 2011:

- Group KDE services, reported by HCPCS code G0421 (Face-to-face educational services related to the care of chronic kidney disease; group, per session, per one hour);
- Group MNT services, reported by CPT code 97804 (Medical nutrition therapy; group (2 or more individual(s)), each 30 minutes);
- Group DSMT services, reported by HCPCS code G0109 (Diabetes outpatient self-management training services, group session (2 or more), per 30 minutes); and/or
- Group HBAI services, reported by CPT code 96153 (Health and behavior intervention, each 15 minutes, face-to-face; group (2 or more patients)) and 96154 (Health and behavior intervention, each 15 minutes, face-to-face; family (with the patient present)).

When furnished as individual services, HBAI and MNT services are currently on the list of Medicare telehealth services. Furthermore, we are proposing to add individual KDE and DSMT services to the list of Medicare telehealth services beginning in CY 2011 as described above.

In the CY 2007 and CY 2010 PFS rulemaking cycles (70 FR 45787 and 70157, and 74 FR 33543 and 61764), we stated that we did not believe that group services could be appropriately delivered through telehealth. We have observed that currently there are no group services approved as Medicare telehealth services and that there is a different interactive dynamic between the practitioner and his or her patients in group services as compared to individual services. We previously have considered requests to add various group services to the list of Medicare telehealth services on a category 2 basis because we have believed that, especially given the interactive dynamic between practitioners and their patients, group services are not similar to other services on the list of Medicare telehealth services. Therefore, we have maintained that it is necessary to evaluate the addition of group services by comparing diagnostic findings or therapeutic interventions when services are furnished via telehealth versus when services are furnished in-person.

We continue to believe that the group dynamic may be a critical and defining element for certain services, and that this characteristic precludes many group services from being considered on a category 1 basis for addition to the list of Medicare telehealth services. For example, we believe that due to the therapeutic nature of the group dynamic that is integral to group psychotherapy, group psychotherapy is fundamentally different from other Medicare telehealth services and, therefore, could not be considered on a category 1 basis for addition to the telehealth services list. For the same reason, in the absence of evidence to the contrary, we do not believe group psychotherapy services could be appropriately delivered through telehealth.

However, upon further consideration, with regard to the particular group education and training services for which we received requests for addition to the Medicare telehealth services list, we believe the group dynamic is not central to the core education and training components of these particular services, specifically DSMT, MNT, KDE, and HBAI services. We believe that these group services are sufficiently similar to the individual, related services that are already on the telehealth services list or are proposed for addition beginning in CY 2011. Specifically, we believe that for these group services, which consist principally of an information exchange for the purpose of education and training, the roles of, and interactions between, the patients and the practitioner are sufficiently similar to the related individual education and training services that the services can be furnished appropriately as a telehealth service.

Therefore, we are proposing to add HCPCS code G0421 for group KDE services, CPT code 97804 for group MNT services, HCPCS code G0109 for group DSMT services, and CPT codes 96153 and 96154 for group HBAI services to the Medicare telehealth services list on a category 1 basis. Furthermore, because the concerns we raised above regarding adequate injection training with the addition of individual DSMT are also present for group DSMT, we are proposing to require the same minimum of 1 hour of in-person instruction for injection training within the year following the initial DSMT service for any beneficiary that receives DSMT services via

telehealth. By reporting the –GT or –GQ modifier with HCPCS code G0109, the distant site practitioner would certify that the beneficiary has received or will receive 1 hour of in-person DSMT services for purposes of injection training during the year following the initial DSMT service. Consistent with this proposal to add these group education and training services, we are also proposing to revise our regulations at § 410.78(b) and § 414.65(a)(1) to include group KDE, MNT, DSMT, and HBAI services as Medicare telehealth services, with the exception of 1 hour of in-person instruction of individual or group DSMT services in the year following the initial DSMT service.

As described above for individual DSMT services, we note that group DSMT services may be furnished by a physician, individual, or entity that furnishes other services for which direct Medicare payment may be made and that submits necessary documentation to, and is accredited by, an accreditation organization approved by CMS, as specified in § 410.141(e) for DSMT services. However, consistent with the statutory requirements of section 1834(m)(1) of the Act and as provided in § 410.78(b)(1) and (b)(2) of our regulations, Medicare telehealth services, including group DSMT furnished as a telehealth service, could only be furnished by a licensed PA, NP, CNS, certified nurse-midwife, clinical psychologist, clinical social worker, or registered dietitian or nutrition professional.

4. Initial, Subsequent, and Discharge Day Management Hospital Care Services

The University of Louisville School of Medicine, the American Telemedicine Association, and Mille Lacs Health System submitted various requests to add initial hospital care services (reported by CPT codes 99221 (Level 1 initial hospital care), 99222 (Level 2 initial hospital care), and 99223 (Level 3 initial hospital care)); subsequent hospital care services (reported by CPT codes 99231 (Level 1 subsequent hospital care), 99232 (Level 2 subsequent hospital care), and 99233 (Level 3 subsequent hospital care)); and/or hospital discharge day management services (reported by CPT codes 99238 (Hospital discharge day management; 30 minutes or less) and 99239 (Hospital discharge day management; more than 30 minutes) to the Medicare telehealth services list beginning in CY 2011, generally on a category 1 basis. Some of the requestors also recommended that we limit the delivery of these services through telehealth to the provision of services to patients with a psychiatric diagnosis or to those treated in a psychiatric hospital or licensed psychiatric bed.

We appreciate the recommendations of the requestors to substantially expand the list of Medicare telehealth services. The requestors submitted a number of studies regarding the outcomes of telehealth services in caring for patients with psychiatric diagnoses. However, we note that the CPT codes for hospital care services are used to report care for hospitalized patients with a variety of diagnoses, including psychiatric diagnoses. We do not believe it would be appropriate to add services to the telehealth list only for certain diagnoses because the service described by a HCPCS code is essentially the same service, regardless of the patient's diagnosis. When evaluating the addition of services for telehealth on a category 1 basis, our focus is on the roles of, and interactions among, the beneficiary, the physician or practitioner, and the telepresenter (if applicable), which generally are similar across diagnoses for services that may be reported with the same HCPCS codes. Even in the unique case of certain ESRD services, we limited additions to the list of Medicare telehealth services based on the appropriateness of certain specific codes, taking into consideration the full service descriptions (69 FR 47511). Therefore, we continue to believe that it is most appropriate to consider additions to the list of telehealth services based on the overall suitability of the services described by the relevant HCPCS codes to delivery through telehealth.

In the CY 2005, CY 2008, and CY 2009 PFS rulemakings (69 FR 47510 and 66276, 72 FR 38144 and 66250, and 73 FR 38517 and 69745, respectively), we did not add initial, subsequent, or discharge day management hospital care services to the list of approved telehealth services because of our concern regarding the use of telehealth for the ongoing evaluation and management (E/M) for the generally high acuity of hospital inpatients. While we continue to have some concern in this area, we also share the requestors' interest in improving access for hospitalized patients to care furnished by treating practitioners. Therefore, we have reevaluated these services in the context of the CY 2011 requests, including considering the possibility that these services could be added on a category 1 basis based on their resemblance to services currently on the telehealth list, such as initial and follow-up inpatient telehealth consultations. The following presents a discussion of our review of the subcategories of hospital care services included in these requests.

Currently, one of the three codes for an initial hospital care service (specifically CPT codes 99221, 99222, or 99223) is reported for the first hospital inpatient E/M visit to the patient by the admitting or a consulting practitioner when that visit is furnished in-person. In addition, we note that currently there are several HCPCS G-codes on the Medicare telehealth services list that may be reported for initial and follow-up inpatient consultations through telehealth, specifically HCPCS codes G0406 (Follow-up inpatient telehealth consultation, limited, physicians typically spend 15 minutes communicating with the patient via telehealth); G0407 (Follow-up inpatient telehealth consultation, intermediate, physicians typically spend 25 minutes communicating with the patient via telehealth); G0408 (Follow-up inpatient telehealth consultation, complex, physicians typically spend 35 minutes or more communicating with the patient via telehealth); G0425 (Initial inpatient telehealth consultation, typically 30 minutes communicating with the patient via telehealth); G0426 (Initial inpatient telehealth consultation, typically 50 minutes communicating with the patient via telehealth); and G0427 (Initial inpatient telehealth consultation, typically 70 minutes or more communicating with the patient via telehealth).

While initial inpatient consultation services are currently on the list of approved telehealth services, there are no services on the current list of telehealth services that resemble initial hospital care for an acutely ill patient by the admitting practitioner who has ongoing responsibility for the patient's treatment during the hospital course. Therefore, we are unable to consider initial hospital care services on a category 1 basis for the telehealth list.

We have reviewed the documentation submitted in support of adding the initial hospital care codes to the Medicare telehealth services list as category 2 requests. Most of the studies provided by the requestors were specific to the treatment of patients with particular diagnoses. Additionally, the studies were not specific to initial hospital care visits by admitting practitioners. Finally, most of the studies concluded that more research was required in order to establish medical equivalence between telehealth and in-person services. Therefore, we received no information that provides robust support for the addition of initial hospital care services to the approved telehealth list on a category 2 basis. The

initial hospital care codes describe the first visit to the hospitalized patient by the admitting practitioner who may or may not have seen the patient in the decision-making phase regarding hospitalization. We believe it is critical that the initial hospital visit by the admitting practitioner be conducted in-person to ensure that the practitioner with ongoing treatment responsibility comprehensively assesses the patient's condition upon admission to the hospital through a thorough in-person examination. Therefore, we are not proposing to add initial hospital care services to the Medicare telehealth services list for CY 2011.

We have again considered adding subsequent hospital care services reported by CPT codes 99231 through 99233 to the telehealth list for CY 2011 on a category 1 basis. In the CY 2005 and CY 2008 PFS proposed rules (69 FR 47511 and 72 FR 38155), we stated that the potential acuity of patients in the hospital setting precludes consideration of subsequent hospital visits as similar to existing telehealth services. However, as stated earlier, we also note that HCPCS codes for initial and follow-up inpatient consultation services are on the list of telehealth services. These E/M services are furnished to high acuity hospitalized patients, although not by the admitting practitioner himself or herself. However, in light of the increasingly prevalent care model that entails multidisciplinary team care for patients with complex medical illnesses that involve multiple body systems, consulting practitioners may often play a key, intensive, and ongoing role in caring for hospitalized patients. Therefore, we believe that subsequent hospital care visits by a patient's admitting practitioner may sufficiently resemble follow-up inpatient consultation services to consider these subsequent hospital care services on a category 1 basis for the telehealth list. While we still believe the potential acuity of hospital inpatients is greater than those patients likely to receive currently approved Medicare telehealth services, we also believe that it would be appropriate to permit some subsequent hospital care services to be furnished through telehealth in order to ensure that hospitalized patients have frequent encounters with their admitting practitioner. However, we also continue to believe that the majority of these visits should be in-person to facilitate the comprehensive, coordinated, and personal care that medically volatile, acutely ill patients require on an ongoing basis.

Therefore, we are proposing that subsequent hospital care services, specifically CPT codes 99231, 99232, and 99233, be added to the list of telehealth services on a category 1 basis for CY 2011, but with some limitations on the frequency that these services may be furnished through telehealth. Because of our concerns regarding the potential acuity of hospital inpatients, we are proposing to limit the provision of subsequent hospital care services through telehealth to once every 3 days. We are confident that admitting practitioners will continue to make appropriate in-person visits to all patients who need such care during their hospitalization. Consulting practitioners should continue to use the inpatient telehealth consultation HCPCS G-codes, specifically G0406, G0407, G0408, G0425, G0426, or G0427 when reporting consultations furnished to inpatients via telehealth.

Consistent with this proposal, we are proposing to revise § 410.78(b) and § 414.65(a)(1) to include subsequent hospital care services as Medicare telehealth services, with the limitation of one telehealth subsequent hospital care service every 3 days.

We also considered adding hospital discharge day management services to the list of telehealth services. These services, reported by CPT codes 99238 and 99239, include the final examination of the patient, discussion of the hospital stay, instructions for continuing care to all relevant caregivers, and preparation of discharge records, prescriptions, and referral forms. These services are furnished when a practitioner deems it medically reasonable and necessary to assess a patient's readiness for discharge and to prepare a patient for discharge from an acute care environment to a less intensive setting. There are no services on the current list of telehealth services that resemble such preparation of a patient for discharge. We believe it is especially important that, if a practitioner furnishes a discharge day management service, the service be furnished in-person in order to allow the practitioner to comprehensively assess the patient's status in preparation for discharge so that the patient will have a higher likelihood of making a successful transition to the less intensive setting. Therefore, we are not considering hospital discharge day management services for addition to the Medicare telehealth services list on a category 1 basis.

We have reviewed the documentation submitted by requestors in support of adding these codes to the Medicare telehealth services list on a category 2 basis. Most of the submitted studies were specific to the treatment of patients with specific diagnoses and were not specific to discharge services. Additionally, most of the studies concluded that more research was required in order to establish medical equivalence between telehealth and in-person services. The submitted documentation did not provide the necessary evidence to alter our previous conclusion that hospital discharge day management services should be provided in-person in light of the acuity of hospitalized patients, their typically complex post-hospitalization care needs, and the importance of patient education by the admitting practitioner who had ongoing responsibility for the patient's treatment during the hospital stay. Therefore, we are not proposing to add hospital discharge day management services to the list of telehealth services for CY 2011.

5. Initial, Subsequent, Discharge Day Management, and Other Nursing Facility Care Services

The American Telemedicine Association and the Marshfield Clinic submitted requests to add nursing facility care codes, covering the spectrum of initial (reported by CPT codes 99304 (Level 1 initial nursing facility care), 99305 (Level 2 initial nursing facility care) and 99306 (Level 3 initial nursing facility care)); subsequent (reported by CPT codes 99307 (Level 1 subsequent nursing facility care), 99308 (Level 2 subsequent nursing facility care), 99309 (Level 3 subsequent nursing facility care), and 99310 (Level 4 subsequent nursing facility care)); discharge day management (reported by CPT codes 99315 (Nursing facility discharge day management; 30 minutes or less) and 99316 (Nursing facility discharge day management; more than 30 minutes)); and other (reported by CPT code 99318 (Evaluation and management of a patient involving an annual nursing facility assessment)) services, to the Medicare telehealth services list beginning in CY 2011. The requests for the addition of these services expressed concerns regarding limited access to care if we do not allow these services to be furnished through telehealth, and requested that CMS acknowledge the recent Congressional inclusion of nursing facilities as telehealth originating sites by adding these codes to the list of Medicare telehealth services.

In the CY 2010 PFS proposed and final rules (74 FR 33544 and 74 FR 61762), we discussed concerns about potential disparities in patient acuity between nursing facility services and the current list of Medicare telehealth

services. We have also declined to add HCPCS codes to the Medicare telehealth services list that are used exclusively to describe Federally-mandated nursing facility visits. As discussed in the CY 2010 PFS proposed rule (74 FR 33543), the long-term care regulations at § 483.40(c) require that residents of SNFs receive initial and periodic personal visits. These regulations ensure that at least a minimal degree of personal contact between a practitioner and a SNF resident is maintained, both at the point of admission to the facility and periodically during the course of the resident's stay. We continue to believe that these federally-mandated visits should be conducted in-person, and not as Medicare telehealth services. Therefore, in the CY 2010 PFS final rule with comment period, we revised § 410.78 to preclude physicians and other practitioners from furnishing the physician visits required under § 483.40(c) through telehealth.

We reviewed the use of telehealth for each of the subcategories of nursing facility services included in the requests for CY 2011. We identified the E/M services that fulfill Federal requirements for personal visits under § 483.40(c), and we are not proposing for CY 2011 to add any HCPCS codes to the Medicare telehealth services list that are used exclusively to describe these Federally-mandated visits. These codes include the CPT codes for initial nursing facility care (CPT codes 99304 through 99306) that are used to report the initial E/M visit that fulfills Federally-mandated requirements under § 483.40(c) and other nursing facility service (CPT code 99318) that is only payable by Medicare if the visit is substituted for a federally-mandated visit under § 483.40(c).

The nursing facility discharge day management services reported under CPT code 99315 and 99316 are E/M visits that prepare a nursing facility resident for discharge from the facility. There are no Medicare requirements that such a service be furnished. If a practitioner chooses to furnish this service, we continue to believe that an in-person visit is most appropriate in order to ensure the resident is prepared for discharge from the nursing facility. These services are furnished when a practitioner deems it medically reasonable and necessary to assess a patient's readiness for and to prepare a patient being discharged from the monitored nursing facility environment to another typically less intensive setting. There are no services on the current list of telehealth services that resemble such preparation of a patient for discharge. As in the case of hospital discharge day management services, we believe it is especially important that, if a practitioner furnishes a nursing facility discharge day management service, the service be furnished in-person. The practitioner must be able to comprehensively assess the patient's status in preparation for discharge so that the patient will have a higher likelihood of making a successful transition from the nursing facility to another setting. Therefore, we are not considering nursing facility discharge day management services for addition to the Medicare telehealth services list on a category 1 basis. When we considered the addition of these services under category 2, we had no evidence that nursing facility discharge services furnished through telehealth are equivalent to in-person discharge services. Therefore, we are not proposing to add nursing facility discharge day management services to the CY 2011 telehealth list.

Subsequent nursing facility services, reported by CPT codes 99307 through 99310, may be used to report either a federally-mandated periodic visit under § 483.40(c) or another E/M visit, prior to or after the initial nursing facility care visit, as long as the subsequent nursing facility care visit is medically reasonable and necessary for the resident's care. While we continue to believe that many SNF residents have complex medical care needs, we believe that it is appropriate to consider the addition of these codes to the telehealth list on a category 1 basis. As we state above in the context of our discussion of subsequent hospital care services, the HCPCS codes for initial and follow-up inpatient consultation services for nursing facility patients are on the list of Medicare telehealth services, and subsequent nursing facility services are similar to those services. These E/M services are furnished to high acuity, complex SNF patients, although not by the admitting practitioner himself or herself. Therefore, we believe that subsequent nursing facility visits by a patient's admitting practitioner sufficiently resemble follow-up inpatient consultation services to consider them on a category 1 basis for the telehealth list. We have concluded that it would be appropriate to permit some subsequent nursing facility care services to be furnished through telehealth to ensure that complex nursing facility patients have frequent encounters with their admitting practitioner, although we continue to believe that the federally-mandated visits should be in-person to facilitate the comprehensive, coordinated, and personal care that these complex patients require on an ongoing basis.

Therefore, we are proposing that subsequent nursing facility care services, specifically CPT codes 99307, 99308, 99309 and 99310, be added to the list of Medicare telehealth services on a category 1 basis beginning in CY 2011, with some limitations on furnishing these services through telehealth. Because of our concerns regarding the potential acuity and complexity of SNF inpatients, we are proposing to limit the provision of subsequent nursing facility care services furnished through telehealth to once every 30 days. We are especially interested in public comments, including any evidence regarding patterns of high quality care and clinical outcomes, regarding this proposal to limit the provision of subsequent nursing facility care services furnished through telehealth to once every 30 days. We remain committed to ensuring that SNF inpatients receive appropriate in-person visits and that Medicare pays only for medically reasonable and necessary care. Currently and continuing in CY 2011, an unlimited number of initial and follow-up consultation services may be furnished through telehealth to these patients so we believe that only a limited number of subsequent nursing facility care services by the admitting practitioner would be appropriate for SNF inpatients. Finally, we are specifying that subsequent nursing facility care services reported for a Federally-mandated periodic visit under § 483.40(c) may not be furnished through telehealth. In light of this proposal for CY 2011, we remain confident that admitting practitioners will continue to make appropriate in-person visits to all patients who need such care during their SNF stay.

Consistent with this proposal, we are proposing to revise § 410.78(b) and § 414.65(a)(1) to include subsequent nursing facility care services as Medicare telehealth services, with the limitation of one telehealth subsequent nursing facility care service every 30 days. Federally-mandated periodic visits may not be furnished through telehealth, as specified currently in § 410.78(e)(2).

6. Neuropsychological Testing

The American Telemedicine Association submitted a request to add neuropsychological testing services, described by CPT codes 96119 (Neuropsychological testing (*e.g.,* Halstead-Reitan Neuropsychological Battery, Wechsler Memory Scales and Wisconsin Card Sorting Test), per hour

of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report); and 96119 (Neuropsychological testing (*e.g.,* Halstead-Reitan Neuropsychological Battery, Wechsler Memory scales and Wisconsin Card Sorting Test), with qualified health care professional interpretation and report, administered by technician, per hour of technician time, face-to-face), to the list of telehealth services for CY 2011 based on their similarity to other telehealth services.

In the CY 2008 PFS final rule with comment period (72 FR 66251), we stated that we have received conflicting comments and data regarding the appropriateness of furnishing neuropsychological testing via telehealth. While we appreciate the recent request for addition of these same services to the Medicare telehealth services list, we do not believe that these services are similar to services currently on the Medicare telehealth services list and, therefore, we conclude that they would not be appropriate for consideration or addition under category 1. In this year's request for the addition of the these services, we received no information to indicate that the diagnostic findings of neuropsychological testing through telehealth are similar to those based upon in-person testing, and therefore, that testing through telehealth does not affect the patient's diagnosis. Therefore, we are not proposing to add neuropsychological testing services to the list of approved Medicare telehealth services for CY 2011.

7. Speech-Language Pathology Services

The Marshfield Clinic submitted a request to add various speech-language pathology services to the list of approved telehealth services for CY 2011. Speech-language pathologists are not permitted under section 1842(b)(18)(C) of the Act to furnish and receive payment for Medicare telehealth services. Therefore, we are not proposing to add any speech-language pathology services to the list of Medicare telehealth services for CY 2011. For further discussion of these services in the context of telehealth, we refer readers to the CY 2005 and CY 2007 PFS proposed and final rules with comment period (69 FR 47512 and 66276, and 71 FR 48995 and 69657).

8. Home Wound Care Services

Wound Care Associates, LLC, submitted a request to add wound care in the home setting to the list of Medicare telehealth services. A patient's home is not permitted under current statute to serve as an originating site for Medicare telehealth services. Therefore, we are not proposing to add home wound care services to the list of Medicare telehealth services for CY 2011.

D. Summary of CY 2011 Telehealth Proposals

In summary, we are proposing to add the following requested services to the list of Medicare telehealth services for CY 2011:

- Individual and group KDE services (HCPCS codes G0420 and G0421, respectively);
- Individual and group DSMT services, with a minimum of 1 hour of in-person instruction to be furnished in the year following the initial DSMT service to ensure effective injection training (HCPCS codes G0108 and G0109, respectively);
- Group MNT and HBAI services (CPT codes 97804, and 96153 and 96154, respectively);
- Subsequent hospital care services, with the limitation for the patient's admitting practitioner of one telehealth visit every 3 days (CPT codes 99231, 99232, and 99233); and
- Subsequent nursing facility care services, with the limitation for the patient's admitting practitioner of one telehealth visit every 30 days (CPT codes 99307, 99308, 99309, and 99310).

Furthermore, we are proposing to revise § 410.78(b) and § 414.65(a)(1) accordingly. Specifically, we are proposing to add individual and group KDE services, individual and group DSMT services, group MNT services, group HBAI services, and subsequent hospital care and nursing facility care services to the list of telehealth services for which payment will be made at the applicable PFS payment amount for the service of the practitioner. In addition, we have reordered the listing of services in these two sections and removed "initial and follow-up inpatient telehealth consultations furnished to beneficiaries in hospitals and SNFs" in § 410.78(b) because these are described by the more general term "professional consultations" that is in the same section. Finally, we are continuing to specify that the physician visits required under § 483.40(c) may not be furnished as telehealth services.

V. Provisions of the Patient Protection and Affordable Care Act of 2010

The following section addresses certain provisions of the Patient Protection and Affordable Care Act (Pub. L. 111–148), enacted on March 23, 2010, as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) enacted on March 30, 2010 (collectively known as the Affordable Care Act (ACA)).

A. Section 3002: Improvements to the Physician Quality Reporting System

Section 3002 of ACA makes a number of changes to the Physician Quality Reporting Initiative (PQRI), including authorizing incentive payments through 2014, and requiring a penalty beginning in 2015, for eligible professionals who do not satisfactorily submit quality data. For a more detailed discussion of the provisions of section 3002 of the ACA, please refer to section VI.G.1. of this proposed rule.

B. Section 3003: Improvements to the Physician Feedback Program and Section 3007: Value-based Payment Modifier Under the Physician Fee Schedule

1. Background

As required under section 1848(n) of the Act, as added by section 131(c) of MIPPA, we established and implemented by January 1, 2009, the Physician Resource Use Measurement & Reporting (RUR) Program for purposes of providing confidential reports to physicians that measure the resources involved in furnishing care to Medicare beneficiaries. Section 1848(n) of the Act also authorizes CMS to include information on the quality of care furnished to Medicare beneficiaries by a physician or group of physicians.

We are continuing a phased implementation of the program. Phase I was discussed in the CY 2010 proposed and final rules (74 FR 33589, and 74 FR 61844, respectively), and has been completed. Phase I consisted of several activities including extensive data analysis to inform decisions about topics such as measures, attribution, and risk adjustment and formative testing of report design with practicing physicians. We concluded Phase I by sending to individual practicing physicians in 12 geographic areas [1] several hundred reports that contained per capita and episode-based cost information.

Phase I of the Program focused on providing confidential feedback on resource use measures. Section 1848(n)(1)(A)(iii) of the Act states that the Secretary may also include information on the quality of care

[1] The 12 geographic areas are: Boston, MA, Syracuse, NY, Northern New Jersey, Greenville, SC, Miami, FL, Little Rock, AR, Indianapolis, IN, Cleveland, OH, Lansing, MI, Phoenix, AZ, Seattle, WA, and Orange County, CA.

furnished to Medicare beneficiaries by physicians (or groups of physicians) in the feedback reports. We believe that providing physicians with feedback on both quality and cost is consistent with the direction of other CMS value based purchasing (VBP) initiatives. As a result, we decided to include quality measures in Phase II of the program and, in particular, we considered measures used in PQRI and claims-based measures such as GEM measures (74 FR 61846).

Section 1848(n)(1)(A)(ii) also states that the Secretary may provide reports at the physician group level. Accordingly, as part of Phase II of the program, we will also include reporting to group practices, defined as more than one physician practicing medicine together (74 FR 61846). In addition, we noted that the definition applies to the following types of physician groups: (1) Formally established single or multi-specialty group practices; (2) physicians practicing in defined geographic regions; and (3) physicians practicing within facilities or larger systems of care (74 FR 61846). As we continue with Phase II, we plan to report to both physician group practices and their affiliated practitioners, recognizing that many physicians practice in arrangements other than solo practices. We believe that using both group and individual level reporting will also allow us to gain experience with the sample size issues that arise when individual physicians have too few Medicare beneficiaries with specific conditions to generate reliable information. (*See* the CY 2010 final rule with comment period (74 FR 61844) for a detailed discussion of plans for Phase II.)

2. Effect of the ACA of 2010 on the Program

The ACA contains two provisions relevant to the RUR program. Section 3003 continues the confidential feedback program and requires the Secretary, beginning in 2012, to provide reports that compare patterns of resource use of individual physicians to other physicians. In addition, section 3007 of the ACA requires the Secretary to apply a separate, budget-neutral payment modifier to the Fee-For-Service physician fee schedule payment formula. The payment modifier, which will be phased in beginning January 1, 2015 through January 1, 2017, will provide for differential payment under the fee schedule to a physician or groups of physicians, and later, possibly to other eligible professionals, based upon the relative quality and cost of care of their Medicare beneficiaries. Accordingly, our goal is to have Medicare physicians receive a confidential feedback report prior to implementation of the payment modifier. We view these two provisions as complementary, as we expect the work done for the confidential feedback program under section 3003 of the ACA will inform our implementation of the payment modifier under section 3007 of the ACA. The approach used in the confidential feedback reports will serve as the foundation for implementing the payment modifier. Specifically, throughout future phases of reports under the RUR program, we will continue to enhance our measures and methods and improve the content of the reports based on both our research and the feedback of stakeholders before the payment modifier begins to affect physician payments in 2015.

We plan to engage in a large-scale effort to garner widespread stakeholder involvement with regard to how we continue to build and expand the confidential feedback program and transition to implementation of the payment modifier. We recognize that such a payment modifier may have an impact on the delivery of care to Medicare beneficiaries. Reports that will be produced in the future based on changes as a result of section 3003 of the ACA will contain both cost and quality data, and work done to improve these reports with regard to fair and actionable measures in each of these domains will aid our decision making in how to apply the payment modifier. We intend to seek stakeholder input on various aspects of program design, including cost and quality measures, methodologies for compositing measures, and feedback report content and delivery. Such feedback may be gathered through rulemaking, open door forums, or other mechanisms.

3. Phase II Proposed Changes

We anticipate that reports in Phase II of the RUR Program will be distributed in the fall of 2010. We are proposing, however, several changes to the program parameters for Phase II that were finalized in prior rules. First, we plan to discontinue our use of commercially-available proprietary episode grouping software. In particular, section 3003 of the ACA requires that the Secretary develop a Medicare-specific episode grouper by January 1, 2012, the details of which must be made public. This grouper will address the limitations found in the proprietary software.

We recognize that episode-specific cost information is meaningful and actionable for physicians, and we plan to provide such information in feedback reports after the public grouper software is developed. Prior to that, we may consider other potential interim options for grouping to provide such information. We believe that our use of proprietary episode grouping software in previous phases of the program had limitations. These software products were not intended for use with Medicare claims data, and we discovered several problems with the data outputs. Specifically, the groupers do not work well to create episodes for beneficiaries with multiple chronic conditions, which is a significant portion of Medicare beneficiaries.

For example, when a beneficiary with a chronic disease is hospitalized for an acute condition, that beneficiary most likely also receives treatments unrelated to the condition for which he or she is hospitalized, but related to the chronic disease. The groupers, which are proprietary and often referred to as "black boxes," do not enable users to understand the coding to determine how to accomodate these issues. Therefore, CMS had to make several decisions about how to pre-process the claims data so that the groupers could recognize and attempt to deal with these issues in the clinical grouping logic. After report production in Phase I, we discovered several problems with the pre-processing, which resulted in inaccurate episode cost information being disseminated.

Until a Medicare-specific episode grouping software is developed, we plan to produce reports for Phase II that contain per capita cost information. More specifically, instead of episode-specific cost information, we plan to provide overall per capita cost information, as well as per capita cost information for those beneficiaries with five common chronic diseases: (1) Diabetes, (2) congestive heart failure, (3) coronary artery disease, (4) chronic obstructive pulmonary disease, and (5) prostate cancer. This information will not be specific to the cost of treating the disease itself, but will provide total Part A/B per capita cost information, as well as service category breakdowns, for treating the subset of attributed beneficiaries with that disease.

Second, while commenters have been generally supportive of including PQRI measures in the reports, we propose not including data from PQRI in the reports. The current support contractor for this program has only 2007 PQRI data. This was the first year of PQRI, and participation was still quite low. Because of the low number of physicians reporting under PQRI, and because providers have the flexibility to choose which measures to report under

PQRI, we believe it would be difficult to make meaningful peer comparisons for purposes of these reports. Instead, for Phase II, we propose using the claims-based measures developed by CMS in the Generating Medicare Physician Quality Performance Measurement Results (GEM) project.[2] This is a core set of 12 process quality measures that can be calculated using only administrative claims data. However, in future phases of the program, we intend to explore the possibility of linking this program to the HITECH incentive program for meaningful use of electronic health records, and the group practice reporting option in PQRI. Both of these programs offer measures and measure sets, as well as methods of reporting data which may be more conducive to meaningful peer comparisons among physicians.

Third, we propose to distribute reports electronically in Phase II, by leveraging the infrastructure used to distribute PQRI feedback reports. This infrastructure will enable groups to utilize an electronic portal to download their Phase II reports. Individual practitioners will be able to contact their MACs/fiscal intermediaries to receive an e-mailed copy of their reports. We have received feedback from physicians that the reports distributed in Phase I were too long and cumbersome to manage in hard copy. Our intent is a condensed report with electronic dissemination that allows for easier navigation. We are seeking public comment on the above proposals.

4. Implementation of Sections 3003 and 3007 of the ACA

The Affordable Care Act provisions that we mention above contain several important implementation dates. In addition to developing an episode grouper by January 1, 2012, we are required to publish the cost and quality measures we intend to use in determining the payment modifier to be effective on January 1, 2012. We are also required to begin implementing the program parameters through rulemaking in 2013. The payment modifier is effective on January 1, 2015, with a phased implementation so that all physicians paid under the physician fee schedule will be subject to the modifier by January 1, 2017. On or after January 1, 2017, we have the authority to also apply the payment modifier to other eligible professionals.

In anticipation of implementing sections 3003 and 3007 of the ACA, we intend to perform extensive data analysis and research, and to seek stakeholder input on issues related to cost and quality measures so that we can be prepared to publish, by January 1, 2012, those measures we intend to use for the payment modifier. We intend for the work done in determining measures for use in the payment modifier to inform the continued dissemination of confidential feedback reports to both individual physicians and physician groups. Specifically, the measures chosen for use in the payment modifier will be candidates for inclusion in future phases of the confidential feedback reports.

As mentioned above, Phase I included reports to several hundred physicians. In Phase II we anticipate disseminating reports to about 40 large physician groups and the approximately 2,000 physicians affiliated with those groups. We anticipate future phases of the reports to include additional dissemination to increasing numbers of practitioners and groups such that virtually every applicable Medicare practitioner receives a report prior to implementation of the payment modifier.

5. Comments Sought on Specific Statistical Issues Related to the ACA Sections 3003 and 3007

We recognize that there are many important decisions to be made when implementing a program that compares physicians to their peers, especially when such information can lead to differential payment. Since the inception of the RUR program, all data have been price standardized which includes accounting for geographic adjustments. We have identified important statistical issues in previous rules, and as we have done in previous rules, CMS seeks input on several of these topics as they relate to future phases of reports. These include, but are not limited to: risk adjustment; attribution; benchmarking; peer groups; minimum case sizes; cost and quality measures; and compositing methods. To date, the public comments we have received have not led us to a single methodology to propose for dealing with any of these issues. Therefore, we do not make formal proposals in this proposed rule. Specific parameters of the RUR program are based on the most current information we have available to us. These parameters will continue to evolve and we will continue to evaluate them as the state of the art in these areas continues to improve. Therefore, we seek public comment on these issues.

a. Risk Adjustment

The cost data used in Phase I will be risk adjusted. For the per capita costs, we used the Hierarchical Condition Categories (HCC) model developed for risk adjustment in Medicare Advantage plans. This model takes into account beneficiary characteristics such as age, sex, and Medicaid status, and then predicts costs for beneficiaries based on their unique mix of health conditions. Several other socioeconomic factors, such as the median income per capita in the county where the physician practices, were used. For the episode costs, we used the risk adjustment/severity levels in the proprietary grouper software.

The cost data in Phase II are risk adjusted using the HCC model, but excluding the additional socioeconomic factors such as the median income per capita in the county where the physician practices, as mentioned above. Regression analyses indicated that these additional socioeconomic factors did little to improve the fit of the model, so we will not include them. And since there are no episode-based costs in Phase II—only annual per capita costs—the HCC model will be the only method used. Other methods of risk adjustment exist that we have not used, such as the CC (complications and comorbidities) and MCC (major complications and comorbidities) indicators implemented in the 2008 MS–DRG system.

The quality data included in Phase II will not be risk adjusted because the GEM measures are all clinical process measures, and it is generally accepted that such measures need not be risk adjusted. Beneficiaries should receive the indicated preventive services (for example, breast cancer screening) regardless of their demographic characteristics or presence or absence of health conditions.

We seek comment on the appropriate method for risk adjusting cost data, as well as our reasoning for not risk adjusting clinical process quality measures.

b. Attribution

Deciding which physician(s) is/are responsible for the care of which beneficiaries is an important aspect of measurement. CMS must strike a balance between only attributing cost information to physicians for the services they personally delivered, and attributing costs to physicians based on a more encompassing view of the services provided to each beneficiary so as to encourage better care coordination and accountability for patient outcomes.

There are several methods that are generally used for attributing beneficiaries' costs to physicians for the purposes of measuring and comparing

[2] *http://www.cms.gov/GEM.*

performance. In Phase I, we used two different attribution methodologies. Half of the reports used the "multiple-proportional" attribution, in which a beneficiary's costs were summed, and then divided among the physicians who treated that beneficiary in the same proportion as their share of evaluation and management (E&M) services provided. The other half of the reports used the "plurality-minimum" method, in which a beneficiary's entire cost (either for the episode or for the year) was attributed to the physician who performed the plurality of the E&M services, subject to a minimum percentage (in that case, 10 percent).

In Phase II reports, we plan to use the "plurality-minimum" method with a minimum percentage threshold of E&M services of 20 percent for individual physicians and a minimum percentage threshold of E&M services of 30 percent of the E&M services for physician group level reports. These minimum threshold determinations were based on our analysis of the claims data. We recognize that other attribution methods exist, which may be either more or less appropriate given the aspect of care one is measuring. For example, it may be desirable to attribute the entire cost of a surgical episode to the performing surgeon. Another method for attributing costs is referred to as "multiple-even," in which the entire beneficiary's cost is attributed to multiple physicians who treated the beneficiary.

We seek comment on the topic of attribution methodologies, including both of those we have already used in the program, as well as others that may or may not be mentioned here.

c. Benchmarking and Peer Groups

Determining the relevant comparisons to make among physicians is also an important policy aspect of the program. CMS' research conducted in Phase I of the program indicated that physicians prefer to be compared only to those physicians most like them (that is, the narrowest peer group). We recognize the importance of fair comparison, but are also faced with the challenge that very narrow peer groups are most often not large enough to make statistically significant comparisons.

The individual-level reports in both phases of the program have contained, or will contain, two peer group comparisons: (1) Physicians in the same specialty in the same geographic area; and (2) physicians in the same specialty across all 12 geographic areas. In each of these peer groups, a physician is shown where he or she falls on a distribution that specifically identified the 10th, 50th, and 90th percentiles. These benchmarks were finalized on an interim basis in the CY 2010 proposed rule (74 FR 33589).

In determining applicability for episode measures in Phase I, we used a statistical reliability test. For per capita measures in Phase I, a physician had to have 20 or more beneficiaries to be measured and compared. There was no minimum peer group size requirement.

The original MIPPA mandate requires CMS to make comparisons among physicians on cost, and gives the Secretary the authority to include comparisons on quality. The use of quality measures in the program was finalized in the CY 2010 final rule (74 FR 61846). In Phase II, comparisons with appropriate peer groups will be made for both cost and quality. Phase II reports will be provided only to those physicians that have 30 or more patients for each of the cost measures. For the quality measures, we plan to use the measure specifications in the GEM project to define minimum case sizes, which are at least 11 beneficiaries. We also plan to impose a minimum peer group size of 30 in Phase II for both the cost and quality measures. A minimum sample size of 30 is generally accepted in the research community as the minimum sample size to represent a group and make comparisons.

We seek comment on the most appropriate and relevant peer groups for comparison, including the appropriate minimum case sizes and minimum peer group sizes. We are also interested in methodologies that can account for small case sizes.

d. Cost and Quality Measures and Compositing Methods

As mentioned above, and in previous rules, section 1848(n)(1)(A)(ii) of the Act gives the Secretary the authority to include both cost and quality information in the feedback reports. In Phase I, we chose to use only cost information, and used both per capita and episode cost measurements. As mentioned above, we previously finalized the use of quality measures in Phase II (74 FR 61846), but propose to discontinue our use of episode cost measurements. We have yet to include any composite measures of cost or quality in the feedback reports.

Section 3007 of the ACA requires CMS to pay physicians differentially based on a modifier derived with composites of both quality and cost measures. Accordingly, we will need to devise a methodology in the future for compositing cost measures and quality measures, including considering, among other things, possible methodologies to develop a single score. In the future, episode-based cost measures developed using the public Medicare-specific episode grouper software also may be considered in developing a composite score. Other domains of measures that may be considered include patient-level utilization statistics (for example, emergency department visits per 1,000 patients) and structural measures such as whether a provider has adopted an electronic health record. We recognize that measure composites are methodologically and operationally complex and, therefore, we are seeking comment on this topic.

We plan to continue a phased approach in the future. Although we will continue to move from phase-to-phase, any substantive changes to the RUR program will be implemented through rulemaking. We also anticipate continuing to gather feedback from stakeholders about the important data-driven policy topics that affect the feedback reports.

C. Section 3102: Extension of the Work Geographic Index Floor and Revisions to the Practice Expense Geographic Adjustment Under the Medicare Physician Fee Schedule, and Protections for Frontier States as Amended by Section 10324

Section 1848(e)(1)(E) of the Act (as amended by section 3102(a) of the ACA) extends application of the 1.0 work GPCI floor for services furnished through December 31, 2010. In addition, section 1848(e)(1) of the Act (as amended by section 3102(b) of the ACA) specifies that for CY 2010 and CY 2011, the employee wage and rent portions of the PE GPCI must reflect only one-half of the relative cost differences for each locality compared to the national average and includes a "hold harmless" provision for any PFS locality that would receive a reduction to its PE GPCI resulting from the limited recognition of cost differences. Section 1848(e)(1) of the Act (as amended by section 3102(b) of the ACA) also requires an analysis of the current methods and data sources used to determine the relative cost differences in office rent and employee wages compared to the national average and the cost share weights assigned to each PE GPCI component: Employee wages, office rent, and supplies. Finally, section 1848(e)(1) of the Act (as amended by section 3102(b) of the ACA) requires the Secretary to make appropriate adjustments to the PE GPCI by no later than January 1, 2012. In addition, section 1848(e)(1) of the Act (as amended by section 10324(c) of the ACA) establishes a 1.0 PE GPCI floor for services furnished in frontier states effective January 1, 2011. The

provisions of the ACA related to the GPCIs are discussed in detail in section II.D. of this proposed rule.

D. Section 3103: Extension of Exceptions Process for Medicare Therapy Caps

Section 1833(g)(5) of the Act (as amended by section 3103 of the ACA) extends the exceptions process for therapy caps through December 31, 2010. Therapy caps are discussed in detail in section III.A. of this proposed rule.

E. Section 3104: Extension of Payment for Technical Component of Certain Physician Pathology Services

Section 542(c) of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554), as amended by section 732 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), section 104 of division B of the Tax Relief and Health Care Act of 2006 (MIEA–TRHCA) (Pub. L. 109–432), section 104 of the Medicare, Medicaid, and SCHIP Extension Act of 2007 (MMSEA) (Pub. L. 110–173), and section 136 of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) (Pub. L. 110–275) is amended by section 3104 of the ACA to continue payment to independent laboratories for the TC of physician pathology services for fee-for-service Medicare beneficiaries who are inpatients or outpatients of a covered hospital through CY 2010. The technical component (TC) of physician pathology services refers to the preparation of the slide involving tissue or cells that a pathologist interprets. The professional component (PC) of physician pathology services refers to the pathologist's interpretation of the slide.

When the hospital pathologist furnishes the PC service for a hospital patient, the PC service is separately billable by the pathologist. When an independent laboratory's pathologist furnishes the PC service, the PC service is usually billed with the TC service as a combined service.

Historically, any independent laboratory could bill the Medicare contractor under the PFS for the TC of physician pathology services for hospital patients even though the payment for the costs of furnishing the pathology service (but not its interpretation) was already included in the bundled inpatient stay payment to the hospital. In the CY 2000 PFS final rule with comment period (64 FR 59408 through 59409), we stated that this policy has contributed to the Medicare program paying twice for the TC service: (1) To the hospital, through the inpatient prospective payment rate, when the patient is an inpatient; and (2) to the independent laboratory that bills the Medicare contractor, instead of the hospital, for the TC service. While the policy also permits the independent laboratory to bill for the TC of physician pathology services for hospital outpatients, in this case, there generally would not be duplicate payment because we would expect the hospital to not also bill for the pathology service, which would be paid separately to the hospital only if the hospital were to specifically bill for it. We further indicated that we would implement a policy to pay only the hospital for the TC of physician pathology services furnished to its inpatients.

Therefore, in the CY 2000 PFS final rule with comment period, we revised § 415.130(c) to state that for physician pathology services furnished on or after January 1, 2001 by an independent laboratory, payment is made only to the hospital for the TC furnished to a hospital inpatient. Ordinarily, the provisions in the PFS final rule with comment period are implemented in the following year. However, the change to § 415.130 was delayed 1 year (until January 1, 2001), at the request of the industry, to allow independent laboratories and hospitals sufficient time to negotiate arrangements.

Full implementation of § 415.130 was further delayed by section 542 of the BIPA and section 732 of the MMA, which directed us to continue payment to independent laboratories for the TC of physician pathology services for hospital patients for a 2-year period beginning on January 1, 2001 and for CYs 2005 and 2006, respectively.

In the CY 2007 MPFS final rule with comment period (71 FR 69624 and 69788), we amended § 415.130 to provide that, for services furnished after December 31, 2006, an independent laboratory may not bill the carrier for the TC of physician pathology services furnished to a hospital inpatient or outpatient. However, section 104 of the MIEA–TRHCA continued payment to independent laboratories for the TC of physician pathology services for hospital patients through CY 2007, and section 104 of the MMSEA further extended such payment through the first six months of CY 2008.

Section 136 of the MIPPA extended the payment through CY 2009. Most recently, section 3104 of the ACA amended the prior legislation to extend the payment through CY 2010.

Consistent with this legislative change, we are proposing to revise § 415.130(d) to: (1) Amend the effective date of our payment policy to reflect that for services furnished after December 31, 2010, an independent laboratory may not bill the Medicare contractor for the TC of physician pathology services furnished to a hospital inpatient or outpatient; and (2) reformat this subsection into subparagraphs.

F. Sections 3105 and 10311: Extension of Ambulance Add-Ons

1. Amendment to Section 1834(l)(13) of the Act

Section 146(a) of the MIPPA amended section 1834(l)(13)(A) of the Act to specify that, effective for ground ambulance services furnished on or after July 1, 2008 and before January 1, 2010, the ambulance fee schedule amounts for ground ambulance services shall be increased as follows:

- For covered ground ambulance transports which originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 3 percent.
- For covered ground ambulance transports which do not originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 2 percent.

Sections 3105(a) and 10311(a) of the ACA further amend section 1834(l)(13)(A) of the Act to extend the payment add-ons described above for an additional year, such that these add-ons also apply to covered ground ambulance transports furnished on or after January 1, 2010 and before January 1, 2011. We are revising § 414.610(c)(1)(i) to conform the regulations to this statutory requirement. This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate increase, and does not require any substantive exercise of discretion on the part of the Secretary. For further information regarding the extension of these payment add-ons, please see Transmittal 706 (Change Request 6972) dated May 21, 2010.

2. Amendment to Section 146(b)(1) of MIPPA

Section 146(b)(1) of the MIPPA amended the designation of rural areas for payment of air ambulance services. The statute specified that any area that was designated as a rural area for purposes of making payments under the ambulance fee schedule for air ambulance services furnished on December 31, 2006, shall continue to be

treated as a rural area for purposes of making payments under the ambulance fee schedule for air ambulance services furnished during the period July 1, 2008 through December 31, 2009. Sections 3105(b) and 10311(b) of the ACA amend section 146(b)(1) of MIPPA to extend this provision for an additional year, through December 31, 2010. Accordingly, for areas that were designated as rural on December 31, 2006, and were subsequently re-designated as urban, we have re-established the "rural" indicator on the ZIP Code file for air ambulance services, effective January 1, 2010 through December 31, 2010. We are revising § 414.610(h) to conform the regulations to this statutory requirement. This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of a rural indicator, and does not require any substantive exercise of discretion on the part of the Secretary. For further information regarding the extension of this MIPPA provision, please see Transmittal 706 (Change Request 6972) dated May 21, 2010.

3. Amendment to Section 1834(l)(12) of the Act

Section 414 of the MMA added paragraph (12) to section 1834(l) of the Act, which specified that in the case of ground ambulance services furnished on or after July 1, 2004, and before January 1, 2010, for which transportation originates in a qualified rural area (as described in the statute), the Secretary shall provide for a percent increase in the base rate of the fee schedule for such transports. The statute requires this percent increase to be based on the Secretary's estimate of the average cost per trip for such services (not taking into account mileage) in the lowest quartile of all rural county populations as compared to the average cost per trip for such services (not taking into account mileage) in the highest quartile of rural county populations. Using the methodology specified in the July 1, 2004 interim final rule (69 FR 40288), we determined that this percent increase was equal to 22.6 percent. As required by the MMA, this payment increase was applied to ground ambulance transports that originated in a "qualified rural area"; that is, to transports that originated in a rural area included in those areas comprising the lowest 25th percentile of all rural populations arrayed by population density. For this purpose, rural areas included Goldsmith areas (a type of rural census tract). Sections 3105(c) and 10311(c) of the ACA amend section 1834(l)(12)(A) of the Act to extend this rural bonus for an additional year through December 31, 2010. Therefore, as directed by the ACA, we are continuing to apply the rural bonus described above (in the same manner as in previous years), to ground ambulance services with dates of service on or after January 1, 2010 and before January 1, 2011 where transportation originates in a qualified rural area.

We are revising § 414.610(c)(5)(ii) to conform the regulations to this statutory requirement. This statutory requirement is self-implementing. The statute requires a one-year extension of the rural bonus (which was previously established by the Secretary), and does not require any substantive exercise of discretion on the part of the Secretary. For further information regarding the extension of this rural bonus, please see Transmittal 706 (Change Request 6972) dated May 21, 2010.

G. Section 3107: Extension of Physician Fee Schedule Mental Health Add-On

Section 3107 of the ACA amends section 138(a)(1) of the MIPPA to continue the 5 percent increase in Medicare payment for specified mental health services through December 31, 2010. This payment increase was originally authorized under section 138 of the MIPPA from July 1, 2008 until December 31, 2009. Accordingly, payment for the 24 psychiatry CPT codes in Table 33, representing "specified services," remains increased by 5 percent until December 31, 2010.

TABLE 33—SPECIFIED MENTAL HEALTH SERVICES SUBJECT TO THE FIVE PERCENT INCREASE IN MEDICARE PAYMENT THROUGH DECEMBER 31, 2010

Office or Other Outpatient Facility **Insight Oriented, Behavior Modifying and/or Supportive Psychotherapy**
90804 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 20 to 30 minutes face-to-face with the patient).
90805 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 20 to 30 minutes face-to-face with the patient; with medical evaluation and management services).
90806 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 45 to 50 minutes face-to-face with the patient).
90807 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 45 to 50 minutes face-to-face with the patient; with medical evaluation and management services).
90808 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 75 to 80 minutes face-to-face with the patient).
90809 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 75 to 80 minutes face-to-face with the patient; with medical evaluation and management services).
Interactive Psychotherapy
90810 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 20 to 30 minutes face-to-face with the patient).
90811 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 20 to 30 minutes face-to-face with the patient; with medical evaluation and management services).
90812 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 45 to 50 minutes face-to-face with the patient).
90813 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 45 to 50 minutes face-to-face with the patient; with medical evaluation and management services).
90814 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 75 to 80 minutes face-to-face with the patient).

TABLE 33—SPECIFIED MENTAL HEALTH SERVICES SUBJECT TO THE FIVE PERCENT INCREASE IN MEDICARE PAYMENT THROUGH DECEMBER 31, 2010—Continued

90815	(Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 75 to 80 minutes face-to-face with the patient; with medical evaluation and management services).
	Inpatient Hospital, Partial Hospital or Residential Care Facility Insight Oriented, Behavior Modifying and/or Supportive Psychotherapy
90816	(Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 20 to 30 minutes face-to-face with the patient).
90817	(Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 20 to 30 minutes face-to-face with the patient; with medical evaluation and management services).
90818	(Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 45 to 50 minutes face-to-face with the patient).
90819	(Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 45 to 50 minutes face-to-face with the patient; with medical evaluation and management services).
90821	(Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 75 to 80 minutes face-to-face with the patient).
90822	(Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 75 to 80 minutes face-to-face with the patient; with medical evaluation and management services).
	Interactive Psychotherapy
90823	(Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 20 to 30 minutes face-to-face with the patient).
90824	(Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 20 to 30 minutes face-to-face with the patient; with medical evaluation and management services).
90826	(Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 45 to 50 minutes face-to-face with the patient).
90827	(Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 45 to 50 minutes face-to-face with the patient; with medical evaluation and management services).
90828	(Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 75 to 80 minutes face-to-face with the patient).
90829	(Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 75 to 80 minutes face-to-face with the patient; with medical evaluation and management services).

H. Section 3108: Permitting Physician Assistants To Order Post-Hospital Extended Care Services

The ACA included a self-implementing provision relating to SNFs. Section 3108 adds physician assistants (PAs) to the list of practitioners (that is, physicians, nurse practitioners (NPs), and clinical nurse specialists) that can perform the required initial certification and periodic recertifications under section 1814(a)(2)(B) of the Act with respect to the SNF level of care. Accordingly, we are proposing to make appropriate revisions to include PAs in § 424.20(e)(2), in which we refer to NPs, clinical nurse specialists, and PAs collectively as "physician extenders."

I. Section 3111: Payment for Bone Density Tests

Section 1848(b) of the Act (as amended by section 3111 of the ACA) changes the payment calculation for dual-energy X-ray absorptiometry (DXA) services described by two specified DXA CPT codes for CYs 2010 and 2011. This provision requires payment for these services at 70 percent of the product of the CY 2006 RVUs for these DXA codes, the CY 2006 conversion factor (CF), and the geographic adjustment for the relevant payment year.

Effective January 1, 2007, the CPT codes for DXA services were revised. The former DXA CPT codes 76075 (Dual energy X-ray absorptiometry (DXA), bone density study, one or more sites; axial skeleton (*e.g.,* hips, pelvis, spine)); 76076 (Dual energy X-ray absorptiometry (DXA), bone density study, one or more sites; appendicular skeleton (peripheral) (*e.g.,* radius, wrist, heel)); and 76077 (Dual energy X-ray absorptiometry (DXA), bone density study, one or more sites; vertebral fracture assessment) were deleted and replaced with new CPT codes 77080, 77081, and 77082 that have the same respective code descriptors as the predecessor codes. Section 1848(b) of the Act (as amended by section 3111 of the ACA) specifies that the revised payment applies to two of the predecessor codes (CPT codes 76075 and 76077) and "any succeeding codes," which are, in this case, CPT codes 77080 and 77082.

Section 1848(b) (as amended by section 3111 of the ACA) revises the payment for CPT codes 77080 and 77082 during CY 2010 and CY 2011. We have provided payment in CY 2010 under the PFS for CPT codes 77080 and 77082 at the specified rates. We note that the RVUs included in Addendum B to this proposed rule reflect the RVUs that result from application of this statutory provision and the proposed CY 2011 conversion factor. Because the statute specifies a payment amount for these services as described previously, we imputed RVUs for CY 2011 to include in Addendum B that would provide the specified payment amount for these services when multiplied by the CY 2011 CF. Specifically, we divided the payment amount based on the statutory requirements by the CY

2011 CF for this proposed rule, and distributed the imputed total RVUs across the work, PE, and malpractice components proportionately to their CY 2006 distribution. Therefore, these imputed RVUs for CPT codes 77080 and 77082 are displayed in Addendum B to this proposed rule.

J. Section 3114: Improved Access for Certified Nurse-Midwife Services

Section 1833(a)(1)(K) of the Act (as amended by section 3114 of the ACA) increases the amount of Medicare payment made under the PFS for certified nurse-midwife (CNM) services. Currently, section 1833(a)(1)(K) of the Act specifies that the payment amount for CNM services is 80 percent of the lesser of the actual charge or 65 percent of the PFS amount. Under section 1833(a)(1)(K) of the Act (as amended by section 3114 of the ACA), effective for services furnished on or after January 1, 2011, Medicare payment for CNM services is increased to 100 percent of the PFS amount (or 80 percent of the actual charge if that is less). We are proposing to revise our regulations at § 414.54 (Payment for certified nurse-midwives' services) accordingly to reflect the increased payment for CNM services effective for services furnished on or after January 1, 2011.

Although CNMs are currently paid under Medicare Part B for their professional services, there is no mention of CNMs under the regulatory provision that lists the providers and suppliers of services to whom payment is made under the Medicare Part B program. Accordingly, we are proposing to make a technical revision to § 410.150 (To whom payment is made) to specify that Medicare Part B pays CNMs for professional services in all settings, as well as services and supplies furnished incident to those services.

CNMs are authorized under the statute to be paid directly for services that they are legally authorized to furnish under State law and that are of the type that would otherwise be covered if furnished by a physician or incident to a physician's services. Additionally, there is no requirement under the CNM benefit for physician oversight or supervision. Accordingly, CNMs are authorized to personally furnish diagnostic tests that fall under their State scope of practice without regard to the levels of physician supervision required under the diagnostic tests benefit. Therefore, we are amending § 410.32(b)(2) (Exceptions to the levels of physician supervision required for diagnostic tests) to include CNMs who furnish diagnostic tests that fall within their State scope of practice.

K. Section 3122: Extension of Medicare Reasonable Costs Payments for Certain Clinical Diagnostic Laboratory Tests Furnished to Hospital Patients in Certain Rural Areas

Section 416 of the MMA established a reasonable cost payment for outpatient clinical diagnostic laboratory tests furnished by hospitals with fewer than 50 beds that are located in qualified rural areas for cost reporting periods beginning during the 2-year period beginning on July 1, 2004.

Section 105 of the Tax Relief and Health Care Act of 2006 (Pub. L. 109–432) (TRHCA) extended the 2-year period in section 416(b) of the MMA for an additional cost-reporting year.

Section 107 of the Medicare, Medicaid, and SCHIP Extension Act of 2007 (Pub. L. 110–173) (MMSEA) extended the time period for cost reporting periods beginning on July 1, 2004, and ending on June 30, 2008. For some hospitals with cost reports that began as late as June 30, 2008, this extension affected services performed as late as June 29, 2009, because this was the date those cost reports would have closed.

Section 3122 of the ACA reinstitutes reasonable cost payment for clinical diagnostic laboratory tests performed by hospitals with fewer than 50 beds that are located in qualified rural areas as part of their outpatient services for cost reporting periods beginning on or after July 1, 2010, through June 30, 2011. For some hospitals with cost reports that begin as late as June 30, 2011, this reinstitution of reasonable cost payment could affect services performed as late as June 29, 2012, because this is the date those cost reports will close.

L. Section 3134: Misvalued Codes Under the Physician Fee Schedule

Section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) requires the Secretary to periodically review and identify potentially misvalued codes and make appropriate adjustments to the relative values of those services identified as being potentially misvalued. Section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) further specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services, as well as conduct surveys or implement other data collection activities, studies, or other analyses as the Secretary determines to be appropriate to facilitate the review and appropriate adjustment of the relative values of potentially misvalued codes. Finally, section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA) provides that the Secretary shall establish a process to validate relative value units under the PFS.

We note that over the past several years, we have been working with the AMA RUC to identify approaches to addressing the issue of potentially misvalued services. Our proposed CY 2011 approaches to categories of potentially misvalued codes are discussed in section II.C. of this proposed rule.

M. Section 3135: Modification of Equipment Utilization Factor for Advanced Imaging Services

1. Adjustment in Practice Expense To Reflect Higher Presumed Utilization

Section 1848(b)(4)(C) of the Act (as added by section 3135(a) of the ACA) adjusts the utilization rate for expensive diagnostic imaging equipment to 75 percent in the methodology for establishing the PE of the associated procedures. As discussed further in section II.A.3.a. of this proposed rule, effective January 1, 2011, we are proposing to assign a 75 percent equipment utilization rate assumption to expensive diagnostic imaging equipment used in services described by the HCPCS codes displayed in Table 4.

In the CY 2010 PFS final rule with comment period (74 FR 61755), we finalized a policy to increase the utilization rate to 90 percent for expensive diagnostic equipment priced at more than $1 million (CT and MRI scanners), providing for a 4-year transition to the 90 percent utilization rate from the CY 2009 utilization rate of 50 percent. Therefore, in CY 2010 we were transitioning to a 90 percent equipment utilization rate assumption, applying a 25/75 blend of the new and old PE RVUs, respectively, for the associated procedures. Section 1848(b)(4)(C) of the Act (as added by section 3135(a) of the ACA) does not provide for any further transition and, therefore, we are assigning a 75 percent equipment utilization rate assumption to CT and MRI scanners, effective January 1, 2011. Under section 1848(b)(4) of the Act (as amended by section 3135(a) of the ACA), this change in the equipment utilization rate assumption from CY 2010 to CY 2011 is not budget neutral under the PFS. The equipment utilization rate assumption remains at 50 percent for all other equipment included in the PFS PE methodology.

2. Adjustment in Technical Component "Discount" on Single-Session Imaging to Consecutive Body Parts

Section 1848(b)(4)(D) of the Act (as added by section 3135(a) of the ACA) increases the established PFS multiple procedure payment reduction (MPPR) for the technical component (TC) of certain single-session imaging services to consecutive body areas from 25 to 50 percent, effective July 1, 2010, and section 1848(c)(2)(B)(v)(VI) of the Act (as added by section 3135(b) of the ACA) exempts this change from the PFS budget neutrality provision. This policy is discussed in detail in section II.C.4 of this proposed rule.

Effective January 1, 2006, we adopted an MPPR of 25 percent for the technical component (TC) of certain diagnostic imaging procedures, applied to the second and subsequent services when more than one service in one of 11 imaging families, defined by imaging modality and contiguous body area, is furnished in a single session (70 FR 70261 through 70263). The established imaging MPPR applies to TC-only services and to the TC of global services. It does not apply to professional component (PC) services. Under this policy, full payment was made for the TC of the highest priced procedure, while payment was made at 75 percent of the TC for each additional procedure. As of July 1, 2010, and continuing in CY 2011, payment is made at 50 percent of the TC for each additional procedure, consistent with the statutory provision.

N. Section 3136: Revision for Payment for Power-Driven Wheelchairs

1. Payment Rules for Power Wheelchairs

Durable medical equipment (DME) is defined at section 1861(n) of the Act and includes wheelchairs necessary for use in the patient's home. Section 1861(n) provides that wheelchairs included in the definition of DME "may include a power-operated vehicle that may be appropriately used as a wheelchair, but only where the use of such a vehicle is determined to be necessary on the basis of the individual's medical and physical condition." The general Medicare payment rules for DME are set forth in section 1834(a) of the Act and 42 CFR part 414, subpart D of our regulations. Section 1834(a)(1) of the Act and § 414.210(a) of our regulations establish that the Medicare payment for a DME item is generally equal to 80 percent of either the lower of the actual charge or the fee schedule amount for the item. The beneficiary coinsurance is generally equal to 20 percent of either the lower of the actual charge or the fee schedule amount for the item once the deductible is met.

For Medicare payment purposes, power wheelchairs or power-driven wheelchairs are classified under various codes in the Healthcare Common Procedure Coding System (HCPCS) based on the level of performance and functional characteristics of each power wheelchair that accommodate the specific needs of patients. Power wheelchairs classified under performance Groups 1 through 3 are covered under Medicare for use in the patient's home. Power wheelchair groups were established in 2006 with the release of the Power Mobility Device Coding Guidelines published by the Durable Medical Equipment Regional Carriers (DMERCs) currently called the Durable Medical Equipment Medicare Administrative Contractors (DME MACs). The DMEPOS quality standards define certain power wheelchairs falling as "complex, rehabilitative" power wheelchairs, and these "complex, rehabilitative" power wheelchairs are treated as a separate product category for the purpose of implementing the DMEPOS Competitive Bidding Program (CBP) mandated by section 1847(a) of the Act. In both the quality standards and the DMEPOS competitive bidding program, complex, rehabilitative power wheelchairs are defined or identified as power wheelchairs classified as Group 2 power wheelchairs with power options that can accommodate rehabilitative features (for example, tilt in space) or Group 3 power wheelchairs.

With the exception of power wheelchairs furnished during calendar year 1990, power wheelchairs have been paid under the capped rental category of DME since January 1, 1989. The payment rules for capped rental DME are provided at section 1834(a)(7) of the Act and § 414.229 of our regulations. Payment for these items is generally on a monthly rental basis, with rental payments capped at 13 months. After a 13-month period of continuous use during which rental payments are made, the statute and regulations require that the supplier transfer title to the wheelchair to the beneficiary. In addition, effective for power wheelchairs furnished on or after January 1, 1***, section 1834(a)(7) of the Act, as amended by section 4152(c)(2) (D) of the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101–508), mandates that the supplier of the power wheelchair offer the patient the option to purchase rather than rent the item. Since 1991, over 95 percent of Medicare beneficiaries have exercised this lump-sum purchase option for power wheelchairs.

Consistent with payment for other DMEPOS items, § 414.210(f)(1) permits payment for replacement of capped rental DME if the item has been in continuous use for the equipment's reasonable useful lifetime or is lost, stolen, or irreparably damaged. Section 414.210(f)(1) states the reasonable useful lifetime for equipment is determined through program instructions. In the absence of CMS program instructions, the carrier may determine the reasonable useful lifetime for equipment, but in no case can it be less than 5 years. Computation is based on when the equipment is delivered to the beneficiary, not the age of the equipment. If the beneficiary elects to obtain a new capped rental item after the reasonable useful lifetime, a new 13-month rental payment period would begin for the new equipment in accordance with the requirements of § 414.229.

Section 1834(a)(7)(A) of the Act, § 414.229(b) and (c) set forth the current fee schedule amounts for capped rental items. Pursuant to section 1834(a)(7)(A)(i)(II) of the Act and § 414.229(b), the current rental fee schedule amounts for months 1 thru 3 of the 13-month capped rental period are calculated to pay 10 percent of the average of allowed purchase price for the item. The rental fee schedule amounts for months 4 thru 13 of the 13-month capped rental period are calculated to pay 7.5 percent of the average of allowed purchase price for the item. The purchase price is determined consistent with section 1834(a)(8) of the Act and § 414.229(c) and § 414.220(e) and (f) and is updated by the covered item update, as required by section 1834(a)(14) of the Act and § 414.229(d). The current purchase price amount for power wheelchairs acquired on a lump sum purchase basis is 100 percent of the purchase price calculated for the item when rented, as discussed above.

2. Revision of Payment Amounts for Power Wheelchairs

Section 3136(a) of the ACA made several changes to section 1834(a)(7)(A) of the Act. Section 3136(a)(1) of the ACA amends section 1834(a)(7)(A) of the Act by adding a new subclause (III) to section 1834(a)(7)(A)(i) of the Act. Subclause (III) revises the capped rental fee schedule amounts for all power wheelchairs, modifying the current payment structure of 10 percent of the purchase price for months 1 thru 3 and 7.5 percent of that purchase price for months 4 through 13 that was discussed above. The rental fee schedule amount for months 1 thru 3 of the 13-month

capped rental period for power wheelchairs is revised to 15 percent of the purchase price for the item. The rental fee schedule amounts for months 4 thru 13 of the 13-month capped rental period for power wheelchairs is revised to 6 percent of the purchase price for the item. The statutory provision does not change the methodologies used to calculate and subsequently update of the purchase price of power wheelchairs. Therefore, the methodology described above for determining the purchase price amounts will continue to apply.

Pursuant to section 3136(c) of the ACA, the changes made by section 3136(a) of the ACA apply to power-driven wheelchairs furnished on or after January 1, 2011.

Furthermore, as discussed above, section 3136(c)(2) of the ACA states that the changes made by section 3136(a), including the new payment structure for power wheelchairs, do not apply to payment made for items and services furnished pursuant to contracts entered into under section 1847 of the Act for the DMEPOS CBP prior to January 1, 2011 which applies to the implementation of the first round of the DMEPOS CBP. As a result, contract suppliers furnishing power wheelchairs in competitive bidding areas (CBA) pursuant to contracts entered into prior to January 1, 2011 as part of Round 1 of the DMEPOS CBP will continue to be paid based under the current regulations using 10 percent of the purchase price for months 1 through 3 and 7.5 percent for each of the remaining months. As a result, we are proposing to make changes to §§ 414.202, 414.229 and 414.408 to reflect these statutory requirements.

3. Elimination of Lump Sum Payment for Standard Power Wheelchairs

Section 3136(a)(2) of the ACA further amends section 1834(a)(7)(A)(iii) by inserting the term "complex rehabilitative" before the term "power-driven wheelchairs." As a result, section 1834(a)(7)(A)(iii) of the Act now extends the lump sum purchase option only to complex rehabilitative power wheelchairs. As discussed above, "complex rehabilitative power wheelchairs are power wheelchairs that are classified as: (1) Group 2 power wheelchairs with power options that can accommodate rehabilitative features (for example, tilt in space), or (2) Group 3 power wheelchairs. We consider all other power wheelchairs to be standard power wheelchairs. Therefore, we propose to interpret the language "complex rehabilitative" in section 1834(a)(7)(A) of the Act consistent with this longstanding classification. As a result, the changes made by section 3136 to section 1834(a)(7)(A)(iii) eliminate the lump sum purchase option for standard power wheelchairs.

Pursuant to section 3136(c) of the ACA, the changes made to section 1834(a)(7)(A)(iii) of the Act apply to power-driven wheelchairs furnished on or after January 1, 2011. The lump sum purchase payment option will no longer extend to standard power driven wheelchairs furnished on or after January 1, 2011.

Furthermore, section 3136(c)(2) of the ACA states that the changes made by section 3136(a), including the limitation of the lump sum purchase payment option to complex, rehabilitative power wheelchairs, do not apply to payment made for items and services furnished pursuant to contracts entered into under section 1847 of the Act for the DMEPOS CBP prior to January 1, 2011 pursuant to the implementation of the first round of the DMEPOS CBP. As a result, contract suppliers furnishing power wheelchairs in CBAs pursuant to contracts entered into prior to January 1, 2011 as part of Round 1 of the DMEPOS CBP must continue to offer beneficiaries the lump sum purchase option for all power wheelchairs.

We are proposing changes to §§ 414.229 and 414.408 to reflect our interpretation of these statutory requirements.

O. Section 3139: Payment for Biosimilar Biological Products

Section 3139 of the ACA amends section 1847A of the Act to provide for Medicare payment of biosimilar biological products using the average sale price (ASP) methodology.

Section 1847A of the Act, as amended by the ACA, defines a biosimilar biological product as a biological product approved under an abbreviated application for a license of a biological product that relies in part on data or information in an application for another biological product licensed under section 351 of the Public Health Service Act (PHSA). The reference biological product for a biosimilar biological product is defined by the statute as the biological product licensed under such section 351 of the PHSA that is referred to in the application of the biosimilar biological product.

The ACAct also amends section 1847A of the Act to specify that the payment amount for a biosimilar biological product will be the sum of the following two amounts: the ASP of all NDCs assigned to the biosimilar biological drug product determined using the methodology in section 1847A(b)(6) of the Act, and 6 percent of the payment amount determined using the methodology in section 1847A(b)(4) of the Act for the corresponding reference biological product. Sections 7001 to 7003 of the ACA also established a licensing pathway for biosimilar biological products, and in accordance with the statute, the effective date for Medicare ASP statutory provisions is July 1, 2010. We are proposing conforming regulation text changes at § 414.902 and § 414.904 and we welcome comments on these conforming changes.

We anticipate that as biosimilar biological drug products are approved, we will receive ASP sales data through the ASP data submission process and publish national payment amounts in a manner that is consistent with our current approach to other drugs and biologicals that are paid under section 1847A of the Act and set forth in 42 CFR part 414 subpart J. Until we have collected sufficient sales data, as reported by manufacturers, payment limits will be determined in accordance with the provisions in section 1847A(c)(4) of the Act. If no manufacturer data is collected, prices will be determined by local contractors using any available pricing information, including provider invoices. More information about the ASP payment methodology and the data submission process may be found on the CMS Web site at *http://www.cms.gov/McrPartBDrugAvgSalesPrice/01_overview.asp* and in this rule, in the section VI.A.1. of this proposed rule, "Carry Over" ASP.

P. Section 3401: Revision of Certain Market Basket Updates and Incorporation of Productivity Improvements Into Market Basket Updates That Do Not Already Incorporate Such Improvements.

1. ESRD Market Basket Discussion

Section 3401(h) of the ACA amended section 1881(b)(14)(F) of the Act and directs the Secretary to annually increase payment amounts established under the ESRD market basket. Please see section VI.E. of this proposed rule for a detailed description of these provisions.

2. Productivity Adjustment Regarding Ambulatory Surgical Center, Ambulance, Clinical Laboratory and DMEPOS Fee Schedules

Section 3401 of the ACA requires that the update factor under certain payment systems be annually adjusted by changes in economy-wide productivity.

The year that the productivity adjustment is effective varies by payment system. Specifically, section 3401 of the ACA requires that in CY 2011 (and in subsequent years) update factors under the ambulatory surgical center (ASC) payment system, the ambulance fee schedule (AFS), and the clinical laboratory fee schedule (CLFS) be adjusted by changes in economy-wide productivity. Section 3401(a) amends section 1886(b)(3)(B) of the Act to add clause (xi)(II) which sets forth the definition of this productivity adjustment. The statute defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period) (the "MFP adjustment"). Please see *http://www.bls.gov/mfp* for more information on MFP. This is the link to the Bureau of Labor Statistics (BLS) historical published data on the measure of MFP.

The projection of MFP will be produced by an economic forecasting firm, currently HIS Global Insight (IGI). In order to generate a forecast of MFP, IGI would replicate the MFP measure calculated by the BLS using a series of proxy variables derived from the IGI US Macro-economic models. These models take into account a very broad range of factors that influence the total US economy. IGI forecasts the underlying proxy components such as Gross Domestic Product (GDP), capital, and labor inputs required to estimate MFP, and will combine those projections according to the BLS methodology. For more information on the BLS measure of MFP, including technical notes, visit: *http://www.bls.gov/mfp/*. Table 34 lists the MFP component series employed by the BLS and the corresponding concepts estimated by IGI.

TABLE 34—MULTIFACTOR PRODUCTIVITY COMPONENT SERIES EMPLOYED BY THE BUREAU OF LABOR STATISTICS AND HIS GLOBAL INSIGHT

BLS Series	IGI Series
Real value-added output, constant 2000 dollars	Real gross non-farm value added output, chained 2005 dollar billions.
Private non-farm business sector labor input; 2000=100.00	Hours of all persons-private nonfarm business sector; 1992=1.0.
Aggregate capital inputs; 2000=100.00	Real effective capital stock used for full employment GDP, chained 2005 dollar billions.

To identify the appropriate proxy variables, IGI compared the historical growth rates of the BLS and IGI components listed above and found they were consistent across all series and therefore suitable proxies for calculating MFP. IGI would use the growth rates of the forecasted IGI concepts to project BLS' components of MFP, and derive the MFP adjustment that would be used under section 3401 to adjust the updates for the ASC payment system, the AFS, and the CLFS.

As discussed below, for each of these payment systems, the update factor is the percentage increase (or percentage decrease for the CLFS) in the consumer price index for all urban consumers (CPI–U) (referred to as the "CPI–U update factor").

The statute for all three payment systems generally states that the Secretary shall reduce the CPI–U adjustment by the MFP adjustment. In order to calculate the MFP-adjusted updates to these payment systems, the MFP percentage adjustment would be subtracted from the CPI–U update factor (for the most recent 12-month period beginning with July 1 of the previous year and ending with June 30 of the current year). For example, if the update factor (CPI–U) is 4.0 percent, and the projected MFP is 1.3 percent, the MFP–Adjusted update factor (or MFP–Adjusted CPI–U for these payment systems) would be a 2.7 percent increase.

The period on which the CPI–U is calculated is for the most recent 12-month period beginning with July 1 of the previous year and ending with June 30 of the current year, and we propose that the end of the 10-year moving average of changes in the MFP should coincide with the end of this CPI–U timeframe. Since the CPI–U update factor is reduced by the MFP adjustment to determine the annual update for these payment systems, we believe it is appropriate for the numbers associated with both parts of the calculation to be projected as of the same end date (in this case, the end date of the time frame for both estimates would be June 30th of the year preceding the update year itself). In this way, changes in market conditions are aligned. We will round the final annual adjustment to the one-tenth of one percentage point level up or down as applicable according to conventional rounding rules (that is, if the number we are rounding is followed by 5, 6, 7, 8, or 9, we will round the number up; if the number we are rounding is followed by 0, 1, 2, 3, or 4, we will round the number down).

Below, we provide more information on the statutory requirements and proposals for each of the three payment systems. The statutory requirements for the ASC payment system will also be addressed in the CY 2011 OPPS/ASC proposed rule. We note that, in this proposed rule, we are describing the legislative provision and outlining the methodology we propose to use to calculate and apply the MFP adjustment to determine the annual updates for ASCs, the AFS, and the CLFS for CY 2011 and each subsequent year. We will set forth the final MFP adjustment for CY 2011 in the CY 2011 PFS final rule. Once we finalize the methodology for determining and applying the MFP adjustment to the CPI–U update factors for these payment systems, for subsequent calendar years, as we have done in the past, we intend to notify the general public of the annual update to the AFS and CLFS via CMS instruction and on the CMS Web site. These notifications would set forth both the CPI–U percentage increase or decrease and the MFP adjustment for the applicable year. For ASCs, for subsequent calendar years, as we have done in the past, we would continue to notify the general public of the annual update to the ASC payment amount via OPPS/ASC rulemaking.

We welcome comments on these proposals.

a. Ambulatory Surgical Centers (ASCs)

Section 1833(i)(2)(C) of the Act requires that, if the Secretary has not updated the ASC payment amounts in a calendar year, the payment amounts shall be increased by the percentage increase in the CPI–U as estimated by the Secretary for the 12-month period ending with the midpoint of the year involved. Because the Secretary does update the ASC payment amounts annually, we adopted a policy, which we codified at § 416.171(a)(2)(ii), to update the ASC conversion factor using the CPI–U for CY 2010 and subsequent calendar years. Therefore, the annual

update to the ASC payment system is the CPI–U (referred to as the CPI–U update factor). Section 3401(k) of the ACA amends section 1833(i)(2)(D) of the Act by adding a new clause (v) which requires that "any annual update under [the ASC payment] system for the year * * * shall be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II)" (which we refer to as the MFP adjustment) effective with the calendar year beginning January 1, 2011. Section 3401(k) of the ACA states that application of the MFP adjustment to the ASC payment system may result in the update to the ASC payment system being less than zero for a year and may result in payment rates under the ASC payment system for a year being less than such payment rates for the preceding year.

In accordance with section 1833(i)(2)(C)(i) of the Act, before applying the MFP adjustment, the Secretary first determines the "percentage increase" in the CPI–U, which we interpret cannot be a negative number. Thus, in the instance where the percentage change in the CPI–U for a year is negative, we propose to hold the CPI–U update factor for the ASC payment system to zero. Section 1833(i)(2)(D)(v) of the Act, as added by section 3401(k) of the ACA, then requires that the Secretary reduce the CPI–U update factor (which would be held to zero if the CPI–U percentage change is negative) by the MFP adjustment, and states that application of the MFP adjustment may reduce this percentage change below zero. If the application of the MFP adjustment to the CPI–U percentage increase would result in a MFP-adjusted CPI–U update factor that is less than zero, then the annual update to the ASC payment rates would be negative and payments would decrease relative to the prior year.

Table 35 provides illustrative examples of how the MFP would be applied to the ASC payment system. These examples show the implication of a positive CPI–U update factor with a smaller MFP, a positive CPI–U update factor with a large MFP, and a CPI–U update factor of 0. We discuss the application of the MFP to the CPI–U update factor for the ASC payment system under the OPPS/ASC CY 2001 proposed rule (1504–P), which will be published around the same time as this proposed rule. Comments on the specific mathematical calculation of the MFP should be made to this PFS proposed rule. Comments on the application of the MFP to the CPI–U update factor under the ASC payment system should be made to the OPPS/ASC CY 2011 proposed rule (1504–P).

TABLE 35—MULTIFACTOR PRODUCTIVITY ADJUSTED PAYMENT UPDATE: ILLUSTRATIVE EXAMPLE

CPI–U (percent)	MFP (percent)	MFP–Adjusted CPI–U update factor (percent)
4.0	1.3	2.7
4.0	4.7	−0.7
0.0	0.2	−0.2

b. Ambulance Fee Schedule (AFS)

In accordance with section 1834(l)(3)(B) of the Act, the AFS is required to be increased each year by the percentage increase in the CPI–U (U.S. city average) for the 12-month period ending with June of the previous year. We refer to this update as the Ambulance Inflation Factor (AIF). Section 3401(j) of the ACA amends section 1834(l)(3) of the Act to add a new subparagraph (C) which states that, for CY 2011 and each subsequent year, after determining the percentage increase under section 1834(l)(3)(B) (that is, the CPI–U percentage increase, or AIF), the Secretary shall reduce such percentage increase by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) (as discussed above). Section 3401(j) further amends section 1834(l)(3) to state that the application of subparagraph (C) (that is, the reduction of the CPI–U percentage increase by the MFP adjustment) may result in that percentage increase being less than zero for a year, and may result in payment rates for a year being less than such payment rates for the preceding year.

In accordance with section 1834(l)(3) of the Act as amended by section 3401(j) of the ACA, before applying the MFP adjustment, the Secretary first determines the "percentage increase" in the CPI–U, which we interpret cannot be a negative number. Thus, in the instance where the percentage change in the CPI–U for a year is negative, we propose to hold the AIF to zero. The statute then requires that the Secretary reduce the CPI–U percentage increase (which would be held to zero if the CPI–U percentage change is negative) by the MFP adjustment, and states that application of the MFP adjustment may reduce this percentage increase below zero. If the application of the MFP adjustment to the CPI–U percentage increase would result in an MFP-adjusted AIF that is less than zero, then the annual update to the AFS would be negative and payments would decrease relative to the prior year.

Table 36 provides illustrative examples of how the MFP would be applied to the AFS. Finally, we propose to revise § 414.610(f) to require that the AIF be reduced by the MFP adjustment as required by the statute in determining the annual update under the ambulance fee schedule for CY 2011 and each subsequent year, and to revise § 414.620 to state that changes in payment rates resulting from the incorporation of the AIF and the MFP adjustment will be announced by CMS by instruction and on the CMS Web site, as we discussed above.

TABLE 36—EXAMPLES OF THE APPLICATION OF THE MULTIFACTOR PRODUCTIVITY ADJUSTMENT TO THE AMBULANCE FEE SCHEDULE

A CPI–UA	B AIF	C MFP	D Final update rounded
2.0%	2.0%	1.3%	0.7%
0.0%	0.0%	1.3%	−1.3%
−2.0%	0.0%	1.3%	−1.3%
1.0%	1.0%	1.3%	−0.3%

c. Clinical Laboratory Fee Schedule

Section 1833(h)(2)(A)(i) of the Act, as amended by section 3401(l) of the ACA, requires the Secretary to annually adjust the CLFS "by a percentage increase or decrease equal to the percentage increase or decrease in the Consumer Price Index for All Urban Consumers (United States city average minus, for each of the years 2009 through 2010, 0.5 percentage points." Therefore, the

adjustment to the fee schedule can be an increase or a decrease.

Section 3401(l) of the ACA also adds new clause (iv) that applies in CY 2011 and each subsequent year. This clause requires the Secretary to reduce the adjustment in clause (i): (1) By the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) for 2011 and each subsequent year and (2) by 1.75 percentage points for each of 2011 through 2015 (the "percentage adjustment"). However, section 3401(l) of the ACA states that the MFP adjustment will not apply in a year where the adjustment to the fee schedule determined under clause (i) is zero or a percentage decrease for a year. Further, the application of the MFP adjustment may not result in an adjustment to the fee schedule under clause (i) of less than zero for a year.

Therefore, we are proposing to apply the MFP adjustment as follows:

- If the CPI–U update factor is positive, it would be reduced by the MFP. However, if application of the MFP would result in a negative update, the update would be held to zero.
- If the CPI–U update factor is zero or negative, the MFP adjustment would not be applied.

Section 3401(l) of the ACA also states that the application of the percentage adjustment may result in an adjustment to the fee schedule under clause (i) being less than zero for a year and may result in payment rates for a year being less than such payment rates for the preceding year. Therefore, we are proposing to apply the percentage reduction of 1.75 percentage points to any adjustment to the fee schedule under the CLFS as directed by Section 3401(l) of the ACA.

Table 37 provides illustrative examples of how these adjustments would be applied to fees under the CLFS.

TABLE 37—EXAMPLES OF THE APPLICATION OF THE MULTIFACTOR PRODUCTIVITY ADJUSTMENT TO THE CLINICAL LAB FEE SCHEDULE

CPI–U	MFP	Productivity adjusted update	(−1.75%) Percentage point reduction	Resultant change to CLFS
		Greater of 0.0% or (Col.A) − (Col.B)		Col.C − Col.D
A	B	C	D	E
2.0%	1.3%	0.7%	−1.75%	−1.05%
0.0%	N/A	0.0%	−1.75%	−1.75%
−2.0%	N/A	0.0%	−1.75%	−1.75%

d. DMEPOS Fee Schedule

Sections 1834(a)(14), 1834(h)(4), and 1842(s)(1) of the Act mandate annual updates to the fee schedule amounts established in accordance with these respective sections for covered items of durable medical equipment defined in section 1834(a)(13) of the Act, prosthetic devices, orthotics, and prosthetics defined in section 1834(h)(4)(B) and (C) of the Act, and parenteral and enteral nutrients, equipment, and supplies described in section 1842(s)(2)(D) of the Act. The annual updates for 2011 for these sections are based on the percentage increase in the CPI–U for the 12-month period ending with June 2010. The annual updates for years subsequent to 2011 are based on the percentage increase in the CPI–U for the 12-month period ending with June of the previous year (that is, June 2011 for 2012, June 2011 for 2013, *etc.*). Since 1990 for durable medical equipment, prosthetic devices, orthotics, and prosthetics and 2003 for parenteral and enteral nutrients, equipment, and supplies, these annual fee schedule updates have been implemented on an annual basis through program instructions.

Section 3401(m) of the ACA amends section 1834(a)(14) of the Act to add a new subparagraph (L) which provides that, for CY 2011 and each subsequent year, the fee schedule update factor based on the CPI–U for the 12-month period ending with June of the previous year is to be reduced by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (as discussed above). Section 3401(m) of the ACA further amends section 1834(a)(14) of the Act to state that the application of subparagraph (L) (that is, the reduction of the CPI–U percentage increase by the MFP adjustment) may result in that percentage increase being less than zero for a year, and may result in payment rates for a year being less than such payment rates for the preceding year.

Section 3401(n) of ACA amends section 1834(h)(4)(A) of the Act to add a new clause (xi) which provides that, for CY 2011 and each subsequent year, the fee schedule update factor based on the CPI–U for the 12-month period ending with June of the previous year is to be reduced by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (as discussed above). Section 3401(n) of the ACA further amends section 1834(h)(4) of the Act to state that the application of subparagraph (A)(xi) (that is, the reduction of the CPI–U percentage increase by the MFP adjustment) may result in that percentage increase being less than zero for a year, and may result in payment rates for a year being less than such payment rates for the preceding year.

Section 3401(o) of ACA amends section 1842(s)(1) of the Act to add a new subparagraph (B) and clause (ii) which provides that, for CY 2011 and each subsequent year, the fee schedule update factor based on the CPI–U for the 12-month period ending with June of the previous year is to be reduced by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) (as discussed above). Section 3401(o) further amends section 1842(s)(1) to state that the application of subparagraph (B)(ii) (that is, the reduction of the CPI–U percentage increase by the MFP adjustment) may result in that percentage increase being less than zero for a year, and may result in payment rates for a year being less than such payment rates for the preceding year.

The MFP adjustments to the CPI–U percentage increases used in calculating the fee schedule adjustment factors for these DMEPOS items and services as mandated by sections 3401(m), (n), and (o) of ACA are simple mathematical calculations and are ministerial in nature. Therefore, we plan to implement these adjustments for 2011 and subsequent years as part of the annual program instructions related to the DMEPOS fees schedule updates.

Q. Section 4103: Medicare Coverage of Annual Wellness Visit Providing a Personalized Prevention Plan

1. Background

a. Medicare Coverage of Preventive Physical Examinations and Routine Checkups

Section 1862(a)(7) of the Act explicitly prohibits Medicare payment for routine physical checkups with certain exceptions. One exception is for the Initial Preventive Physical Exam (also referred to as the "Welcome to Medicare" exam) established for new beneficiaries effective for services furnished on or after January 1, 2005. Section 4103 of the ACA has provided another exception to section 1862(a)(7). Congress has expanded Medicare coverage under part B to include an Annual Wellness Visit Providing Personalized Prevention Plan Services (hereinafter referred to as the annual wellness visit) in sections 1861(s)(2)(FF) and 1861(hhh) of the Act. This expanded benefit will be effective on January 1, 2011. Preventive care has become an increasing focus of the Medicare program. For instance, section 101 of the MIPPA expanded Medicare's authority to establish coverage for preventive services that meet specified criteria. Among other things, the annual wellness visit will encourage beneficiaries to obtain the preventive services already covered by Medicare, and that are appropriate for each individual beneficiary.

b. Requirements for Coverage of an Annual Wellness Visit

Section 4103 of the ACA provides for coverage of an annual wellness visit, which includes and/or takes into account a health risk assessment (HRA), and creates a personalized prevention plan for beneficiaries, subject to certain eligibility and other limitations. Section 4103 of the ACA also requires the identification of elements that must be provided to a beneficiary as part of the first visit for personalized prevention plan services and requires the establishment of a yearly schedule for appropriate provision of such elements thereafter.

The Affordable Care Act specifies elements that may be included in a personalized prevention plan, including establishment of, or update to, the individual's medical and family history, a list of the individual's current providers and suppliers and medications prescribed for the individual; measurement of height, weight, body-mass index (BMI) or waist circumference, and blood pressure; detection of any cognitive impairment; establishment or update of an appropriate screening schedule for the next 5 to 10 years; establishment or update of a list of risk factors and conditions (including any mental health conditions) for which interventions are recommended or underway; and furnishing of personalized health advice and referral, as appropriate, to health education or preventive counseling services or programs. The Affordable Care Act also permits the Secretary to add other elements to the annual wellness visit determined to be appropriate.

2. Proposed Revisions

a. Proposed Revisions to § 411.15, Particular Services Excluded From Coverage

To conform the regulations to the statutory requirements of the ACA, we are proposing to revise § 411.15 by specifying an exception to the routine physical checkups exclusion from coverage in § 411.15(a)(1) and modifying § 411.15(k)(15). We would add a provision to permit coverage of annual wellness visits that meet the eligibility limitation and the conditions for coverage we are specifying in § 410.15 (Annual Wellness Visit Providing Personalized Prevention Plan Services). Coverage of the annual wellness visit is furnished under Medicare Part B only. As provided in the statute, this new coverage allows payment for an annual wellness visit if provided after January 1, 2011 for an individual who is no longer within 12 months after the effective date of his or her first Medicare Part B coverage period, and has not received either an IPPE or an annual wellness visit within the past 12 months.

b. Proposed Revisions to Part 410, Subpart B—Medical and Other Health Services

We propose to add § 410.15(a), Condition for Coverage of Annual Wellness Visits Providing Personalized Prevention Plan Services, and § 410.15(b), Limitation on Coverage of Annual Wellness Visits Providing Personalized Prevention Plan Services, to codify the coverage of the annual wellness visit providing personalized prevention plan services.

We are proposing to define several terms in § 410.15. These include the following terms: (1) Detection of any cognitive impairment; (2) Review of the individual's functional ability and level of safety; (3) Health professional; (4) Establishment of, or update to the individual's medical and family history; (5) Eligible beneficiary; (6) First annual wellness visit providing personalized prevention plan services; and (7) Subsequent annual wellness visit providing personalized prevention plan services.

Further, the ACA allows the addition of any other element determined appropriate by the Secretary for inclusion in an annual wellness visit. We reviewed the relevant medical literature, current clinical practice guidelines, and the recommendations of the United States Preventive Services Task Force (USPSTF). Pursuant to that review, we propose to add depression screening and functional status screening as elements of the first annual wellness visit only. In their December 2009 Recommendation Statement, the U.S. Preventive Services Task Force (USPSTF) recommends screening adults for depression when staff-assisted depression care supports are in place to assure accurate diagnosis, effective treatment and follow-up (Grade: B recommendation). That is, the USPSTF recommends the service; and there is high certainty that the net benefit is moderate or there is moderate certainty that the net benefit is moderate to substantial.

The USPSTF is currently updating its 1996 recommendation regarding screening for hearing impairment in older adults as well as its recommendation on falls in the elderly. Until those recommendations can be published, functional status screening (including assessment of hearing impairment, ability to successfully perform activities of daily living, fall risk and home safety) appears supportable by evidence only for the first annual wellness visit.

We also are proposing that the definition of the term "Establishment of, or an update to the individual's medical and family history" include more than a list of all of an individual's prescribed medications as provided in the statute, but also supplements such as vitamins and calcium that an individual may use or be exposed to. Supplements such as these are commonly used by many beneficiaries and the medical literature supports that their use be closely monitored by health professionals because they can interact with prescribed medications and may result in unintended medical problems in individual cases. The statute expressly permits the Secretary to add other elements such as this to the annual wellness visits.

(1) Definitions

We are proposing to add the following definitions to § 410.15:

• *Detection of any cognitive impairment,* for purposes of this section, means assessment of an individual's cognitive function by direct observation, with due consideration of information obtained by way of patient report, concerns raised by family members, friends, caretakers, or others.

• *Review of the individual's functional ability and level of safety,* for purposes of this section includes, at a minimum, assessment of the following topics:

++ Hearing impairment;
++ Ability to successfully perform activities of daily living;
++ Fall risk;
++ Home safety.

• *Health professional,* for purposes of this section means:

++ A physician who is a doctor of medicine or osteopathy (as defined in section 1861(r)(1) of the Act); or
++ A practitioner as described in clause (i) of section 1842(b)(18)(C) of the Act, that is, a physician assistant, nurse practitioner, or clinical nurse specialist (as defined in section 1861(aa)(5) of the Social Security Act); or
++ A medical professional (including a health educator, registered dietitian, or nutritionist) or a team of medical professionals, who are working under the supervision of a physician as defined in this definition.

• *Establishment of, or an update to the individual's medical and family history,* for purposes of this section, means at a minimum the collection and documentation of the following:

++ Past medical and surgical history, including experiences with illnesses, hospital stays, operations, allergies, injuries, and treatments.
++ Use or exposure to medications and supplements, including calcium and vitamins.
++ Medical events experienced by the beneficiary's parents and any siblings and children, including diseases that may be hereditary or place the individual at increased risk.

• *Eligible beneficiary,* for purposes of this section, means an individual who is no longer within 12 months after the effective date of his or her first Medicare Part B coverage period, and has not received either an initial preventive physical examination or an annual wellness visit providing a personalized prevention plan within the past 12 months.

(2) Requirements of the First Visit for Personalized Prevention Plan Services

We are proposing that the first annual wellness visit for purposes of this benefit include the following:

• Establishment of the individual's medical and family history;

• Establishment of a list of current providers and suppliers that are regularly involved in providing medical care to the individual;

• Measurement of the individual's height, weight, body mass index (or waist circumference, if appropriate), blood pressure, and other routine measurements as deemed appropriate, based on the individual's medical and family history;

• Detection of any cognitive impairment that the individual may have;

• Review of the individual's potential (risk factors) for depression, including current or past experiences with depression or other mood disorders, based on the use of an appropriate screening instrument for persons without a current diagnosis of depression, which the health professional as defined in this section may select from various available screening questions or standardized questionnaires designed for this purpose and recognized by national professional medical organizations;

• Review of the individual's functional ability and level of safety, based on direct observation or the use of appropriate screening questions or a screening questionnaire, which the health professional as defined in this section may select from various available screening questions or standardized questionnaires designed for this purpose and recognized by national professional medical organizations;

• Establishment of the following:

++ A written screening schedule, such as a checklist, for the next 5 to 10 years as appropriate, based on recommendations of the USPSTF and the Advisory Committee on Immunization Practices, and the individual's health status, screening history, and age-appropriate preventive services covered by Medicare; and
++ A list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway, including any mental health conditions or any such risk factors or conditions that have been identified through an initial preventive physical examination (as described under § 410.16), and a list of treatment options and their associated risks and benefits;

• Furnishing of personalized health advice and a referral, as appropriate, to health education or preventive counseling services or programs aimed at reducing identified risk factors and improving self management, or community-based lifestyle interventions to reduce health risks and promote self-management and wellness, including weight loss, physical activity, smoking cessation, fall prevention, and nutrition; and

• Any other element determined appropriate by the Secretary through the National Coverage Determination process.

(3) Requirements of Subsequent Visits for Personalized Prevention Plan Services

We are proposing that subsequent annual wellness visits providing personalized prevention plan services for purposes of this benefit include the following:

• An update of the individual's medical and family history;

• An update of the list of current providers and suppliers that are regularly involved in providing medical care to the individual, as that list was developed for the first annual wellness visit providing personalized prevention plan services;

• Measurement of an individual's weight, blood pressure, and other routine measurements as deemed appropriate, based on the individual's medical and family history;

• Detection of any cognitive impairment, as that term is defined in this section, that the individual may have;

• An update to the following:

++ The written screening schedule for the individual as that schedule was developed at the first annual wellness visit providing personalized prevention plan services; and
++ The list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual as that list was developed at the first annual wellness visit providing personalized prevention plan services;

• Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs as that advice and related services are defined in paragraph (a) of this section;

• Any other element determined appropriate by the Secretary through the National Coverage Determination process. Body-mass index (BMI) should be calculated at the first annual wellness visit and may be recalculated at subsequent visits, if indicated. Given

the general stability of adult height, we would not expect the BMI to meaningfully change in the absence of significant weight change. We have not in the definition of the subsequent annual visit required measurement of the individual's height.

We are proposing to add two distinct elements to the definition of the first annual wellness visit only: depression screening and functional status assessment. Our review of the medical literature and the USPSTF recommendations indicates that the optimum frequency for those services is unknown. Thus we believe it would be premature and beyond the current evidence to require that they be included in the definition of subsequent visits, but they may be performed at these visits, if indicated.

In addition, to facilitate future consideration of coverage of additional elements in the definitions of the first and subsequent annual wellness visits in § 410.15(a), we are proposing that the determination of other required elements for those purposes will be made through the National Coverage Determination (NCD) process. The NCD process is evidence based, transparent and furnishes the opportunity for public comment, and is described in sections 1862(l) of the Act.

While section 4103 of the ACA ultimately requires that an HRA be included in the new annual wellness visit benefit beginning January 1, 2011, the HRA guidelines (with standards for interactive telephonic and web-based HRAs) and the model HRA tool also required by section 4103 are not yet available. As a result, we have not included requirements related to the HRA in this proposed rule. When HRA guidelines and standards have been established, and a model HRA instrument is available and determined by the Secretary to be appropriate for the Medicare population, we will revise these regulations to include the HRA as an element in the definition of the annual wellness visit.

We are requesting public comments on the components of both the first and subsequent annual wellness visits, as well as the definitions of related terms in the document. We ask that commenters making specific recommendations on this or any related issue provide documentation from the medical literature, current clinical practice guidelines, or the USPSTF or Advisory Committee on Immunization Practices recommendations.

3. Payment for the Annual Wellness Visit Providing Personalized Prevention Plan Services (PPPS)

Section 4103 of the ACA created a new benefit for the "annual wellness visit" with personalized prevention plan services. The Affordable Care Act amends section 1861(s)(2) of the Act by adding a new subsection (FF) to provide for coverage of the annual wellness visit beginning January 1, 2011. Section 4103 also adds new subsection (hhh) to section 1861 of the Act to define "personalized prevention plan services" and to specify who may furnish these services. Finally, section 4103 amends section 1848(j)(3) of the Act to provide for payment of annual wellness visits under the PFS, and specifically excludes the annual wellness visit from the hospital outpatient prospective payment system (OPPS). Therefore, a single payment under the PFS will be made when an annual wellness visit is furnished by a physician, physician assistant, nurse practitioner, or clinical nurse specialist, or by a medical professional or team of medical professionals, as determined appropriate by the Secretary, under the supervision of a physician.

To allow for Medicare reporting and payment of the annual wellness visit, we are proposing to create two new HCPCS G-codes for reporting the first wellness visit and creation of the PPPS and the subsequent visits available to the beneficiary every 12 months. Specifically, we are proposing to establish the following two new HCPCS codes for CY 2011: GXXXA (Annual wellness visit; includes a personalized prevention plan of service (PPPS), first visit) and GXXXB (Annual wellness visit; includes a personalized prevention plan of service (PPPS), subsequent visit). A beneficiary's first annual wellness visit to a practitioner would be reported to Medicare under HCPCS code GXXXA, even if the beneficiary had previously received an initial preventive physical examination (IPPE) that was covered by Medicare. Beneficiaries, in their first 12 months of Part B coverage, will continue to be eligible only for an IPPE. After the first 12 months of Part B coverage, on and after January 1, 2011, beneficiaries will be eligible for an annual wellness visit described by HCPCS code GXXXA or GXXXB, provided that the beneficiary has not received an IPPE or annual wellness visit within the preceding 12-month period.

A beneficiary would be eligible for one initial annual wellness visit covered by Medicare that must include all of the required elements that we are proposing for the first visit as described in the preceding section. All other annual wellness visits that would include the required elements for those visits would be reported as subsequent visits, even if a different practitioner furnished the subsequent annual wellness visit. We would expect there to be continuity and communication among the practitioners caring for beneficiaries over time with respect to the PPPS, and that would include the case where a different practitioner furnishing a subsequent annual wellness visit would update the information in the patient's medical record based on the patient's interval history since the previous annual wellness visit.

The first wellness visit described by HCPCS code GXXXA is similar to the IPPE that is currently reported with HCPCS code G0402 (Initial preventive physical examination; face-to-face visit, services limited to new beneficiary during the first 12 months of Medicare enrollment). We believe that the physician work and nonfacility PE of the IPPE and the first annual wellness visit are very similar, given that both represent an initial beneficiary visit focused on prevention. In the CY 2010 PFS final rule with comment period discussion of payment for the IPPE (74 FR 61767), we noted that in the context of physician work and intensity, HCPCS code G0402 was most equivalent to CPT code 99204 (Level 4 new patient office or other outpatient visit). Therefore, for CY 2011, we are proposing to crosswalk the same physician work RVUs of 2.43 from CPT code 99204 to HCPCS codes G0402 and GXXXA. Similarly, we believe the direct PE inputs for all of these services are similar and, therefore, we are proposing to assign the same direct PE inputs to HCPCS codes G0402 and GXXXA as are included for CPT code 99204. We note that currently, the direct PE inputs for HCPCS code G0402 also include preventive assessment forms, and we are proposing to add this supply to the PE for HCPCS code GXXXA as well because we believe it would be used in the first wellness visit. The proposed CY 2011 PE and malpractice RVUs for HCPCS code GXXXA are displayed in Addendum B to this proposed rule. We also note that we are proposing no facility PE RVUs for HCPCS code GXXXA because only a single payment will be made under the PFS when this service is furnished. There is no separate facility payment for GXXXA when a practitioner furnishes this service in the facility setting.

Moreover, we believe that a subsequent annual wellness visit described by HCPCS code GXXXB is most similar, from the perspectives of

physician work and PE, to CPT code 99214 (Level 4 established patient office or other outpatient visit). The subsequent annual wellness visit is a patient visit for PPPS that includes certain required elements, such as updating information regarding the patient's history, risk factors, and regular medical care providers and suppliers since the prior annual visit, and obtaining routine measurements. We believe the physician work and direct PE of a subsequent annual wellness visit are similar, in terms of evaluation and management (E/M) visit level, to the first wellness visit, which we are proposing to value like a level 4 new patient office or other outpatient visit, as we have previously valued the IPPE. However, the subsequent annual wellness visit would typically be for an established patient and, as described earlier in this section, we are proposing that certain wellness visit elements only must be furnished in the first wellness visit. As a result, we believe it would be most appropriate to value the subsequent annual wellness visit based upon an E/M visit for an established patient. Therefore, for CY 2011 we are proposing to crosswalk the same physician work RVUs of 1.50 from CPT code 99214 to HCPCS code GXXXB. Furthermore, we believe the direct PE inputs for these two services are also similar and, therefore, we are proposing to assign the same direct PE inputs to HCPCS code GXXXB as are assigned to CPT code 99214. We note that we are also proposing to add the same preventive assessment forms to the PE for HCPCS code GXXXB as we are proposing to add for HCPCS code GXXXA because we believe this supply would be used in both the first and subsequent annual wellness visits. The proposed CY 2011 PE and malpractice RVUs for HCPCS code GXXXB are displayed in Addendum B to this proposed rule. Similar to our treatment of HCPCS code GXXXA for the first wellness visit, we are proposing no facility PE RVUs for HCPCS code GXXXB as only a single payment will be made under the PFS when this service is furnished. There is no separate facility payment for GXXXB when a practitioner furnishes this service in the facility setting.

While we believe there could be overlap in the direct PE, malpractice expense, and physician work in both history taking and examination of the patient in the context of the initial or subsequent wellness visit and another E/M service, we are not proposing to limit the level of a medically necessary E/M visit when furnished and billed with a wellness visit. As we stated in the CY 2005 PFS final rule with comment period with respect to the IPPE (69 FR 66289 through 66290), we do not want to prohibit the reporting of an appropriate level of service when it is necessary to evaluate and treat the beneficiary for acute and chronic conditions. However, at the same time, we believe the practitioner is better able to discuss health promotion, disease prevention, and the educational opportunities available with beneficiaries when their health status has been stabilized and the beneficiary is physically receptive. Therefore, depending on the clinical circumstances, a CPT code for a medically necessary E/M visit may be reported and appended with CPT modifier -25 (significant, separately identifiable evaluation and management service by the same physician on the same day of the procedure or other service) to designate the E/M visit as a separately identifiable service from the initial or subsequent wellness visit. However, we believe this scenario would be uncommon, and we expect that no components of an encounter attributable to the annual wellness visit would be used in determining the level of a separate E/M visit that would also be reported.

With respect to beneficiary cost-sharing, section 4103(c) of the ACA amends section 1833(a)(1) of the Act by adding subparagraph (X), referring to the PPPS to state that the amount paid shall be 100 percent of the lesser of the actual charge for the services or the amount determined under the payment basis determined under section 1848 of the Act, thereby eliminating coinsurance for the annual wellness visit. Finally, section 4103(b)(4) of the ACA amends section 1833(b) of the Act to specify that the Part B deductible does not apply to the annual wellness visit. We expect that practitioners will work to ensure that this valuable new Medicare benefit is furnished to the beneficiaries that they care for in their practices, effective January 1, 2011.

R. Section 4104: Removal of Barriers to Preventive Services in Medicare

1. Definition of "Preventive Services"

Section 4104 of the ACA revises section 1861(ddd) of the Act to add paragraph (3), which defines the term "preventive services" as follows:

- The specific services currently listed in section 1861(ww)(2) of the Act with the explicit exclusion of electrocardiograms (as specified in section 1861(ww)(2)(M) of the Act);
- The initial preventive physical examination (IPPE) established by section 611 of the MMA and defined in section 1861(ww)(1) of the Act; and
- The annual wellness visit, as specified by section 1861(hhh) of the Act as added by section 4103 of the ACA. We refer readers to section V.Q. of this proposed rule for the proposed provisions related to the coverage of and payment for the annual wellness visit. The regulations regarding coverage of the IPPE are specified in § 410.16 and remain unchanged by the ACA.

The specific preventive services included in the definition of "preventive services" in section 1861(ddd)(3)(A) of the Act as cross-referenced to section 1861(ww)(2) of the Act, excluding electrocardiograms, include the following:

- Pneumococcal, influenza, and hepatitis B vaccine and administration.
- Screening mammography.
- Screening pap smear and screening pelvic exam.
- Prostate cancer screening tests.
- Colorectal cancer screening tests.
- Outpatient diabetes self-management training (DSMT).
- Bone mass measurement.
- Screening for glaucoma.
- Medical nutrition therapy (MNT) services.
- Cardiovascular screening blood tests.
- Diabetes screening tests.
- Ultrasound screening for abdominal aortic aneurysm (AAA).
- Additional preventive services identified for coverage through the national coverage determination (NCD) process.

We note that currently the only additional preventive service identified for coverage through the NCD process is HIV testing. A proposed NCD for smoking cessation services for asymptomatic patients was released in May 2010 on the CMS Web site at: *http://www.cms.gov/mcd/index_list.asp?list_type=nca.* We will address the applicability of section 1861(ddd)(3)(A) of the Act (as added by section 4104 of the ACA) to these services if an NCD establishing them as additional preventive services is finalized.

We are proposing to add the definition of "preventive services" in § 410.2 to implement the provisions of section 1861(ddd)(3) of the Act (as amended by section 4104 of the ACA).

2. Deductible and Coinsurance for Preventive Services

Section 4104(b)(4) of the ACA amends section 1833(a)(1) of the Act by requiring 100 percent Medicare

payment for the IPPE and for those preventive services recommended by the United States Preventive Services Task Force (USPSTF) with a grade of A or B for any indication or population and that are appropriate for the individual. This provision waives any coinsurance that would otherwise be applicable under section 1833(a)(1) of the Act for those items and services listed in section 1861(ww)(2) of the Act (excluding electrocardiograms) to which the USPSTF has given a grade of A or B. In addition, section 4103(c)(1) of the ACA amends section 1833(c)(1) of the Act to waive the coinsurance for the annual wellness visit. The coinsurance represents the beneficiary's share of the payment to the provider or supplier for furnished services. Coinsurance generally refers to a percentage (for example, 20 percent) of the Medicare payment rate for which the beneficiary is liable and is applicable under the PFS, while copayment generally refers to an established amount that the beneficiary must pay that is not necessarily related to a particular percentage of the Medicare payment, and is applicable under the hospital Outpatient Prospective Payment System (OPPS). We refer readers to the CY 2011 OPPS/ASC proposed rule for proposed provisions related to payment for preventive services, including waiver of the deductible and copayment, under the OPPS.

Section 4104(c) of the ACA amends section 1833(b)(1) of the Act to waive the Part B deductible for preventive services described in subparagraph (A) of section 1861(ddd)(3) of the Act that have a grade of A or B from the USPSTF. In addition, section 1833(b)(1) of the Act (as amended by section 4103(c)(4) of the ACA) waives the Part B deductible for the annual wellness visit. These provisions are effective for services furnished on and after January 1, 2011. Section 101(b)(2) of the MIPPA amended section 1833(b) of the Act to waive the deductible for the IPPE effective January 1, 2009.

Not all preventive services described in subparagraph (A) of section 1861(ddd)(3) are recommended by the USPSTF with a grade of A or B and, therefore, some of the preventive services do not meet the criteria in sections 1833(a)(1) and (b)(1) of the Act for the waiver of the deductible and coinsurance. However, with certain exceptions noted below, the changes made by section 4104 of the ACA do not affect most of the preexisting specific provisions in sections 1833(a) and 1833(b) of the Act (that are codified in regulations in § 410.160(b) and § 410.152) that waive the deductible and coinsurance for specific services. For example, section 1833(a)(1)(D) of the Act already waives the coinsurance and section 1833(b)(3) of the Act waives the deductible for clinical laboratory tests (including tests furnished for screening purposes). Section 4104 of the ACA does not change this provision and, therefore, the waiver of both the deductible and coinsurance remains in place for all laboratory tests, regardless of whether the particular clinical laboratory test meets the USPSTF grading criteria specified in sections 1833(a)(1) and 1833(b)(1) of the Act (as amended by section 4104 of the ACA) for waiver of the deductible and coinsurance as a preventive service.

The following preventive services listed in section 1833(ddd)(3)(A) of the Act are not recommended by the USPSTF with a grade of A or B for any indication or population: digital rectal examination furnished as a prostate cancer screening service; glaucoma screening; DSMT services; and barium enema furnished as a colorectal cancer screening service.

Specifically, HCPCS code G0102 (Prostate cancer screening; digital rectal exam), which does not have a grade of A or B from the USPSTF for any indication or population, will continue to be subject to the deductible and coinsurance as there is no statutory provision to the contrary. However, the deductible and coinsurance for HCPCS code G0103 (Prostate cancer screening; prostate specific antigen test (PSA)) will continue to be waived in accordance with section 1833(a)(1)(D) of the Act, even though this service also does not have a grade of A or B from the USPSTF.

Glaucoma screening services, described by HCPCS codes G0117 (Glaucoma screening for high risk patients furnished by an optometrist or ophthalmologist) and G0118 (Glaucoma screening for high risk patient furnished under the direct supervision of an optometrist or ophthalmologist), will continue to be subject to the deductible and coinsurance because these services are not recommended with a grade of A or B by the USPSTF for any indication or population and there is no other statutory provision to except them. Similarly, DSMT services are currently not rated by the USPSTF, and there is no other statutory provision to except them from applicability of the deductible and coinsurance. Therefore the deductible and coinsurance requirements will continue to apply.

Barium enemas furnished as colorectal cancer screening tests, described by HCPCS codes G0106 (Colorectal cancer screening; alternative to G0104, screening sigmoidoscopy, barium enema) and G0120 (Colorectal cancer screening; alternative to G0105, screening colonoscopy, barium enema), do not have a grade of A or B from the USPSTF for any indication or population. However, the deductible does not apply to barium enemas furnished as colorectal cancer screening tests, because colorectal cancer screening tests are explicitly excluded from the deductible in section 1833(b)(8) of the Act. However, there is no specific exclusion of barium enemas from the coinsurance requirement in section 1833(b)(1) of the Act and, therefore, this requirement, as applicable, continues to apply to barium enemas. We note that the USPSTF has given a grade of A to screening colonoscopy, screening flexible sigmoidoscopy, and fecal occult blood screening tests, and that, as a result, these colorectal cancer screening tests are subject to the statutory waiver of both the deductible and coinsurance.

We note also that the USPSTF ceased to make recommendations with regard to vaccines and vaccine administration after CY 1996, so as not to conflict with the recommendations of the Centers for Disease Control and Prevention's Advisory Committee on Immunization Practices. However, the USPSTF's most recent vaccine recommendations gave a grade of B to influenza and pneumococcal vaccines and their administration and a grade of A to hepatitis B vaccine and its administration. While sections 1833(a)(1) and 1833(b)(1) of the Act require that the preventive services receive a grade of A or B from the USPSTF for the coinsurance and deductible to be waived, the statute does not specify that the recommended grade must be furnished by the USPSTF within any given timeframe. The USPSTF grades for these preventive services are the most current USPSTF grade and have never been withdrawn. Therefore, we believe that these preventive services meet the requirements of the statute for the waiver of the deductible and coinsurance. We also note that the Centers for Disease Control and Prevention's Advisory Committee on Immunization Practices currently recommends influenza, pneumococcal, and hepatitis B vaccines.

We are proposing to update § 410.160(b), which lists the services for which expenses incurred are not subject to the Part B annual deductible and do not count toward meeting that deductible. Specifically, we are proposing to revise § 410.160(b)(2) to include influenza and hepatitis B

vaccines and their administration, in addition to pneumococcal vaccine and its administration. In addition, in § 410.160(b), we are also proposing to add exceptions for bone mass measurement, MNT services, and the annual wellness visit.

In § 410.152, we are proposing to revise paragraph (l) to establish the amount of payment under the applicable payment system for providers and suppliers of the services listed in the paragraph and displayed in Table 38. Table 38 displays the HCPCS codes that we are proposing as "preventive services" under section 1861(ddd)(3)(A) of the Act and identifies the HCPCS codes for the IPPE and the annual wellness visit. Table 38 also indicates the most recent USPSTF grade, if any, that is the basis for our proposed policy with regard to waiver of the deductible and coinsurance, as applicable, and the Medicare payment system under which the HCPCS code would be paid when furnished outside of the facility setting. We note that the changes made by section 4104 of the ACA with respect to the deductible and coinsurance apply in all settings in which the services are furnished.

In developing recommendations regarding preventive services, we recognize that the USPSTF may make recommendations that are specific to an indication or population, at times including characteristics such as gender and age in its recommendations. While we are proposing to waive the deductible and coinsurance for any Medicare covered preventive service recommended with a grade of A or B for any indication or population, with no limits on the indication or population as long as the USPSTF has recommended the preventive service for at least one indication and/or population with a grade of A or B, we note that all existing Medicare coverage policies for such services, including any limitations based on indication or population, continue to apply. In some cases, national coverage policies may currently limit Medicare coverage based on the indication or population, consistent with the USPSTF recommendations with a grade of A or B for the indication or population. In other cases where Medicare does not explicitly noncover preventive services for a specific population or indication, we would expect that, particularly in those cases where the USPSTF recommendation grade is a D (that is, the USPSTF recommends against the service because there is moderate or high certainty that the service has no net benefit or that the harms outweigh the benefits), practitioners would only order those preventive services that are clinically appropriate for the beneficiary. If we have concerns in the future about the appropriateness of preventive services for an indication or population in light of the USPSTF's recommendations, we may consider using our authority under section 1834(n)(1) of the Act (as added by section 4105 of the ACA) to modify Medicare coverage of any preventive service to be consistent with the recommendations of the USPSTF.

Section 10501(i)(2) of the ACA amended the definition of Federally Qualified Health Center (FQHC) services as defined in section 1861(aa)(3)(A) of the Act by replacing the specific references to services provided under section 1861(qq) and (vv) of the Act (diabetes outpatient self-management training services and medical nutrition therapy services, respectively) with preventive services as defined in section 1861(ddd)(3) of the Act, as established by section 4014(a)(3) of the ACA. These changes are effective for services provided on or after January 1, 2011. Accordingly, we are proposing to conform the regulations to the new statutory requirement by adding a new section § 405.2449 which would add the new preventive services definition to the definition of FQHC services effective for services provided on or after January 1, 2011.

Section 1861(ddd)(3) of the Act defines "preventive services" as consisting of the following three components:

- Screening and preventive services described in section 1861(ww)(2) of the Act (other than electrocardiograms described in subparagraph (M) of that same subsection).
- An initial preventive physical examination, as defined in section 1861(ww) of the Act.
- Personalized prevention plan services as defined in section 1861(hhh)(1) of the Act.

We are proposing to add each of these three components into the new Medicare FQHC preventive services definition in a new § 405.2449.

Section 4104(b)(1) of the ACA, as amended by section 10406 of the same Act, waives coinsurance for preventive services by adding section 1833(a)(1)(Y) to the Act to require, essentially, waiver of coinsurance for preventive services that are recommended with a grade of A or B by the USPSTF for any indication or population. This provision is specifically designed to remove barriers to affording and obtaining such preventive services under Medicare.

In addition, section 10501(i)(3)(B)(ii) of the ACA added section 1833(a)(1)(Z) to the Act to require a 20-percent copay on all FQHC services after implementation of the FQHC prospective payment system. We believe we can give both section 1833(a)(1)(Y) and (Z) of the Act, and the definition of FQHC services (revised to include the broader scope of preventive services) their best effect by permitting a 100 percent reimbursement rate for preventive services as defined at section 1861 (ddd)(3) of Act, effective January 1, 2011.

Section 1833(b)(4) of the Act stipulates that the Medicare Part B deductible shall not apply to Federally qualified health center services. The ACA makes no change to this provision, therefore Medicare shall continue to waive the Part B deductible for all federally qualified health center services, including preventive services added by the ACA.

TABLE 38—PROPOSED CY 2011 DEDUCTIBLE AND COINSURANCE FOR PREVENTIVE SERVICES UNDER SECTION 1861(ddd)(3)(A) OF THE ACT (INCLUDES THE IPPE AND THE ANNUAL WELLNESS VISIT)

Preventive service	CPT/ HCPCS Code	Long descriptor	USPSTF rating [1]	Payment method	CY 2010 coins./ deductible	CY 2011 coins./ deductible
Initial Preventive Physical Examination, IPPE.	G0402	Initial preventive physical examination; face to face visits, services limited to new beneficiary during the first 12 months of Medicare enrollment.	* Not Rated.	PFS	Coins. applies and ded. is waived.	WAIVED.
	G0403	Electrocardiogram, routine ECG with 12 leads; performed as a screening for the initial preventive physical examination with interpretation and report.	.....	PFS	Not Waived	Not Waived.

TABLE 38—PROPOSED CY 2011 DEDUCTIBLE AND COINSURANCE FOR PREVENTIVE SERVICES UNDER SECTION 1861(ddd)(3)(A) OF THE ACT (INCLUDES THE IPPE AND THE ANNUAL WELLNESS VISIT)—Continued

Preventive service	CPT/ HCPCS Code	Long descriptor	USPSTF rating [1]	Payment method	CY 2010 coins./ deductible	CY 2011 coins./ deductible
	G0404	Electrocardiogram, routine ECG with 12 leads; tracing only, without interpretation and report, performed as a screening for the initial preventive physical examination.	.....	PFS	Not Waived	Not Waived.
	G0405	Electrocardiogram, routine ECG with 12 leads; interpretation and report only, performed as a screening for the initial preventive physical examination.	.....	PFS	Not Waived	Not Waived.
Ultrasound Screening for Abdominal Aortic Aneurysm (AAA).	G0389	Ultrasound, B-scan and/or real time with image documentation; for abdominal aortic aneurysm (AAA) ultrasound screening.	B	PFS	Coins. applies and ded. is waived.	WAIVED.

[1] U.S. Preventive Services Task Force Recommendations.

A—The USPSTF strongly recommends that clinicians routinely provide [the service] to eligible patients. (The USPSTF found good evidence that [the service] improves important health outcomes and concludes that benefits substantially outweigh harms.)

B—The USPSTF recommends that clinicians routinely provide [the service] to eligible patients. (The USPSTF found at least fair evidence that [the service] improves important health outcomes and concludes that benefits outweigh harms.)

C—The USPSTF makes no recommendation for or against routine provision of [the service]. (The USPSTF found at least fair evidence that [the service] can improve health outcomes but concludes that the balance of benefits and harms is too close to justify a general recommendation.)

D—The USPSTF recommends against routinely providing [the service] to asymptomatic patients. (The USPSTF found at least fair evidence that [the service] is ineffective or that harms outweigh benefits.)

I—The USPSTF concludes that the evidence is insufficient to recommend for or against routinely providing [the service]. (Evidence that [the service] is effective is lacking, of poor quality, or conflicting and the balance of benefits and harms cannot be determined.)

4. Extension of Waiver of Deductible to Services Furnished in Connection With or in Relation to a Colorectal Cancer Screening Test That Becomes Diagnostic or Therapeutic

Section 4104(c) of the ACA amends section 1833(b) of the Act to waive the Part B deductible for colorectal cancer screening tests that become diagnostic. Specifically, section 1833(b)(1) of the Act (as amended by section 4104(c)(2) of the ACA) waives the deductible with respect to a colorectal cancer screening test regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure that is furnished in connection with, as a result of, and in the same clinical encounter as a screening test. We are proposing that all surgical services furnished on the same date as a planned screening colonoscopy, planned flexible sigmoidoscopy, or barium enema be considered to be furnished in connection with, as a result of, and in the same clinical encounter as the screening test. In the event of a legislative change to this policy (for example, a statutory change that would waive the coinsurance for these related services in addition to the deductible), we would reassess the appropriateness of this proposed definition of services that are furnished in connection with, as a result of, and in the same clinical encounter as the colorectal cancer screening test that becomes diagnostic. We also note that the beneficiary's annual deductible would likely be met when any surgical procedure (related or not) is furnished on the same day as the scheduled screening test.

We are proposing to implement this provision by creating a HCPCS modifier that providers and practitioners would append to the diagnostic procedure code that is reported instead of the screening colonoscopy or screening flexible sigmoidoscopy HCPCS code or as a result of the barium enema when the screening test becomes a diagnostic service. The claims processing system would respond to the modifier by waiving the deductible for all surgical services on the same date as the diagnostic test. Coinsurance would continue to apply to the diagnostic test and to other services furnished in connection with, as a result of, and in the same clinical encounter as the screening test.

S. Section 5501: Expanding Access to Primary Care Services and General Surgery Services

1. Section 5501(a): Incentive Payment Program for Primary Care Services

a. Background

Section 5501(a) of the ACA revises section 1833 of the Act by adding a new paragraph (x), "Incentive Payments for Primary Care Services." Section 1833(x) of the Act states that in the case of primary care services furnished on or after January 1, 2011 and before January 1, 2016 by a primary care practitioner, there shall also be paid on a monthly or quarterly basis an amount equal to 10 percent of the payment amount for such services under Part B.

Section 1833(x)(2)(A) of the Act (as added by section 5501(a) of the ACA) defines a primary care practitioner as: (1) A physician, as described in section 1861(r)(1) of the Act, who has a primary specialty designation of family medicine, internal medicine, geriatric medicine, or pediatric medicine; or (2) a nurse practitioner, clinical nurse specialist, or physician assistant as defined in section 1861(aa)(5) of the Act, and in all cases, for whom primary care services accounted for at least 60 percent of the allowed charges under Part B for the practitioner in a prior period as determined appropriate by the Secretary.

Section 1833(x)(2)(B) (as added by section 5501(a)(2)(B) of the ACA) defines primary care services as those services identified by the following HCPCS codes as of January 1, 2009 (and as subsequently modified by the Secretary, as applicable):

- 99201 through 99215 for new and established patient office or other outpatient evaluation and management (E/M) visits;
- 99304 through 99340 for initial, subsequent, discharge, and other nursing facility E/M services; new and established patient domiciliary, rest home (*e.g.,* boarding home), or custodial care E/M services; and domiciliary, rest home (*e.g.,* assisted living facility), or home care plan oversight services; and
- 99341 through 99350 for new and established patient home E/M visits.

These codes are displayed in Table 39. All of these codes remain active in CY 2010 and there are no other codes used to describe these services.

TABLE 39—PRIMARY CARE SERVICES ELIGIBLE FOR PRIMARY CARE INCENTIVE PAYMENTS IN CY 2011

CPT codes	Description
99201	Level 1 new patient office or other outpatient visit.
99202	Level 2 new patient office or other outpatient visit.
99203	Level 3 new patient office or other outpatient visit.

99350	Level 4 established patient home visit.

b. Proposed Primary Care Incentive Payment Program (PCIP)

For primary care services furnished on or after January 1, 2011 and before January 1, 2016, we are proposing to provide a 10 percent incentive payment to primary care practitioners, identified as the following: (1) In the case of physicians, enrolled in Medicare with a primary specialty designation of 08—family practice, 11—internal medicine, 37—pediatrics, or 38—geriatrics; or (2) in the case of nonphysician practitioners (NPPs), enrolled in Medicare with a primary care specialty designation of 50—nurse practitioner, 89—certified clinical nurse specialist, or 97—physician assistant; and (3) for whom the primary care services displayed in Table 39 accounted for at least 60 percent of the allowed charges under Part B for such practitioner during the time period that is specified by the Secretary, and proposed in this section.

We are proposing to use the most current full year of claims data to identify primary care practitioners eligible for the PCIP for a CY based on the practitioner's primary specialty (as identified on claims) and the practitioner's percentage of all allowed charges for the primary care services displayed in Table 39. We commonly use the most recent full year of claims data for purposes of establishing annual payment amounts under a number of Medicare's fee-for-service programs. A practitioner with a primary care specialty designation would be eligible for the PCIP in a CY if the percentage of his or her allowed charges for primary care services (identified in Table 39) on claims where the practitioner is identified as one of the primary care specialties described above meets or exceeds the 60 percent threshold. We note that the practitioner's specialty is applied to the claim by the claims processing system and reflects the physician's primary specialty designation for purposes of Medicare enrollment on the date the claim is processed, which would usually be close to the date on which the service was actually furnished to the beneficiary. We would identify primary care practitioners eligible for the PCIP for a year by the individual physician/practitioner national provider identifier (NPI) number using the most current full year of claims data available.

Therefore, for determining PCIP practitioner eligibility for CY 2011, we would use CY 2009 PFS claims data, processed through June 30, 2010. This would ensure analysis of about 99 percent of CY 2009 claims to determine practitioner eligibility for PCIP payment beginning January 2011. We note that the MMA changed the requirements for critical access hospital (CAH) billing for practitioners' professional services and, therefore, modifications were made to the Medicare claims processing system to require CAHs to identify the practitioner furnishing a service on the CAH claim for that professional service. However, because the rendering practitioner has only been identified on CAH claims since July 1, 2009, for the first year of the PCIP we are proposing to identify eligible practitioners using only 6 months of CAH data for those CAHs paid under the optional method. Thereafter, we would update the list of practitioners eligible for the PCIP annually based on the most recent available full year of PFS and CAH claims data.

To the extent practitioners were paid under the PFS during the historical claims data year for some primary services and, for other services, CAHs were paid under the optional method for those same practitioners' professional services, we would aggregate the historical claims data from all settings by the practitioner's NPI in order to determine whether the practitioner is eligible for PCIP payments. We note that for all practitioners (both practitioners paid under the PFS and practitioners for whose professional services CAHs are paid under the optional method), the period of claims data used for the annual determination of the primary care service percentage of allowed charges with a practitioner specialty of primary care would lag the PCIP payment year by 2 years (for example, CY 2010 claims data would be used for the CY 2012 PCIP). This 2-year lag is consistent with other areas of the Medicare program where we rely on information from claims data to inform payment in a future year, such as the use of CY 2009 PFS utilization data in the establishment of certain aspects of CY 2011 PFS payment rates.

Under the proposed PCIP eligibility determination method, it would be necessary to revise the list of eligible practitioners based on updated claims data regarding primary specialty designation and the percentage of a practitioner's allowed charges for primary care services each year. The

revised list of practitioners developed prior to the beginning of the next CY would establish a practitioner's eligibility for PCIP payments for the full next CY. That is, once eligible for the PCIP for a given CY, the practitioner would receive PCIP payments for primary care services furnished throughout that full CY until we reassess the practitioner's PCIP eligibility for the next year's payments. As a result, a practitioner newly enrolling in Medicare during a CY would not be eligible for the PCIP until Medicare claims data reflecting the practitioner's primary care specialty and a percentage of allowed charges for primary care services that equals or exceeds the 60 percent threshold were available to establish the practitioner's eligibility for the next PCIP year. Similarly, an enrolled practitioner's change in primary specialty designation (either to or from a primary care specialty) would not affect that practitioner's eligibility for the PCIP until the practitioner's claims reflecting the change were available for analysis in preparation for the next applicable CY PCIP. Given the statutory requirement that a practitioner's primary care services account for at least 60 percent of the allowed charges under Part B for the practitioner in a prior period as determined by the Secretary, we see no clear alternative methodologies that would allow PCIP payments to be made to those practitioners newly enrolling in Medicare without the 2-year lag in eligibility determination that was described previously. However, given our general interest in supporting primary care practitioners and entry into primary care practice by new physicians and NPPs in order to ensure that Medicare beneficiaries have access to these important services, we are seeking public comments on alternative approaches for establishing PCIP eligibility for newly enrolled practitioners that would be consistent with the statutory requirement.

We plan to monitor changes in the primary specialties of enrolled practitioners over time and would expect not to see significant changes in the specialties of currently enrolled practitioners as a result of the PCIP payments. We would expect that physicians changing their primary specialty to one of the primary care specialties of family medicine, internal medicine, geriatric medicine, or pediatric medicine and who would be newly eligible for the PCIP would be furnishing primary care services to the patients in their practices. Consistent with our past policies, we would expect that physicians changing their primary specialty designation under Medicare would make such changes only so that their primary specialty designation is fully consistent with the specific or unique type of medicine they practice. If we find that physicians are changing their specialty designations (for example, cardiologists who designate their primary specialty as internal medicine, although they practice cardiology) in order to take advantage of the PCIP payments, we would considering making future revisions to eliminate such an outcome.

Consistent with the established Medicare HPSA physician bonus program (Medicare Claims Processing Manual, Pub. 100–04, Chapter 12, Section 90.4.4) and the proposed Health Professional Shortage Area Surgical Incentive Payment Program (HSIP) described in section III.S.2. of this proposed rule, we are proposing that PCIP payments would be calculated by the Medicare contractors and made quarterly on behalf of the eligible primary care practitioner for the primary care services furnished by the practitioner in that quarter. The primary care practitioners' professional services may be paid under the PFS based on a claim for professional services or, where the practitioner has reassigned his or her benefits to a CAH paid under the optional method, to the CAH based on an institutional claim.

As discussed above, eligible primary care practitioners would be identified on a claim based on the NPI of the rendering practitioner. If the claim is submitted by a practitioner's group practice or a CAH, the rendering practitioner's NPI must be included on the line-item for the primary care service (identified in Table 39 above) in order for a determination to be made regarding whether or not the service is eligible for payment of the PCIP. We note that, in order to be eligible for the PCIP, physician assistants, clinical nurse specialists, and nurse practitioners must be billing for their services under their own NPI and not furnishing services incident to physicians' services. Regardless of the specialty area in which they may be practicing, these specific NPPs would be eligible for the PCIP based on their specialty if their historical percentage of allowed charges for primary care services equals or exceeds the 60 percent threshold.

We note that section 1833(x)(4) of the Act (as added by section 5501(a) of the ACA) specifies "there shall be no administrative or judicial review under section 1869, 1878, or otherwise, respecting the identification of primary care practitioners." We believe that the inclusion of this language is intended to provide a means for the practical implementation of this provision. That is, because we must develop a process and identify primary care practitioners before we can make payment under the PCIP to the eligible primary care practitioners, the statute gives CMS the authority to make final determinations of eligible primary care practitioners that are not subject to appeal through the various channels normally available to practitioners, in order for the timely payments under the PCIP to occur. In contrast, if the determinations that CMS must make under this provision were subject to appeal, the timely implementation of this provision could be jeopardized and payments under the PCIP could be significantly delayed. However, we do not believe that the "no administrative or judicial review" clause precludes CMS from correcting errors resulting from clerical or mathematical mistakes. Therefore, we note that practitioners would have the opportunity to notify CMS of clerical or mathematical errors that may have occurred during the process of identifying eligible primary care practitioners for PCIP payment, and which could result in a mistaken eligibility determination for the PCIP.

In summary, under the PCIP beginning in CY 2011, we are proposing to identify primary care practitioners based on their primary specialty and percentage of allowed charges for primary care services that equals or exceeds the 60 percent threshold based upon the most current full year of Medicare claims data, which would be the claims data for 2 years prior to the incentive payment year (for example, CY 2009 claims data processed through June 2010 would be used to identify primary care practitioners for the CY 2011 PCIP). Practitioners identified as eligible for the PCIP immediately prior to the PCIP payment year would then receive quarterly incentive payments during the PCIP year equal to 10 percent of the payment amount for their primary care services under Part B, in addition to the amount the primary care practitioner would otherwise be paid for their professional services under Part B for furnishing the primary care services. For example, primary care practitioners identified in late CY 2010 for the CY 2011 PCIP would receive quarterly PCIP payments in CY 2011 that equal 10 percent of the Part B payment for the primary care services those practitioners furnish during CY 2011.

We further note that section 1833(x)(3) of the Act (as added by section 5501(a) of the ACA) authorizes

payment under the PCIP as an additional payment amount for specified primary care services without regard to any additional payment for the service under section 1833(m) of the Act. Therefore, an eligible primary care physician furnishing a primary care service in a HPSA may receive both a HPSA physician bonus payment under the established program and a PCIP payment under the new program beginning in CY 2011, but the PCIP payment is made without regarding to the HPSA physician bonus payment amount. In addition, payments for outpatient CAH services under section 1834(g)(2)(B) of the Act (as amended by section 5501(a) of the ACA) are not affected by the PCIP payment amounts made to the CAH on behalf of the primary care practitioner.

Accordingly, for CY 2011, we are proposing to add a new § 414.80 to our regulations to specify the requirements of the PCIP. Proposed § 414.80(a) would define primary care practitioners and primary care services. Proposed § 414.80(b) would provide eligible primary care practitioners a 10 percent incentive payment with respect to primary care services, in addition to the amount that would otherwise be paid for their professional services under Part B. Quarterly PCIP payments would be made to eligible practitioners or to CAHs paid under the optional method that are billing on behalf of practitioners for their professional services for identified primary care services.

2. Section 5501(b): Incentive Payment Program for Major Surgical Procedures Furnished in Health Professional Shortage Areas

a. Background

Section 1833(m) of the Act provides for an additional 10 percent incentive payment for physicians' services furnished to a covered individual in an area that is designated as a geographic Health Professional Shortage Area (HPSA) as identified by the Secretary prior to the beginning of such year. Section 5501(b) of the ACA revises section 1833 of the Act by adding the new subparagraph (y), "Incentive Payments for Major Surgical Procedures Furnished in Health Professional Shortage Areas."

In the case of major surgical procedures furnished by a general surgeon on or after January 1, 2011 and before January 1, 2016, in an area designated under section 332(a)(1)(A) of the Public Health Service Act as a geographic HPSA, there shall be paid on a monthly or quarterly basis, an amount equal to 10 percent of the payment amount for eligible services under Part B. Section 1833(y)(2)(A) of the Act (as added by section 5501(b) of the ACA) defines a general surgeon as a physician who is described in section 1861(r)(1) of the Act and who has designated a CMS specialty code of 02—General Surgery as his or her primary specialty code in the physician enrollment under section 1866(j) of the Act.

Section 1833(y)(2)(B) of the Act (as added by section 5501(b) of the ACA) defines major surgical procedures as surgical procedures for which a 10-day or 90-day global period is used for payment under the PFS in section 1848(b) of the Act. In Addendum B to the CY 2010 PFS final rule with comment period (74 FR 62017 through 62143), as corrected in the correction notice (74 FR 65455 through 65457), we identified 489 10-day global procedure codes and 3,796 90-day global procedure codes for a total of 4,285 surgical procedure codes that would have met the surgical procedure criteria for the incentive payment if it were applicable in CY 2010.

b. Proposed HPSA Surgical Incentive Payment Program (HSIP)

For services furnished on or after January 1, 2011 and before January 1, 2016, we are proposing to provide a 10 percent incentive payment to general surgeons, identified by their enrollment in Medicare with a primary specialty code of 02—general surgery, in addition to the amount they would otherwise be paid for their professional services under Part B, when they furnish a major surgical procedure in a location that was defined by the Secretary as of December 31 of the prior year as a geographic HPSA. As with the PCIP described above, we do not believe that surgeons will change their Medicare specialty designation in order to take advantage of the HSIP payments. However, we will monitor the specialty designations of enrolled physicians, and if we find that surgeons are changing their primary specialty designation to general surgery in order to take advantage of the HSIP payments, we would consider making future revisions to eliminate such an outcome.

Consistent with the established Medicare HPSA physician bonus program, we are proposing that these HSIP payments would be calculated by the Medicare contractors based on the criteria for payment that we have established as discussed earlier in this section, and payments would be made quarterly on behalf of the qualifying general surgeon for the qualifying major surgical procedures. The surgeons' professional services may be paid under the PFS based on a claim for professional services or, where the physician has reassigned his or her benefits to a critical access hospital (CAH) paid under the optional method, to the CAH based on an institutional claim.

Qualifying general surgeons would be identified on a claim for a major surgical procedure based on the primary specialty of the rendering physician, identified by his or her NPI, of 02—general surgery. If the claim is submitted by a physician's group practice or a CAH, the rendering physician's NPI must be included on the line-item for the major surgical procedure in order for a determination to be made regarding whether or not the procedure is eligible for payment under the HSIP.

For HSIP payment to be applicable, the major surgical procedure must be furnished in an area designated by the Secretary as of December 31 of the prior year as a geographic HPSA. We would provide HSIP payments for major surgical procedures furnished by general surgeons in the same HPSAs as we currently recognize for purposes of payment of all physicians under the established Medicare HPSA physician bonus program under section 1833(m) of the Act.

Each year, we publish a list of zip codes eligible for automatic payment of the HPSA physician bonus payment at: *http://www.cms.gov/hpsapsaphysicianbonuses/01_overview.asp.* We are proposing to use the same list of zip codes for automatic payment of the bonus for eligible services furnished by general surgeons. We are also proposing to create a new HCPCS code modifier to identify circumstances when general surgeons furnish services in areas that are designated as HPSAs as of December 31 of the prior year, but that are not on the list of zip codes eligible for automatic payment. The new modifier would be appended to the major surgical procedure on claims submitted for payment, similar to the current process for payment of the Medicare HPSA physician bonus when the geographic HPSA is not a HPSA identified for automatic payment.

Consistent with the statutory requirement, we are proposing to define major surgical procedures as those for which a 10-day or 90-day global period is used for payment under the PFS. For CY 2011, approximately 4,300 10-day and 90-day global surgical procedures codes are identified in Addendum B to this proposed rule under the far right column labeled "Global" and designated with "010" or "090," respectively.

We further note that section 1833(y)(3) of the Act (as added by section 5501(b)(1) of the ACA) authorizes payment under the HSIP as an additional payment amount for specified surgical services without regard to any additional payment for the service under section 1833(m) of the Act. Therefore, a general surgeon may receive both a HPSA physician bonus payment under the established Medicare HPSA physician bonus program and an HSIP payment under the new program beginning in CY 2011, but the HSIP payment is made without regarding to the HPSA physician bonus payment amount. In addition, payments for outpatient CAH services under section 1834(g)(2)(B) of the Act (as amended by section 5501(b) of the ACA) are not affected by the HSIP payment amounts made to the CAH on behalf of the general surgeon.

Accordingly, for CY 2011, we are proposing to amend § 414.2 by adding the definitions of "HPSA" and "major surgical procedure." We are also proposing to revise § 414.67 to move the existing provisions to paragraph (a) to be grouped as the "Health Professional Shortage Area (HPSA) physician bonus program" and adding a new paragraph (b) for the "HPSA surgical incentive payment program" provisions. Proposed § 414.67(b) would state that general surgeons who furnish identified 10-day and 90-day global period surgical procedures in an area designated by the Secretary as of December 31 of the prior year as a geographic HPSA that is recognized by Medicare for the HPSA physician bonus program as specified under renumbered § 414.67(a)(1) would receive a 10 percent incentive payment in addition to the amount that would otherwise be paid for their professional services under Part B. Physicians furnishing services in areas that are designated as geographic HPSAs prior to the beginning of the year but not included on the published list of zip codes for which automated HPSA surgical bonus payments are made should report a specified HCPCS code modifier to receive the HSIP payment. Quarterly incentive payments would be made to physicians or to CAHs paid under the optional method that are billing on behalf of physicians for their professional services.

3. Sections 5501(a) and (b) of the ACA and Payment for Critical Access Hospital Professional Services Under the Optional Method

Section 1834(g) of the Act establishes the payment rules for outpatient services furnished by a CAH. In 1999, section 403(d) of the Balanced Budget Refinement Act of 1999 (Pub. L. 106–113) (BBRA) amended section 1834(g) of the Act to provide for two methods of payment for outpatient services furnished by a CAH. Specifically, section 1834(g)(1) of the Act, as amended by the BBRA, specifies that the amount of payment for outpatient services furnished by a CAH is equal to the reasonable costs of the CAH in furnishing such services. (The physician or other practitioner furnishing the professional service receives payment under the PFS.) In the alternative, the CAH may make an election, under section 1834(g)(2) of the Act, to receive amounts that are equal to "the reasonable costs" of the CAH for facility services plus, with respect to the professional services, the amount otherwise paid for professional services under Medicare, less the applicable Medicare deductible and coinsurance amount. The election made under section 1834(g)(2) of the Act is sometimes referred to as "method II" or "the optional method." Throughout this section of this preamble, we refer to this election as "the optional method."

In 2000, section 202 of the Medicare, Medicaid and SCHIP Benefits Improvement and Protection Act of 2000) (Pub. L. 106–554) (BIPA) amended section 1834(g)(2)(B) of the Act to increase the payment for professional services under the optional method to 115 percent of the amount otherwise paid for professional services under Medicare. In addition, in 2003 section 405(a)(1) of the MMA amended section 1834(g)(l) of the Act by inserting the phrase "equal to 101 percent of" before the phrase "the reasonable costs." However, section 405 of the MMA did not make a corresponding change to section 1834(g)(2)(A) of the Act regarding the amount of payment for facility services under the optional method. In 2010, Section 3128 of the ACA amended section 1834(g)(2)(A) of the Act by inserting the phrase "101 percent of" before "the reasonable costs."

Section 5501(a) of the ACA amends section 1833 of the Act by adding a new paragraph (x), "Incentive Payments for Primary Care Services," that authorizes additional Part B payments to primary care practitioners for primary care services. Section 5501(b) of the ACA further amends section 1833 of the Act by adding new paragraph (y), "Incentive Payments for Major Surgical Procedures Furnished in Health Professional Shortage Areas," that authorizes additional Part B payments for major surgical procedures furnished by general surgeons in HPSAs. Sections 5501(a)(3) and 5501(b)(3) of the ACA make conforming amendments to section 1834(g)(2)(B) of the Act, which refers to payment to the CAH for professional services under the optional method, by adding at the end of section 1834(g)(2)(B) the following phrase, "Subsections (x) and (y) of 1833 shall not be taken into account in determining the amounts that would otherwise be paid pursuant to the preceding sentence." As such, section 1834(g)(2)(B) of the Act (as amended by sections 5501(a)(2) and 5501(b)(2) of the ACA) requires that under the optional method, the 115 percent adjustment payment to the CAH for professional services is calculated without considering the incentive payments for primary care services furnished by primary care practitioners and major surgical procedures furnished by general surgeons in HPSAs as these terms are defined under sections 1833(x) and (y) of the Act.

The regulations implementing section 1834(g)(2)(B) of the Act, payment to the CAH for professional services under the optional method, are in § 413.70(b)(3)(ii)(B). In order to implement the amendments to section 1834(g)(2)(B) of the Act as specified by sections 5501(a)(2) and 5501(b)(2) of the ACA, we are proposing to amend the regulations in § 413.70(b)(3)(ii)(B) to state that, effective for primary care services furnished by primary care practitioners and major surgical procedures furnished by general surgeons in HPSAs on or after January 1, 2011 and before January 1, 2016, the additional incentive payment amounts as specified in § 414.67 and § 414.80 are not included in the determination of the payment for professional services made to the CAH under the optional method. Accordingly, we are proposing that payment for professional services to the CAH at 115 percent of the PFS amount under the optional method would not take into account the additional Part B incentive payments for primary services furnished by primary care practitioners and major surgical procedures furnished by general surgeons in HPSAs as provided in § 414.67 and § 414.80.

T. Section 6003: Disclosure Requirements for In-Office Ancillary Services Exception to the Prohibition on Physician Self-Referral for Certain Imaging Services

1. Background

Section 1877 of the Act also known as the physician self-referral law: (1) Prohibits a physician from making referrals for certain "designated health services" (DHS) payable by Medicare to an entity with which he or she (or an immediate family member) has a

financial relationship (ownership or compensation), unless an exception applies; and (2) prohibits the entity from filing claims with Medicare (or billing another individual, entity, or third party payer) for those DHS rendered as a result of a prohibited referral. The statute establishes a number of specific exceptions and grants the Secretary the authority to create regulatory exceptions that pose no risk of program or patient abuse.

Section 1877(b)(2) of the Act, entitled "In-office Ancillary Services" sets forth the exception that permits a physician in a solo or group practice to order and provide designated health services (DHS), other than most durable medical equipment and pretrial and enteral nutrients, in the office of the physician or group practice, provided that certain specific criteria are met. Under this exception, the statute limits who can furnish the service, designates where the service must be performed, and limits who can bill for the service. As explained at the end of the statutory exception, the service may also be subject to "such other requirements as the Secretary may impose by regulation as needed to protect against program or patient abuse." The in-office ancillary services exception is interpreted at § 411.355(b).

Section 6003 of the ACA amends section 1877(b)(2) of the Act by creating a new disclosure requirement for the in-office ancillary services exception to the prohibition on physician self-referral. Specifically, section 6003 provides that, with respect to referrals for magnetic resonance imaging (MRI), computed topography (CT), positron emission topography (PET), and any other DHS specified under section 1877(h)(6)(D) that the Secretary determines appropriate, we must promulgate a requirement that the referring physician inform a patient in writing at the time of the referral that the patient may obtain the service from a person other than the referring physician or someone in the physician's group practice and provide the patient with a list of suppliers who furnish the service in the area in which the patient resides.

2. Proposed Disclosure Requirement

We are proposing to implement section 6003 of the ACA by amending § 411.355(b) to add new paragraph (b)(7). We describe below our proposal for the new disclosure requirement.

a. Services That Trigger the Disclosure Requirement

Section 6003(a) of the ACA requires that the new disclosure requirement apply to MRI, CT, and PET services as well as such other radiology or imaging services included in the DHS category specified in section 1877(h)(6)(D) of the Act that the Secretary determines appropriate. We are considering whether to expand this disclosure requirement to other radiology and imaging services. We are not inclined to expand the disclosure requirement but we solicit comments regarding whether other radiology or imaging services that fall under section 1877(h)(6)(D) of the Act should be included in this requirement, and if so, which services, and the purpose served by extending the disclosure requirement to additional radiology or imaging services.

b. General Disclosure Requirements

In § 411.355(b)(7), we are proposing that the disclosure notice should be written in a manner sufficient to be reasonably understood by all patients and must, as the ACA requires, be given to the patient at the time of the referral. This notice must indicate to the patient that the services may be obtained from a person other than the referring physician or his or her group practice and include a list of other suppliers who provide the service being referred (MRI, CT, or PET).

We believe one purpose of the disclosure requirement is to inform a patient's decision-making regarding his or her own care. The list of suppliers provided to the patient by the physician is meant to serve as a resource for the patient. Nothing on the disclosure notice or list of suppliers may indicate to the patient that he or she must receive imaging from a supplier on the list if not receiving the service from the referring physician. The patient may receive the imaging service from the referring physician, from a supplier identified on the notice, or from another supplier of the patient's choice. The patient is free to choose the supplier of the service.

c. List of Alternate Suppliers

Section 6003(a) of the ACA specifies that the referring physician must provide a written list of "suppliers (as defined in section 1861(d))." Section 1861(d) of the Act defines supplier as "a physician or other practitioner, a facility, or other entity (other than a provider of services) that furnishes items or services under this title." We are proposing that only suppliers be included on the written list. We are not proposing to permit or require the list to include "providers of services", which is defined in section 1861(u) of the Act to include hospitals and critical access hospitals, among other facilities. We are soliciting comments regarding whether inclusion of providers of services on the written notice would benefit patients in choosing an alternate entity for an imaging service by providing more, and varied, options.

Section 6003(a) of the ACA also requires that the alternate suppliers specified in the notice provided to the patient must furnish the relevant services "in the area in which [the patient] resides." We are aware that a patient may travel outside the area in which he or she resides in order to receive medical care. We believe that requiring an original written notice for each patient based upon a certain distance from the patient's residence could place a significant administrative burden on physicians practicing in a solo or group practice. It would be impractical for a physician to prepare a separate list for every area in which his or her patients reside. Additionally, we believe that if a patient has traveled to see the referring physician, the physician is located in an area convenient to the patient and therefore, a referral within a certain distance of this location would also be convenient for the patient.

In order to ease the administrative burden of creating multiple lists while still implementing the requirements of the statute, we are proposing that the suppliers included in this notice should be located within a 25-mile radius of the physician's office location at the time of the referral. We believe that a 25-mile radius is large enough in most areas to generate a list of suppliers that will be useful to patients. We note that we have used a 25-mile radius in other physician self-referral exceptions, including the intra-family rural referrals exception (§ 411.355(j)) and the physician recruitment exception (§ 411.357(e)). Even if a patient resides more than 25 miles away, we are proposing that it will be sufficient to provide a list of suppliers located within a 25-mile radius of the physician's office location at the time the referral is made. As discussed above, we believe that measuring the distance from the physician's office location will better serve patients who have perhaps traveled from long distances to receive specialized treatment.

We are soliciting comments regarding the proposed 25-mile radius requirement. In attempting to minimize confusion and burden related to implementing this provision, we have proposed the same standard for both urban and rural areas. We realize that in some areas 25 miles may be too small to generate a sufficient list of other suppliers. We are interested in hearing whether an alternative distance may be

more effective for urban or rural areas as well as what other criteria should be considered in finalizing regulations for physicians in both urban and rural areas.

In order to help a patient make an informed decision regarding other options for the recommended imaging services, we propose that the written notice include no fewer than 10 other suppliers. We considered proposing that the list include the 10 closest suppliers, but we want to allow physicians some flexibility in drafting the list of suppliers. On the other hand, we are concerned that physicians located in large metropolitan areas will draft a list that includes suppliers located mostly at the edges of the 25-mile radius, thereby increasing the chances that the patient will choose to receive imaging services from the referring physician's practice. We are soliciting comments regarding whether providing a list of 10 suppliers is sufficient or too burdensome or susceptible to abuse and whether there are alternate criteria we should use that would result in an adequate list of convenient suppliers that does not impose an undue burden on physician practices or a risk of abuse.

We recognize that there may be fewer than 10 other suppliers within a 25-mile radius of the referring physician's office location. We propose that, under these circumstances, the physician shall list all of the other suppliers of the particular imaging service that are present within a 25-mile radius of the referring physician's office location, including up to 10 suppliers as required by these regulations. If no other suppliers of the imaging services ordered exist within the 25-mile radius of the physician's office location, the physician need not provide a list of alternative suppliers, but must still disclose to his or her patients that the patients may receive the imaging services from another supplier. In this last situation, simply providing this disclosure statement will satisfy the disclosure requirement of this provision even though alternative suppliers are not listed. The physician must maintain documentation of the disclosure.

We are proposing that the written notice be required to include certain information about the listed suppliers in order to satisfy this disclosure requirement. The list must include the name, address, phone number, and distance from the physician's office location at the time of the referral. We propose to require inclusion of the distance from the physician's location to the other suppliers in order to emphasize to the patient the relative convenience of the listed suppliers.

We are not proposing an exception to the disclosure requirement for MRI, CT, or PET services furnished on an emergency or time-sensitive basis. We are soliciting comments related to whether there are other procedures or circumstances in which it may be difficult or impractical to provide the written disclosure prior to provision of the imaging services.

This proposal sets forth criteria that apply to the disclosure requirement and list of alternative suppliers. These criteria are intended to provide clear guidance as to how physicians may comply with the new requirement of the in-office ancillary services exception. We understand that there may be alternative ways to implement these statutory requirements. One possible alternative is to only require a "reasonable" list of other suppliers with general requirements for the disclosure to patients, while providing that if the physician meets the more specific requirements set forth in this proposal, he or she will be deemed to have a "reasonable" disclosure. We seek comments on this specific alternative and any other alternative methods of compliance that still satisfy the statutory requirements.

d. Documentation of Disclosure

In order to document that this disclosure requirement has been satisfied, we propose that a record of the patient's signature on the disclosure notification must be maintained as an element of the patient's medical record. We are soliciting comments regarding the burden of this recordkeeping requirement. We are also interested in comments that suggest alternative means of recording that the disclosure was made to the patient at the time of referral.

e. Effective Date

As discussed above, section 6003(a) of the ACA amends section 1877(b)(2) of the Act by instructing that the new disclosure requirement be added as one of the additional requirements of the in-office ancillary services exception. The last sentence of the statutory exception preceding this amendment authorizes the Secretary to impose "such other requirements * * * *by regulation* as needed to protect against program or patient abuse" (*emphasis added*). The amendment specifies that "[s]uch requirements shall * * * include a [disclosure] requirement * * *" In reading the last sentence of section 1877(b)(2) together with the amendment, we do not believe that the amendment is self-effectuating. Instead, the new disclosure requirement of section 6003 must be promulgated by regulation. Therefore, we believe that a correct reading of section 6003(a) is that this amendment shall not be effective until the Secretary promulgates a final regulation implementing this new requirement and the regulation becomes effective.

We considered whether, pursuant to section 6003 of the ACA, the final rule setting forth the disclosure requirement should apply retroactively to all services furnished on or after January 1, 2010. Given the structure of the amended in-office ancillary services exception and the statute as a whole, however, we believe that retroactive rulemaking is not required. Therefore, we are proposing that the new disclosure requirement shall apply only to services furnished on or after the effective date of the final regulation implementing section 6003 of the ACA. We are proposing an effective date of January 1, 2011 for the regulation implementing this provision.

U. Section 6404: Maximum Period for Submission of Medicare Claims Reduced to Not More Than 12 Months

1. Background

Sections 1814(a)(1), 1835(a), and 1842(b)(3)(B) of the Act establish time limits for filing Medicare Part A and B claims. Prior to the enactment of the ACA, under sections 1814(a)(1) and 1835(a) of the Act, providers could file for Part A and Part B claims, respectively, "* * * no later than the close of the period of 3 calendar years following the year in which such services are furnished (deeming any services furnished in the last 3 calendar months of any calendar year to have been furnished in the succeeding calendar year) except that, where the Secretary deems that efficient administration so requires, such period may be reduced to not less than 1 calendar year * * *". Prior to the enactment of the ACA, CMS was authorized to establish a minimum time limit for provider-submitted Part A and Part B claims of at least 1 calendar year from the date of service, and a maximum time limit not to exceed 4 years and 3 months after the date of service.

Additionally, prior to the enactment of the ACA, under section 1842(b)(3)(B) of the Act, Part B claims for physician and other supplier services could be filed with Medicare "* * * no later than the close of the calendar year following the year in which such service is furnished (deeming any service furnished in the last 3 months of any calendar year to have been furnished in

the succeeding calendar year) * * *". Therefore, prior to the enactment of the ACA, CMS was authorized to establish a minimum time limit for filing Part B claims of 15 months and a potential maximum of 27 months after the service was furnished, depending on what month of the year the service was furnished.

Section 424.44 implements sections 1814(a)(1), 1835(a), and 1842(b)(3)(B) of the Act. In order to effectively administer the Medicare Program, CMS, through regulations, modified the potential minimum and maximum time periods for filing Part A claims so that Part A claims would have the same time limits as Part B claims. At § 424.44(a), CMS adopted the minimum time limit of 15 months and potential maximum of 27 months after the service was furnished that was permitted under section 1842(b)(3)(B) of the Act for Part B claims and uniformly applied that 15 to 27 month time limit to both Part A and B claims. Also, under § 424.44(b), CMS allowed providers and suppliers the opportunity to file claims after the 15 to 27 month deadline for filing claims expired when the failure to file "* * * was caused by error or misrepresentation of an employee, intermediary, carrier, or agent of the Department that was performing Medicare functions and acting within the scope of its authority."

2. Provisions of the ACA

Section 6404 of the ACA amended sections 1814(a)(1), 1835(a), and 1842(b)(3)(B) of the Act regarding Medicare fee-for-service (FFS) claims for services furnished on or after January 1, 2010. Under section 6404(b)(1) of the ACA, all claims for services furnished on or after January 1, 2010 must be filed within 1 calendar year after the date of service. The provisions of the ACA did not amend these sections of the Act for services furnished before January 1, 2010. However, section 6404(b)(2) of the ACA created a new requirement that claims for services furnished before January 1, 2010 must be filed on or before December 31, 2010. Thus, the statutory provisions prior to the enactment of the ACA remain in effect for pre-2010 services, subject to this new requirement. The practical effect of this change is that any claims for services furnished before October 1, 2009 will follow the current existing regulations. But for any services furnished during the last three months of 2009, those claims must be filed no later than December 31, 2010. For services furnished between October 1, 2009 and December 31, 2009, providers and suppliers will only have 12–15 months to file a claim, whereas before the ACA amendments, they would have had an additional year to file their claims, or 24 to 27 months. Therefore, in order to effectuate the changes made by the ACA, we are proposing to amend § 424.44 so that it is consistent with the amended statutory provisions.

We are proposing to amend § 424.44(a) by replacing the current text with the requirement that claims for services provided on or after January 1, 2010 must be submitted no later than the close of the period ending 1 calendar year after the date of service. As noted above, any services furnished before January 1, 2010 will still be subject to the pre-existing statutory provisions. Therefore, we are proposing that for pre-2010 services, the pre-existing regulatory structure will continue to apply. For those services furnished before January 1, 2010, claims must be filed on or before December 31 of the following year for services that were furnished during the first 9 months of a calendar year, and on or before December 31st of the second following year for services that were furnished during the last 3 months of the calendar year. However, for those services provided in the last three months of 2009, we propose that all claims for those services must be filed no later than December 31, 2010.

Section 6404 of the ACA also gives the Secretary authority to create exceptions to the 1 year timely filing period. In addition to the existing exception to the timely filing requirement due to error or misrepresentation by CMS, our contractors or agents, we propose to create two new exceptions. First, we are proposing to create an exception for those situations where a beneficiary becomes retroactively entitled to Medicare benefits, but was not entitled at the time the services were furnished. Second, we are proposing to permit providers and suppliers to file claims after the time limit for filing claims has expired in limited dual eligible Medicare/Medicaid beneficiary situations.

The first new proposed exception at § 424.44(b)(2) will permit providers and suppliers to file claims after the time limit for filing claims expires when CMS or our contractors determines that the following conditions have been met:

- At the time the service was furnished the beneficiary was not entitled to Medicare; and
- The beneficiary subsequently received notification of Medicare entitlement effective retroactively to or before the date of the furnished service.

In these situations, if CMS or one of our contractors determines that both of the conditions in § 424.44(b)(2) are met, then the time to file a claim will be extended through the last day of the 6th calendar month following the month in which the beneficiary received notification of Medicare entitlement effective retroactively to or before the date of the furnished service. Therefore, instead of the beneficiary having to pay out of his or her own pocket for the service or instead of the beneficiary's other insurance or some other payer that is secondary to Medicare having to pay primary for the service, Medicare may pay primary (or secondary or tertiary) for the service since the beneficiary was entitled to Medicare (although retroactively) at the time the service was furnished. All of Medicare's payment rules including Medicare's Secondary Payer rules still apply in these retroactive entitlement situations.

The second proposed new exception at § 424.44(b)(3) will permit providers and suppliers to file claims for dually-eligible beneficiaries after the time limit for filing claims expires when CMS or our contractors determine that all of the following conditions have been met:

- At the time the service was furnished the beneficiary was not entitled to Medicare;
- The beneficiary subsequently received notification of Medicare entitlement effective retroactively to or before the date of the furnished service; and
- A State Medicaid agency recovered the Medicaid payment for the furnished service from the provider or supplier 11 months or more after the date of service.

This proposed exception applies to situations where a provider or supplier bills (and receives payment from) Medicaid for the services that a dual eligible Medicare/Medicaid beneficiary receives from the provider or supplier. However, at the time the services were furnished, the patient was not a dual eligible Medicare/Medicaid beneficiary yet because Medicare entitlement was granted to the individual retroactively after the service was actually furnished to the individual. In addition, after the State Medicaid Program discovers that the individual was granted Medicare entitlement retroactively, the State Medicaid Program recovers its payments from the provider or supplier for that individual's services instructing the provider or supplier that Medicare should be billed for the services (not Medicaid). If all three of the conditions outlined above occur within 11 months of the date the service was furnished, then the provider or supplier will have enough time to bill Medicare for the

service. However, if Medicaid recovers their incorrect payment 11 months or more after the date the service was furnished, then the provider or supplier will not have enough time to file a claim with Medicare for the covered services because the time limit for filing claims expires 1 calendar year after the date of service. In these situations, if CMS or one of our contractors determines that all of the conditions at § 424.44(b)(3) are met, then the time to file a claim will be extended through the last day of the 6th calendar month following the month in which the State Medicaid agency recovered the Medicaid payment for the furnished service from the provider or supplier. Therefore, we are proposing that this exception along with the aforementioned retroactive entitlement exception be added to § 424.44.

We are proposing that for the one existing exception due to error or misrepresentation by CMS, our contractors or agents (*see* § 424.44(b)(1)) that no extension of time will be granted beyond 4 years from the date of service. Limiting the exception for this timely filing extension is consistent with current CMS policy. Moreover, we believe that limiting this exception to 4 years after the date of service strikes an appropriate balance between fairness and equity for providers, suppliers, and beneficiaries and administrative finality for the Medicare program. We recognize that limiting the exceptions process could have potential impacts on those that wish to avail themselves of this exception. Therefore, we are soliciting comments on how this proposed four year limitation on the exception at § 424.44(b)(1) will impact providers, suppliers and beneficiaries and the frequency of such occurrences. In addition, we are soliciting comments on whether the proposed four year limitation for this particular exception is appropriate, or what changes, if any, should be made to the limitation on the exceptions process, including a rationale or justification for an alternative time limitation.

CMS is not proposing a definition of the term "date of service" in this regulation. Yet we recognize that the definition of this term is very important to providers, suppliers, and beneficiaries because the "date of service" will ultimately determine when the claim has to be filed in order to meet the new 1 calendar year requirement. In most cases the "date of service" will be the date that the item or service is actually furnished to the beneficiary; however, we recognize that for many Part A and B services it is difficult to craft a uniform rule that will apply a consistent date of service standard. It is our intention to provide sub-regulatory guidance on what constitutes the date of service for different Part A and B services. We are soliciting comments regarding whether CMS should provide a regulatory definition of "date of service" and, if so, how should it define this term.

We are also clarifying the exception that appears at § 424.44(e). We are making clear that this regulation does not supersede the restriction on retrospective billing that appears in §§ 424.520 and 424.521. Under these provisions certain newly-enrolled suppliers, such as physicians, non-physician practitioners, physician or non-physician practitioner organizations and IDTFs, have only a limited ability to submit claims for items or services furnished prior to the effective date of their Medicare billing privileges even if these claims would otherwise be considered timely. In addition, we want to make clear that the one calendar year timely filing limit in section 424.44(a) does apply to any retrospective claims permitted by sections 424.520 and 424.521 and to claims for items or services furnished after the effective date of the supplier's billing privileges.

V. Section 6410 and MIPPA: Adjustments to the Metropolitan Statistical Areas (MSA) for Medicare Durable Medical Equipment, Prosthetics, Orthotics, and Supplies Competitive Acquisition Program

We are proposing a number of revisions to the DMEPOS CBP as a result of changes to the statute made by both the Medicare Improvements for Patients and Provider Act of 2008 (MIPPA) and the ACA. Since both MIPPA and the ACA specify requirements for MSA selection for round 2 and beyond we are outlining our proposals for implementing the statutory requirements related to MSA selection in both MIPPA and the ACA in this section. First, we propose to use the authority provided by the statute at section 1847(a)(1)(D)(ii) of the Act, as amended by MIPPA to subdivide Metropolitan Statistical Areas (MSAs) with populations of greater than 8,000,000 under Round 2 of the DMEPOS CBP. Second, we propose to exclude certain areas from competitive bidding after round 2 as mandated by section 1847(a)(1)(D)(iii) of the Act, as amended by MIPPA. Third, we propose to implement the requirement of section 6410 of the ACA to expand Round 2 of the program by adding 21 of the largest MSAs based on total population to the original 70 already selected for round 2.

1. Background

Section VI.H of this proposed rule provides background on the DMEPOS CBP, including a description of many of the changes made to the program by section 154 of MIPPA. In this section, we provide additional information regarding changes made by both MIPPA and Section 6410 of the ACA. In addition to the changes discussed previously in this proposed rule, MIPPA also added subparagraph (D) to section 1847(a)(1) of the Act. Section 1847(a)(1)(D)(ii), as added by MIPPA, addresses Round 2 of the DMEPOS CBP, and section 1847(a)(1)(D)(iii) addresses subsequent rounds of the Program.

Section 1847(a)(1)(D)(ii)(II) of the Act specifies that the Secretary shall implement DMEPOS competitive bidding in the areas previously selected for round 2 of the program and also allows the Secretary, in implementing round 2 of the program, to subdivide metropolitan statistical areas (MSAs) with populations of greater than 8,000,000 into separate CBAs. Previously, we believe the statute could have been interpreted to allow CMS to subdivide large MSAs but MIPPA gave CMS the explicit authority to subdivide large MSAs. Section 1847(a)(1)(D)(iii) imposes new requirements on the Secretary for competitions occurring before 2015 in subsequent rounds of the program. For such competitions (other than national mail order), the following areas are to be excluded from the program: (I) Rural areas; (II) MSAs not selected under Round 1 or 2 with a population of less than 250,000; and (III) certain areas with low population density within a selected MSA. These requirements do not apply to a national mail order program.

Finally, MIPPA required that we implement Round 2 of the DMEPOS CBP in the same MSAs that were designated as of June 1, 2008. In 2010, section 6410(a) of the ACA amended sections 1847(a)(1)(B)(i)(II) and (D)(ii) of the Act to expand Round 2 of the program from 70 MSAs to 91 MSAs by adding the next 21 largest MSAs by total population not already selected for Rounds 1 or 2.

2. Subdividing Large MSAs Under Round 2

We have selected MSAs for Round 1 and for Round 2 consistent with MIPPA's requirement. For round 1 CBAs generally were comparable to MSAs, however, for round 2 we are proposing to subdivide MSAs of 8,000,000 or more in population. The authority to subdivide MSAs into separate areas for competitive bidding

purposes is set forth in section 1847(a)(1)(D)(ii)(II) of the Act which states, "[t]he Secretary may subdivide metropolitan statistical areas with populations (based upon the most recent data from the Census Bureau) of at least 8,000,000 into separate areas for competitive acquisition purposes." We have identified three MSAs which, based on the 2009 estimate from the Census Bureau data, could be subdivided under section 1847(a)(1)(D)(ii)(II): (1) Chicago-Naperville-Joliet, Illinois-Indiana-Wisconsin (IL-IN-WI) MSA with a population of 9,569,624; (2) Los Angeles-Long Beach-Santa Ana, California (CA) MSA with a population of 12,872,808; and (2) New York-Northern New Jersey-Long Island, New York-New Jersey-Pennsylvania (NY-NJ-PA) MSA with a population of 19,006,798. We are proposing to divide these MSAs into separate CBAs because we believe this approach would create more manageable CBAs for contract suppliers to serve and allow more small suppliers to be considered for participation in the program.

We considered certain factors when considering whether to propose subdividing the MSAs with populations of at least 8,000,000. We considered the geographic, social, and economic integration of each of the MSAs. We apply all of these factors when grouping counties into CBAs considered at a county level in each MSA and we believe it is also appropriate to use these factors to determine: (1) Whether or not to subdivide an MSA into separate CBAs, and (2) once the decision is made to subdivide the MSA, how to subdivide the MSA. We considered the following factors, generally in the order in which they are listed:

- Geographic size of the MSA and the location of the counties within each MSA compared to neighboring counties;
- The driving distances from north to south and east to west within each MSA and county;
- The total population and the population of FFS Medicare beneficiaries using DMEPOS items subject to competitive bidding;
- The DMPOS allowed charges for items subject to competitive bidding;
- Comparably sized Round 1 and Round 2 MSAs based on beneficiary counts and allowed charges for competitive bid items;
- The interstate highway infrastructures of the MSAs; and
- The current service patterns of suppliers in each county of the MSA.

We used each of the factors to the extent practical to develop initial proposals for reasonable and workable subdivisions of these highly and densely populated MSAs. We believe consideration of these factors will help us meet our goal of subdividing large and densely populated MSAs and creating CBAs that are attractive to suppliers and incentivize them to bid competitively for a contract. With this goal in mind, we are trying to establish CBAs that provide for a good volume of DMEPOS business for winning bidders, avoid obvious geographic obstacles, mimic existing supplier service patterns, and, to the extent possible, do not cross State lines. We believe the factors we have selected will achieve those objectives.

We found that counties clearly delineate areas within a MSA, and as we have done for Round 1 by identifying CBAs by counties and zip codes, we are proposing to subdivide the MSAs at a county level. Since the Office of Management and Budget (OMB) defines the MSAs by counties and county-based subdivisions are stable, we use counties to subdivide CBAs. When subdividing an MSA into counties, we consider counties that share social, economic and geographic integration. The Chicago-Naperville-Joliet IL-IN-WI MSA comprises 14 counties within 3 States: Illinois, Indiana, and Wisconsin. This MSA has 207,106 beneficiaries and $218,161,562 of DMEPOS allowed charges subject to the DMEPOS CBP. Using the factors that we indentified, we would subdivide the Chicago-Naperville-Joliet, IL-IN-WI MSA into four separate CBAs: Indiana-Chicago Metro CBA; South-West-Chicago-Metro CBA; Central-Chicago Metro CBA; and Northern-Chicago Metro CBA. The counties, DMEPOS allowed charges, and the number of beneficiaries subject to competitive bidding, and the general population that comprise each of these proposed CBAs are shown in Table 40.

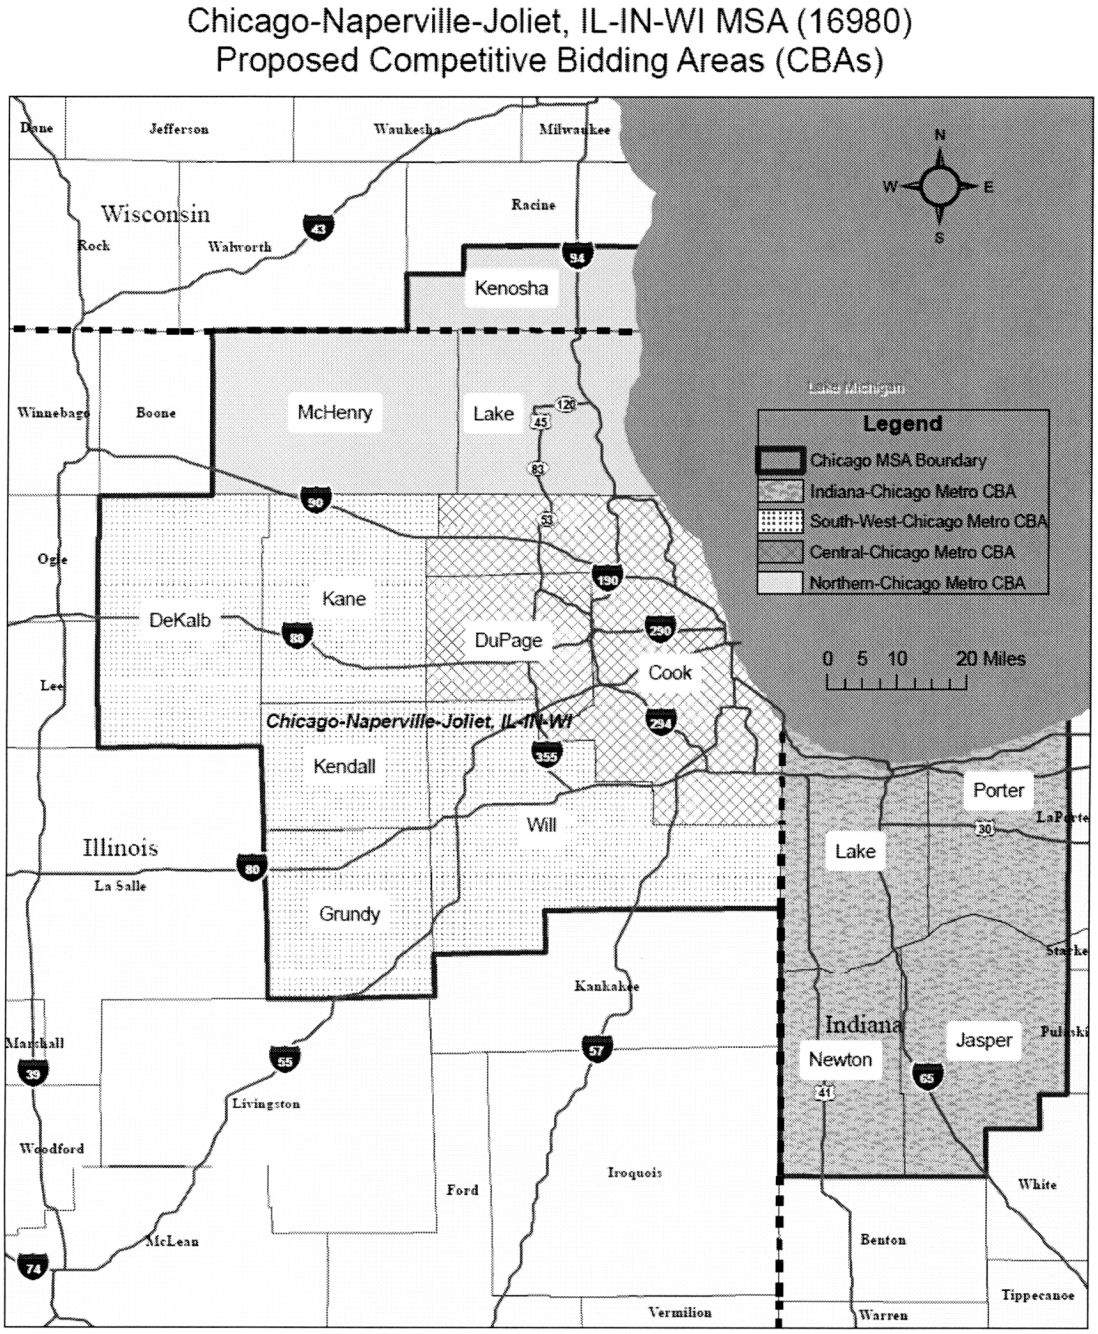
BILLING CODE 4120–01–P

FIGURE 1:



BILLING CODE 4120–01–C

The Indiana-Chicago Metro CBA would include all four of the Indiana counties that are part of the MSA. The other CBAs in the MSA would be as follows:

- The South-West-Chicago Metro CBA would include counties in Illinois located to the south and west of the Central-Chicago Metro CBA.
- The Central-Chicago Metro CBA would include the city of Chicago covering both Cook and DuPage counties.
- The Northern-Chicago Metro CBA which is north of the Central-Chicago Metro CBA subdivision that encompasses the city of Chicago.

The Los Angeles-Long Beach-Santa Ana, CA MSA comprises two counties: Los Angeles County and Orange County. The MSA has 173,631 fee-for-service beneficiaries receiving DMEPOS subject to competitive bidding and $244,523,957 in DMEPOS allowed charges subject to the DMEPOS CBP. We propose to subdivide the Los Angeles-Long Beach-Santa Ana, CA MSA into two CBAs: Los Angeles County CBA and Orange County CBA. The DMEPOS allowed amount and beneficiary count subject to competitive bidding, and the general population that comprises these two proposed CBAs are shown in Table 41.

TABLE 41—LOS ANGELES-LONG BEACH-SANTA ANA, CA

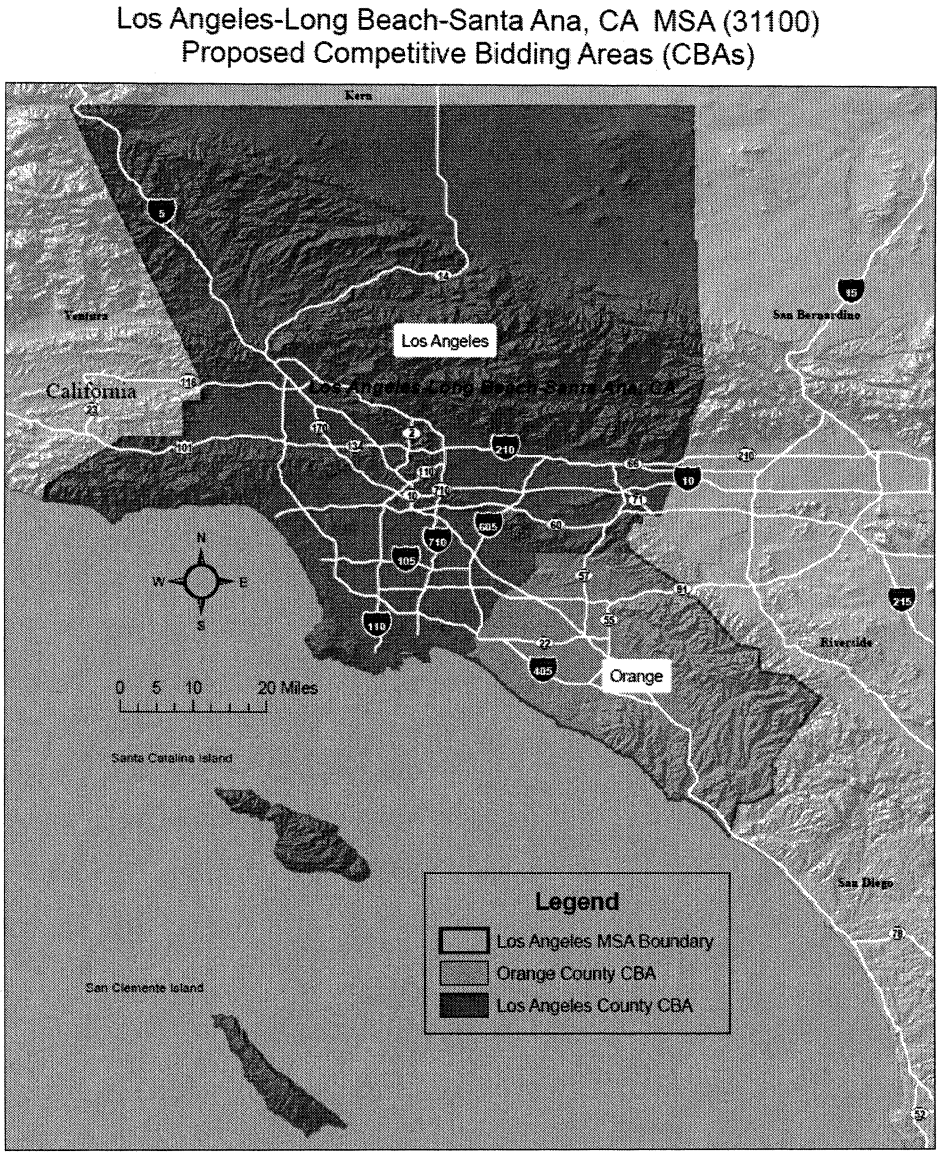
Figure 2 shows the boundaries of each proposed CBA.

FIGURE 2:



As mentioned earlier, we propose to subdivide MSAs using counties, and since the Los Angeles-Long Beach-Santa Ana, CA MSA only has two counties, it offers only one subdivision along the county lines. Hence, we have proposed to divide the MSA by the two counties creating two CBAs.

We also propose to use the authority in section 1847(a)(3)(A) of the Act to exclude certain areas within the Los Angeles-Long Beach-Santa Ana, CA MSA. We believe these areas meet the requirement of section 1847(a)(3)(A); they are rural areas with a low population density within an urban area that are not competitive. In the final rule CMS–1270 F § 414.410(c) published in April 2007, we defined the factors we consider when determining an area is considered a low population density area or an area that would not be competitive. Based on our review of the County Subdivision Population from the 2000 Census from the U.S. Census Bureau, and using the factors set forth in the April 2007 proposed rule, we propose to exclude the area of Los Angeles County north of the San Gabriel mountains. This large geographic area has a population of about 357,000, which is only 4 percent of the total population of Los Angeles County, and is separated from the rest of the county by the San Gabriel Mountains. The area north of the San Gabriel Mountains has one major road and many terrains which make this area remote. The majority of the population in LA County lives south of the San Gabriel Mountains.

We believe that excluding this area will create a more manageable CBA that still provides sufficient volume of DMEPOS items while avoiding the geographic obstacle of the mountains. We believe including this area in the DMEPOS CBP would result in fewer small suppliers being considered for participation under the program, because we would not expect small suppliers to have the resources to serve these more remote areas. As a result, we expect that if this proposal is finalized it will increase the number of bids submitted for the CBAs within the Los Angeles-Long Beach-Santa Ana, CA MSA.

The Los Angeles County includes the two islands of Santa Catalina and San Clemente off the west coast. We are proposing that the two islands be included as a part of the Los Angeles County CBA in order to ensure that

beneficiaries presently residing on these islands or who move to these islands in the future are ensured access to competitively bid items by contract suppliers. San Clemente Island is a military base with a current population of zero, and therefore, the inclusion of this area in the CBA would not result in an increase in the supplier service area at this time.

We also propose to subdivide the New York-Northern New Jersey-Long Island, NY–NJ–PA MSA into five CBAs. This MSA comprises 23 counties in three States: New York, New Jersey and Pennsylvania. The MSA has 344,879 FFS beneficiaries receiving DMEPOS subject to the DMEPOS CBP and $350,449,795 in allowed charges for DMEPOS items subject to competitive bidding. The counties, DMEPOS allowed amount and beneficiary count subject to competitive bidding and the general populations that comprise each of these proposed CBAs are shown in Table 42.

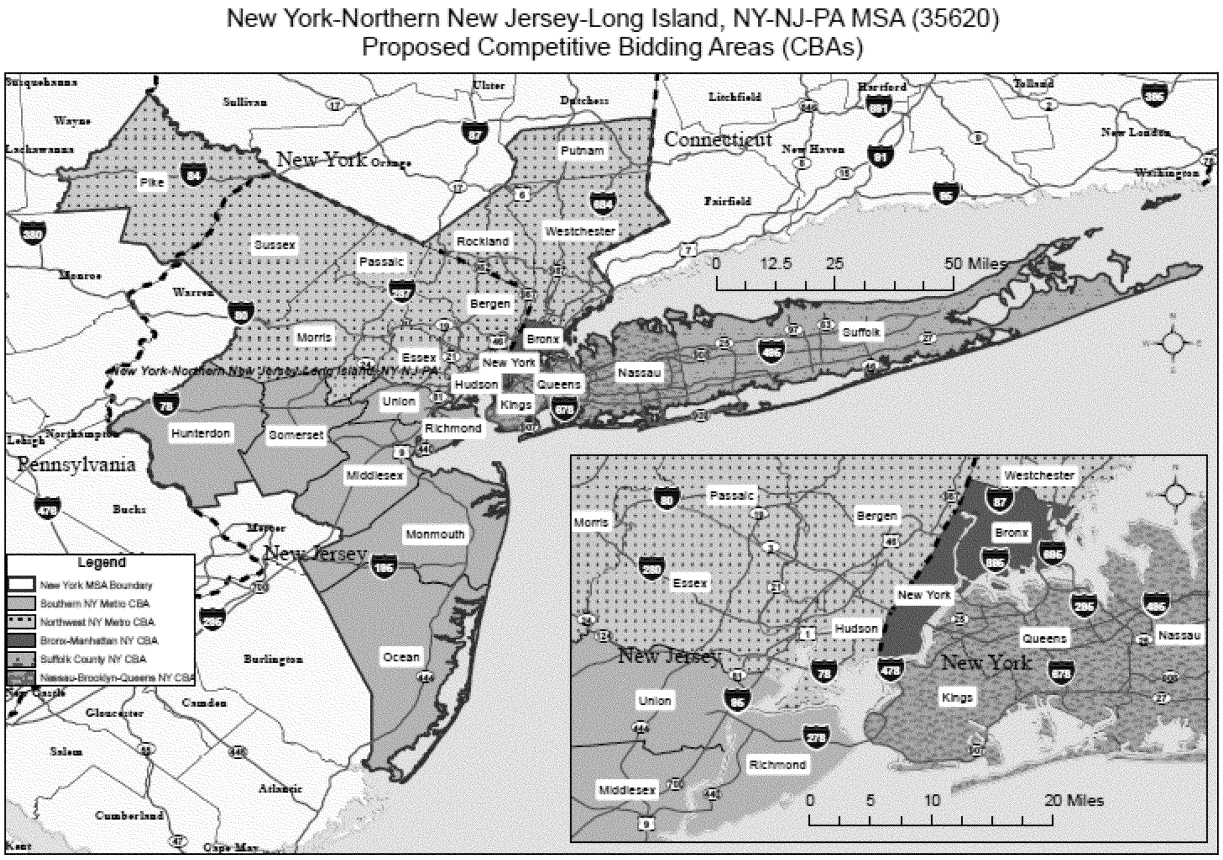
Figure 3 shows the boundaries of each proposed CBA.

FIGURE 3:



The Nassau-Brooklyn-Queens CBA would be contiguous to Suffolk County and would consist of the western part of Long Island and extend to the eastern part of New York City. The Suffolk County CBA would consist of the eastern part of Long Island and would encompass most of Long Island. The Bronx-Manhattan NY CBA would include the entire area of Manhattan and the Bronx. The North-West NY Metro CBA would be situated north and west of New York City and would extend into New Jersey and Pennsylvania. The Southern NY Metro CBA would include Staten Island and would extend south to Ocean County, New Jersey.

At the March 17, 2010 meeting of the Program Advisory and Oversight Committee (PAOC), we presented these proposals for subdividing these three large MSAs. Various members of the PAOC had the following suggestions for subdividing these MSAs:

- Draw the boundaries of CBAs using the interstate highways rather than the divisions by County;
- Determine the current servicing areas of suppliers by MSA and product category by using a scatter plot;
- Use the Hudson River to divide the CBAs for the New York MSA;
- Carve out Pike and Putnam Counties from the New York MSA due to their location and their low population density;
- Include Manhattan as a separate CBA, due to its unique nature as a self contained area;
- Consider State licensure requirements when we divide the MSAs into CBAs;
- In the LA County CBA, exclude the area north of the San Gabriel Mountains from the CBA; and
- Consider traffic patterns when dividing the Los Angeles MSAs into CBAs.

We are considering the PAOC's advice and recommendations and invite further comments on the proposed subdivisions and PAOC's advice of these three MSAs.

3. Exclusions of Certain Areas After Round 2 and Prior to 2015

The MIPPA amended the statute by requiring that competition under Round 2 takes place in 2011 and by adding section 1847(a)(1)(D)(iii) that requires CMS to exclude the following areas from the competitive bid program for competitions after Round 2 of the program and before 2015:

- Rural Areas;
- Metropolitan Statistical Areas not selected under Round 1 or Round 2 with a population of less than 250,000; and
- Areas with a low population density within a MSA that is otherwise selected consistent with section 1847(a)(3)(A).

We propose to incorporate these requirements and timeframes in proposed § 414.410(c).

4. Expansion of Round 2

Section 6410(a) of the ACA expanded the areas to be included in Round 2 of the program. As amended by section 6410(a) of the ACA, section 1847(a)(1)(B)(i)(II) requires that the competition for Round 2 of the program occur in 91 of the largest MSAs in 2011. Prior to this change, Round 2 was to include 70 MSAs. Section 1847(a)(1)(D)(ii)(II), as added by section 6410(a), specifies that the additional 21 MSAs to be included in Round 2 "include the next 21 largest metropolitan statistical areas by total population" (after those already selected Round 2). The 2009 annual population estimates from the U.S. Census Bureau

are the most recent estimates of population that will be available prior to the Round 2 competition mandated to take place in 2011. We therefore propose to use these estimates to determine the additional 21 MSAs to be included in Round 2 of the program. Table 43 is a list of the additional 21 MSAs added to Round 2.

TABLE 43—ADDITIONAL 21 MSAS ADDED TO ROUND 2

W. Section 10501(i)(3)—Proposed Collection of HCPCS Data for Development and Implementation of a Prospective Payment System for the Medicare Federally Qualified Health Center Program

The Omnibus Budget Reconciliation Act (OBRA) of 1989 amended the Social Security Act by creating new FQHC benefit programs under both Medicare and Medicaid. The Medicare FQHC benefit provides coverage for a full range of primary care services, including physician and certain nonphysician services (PAs, NPs), clinical social worker, psychologist services, and preventive services. FQHCs are "safety net" providers (for example, community health centers and programs serving migrants, the homeless, public housing centers, and tribal groups). The main purpose of the FQHC program is to enhance the provision of primary care services in underserved urban and rural communities. FQHCs typically enhance the availability of care to vulnerable populations, including Medicare, Medicaid, SCHIP, and the uninsured. Most of these health centers receive HRSA grants for services to the uninsured.

Medicare pays FQHCs on the basis of reasonable cost, subject to an upper payment limit on the reasonableness of incurred cost. Actual Medicare reasonable cost is determined based upon a Medicare cost report filed by the FQHC after the end of its fiscal year. Prior to the start of the year, an interim all-inclusive per-visit payment amount, based upon an estimate of Medicare reasonable costs, is calculated for each Medicare FQHC. During the year, this interim all-inclusive per-visit payment amount is paid for each covered visit between a Medicare beneficiary and an FQHC health professional. After the end of the Medicare FQHC's cost reporting year, interim per-visit payments are reconciled to actual Medicare reasonable costs based upon the Medicare cost report filed by the FQHC. Section 10501(i)(3) of the ACA now amends this current Medicare FQHC payment policy with an entirely different payment system, effective with cost reporting periods beginning on or after October 1, 2014.

Section 10501(i)(3)(A) of the ACA amended section 1834 of the Act by adding a new subsection (o), Development and Implementation of Prospective Payment System. This subsection provides the statutory framework for development and implementation of a prospective payment system for Medicare FQHCs. Section 1834(o)(1)(B) of the Act, as established by the ACA, addresses collection of data necessary to develop and implement the new Medicare FQHC prospective payment system. Specifically, section 1834(o)(1)(B) of the Act, Collection of Data and Evaluation, grants the Secretary of HHS the authority to require FQHCs to submit such information as may be required in order to develop and implement the Medicare FQHC prospective payment system, including the reporting of services using HCPCS codes. Section 1834(o)(1)(B) of the Act requires that the Secretary impose this data collection submission requirement no later than January 1, 2011. Accordingly, we are proposing to add a new paragraph (d) to § 405.2470 to require Medicare FQHCs to begin reporting all services furnished and using HCPCS codes for these services starting January 1, 2011. Beginning January 1, 2011, the Medicare FQHC would be required to report on Medicare FQHC claims all pertinent service(s) provided for each Medicare FQHC visit (defined in § 405.2463). This additional reporting would include the information needed to develop and implement a PPS for FQHCs. For example, corresponding HCPCS code(s) would be required to be reported along with the presently required Medicare revenue code(s) for the Medicare FQHC visit(s). CMS' Medicare FQHC claims processing system would be revised to accept the addition of the new reporting requirements effective January 1, 2011. The proposed new data collection effort would be for informational and data gathering purposes only, and would not be utilized to determine Medicare payment to the FQHC. Until the FQHC prospective payment system is implemented in 2014 and the Medicare claims processing system is revised to reflect such a system, Medicare FQHC

payment would continue in the current manner (utilizing revenue codes and the interim per-visit payment rate methodology).

We further note that Medicare FQHCs would be required to adhere to the information collection requirements in accordance with the content and terms of their Medicare agreement as stipulated at § 405.2434. Failure to do so could result in the termination of the FQHC's Medicare agreement in accordance with § 405.2436 of the Medicare FQHC regulations.

At this time, we do not foresee additional claims or other information collection needs beyond collection of HCPCS codes. Accordingly, we are not proposing additional information collection requirements at this time. However, we invite public comment on any additional information FQHCs believe may be necessary in order to develop and implement a prospective payment system for Medicare FQHCs.

VI. Other Provisions of the Proposed Regulation

A. Part B Drug Payment: Average Sales Price (ASP) Issues

1. "Carry Over" ASP

The ASP payment methodology is authorized under section 303(c) of the MMA which amends Title XVIII of the Act by adding section 1847A of the Act. This section establishes the use of the ASP methodology for payment for drugs and biologicals described in section 1842(o)(1)(C) of the Act furnished on or after January 1, 2005. For purposes of this part, the term "drugs" will hereafter refer to both drugs and biologicals. The ASP methodology applies to most drugs furnished incident to a physician's service, drugs furnished under the durable medical equipment (DME) benefit, certain oral anti-cancer drugs, and oral immunosuppressive drugs.

Sections 1847A and 1927(b) of the Act specify quarterly ASP data reporting requirements for manufacturers. Specific ASP reporting requirements are set forth in section 1927(b) of the Act. Although delays in reporting have been uncommon, they create a risk that: (1) Could result in the publication of payment limits which do not reflect prices for drug products, and (2) could result in inaccurate payments, the need for correction of files and unintentional ASP payment limit variability.

As a result of these concerns, we are seeking to establish a process for addressing situations where manufacturers fail to report manufacturer ASP data in a timely fashion. This proposal is intended to allow us to calculate and report ASP payment limits for a given quarter within the existing timelines and does not affect the CMS or OIG's authority to assess civil monetary penalties associated with untimely or false ASP reporting. Manufacturers who misrepresent or fail to report manufacturer ASP data will remain subject to civil monetary penalties, as applicable and described in sections 1847A and 1927(b) of the Act.

For the purposes of reporting under section 1847A of the Act, the term manufacturer is defined in section 1927(k)(5) of the Act and means any entity engaged in the following: production, preparation, propagation, compounding, conversion or processing of prescription drug product, either directly or indirectly by extraction from substances of natural origin, or independently by means of chemical synthesis, or by a combination of extraction and chemical synthesis; or packaging, repackaging, labeling, relabeling, or distribution of prescription drug products. The term manufacturer does not include a wholesale distributor of drugs or a retail pharmacy licensed under State law. However, manufacturers that also engage in certain wholesaler activities are required to report ASP data for those drugs that they manufacture. Note that the definition of manufacturers for the purposes of ASP data reporting includes repackagers.

In accordance with section 1847A of the Act, manufacturers are required to report data on the NDC level, which include the following elements: the manufacturer ASP for drugs; the Wholesale Acquisition Cost (WAC) in effect on the last day of the reporting period; the number of ASP units sold; and the NDC. Currently, when manufacturer ASP data or specific data elements are not available, we calculate an ASP price for a billing code based on other applicable and available pricing data from manufacturers for that drug. This includes WAC prices from compendia if manufacturer data are not available for a billing code. WAC prices tend to be higher than manufacturer ASP prices.

Although problems with reporting have been uncommon, we have recently encountered situations where delays in manufacturer ASP reporting could have led to significant ASP payment limit fluctuations for highly utilized HCPCS codes. The greatest potential impact occurs when data for high volume drug products within a HCPCS code that is represented by a limited number of NDCs have not been reported and cannot be included in the ASP volume weighted calculations described in section 1847A(b) of the Act. For multisource drugs, such a situation is likely to artificially increase or decrease Medicare ASP payment limits, which in turn would affect beneficiary cost sharing amounts. Such artificial fluctuations of the ASP payment limit could provide the appearance of instability unrelated to market forces and could also create access issues for providers and beneficiaries and confusion that could ultimately affect product demand in the marketplace.

In order to minimize the possibility of ASP payment limit fluctuations due to missing data, we are proposing a process, consistent with our authority in section 1847A(c)(5)(B), to update ASPs, based on the manufacturer's ASP calculated for the most recent quarter for which data is available. Specifically, we are proposing to carry over the previously reported manufacturer ASP for an NDC(s) when missing manufacturer ASP and/or WAC data could cause significant changes or fluctuations in ASP payment limits, and efforts by us to obtain manufacturer reported ASP before Medicare ASP payment limits publication deadlines have not been successful. For example, the most recently reported manufacturer ASP prices for products on the market would be carried over to the next quarter if an entire manufacturer's submission was not received, manufacturer ASP price data for specific NDCs has not been reported, or only WAC data has been reported; however, NDCs that have zero sales or are no longer being manufactured will not be subjected to this process. Also, we are proposing to apply the carryover process only in cases where missing data results in a 10 percent or greater change in the ASP payment limit compared to the previous quarter. Based on experience with ASP methodology since 2006, we believe that this percentage threshold meets the definition of significant. We are specifically seeking comments on our use of 10 percent as the threshold amount. In order to better represent actual market trends, that is actual increases or decreases in manufacturer reported ASP for the group of NDCs that represent the HCPCS code, we are proposing that the manufacturer ASP payment amounts for the individual NDCs that are carried over will be adjusted by the weighted average of the change in the manufacturer ASP for the NDCs that were reported during both the most recently available quarter and the current quarter. We would appreciate comments about whether other methods to account for

marketplace price trends to the carried over NDCs could be a better substitute for applying the weighted average change. The previous quarter's sales volumes will be carried over. An example of the proposed process appears in Table 44.

We propose to apply this process to both single source drugs and multiple source drugs. However, we are concerned that including single source drugs in the carry over process could create an incentive for non-reporting in situations where ASP prices for a single source drug are falling and the manufacturer stops reporting ASP in an effort to preserve a higher payment amount despite the risk of significant statutory penalties for such an action. Therefore, we are specifically requesting comments on this option and the effect of limiting this proposal to multiple source drugs only. We will consider these comments carefully before including both single source and multisource drugs in this process.

TABLE 44—PROPOSED ASP CARRYOVER EXAMPLE FOR NDCS IN A SPECIFIC HCPCS CODE

Previous quarter reported NDCs	Previous Qtr reported volume	Previous Qtr ASP price	Current Qtr reported NDCs	Current Qtr reported volume	Current Qtr ASP price	Current Qtr NDCs for calculation	Current Qtr volume for calculation	Current Qtr price for calculation
12345–6789–10	2000	$1.000	12345–6789–10	2500	$0.980	12345–6789–10	2500	$0.980
12345–6789–11	3000	1.000	12345–6789–11	1700	0.980	12345–6789–11	1700	0.980
12345–6789–12	5000	1.000	12345–6789–12	5500	0.980	12345–6789–12	5500	0.980
45678–1234–90	9000	1.100	(**)	(**)	(**)	45678–1234–90	9000	*1.078
45678–1234–99	27000	1.100	(**)	(**)	(**)	45678–1234–99	27000	*1.078

*This result is obtained by calculating the weighted average price change in NDCs available (that is, 12345–6789–10 thru 12345–6789–12) in both the previous and current quarters, which is −2% [(0.98–1.00)*100], and applying that change to the previous quarter's manufacturer ASP for the missing NDCs (that is, 45678–1234–90 and 45678–1234–99). The last two columns on the right would be used to calculate the weighted ASP and payment limits for the 5 NDCs as a HCPCS code and accounts for missing prices for two high volume NDCs that represent most of the units sold within the HCPCS code and therefore heavily influence the price calculation for the HCPCS code.

** Missing.

Our proposed approach is intended to establish a straightforward and transparent solution that minimizes the effect of missing manufacturer ASP data on Medicare ASP payment limits. We believe that the availability of a mechanism to minimize non-market related price fluctuations is desirable when efforts to obtain manufacturer's ASP data by deadlines have not been successful. Our proposed mechanism is not intended to alter or adjust reported prices and will not be used to do so, but instead is intended to more accurately represent prices in the marketplace if manufacturer ASP data for particular drug product(s) is missing. Based on our experience with ASP reporting since 2004, we do not believe that this process will be used frequently. However, as we stated previously, recent concerns with delays in reporting of manufacturer ASP data have led to this proposal.

We also remind manufacturers that significant civil monetary penalties for not reporting or misrepresenting manufacturer ASP data are authorized under sections 1847A(d)(4) and 1927(b)(3)(C) of the Act and codified in regulations at § 414.806. This proposal should not be interpreted to mean that CMS and the OIG will refrain from collecting such penalties for ASP reporting violations. Late or missing reports will not be tolerated. This proposed policy would be implemented regardless of any efforts by the OIG to enforce Civil Monetary Penalties for non-reporting.

We would also like to remind manufacturers that additional specific information about reporting ASP data to us is available. (See for example.: 69 FR 17936, 69 FR 66299, 70 FR 70215, 71 FR 69665, 72 FR 66256, 73 FR 69751, and 74 FR 61904.) Also, Frequently Asked Questions are posted in the Related Links Inside CMS Section of the ASP Overview Web page at *http://www.cms.hhs.gov/McrPartBDrugAvgSalesPrice/01_overview.asp#TopOfPage*, and the Downloads section of the same webpage contains a link to the ASP Data Form (addendum A), which includes examples of how ASP data must be reported and formatted for submission. In particular, we would like to remind manufacturers to report sales volume in quantities of NDC units sold (not vials or other units of sale), and to use a zero (that is the character "0") instead of a blank when reporting items that did not have any sales in a particular quarter. In addition, manufacturers should report both the ASP and the WAC for each NDC, the expiration date for the last lot sold, if applicable, and the date of first sale for an NDC.

In summary, in situations where any current quarter's manufacturer ASP data is unavailable, we are proposing, consistent with our authority in section 1847A(c)(5)(B), to use the most recent data available in the ASP payment limit calculation for single source and multiple source drugs. We look forward to comments on this proposal and the proposed changes to § 414.904(i).

2. Partial Quarter ASP Data

Section 1847A(c)(4) of the Act states that "In the case of a drug or biological during an initial period (not to exceed a full calendar quarter) in which data on the prices for sales for the drug or biological is not sufficiently available from the manufacturer to compute an average sales price for the drug or biological, the Secretary may determine the amount payable under this section for the drug or biological based on—(A) the wholesale acquisition cost; or (B) the methodologies in effect under this part on November 1, 2003, to determine payment amounts for drugs or biological."

When a new drug product enters the market, the first date of sale rarely coincides with the beginning of a calendar quarter. Therefore, the ASP data for many new drug products falls into partial quarter status during the first quarter of sales. We are taking this opportunity to describe our policy regarding how reported data is used in the calculation of ASP payment limits during the first quarter of sales for single source and multiple source drugs.

In accordance with section 1847A(c)(4)(A) of the Act, it has been our policy to price new single source drugs at WAC for the first quarter (unless the date of first sale is on the first day of the quarter), and to add new

NDCs for multi source drugs and product line expansions of single source drugs to the ASP calculation for a quarter as soon as these products are reported.

We believe that the approaches for both single source and multi source drugs are consistent with the statute, particularly section 1847A(c)(4) of the Act, and we intend to continue this policy.

3. Determining the Payment Amount for Drugs and Biological Which Include Intentional Overfill

The methodology for developing Medicare drug payment allowances based on the manufacturers' submitted ASP data is specified in 42 CFR part 414, subpart K. We initially established this regulatory text in the CY 2005 PFS final rule with comment period (69 FR 66424). We further described the formula we use to calculate the payment amount for each HCPCS billing code in the CY 2006 PFS proposed rule (70 FR 45844) and final rule with comment period (70 FR 70217). With the enactment of the Medicare, Medicaid and SCHIP Extension Act (MMSEA) (Pub. L. 110–173), the formula we use changed beginning April 1, 2008. Section 112(a) of the MMSEA requires us to calculate payment amounts using a specified volume-weighting methodology. In addition, section 112(b) of the MMSEA sets forth a special rule for determining the payment amount for certain drugs and biological. We addressed these changes in the CY 2009 PFS proposed and final rules (73 FR 38520 and 69571, respectively). For each billing code, we calculate a volume-weighted, ASP-based payment amount using the ASP data submitted by manufacturers. Manufacturers submit ASP data to us at the 11-digit National Drug Code (NDC) level, including the number of units of the 11-digit NDC sold and the ASP for those units. We determine the number of billing units in an NDC based on the amount of drug in the package.

For example: A manufacturer sells a box of 4 vials of a drug. Each vial contains 20 milligrams (mg); the billing code is per 10 MG. The number of billing units in this NDC for this billing code is (4 vials × 20mg)/10mg = 8 billable units.

Beginning April 1, 2008, we use a two-step formula to calculate the payment amount for each billing code. We sum the product of the manufacturer's ASP and the number of units of the 11-digit NDC sold for each NDC assigned to the billing and payment code, and then divide this total by the sum of the product of the number of units of the 11-digit NDC sold and the number of billing units in that NDC for each NDC assigned to the billing and payment code.

The provisions in section 112 of the MMSEA were self-implementing for services on and after April 1, 2008. Because of the limited time between enactment and the implementation date, it was not practical to undertake and complete rulemaking on this issue prior to implementing the required changes. As a result of the legislation, we revised § 414.904 to codify the changes to the determination of payment amounts consistent with section 112 of the MMSEA.

Since that time, we have become aware of situations where manufacturers, by design, include a small amount of "intentional overfill" in containers of drugs. We understand that this "intentional overfill" is intended to compensate for loss of product when a dose is prepared and administered properly. For instance, a hypothetical drug is intended to be delivered at a 0.5 mg dose which must be drawn into a syringe from a vial labeled for single use only. The vial is labeled to contain 0.5 mg of product but actually contains 1.5 mg of product. The additional 1.0 mg of product is included, by design, and is intended to be available to the provider so as to ensure a full 0.5 mg dose is administered to the patient.

Our ASP payment calculations are based on data reported to us by manufacturers. This data includes the "volume per item." In our "Appendix A—Average Sales Price Reporting Data Elements" available on our Web site at *http://www.cms.gov/McrPartBDrugAvgSalesPrice/,* we define "volume per item" as "The amount in one item. (ex., 10 ml in one vial, or 500 tablets in one bottle) Enter "1" for certain forms of drugs (for example, powders and sheets) when "Strength of the Product" indicates the amount of the product per item." In order to accurately calculate Medicare ASP payment limits under section 1847A, we interpret "the amount in one item" to be the amount of product in the vial or other container as indicated on the FDA-approved label.

It has been longstanding Medicare policy that in order to meet the general requirements for coverage under the "incident to" provision, services or supplies should represent an expense incurred by the physician or entity billing for the services or supplies (See Medicare Benefit Policy Manual (Publication #100–02), Chapter 15, Sections 50.3, 60.1.A). Such physicians' services and supplies include drugs and biological under section 1861(s)(2)(A). In accordance with this policy, providers may only bill for the amount of drug product actually purchased and that the cost of the product must represent an expense to the physician.

We further understand that when a provider purchases a vial or container of product, the provider is purchasing an amount of drug defined by the product packaging or label. Any excess, free product (that is, overfill) is provided without charge to the provider. In accordance with our policy, providers may not bill Medicare for overfill harvested from containers, including overfill amounts pooled from more than one container, because that overfill does not represent a cost to the provider. Claims for drugs and biological that do not represent a cost to the provider are not reimbursable, and providers who submit such claims may be subject to scrutiny and follow up action by CMS, its contractors, and OIG.

Because such overfill is not included in the calculation of payment limits under the methodology in section 1847A of the Act and does not represent an incurred cost to a provider, we are proposing to update our regulations at 42 CFR part 414 subpart J to clearly state that Medicare ASP payment limits are based on the amount of product in the vial or container as reflected on the FDA-approved label. We are also proposing to update our regulations to clearly state that payment for amounts of free product, or product in excess of the amount reflected on the FDA-approved label, will not be made under Medicare.

4. WAMP/AMP

Section 1847A(d)(1) of the Act states that "the Inspector General of HHS shall conduct studies, which may include surveys to determine the widely available market prices (WAMP) of drugs and biologicals to which this section applies, as the Inspector General, in consultation with the Secretary, determines to be appropriate." Section 1847A (d)(2) of the Act states that, "Based upon such studies and other data for drugs and biologicals, the Inspector General shall compare the ASP under this section for drugs and biologicals with—

- The widely available market price (WAMP) for these drugs and biologicals (if any); and
- The average manufacturer price (AMP) (as determined under section 1927(k)(1) of the Act) for such drugs and biologicals."

Section 1847A(d)(3)(A) of the Act states that, "The Secretary may disregard the ASP for a drug or biological that exceeds the WAMP or the AMP for such drug or biological by the applicable

threshold percentage (as defined in subparagraph (B)).'' Section 1847A(d)(3)(C) of the Act states that if the OIG finds that the ASP for a drug or biological is found to have exceeded the WAMP or AMP by this threshold percentage, the OIG ''shall inform the Secretary (at such times as the Secretary may specify to carry out this subparagraph) and the Secretary shall, effective as of the next quarter, substitute for the amount of payment otherwise determined under this section for such drug or biological, the lesser of—(i) the widely available market price for the drug or biological (if any); or (ii) 103 percent of the average manufacturer price * * *.''

The applicable threshold percentage is specified in section 1847A(d)(3)(B)(i) of the Act as 5 percent for CY 2005. For CY 2006 and subsequent years, section 1847A(d)(3)(B)(ii) of the Act establishes that the applicable threshold percentage is ''the percentage applied under this subparagraph subject to such adjustment as the Secretary may specify for the WAMP or the AMP, or both.'' In the CY 2006 (70 FR 70222), CY 2007 (71 FR 69680), CY 2008 (72 FR 66258), CY 2009 (73 FR 69752), and CY 2010 (74 FR 61904) PFS final rules with comment period, we specified an applicable threshold percentage of 5 percent for both the WAMP and AMP. We based this decision on the fact that data was too limited to support an adjustment to the current applicable threshold percentage.

For CY 2011, we are proposing to specify two separate adjustments to the applicable threshold percentages. When making comparisons to the WAMP, we propose the applicable threshold percentage to remain at 5 percent. The applicable threshold percentage for the AMP is addressed below in this section of the preamble. Although the latest WAMP comparison was published in 2008, the OIG is continuing to perform studies comparing ASP to WAMP. Based on available OIG reports that have been published comparing WAMP to ASP, we do not have sufficient information to determine that the 5 percent threshold percentage is inappropriate. As a result, we believe that continuing the 5 percent applicable threshold percentage for the WAMP is appropriate for CY 2011. Therefore we are proposing to revise § 414.904(d)(3) to include the CY 2011 date.

As we noted in the CY 2010 PFS final rule with comment period (74 FR 61904), we understand that there are complicated operational issues associated with this policy. We continue to proceed cautiously in this area. We remain committed to providing stakeholders, including providers and manufacturers of drugs impacted by potential price substitutions with adequate notice of our intentions regarding such, including the opportunity to provide input with regard to the processes for substituting the WAMP for the ASP.

We welcome comments on our proposal to continue the applicable threshold percentage at 5 percent for the WAMP for 2011.

5. AMP Threshold and Price Substitutions

a. AMP Threshold

As mentioned elsewhere in this proposal, when making comparisons of ASP to AMP, the applicable threshold percentage for CY 2005 was specified in statute as 5 percent. Section 1847A(d)(3) of the Act allows the Secretary to specify adjustments to this threshold percentage for years subsequent to 2005, and to specify the timing for any price substitution. For CY 2006 (70 FR 70222), CY 2007 (71 FR 69680), CY 2008 (72 FR 66258), CY 2009 (73 FR 69752), and CY 2010 (74 FR 61904), the Secretary made no adjustments to the threshold percentage; it remained at 5 percent.

For CY 2011, we are proposing with respect to AMP substitution to apply the applicable percentage subject to certain adjustment such that comparisons of ASP to AMP will only be made when the ASP exceeds the AMP by 5 percent in two consecutive quarters immediately prior to the current pricing quarter, or three of the previous four quarters immediately prior to the current quarter.

In general, the ASP methodology reflects average market prices for Part B drugs for a quarter. The ASP is based, in part, on the average sales price to all purchasers for a calendar quarter; the AMP, in turn, represents the average price paid by certain wholesalers. Accordingly, while the ASP payment amount for a billing code may exceed its AMP for that billing code for any given quarter, this may only reflect a temporary fluctuation in market prices that would be otherwise corrected in a subsequent quarter. We believe this fluctuation is demonstrated by how few billing codes exceed the applicable threshold percentage over multiple quarters. For example, in the Inspector General's report ''Comparison of Average Sales Prices and Average manufacturer Prices: An Overview of 2008'', only 33 of 482 examined billing codes exceeded the applicable threshold percentage over multiple quarters. This figure also included billing codes that exceeded the threshold based on partial price comparisons (OEI–03–09–00350). We are concerned that comparisons of a single quarter's ASP to AMP will not adequately account for these temporary fluctuations and underlying market trends. We believe that applying this threshold percentage adjusted to reflect data from multiple quarters will account for continuing differences between ASP and AMP, and allow us to better identify those drugs that consistently trigger the substitution threshold.

We further propose to apply the applicable AMP threshold percentage only for those situations where AMP and ASP comparisons are based on the same set of NDCs for a billing code (that is, ''complete'' AMP data). Prior to 2008, the OIG calculated a volume-weighted AMP and made ASP and AMP comparisons for only billing codes with such ''complete'' AMP data. In such comparisons, a volume-weighted AMP for a billing code was calculated when NDC-level AMP data was available for the same NDCs used by us to calculate the volume-weighted ASP. Beginning in the first quarter of 2008, the OIG also began to make ASP and AMP comparisons based on ''partial'' AMP data (that is, AMP data for some, but not all NDCs in a billing code). For these comparisons, the volume-weighted AMP for a billing code is calculated even when only such limited AMP data is available. That is, the volume-weighted AMP calculated by the Inspector General is based on fewer NDCs than the volume-weighted ASP calculated by CMS. Moreover, volume-weighted ASPs are not adjusted by the Inspector General to reflect the fewer number of NDCs in the volume-weighted AMP.

Because the OIG's partial AMP data comparison does not reflect all the NDCs used in our volume-weighted ASP calculations, we have some concerns using the volume-weighted AMP. We believe that such AMP data may not adequately account for market-related drug price changes and may lead to the substitution of incomplete and inaccurate volume-weighted prices. Such substitutions may impact physician and beneficiary access to drugs. Therefore, in accordance with our authority as set forth in section 1847A(d)(1) and (3) of the Act, we are proposing the substitution of 103 percent of AMP for 106 percent of ASP should be limited to only those drugs with ASP and AMP comparisons based on the same set of NDCs. We are proposing to revise § 414.904(d)(3) to reflect corresponding regulatory text changes, and we welcome comments on all aspects of this proposal.

b. AMP Price Substitution

(1) Inspector General Studies

Section 1847A(d) of the Act requires the Inspector General to conduct studies of the widely available market price for drugs and biological to which section 1847A of the Act applies. However, it does not specify the frequency of when such studies should be conducted. The Inspector General has conducted studies comparing AMP to ASP for essentially each quarter since the ASP system has been implemented. Since 2005, the OIG has published 18 reports pertaining to the price substitution issue (see Table 45), of which 16 have identified billing codes with volume-weighted ASPs that have exceeded their volume-weighted AMPs by the applicable threshold percentage.

TABLE 45—PUBLISHED OIG REPORTS ON PRICE SUBSTITUTIONS

Date	Report title
7/2008	A Comparison of Average Sales Price to Widely Available Market Prices for Inhalation Drugs (OEI–03–07–00190).
6/2006	A Comparison of Average Sales Price to Widely Available Market Prices: Fourth Quarter 2005 (OEI–03–05–00430).
4/2010	Comparison of Third-Quarter 2009 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for First Quarter 2010 (OEI–03–10–00150).
2/2010	Comparison of Average Sales Prices and Average Manufacturer Prices: An Overview of 2008 (OEI–03–09–00350).
1/2010	Comparison of Second-Quarter 2009 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for Fourth Quarter 2009 (OEI–03–09–00640).
8/2009	Comparison of First-Quarter 2009 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for Third Quarter 2009 (OEI–03–09–00490).
8/2009	Comparison of Fourth-Quarter 2008 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for Second Quarter 2009 (OEI–03–09–00340).
4/2009	Comparison of Third-Quarter 2008 Average Sales Prices and Average Manufacturer Prices: Impact on Medicare Reimbursement for First Quarter 2009 (OEI–03–09–00150).
2/2009	Comparison of Second-Quarter 2008 Average Sales Prices and Average Manufacturer Prices: Impact on Medicare Reimbursement for Fourth Quarter 2008 (OEI–03–09–00050).
12/2008	Comparison of First-Quarter 2008 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for Third Quarter 2008 (OEI–03–08–00530).
12/2008	Comparison of Average Sales Prices and Average Manufacturer Prices: An Overview of 2007 (OEI–03–08–00450).
8/2008	Comparison of Fourth-Quarter 2007 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for Second Quarter 2008 (OEI–03–08–00340).
5/2008	Comparison of Third-Quarter 2007 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for First Quarter 2008 (OEI–03–08–00130).
12/2007	Comparison of Second-Quarter 2007 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for Fourth Quarter 2007 (OEI–03–08–00010).
9/2007	Comparison of First-Quarter 2007 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for Third Quarter 2007 (OEI–03–07–00530).
7/2007	Comparison of Third-Quarter 2006 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for First Quarter 2007 (OEI–03–07–00140).
7/2006	Comparison of Fourth-Quarter 2005 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for Second Quarter 2006 (OEI–03–06–00370).
4/2006	Monitoring Medicare Part B Drug Prices: A Comparison of Average Sales Price to Average Manufacturer Prices (OEI–03–04–00430).

For example, in their latest report comparing AMP to ASP entitled "Comparison of Third-Quarter 2009 Average Sales Price and Average Manufacturer Prices: Impact on Medicare Reimbursement for First Quarter 2010" (OEI–03–10–00150), the Inspector General found that of 356 billing codes with complete AMP data in the third quarter of 2009, 16 met the 5 percent threshold, that is, ASP exceeded AMP by at least 5 percent. Eight of these 16 billing codes were also eligible for price adjustments in one or more of the previous four quarters, with three drugs meeting the 5-percent threshold in all five quarters under review. This Inspector General report further indicates that, "If reimbursement amounts for all 16 drugs had been based on 103 percent of the AMPs, we estimate that Medicare expenditures would have been reduced by over half a million dollars in the first quarter of 2010." These drugs and the savings found by the Inspector General constitute potential savings for the Medicare program and beneficiaries.

(2) Regulatory, Judicial, and Legislative Changes

Since 2005, regulatory and legislative changes, as well as litigation, have had a direct impact on this price substitution issue. In 2007, we published a final rule that, in accordance with section 6001(c) of the Deficit Reduction Act, was designed to clarify the definition of AMP (72 FR 39142). On December 19, 2007, the United States District Court for the District of Columbia issued a preliminary injunction in *National Association of Chain Drug Stores et al.* v. *Health and Human Services,* Civil Action No. 1:07-cv-02017(RCL) that enjoins CMS, in part, from posting any AMP data on a public Web site or otherwise disclosing any AMP data to certain individuals or entities, including, but not limited to, States or their representatives. (For additional information on this injunction, please see our Web site at *http://www.cms.hhs.gov/DeficitReductionAct/Downloads/AMPPIOrder.pdf).*

In 2010, section 2503 of ACA amended the definition of AMP, in part, to reflect the average price paid for covered outpatient drugs: (1) By wholesalers for drugs distributed to retail community pharmacies; and (2) by retail community pharmacies that purchase drugs directly from the manufacturer. The statute defines retail community pharmacies, in part, as independent, chain, and supermarket pharmacies.

(3) Proposal

Overall, we are cognizant that any policy must reflect market-related pricing changes. Additionally, we continue to recognize the need, in light of the statute, to implement a price substitution policy.

As discussed previously, section 1847A(d)(3) of the Act provides authority for us to determine the applicable percentage subject to "such adjustment as the Secretary may specify for the widely available market price or the average manufacturer price, or both." We also have authority to specify the timing of any ASP substitution. Consistent with this authority, we are proposing a policy to substitute 103 percent of AMP for 106 percent of ASP where the applicable percentage has been satisfied for a number of calendar quarters, as discussed elsewhere in this rule. This policy would apply to both single source and multiple source drugs and biologicals as defined respectively at section 1847A(c)(6)(C) and (D) of the Act.

We acknowledge the limitation of the preliminary injunction on our ability to publicly disclose AMP data and until that injunction is modified, we will not implement this price substitution policy.

Because of the lack of data regarding WAMP to ASP comparisons, we are explicitly excluding WAMP from this price substitution proposal though we are proposing to maintain the WAMP threshold at 5 percent for CY 2011 in a separate section of this rule. Overall, we are interested in implementing a price substitution policy that reflects market-related pricing changes and which focuses on those drugs that consistently exceed the price substitution threshold over multiple quarters. Unlike the OIG's AMP studies, the published WAMP studies have recommended price substitutions based on specific timeframes that do not illustrate whether such pricing discrepancies are singular or consistent across multiple quarters. We will reconsider proposing a policy for the substitution of WAMP at a later date.

(4) Timeframe for and Duration of Price Substitutions

As stated in § 414.804(a)(5), a manufacturer's average sales price must be submitted to CMS within 30 days of the close of the quarter. We then calculate an ASP for each billing code as per the process outlined at § 414.904. Then, as per our CY 2005 PFS final rule (69 FR 66300), we implement these new prices through program instructions or otherwise at the first opportunity after we receive the data, which is the calendar quarter after receipt.

Section 1847A(d)(3)(C) of the Act indicates that a price substitution would be implemented "effective as of the next quarter" after the OIG has informed us that the ASP for a drug or biological exceeds its AMP by the applicable percentage threshold. The OIG does not receive new ASP prices for a given quarter until after we have finalized them. Also, the results of their pricing comparisons are not available until after the ASP prices for a given quarter have gone into effect. Therefore, we anticipate that there will be a three quarter lag for substituted prices from the quarter in which manufacturer sales occurred, though this will depend in great part upon the timeframe in which we obtain comparison data from the OIG. Table 46 provides an example of this timeframe.

TABLE 46—EXAMPLE PRICE SUBSTITUTION TIMEFRAME

	Q2–10	Q3–10	Q4–10	Q1–11
ASP Process	Manufacturer sells drug.	Manufacturer submits Q2–10 pricing data. CMS calculates ASP payment limits for Q4–10.	CMS publishes Q4–10 payment limits.	
.....	.....	.....	CMS calculates ASP payment limits for Q1–11. Compares calculated payment limits to OIG substitute prices. Publishes Q1–11 prices that may include OIG substitute prices.	
OIG Process	.....	.....	OIG receives Q4–10 pricing from CMS and compares it to Q2–10 volume-weighted AMP data. Notifies CMS of eligible HCPCS for substitution.	

Given this lag in time, the ASP price for a billing code may have decreased since the OIG's comparison. Therefore, consistent with our authorities in section 1847A(d)(3) of the Act and our desire to provide accurate payments consistent with these provisions, we believe that the timing of any substitution policy should permit a final comparison between the OIG's volume-weighted 103 percent AMP for a billing code (calculated from the prior quarter's data) and the billing code's volume-weighted 106 percent ASP, as calculated by CMS, for the current quarter. This final comparison would assure the Secretary that the 106 percent ASP payment limit continues to exceed 103 percent of the OIG's calculated AMP in order to avoid a situation in which the Secretary would inadvertently raise the Medicare payment limit through this price substitution policy. We specifically request comments on this proposal.

ASP payment limits are calculated on a quarterly basis as per section 1847A(c)(5)(A) of the Act, and we are particularly mindful that the ASP-based payment allowance for a billing code may change from quarter to quarter. As such, we propose that any price substitution would last for one quarter.

Overall, we believe that our proposal as outlined above to substitute 103 percent of AMP for 106 percent of ASP provides us with a viable mechanism for generating savings for the Medicare program and its beneficiaries since it will allow Medicare to pay based off lower market prices for those drugs and biologicals that consistently exceed the applicable threshold percentage. Moreover, it will enable us to address a programmatic vulnerability identified by the OIG. We welcome comments on all aspects of our proposal.

We are also seeking comment on other issues related to the comparison between ASP and AMP, such as—

- Any effect of definitional differences between AMP and ASP, particularly in light of the revised definition of AMP per ACA;
- The impact of any differences in AMP and ASP reporting by manufacturers on price substitution comparisons; and
- Whether and/or how general differences and similarities between AMP and manufacturer's ASP would affect comparisons between these two.

B. Ambulance Fee Schedule Issue: Policy for Reporting Units When Billing for Ambulance Fractional Mileage

Under the ambulance fee schedule, the Medicare program pays for transportation services for Medicare beneficiaries when other means of transportation are contraindicated and all other applicable medical necessity requirements are met. Ambulance services are classified into different levels of ground (including water) and air ambulance services based on the medically necessary treatment provided during transport. These services include the following levels of service:

- For Ground—

++ Basic Life Support (BLS) (emergency and nonemergency).

++ Advanced Life Support, Level 1 (ALS1) (emergency and nonemergency).

++ Advanced Life Support, Level 2 (ALS2).

++ Specialty Care Transport (SCT).

++ Paramedic ALS Intercept (PI).

- For Air—

++ Fixed Wing Air Ambulance (FW).

++ Rotary Wing Air Ambulance (RW).

1. History of Medicare Ambulance Services

a. Statutory Coverage of Ambulance Services

Under sections 1834(l) and 1861(s)(7) of the Act, Medicare Part B (Supplementary Medical Insurance) covers and pays for ambulance services, to the extent prescribed in regulations, when the use of other methods of transportation would be contraindicated by the beneficiary's medical condition. The House Ways and Means Committee and Senate Finance Committee Reports that accompanied the 1965 Social Security Amendments suggest that the Congress intended that—

- The ambulance benefit cover transportation services only if other means of transportation are contraindicated by the beneficiary's medical condition; and

- Only ambulance service to local facilities be covered unless necessary services are not available locally, in which case, transportation to the nearest facility furnishing those services is covered (H.R. Rep. No. 213, 89th Cong., 1st Sess. 37 and Rep. No. 404, 89th Cong., 1st Sess. Pt 1, 43 (1965)).

The reports indicate that transportation may also be provided from one hospital to another, to the beneficiary's home, or to an extended care facility.

b. Medicare Regulations for Ambulance Services

Our regulations relating to ambulance services are set forth at 42 CFR part 410, subpart B, and 42 CFR part 414, subpart H. Section 410.10(i) lists ambulance services as one of the covered medical and other health services under Medicare Part B. Therefore, ambulance services are subject to basic conditions and limitations set forth at § 410.12 and to specific conditions and limitations as specified in § 410.40 and § 410.41. Part 414, subpart H, describes how payment is made for ambulance services covered by Medicare.

2. Mileage Reporting

a. Background and Current Process for Reporting Ambulance Mileage

Historically, the Medicare fee-for-service (FFS) claims processing system lacked the capability to accept and process fractional unit amounts reported in any claim format. Therefore, the standard for reporting units for ambulance mileage was to bill in whole number increments. Thus, if the total units of service for ambulance mileage included a fractional amount, providers and suppliers of ambulance services (hereafter referred to collectively as "providers and suppliers") were instructed to round the fraction up to the next whole number. Claims billed with fractional units of service were, at that time, returned as unprocessable as CMS' claims processing systems could not accept nor adjudicate fractional unit amounts properly.

Consequently, in Change Request (CR) 1281 (Transmittal AB–00–88, issued on September 18, 2000), we instituted an operational procedure requiring whole-unit reporting of mileage on ambulance claims. Specifically, we instructed providers and suppliers that "If mileage is billed, the miles must be whole numbers. If a trip has a fraction of a mile, round up to the nearest whole number." Our instructions also stated that "1" should be reported for trips totaling less than a single mile. This was an operational instruction based on Medicare's FFS system limitations and capabilities at the time, as our claims processing systems were not capable of accepting and processing claims submitted with fractional units of service. Since then, our claims processing system functionality has evolved to the point where this rounding process is no longer necessary for most ambulance transports, as it is now possible for our FFS systems to capture and accurately process fractional units on both paper and electronic forms.

Under our current instructions, providers and suppliers continue to report loaded mileage as whole-number units on both paper and electronic claims. Providers and suppliers utilize the appropriate Healthcare Common Procedure Coding System (HCPCS) code for ambulance mileage to report the number of miles traveled during a Medicare-covered trip rounded up to the nearest whole mile at a minimum of 1 unit for the purpose of determining payment for mileage. Transmittal AB–00–88 established a list of HCPCS codes accepted by Medicare for the purpose of billing mileage. Providers and suppliers were instructed to use these specific HCPCS codes and enter the total number of covered miles in the "units" field of the claim form. For example, if a covered trip from the point of pickup (POP) to the Medicare-approved destination (see § 414.40 for a list of approved destinations) totaled 9.1 miles, the provider would enter the appropriate HCPCS code for covered mileage and a "10" in the units field. Providers and suppliers billing for trips totaling, for example, 0.5 covered miles, would enter "1" in the units field along with the appropriate HCPCS code for mileage.

b. Concerns Regarding the Potential for Inaccuracies in Reporting Units and Associated Considerations

Often an ambulance provider will transport a distance that is either not an exact whole number of miles or less than one whole mile during a covered trip. Currently, providers and suppliers billing for ambulance services must round up the total billable mileage to the nearest whole mile for trips that include a fraction of a mile or less than one whole mile. Under our current instructions, a provider or supplier is required to bill as much as .9 of a mile more than what was actually traveled.

We have been contacted by suppliers on several occasions with concerns regarding our current instructions for reporting ambulance mileage. Certain suppliers believe that our instructions require them to bill inaccurately. One company in particular stated that they routinely need to bill for trips totaling less than 1 mile. The beneficiaries that are being transported by this company live in the immediate vicinity of the facility to which they are being transported, and therefore, the number of loaded miles for each trip totals approximately one half of a mile. The company was concerned that since Medicare requires that they enter a "1" in the units field of their claims for mileage, they are being overpaid by

Medicare for mileage based on the service they actually provided.

However, the company's main concern revolved around the risk of creating an appearance of impropriety. Although our instructions clearly state that providers and suppliers should, as a matter of procedure, round up fractional mileage amounts to the nearest whole mile, some providers and suppliers indicated that they wanted to bill as accurately as possible and that they only wanted to be paid for the service they actually provided. We thoroughly considered these concerns while reevaluating the procedure for reporting units for fractional mileage amounts.

Our first priority in considering the issues raised by ambulance providers and suppliers was to ascertain the basis for the current mileage reporting instructions. As previously discussed, the original instructions for reporting fractional mileage were published in Transmittal AB–00–88, issued on September 18, 2000. We instructed providers and suppliers to round fractional mileage amounts "up to the nearest whole mile" and to enter "1" for fractional mileage totaling less than one mile. This particular process had also been in place prior to issuance of the transmittal. The reason for the procedure was that our claims processing systems were not capable of accepting and processing claims submitted with fractional units of service—even if the service was commonly measured in fractional amounts, as with ambulance mileage.

We then explored whether a change in our procedure would be: (a) Appropriate, (b) possible considering our current system capabilities and industry standards of measurement, and (c) applicable to any service other than ambulance mileage. As to the appropriateness of changing the procedure for reporting units of service on provider claims for fractional ambulance mileage, we believe that we should make every effort to create and implement policies and processes that create the best opportunity for accuracy in billing. It is not our intention to put providers and suppliers in a position where they are required to bill inaccurately for the service they provide. We continue to strive toward ensuring that providers and suppliers bill and are paid only for services actually provided. We believe that changing our current procedure for reporting units of service to require reporting of fractional mileage will help to ensure that providers and suppliers can submit claims that more precisely reflect actual mileage, and are reimbursed more accurately for the services they actually provided. We originally instituted a policy of accepting and processing only whole units because at that time, system limitations prevented us from accepting and processing fractional ambulance mileage.

Second, we considered whether it is currently possible for our claims processing systems to accept and process fractional unit amounts on both paper and electronic claims. Upon reevaluating our system capabilities, we found that technological advancements in Optical Character Recognition (OCR) and electronic claim submission have made it possible for our FFS systems to capture and accurately process fractional units on both paper and electronic claims. We note that our systems currently have the capability to accept fractional units with accuracy up to as much as one thousandth of a unit (that is, to 3 decimal places).

We also considered whether ambulance providers and suppliers have the capability to measure fractional mileage. This was an important point because if providers and suppliers are not able to measure mileage with any more specificity than the nearest whole number mile, then there would be no need to modify the current procedure for billing fractional mileage. In that case, providers and suppliers would continue to report mileage as whole numbers since they could measure no more accurately than that. However, both analog and digital motor vehicle odometers are designed to measure mileage accurately to within a minimum of a tenth of a mile. While we found that some vehicle odometers measure mileage more accurately than a tenth of a mile, most odometers are accurate to the nearest tenth of a mile. Additionally, aircraft geographic positioning system (GPS) technology provides the means to accurately determine billable mileage to the tenth of a mile.

Third, we considered whether a policy of billing fractional units would be applicable to any other service besides ambulance mileage. The units of service field on both the electronic and paper claim is used to report the quantity of services or supplies provided to Medicare beneficiaries and is used to report a wide range of services and supplies including, but not limited to: Number of office visits; anesthesia minutes; quantity of drugs administered; covered miles. Although Medicare currently makes payment based on fractional units for some services (for example, calculation of payment after conversion of anesthesia time reported in minutes to time units), there is currently no requirement that providers bill fractional units on the claim. If we were to implement a policy of requiring reporting of fractional units for other types of services or supplies we would first need to evaluate whether it is possible to do so considering industry standards of measurement. As previously discussed, providers and suppliers of ambulance services have the capability to determine fractional mileage using standard onboard equipment, that is, an odometer, GPS, and/or other similar equipment used to measure distance traveled. This would enable us to readily implement a fractional unit billing policy for ambulance mileage; whereas applicability to other areas (such as anesthesia, drugs, *etc.*) would require more analysis to determine whether a fractional unit billing policy is feasible, efficacious, and cost effective. Additionally, this issue was first raised by ambulance suppliers who were concerned about overbilling and being overpaid by Medicare. Therefore, we believe it is most reasonable to first address the area where concerns have been raised (that is, ambulance mileage) and consider applicability of this procedure to other types of services and items in the future.

Finally, and perhaps most importantly, we considered that our claims processing system should be configured to process claims as accurately as possible so as to provide for more accurate payments and to safeguard Medicare dollars. As previously discussed, ambulance providers and suppliers currently have the capability to measure mileage accurately to within a minimum of a tenth of a mile using devices (for example, odometers, GPS technology, etc.) already equipped onboard their vehicles. We believe that requiring ambulance providers and suppliers to round (and report) fractional ambulance mileage up to the next tenth of a mile strikes a proper balance between ensuring that the claims processing system adjudicates a claim as accurately as the system will permit without unduly burdening the ambulance community.

Based on all of the above considerations, we have decided that our claims processing instructions for submission of claims for ambulance mileage should be revised to reflect the current functionality of our claims processing systems so as to maximize the accuracy of claims payment, as further discussed below in this section.

c. Billing of Fractional Units for Mileage

It is both reasonable and prudent that, in order to ensure accuracy of payment, we facilitate and allow submission of the most accurate information on all Medicare ambulance claims. Furthermore, since our claims processing systems are currently capable of accepting and processing fractional units of service, we believe that ambulance mileage should be billed to and paid by Medicare in fractional amounts to enhance payment accuracy. Based on all the considerations discussed above, we are proposing to require that claims for mileage submitted by ambulance providers and suppliers for an ambulance transport (ground and air) be billed in fractional units, by rounding up to the nearest tenth of a mile (with the exception discussed below). As discussed above, we believe that requiring ambulance providers and suppliers to round (and report) fractional mileage up to the next tenth of a mile would allow us to provide for more accurate claims payment without unduly burdening the ambulance community.

Therefore, we are proposing that, effective for claims with dates of service on and after January 1, 2011, ambulance providers and suppliers would be required to report mileage rounded up to the nearest tenth of a mile for all claims for mileage totaling up to 100 covered miles. Providers and suppliers would submit fractional mileage using a decimal in the appropriate place (for example, 99.9). Since standard vehicle mileage (analog, digital, and GPS) is or can be calculated accurately to the nearest tenth of a mile, we are proposing that the mileage billed to Medicare by ambulance providers and suppliers be reported by rounding up to the next tenth of a mile.

Although the electronic claim formats can accommodate fractional mileage when mileage is equal to or greater than 100 covered miles (for example, 100.0), the paper claim cannot. Because the Form CMS–1500 paper claim currently only supports four characters (including the decimal point) in the units field (Item 24G), we also propose that mileage equal to or greater than 100 covered miles continue to be reported in whole number miles on both paper and electronic claims. We propose that providers and suppliers would round up fractional mileage to the next whole number for mileage that exceeds 100 covered miles and report the resulting whole number in the units' field. We would revise the instructions set forth in our Claims Processing Manual to reflect the revised procedures for submitting and paying claims for fractional ambulance.

C. Clinical Laboratory Fee Schedule: Signature on Requisition

In the March 10, 2000 **Federal Register**, we published the "Medicare Program; Negotiated Rulemaking: Coverage and Administrative Policies for Clinical Diagnostic Laboratory Services" proposed rule (65 FR 13082) announcing and soliciting comments on the results of our negotiated rulemaking committee tasked to establish national coverage and administrative policies for clinical diagnostic laboratory tests under Part B of Medicare. In our final rule published in the November 23, 2001 **Federal Register** (66 FR 58788), we explained our policy on ordering clinical diagnostic laboratory services and amended § 410.32 to make our policy more explicit. Our regulation at § 410.32(a) states the requirement that "[a]ll diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests must be ordered by the physician who is treating the beneficiary." In the November 23, 2001 final rule, we added paragraph (d)(2) to § 410.32 to require that the physician or qualified nonphysician practitioner (NPP) (that is, clinical nurse specialists, clinical psychologists, clinical social workers, nurse-midwives, nurse practitioners (NPs), and physician assistants (PAs)) who orders the service must maintain documentation of medical necessity in the beneficiary's medical record (66 FR 58809). In the preamble discussions to the March 10, 2000 proposed rule and November 23, 2001 final rule (65 FR 13089 and 66 FR 58802, respectively), we noted that "[w]hile the signature of a physician on a requisition is one way of documenting that the treating physician ordered the test, it is not the only permissible way of documenting that the test has been ordered." In those preambles, we described the policy of not requiring physician signatures on requisitions for clinical diagnostic laboratory tests, but implicitly left in place the existing requirements for a written order to be signed by the ordering physician or NPP for clinical diagnostic laboratory tests, as well as other types of diagnostic tests. We further stated in the preambles of the proposed and final rules that we would publish an instruction to Medicare contractors clarifying that the signature of the ordering physician is not required for Medicare purposes on a requisition for a clinical diagnostic laboratory test (65 FR 13089 and 66 FR 58802).

On March 5, 2002, we published a program transmittal implementing the administrative policies set forth in the final rule, including the following instruction: "Medicare does not require the signature of the ordering physician on a laboratory service requisition. While the signature of a physician on a requisition is one way of documenting that the treating physician ordered the service, it is not the only permissible way of documenting that the service has been ordered. For example, the physician may document the ordering of specific services in the patient's medical record." (Transmittal AB–02–030, Change Request 1998, dated March 5, 2002).

On January 24, 2003, we published a program transmittal in order to manualize the March 5, 2002 Transmittal. (Transmittal 1787, Change Request 2410, dated January 24, 2003). The cover note to the transmittal states, "Section 15021, Ordering Diagnostic Tests, manualizes Transmittal AB–02–030, dated March 5, 2002. In accordance with negotiated rulemaking for outpatient clinical diagnostic laboratory services, no signature is required for the ordering of such services or for physician pathology services." In the manual instructions in that transmittal in a note, we stated: "No signature is required on orders for clinical diagnostic services paid on the basis of the physician fee schedule or for physician pathology services." The manual instructions did not explicitly reference clinical diagnostic laboratory tests as the cover note did. Rather, the transmittal seemed to extend the policy set forth in the **Federal Register** (that no signature is required on requisitions for clinical diagnostic laboratory tests paid under the Clinical Laboratory Fee Schedule (CLFS)) to also apply to clinical diagnostic tests paid on the basis of the Physician Fee Schedule (PFS) and physician pathology services. In addition, the manual instructions used the term "order" instead of "requisition," which some members of the industry have asserted caused confusion.

When we transitioned from paper manuals to the current electronic Internet Only Manual system, these manual instructions were inadvertently omitted from the new Benefit Policy Manual (BPM).

In August 2008, we issued a program transmittal (Transmittal 94, Change Request 6100, dated August 29, 2008) to update the BPM to incorporate language that was previously contained in section 15021 of the Medicare Carriers Manual. The reissued language states, "No signature is required on orders for clinical diagnostic tests paid on the basis of the clinical laboratory fee schedule, the physician fee schedule, or

for physician pathology services." Based on further review, we have determined that there are no clinical diagnostic laboratory tests paid under the PFS. After Transmittal 94 was published, we received numerous inquiries from laboratory, diagnostic testing, and hospital representatives who had questions about whether the provision applied to all diagnostic services, including x-rays, MRIs, and other nonclinical laboratory fee schedule diagnostic services.

To resolve any existing confusion surrounding the implementation of the policy in 2001 and subsequent transmittals, we restated and solicited public comments on our policy in the CY 2010 PFS proposed rule (74 FR 33641). Our current policy is that a physician's signature is not required on a requisition for clinical diagnostic laboratory tests paid on the basis of the CLFS; however, it must be evident, in accordance with our regulations at § 410.32(d)(2) and (3), that the physician ordered the services.

We note that we solicited and received comments on this signature requirement during the notice and comment period for the March 10, 2000 proposed rule in the context of our proposal to add paragraph (d)(2)(i) to § 410.32 to require that the practitioner who orders a diagnostic laboratory test must maintain documentation of medical necessity in the beneficiary's medical record. The majority of comments supported the adoption of a policy that the signature of the practitioner on a requisition for a clinical diagnostic laboratory test paid under the CLFS is not the only way of documenting that the test has been ordered and, thus, should not be required provided such documentation exists in an alternate form.

This policy regarding requisitions for clinical diagnostic laboratory tests does not supersede other applicable Medicare requirements (such as those related to hospital Conditions of Participation (CoPs)) which require the medical record to include an order signed by the physician who is treating the beneficiary. Nor do we believe that anything in our policy regarding signatures on requisitions for clinical diagnostic laboratory tests supersedes other requirements mandated by professional standards of practice or obligations regarding orders and medical records promulgated by Medicare, the Joint Commission, or State law; nor do we believe the policy would require providers to change their business practices.

We also restated and solicited public comment on our long-standing policy consistent with the principle in § 410.32(a) that a written order for diagnostic tests including those paid under the CLFS and those that are not paid under the CLFS (for example, that are paid under the PFS or under the OPPS), such as X-rays, MRIs, and the TC of physician pathology services, must be signed by the ordering physician or NPP. That is, the policy that signatures are not required on requisitions for clinical diagnostic laboratory tests paid based on the CLFS applies only to requisitions (as opposed to written orders) (74 FR 33642).

Additionally, we solicited public comments about the distinction between an order and a requisition (74 FR 33642). We note that an "order" as defined in our IOM, 100–02, Chapter 15, Section 80.6.1, is a communication from the treating physician/practitioner requesting that a diagnostic test be performed for a beneficiary. The order may conditionally request an additional diagnostic test for a particular beneficiary if the result of the initial diagnostic test ordered yields to a certain value determined by the treating physician/practitioner (for example, if test X is negative, then perform test Y). As set forth in the CY 2010 MPFS final rule (FR 74 61930), an order may be delivered via any of the following forms of communication:

- A written document signed by the treating physician/practitioner, which is hand-delivered, mailed, or faxed to the testing facility.
- A telephone call by the treating physician/practitioner or his or her office to the testing facility.
- An electronic mail, or other electronic means, by the treating physician/practitioner or his or her office to the testing facility.

If the order is communicated via telephone, both the treating physician/practitioner, or his or her office, and the testing facility must document the telephone call in their respective copies of the beneficiary's medical records.

In the proposed rule (74 FR 33642), we defined a "requisition" as the actual paperwork, such as a form, which is provided to a clinical diagnostic laboratory that identifies the test or tests to be performed for a patient. It may contain patient information, ordering physician information, referring institution information, information about where to send reports, billing information, specimen information, shipping addresses for specimens or tissue samples, and checkboxes for test selection. We believe it is ministerial in nature, assisting laboratories with billing and handling of results, and serves as an administrative convenience to providers and patients. We believe that a written order, which may be part of the medical record, and the requisition are two different documents, although a requisition that is signed may serve as an order. We welcomed comments from the public about the distinction between requisitions and orders.

During the proposed and final rulemaking process for CY 2010, we received numerous comments on these issues, including, among others: Expressions of continued confusion over the difference between an "order" and a "requisition"; requests that CMS develop a single policy for all outpatient laboratory services, without the distinction for those paid under the CLFS or the PFS; and concerns about reference laboratory technicians who felt compelled to perform a test in order to protect the viability of the specimen although they did not have the proper documentation. See 74 FR 61930–32 for a complete discussion of the comments received and responses to these issues. In the CY 2010 PFS final rule with comment period (74 FR 61931), we stated that, in light of the issues and concerns raised during the comment period, and our desire to create policy that will address the concerns in a meaningful, clear and thoughtful way, we would continue to carefully consider the issues of physician signatures on requisitions and orders and that we plan to revisit these issues in the future paying particular attention to the definitions of order and requisition.

Since the publication of the CY 2010 PFS final rule with comment period, we have considered an approach that would address the concerns raised. We are proposing to require a physician's or NPP's signature on requisitions for clinical diagnostic laboratory tests paid on the basis of the CLFS.

We believe that this policy would result in a less confusing process. We believe that it would be less confusing because a physician's signature would then be required for all requisitions and orders, eliminating uncertainty over whether the documentation is a requisition or an order, whether the type of test being ordered requires a signature, or which payment system does or does not require a physician or NPP signature. We also believe that it would not increase the burden on physicians because it is our understanding that, in most instances, physicians are annotating the patient's medical record with either a signature or an initial (the "order"), as well as providing a signature on the paperwork that is provided to the clinical diagnostic laboratory that identifies the

test or tests to be performed for a patient (the "requisition") as a matter of course. Further, this policy would make it easier for the reference laboratory technicians to know whether a test is appropriately requested, and potential compliance problems would be minimized for laboratories during the course of a subsequent Medicare audit because a signature would be consistently required. As already discussed, this minimizes confusion and provides a straightforward directive for laboratories to meet.

We welcome comments on this proposal.

D. Discussion of Chiropractic Services Demonstration

Section 651 of MMA requires the Secretary to conduct a 2-year demonstration to evaluate the feasibility and advisability of expanding coverage for chiropractic services under Medicare. Medicare coverage for chiropractic services is limited to manual manipulation of the spine to correct a subluxation described in section 1861(r)(5) of the Act. The demonstration expanded current Medicare coverage to include "care for neuromusculoskeletal conditions typical among eligible beneficiaries and diagnostic and other services that a chiropractor is legally authorized to perform by the State or jurisdiction in which such treatment is provided" and was conducted in four geographically diverse sites, two rural and two urban regions, with each type including a Health Professional Shortage Area (HPSA). The two urban sites were 26 counties in Illinois and Scott County, Iowa, and 17 counties in Virginia. The two rural sites were the States of Maine and New Mexico. The demonstration, which ended on March 31, 2007, was required to be budget neutral as section 651(f)(1)(B) of MMA mandates the Secretary to ensure that "the aggregate payments made by the Secretary under the Medicare program do not exceed the amount which the Secretary would have paid under the Medicare program if the demonstration projects under this section were not implemented."

In the CY 2006, 2007, and 2008 PFS final rules with comment period (70 FR 70266, 71 FR 69707, 72 FR 66325, respectively), we included a discussion of the strategy that would be used to assess budget neutrality (BN) and the method for adjusting chiropractor fees in the event the demonstration resulted in costs higher than those that would occur in the absence of the demonstration. We stated BN would be assessed by determining the change in costs based on a pre-post comparison of Medicare costs for beneficiaries in the demonstration and their counterparts in the control groups and the rate of change for specific diagnoses that are treated by chiropractors and physicians in the demonstration sites and control sites. We also stated that our analysis would not be limited to only review of chiropractor claims because the costs of the expanded chiropractor services may have an impact on other Medicare costs.

In the CY 2010 PFS final rule with comment period (74 FR 61926), we discussed the evaluation of this demonstration conducted by Brandeis University and the two sets of analyses used to evaluate budget neutrality. In the "All Neuromusculoskeletal Analysis," which compared the Medicare costs of *all* beneficiaries who received services for a neuromusculoskeletal condition in the demonstration areas with those of beneficiaries with similar characteristics from similar geographic areas that did not participate in the demonstration, the total effect of the demonstration to Medicare was $114 million. In the "Chiropractic User Analysis," which compared the Medicare costs of beneficiaries who used expanded chiropractic services to treat a neuromusculoskeletal condition in the demonstration areas, with those of beneficiaries with similar characteristics who used chiropractic services as currently covered by Medicare to treat a neuromusculoskeletal condition from similar geographic areas that did not participate in the demonstration, the total effect of the demonstration to Medicare was $50 million.

As explained in the CY 2010 PFS final rule, we based the BN estimate on the "Chiropractic User Analysis" because of its focus on users of chiropractic services rather than all Medicare beneficiaries with neuromusculoskeletal conditions, including those who did not use chiropractic services and who would not have become users of chiropractic services even with expanded coverage for them (74 FR 61926 through 61927). Users of chiropractic services are most likely to have been affected by the expanded coverage provided by this demonstration. Cost increases and offsets, such as reductions in hospitalizations or other types of ambulatory care, are more likely to be observed in this group.

As explained in the CY 2010 PFS final rule (74 FR 61927), because the costs of this demonstration were higher than expected and we did not anticipate a reduction to the PFS of greater than 2 percent per year, we finalized a policy to recoup $50 million in expenditures from this demonstration over a 5-year period, that is, CYs 2010 through 2014 (74 FR 61927). Specifically, we are recouping $10 million for each such year through adjustments to the chiropractic CPT codes. Payment under the PFS for these codes will be reduced by approximately 2 percent. We believe that spreading this adjustment over a longer period of time will minimize its potential negative impact on chiropractic practices.

We are continuing the implementation of the required budget neutrality adjustment by recouping $10 million in CY 2011. Our Office of the Actuary estimates chiropractic expenditures in CY 2011 to be approximately $524 million based on actual Medicare spending for chiropractic services for the most recent available year. To recoup $10 million in CY 2011, the payment amount under the PFS for the chiropractic CPT codes (that is, CPT codes 98940, 98941, and 98942) will be reduced by approximately 2 percent. We are reflecting this reduction only in the payment files used by the Medicare contractors to process Medicare claims rather than through adjusting the RVUs. Avoiding an adjustment to the RVUs would preserve the integrity of the PFS, particularly since many private payers also base payment on the RVUs.

E. Provisions Related to Payment for Renal Dialysis Services Furnished by End-Stage Renal Disease (ESRD) Facilities

Since August 1, 1983, payment for dialysis services furnished by ESRD facilities has been based on a composite rate payment system that provides a fixed, prospectively determined amount per dialysis treatment, adjusted for geographic differences in area wage levels. The composite rate is designed to cover a package of goods and services needed to furnish dialysis treatments that include, but not be limited to, certain routinely provided drugs, laboratory tests, supplies, and equipment. Unless specifically included in the composite rate, other injectable drugs and laboratory tests medically necessary for the care of patients on dialysis are separately billable.

Other than periodic updates, there were no significant changes to the composite rate payment system until the implementation of the basic case-mix adjusted composite rate payment system beginning January 1, 2005. The Congress has enacted a number of adjustments to the composite rate since that time. As a result of the July 15, 2008 enactment of MIPPA, we are required to implement an end-stage renal disease (ESRD)

bundled prospective payment system effective January 1, 2011 (referred to as the "ESRD PPS"). Below we briefly discuss the ESRD PPS, the basic case-mix composite payment system, as well as our proposed updates to the composite rate portion of the blended payment for CY 2011.

a. MIPPA—The ESRD PPS

On September 29, 2009, we published in the **Federal Register** a proposed rule entitled "End-Stage Renal Disease Prospective Payment System" (74 FR 49922). In that rule, we proposed to implement a case-mix adjusted bundled PPS for renal dialysis services beginning January 1, 2011, in accordance with the statutory provisions set forth in section 153(b) of MIPPA. The ESRD PPS would replace the current basic case-mix adjusted composite payment system and the methodologies for the reimbursement of separately billable outpatient ESRD services.

As explained in the ESRD PPS proposed rule (74 FR 50019), section 1881(b)(14)(E)(i) of the Act requires a 4-year transition (phase-in) from the current composite payment system to the ESRD PPS, and section 1881(b)(14)(E)(ii) of the Act allows ESRD facilities to make a one-time election to be excluded from the transition. Electing to be excluded from the 4-year transition means that the ESRD facility receives payment for renal dialysis services based on 100 percent of the payment rate established under the ESRD PPS, rather than a blended rate under each year of the transition based in part on the payment rate under the current payment system and in part on the payment rate under the ESRD PPS. As of January 1, 2011, ESRD facilities that elect to go through the transition would be paid in the first year a blended amount that will consist of 75 percent of the basic case-mix adjusted composite payment system and the remaining 25 percent would be based on the ESRD PPS payment. Thus, we must continue to update the basic case-mix composite payment system for purposes of determining the composite rate portion of the blended payment amount during the ESRD PPS 4-year transition (CYs 2011 through 2013.) Accordingly, in this proposed rule, we are proposing the composite rate portion of the blend, which includes an update to the drug add-on and the application of the wage index, as well as the payment amount for the first-year (CY 2011) of the ESRD PPS transition. We anticipate that the final rule for the ESRD PPS will be published this summer.

b. Medicare Modernization Act (MMA)—The Basic Case-Mix Adjusted Composite Payment System

Section 623 of the MMA amended section 1881 of the Act to require changes to the composite rate payment methodology, as well as to the pricing methodology for separately billable drugs and biologicals furnished by ESRD facilities. Section 1881(b)(12) of the Act, as added by section 623(d) of the MMA, requires the establishment of a basic case-mix adjusted composite payment system that includes services comprising the composite rate and an add-on to the composite rate component to account for the difference between current payments for separately billed drugs and the revised drug pricing specified in the statute. In addition, section 1881(b)(12)(A) of the Act requires that the composite rate be adjusted for a number of patient characteristics (case-mix) and section 1881(b)(12)(D) of the Act gives the Secretary discretion to revise the wage indices and the urban and rural definitions used to develop them. Finally, section 1881(b)(12)(E) of the Act imposed a budget neutrality (BN) requirement, so that aggregate payments under the basic case-mix adjusted composite payment system equal the aggregate payments for the same period if section 1881(b)(12) of the Act did not apply.

1. CY 2005 Revisions

In the CY 2005 PFS final rule with comment period (69 FR 66319 through 66334), we implemented section 1881(b)(12) of the Act, as added by section 623 of the MMA, and revised payments to ESRD facilities. These revisions that were effective January 1, 2005, included an update of 1.6 percent to the composite rate component of the payment system; a drug add-on adjustment of 8.7 percent to the composite rate to account for the difference between pre-MMA payments for separately billable drugs and payments based on revised drug pricing for 2005 which used acquisition costs.

Also, to implement section 1881(b)(13) of the Act, we revised payments for drugs billed separately by independent ESRD facilities, paying for the top 10 ESRD drugs based on acquisition costs (as determined by the OIG) and for other separately billed drugs at the average sales price +6 percent (ASP+6).

In addition, effective April 1, 2005, we implemented the case-mix adjustments to the composite rate for certain patient characteristics (that is, age, low body mass index, and body surface area). For further explanation of the development of the basic case-mix adjusted composite payment system, see the CY 2005 PFS final rule with comment period (69 FR 66319 through 66334).

2. CY 2006 Revisions

In the CY 2006 PFS final rule with comment, we implemented additional revisions to payments to ESRD facilities required under section 623 of the MMA. We revised the drug payment methodology applicable to drugs furnished by ESRD facilities. Effective January 1, 2006, all separately billed drugs and biologicals furnished by both hospital-based and independent ESRD facilities were paid based on ASP+6 percent. The drug add-on adjustment was updated to 14.5 percent to reflect the expected growth in expenditures for separately billable drugs in CY 2006.

We also implemented a revised geographic adjustment authorized by section 1881(b)(12)(D) of the Act. This adjustment revised the labor market areas to incorporate the Core-Based Statistical Area (CBSA) designations established by the Office of Management and Budget (OMB) by providing a 4-year transition from the previous wage-adjusted composite rates. Effective January 1, 2006, 25 percent of the payment was based on the revised geographic adjustments, and the remaining 75 percent of payment was based on the metropolitan statistical area-based (MSA-based) adjustments. Other adjustments included the elimination of the wage index ceiling, and reducing the wage index floor to 0.8500, as well as a revised labor portion of the composite rate to which the geographic adjustment is applied.

In addition, section 5106 of the DRA (Pub. L. 109–171) provided for a 1.6 percent update to the composite rate component of the basic case-mix adjusted composite payment system, effective January 1, 2006. For further explanation of the revisions to the basic case-mix adjusted composite payment system, see the CY 2006 PFS final rule with comment period (70 FR 70161 through 70771).

3. CY 2007 Revisions

In the CY 2007 PFS final rule with comment period, we implemented a method to annually calculate the growth update to the drug add-on adjustment required by section 1881(b)(12) of the Act, as well as a growth update of 0.5 percent to the drug add-on adjustment. Also, section 103 of the MIEA–TRHCA (Pub. L. 109–432) established a 1.6 percent update to the composite rate portion of the payment system, effective

April 1, 2007. The effect of this increase in the composite rate was a reduction in the drug add-on adjustment to 14.9 percent, effective April 1, 2007. As a result, the drug add-on adjustment to the composite rate increased from 14.5 to 15.1 percent. Since we compute the drug add-on adjustment as a percentage of the weighted average base composite rate, increases in the composite rate portion of the payment reduce the drug add-on percentage.

We provided an update to the wage index adjustments to reflect the latest hospital wage data, including a BN adjustment factor. We also implemented the second year of the transition to the CBSA-based wage index, where 50 percent of the payment was based on the CBSA-based geographic adjustments, and the remaining 50 percent of payment was based on the MSA-based adjustments. In addition, we reduced the wage index floor 0.85 to 0.80.

For further explanation of the development of the basic case-mix adjusted composite payment system, see the CY 2007 PFS final rule with comment period (71 FR 69681 through 69688).

4. CY 2008 Revisions

In the CY 2008 PFS final rule with comment period (72 FR 66280), we implemented a growth update to the drug add-on adjustment of 0.5 percent. As a result, the drug add-on adjustment to the composite payment rate increased from 14.9 percent to 15.5 percent. In addition, we updated the wage index adjustments to reflect the latest hospital wage data, including a wage index BN adjustment of 1.055473 to the wage index for CY 2008, and finally, for CY 2008, we implemented the third year of the transition to the CBSA-based wage index, where 75 percent of the payment was based on the the CBSA-based adjustments and the remaining 25 percent of payment was based on the MSA-based adjustments. In addition, we reduced the wage index floor from 0.80 to 0.75.

5. CY 2009 Revisions

For CY 2009, section 153(a) of the MIPPA updated sections 1881(b)(12)(G) and 1881(b)(12)(A) of the Act to revise payments to ESRD facilities effective for services furnished on or after January 1, 2009 and January 1, 2010. The revisions included an update of 1 percent to the composite rate, and the establishment of a site neutral composite rate to both hospital-based and independent dialysis facilities that reflects the labor share applicable to independent dialysis facilities (53.711). The 1 percent increase to the independent dialysis facility's CY 2008 composite rate of $132.49 resulted in a CY 2009 base composite rate for hospital-based and independent dialysis facilities of $133.81. The one percent increase in the composite rate portion of the payment system effective January 1, 2009, reduced the drug add-on adjustment from 15.5 to 15.2 percent.

Also, we updated the wage index adjustments to reflect the latest available wage data, including a wage index BN adjustment of 1.056672 to the wage index for CY 2009. Finally, we completed the 4-year transition to the CBSA-based geographic adjustments and reduced the wage index floor from 0.7500 to 0.700. For further detail, regarding the ESRD provisions, see the 2008 PFS final rule with comment period (73 FR 61921 through 61926).

6. CY 2010 Revisions

For CY 2010, we updated the case-mix adjusted composite rate payment system by updating the drug add-on component of the composite rate system, as well as the wage index values used to adjust the labor component of the composite rate. Specifically, to update the drug add-on adjustment, we conducted a trend analysis of CY 2006 through 2008, we implemented a zero growth update to the drug add-on adjustment to the composite rates for 2010 required by section 1881(b)(12)(F) of the Act.

Also, section 1881(b)(12)(G)(iv) of the Act, as added by section 153(a)(1) of the MIPPA, increased the composite rate by 1.0 percent for ESRD services furnished on or after January 1, 2010. The 1.0 percent increase resulted in a base composite rate of $135.15 per treatment and reduced the drug add-on adjustment from 15.2 to 15.0 percent.

Lastly, we updated the wage index to reflect the latest available wage data, including a revised BN adjustment factor of 1.057888. We applied a reduction to the wage index floor from 0.700 to 0.6500.

For further detail, regarding the ESRD provisions, see the 2009 final rule with comment period (74 FR 33634 through 33639).

7. CY 2011 Proposals

For purposes of establishing the composite rate portion of the blended payments under the ESRD PPS for those facilities electing to go through the transition in CY 2011, CMS is proposing the following:

- An update to the drug add-on adjustment to the composite rate, using a refined methodology for projecting growth in drug expenditures; and
- An update to the wage index adjustment to reflect the latest available wage data, including a revised BN adjustment.
- A reduction in the ESRD wage index floor from 0.6500 to 0.600.

8. The Affordable Care Act

Section 1881(b)(14)(F) of the Act, as added by section 153(b) of MIPPA and amended by section 3401(h) of ACA, governs the ESRD market basket increase factor (that is, the ESRD market basket). As explained in the ESRD PPS proposed rule (74 FR 4997), we described how the ESRD Bundled market basket would be used to update the composite rate portion of the ESRD payments during the PPS transition.

Ordinarily in updating the composite payment system, we discuss any updates to the composite rate. However, beginning in 2011, the composite payment would be used as part of the blended payments during the ESRD PPS transition. Since the publication of the ESRD PPS proposed rule, and as explained in the ESRD PPS final rule, which we anticipate will be published this summer, we interpret this provision as requiring that the composite rate portion of the blended payment amount be increased in CY 2011 by the ESRD market basket percentage increase factor (the "ESRD market basket").

For purposes of this proposed rule, for CY 2011, we anticipate an estimate of a 2.5 percent increase to the ESRD composite rate portion of the blended payment amount, resulting in a CY 2011 composite rate of $138.53 ($135.15*1.025). This 2.5 percent increase does not apply to the drug add-on adjustment to the composite rate. Also, we note that the drug add-on percentage would be reduced from 15.0 to 14.7 as a result of the proposed increase to the composite rate in CY 2011. (A detailed explanation of the reduction to the drug add-on adjustment is discussed below).

9. Proposed Update to the Drug Add-on Adjustment to the Composite Rate

a. Estimating Growth in Expenditures for Drugs and Biologicals in CY 2011

Section 1881(b)(12)(F) of the Act specifies that the drug add-on increase must reflect "the estimated growth in expenditures for drugs and biologicals (including erythropoietin) that are separately billable * * *." By referring to "expenditures," we believe the statute contemplates that the update would account for both increases in drug prices, as well as increases in utilization of those drugs.

Since we now have 4 years of drug expenditure data based on ASP pricing,

we propose to continue estimating growth in drug expenditures based on the trends in available data. Therefore, for CY 2011, we are proposing to use trend analysis from drug expenditure data to update the per treatment drug add-on adjustment. We then removed growth in enrollment for the same time period from the expenditure growth so that the residual reflects per patient expenditure growth (which includes price and utilization combined).

We further propose to use the per patient growth update to the drug add-on adjustment for CY 2011. To estimate drug expenditure growth using trend analysis, we looked at the average annual growth in total drug expenditures between 2006 and 2009. First, we estimated the total drug expenditures for all ESRD facilities in CY 2009. For this proposed rule, we used the final CY 2006, through CY 2008 ESRD claims data and the latest available CY 2009 ESRD facility claims, updated through December 31, 2009 (that is, claims with dates of service from January 1 through December 31, 2009, that were received, processed, paid, and passed to the National Claims History File as of December 31, 2009). For the CY 2011 PFS final rule, we plan to use additional updated CY 2009 claims with dates of service for the same timeframe. This updated CY 2009 data file will include claims received, processed, paid, and passed to the National Claims History File as of June 30, 2010.

While the CY 2009 claims file used in this proposed rule is the most current available, we recognize that it does not reflect a complete year, as claims with dates of service towards the end of the year have not all been processed. To more accurately estimate the update to the drug add-on, aggregate drug expenditures are required. Based on an analysis of the 2008 claims data, we are proposing to inflate the CY 2009 drug expenditures to estimate the June 30, 2010 update of the 2009 claims file. We used the relationship between the December 2008 and the June 2009 versions of 2008 claims to estimate the more complete 2009 claims that will be available in June 2010 and applied that ratio to the 2009 claims data from the December 2009 claims file. The net adjustment to the CY 2009 claims data is an increase of 12.22 percent to the 2009 expenditure data. This adjustment allows us to more accurately compare the 2008 and 2009 drug expenditure data to estimate per patient growth. As stated earlier in this section, we plan to use additional updated CY 2009 claims in the CY 2011 PFS final rule.

Using the full-year 2009 drug expenditure figure, we calculated the average annual change in drug expenditures from 2006 through 2009. This average annual change showed an increase of 2.1 percent for this timeframe. We propose to use this 2.1 percent increase to project drug expenditures for both 2010 and 2011.

b. Estimating Per Patient Growth

Once we had the projected growth in drug expenditures from 2010 to 2011, which is what we believe that section 1881(b)(12)(F) of the Act requires us to use to update the drug add-on adjustment. To calculate the per patient growth between CYs 2010 and 2011, we removed the enrollment component by using the estimated growth in enrollment data between CY 2010 and CY 2011. This was approximately 3.6 percent. To do this, we divided the total drug expenditure change between 2010 and 2011 (1.021) by enrollment growth of 3.6 percent (1.036) for the same timeframe. The result is a per patient growth factor equal to 0.986 (1.021/1.036 = 0.986). Thus, we are projecting a 1.4 percent decrease in per patient growth in drug expenditures between 2010 and 2011.

c. Applying the Proposed Growth Update to the Drug Add-On Adjustment

In CY 2006, we applied the projected growth update percentage to the total amount of drug add-on dollars established for CY 2005 to establish a dollar amount for the CY 2006 growth update. In addition, we projected the growth in dialysis treatments for CY 2006 based on the projected growth in ESRD enrollment. We divided the projected total dollar amount of the CY 2006 growth by the projected growth in total dialysis treatments to develop the per treatment growth update amount. This growth update amount, combined with the CY 2005 per treatment drug add-on amount, resulted in an average drug add-on amount per treatment of $18.88 (or a 14.5 percent adjustment to the composite rate) for CY 2006.

In the CY 2007 PFS final rule with comment period (71 FR 69684), we revised our update methodology by applying the growth update to the per treatment drug add-on amount. That is, for CY 2007, we applied the growth update factor of 4.03 percent to the $18.88 per treatment drug add-on amount for an updated amount of $19.64 per treatment (71 FR 69684). For CY 2008, the per treatment drug add-on amount was updated to $20.33. In the CY 2009 and 2010 PFS final rule with comment period (73 FR 69755 through 69757 and 74 FR 61923), we applied a zero update to per treatment drug add-on amount which left it at $20.33. As discussed in detail below, for CY 2011, we are again proposing no update to the per treatment drug add-on amount of $20.33 established in CY 2008.

d. Proposed Update to the Drug Add-On Adjustment

As discussed previously in this section, we estimate a 2.1 percent increase in drug expenditures between CY 2010 and CY 2011. Combining this reduction with a 3.6 percent increase in enrollment, as described above, we are projecting a 1.4 percent decrease in per patient growth of drug expenditures between CY 2010 and CY 2011. Therefore, we are projecting that the combined growth in per patient utilization and pricing for CY 2011 would result in a negative update equal to 0.2 percent. However, similar to last year and as indicated above, we are proposing a zero update to the drug add-on adjustment. We believe this approach is consistent with the language under section 1881(b)(12)(F) of the Act which states in part that "the Secretary shall annually increase" the drug add-on amount based on the growth in expenditures for separately billed ESRD drugs. Our understanding of the statute contemplates "annually increase" to mean a positive or zero update to the drug add-on. Therefore, we propose to apply a zero update, and to maintain the $20.33 per treatment drug add-on amount for CY 2011.

e. Proposed Update to the Geographic Adjustments to the Composite Rate

The purpose of the wage index is to adjust the composite rates for differing wage levels covering the areas in which ESRD facilities are located. The wage indexes are calculated for each urban and rural area.

In addition, we generally have followed wage index policies related to these definitions as used under the inpatient hospital prospective payment system (IPPS), but without regard to any approved geographic reclassification authorized under sections 1886(d)(8) and (d)(10) of the Act or other provisions that only apply to hospitals paid under the IPPS (70 FR 70167). For purposes of the ESRD wage index methodology, the hospital wage data we use is pre-classified, pre-floor hospital data and unadjusted for occupational mix.

f. Proposed Updates to Core-Based Statistical Area (CBSA) Definitions

In the CY 2006 PFS final rule with comment period (70 FR 70167), we announced our adoption of the OMB's

CBSA-based geographic area designations to develop revised urban/rural definitions and corresponding wage index values for purposes of calculating ESRD composite rates. The CBSA-based geographic area designations are described in OMB Bulletin 03–04, originally issued June 6, 2003, and is available online at *http://www.whitehouse.gov/omb/bulletins/b03-04.html.* In addition, OMB has published subsequent bulletins regarding CBSA changes, including changes in CBSA numbers and titles. We wish to point out that this and all subsequent ESRD rules and notices are considered to incorporate the CBSA changes published in the most recent OMB bulletin that applies to the hospital wage index used to determine the current ESRD wage index. The OMB bulletins may be accessed online at *http://www.whitehouse.gov/omb/bulletins/index.html.*

g. Updated Wage Index Values

In the CY 2007 PFS final rule with comment period (71 FR 69685), we stated that we intended to update the ESRD wage index values annually. The ESRD wage index values for CY 2011 were developed from FY 2007 wage and employment data obtained from the Medicare hospital cost reports. As we indicated, the ESRD wage index values are calculated without regard to geographic classifications authorized under sections 1886(d)(8) and (d)(10) of the Act and utilize pre-floor hospital data that is unadjusted for occupational mix. We propose to use the same methodology for CY 2011, with the exception that FY 2007 hospital data would be used to develop the CY 2011 wage index values. For a detailed description of the development of the proposed CY 2011 wage index values based on FY 2007 hospital data, see the FY 2011 IPPS proposed rule (75 FR 23944). Section III.G, of the preamble to the FY 2011 IPPS proposed rule, "Method for Computing the Proposed FY 2011 Unadjusted Wage Index," describes the cost report schedules, line items, data elements, adjustments, and wage index computations. The wage index data affecting the ESRD composite rate for each urban and rural locale may also be accessed on the CMS Web site at *http://www.cms.hhs.gov/AcuteInpatientPPS/WIFN/list.asp.* The wage data are located in the section entitled, "FY 2011 Proposed Rule Occupational Mix Adjusted and Unadjusted Average Hourly Wage and Pre-reclassified Wage Index by CBSA."

i. Reduction to the ESRD Wage Index Floor

In the CY 2010 PFS final rule with comment period, we stated our intention to continue to reassess the need for a wage index floor (74 FR 61924). We also stated that a gradual reduction in the floor is needed to support continuing patient access to dialysis in areas that have low wage index values, especially in Puerto Rico where the wage index values are below the current wage index floor.

In the ESRD PPS proposed rule (74 FR 49968), we stated our intent to continue to reduce the wage index floor to the composite rate during the transition. For CY 2011, we propose that the ESRD wage index floor would be reduced from 0.65 to 0.60.

j. Proposed Wage Index Values for Areas With No Hospital Data

As discussed in the CY 2010 PFS final rule (74 FR 61925), and the ESRD PPS proposed rule (74 FR 49969) we have a methodology for identifying the small number of ESRD facilities in both urban and rural geographic areas where there are no hospital wage data from which to calculate ESRD wage index values. At that time those rules were published, the affected areas were rural Puerto Rico, and the urban area Hinesville-Fort Stewart, GA (CBSA 25980), and rural Massachusetts.

In the case of Massachusetts, the entire rural area consists of Dukes and Nantucket Counties. We determined that the borders of Dukes and Nantucket counties are contiguous with CBSA 12700, Barnstable Town, MA, and CBSA 39300, Providence-New Bedford-Fall River, RI–MA. We intend to use the same methodology for CY 2011. Under this methodology, this results in a proposed CY 2011 wage index value of 1.3577 for the composite rate portion of the blend, and a wage index value of 1.2844 for the ESRD PPS portion of the blend for Barnstable Town, MA (CBSA 12700) and also results in a proposed CY 2011 wage index value of 1.1343 for the composite rate portion of the blend, and a wage index value of 1.0731 for the ESRD PPS portion of the blend for (Providence-New Bedford-Fall River, RI–MA (CBSA 39300). These averages result in an imputed proposed wage index value of 1.2460 for rural Massachusetts in CY 2011, for the composite rate portion of the blend, and a wage index value of 1.1788 for the ESRD PPS portion of the blend.

For Hinesville-Fort Stewart, GA (CBSA 25980), which is an urban area without specific hospital wage data, we propose to apply the same methodology used to impute a wage index value that we used in CYs 2006 through 2010. Specifically, we compute the average wage index value of all urban areas within the State of Georgia. This results in a CY 2011 wage index value of 0.9465 for the composite rate portion of the blend, and a wage index value of 0.8954 for the ESRD PPS portion of the blend for Hinesville-Fort Stewart, GA (CBSA 25980).

For CY 2011, there is an additional urban area—Anderson, SC—with no hospital data. For this urban area, Anderson, SC (CBSA 11340), we propose to use the same methodology we have used for the other urban area with no hospital data, that is, Hinesville-Fort Stewart, GA (CBSA 25980). Under the methodology used for that area, we compute the average of all urban areas within the State of South Carolina. This approach would result in a CY 2011 wage index value of 0.9480 for the composite rate portion of the blend, and a wage index value of 0.8839 for the ESRD PPS portion of the blend for the Anderson, SC CBSA (CBSA 11340).

For Puerto Rico, because all geographic areas in Puerto Rico were subject to the wage index floor in CYs 2006 through 2010, we applied the ESRD wage index floor to rural Puerto Rico as well. Therefore, for CY 2011, all urban areas in Puerto Rico that have a wage index are eligible for the ESRD wage index floor of 0.60. Currently there are no ESRD facilities located in rural Puerto Rico, however, should any facilities open in rural Puerto Rico, we intend to apply the CY 2011 proposed wage index floor of 0.60 to facilities that are located in rural Puerto Rico. The proposed reduction to the wage index floor of 0.60 remains higher than the actual wage index values for ESRD facilities located in Puerto Rico, which currently range from 0.3674 to 0.4828. Also, in the CY 2010 PFS final rule with comment period (74 FR 61925), we stated that we would continue to evaluate existing hospital wage data and possibly wage data from other sources such as the Bureau of Labor Statistics, to determine if other methodologies might be appropriate for imputing wage index values for areas without hospital wage data for CY 2011 and subsequent years. To date, no data from other sources, superior to that currently used in connection with the IPPS wage index has emerged. For ESRD purposes, we continue to believe this is an appropriate policy.

Finally, for CY 2011, we are proposing to use the FY 2011 wage index data (collected from cost reports submitted by hospitals for cost reporting

periods beginning FY 2007) to compute the ESRD composite payment rates effective beginning January 1, 2011.

k. Budget Neutrality Adjustment

We have previously interpreted the statute as requiring that the geographic adjustment be made in a budget neutral manner. Given our application of the ESRD wage index, this means that aggregate payments to ESRD facilities in CY 2011 would be the same as aggregate payments that would have been made if we had not made any changes to the geographic adjusters. We note that this BN adjustment only addresses the impact of changes in the geographic adjustments. A separate BN adjustment was developed for the case-mix adjustments required by the MMA.

As we are not proposing any changes to the case-mix measures for CY 2011, the current case-mix BN adjustment of 0.9116 would remain in effect for CY 2011. Consistent with prior rulemaking, For CY 2011, we propose to apply the wage-index BN adjustment factor of 1.057057 directly to the ESRD wage index values to the composite rate portion of the blend. Because the ESRD wage index is only applied to the labor-related portion of the composite rate, we computed the BN adjustment factor based on that proportion (53.711 percent).

To compute the proposed CY 2011 wage index BN adjustment factor (1.057057), we used the FY 2007 pre-floor, pre-reclassified, non-occupational mix-adjusted hospital data to compute the wage index values, 2009 outpatient claims (paid and processed as of December 31, 2009), and geographic location information for each facility which may be found through Dialysis Facility Compare Web page on the CMS Web site at *http://www.cms.hhs.gov/DialysisFacilityCompare/.* The FY 2011 hospital wage index data for each urban and rural locale by CBSA may also be accessed on the CMS Web site at *http://www.cms.hhs.gov/AcuteInpatientPPS/WIFN/list.asp.* The wage index data are located in the section entitled, "FY 2011 Proposed Rule Occupational Mix Adjusted and Unadjusted Average Hourly Wage and Pre-Reclassified Wage Index by CBSA."

Using treatment counts from the 2009 claims and facility-specific CY 2010 composite rates, we computed the estimated total dollar amount each ESRD provider would have received in CY 2010. The total of these payments became the target amount of expenditures for all ESRD facilities for CY 2011. Next, we computed the estimated dollar amount that would have been paid for the same ESRD facilities using the proposed ESRD wage index for CY 2011. The total of these payments becomes the new CY 2011 amount of wage-adjusted composite rate expenditures for all ESRD facilities.

After comparing these two dollar amounts (target amount divided by the new CY 2011 amount), we calculated an adjustment factor that, when multiplied by the applicable CY 2011 ESRD wage index value, would result in aggregate payments to ESRD facilities that would remain within the target amount of composite rate expenditures. When making this calculation, the ESRD wage index floor value of 0.6000 is applied whenever appropriate. The proposed wage BN adjustment factor for CY 2011 is 1.057057.

To ensure BN, we also must apply the BN adjustment factor to the wage index floor of 1.057057 which results in an adjusted wage index floor of 0.6343 (0.6000 x 1.057057) for CY 2011. This budget neutrality factor is not applied to the wage index values for the ESRD PPS portion of the blend.

l. ESRD Wage Index Tables

The CY 2011 ESRD proposed wage index tables are located in Addenda K and L of this proposed rule. The wage index tables lists two separate columns of wage index values. The first column lists the wage index values will be applied under the composite rate portion and includes the budget neutrality adjustment of 1057057. The second column lists the wage index values that will be applied under the ESRD PPS.

F. Issues Related to the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA)

1. Section 131: Physician Payment, Efficiency, and Quality Improvements—Physician Quality Reporting Initiative (PQRI)

a. Program Background and Statutory Authority

The Physician Quality Reporting Initiative (PQRI) is a voluntary reporting program, first implemented in 2007, that provides an incentive payment to identified EPs (EPs) who satisfactorily report data on quality measures for covered professional services furnished during a specified reporting period. We propose to add § 414.90 to title 42 of the Code of Federal Regulations to implement the provisions of the PQRI discussed in this section of the proposed rule.

Under section 1848(k)(3)(B) of the Act, the term "EP" means any of the following: (1) A physician; (2) a practitioner described in section 1842(b)(18)(C); (3) a physical or occupational therapist or a qualified speech-language pathologist; or (4) a qualified audiologist. The PQRI was first implemented in 2007 as a result of section 101 of Division B of the Tax Relief and Health Care Act of 2006—the Medicare Improvements and Extension Act of 2006 (Pub.L. 109–432) (MIEA–TRHCA), which was enacted on December 20, 2006. The PQRI was extended and further enhanced as a result of the Medicare, Medicaid, and SCHIP Extension Act of 2007 (Pub. L. 110–173) (MMSEA), which was enacted on December 29, 2007, and the MIPPA, which was enacted on July 15, 2008. Changes to the PQRI as a result of these laws, as well as information about the PQRI in 2007, 2008, 2009, and 2010 are discussed in detail in the CY 2008 PFS proposed and final rules (72 FR 38196 through 38204 and 72 FR 66336 through 66353, respectively), CY 2009 PFS proposed and final rules (73 FR 38558 through 38575 and 73 FR 69817 through 69847, respectively), and CY 2010 PFS proposed and final rules (74 FR 33559 through 33600 and 74 FR 61788 through 61861, respectively). Further detailed information, about the PQRI program, related laws, and help desk resources, is available on the CMS Web site at *http://www.cms.gov/PQRI.*

The ACA makes a number of changes to the PQRI, including authorizing incentive payments through 2014, and requiring a penalty beginning in 2015 for EPs who do not satisfactorily report data on quality measures in the applicable reporting period for the year. The various provisions of the ACA, with respect to PQRI, are further discussed in sections VI.F.1.b., VI.F.1.k., and VI.F.1.l. of this proposed rule.

Prior to the enactment of the ACA, PQRI incentive payments were only authorized through 2010. As discussed further in sections VI.F.1.b. and VI.F.1.l. below, under section 1848(m)(1)(A) of the Act, as amended by section 3002(a) of the ACA, PQRI incentive payments are extended through 2014 for EPs that satisfactorily report data on PQRI quality measures for the applicable reporting period. Section 1848(m)(1)(B) of the Act, as amended by section 3002(a) of the ACA, authorizes a 1.0 percent incentive payment for program year 2011 and a 0.5 percent incentive payment for program years 2012 through 2014 for qualified EPs who satisfactorily submit PQRI quality measures data. Beginning in 2015, an incentive payment adjustment will be implemented for EPs who do not satisfactorily report quality measures as required by section 1848(a)(8) of the Act

and added by section 3002(b) of the ACA.

Section 3002(e) of the ACA amends section 1848(m)(5) of the Act to require the Secretary to provide timely feedback to EPs on the performance of the EP with respect to satisfactorily submitting data on quality measures. This is discussed further in section VI.F.1.l.(4) below.

Section 3002(f)(2) amends section 1848(m)(5) of the Act by adding a requirement with respect to an informal appeals process. Specifically, section 1848(m)(5)(I) of the Act, as discussed further in section VI.F.1.l.(5) below, requries that the Secretary establish and have in place an informal process by January 1, 2011, whereby EPs may seek a review of the determination that an EP did not satisfactorily submit data on quality measures for purposes of qualifying for a PQRI incentive payment.

Section 1848(m)(7) of the Act ("Additional Incentive Payment"), as added by section 10327(a) of the ACA, provides that for years 2011 through 2014, the applicable quality percent under PQRI for EPs satisfactorily reporting PQRI quality measures data will be increased by 0.5 percentage points, if the EP also meets certain requirements, including satisfactorily reporting data on quality measures for a year and having such data submitted on their behalf through a Maintenance of Certification Program (MOCP) (as defined under section 1848(m)(7) of the Act) and participating in an MOCP practice assessment more frequently than is required to qualify for or maintain board certification status. Section 1848(m)(7) of the Act ("Additional Incentive Payment") is discussed in more detail in section VI.F.1.l.(2). Furthermore, section 3002(c) of the ACA, as amended by section 10327(b) of the ACA authorizes the Secretary to incorporate participation and successful completion in an MOCP and successful completion of a qualified MOCP practice assessment into the composite of measures of quality of care furnished under the PFS payment modifier.

Also discussed further in section VI.F.1.k. below, section 10331 of the ACA requires the Secretary to develop a Physician Compare Internet web site by January 1, 2011, on which information on physicians enrolled in the Medicare program and other EPs who participate in the PQRI program would be posted. With respect to measures collected under the PQRI program, to the extent practicable, the Secretary will implement a plan by January 1, 2013, to report 2012 PQRI information on the Physician Compare Web site.

Finally, section 1848(m)(7) of the Act ("Integration of Physician Quality Reporting and EHR Reporting"), as added by section 3002 of the ACA requires that not later than January 1, 2012, the Secretary shall develop a plan to integrate reporting on quality measures under subsection (o) relating to the meaningful use of electronic health records (EHRs), as discussed further in section VI.F.1.l.(3) below.

b. Incentive Payments for the 2011 PQRI

As stated above, for years 2011 through 2014, section 3002(a) of the ACA extends the opportunity for EPs to earn a PQRI incentive payment for satisfactorily reporting PQRI quality measures. For 2011 PQRI, section 1848(m)(2)(B) of the Act, as amended by section 3002(a) of the ACA, authorizes a 1.0 percent incentive, and for 2012 through 2014, a 0.5 percent incentive, for qualified EPs who satisfactorily submit PQRI quality measures data. Regardless of the reporting mechanism, and/or the associated reporting period (both discussed in detail below) an EP chooses to report quality data for purposes of PQRI, if the EP meets the respective criteria for satisfactory reporting, the EP may receive a 1.0 percent incentive.

The PQRI incentive payment amount is calculated using estimated Medicare Part B PFS allowed charges for all covered professional services, not just those charges associated with the reported quality measures. "Allowed charges" refers to total charges, including the beneficiary deductible and coinsurance, and is not limited to the 80 percent paid by Medicare or the portion covered by Medicare where Medicare is secondary payer. Amounts billed above the PFS amounts for assigned and non-assigned claims will not be included in the calculation of the incentive payment amount. In addition, since, by definition under section 1848(k)(3)(A) of the Act, "covered professional services" are limited to services for which payment is made under, or is based on, the PFS and which are furnished by an EP, other Part B services and items that may be billed by EPs, but are not paid under or based upon the Medicare Part B PFS, are not included in the calculation of the incentive payment amount.

As mentioned above, we are proposing a number of reporting mechanisms that EPs may choose in order to participate in PQRI. Our proposals for claims-based reporting, registry-based reporting, and EHR-based reporting are discussed below with respect to the opportunity for individual EPs to participate in PQRI. For satisfactory reporting at the individual level in 2011, 1.0 percent of qualified charges would be paid at the TIN/NPI level. These proposed reporting mechanisms are addressed in section G.1.d. below. Our proposed criteria for satisfactorily reporting using the various reporting mechanisms are discussed in further detail in sections VI.F.1.e. and VI.F.1.f. below. Our proposals with respect to the reporting mechanisms and criteria for satisfactorily reporting for group practices are also addressed below, in section VI.F.1.g. Those group practices that satisfactorily report will also be paid a 1.0 percent incentive payment based upon the qualified charges for the group practice TIN.

c. Proposed 2011 Reporting Periods for Individual EPs

Under section 1848(m)(6)(C) of the Act, the "reporting period" for the 2008 PQRI and subsequent years is defined to be the entire year, but the Secretary is authorized to revise the reporting period for years after 2009 if the Secretary determines such revision is appropriate, produces valid results on measures reported, and is consistent with the goals of maximizing scientific validity and reducing administrative burden. For the 2011 PQRI, we propose the following reporting periods: (1) 12-month reporting period for claims-based reporting and registry-based reporting (that is, January 1, 2011 through December 31, 2011); (2) 12-month reporting period for EHR-based reporting (that is, January 1, 2011 through December 31, 2011; and (3) 6-month reporting period for claims-based reporting and registry-based reporting (that is, July 1, 2011 through December 31, 2011). Additionally, as discussed further below in their respective sections, we propose the 12-month reporting period for the group practice reporting option (GPRO) for both PQRI and the eRx Prescribing Incentive Program (January 1, 2011 through December 31, 2011).

The proposed 2011 PQRI reporting periods are consistent with the 2010 reporting periods. In addition, in prior program years, we received input from stakeholders in support of partial year reporting for all reporting mechanisms, to give more EPs the opportunity to begin reporting later in the year. We agree that having the same reporting periods for all mechanisms may be less complex, and may facilitate participation in 2011 PQRI for certain EPs. In an effort to be consistent with prior program years, and move in the direction of maintaining program

stability and continuing program flexibility, while increasing successful reporting of 2011 PQRI measures, we propose to retain 2010 PQRI reporting periods as described above. We invite comments on the proposed reporting periods for 2011 PQRI.

d. Proposed 2011 PQRI Reporting Mechanisms for Individual EPs

When the PQRI was first implemented in 2007, there was only 1 reporting mechanism available to submit data on PQRI quality measures. For the 2007 PQRI, EPs had to submit quality data codes (QDCs) on Medicare Part B claims (claims-based reporting). QDCs are Current Procedural Terminology (CPT) Category II codes or G-codes (where CPT Category II codes are not yet available). CPT Category II codes and G-codes are Healthcare Common Procedure Coding System (HCPCS) codes for reporting quality data. For the 2008 PQRI, we added registry-based reporting as an alternative reporting mechanism as required by section 1848(k)(4) of the Act. Under this option, EPs may submit data on PQRI quality measures to a qualified PQRI registry and request the registry to submit PQRI quality measures results and numerator and denominator data on the 2008 PQRI quality measures or measures groups. For the 2009 PQRI, we retained the 2 reporting mechanisms used in the 2008 PQRI (that is, claims-based reporting and registry-based reporting) for reporting individual PQRI quality measures and for reporting measures groups.

Finally, to promote the adoption of EHRs, and to facilitate quality measure data reporting, we sought to establish an EHR reporting option by conducting limited testing of EHR reporting for the 2008 and 2009 PQRI. This involved the submission of clinical quality data extracted from an EHR, or the EHR-based reporting mechanism. No incentive payment was available to those EPs who participated in testing the EHR-based reporting mechanism.

For the 2010 PQRI, we retained the claims-based reporting mechanism, the registry-based reporting mechanism, and established EHR reporting for a limited subset of the 2010 PQRI quality measures, as identified in Table 14 of the CY 2010 PFS final rule with comment period (74 FR 61831), contingent upon the successful completion of our 2009 EHR data submission testing process and a determination based on that testing process that accepting data from EHRs on quality measures for the 2010 PQRI was practical and feasible. In the 2010 PQRI, following the successful completion of the 2009 EHR data submission testing process, it was determined that it is practical and feasible to accept data from EHRs on quality measures for the 2010 PQRI.

For the 2011 PQRI, we are proposing to retain the claims-based reporting mechanism and the registry-based reporting mechanism. We also propose to retain the 2010 EHR-based reporting mechanism, by which we will continue to accept quality measures data extracted from a qualified EHR product for a limited subset of the proposed 2011 PQRI quality measures, as identified in Tables 55 and 56. Under the 2011 PQRI, we propose that the EHR submission is optional.

For the 2011 PQRI, we are not proposing to offer additional reporting options for individual EPs beyond those discussed above. In contrast to prior program years (2008 PQRI, 2009 PQRI, and 2010 PQRI), we believe that other options would not facilitate reporting of quality data for PQRI by EPs. However, we seek public comment on these proposals and invite suggestions as to other options that could be included in the PQRI.

We recognize that there continues to be a number of limitations associated with claims-based reporting since the claims processing system was developed for billing purposes and not for the submission of quality data. Claims submission, however, is available to all EPs. We have observed that only about half of those EPs who participated in PQRI via the claims-based reporting mechanism satisfied the criteria for satisfactory reporting (that is, reported at least 3 PQRI measures or 1–2 measures if there were fewer than 3 applicable measures, for at least 80 percent of the EP's Medicare Part B FFS patients for whom services were furnished during the reporting period to which the measure applies) and qualified for the incentive. We have also found that measures with complex specifications, such as those that require multiple diagnosis codes are not as conducive to claims-based reporting and may be associated with a greater number of invalidly reported QDCs. Similarly, when multiple measures share the same codes it may be difficult to determine which measure(s) the EP intended to report through claims. Finally, for pragmatic efficiency it is not practical to allow resubmission of claims for the sole purpose of adding QDCs. This means that claims-based reporting must be concurrent with billing.

By contrast, our experience with the registry-based reporting mechanism continues to be a favorable option, as the drawbacks discussed above do not apply. Data has shown that not only have the participation rates for registry-based reporting increased, but also satisfactory reporting, resulting in an incentive payment for EPs, has also increased. Furthermore, the available number of qualified registries has also increased since 2008, and we expect additional registries to become qualified in future years. For these reasons, we maintain that the registry-based reporting option remains viable, and furthermore, we anticipate continuing to expand this option in future years.

We also believe that EHR-based reporting continues to be a viable option for overcoming the limitations associated with claims-based reporting of quality measures, as clinical quality data is extracted from the EHR for submission. We believe further that retaining the EHR-based reporting mechanism for 2011 PQRI will continue to promote the adoption and use of EHRs and further align with the provision in the ACA related to the integration of PQRI EHR measures and the EHR incentive program measures in years after 2011, which is discussed in further detail in section VI.F.1.l.(3) below.

In summary, we propose that for 2011, an EP may choose to report data on PQRI quality measures through claims, a qualified registry (for the proposed qualification requirements for registries, see section VI.F.1.d.(4) of this proposed rule), or through a qualified EHR product (for the proposed qualification requirements for the EHR vendors and their products, see section VI.F.1.d.(5) of this proposed rule). As in previous years, depending on which PQRI individual quality measures or measures groups an EP selects, one or more of the proposed reporting mechanisms may not be available for reporting a particular 2011 PQRI individual quality measure or measures group. For example, the EHR reporting mechanism currently is not available for reporting measures groups and specifications for the electronic transmission of a measure via an EHR are not available for all of the individual PQRI measures. In addition, as discussed previously the specifications for some measures are too complex for claims-based reporting. The proposed 2011 reporting mechanisms through which each proposed 2011 PQRI individual quality measure and measures group could be reported are identified in Tables 47 and 48. We invite comments on our proposal for the 2011 reporting mechanisms.

While we propose to retain the claims-based reporting mechanism for 2011, we note that we continue to

consider significantly limiting the claims-based mechanism of reporting clinical quality measures in future program years. This limitation continues to be contingent upon there being an adequate number and variety of registries available and/or the continuation and/or expansion of the EHR reporting option. Potentially, we would continue to retain claims-based reporting in years after 2011 principally for the reporting of structural measures, such as Measure #124 Health Information Technology (HIT): Adoption/Use of Electronic Health Records (EHR), and in circumstances where claims-based reporting is the only available mechanism for certain categories of EPs to report on PQRI quality measures.

Continuing to reduce our reliance on the claims-based reporting mechanism after 2011 would allow us and EPs to continue to devote available resources towards maximizing the potential of registries and EHRs for quality measurement reporting. Both mechanisms hold the promise of more sophisticated and timely reporting of clinical quality measures. Clinical data registries allow the collection of more detailed data, including outcomes, without the necessity of a single submission contemporaneously with claims billing, which overcomes some of the limitations of the claims-based reporting mechanism. Registries can also provide feedback and quality improvement information based on reported data. Finally, clinical data registries can also receive data from EHRs, and therefore, serve as an alternative means to reporting clinical quality data extracted from an EHR. As we continue to qualify additional registries (qualified registries are listed on the CMS PQRI Web site *http://www.cms.gov/PQRI/20_AlternativeReportingMechanisms.asp#TopOfPage*), we believe there may be a sufficient number of registries by 2012 to make it possible to reduce the claims-based reporting mechanism for many measures after 2011. We again invite comments on our intent to lessen our reliance on the claims-based reporting mechanism for the PQRI program beyond 2011.

As in previous years, regardless of the reporting mechanism chosen by an EP, there is no requirement for the EP to sign up or register to participate in the PQRI. However, there may be some requirements for participation through a specific reporting mechanism that are unique to that particular reporting mechanism. In addition to the proposed criteria for satisfactory reporting of individual measures and measures groups described in section VI.F.1.e. and section VI.F.1.f., respectively, of this proposed rule, EPs must ensure that they meet all requirements for their chosen reporting mechanism for 2011.

(1) Proposed Requirements for Individual EPs Who Choose the Claims-Based Reporting Mechanism

For EPs who choose to participate in the 2011 PQRI by submitting data on individual quality measures or measures groups through the claims-based reporting mechanism, we propose the EP would be required to submit the appropriate PQRI QDCs on the professionals' Medicare Part B claims. QDCs for the EP's selected individual PQRI quality measures or measures group may be submitted to CMS at any time during 2011. Please note, however, that as required by section 1848(m)(1)(A) of the Act, all claims for services furnished between January 1, 2011 and December 31, 2011, would need to be processed by no later than February 28, 2012, to be included in the 2011 PQRI analysis.

(2) Proposed Requirements for Individual EPs Who Choose the Registry-Based Reporting Mechanism

We propose that in order to report quality data on the 2011 PQRI individual quality measures, or measures groups, through a qualified clinical registry, an EP must enter into and maintain an appropriate legal arrangement with a qualified 2011 PQRI registry. Such arrangements would provide for the registry's receipt of patient-specific data from the EP and the registry's disclosure of quality measures results and numerator and denominator data on PQRI quality measures or measures groups on behalf of the EP to CMS. Thus, the registry would act as a Health Insurance Portability and Accountability Act of 1996 (Pub. L. 104–191) (HIPAA) Business Associate and agent of the EP. Such agents are referred to as "data submission vendors." The "data submission vendors" would have the requisite legal authority to provide clinical quality measures results and numerator and denominator data on individual quality measures or measures groups on behalf of the EP for the PQRI. We propose that the registry, acting as a data submission vendor, would submit CMS-defined registry-derived measures information to our designated database for the PQRI, using a CMS-specified record layout, which would be provided to the registry by CMS.

To maintain compliance with applicable statutes and regulations, our program and our data system must maintain compliance with the HIPAA requirements for requesting, processing, storing, and transmitting data. EPs that conduct HIPAA covered transactions also would need to maintain compliance with the HIPAA requirements.

We propose that EPs choosing to participate in PQRI through the registry-based reporting mechanism for 2011 would need to select a qualified PQRI registry and submit information on PQRI individual quality measures or measures groups to the selected registry in the form and manner and by the deadline specified by the registry.

We propose to post on the PQRI section of the CMS Web site at *http://www.cms.gov* a list of qualified registries for the 2011 PQRI, including the registry name, contact information, and the 2011 measure(s) and/or measures group(s) and eRx reporting (if qualified) for which the registry is qualified and intends to report. As in the 2010 PQRI, we propose for the 2011 PQRI to post the names of the 2011 PQRI qualified registries in 3 phases, which are discussed below. In any event, even though a registry is listed as "qualified," we cannot guarantee or assume responsibility for the registry's successful submission of the required PQRI quality measures results or measures group results or required data elements submitted on behalf of a given EP.

In the first phase, we propose to post, by December 31, 2010, a list of those registries qualified for the 2011 PQRI based on the following: (1) Being a qualified registry for a prior PQRI program year that successfully submitted 2008 and/or 2009 PQRI quality measures results and numerator and denominator data on the quality measures; (2) having received a letter indicating their continued interest in being a PQRI registry for 2011 by October 31, 2010; and (3) the registry's compliance with the 2011 PQRI registry requirements. This list may be modified if any given registry fails to meet any new requirement(s) proposed for 2011. The testing of any additional requirements will be completed as soon as possible but by the end of the first quarter of 2011 at the latest. By posting this first list of qualified registries for the 2011 PQRI, we seek to make available the names of registries that can be used at the start of the 2011 reporting period.

We propose in the second phase, to add the names of the registries that were initially qualified in 2010 and submitted actual quality data on behalf of their EPs to CMS for the first time in early 2011. Successful submission of data to CMS

for the year in which a registry is qualified is the final step in the qualification process and a necessary requirement if the registry desires to continue to participate in PQRI in subsequent years. We propose that these registries also must meet any new 2011 requirements and will also undergo testing, which will be completed by the end of the first quarter of 2011 at the latest.

In the third phase, we propose to complete posting of the list of qualified 2011 registries as soon as we have completed vetting the additional registries interested in and capable of participating in the 2011 PQRI. We anticipate this will be completed no later than the summer of 2011. An EP's ability to report PQRI quality measures data and numerator and denominator data on PQRI quality measures or measures groups using the registry-based reporting mechanism should not be impacted by the complete list of qualified registries for the 2011 PQRI being made available after the start of the reporting period. First, registries would not begin submitting EPs' PQRI quality measures results and numerator and denominator data on the quality measures or measures groups to CMS until 2012. Second, if an EP decides that he or she is no longer interested in submitting quality measures data and numerator and denominator data on PQRI individual quality measures or measures group through the registry-based reporting mechanism after the complete list of qualified registries becomes available, this would not preclude the EP from attempting to meet the criteria for satisfactory reporting through another 2011 PQRI reporting mechanism, such as claims or EHR-based data submission.

In addition to meeting the above proposed requirements specific to registry-based reporting, we propose that EPs who choose to participate in PQRI through the registry-based reporting mechanism would need to meet the relevant criteria proposed for satisfactory reporting of individual measures or measures groups that all EPs must meet in order to satisfactorily report for PQRI 2011. However, in 2011, we propose not to count measures that are reported through a registry or EHR that have a zero percent performance rate. That is, if the recommended clinical quality action is not performed on at least 1 patient for a particular measure or measures group reported by the EP via a registry or EHR, we will not count the measure (or measures groups) as a measure (or measures group) reported by an EP. We propose to disregard measures (or measures groups) that are reported through a registry or EHR that have a zero percent performance rate in the 2011 PQRI because we are assuming that the measure was not applicable to the EP and was likely reported from EHR-derived data (or from data mining) and was unintentionally submitted from the registry or EHR to CMS. We also seek to avoid the possibility of intentional submission of spurious data solely for the purpose of receiving an incentive payment for reporting.

(3) Proposed Requirements for Individual EPs Who Choose the EHR-Based Reporting Mechanism

For 2011, in addition to meeting the criteria for satisfactory reporting of at least 3 individual measures, we propose the following requirements associated with EHR-based reporting: (1) Selection of a PQRI qualified EHR product; and (2) submission of clinical quality data extracted from the EHR to a CMS clinical data warehouse in the CMS-specified manner and format. These proposed requirements are identical to the 2010 requirements for individual EPs who choose the EHR-based requirements. We are proposing to retain the 2010 requirements because results from 2010 EHR data submission will not be available until 2011. A test of quality data submission from EPs who wish to report 2010 quality measure data directly from their qualified EHR product will be required and occur in early 2011 immediately followed by the submission of the EP's actual 2010 PQRI data. This entire final test/production 2010 data submission timeframe is expected to be January 2011 through March 2011. As discussed in the CY 2010 PFS final rule with comment period (74 FR 61800), throughout most of 2010, we will continue to vet newly self-nominated EHR vendor products for possible qualification for the 2011 PQRI program year. We expect to list any additional PQRI qualified EHR products by January 2011. It is expected that these newly qualified products would be able to submit 2011 PQRI data in early 2012.

Measures group reporting is not an option for EHR based quality measure reporting for 2010. We propose to continue this policy for 2011 and therefore, propose not to include measures group reporting via EHRs for the 2011 PQRI. We will receive 2010 production data in early 2011 and since this will be the first time we have an opportunity to receive direct EHR data submission for quality reporting and to calculate the results, we believe it is best not to add another reporting option using EHRs at this time. We propose that EPs who choose the EHR-based reporting mechanism for the 2011 PQRI would be required to (in addition to meeting the criteria for satisfactory reporting of individual measures)—

- Have a qualified EHR product;
- Have an active Individuals Authorized Access to CMS Computer Services (IACS) user account with a data submission role or be able to use the surrogate data submission method (if one exists) that will be used to submit clinical quality data extracted from the EHR to a CMS clinical data warehouse or another CMS approved means of securely transmitting the quality measures data to CMS such as a CMS/OCSQ approved HIE (health information exchange) if we are able to collect data from HIEs in 2012 using the NHIN (national health information network) or NHIN direct network;
- Submit a test file containing real or test clinical quality data extracted from the EHR to a CMS clinical data warehouse via an approved data submission method such as IACS, an HIE, or the NHIN between July 1, 2011 and September 30, 2011 (if technically feasible); and
- Submit a file containing the EP's 2011 PQRI clinical quality data extracted from the EHR for the entire reporting period (that is January 1, 2011 through December 31, 2011) via IACS or an acceptable surrogate (if technically feasible) between January 1, 2012, through February 28, 2012.

However, as stated above, the 2010 EHR Testing Program is still ongoing. Since we are proposing that only EHR vendors that self-nominated to participate in the 2011 EHR Testing Program and successfully complete the 2011 EHR Testing Program would be considered qualified EHR vendors for the 2011 PQRI, there is no guarantee that there will be any additionally qualified EHR vendors available for the 2011 PQRI. In addition, as we complete the 2010 EHR Testing Program and are better able to determine what is technically feasible, the actual dates on which EPs are required to submit their test files and/or to begin submitting their actual 2011 PQRI data are subject to change.

We cannot assume responsibility for the successful submission of data from an EP's EHR. Any EP who chooses to submit PQRI data extracted from an EHR should contact the EHR product's vendor to determine if the product is qualified and has been updated to facilitate PQRI quality measures data submission. Such professionals also should begin attempting submission soon after the opening of the clinical data warehouse in order to assure the

professional has a reasonable period of time to work with his or her EHR and/or its vendor to correct any problems that may preclude successful quality measures data submission through that EHR. As we indicated above, we are proposing that data submission for the 2011 PQRI would need to be completed by February 28, 2012.

The specifications for the electronic transmission of the 2011 PQRI measures, identified in Tables 55 and 56 of this proposed rule as being available for EHR-based reporting in 2011, will be posted on the Alternative Reporting Mechanisms page of the PQRI section of the CMS Web site during the summer of 2010.

(4) Proposed Qualification Requirements for Registries

In order to be "qualified" to submit quality measures results and numerator and denominator data on PQRI quality measures and measures groups on behalf of EPs pursuing a PQRI incentive for the 2008, 2009, and 2010 PQRI, we required registries to complete a self-nomination process and to meet certain technical and other requirements. For the 2010 PQRI, registries that were qualified for 2009 did not need to be "re-qualified" for 2010 unless they were unsuccessful at submitting 2009 PQRI data (that is, failed to submit 2009 PQRI data per the 2009 PQRI registry requirements). Registries that were "qualified" for 2009 and wished to continue to participate in 2010 were only required to communicate their desire to continue participation for 2010 by submitting a letter to CMS indicating their continued interest in being a PQRI registry for 2010 and their compliance with the 2010 PQRI registry requirements by March 31, 2010.

For the 2011 PQRI, we are proposing to require a self-nomination process for registries wishing to submit 2011 PQRI quality measures or measures groups on behalf of EPs for services furnished during the applicable reporting periods in 2011. We propose that the registry self-nomination process for the 2011 PQRI would be based on a registry meeting specific technical and other requirements, as discussed below.

To be considered a qualified registry for purposes of submitting individual quality measures and measures groups on behalf of EPs who choose to report using this reporting mechanism under the 2011 PQRI, we propose that all registries (new to PQRI and those previously qualified) must:

- Be in existence as of January 1, 2011;
- Have at least 25 participants by January 1, 2011;
- Provide at least 1 feedback report per year to participating EPs;
- Not be owned and managed by an individual locally-owned single-specialty group (in other words, single-specialty practices with only 1 practice location or solo practitioner practices would be prohibited from self-nominating to become a qualified PQRI registry);
- Participate in ongoing 2011 PQRI mandatory support conference calls hosted by CMS (approximately 1 call per month), including an in-person registry kick-off meeting to be held at CMS headquarters in Baltimore, MD. Registries that miss more than one meeting will be precluded from submitting PQRI data for the reporting year (2011);
- Be able to collect all needed data elements and transmit to CMS the data at the TIN/NPI level for at least 3 measures in the 2011 PQRI program (according to the posted 2011 PQRI Measure Specifications);
- Be able to calculate and submit measure-level reporting rates or the data elements needed to calculate the reporting rates by TIN/NPI;
- Be able to calculate and submit, by TIN/NPI, a performance rate (that is, the percentage of a defined population who receive a particular process of care or achieve a particular outcome) for each measure on which the TIN/NPI reports or the data elements needed to calculate the reporting rates;
- Be able to separate out and report on Medicare Part B FFS patients;
- Provide the name of the registry;
- Provide the reporting period start date the registry will cover;
- Provide the reporting period end date the registry will cover;
- Provide the measure numbers for the PQRI quality measures on which the registry is reporting;
- Provide the measure title for the PQRI quality measures on which the registry is reporting;
- Report the number of eligible instances (reporting denominator);
- Report the number of instances of quality service performed (numerator);
- Report the number of performance exclusions;
- Report the number of reported instances, performance not met (EP receives credit for reporting, not for performance);
- Be able to transmit this data in a CMS-approved XML format. We expect that this CMS-specified record layout will be substantially the same as for the 2008, 2009, and 2010 PQRI if aggregate level data is continued but will likely change if individual data elements are required, as discussed below. This layout will be provided to registries in 2011;
- Comply with a CMS-specified secure method for data submission, such as submitting the registry's data in an XML file through an IACS user account or another approved method such as over the NHIN (national health information network) if technically feasible;
- Submit an acceptable "validation strategy" to CMS by March 31, 2011. A validation strategy ascertains whether EPs have submitted accurately and on at least the minimum number (80 percent) of their eligible patients, visits, procedures, or episodes for a given measure. Acceptable validation strategies often include such provisions as the registry being able to conduct random sampling of their participant's data, but may also be based on other credible means of verifying the accuracy of data content and completeness of reporting or adherence to a required sampling method;
- Perform the validation outlined in the strategy and send the results to CMS by June 30, 2012 for the 2011 reporting year's data;
- Enter into and maintain with its participating professionals an appropriate Business Associate agreement that provides for the registry's receipt of patient-specific data from the EPs, as well as the registry's disclosure of quality measure results and numerator and denominator data on behalf of EPs who wish to participate in the PQRI program;
- Obtain and keep on file signed documentation that each holder of an NPI whose data are submitted to the registry has authorized the registry to submit quality measures and numerator and denominator data to CMS for the purpose of PQRI participation. This documentation must be obtained at the time the EP signs up with the registry to submit PQRI quality measures data to the registry and must meet any applicable laws, regulations, and contractual business associate agreements;
- Provide CMS access (if requested for validation purposes) to review the Medicare beneficiary data on which 2011 PQRI registry-based submissions are founded or provide to CMS a copy of the actual data (if requested);
- Provide the reporting option (reporting period and reporting criteria) that the EP has satisfied or chosen;
- Provide CMS a signed, written attestation statement via mail or e-mail which states that the quality measure results and any and all data including numerator and denominator data

provided to CMS are accurate and complete;

• Indicate the reporting period chosen for each EP who chooses to submit data on measures groups;

• Base reported information on measures groups only on patients to whom services were furnished during the 12-month reporting period of January through December 2011 or the 6-month reporting period of July 1, 2011 through December 31, 2011;

• Agree that the registry's data may be inspected or a copy requested by CMS and provided to CMS under our oversight authority;

• Be able to report data on all applicable measures in a given measures group on either 30 or more Medicare Part B FFS patients from January 1, 2011 through December 31, 2011, or on 80 percent of applicable Medicare Part B FFS patients for each EP (with a minimum of 15 patients during the January 1, 2011, through December 31, 2011, reporting period or a minimum of 8 patients during the July 1, 2011, through December 31, 2011, reporting period).

These proposed qualification requirements for 2011 registries are similar to the PQRI qualification requirements for registries for previous years. However, we note, that registries would no longer be permitted to include non-Medicare patients for measures group reporting (*see* section VI.F.1.f. of this proposed rule for further discussion of the criteria for satisfactory reporting of measures groups by individual EPs).

In addition, in prior years registries were permitted to develop their own algorithms to calculate measure results (that is, reporting and performance rates) from the data provided to them from their EP members. For the 2011 PQRI, we propose that all current and future registries would have to meet the following new requirements proposed for 2011:

• Use PQRI measure specifications and the CMS provided measure calculation algorithm to calculate reporting rates or performance rates unless otherwise stated if aggregated measures data is continued for 2011 PQRI registry reporting. CMS will provide registries a calculation algorithm for each measure and/or measures group they intend to report in 2011.

• Provide a calculated result using the CMS supplied algorithm and XML file for each measure that the registry intends to calculate (as described below). This applies to all registries; those that are new to the program, and those that were previously qualified. The registries will be required to show that they can calculate the proper measure results (that is, reporting and performance rates) using the CMS-supplied algorithm and send the calculated data back to CMS in the specified format.

• Provide us the individual data elements used to calculate the measures if so requested by CMS for validation purposes, if aggregated data submission is still the selected method of data collection. Registries that are subject to validation will be asked to send discrete data elements for a measure (determined by CMS) in the required data format for us to recalculate the registries' reported results. Validation will be conducted for several measures at a randomly selected sample of registries in order to validate their data submissions.

While registries allow EPs to collect data over a broader timeframe enabling us to implement more sophisticated measures in PQRI and despite their apparent success as a vehicle for quality reporting (over 90.0 percent of EPs who participated in the 2008 PQRI through registry-based reporting were incentive eligible), registry data results have been inconsistent when we have validated the registry data against claims. Even though qualified registries go through a thorough vetting and testing process, we have found differences in measure results (that is, performance rates) reported by the registries when compared to measure results calculated from claims data for the same EP. This makes it difficult for EPs to analyze their performance results for practice improvement in that the information may not be reliable and reproducible from registry to registry. This also makes possible physician comparison difficult and inconsistent. We believe there are likely several reasons for these inconsistencies, including the fact that some registries are getting their data from an EP's EHR, the use of non-Medicare patients by registries for measures groups, and the use of different algorithms by registries to calculate measures. We believe the proposed new requirements for registries discussed above will help us in validating the registry data we receive by addressing some of the reasons leading to the inconsistencies. The proposal for 2011 to retain many of the 2010 requirements while introducing some new requirements is intended to improve the registry-based reporting mechanism by capitalizing on some of the registry's existing quality improvement functions, maximizing the registry's ability to successfully submit EP's quality measure results and numerator and denominator data on PQRI individual quality measures or measures groups to CMS, and discouraging small physicians' offices or an individual EP from self-nominating to become a qualified registry. We continue to be concerned that an individual EP or a small practice does not have either the resources, or the capabilities, to successfully submit quality measures results and numerator and denominator data on PQRI individual measures or measures groups through the registry data submission process. We invite comments on the process and requirements that we propose to use to determine whether a registry is qualified to submit quality measures results (performance rates and reporting rates) and numerator and denominator data on PQRI quality measures or measures groups on an EP's behalf.

As stated previously, registries currently calculate the measure results (that is reporting and performance rates) from the data submitted to them by their EP members and send us the measure results for each participating EP, which are aggregated, nonpatient identifiable data. An advantage of this approach is that less data will need to be transmitted to CMS (since we only receive aggregated data), which means there is less data for CMS to analyze.

Another option that we considered was changing the requirements with respect to the type of data that registries send us. For 2011, we considered requiring registries, instead, to send discrete data elements for a measure (as determined by CMS) in the required data format for us to calculate the EP's measure results. Thus, the registry would be required to send CMS beneficiary-level data provided to the registry by the EP and CMS would use the data to calculate the EP's measure results (that is, reporting and performance rates). This approach is similar to the approach that was contemplated when registry data submission began in 2008 and was referred to as "Option 2" in the CY 2008 PFS proposed rule (72 FR 38203). An advantage of this approach is that it allows us to calculate the measure results and reduces the variation that occurs when registries try to aggregate their data and calculate the measure results themselves. Reducing the variation would facilitate comparison of EPs' results should we move towards public reporting of performance results in the future. Also, if the measure specifications change from year to year, this approach would require the registry to make fewer systems changes. The registry would not need to update the algorithms used to calculate the

measure's results. We invite comments on this alternative that was considered.

We propose to post the final 2011 PQRI registry requirements, including the exact date by which registries that wish to qualify for 2011 must submit a self-nomination letter and instructions for submitting the self-nomination letter, on the PQRI section of the CMS Web site at *http://www.cms.gov/PQRI* by November 15, 2010. We anticipate that new registries that wish to self-nominate for 2011 would be required to do so by January 31, 2011.

Similar to 2010 PQRI, we propose that registries that were "qualified" for 2010 and wish to continue to participate in 2011 will not need to be "re-qualified" for 2011 except to the extent that the requirements change for 2011 (as proposed above). If this occurs, we propose that all previously qualified registries would need to demonstrate that they can meet the new 2011 data submission requirements. Additionally, we propose that registries that are unsuccessful submitting 2010 PQRI data (that is, fail to submit 2010 PQRI data per the 2010 PQRI registry requirements) will need to go through a full self-nomination vetting process for 2011. Successful 2010 PQRI registries that choose to report on new or different 2011 PQRI measures would also need to qualify for these additional measures and/or methods. We also propose that registries that are "qualified" for 2010, who were successful in submitting 2010 PQRI data, and wish to continue to participate in 2011 would need to indicate their desire to continue participation for 2011 by submitting a letter to CMS indicating their continued interest in being a PQRI registry for 2011 and their compliance with the 2011 PQRI registry requirements by no later than October 31, 2010. Instructions regarding the procedures for submitting this letter will be provided to qualified 2010 PQRI registries on the 2010 PQRI registry support conference calls.

Similar to 2010 PQRI, we propose that if a qualified 2010 PQRI registry fails to submit 2010 PQRI data per the 2010 PQRI registry requirements, the registry would be considered unsuccessful at submitting 2010 PQRI data and would need to go through the full self-nomination process again to participate in the 2011 PQRI. By March 31, 2011, registries that are unsuccessful at submitting quality measures results and numerator and denominator data for 2010 would need to be able to meet the 2011 PQRI registry requirements and go through the full vetting process again. This would include CMS receiving the registry's self-nomination by March 31, 2011. As discussed further under section VI.F.2. of this proposed rule, we propose that the above registry requirements would apply not only for the purpose of a registry qualifying to report 2011 PQRI quality measure results and numerator and denominator data on PQRI individual quality measures or measures groups, but also for the purpose of a registry qualifying to submit the proposed electronic prescribing measure for the 2011 Electronic Prescribing Incentive Program. We invite comments on the proposed qualification requirements for registries for the 2011 PQRI.

(5) Proposed Qualification Requirements for EHR Vendors and Their Products

In 2010 PQRI, EHR products were listed on the PQRI section of the CMS Web site at *http://www.cms.hhs.gov/PQRI* as a "qualified" EHR product (that is, the name of the vendor software product and the version that was qualified), and were available for the product's users to submit quality data on Medicare beneficiaries to CMS directly from their system for the 2010 PQRI. This list of qualified EHR vendors and products was posted upon completion of the 2009 EHR Testing Program in January 2010.

Vendors' EHR products that were listed as "qualified" products for the 2010 PQRI were selected because the vendor self-nominated to participate in the 2009 EHR Testing Program and demonstrated that their products met the "Requirements for Electronic Health Record (EHR) Vendors to Participate in the 2009 PQRI EHR Testing Program" that were posted on the Alternative Reporting Mechanisms page of the PQRI section of the CMS Web site at *http://www.cms.gov/PQRI/20_AlternativeReportingMechanisms.asp#TopOfPage* on December 31, 2008. Additionally, a vendor's EHR system was required to be updated according to the Final 2010 EHR specifications, which were posted in January 2010 on the Alternative Reporting Mechanisms page of the PQRI section of the CMS Web site in order for an EHR vendor and its product to be qualified to submit information on 2010 PQRI measures.

The EHR vendor qualification process for the 2011 PQRI was finalized in the 2010 PFS final rule with comment period (74 FR 61800 through 61802) and is currently underway. We anticipate the EHR vendor vetting process for the 2011 PQRI will be complete in early 2011. At the conclusion of the 2011 PQRI EHR vendor vetting process, those EHR products that meet all of the 2011 EHR vendor requirements will be listed on the PQRI section of the CMS Web site as a "qualified" PQRI EHR product, which indicates that the product's users may submit quality data to CMS for the 2011 PQRI. We continue to caution there is no guarantee that there will be any qualified EHR vendors available for the 2011 PQRI. However, since seven EHR vendors and their programs were "qualified" to submit quality data to CMS directly from their EPs for 2010 PQRI reporting, we are optimistic that for 2011 PQRI and subsequent years there will continue to be multiple "qualified" EHR vendors available for EPs.

During 2011, we propose to use the same self-nomination process described in the "Requirements for Electronic Health Record (EHR) Vendors to Participate in the 2011 PQRI EHR Testing Program" posted on the PQRI section of the CMS Web site at *http://www.cms.gov/PQRI/20_AlternativeReportingMechanisms.asp#TopOfPage,* to qualify additional EHR vendors and their EHR products to submit quality data extracted from their EHR products to the CMS clinical quality data warehouse for 2012 PQRI. We propose that any EHR vendor interested in having one or more of their EHR products "qualified" to submit quality data extracted from their EHR products to the CMS clinical quality data warehouse for 2012 and subsequent years will be required to submit their self-nomination letter by January 31, 2011. Instructions for submitting the self-nomination letter will be provided in the 2012 EHR vendor requirements, which we expect to post in the 4th quarter of CY 2010. Specifically, for the 2012 PQRI, we propose that only EHR vendors that self-nominate to participate in the 2012 EHR Test Program will be considered qualified EHR vendors for the 2012 PQRI. We propose that the 2011 PQRI EHR test vendors, who, if their testing is successful, may report 2012 PQRI data to CMS, must meet the following requirements:

- Be able to collect and transmit all required data elements according to the 2012 EHR Specifications.
- Be able to separate out and report on Medicare Part B FFS patients only.
- Be able to include TIN/NPI information submitted with an EP's quality data.
- Be able to transmit this data in the CMS-approved format.
- Comply with a secure method for data submission.
- Not be in a beta test form.
- Have at least 25 active users.

Additionally, we propose that previously qualified PQRI EHR vendors and 2012 EHR test vendors must also

participate in ongoing PQRI mandatory support conference calls hosted by CMS (approximately one call per month). These requirements would apply not only for the purpose of a vendor's EHR product being qualified so that the product's users may submit data extracted from the EHR for the 2012 PQRI in 2013, but also for the purpose of a vendor's EHR product being qualified so that the product's users may electronically submit data extracted from the EHR for the electronic prescribing measure for the 2012 eRx Incentive Program in 2013. We propose that if a vendor misses more than one mandatory support call or meeting, the vendor and their product would be disqualified for the PQRI reporting year, which is covered by the call.

We propose that previously qualified vendors and new vendors will need to incorporate any new EHR measures (measures electronically-specified) added to PQRI for the reporting year they wish to maintain their PQRI qualification, as well as update their electronic measure specifications and data transmission schema should either or both change. This proposed requirement ensures that all PQRI qualified EHR products can be used by EPs to report any PQRI EHR measure. We invite comments on the proposed qualification requirements for EHR Vendors and their products for the 2012 PQRI.

e. Proposed Criteria for Satisfactory Reporting of Individual Quality Measures for Individual EPs

Section 1848(m)(3)(A) of the Act established the criteria for satisfactorily submitting data on individual quality measures as at least 3 measures in at least 80 percent of the cases in which the measure is applicable. If fewer than 3 measures are applicable to the services of the professional, the professional may meet the criteria by submitting data on 1 or 2 measures for at least 80 percent of applicable cases where the measures are reportable. This section establishes the presumption that if an EP submits quality data codes for a particular measure the measure applies to the EP.

For years after 2009, section 1848(m)(3)(D) of the Act provides additional authority to the Secretary, in consultation with stakeholders and experts, to revise the criteria for satisfactorily reporting data on quality measures. Based on this authority and the input we have previously received from stakeholders, we propose, for 2011, the following 2 criteria for claims-based reporting of individual measures by individual EPs:

- Report on at least 3 measures that apply to the services furnished by the professional; and
- Report each measure for at least 50 percent of the EP's Medicare Part B FFS patients for whom services were furnished during the reporting period to which the measure applies.

To the extent that an EP has fewer than 3 PQRI measures that apply to the EP's services, then we propose the EP would be able to meet the criteria for satisfactorily reporting data on individual quality measures by meeting the following 2 criteria:

- Report on all measures that apply to the services furnished by the professional (that is 1 to 2 measures); and
- Report each measure for at least 50 percent of the EP's Medicare Part B FFS patients for whom services were furnished during the reporting period to which the measure applies.

We also propose for 2011 the requirement that an EP who reports on fewer than 3 measures through the claims-based reporting mechanism may be subject to the Measure Applicability Validation (MAV) process, which would allow us to determine whether an EP should have reported quality data codes for additional measures. This process was applied in prior years. Under the proposed MAV process, when an EP reports on fewer than 3 measures, we propose to review whether there are other closely related measures (such as those that share a common diagnosis or those that are representative of services typically provided by a particular type of EP). We further propose that if an EP who reports on fewer than 3 measures in 2011 reports on a measure that is part of an identified cluster of closely related measures and did not report on any other measure that is part of that identified cluster of closely related measures, then the EP would not qualify as a satisfactory reporter in 2011 PQRI or earn an incentive payment. In 2011, we propose that these criteria for satisfactorily reporting data on fewer than 3 individual quality measures would apply for the claims-based reporting mechanism only.

We note that the proposed 2011 criteria for satisfactory reporting of individual quality measures through claims submission are different from the 2010 criteria, which required reporting on at least 80 percent of the EP's Medicare Part B FFS patients for whom services were furnished during the reporting period to which the measure applies.

The rationale for an 80 percent reporting rate is that this sample size would prevent selective reporting to achieve higher performance rates. However, we now have experience with claims based reporting, which has proved challenging for EPs, as discussed above. In 2007, approximately half of PQRI participants (defined as submitting at least one QDC), qualified for the PQRI incentive payment. Following the 2007 program completion, we performed an extensive review and made a number of analytic changes that we detailed in our 2007 PQRI Experience Report. For 2008, the analytic changes that we made following the completion of the 2007 program resulted in substantial increases in valid QDC reporting and the number of professionals qualifying for an incentive payment. However, the number who qualified for the incentive for the 2008 program year remained at about half of those who participated. A major reason for this was reporting at less than the required 80 percent reporting requirement. As a result of our review of the 2007 and 2008 program results, we believe that we can reduce the reporting sample requirement to 50 percent for claims-based submission without increasing the likelihood that professionals will selectively report based on whether the performance expectation of a measure is met for that particular patient. Inasmuch as we do not allow resubmission of a claim solely for the purpose of resubmission of a QDC, EPs will still need to submit QDCs contemporaneously with the claim. Therefore, we believe that even at a 50 percent reporting it would be difficult to selectively report for the purpose of better performance. Based on our review, we further believe that by reducing the reporting sample, there will be substantial increases in the portion of participating professionals who qualify for the PQRI incentive. Thus, we believe we can encourage significantly broader participation which otherwise might be deterred if physicians and other EPs do not believe that they are likely to qualify for the incentive.

As previously stated, we propose that the 50 percent reporting sample would apply only to the 2011 PQRI claims-based reporting mechanism available for reporting individual PQRI quality measures and not registry-based reporting or EHR-based reporting.

For the 2011 PQRI, we propose the following 2 criteria for satisfactory reporting of data on individual PQRI quality measures for registry-based and EHR-based reporting:

- Report on at least 3 measures that apply to the services furnished by the professional; and

• Report each measure for at least 80 percent of the EP's Medicare Part B FFS patients for whom services were furnished during the reporting period to which the measure applies.

We do not believe that reducing the reporting sample to 50 percent for registry-based reporting or EHR-based reporting would substantially impact the portion of participating professionals who qualify for the PQRI incentive. As stated previously, over 90.0 percent of EPs submitting data through registries were incentive eligible.

The proposed 2011 criteria for satisfactory reporting of data on individual PQRI quality measures are summarized in Table 47 and are arranged by reporting mechanism and reporting period. We seek public comment on these proposed reporting criteria. We are particularly interested in receiving comments on our proposal to lower the reporting criteria for claims-based reporting of individual measures from 80 percent to 50 percent. We seek input on whether 50 percent is an appropriate threshold or if another threshold would be more appropriate. We had considered lowering the reporting criteria to a higher threshold (such as 60 percent or 75 percent) but we found that differences in the performance rates at 50 percent and 80 percent reporting were not substantial while differences in the proportion of EPs satisfactorily reporting at the two different thresholds were substantial.

TABLE 47—PROPOSED 2011 CRITERIA FOR SATISFACTORY REPORTING OF DATA ON INDIVIDUAL PQRI QUALITY MEASURES, BY REPORTING MECHANISM AND REPORTING PERIOD

Reporting mechanism	Reporting criteria	Reporting period
Claims-based reporting	• Report at least 3 PQRI measures, or 1–2 measures if less than 3 measures apply to the EP; and • Report each measure for at least 50% of the EP's Medicare Part B FFS patients seen during the reporting period to which the measure applies.	January 1, 2011–December 31, 2011.
Claims-based reporting	• Report at least 3 PQRI measures, or 1–2 measures if less than 3 measures apply to the EP; and • Report each measure for at least 50% of the EP's Medicare Part B FFS patients seen during the reporting period to which the measure applies.	July 1, 2011–December 31, 2011.
Registry-based reporting	• Report at least 3 PQRI measures; and • Report each measure for at least 80% of the EP's Medicare Part B FFS patients seen during the reporting period to which the measure applies.	January 1, 2011–December 31, 2011.
Registry-based reporting	• Report at least 3 PQRI measures; and • Report each measure for at least 80% of the EP's Medicare Part B FFS patients seen during the reporting period to which the measure applies.	July 1, 2011–December 31, 2011.
EHR-based reporting	• Report at least 3 PQRI measures; and • Report each measure for at least 80% of the EP's Medicare Part B FFS patients seen during the reporting period to which the measure applies.	January 1, 2011–December 31, 2011.

Table 47 illustrates that there are a total of 5 proposed reporting options for 2011, or ways in which an EP may meet the criteria for satisfactorily reporting on individual quality measures for the 2011 PQRI. Each proposed reporting option consists of the criteria for satisfactorily reporting such data and results on individual quality measures relevant to a given reporting mechanism and reporting period. EPs may potentially qualify for an incentive as satisfactorily reporting individual quality measures under more than one of the proposed reporting criteria, proposed reporting mechanism, and or for more than one proposed reporting period; however, only one incentive payment will be made to an EP based on the longest reporting period for which the EP satisfactorily reports.

f. Proposed Criteria for Satisfactory Reporting Measures Groups for Individual EPs

We also propose that individual EPs have the option to report measures groups instead of individual quality measures to qualify for the 2011 PQRI incentive, using claims or registries. As stated previously, we do not propose to make the EHR-based reporting mechanism available for reporting on measures groups in 2011. The criteria that we propose for 2011 for satisfactory reporting of measures groups through claims-based or registry-based reporting for either the 12-month or 6-month reporting period are as follows: (1) For claims-based reporting, the reporting of at least 1 measures group for at least 50 percent of patients to whom the measures group applies, during the reporting period; or (2) for registry-based reporting, the reporting of at least 1 measures group for at least 80 percent of patients to whom the measures group applies during the reporting period. EPs, for both claims-based and registry-based reporting under these criteria, would be required to submit data on a minimum of 15 unique Medicare Part B FFS patients for the 12-month reporting period and a minimum of 8 Medicare Part B FFS patients for the 6-month reporting period. We note that the proposed criteria for 2011 are the same criteria as for 2010 PQRI reporting on measures groups, with the exception of our reducing the reporting sample from 80 percent to 50 percent for claims-based submission of measures groups. We propose to reduce the reporting sample requirement for claims-based submission of measures groups for the same reasons discussed in section VI.F.1.e. of this proposed rule for claims-based submission of individual measures. In other words, we believe that reducing the reporting sample from 80 percent to 50 percent will substantially increase the portion of participating EPs who qualify for a 2011 PQRI incentive without encouraging EPs to selectively report only those cases that will increase their performance rates. Additionally for 2011, we propose to retain the criteria, available only for the 12-month reporting period, based on reporting on at least 1 measures group for at least 30 patients for whom

services were furnished between January 1, 2011, and December 31, 2011, to whom the measures group applies. We also propose that the 30 patients on which an EP would need to report a measures group for 2011 would not need to be consecutive patients. We propose that the EP may report on any 30 unique patients seen during the reporting period to which the measures group applies. As in previous years, we propose that for 2011, the patients, for claims-based reporting, would be limited to Medicare Part B FFS patients.

Finally, for registry-based reporting in 2011, in contrast to prior program years, we propose to require that the minimum patient numbers or percentages must be met by Medicare Part B FFS patients exclusively and not non-Medicare Part B FFS patients. The reason for this is the difficulty of analyzing data we receive from registries, where patients other than Medicare Part B FFS patients are included. For example, under our proposal we would be able to compare claims data with registry submitted data to compare patients in the denominator of the measure for validation. The proposed 2011 criteria for satisfactory reporting of data on measures groups are summarized in Table 48 and are arranged by reporting mechanism and reporting period.

TABLE 48—PROPOSED 2011 CRITERIA FOR SATISFACTORY REPORTING ON MEASURES GROUPS, BY REPORTING MECHANISM AND REPORTING PERIOD

Reporting mechanism	Reporting criteria	Reporting period
Claims-based reporting	• Report at least 1 PQRI measures group; • Report each measures group for at least 30 Medicare Part B FFS patients.	January 1, 2011–December 31, 2011.
Claims-based reporting	• Report at least 1 PQRI measures group; • Report each measures group for at least 50% of the EP's Medicare Part B FFS patients seen during the reporting period to whom the measures group applies; and • Report each measures group on at least 15 Medicare Part B FFS patients seen during the reporting period to which the measures group applies.	January 1, 2011–December 31, 2011.
Claims-based reporting	• Report at least 1 PQRI measures group; • Report each measures group for at least 50% of the EP's Medicare Part B FFS patients seen during the reporting period to whom the measures group applies; and • Report each measures group on at least 8 Medicare Part B FFS patients seen during the reporting period to which the measures group applies.	January 1, 2011–December 31, 2011.
Registry-based reporting	• Report at least 1 PQRI measures group; • Report each measures group for at least 30 Medicare Part B FFS patients.	January 1, 2011–December 31, 2011.
Registry-based reporting	• Report at least 1 PQRI measures group; • Report each measures group for at least 80% of the EP's Medicare Part B FFS patients seen during the reporting period to whom the measures group applies; and • Report each measures group on at least 15 Medicare Part B FFS patients seen during the reporting period to which the measures group applies.	January 1, 2011–December 31, 2011.
Registry-based reporting	• Report at least 1 PQRI measures group; • Report each measures group for at least 80% of the EP's Medicare Part B FFS patients seen during the reporting period to whom the measures group applies; and • Report each measures group on at least 8 Medicare Part B FFS patients seen during the reporting period to which the measures group applies.	January 1, 2011–December 31, 2011.

As illustrated in Table 48, there are a total of 6 proposed reporting options, or ways in which EPs may meet the criteria for satisfactory reporting of measures groups for the 2011 PQRI. Each proposed reporting option consists of the criteria for satisfactory reporting relevant to a given reporting mechanism and reporting period. As stated previously, EPs may potentially qualify as satisfactorily reporting for 2011 PQRI on measures groups under more than one of the reporting criteria, reporting mechanisms, and/or for more than one reporting period; however, only one incentive payment will be made to an EP based on the longest reporting period for which the EP satisfactorily reports. Similarly, an EP could also potentially qualify for the PQRI incentive payment by satisfactorily reporting both individual measures and measures groups. However, only one incentive payment will be made to the EP based on the longest reporting period for which the EP satisfactorily reports. We invite comments on the proposed criteria for satisfactory reporting measures groups for individual EPs.

g. Proposed Reporting Option for Satisfactory Reporting on Quality Measures by Group Practices

(1) Background and Authority

Section 1848(m)(3)(C)(i) of the Act requires the Secretary to establish and have in place a process by January 1, 2010 under which EPs in a group practice (as defined by the Secretary) shall be treated as satisfactorily submitting data on quality measures

under PQRI if, in lieu of reporting measures under PQRI, the group practice reports measures determined appropriate by the Secretary, such as measures that target high-cost chronic conditions and preventive care, in a form and manner, and at a time specified by the Secretary. Section 1848(m)(3)(C)(ii) of the Act requires that this process provide for the use of a statistical sampling model to submit data on measures, such as the model used under the Medicare Physician Group Practice (PGP) demonstration project under section 1866A of the Act. A group practice reporting option (GPRO) was established for the 2010 PQRI in the CY 2010 PFS final rule with comment period (74 FR 61807 through 61811).

In addition, payments to a group practice under section 1848(m) of the Act by reason of the process proposed herein shall be in lieu of the PQRI incentive payments that would otherwise be made to EPs in the group practice for satisfactorily submitting data on quality measures (that is, prohibits double payments). Therefore, for the 2011 PQRI, we propose to continue to allow a group practice, as a whole (that is, for the TIN(s)), to participate in 2011 PQRI and to submit PQRI quality measures for 2011 and qualify to earn an incentive. If, however, an individual EP is affiliated with a group practice participating in the GPRO and the group practice satisfactorily reports under the GPRO, the EP will be considered as satisfactorily reporting PQRI quality measures data at the individual level under that same TIN(s) (that is, for the same TIN/NPI combination).

(2) Definition of "Group Practice"

As stated above, section 1848(m)(3)(C)(i) of the Act authorizes the Secretary to define "group practice." For purposes of determining whether a group practice satisfactorily submits PQRI quality measures data, we propose that for the 2011 PQRI a "group practice" would consist of a physician group practice, as defined by a TIN, with 2 or more individual EPs (or, as identified by NPIs) who have reassigned their billing rights to the TIN. This proposed definition for group practice is different from the 2010 PQRI definition of group practice in that we propose to change the minimum group size from 200 to 2 to enable more group practices to participate in the PQRI GPRO in 2011.

Generally, our intent continues to be to build on an existing quality reporting program that group practices may already be familiar with by modeling some aspects of the the PQRI GPRO after the PGP demonstration while concurrently expanding the availability of the GPRO to more group practices. Since the PGP demonstration is a demonstration program for large group practices, one of the requirements for group practices participating in the PGP demonstration is for each practice to have 200 or more members. To be consistent with the PGP demonstration, we propose one GPRO process, which we refer to as "GPRO I" that would be available only to similar large group practices. For group practices that have fewer than 200 members, we propose, if technically feasible, an alternative GPRO process which we refer to as "GPRO II". We invite comments on the proposed definition of "group practice" and our proposal to expand the definition of group practice to include groups with 2 or more members.

In order to participate in the 2011 PQRI through the GPRO, we propose to require group practices to complete a self-nomination process and to meet certain technical and other requirements. The proposed self-nomination process and participation requirements for GPRO I and GPRO II are separately discussed below.

As discussed further in section VI.F.2. of this proposed rule, participation in the Electronic Prescribing (eRx) Incentive Program is voluntary for group practices selected to participate in the PQRI group practice reporting option. However, for 2011, we propose that group practices must participate in the PQRI group practice reporting option in order to be eligible to participate in the eRx group practice reporting option for 2011 PQRI. This is the current requirement under the 2010 PQRI and ERx Incentive programs. Therefore, we propose that a group practice that wishes to participate in both the PQRI group practice reporting option and the electronic prescribing group practice reporting option must notify CMS of its desire to do so at the time that it self-nominates to participate in the PQRI group practice reporting option.

In addition, we propose that group practices that are participating in Medicare demonstration projects, as approved by the Secretary, would also be considered group practices for purposes of the 2011 PQRI GPRO. Specifically, for the 2011 PQRI we propose to deem group practices participating in the PGP, Medicare Care Management Performance (MCMP), and EHR demonstrations to be participating in the PQRI GPRO since many of the measures being reported under these demonstration programs are similar to PQRI measures. As a result, such practices do not need to separately self-nominate to participate in the PQRI GPRO, although it would be necessary for such groups to meet the requirements for incentive qualification under their respective approved demonstration project. For example, the MCMP demonstration sites would be required to meet the requirements for earning a PQRI incentive specified under the MCMP demonstration.

For purposes of the 2011 eRx Incentive Program, however, we propose that group practices participating in CMS-approved demonstration projects discussed above would be required to meet the proposed 2011 eRx Incentive Program GPRO requirements or the proposed 2011 eRx Incentive Program requirements for individual EPs in order to qualify for a 2011 eRx incentive. Such group practices would not be able to qualify for a 2011 eRx incentive via participation in an approved demonstration project since there is no eRx requirement under these demonstrations.

(3) Proposed Process for Physician Group Practices To Participate as Group Practices and Criteria for Satisfactory Reporting

(i) Group Practice Reporting Option for Physician Group Practices With 200 or More NPIs–GPRO I

As stated above, we propose that group practices interested in participating in GPRO I must self-nominate to do so. Specifically, we propose that the 2011 PQRI self-nomination letter for group practices interested in participating in the 2011 PQRI through the GPRO I must be accompanied by an electronic file submitted in a format specified by CMS (such as, a Microsoft Excel file) that includes the group practice's TIN(s) and name of the group practice, the name and e-mail address of a single point of contact for handling administrative issues, as well as the name and e-mail address of a single point of contact for technical support purposes. This information was also required as part of the self-nomination process for the 2010 PQRI GPRO.

One change that we propose from the 2010 PQRI GPRO is that we propose for 2011 PQRI GPRO I to validate that the group practice consists of a minimum of 200 NPIs and we will supply group practices with this list. We invite comment on this proposed change for self nomination criteria. In addition, we propose that the self-nomination letter must also indicate the group practice's compliance with the following requirements:

- Have an active IACS user account;

- Agree to attend and participate in all mandatory GPRO training sessions; and
- Have billed Medicare Part B on or after January 1, 2010 and prior to October 29, 2010.

We propose to post the final 2011 PQRI participation requirements for group practices, including instructions for submitting the self-nomination letter and other requested information, on the PQRI section of the CMS Web site at *http://www.cms.gov/PQRI* by November 15, 2010. Group practices that wish to self-nominate for 2011 would be required to do so by January 31, 2011. Upon receipt of the self-nomination letters we propose to assess whether the participation requirements were met by each self-nominated group practice using 2010 Medicare claims data. We do not propose to preclude a group practice from participating in the GPRO I if we discover, from analysis of the 2010 Medicare claims data, that there are some EPs (identified by NPIs) that are not established Medicare providers (that is, have not billed Medicare Part B on or after January 1, 2010 and prior to October 29, 2010) as long as the group has at least 200 established Medicare providers. NPIs who are not established Medicare providers, however, would not be included in our incentive payment calculations. We propose that group practices that were selected to participate in the 2010 PQRI GPRO would automatically be qualified to participate in the 2011 PQRI GPRO I and would not need to complete the 2011 PQRI GPRO I self-nomination process.

For physician groups selected to participate in the PQRI GPRO I for 2011, we propose to retain the existing 12-month reporting period beginning January 1, 2011. We propose that group practices participating in GPRO I submit information on these measures using a data collection tool based on the GPRO Tool used in 2010 PQRI GPRO by 36 participating group practices to report quality measures under PQRI. The 2010 PQRI GPRO Tool will be updated as needed to include the 2011 PQRI GPRO I measures. We believe that use of the GPRO data collection tool allows group practices the opportunity to calculate their own performance rates for reporting quality measures. We propose that physician groups selected to participate in the 2011 PQRI through the GPRO I report on a proposed common set of 26 NQF-endorsed quality measures that are based on measures currently used for 2010 PQRI GPRO. We believe these measures target high-cost chronic conditions and preventive care. The proposed quality measures are identified in Table 71.

The proposed 2011 PQRI GPRO I quality measures are based on a subset of the Doctor's Office Quality (DOQ) quality measures set developed under the direction of CMS and were used in the PGP and/or MCMP demonstration programs, and have subsequently been used in 2010 PQRI GPRO. Contributors to the development of the DOQ measures set included the American Medical Association's Physician Consortium for Performances Improvement (AMA–PCPI), the American College of Cardiology (ACC), the American Heart Association (AHA), the National Diabetes Quality Improvement Alliance, the National Committee for Quality Assurance (NCQA), and the Veterans Health Administration (VA). In most instances, these measures overlap with the proposed 2011 PQRI measures for reporting by individual EPs, however, there are some measures proposed for GPRO I that are not proposed for individual EPs.

These quality measures are grouped into four disease modules: coronary artery disease; diabetes; heart failure; and preventive care services. On February 2, 2010, we hosted a 2011 PQRI listening session to solicit input on a number of aspects of the PQRI, including measures for the 2011 PQRI GPRO. Since we received no suggestions for additional disease modules for the GPRO I from this listening session, we are not proposing any additional measures for the 2011 PQRI GPRO I. We invite comments on our proposal to use the 26 measures identified in Table 71 for inclusion in 2011 PQRI GPRO I. We specifically request comments on whether these measures can and/or should be expanded for the group practice reporting option for future program years. Disease modules and measures should address high cost conditions and/or a gap in care. Further detail on criteria for measure selection can be found in section VI.F.1.h. below.

The proposed process that group practices will be required to use to report data on quality measures for the 2011 PQRI GPRO I and the proposed associated criteria for satisfactory reporting of data on quality measures by group practices, are summarized in Table 49. Under our proposed 2011 program, group practices participating in PQRI GPRO I as a group practice would be required to report on all of the measures listed in Table 71.

As part of the data submission process for 2011 GPRO I, we propose that during 2012, each group practice would be required to report quality measures with respect to services furnished during the 2011 reporting period (that is, January 1, 2011, through December 31, 2011) on an assigned sample of Medicare beneficiaries. We propose to analyze the January 1, 2011 through October 31, 2011 (that is, the last business day of October 2011) National Claims History (NCH) file to assign Medicare beneficiaries to each physician group practice using a patient assignment methodology modeled after the patient assignment methodology used in the PGP demonstration. Based on our desire to model the PQRI GPRO I after the PGP demonstration, we will also consider applying any refinements made to the patient assignment methodology used in the PGP demonstration prior to January 1, 2011 to the 2011 PQRI GPRO I. Assigned beneficiaries would be limited to those Medicare FFS beneficiaries with Medicare Parts A and B for whom Medicare is the primary payer. Assigned beneficiaries would not include Medicare Advantage enrollees. A beneficiary would be assigned to the physician group that provides the plurality of a beneficiary's office or other outpatient evaluation and management allowed charges (based on Medicare Part B claims submitted for the beneficiary for dates of services between January 1, 2011, and October 31, 2011). Beneficiaries with only 1 visit to the group practice between January 1, 2011 and October 31, 2011, would be eliminated from the group practice's assigned patient sample for purposes of 2011 PQRI GPRO I. For inclusion in the sample, assigned beneficiaries would be required to have at least 2 visits to the group practice between January 1, 2011, and October 31, 2011.

Once the beneficiary assignment has been made for each physician group during the fourth quarter of 2011, we propose to provide each physician group selected to participate in the PQRI GPRO I with access to a database (that is, a data collection tool) that will include the group's assigned beneficiary samples and the quality measures listed in Table 71. We propose to pre-populate the data collection tool with the assigned beneficiaries' demographic and utilization information based on all of their Medicare claims data. We intend to provide the selected physician groups with access to this pre-populated database by no later than the first quarter of 2012. The physician group would be required to populate the remaining data fields necessary for capturing quality measure information on each of the assigned beneficiaries. Numerators for each of the quality measures would include all

beneficiaries in the denominator population who also satisfy the quality performance criteria for that measure. Denominators for each quality measure would include a sample of the assigned beneficiaries who meet the eligibility criteria for that disease module or each preventive care quality measure. All of the assigned patients' inpatient, outpatient, and physician claims would be used in determining clinical eligibility for each module, regardless if they were submitted by the group practice or other providers. Identical to the sampling method used in the PGP demonstration, we propose that the random sample must consist of at least 411 assigned beneficiaries. If the pool of eligible assigned beneficiaries is less than 411, then the group practice must report on 100 percent, or all, of the assigned beneficiaries to satisfactorily participate in the group practice reporting option. For each disease module or preventive care measure, the physician group would be required to report information on the assigned patients in the order in which they appear in the group's sample (that is, consecutively). These proposed reporting criteria are identical to the reporting criteria used in the PGP demonstration and in the 2010 PQRI GPRO. By building on an existing demonstration program that large group practices may already have experience with, we hope to minimize burden on both group practices and CMS.

TABLE 49—2011 PROPOSED PROCESS FOR PHYSICIAN GROUP PRACTICES TO PARTICIPATE AS GROUP PRACTICES AND CRITERIA FOR SATISFACTORY REPORTING OF DATA ON QUALITY MEASURES BY GROUP PRACTICES FOR GPRO I

Reporting mechanism	Reporting criteria	Reporting period
A pre-populated data collection tool provided by CMS.	• Report on all measures included in the data collection tool (26 measures); and • Complete the tool for the first 411 consecutively ranked and assigned beneficiaries in the order in which they appear in the group's sample for each disease module or preventive care measure. If the pool of eligible assigned beneficiaries is less than 411, then report on 100% of assigned beneficiaries.	January 1, 2011–December 31, 2011.

For 2011, we propose an exclusive reporting mechanism for EPs identified as part of the group practice with respect to the group as identified by the TIN. However, EPs who are part of the group practice, and who separately practice with respect to another TIN to which the EP has reassigned benefits, could separately qualify as individual EPs with respect to the other practice (TIN). As discussed above, we propose that each physician group selected to participate in the PQRI GPRO I would have access to a data base (that is a data collection tool) that would include the assigned beneficiary sample and the quality measures. This data collection tool was originally developed for use in the PGP demonstration, updated for use in the MCMP demonstration, and will continue to be updated as needed for use in the PQRI. The assigned beneficiaries' demographic and utilization information is pre-populated based on claims data. We anticipate being able to provide the selected physician groups with access to this pre-populated database by the first quarter of 2012. The physician group would be required to populate the remaining data fields necessary for capturing quality measure information on each of the assigned beneficiaries. Numerators for each of the quality measures would include all beneficiaries in the denominator population who also satisfy the quality performance criteria for that measure. Denominators for each quality measure would include a sample of the assigned beneficiaries who meet the eligibility criteria for that quality measure module or preventive care measure.

We expect that use of the PQRI GPRO I data collection tool allows group practices the opportunity to calculate their own performance rates for reporting quality measures. This provides group practices with the chance to preview their information prior to the public posting of performance data should we choose to do so in future program years.

We invite comment on our proposal for 2011 to retain 200 as the number of NPIs for a TIN required for each group practice under the GPRO I. We also invite comment on our proposal to allow those "qualified" for 2010 GPRO to be rolled over for automatic qualification for 2011 GPRO I.

(ii) Group Practice Reporting Option for Group Practices of 2—199 NPIs—GPRO–II

As discussed previously, section 1848(m)(3)(C) of the Act authorizes us to define the term "group practice" and requires us to establish a process under which EPs in group practices shall be treated as satisfactorily submitting data on PQRI quality measures, but is not prescriptive with regard to the characteristics of this process. Although for 2010 we did not provide a process for groups of less than 200 NPIs to report under the GPRO, we believe that there are significant potential benefits to allowing reporting at the group level generally. At present, for example, where more than one individual professional sees the same patient, each may have to report separately with respect to the patient even for processes of care that do not need to be repeated at each visit. Thus, there is significant duplication of reporting. Additionally, while we are not proposing to report performance information with respect to the 2011 PQRI GPRO, the public reporting of performance information at the group level raises substantially fewer issues, such as privacy, and the potential adverse impact of public reporting on the individual physician, and the lack of sufficient numbers of patients for any one physician to meaningfully differentiate performance results. Finally, we believe that many process-of-care measures depend on general functioning of the practice, such as in coordinating and tracking care, as opposed to a quality of a particular professional in the group, particularly for measures related to prevention and care of chronic illnesses.

As a result, based on our authority under section 1848(m)(3)(C) of the Act to establish a process for group practices and our discretion to define "group practice" under this section we are proposing multiple processes for reporting at the group level for groups of EPs of all sizes for purposes of qualifying for a PQRI incentive payment. The proposed process for groups of 200 or more EPs, known as GPRO I, was discussed above. If technically feasible, we propose a new group practice reporting option (GPRO

II) for groups of 2–199 NPIs in a TIN for 2011. For GPRO II in 2011, we propose to require groups of EPs who decide to report as a group to self-nominate. The self-nomination process would consist of sending a letter with the name of the group, the TIN, an e-mail address of the contact person, and the names and NPIs of all of the EPs practicing under that group's TIN. We do not propose to preclude a group practice from participating in the GPRO II if we discover, from analysis of the 2010 Medicare claims data, that there are some EPs (identified by NPIs) that are not established Medicare providers (that is, have not billed Medicare Part B on or after January 1, 2010 and prior to October 29, 2010) as long as the group has at least 2 established Medicare providers. NPIs who are not established Medicare providers, however, would not be included in our incentive payment calculations.

We also propose that self-nominating groups would need to indicate in this letter if the group intends to report as a group for the eRx Incentive Program and the reporting mechanism the group intends to use to report as a group for the eRx Incentive Program. We would require that this information be sent to: GPRO II, c/o CMS, 7500 Security Blvd., Mail Stop S3–02–01, Baltimore, MD 21244, and must be postmarked by January 31, 2011, for consideration in the program.

Since GPRO II would be a new process available to groups in 2011, we propose to initially pilot the GPRO II process with a limited number of groups. We propose to select the first 500 groups that meet the proposed eligibility requirements to participate in the 2011 GPRO II. We propose to use the postmark to determine the order in which groups self-nominated for GPRO II. We propose to consider only self-nomination letters postmarked between January 3, 2011 and January 31, 2011. We do not propose to consider letters postmarked prior to January 3, 2011 to prevent groups from self-nominating before the GPRO II requirements are finalized and to discourage groups from self-nominating for GPRO II prior to reviewing the final GPRO II requirements.

For purposes of quality data submission, we propose, for the GPRO II, to allow EPs to submit their data through claims or through a qualified GPRO registry to the extent registries are technically capable of collecting, calculating and transmitting the required data to CMS and that we are able to accept such data from registries.

For GPRO II, as discussed in greater detail below, we propose that in addition to reporting a specific number of individual measures, the group would have to report one or more proposed 2011 PQRI measures groups identified in Tables 57 through 70 of this proposed rule depending on the size of the group practice. In this way we seek to address a concern expressed regarding PQRI for individual reporting that EPs are able to select any three of a large array of measures making comparison data difficult whether for the same individual or among professionals. We believe that by having a smaller set of measures to choose from, we hope to focus on topics of major significance, and make the information obtained with respect to quality more meaningful.

For purposes of satisfying the requirements under section 1848(m)(3)(C)(i) of the Act for groups of 2–199 NPIs, we propose that in order to be treated as satisfactorily reporting under GPRO II, the group practice would be required to report on 50 percent or more (if submitting through claims) of all Medicare Part B patients who fit into the measures group denominator or 80 percent or more of Medicare patients if using a registry to report.

Additionally, to earn a PQRI incentive payment for all allowed Medicare Part B services that are provided by the TIN, we propose that a group practice must report on three to six individual 2011 PQRI measures, depending on the size of the group. We propose that the group practice may select from among any of the 2011 PQRI measures on which to submit data, provided the measures selected are not duplicated in the measures group(s) reported.

We propose that, to satisfactorily report individual PQRI measures, a group must report each measure at the same rate (percentage) as determined by the method of submission as individual EPs. For example, if reporting via claims, to satisfactorily report individual measures, each measure would need to be reported on at least 50 percent of eligible Medicare Part B FFS patients.

An alternative which we considered was to require that the individual measures be selected from a more limited set of measures, such as measures closely linked to improved population health, or other measures perceived to address the greatest potential benefit from improved performance. While there are potential benefits to this approach of encouraging broad reporting of a more limited set of measures, we are concerned that any limited measures set may not be applicable to all groups, such as single specialty groups. Further we are concerned that this would diminish an important strength of the overall PQRI measures set, which is its broad applicability. We invite comments on the potential benefits of a core measures set, as opposed to allowing groups to select from among the array of PQRI measures, what measures should be included in that set, whether there are any PQRI measures that all professionals in group practices should report, where the measure applies to patients of the group.

A second alternative that we considered was to require group practices, as part of the self-nomination process, to designate whether they were a multispecialty group with primary care, a multispecialty group without primary care, or a single specialty group, and if so, the specialty. Depending on what type of specialty the group is, we would identify a set of PQRI measures pertaining to the group's specialty and require the group practice to report on the identified set of specialty-specific PQRI measures. We invite comments on the potential benefits of this approach as opposed to allowing groups to select from among the array of PQRI measures or requiring all groups, regardless of specialty, to report on the same core set of measures.

Table 50 sets forth the proposed criteria for satisfactory reporting under the 2011 PQRI GPRO II and requirements for each group based on their respective group size (number of EPs).

If a group does not satisfactorily report as a GPRO II group, we propose to analyze the individual professional's data to see if they satisfactorily reported at the individual TIN/NPI level. If the EP satisfactorily reported at the individual level, he or she would receive a PQRI incentive, which is calculated using the EP's TIN/NPI Medicare Part B allowed charges.

If a group practice participating in the 2011 PQRI GPRO II wants to also participate in the 2011 eRx Incentive Program as a small group, we propose that the group would need to indicate that preference in their self-nomination letter and would need to report on the number of unique encounters based on their group size as listed in Table 50 below. For the 2011 eRx reporting for GPRO II, we propose the following reporting mechanisms: claims, a GPRO eRx qualified registry or a GPRO qualified EHR. As with the 2011 eRx Incentive Program for individual EPs and the 2011 eRx GPRO I, at least 10 percent of a GPRO II group's charges would need to be comprised of codes in the denominator of the electronic

prescribing measure and the group would need to use an electronic prescribing system that meets the requirements of the 2011 eRx measure. Similar to proposed GPRO I, if a GPRO II group self-nominates to report the eRx measure as a group, we propose that all members of the group practicing under the group's TIN would be ineligible to report as an individual electronic prescriber.

TABLE 50—2011 PROPOSED PROCESS FOR PHYSICIAN GROUP PRACTICES TO PARTICIPATE AS GROUP PRACTICES AND CRITERIA FOR SATISFACTORY REPORTING OF DATA ON QUALITY MEASURES BY GROUP PRACTICES FOR GPRO II

Group size (number of EPs)	Number of MGs required to be reported	Percent of Medicare Pt B patients in denominator for successful reporting via claims	Percent of Medicare Pt B patients in denominator for successful reporting via registries	Minimum number of patients in each measures group	Number of required individual measures to report	Required number of unique visits where an e-prescription was generated to be a successful electronic prescriber
2–10	1	50%	80%	35	3	75
11–25	1	50%	80%	50	3	225
26–50	2	50%	80%	50	4	475
51–100	3	50%	80%	60	5	925
101–199	4	50%	80%	100	6	1875

The required number of unique visits where an electronic prescription was generated to be a successful electronic prescriber was determined by taking the midpoint of the group size range and multiplying the number by 12.5 and then rounding this number to the nearest multiple of 5. This is consistent with how the 2010 eRx GPRO requirements, which requires that the group practice report that at least 1 prescription during an encounter was generated and transmitted using a qualified electronic prescribing system in at least 2,500 instances during the reporting period, were derived. For the 2010 eRx Incentive Program, we assumed that half the members of an average sized-group (which we assumed to be 200 EPs) do not furnish the services represented by the electronic prescribing measure's denominator codes, and thus, would not have an opportunity to report the electronic prescribing measure. For the remaining EPs within the group who do have an opportunity to report the electronic prescribing measure, we sought to hold those EPs to the same standard as individual EPs. Thus, for an average 200 EP group, each of the 100 EPs with an opportunity to report the electronic prescribing measure would be expected to have 25 unique electronic prescribing events for a total of 2,500 unique electronic prescribing events for the group.

We propose posting the information required by section 1848(m)(5)(G) of the Act for those group practices that are selected to participate in the 2011 PQRI under the GPRO II. That is, we propose to post the names of group practices that satisfactorily report under GPRO II as we propose to do for group practices that satisfactorily report under the 2011 PQRI GPRO I.

We invite comment on our proposal to add this second option (GPRO II) for group practices to report PQRI quality data measures and the GPRO II process. We also invite comments regarding our proposal to publicly report GPRO II information with respect to satisfactory PQRI participation.

(iii) Alternatives Considered for Expanding the GPRO in 2011

In addition to the GPRO II, another option that we considered for expanding the GPRO for 2011 was to expand GPRO I to include smaller group practices. Specifically, we considered allowing groups of 100 or more EPs to participate in the PQRI under GPRO using the same reporting mechanism and reporting criteria required under the 2010 PQRI GPRO and proposed for the 2011 PQRI GPRO I. We also considered modifying the definition of "group practice" to include groups that have and use multiple TINs. We invite comments on these alternatives.

h. Statutory Requirements and Other Considerations for 2011 PQRI Measures

(1) Statutory Requirements for 2011 PQRI Measures

Under section 1848(k)(2)(C)(i) of the Act, the PQRI quality measures shall be such measures selected by the Secretary from measures that have been endorsed by the entity with a contract with the Secretary under subsection 1890(a) of the Act (that is, the National Quality Forum, or NQF). However, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the NQF, section 1848(k)(2)(C)(ii) of the Act authorizes the Secretary to specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary, such as the AQA alliance. In light of these statutory requirements, we believe that, except in the circumstances specified in the statute, each proposed 2011 PQRI quality measure would need to be endorsed by the NQF. The NQF endorsement status of each of the proposed measures is identified for each measure. The basis for including certain measures that are not endorsed by NQF is discussed further below.

Additionally, section 1848(k)(2)(D) of the Act requires that for each 2011 PQRI quality measure, "the Secretary shall ensure that EPs have the opportunity to provide input during the development, endorsement, or selection of measures applicable to services they furnish." We believe that this requirement is met for all proposed measures in several ways. Measure developers generally include a public comment phase in their measure development process. As part of the measures development process, measures developers typically solicit public comments on measures that they are testing in order to determine whether additional refinement of the measure(s) is needed prior to submission for consensus endorsement. For example, information on the measure development process, employed by us when CMS or our contractor is the measure developer, is available in the "Measures Management System Blueprint" found on the CMS Web site at *http://www.cms.gov/apps/QMIS/mmsBlueprint.asp*. EPs also have the opportunity to provide input on a measure as the measure is being vetted

through the NQF consensus endorsement process. The NQF employs a public comment period for measures vetted through its consensus endorsement process (and previously, for the AQA consensus adoption process). Additionally, we have invited suggestions for measures during the last 3 years, including most recently via the Listening Session held at CMS on February 2, 2010. The goal of the Listening Session was to discuss and solicit feedback on suggestions received on individual quality measures and measures groups for possible inclusion in the proposed set of quality measures for use in the 2011 PQRI program. Finally, as in previous program years, EPs also have an opportunity to provide input on the measures proposed for inclusion in the 2011 PQRI through this proposed rule, which provides a 60-day comment period. Accordingly, with regard to the 2011 PQRI, we believe we have satisfied this requirement in multiple ways.

The statutory requirements under section 1848(k)(2)(C) of the Act, subject to the exception noted above, require only that the measures be selected from measures that have been endorsed by the entity with a contract with the Secretary under section 1890(a) (that is, the NQF) and are silent with respect to how the measures that are submitted to the NQF for endorsement were developed. The basic steps for developing measures applicable to physicians and other EPs prior to submission of the measures for endorsement may be carried out by a variety of different organizations. We do not believe there needs to be any special restrictions on the type or make up of the organizations carrying out this basic development of physician measures, such as restricting the initial development to physician-controlled organizations. Any such restriction would unduly limit the basic development of quality measures and the scope and utility of measures that may be considered for endorsement as voluntary consensus standards.

(2) Other Considerations for Measures Proposed for Inclusion in the 2011 PQRI

As stated previously, in addition to reviewing the 2010 PQRI measures for purposes of developing the proposed 2011 PQRI measures, we reviewed and considered measure suggestions including comments received in response to the CY 2010 PFS proposed rule and final rule with comment period. Additionally, suggestions and input received through other venues, such as an invitation for measures suggestions via the Listening Session held February 2, 2010, were also reviewed and considered for purposes of our development of the list of proposed 2011 PQRI quality measures. A summary of the measures suggestions received via the Listening Session is included in the background paper that was provided to Listening Session participants. The Listening Session background paper is posted on CMS Sponsored Calls page of the PQRI section of the CMS Web site at: *http://www.cms.gov/PQRI/04_CMSSponsoredCalls.asp#TopOfPage*.

With respect to the selection of new measures (that is, measures that have never been selected as part of a PQRI quality measure set for 2010 or any prior year), we propose to apply the following considerations, which include many of the same considerations applied to the selection of 2009 and 2010 PQRI quality measures for inclusion in the 2011 PQRI quality measure set described above:

- High Impact on Healthcare.

++ Measures that are high impact and support CMS and HHS priorities for improved quality and efficiency of care for Medicare beneficiaries. These current and long-term priority topics include the following: Prevention; chronic conditions; high cost and high volume conditions; elimination of health disparities; healthcare-associated infections and other conditions; improved care coordination; improved outcomes; improved efficiency; improved patient and family experience of care; improved end-of-life/palliative care; effective management of acute and chronic episodes of care; reduced unwarranted geographic variation in quality and efficiency; and adoption and use of interoperable HIT.

- Measures that are included in, or facilitate alignment with, other Medicare, Medicaid, and CHIP programs in furtherance of overarching healthcare goals.

- NQF Endorsement.

++ Measures must be NQF-endorsed by June 1, 2010, in order to be considered for inclusion in the 2011 PQRI quality measure set except as provided under section 1848(k)(2)(C)(ii) of the Act.

++ Section 1848(k)(2)(C)(ii) of the Act provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). As long as an area or medical topic for which a feasible and practical NQF-endorsed measure is not available has been identified and due consideration has been given to measures that have been adopted by the AQA or other consensus organization identified by Secretary. As discussed above, we anticipate not including measures which only have AQA adoption for future program years.

++ The statutory requirements under section 1848(k)(2)(C) of the Act, subject to the exception noted above, require only that the measures be selected from measures that have been endorsed by the entity with a contract with the Secretary under section 1890(a) (that is, the NQF) and are silent with respect to how the measures that are submitted to the NQF for endorsement are developed. The basic steps for developing measures applicable to physicians and other EPs prior to submission of the measures for endorsement may be carried out by a variety of different organizations. We do not believe there needs to be any special restrictions on the type or makeup of the organizations carrying out this basic development of physician measures, such as restricting the initial development to physician-controlled organizations. Any such restriction would unduly limit the basic development of quality measures and the scope and utility of measures that may be considered for endorsement as voluntary consensus standards. The requirements under section 1848(k)(2)(C) of the Act pertain only to the selection of measures and not to the development of measures.

- Address Gaps in PQRI Measure Set.

++ Measures that increase the scope of applicability of the PQRI measures to services furnished to Medicare beneficiaries and expand opportunities for EPs to participate in PQRI. We continue to seek the broad ability to assess the quality of care furnished to Medicare beneficiaries, and ultimately to compare performance among professionals. We seek to increase the circumstances where EPs have at least three measures applicable to their practice and measures that help expand the number of measures groups with at least four measures in a group.

- Measures of various aspects of clinical quality including outcome measures, where appropriate and feasible, process measures, structural measures, efficiency measures, and measures of patient experience of care.

Other considerations that we propose to apply to the selection of measures for 2011, regardless of whether the measure was a 2010 PQRI measure or not, were:

• Measures that are functional, which is to say measures that can be technically implemented within the capacity of the CMS infrastructure for data collection, analysis, and calculation of reporting and performance rates. This leads to preference for measures that reflect readiness for implementation, such as those that are currently in the 2010 PQRI program or have been through testing. The purpose of measure testing is to reveal the measure's strengths and weaknesses so that the limitations can be addressed and the measure refined and strengthened prior to implementation. For any new measures considered for 2011 PQRI, preference is given to those that can be most efficiently implemented for data collection and submission. Therefore, any measures that have previously been found to be technically impractical to report because they are analytically challenging due to any number of factors, including those that are claims-based, will again not been included for 2011 PQRI. For example, in some cases, we are proposing to replace existing 2010 PQRI measures with updated and improved measures that are less technically challenging to report. For example, we are proposing to replace existing 2010 PQRI measures #114 and #115 with updated and improved measure #TBD (Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention), which is less technically challenging to report.

• In 2011 PQRI, as in 2010 PQRI, for some measures that are useful, but where data submission is not feasible through all otherwise available PQRI reporting mechanisms, a measure may be included for reporting solely through specific reporting mechanism(s) in which its submission is feasible. For the 2011 PQRI, we propose to retain those measures that had previously been available for claims-based reporting and registry-based reporting, which were changed for 2010 PQRI to registry-based reporting only because they were technically challenging to report and/or analyze through the claims-based reporting mechanism.

We welcome comments on the implication of including or excluding any given measure or measures for our proposed 2011 PQRI quality measure set, as well as feedback relative to our proposed approach in selecting measures. We recognize that some commenters may also wish to recommend additional measures for inclusion in the 2011 PQRI measures that we are not proposing. While we welcome all constructive comments and suggestions, and may consider such recommended measures for inclusion in future measure sets for PQRI and/or other programs to which such measures may be relevant, we will not be able to consider such additional measures for inclusion in the final 2011 measure set.

As discussed above, section 1848(k)(2)(D) of the Act requires that the public have the opportunity to provide input during the selection of measures. We also are required by other applicable statutes to provide opportunity for public comment on provisions of policy or regulation that are established via notice and comment rulemaking. Measures that were not included in this proposed rule for inclusion in the 2011 PQRI that are recommended to CMS via comments on this proposed rule cannot be included in the 2011 measure set.

As discussed above, section 1848(k)(2)(D) of the Act requires that the public have the opportunity to provide input during the selection of measures. We also are required by other applicable statutes to provide opportunity for public comment on provisions of policy or regulation that are established via notice and comment rulemaking. Measures that were not included in this proposed rule for inclusion in the 2011 PQRI that are recommended to CMS via comments on this proposed rule have not been placed before the public to comment on the selection of those measures within the rulemaking process. Even when measures have been published in the **Federal Register**, but in other contexts and not specifically proposed as PQRI measures, such publication does not provide true opportunity for public comment on those measures' potential inclusion in PQRI. Thus, such additional measures recommended for selection for the 2011 PQRI via comments on this proposed rule cannot be included in the 2011 measure set. However, as discussed above, we will consider comments and recommendations for measures, which may not be applicable to the final set of 2011 PQRI measures, for purposes of identifying measures for possible use in future years' PQRI or other initiatives to which those measures may be pertinent.

In addition, as in prior years, we again note that we do not use notice and comment rulemaking as a means to update or modify measure specifications. Quality measures that have completed the consensus process have a designated party (usually, the measure developer/owner) who has accepted responsibility for maintaining the measure. In general, it is the role of the measure owner, developer, or maintainer to make changes to a measure. Therefore, comments requesting changes to a specific proposed PQRI measure's title, definition, and detailed specifications or coding should be directed to the measure developer identified in Tables 52 through 70. Contact information for the 2010 PQRI measure developers is listed in the "2010 PQRI Quality Measures List," which is available on the PQRI section of the CMS Web site at *http://www.cms.gov/PQRI*.

However, we stress that inclusion of measures that are not NQF endorsed or AQA adopted is an exception to the requirement under section 1848(k)(2)(C)(i) of the Act that measures be endorsed by the NQF. We may exercise this exception authority in a specified area or medical topic for which a feasible and practical measure has not been endorsed by NQF, so long as due consideration is given to measures that have been endorsed by the NQF.

i. Proposed 2011 PQRI Quality Measures for Individual EPs

As in 2010 PQRI, individual EPs have the choice of reporting PQRI quality measures data on either individual quality measures or on measures groups for 2011 PQRI.

Consistent with statutory requirements for identifying and including measures for 2011 PQRI, the individual quality measures identified for use in the 2011 PQRI will be selected from those we propose in this rule and will ultimately be finalized as of the date the CY 2011 PFS final rule with comment period is available for public inspection at the Office of the Federal Register. No changes (that is, additions or deletions of measures) will be made after publication of the CY 2011 PFS final rule with comment period. However, as was the case in previous program years, we may make modifications or refinements, such as revisions to measures titles and code additions, corrections, or revisions to the detailed specifications for the 2011 measures until the beginning of the reporting period. The 2011 measures specifications for individual quality measures will be available on the PQRI section of the CMS Web site at *http://www.cms.gov/PQRI* when they are sufficiently developed or finalized. We are targeting finalization and publication of the detailed specifications for all 2011 PQRI measures on the PQRI section of the CMS Web site by November 15, 2010 and will, in no event, publish these specifications later than December 31, 2010. The detailed specifications will include instructions for reporting and will identify the circumstances in which each measure is applicable. For 2011,

we are proposing that for the most part, final PQRI quality measures will be selected from the 2010 PQRI measures.

In response to the February 2, 2010 Listening Session, CMS received 146 individual measure suggestions and 9 measures groups suggestions, one of which included modifications to an existing measures group, for possible inclusion in the 2011 PQRI.

We propose to include a total of 198 measures (this includes both individual measures and measures that are part of a proposed 2011 measures group) on which individual EPs can report for the 2011 PQRI. The individual PQRI quality measures proposed for the 2011 PQRI are listed in Tables 52 through 56 and fall into four broad categories as set forth below. The four categories are the following:

- Proposed 2011 Individual Quality Measures Selected From the 2010 PQRI Quality Measures Set Available for Claims-Based Reporting and Registry-Based Reporting;
- Proposed 2011 Individual Quality Measures Selected From the 2010 PQRI Quality Measures Set Available for Registry-Based Reporting Only;
- New Individual Quality Measures Proposed for 2011; and
- Proposed 2011 Measures Available for EHR-Based Reporting.

In addition, we are also proposing the inclusion of 1 new measures group for 2011 PQRI. The measures proposed for 2011 measures groups are listed in Tables 57 through 70. Please note Table 51 includes 2010 PQRI measures that are not proposed for inclusion in 2011 PQRI.

TABLE 51—2010 PQRI QUALITY MEASURES NOT PROPOSED FOR INCLUSION IN THE 2011 PQRI

Measure No.	Measure title
114	Preventive Care and Screening: Inquiry Regarding Tobacco Use.
115	Preventive Care and Screening: Advising Smokers and Tobacco Users to Quit.
135	Chronic Kidney Disease (CKD): Influenza Immunization.
136	Melanoma: Follow-Up Aspects of Care.
139	Cataracts: Comprehensive Preoperative Assessment for Cataract Surgery with Intraocular Lens (IOL) Placement.

After careful consideration of 2010 PQRI measures, we propose to retire these 5 measures because they did not meet one or more of the considerations for selection of proposed 2011 measures discussed in section VI.F.1.h. above. Specifically, we are proposing to retire PQRI measures #135, #136, and #139, for 2011 because they have been considered by NQF for possible endorsement but ultimately were not NQF-endorsed. In addition we propose to replace existing 2010 PQRI measures #114 and #115 with an updated and improved measure (#TBD "Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention"), which is less technically challenging to report. We invite comments on our proposal to retire the 2010 measures listed in Table 51 for the 2011 PQRI.

(1) Proposed 2011 Individual Quality Measures Selected From the 2010 PQRI Quality Measures Set Available for Claims-Based Reporting and Registry-Based Reporting

For 2011, we propose to retain 170 measures currently used in the 2010 PQRI. These 170 proposed measures include 45 registry-only measures currently used in the 2010 PQRI, but do not include any measures that are proposed to be included as part of the 2011 Back Pain measures group (*see* section VI.F.1.i.(5) of this proposed rule). Similar to the 2010 PQRI, for 2011, we propose that any 2011 PQRI measures that are included in the Back Pain measures group would not be reportable as individual measures through claims-based reporting or registry-based reporting.

The 125 individual 2010 PQRI measures proposed for inclusion in the 2011 PQRI quality measure set as individual quality measures for either claims-based reporting or registry-based reporting are listed by their Measure Number and Title in Table 52, along with the name of the measure's developer/owner, and the NQF measure number, if applicable. The PQRI Measure Number is a unique identifier assigned by CMS to all measures in the PQRI measure set. Once a PQRI Measure Number is assigned to a measure, it will not be used again to identify a different measure, even if the original measure to which the number was assigned is subsequently retired from the PQRI measure set. A description of the measures listed in Table 52 can be found in the "2010 PQRI Quality Measures List," which is available on the Measures and Codes page of the PQRI section of the CMS Web site at *http://cms.gov/PQRI.*

The 2010 measures that are proposed to be available for registry-based reporting only for the 2011 PQRI are discussed and identified in section VI.F.1.i.(2) of this proposed rule.

TABLE 52—PROPOSED 2011 MEASURES SELECTED FROM THE 2010 PQRI QUALITY MEASURE SET AVAILABLE FOR EITHER CLAIMS-BASED REPORTING OR REGISTRY-BASED REPORTING

Measure No.	Measure title	Measure developer	NQF Measure No.
1	Diabetes Mellitus: Hemoglobin A1c Poor Control in Diabetes Mellitus.	NCQA	0059.
2	Diabetes Mellitus: Low Density Lipoprotein (LDL–C) Control in Diabetes Mellitus.	NCQA	0064.
3	Diabetes Mellitus: High Blood Pressure Control in Diabetes Mellitus.	NCQA	0061.
6	Coronary Artery Disease (CAD): Oral Antiplatelet Therapy Prescribed for Patients with CAD.	AMA–PCPI	0067.
9	Major Depressive Disorder (MDD): Antidepressant Medication During Acute Phase for Patients with MDD.	NCQA	0105.
10	Stroke and Stroke Rehabilitation: Computed Tomography (CT) or Magnetic Resonance Imaging (MRI) Reports.	AMA–PCPI/NCQA	0246.

TABLE 52—PROPOSED 2011 MEASURES SELECTED FROM THE 2010 PQRI QUALITY MEASURE SET AVAILABLE FOR EITHER CLAIMS-BASED REPORTING OR REGISTRY-BASED REPORTING—Continued

Measure No.	Measure title	Measure developer	NQF Measure No.
12	Primary Open Angle Glaucoma (POAG): Optic Nerve Evaluation.	AMA–PCPI/NCQA	0086.
14	Age-Related Macular Degeneration (AMD): Dilated Macular Examination.	AMA–PCPI/NCQA	0087.
18	Diabetic Retinopathy: Documentation of Presence or Absence of Macular Edema and Level of Severity of Retinopathy.	AMA–PCPI/NCQA	0088.
19	Diabetic Retinopathy: Communication with the Physician Managing On-Going Diabetes Care.	AMA–PCPI/NCQA	0089.
20	Perioperative Care: Timing of Antibiotic Prophylaxis—Ordering Physician.	AMA–PCPI/NCQA	0270.
21	Perioperative Care: Selection of Prophylactic Antibiotic—First OR Second Generation Cephalosporin.	AMA–PCPI/NCQA	0268.
22	Perioperative Care: Discontinuation of Prophylactic Antibiotics (Non-Cardiac Procedures).	AMA–PCPI/NCQA	0271.
23	Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients).	AMA–PCPI/NCQA	0239.
24	Osteoporosis: Communication with the Physician Managing On-Going Care Post-Fracture of Hip, Spine or Distal Radius for Men and Women Aged 50 Years and Older.	AMA–PCPI/NCQA	0045.
28	Aspirin at Arrival for Acute Myocardial Infarction (AMI)	AMA–PCPI/NCQA	0092.
30	Perioperative Care: Timely Administration of Prophylactic Parenteral Antibiotics.	AMA–PCPI/NCQA	0270.
31	Stroke and Stroke Rehabilitation: Deep Vein Thrombosis Prophylaxis (DVT) for Ischemic Stroke or Intracranial Hemorrhage.	AMA–PCPI/NCQA	0240
32	Stroke and Stroke Rehabilitation: Discharged on Antiplatelet Therapy.	AMA–PCPI/NCQA	0325.
35	Stroke and Stroke Rehabilitation: Screening for Dysphagia	AMA–PCPI/NCQA	0243.
36	Stroke and Stroke Rehabilitation: Consideration of Rehabilitation Services.	AMA–PCPI/NCQA	0244.
39	Screening or Therapy for Osteoporosis for Women Aged 65 Years and Older.	AMA–PCPI/NCQA	0046.
40	Osteoporosis: Management Following Fracture of Hip, Spine or Distal Radius for Men and Women Aged 50 Years and Older.	AMA–PCPI/NCQA	0045.
41	Osteoporosis: Pharmacologic Therapy for Men and Women Aged 50 Years and Older.	AMA–PCPI/NCQA	0049.
43	Coronary Artery Bypass Graft (CABG): Use of Internal Mammary Artery (IMA) in Patients with Isolated CABG Surgery.	Society of Thoracic Surgeons (STS).	0516 or 0134.
44	Coronary Artery Bypass Graft (CABG): Preoperative Beta-Blocker in Patients with Isolated CABG Surgery.	STS	0127 or 0236.
45	Perioperative Care: Discontinuation of Prophylactic Antibiotics (Cardiac Procedures).	AMA–PCPI/NCQA	0637.
46	Medication Reconciliation: Reconciliation After Discharge From an Inpatient Facility.	AMA–PCPI/NCQA	0097.
47	Advance Care Plan	AMA–PCPI/NCQA	0326.
48	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older.	AMA–PCPI/NCQA	0098.
49	Urinary Incontinence: Characterization of Urinary Incontinence in Women Aged 65 Years and Older.	AMA–PCPI/NCQA	0099.
50	Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older.	AMA–PCPI/NCQA	0100.
51	Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation.	AMA–PCPI	0091.
52	Chronic Obstructive Pulmonary Disease (COPD): Bronchodilator Therapy.	AMA–PCPI	0102.
53	Asthma: Pharmacologic Therapy	AMA–PCPI	0047.
54	12–Lead Electrocardiogram (ECG) Performed for Non-Traumatic Chest Pain.	AMA–PCPI/NCQA	0090.
55	12–Lead Electrocardiogram (ECG) Performed for Syncope	AMA–PCPI/NCQA	0093.
56	Community-Acquired Pneumonia (CAP): Vital Signs	AMA–PCPI/NCQA	0232
57	Community-Acquired Pneumonia (CAP): Assessment of Oxygen Saturation.	AMA–PCPI/NCQA	0094.
58	Community-Acquired Pneumonia (CAP): Assessment of Mental Status.	AMA–PCPI/NCQA	0234.
59	Community-Acquired Pneumonia (CAP): Empiric Antibiotic	AMA–PCPI/NCQA	0096.
64	Asthma: Asthma Assessment	AMA–PCPI	0001.

TABLE 52—PROPOSED 2011 MEASURES SELECTED FROM THE 2010 PQRI QUALITY MEASURE SET AVAILABLE FOR EITHER CLAIMS-BASED REPORTING OR REGISTRY-BASED REPORTING—Continued

Measure No.	Measure title	Measure developer	NQF Measure No.
65	Treatment for Children With Upper Respiratory Infection (URI): Avoidance of Inappropriate Use.	NCQA	0069.
66	Appropriate Testing for Children With Pharyngitis	NCQA	0002.
67	Myelodysplastic Syndrome (MDS) and Acute Leukemias: Baseline Cytogenetic Testing Performed on Bone Marrow.	AMA–PCPI/American Society of Hematology (ASH).	0377.
68	Myelodysplastic Syndrome (MDS): Documentation of Iron Stores in Patients Receiving Erythropoietin Therapy.	AMA–PCPI/ASH	0378.
69	Multiple Myeloma: Treatment With Bisphosphonates	AMA–PCPI/ASH	0380.
70	Chronic Lymphocytic Leukemia (CLL): Baseline Flow Cytometry.	AMA–PCPI/ASH	0379.
71	Breast Cancer: Hormonal Therapy for Stage IC–IIIC Estrogen Receptor/Progesterone Receptor (ER/PR) Positive Breast Cancer.	AMA–PCPI/American Society of Clinical Oncology (ASCO)/National Comprehensive Cancer Network (NCCN).	0387.
72	Colon Cancer: Chemotherapy for Stage III Colon Cancer Patients.	AMA–PCPI/ASCO/NCCN	0385.
76	Prevention of Catheter-Related Bloodstream Infections (CRBSI): Central Venous Catheter (CVC) Insertion Protocol.	AMA–PCPI	0464.
79	End-Stage Renal Disease (ESRD): Influenza Immunization in Patients with ESRD.	AMA–PCPI	0227.
84	Hepatitis C: Ribonucleic Acid (RNA) Testing Before Initiating Treatment.	AMA–PCPI	0395.
85	Hepatitis C: HCV Genotype Testing Prior to Treatment	AMA–PCPI	0396.
86	Hepatitis C: Antiviral Treatment Prescribed	AMA–PCPI	0397.
87	Hepatitis C: HCV Ribonucleic Acid (RNA) Testing at Week 12 of Treatment.	AMA–PCPI	0398.
89	Hepatitis C: Counseling Regarding Risk of Alcohol Consumption.	AMA–PCPI	0401.
90	Hepatitis C: Counseling Regarding Use of Contraception Prior to Antiviral Therapy.	AMA–PCPI	0394.
91	Acute Otitis Externa (ACE): Topical Therapy	AMA–PCPI	AQA adopted Currently under NQF review.
92	Acute Otitis Externa (ACE): Pain Assessment	AMA–PCPI	AQA adopted Currently under NQF review.
93	Acute Otitis Externa (ACE): Systemic Antimicrobial Therapy—Avoidance of Inappropriate Use.	AMA–PCPI	AQA adopted Currently under NQF review.
94	Otitis Media with Effusion (OME): Diagnostic Evaluation—Assessment of Tympanic Membrane Mobility.	AMA–PCPI	AQA adopted Currently under NQF review.
99	Breast Cancer Resection Pathology Reporting: pT Category (Primary Tumor) and pN Category (Regional Lymph Nodes) With Histologic Grade.	AMA–PCPI/College of American Pathologists (CAP).	0391.
100	Colorectal Cancer Resection Pathology Reporting: pT Category (Primary Tumor) and pN Category (Regional Lymph Nodes) With Histologic Grace.	AMA–PCPI/CAP	0392.
102	Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low-Risk Prostate Cancer Patients.	AMA–PCPI	0389.
104	Prostate Cancer: Adjuvant Hormonal Therapy for High-Risk Prostate Cancer Patients.	AMA–PCPI	0390.
105	Prostate Cancer: Three-Dimensional (3D) Radiotherapy	AMA–PCPI	0388.
106	Major Depressive Disorder (MDD): Diagnostic Evaluation	AMA–PCPI	0103.
107	Major Depressive Disorder (MDD): Suicide Risk Assessment.	AMA–PCPI	0104.
108	Rheumatoid Arthritis (RA): Disease Modifying Anti-Rheumatic Drug (DMARD) Therapy.	NCQA	0054.
109	Osteoarthritis: Function and Pain Assessment	AMA–PCPI	0050.
110	Preventive Care and Screening: Influenza Immunization for Patients ≥ 50 Years Old.	AMA–PCPI	0041.
111	Preventive Care and Screening: Pneumonia Vaccination for Patients 65 Years and Older.	NCQA	0043.
112	Preventive Care and Screening: Screening Mammography	NCQA	0031.
113	Preventive Care and Screening: Colorectal Cancer Screening.	NCQA	0034.
116	Antibiotic Treatment for Adults with Acute Bronchitis: Avoidance of Inappropriate Use.	NCQA	0058.
117	Diabetes Mellitus: Dilated Eye Exam in Diabetic Patient	NCQA	0055.
119	Diabetes Mellitus: Urine Screening for Microalbumin or Medical Attention for Nephropathy in Diabetic Patients.	NCQA	0062.

TABLE 52—PROPOSED 2011 MEASURES SELECTED FROM THE 2010 PQRI QUALITY MEASURE SET AVAILABLE FOR EITHER CLAIMS-BASED REPORTING OR REGISTRY-BASED REPORTING—Continued

Measure No.	Measure title	Measure developer	NQF Measure No.
121	Chronic Kidney Disease (CKD): Laboratory Testing (Calcium, Phosphorous, Intact Parathyroid Hormone (iPTH) and Lipid Profile).	AMA–PCPI	Combined: 0570, 0571, 0572, 0626.
122	Chronic Kidney Disease (CKD): Blood Pressure Management.	AMA–PCPI	AQA adopted.
123	Chronic Kidney Disease (CKD): Plan of Care—Elevated Hemoglobin for Patients Receiving Erythropoiesis-Stimulating Agents (ESA).	AMA–PCPI	AQA adopted.
124	Health Information Technology (HIT): Adoption/Use of Electronic Health Records (EHR).	CMS/Quality Insights of Pennsylvania (QIP).	0488.
126	Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy—Neurological Evaluation.	American Podiatric Medical Association (APMA).	0417.
127	Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention—Evaluation of Footwear.	APMA	0416.
128	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up.	CMS/QIP	0421.
130	Documentation and Verification of Current Medications in the Medical Record.	CMS/QIP	0419.
131	Pain Assessment Prior to Initiation of Patient Therapy and Follow-Up.	CMS/QIP	0420.
134	Screening for Clinical Depression and Follow-Up Plan	CMS/QIP	0418.
140	Age-Related Macular Degeneration (AMD): Counseling on Antioxidant Supplement.	AMA–PCPI/NCQA	0566.
141	Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 15% OR Documentation of Plan of Care.	AMA–PCPI/NCQA	0563.
142	Osteoarthritis (OA): Assessment for Use of Anti-Inflammatory or Analgesic Over-the-Counter (OTC) Medications.	AMA–PCPI	0051.
145	Radiology: Exposure Time Reported for Procedures Using Fluoroscopy.	AMA–PCPI/NCQA	0510.
146	Radiology: Inappropriate Use of “Probably Benign” Assessment Category in Mammography Screening.	AMA–PCPI/NCQA	0508.
147	Nuclear Medicine: Correlation With Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy.	AMA–PCPI	0511.
153	Chronic Kidney Disease (CKD): Referral for Arteriovenous (AV) Fistula.	AMA–PCPI	AQA adopted.
154	Falls: Risk Assessment	AMA–PCPI/NCQA	AQA adopted.
155	Falls: Plan of Care	AMA–PCPI/NCQA	AQA adopted.
156	Oncology: Radiation Dose Limits to Normal Tissues	AMA–PCPI	0382
157	Thoracic Surgery: Recording of Clinical Stage for Lung Cancer and Esophageal Cancer Resection.	STS	0455.
158	Carotid Endarterectomy: Use of Patch During Conventional Carotid Endarterectomy.	Society of Vascular Surgeons (SVS).	0466.
163	Diabetes Mellitus: Foot Exam	NCQA	0056.
172	Hemodialysis Vascular Access Decision-Making by Surgeon To Maximize Placement of Autogenous Arterial Venous (AV) Fistula.	SVS	0259.
173	Preventive Care and Screening: Unhealthy Alcohol Use—Screening.	AMA–PCPI	AQA adopted.
175	Pediatric End-Stage Renal Disease (ESRD): Influenza Immunization.	AMA–PCPI	AQA adopted.
176	Rheumatoid Arthritis (RA): Tuberculosis Screening	AMA–PCPI/NCQA	AQA adopted.
177	Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity.	AMA–PCPI/NCQA	AQA adopted.
178	Rheumatoid Arthritis (RA): Functional Status Assessment	AMA–PCPI/NCQA	AQA adopted.
179	Rheumatoid Arthritis (RA): Assessment and Classification of Disease Prognosis.	AMA–PCPI/NCQA	AQA adopted.
180	Rheumatoid Arthritis (RA): Glucocorticoid Management	AMA–PCPI/NCQA	AQA adopted.
181	Elder Maltreatment Screen and Follow-Up Plan	CMS/QIP	AQA adopted.
182	Functional Outcome Assessment in Chiropractic Care	CMS/QIP	AQA adopted.
183	Hepatitis C: Hepatitis A Vaccination in Patients with HCV	AMA–PCPI	0399.
184	Hepatitis C: Hepatitis B Vaccination in Patients with HCV	AMA–PCPI	0400.
185	Endoscopy & Polyp Surveillance: Colonoscopy Interval for Patients With a History of Adenomatous Polyps—Avoidance of Inappropriate Use.	AMA–PCPI/NCQA	AQA adopted Currently under NQF review.
186	Wound Care: Use of Compression System in Patients With Venous Ulcers.	AMA–PCPI/NCQA	AQA adopted.
188	Referral for Otologic Evaluation for Patient With Congenital or Traumatic Deformity of the Ear.	Audiology Quality Consortium (AQC).	Not applicable.

TABLE 52—PROPOSED 2011 MEASURES SELECTED FROM THE 2010 PQRI QUALITY MEASURE SET AVAILABLE FOR EITHER CLAIMS-BASED REPORTING OR REGISTRY-BASED REPORTING—Continued

Measure No.	Measure title	Measure developer	NQF Measure No.
189	Referral for Otologic Evaluation for Patient With History of Active Drainage From the Ear Within the Previous 90 days.	AQC	Not applicable.
190	Referral for Otologic Evaluation for Patient With a History of Sudden or Rapidly Progessive Hearing Loss.	AQC	Not applicable.
193	Perioperative Temperature Management	AMA–PCPI	0454.
194	Oncology: Cancer Stage Documented	AMA–PCPI/ASCO	0386.
195	Stenosis Measurement in Carotid Imaging Studies	AMA–PCPI/NCQA	0507.
201	Ischemic Vascular Disease (IVD): Blood Pressure Management Control.	NCQA	0084.
202	Ischemic Vascular Disease (IVD): Complete Lipid Profile	NCQA	0073.
203	Ischemic Vascular Disease (IVD): Low Density Lipoprotein (LDL–C) Control.	NCQA	0075.
204	Ischemic Vascular Disease (IVD): Use of Aspirin or Another Anti-thrombotic.	NCQA	0068

It is our understanding that measures #188, #189, and #190 were considered by NQF for possible endorsement but were not ultimately NQF-endorsed. However, since we are not aware of any other NQF-endorsed measures that are available to audiologists, we propose to exercise our exception authority under section 1848(k)(2)(C)(ii) of the Act. Therefore, we propose to use measures #188, #189, and #190 for the 2011 PQRI despite the fact that they are neither NQF-endorsed nor AQA adopted.

Please note that detailed measure specifications, including the measure's title, for 2010 individual PQRI quality measures may have been updated or modified during the NQF endorsement process or for other reasons prior to 2011. The 2011 PQRI quality measure specifications for any given individual quality measure may, therefore, be different from specifications for the same quality measure used for 2010. Specifications for all 2011 individual PQRI quality measures, whether or not included in the 2010 PQRI program, must be obtained from the specifications document for 2011 individual PQRI quality measures, which will be available on the PQRI section of the CMS Web site on or before December 31, 2010.

(2) Proposed 2011 Individual Quality Measures Selected From the 2010 PQRI Quality Measures Set Available for Registry-Based Reporting Only

For the 2011 PQRI, we propose to include 45 registry-only individual measures from the 2010 PQRI. As in 2010 PQRI, we are proposing to designate these measures as registry-only measures for 2011 to relieve ongoing analytical difficulties encountered with claims-based reporting of these measures in prior program years. We encourage comments on our proposal to designate these 45 2010 measures as registry-only measures for the 2011 PQRI.

Although we are proposing to designate certain measures as registry-only measures for 2011, we cannot guarantee that there will be a registry qualified to submit each registry-only measure for 2011. We rely on registries to self-nominate and identify the types of measures for which they would like to be qualified to submit quality measures results and numerator and denominator data on quality measures. If no registry self-nominates to submit measure results and numerator and denominator data on a particular type of measure for 2011, then an EP would not be able to report that particular measure type via a registry. The Measure Number and Measure Title for these proposed registry-only measures are listed in Table 53 along with the NQF measure number, if applicable, and the name of the measure's developer/owner. As mentioned above, a description of the measures listed in Table 53 can be found in the "2010 PQRI Quality Measures List," which is available on the Measures and Codes page of the PQRI section of the CMS Web site at *http://www.cms.gov/PQRI.*

TABLE 53: 2011 PROPOSED MEASURES SELECTED FROM THE 2010 PQRI QUALITY MEASURE SET AVAILABLE FOR REGISTRY-BASED REPORTING ONLY

Measure No.	Measure title	Measure developer	NQF Measure No.
5	Heart Failure: Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy for Left Ventricular Systolic Dysfunction (LVSD).	AMA–PCPI	0081.
7	Coronary Artery Disease (CAD): Beta-Blocker Therapy for CAD Patients With Prior Myocardial Infarction (MI).	AMA–PCPI	0070.
8	Heart Failure: Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD).	AMA–PCPI	0083.
33	Stroke and Stroke Rehabilitation: Anticoagulant Therapy Prescribed for Atrial Fibrillation at Discharge.	AMA–PCPI/NCQA	0241.
81	End-Stage Renal Disease (ESRD): Plan of Care for Inadequate Hemodialysis in ESRD Patients.	AMA–PCPI	0323.
82	End-Stage Renal Disease (ESRD): Plan of Care for Inadequate Peritoneal Dialysis.	AMA–PCPI	0321
83	Hepatitis C: Testing for Chronic Hepatitis C—Confirmation of Hepatitis C Viremia.	AMA–PCPI	0393.

TABLE 53: 2011 PROPOSED MEASURES SELECTED FROM THE 2010 PQRI QUALITY MEASURE SET AVAILABLE FOR REGISTRY-BASED REPORTING ONLY—Continued

Measure No.	Measure title	Measure developer	NQF Measure No.
118	Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy for Patients With CAD and Diabetes and/or Left Ventricular Systolic Dysfunction (LSVD).	AMA–PCPI	0066.
137	Melanoma: Continuity of Care—Recall System	AMA–PCPI/NCQA	0650.
138	Melanoma: Coordination of Care	AMA–PCPI/NCQA	0561.
143	Oncology: Medical and Radiation—Pain Intensity Quantified	AMA–PCPI	0384.
144	Oncology: Medical and Radiation—Plan of Care for Pain	AMA–PCPI	0383.
159	HIV/AIDS: CD4+ Cell Count or CD4+ Percentage	AMA–PCPI/NCQA	0404.
160	HIV/AIDS: Pneumocystis Jiroveci Pneumonia (PCP) Prophylaxis.	AMA–PCPI/NCQA	0405.
161	HIV/AIDS: Adolescent and Adult Patients With HIV/AIDS Who Are Prescribed Potent Antiretroviral Therapy.	AMA–PCPI/NCQA	0406.
162	HIV/AIDS: HIV RNA Control After Six Months of Potent Antiretroviral Therapy.	AMA–PCPI/NCQA	0407.
164	Coronary Artery Bypass Graft (CABG): Prolonged Intubation (Ventilation).	STS	0129.
165	Coronary Artery Bypass Graft (CABG): Deep Sternal Wound Infection Rate.	STS	0130.
166	Coronary Artery Bypass Graft (CABG): Stroke/Cerebrovascular Accident (CVA).	STS	0131.
167	Coronary Artery Bypass Graft (CABG): Postoperative Renal Insufficiency.	STS	0114.
168	Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration.	STS	0115.
169	Coronary Artery Bypass Graft (CABG): Antiplatelet Medications at Discharge.	STS	0116.
170	Coronary Artery Bypass Graft (CABG): Beta-Blockers Administered at Discharge.	STS	0117.
171	Coronary Artery Bypass Graft (CABG): Lipid Management and Counseling.	STS	0118.
174	Pediatric End-Stage Renal Disease (ESRD): Plan of Care for Inadequate Hemodialysis.	AMA–PCPI	AQA adopted Currently under NQF review.
187	Stroke and Stroke Rehabilitation: Thrombolytic Therapy	AHA/ASA/ TJC	0437.
191	Cataracts: 20/40 or Better Visual Acuity Within 90 Days Following Cataract Surgery.	AMA–PCPI/NCQA	0565.
192	Cataracts: Complications Within 30 Days Following Cataract Surgery Requiring Additional Surgical Procedures.	AMA–PCPI/NCQA	0564.
196	Coronary Artery Disease (CAD): Symptom and Activity Assessment.	AMA–PCPI	0065.
197	Coronary Artery Disease (CAD): Drug Therapy for Lowering LDL–Cholesterol.	AMA–PCPI	0074.
198	Heart Failure: Left Ventricular Function (LVF) Assessment	AMA–PCPI	0079.
199	Heart Failure: Patient Education	AMA–PCPI	0082.
200	Heart Failure: Warfarin Therapy Patients With Atrial Fibrillation.	AMA–PCPI	0084.
205	HIV/AIDS: Sexually Transmitted Disease Screening for Chlamydia and Gonorrhea.	AMA–PCPI/NCQA	0409.
206	HIV/AIDS: Screening for High Risk Sexual Behaviors	AMA–PCPI/NCQA	0413.
207	HIV/AIDS: Screening for Injection Drug Use	AMA–PCPI/NCQA	0415.
208	HIV/AIDS: Sexually Transmitted Disease Screening for Syphilis.	AMA–PCPI/NCQA	0410.
209	Functional Communication Measure—Spoken Language Comprehension.	American Speech Language Haring Association (ASHA).	0445.
210	Functional Communication Measure—Attention	ASHA	0449.
211	Functional Communication Measure—Memory		0448.
212	Functional Communication Measure—Motor Speech	ASHA	0447.
213	Functional Communication Measure—Reading	ASHA	0446.
214	Functional Communication Measure—Spoken Language Expression.	ASHA	0444.
215	Functional Communication Measure—Writing	ASHA	0442.
216	Functional Communication Measure—Swallowing	ASHA	0443.

Please note, as previously discussed above, detailed measure specifications, including a measure's title, for 2010 PQRI quality measures may be updated or modified during the NQF endorsement process or for other reasons during 2010. Therefore, the 2011 PQRI quality measure specifications for any given quality measure may be different from specifications for the same quality measure used for 2010. Specifications

for all 2011 individual PQRI quality measures, whether or not included in the 2010 PQRI program, must be obtained from the specifications document for 2011 individual PQRI quality measures, which will be available on the PQRI section of the CMS Web site on or before December 31, 2010.

(3) New Individual Quality Measures Proposed for 2011

We propose to include in the 2011 PQRI quality measure set 20 measures that were not included in the 2010 PQRI quality measures set provided that each measure obtains NQF endorsement by June 1, 2010 and its detailed specifications are completed and ready for implementation in PQRI by August 15, 2010. Besides having NQF endorsement, we again propose that the development of a measure is considered complete for the purposes of the 2011 PQRI if by August 15, 2010: (1) The final, detailed specifications for use in data collection for PQRI have been completed and are ready for implementation, and (2) all of the Category II Current Procedural Terminology (CPT II) codes required for the measure have been established and will be effective for CMS claims data submission on or before January 1, 2011. The titles of these proposed additional, or new, measures are listed in Table 54 along with the name of the measure developer and the proposed reporting mechanism (that is, whether the measure is proposed to be reportable using claims, registries, or both). For these 20 proposed measures, a PQRI Measure Number will be assigned to a measure if and when the measure is included in the final set of 2011 PQRI measures.

Due to the complexity of their measure specifications, we propose that 8 of these 20 measures would be available as registry-only measures for the 2011 PQRI. The remaining 15 measures are proposed to be available for reporting through either claims-based reporting or registry-based reporting.

TABLE 54—NEW INDIVIDUAL QUALITY MEASURES PROPOSED FOR 2011

Measure title	NQF Measure number	Measure developer	Reporting mechanism(s)
Change in Risk-Adjusted Functional Status for Patients With Knee Impairments.	0422	FOTO	Registry.
Change in Risk-Adjusted Functional Status for Patients With Hip Impairments.	0423	FOTO	Registry.
Change in Risk-Adjusted Functional Status for Patients With Lower Leg, Foot or Ankle Impairments.	0424	FOTO	Registry.
Change in Risk-Adjusted Functional Status for Patients With Lumbar Spine Impairments.	0425	FOTO	Registry.
Change in Risk-Adjusted Functional Status for Patients With Shoulder Impairments.	0426	FOTO	Registry.
Change in Risk-Adjusted Functional Status for Patients With Elbow, Wrist or Hand Impairments.	0427	FOTO	Registry.
Change in Risk-Adjusted Functional Status for Patients With a Functional Deficit of the Neck, Cranium, Mandible, Thoracic Spine, Ribs or Other General Orthopedic Impairment.	0428	FOTO	Registry.
Care Transitions: Reconciled Medication List Received by Discharged Patients (Inpatient Discharges to Home/Self Care or Any Other Site of Care).	Currently under NQF review	Society of Hospital Medicine (SMH) AMA–PCPI/NCQA.	Claims, Registry.
Care Transitions: Transition Record with Specified Elements Received by Discharged Patients (Inpatient Discharges to Home/Self Care or Any Other Site of Care).	Currently under NQF review	Society of Hospital Medicine (SMH) AMA–PCPI/NCQA.	Claims, Registry.
Care Transitions: Timely Transmission of Transition Record (Inpatient Discharges to Home/Self Care or Any Other Site of Care).	Currently under NQF review	Society of Hospital Medicine (SMH) AMA–PCPI/NCQA.	Claims, Registry.
Care Transitions: Transition Record with Specified Elements Received by Discharged Patients (Emergency Department Discharges to Ambulatory Care [Home/Self Care] or Home Health Care).	Currently under NQF review	Society of Hospital Medicine (SMH) AMA–PCPI/NCQA.	Claims, Registry.
Hypertension (HTN): Plan of Care	0017	AMA–PCPI	Claims, Registry.
Heart Failure (HF): Left Ventricular Function (LVF) Testing	79	CMS	Registry.
Melanoma: Overutilization of Imaging Studies in Stage 0–IA Melanoma.	0562	AMA–PCPI	Claims, Registry.
Radiology: Reminder System for Mammograms	0509	AMA–PCPI	Claims, Registry.
Asthma: Assessment of Asthma Risk—Emergency Department/Inpatient Setting.	Currently under NQF review	AMA–PCPI	Claims, Registry.
Asthma: Discharge Plan—Emergency Department/Inpatient Setting.	Currently under NQF review	AMA–PCPI	Claims, Registry.
Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention.	0028	AMA–PCPI	Claims, Registry.
Recording of Performance Status Prior to Lung or Esophageal Cancer Resection.	0457	Society of Thoracic Surgery (STS).	Claims, Registry.
Pulmonary Function Tests Before Major Anatomic Lung Resection.	0458	Society of Thoracic Surgery (STS).	Claims, Registry.

These measures are being proposed for the 2011 PQRI because they meet one or more of the considerations for measure selection discussed in section VI.F.1.h. of this proposed rule.

(4) Proposed 2011 Measures Available for EHR-Based Reporting

For 2011, we propose to again accept PQRI data from EHRs for a limited subset of the proposed 2011 PQRI quality measures, contingent upon the successful completion of our 2010 EHR data submission process and a determination that accepting data from EHRs on quality measures for the 2011 PQRI continues to be practical and feasible.

We propose to make a total of 22 measures available for EHR-based reporting in the 2010 PQRI. These include the 10 measures available for EHR-based reporting in the 2010 PQRI, which are identified in Table 55 and 12 additional measures identified in Table 56 that overlap with the clinical quality measures used in the EHR incentive program established by the American Recovery and Reinvestment Act (ARRA). Again, this year, we propose to make these measures available for electronic submission via an EHR because these measures target preventive care or common chronic and high-cost conditions.

TABLE 55—PROPOSED 2011 MEASURES AVAILABLE FOR EHR-BASED REPORTING FROM 2010 PQRI

Measure No.	Measure title	Measure developer	NQF Measure No.
1	Diabetes Mellitus: Hemoglobin A1c Poor Control in Diabetes Mellitus.	NCQA	0059.
2	Diabetes Mellitus: Low Density Lipoprotein (LDL–C) Control in Diabetes Mellitus.	NCQA	0064.

142	Osteoarthritis: Assessment of Use of Anti-Inflammatory or Analgesic OTC Meds.	AMA–PCPI	0051.

(5) Measures Proposed for Inclusion in 2011 Measures Groups

We propose to retain the following 13 2010 PQRI measures groups for the 2011 PQRI: (1) Diabetes Mellitus; (2) CKD; (3) Preventive Care; (4) CABG; (5) Rheumatoid Arthritis; (6) Perioperative Care; (7) Back Pain; (8) CAD; (9) Heart Failure; (10) IVD; (11) Hepatitis C; (12) HIV/AIDS; and (13) CAP. We are proposing to include these measures groups in 2011 PQRI because they each contain at least 4 PQRI quality measures that share a common denominator definition.

For 2011, we propose that the CABG, CAD, Heart Failure, HIV/AIDS measures groups continue to be reportable through the registry-based reporting mechanism only, while the remaining Diabetes Mellitus, CKD, Preventive Care, Rheumatoid Arthritis, Perioperative Care, Back Pain, IVD, Hepatitis C, and CAP measures groups will continue to be reportable through either claims-based reporting or registry-based reporting for the 2011 PQRI. The 4 2011 proposed measures groups reportable via registry-based reporting only are identified with an asterisk (*) below.

For 2010, the 13 measures groups that we propose to retain in the 2011 PQRI, combined with the one additional measures group we are proposing for 2011, makes a total of 14 measures groups for the 2011 PQRI. The 1 additional measures group we propose for the 2011 PQRI, identified in Table 70, is an Asthma Measures Group. The Asthma Measures Group is proposed to be reportable through either claims-based reporting or registry-based reporting.

We believe that the measure groups proposed for the 2011 PQRI address gaps in quality reporting and are those that have a high impact on HHS and CMS priority topics for improved quality and efficiency for Medicare beneficiaries (such as prevention, chronic conditions, improved care coordination, improved efficiency, improved patient and family experience of care, and effective management of acute and chronic episodes).

Finally, as in previous program years, for 2011, we continue to propose that except for the measures included in the Back Pain measures group, the measures included in any proposed 2011 measures group be reportable either as individual measures or as part of a measures group. For 2011, we propose that the measures proposed for inclusion in the Back Pain measures group will continue to be reportable only as part of a measures group and not as individual measures in 2011. We propose that measures selected for inclusion in all 2011 PQRI measures groups (except for the Back Pain measures group) are reportable either as individual measures or as part of a measures group.

The measures proposed for inclusion in each of the 2011 measures groups are identified in Tables 57 through 70. As stated previously, the PQRI Measure Number is a unique identifier assigned by CMS to all measures in the PQRI measure set. Once a PQRI Measure Number is assigned to a measure, it will not be used again, even if the measure is subsequently retired from the PQRI measure set. Measures that are not preceded by a number (in other words, those preceded by "TBD") in Tables 57 through 71 were never part of a PQRI measure set prior to 2011. A number will be assigned to such measures for 2011, if we finalize inclusion of the measures in the 2011 PQRI.

As with measures group reporting in the 2008, 2009, and 2010 PQRI, we propose that each EP electing to report a group of measures for 2011 must report all measures in the group that are applicable to each patient or encounter to which the measures group applies at least up to the minimum number of patients required by the applicable reporting criteria.

Measure No.	Measure title	NQF Measure No.	Measure developer
53	Asthma: Pharmacologic Therapy	0047	AMA–PCPI.
64	Asthma: Asthma Assessment	0001	AMA–PCPI.
TBD	Asthma: Assessment of Asthma Risk—Emergency Department/Inpatient Setting.	Currently under NQF review	AMA–PCPI.
TBD	Asthma: Discharge Plan-Emergency/Inpatient Setting	Currently under NQF review	AMA–PCPI.

We note that the specifications for measures groups do not necessarily contain all the specification elements of each individual measure making up the measures group. This is based on the need for a common set of denominator specifications for all the measures making up a measures group in order to define the applicability of the measures group. Therefore, the specifications and instructions for measures groups will again be provided separately from the specifications and instructions for the individual 2011 PQRI measures. We will post the detailed specifications and specific instructions for reporting measures groups on the PQRI section of the CMS Web site at *http://www.cms.gov/PQRI* by no later than December 31, 2010.

Additionally, the detailed measure specifications and instructions for submitting data on those 2011 measures groups that were also included as 2010 PQRI measures groups may be updated or modified prior to 2011. Therefore, the 2011 PQRI measure specifications for any given measures group could be different from specifications and submission instructions for the same measures group used for 2010. These measure specification changes are not expected to materially impact the intended meaning of the measures or the strength of the measures.

j. Proposed 2011 PQRI Quality Measures for Physician Groups Selected To Participate in the Group Practice Reporting Option (GPRO I)

As discussed in section VI.F.1.g.(3).(i) of this proposed rule, we propose that physician groups selected to participate in the 2011 PQRI GPRO I would be required to report on 26 proposed measures. We are proposing these measures because they are NQF-endorsed measures currently collected as part of the PGP and/or MCMP demonstrations and in the 2010 PQRI GPRO. These proposed measures are listed in Table 71. To the extent that a measure is an existing PQRI measure available for reporting by individual EPs, the Measure Title is preceded by the measure's PQRI Measure Number. If there is no number in the PQRI Measure Number column of the table, then the measure is not an existing PQRI measure and will be added to the 2011 PQRI for purposes of the GPRO I. Measures proposed for GPRO II are discussed in section VI.F.1.g.(3).(ii) of this proposed rule.

As in the 2010 PQRI, a separate measures specifications manual and other supporting documents will be available for group practices participating in the 2011 PQRI GPRO I. We anticipate that the group practice measures specifications manual will be available by November 15, 2010 on the PQRI section of the CMS Web site at *http://www.cms.gov/PQRI.*

TABLE 71—MEASURES FOR PHYSICIAN GROUPS PARTICIPATING IN THE 2011 PQRI GROUP PRACTICE REPORTING OPTION (GPRO I)

PQRI measure No.	Measure title	Measure developer	NQF No.
1	Diabetes Mellitus: Hemoglobin A1c Poor Control in Diabetes Mellitus.	NCQA	0059

GPRO HTN–2	Hypertension (HTN): Blood Pressure Control	NCQA	0018
GPRo HTN–3	Hypertension (HTN): Plan of Care	AMA–PCPI	0017

k. Public Reporting of PQRI Data

Section 1848(m)(5)(G) of the Act requires the Secretary to post on the CMS Web site, in an easily understandable format, a list of the names of EPs (or group practices) who satisfactorily submitted data on quality measures for the PQRI and the names of the EPs (or group practices) who are successful electronic prescribers. In addition, section 10331(a)(1) of the ACA, requires the Secretary to develop a Physician Compare Internet Web site by January 1, 2011, on which information on physicians enrolled in the Medicare program and other EPs who participate in the PQRI program would be posted.

To meet the ACA deadline of January 1, 2011, with respect to establishing the Physician Compare Web site, we propose, for 2011 PQRI, to use the current Physician and Other Health Care Professional Directory as a foundation for the Physician Compare Web site. As in 2010 PQRI, we propose to continue to make public the names of EPs and group practices that satisfactorily submit quality data for the 2011 PQRI. Previously, this was posted on the Physician and Other Health Care Professionals Directory. Our intent for the 2011 PQRI is to post the information on the Physician Compare Web site that must be developed by January 1, 2011. Specifically, we propose to post the names of EPs who: (1) Submit data on the 2011 PQRI quality measures through one of the reporting mechanisms available for the 2011 PQRI; (2) meet one of the proposed satisfactory reporting criteria of individual measures or measures groups for the 2011 PQRI as described above; and (3) qualify to earn a PQRI incentive payment for covered professional services furnished during the applicable 2011 PQRI reporting period, for purposes of satisfying the requirements under section 1848(m)(5)(G)(i) of the Act, on the Physician Compare Web site.

Similarly, for purposes of publicly reporting the names of group practices, on the Physician Compare Web site, for 2011, we propose to post the names of group practices that: (1) Submit data on the 2011 PQRI quality measures through one of the proposed group practice reporting options; (2) meet the proposed criteria for satisfactory reporting under the respective group practice reporting option; and (3) qualify to earn a PQRI incentive payment for covered professional services furnished during the applicable 2011 PQRI reporting period for purposes of satisfying the requirements under section 1848(m)(5)(G)(i) of the Act.

We do not propose to require as a condition of participation in the 2011 PQRI that performance information be made publicly available at either the group practice or individual level for 2011 PQRI. However, we note that section 10331 of the ACA requires that not later than January 1, 2013, and with respect to reporting periods that begin no earlier than January 1, 2012, we implement a plan for making publicly available through Physician Compare, information on physician performance, including measures collected under PQRI. Consistent with section 10331 of the ACA, we expect, in the future, to publicly report performance information based on PQRI.

We will be working on a plan to expand the information that is publicly posted on the Physician Compare in future years. This will be further described in future rulemaking. We solicit comments on our plan for implementation of a Physician Compare Web site for 2011.

l. Other Relevant ACA Provisions

(1) Section 3002 (b)—Incentive Payment Adjustment for Quality Reporting

Beginning 2015, a payment adjustment will apply under the PQRI. Specifically, under section 1848(a)(8) of the Act, as added by section 3002(b) of the ACA, with respect to covered professional services furnished by an EP during 2015 or any subsequent year, if the EP does not satisfactorily submit data on quality measures for covered professional services for the quality reporting period for the year, the fee schedule amount for services furnished by such professionals during the year shall be equal to the applicable percent of the fee schedule amount that would otherwise apply to such services. The applicable percent for 2015 is 98.5 percent and for 2016 and each subsequent year it is 98.0 percent.

We will address this provision of the ACA in future notice and comment rulemaking.

(2) Section 3002(c)—Maintenance of Certification Programs and Section 10327 Improvements to the Physician Quality Reporting System

Section 3002(c) of the ACA amends section 1848(k)(4) of the Act to require a mechanism whereby an EP may provide data on quality measures through an MOCP operated by a specialty body of the American Board of Medical Specialties (ABMS). In addition, section 1848(m)(7)of the Act ("Additional Incentive Payment"), as added by section 10327(a) of the ACA, provides for an additional 0.5 percent incentive payment for years 2011 through 2014 if certain requirements are met. In accordance with section 1848(m)(7)(B) of the Act, in order to qualify for the additional incentive payment, an EP must—

- Satisfactorily submit data on quality measures under PQRI for a year and have such data submitted—

++ On their behalf through an MOCP that meets the criteria for a registry under PQRI (see section VI.F.1.d.(4) of this proposed rule); or

++ In an alternative form and manner determined appropriate by the Secretary; and

- More frequently than is required to qualify for or maintain board certification status—

++ Participate in such an MOCP for a year; and

++ Successfully completes a qualified MOCP for such year.

Section 1848(m)(7)(C)(i) of the Act defines "Maintenance of Certification Program" as a continuous assessment program, such as a qualified ABMS MOCP, or an equivalent program (as determined by the Secretary), that advances quality and the lifelong learning and self-assessment of board certified specialty physicians by focusing on the competencies of patient care, medical knowledge, practice-based learning, interpersonal and communications skills and professionalism. Such a program shall require a physician to do the following:

- Maintain a valid, unrestricted medical license in the United States.
- Participate in educational and self-assessment programs that require an assessment of what was learned.
- Demonstrate, through a formalized, secure examination, that the physician has the fundamental diagnostic skills, medical knowledge, and clinical judgment to provide quality care in their respective specialty.
- Successful completion of a qualified MOCP practice assessment.

As defined in section 1848(m)(7)(C)(ii) of the Act, a "qualified Maintenance of Certification Program practice assessment" means an assessment of a physician's practice that—

(1) Includes an initial assessment of an EP's practice that is designed to demonstrate the physician's use of evidence-based medicine;

(2) Includes a survey of patient experience with care; and

(3) Requires a physician to implement a quality improvement intervention to address a practice weakness identified in the initial assessment and then to remeasure to assess performance after such intervention.

To qualify for the additional incentive payment, section 1848(m)(7)(B)(iii) of the Act also requires the MOCP Program to submit to CMS, on behalf of the EP, information:

(1) In a form and manner specified by the Secretary, that the EP has successfully completed a qualified MOCP practice assessment for such year;

(2) If requested by the Secretary, information on the survey of patient experience with care; and

(3) As the Secretary may require, on the methods, measures, and data used under the MOCP and the qualified MOCP practice assessment.

Section 10327(b) of the ACA amends section 3002(c) of the ACA further to specify that the additional 0.5 percent incentive payment is available only for years 2011, 2012, 2013, and 2014. For years after 2014, if the Secretary determines it to be appropriate, the Secretary may incorporate participation in an MOCP and successful completion of a qualified MOCP practice assessment into the composite of measures of quality for care furnished pursuant to the physician fee schedule payment modifier.

To implement the provisions under sections 3002(c) and 10327 of the ACA, CMS proposes for 2011 to require the following:

- An EP wishing to be eligible for the additional PQRI incentive payment of 0.5 percent must meet the proposed requirements for satisfactory PQRI reporting, for program year 2011, based on the 12-month reporting period. We propose to require that EPs seeking the additional PQRI incentive payment satisfactorily report for a 12-month reporting period rather than only a 6 month reporting period, based on the statutory language that the EP must satisfactorily report "for a year." For purposes of satisfactory reporting under PQRI, we propose that the EP may participate as an individual EP using either individual PQRI measures or measures groups and submitting the PQRI data via claims, a registry, or an her or participate under one of the GPRO options (I or II),. Alternatively, EPs may satisfactorily report under PQRI based on submission of PQRI data by an MOCP, provided that the MOCP has qualified as a PQRI registry for 2011. As indicated previously, an EP would not necessarily have to qualify for PQRI through an MOCP serving as a registry. Rather, we propose that an EP may qualify for the additional incentive, without reqard to the method by which the EP has met the basic requirement of satisfactory reporting under PQRI.
- In addition to meeting the proposed requirements for satisfactory reporting under PQRI for program year 2011, the EP must have data submitted on his or her behalf through an MOCP, for the MOCP in which the EP participates. Although the MOCP need not become a qualified registry for data submission for PQRI purposes, the MOCP must meet the criteria for a registry for submission of the MOCP data as specified below.
- An EP must, more frequently than is required to qualify for or maintain board certification, participate in an MOCP for a year and successfully complete a qualified MOCP practice assessment for such year. We believe that the "more frequently" requirement applies both to the elements of the MOCP itself and the requirement to successfully complete a qualified MOCP practice assessment. With regard to the elements other than completing a qualified MOCP practice assessment, we propose to require that the MOCP certify that the EP has "more frequently" than is required to qualify for or maintain

board certification "participated in a MOCP for a year" as required by section 10327 of the ACA. We do not propose to specify with respect to participation how an EP must meet the more frequently requirement, but rather that the MOCP so certify that EP has met this requirement. We note that we do not believe that the "more frequently" requirement is applicable to the licensure requirement, given that one cannot be licensed "more frequently" than is required. However, we do believe that the "more frequently" requirement applies to the required elements under sections 1848(m)(7)(C)(i)(II) and 1848(m)(7)(C)(i)(III) of the Act. In other words, we believe that the EP must "more frequently" than is required to qualify for or maintain board certification, participate in educational and self-assessment programs that require an assessment of what was learned; demonstrate, through a formalized, secure examination, that the physician has the fundamental diagnostic skills, medical knowledge, and clinical judgment to provide quality care in their respective specialty; and successfully complete a qualified MOCP practice assessment.

With respect to the MOCP practice assessment, which is specifically delineated in section 1848(m)(7)(B)(ii) of the Act as being required more often than is necessary to qualify for or maintain board certification, we believe we need to be more specific regarding our interpretation of the phrase "more frequently." Additionally, we are aware that some specialty boards have varying MOCP requirements for physicians to maintain board certification, based on the date of original certification. Some, we believe, may not be required to participate in an MOCP program at all in order to maintain board certifications. Accordingly, we recognize that "more often" may vary among physicians certified by the same specialty board. We interpret the statutory provisions as requiring participation in and successful completion of at least one MOCP practice assessment. Therefore, we propose, as a basic requirement, participation in and successful completion in at least one MOCP practice assessment. For physicians who are not required to participate in an MOCP to maintain board certification, "more often" would be more than 0, and therefore only once. For physicians, however, who are otherwise required by the specialty board to participate in an MOCP to maintain board certification status, these physicians would need to complete the MOCP practice assessment a second time in order to qualify for the additional incentive payment. If an MOCP practice assessment were required more than once during a particular cycle, the EP would be required to complete the MOCP practice assessment a third time in order to qualify for the additional incentive.

We are also aware that ABMS boards are at various stages in implementing the practice assessment modules, and some may not have such assessment modules in place. However, inasmuch as we interpret the statute to require an MOCP practice assessment at least once as part of the MOCP, EPs who do not have available, through their boards or otherwise, an MOCP practice assessment are not eligible for the 0.5 percent incentive.

- We believe that the experience of care survey provides particularly valuable information and propose that a qualified MOCP practice assessment must include a survey of patient experience with care. The Secretary may request information on the survey of patient experience with care, under section 1848(m)(7)(B)(iii) of the Act. In view of the importance of this information, and the lack of readily available alternative sources, we propose to require that MOCPs submit information as to the survey of patient experience with care for the EP regarding whom information is being submitted by the MOCP.

We propose that MOCPs, who wish to enable their members to be eligible for an additional PQRI incentive payment for the 2011 PQRI, will need to go through a self-nomination process by January 31, 2011. We propose the board will need to include all of the following information in their self-nomination letter to CMS:

- Provide detailed information regarding the MOCP with reference to the statutory requirements for such program.
- Indicate the organization sponsoring the MOCP, and whether the MOCP is sponsored by an ABMS board. If not an ABMS board, indicate whether the program is substantially equivalent to the ABMS MOCP process.
- The frequency of a cycle of MOC for the specific MOCP of the sponsoring organization; including what constitutes "more frequently" for the MOCP practice assessment for the specific MOCP of the sponsoring organization.
- What was, is, or will be the first year of availability of the MOCP practice assessment for completion by an EP.
- What data is collected under the patient experience of care survey and how this information would be provided to CMS.
- How the MOCP monitors that an EP has implemented a quality improvement process for their practice.
- Describe the methods, and data used under the MOCP, and provide a list of all measures used in the MOCP for 2010 and to be used for 2011, including the title and descriptions of each measure, the owner of the measure, whether the measure is NQF endorsed, and a link to a Web site containing the detailed specifications of the measures, or an electronic file containing the detailed specifications of the measures.

We propose that sponsoring organizations who desire to participate as an MOCP will need to be able to provide CMS the following information in a CMS-specified file format by no later than the end of the first quarter of 2012:

- The name, NPI and applicable TIN(s) of the EP who would like to participate in this process;
- Attestation from the board that the information provided to CMS is accurate and complete;
- The board has signed documentation from the EP that the EP wishes to have their information released to CMS; Information from the experience of care survey;
- Information certifying that the EP has participated in an MOCP for a year, more frequently than is required to qualify for or maintain board certification status, including the year that the physician met the board certification requirements for the MOCP, and the year the EP participated in an MOCP "more frequently" than is required to maintain or qualify for board certification; and
- Information certifying that the EP has completed the MOCP practice assessment one additional time more than is required to qualify for or maintain board certification, including the year of the original MOCP practice assessment or that an MOCP practice assessment is not required for the EP, and the year of the additional MOCP practice assessment completion.

We propose that specialty boards that also desire to send PQRI information to CMS on behalf of their EP should be able to meet the requirements for registry data submission proposed in section VI.F.1.d.(4) of this rule and should follow the directions for self-nomination to become a qualified registry. Boards may also participate as registries for PQRI data provided that they meet the registry requirements.

As an alternative to requiring boards to either operate a qualified PQRI registry or to self-nominate to submit MOCP data to CMS on behalf of their members, we also considered having the

various boards submit the MOCP data to the ABMS and having ABMS channel the information from the various boards to CMS. We invite comments on the proposed mechanism for receiving MOCP data from the specialty boards as well as on the alternative mechanism that we considered.

(3) Section 3002(d)—Integration of PQRI and EHR Reporting

Section 1848(m)(7) of the Act ("Integration of Physician Quality Reporting and EHR Reporting), as added by section 3002(d) of the ACA requires us to move towards the integration of EHR measures with respect to the PQRI program. Section 1848(m)(7) of the Act specifies that by no later than January 1, 2012, the Secretary shall develop a plan to integrate reporting on quality measures under PQRI with reporting requirements under subsection (o) relating to the meaningful use of EHRs. Such integration shall consist of the following:

(A) The selection of measures, the reporting of which would both demonstrate—

(i) Meaningful use of an EHR for purposes of the EHR incentive program; and

(ii) Quality of care furnished to an individual; and

(B) Such other activities as specified by the Secretary.

In an effort to align PQRI with the EHR incentive program, we propose to include many ARRA core clinical quality measures in the PQRI program, to demonstrate meaningful use of EHR and quality of care furnished to individuals. We propose the selection of these measures to meet the requirements of planning the integration of PQRI and EHR reporting. We are working towards a plan to integrate reporting on quality measures to make available by January 1, 2012.

We solicit comments on this approach to integrate PQRI EHR measures with the clinical quality measures adopted for the EHR incentive program. Specifically, we encourage comments on how CMS plans to align the measures, and how the plan for integration will optimally improve quality of care for individuals and provide meaningful use of EHRs.

(4) Section 3002(e)—Feedback

Section 3002 (e) of the ACA amends section 1848(m)(5) of the Act by adding subparagraph (H), which requires the Secretary to provide timely feedback to EPs on the performance of the EP with respect to satisfactorily submitting data on quality measures. Since the inception of the program in 2007, the PQRI program has provided EPs who have reported PQRI data on quality measures feedback reports at the TIN/NPI level detailing participation in PQRI, including reporting rate and performance rate information. For 2008, we improved the format and content of feedback reports based on stakeholder input. We also developed an alternate report distribution method whereby each EP can directly request and receive a feedback report. We will continue to provide feedback reports to individuals and group practices that satisfactorily submit PQRI quality measure and thus qualify to earn a PQRI incentive.

We believe that the requirements under section 1848(m)(5)(H) of the Act, as added by section 3002(e) of the ACA, for "timely" feedback reports with respect to satisfactorily submitting data on quality measures is met by providing the feedback reports on or about the time of issuance of the incentive payments. Thus, we propose to provide 2011 feedback reports on or about the time of issuance of the 2011 incentive payments, consistent with our current practice.

In addition, we also propose to provide interim feedback reports for EPs reporting 2011 measures groups through the claims-based reporting mechanism. Specifically, we propose to develop interim feedback reports that are similar in content and format to the reports that we currently provide for such EPs using claims for dates of service between January 1, 2011 and February 28, 2011. We expect that we would be able to make these interim feedback reports available to EPs in June 2011. We believe interim feedback reports would be particularly valuable to EPs reporting measures group because, unlike with individual measures reporting, EPs would not be required to report on a certain percentage of eligible cases to satisfactorily report the 2011 PQRI measures groups. EPs could just report on 30 eligible cases to satisfactorily report using measures groups. Interim feedback regarding the number of cases reported as of February 28, 2011 would be valuable since an EP would know how many more cases he or she needs to report to satisfy the criteria for satisfactory reporting for claims-based reporting of measures groups.

We also intend to continue to explore methods to facilitate PQRI feedback report distribution. Additionally, based on feedback from the 2011 PQRI Listening Session that was held on February 2, 2010, we are considering a process by which we could respond to interim feedback report requests at the individual level for claims-based submission, based upon first quarter claims data for the applicable program year. The goal of this would be to provide information to EPs as to errors in claims-based QDC submission while the reporting period is ongoing and prior to the start of the 6-month reporting period. We welcome comments with respect to our proposal to provide timely feedback reports for PQRI.

(5) Section 3002(f)—Appeals

Section 1848(m)(5)(I) of the Act, as amended and added by section 3002(f)(2) of the ACA, requires an informal review process. Specifically, the statute requires that the Secretary establish and have in place, no later than January 1, 2011, an informal process for EPs to seek a review of the determination that an EP did not satisfactorily submit data on quality measures under the PQRI.

We note that except as provided under the informal process under section 1848(m)(5)(I) of the Act, section 1848(m)(5)(E) of the Act, as amended by section 3002(f) of the ACA, specifies that, with respect to the PQRI, there shall be no administrative or judicial review under section 1869, section 1878, or otherwise, of:

(1) The determination of measures applicable to services furnished by EPs under PQRI;

(2) The determination of satisfactory reporting under PQRI; and

(3) The determination of any PQRI incentive payment and PQRI payment adjustment.

We propose to base the informal process on our current inquiry process whereby an EP can contact the Quality Net Help Desk (via phone or e-mail) for general PQRI and eRx Incentive Program information, information on PQRI feedback report availability and access, and/or information on PQRI Portal password issues. We believe that the current inquiry process provides a good basis for an informal review process because EPs currently can utilize the inquiry process if they have questions on whether they qualified for an incentive. However, the current inquiry process does not have timelines nor is it restricted to questions solely on whether the EP qualified for an incentive. Thus, for purposes of the informal process required under section 1848(m)(5)(E) of the Act, we propose the following process:

- An EP electing to utilize the informal process must request an informal review within 90 days of the release of his or her feedback report.
- An EP can request the informal review by notifying the Quality Net Help Desk via e-mail at

qnetsupport@sdps.org. The e-mail requesting the initiation of the informal review process should summarize the concern(s) of the EP and the reason(s) for requesting an informal review.

- We propose to provide the EP with a response to his or her request for an informal review within 60 days of receiving the original request.
- As this process is informal and the statute does not require a formal appeals process, we will not include a hearing or evidence submission process, although the EP may submit information to assist in the review.
- Based on our informal review, we will provide a written response. Where we find that the EP did satisfactorily report, we propose to provide the applicable incentive payment.
- Given that this is an informal review process and given the limitations on review under section 1848(m)(5)(E) of the Act, decisions based on the informal review will be final, and there will be no further review or appeal.
- By December 31, 2011, we propose to post on the CMS PQRI Web site, further information regarding the operational aspects of the informal review process for 2011 PQRI. We invite public comment on this proposed process.

2. Section 132: Incentives for Electronic Prescribing (eRx)— The Electronic Prescribing Incentive Program

a. Program Background and Statutory Authority

As defined in § 423.159(a), eRx is the transmission using electronic media, of prescription or prescription-related information between prescriber, dispenser, pharmacy benefit manager (PBM), or health plan, either directly or through an intermediary, including an eRx network. Included in eRx, but not limited to, are two-way transmissions between the point of care and the dispenser.

Section 1848(m)(2) of the Act promotes the use of electronic prescribing by authorizing incentive payments to EPs or group practices who are "successful electronic prescribers." The intention of the 2011 eRx Incentive Program, which is separate from, and in addition to, any incentive payment that EPs may earn through the PQRI program, is to continue to encourage significant expansion of the use of electronic prescribing by authorizing a combination of financial incentives and payment adjustments. Individual EPs do not have to participate in PQRI in order to participate in the eRx Incentive Program (and vice versa). We propose to add § 414.92 to title 42 of the Code of Federal Regulations to implement the provisions of the eRx Incentive Program discussed in this section of the proposed rule.

For 2011, which is the third year of the eRx Incentive Program, the Secretary is authorized to provide successful electronic prescribers, as defined in section 1848(m)(3)(B) of the Act and further discussed below in this section, an incentive payment equal to 1.0 percent of the total estimated Medicare Part B PFS allowed charges (based on claims submitted not later than 2 months after the end of the reporting period) for all covered professional services furnished during the 2011 reporting period. Covered professional services are defined under the statute to be services for which payment is made under, or is based on, the PFS and which are furnished by an EP. The applicable electronic prescribing percent (1.0 percent) authorized for the 2011 eRx Incentive Program is different from that authorized for the 2009 and 2010 eRx Incentive Program.

Under section 1848(m)(2)(C) of the Act, the incentive payments for successful electronic prescribers for future years are authorized as follows:

- 1.0 percent for 2012.
- 0.5 percent for 2013.

However, section 1848(m)(2)(D) of the Act, as added by section 4101(f)(2)(B) of Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (Pub.L. 111–5) (ARRA–HITECH), specifies that the eRx incentive does not apply to an EP (or group practice), if, for the EHR reporting period, the EP (or group practice) earns an incentive payment under the Medicare EHR incentive program. The Medicare EHR incentive program begins in 2011. Therefore, EPs who earn an incentive under the Medicare EHR Incentive Program, with respect to certified EHR technology that has eRx capabilities, will not be eligible to earn a separate incentive payment for being a successful electronic prescriber under the eRx Incentive Program.

For eRx, when reporting any of the G-codes for purposes of qualifying for the incentive payment for electronic prescribing in 2011, we propose that the professional must have and regularly use a "qualified" electronic prescribing system, as defined in the electronic prescribing measure specifications. If the professional does not have general access to an eRx system in the practice setting, as cited in the hardship exception as stated by the secretary, there is nothing to report.

In addition, under section 1848(a)(5)(A) of the Act, a PFS payment adjustment applies beginning in 2012 to those who are not successful electronic prescribers. Specifically, for 2012, 2013, and 2014, if the EP is not a successful electronic prescriber for the reporting period for the year, the PFS amount for covered professional services furnished by such professionals during the year as referenced above shall be less than the PFS amount that would otherwise apply over the next several years by:

- 1.0 percent for 2012.
- 1.5 percent for 2013.
- 2.0 percent for 2014.

We believe that the criteria for determination of successful electronic prescriber proposed herein for the eRx incentive payment are not required to be identical to the criteria that will be used to determine the applicability of the payment adjustment that begins in 2012. Policy considerations underlying the application of the incentive payment are not necessarily the same as those in applying a payment adjustment. In general, we believe that an incentive should be broadly available to encourage the widest possible adoption of eRx, even for low volume prescribers. On the other hand, we believe that a payment adjustment should be applied primarily to assure that those who have a large volume of prescribing do so electronically, without penalizing those for whom the adoption and use of an electronic prescribing system may be impractical given the low volume of prescribing. The 2011 eRx incentive and the application of the payment adjustment for 2012 will be addressed separately below.

Under section 1848(m)(6)(A) of the Act, the definition of "EP" for purposes of eligibility for the eRx Incentive Program is identical to the definition of "EP" for the PQRI under section 1848(k)(3)(B) of the Act. In other words, EPs include physicians, other practitioners as described in section 1842(b)(18)(C) of the Act, physical and occupational therapists, qualified speech-language pathologists, and qualified audiologists. However, as we have noted in prior years, for purposes of the eRx Incentive Program, eligibility is further restricted by scope of practice to those professionals who have prescribing authority. Detailed information about the types of professionals that are eligible to participate in the eRx Incentive Program is available on the Electronic Prescribing Incentive Program section of the CMS Web site at *http://www.cms.gov/ERXIncentive.*

As in the 2010 eRx Incentive Program, we propose in 2011 that the eRx Incentive Program continue to be an incentive program in which determination of whether an EP is a

successful electronic prescriber will be made at the individual professional level, based on the NPI. Inasmuch as some individuals (identified by NPIs) may be associated with more than one practice or TIN, the determination of whether an EP is a successful electronic prescriber will be made to the holder of each unique TIN/NPI combination. Then, as in previous years, payment will be made to the applicable holder of the TIN. For 2011, the determination of whether an EP is a successful electronic prescriber will continue to be made for each unique TIN/NPI combination. However, section 1848(m)(3)(C) of the Act required the Secretary by January 1, 2010 to establish and have in place a process under which EPs in a group practice (as defined by the Secretary) would be treated as meeting the requirements for submitting data on electronic prescribing quality measures for covered professional services for a reporting period (or, for purposes of the payment adjustment under section 1848(a)(5) of the Act, for a reporting period for a year) if, in lieu of reporting the electronic prescribing measure, the group practice reports measures determined appropriate by the Secretary, such as measures that target high-cost chronic conditions and preventive care, in a form and manner, and at a time specified by the Secretary. Therefore, in addition to making incentive payments for 2011 to individual EPs based on separately analyzing whether the individual EPs are successful electronic prescribers, we propose to also make incentive payments to group practices based on the determination that the group practice, as a whole, is a successful electronic prescriber in accordance with section 1848(m)(3)(C) of the Act.

b. The 2011 eRx Incentive

(1) The 2011 Reporting Period for the eRx Incentive Program

Section 1848(m)(6)(C)(i)(II) of the Act defines "reporting period" for the 2011 eRx Incentive Program to be the entire year. Section 1848(m)(6)(C)(ii) of the Act, however, authorizes the Secretary to revise the reporting period if the Secretary determines such revision is appropriate, produces valid results on measures reported, and is consistent with the goals of maximizing scientific validity and reducing administrative burden. We propose the 2011 eRx Incentive Program reporting period to be the entire calendar year (January 1, 2011 through December 31, 2011) based on the definition of "reporting period" specified under section 1848(m)(6)(C)(i)(II) of the Act. We believe that keeping the 2011 eRx Incentive Program reporting period consistent with 2009 and 2010 eRx Incentive Program reporting periods will help to further maintain program stability and be less confusing for EPs.

Accordingly, we propose that successful electronic prescribers would be eligible to receive an incentive payment equal to 1.0 percent of the total estimated allowed Medicare Part B charges (based on claims submitted by no later than February 28, 2012) for all covered professional services furnished January 1, 2011 through December 31, 2011.

(2) Proposed Criteria for Determination of Successful Electronic Prescriber for EPs

Under section 1848(m)(3)(B) of the Act, in order to qualify for the incentive payment, an EP must be a "successful electronic prescriber," which the Secretary is authorized to identify using 1 of 2 possible criteria. One criterion, under section 1848(m)(3)(B)(ii) of the Act, is based on the EP's reporting, in at least 50 percent of the reportable cases, on any electronic prescribing quality measures that have been established under the physician reporting system, under subsection 1848(k) of the Act (which, as noted previously, we have named "PQRI" for ease of reference) and are applicable to services furnished by the EP during a reporting period. We applied this criterion in 2009. However, for years after 2009, section 1848(m)(3)(D) of the Act permits the Secretary in consultation with stakeholders and experts to revise the criteria for submitting data on electronic prescribing measures under section 1848(m)(3)(B)(ii) of the Act.

The second criterion, under section 1848(m)(3)(B)(iii) of the Act, is based on the electronic submission by the EP of a sufficient number (as determined by the Secretary) of prescriptions under Part D during the reporting period. If the Secretary decides to use the latter standard, then, in accordance with section 1848(m)(3)(B)(iv) of the Act, the Secretary is authorized to use Part D drug claims data to assess whether a "sufficient" number of prescriptions have been submitted by EPs. However, under section 1848(m)(3)(B)(i) of the Act, if the standard based on a sufficient number (as determined by the Secretary) of electronic Part D prescriptions is applied for a particular reporting period, then the standard based on the reporting on electronic prescribing measures would no longer apply.

For 2011, we propose to continue to require EPs to report on the electronic prescribing measure used in the 2009 and 2010 eRx Incentive Program to determine whether an EP is a successful electronic prescriber, but we are proposing to again use modified measure specifications and to use modified reporting criteria based on the authority provided under section 1848(m)(3)(D) of Act, as discussed below.

As we stated in prior years, we are still considering the use of a certain number of Part D prescribing events as the basis for the incentive payment. We propose to continue to require EPs to report on the electronic prescribing measure used in the 2009 and 2010 eRx Incentive Program because we believe that the accuracy and completeness of the Part D data with respect to whether a prescription was submitted electronically is unknown. In 2010, information on whether a prescription was submitted electronically by an individual EP began to be collected on the Part D claims and/or Prescription Drug Event (PDE) data. Also, since April 1, 2009, prescription drug plan sponsors are required to send PDE data with an individual prescriber's NPI. We currently have limited information on the accuracy and completeness of NPI data that is submitted with the PDE data. The NPI is needed in order for CMS to be able to link an EP's PDE data to his or her Medicare Part B claims to calculate the incentive payment amount. During 2010, we continue to evaluate the adequacy of Part D data to determine the feasibility of its use for determining whether an EP qualifies as a successful electronic prescriber. The use of Part D data for correlation has not yet shown to be possible due to NPI and other issues. Part D data is supplied by the pharmacy and not the EP. We are in the process of writing and will publish an evaluation of the PQRI reporting experience. The experience report will include an evaluation of the eRx Incentive Program.

(i) Reporting the Electronic Prescribing Measure

For 2011, we propose to retain the 3 reporting mechanisms available to individual EPs to report the electronic prescribing measure in 2010 to maintain program stability. First, we propose to again retain the claims-based reporting mechanism that is used in the 2009 and 2010 eRx Incentive Program. In addition, similar to the PQRI, for the eRx Incentive Program, we propose to continue the registry-based reporting mechanism and, we also propose that the EHR-based reporting mechanism be available for the electronic prescribing measure for 2011.

We propose that only registries qualified to submit quality measure results and numerator and denominator data on quality measures on behalf of EPs for the 2011 PQRI would be qualified to submit measure results and numerator and denominator data on the electronic prescribing measure on behalf of EPs for the 2011 eRx Incentive Program. As in 2010, not all registries qualified to submit quality measures on behalf of EPs for the 2011 PQRI would be qualified to submit quality measures results and numerator and denominator data on the eRx measure. The electronic prescribing measure is reportable by an EP any time he or she bills for one of the procedure codes for Part B services included in the measure's denominator. Some registries who self-nominate to become a qualified registry for PQRI may not choose to self-nominate to become a qualified registry for submitting measures that require reporting at each eligible visit. Registries need to indicate their desire to qualify to submit measure results and numerator and denominator data on the electronic prescribing measure for the 2011 eRx Incentive program at the time that they submit their self-nomination letter for the 2011 PQRI. In addition, we propose that registries that want to be qualified to submit measure results and numerator and denominator data on the electronic prescribing measure for the 2011 eRx Incentive Program would be required to transmit 2011 eRx measure results and numerator and denominator data on the electronic prescribing measure to CMS in two separate transmissions. In addition to submitting 2011 measure results and numerator data on the electronic prescribing measure in 2012 as described in section VI.F.1. above, such registries would need to submit 2011 measure results and numerator and denominator data on the electronic prescribing measure between July 1, 2011 and August 19, 2011 for purposes of the eRx penalty described in section VI.F.2.c. below. The self-nomination process and requirements for registries for the PQRI, which also would apply to the registries for the 2011 eRx Incentive Program, are discussed previously in section VI.F.1. of this proposed rule. We will post a final list of qualified registries for the 2011 eRx Incentive Program on the Electronic Prescribing Incentive Program section of the CMS Web site at *http://www.cms.gov/ERXIncentive* when we post the final list of qualified registries for the 2011 PQRI on the PQRI section of the CMS Web site.

Similarly, we continue to propose that only EHR products "qualified" to potentially be able to submit clinical quality data extracted from the EHR to CMS for the 2011 PQRI would be considered "qualified" for the purpose of an EP potentially being able to submit data on the electronic prescribing measure for the 2011 eRx Incentive Program. The self-nomination process and requirements for EHR vendors for the PQRI, which would apply to the EHR vendors for the 2011 eRx Incentive Program were discussed in the CY 2010 PFS final rule with comment period (74 FR 61801 through 61802). EHR vendors were required to indicate their desire to have one or more of their EHR products qualified for the purpose of an EP potentially being able to submit data on the electronic prescribing measure for the 2011 eRx Incentive Program at the time that they submitted their self-nomination letter for the 2011 PQRI. A list of qualified EHR vendors and their products (including the version that is qualified) for the 2011 eRx Incentive Program will be posted on the eRx Incentive Program section of the CMS Web site at *http://www.cms.gov/ERXIncentive* when we post the list of qualified EHR products for the 2011 PQRI on the PQRI section of the CMS Web site. We propose that EPs who want to use a qualified EHR to submit the electronic prescribing measure for the 2011 eRx Incentive Program would be required to transmit 2011 eRx data to CMS in two separate transmissions. In addition to submitting 2011 data on the electronic prescribing measure in 2012, as described in section VI.F.1. above, such EPs would need to submit 2011 data on the electronic prescribing measure between July 1, 2011 and August 19, 2011 for purposes of the eRx penalty described in section VI.F.2.c. below.

(ii) The Reporting Denominator for the Electronic Prescribing Measure

The electronic prescribing measure, similar to the PQRI measures, has 2 basic elements, which include: (1) A reporting denominator that defines the circumstances when the measure is reportable; and (2) a reporting numerator.

The denominator for the electronic prescribing measure consists of specific billing codes for covered professional services. The measure becomes reportable when any one of these procedure codes is billed by an EP for Part B covered professional services. As initially required under section 1848(k)(2)(A)(ii) of the Act, and further established through rulemaking and under section 1848(m)(2)(B) of the Act, we may modify the codes making up the denominator of the electronic prescribing measure. As such, we expanded the scope of the denominator codes for 2010 to covered professional services outside the professional office and outpatient setting, such as professional services furnished in skilled nursing facilities or the home care setting.

We propose to retain the following CPT codes in the denominator of the electronic prescribing measure for 2011: 90801, 90802, 90804, 90805, 90806, 90807, 90808, 90809, 90862, 92002, 92004, 92012, 92014, 96150, 96151, 96152, 99201, 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, 99304, 99305, 99306, 99307, 99308, 99309, 99310, 99315, 99316, 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350, G0101, G0108, G0109. In 2010, the expansion of the electronic prescribing measure denominator was expected to provide more EPs the opportunity to report the measure, and thus, provide more opportunities for EPs to participate in the eRx Incentive Program. Thus far, our experience in the 2010 eRx Incentive Program has been positive and we do not see a need to change the denominator codes for 2011. We invite comments on our proposal to retain the denominator codes from the 2010 electronic prescribing measure denominator.

There are no diagnosis codes in the measure's denominator and there are no age/gender requirements in order for a patient to be included in the measure's denominator (that is, reporting of the electronic prescribing measure is not further limited to certain ages or a specific gender). EPs are not required to report this measure in all cases in which the measure is reportable. EPs who do not bill for one of the procedure codes for Part B covered professional services included in the measure's denominator will have no occasion to report the electronic prescribing measure.

We further propose that by December 31, 2010, we will post the final specifications of the measure on the "eRx Measure" page of the eRx Incentive Program section of the CMS Web site at *http://www.cms.gov/ERXIncentive.*

(iii) Qualified Electronic Prescribing System—Required Functionalities and Part D eRx Standards

To report the electronic prescribing measure in 2011, we again propose that the EP must report one of the measure's numerator "G" codes, as will be discussed below. However, when reporting any of the G-codes for purposes of qualifying for the incentive

payment for electronic prescribing in 2011, we propose that the professional must have and regularly use a "qualified" electronic prescribing system, as defined in the electronic prescribing measure specifications. If the professional does not have general access to an eRx system in the practice setting, the EP does not have any data to report for purposes of the incentive payment.

Required Functionalities for a "Qualified" Electronic Prescriber System.

For 2011, we propose to retain what constitutes a "qualified" electronic prescribing system as a system based upon certain required functionalities that the system can perform. We propose that for 2011, a "qualified" electronic prescribing system would be one that can—

- Generate a complete active medication list incorporating electronic data received from applicable pharmacies and PBMs, if available.
- Allow EPs to select medications, print prescriptions, electronically transmit prescriptions, and conduct alerts (written or acoustic signals to warn the prescriber of possible undesirable or unsafe situations including potentially inappropriate dose or route of administration of a drug, drug-drug interactions, allergy concerns, or warnings and cautions). This functionality must be enabled.
- Provide information related to lower cost, therapeutically appropriate alternatives (if any). The ability of an electronic prescribing system to receive tiered formulary information, if available, would again suffice for this requirement for 2011 and until this function is more widely available in the marketplace.
- Provide information on formulary or tiered formulary medications, patient eligibility, and authorization requirements received electronically from the patient's drug plan (if available).

Part D Electronic Prescribing Standards. Section 1848(m)(3)(B)(v) of the Act specifies that to the extent practicable, in determining whether an EP is a successful electronic prescriber, "the Secretary shall ensure that EPs utilize electronic prescribing systems in compliance with standards established for such systems pursuant to the Part D Electronic Prescribing Program under section 1860D–4(e)" of the Act. The Part D standards for electronic prescribing systems establish which electronic standards Part D sponsors, providers, and dispensers must use when they electronically transmit prescriptions and certain prescription related information for Part D covered drugs that are prescribed for Part D eligible individuals. To be a qualified electronic prescribing system under the current eRx Incentive Program, electronic systems must convey the information listed above under (a) through (d) using the standards currently in effect for the Part D electronic prescribing program. Additional Part D electronic prescribing standards were implemented April 1, 2009. These latest Part D electronic prescribing standards, and those that had previously been adopted, can be found on the CMS Web site at *http://www.cms.gov/eprescribing.*

To ensure that EPs utilize electronic prescribing systems that meet these requirements, the electronic prescribing measure requires that those functionalities required for a "qualified" electronic prescribing system utilize the adopted Part D electronic prescribing standards. The Part D electronic prescribing standards relevant to the four functionalities for a "qualified" system in the electronic prescribing measure described above and listed as (a), (b), (c), and (d), currently are as follows:

(a) Generate medication list—Use the National Council for Prescription Drug Programs (NCPDP) Prescriber/Pharmacist Interface SCRIPT Standard, Implementation Guide, Version 8, Release 1, October 2005 (hereinafter "NCPDP SCRIPT 8.1") Medication History Standard.

(b) Transmit prescriptions electronically—Use the NCPDP SCRIPT 8.1 for the transactions listed at § 423.160(b)(2).

(c) Provide information on lower cost alternatives—Use the NCPDP Formulary and Benefits Standard, Implementation Guide, Version 1, Release 0 (Version 1.0), October 2005 (hereinafter "NCPDP Formulary and Benefits 1.0").

(d) Provide information on formulary or tiered formulary medications, patient eligibility, and authorization requirements received electronically from the patient's drug plan—use—

(1) NCPDP Formulary and Benefits 1.0 for communicating formulary and benefits information between prescribers and plans;

(2) Accredited Standards Committee (ASC) X12N 270/271–Health Care Eligibility Benefit Inquiry and Response, Version 4010, May 2000, Washington Publishing Company, 004010X092 and Addenda to Health Care Eligibility Benefit Inquiry and Response, Version 4010A1, October 2002, Washington Publishing Company, 004010X092A1 for communicating eligibility information between the plan and prescribers; and

(3) NCPDP Telecommunication Standard Specification, Version 5, Release 1 (Version 5.1), September 1999, and equivalent NCPDP Batch Standard Batch Implementation Guide, Version 1, Release 1 (Version 1.1), January 2000 for communicating eligibility information between the plan and dispensers.

However, there are Part D electronic prescribing standards that are in effect for functionalities that are not commonly utilized at this time. Such functionalities are not currently required for a "qualified" system under the eRx Incentive Program. One example is Rx Fill Notification, which is discussed in the Part D electronic prescribing final rule (73 FR 18918, 18926). For purposes of the 2011 Electronic Prescribing Program, we again are not proposing to require that an electronic prescribing system contain all functionalities for which there are available Part D electronic prescribing standards. For those required functionalities described above, we propose that a "qualified" system must use the adopted Part D electronic prescribing standards for electronic messaging.

There are other aspects of the functionalities for a "qualified" system that are not dependent on electronic messaging and are part of the software of the electronic prescribing system, for which Part D standards for electronic prescribing do not pertain and are not required for purposes of the eRx Incentive Program. For example, the requirements in qualification (b) listed above that require the system to allow professionals to select medications, print prescriptions, and conduct alerts are functions included in the particular software, for which Part D standards for electronic messaging do not apply.

We are aware that there are significant numbers of EPs who are interested in participating in the eRx Incentive Program, but currently do not have an electronic prescribing system. The electronic prescribing measure does not require the use of any particular system or transmission network; only that the system be a "qualified" system having the functionalities described above based on Part D electronic prescribing standards. As in 2010, if the professional does not have general access to an electronic prescribing system in the practice setting, the EP does not have any data to report for purposes of the incentive payment and would not be able to participate in the 2011 eRx Incentive Program. If an EP does not participate in the 2011 eRx Incentive Program he or she may be subject to the 2012 eRx penalty

discussed in section VI.F.2.c. of this proposed rule.

(iv) The Reporting Numerator for the Electronic Prescribing Measure

The proposed criteria for reporting for purposes of being a 2011 successful electronic prescriber are designed to reward those EPs who demonstrate that they have adopted a qualified electronic prescribing system and actually used the system in a substantial way to electronically prescribe. In this context, the reporting of information in circumstances where a professional did not electronically prescribe is not pertinent. Additionally, although it may be of interest to measure the proportion of prescribing events that are electronic, we do not believe such detail at the individual or group practice level is of sufficient value to warrant the high burden of reporting such information. We do note that in the future the use of Part D claims data may allow this information to be collected without the necessity for professionals to specifically report such details.

Accordingly, for the 2011 electronic prescribing measure, we propose to retain the following numerator G-code from the 2010 electronic prescribing measure's numerator: G8553 (At least 1 prescription created during the encounter was generated and transmitted electronically using a qualified electronic prescribing system.)

We propose to post the final 2011 electronic prescribing measure specifications on the "eRx Measure" page of the eRx Incentive Program section of the CMS Web site at *http://www.cms.gov/ERXIncentive*. We propose to post the final 2011 electronic prescribing measure specifications by no later than December 31, 2010.

Because the electronic prescribing quality measure will apply only when an EP furnishes services indicated by one of the codes included in the measure's denominator, for claims-based reporting, for example, it will not be necessary for an EP to report G-codes for the electronic prescribing measure on claims not containing one of the denominator codes. However, if reporting a G-code, the G-code data submission will only be considered valid if it appears on the same Medicare Part B claim containing one of the electronic prescribing quality measure's denominator codes.

In addition, if the EP submits a Medicare Part B claim containing one of the electronic prescribing measure's denominator codes, he or she can report the numerator G-code only when the EP furnishes services indicated by the G-code included in the measure's numerator. That is, only when at least 1 prescription created during the encounter is generated and transmitted electronically using a qualified electronic prescribing system.

(v) Criteria for Successful Reporting of the Electronic Prescribing Measure

As discussed above, section 1848(m)(3)(D) of the Act authorizes the Secretary to revise the criteria for submitting data on the electronic prescribing measure from the criteria specified under section 1848(m)(3)(B)(ii) of the Act, which requires the measure to be reported in at least 50 percent of the cases in which the measure is reportable. In 2010, we revised the criteria for successful electronic prescriber such that an EP shall be treated as a successful electronic prescriber for a reporting period based on the EP's reporting of the electronic prescribing measure by generating and reporting one or more prescriptions associated with a patient visit electronically, a minimum of 25 unique visits per year in 2010 of applicable cases in the denominator of the eRx measure. For 2011, we again propose to make the determination of whether an EP is a successful electronic prescriber based on a count of the number of times (minimum threshold of 25) an EP reports that at least one prescription created during the encounter is generated using a qualified electronic prescribing system (that is, reports the G8553 code).

As in 2010, we believe these criteria will bring us closer to our intention to transition to using a certain number of electronic Part D prescribing events as the basis for the incentive payment in future years. In proposing these criteria again for 2011 eRx, we continue to assume that once an EP has invested in an eRx system, integrated the use of the eRx system into the practice's work flows, and has used the system to some extent, he or she is likely to continue to use the eRx system for most of the prescriptions he or she generates.

For structural measures such as the electronic prescribing measure, once an EP has demonstrated that he or she has integrated use of an eRx system into his or her practice's work flow, we believe that requiring the EP to continue to report the measure represents an administrative burden with little added benefit to the reliability and validity of the data being reporting. In contrast, for clinical quality measures, we believe that the reliability and validity of the performance rates depends on the adequacy of the sample. Therefore, we propose that an EP would be required to report that at least 1 prescription for a Medicare Part B FFS patient created during an encounter that is represented by 1 of the codes in the denominator of the electronic prescribing measure was generated and transmitted electronically using a qualified eRx system for at least 25 times during the 2011 reporting period.

The reporting threshold of 25 also takes into consideration that prescriptions are not generated with every Medicare Part B FFS patient encounter, some prescriptions, such as narcotics, cannot be prescribed electronically, and that not all Medicare Part B FFS encounters are represented by the electronic prescribing measure's denominator codes.

As stated previously, we propose that by December 31, 2010, we will post the final specifications of the measure on the "eRx Measure" page of the eRx Incentive Program section of the CMS Web site at *http://www.cms.gov/ERXIncentive*.

(3) Determination of the 2011 Incentive Payment Amount for Individual EPs Who Are Successful Electronic Prescribers

Section 1848(m)(2)(B) of the Act imposes a limitation on the electronic prescribing incentive payment. The Secretary is authorized to choose 1 of 2 possible criteria for determining whether or not the limitation applies to a successful electronic prescriber. The first criterion, under section 1848(m)(2)(B)(i) of the Act, is based upon whether the Medicare Part B allowed charges for covered professional services to which the electronic prescribing quality measure applies are less than 10 percent of the total Medicare Part B PFS allowed charges for all covered professional services furnished by the EP during the reporting period. The second criterion, under section 1848(m)(2)(B)(ii) of the Act, is based on whether the EP submits (both electronically and non-electronically) a sufficient number (as determined by the Secretary) of prescriptions under Part D (which can, again, be assessed using Part D drug claims data). If the Secretary decides to use the latter criterion, then, in accordance with section 1848(m)(2)(B) of the Act, the criterion based on the reporting on electronic prescribing measures would no longer apply. The statutory limitation also applies with regard to the application of the payment adjustment.

Based on our proposal to make the determination of whether an EP is a "successful electronic prescriber" based on submission of the electronic prescribing measure, we propose to

again apply the criterion under section 1848(m)(2)(B)(i) of the Act for the limitation for the 2011 eRx Incentive Program.

Since, as discussed above, we are retaining for 2011 our proposal to make the determination of whether an EP is a "successful electronic prescriber" based on submission of the electronic prescribing measure, we also are proposing to retain the requirement to analyze the claims submitted by the EP at the TIN/NPI level to determine whether the 10 percent threshold is met in determining the receipt of an electronic prescribing incentive payment for 2011 by an EP. This calculation is expected to take place in the first quarter of 2012 and will be performed by dividing the EP's total 2011 Medicare Part B PFS allowed charges for all such covered professional services submitted for the measure's denominator codes by the EP's total Medicare Part B PFS allowed charges for all covered professional services (as assessed at the TIN/NPI level). If the result is 10 percent or more, then the statutory limitation will not apply and a successful electronic prescriber will qualify to earn the electronic prescribing incentive payment. If the result is less than 10 percent, then the statutory limitation will apply and the EP will not earn an electronic prescribing incentive payment even if he or she electronically prescribes and reports a G-code indicating that he or she generated and transmitted a prescription electronically at least 25 times for those eligible cases that occur during the 2011 reporting period. Although an individual EP may decide to conduct his or her own assessment of how likely this statutory limitation is expected to apply to him or her before deciding whether or not to report the electronic prescribing measure, an individual EP may report the electronic prescribing measure without regard to the statutory limitation for the incentive payment.

(4) Proposed Reporting Option for Satisfactory Reporting of the Electronic Prescribing Measure by Group Practices

In 2010 eRx Incentive Program, we were required by section 1848(m)(3)(C) of the Act to establish a process under which EPs in a group practice shall be treated as a successful electronic prescriber. In addition, section 1848(m)(3)(C)(iii) of the Act requires that payments to a group practice by reason of the process established under section 1848(m)(3)(C)(i) of the Act shall be in lieu of the payments that would otherwise be made under this subsection to EPs in the group practice for being a successful electronic prescriber. In 2011, we propose to retain the requirements from 2010 eRx Incentive Program with respect to making incentive payments to group practices based on the determination that the group practice, as a whole, is a successful electronic prescriber for 2011. An individual EP who is affiliated with a group practice participating in the group practice reporting option that successfully meets the proposed requirements for group practices would not be eligible to earn a separate eRx incentive payment for 2011 on the basis of his or her successfully reporting the electronic prescribing measure at the individual level.

(i) Definition of "Group Practice"

Section 1848(m)(3)(C)(i) of the Act authorizes the Secretary to define "group practice." For purposes of determining whether a group practice is a successful electronic prescriber for 2011, we propose that consistent with the definition of group practice proposed for the PQRI group practice reporting option (GPRO) discussed in section VI.F.1. of this proposed rule, a "group practice" would be defined as a single Taxpayer Identification Number (TIN) with 2 or more EPs, as identified by their individual National Provider Identifier (NPI), who have reassigned their Medicare billing rights to the TIN. "Group practice" would also include group practices participating in Medicare demonstration projects approved by the Secretary, as described in section VI.F.1.g.(2) of this proposed rule.

In addition, we propose to restrict participation in the 2011 eRx GPRO to group practices participating in the 2011 PQRI GPRO (either through GPRO I or GPRO II) or group practices that are deemed to be participating in the 2011 PQRI GPRO (that is, group practices participating in a CMS-approved Medicare demonstration) that have indicated their desire to participate in the 2011 eRx GPRO.

Therefore, unlike individual EPs who are not required to participate in the PQRI, to be eligible to earn an electronic prescribing incentive in 2011, group practices that wish to participate in the electronic prescribing group practice reporting option will be required to participate in the PQRI group practice reporting option or be deemed to be participating in the PQRI group practice reporting option based on the practice's participation in an approved Medicare demonstration project. Participation in the eRx Incentive Program, including participation in the electronic prescribing group practice reporting option is, however, optional for group practices that are participating in PQRI under the group practice reporting option. If a group practice wishes to participate in the 2011 eRx Incentive Program under the group practice reporting option, it must indicate its desire to do so at the time that the group practice self-nominates to participate in the 2011 PQRI group practice reporting option. There is no need for group practices to indicate their intent to participate in the 2011 eRx Incentive Program as individual EPs when the group practice self-nominates to participate in the 2011 PQRI group practice reporting option.

Group practices interested in participating in the 2011 PQRI through the group practice reporting option will be required to submit a self-nomination letter to CMS, requesting to participate in the 2011 PQRI group practice reporting option. Instructions for submitting the self-nomination letter will be posted on the PQRI section of the CMS Web site by November 15, 2010. A group practice that wishes to participate in the eRx Incentive Program group practice reporting option will be notified of the selection decision to participate in the eRx Incentive Program at the same time that it is notified of the selection decision for the PQRI group practice reporting option.

In addition to meeting the proposed eligibility requirements discussed in section VI.F.1.g. of this proposed rule, we propose that a group practice that wishes to participate in the 2011 eRx Incentive Program under the group practice reporting option will also have to indicate how it intends to report the electronic prescribing measure. That is, the group practice will need to indicate in its self-nomination letter which reporting mechanism the group practice intends to use for purposes of participating in the 2011 eRx Incentive Program group practice reporting option.

(2) Process for Group Practices to Participate as Group Practices and Criteria for Successful Reporting of the Electronic Prescribing Measure by Group Practices

For group practices selected to participate in the electronic prescribing group practice reporting option for 2011, we propose the reporting period would be January 1, 2011, to December 31, 2011.

We propose that physician groups selected to participate in the 2011 eRx Incentive Program through the group practice reporting option would be able to choose to report the electronic prescribing measure through the claims-

based, the registry-based, or, the EHR-based reporting mechanism.

In order for a group practice participating in the PQRI GPRO I to be considered a successful electronic prescriber, we propose that the group practice would have to report that at least 1 prescription during an encounter was generated and transmitted electronically using a qualified electronic prescribing system in at least 2,500 instances during the reporting period. In order for a group practice participating in the PQRI GPRO II to be considered a successful electronic prescriber, we propose that the group practice would have to report that at least 1 prescription during an encounter was generated and transmitted electronically using a qualified electronic prescribing system for the number of instances specified in Table 50 (see section VI.F.1.g.(3).(ii). of this proposed rule). In other words, a group of 2–10 NPIs would need to report the 2011 electronic prescribing measure for at least 75 denominator eligible patient encounters during 2011, 225 instances for groups of 11–25 NPIs, 475 instances for groups of 26–50 NPIs, 925 instances for groups of 51–100, and 1,875 instances for groups of 101–199.

Section 1848(m)(2)(B) of the Act specifies that the limitation on the applicability of the electronic prescribing incentive applies to group practices as well as individual EPs. Therefore, in determining whether a group practice will receive an electronic prescribing incentive payment for 2011 by meeting the proposed reporting criteria described above, we would determine whether the 10 percent threshold is met based on the claims submitted by the group practice.

This calculation is expected to take place in the first quarter of 2012 and will be determined by dividing the group practice's total 2011 Medicare Part B PFS allowed charges for all covered professional services submitted for the measure's denominator codes by the group practice's total Medicare Part B PFS allowed charges for all covered professional services. If the result is 10 percent or more, then the statutory limitation would not apply and a group practice that is determined to be a successful electronic prescriber would qualify to earn the electronic prescribing incentive payment. If the result is less than 10 percent, then the statutory limitation would apply and the group practice would not qualify to earn the electronic prescribing incentive payment.

c. The 2012 eRx Penalty

As stated previously, section 1848(a)(5) of the Act requires that beginning with respect to covered professional services furnished by an EP in 2012, if the EP is not a successful electronic prescriber for the reporting period for the year, the fee schedule amount for such services furnished by such professional during 2012 shall be equal to 99 percent of the fee schedule amount that would otherwise apply to such PFS services. As noted previously, we do not believe that the criteria that will be used to determine the applicability of the payment adjustment, or penalty, for 2012 need to be identical to the criteria for determination of successful electronic prescriber.

We note also that although earning an incentive payment under the EHR incentive payment program precludes an EP from earning an eRx incentive payment, it does not preclude the EP from being subject to the eRx penalty. In order to avoid the eRx penalty, an EP participating in the Medicare EHR incentive program still must meet the relevant eRx penalty criteria for being a successful electronic prescriber.

(1) The eRx Penalty Reporting Period

For purposes of the 2012 eRx penalty, we propose to make a determination of whether an EP or a group practice is a successful electronic prescriber based on the reporting period that begins January 1, 2011 through June 30, 2011. We are proposing a 6-month reporting period for the 2012 penalty rather than a 12-month reporting period so that we may be able to complete the analysis of 2011 data to determine whether an EP or group practice is a successful electronic prescriber prior to January 1, 2012. In order to apply the penalty in 2012 concurrently with claims submission, we will need to make a determination of whether the penalty applies sufficiently in advance of 2012. We believe that establishing a 6-month reporting period for the first year of the penalty will provide administrative efficiencies and avoid the need to apply a retroactive penalty or to make retroactive payments based on application of a penalty.

For EPs and group practices using the claims-based reporting mechanism, we propose that all claims for services furnished between January 1, 2011 and June 30, 2011 must be processed by no later than July 31, 2011 for the claim to be included in our data analysis. This is in contrast to the incentive, where we allow 2 months for claims to be processed. In order to be able to make a determination of whether the penalty applies sufficiently in advance of 2012, we will need to begin our analysis of the claims shortly after June 30, 2011. We invite comments on the proposed reporting period for the 2012 penalty and our proposal to require claims to be submitted by no later than 1 month after the reporting period.

(2) Criteria for Determining Applicability of the 2012 eRx Penalty to Individual EPs

Based on the authority under section 1848(m)(3)(D) of the Act, we propose that the 2012 eRx penalty would apply to an individual EP unless one of the following conditions is met:

- The EP is not a physician (includes MDs, DOs, and podiatrists), nurse practitioner, or physician assistant as of June 30, 2011. We believe that it is appropriate to limit the application of the penalty to those professionals who generally have prescribing privileges nationwide. Other EPs not listed above may have prescribing privileges in some states but not others. Therefore, we propose to exempt EPs who do not generally have prescribing privileges from being subject to the penalty.
- The EP does not have at least 100 cases (that is, claims for patient services) containing an encounter code that falls within the denominator of the eRx measure for dates of service between January 1, 2011 through June 30, 2011. We seek to apply the penalty only to EPs who have a sufficient number of cases between January 1, 2011 and June 30, 2011 to meet the criteria for successful electronic prescribing for purposes of the penalty. We believe that, on average, for every 10 eligible cases, there will be at least one electronic prescribing opportunity, which provides a sufficient number of cases to allow EPs to meet the criteria for being a successful electronic prescriber. In addition, we seek to prevent EPs who are new to Medicare from being subject to the eRx penalty.
- The EP is a successful electronic prescriber for the January 1, 2011 through June 30, 2011 reporting period. Specifically, we propose that the EP must report that at least 1 prescription for Medicare Part B FFS patients created during an encounter that is represented by 1 of the codes in the denominator of the 2011 electronic prescribing measure was generated and transmitted electronically using a qualified eRx system at least 10 times during the 2012 eRx penalty reporting period (that is, January 1, 2011 through June 30, 2011). We propose reporting criteria that are lower for the 2012 eRx penalty than for the 2011 eRx incentive because EPs will only have 6 months to satisfy the

criteria for the 2012 penalty but have a full year to satisfy the criteria for the 2011 incentive.

The limitation with respect to the electronic prescribing measures required under section 1848(m)(2)(B)(i) of the Act also applies to the penalty. Therefore, we propose that if less than 10 percent of the EP's estimated total allowed charges for the January 1, 2011 through June 30,2011 reporting period are comprised of services which appear in the denominator of the 2011 electronic prescribing measure, then the EP would not be subject to the eRx penalty.

We invite comments on the proposed conditions under which we would prospectively apply the 1.0 percent reduction in PFS charges for services furnished January 1, 2012 through December 31, 2012. We specifically invite comments on our proposals to exempt certain types of EPs and EPs who do not have a certain number of cases from the penalty as well as the proposed criteria for successful reporting of the electronic prescribing measure for individual EPs with respect to the penalty.

As with the 2011 incentive payment, we propose that the determination of whether an EP is subject to the penalty will be made at the individual professional level, based on the NPI and for each unique TIN/NPI combination.

(3) Criteria for Determining Applicability of the 2012 eRx Penalty to Group Practices

As required by section 1848(m)(3)(C) of the Act, we are also required to establish and have in place a process under which EPs in a group practice shall be treated as a successful electronic prescriber for purposes of the eRx penalty. Thus, we propose that for purposes of the 2012 eRx penalty, a payment adjustment would not be applied to a a group practice participating in the 2011 eRx GPRO if the group practice is participating in either the 2011 PQRI GPRO I or the 2011 PQRI GPRO II and meets the proposed 2011 criteria for successful electronic prescribing described in sections VI.F.2.b.(4).(ii). (with respect to the eRx requirements for GPRO I participants who wish to participate in the 2011 eRx GPRO) and VI.F.1.g.(3).(ii). of the preamble to this proposed rule (with respect to the eRx requirements for GPRO II participants who wish to participate in the 2011 eRx GPRO) for the 2011 eRx incentive.

For purposes of the 2012 eRx penalty, we propose that the proposed 2011 criteria for successful electronic prescribing would need to be satisfied during the 2012 eRx penalty reporting period of January 1, 2011 through June 30, 2011 for the same operational reasons that we are proposing a 6-month reporting period for the penalty for individual EPs. Furthermore, we do not believe that group practices would be disadvantaged by having to satisfy the proposed criteria for being a successful electronic prescriber for the 2011 incentive in 6 months rather than 12 months to avoid the penalty. When compared to the criteria for individual EPs, the proposed criteria for being a successful electronic prescriber for the 2011 eRx incentive payment for group practices enable group practices, on average, to earn the incentive by electronically prescribing a fewer number of prescriptions per EP than what individual EPs are required to do.

For purposes of determining whether the eRx penalty applies to a group practice, we propose to conduct our analysis for each unique TIN/NPI combination so as not to disadvantage EPs who may have joined the group practice after January 1, 2011.

In addition, in accordance with section 1848(m)(2)(B)(i) of the Act, we also propose that the 2012 eRx penalty would not apply to an eRx GPRO in which less than 10 percent of the group practice's estimated total allowed charges for the January 1, 2011 through June 30, 2011 reporting period are comprised of services which appear in the denominator of the 2011 electronic prescribing measure. To be consistent with how this limitation is applied to group practices for purposes of the incentive, we propose to determine whether this limitation applies to a group practice for the penalty at the TIN level.

For the same reasons that we are proposing a 6-month reporting period for the 2012 eRx penalty for group practices, we also propose that we will use only claims processed by July 31, 2011 in our analysis. This is consistent with our proposed approach for analyzing individual EP claims. Similarly, we propose that registries would need to submit eRx data for services furnished January 1, 2011 through June 30, 2011 to CMS between July 1, 2011 and August 19, 2011 so that we may include registry data in our analysis. We propose also that group practices participating in the eRx group practice reporting option via EHR-based reporting would be required to submit eRx data for services furnished January 1, 2011 through June 30, 2011 to CMS between July 1, 2011 and August 19, 2011.

We invite comments on the proposed criteria for determining applicability of the 2012 eRx penalty to group practices, including the proposed criteria for successful reporting of the electronic prescribing measure for group practices, and our proposed analytical approach.

(4) Significant Hardship Exemption

Section 1848(a)(5)(B) of the Act provides that the Secretary may, on a case-by-case basis, exempt an EP from the application of the payment adjustment, or penalty, if the Secretary determines, subject to annual renewal, that compliance with the requirement for being a successful electronic prescriber would result in a significant hardship, such in the case of an EP who practices in a rural area without sufficient Internet access. Therefore, we propose that in addition to meeting the criteria for successful electronic prescriber described in sections VI.F.2.(c).(2) and VI.F.2.(c).(3) of the preamble to this proposed rule, an EP or group practice may also be exempt from application of the 2012 eRx penalty, if during the 2012 eRx penalty reporting period (that is, January 1, 2011 through June 30, 2011), one of the following circumstances applies to the EP or group practice:

- The EP or group practice practices in a rural area with limited high speed Internet access.
- The EP or group practice practices in an area with limited available pharmacies for electronic prescribing.

We propose to add two additional "G" codes to the 2011 electronic prescribing measure's specifications describing these 2 circumstances. EPs or group practices to whom one or more of these circumstances apply would be required to report the appropriate G-code at least once between January 1, 2011 and June 30, 2011 using their selected 2011 eRx reporting mechanism. Reporting of one of these two G-codes prior to June 30, 2011 will indicate to us that the EP or group practice would like to be considered for an exemption from the 2012 penalty under the significant hardship exception. We invite comments on the proposed process for the significant hardship exception as well as comments regarding other circumstances that should be considered a significant hardship.

d. The 2013 eRx Penalty

Section 1848(a)(5) of the Act also requires that with respect to covered professional services furnished by an EP in 2013, if the EP is not a successful electronic prescriber for the reporting period for the year, the fee schedule amount for such services furnished by such professional during 2013 shall be equal to 98.5 percent of the fee schedule

amount that would otherwise apply to such PFS services. Under section 1848(m)(3)(C) of the Act, we are also required to establish and have in place a process under which EPs in a group practice shall be treated as a successful electronic prescriber for purposes of the eRx penalty.

For purposes of the 2013 eRx penalty, we propose to use the proposed 2011 criteria for successful electronic prescriber to determine whether an EP or a group practice is a successful electronic prescriber for purposes of the 2013 eRx penalty. In addition, we propose that the reporting period for the 2013 eRx penalty would be the 2011 eRx incentive reporting period of January 1, 2011 through December 31, 2011. We believe that matching the criteria that will be applied for the 2013 penalty with the criteria that will be applied for the incentive in an earlier year would be the most effective means of encouraging EPs and group practices to adopt and use electronic prescribing systems since anyone who does not qualify for an incentive in 2011 would be subject to a payment adjustment in 2013. We invite comments on this proposal.

e. Public Reporting of Names of Successful Electronic Prescribers

Section 1848(m)(5)(G) of the Act requires the Secretary to post on the CMS Web site, in an easily understandable format, a list of the names of EPs (or group practices) who satisfactorily submit data on quality measures for the PQRI and the names of the EPs (or group practices) who are successful electronic prescribers. As required by section 1848(m)(5)(G) of the Act, we are proposing to make public the names of EPs and group practices who are successful electronic prescribers for the 2011 eRx Incentive Program on the Physician Compare Web site that we are required to establish by January 1, 2011 under section 10331 of the ACA. As stated under section VI.F.1.k. of this proposed rule, we plan to use the existing Physician and Other Health Care Professionals directory as the foundation for the Physician Compare Web site.

We anticipate that the names of individual EPs and group practices who are successful electronic prescribers for the 2011 eRx Incentive Program will be available in 2012 after the 2011 incentive payments are paid.

To comply with section 1848(m)(5)(G) of the Act, we specifically propose to post the names of individual EPs who report the electronic prescribing measure at least 25 times during the 2011 reporting period for patient encounters included in the measure's denominator, without regard to whether the limitation under section 1848(m)(2)(B) of the Act applies to the EP and without regard to whether the EP actually qualifies to earn an incentive payment. In addition, since the PQRI and the eRx Incentive Program are two separate incentive programs and individual EPs are not required to participate in both programs to earn an incentive under either program, we point out that it is possible for an EP who participates in both incentive programs to be listed both as an individual EP who satisfactorily submits data on quality measures for the PQRI and is a successful electronic prescriber under the eRx Incentive Program. Likewise, an individual EP may be listed as an individual EP who satisfactorily submits data on quality measures for the PQRI but not as a successful electronic prescriber under the eRx Incentive Program (or vice versa) even if he or she participated in both incentive programs.

Similarly, for purposes of publicly reporting the names of group practices, on the Physician Compare Web site, we intend to post the names of group practices that report the electronic prescribing measure the required number of times during the 2011 reporting period for patient encounters included in the measure's denominator without regard to whether the limitation under section 1848(m)(2)(B) of the Act applies to the group practice or whether the group practice actually qualifies to earn an incentive payment. Although any group practice participating in the eRx Incentive Program under the group practice reporting option would also have to participate in a PQRI group practice reporting option, the criteria for satisfactory reporting of PQRI measures for group practices are different from the criteria for successful reporting of the electronic prescribing measure by group practices. Therefore, it is possible for a group practice to be listed as a group practice that satisfactorily submits data on quality measures for the PQRI but not as a successful electronic prescriber under the eRx Incentive Program, or vice versa.

G. DMEPOS Provisions

1. Medicare Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) Competitive Bidding Program (CBP)

a. Legislative and Regulatory History of DMEPOS CBP

Medicare pays for most DMEPOS furnished after January 1, 1989 pursuant to fee schedule methodologies set forth in section 1834 of the Act, as added by section 4062 of the Omnibus Budget Reconciliation Act of 1987 (OBRA '87) (Pub. L. 100–203). Specifically, sections 1834(a)(1)(A) and (B), and 1834 (h)(1)(A) of the Act provide that Medicare payment for these items is equal to 80 percent of the lesser of the actual charge for the item or the fee schedule amount for the item. We implemented this payment methodology at 42 CFR part 414, subpart D of our regulations. Sections 1834(a)(2) through (a)(5) and 1834(a)(7) of the Act, and implementing regulations at § 414.200 through § 414.232 (with the exception of § 414.228), set forth separate payment categories of durable medical equipment (DME) and describe how the fee schedule for each of the following categories is established:

- Inexpensive or other routinely purchased items (section 1834(a)(2) of the Act and § 414.220 of the regulations);
- Items requiring frequent and substantial servicing (sections 1834(a)(3) of the Act and § 414.222 of the regulations);
- Customized items (section 1834(a)(4) of the Act and § 414.224 of the regulations);
- Oxygen and oxygen equipment (section 1834(a)(5) of the Act and § 414.226 of the regulations);
- Other items of DME (section 1834(a)(7) of the Act and § 414.229 of the regulations).

For a detailed discussion of payment for DMEPOS under fee schedules, see the final rule published in the April 10, 2007 **Federal Register** (72 FR 17992).

Blood glucose testing strips or diabetic testing strips are covered under the Medicare DME benefit in accordance with section 1861(n) of the Act. Other supplies that are necessary for the effective use of DME are also covered under the Medicare DME benefit in accordance with longstanding program instructions at section 110.3 of chapter 15 of the Medicare Benefit Policy Manual.

Section 1847 of the Act, as amended by section 302(b)(1) of the MMA, requires the Secretary to establish and implement a DMEPOS CBP. Under the DMEPOS CBP, Medicare sets payment amounts for selected DMEPOS items and services furnished to beneficiaries in competitive bidding areas (CBAs) based on bids submitted by qualified suppliers and accepted by Medicare. For competitively bid items, these new payment amounts, referred to as "single payment amounts (SPA)," replace the fee schedule payment methodology. Section 1847(b)(5) of the Act provides that Medicare payment for these

competitively bid items and services is made on an assignment-related basis equal to 80 percent of the applicable SPA, unless any unmet Part B deductible described in section 1833(b) of the Act. Section 1847(b)(2)(A)(iii) of the Act prohibits the awarding of contracts to any entity unless the total amounts to be paid to contractors in a CBA are expected to be less than the total amounts that would otherwise be paid under the fee schedule methodologies set forth in section 1834(a) of the Act. This requirement guarantees savings to both the Medicare program and beneficiaries under the program. The fee schedule methodologies will continue to set payment amounts for noncompetitively bid DMEPOS items and services. The program also includes provisions to ensure beneficiary access to quality DMEPOS items and services. Section 1847 of the Act limits participation in the program to suppliers who have met applicable quality and financial standards and requires the Secretary to maintain beneficiary access to multiple suppliers.

When first enacted by the Congress, section 1847(a)(1)(B) of the Act required the Secretary to phase in the DMEPOS CBP in a manner so that the competition under the program occurred in 10 of the largest metropolitan statistical areas (MSAs) in 2007. The program was to be expanded into 70 additional MSAs in 2009, and then into additional areas after 2009.

In the May 1, 2006 **Federal Register** (72 FR 25654), we issued a proposed rule that would implement the DMEPOS CBP for certain DMEPOS items and services and solicited public comment on our proposals. In the April 10, 2007 **Federal Register** (72 FR 17992), we issued a final rule addressing the comments on the proposed rule and establishing the regulatory framework for the DMEPOS CBP in accordance with section 1847 of the Act.

Consistent with the requirements of section 1847 of the Act and the competitive bidding regulations, we began implementation of the program by conducting the first round of competition in 10 of the largest MSAs in 2007. We limited competition during this first round of the program to DMEPOS items and services included in 10 selected product categories, including mail order diabetic supplies. The bidding window opened on May 15, 2007 and was extended to allow bidders adequate time to prepare and submit their bids. We then evaluated each submission and awarded contracts consistent with the requirements of section 1847(b)(2) of the Act and § 414.414. Following the bid evaluation process, we awarded over 329 contracts to qualified suppliers.

The DMEPOS CBP was effective on July 1, 2008. Beginning on that date, Medicare coverage for competitively bid DMEPOS items and services furnished in the first 10 CBAs was limited to items and services furnished by contract and grandfathered suppliers of oxygen and oxygen equipment and rented DME, and payment to these suppliers was based on the SPA, as determined under the competitive bidding regulations. For further discussion of the DMEPOS CBP and the bid evaluation process, see the final rule published in the April 10, 2007 **Federal Register** (72 FR 17992).

On July 15, 2008, the MIPPA was enacted. Section 154 of the MIPPA amended section 1847 of the Act to make certain limited changes to the DMEPOS CBP. Section 154(a) of the MIPPA delayed competition under the program and amended section 1847(a)(1)(D)(i) of the Act to terminate the competitive bidding contracts effective June 30, 2008 and prohibit payment based on the contracts.

Section 154(a) of the MIPPA required the Secretary to conduct a second competition to select suppliers for Round 1 in 2009 ("Round 1 Rebid"). The Round 1 Rebid includes the "same items and services" and is to be conducted in the "same areas" as the 2007 Round 1 competition, with certain limited exceptions. Specifically, we were required to exclude the product category of negative pressure wound therapy (NPWT) items and services and the San Juan, Puerto Rico CBA from the Round 1 Rebid. In addition, section 154(a) of the MIPPA permanently excluded group 3 complex rehabilitative wheelchairs from the DMEPOS CBP by amending the definition of "items and services" in section 1847(a)(2) of the Act. Section 154(a) of the MIPPA delayed competition for Round 2 of the DMEPOS CBP from 2009 to 2011, and subsequent competitions under the program to after 2011. Finally, section 154(a) of the MIPPA specifically addresses the phase in of a competition for national mail order items and services by specifying that such competitions may be phased in after 2010.

b. Implementation of a National Mail Order DMEPOS Competitive Bidding Program (CBP) for Diabetic Testing Supplies

We conducted competitions for mail order diabetic testing supplies in the 10 CBAs selected for Round 1. In the Round 1 rebid we conducted competition for mail order diabetic testing supplies in 9 of the 10 CBAs selected in Round 1. These competitions were limited to diabetic testing supplies furnished by mail order contract suppliers, as defined in the April 10, 2007 DMEPOS Competitive Bidding final rule (72 FR 17992) to individuals located in those CBAs. As defined in the final rule, a mail order contract supplier is "a contract supplier that furnishes items through the mail to beneficiaries who maintain a permanent residence in a CBA". We clarified in program instructions that "mail order" means items ordered remotely (that is, by phone, e-mail, Internet, or mail) and delivered to a beneficiary's residence by common carriers (for example, U.S. Postal Service, Federal Express, United Parcel Service, or other shipping or courier service companies) but not items obtained by beneficiaries from local retail storefronts.

Due to the inclusion of mail order diabetic supplies as a product category in Round 1 of the program, Medicare beneficiaries in a CBA who obtain diabetic testing supplies through mail order must purchase these supplies from a mail order contract supplier in order for Medicare to pay for these items. Payment for these items will be at the SPA determined consistent with the program's regulations. Beneficiaries who do not obtain their testing supplies through mail order may purchase these products from any enrolled Medicare supplier and Medicare payment for these items will be at the fee schedule amount. The home blood glucose monitor (diabetic testing equipment) itself is not included in the Round 1 DMEPOS CBP for mail order diabetic supplies. This allows the beneficiary to go to any enrolled supplier to obtain the glucose monitor that the beneficiary and their clinician believes best meets their medical needs. The supplier of the glucose monitor is responsible for training the beneficiary on how to use the monitor and for answering all follow up questions and providing all services required by the DMEPOS quality standards and supplier standards, found in § 424.57, related to the glucose monitoring system selected by the beneficiary and their clinician. The beneficiary then has the choice of obtaining the replacement diabetic testing supplies that work with their purchased monitoring system from any local, non-mail order supplier (typically a pharmacy) or from a mail order supplier whose contract requires them to ship the replacement diabetic supplies directly to the beneficiary's home. If the beneficiary wants to continue receiving their replacement

supplies from a local pharmacy because that is their preference or because they want to have face-to-face access to a local pharmacist who, in addition to the supplier of the glucose monitoring system, can answer questions about the use of their system in testing their blood glucose levels, this choice is preserved. However, if they choose the convenience and savings associated with having their replacement supplies shipped directly to their home, the beneficiary can decide to obtain their supplies from a mail order contract supplier.

The SPA was on average 43 percent lower than the fee schedule amount for diabetic testing supplies during the Round 1 of DMEPOS CBP. This reduction in payment would have resulted in a reduction of the beneficiary's co-insurance payment. The contracts and SPAs for the Round 1 Rebid for mail order diabetic testing supplies are scheduled to be effective for diabetic supplies furnished on a mail order basis to beneficiaries in the 9 CBAs from January 1, 2011, through December 31, 2012.

(1) National Mail Order DMEPOS CBP

As part of our rulemaking implementing the DMEPOS CBP, we established regulations to implement competitions on a regional or national level for certain items such as diabetic testing supplies that are furnished on a mail order basis. We explained our rationale for establishing a national DMEPOS CBP for items furnished on a mail order basis in the **Federal Register** in the May 1, 2006 proposed rule (71 FR 25669) and April 10, 2007 final rule (72 FR 18018). A national mail order program would generate immediate national savings at a magnitude that may not be possible with local competitions among suppliers that are not able to obtain the type of volume purchasing discounts from manufacturers that are available to large, national mail order suppliers. In a September 2004 report (GAO–04–765), the Government Accountability Office (GAO) recommended that we consider using mail delivery for items that can be provided directly to beneficiaries in the home as a way to implement a DMEPOS competitive bidding strategy. In the case of diabetic supplies and other items furnished by local neighborhood pharmacies, establishing a competition for items furnished on a mail order basis would exempt local pharmacies from competing with national mail order suppliers while preserving the choice of the beneficiary to go to any local pharmacy to pick up their diabetic supplies. Manufacturers and suppliers have stated to CMS at different meetings on numerous occasions that the choice for beneficiaries to obtain diabetic supplies from local pharmacies with licensed pharmacists in house who can provide instructions and guidance to beneficiaries related to their testing needs is important and needs to be preserved.

(2) DMEPOS CBP for National Mail Order Diabetic Supplies

In the January 16, 2009 **Federal Register**, we published an interim final rule (IFC) (74 FR 2873) implementing certain changes to the DMEPOS CBP. Specifically, the rule implemented certain MIPPA provisions that delayed implementation of Round 1 of the program; required CMS to conduct a second Round 1 competition in 2009, and mandated certain changes for both the Round 1 Rebid and subsequent rounds of the program. In the January 16, 2009 IFC preamble, we indicated that we would be considering alternatives for competition of diabetic testing supplies in future notice and comment rulemaking. We explained that we believed it was consistent with section 1847(a) to employ competitive bidding for diabetic suppliers in both the mail order and traditional retail markets, in part due to concerns raised about the bifurcation of the method of delivery of diabetic supplies and the difficulty in defining what constitutes "mail order" for purposes of competition.

(3) Overview of Proposed Rule

As part of the phase in of the DMEPOS CBP, we are proposing to implement a national mail order DMEPOS CBP for diabetic testing supplies. Under the proposed mail order DMEPOS CBP, we would award contracts to suppliers to furnish these items across the nation to beneficiaries who elect to have replacement diabetic testing supplies delivered to their residence. Suppliers wishing to furnish these items through mail order to Medicare beneficiaries would be required to submit bids to participate in any DMEPOS CBP implemented for the furnishing of mail order items. In accordance with the DMEPOS CBP final rule, payment for mail order diabetic supplies would be based on the SPA determined from the bids submitted and accepted for the furnishing of diabetic testing supplies by mail order throughout the national CBA.

As part of our proposal to implement the national mail order DMEPOS CBP, we are also proposing a revised definition in regulation of "mail order" so that there would be a clear distinction between mail order items and non-mail order items. This revised definition would apply to all future competitions for mail order items and services. We are also proposing to implement the special rule mandated by section 1847(b)(10)(A) of the Act for competitions for diabetic testing strips following the Round 1 Rebid. Section 1847(b)(10)(A) requires suppliers bidding in competitions to furnish diabetic testing strips after the Round 1 Rebid to demonstrate that their bid covers at least 50 percent of all types of diabetic testing strips furnished by suppliers. If the supplier is not able to satisfy this requirement, the Secretary must reject that bid. Finally, we are proposing to include an additional term in contracts of mail order suppliers of diabetic testing supplies following the Round 1 Rebid. The proposed term would prohibit suppliers from influencing or incentivizing beneficiaries to change their brand of glucose monitor and test strips.

(4) Future Competitions for Diabetic Testing Supplies

Section 1847(a)(1)(A) of the Act mandates the establishment of DMEPOS CBP for items described in section 1847(a)(2)(A) of the Act, including diabetic testing supplies. Section 1847(a)(1)(B)(ii) of the Act authorizes the phase in of items and services under these programs beginning with the highest cost and highest volume items and services or those items and services that are determined to have the largest savings potential. Current Medicare claims data from fiscal year 2009 shows that over 62 percent of beneficiaries currently receive their replacement diabetic testing supplies from mail order suppliers. Mail order diabetic testing supplies account for approximately one billion dollars in allowed charges per year and are therefore high volume items. We believe that a national mail order CBP for diabetic testing supplies would result in large savings as a result of competition between entities that would factor into their bids savings from volume discount purchasing of quantities of supplies needed on a national rather than local basis. Therefore, we believe that implementing a national mail order DMEPOS CBP for diabetic testing supplies is the best option for meeting the requirements of the statute referenced above as long as certain refinements discussed below are made to the program to address concerns about the mail order/non-mail order bifurcation.

We have heard from industry groups and suppliers that furnish diabetic testing supplies on a national mail order

basis of their concerns that national chain pharmacies that furnish diabetic testing supplies through both a national mail order business and local retail pharmacies will encourage beneficiaries to obtain these items from local retail locations by inappropriately offering certain incentives to Medicare beneficiaries such as coupons for other store items. Based on our experience from Round 1, we believe DMEPOS CBP for mail order diabetic testing supplies would be subject to manipulation without a clearer definition of what we mean by mail order. We agree with the industry groups and suppliers that have indicated that this practice will harm businesses that only furnish diabetic testing supplies on a mail order basis. In order to address these concerns, we are proposing to add to § 414.402 a definition of "National mail order DMEPOS CBP." We propose to define that term as a program whereby contracts are awarded to suppliers for the furnishing of mail order items across the nation. We believe that implementing a national competitive bidding program for diabetic supplies would preserve beneficiary choice to purchase testing supplies in person from any local pharmacy that is an enrolled Medicare supplier that furnishes diabetic supplies, while clarifying the definition of mail order will provide significant savings potential for beneficiaries and the program. Savings would be generated in the near future from national SPAs for supplies furnished on a mail order or home delivery basis and on a long term basis for all diabetic supplies as a result of the requirement of section 1834(a)(1)(F) of the Act to either competitively bid in all areas or adjust prices in all areas by January 1, 2016. We believe that more beneficiaries will elect to choose the mail order/home delivery option, thereby further increasing short term savings under the program. Even if this is not the case, and the percentage of beneficiaries choosing the mail order/home delivery option remains at the current rate of 62 percent, savings for the remaining 38 percent must be achieved by no later than January 1, 2016, as a result of the requirements of section 1834(a)(1)(F) of the Act.

We considered other alternatives for establishing DMEPOS CBP for diabetic testing supplies that would eliminate the mail order/non-mail order bifurcation and associated concerns. These alternatives include:

- A national competition among all types of suppliers for all replacement diabetic supplies. Under this alternative, all beneficiaries would receive their replacement diabetic supplies from contract suppliers responsible for furnishing diabetic supplies throughout the nation using any method of delivery as long as the supplies are delivered on a timely basis.
- Competitions in regional CBAs among all types of suppliers for all replacement diabetic supplies. Under this alternative, all beneficiaries would receive their replacement diabetic supplies from contract suppliers responsible for furnishing diabetic supplies throughout a designated region of the country using any method of delivery to a beneficiary home as long as the supplies are delivered on a timely basis.
- Competitions in local CBAs among all types of suppliers for all replacement diabetic supplies. Under this alternative, all beneficiaries would receive their replacement diabetic supplies from contract suppliers responsible for furnishing diabetic supplies throughout the local area using any method of delivery to a beneficiary as long as the supplies are delivered on a timely basis.

We believe that the first option to bid on a national basis for all diabetic supplies, would result in most beneficiaries using mail order and might generate more savings than a national competition for diabetic supplies furnished on a mail order basis only. However, this first option would likely eliminate the beneficiary choice to obtain replacement diabetic supplies on a non-mail order basis from any enrolled supplier that is a pharmacy or other local supplier storefront where a licensed pharmacist is on hand to offer guidance and consultation to the beneficiary. We believe the other two options would also diminish this choice. In addition, the alternatives of regional or local competitions are not likely to result in savings at or above the level that can be generated from a national competition for mail order supplies. Suppliers participating in a national program may be able to obtain volume purchasing discounts for the quantities of supplies needed nationwide. Therefore, we are not proposing any of these alternatives at this time. However, we are specifically requesting public comments on these and other alternatives for establishing DMEPOS CBP for diabetic supplies.

In § 414.411, we are proposing to establish a national mail order DMEPOS CBP with competitions taking place after 2010 for the purpose of awarding contracts to suppliers to furnish replacement diabetic testing supplies across the nation, with additional program refinements described below. We note that the decision to proceed with a national mail order competition after 2010 does not prevent us from phasing in competitions for non-mail order diabetic supplies or from conducting competitions for diabetic supplies in general in the future consistent with section 1847(a)(1) of the Act.

(5) Definition of Mail Order Item

We are proposing to define "mail order item" in 42 CFR 414.402 to mean any item (for example, diabetic testing supplies) shipped or delivered to the beneficiary's home, regardless of the method of delivery. We are also proposing to define "non-mail order item" as any item (for example, diabetic testing supplies) that a beneficiary or caregiver picks up in person at a local pharmacy or supplier storefront. Therefore, the only items excluded from the mail order definition and mail order competition would be those that a beneficiary or caregiver picks up in person at a local pharmacy or other local supplier storefront. These revised definitions of mail order item and non-mail order item are intended to clearly identify which items are truly mail order. In addition, we believe this definition will preserve the choice of the beneficiary to obtain replacement diabetic supplies in person from a local pharmacy and eliminate the circumvention of the mail order program.

As discussed above, for Round 1 and the Round 1 Rebid of the DMEPOS CBP, we defined mail order contract supplier in our regulations at § 414.402 to mean a contract supplier that furnishes items through the mail. We further defined mail order in program instructions to mean "items ordered remotely (that is, by telephone, e-mail, Internet or mail) and delivered to beneficiary's residence by common carriers (for example, U.S. Postal Service, Federal Express, United Parcel Service) and does not include items obtained by beneficiaries from local storefronts." The intent of the Round 1 definition was to distinguish between mail order supplies (supplies furnished directly to the beneficiary's home) and non-mail order supplies (supplies picked up at a local pharmacy). Manufacturers and suppliers of blood glucose monitors and test strips have expressed on numerous occasions the importance of maintaining the patient option of obtaining diabetic testing supplies from a local pharmacy that provides full time access to a licensed pharmacist who can provide instructions and guidance to the beneficiary or caregiver related to the use of the diabetic supplies (the

pharmacy pickup option). This is the "non-mail order" option we attempted to separate from the mail order option with the Round 1 definition of mail order.

During implementation of Round 1 of the program, we discovered that suppliers that did not successfully compete and win a contract under the program tried to adopt certain approaches to circumvent the mail order definition. In the first round of competitive bidding, suppliers that lost their bid to be a contract supplier for mail order diabetic testing supplies considered ways to change their delivery methods to circumvent the mail order DMEPOS CBP. For example, some mail order suppliers considered purchasing a fleet of cars to deliver these items to the beneficiary's home so as not to be considered a mail order supplier. Other suppliers attempted to enter into special "private" arrangements with well known delivery services and claimed that because of such arrangements they should not be considered mail order suppliers. These alternative home delivery methods do not provide any benefits to the patient beyond what the traditional mail order home delivery method offers. They are simply ways to continue furnishing diabetic supplies on a home delivery basis after submitting a bid for mail order that does not result in the award of a contract under the DMEPOS CBP. Without a clear distinction between mail order (home delivery option) and non-mail order (pharmacy pickup option), suppliers could continue to attempt to make arrangements as they did in the initial Round 1 competition to circumvent the DMEPOS CBP. We consider these practices to be inconsistent with the DMEPOS CBP statute and regulations currently in effect, and our proposal is intended to further clarify the existing definition of mail order. Such arrangements prevent beneficiaries and the Medicare program from realizing savings afforded by the mail order DMEPOS CBP and is unfair to winning suppliers who bid in good faith for a contract for furnishing supplies to the home delivery market.

This proposed definition of mail order item would not apply to the Round 1 competition because of the specific requirement of MIPPA to rebid Round 1 in 2009 for the same items and services included in the initial Round 1 competition. However, for a national competition, it is imperative that the new definition of mail order item be in place because of the implications such a program would have on the entire mail order delivery market in the United States. In these future competitions, we would continue to emphasize in our educational efforts the basic distinction between mail order (home delivery) and non-mail order (pharmacy pickup). In addition, we will continue to take appropriate and necessary action against suppliers that do not comply with the revised definition.

As mentioned above, an alternative DMEPOS CBP for replacement diabetic supplies would be to hold a national competition among all types of suppliers for all replacement diabetic supplies. One benefit to this approach is that it would eliminate the need to differentiate between mail order and non-mail order supplies; however, it would likely eliminate the pharmacy pickup choice since most local pharmacies would not be able to service the entire CBA if they did not also operate a national mail order service.

We invite comments on our proposed definition of "mail order" and its impact on future rounds of bidding.

(6) Special Rule in Case of Competition for Diabetic Testing Strips

Following Round 1 of the program, any competition for diabetic testing strips, such as the national mail order program for diabetic testing supplies proposed in this rule, must include the special rule set forth in section 1847(b)(10)(A) of the Act. Under that section, a supplier must demonstrate that their bid to furnish diabetic testing strips covers the furnishing of a sufficient number of different types of diabetic testing strip products that, in the aggregate and taking into account volume for the different products, to account for at least 50 percent of all such types of products on the market. Section 1847(a)(10)(A) also specifies that the volume for the different products may be determined in accordance with data (which may include market based data) recognized by the Secretary. When a beneficiary needs to obtain replacement test strips, they must obtain the specific brand of test strips products that work with their brand and model of blood glucose monitor. The test strips are not manufactured in a way that allows use of different brands of test strips in different brands of monitors. Therefore, when replacement test strips are furnished, the supplier must ensure that the specific brand and model of test strips that the patient requires for use with their purchased monitor is furnished.

Section 1847(b)(10)(B) of the Act mandates the Office of Inspector General (OIG) of the Department to conduct a study before 2011 to generate volume data for the various products that could be used for this purpose.

Under the DMEPOS CBP, bidding suppliers are required to provide information on the products they plan to furnish if awarded a contract. We propose to use this information and information on the market share (volume) of the various diabetic testing strip products to educate suppliers on meeting the requirements of this special rule. In addition, it may be necessary to obtain additional information from suppliers such as invoices or purchase orders to verify that the requirements in the statute have been met.

We are proposing that suppliers be required to demonstrate that its bid covers the minimum 50 percent threshold provided in the statute, but we invite comments on whether a higher threshold should be used. We have proposed the 50 percent threshold in part because we believe that all suppliers have an inherent incentive to furnish a wide variety of types of diabetic testing products to generate a wider customer referral base. The 50 percent threshold would ensure that beneficiaries have access to mail order delivery of the top-selling diabetic test strip products. In addition, as explained below, we are proposing an "anti-switching provision" that we believe should obviate the need to establish a threshold of greater than 50 percent for the purpose of implementing this special rule because the contract suppliers would not be able to carry a limited variety of products and switch beneficiaries to those products.

For purposes of implementing the special rule in section 1847(b)(10)(A), we are proposing to define "diabetic testing strip product" as a specific brand and model of test strip, as that is the best way to distinguish among different products. Therefore, we plan to use market based data for specific brands and models of diabetic test strips to determine the relative market share or volume of the various products on the market that are available to Medicare beneficiaries. We plan to review a variety of data, including but not limited to data furnished in the OIG report, to determine the market share of the various products. The special rule mandated by section 1847(b)(10)(A) of the Act applies to all competitions for diabetic testing strips after the first round of the DMEPOS CBP. Therefore, we would apply this rule to non-mail order competitions and/or local competitions conducted for diabetic testing strips after Round 1 of the DMEPOS CBP.

(7) Anti-Switching Rule in Case of Competition for Diabetic Test Strips

We do not believe that we can effectively apply the 50 percent rule, as required by section 1847(b)(10)(A) of the Act, if we do not establish an anti-switching rule to prevent suppliers from influencing beneficiaries to switch monitors. We have heard concerns from beneficiary advocacy groups, as well as industry representatives, that contract suppliers furnishing diabetic testing supplies in the first round encouraged beneficiaries to switch to a different brand of blood glucose monitor and testing supplies than they and/or their physician or clinician previously selected. Suppliers attempted to switch beneficiaries to the less expensive monitor or the monitor that provided them with the most profit rather than the monitor that was most suitable for them. Without the anti-switching rule, suppliers may offer 50 percent of the brands on the market but continue to switch beneficiaries to the least expensive brands so that the requirement to offer at least 50 percent of the brands on the market rather than a few specific brands becomes meaningless.

We are proposing to prohibit suppliers awarded contracts for diabetic testing supplies from influencing or incentivizing the beneficiary in any way to switch the brand of glucose monitor and testing supplies they are currently using. We would propose that contract suppliers continue to furnish the brand of testing supplies that work with the monitor currently in use by the beneficiary. In the case where the beneficiary is receiving a monitor for the first time or a replacement monitor, the contract supplier would be subject to the requirements of § 414.420 in order to protect beneficiaries from feeling forced or incentivized to use a particular type or brand of monitor We continue to believe the proper role of the contract supplier is to furnish diabetic testing strips and other supplies to beneficiaries, not to interfere with the beneficiary's selection of the type of monitor and supplies. This requires the supplier to furnish the brand of testing supplies that work with the blood glucose monitor product that the beneficiary and/or clinician, and not the supplier of the testing supplies, selects. If the beneficiary needs a blood glucose monitor for the first time, or needs to replace their existing blood glucose monitor, and neither the beneficiary nor their physician has determined which brand or type of monitor to obtain, the beneficiary may continue to ask for assistance from the supplier to select a monitor and the supplier should show them the full range of products. However, if the beneficiary has already selected a monitor and simply needs replacement diabetic testing supplies, the supplier must furnish the brands of testing supplies that work with the brand monitor that the beneficiary has selected. We believe this proposal would preserve the integrity of the clinical decision regarding choice of glucose monitoring system and would result in contract suppliers offering a wide variety of diabetic testing supply products.

We are proposing to amend § 414.422 to add the anti-switching requirement to the terms of the contract for a supplier of diabetic testing supplies. A supplier would be in breach of their contract and subject to the sanctions set forth under § 414.423(g), including termination, if they violate this term. We welcome comments on this proposal.

c. Off-the-Shelf (OTS) Orthotics Exemption

In the April 10, 2007 final rule (72 FR 17992), we established § 414.404(b)(1), which sets forth several exemptions to the DMEPOS CBP. These exceptions are applicable to providers, physicians, and treating practitioners that furnish certain DMEPOS items under Medicare Part B. The exempted items are limited to crutches, canes, walkers, folding manual wheelchairs, blood glucose monitors, and infusion pumps that are DME. For an explanation as to why these items were exempt see the DMEPOS Competitive Bidding final rule (CMS–1270–F) published April 10, 2007, (72 FR 17992). For the exemptions to apply, the items must be furnished by a physician or treating practitioner to his or her own patients as part of his or her professional service. The items are to be billed under a billing number assigned to the physician, the treating practitioner (if possible), or a group practice to which the physician or treating practitioner has reassigned the right to receive Medicare payment.

The April 10, 2007 final rule also established an exemption for a physical therapist in private practice (as defined in § 410.60(c)) or an occupational therapist in private practice (as defined in § 410.59(c)) to furnish competitively bid OTS orthotics without submitting a bid and being awarded a contract under the DMEPOS CBP, provided that the items are furnished only to the therapist's own patients as part of a physical or occupational therapy service.

Section 154(d) of MIPPA amended section 1847(a) of the Act by adding paragraph (7), which expands the exemptions from the DMEPOS CBP for certain OTS orthotics to physicians or other practitioners (as defined by the Secretary) if furnished to their own patients as part of their professional service. Section 1847(a)(7) of the Act, as added by MIPPA, also expanded the exemption from the program to hospitals for certain OTS orthotics, crutches, canes, walkers, folding manual wheelchairs, blood glucose monitors, and infusion pumps if these items are furnished to the hospital's own patients during an admission or on the date of discharge.

The DMEPOS CBP Round 1 Rebid interim final rule with comment period (IFC) included the expanded exemption for certain DMEPOS items as provided by MIPPA for hospitals. We noted in the IFC that we would address the expanded exemption of OTS orthotics for hospitals, physicians and other practitioners in future rulemaking.

In this proposed rule, we are proposing to revise current provisions at § 414.404(b)(1)(i) to incorporate the provision of section 1847(a)(7)(A)(i) and (ii) of the Act that exempts from the program OTS orthotics furnished by physicians and other practitioners to their own patients as part of their professional service or by hospitals to the hospital's own patients during an admission or on the date of discharge.

d. Grandfathering Rules Resulting in Additional Payments To Contract Suppliers Under the DMEPOS Competitive Bidding Program (CBP)

Section 1847(a)(4) of the Act requires that in the case of rented DME and oxygen and oxygen equipment, the Secretary shall establish a "grandfathering" process. This requirement was implemented through regulations at § 414.408(j) that were published in the April 10, 2007 **Federal Register** (72 FR 17992). The grandfathering process allows beneficiaries who were renting DME items or receiving oxygen and oxygen equipment prior to the start of a DMEPOS CBP from a supplier who did not win a contract to continue to rent the equipment from that noncontract supplier if that supplier chooses to become a grandfathered supplier. Under § 414.408(i)(2), when the beneficiary decides to use a contract supplier instead of a grandfathered supplier to receive their oxygen equipment and supplies, the contract supplier receives a minimum of 10 monthly payments for taking over the furnishing of oxygen and oxygen equipment. When a beneficiary decides to use a contract supplier to furnish capped rental DME, section § 414.408(h)(2) restarts the 13-month

capped rental period. These rules were established, in part, based on advice from the Program Advisory and Oversight Committee (PAOC) and are intended to give bidding suppliers an assurance that they would be compensated in these situations and would not have to factor into their bids the cost of receiving as few as one monthly payment for beneficiaries near the end of the 13-month cap for capped rental items and 36-month cap for oxygen equipment.

At the time these rules were developed, the supplier was mandated by the statute to transfer title to the equipment to the beneficiary after the both the 13-month cap for capped rental items and the 36-month cap for oxygen equipment. Section 144(b) of the MIPPA repealed the transfer of title requirement for oxygen equipment, as established by Deficit Reduction Act of 2005, replacing that requirement with the 36-month rental cap. Under the revised oxygen payment provisions, suppliers now get the equipment back when the beneficiary no longer needs it. Also, at the time these rules were developed, the beneficiary had the option to acquire standard power wheelchairs on a lump sum purchase basis, an option which greater than 95% of the beneficiaries selected, based upon historic claims data. Therefore, those items generally would not be affected by the grandfathering rules. However, as discussed in section 3136 of this proposed rule, section 3136 of the ACA eliminates the lump sum purchase option for standard power wheelchairs. This new policy applies to items furnished under the DMEPOS CBP beginning with Round 2 of the program. Over 200,000 beneficiaries received standard power wheelchairs nationwide in 2009, and the Medicare allowed charges for these wheelchairs was over $650 million, including both rental and purchase options. Therefore, this large volume of capped rental items will be subject to the grandfathering rules effective with Round 2 of the DMEPOS CBP, thus increasing the overall magnitude of the effect these rules have on the program and beneficiaries.

In some cases, the grandfathering rules described above place a financial burden on beneficiaries who are near the end of the 13 or 36-month rental cap periods. If a beneficiary's existing supplier chooses not to be a grandfathered supplier, the beneficiary will be required to switch to a contract supplier in order for Medicare to continue to pay for the furnishing of the rental equipment. In such cases, the beneficiary will be responsible for additional co-insurance amounts. Based on experience from the initial Round 1 competition in 2008, we believe that most suppliers will choose to grandfather and therefore these rules will have no impact on these situations. However, in those limited situations in which the beneficiary does not use a grandfathered supplier and the beneficiary is near the end of the 13 or 36-month rental cap period, the impact on the beneficiary could be significant. As mentioned above, our current grandfathering rules will result in a limited number of beneficiaries facing additional co-insurance payments. To illustrate the impact some beneficiaries may face as a result of these rules, a beneficiary who has already made 12 coinsurance payments for a capped rental item could make as many as 12 additional copayments as a result of restarting the capped rental period when they transition from a noncontract supplier to a contract supplier at the beginning of a DMEPOS CBP. In another example, a beneficiary who has already made 35 coinsurance payments for oxygen and oxygen equipment could make as many as 9 additional copayments as a result of the rule that provides a minimum of 10 monthly payments when they transition from a noncontract supplier to a contract supplier at the beginning of a DMEPOS CBP. As stated above, we expect that most noncontract suppliers will choose to become grandfathered suppliers, therefore limiting the number of instances where these rules would apply. However, in light of the beneficiary impact in the those extreme cases illustrated above, and in light of the recent legislative changes by the MIPPA and the ACA as explained above, we are reevaluating whether or not changes to these grandfathering rules are necessary. As discussed above, as a result of the MIPPA, suppliers of oxygen equipment no longer lose title to the equipment after receiving the 36th payment and this may warrant reconsideration of the minimum number of payments they should receive as contract suppliers when a beneficiary transitions to them from a noncontract supplier at the beginning of a DMEPOS CBP. In addition, we believe it is important to reevaluate the policy that restarts the 13-month capped rental period in situations where a beneficiary transitions from a noncontract supplier to a contract supplier at the beginning of a DMEPOS CBP. Therefore, we are soliciting public comments on whether or not the current rules should be changed to reduce the number of payments the contract supplier would receive in these situations above the 13 and 36-month limits set forth under the standard payment rules in section 1834(a) of the Act. We also plan to solicit advice from the PAOC on this subject at a future committee meeting.

e. Appeals Process

The DMEPOS CBP final rule issued on April 10, 2007 includes § 414.422(g)(1), which states that "any deviation from contract requirements, including a failure to comply with governmental agency or licensing organization requirements, constitutes a breach of contract." In the event we determine that a contract supplier's actions constitute a breach of contract, § 414.422(g)(2) authorizes us to take one or more of the following actions:

- Require the contract supplier to submit a corrective action plan;
- Suspend the contract supplier's contract;
- Terminate the contract;
- Preclude the contract supplier from participating in the DMEPOS CBP;
- Revoke the supplier number of the contract supplier; or
- Avail itself of other remedies allowed by the statute.

Proposed Appeals Process

We are proposing to add a new § 414.423 to establish an appeals process for contracts terminated under section 1847(a) and (b) of the Act. Section § 414.423, as proposed in this rule, would set forth policies and procedures relating to our determinations of a breach of contract and the appeals process for contract suppliers that are considered to be in breach of contract. In addition, we are proposing to add new definitions to § 414.402 that are used in the proposed § 414.423.

Given the impact that termination has on a contract supplier, we believe it is appropriate for contract suppliers whose contract(s) may be terminated due to a breach of contract to have access to an appeal process that will reconsider that termination. In establishing this process we reviewed other appeals processes, such as the appeals process under Part D located at 42 CFR 423.641 through 423.668, Subpart N—Medicare Contract Determinations and Appeals, to consider essential steps to ensure suppliers have access to an appropriate review of certain CMS decisions. We chose to propose a simplified process that would not result in disruption to the program by having suppliers going in and out of the program. For this reason, we propose a process for review and reconsideration before the contract is actually terminated. This proposal would avoid the necessity to reinstate

retroactively suppliers because the contracts would generally not be terminated before the full review process has occurred. This would protect the supplier because we generally would not terminate a supplier until a final decision is made. Another feature of this process that may be beneficial to some suppliers is allowing them to submit a corrective action plan (CAP) depending upon the nature of the breach. We believe our proposal would allow most suppliers to correct identified deficiencies.

(1) Purpose and Definitions: (§ 414.402)

We are proposing to amend § 414.402 to define the following terms:

- *Affected party* means a contract supplier that has been notified that their DMEPOS CBP contract would be terminated for a breach of contract.
- *Breach of contract* means any deviation from contract requirements, including a failure to comply with a governmental agency or licensing organization requirements.
- *Corrective Action Plan (CAP)* means a contract supplier's written document with supporting information that describes the actions the contract supplier would take within a specified timeframe to remedy the breach of contract.
- *Competitive Bidding Implementation Contractor (CBIC) Hearing Officer (HO)* means an individual, who was not involved with the CBIC recommendation to terminate a DMEPOS CBP contract, who is designated by CMS to review and make an unbiased and independent determination from the CBIC's recommendation to terminate a DMEPOS CBP contract.
- *Parties to the Hearing* means the DMEPOS contract supplier and CMS.

(2) Applicability

The appeals process proposed in this regulation would allow contract suppliers the opportunity for a review of the following:

- A CMS determination under § 414.422(g)(1) that the contract supplier breached its contract entered into as part of the DMEPOS CBP; and
- Certain agency actions taken under § 414.422(g)(2).

The proposed appeals process would not apply to any other actions made by CMS, nor would the existence of other appeals processes preclude us from terminating a DMEPOS CBP contract. In other words, the proposed appeals process would be in addition to—and would not replace—existing CMS regulations regarding other appeals mechanisms. For example, a contract may be terminated because a supplier's National Supplier Clearinghouse (NSC) number has been revoked or inactivated. In this case, the supplier would not appeal the decision to inactive or revoke its number through this appeals process. Instead, the supplier would continue to appeal the inactivation or revocation of its supplier number through the NSC's appeals process, and we would postpone the termination decision until the supplier completes the NSC appeals process.

Under our proposal, when we issue a termination decision, it would be final and binding unless a postponement of the termination decision is allowed by proposed § 414.423. We welcome comments on the scope of the proposed appeals process.

(3) Contract Termination

We are proposing that this appeals process applies in situations where the supplier has received a notice that we have determined that they are in breach of contract and that their contract is therefore subject to termination. A contract may be terminated for any violation of the terms of the contract. Examples of violations include, but are not limited to, situations where the contract supplier—

- Has committed or participated in false, fraudulent, or abusive activities affecting the Medicare program, including the submission of false or fraudulent data or claims;
- Experiences financial difficulties so that they are unable to effectively provide the necessary services to a Medicare beneficiary; or
- Fails to meet the non-discrimination policy and provides different items to beneficiaries located in a competitive bidding area (CBA) than it provides to its non-Medicare beneficiaries at § 414.422(c).

We welcome comments on our proposed termination process.

(4) Notice of Termination

Under the proposed rule, the CBIC would work with suppliers to informally resolve performance deficiencies under its DMEPOS CBP contract prior to sending a recommendation to CMS that the supplier's contract be terminated. If the CBIC cannot informally resolve the supplier's deficiencies and recommends that we terminate the contract, we would review the CBIC's recommendation to terminate the supplier's contract. If we find that a breach occurred, we would begin the contract termination process by sending out a notice of termination to the supplier.

We also propose requirements for the notice of termination so that suppliers are informed of the basis for CMS's action as well as their options to respond to this action. The notice would explain all actions we plan to take in response to the supplier's breach, such as the ability to submit a CAP or our determination to preclude a supplier from participating in future rounds of competitive bidding if found in breach of contract. If the supplier decides to appeal any of these decisions the supplier would submit an appeal in response to the notice to terminate. If we consider a supplier to be in breach of its contract, either in part or in whole, we would notify the contract supplier of the termination by certified mail. The notice would indicate that the contract supplier has been found to be in breach of contract and that the supplier's contract would be terminated within 45 calendar days of the date of the notification of termination. The notice would be sent by the CBIC using certified mail on the same date as the date on the notification of termination. The date of the notification of termination is the date that the notification is signed. The notification will be mailed on the date that it is signed. This date will be indicated on the notification.

The proposed rule requires the notice to include, at a minimum, the following information:

- The reasons for the termination in sufficient detail to allow the contract supplier to understand the nature of its breach of contract;
- Depending on the nature of the breach, whether the supplier may be allowed to submit a CAP in lieu of requesting a hearing by the HO;
- The right to request a hearing by the HO;
- The address to which the written request for a hearing must be mailed;
- The address to which the CAP must be mailed; and
- The effective date of the termination of the contract, if a CAP is not submitted or if a request for a hearing has not been filed timely.

We believe that this information would be sufficient to provide the supplier with the basis for CMS's action, as well as their options in responding to our decision. We welcome comments on our proposal regarding the contents of the notice.

In addition, our proposed rule requires the notice to indicate any additional penalties that may result from the termination, such as not being eligible to bid in future rounds of competitive bidding. An appeal of the termination would include the appeal of

any other results from the termination that are permissible under § 414.423, such as preclusion from participation in future rounds of the DMEPOS CBP. We believe this information may help the supplier to decide whether to appeal the notice of termination.

(5) Corrective Action Plan

We are also proposing a process by which a contract supplier may be able to submit a CAP to address the breach of contract. Depending on the nature of the breach of contract, we propose that the notice to the supplier would indicate whether a contract supplier would be allowed to provide the CBIC with a written CAP instead of submitting a request for a hearing by a HO. For example, under this proposal we would not allow a CAP if the supplier has been excluded, debarred or convicted of a health care related crime. We may also not allow a CAP that would result in negative consequences to the beneficiaries or the program caused by delaying the termination of the contract.

We are proposing timelines related to the CAP. Under the proposed rule, if the supplier decides to submit a CAP, the CAP must be received by the CBIC within 30 calendar days from the date on the notice of termination. If the supplier decides not to submit a CAP, the supplier retains the right to request a review by a HO within 30 days from the date of the notice for termination. While the CAP is being evaluated, the termination determination would be postponed. We believe that 30 days is a sufficient amount of time for suppliers to prepare and submit a CAP and this would also ensure that there are no unnecessary delays in the appeals process.

Under the proposed rule, we would require the CAP to demonstrate that the contract supplier has a plan to remedy all of the deficiencies that were identified in its notice of termination and must specify the timeframes for correcting these deficiencies. The CBIC would review the CAP to ensure that the contract supplier would be taking the appropriate measures in a timely manner to remedy the breach of contract. What constitutes a timely manner is dependent on the type of deficiency that is being corrected. Once the nature of the deficiency is identified the CBIC and CMS would make a case-by-case determination concerning what constitutes a timely manner for correcting the deficiency. However, we expect most deficiencies to be corrected within 90 days or less. Further guidance of what constitutes a timely manner would be communicated to the contract supplier by the CBIC as part of the review process.

As part of the review process, the CBIC would provide guidance, in accordance with CMS instructions, regarding the type of documentation that the CAP and the follow-up report must provide to substantiate that the deficiencies have been corrected. To make a determination if a CAP would be considered acceptable, we may discuss the CAP with the supplier, and as a result of these discussions, the CBIC will allow a supplier to make revisions to its CAP during the review process. Suppliers may only revise their CAP one time during the review process. The timeframe for the review process would vary upon the circumstances for each case. If the supplier does not submit an acceptable CAP during the review process, the supplier would receive a new notice that their CAP is not acceptable or has not been implemented consistent with the supplier's original submission and its contract would be terminated within 45 calendar days. Every supplier would have a one time opportunity to revise their CAP based upon deficiencies identified by the CBIC. Failure to develop and implement an approved CAP would result in a new notice to the supplier of the termination of the DMEPOS CBP contract and provide notice that the supplier may request a hearing on this termination. Under the proposed rule, once an acceptable CAP has been completed the contract supplier must provide a follow-up report within 5 days of the agreed upon date for the completion of the CAP to verify that all of the deficiencies identified in the CAP have been corrected consistent with the timeframes specified in the CAP, as approved by the CMS. We believe that 5 days is sufficient time for a supplier to submit a report to CBIC outlining all steps that have been completed to correct the identified deficiencies.

We welcome comments on our proposals relating to the option for a CAP.

(6) Right To Request a Hearing by the CBIC Hearing Officer (HO)

We propose that a contract supplier that has received a notice that we consider the supplier in breach of contract has the right to request a hearing before a HO who was not involved with the original breach of contract determination. We consider this process to be a reconsideration of the original decision, and consistent with other Medicare appeals provisions, we believe it is important that an individual not involved in making the initial recommendation conduct the reconsideration of the initial decision. As mentioned previously, the HO would be an individual who is designated by CMS to review and to make an unbiased and independent recommendation of whether to terminate the supplier's DMEPOS CBP contract. The notice to the contract supplier would also identify the location to which a request for hearing must be sent.

Under the proposed rule, a contract supplier may appeal the notice of termination by submitting a written request to the CBIC for a hearing by a HO. The written request should include any evidence to support its appeal. The HO is not required to allow evidence submitted in addition to the evidence submitted along with the written request. The hearing request must be received by the CBIC within 30 calendar days from the date of the termination letter. A request for a hearing must be sent to the address identified on the notice. Failure to request a hearing within the allotted 30 calendar days would result in a termination of the supplier's contract, as of the effective date of termination identified in the notice to the supplier. There would be no extensions to this 30-day timeframe. We believe suppliers have sufficient time to decide whether or not to request a hearing and the deficiencies identified in the notice may pose a risk to the DMEPOS CBP. The date the request is received by the CBIC determines if the hearing request was timely filed.

We would require that the request for hearing be filed by a supplier's authorized official, because an authorized official of the company signed the contract and this ensures the validity of the request. The authorized official must be an official of the company who is identified on the supplier's CMS 855–S form as an authorized official of the supplier. A supplier may appoint someone other than the authorized official to be a representative for them at the hearing. However, the representative may not be an individual who has been disqualified or suspended from acting as a representative by the Secretary or otherwise prohibited by law. The request for a hearing must be filed with the CBIC at the address identified on the notice of termination.

We welcome comments on our proposed process for requesting a hearing by a HO.

(7) Scheduling of the Hearing

The proposed rule also addresses scheduling the hearing. We propose that within 30 calendar days from the receipt of a supplier's timely hearing request the HO would contact the parties to

schedule a hearing. The request for a hearing would result in the postponement of the date of the contract termination. The only exception to this rule is when a supplier has been excluded, debarred or convicted of a health care related crime; in that situation the supplier's contract would be terminated immediately. In the hearing request the contract supplier may ask for the hearing to be held in person or by telephone. The HO would send a notice to the parties to the hearing indicating the time and place for the hearing at least 30 days before the date of the hearing. The HO may, on his or her own motion, or at the request of a party, change the time and place for the hearing, but must give the parties to the hearing a 30-day notice of the change.

The proposed rule would require that the HO's notice scheduling the hearing must provide, at a minimum, the following information:

- Date, time, and location of the scheduled hearing;
- Description of the hearing procedure;
- Issues to be resolved;
- Requirement that the contract supplier bears the burden of proof to demonstrate that it is not in breach of contract; and
- Provide an opportunity for the supplier to submit evidence to support its appeal. We believe this information provides the supplier with sufficient information regarding the hearing date, time, and matters that would be addressed at that time. We welcome comments on the content of this notice and the procedures for scheduling a hearing.

(8) Burden of Proof

We propose that the contract supplier would present to the HO the basis for its disagreement with the termination notice and would have the burden of proof to demonstrate to the HO with supporting evidence that it is not in breach of its contract and that the termination action is not appropriate. The supplier's supporting evidence must be submitted with its request for a hearing. The supporting evidence and the request for a hearing must be submitted together and received by the HO within 30 calendar days from the date identified on the notice of termination. In the absence of good cause, the HO may not allow evidence to be submitted in addition to the evidence submitted along with the written request. We also have the opportunity to submit evidence to the HO within 30 days of receiving the notice announcing the hearing. The HO will share all evidence submitted, both from the supplier and CMS, in preparation for the hearing with all affected parties within 15 days prior to the scheduled date of the hearing.

We welcome comments on our proposal regarding the burden of proof.

(9) Role of the Hearing Officer (HO)

Our proposal requires that the HO conduct a thorough and independent review. Such a review requires the consideration of all information and documentation relevant to the hearing and submitted consistent with this proposal. Consistent with this goal, we propose that the HO is responsible for all of the following:

- Sharing all evidence submitted, both from supplier and CMS, in preparation for the hearing with all affected parties within 15 days prior to the scheduled date of the hearing.
- Conducting the hearing and deciding the order in which the evidence and the arguments of the parties would be presented.
- Determining the rules on admissibility of the evidence.
- Examining the witnesses, in addition to the examinations conducted by CMS and the contract supplier.
- Determining the rules for requesting documents and other evidence from other parties.
- Ensuring a complete recording of the hearing is available and provided to all parties to the hearing and the CBIC.
- Preparing a file of the record of the hearing which includes all evidence submitted as well as any relevant documents identified by the HO and considered as part of the hearing.
- Complying with all applicable provisions of 42 U.S.C. Title 18 and related provisions of the Act, the applicable regulations issued by the Secretary, and manual instructions issued by CMS.

The HO would make a recommendation based on the information presented and submitted. The HO would issue a written recommendation to CMS within 30 days of the close of the hearing, unless the HO requests an extension from CMS and demonstrates to CMS that he or she needs an extension due to complexity of the matter or heavy work load. The HO's recommendation would include the rationale for his or her recommendation regarding the termination of the supplier's contract and the HO would submit this recommendation to CMS for its determination.

We welcome comments on the role of the CBIC HO in our proposed rule.

(10) CMS's Final Determination

Under the proposed rule, the HO's recommendation is submitted to CMS, and the agency would make the final determination regarding whether the supplier's contract would be terminated. Our determination would be based upon on the record of the hearing, evidence, and documents considered by the HO as part of the HO recommendation. Information submitted after the hearing would not be considered. Our decision would be made within 30 days of the receipt of the HO's recommendation. If our decision is to terminate the contract, the supplier would be notified of the effective date of termination by certified mail. Our decision regarding the termination of the contract is final and binding.

We welcome comments on our proposal relating to CMS's final determination of a supplier's contract termination.

(11) Effective Date of the Contract Termination

Under the proposed rule, suppliers who submit a CAP or request a hearing would have the termination date identified on the notice delayed. The only exception to this rule is when a supplier has been excluded, debarred or convicted of a health care related crime; in that situation the contract would be terminated immediately. For terminations that do not meet these exceptions, the effective date of a final termination would be determined as follows:

- The termination of a supplier's DMEPOS CBP contract is effective on the date specified in the initial notice of termination, which will be 45 days from the date of the notice, unless the supplier request a hearing with the HO or the supplier submits an acceptable CAP.
- After reviewing the HO recommendation, if we terminate a supplier's contract the effective date of the termination would be the date specified in the post-hearing notice sent to the supplier indicating CMS's final determination to terminate the contract.

We welcome comments on our proposals related to the effective date of contract termination.

(12) Effect of Contract Termination

Under our proposal, once a supplier's contract is terminated for breach of contract under the DMEPOS CBP, the contract supplier is no longer a DMEPOS CBP contract supplier for any DMEPOS CBP product category for which it was awarded a contract. This termination applies to all areas and

product categories because there is only one contract that encompasses all CBAs and product categories for which the supplier was awarded a contract. We would not make payment and would reject claims for DMEPOS competitive bid items and services furnished by a supplier whose contract has been terminated after the effective date of the termination for the remainder of the contract period.

We recognize that a supplier's termination would impact beneficiaries within the CBA. Therefore, we therefore propose that terminated suppliers must notify all beneficiaries within the CBA who are receiving rented competitively bid items of the termination of their contract status so that the beneficiaries can make arrangements to receive equipment and suppliers through other contract suppliers. After we have made our final determination and sent notification to the supplier, the supplier must notify beneficiaries within 5 days of receipt of the contract supplier's final notice of termination. This notice must inform beneficiaries that they would have to select a new contract supplier to furnish their DMEPOS items in order for Medicare to pay for these items. For beneficiary protection, we also propose that contract suppliers who fail to give proper notification to beneficiaries may be prevented from participating in future rounds of DMEPOS CBP. We also propose that rental items may not be picked up from the beneficiary's home until after the last day of the rental month for which the supplier has already received payment. We are proposing both of these policies to protect the beneficiary and to ensure that suppliers do not pick up equipment from a beneficiary for a time period for which they have already been paid to provide the service.

2. Changes to Payment Rules for Oxygen and Oxygen Equipment

a. Background

The general Medicare payment rules for DME are set forth in section 1834(a) of the Act and 42 CFR part 414, subpart D of our regulations. Section 1834(a)(1) of the Act and § 414.210(a) of our regulations establish the Medicare payment for a DME item as equal to 80 percent of either the lower of the actual charge or the fee schedule amount for the item. The beneficiary coinsurance is equal to 20 percent of either the lower of the actual charge or the fee schedule amount for the item once the deductible is met.

The specific payment rules for oxygen and oxygen equipment under the existing fee schedules are set forth in section 1834(a)(5) of the Act and § 414.226 of our regulations. Suppliers are paid a monthly payment amount for furnishing medically necessary oxygen contents (for both stationary and portable) and stationary oxygen equipment described under the class described in § 414.226(c)(1)(i). Equipment in the stationary class includes stationary oxygen concentrators, which concentrate oxygen from room air; stationary liquid oxygen systems, which use oxygen stored as a very cold liquid in cylinders and tanks; and gaseous oxygen systems, which administer compressed oxygen directly from cylinders.

A monthly add-on payment is also made to suppliers furnishing medically necessary portable oxygen equipment falling under one of two classes described in § 414.226(c)(1)(ii) and (iii). Equipment in these classes includes traditional portable equipment, that is, portable liquid oxygen systems and portable gaseous oxygen systems, and oxygen generating portable equipment (OGPE), that is, portable oxygen concentrators and oxygen transfilling equipment used to fill portable tanks or cylinders in the home. Both the liquid and gaseous oxygen systems (for stationary and traditional portable systems) require on-going delivery of oxygen contents.

Section 1834(a)(5)(F) of the Act, as amended by section 144(b) of MIPPA, limits the monthly rental payments to suppliers for oxygen equipment to 36 months of continuous use, although monthly payments for furnishing gaseous or liquid oxygen contents continue after the 36-month equipment rental cap is reached for gaseous or liquid systems. In the CY 2009 PFS final rule with comment period (73 FR 69875 through 69876), we discussed section 144(b) of MIPPA and included a detailed discussion of how section 5101(b) of the Deficit Reduction Act of 2005 (DRA) previously required suppliers to transfer title to oxygen equipment to the beneficiary at the end of the 36-month rental period. Section 144(b) of the MIPPA repealed this requirement to transfer title to the oxygen equipment to the beneficiary and allows suppliers to retain title to the oxygen equipment after 36 monthly rental payments are made for the equipment.

Section 414.210 establishes the requirements for the replacement of DME, including oxygen equipment. Section 414.210(f)(1) states that if an item of DME, which includes oxygen equipment, has been in continuous use by the patient for the equipment's reasonable useful lifetime or if the original equipment is lost, stolen, or irreparably damaged, the patient may elect to obtain a new piece of equipment. In such circumstances, § 414.420(f)(2) authorizes payment for the new oxygen equipment in accordance with § 414.226(a). Section 414.210(f)(1) states that the reasonable useful lifetime for DME, which includes oxygen equipment, is determined through program instructions. In the absence of CMS program instructions, the carrier may determine the reasonable useful lifetime for equipment, but in no case can it be less than 5 years. Computation is based on when the equipment is delivered to the beneficiary, not the age of the equipment. If the beneficiary elects to obtain new oxygen equipment after the reasonable useful lifetime, the payment is made for a new 36-month rental period in accordance with § 414.226(a).

We are proposing to revise the payment rule for oxygen and oxygen equipment at § 414.226(g)(1) to address situations where beneficiaries relocate outside the service area of a supplier during the 36-month rental payment cap period for the oxygen equipment. Beneficiaries are experiencing great difficulties in finding suppliers willing to furnish oxygen equipment in situations where only a few months are left in the 36-month rental payment period at the time they relocate. For example, if a beneficiary is in the 30th rental month, the new supplier would be entitled to only 6 months of rental payments and then would have to continue to furnish the oxygen and oxygen equipment during any period of medical need for the remainder of the reasonable useful lifetime of the equipment. This creates a financial disincentive for oxygen suppliers to furnish oxygen and oxygen equipment to beneficiaries in these situations.

The proposed changes to the payment rules for oxygen and oxygen equipment would apply to oxygen and oxygen equipment furnished under Part B and would also apply to oxygen and oxygen equipment furnished under programs implemented in accordance with section 1847(a) of the Act.

b. Furnishing Oxygen Equipment after the 36-Month Rental Period (Cap)

In the CY 2010 PFS final rule with comment period (74 FR 61887 through 61890), we finalized § 414.226(g)(1) which, in accordance with section 1834(a)(5)(F)(ii)(I) of the Act, requires the supplier that furnishes oxygen equipment during the 36-month rental period to continue furnishing the oxygen equipment after the 36-month rental period. The supplier is required

to continue to furnish the equipment during any period of medical need for the remainder of the reasonable useful lifetime of the equipment. As we noted when finalizing this rule, section 1834(a)(5)(F)(ii)(I) does not provide any exceptions to this requirement. If the beneficiary relocates outside the supplier's normal service area at some time after the 36-month rental period but before the end of the reasonable useful lifetime of the equipment, the supplier must make arrangements for the beneficiary to continue receiving the equipment at his or her new place of residence. This responsibility for furnishing the equipment does not transfer to another supplier.

We revised § 414.226(f) to conform our regulations to this new MIPPA requirement. We deleted the transfer of ownership requirement and added the new requirement that the supplier must continue furnishing the oxygen equipment after the 36-month rental period during any period of medical need for the remainder of the reasonable useful lifetime of the equipment. It is important to note that § 414.226(g)(1)(ii) does not apply this same requirement in situations where the beneficiary relocates outside of the supplier's normal service area during the 36-month rental period.

c. Furnishing Oxygen Equipment during the 36-Month Rental Period (Cap)

Section § 414.226(g)(1) contains the requirement that the supplier that furnishes oxygen and oxygen equipment for the first month of the 36th month of the rental cap period must continue to furnish the equipment for the entire 36-month period of continuous use, with limited exceptions. One exception at § 414.226(g)(1)(ii) applies when a beneficiary permanently relocates his or her residence during the 36-month rental period outside of the current supplier's normal service area. This exception was proposed in the "Home Health Prospective Payment System Rate Update for Calendar Year 2007 and Deficit Reduction Act of 2005 Changes to Medicare Payment for Oxygen Equipment and Capped Rental Durable Medical Equipment; Proposed Rule" published in the August 3, 2006 **Federal Register** (71 FR 44094) and was intended to reduce the burden on the supplier in these situations. This approach is also consistent with the regulations addressing capped rental items described in § 414.229. We addressed this issue in the capped rental context in the July 10, 1995 **Federal Register** (60 FR 35494) in response to comments. The discussion states that since the implementation of the capped rental payment methodology on January 1, 1989, we received no reports of beneficiaries having difficulty obtaining access to capped rental DME after relocating outside the supplier's service area. Since enactment of the capped rental DME payment category in section 4062 of the Omnibus Budget Reconciliation Act of 1987 (Pub. L. 100–203), representatives of the DME industry indicated that suppliers would be able to accommodate beneficiaries in these situations, and this has proven to be true for capped rental items. In fact, we have found this to be the case to this day.

For this reason, we believed that beneficiaries would not encounter problems obtaining access to oxygen and oxygen equipment in similar situations, that is, following the 36-month cap imposed by section 144(b) of MIPPA. However, since the changes to the payment rules for oxygen and oxygen equipment mandated by the DRA became effective in 2006 and the 36-month rental cap imposed by MIPPA was reached for the first time in January 2009, we have received many reports of beneficiaries relocating prior to the end of the 36-month rental payment cap period and having difficulty finding an oxygen supplier in the new location. We have learned that many suppliers are unwilling to provide services in situations where there are a few number of months left in the 36-month rental payment period.

We do not believe that beneficiaries have encountered similar issues following the 36-month rental cap, which most likely is the result of different statutory requirements for these two periods (that is, during and after the 36-month rental period). Section 1834(a)(5)(F)(ii) of the Act requires the supplier that furnishes the oxygen equipment during the 36-month rental payment period to continue furnishing the equipment after the 36-month rental payment period. Consistent with this requirement, we established regulations at § 414.226(f)(1) that require the supplier to furnish the equipment or make arrangements for furnishing the equipment in situations where the beneficiary relocates outside the supplier's normal service area. Since no such requirement currently applies in situations where the beneficiary relocates prior to the end of the 36-month rental payment period, and in fact current regulations at § 414.226(g)(1)(ii) absolve the supplier of the obligation to continue furnishing oxygen equipment in these situations, beneficiaries are experiencing difficulties finding suppliers of oxygen equipment in their new locations that are willing to accommodate them. As noted above, we have not seen this problem in the capped rental DME context. The requirement at § 414.226(g)(1) to furnish oxygen equipment for the entire 36 month rental cap period was established in the course of implementing section 5101(b) of the DRA in order to safeguard the beneficiary from situations where suppliers might discontinue service and pick up oxygen equipment prior to the end of the 36-month rental cap in order to avoid losing title to the equipment. As mentioned earlier, the transfer of title of oxygen and oxygen equipment after the 36th paid rental month was repealed. The exception to this rule at § 414.226(g)(1)(ii) was established based on our experience that suppliers of capped rental DME have accommodated beneficiaries in these situations, which, unfortunately, has not been our experience in the context of oxygen equipment.

In order to address this vulnerability facing beneficiaries as a result of regulations currently in effect, we are proposing to revise the exception at § 414.226(g)(1)(ii) to apply only to situations where the beneficiary relocates before the 18th paid rental month to an area that is outside the normal service area of the supplier that initially furnished the equipment. We are proposing to revise the regulation to require the supplier that furnishes the oxygen equipment and receives payment for month 18 or later to either furnish the equipment for the remainder of the 36-month rental payment period or, in the case where the beneficiary has relocated outside the service area of the supplier, make arrangements for furnishing the oxygen equipment with another supplier for the remainder of the 36-month rental payment period. The supplier that is required to furnish the equipment on the basis of this requirement must also furnish the equipment after the 36-month rental payment period in accordance with the requirements of section 1834(a)(5)(F)(ii) and § 414.226(f).

The proposed revision would mean that a supplier does not have to continue to furnish the oxygen equipment if the beneficiary relocates outside the normal service area before the 18th paid rental month during a period of continuous use. Under the current rule, a supplier does not have to furnish the oxygen equipment if the beneficiary relocated before the 36th paid rental month during a period of continuous use. The current rule was established based on the long term, demonstrated ability of suppliers of capped rental DME to accommodate

beneficiaries in situations where they relocate near the end of a capped rental payment period. With regard to oxygen equipment, suppliers in general have not demonstrated a willingness to accommodate beneficiaries in similar situations. Therefore, it is necessary to revisit this rule in order to protect beneficiaries in these situations. This proposal would allow either a new supplier in the beneficiary's new service area or a supplier in the old service area to receive at least half of the 36 monthly payments allowed for under the current statutory payment rule for oxygen equipment. We believe this approach would be fair to suppliers in either scenario since the same minimum number of payments applies. Based on current 2010 Medicare allowed fee schedule amounts for stationary oxygen equipment, total payments for 18 months is $3,117.06. We believe this new rule would provide greater financial incentive to suppliers in areas where beneficiaries relocate to furnish oxygen equipment in these situations. We also believe that this proposal would not disadvantage suppliers required to continue furnishing oxygen equipment or make arrangements for furnishing oxygen equipment to beneficiaries that relocate outside their normal service area since these suppliers would receive 18 or more monthly payments. Most of the cases that have been reported regarding problems encountered by beneficiaries in obtaining access to oxygen equipment after relocating during the 36-month rental cap period have been situations where the beneficiary has relocated during the second half of the 36-month rental cap period. Therefore, we believe that this rule would largely address access problems associated with relocations during the 36-month rental cap period because the supplier that received payments during the first half of the 36-month rental cap period would be obligated to continuing furnishing the equipment during the second half of the 36-month rental cap period.

H. Provider and Supplier Enrollment Issue: Air Ambulance Provision

The National Transportation Safety Board (NTSB) is an independent Federal agency charged by the Congress with investigating transportation accidents, determining their probable cause and making recommendations to prevent similar accidents from occurring. Based on information derived from testimony provided at the NSTB public hearing and investigations into recent Helicopter Emergency Medical Services (HEMS) accidents, the NTSB made several specific recommendations to the Secretary of Health and Human Services on September 24, 2009.

Specifically, the NTSB recommended that the Secretary develop minimum safety accreditation standards for HEMS operators that augment the operating standards of 14 CFR part 135 by including for all fights with medical personnel on board: (a) Scenario-based pilot training; (b) implementation of preflight risk evaluation programs; and (c) the installation of FAA-approved terrain awareness warning systems, night vision imaging systems, flight data recording systems for monitoring and autopilots if a second pilot is not used.

In response to the NTSB concerns, the Secretary noted that the recommendations to CMS were similar to those being made to the Federal Aviation Administration (FAA). While we have expertise to regulate health and safety requirements that suppliers and providers of healthcare should meet, we do not have the expertise to determine aircraft safety requirements. The Secretary stated that, "we believe the FAA should determine the minimum level of safety that HEMS operators should meet and CMS should adopt regulations that require any HEMS operator that enrolls in Medicare to meet those requirements." The Secretary also added that, "while we do not believe CMS should augment FAA regulations, we do believe that CMS' regulations should ensure that only those HEMS operators that maintain the minimum level of requirements established by the FAA through its regulations are enrolled or maintain enrollment in the Medicare program."

In the April 21, 2006 **Federal Register**, we published the "Requirements for Providers and Suppliers to Establish and Maintain Medicare Enrollment" final rule. This final rule implemented section 1866(j)(1)(A) of the Act. In this final rule, we required that all providers and suppliers (other than physicians or practitioners who have elected to "opt-out" of the Medicare program) must complete an enrollment form and submit specific information to CMS in order to obtain Medicare billing privileges. Section 424.515 required that ambulance service providers continue to resubmit enrollment information in accordance with § 410.41(c)(2), which states, "Upon a carrier's request, complete and return the ambulance supplier form designated by CMS and provide Medicare carrier with documentation of compliance with emergency vehicle and staff licensure and certification requirements in accordance with State and local laws." This final rule also established § 424.510(d)(2)(iii) which states, "Submission of all documentation, including all applicable Federal and State licensure and regulatory requirements that apply to the specific provider or supplier type that related to providing health care services, required by CMS under this or other statutory or regulatory authority, or under the Paperwork Reduction Act of 1995, to establish the provider or supplier's eligibility to furnish Medicare covered items or services to beneficiaries in the Medicare program."

While the Airline Deregulation Act (Pub. L. 95–504) preempts a State, political subdivision of a State, or political authority of at least 2 States from enacting or enforcing a law, regulation, or other provision having the force and effect of law related to a price, route, or service of an air carrier that may provide air transportation, air ambulances remain subject to Federal laws and regulations. In accordance with § 424.516(a)(2), providers and suppliers must adhere to all Federal regulations and State laws and regulations, as required, based on the type of services or supplies the provider or supplier type will furnish and bill Medicare.

In § 424.510(d)(iii), we are proposing to clarify that ambulance suppliers and other providers and suppliers include documentation regarding all applicable Federal and State certifications. Accordingly we are propsing to revise § 424.510(d)(iii) from "Submission of all documentation, including all applicable Federal and State licenses and regulatory requirements that apply to the specific provider or supplier type that relate to providing health care service, required by CMS under this or other statutory or regulatory authority, or under the Paperwork Reduction Act of 1995, to establish the provider or supplier's eligibility to furnish Medicare covered items or services to beneficiaries in the Medicare program," to "Submission of all documentation, including all applicable Federal and State licenses, certifications (including, but not limited to Federal Aviation Administration and Clinical Laboratory Improvement Act certifications), and regulatory requirements that apply to the specific provider or supplier type that relate to providing health care service, required by CMS under this or other statutory or regulatory authority, or under the Paperwork Reduction Act of 1995, to establish the provider or supplier's eligibility to furnish Medicare covered items or services to beneficiaries in the Medicare program."

We are also proposing to revise § 424.516(e)(2) and add new paragraph

(e)(3) to clarify that Medicare enrolled providers and suppliers must report a revocation or suspension of a Federal or State license or certification, including but not limited to FAA and Clinical Laboratory Improvement Act (CLIA) certifications. This revision will clarify that fixed-wing ambulance operators and HEMS operators are responsible for notifying the designated Medicare contractor for their State when FAA revokes or suspends any license or certification. Moreover, fixed-wing ambulance operators and HEMS operators must maintain all requirements as specified in 14 CFR part 135.

We believe that requiring fixed-wing ambulance and HEMS operators to notify their Medicare contractor of a suspension or revocation of a license or certification will ensure that any action taken by the FAA or other regulating authority will have a direct linkage to the operator's ability to maintain their Medicare enrollment. We believe that such a policy will help improve aircraft safety for operators that are enrolled in Medicare and providing services to Medicare beneficiaries. In addition, since the FAA is responsible for the issuance and enforcement of regulations and minimum standards covering manufacturing, operating, and maintaining aircraft, we will work with the FAA to confirm that fixed-wing ambulance operators and HEMS operators remain in compliance with FAA safety regulations (including, but not limited to Federal Aviation Administration and certifications) to the Medicare contractor within 30 days of the revocation or suspension of the license or certification, the provider or supplier is making the decision to voluntarily terminate its Medicare billing privileges because the provider or supplier is no longer in compliance with the applicable licensing or certification requirements for their provider or supplier type. We believe that allowing providers and suppliers to self-report licensure or certification revocations and suspensions within a 30 day period via the Medicare enrollment application (such as, the Internet-based Provider Enrollment Chain and Ownership System (PECOS) or the paper CMS–855) promotes compliance with the Medciare reporting requirements found in § 424.516. In addition, by reporting a licensure or certification revocation or suspension within 30 days, the provider or supplier avoids the Medicare contractor bringing an action to revoke its Medicare billing privileges and establishing and Medicare enrollment bar, see § 424.535(c). Thus, by complying with the reporting responsibilities found in § 424.516 and voluntarily terminating from the Medicare program, the air ambulance supplier can submit an initial application to enroll in the Medicare program as soon as the licensure or certification revocation or suspension action is resolved with the applicable licensing or certification organization.

In § 424.502, we are proposing to define the term, "voluntary termination" as it is currently used in the Medicare program and throughout this regulation in the context of the provider enrollment requirements: We are proposing that the term, "voluntary termination" to mean an air ambulance supplier, that submits written confirmation to CMS of its decision to discontinue enrollment in the Medicare program.

Futhermore, we belive that an air ambulance supplier, can make the decision to voluntary terminate their business relationship with the Medicare program at any time, including when the provider or supplier makes the decision that they will no longer furnish services to Medicare beneficiaries.

In those situations, where an air ambulance supplier does not meet their reporting responsibilities and notify the Medicare program of a Federal or State licensure or certification revocation or suspension within 30 days of the reportable event, we believe that it is appropriate to that CMS or the Medicare contractor revoke the supplier's Medicare billing privileges using § 424.535(a)(1). We believe that this change will clarify that CMS or our Medicare contractor may revoke Medicare billing privileges when these types of suppliers do not report a revocation or suspension of a Federal or State license or certification.

I. Technical Corrections

1. Physical Therapy, Occupational Therapy and Speech-language Pathology

We are proposing to revise § 409.23(c) by making a minor technical correction to remove an extraneous cross-reference which was initially proposed in the CY 2008 PFS proposed rule (72 FR 38122, 72 FR 38193, and 72 FR 38221). This cross-reference refers the reader to "paragraph (c)(1)(ii) of this section," a paragraph also proposed in the CY 2008 PFS proposed rule, but never finalized. In the CY 2008 PFS final rule with comment period, we inadvertently neglected to remove the associated cross-reference from the regulations text. Accordingly, we now propose to rectify that oversight by making an appropriate correction in the regulations text, along with other minor formatting revisions. We are also proposing to make a minor clarification to the section heading and introductory text of § 409.23 (along with a conforming revision to the corresponding regulations text at § 409.20(a)(3)) by revising the existing phrase "speech therapy" to read "speech-language pathology services," so that it more accurately reflects the currently used terminology for this type of therapeutic treatment.

In addition, we are also proposing to make a minor wording change in the provision at § 409.17(d) (which is incorporated by reference in § 409.23(c)(2)), in order to clarify that the former provision's reference to "hospital" policies and procedures can alternatively refer, depending on the particular context, to SNF policies and procedures.

2. Scope of Benefits

In § 410.3, we are proposing a technical correction to paragraph (b)(2). Currently, § 410.3(b)(2) states that the specific rules on payment are set forth in subpart E of part 410. However, the specific payment rules are actually listed in subpart I of part 410. Therefore, we are proposing to correct § 410.3(b)(2) in this proposed rule.

VII. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs):

A. ICRs Regarding Diagnostic X-ray Tests, Diagnostic Laboratory Tests, and Other Diagnostic Tests: Conditions (§ 410.32)

Proposed § 410.32(d)(2)(i) would require the physician or qualified non physician practitioner (as defined in § 410.32(a)(2)) who orders the service must maintain documentation of medical necessity in the beneficiary's medical record. In addition, both the medical record and the laboratory requisition (or order) would be required to be signed by the physician or qualified non physician practitioner (as defined in § 410.32(a)(2) of this section) who orders the service. The burden associated with these requirements would be the time and effort necessary for a physician or qualified nonphysician practitioner to sign the medical record or laboratory requisition (or order). There would also be a recordkeeping requirement associated with maintaining the documentation of medical necessity in the beneficiary medical record. While these requirements are subject to the PRA, we believe the associated burden is exempt from the PRA in accordance with 5 CFR 1320.3(b)(2). We believe that the time, effort, and financial resources necessary to comply with the aforementioned information collection requirements would be incurred by persons in the normal course of their activities and therefore considered to be usual and customary business practices.

B. ICRs Regarding General Exceptions to the Referral Prohibition Related to Both Ownership/Investment and Compensation (§ 411.355)

Proposed § 411.355(b)(7)(i) states that with respect to magnetic resonance imaging, computed tomography, and positron emission tomography, the referring physician shall provide written notice to the patient at the time of the referral that the patient may receive the same services from a person other than one described in § 411.355(b)(1). The written notice shall include a list of other suppliers (as defined in § 400.202 of this title) that provide the services for which the individual is being referred. The list shall include a minimum of 10 suppliers within a 25-mile radius of the referring physician's office location at the time of the referral. The notice should be written in a manner sufficient to be reasonably understood by all patients and should include for each supplier on the list, at a minimum, the supplier's name, address, telephone number, and distance from the referring physician's office. A record of the disclosure notification, signed by the patient, shall be maintained as a part of the patient's medical record.

Section 411.355(b)(7)(ii) proposes that if the referring physician makes a referral within an area with fewer than 10 other suppliers within the 25-mile radius of the physician's office location at the time of the referral, the physician shall list all of the other suppliers of the imaging service that are present within a 25-mile radius of the referring physician's office location, including up to 10 suppliers. Provision of the written list of alternate suppliers will not be required if no other suppliers provide the services for which the individual is being referred within the 25-mile radius. These physicians must still disclose to the patient that the patient may receive these services from a person other than one described in § 411.355(b)(1) in a manner sufficient to reasonably be understood by all patients. A record of the disclosure notification, signed by the patient and the referring physician, shall be maintained as a part of the patient's medical record.

The burden associated with the requirements contained in this section would be the time and effort necessary for a physician to develop a standard disclosure. There would also be burden associated with the time and effort necessary for a physician to provide the disclosure to the patient, to obtain the patient's signature, and to record the paper as part of the patient's medical record. We estimate that it would take 1 hour for a physician's office to develop a standard disclosure. We further estimate that 71,000 physicians will be required to comply with these requirements. The total burden associated with the development of the standard disclosure is 71,000 hours at a cost of $1,042,280. Similarly, we estimate that it will take each physician 1 minute to provide the disclosure to the patient, to obtain the patient's signature, and to record the paper as part of the patient's medical record. We believe that each provider will make approximately 106 disclosures. The total estimated annual for this requirement is 125,433 hours at a cost of $10,536,400.

C. ICRs Regarding Appeals Process for Termination of Competitive Bidding Contract (§ 414.423)

Proposed § 414.423(c)(1)(i) states that CMS has the option to allow a DMEPOS supplier to provide a written CAP to remedy the deficiencies identified in the notice, when CMS determines that the delay in the termination date caused by allowing a CAP will not cause harm to beneficiaries. As stated in proposed § 414.423(c)(2)(i) a CAP must be submitted within 30 calendar days from the date on the notification letter. If the supplier decides not to submit a CAP the supplier may within 30 days of the date on the termination letter request a hearing by a CBIC hearing officer.

The burden associated with this requirement is the time and effort necessary for a supplier that has received a termination notice to develop and submit a CAP. We estimate that 10 suppliers will need to comply with this requirement annually. Similarly, we estimate that it will take a supplier an average of 3 hours to develop a CAP. The total estimated annual burden associated with this requirement is 30 hours at a cost of $2,250.

Proposed § 414.423(e)(2) would require that if CMS accepts the CAP, including supplier's designated timeframe for its completion, the supplier must provide a follow-up report within 5 days after the supplier has fully implemented the CAP that verifies that all of the deficiencies identified in the CAP have been corrected in accordance with the timeframes accepted by CMS. The burden associated with this requirement is the time and effort necessary for a supplier to develop and submit a follow-up report. While this requirement is subject to the PRA, we believe the associated burden is exempt under 5 CFR 1320.3(h)(6). In accordance with 5 CFR 1320.3(h)(6), a request for facts or opinions addressed to a single person is not defined as information collection requirements and is therefore exempt from the PRA.

Proposed § 414.423(f)(1) states that a supplier who has received a notice that CMS considers them in breach of contract or that their CAP is not acceptable has the right to request a hearing before a CBIC HO who was not involved with the original determination. Section 414.423(f)(2) further proposes that a supplier who wishes to appeal the termination notice must submit a written request to the CBIC. The request for a hearing must be received by the CBIC within 30 calendar days from the date of the notice to terminate.

The burden associated with this section is the time and effort necessary for a supplier to develop and submit a written request for a hearing by a CBIC Hearing Officer. We estimate that it will take a supplier 8 hours to develop and submit a request for a hearing. We believe 5 suppliers will be subject to this requirement on an annual basis. The total estimated annual burden associated with developing and submitting a written request for a

hearing by a CBIC Hearing Officer is 40 hours at a cost of $3,000.

Proposed § 414.423 would require a contract suppliers whose contract has been terminated to notify all beneficiaries who are receiving rented competitive bid items or competitive bid items received on a recurring basis, of the termination of their contract. The notice to the beneficiary from the supplier whose contract was terminated must be provided within 5 days of receipt of the notice of termination. The notification to the beneficiaries must inform the beneficiaries that they are going to have to select a new contract supplier for these items.

The burden associated with this section is the time and effort necessary for a supplier to develop and distribute notification of its termination to all beneficiaries receiving rented competitive bid items or competitive bid items received on a recurring basis. We estimate that it will take a supplier 3 hours to develop and distribute a notice announcing its termination to all of its beneficiaries receiving rented competitive bid items or competitive bid items received on a recurring basis. We believe 2 suppliers will be subject to this requirement on an annual basis. The total estimated annual burden associated with this requirement is 6 hours at a cost of $450.

D. ICRs Regarding Additional Provider and Supplier Requirements for Enrolling and Maintaining Active Enrollment Status in the Medicare Program (§ 424.516)

Proposed § 424.516(e)(2) would require a provider or supplier to report a revocation or suspension to the applicable Medicare contractor within 30 days any revocation or suspension of a Federal or State license or certification. Similarly, proposed § 424.516(e)(2) states that within 30 days of voluntary withdrawal or involuntary termination from the Medicare program, the provider or supplier must report voluntary withdraw or involuntary termination to the applicable Medicare contractor. The burden associated with the requirements in § 424.516(e)(2) and (3) is the time and effort necessary for a provider or supplier to report the required information to the applicable Medicare contractor. While these requirements are subject to the PRA, each submission will be evaluated on a case-by-case basis.

E. ICRs Regarding Additional Provider and Supplier Requirements for Enrolling and Maintaining Active Enrollment Status in the Medicare Program (§ 424.516)

Proposed § 424.516(e)(2) would require a provider or supplier to report a revocation or suspension to the applicable Medicare contractor within 30 days any revocation or suspension of a Federal or State license or certification. Similarly, proposed § 424.516(e)(2) states that within 30 days of voluntary withdrawal or involuntary termination from the Medicare program, the provider or supplier must report voluntary withdraw or involuntary termination to the applicable Medicare contractor. The burden associated with the requirements in § 424.516(e)(2) and (3) is the time and effort necessary for a provider or supplier to report the required information to the applicable Medicare contractor. While these requirements are subject to the PRA, each submission will be evaluated on a case-by-case basis.

TABLE 72—ESTIMATED ANNUAL RECORDKEEPING AND REPORTING BURDEN

Regulation section(s)	OMB Control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting (in $)	Total labor cost of reporting (in $)	Total capital/maintenance costs (in $)	Total cost (in $)
§ 411.355	0938–New	71,000	71,000	1	71,000	14.68	1,042,280	0	1,042,280
		71,000	7,454,760	0.0167	125,433	83.79	10,536,400*	0	10,536,400
§ 414.423	0938–New	10	10	3	30	75.00	2,250	0	2,250
		5	5	8	40	75.00	3000		3000
		2	2	3	6	75.00	450		450
Total		71,017	7,525,777		196,509				11,584,380

* The annual cost burden for this provision was calculated by taking 106 disclosures per year per physician × $1.40 per disclosure = $148.40 a year per physician × 71,000 physicians = $10,536,400.

If you comment on these information collection and recordkeeping requirements, please do either of the following:

1. Submit your comments electronically as specified in the **ADDRESSES** section of this proposed rule; or

2. Submit your comments to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: CMS Desk Officer, [CMS–1503–P] Fax: (202) 395–6974; or E-mail: *OIRA_submission@omb.eop.gov.*

F. Additional Information Collection Requirements

This proposed rule imposes collection of information requirements as outlined in the regulation text and specified above. However, this proposed rule also makes reference to several associated information collections that are not discussed in the regulation text contained in this document. The following is a discussion of these information collections, some of which have already received OMB approval.

1. Part B Drug Payment

The discussion of average sales price (ASP) issues in section VI.A.1 of this proposed rule does not contain any new information collection requirements with respect to payment for Medicare Part B drugs and biologicals under the ASP methodology. Drug manufacturers are required to submit ASP data to us on a quarterly basis. The ASP reporting requirements are set forth in section 1927(b) of the Act. The burden associated with this requirement is the time and effort required by manufacturers of Medicare Part B drugs and biologicals to calculate, record, and submit the required data to CMS. While the burden associated with this requirement is subject to the PRA, it is currently approved under OMB control number 0938–0921.

3. Physician Quality Reporting Initiative (PQRI)

Section VI.F.1. of this proposed rule discusses the background of the PQRI, provides information about the proposed measures and reporting mechanisms to be available to eligible professionals (EPs) and group practices who choose to participate in the 2011 PQRI, and the proposed criteria for satisfactory reporting in 2011.

With respect to satisfactory submission of data on quality measures by EPs, EPs include physicians, other practitioners as described in section 1842(b)(18)(c) of the Act, physical and occupational therapists, qualified speech-language pathologists, and qualified audiologists. EPs may choose whether to participate and, to the extent they satisfactorily submit data on quality measures for covered professional services, they can qualify to receive an incentive payment. To qualify to receive an incentive payment for 2011, the EP (or group practice) must meet one of the proposed criteria for satisfactory reporting described in sections VI.F.1.e. or VI.F.1.f. of this proposed rule (or section VI.F.1.g. for group practices).

Because this is a voluntary program, it is difficult to accurately estimate how many EPs will opt to participate in the PQRI in CY 2011. Information from the "PQRI 2007 Reporting Experience Report," which is available on the PQRI section of the CMS Web site at *http://www.cms.hhs.gov/PQRI,* indicates that nearly 110,000 unique TIN/NPI combinations attempted to submit PQRI quality measures data via claims for the 2007 PQRI. Therefore, for purposes of conducting a burden analysis for the 2011 PQRI, we will assume that all EPs who attempted to participate in the 2007 PQRI will also attempt to participate in the 2011 PQRI. Furthermore, we believe that the burden for EPs who are participating in the PQRI for the first time in 2011 will be considerably higher than the burden for EPs who have participated in PQRI in prior years.

For individual EPs, the burden associated with the requirements of this reporting initiative is the time and effort associated with EPs identifying applicable PQRI quality measures for which they can report the necessary information, collecting the necessary information, and reporting the information needed to report the EP's or group practice's measures. We believe it is difficult to accurately quantify the burden because EPs may have different processes for integrating the PQRI into their practice's work flows. Moreover, the time needed for an EP to review the quality measures and other information, select measures applicable to his or her patients and the services he or she furnishes to them, and incorporate the use of quality data codes into the office work flows is expected to vary along with the number of measures that are potentially applicable to a given professional's practice. Since EPs are generally required to report on at least 3 measures to earn a PQRI incentive, we will assume that each EP who attempts to submit PQRI quality measures data is attempting to earn a PQRI incentive payment and reports on an average of 3 measures for this burden analysis.

Because we anticipate even greater participation in the 2011 PQRI than in previous years, including participation by EPs who are participating in PQRI for the first time in 2011, we will assign 5 hours as the amount of time needed for EPs to review the 2011 PQRI Measures List, review the various reporting options, select the most appropriate reporting option, identify the applicable measures or measures groups for which they can report the necessary information, review the measure specifications for the selected measures or measures groups, and incorporate reporting of the selected measures or measures groups into the office work flows. This estimate is based on our assumption that an EP will need up to 2 hours to review the 2011 PQRI Measures List, review the reporting options, and select a reporting option and measures on which to report and 3 hours to review the measure specifications for up to 3 selected measures or up to 1 selected measures group and to develop a mechanism for incorporating reporting of the selected measures or measures group into the office work flows.

Information from the Physician Voluntary Reporting Program (PVRP), which was a predecessor to the PQRI, indicated an average labor cost of $50 per hour. To account for salary increases over time, we will use an average practice labor cost of $58 per hour in our estimates based on an assumption of an average annual increase of approximately 3 percent. Thus, we estimate the cost for EP associated with preparing to report PQRI quality measures would be approximately $290 per EP ($58 per hour x 5 hours).

We continue to expect the ongoing costs associated with PQRI participation to decline based on an EP's familiarity with and understanding of the PQRI, experience with participating in the PQRI, and increased efforts by CMS and stakeholders to disseminate useful educational resources and best practices.

We believe the burden associated with actually reporting the PQRI quality measures will vary depending on the reporting mechanism selected by the EP. For claims-based reporting, EPs must gather the required information, select the appropriate quality data codes (QDCs), and include the appropriate QDCs on the claims they submit for payment. The PQRI will collect QDCs as additional (optional) line items on the existing HIPAA transaction 837–P and/or CMS Form 1500 (OCN: 0938–0999). We do not anticipate any new forms and no modifications to the existing transaction or form. We also do not anticipate changes to the 837–P or CMS Form 1500 for CY 2011.

Based on our experience with the PVRP, we continue to estimate that the time needed to perform all the steps necessary to report each measure (that is, reporting the relevant quality data code(s) for a measure) on claims ranges from 15 seconds (0.25 minutes) to over 12 minutes for complicated cases and/or measures, with the median time being 1.75 minutes. At an average labor cost of $58 per hour per practice, the cost associated with this burden ranges from $0.24 in labor to about $11.60 in labor time for more complicated cases and/or measures, with the cost for the median practice being $1.69.

The total estimated annual burden for this requirement will also vary along with the volume of claims on which quality data is reported. In previous years, when we required reporting on 80 percent of eligible cases for claims-based reporting, we found that on average, the median number of reporting instances for each of the PQRI measures was 9. Since we propose to reduce the required reporting rate by over one-third to 50 percent, then for purposes of this burden analysis we will assume that an EP will need to report each selected measure for 6 reporting instances. The actual number of cases on which an eligible professional would be required to report quality measures data will vary, however, with the EP's patient population and the types of measures on which the EP chooses to report (each measure's specifications includes a required reporting frequency).

Based on the assumptions discussed above, we estimate the total annual reporting burden per EP associated with claims-based reporting to range from 4.5 minutes (0.25 minutes per measure $\times$ 3 measures $\times$ 6 cases per measure) to 180 minutes (12 minutes per measure $\times$ 3 measures $\times$ 6 cases per measure), with the burden to the median practice being 31.5 minutes (1.75 minutes per measure $\times$ 3 measures $\times$ 6 cases). We estimate the total annual reporting cost per EP associated with claims-based reporting to range from $4.32 ($0.24 per measure $\times$ 3 measures $\times$ 6 cases per measure) to $208.80 ($11.60 per measure $\times$ 3 measures $\times$ 6 cases per measure), with the cost to the median practice being $30.42 per EP ($1.69 per measure $\times$ 3 measures $\times$ 6 cases per measure).

For registry-based reporting, there would be no additional time burden for EP to report data to a registry as EP

opting for registry-based reporting would more than likely already be reporting data to the registry for other purposes. Little, if any, additional data would need to be reported to the registry for purposes of participation in the 2011 PQRI. However, EPs would need to authorize or instruct the registry to submit quality measures results and numerator and denominator data on quality measures to CMS on their behalf. We estimate that the time and effort associated with this would be approximately 5 minutes per EP.

Registries interested in submitting quality measures results and numerator and denominator data on quality measures to CMS on their participants' behalf in 2011 would need to complete a self-nomination process in order to be considered "qualified" to submit on behalf of EPs unless the registry was qualified to submit on behalf of EPs for prior years and did so successfully. We estimate that the self-nomination process for qualifying additional registries to submit on behalf of EPs for the 2011 PQRI involves approximately 1 hour per registry to draft the letter of intent for self-nomination. It is estimated that each self-nominated entity will also spend 2 hours for the interview with CMS officials and 2 hours calculating numerators, denominators, and measure results for each measure the registry wishes to report using a CMS-provided measure flow. However, the time it takes to complete the measure flow could vary depending on the registry's experience and the number and type of measures for which the registry wishes to submit on behalf of EPs. Additionally, part of the self-nomination process involves the completion of an XML submission by the registry, which is estimated to take approximately 5 hours, but may vary depending on the registry's experience. We estimate that the registry staff involved in the registry self-nomination process have an average labor cost of $50 per hour. Therefore, assuming the total burden hours per registry associated with the registry self-nomination process is 10 hours, we estimate the total cost to a registry associated with the registry self-nomination process to be approximately $500 ($50 per hour × 10 hours per registry).

The burden associated with the registry-based reporting requirements of this voluntary reporting initiative is the time and effort associated with the registry calculating quality measure results from the data submitted to the registry by its participants and submitting the quality measures results and numerator and denominator data on quality measures to CMS on behalf of their participants. The time needed for a registry to review the quality measures and other information, calculate the measures results, and submit the measures results and numerator and denominator data on the quality measures on their participants behalf is expected to vary along with the number of EPs reporting data to the registry and the number of applicable measures. However, we believe that registries already perform many of these activities for their participants. The number of measures that the registry intends to report to CMS and how similar the registry's measures are to CMS' PQRI measures will determine the time burden to the registry.

For EHR-based reporting, the EP must have an IACS account, which we believe takes less than 1 hour to obtain. Once an EP has an IACS account, he or she must extract the necessary clinical data from his or her EHR, and submit the necessary data to the CMS-designated clinical data warehouse. With respect to our proposal to require an EP to submit a test file, we believe that doing so would take less than 1 hour. With respect to submitting the actual 2011 data file in 2012, we believe that this would take an EP no more than 2 hours, depending on the number of patients on which the EP is submitting. We believe that once the EHR is programmed by the vendor to allow data submission to CMS, the burden to the EP associated with submission of data on PQRI quality measures should be minimal. Because this manner of reporting quality data to CMS was new to PQRI for 2010 and no EHR data submissions have taken place yet, it is difficult to estimate how many EPs will opt to participate in the PQRI through the EHR mechanism in CY 2011.

An EHR vendor interested in having their product(s) be used by EPs to submit PQRI quality measures data to CMS were required to complete a self-nomination process in order for the vendor's product(s) to be considered "qualified" for 2011. It is difficult to accurately quantify the burden associated with the EHR self-nomination process as there is variation regarding the technical capabilities and experience among vendors. For purposes of this burden analysis, however, we estimate that the time required for an EHR vendor to complete the self-nomination process will be similar to the time required for registries to self-nominate that is approximately 10 hours at $50 per hour for a total of $500 per EHR vendor ($50 per hour x 10 hours per EHR vendor).

The burden associated with the EHR vendor programming its EHR product(s) to extract the clinical data that the EP needs to submit to CMS for purposes of reporting 2010 PQRI quality measures will be dependent on the EHR vendor's familiarity with PQRI, the vendor's system capabilities, as well as the vendor's programming capabilities. Some vendors already have these necessary capabilities and for such vendors, we estimate the total burden hours to be 40 hours at a rate of $50 per hour for a total burden estimate of $2,000 ($50 per hour x 40 hours per vendor). However, given the variability in the capabilities of the vendors, those vendors with minimal experience would have a burden of approximately 200 hours at $50 per hour, for a total estimate of $10,000 per vendor ($50 per hour x 200 hours per EHR vendor).

With respect to the process for group practices to be treated as satisfactorily submitting quality measures data under the 2011 PQRI discussed in section VI.F.1. of this proposed rule, group practices interested in participating in the 2011 PQRI through one of the proposed group practice reporting options would need to complete a self-nomination process similar to the self-nomination process required of registries and EHR vendors. Therefore, assuming 2 hours for a group practice to decide whether to participate as a group or individually, approximately 2 hours per group practice to draft the letter of intent for self-nomination, gather the requested information, and provide this requested information, and an additional 2 hours undergoing the vetting process with CMS officials, we estimate a total of 6 hours associated with the self-nomination process. Assuming that the group practice staff involved in the group practice self-nomination process have the same average practice labor cost as the average practice labor cost estimates we used for individual EPs of $58 per hour, we estimate the total cost to a group practice associated with the group practice self-nomination process to be approximately $348 ($58 per hour x 6 hours per group practice).

The burden associated with the group practice reporting requirements of this voluntary reporting initiative is the time and effort associated with the group practice submitting the quality measures data. For practices participating under the proposed GPRO I process, this would be the time associated with the physician group completing the data collection tool. The information collection components of this data collection tool have been reviewed by OMB and are currently approved under

OMB control number 0938–0941, with an expiration date of December 31, 2011, for use in the Physician Group Practice, Medicare Care Management Performance (MCMP), and EHR demonstrations. Based on burden estimates for the PGP demonstration, which uses the same data submission methods, we estimate the burden associated with a physician group completing the data collection tool would be approximately 79 hours per physician group. Based on an average labor cost of $58 per physician group, we estimate the cost of data submission per physician group associated with participating in the proposed PQRI GPRO I would be $4,582 ($58 per hour x 79 hours per group practice).

For group practices participating under the proposed GPRO II process, the burden associated with submitting the PQRI quality measures data would be the time associated with the group practice submitting the required data to CMS via claims or a registry. We would expect that data submission under GPRO II would take no more time than the time it would take an individual EP to submit via claims or registry. We believe it would be appropriate to multiply the appropriate burden estimates for each reporting mechanism for individual EPs by the number of EPs in a group to obtain the burden estimates for data submission under GPRO II. For example, based on our estimate of 15.75 minutes per EP under claims-based reporting, we would expect that a 2-person group would have a burden of 31.50 minutes for claims-based submission under GPRO II.

We invite comments on this burden analysis, including the underlying assumptions used in developing our burden estimates.

3. Electronic Prescribing (eRx) Incentive Program

We believe it is difficult to accurately estimate how many EPs will opt to participate in the eRx Incentive Program in CY 2011. Final participation numbers from the first year of the eRx Incentive Program (2009) are not available. Information from the "PQRI 2007 Reporting Experience Report," which is available on the PQRI section of the CMS Web site at *http://www.cms.hhs.gov/PQRI,* however, indicates that nearly 110,000 unique TIN/NPI combinations attempted to submit PQRI quality measures data via claims for the 2007 PQRI. Therefore, for purposes of conducting a burden analysis for the 2011 eRx Incentive Program, we will assume that as many EPs who attempted to participate in the 2007 PQRI will attempt to participate in the 2011 eRx Incentive Program. As such, we can estimate that nearly 110,000 unique TIN/NPI combinations will participate in the 2011 eRx Incentive Program.

Section VI.F.2 of this proposed rule discusses the background of the eRx Incentive Program. Section VI.F.2.b.(2) of this proposed rule provides information on how we propose EPs and group practices can qualify to be considered a successful electronic prescriber in 2011 in order to earn an incentive payment. For 2011, EPs and group practices may choose whether to participate and, to the extent they meet— (1) certain thresholds with respect to the volume of covered professional services furnished; and (2) the criteria to be considered a successful electronic prescriber described in section VI.F.2.b.(2) of this proposed rule, they can qualify to receive an incentive payment for 2011 and/or avoid being subject to a penalty that goes into effect in 2012.

For the 2011 eRx Incentive Program, as discussed in section VI.F.2. of this proposed rule, we propose that each EP would need to report the G-code indicating that at least one prescription generated during an encounter was electronically submitted at least 25 instances during the reporting period. We expect the ongoing costs associated with participation in the eRx Incentive Program to decline based on an EP's familiarity with and understanding of the eRx Incentive Program, experience with participating in the eRx Incentive Program, and increased efforts by CMS and stakeholders to disseminate useful educational resources and best practices.

Similar to PQRI, one factor in the burden to individual EPs would be the time and effort associated with individual EPs reviewing the electronic prescribing measure to determine whether it is applicable to them, reviewing the available reporting options (we propose this measure would be reportable through claims-based reporting, registry-based reporting, or through EHRs) and selecting one, gathering the required information, and incorporating reporting of the measure into their office work flows. Since the eRx Incentive Program consists of only 1 measure to report, we estimate 2 hours as the amount of time needed for individual EPs to prepare for participation in the eRx Incentive Program. At an average cost of approximately $58 per hour per practice, we estimate the total preparation costs to individual EPs to be approximately $116 (2 hours × $58 per hour).

Another factor that influences the burden to EPs is how they choose to report the electronic prescribing measure. For EPs who choose to do so via claims, we estimate that the burden associated with the requirements of this incentive program is the time and effort associated with gathering the required information, selecting the appropriate quality data codes (QDCs), and including the appropriate QDCs on the claims they submit for payment. For claims-based reporting, the QDCs will be collected as additional (optional) line items on the existing HIPAA transaction 837–P and/or CMS Form 1500. We do not anticipate any new forms and no modifications to the existing transaction or form. We also do not anticipate changes to the 837–P or CMS Form 1500 for CY 201.

Based on the information from the PVRP described above for the amount of time it takes a median practice to report one measure one time on claims (1.75 minutes) and our proposal to require EPs to report the measure 25 times, we estimate the burden associated with claims-based data submission to be 43.75 minutes (1.75 minutes per case × 1 measure × 25 cases per measure). This equates to a cost of approximately $42.29 (1.75 minutes per case × 1 measure × 25 cases per measure × $58 per hour) per individual EP.

Because registry-based reporting of the electronic prescribing measure to CMS was added to the eRx Incentive Program for 2010 and EPs are not required to indicate to us how they plan to report the electronic prescribing measure each year, it is difficult to accurately estimate how many EPs will opt to participate in the eRx Incentive Program through the registry-based reporting mechanism in CY 2011. We do not anticipate, however, any additional burden for EPs to report data to a registry as EPs opting for registry-based reporting would more than likely already be reporting data to the registry for other purposes. Little, if any, additional data would need to be reported to the registry for purposes of participation in the 2011 eRx Incentive Program. However, EPs would need to authorize or instruct the registry to submit quality measures results and numerator and denominator data on the electronic prescribing measure to CMS on their behalf. We estimate that the time and effort associated with this would be approximately 5 minutes for each EP that wishes to authorize or instruct the registry to submit quality measures results and numerator and denominator data on the electronic

prescribing measure to CMS on their behalf.

Based on our proposal to consider only registries qualified to submit PQRI quality measures results and numerator and denominator data on quality measures to CMS on their participants' behalf for the 2010 PQRI to be qualified to submit results and numerator and denominator data on the electronic prescribing measure for the 2010 eRx Incentive Program, there would be no need for a registry to undergo a separate self-nomination process for the eRx Incentive Program and therefore, no additional burden associated with the registry self-nomination process.

There would also be a burden to the registry associated with the registry calculating results for the electronic prescribing measure from the data submitted to the registry by its participants and submitting the quality measures results and numerator and denominator data on the electronic prescribing quality measure to CMS on behalf of their participants. The time needed for a registry to review the electronic prescribing measure and other information, calculate the measure's results, and submit the measure's results and numerator and denominator data on the measure on their participants behalf is expected to vary along with the number of EPs reporting data to whom the measure applies. However, we believe that registries already perform many of these activities for their participants. Since the E–Prescribing Incentive Program consists of only one measure, we believe that the burden associated with the registry reporting the measure's results and numerator and denominator to CMS on behalf of their participants would be minimal.

For EHR-based reporting, the EP must extract the necessary clinical data from his or her EHR and submit the necessary data to the CMS-designated clinical data warehouse. Because this manner of reporting quality data to CMS was first added to the eRx Incentive Program in 2010 and EPs are not required to indicate to us how they intend to report the electronic prescribing measure, it is difficult to estimate how many EPs will opt to participate in the eRx Incentive Program through the EHR-based reporting mechanism in CY 2011. We believe that once an EP's EHR is programmed by the vendor to allow data submission to CMS, the burden to the EP associated with submission of data on the electronic prescribing measure should be minimal.

Since we are considering only EHR products qualified for the 2010 PQRI to be qualified for the 2011 eRx Incentive Program, there would be no need for EHR vendors to undergo a separate self-nomination process for the 2011 eRx Incentive Program and therefore, no additional burden associated with the self-nomination process.

There would also be a burden to the EHR vendor associated with the EHR vendor programming its EHR product(s) to extract the clinical data that the EP needs to submit to CMS for purposes of reporting the proposed 2011 electronic prescribing measure. The time needed for an EHR vendor to review the measure and other information and program each qualified EHR product to enable EPs to submit data on the measure to the CMS-designated clinical data warehouse will be dependent on the EHR vendor's familiarity with the electronic prescribing measure, the vendor's system capabilities, as well as the vendor's programming capabilities. Since only EHR products qualified for the 2011 PQRI would be qualified for the 2011 eRx Incentive Program and the eRx Incentive Program consists of only one measure, we believe that any burden associated with the EHR vendor to program its product(s) to enable EPs to submit data on the electronic prescribing measure to the CMS-designated clinical data warehouse would be minimal.

Finally, with respect to the process for group practices to be treated as successful electronic prescribers under the 2011 eRx Incentive Program discussed in section VI.F.2. of this proposed rule, we propose that group practices would have the same options as individual EPs in terms of the form and manner for reporting the electronic prescribing measure (that is, group practices would have the option of reporting the measure through claims, a qualified registry, or a qualified EHR product). There are only 2 differences between the proposed requirements for an individual EP and a group practice: (1) The fact that a group practice would have to self-nominate; and(2) the number of times that a group practice would be required to report the electronic prescribing measure.

We do not anticipate any additional burden associated with the group practice self-nomination practice since we propose to limit the group practices to those selected to participate in the 2011 PQRI GPRO I or PQRI GPRO II. The practice only would need to indicate their desire to participate in the eRx GPRO at the same time they self-nominate for either PQRI GPRO I or PQRI GPRO II and indicate how they intend to report the electronic prescribing measure.

In terms of the burden to group practices associated with submission of the electronic prescribing measure, we believe that this would be similar to the burden to individual EPs for submitting the electronic prescribing measure. In fact, overall, there could be less burden associated with a practice participating as a group rather than as individual EPs because the total number of reporting instances required by the group could be less than the total number of reporting instances that would be required if each member of the group separately reported the electronic prescribing measure. Thus, we believe that the burden to a group practice associated with reporting the electronic prescribing measure could range from almost no burden (for groups who choose to do so through a qualified EHR or registry) to 72.92 hours (1.75 minutes per measure $\times$ 1 measure $\times$ 2,500 cases per measure) for a GPRO I group who chooses to report the electronic prescribing measures through claims submission. Consequently, the total estimated cost per group practice to report the electronic prescribing measure could be as high as $4,225 ($1.69 per measure $\times$ 1 measure $\times$ 2,500 cases per measure).

As with individual EPs, we believe that group practices that choose to participate in the 2011 eRx GPRO through registry-based reporting of the electronic prescribing measure would more than likely already be reporting data to the registry. Little, if any, additional data would need to be reported to the registry for purposes of participation in the 2011 eRx Incentive Program beyond authorizing or instructing the registry to submit quality measures results and numerator and denominator data on the electronic prescribing measure to CMS on their behalf. We estimate that the time and effort associated with this would be approximately 5 minutes for each group practice that wishes to authorize or instruct the registry to submit quality measures results and numerator and denominator data on the electronic prescribing measure to CMS on their behalf.

For group practices that choose to participate in the 2011 eRx Incentive Program through EHR-based reporting of the electronic prescribing measure, once the EHR is programmed by the vendor to allow data submission to CMS, the burden to the group practice associated with submission of data on the electronic prescribing measure should be minimal.

We invite comments on this burden analysis, including the underlying

assumptions used in developing our burden estimates.

VIII. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

IX. Regulatory Impact Analysis

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). We estimate, as discussed below in this section, that the PFS provisions included in this proposed rule will redistribute more than $100 million in 1 year. Therefore, we estimate that this rulemaking is "economically significant" as measured by the $100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we have prepared a Regulatory Impact Analysis that to the best of our ability presents the costs and benefits of the rulemaking.

The RFA requires agencies to analyze options for regulatory relief of small businesses, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that most hospitals and most other providers are small entities as that term is used in the RFA (including small businesses, nonprofit organizations, and small governmental jurisdictions). The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than $34.5 million in any 1 year) (for details see the SBA's Web site at *http://sba.gov/idc/groups/public/documents/sba_homepage/serv_sstd_tablepdf.pdf* (refer to the 620000 series). Individuals and States are not included in the definition of a small entity. The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

For purposes of the RFA, physicians, NPPs, and suppliers including IDTFs are considered small businesses if they generate revenues of $10 million or less based on SBA size standards. Approximately 95 percent of physicians are considered to be small entities. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS.

For purposes of the RFA approximately 85 percent of suppliers of durable medical equipment, prosthetics, orthotics, and supplies (DMEPOS) are considered small businesses according to the SBA size standards. Our most recent claims information includes 47,000 entities billing Medicare for DMEPOS each year. Total annual estimated Medicare expenditures for DMEPOS suppliers are approximately $10.1 billion in CY 2009, for which $8.1 billion was fee-for-service (FFS) and $2 billion was for managed care.

For purposes of the RFA, approximately 80 percent of clinical diagnostic laboratories are considered small businesses according to the SBA size standards.

Ambulance providers and suppliers for purposes of the RFA are also considered to be small entities.

In addition, most ESRD facilities are considered small entities for purposes of the RFA, either based on nonprofit status or by having revenues of $34.5 million or less in any year. We note that a considerable number of ESRD facilities are owned and operated by large dialysis organizations (LDOs) or regional chains, which would have total revenues more than $34.5 million in any year if revenues from all locations are combined. However, the claims data we use to estimate payments for this RFA and RIA does not identify which dialysis facilities are parts of an LDO, regional chain, or other type of ownership. Each individual dialysis facility has its own provider number and bills Medicare using this number. Therefore, we consider each ESRD facility to be a small entity for purposes of the RFA. We consider a substantial number of entities to be significantly affected if the proposed rule has an annual average impact on small entities of 3 to 5 percent or more. The majority of ESRD facilities will experience impacts of approximately 2 percent of total revenues. There are 954 nonprofit ESRD facilities with a combined increase of 2.1 percent in overall payments relative to current overall payments. We note that although the overall effect of the wage index changes is budget neutral, there are increases and decreases based on the location of individual facilities. The analysis and discussion provided in this section and elsewhere in this proposed rule complies with the RFA requirements.

Because we acknowledge that many of the affected entities are small entities, the analysis discussed throughout the preamble of this proposed rule constitutes our regulatory flexibility analysis for the remaining provisions and addresses comments received on these issues.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis, if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. Any such regulatory impact analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. We do not believe this proposed rule has impact on significant operations of a substantial number of small rural hospitals because most dialysis facilities are freestanding. While there are 184 rural hospital-based dialysis facilities, we do not know how many of them are based at hospitals with fewer than 100 beds. However, overall, the 184 rural hospital-based dialysis facilities will experience an estimated 2.1 percent increase in payments. As a result, this rule will not have a significant impact on small rural hospitals. Therefore, the Secretary has determined that this proposed rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2010, that threshold is approximately $135 million. This proposed rule will not mandate any requirements for State, local, or tribal governments in the aggregate, or by the private sector, of $135 million. Medicare beneficiaries are considered to be part of the private sector and as a result a more detailed discussion is presented on the Impact of Beneficiaries in section IX.G. of this regulatory impact analysis.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. We have examined this proposed rule in accordance with Executive Order 13132 and have determined that this regulation would not have any substantial direct effect on State or local governments, preempt States, or otherwise have a Federalism implication.

We have prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for and purposes of this proposed rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this rule, we are implementing a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services. We provide information for each of the policy changes in the relevant sections of this proposed rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this proposed rule. The relevant sections of this rule contain a description of significant alternatives if applicable.

A. RVU Impacts

1. Resource-Based Work, PE, and Malpractice RVUs

Section 1848(c)(2)(B)(ii) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ by more than $20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare revenues for PFS services compare payment rates for CY 2010 with proposed payment rates for CY 2011 using CY 2009 Medicare utilization for all years. To the extent that there are year-to-year changes in the volume and mix of services provided by physicians, the actual impact on total Medicare revenues will be different than those shown in Table 73. The payment impacts reflect averages for each specialty based on Medicare utilization. The payment impact for an individual physician would be different from the average, based on the mix of services the physician furnishes. The average change in total revenues would be less than the impact displayed here because physicians furnish services to both Medicare and non-Medicare patients and specialties may receive substantial Medicare revenues for services that are not paid under the PFS. For instance, independent laboratories receive approximately 85 percent of their Medicare revenues from clinical laboratory services that are not paid under the PFS.

Table 73 shows only the payment impact on PFS services. We note that these impacts do not include the effect of the current law −6.1 percent CY 2011 PFS update. The following is an explanation of the information represented in Table 73:

- *Column A (Specialty):* The Medicare specialty code as reflected in our physician/supplier enrollment files.
- *Column B (Allowed Charges):* The aggregate estimated PFS allowed charges for the specialty based on CY 2009 utilization and CY 2010 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, or suppliers within a specialty to arrive at the total allowed charges for the specialty.
- *Column C (Impact of Work and Malpractice (MP) RVU Changes):* This column shows the estimated CY 2011 impact on total allowed charges of the changes in the work and malpractice RVUs.
- *Column D (Impact of PE RVU and Multiple Procedure Payment Reduction Changes—Full):* This column shows the estimated CY 2011 impact on total allowed charges of the changes in the PE RVUs if there were no remaining transition to the full use of the new PPIS data. This column also includes the impact of the various MPPR and imaging equipment utilization policies.
- *Column E (Impact of PE RVU and MPPR Changes—Tran):* This column shows the estimated CY 2011 impact on total allowed charges of the changes in the PE RVUs under the second year of the 4-year transition to the full use of the new PPIS data. This column also includes the impact of the various MPPR and imaging equipment utilization policies.
- *Column F (Impact of MEI Rebasing):* This column shows the estimated CY 2011 impact on total allowed charges of the proposed CY 2011 rescaling of the RVUs so that the proportions of total payments based on the work, PE, and malpractice RVUs match the proportions proposed in the rebased CY 2006 MEI.
- *Column G (Combined Impact—Full):* This column shows the estimated CY 2011 combined impact on total allowed charges of all the changes in the previous columns if there were no remaining transition to the new PE RVUs using the PPIS data.
- *Column H (Combined Impact—Tran):* This column shows the estimated CY 2011 combined impact on total allowed charges of all the changes in the previous columns under the second year of the 4-year transition to the new PE RVUs using the PPIS data.

TABLE 73—CY 2011 PFS PROPOSED RULE TOTAL ALLOWED CHARGE ESTIMATED IMPACT FOR RVU, MPPR, AND MEI REBASING CHANGES*

Specialty	Allowed charges (mil)	Impact of work and MP RVU changes	Impact of PE RVU and MPPR changes		Impact of MEI re-basing	Combined impact

2. CY 2011 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty impacts of the RVU changes are generally related to two factors. First, as discussed in section II.A.2. of this proposed rule, we are currently implementing the second year of the 4-year transition to new PE RVUs using the new PPIS data that were adopted in the CY 2010 PFS final rule with comment period (74 FR 61751). The impacts of using the new PPIS data are generally consistent with the impacts discussed in the CY 2010 PFS final rule with comment period (74 FR 61983 through 61984).

The second general factor contributing to the CY 2011 impacts shown in Table 73 is the proposed CY 2011 rescaling of the RVUs so that in the aggregate they match the proposed work, PE, and malpractice proportions in the rebased CY 2006 MEI. That is, as discussed in section II.E.1. of this proposed rule, the proposed rebased MEI has a greater proportion attributable to malpractice and PE and, correspondingly, a lesser proportion attributable to work. Specialties that have a high proportion of total RVUs attributable to work, such as anesthesiology, are estimated to experience a decrease in aggregate payments as a result of this rescaling, while specialties that have a high proportion attributable to PE, such as radiation oncology, are estimated to experience an increase in aggregate payments. Malpractice generally represents a small proportion of total payments and the rescaling of the malpractice RVUs is not the primary driver of the specialty impacts. As discussed in section II.E.1. of this proposed rule, the proposed rescaling of the RVUs to match the proposed rebased MEI is budget neutral overall.

Table 73 also includes the impacts resulting from our proposed regulatory change to apply the current 50 percent MPPR policy to therapy services. Under the PFS, we estimate that this change would primarily reduce payments to the specialties of physical therapy and occupational therapy. In order to maintain budget neutrality, we are proposing to redistribute the PFS savings back into other services paid under the PFS by increasing all PE RVUs by approximately 1 percent.

Because providers in settings outside of the PFS, such as outpatient hospital departments, are also paid using the PFS payment rates and policies for physical therapy services, we estimate that this proposal would reduce (not redistribute) payments in those settings for therapy services by approximately 13 percent in CY 2011.

In addition, Table 73 includes the impacts resulting from the proposed regulatory change to the scope of the current contiguous body area MPPR policy for imaging services from contiguous body areas to include noncontiguous body areas. We estimate that this change would primarily reduce payments to the specialties of IDTF and radiology. In order to maintain budget neutrality, we are proposing to redistribute these savings back into other services paid under the PFS by increasing all PE RVUs by approximately 0.1 percent.

Table 73 also reflects the impacts resulting from certain ACA provisions, including section 3135 that amends section 1848(b)(4) of the Act to reduce the payment for expensive diagnostic imaging equipment, and, effective July 1, 2010, increases the level of the MPPR for contiguous body areas from 25 percent to 50 percent. The proposed expansion of the MPPR policy is further discussed in section II.C.4. of this proposed rule, while the discussions of the provisions of section 3135 of the ACA are found in sections V.M. and II.A.3.a. of this proposed rule. As required by sections 1848(c)(2)(B)(v)(V) and (VI) of the Act (as added by sections 3135(a) and (b) of the ACA), these changes are not budget neutral and result in program savings. See section IX.D below for a discussion of the budget impacts of the ACA provisions.

We note that the payment impact for an individual physician may be different from the average, based on the mix of services the physician furnishes.

b. Combined Impact

Column H of Table 73 displays the estimated CY 2011 combined impact on total allowed charges by specialty of all the proposed RVU and MPPR changes. These impacts range from an increase of 8 percent for portable x-ray suppliers, to a decrease of 12 percent for physical/occupational therapy. There is generally a slightly positive net effect of our proposals on primary care specialties, such as family practice, internal medicine, and geriatrics. Again, these impacts are estimated prior to the application of the negative CY 2011 CF update specified under the current statute.

Table 74 shows the estimated impact on total payments for selected high-volume procedures of all of the changes discussed previously, including the effect of the CY 2011 negative PFS CF update. We selected these procedures because they are the most commonly furnished by a broad spectrum of physician specialties. There are separate columns that show the change in the facility rates and the nonfacility rates. For an explanation of facility and nonfacility PE, we refer readers to Addendum A of this proposed rule.

TABLE 74.—IMPACT OF PROPOSED RULE AND ESTIMATED PHYSICIAN UPDATE ON CY 2011 PAYMENT FOR SELECTED PROCEDURES

CPT [1]HCPCS Code	MOD	Short descriptor	Facility			Nonfacility		
			CT 2010 [2]	CY 2011 [3]	Percent change	CY 2010 [2]	CY 2011 [3]	Percent change

[3] Payments based upon the projected CY 2011 conversion factor of $26.6574 adjusted by the proposed MEI rescaling factor of 0.921.

B. Geographic Practice Cost Indices (GPCIs)

As discussed in section II.D. of this proposed rule, we are required to update the GPCI values at least every 3 years and phase in the adjustment over 2 years (if there has not been an adjustment in the past year). For CY 2011, we are proposing new GPCIs for each Medicare locality. The updated GPCIs reflect the first year of the 2-year phase in. The new GPCIs rely upon the 2010 HUD data for determining the relative cost differences in the office rent component of the PE GPCIs, as well as the 2006 through 2007 professional malpractice premium data for determining the malpractice GPCIs. The 2006 through 2008 Bureau of Labor and Statistics (BLS) Occupational Employment Statistics (OES) data were used as a replacement for 2000 Census data for determining the physician work GPCIs and the employee compensation component of the PE GPCIs. As discussed in section II.D. of this proposed rule, the cost share weights for each GPCI value, that is, work, PE, and malpractice, reflect the same proportions determined for the proposed 2006-based MEI.

Additionally, the proposed GPCIs reflect several provisions required by the ACA. Section 1848(e)(1)(H) of the Act (as added by section 3102(b) of the ACA) specifies that for CY 2010 and CY 2011, the employee wage and rent portions of the PE GPCIs reflect only one-half of the relative cost differences for each locality compared to the national average and includes a "hold harmless" provision for any PFS locality that would receive a reduction to its PE GPCI resulting from the limited recognition of cost differences. Section 1848(e)(1)(E) of the Act (as amended by section 3102(a) of the ACA) extends the 1.000 work GPCI floor only through December 31, 2010. Therefore, the proposed CY 2011 GPCIs reflect the sunset of the 1.000 work GPCI floor. Section 1848(e)(1)(G) of the Act (as amended by section 134(b) of the MIPPA) established a permanent 1.500 work GPCI floor in Alaska, beginning January 1, 2009 and, therefore, the 1.500 work GPCI floor in Alaska will remain in place for CY 2011. Moreover, section 1848(e)(1)(I) of the Act (as added by section 10324(c) of the ACA) establishes a 1.000 PE GPCI floor for services furnished in frontier states effective January 1, 2011. OACT estimates the combined impact of these provisions on a fiscal year cash basis as $580 million for FY 2011.

As required by the statute, the updated GPCIs would be phased in over a 2-year period. Addendum D to this proposed rule shows the estimated effects of the revised GPCIs on locality

GAFs for the transitional year (CY 2011) in descending order. The GAFs reflect the use of updated underlying GPCI data, updated cost share weights, and the ACA provisions. The GAFs are a weighted composite of each area's work, PE, and malpractice GPCIs using the national GPCI cost share weights. While we do not actually use the GAFs in computing the PFS payment for a specific service, they are useful in comparing the estimated overall costs and payments for different localities. The actual effect on payment for any specific service would deviate from the estimated payment based on the GAF to the extent that the proportions of work, PE, and malpractice expense RVUs for the specific service differ from those of the GAF. The most significant changes would occur in 12 payment localities, where the GAF increases by more than 1 percent or decreases by more than 2 percent. The cumulative effects of all of the GPCI revisions, including the updated underlying GPCI data, updated cost share weights, and provisions of the ACA, are reflected in the CY 2012 GPCI values that are displayed in Addendum E to this proposed rule.

C. Rebasing and Revising of the MEI

As discussed in section II.E.1. of this proposed rule, we are proposing to rebase and revise the MEI for the CY 2011 PFS. Substituting the proposed 2006 MEI weights in place of the 2000 weights and implementing the proposed revisions to the MEI has no impact on the projected MEI increase for CY 2011. The projected MEI update for CY 2011 is 0.3 percent under both the 2000-based and 2006-based MEI. After CY 2011, the MEI updates are slightly higher (0.1 percentage point) in the early part of the forecast, unchanged in the medium term, and slightly lower in the long term (between 0.1 to 0.2 percentage points).

D. The Affordable Care Act Provisions

1. Section 3103: Extension of Exceptions Process for Medicare Therapy Caps

This provision extends the exceptions process for therapy caps through December 31, 2010. Therapy caps are discussed in detail in section III.A.1. of this proposed rule. OACT estimates the impact on a fiscal year cash basis as $1.16 billion for FY 2011.

2. Section 3104: Extension of Payment for Technical Component of Certain Physician Pathology Services

As discussed in section V.E. of this proposed rule, this provision continues payment to independent laboratories for the TC of physician pathology services for fee-for-service Medicare beneficiaries who are inpatients or outpatients of a covered hospital through CY 2010. OACT estimates the impact on a fiscal year cash basis as $80 million for FY 2011.

3. Sections 3105 and 10311: Extension of Ambulance Add-Ons

As discussed in section V.F. of this proposed rule, these provisions require the extension of certain add-on payments for ground ambulance services, and the extension of certain rural area designations for purposes of air ambulance payment. As further discussed in section V.F., we are amending the Medicare program regulations to conform the regulations to these provisions of the ACA. These statutory provisions are essentially prescriptive and do not allow for discretionary alternatives on the part of the Secretary.

As discussed in the July 1, 2004 interim final rule (69 FR 40288), in determining the super-rural bonus amount under section 1834(l)(12) of Act, we followed the statutory guidance of using the data from the Comptroller General (GAO) of the U.S. We obtained the same data as the data that were used in the GAO's September 2003 Report titled "Ambulance Services: Medicare Payments Can Be Better Targeted to Trips in Less Densely Populated Rural Areas" (GAO report number GAO–03–986) and used the same general methodology in a regression analysis as was used in that report. The result was that the average cost per trip in the lowest quartile of rural county populations was 22.6 percent higher than the average cost per trip in the highest quartile. As required by section 1834(l)(12) of the Act, this percent increase is applied to the base rate for ground ambulance transports that originate in qualified rural areas, which were identified using the methodology set forth in the statute. Payments for ambulance services under Medicare are determined by the point of pick-up (by zip code area) where the beneficiary is loaded on board the ambulance. We determined that ground ambulance transports originating in 7,842 zip code areas (which were determined to be in "qualified rural areas") out of 42,879 zip code areas, according to the July 2010 zip code file, will realize increased base rate payments under this provision; however, the number and level of services that might occur in these areas for CY 2011 is unknown at this time. While many elements may factor into the final impact of sections 3105(a), (b), and (c) and 10311(a), (b), and (c) of the ACA, our Office of the Actuary (OACT) estimates the impact of all these provisions to be $10 million for FY 2011.

4. Section 3107: Extension of Physician Fee Schedule Mental Health Add-On

As discussed in section V.G. of this proposed rule, this provision extends the period of time for the five percent increase in Medicare payment for specified mental health services through CY 2010. OACT estimates the impact on a fiscal year cash basis as $20 million for FY 2011.

5. Section 3111: Payment for Bone Density Tests

As discussed in section V.I. of this proposed rule, this provision restores payment for dual-energy x-ray absorptiometry (DXA) services furnished during CYs 2010 and 2011 to 70 percent of the Medicare rate paid in CY 2006. OACT estimates the impact on a fiscal year cash basis as $60 million for FY 2011.

6. Section 3122: Extension of Medicare Reasonable Costs Payments for Certain Clinical Diagnostic Laboratory Tests Furnished to Hospital Patients in Certain Rural Areas

As discussed in section V.K. of this proposed rule, this provision reinstitutes reasonable cost payment for clinical diagnostic laboratory tests performed by hospitals with fewer than 50 beds that are located in qualified rural areas as part of their outpatient services for cost reporting periods beginning on or after July 1, 2010 through June 30, 2011. For some hospitals with cost reports that begin as late as June 30, 2011, this reinstitution of reasonable cost payment could affect services performed as late as June 29, 2012, because this is the date those cost reports will close.

7. Section 3135: Modification of Equipment Utilization Factor For Advanced Imaging Services

As discussed in section V.M. of this proposed rule, for services furnished on or after July 1, 2010, section 1848(b)(4)(D) of the Act (as added by section 3135(b) of the ACA) adjusts the technical component MPPR for multiple imaging studies provided in a single imaging session on contiguous body parts within families of codes from 25 percent to 50 percent as of July 1, 2010. For services furnished on or after January 1, 2011, section 1848(b)(4)(C) of the Act (as added by section 3135(a) of the ACA) increases the equipment utilization rate to 75 percent for expensive diagnostic imaging equipment, changing the CY 2011 transitional utilization rate adopted in

the CY 2010 PFS final rule with comment period to the 75 percent rate. Both of these provisions are not budget neutral. OACT estimates the impact on a fiscal year cash basis to be savings to the Medicare program of $160 million for FY 2011.

8. Section 3136: Revisions in Payments for Power Wheelchairs

As discussed in section V.N. of this proposed rule, this provision requires the Secretary to revise the capped rental fee schedule amounts for all power wheelchairs effective for power wheelchairs furnished on or after January 1, 2011. Under the monthly capped rental payment structure, the fee schedule will pay 15 percent (instead of 10 percent) of the purchase price for the first three months and 6 percent (instead of 7.5 percent) for the remaining rental months not to exceed 13 months. In addition, the lump sum (up front) purchase payment will be eliminated for standard power-driven wheelchairs. For complex rehabilitative power-driven wheelchairs, the provision permits payment to be made on a lump sum purchase method or a monthly rental method. These changes are prescriptive in the statute and does not allow for discretionary alternatives.

We expect the changes mandated by section 3136 of the ACA as a whole to achieve program savings as a result of total payments per standard power wheelchair being less than 100 percent of the purchase fee schedule amount. This decrease in expenditures is expected for two reasons. Primarily, the provision will eliminate the lump sum payment method for standard power-driven wheelchairs and instead payment will be made under the monthly rental method resulting in lower aggregate payments because many beneficiaries who use standard power wheelchairs do not use them for as long as 13 months. In addition, we note that currently a significantly lower volume of power-driven wheelchairs are paid under the monthly payment method. The payment impact of increasing monthly rental payments in the initial 3 months will be offset both by the savings achieved from eliminating the lump sum payment method for standard power-driven wheelchairs and by decreasing payments for the remaining months of rental from 7.5 percent to 6 percent of the purchase price for all power-driven wheelchairs. We compared the estimates of current payments for power-driven wheelchairs to estimates of payments resulting from the changes which showed an estimated payment impact of a decrease in expenditures of approximately $780 million over a 5-year period. The FY 2011 cash savings was $120 million.

9. Section 3401: Revisions of Certain Market Basket Updates and Incorporation of Productivity Adjustments

As discussed in section V.P. of this proposed rule, section 3401 of the ACA incorporates a productivity adjustment into the update factors for certain payment systems. Specifically, section 3401 requires that in CY 2011 (and in subsequent years), update factors under the ambulatory surgical center payment system, the ambulance fee schedule, and the clinical laboratory fee schedule be adjusted by the productivity adjustment. OACT estimates the impact to be savings to the Medicare program of $20 million, $30 million, and $50 million for the ambulatory surgical center payment system, the ambulance fee schedule, and the clinical laboratory fee schedule, respectively, for FY 2011. Furthermore section 3401 changed the 2011 ESRD composite rate Market Basket minus one increase to a Market Basket increase. This provision would be a cost to the Medicare program of $40 million (does not include coinsurance).

10. Section 4103: Medicare Coverage of Annual Wellness Visit Providing a Personalized Prevention Plan

As discussed in section V.Q. of this proposed rule, for services furnished on or after January 1, 2011, section 1861(s)(2)(FF) of the Act (as added by section 4103 of the ACA) provides Medicare coverage, with no coinsurance or deductible, for an annual wellness visit. The annual wellness visit entails the creation of a personalized prevention plan for an individual that includes a health risk assessment and may include other elements, such as updating the family history, identifying providers that regularly provide medical care to the individual, body mass index measurement, development of a screening service schedule, and identification of risk factors. OACT estimates the impact on a fiscal year cash basis to be $110 million for FY 2011.

11. Section 4104: Removal of Barriers to Preventive Services in Medicare

As discussed in section V.R. of this proposed rule, for services furnished on or after January 1, 2011, sections 1833(a)(1) and 1833(b) of the Act (as amended by section 4104 of the ACA) waive the deductible and coinsurance requirements for most preventive services, and waive the deductible for colorectal cancer screening tests that are reported with other codes. Services to which no coinsurance or deductible would be applied are the annual wellness visit, the initial preventive physical examination, and any covered preventive service if it is recommended with a grade of A or B by the United States Preventive Services Task Force. We estimate that this new benefit will result in an increase in Medicare payments. OACT estimates the impact on a fiscal year cash basis to be $110 million for FY 2011.

12. Section 5501: Expanding Access to Primary Care Services and General Surgery Services

As discussed in section V.S. of this proposed rule, for services furnished on or after January 1, 2011 and before January 1, 2016, sections 1833(x) and (y) of the Act (as added by section 5501 of the ACA) provide primary care practitioners, as well as general surgeons practicing in geographic health professional shortage areas, with 10 percent incentive payments based on their provision of primary care or major surgical services, respectively. OACT estimates the impact on a fiscal year cash basis to be $170 million for FY 2011.

13. Section 6003: Disclosure Requirements for In-office Ancillary Services Exception to the Prohibition of Physician Self-Referral for Certain Imaging Services

In section V.T of the preamble of this proposed rule, we propose to amend § 411.355(b)(2) to include a new disclosure requirement created by section 6003 of the ACA and related to the in-office ancillary services exception to the physician self-referral prohibition. Specifically, the statute requires that, with respect to magnetic resonance imaging, computed tomography, and positron emission tomography, the referring physician must inform the patient in writing at the time of the referral that the patient may obtain the same imaging services from another supplier. In addition, the statute requires physicians to provide a written list of other suppliers who furnish the same imaging services in the area in which the patient resides.

We propose that the written notice shall include a list of at least 10 other suppliers who provide the services for which the individual is being referred and which are located within a 25-mile radius of the referring physician's office location. If there are fewer than 10 other suppliers located within a 25-mile radius of the physician's office location, the physician shall list all of the other suppliers of the imaging service that are present within a 25-mile radius of the

referring physician's office location, including up to 10 suppliers. Provision of the written list of alternate suppliers will not be required if no other suppliers provide the services for which the individual is being referred within a 25-mile radius. We also propose that the notice should be written in a manner sufficient to be reasonably understood by all patients and should include for each supplier on the list, at a minimum, the supplier's name, address, telephone number, and distance from the referring physician's office location. A record of the disclosure notification, signed by the patient, shall be maintained as a part of the patient's medical record.

Our proposal minimizes the administrative burden for the physician by requiring the development of only one list of alternative suppliers for each office location, rather than multiple lists targeting the various areas in which the physician's patients reside.

We do not anticipate that our proposals in section V.T. of the preamble of this proposed rule would have a significant economic impact on a substantial number of physicians, other health care providers and suppliers, or the Medicare or Medicaid programs and their beneficiaries. Specifically, we believe that this proposed rule would affect only those physicians who provide MRI, CT, PET services under the in-office ancillary services exception and beneficiaries receiving those services. We are uncertain of the number of physicians who will have to comply with this disclosure requirement. Using data from the 2009 CMS Statistics booklet, we propose an estimate of 71,000 Medicare enrolled physicians would have to comply with this new requirement. This figure represents 20 percent of primary care and medical specialty physicians enrolled in Medicare Part B. In order to ensure accuracy of the effect of this provision on physician practices, we are soliciting comments regarding the appropriateness of this estimate. The burden associated with disclosing the information, receiving the patient's signature on the form and maintaining a record of such disclosure will be de minimis for the individual physician.

Our proposed criteria for the new disclosure requirement would present a negligible economic impact on the physician or group practice required to create the disclosure notice. The physician or group practice would incur only a one-time cost associated with developing a disclosure notice that informs patients that they may receive the same imaging services from another supplier and also lists other suppliers located within a 25-mile radius of the physician's office location at the time of the referral. We believe it would take an individual 1 hour to create the notice informing patients that they may receive imaging services from another supplier as well as to compile the list of 10 other suppliers. In addition, we believe it would require a negligible amount of time to provide the notice and list of suppliers to the patient and to maintain a copy of the notice in the patient's medical record.

We believe that beneficiaries would be impacted positively by this new provision. The disclosure that the patient may receive the referred imaging services from another supplier contributes to informed decision-making about the availability of such imaging services from other suppliers. We also believe that furnishing a list of other suppliers who provide the same services in the vicinity of the referring physician serves patient convenience. The proposed regulation makes no significant changes that would impede patient access to health care services, and it will likely improve patients' awareness of options in deciding where to receive imaging services.

14. Section 6404: Maximum Period for Submission of Medicare Claims Reduced to Not More Than 12 Months

As discussed in section V.U. of this proposed rule, section 6404 of the ACA reduces the maximum time period for filing Medicare claims to no more than 12 months after the date of service. Under the new law, claims for services furnished on or after January 1, 2010, must be filed within 1 calendar year after the date of service. In addition, section 6404 of the ACA provides that claims for services furnished before January 1, 2010, must be filed no later than December 31, 2010.

Section 6404 of the ACA also permits the Secretary to make certain exceptions to the 1-year filing deadline. This proposed rule would create two new exceptions to the 1-year filing deadline.

The first exception would permit the time limits for filing claims to be extended where a beneficiary becomes retroactively entitled to Medicare benefits, but was not entitled to Medicare benefits at the time the services were furnished. Under this exception, the time to file a claim would be extended through the last day of the sixth month following the month in which the beneficiary received notification of the retroactive Medicare entitlement to the date of the furnished service.

The second exception would permit the time limits for filing claims to be extended where: (1) At the time the service was furnished, the beneficiary was not entitled to Medicare; (2) subsequently, the beneficiary received notification of Medicare entitlement, retroactively effective to the date of the furnished service; and (3) subsequently the State Medicaid agency recovered the Medicaid payment for the furnished service from a provider or supplier 11 months or more after date the service was furnished. Under this exception, the time to file a claim would be extended through the last day of the sixth month following the month in which the State recovered the Medicaid payment from the provider or supplier.

The budgetary impact related to this provision is significant as future payment of claims for services incurred will now be made at an earlier date, relative to the 12-month submission expiration. This is reflected by the Part A and Part B payment amounts of $60 and $50 million for FY 2011. However, for purposes of the Regulatory Impact Analysis, the economic impact of this provision is non-economically significant, as to the interest lost on money now required to pay claims prior to the 12-month submission expiration is minimal.

Providers and suppliers have established billing practices for the submission of claims for payment to the Medicare program. Although this proposed rule would require providers and suppliers to submit Medicare fee-for-service claims within 12 months from the date of service, we believe providers and suppliers would easily revise their billing practices on a one-time basis, and suffer no economic impact. In fact, analysis of Medicare claims data shows that more than 99 percent of Part A and Part B claims are filed in 12 months or less. In addition, some providers and suppliers will receive payment and interest on claims that are filed at an earlier date.

Lastly, providers, suppliers, or the small number of beneficiaries that occasionally submit claims may benefit from the availability of the two proposed new exceptions to the timely filing rule; however, we believe the impact on program costs would be negligible.

E. Other Provisions of the Proposed Regulation

1. Part B Drug Payment: ASP Issues

Application of our proposed policies for "Carry Over ASP" and "Partial Quarter ASP Data," as discussed in section VI.A. of this proposed rule, are dependent on the status and quality of quarterly manufacturer data

submissions, so we cannot quantify associated savings.

Furthermore, we do not expect that our proposed policy for determining the payment amount for drugs and biologicals which include intentional overfill, as discussed in section VI.A of this proposed rule, will impact payments made by the Medicare program.

Finally, as discussed in section VI.A of this proposed rule, we are proposing to provide for appropriate price substitutions that account for market-related pricing changes and would allow Medicare to pay based off lower market prices for those drugs and biologicals that consistently exceed the applicable threshold percentage. We believe that this proposal will generate some savings for the Medicare program and its beneficiaries since any substituted prices would be for amounts less than the calculated 106 percent of the ASP.

2. Ambulance Fee Schedule: Proposed Policy for Reporting Units When Billing for Ambulance Fractional Mileage

As discussed in section VI.B. of this proposed rule, we are proposing to implement fractional mileage billing for all providers and suppliers of ambulance services. For all claims for mileage totaling up to 100 covered miles, we are proposing to require all providers and suppliers of ambulance services to bill mileage rounded up to the nearest tenth of a mile rather than the nearest whole mile and are proposing to pay based on that amount. By requiring that providers and suppliers round up to the nearest tenth of a mile rather than the nearest whole mile, providers and suppliers would be submitting claims for anywhere between 0.1 and 0.9 of a mile less per claim and Medicare would pay based on that amount. We anticipate that requiring greater accuracy in billing for ambulance mileage will generate modest cost savings for the Medicare program. Based on our rough estimates using CY 2008 claims data, Medicare could potentially save at least $45 million per year in payments for base mileage billed by suppliers, and perhaps as much as $80 million per year when considering other types of ambulance mileage payments such as those for rural mileage and those made to institutional providers.

3. Chiropractic Services Demonstration

As discussed in section VI.D. of this proposed rule, we are continuing the recoupment of the $50 million in expenditures from this demonstration in order to satisfy the budget neutrality requirement in section 651(f)(1)(b) of the MMA. We initiated this recoupment in CY 2010 and this will be the second year. As discussed in the CY 2010 PFS final rule with comment period, we finalized a policy to recoup $10 million each year through adjustments to the PFS for all chiropractors in CYs 2010 through 2014. To implement this required budget neutrality adjustment, we are recouping $10 million in CY 2011 by reducing the payment amount under the PFS for the chiropractic CPT codes (that is, CPT codes 98940, 98941, and 98942) by approximately 2 percent.

4. Renal Dialysis Services Furnished by ESRD Facilities

The ESRD related provisions are discussed in sections V.P. and VI.E. of this proposed rule. To understand the impact of the changes affecting payments to different categories of ESRD facilities, it is necessary to compare estimated payments under the current year (CY 2010 payments) to estimated payments under the revisions to the composite rate payment system (CY 2011 payments) as discussed in section VI.E. of this proposed rule. To estimate the impact among various classes of ESRD facilities, it is imperative that the estimates of current payments and estimates of proposed payments contain similar inputs. Therefore, we simulated payments only for those ESRD facilities for which we are able to calculate both current CY 2010 payments and proposed CY 2011 payments.

Also, as explained in the ESRD PPS proposed rule (74 FR 50019), section 1881(b)(14)(E)(i) of the Act requires a 4-year transition (phase-in) from the current composite payment system to the ESRD PPS, and section 1881(b)(14)(E)(ii) allows ESRD facilities to make a one-time election to be excluded from the transition. As of January 1, 2011, ESRD facilities that elect to go through the transition would be paid a blended amount that will consist of 75 percent of the basic case-mix adjusted composite payment system and the remaining 25 percent would be based on the ESRD PPS payment. Therefore, these proposed rates listed in the impact table below reflect only the composite rate portion of the blended payment amounts for facilities going through the first year of the 4-year transition under the new ESRD PPS. A full analysis of the projected impact of the ESRD PPS will be addressed in the ESRD PPS final rule which will be published in the summer.

ESRD providers were grouped into the categories based on characteristics provided in the Online Survey and Certification and Reporting (OSCAR) file and the most recent cost report data from the Healthcare Cost Report Information System (HCRIS). We also used the December 2009 update of CY 2009 National Claims History file as a basis for Medicare dialysis treatments and separately billable drugs and biologicals. Since the December 2009 update of the CY 2009 National Claims History File is incomplete, we updated the data. The description of the updates for the separately billable drugs is described in section IV.E. of this proposed rule. To update the treatment counts we used the ratio of the June 2009 to the December 2008 updates of the CY 2008 National Claims History File figure for treatments. This was an increase of 12.4 percent. Due to data limitations, we are unable to estimate current and proposed payments for 32 of the 5318 ESRD facilities that bill for ESRD dialysis treatments.

Table 75 shows the impact of this year's proposed changes to CY 2011 payments to hospital-based and independent ESRD facilities. The first column of Table 75 identifies the type of ESRD provider, the second column indicates the number of ESRD facilities for each type, and the third column indicates the number of dialysis treatments. The fourth column shows the effect of all proposed changes to the ESRD wage index for CY 2011 as it affects the composite rate payments to ESRD facilities. The fourth column compares aggregate ESRD wage-adjusted composite rate payments in CY 2011 to aggregate ESRD wage-adjusted composite rate payments in CY 2010. In CY 2010, ESRD facilities receive 100 percent of the CBSA wage-adjusted composite rate. The overall effect to all ESRD providers in aggregate is zero because the CY 2011 ESRD wage index has been multiplied by a budget neutrality adjustment factor to comply with the statutory requirement that any wage index revisions be done in a manner that results in the same aggregate amount of expenditures as would have been made without any changes in the wage index. The fifth column shows the effect of proposed changes to the ESRD wage index in CY 2011 and the effect of section 3401(h) of the ACA, which amends section 1881(b)(14)(F) of the Act to revise the ESRD market basket increase factor. Effective January 1, 2011, there is a full ESRD bundled market basket update to the composite rate component of the blended payment amount under the payment system. We anticipate an estimated ESRD market basket increase factor of 2.5 percent for those facilities

electing to go through the ESRD PPS transition. The sixth column shows the overall effect of the proposed changes in composite rate payments to ESRD providers, including the drug add-on. The overall effect is measured as the difference between the proposed CY 2011 payment with all changes as proposed in this rule and current CY 2010 payment. This payment amount is computed by multiplying the wage-adjusted composite rate with the drug add-on for each provider times the number of dialysis treatments from the CY 2009 claims. The CY 2011 proposed payment is the composite rate for each provider (with the proposed 14.7 percent drug add on) times dialysis treatments from CY 2009 claims. The CY 2010 current payment is the composite rate for each provider (with the current 15.0 percent drug add on) times dialysis treatments from CY 2009 claims.

The overall impact to ESRD providers in aggregate is 2.2 percent as shown in Table 75. Most ESRD facilities will see an increase in payments as a result of the ACA provision. While section 3401(h) of the ACA modifies the ESRD bundled market basket, which we anticipate will be a 2.5 percent increase to the ESRD composite rate portion of the blended payment amount, this 2.5 percent increase does not apply to the drug add-on to the composite rate. For this reason, the impact of all changes in this proposed rule is a 2.2 percent increase for all ESRD providers. Overall, payments to independent ESRD facilities will increase by 2.2 percent and payments to hospital-based ESRD facilities will increase by 2.1 percent.

TABLE 75—IMPACT OF CY 2012 CHANGES IN PAYMENTS TO HOSPITAL-BASED AND INDEPENDENT ESRD FACILITIES

[Percent change in composite rate payments to ESRD facilities]

1	2	3	4	5	6
	Number of facilities	Number of dialysis treatments (in millions)	Effect of changes in wage index [1]	Effect of changes in wage index and of affordable care act provision [2]	Overall effect of wage index affordable care act & drug add-on [3]
All Providers	5,286	38.8	0.0%	2.5%	2.2%
Independent	4,715	35.1	0.0%	2.5%	2.2%
Hospital Based	571	3.7	−0.1%	2.4%	2.1%
By Facility Size					
Less than 5000 treatments	1,973	5.6	0.1%	2.6%	2.3%
5000 to 9999 treatments	2,042	14.8	0.1%	2.6%	2.3%
Greater than 9999 treatments	1,271	18.3	−0.1%	2.4%	2.1%
Type of Ownership					
Profit	4,332	32.1	0.0%	2.5%	2.3%
Nonprofit	954	6.7	−0.1%	2.4%	2.1%
By Geographic Location					
Rural	1,167	6.3	0.2%	2.7%	2.4%
Urban	4,119	32.5	0.0%	2.5%	2.2%
By Region					
New England	163	1.3	−0.6%	1.9%	1.6%
Middle Atlantic	591	4.8	−0.4%	2.1%	1.8%
East North Central	869	6.0	0.2%	2.7%	2.4%
West North Central	397	2.1	−0.1%	2.4%	2.2%
South Atlantic	1,188	8.8	0.0%	2.5%	2.2%
East South Central	415	2.9	0.0%	2.5%	2.3%
West South Central	712	5.6	0.4%	2.9%	2.7%
Mountain	310	1.8	0.2%	2.7%	2.4%
Pacific	603	5.1	0.0%	2.5%	2.3%
Puerto Rico & Virgin Islands	38	0.4	−2.4%	0.0%	−0.2%

Notes: Payments have been adjusted to reflect budget neutrality. 2010 includes the MIPPA 1 percent increase and site neutral rates. 2010 & 2011 are 100 percent new CBSA wage adjusted compsite rate.

[1] This column shows the overall effect of wage index changes on ESRD providers. Composite rate payments are computed using the proposed CY 2011 wage indexes which are compared to composite rate payments using the current CY 2010 wage indexes.

[2] This column shows the effect of the changes in the Wage Indexes and the ACA provision which includes an ESRD Bundled Market Basket (anticipated 2.5 percent) increase to the composite rate. This provision is effective January 1, 2011.

[3] This column shows the percent change between CY 2011 and CY 2010 composite rate payments to ESRD facilities.

[4] The CY 2011 payments include the CY 2011 wage adjusted composite rate, an anticipated 2.5 percent increase due to the ACA effective January 1, 2011, and the drug add-on of 14.7 percent. The CY 2010 payments include the CY 2010 wage adjusted composite rate, a 1 percent increase and site neutral rates effective January 1, 2009, and the drug add-on of 15.0 percent. This column shows the effect of wage index, ACA, and drug add-on changes. Although as a result of the ACA provision we anticipate a 2.5 percent increase to the composite rate in CY 2011, this increase does not apply to the drug add-on to the composite rate. For this reason, the impact of all changes in this proposed rule is a 2.2 percent increase for all ESRD providers.

5. Section 131(b) of the MIPPA: Physician Payment, Efficiency, and Quality Improvements—Physician Quality Reporting Initiative (PQRI)

As discussed in section VI.F.1 of this proposed rule, we propose several different reporting options for EPs who wish to participate in the 2011 PQRI. Although there may be some cost incurred in the PQRI and their associated code sets, and for expanding an existing clinical data warehouse to accommodate registry-based reporting and EHR-based reporting for the PQRI, we do not anticipate a significant cost impact on the Medicare program.

Participation in the CY 2011 PQRI by individual EPs is voluntary and individual EPs and group practices may have different processes for integrating the PQRI into their practice's work flows. Given this variability and the multiple reporting options that we propose to provide, it is difficult to accurately estimate the impact of the PQRI on providers. Furthermore, we believe that costs for EPs who are

participating in the PQRI for the first time in 2011 will be considerably higher than the cost for EPs who participated in PQRI in prior years. In addition, for many EPs, the cost of participating in the PQRI is offset by the incentive payment received.

With respect to the potential incentive payment that will be made for the 2011 PQRI, we estimate this amount to be approximately $100 million. This estimate is derived from looking at our 2008 incentive payment of more than $93 million and then accounting for the fact that the 2008 incentive payment was 1.5 percent of an EP's total estimated Medicare Part B PFS allowed charges for all covered professional services furnished during the 2008 reporting period. For 2011, the incentive payment is 1.0 percent of an EP's total estimated Medicare Part B PFS allowed charges for all covered professional services furnished during the 2011 reporting period. Although we expect that the lower incentive payment amount for 2011 would reduce the total outlay by approximately one-third, we also expect more EPs to participate in the 2011 PQRI as there are more methods of data submission and additional alternative reporting periods.

One factor that influences the cost to individual EPs is the time and effort associated with individual EPs identifying applicable PQRI quality measures and reviewing and selecting a reporting option. This burden will vary with each individual EP by the number of applicable measures, the EP's familiarity and understanding of the PQRI, experience with PQRI participation, and the method(s) selected by the EP for reporting of the measures, and incorporating the reporting of the measures into the office work flows. Information obtained from the Physician Voluntary Reporting Program (PVRP), which was a predecessor to the PQRI and was the first step for the reporting of physician quality of care through certain quality metrics, indicated an average labor cost per practice of approximately $50 per hour. To account for salary increases over time, we will use an average practice labor cost of $58 per hour for our estimates, based on an assumption of an average annual increase of approximately 3 percent. Therefore, assuming that it takes an individual EP approximately 5 hours to review the PQRI quality measures, review the various reporting options, select the most appropriate reporting option, identify the applicable measures for which they can report the necessary information, and incorporate reporting of the selected measures into their office work flows, we estimate that the cost to EPs associated with preparing to report PQRI quality measures would be approximately $290 per individual EP ($58 per hour × 5 hours).

Another factor that influences the cost to individual EPs is how they choose to report the PQRI measures (that is, whether they select the claims-based, registry-based or EHR-based reporting mechanism). For claims-based PQRI reporting, estimates from the PVRP indicate the time needed to perform all the steps necessary to report quality data codes (QDCs) for 1 measure on a claim ranges from 15 seconds (0.25 minutes) to 12 minutes for complicated cases or measures. In previous years, when we required reporting on 80 percent of eligible cases for claims-based reporting, we found that on average, the median number of reporting instances for each of the PQRI measures was 9. Since we propose to reduce the required reporting rate by over one-third to 50 percent, then for purposes of this impact analysis we will assume that an EP will need to report each selected measure for 6 reporting instances, or 6 cases. Assuming that an EP, on average, will report 3 measures and that an EP reports on an average of 6 reporting instances per measure, we estimate that the cost to an individual EP associated with claims-based reporting of PQRI measures would range from approximately $4.35 (0.25 min per reporting instance × 6 reporting instances per measure × 3 measures × $58 per hour) to $208.80 (12 min per reporting instance × 6 reporting instances per measure × 3 measures × $58 per hour). If an EP satisfactorily reports, these costs will more than likely be negated by the incentive earned. For the 2007 PQRI, which had a 1.5 percent incentive for a 6-month reporting period, the mean incentive amount was close to $700 for an individual EP and the median incentive payment amount was over $300.

For registry-based reporting, individual EPs must generally incur a cost to submit data to registries. Estimated fees for using a qualified registry range from no charge, or a nominal charge, for an individual EP to use a registry to several thousand dollars, with a majority of registries charging fees ranging from $500–$1000. However, our impact analysis should be limited to the incremental costs associated with PQRI reporting, which we believe are minimal. Many EPs who select registry-based reporting were already utilizing the registry for other purposes and would not need to report additional data to the registry specifically for PQRI. The registries also often provide the EP services above and beyond what is required for PQRI.

For EHR-based reporting, an individual EP generally would incur a cost associated with purchasing an EHR product. Although we do not believe that the majority of EPs would purchase an EHR solely for the purpose of participating in PQRI, we estimate that an individual EP who chooses to do so would have to spend anywhere from $25,000–$54,000 to purchase and implement a certified EHR and $10,000 annually for ongoing maintenance.

Although we believe that the majority of EPs attempting to qualify for the additional 0.5 percent incentive payment authorized by section 1848(m)(7) of the Act would be those who are already required by their Boards to participate in an MOCP, individual EPs who wish to qualify for the additional 0.5 percent incentive payment and are not currently participating in an MOCP would also have to incur a cost for participating in an MOCP. The manner in which fees are charged for participating in an MOCP vary by specialty. Some Boards charge a single fee for participation in the full cycle of MOC. Such fees appear to range anywhere from over $1,100 to nearly $1,800 per cycle. Some Boards have annual fees that are paid by their diplomates. On average, ABMS diplomates pay approximately $200.00 per year for participating in MOC. Some Boards have an additional fee for the MOC Part III secure examination, but most Boards do not have additional charges for participation in the Part IV practice/quality improvement activities.

With respect to the proposed process for group practices to be treated as satisfactorily submitting quality measures data for the CY 2011 PQRI discussed in section VI.F.1 of this proposed rule, group practices interested in participating in the CY 2011 PQRI through the group practice reporting option (GPRO) I or GPRO II may also incur a cost. However, for groups that satisfactorily report for 2011 PQRI, we believe these costs would be completely offset by the incentive payment earned since the group practice would be eligible for an incentive payment equal to 1 percent of the entire group's total estimated Medicare Part B PFS allowed charges for covered professional services furnished during the reporting period.

One factor in the cost to group practices would be the costs associated with the self-nomination process. Similar to our estimates for staff involved with the claims-based reporting option for individual EPs, we also estimate that the group practice

staff involved in the group practice self-nomination process has an average labor cost of $58 per hour. Therefore, assuming 2 hours for a group practice to decide whether to participate individually or as a group and 4 hours for the self-nomination process, we estimate the total cost to a group practice associated with the group practice self-nomination process to be approximately $348 ($58 per hour × 6 hours per group practice).

For groups participating under the proposed GPRO I process, another factor in the cost to the group would be the time and effort associated with the group practice completing and submitting the proposed data collection tool. The information collection components of this data collection tool have been reviewed by OMB and are currently approved under OMB control number 0938–0941, with an expiration date of December 31, 2011. Based on the Physician Group Practice (PGP) demonstration's estimate that it takes approximately 79 hours for a group practice to complete the data collection tool, which uses the same data submission methods as those we have proposed, we estimate the cost associated with a physician group completing the data collection tool would be approximately $4,582 ($58 per hour × 79 hours per group practice).

For group practices participating under the proposed GPRO II process, the costs associated with submitting the PQRI quality measures data would be the time associated with the group practice submitting the required data to CMS via claims or a registry. The costs for a group practice reporting to a registry should be similar to the costs associated with registry reporting for an individual EP, as the process is the same with the exception that more patients and more measures must be reported in GPRO II compared to an individual EP. For similar reasons, the costs for a group practice reporting via claims should also be similar to the costs associated with claims-based reporting for an individual EP. Overall, there is significantly less burden associated with a group practice participating in PQRI via GPRO II than doing so as individual EPs. Participation in GPRO II requires the group practice as a whole to report a fewer number of measures on a fewer number of people since EPs within a group who share patients would not be required to separately report measures for those shared patients. Therefore, assuming that an average group practice would spend 20 hours for data submission, we estimate the cost of data submission under GPRO II would be approximately $1,160 (20 hours for data submission × $58 per hour). Smaller groups may need less time for data submission as they would be required to report fewer measures and presumably have a smaller patient population while larger groups may need more time for data submission since they would be required to report more measures and presumably have a larger patient population.

In addition to costs incurred by EPs and group practices, registries and EHR vendors may also incur some costs related to the PQRI. Registries interested in becoming "qualified" to submit on behalf of individual EPs would also have to incur a cost associated with the vetting process and with calculating quality measures results from the data submitted to the registry by its participants and submitting the quality measures results and numerator and denominator data on quality measures to CMS on behalf of their participants. We estimate the registry self-nomination process would cost approximately $500 per registry ($50 per hour × 10 hours per registry). This cost estimate includes the cost of submitting the self-nomination letter to CMS and completing the CMS vetting process. Our estimate of $50 per hour average labor cost for registries is based on the assumption that registry staff include IT professionals whose average hourly rates range from $36 to $84 per hour depending on experience, with an average rate of nearly $50 per hour for a mid-level programmer. However, the 2010 qualified registries would not incur any costs associated with the self-nomination process unless they are unsuccessful at submitting 2010 PQRI results, they wish to be qualified to submit additional measures or for additional methods, or we finalize new requirements for 2011. We do not believe that there are any additional costs for registries associated with a registry calculating quality measures results from the data submitted to the registry by its participants and submitting the quality measures results and numerator and denominator data on quality measures to CMS on behalf of their participants. We believe that the majority of registries already perform these functions for their participants.

An EHR vendor interested in having its product(s) be used by individual EPs to submit PQRI measures to CMS for 2012 would have to complete a vetting process during 2011 and program its EHR product(s) to extract the clinical data that the EP needs to submit to CMS for purposes of reporting 2012 quality measures as well. We propose that previously qualified vendors would need to only update their electronic measure specifications and data transmission schema to incorporate any new EHR measures to maintain their qualification for the 2012 PQRI. Therefore, for EHR vendors that were not previously qualified, the cost associated with completing the self-nomination process, including the vetting process with CMS officials, is estimated to be $500 ($50 per hour × 10 hours per EHR vendor). Our estimate of a $50 per hour average labor cost for EHR vendors is based on the assumption that vendor staff include IT professionals whose average hourly rates range from $36 to $84 per hour depending on experience, with an average rate of nearly $50 per hour for a mid-level programmer. We believe that the cost associated with the time and effort needed for an EHR vendor to review the quality measures and other information and program the EHR product to enable individual EPs to submit PQRI quality measures data to the CMS-designated clinical warehouse will be dependent on the EHR vendor's familiarity with PQRI, the vendor's system's capabilities, as well as the vendor's programming capabilities. Some vendors already have the necessary capabilities and for such vendors, we estimate the total cost to be approximately $2,000 ($50 per hour × 40 hours per vendor). However, given the variability in the capabilities of the vendors, we believe an estimate for those vendors with minimal experience would be approximately $10,000 per vendor ($50 per hour × 200 hours per EHR vendor).

6. Section 132 of the MIPPA: Incentives for Electronic Prescribing (eRx)—The eRx Incentive Program

Section VI.F.2. of this proposed rule describes the proposed 2011 Electronic Prescribing (eRx) Incentive Program. To be considered a successful electronic prescriber in CY 2011, an individual EP would need to meet the requirements proposed in section VI.F.2. of this proposed rule.

We anticipate that the cost impact of the eRx Incentive Program on the Medicare program would be the cost incurred for maintaining the electronic prescribing measure and its associated code set, and for maintaining the existing clinical data warehouse to accommodate registry-based reporting and EHR-based reporting for the electronic prescribing measure. However, we do not anticipate a significant cost impact on the Medicare program since much of this infrastructure has already been established for the PQRI program.

Individual EPs and group practices may have different processes for

integrating the eRx Incentive Program into their practices' work flows. Given this variability and the multiple reporting options that we propose to provide, it is difficult to accurately estimate the impact of the eRx Incentive Program on providers. Furthermore, we believe that costs for EPs who are participating in the eRx Incentive Program for the first time in 2011 will be considerably higher than the cost for EPs who participated in the eRx Incentive Program in prior years. In addition, for many EPs (especially those who participated in the eRx Incentive Program in prior years), the cost of participating in the eRx Incentive Program will be offset by the incentive payment received.

At this time, no eRx incentive payments have been made yet. We are currently analyzing 2009 eRx data, which was the first year of the program, and anticipate making the 2009 incentive payments later this year. We estimate that the incentive payments for the 2011 eRx Incentive Program (which will be paid in 2012) will be approximately $81 million. This estimate is based on preliminary participation numbers from the early part of 2010 and incentive payments that have been made for PQRI. We anticipate that despite a decrease in the incentive payment amount from 2 percent in 2010 to 1 percent of total estimated Medicare Part B allowed charges for covered professional services in 2011, more EPs (and groups) will choose to participate in the 2011 eRx Incentive Program to avoid a prospective 1 percent payment penalty in 2012 for not demonstrating that they are successful electronic prescribers. Even though the incentive payment amount for the 2011 eRx Incentive Program is equal to the incentive payment amount for the 2011 PQRI, we believe that the total incentive amount that will be paid for the 2011 eRx Incentive Program will be less than the total incentive payment amount that will be paid for the PQRI discussed above. The eRx Incentive Program does not apply to all EPs. For example, EPs who do not have prescribing privileges or EPs who do not practice in a particular care setting would not be able to participate in the eRx Incentive Program even though they can participate in PQRI.

Any EP who wishes to participate in the eRx Incentive Program must have a qualified electronic prescribing system in order to participate. Therefore, a one-time potential cost to some individual EPs would be the cost of purchasing and using an eRx system, which varies by the commercial software package selected, the level at which the professional currently employs information technology in his or her practice and the training needed. One study indicated that a midrange complete electronic medical record with electronic prescribing functionality costs $2,500 per license with an annual fee of $90 per license for quarterly updates of the drug database after setup costs while standalone prescribing, messaging, and problem list system may cost $1,200 per physician per year after setup costs. Hardware costs and setup fees substantially add to the final cost of any software package. (Corley, S.T. (2003). "Electronic prescribing: a review of costs and benefits." Topics in Health Information Management 24(1):29–38.). These are the estimates that we propose to use for our impact analysis.

Similar to PQRI, one factor in the cost to individual EPs is the time and effort associated with individual EPs reviewing the electronic prescribing measure to determine whether it is applicable to them, reviewing the available reporting options and selecting one, gathering the required information, and incorporating reporting of the measure into their office work flows. Since the eRx Incentive Program consists of only 1 quality measure, we propose to estimate 2 hours as the amount of time needed for individual EPs to prepare for participation in the eRx Incentive Program. Information obtained from the Physician Voluntary Reporting Program (PVRP), which was a predecessor to the PQRI and was the first step for the reporting of physician quality of care through certain quality metrics, indicated an average labor cost per practice of approximately $50 per hour. To account for salary increases over time, we will use an average practice labor cost of $58 per hour for our estimates, based on an assumption of an average annual increase of approximately 3 percent. At an average cost of approximately $58 per hour, we estimate the total preparation costs to individual EPs to be approximately $116 ($58 per hour × 2 hours).

Another factor that influences the cost to individual EPs is how they choose to report the electronic prescribing measure (that is, whether they select the claims-based, registry-based or EHR-based reporting mechanism). For claims-based reporting, there would be a cost associated with reporting the appropriate QDC on the claims an individual EP submits for payment. Based on the information from the PVRP described above for the amount of time it takes a median practice to report one measure one time (1.75 min) and the proposed requirement to report 25 electronic prescribing events during 2011, we estimate the annual estimated cost per individual EP to report the electronic prescribing measure via claims-submission to be $42.29 (1.75 min per case × 1 measure × 25 cases per measure × $58 per hour). Assuming that the mean and median incentive payment amounts per individual EP would be comparable to those for the PQRI since the incentive payments are calculated in the same manner, we believe that for most successful electronic prescribers who earn an incentive, these costs would be negated by the incentive payment received.

For EPs who select the registry-based reporting mechanism, we do not anticipate any additional cost for individual EPs to report data to a registry, as individual EPs opting for registry-based reporting are more than likely already reporting data to the registry. Little if any, additional data would need to be reported to the registry for purposes of participation in the CY 2011 eRx Incentive Program. Individual EPs using registries for PQRI will likely experience minimal, if any, increased costs charged by the registry to report this 1 additional measure.

For EHR-based reporting, the EP must extract the necessary clinical data from his or her EHR, and submit the necessary data to the CMS-designated clinical data warehouse. Once the EHR is programmed by the vendor to allow data submission to CMS, the cost to the individual EP associated with the time and effort to submit data on the electronic prescribing measure should be minimal.

With respect to the proposed process for group practices to be treated as successful electronic prescribers under the CY 2011 eRx Incentive Program discussed in section VI.F.2 of this proposed rule, group practices have the same option as individual eligible professionals in terms of the form and manner for reporting the eRx measure (that is, group practices have the option of reporting the measure through claims, a qualified registry, or a qualified EHR product). There are only 2 differences between the requirements for an individual EP and a group practice: (1) The fact that a group practice would have to self-nominate; and (2) the number of times a group practice would be required to report the eRx measure. Overall, there could be less cost associated with a practice participating in the eRx Incentive Program as a group rather than the individual members of the group separately participating. We do not anticipate any additional costs associated with the group practice self-nomination process since we propose to

limit the group practices to those selected to participate in the 2011 PQRI GPRO I or PQRI GPRO II. The practices only would need to indicate their desire to participate in the eRx GPRO at the time they self-nominate for either PQRI GPRO I or PQRI GPRO II.

The costs for a group practice reporting to an EHR or registry should be similar to the costs associated with registry and EHR reporting for an individual EP, as the process is the same with the exception that more electronic prescribing events must be reported by the group. For similar reasons, the costs for a group practice reporting via claims should also be similar to the costs associated with claims-based reporting for an individual EP. Therefore, we estimate that the costs for group practices who are selected to participate in the CY 2011 eRx Incentive Program as a group would range from $126.88 (1.75 min per case × 1 measure × 75 cases per measure × $58 per hour) for the smallest groups participating under GPRO II to $4,229.17 (1.75 min per case × 2500 cases per measure × $58 per hour) for the groups participating under GPRO I.

We believe that the costs to individual EPs and group practices associated with avoiding the eRx penalty that goes into effect in 2012 would be similar to the costs of an EP or group practice reporting the electronic prescribing measure for purposes of the 2011 eRx incentive. The proposed requirements for avoiding the 2012 eRx penalty, including the reporting period, essentially overlaps with the proposed requirements for the 2011 eRx incentive.

Based on our proposal to consider only registries qualified to submit quality measures results and numerator and denominator data on quality measures to CMS on their participant's behalf for the 2011 PQRI to be qualified to submit results and numerator and denominator data on the eRx measure for the CY 2011 eRx Incentive Program, we do not anticipate any cost to the registry associated with becoming a registry qualified to submit the eRx measure for CY 2011.

The cost for the registry would be the time and effort associated with the registry calculating results for the eRx measure from the data submitted to the registry by its participants and submitting the quality measures results and numerator and denominator data on the eRx quality measure to CMS on behalf of their participants. We believe such costs would be minimal as registries would already be required to perform these activities for PQRI.

Likewise, based on our proposal to consider only EHR products qualified for the CY 2011 PQRI to be qualified to submit results and numerator and denominator data on the electronic prescribing measure for the CY 2011 eRx Incentive Program, there would be no need for EHR vendors to undergo a separate self-nomination process for the eRx Incentive Program. Therefore, there would be no additional cost associated with the self-nomination process.

The cost to the EHR vendor associated with the EHR-based reporting requirements of this reporting initiative is the time and effort associated with the EHR vendor programming its EHR product(s) to extract the clinical data that the individual EP needs to submit to CMS for purposes of reporting the CY 2011 eRx measure. Since we propose that only EHR products qualified for the 2011 PQRI would be qualified for the CY 2011 eRx Incentive Program, and the eRx Incentive Program consists of only one measure, we believe that any burden associated with the EHR vendor to program its product(s) to enable individual EPs to submit data on the eRx measure to the CMS-designated clinical data warehouse would be minimal.

7. Durable Medical Equipment-Related Issues

a. Off-the-Shelf (OTS) Orthotics Exemption

In section VI.G. of this proposed rule, we are proposing to expand the exemptions from the Competitive Bidding Program (CBP) for certain OTS orthotics to physicians or other practitioners (as defined by the Secretary) if furnished to their own patients as part of their professional service.

The proposed exemption is a self-implementing mandate required by section 154(d) of MIPPA, which added section 1847(a)(7) of the Act. Section 1847(a)(7)(A) of the Act expanded the exemptions from the CBP for certain OTS orthotics to physicians or other practitioners (as defined by the Secretary) if furnished to their own patients as part of their professional service. Section 1847(a)(7)(B) of the Act, as added by section 154(d) of MIPPA, also expanded the exemption from CBP for certain OTS DME items (crutches, canes, walkers, folding manual wheelchairs, blood glucose monitors, and infusion pumps) when furnished by hospitals to the hospital's own patients during an admission or on the date of discharge.

We believe this exemption would have a negligible impact on physicians and other providers. The exemption will allow physicians to continue to provide these items to their own patients without submitting a bid and becoming a contract supplier. This will also allow continued access to OTS items for beneficiaries while being seen in their physician's office.

b. Changes to Payment for Oxygen Equipment

The revisions pertaining to oxygen and oxygen equipment in section VI.G. of this proposed rule reflect changes made by section 144(b) of MIPPA and regulations implementing that provision. In § 414.226(g), exceptions are listed to the requirement that the supplier that furnishes oxygen equipment in the 1st month of the 36-month period must continue to furnish it until medical necessity ends or the 36-month of continuous use ends. Section VI.G. changes one exception (§ 414.226(g)(1)(ii)) to read that if a beneficiary relocates to an area that is outside the normal service area of the supplier before the 18th month, then the supplier does not have to continue to furnish the item or make arrangements.

We expect that revising § 414.226(g)(1)(ii) so that only suppliers that have received at least 18 months of rental payments must continue to furnish the oxygen equipment until medical necessity ends or the end of the reasonable useful lifetime should have a minor impact on the supplier, but should provide protection to beneficiaries. The reason that we expect the revised exception will have little impact has foremost to do with the fact that it applies in cases that are the exception to the normal circumstances. Only 38 percent of the beneficiaries are still renting by the 18th month of the rental period; only suppliers furnishing oxygen equipment to this subgroup of beneficiaries will be affected by this proposed change. Further, relocation between the 18th to the 36th month is not a common occurrence. Such relocation happens with less than 0.5 percent of the beneficiaries using oxygen equipment. In addition, between the 32nd and 35th month, relocation happens with the beneficiaries in about 0.06 percent of the time on average.

c. Diabetic Testing Supplies

We are establishing requirements for conducting a national competition for furnishing diabetic supplies on a mail order basis. Specifically this proposed rule will establish 3 requirements: A new definition for what constitutes mail order; a rule that requires contract suppliers to provide at a minimum 50 percent of all of the different types of diabetic testing products on the market by brand and model name; and a

prohibition against influencing and incentivizing beneficiaries to switch their brand of monitor and testing suppliers.

Currently based on claims data from fiscal year 2009 over 62 percent of beneficiaries receive their replacement diabetic testing supplies from mail order suppliers. This definition will not impact these beneficiaries because they can continue to obtain their items through mail order. The remaining 38 percent of beneficiaries may continue to obtain these items from a local storefront. We do not expect this rule to have any adverse affects on beneficiaries because the new definition of mail order is reflective of the way that beneficiaries currently get their testing supplies. However, we believe that by clarifying this definition we will protect beneficiaries from paying higher co-payment amounts and we anticipate program savings that would have been eroded by suppliers circumventing our definition to continue to provide items, even if not awarded a contract under competitive bidding and to obtain the higher fee schedule payment amount. This definition is also consistent with the way that suppliers currently do business by either providing items through mail order or at a local storefront. For these reasons we believe this new definition will have minimal impact.

Also, we considered the option to not bifurcate bidding based on delivery method and to bid for diabetic testing suppliers regardless of how the items were obtained. We rejected this approach because it would force companies with different business models to compete against each other, by requiring local pharmacies to compete with national mail order suppliers in order to win a contract to be able to furnish testing supplies.

In order to implement a national mail order competition for diabetic supplies, we are also proposing to implement the special "50 percent rule" mandated by MIPPA. This rule requires a bidder to demonstrate that its bid "covers types of diabetic testing strip products that, in the aggregate and taking into account volume for the different products, cover 50 percent (or such higher percentage as the Secretary may specify) of all such types of products." The 50 percent threshold would ensure that beneficiaries have access to mail order delivery of the top-selling diabetic test strip products from every contract supplier. We plan to use the information that bidding suppliers provide on their bidding Form B where suppliers list the products they plan to furnish. We believe this requirement will have a minimal impact on suppliers because most suppliers currently provide a wide range of the brands and models in order to gain market share. The statute states that suppliers are required to carry at least 50 percent of all brands on the market. However, the Secretary can establish suppliers to carry a higher percentage of brands. We have adopted 50 percent criteria because we believe this is reflective of what suppliers are currently doing and ensures appropriate access for beneficiaries.

In addition to the 50 percent rule, we are also proposing to establish an anti-switching requirement. This provision would prevent contract suppliers from switching beneficiaries from their current brand to a brand provided by the supplier. We believe this requirement will protect the beneficiary and physician choice of glucose monitoring systems. The decision concerning the type of monitor and testing supplies that a beneficiary chooses should not be made by the supplier but rather by the beneficiary and their physician. We believe that this provision will have a minimal impact on suppliers because suppliers currently offer a variety of products and generally do require beneficiaries to switch from the brands they are familiar with and customarily use.

d. Metropolitan Statistical Areas

We believe that the provisions pertaining to subdividing metropolitan statistical areas (MSAs) with populations of at least 8,000,000 for the purpose of establishing competitive bidding areas (CBAs) under Round 2 of the DMEPOS Competitive Bidding Program will have a positive impact on most suppliers, particularly small suppliers. The authority provided by section 1847(a)(1)(D)(ii)(II) of the Act would be used to create CBAs that are smaller than the highly and densely populated MSAs of: Chicago-Naperville-Joliet, IL–IN–WI; Los Angeles-Long Beach-Santa Ana, CA; and New York-Northern New Jersey-Long Island, NY–NJ–PA. This should result in more manageable service areas for suppliers to navigate when furnishing items. More importantly, it should ensure more timely delivery of items and services to beneficiaries located throughout each of the MSAs. It should also benefit small suppliers because they would have smaller geographic areas to cover as contract suppliers than the large MSAs, which in some cases, might prevent them from being considered for participation under the program. The larger suppliers would still have the opportunity to bid in all of the CBAs within each MSA. We expect that subdividing the large MSAs of Chicago, Los Angeles, and New York would not have a negative impact on program savings, as long as each CBA is large enough to be attractive to suppliers for bidding purposes.

Table 76 considers FY cash impact on the entire Medicare program, including Medicare Advantage for FYs 2011 thru 2015 of the provisions of this proposed rule related to the establishment of CBAs during Round 2 and prior to calendar year 2015. The FY–CY distinction is an important one when comparing savings. For example, the savings for the Medicare DMEPOS Competitive Bidding Program will be for 9 months of FY 2013, but for 12 months of CY 2013. Table 76 considers the impact on program expenditures, and does not include beneficiary coinsurance. Finally, the estimates in Table 76 incorporate spillover effects from the competitive acquisition program onto the Medicare Advantage program. The expectation is that the 21 additional MSAs added to the Medicare DMEPOS Competitive Bidding Program would lower prices for DME products in FFS would lead to lower prices in the Medicare Advantage market. The table below considers FY cash impact of the above provisions on the entire Medicare program, including Medicare Advantage for the FY.

TABLE 76—FISCAL YEAR COSTS TO THE MEDICARE PROGRAM

FY	Cost (in $millions)
2011	0
2012	0
2013	−40
2014	−70
2015	−110

Subdividing the large MSAs of Chicago, Los Angeles, and New York is considered to have little to no fiscal impact. The exceptions to the Medicare DMEPOS Competitive Bidding program involving rural areas, MSAs with populations less than 250,000, and low population density areas in selected MSAs before 2015 are considered to have little to no impact because the baseline never considered these areas as subject to competitive bidding prices.

8. Air Ambulance

In section VI.G. of this proposed rule, we present our proposals regarding air ambulance and provider and supplier enrollment. We note that this proposal is an administrative initiative that may result in Medicare program savings but at this time those savings are inestimable. We believe the probable

costs providers or suppliers will incur as a result of this rule to be negligible.

F. Alternatives Considered

This proposed rule contains a range of policies, including some provisions related to specific MIPPA and ACA provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been exercised, presents rationale for our proposals and, where relevant, alternatives that were considered.

G. Impact on Beneficiaries

There are a number of changes in this proposed rule that would have an effect on beneficiaries. In general, we believe that many of the proposed changes, including the refinements of the PQRI with its focus on measuring, submitting, and analyzing quality data, the expansion of the list of Medicare-approved telehealth services, the incentive payments for primary care services furnished by primary care practitioners in any location and major surgical procedures furnished by general surgeons in HPSAs, the waiver of beneficiary cost-sharing for most preventive services, and the annual wellness visit proposals, will have a positive impact and improve the quality and value of care provided to Medicare beneficiaries.

The regulatory provisions may affect beneficiary liability in some cases. For example, the waiver of the deductible and coinsurance for the annual wellness visit, the IPPE, and preventive services with a grade of A or B from the USPSTF would reduce beneficiary liability for these services. Most changes in aggregate beneficiary liability due to a particular provision would be a function of the coinsurance (20 percent if applicable for the particular provision after the beneficiary has met the deductible). To illustrate this point, as shown in Table 74, the CY 2010 national payment amount in the nonfacility setting for CPT code 99203 (Office/outpatient visit, new) under the conversion factor that was consistent with the statute as of October 30, 2009 and that would be in effect on December 31, 2010 under current law, is $76.93 which means that in CY 2010 a beneficiary would be responsible for 20 percent of this amount, or $15.39. Based on this proposed rule, the CY 2011 national payment amount in the nonfacility setting for CPT code 99203, as shown in Table 74, is $72.67, which means that, in CY 2011, the beneficiary coinsurance for this service would be $14.53.

Additionally, beneficiary liability would also be impacted by the effect of the aggregate cost (savings) of the provisions on the standard calculation of the Medicare Part B premium rate (generally 25 percent of the provision's cost or savings).

Most policies discussed in this rule that impact payment rates, such as the expansion of the MPPR to therapy services and the increased discount on the TC of multiple imaging procedures from 25 percent to 50 percent, would similarly impact beneficiaries' coinsurance.

H. Accounting Statement

As required by OMB Circular A–4 (available at *http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf*), in Table 77, we have prepared an accounting statement showing the estimated expenditures associated with this proposed rule. This estimate includes the estimated FY 2011 cash benefit impact associated with certain ACA and MIPPA provisions, and the CY 2011 incurred benefit impact associated with the estimated CY 2011 PFS conversion factor update based on the FY 2011 President's Budget baseline.

TABLE 77—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES

Category	Transfers
CY 2011 Annualized Monetized Transfers.	Estimated decrease in expenditures of $5.7 billion for PFS conversion factor update.
From Whom To Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.
FY 2011 Annualized Monetized Transfers.	Estimated increase in expenditures of $2 billion for Affordable Care Act provisions.
From Whom To Whom?	Federal Government to providers.

In accordance with the provisions of Executive Order 12866, this proposed rule was reviewed by the Office of Management and Budget.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 409

Health facilities, Medicare.

42 CFR Part 410

Health facilities, Health professions, Kidney diseases, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 411

Kidney diseases, Medicare, Physician Referral, Reporting and record keeping requirements.

42 CFR Part 413

Health facilities, Kidney diseases, Medicare Reporting and recordkeeping requirements.

42 CFR Part 414

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping.

42 CFR Part 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

1. The authority citation for part 405 continues to read as follows:

Authority: Secs. 1102, 1861, 1862(a), 1871, 1874, 1881, and 1886(k) of the Social Security Act (42 U.S.C. 1302, 1395x, 1395y(a), 1395hh, 1395kk, 1395rr and 1395ww(k)), and sec. 353 of the Public Health Service Act (42 U.S.C. 263a).

Subpart X—Rural Health Clinic and Federally Qualified Health Center Services

2. A new § 405.2449 is added to read as follows.

§ 405.2449 Preventive services.

For services furnished on or after January 1, 2011, preventive services covered under the Medicare Federally qualified health center benefit are those preventive services defined in section 1861(ddd)(3) of the Act, and § 410.2 of this chapter. Specifically, these include the following:

(a) The specific services currently listed in section 1861(ww)(2) of the Act, with the explicit exclusion of electrocardiograms;

(b) The Initial Preventive Physical Examination (IPPE) (as specified by section 1861(ww)(1) of the Act as added by section 611 of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (Pub. L. 108–173) and § 410.16 of this chapter); and

(c) The Personalized Prevention Plan Services (PPPS), also known as the "Annual Wellness Visit" (as specified by section 1861(hhh) of the Act as added by section 4103 of the Affordable Care Act (Pub. L. 111–148) and part 410, subpart B, § 410.15 of this chapter).

3. Section 405.2470 is amended by adding a new paragraph (d) to read as follows:

§ 405.2470 Reports and maintenance of records.

* * * * *

(d) *Collection of additional claims data.* Beginning January 1, 2011, a Medicare FQHC must report on its Medicare claims such information as the Secretary determines is needed to develop and implement a prospective payment system for FQHCs including, but not limited to all pertinent HCPCS (Healthcare Common Procedure Coding System) code(s) corresponding to the service(s) provided for each Medicare FQHC visit (as defined in § 405.2463).

PART 409—HOSPITAL INSURANCE BENEFITS

4. The authority citation for part 409 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

Subpart B—Inpatient Hospital Services and Inpatient Critical Access Hospital Services

§ 409.17 [Amended]

5. Amend § 409.17(d) by removing the phrase "hospital policies and procedures" and adding in its place the phrase "the provider's policies and procedures."

Subpart C—Posthospital SNF Care

6. Section 409.20 is amended by revising paragraph (a)(3) to read as follows:

§ 409.20 Coverage of services.

(a) * * *

(3) Physical therapy, occupational therapy, and speech-language pathology services.

* * * * *

7. Section 409.23 is revised to read as follows:

§ 409.23 Physical therapy, occupational therapy, and speech-language pathology services.

Medicare pays for physical therapy, occupational therapy, or speech-language pathology services as posthospital SNF care if they are furnished—

(a) By (or under arrangements made by) the facility and billed by (or through) the facility;

(b) By qualified physical therapists, physical therapist assistants, occupational therapists, occupational therapy assistants, or speech-language pathologists as defined in part 484 of this chapter; and

(c) In accordance with a plan that meets the requirements of § 409.17(b) through (d) of this part.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

8. The authority citation for part 410 continues to read as follows:

Authority: Secs. 1102, 1834, 1871, and 1893 of the Social Security Act (42 U.S.C. 1302, 1395m, 1395hh, and 1395ddd).

Subpart A—General Provisions

9. Section 410.2 is amended by adding the definition of "Preventive services" in alphabetical order to read as follows:

§ 410.2 Definitions.

* * * * *

Preventive services means all of the following:

(1) The specific services listed in section 1861(ww)(2) of the Act, with the explicit exclusion of electrocardiograms;

(2) The Initial Preventive Physical Examination (IPPE) (as specified by section 1861(ww)(1) of the Act); and

(3) The Personalized Prevention Plan Services (PPPS), also known as the "Annual Wellness Visit" (as specified by section 1861(hhh) of the Act)

§ 410.3 [Amended]

10. Amend § 410.3(b)(2) by removing the reference "subpart E" and adding in its place the reference "subpart I."

Subpart B—Medical and Other Health Services

11. Section 410.15 is added to read as follows:

§ 410.15 Annual wellness visits providing Personalized Prevention Plan Services: Conditions for and limitations on coverage.

(a) *Definitions.*

Detection of any cognitive impairment, for the purpose of this section, means assessment of an individual's cognitive function by direct observation, with due consideration of information obtained by way of patient report, concerns raised by family members, friends, caretakers or others.

Eligible beneficiary for purposes of this section means an individual who is no longer within 12 months after the effective date of his or her first Medicare Part B coverage period and who has not received either an initial preventive physical examination or an annual wellness visit providing a personalized prevention plan within the past 12 months.

Establishment of, or an update to the individual's medical and family history for purposes of this section means, at a minimum, the collection and documentation of the following:

(i) Past medical and surgical history, including experiences with illnesses, hospital stays, operations, allergies, injuries and treatments.

(ii) Use or exposure to medications and supplements, including calcium and vitamins.

(iii) Medical events in the beneficiary's parents and any siblings and children, including diseases that may be hereditary or place the individual at increased risk.

First annual wellness visit providing personalized prevention plan services for purposes of this section means the following services furnished an eligible beneficiary by a health professional as those terms are defined in this section:

(i) Establishment of an individual's medical and family history.

(ii) Establishment of a list of current providers and suppliers that are regularly involved in providing medical care to the individual.

(iii) Measurement of an individual's height, weight, body-mass index (or waist circumference, if appropriate), blood pressure, and other routine measurements as deemed appropriate, based on the beneficiary's medical and family history.

(iv) Detection of any cognitive impairment that the individual may have, as that term is defined in this section.

(v) Review of the individual's potential (risk factors) for depression, including current or past experiences with depression or other mood disorders, based on the use of an appropriate screening instrument for persons without a current diagnosis of depression, which the health professional may select from various available standardized screening tests designed for this purpose and recognized by national medical professional organizations.

(vi) Review of the individual's functional ability and level of safety, based on direct observation or the use of appropriate screening questions or a screening questionnaire, which the health professional as defined in this section may select from various available screening questions or standardized questionnaires designed for this purpose and recognized by national professional medical organizations.

(vii) Establishment of the following:

(A) A written screening schedule for the individual such as a checklist for the next 5 to 10 years, as appropriate, based on recommendations of the United States Preventive Services Task Force and the Advisory Committee on Immunization Practices, and the individual's health status, screening history, and age-appropriate preventive services covered by Medicare.

(B) A list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual, including any mental health conditions or any such risk factors or conditions that have been identified through an initial preventive physical examination (as described under § 410.16 of this subpart), and a list of treatment options and their associated risks and benefits.

(viii) Furnishing of personalized health advice and a referral, as appropriate, to health education or preventive counseling services or programs aimed at reducing identified risk factors and improving self-management, or community-based lifestyle interventions to reduce health risks and promote self-management and wellness, including weight loss, physical activity, smoking cessation, fall prevention and nutrition.

(ix) Any other element determined appropriate through the National Coverage Determination process.

Health professional for purposes of this section means:

(i) A physician who is a doctor of medicine or osteopathy (as defined in section 1861(r)(1) of the Social Security Act); or

(ii) A physician assistant, nurse practitioner, or clinical nurse specialist (as defined in section 1861(aa)(5) of the Act; or

(iii) A medical professional (including a health educator, registered dietitian or nutritionist) or a team of medical professionals, who are working under the supervision of a physician as defined in paragraph (i) of this definition.

Review of the individual's functional ability and level of safety for purposes of this section includes, at minimum, assessment of the following topics:

(i) Hearing impairment,

(ii) Ability to successfully perform activities of daily living,

(iii) Fall risk and

(iv) Home safety.

Subsequent annual wellness visit providing personalized prevention plan services means the following services furnished an eligible beneficiary by a health professional as those terms are defined in this section:

(i) An update of the individual's medical and family history.

(ii) An update of the list of current providers and suppliers that are regularly involved in providing medical care to the individual as that list was developed for the first annual wellness visit providing personalized prevention plan services.

(iii) Measurement of an individual's weight (or waist circumference), blood pressure and other routine measurements as deemed appropriate, based on the individual's medical and family history.

(iv) Detection of any cognitive impairment that the individual may have, as that term is defined in this section.

(v) An update to the following:

(A) The written screening schedule for the individual as that schedule is defined in paragraph (a) of this section for the first annual wellness visit providing personalized prevention plan services.

(B) The list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual as that list was developed at the first annual wellness visit providing personalized prevention plan services.

(vi) Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs as that advice and related services are defined in paragraph (a) of this section.

(vii) Any other element determined appropriate through the National Coverage Determination process.

(b) *Conditions for coverage of annual wellness visits providing personalized prevention plan services.* Medicare Part B pays for first and subsequent annual wellness visits providing personalized prevention plan services that are furnished to an eligible beneficiary, as described in this section, if they are furnished by a heath professional, as defined in this section.

(c) *Limitations on coverage of an annual wellness visit providing personalized prevention plan services.*

(1) Payment may not be made for either a first or a subsequent annual wellness visit providing personalized prevention plan services that is performed for an individual who is not an eligible beneficiary as described in this section.

(2) Payment may not be made for either a first or a subsequent annual wellness visit providing personalized prevention plan services that is performed for an individual who is an eligible beneficiary as described in this section and who has had either an initial preventive physical examination as specified in section 410.16 of this subpart or either a first or a subsequent annual wellness visit providing personalized prevention plan services performed within the past 12 months.

(d) *Effective date.* Coverage for an annual wellness visit providing personalized prevention plan services is effective for services furnished on or after January 1, 2011.

12. Section 410.32 is amended by adding paragraph (b)(2)(vii) to read as follows:

§ 410.32 Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests: Conditions.

* * * * *

(b) * * *

(2) * * *

(vii) Diagnostic tests performed by a certified nurse-midwife authorized to perform the tests under applicable State laws.

* * * * *

13. Section 410.78 is amended by revising the introductory text of paragraph (b) to read as follows:

§ 410.78 Telehealth services.

* * * * *

(b) *General rule.* Medicare Part B pays for office or other outpatient visits, subsequent hospital care services (with the limitation of one telehealth visit every 3 days), subsequent nursing facility care services (not including the Federally-mandated periodic visits under § 483.40(c) of this chapter and with the limitation of one telehealth visit every 30 days), professional consultations, psychiatric diagnostic interview examination, neurobehavioral status exam, individual psychotherapy, pharmacologic management, end-stage renal disease-related services included in the monthly capitation payment (except for one "hands on" visit per month to examine the access site), individual and group medical nutrition therapy services, individual and group kidney disease education services, individual and group diabetes self-management (DSMT) training services (except for one hour of in-person services to be furnished in the year following the initial DSMT service to ensure effective injection training), and individual and group health and behavior assessment and intervention services furnished by an interactive telecommunications system if the following conditions are met:

* * * * *

Subpart I—Payment for SMI Benefits

14. Section 410.150 is amended by adding paragraph (a)(20) to read as follows:

§ 410.150 To whom payment is made.

(a) * * *

(20) To a certified nurse-midwife for professional services furnished by the certified nurse-midwife in all settings and for services and supplies furnished incident to those services. Payment is made only if no facility or other provider charges or is paid any amount for the furnishing of the professional services of the certified nurse-midwife.

15. Section 410.152 is amended by revising paragraph (l) to read as follows:

§ 410.152 Amounts of payment.

* * * * *

(l) *Amount of payment: Preventive services.* Medicare Part B pays 100 percent of the Medicare payment amount established under the applicable payment methodology for the service setting for providers and suppliers for the following preventive services:

(1) Pneumococcal (as specified in paragraph (h) of this section), influenza, and hepatitis B vaccine and administration.

(2) Screening mammography.

(3) Screening pap tests and screening pelvic exam.

(4) Prostate cancer screening tests (excluding digital rectal examinations).

(5) Colorectal cancer screening tests (excluding barium enemas).

(6) Bone mass measurement.

(7) Medical nutrition therapy (MNT) services.

(8) Cardiovascular screening blood tests.

(9) Diabetes screening tests.

(10) Ultrasound screening for abdominal aortic aneurysm (AAA).

(11) Additional preventive services identified for coverage through the national coverage determination (NCD) process.

(12) Initial Preventive Physical Examination (IPPE).

(13) Personalized Prevention Plan Services (PPPS).

16. Section 410.160 is amended by—

A. Revising paragraph (b)(2).

B. Adding paragraphs (b)(10), (11), (12), and (13).

The revisions and additions read as follows:

§ 410.160 Part B annual deductible.

* * * * *

(b) * * *

(2) Pneumococcal, influenza, and hepatitis b vaccines and their administration.

* * * * *

(10) Bone mass measurement.

(11) Medical nutrition therapy (MNT) services.

(12) Personalized prevention plan services (PPPS).

(13) Additional preventive services identified for coverage through the national coverage determination (NCD) process.

* * * * *

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

17. The authority citation for part 411 continues to read as follows:

Authority: Secs. 1102, 1860D–1 through 1860D–42, 1871, and 1877 of the Social Security Act (42 U.S.C. 1302, 1395w–101 through 1395w–152, 1395hh, and 1395nn).

Subpart A—General Exclusions and Exclusion of Particular Services

18. Section 411.15 is amended by—

A. Republishing the introductory text.

B. Revising paragraph (a)(1).

C. Adding new paragraph (k)(16).

The revision and addition read as follows:

§ 411.15 Particular services excluded from coverage.

The following services are excluded from coverage.

(a) * * *

(1) Examinations performed for a purpose other than treatment or diagnosis of a specific illness, symptoms, complaint, or injury, except for screening mammography, colorectal cancer screening tests, screening pelvic exams, prostate cancer screening tests, glaucoma screening exams, ultrasound screening for abdominal aortic screening for abdominal aortic aneurysms (AAA), cardiovascular disease screening tests, diabetes screening tests, a screening electrocardiogram, initial preventive physical examinations that meet the criteria specified in paragraphs (k)(6) through (k)(15) of this section, additional preventive services that meet the criteria in § 410.64 of this chapter, or annual wellness visits providing personalized prevention plan services

* * * * *

(k) * * *

(16) In the case of an annual wellness visit providing a personalized prevention plan, subject to the conditions and limitations specified in § 410.15 of this chapter.

* * * * *

Subpart J—Financial Relationships Between Physicians and Entities Furnishing Designated Health Services

19. Section 411.355 is amended by adding paragraph (b)(7) to read as follows:

§ 411.355 General exceptions to the referral prohibition related to both ownership/investment and compensation.

* * * * *

(b) * * *

(7) *Disclosure requirement for certain imaging services.*

(i) With respect to magnetic resonance imaging, computed tomography, and positron emission tomography, the referring physician shall provide written notice to the patient at the time of the referral that the patient may receive the same services from a person other than one described in paragraph (b)(1) of this section. Except as set forth in paragraph (b)(7)(ii) of this section, the written notice shall include a list of at least 10 other suppliers (as defined in § 400.202 of this chapter) that provide the services for which the individual is being referred and which are located within a 25-mile radius of the referring physician's office location at the time of the referral. The notice should be written in a manner sufficient to be reasonably understood by all patients and should include for each supplier on the list, at a minimum, the supplier's name, address, telephone number, and distance from the referring physician's

office location. A record of the disclosure notification, signed by the patient, shall be maintained as a part of the patient's medical record.

(ii) If there are fewer than 10 other suppliers located within a 25-mile radius of the physician's office location at the time of the referral, the physician shall list all of the other suppliers of the imaging service that are present within a 25-mile radius of the referring physician's office location, including up to 10 suppliers. Provision of the written list of alternate suppliers will not be required if no other suppliers provide the services for which the individual is being referred within the 25-mile radius.

* * * * *

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES

20. The authority citation for part 413 continues to read as follows:

Authority: Secs. 1102, 1812(d), 1814(b), 1815, 1833(a), (i), and (n), 1861(v), 1871, 1881, 1883, and 1886 of the Social Security Act (42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww); and sec. 124 of Public Law 106–133 (113 Stat. 1501A–332).

Subpart E—Payments to Providers

21. Section 413.70 is amended by adding a sentence at the end of paragraph (b)(3)(ii)(B) to read as follows:

§ 413.70 Payment for services of a CAH.

* * * * *

(b) * * *

(3) * * *

(ii) * * *

(B) * * * Effective for primary care services furnished by primary care practitioners (as defined in § 414.80(a)) and major surgical procedures furnished by general surgeons in health professional shortage areas (as defined in § 414.2) furnished on or after January 1, 2011 and before January 1, 2016, incentive payments specified under § 414.80 and § 414.67(b), respectively, of this chapter shall not be included in determining payment made under this paragraph.

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

22. The authority citation for part 414 continues to read as follows:

Authority: Secs. 1102, 1871, and 1881(b)(l) of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr(b)(l)).

Subpart A—General Provisions

23. Section 414.2 is amended by adding the definitions of "Health Professional Shortage Area" and "Major surgical procedure" in alphabetical order to read as follows:

§ 414.2 Definitions.

* * * * *

Health Professional Shortage Area (HPSA) means an area designated under section 332(a)(1)(A) of the Public Health Service Act as identified by the Secretary prior to the beginning of such year.

Major surgical procedure means a surgical procedure for which a 10-day or 90-day global period is used for payment under the PFS and section 1848(b) of the Act.

* * * * *

24. Section 414.26 is amended by—

A. Redesignating paragraph (c) as paragraph (d).

B. Adding a new paragraph (c).

The addition reads as follows:

§ 414.26 Determining the GAF.

* * * * *

(c) *Adjusting the practice expense index to account for the Frontier State floor.* (1) *General criteria.* Effective on or after January 1, 2011, CMS will adjust the practice expense index for physicians' services furnished in qualifying States to recognize the practice expense index floor established for Frontier States. A qualifying State must meet the following criteria:

(i) At least 50 percent of counties located within the State have a population density less than 6 persons per square mile.

(ii) The State does not receive a non-labor related share adjustment determined by the Secretary to take into account the unique circumstances of hospitals located in Alaska and Hawaii.

(2) *Amount of adjustment.* The practice expense value applied for physicians' services furnished in a qualifying State will be not less than 1.00.

(3) *Process for determining adjustment.* (i) CMS will use the most recent Population Estimate data published by the U.S. Census Bureau to determine county definitions and population density. This analysis will be periodically revised, such as for updates to the decennial census data.

(ii) CMS will publish annually a listing of qualifying Frontier States receiving a practice expense index floor attributable to this provision.

* * * * *

Subpart B—Physicians and Other Practitioners

25. Section 414.54 is revised to read as follows:

§ 414.54 Payment for certified nurse-midwives' services.

(a) For services furnished after December 31, 1991, allowed amounts under the fee schedule established under section 1833(a)(1)(K) of the Act for the payment of certified nurse-midwife services may not exceed 65 percent of the physician fee schedule amount for the service.

(b) For certified nurse midwife services furnished on or after January 1, 2011, allowed amounts may not exceed 100 percent of the physician fee schedule amount for the services.

26. Section 414.65 is amended by revising the introductory text of paragraph (a)(1) to read as follows:

§ 414.65 Payment for telehealth services.

(a) * * *

(1) The Medicare payment amount for office or other outpatient visits, subsequent hospital care services (with the limitation of one telehealth subsequent hospital care service every 3 days), subsequent nursing facility care services (not including the Federally-mandated periodic visits under § 483.40(c) and with the limitation of one telehealth nursing facility care service every 30 days), professional consultations, psychiatric diagnostic interview examination, neurobehavioral status exam, individual psychotherapy, pharmacologic management, end-stage renal disease-related services included in the monthly capitation payment (except for one "hands on" visit per month to examine the access site), individual and group medical nutrition therapy services, individual and group kidney disease education services, individual and group diabetes self-management training (DSMT) services (except for 1 hour of in-person DSMT services to be furnished in the year following the initial DSMT service to ensure effective injection training), and individual and group health and behavior assessment and intervention furnished via an interactive telecommunications system is equal to the current fee schedule amount applicable for the service of the physician or practitioner.

* * * * *

27. Section 414.67 is revised to read as follows:

§ 414.67 Incentive payments for services furnished in Health Professional Shortage Areas.

(a) *Health Professional Shortage Area (HPSA) physician bonus program.* A HPSA physician incentive payment will be made subject to the following:

(1) HPSA bonuses are payable for services furnished by physicians as defined in section 1861(r) of the Act in areas designated as of December 31 of the prior year as geographic primary medical care HPSAs as defined in section 332(a)(1)(A) of the Public Health Service Act.

(2) HPSA bonuses are payable for services furnished by psychiatrists in areas designated as of December 31 of the prior year as geographic mental health HPSAs if the services are not already eligible for the bonus based on being in a geographic primary care HPSA.

(3) Physicians eligible for the HPSA physician bonus are entitled to a 10 percent incentive payment above the amount paid for their professional services under the physician fee schedule.

(4) Physicians furnishing services in areas that are designated as geographic HPSAs prior to the beginning of the year but not included on the published list of zip codes for which automated HPSA bonus payments are made should use the AQ modifier to receive the HPSA physician bonus payment.

(b) *HPSA surgical incentive payment program.* A HPSA surgical incentive payment will be made subject to the following:

(1) A major surgical procedure as defined in § 414.2 of this part is furnished by a general surgeon on or after January 1, 2011 and before January 1, 2016 in an area recognized for the HPSA physician bonus program under paragraph (a)(1) of this section.

(2) Payment will be made on a quarterly basis in an amount equal to 10 percent of the Part B payment amount for major surgical procedures furnished as described in paragraph (1), in addition to the amount the physician would otherwise be paid.

(3) Physicians furnishing services in areas that are designated as geographic HPSAs eligible for the HPSA physician bonus program under paragraph (a)(1) of this section prior to the beginning of the year but not included on the published list of zip codes for which automated HPSA surgical bonus payments are made should report a specified HCPCS code modifier to receive the HPSA surgical bonus payment.

(4) The payment described in paragraph (b)(2) of this section is made to the surgeon or, where the surgeon has reassigned his or her benefits to a critical access hospital (CAH) paid under the optional method, to the CAH based on an institutional claim.

28. Section 414.80 is added to subpart B to read as follows:

§ 414.80 Incentive payment for primary care services.

(a) *Definitions.* As defined in this section—

Eligible primary care practitioner means one of the following:

(i) A physician (as defined in section 1861(r)(1)) who meets all of the following criteria:

(A) Enrolled in Medicare with a primary specialty designation of 08-family practice, 11-internal medicine, 37-pediatrics, or 38-geriatrics.

(B) At least 60 percent of the physician's allowed charges during a reference period specified by the Secretary are for primary care services.

(ii) A nurse practitioner, clinical nurse specialist, or physician assistant (as defined in section 1861(aa)(5)) who meets all of the following criteria:

(A) Enrolled in Medicare with a primary specialty designation of 50-nurse practitioner, 89-certified clinical nurse, or 97-physician assistant.

(B) At least 60 percent of the practitioner's allowed charges during a reference period specified by the Secretary are for primary care services.

Primary care services means new and established patient office or other outpatient evaluation and management (E/M) visits; initial, subsequent, discharge, and other nursing facility E/M services; new and established patient domiciliary, rest home (e.g., boarding home), or custodial care E/M services; domiciliary, rest home (e.g., assisted living facility), or home care plan oversight services; and new and established patient home E/M visits.

(b) *Payment.*

(1) For primary care services furnished by an eligible primary care practitioner on or after January 1, 2011 and before January 1, 2016, payment is made on a quarterly basis in an amount equal to 10 percent of the payment amount for the primary care services under Part B, in addition to the amount the primary care practitioner would otherwise be paid for the primary care services under Part B.

(2) The payment described in paragraph (b)(1) of this section is made to the eligible primary care practitioner or, where the physician has reassigned his or her benefits to a critical access hospital (CAH) paid under the optional method, to the CAH based on an institutional claim.

29. A new § 414.90 is added to subpart B to read as follows:

§ 414.90 Physician quality reporting initiative (PQRI).

(a) *Basis and Scope.* This part implements the following provisions of the Act:

(1) 1848(a)—Payment Based on Fee Schedule.

(2) 1848(k)—Quality Reporting System.

(3) 1848(m)—Incentive Payments for Quality Reporting.

(b) *Definitions.* As used in this section, unless otherwise indicated—

Covered professional services means services for which payment is made under, or is based on, the Medicare physician fee schedule as provided under section 1848(k)(3) of the Act and which are furnished by an eligible professional.

Eligible professional (EP) means any of the following:

(i) A physician.

(ii) A practitioner described in section 1842(b)(18)(C) of the Act.

(iii) A physical or occupational therapist or a qualified speech-language pathologist.

(iv) A qualified audiologist (as defined in section 1861(ll)(3)(B) of the Act).

Group practice means a single Taxpayer Identification Number (TIN) with 2 or more eligible professionals, as identified by their individual National Provider Identifier (NPI), who have reassigned their Medicare billing rights to the TIN. This term also includes group practices participating in Medicare demonstration projects approved by the Secretary.

Maintenance of certification program means a continuous assessment program, such as qualified American Board of Medical Specialties Maintenance of Certification Program or an equivalent program (as determined by the Secretary), that advances quality and the lifelong learning and self-assessment of board certified specialty physicians by focusing on the competencies of patient care, medical knowledge, practice-based learning, interpersonal and communication skills and professionalism. Such a program must include the following:

(i) The program requires the physician to maintain a valid unrestricted license in the United States.

(ii) The program requires a physician to participate in educational and self-assessment programs that require an assessment of what was learned.

(iii) The program requires a physician to demonstrate, through a formalized secure examination, that the physician

has the fundamental diagnostic skills, medical knowledge, and clinical judgment to provide quality care in their respective specialty.

(iv) The program requires successful completion of a qualified Maintenance of Certification Program practice assessment.

Maintenance of certification program practice assessment means an assessment of a physician's practice that—

(i) Includes an initial assessment of an eligible professional's practice that is designed to demonstrate the physician's use of evidence-based medicine;

(ii) Includes a survey of patient experience with care; and

(iii) Requires a physician to implement a quality improvement intervention to address a practice weakness identified in the initial assessment under paragraph (i) and then to remeasure to assess performance improvement after such intervention.

Measures group means a subset of four or more PQRI measures that have a particular clinical condition or focus in common. The denominator definition and coding of the measures group identifies the condition or focus that is shared across the measures within a particular measures group.

Performance rate means the percentage of a defined population who receives a particular process of care or achieve a particular outcome for a particular quality measure.

Physician quality reporting initiative (PQRI) means the physician reporting system under section 1848(k) of the Act for the reporting by eligible professionals of data on quality measures and the incentive payment associated with this physician reporting system.

Qualified electronic health record (EHR) means an EHR vendor's product and version that, with respect to a particular program year, has self-nominated and successfully completed a vetting process (as specified by CMS) to demonstrate the product's compliance with the PQRI qualification requirements specified by CMS for a program year.

Qualified registry means a medical registry or a Maintenance of Certification Program operated by a specialty body of the American Board of Medical Specialties that, with respect to a particular program year, has self-nominated and successfully completed a vetting process (as specified by CMS) to demonstrate its compliance with the PQRI qualification requirements specified by CMS for that program year. The registry may act as a data submission vendor, which has the requisite legal authority to provide PQRI data (as specified by CMS) on behalf of an eligible professional to CMS.

Quality reporting period means with respect to a year, a period specified by the Secretary.

Reporting rate means the percentage of patients that the eligible professional indicated a quality action was or was not performed divided by the total number of patients in the denominator of the measure.

(c) *Incentive payments.* With respect to covered professional services furnished during a reporting period by an eligible professional, if—

(1) There are any quality measures that have been established under the PQRI that are applicable to any such services furnished by such professional (or in the case of a group practice under paragraph (h) of this section, such group practice) for such reporting period; and

(2) The eligible professional (or in the case of a group practice under paragraph (h) of this section, the group practice) satisfactorily submits (as determined under paragraph (g) of this section for eligible professionals and paragraph (h) of this section for group practices) to the Secretary data on such quality measures in accordance with the PQRI for such reporting period, in addition to the amount otherwise paid under section 1848 of the Act, there also shall be paid to the eligible professional (or to an employer or facility in the cases described in section 1842(b)(6)(A) of the Act or, in the case of a group practice) under paragraph (h) of this section, to the group practice, from the Federal Supplementary Medical Insurance Trust Fund established under section 1841 an amount equal to the applicable quality percent (as specified in paragraph (c)(3) of this section) of the eligible professional's (or, in the case of a group practice under paragraph (h) of this section, the group practice's) total estimated allowed charges for all covered professional services furnished by the eligible professional (or, in the case of a group practice under paragraph (h) of this section, by the group practice) during the applicable reporting period. For purposes of this paragraph,

(i) The eligible professional's (or, in the case of a group practice under paragraph (h) of this section, the group practice's) total estimated allowed charges for covered professional services furnished during a reporting period are determined based on claims processed in the National Claims History (NCH) no later than 2 months after the end of the applicable reporting period;

(ii) In the case of an eligible professional who furnishes covered professional services in more than one practice, incentive payments are separately determined for each practice based on claims submitted for the eligible professional for each practice;

(iii) Incentive payments earned by an eligible professional (or in the case of a group practice under paragraph (h) of this section, by a group practice) for a particular program year will be paid as a single consolidated payment to the TIN holder of record.

(3) *Applicable quality percent.* The applicable quality percent is as follows:

(i) For 2011, 1.0 percent; and

(ii) For 2012, 2013, and 2014, 0.5 percent;

(d) *Additional incentive payment.* (1) Through 2014, if an eligible professional meets the requirements described in paragraph (d)(2) of this section, the applicable percent for such year, as described in paragraphs (c)(3)(i) and (ii) of this section, must be increased by 0.5 percentage points.

(2) In order to qualify for the additional incentive payment described in paragraph (d)(1) of this section, an eligible professional shall meet the following requirements:

(i) The eligible professional must—

(A) Satisfactorily submit data on quality measures for purposes of this section for a year; and

(B) Have such data submitted on their behalf through a Maintenance of Certification program (as defined in paragraph (b) of this section) that meets:

(*1*) The criteria for a registry (as specified by CMS)); or

(*2*) An alternative form and manner determined appropriate by the Secretary.

(ii) The eligible professional, more frequently than is required to qualify for or maintain board certification status—

(A) Participates in such a Maintenance of Certification Program for a year; and

(B) Sucessfully completes a qualified Maintenance of Certification Program practice assessment (as defined in paragraph (b) of this section) for such year.

(iii) A Maintenance of Certification program submits to the Secretary, on behalf of the eligible professional, information —

(A) In a form and manner specified by the Secretary, that the eligible professional has successfully met the requirements of paragraph (d)(2)(ii) of this section which may be in the form of a structural measure);

(B) If requested by the Secretary, on the survey of patient experience with care (as described in paragraph (b) of this section); and

(C) As the Secretary may require, on the methods, measures, and data used

under the Maintenance of Certification Program and the qualified Maintenance of Certification Program practice assessment.

(e) *Incentive payment adjustment.* (1) With respect to covered professional services furnished by an eligible professional during 2015 or any subsequent year, if the eligible professional does not satisfactorily submit data on quality measures for covered professional services for the quality reporting period for the year (as determined under paragraph (g) for eligible professionals and paragraph (h) of this section for group practices), the fee schedule amount for such services furnished by such professional during the year (including the fee schedule amount for purposes of determining a payment based on such amount) must be equal to the applicable percent of the fee schedule amount that would otherwise apply to such services under section 1848(m) of the Act.

(2) *Applicable percent.* For purposes of paragraph (1) of this section, the term 'applicable percent' means—

(i) For 2015, 98.5 percent; and

(ii) For 2016 and each subsequent year, 98 percent.

(f) *Use of consensus-based quality measures.* For each program year, CMS will publish the final list of measures and the final detailed measure specifications for all quality measures selected for inclusion in the PQRI quality measure set for a given program year on a CMS Web site by no later than December 31 of the prior year.

(1) Subject to paragraph (f)(2) of this section, for purposes of reporting data on quality measures for covered professional services furnished during a year, subject to paragraph (g) of this section, the quality measures specified under this paragraph must be such measures selected by the Secretary from measures that have been endorsed by the entity with a contract with the Secretary under section 1890(a) of the Act.

(2) *Exception.* In the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary, such as the AQA alliance.

(3) *Opportunity to provide input on measures.* For each quality measure adopted by the Secretary under this paragraph, the Secretary shall ensure that eligible professionals have the opportunity to provide input during the development, endorsement, or selection of quality measures applicable to services they furnish.

(g) *Requirements for individual eligible professionals to qualify to receive an incentive payment.* In order to qualify to earn a PQRI incentive payment for a particular program year, an individual eligible professional, as identified by a unique TIN/NPI combination, must meet the criteria for satisfactory reporting specified by CMS for such year by reporting on either individual PQRI quality measures or PQRI measures groups identified by CMS during a reporting period specified in paragraph (g)(1) of this section and using one of the reporting mechanisms specified in paragraph (g)(2) of this section. Although an eligible professional may attempt to qualify for the PQRI incentive payment by reporting on both individual PQRI quality measures and measures groups, using more than one reporting mechanism (as specified in paragraph (g)(2) of this section), or reporting for more than one reporting period, he or she will receive only one PQRI incentive payment per TIN/NPI combination for a program year.

(1) *Reporting periods.* For purposes of this paragraph, the reporting period with respect to a program year are—

(i) The 12-month period from January 1 through December 31 of each program year; or

(ii) The 6-month period from July 1 through December 31 of each program year.

(iii) *Exceptions.* The 6-month reporting period is not available for EHR-based reporting of individual PQRI quality measures or for reporting by group practices under the process described in paragraph (h) of this section.

(2) *Reporting mechanisms.* For each program year, an eligible professional who wishes to participate in the PQRI must report information on the individual PQRI quality measures or PQRI measures groups identified by CMS in the following manner:

(i) Reporting the individual PQRI quality measures or PQRI measures groups to CMS, by no later than 2 months after the end of the applicable reporting period, on the eligible professional's Medicare Part B claims for covered professional services furnished during the applicable reporting period;

(ii) Reporting the individual PQRI quality measures or PQRI measures groups to a qualified registry (as specified in paragraph (b) of this section) in the form and manner and by the deadline specified by the qualified registry selected by the eligible professional. The selected registry will submit information, as required by CMS, for covered professional services furnished by the eligible professional during the applicable reporting period to CMS on the eligible professional's behalf; or

(iii) Reporting the individual PQRI quality measures to CMS by extracting clinical data using a secure data submission method, as required by CMS, from a qualified EHR product (as defined in paragraph (b) of this section) by the deadline specified by CMS for covered professional services furnished by the eligible professional during the applicable reporting period. Prior to actual data submission for a given program year and by a date specified by CMS, the eligible professional must submit a test file containing real or dummy clinical quality data extracted from the qualified EHR product selected by the eligible professional using a secure data submission method, as required by CMS.

(h) *Requirements for group practices to qualify to receive an incentive payment.* A group practice (as defined in paragraph (b) of this section) will be treated as satisfactorily submitting data on quality measures under PQRI for covered professional services for a reporting period (or for purposes of paragraph (e) of this section, for a quality reporting period for the year), if, in lieu of reporting PQRI measures, the group practice—

(1) Meets the participation requirements specified by CMS for the PQRI group practice reporting option (GPRO);

(2) Is selected by CMS to participate in the PQRI GPRO;

(3) Reports measures specified by CMS in the form and manner, and at a time specified by CMS; and

(4) Meets the criteria for satisfactory reporting specified by CMS.

(5) *No double payments.* Payments to a group practice under this paragraph must be in lieu of the payments that would otherwise be made under the PQRI to eligible professionals in the group practice for meeting the criteria for satisfactory reporting for individual eligible professionals.

(i) If an eligible professional, as identified by an individual NPI, has reassigned his or her Medicare billing rights to a TIN selected to participate in the PQRI GPRO for a program year, then for that program year the eligible professional must participate in the PQRI via the GPRO. For any program year in which the TIN is selected to

participate in the PQRI GPRO, the eligible professional cannot individually qualify for a PQRI incentive payment by meeting the requirements specified in paragraph (g) of this section.

(ii) If, for the program year, the eligible professional participates in the PQRI under another TIN that is not selected to participate in the PQRI GPRO for that program year, then the eligible professional may individually qualify for a PQRI incentive by meeting the requirements specified in paragraph (g) of this section under that TIN.

(i) *Limitations on review.* (1) Except as specified in paragraph (h)(2) of this section, there is no administrative or judicial review under section 1869, section 1879, or otherwise of—

(i) The determination of measures applicable to services furnished by eligible professionals under PQRI;

(ii) The determination of the payment limitation; and

(iii) The determination of any PQRI incentive payment and the PQRI payment adjustment.

(j) *Informal review.* Except as specified in paragraph (i) of this section eligible professionals (or in the case of reporting under paragraph (h) of this section, group practices) may seek a review of the determination that an eligible professional (or in the case of reporting under paragraph (h) of this section, group practices) did not satisfactorily submit data on quality measures under the PQRI.

(1) To request an informal review, an eligible professional (or in the case of reporting under paragraph (h) of this section, group practices) must submit a written request to CMS within 90 days of the release of the feedback reports. The request must summarize the concern(s) and reasons for requesting an informal review and may also include information to assist in the review.

(2) CMS will provide a written response within 60 days of the receipt of the original request. All decisions based on the informal review will be final. There will be no further review or appeal.

(k) *Public reporting of an eligible professional's or group practice's PQRI data.* For each program year, CMS will post on a public Web site, in an easily understandable format, a list of the names of eligible professionals (or in the case of reporting under paragraph (h), group practices) who satisfactorily submitted PQRI quality measures.

30. A new § 414.92 is added to subpart B to read as follows:

§ 414.92 Electronic prescribing incentive program.

(a) *Basis and scope.* This part implements the following provisions of the Act:

(1) Section 1848(a)—Payment Based on Fee Schedule.

(2) Section 1848(m)—Incentive Payments for Quality Reporting.

(b) *Definitions.* As used in the part, unless otherwise indicated—

Covered professional services means services for which payment is made under, or is based on, the Medicare physician fee schedule as provided under section 1848(k)(3) of the Act and which are furnished by an eligible professional.

Electronic prescribing (eRx) incentive program means the incentive payment program established under section 1848(m) of the Act for the adoption and use of electronic prescribing technology by eligible professionals.

Eligible professional means any of the following healthcare professionals who have prescribing authority:

(i) A physician.

(ii) A practitioner described in section 1842(b)(18)(C) of the Act.

(iii) A physical or occupational therapist or a qualified speech-language pathologist.

(iv) A qualified audiologist (as defined in section 1861(ll)(3)(B) of the Act).

Group practice means a group practice, as defined at § 414.90(b), that—

(i) Is or is deemed to be participating in the Physician Quality Reporting Initiative (PQRI) group practice reporting option (GPRO) under § 414.90; and

(ii) Has indicated its desire to participate in the eRx GPRO.

Qualified electronic health record (EHR) means an EHR product and version that, with respect to a particular program year, is designated by CMS as a qualified EHR for the purpose of the PQRI (as described in § 414.90) and the product's vendor has indicated a desire to have the product qualified for purposes of the product's users to submit information related to the eRx measure.

Qualified registry means a medical registry or a Maintenance of Certification Program operated by a specialty body of the American Board of Medical Specialties that, with respect to a particular program year, is designated by CMS as a qualified registry for the purpose of the PQRI (as described in § 414.90) and that has indicated its desire to be qualified to submit the eRx measure on behalf of eligible professionals for the purposes of the eRx Incentive Program.

(c) *Incentive payments.* (1) Subject to paragraph (c)(3) of this section, with respect to covered professional services furnished during a reporting period by an eligible professional, if the eligible professional is a successful electronic prescriber for such reporting period, in addition to the amount otherwise paid under section 1848 of the Act, there also shall be paid to the eligible professional (or to an employer or facility in the cases described in paragraph (A) of section 1842(b)(6)) or, in the case of a group practice under paragraph (e) of this section, to the group practice, from the Federal Supplementary Medical Insurance Trust Fund established under section 1841 of the Act an amount equal to the applicable eRx percent (as specified in paragraph (c)(1)(ii) of this section) of the eligible professional's (or, in the case of a group practice under paragraph (e) of this section, the group practice's) total estimated allowed charges for all covered professional services furnished by the eligible professional (or, in the case of a group practice under paragraph (e) of this section, by the group practice) during the applicable reporting period.

(i) For purposes of this paragraph,

(A) The eligible professional's (or, in the case of a group practice under paragraph (e) of this section, the group practice's) total estimated allowed charges for covered professional services furnished during a reporting period are determined based on claims processed in the National Claims History (NCH) no later than 2 months after the end of the applicable reporting period;

(B) In the case of an eligible professional who furnishes covered professional services in more than one practice, incentive payments are separately determined for each practice based on claims submitted for the eligible professional for each practice;

(C) Incentive payments earned by an eligible professional (or in the case of a group practice under paragraph (e) of this section, by a group practice) for a particular program year will be paid as a single consolidated payment to the TIN holder of record.

(ii) *Applicable eRx percent.* The applicable eRx percent is as follows:

(A) For the 2011 and 2012 program years, 1.0 percent; and

(B) For the 2013 program year, 0.5 percent.

(iii) *Limitation with respect to electronic health record (EHR) incentive payments.* The provisions of this paragraph do not apply to an eligible professional (or, in the case of a group practice under paragraph (e) of this section, a group practice) if, for the EHR

reporting period the eligible professional (or group practice) receives an incentive payment under section 1848(o)(1)(A) of the Act with respect to a certified EHR technology (as defined in section 1848(o)(4) of the Act) that has the capability of eRx.

(2) *Incentive payment adjustment.* Subject to paragraph (c)(1)(ii) and paragraph (c)(3) of this section, with respect to covered professional services furnished by an eligible professional during 2012, 2013, or 2014, if the eligible professional (or in the case of a group practice under paragraph (e) of this section, the group practice) is not a successful electronic prescriber (as specified by CMS for purposes of the payment adjustment) for an applicable reporting period (as specified by CMS) the fee schedule amount for such services furnished by such professional (or group practice) during the program year (including the fee schedule amount for purposes of determining a payment based on such amount) is equal to the applicable percent (as specified in paragraph (c)(2)(i) of this section) of the fee schedule amount that would otherwise apply to such services under section 1848 of the Act.

(i) *Applicable percent.* The applicable percent is as follows:

(A) For 2012, 99 percent;

(B) For 2013, 98.5 percent; and

(C) For 2014, 98 percent.

(ii) *Significant hardship exception.* An eligible professional (or in the case of a group practice under paragraph (e) of this section, a group practice) may be exempt from the application of the payment adjustment under this paragraph if, subject to annual renewal, CMS determines that compliance with the requirement for being a successful electronic prescriber (as specified by CMS for purposes of the payment adjustment) would result in a significant hardship. For purposes of this paragraph, any of the following circumstances constitute a "significant hardship:"

(A) An eligible professional (or group practice) who practices in a rural area with limited high speed Internet access.

(B) An eligible professional (or group practice) who practices in an area with limited available pharmacies for electronic prescribing.

(C) Other circumstances identified by CMS.

(3) *Limitation with respect to electronic prescribing quality measures.* The provisions of paragraphs (c)(1) and (c)(2) of this section do not apply to an eligible professional (or, in the case of a group practice under paragraph (e) of this section, a group practice) if for the reporting period the allowed charges under section 1848 of the Act for all covered professional services furnished by the eligible professional (or group, as applicable) for the codes to which the electronic prescribing measure (as identified by CMS) applies are less than 10 percent of the total of the allowed charges under section 1848 of the Act for all such covered professional services furnished by the eligible professional (or the group practice, as applicable).

(d) *Requirements for individual eligible professionals to qualify to receive an incentive payment.* In order to be considered a successful electronic prescriber and qualify to earn an eRx an incentive payment (subject to paragraph (c)(3) of this section), an individual eligible professional, as identified by a unique TIN/NPI combination, must meet the criteria for successful electronic prescriber specified by CMS during the reporting period specified in paragraph (d)(1) of this section and using one of the reporting mechanisms specified in paragraph (d)(2) of this section. Although an eligible professional may attempt to qualify for the eRx incentive payment using more than one reporting mechanism (as specified in paragraph (d)(2) of this section), he or she will receive only one eRx incentive payment per TIN/NPI combination for a program year.

(1) *Reporting period.* For purposes of this paragraph, the reporting period with respect to a program year is the entire calendar year.

(2) *Reporting mechanisms.* An eligible professional who wishes to participate in the eRx Incentive Program must report information on the eRx measure identified by CMS to—

(i) CMS, by no later than 2 months after the end of the applicable reporting period, on the eligible professional's Medicare Part B claims for covered professional services furnished by the eligible professional during the reporting period specified in paragraph (d)(1) of this section;

(ii) A qualified registry (as defined in paragraph (b)) in the form and manner and by the deadline specified by the qualified registry selected by the eligible professional. The selected registry will submit information, as required by CMS, for covered professional services furnished by the eligible professional during the reporting period specified in paragraph (d)(1) of this section to CMS on the eligible professional's behalf; or

(iii) CMS by extracting clinical data using a secure data submission method, as required by CMS, from a qualified EHR product (as defined in paragraph (b) of this section) by the deadline specified by CMS for covered professional services furnished by the eligible professional during the reporting period specified in paragraph (d)(1) of this section. Prior to actual data submission for a given program year and by a date specified by CMS, the eligible professional must submit a test file containing real or dummy clinical quality data extracted from the qualified EHR product selected by the eligible professional using a secure data submission method, as required by CMS.

(e) *Requirements for group practices to qualify to receive an incentive payment.*

(1) A group practice (as defined in paragraph (b) of this section) will be treated as a successful electronic prescriber for covered professional services for a reporting period if the group practice meets the criteria for successful electronic prescriber specified by CMS in the form and manner and at the time specified by CMS.

(2) *No double payments.* Payments to a group practice under this paragraph must be in lieu of the payments that would otherwise be made under the eRx Incentive Program to eligible professionals in the group practice for being a successful electronic prescriber.

(i) If an eligible professional, as identified by an individual NPI, has reassigned his or her Medicare billing rights to a TIN selected to participate in the eRx GPRO for a program year, then for that program year the eligible professional must participate in the eRx Incentive Program via the GPRO. For any program year in which the TIN is selected to participate in the eRx Incentive Program GPRO, the eligible professional cannot individually qualify for an eRx incentive payment by meeting the requirements specified in paragraph (d) of this section.

(ii) If, for the program year, the eligible professional participates in the eRx Incentive Program under another TIN that is not selected to participate in the eRx Incentive Program GPRO for that program year, then the eligible professional may individually qualify for an eRx incentive by meeting the requirements specified in paragraph (d) of this section under that TIN.

(f) *Public reporting of an eligible professional's or group practice's erx incentive program data.* For each program year, CMS will post on a public Web site, in an easily understandable format, a list of the names of eligible professionals (or in the case of reporting under paragraph (e) of this section, group practices) who are successful electronic prescribers.

Subpart D—Payment for Durable Medical Equipment and Prosthetic and Orthotic Devices

31. Section 414.202 is amended by adding a definition of "complex rehabilitative power-driven wheelchair" in alphabetical order to read as follows:

§ 414.202 Definitions.

* * * * *

Complex rehabilitative power-driven wheelchair means a power-driven wheelchair that is classified as—

(1) Group 2 power wheelchair with power options that can accommodate rehabilitative features (for example, tilt in space); or

(2) Group 3 power wheelchair.

* * * * *

32. Section 414.226 is amended by revising paragraph (g)(1) to read as follows:

§ 414.226 Oxygen and oxygen equipment.

* * * * *

(g) * * *

(1) The supplier that furnishes oxygen equipment for the first month during which payment is made under this section must continue to furnish the equipment until medical necessity ends, or the 36-month period of continuous use ends, whichever is earlier, unless—

(i) The item becomes subject to a competitive acquisition program implemented in accordance with section 1847(a) of the Act;

(ii) Before the 18th month of continuous use, the beneficiary relocates to an area that is outside the normal service area of the supplier that initially furnished the equipment;

(iii) The beneficiary elects to obtain oxygen equipment from a different supplier prior to the expiration of the 36-month rental period; or

(iv) CMS or the carrier determines that an exception should apply in an individual case based on the circumstances.

* * * * *

33. Section 414.229 is amended by—

A. Revising paragraphs (a)(3), (d)(1), and (h).

B. Adding paragraphs (a)(4), (a)(5), and (b)(3).

The revisions and additions read as follows:

§ 414.229 Other durable medical equipment-capped rental items.

(a) * * *

(3) For power-driven wheelchairs furnished on or after January 1, 2006 through December 31, 2010, payment is made in accordance with the rules set forth in paragraphs (f) or (h) of this section.

(4) For power-driven wheelchairs that are not classified as complex rehabilitative power-driven wheelchairs, furnished on or after January 1, 2011, payment is made in accordance with the rules set forth in paragraph (f) of this section.

(5) For power-driven wheelchairs classified as complex rehabilitative power-driven wheelchairs, furnished on or after January 1, 2011, payment is made in accordance with the rules set forth in paragraphs (f) or (h) of this section.

(b) * * *

(3) For power-driven wheelchairs furnished on or after January 1, 2011, the monthly fee schedule amount for rental equipment equals 15 percent of the purchase price recognized as determined under paragraph (c) of this section for each of the first 3 months and 6 percent of the purchase price for each of the remaining months.

* * * * *

(d) * * *

(1) Suppliers must offer beneficiaries the option of purchasing power-driven wheelchairs at the time the supplier first furnishes the item. On or after January 1, 2011, this option is available only for complex rehabilitative power-driven wheelchairs. Payment must be on a lump-sum fee schedule purchase basis if the beneficiary chooses the purchase option. The purchase fee is the amount established in paragraph (c) of this section.

* * * * *

(h) *Purchase of power-driven wheelchairs furnished on or after January 1, 2006.*

(1) Suppliers must offer beneficiaries the option to purchase power-driven wheelchairs at the time the equipment is initially furnished.

(2) Payment is made on a lump-sum purchase basis if the beneficiary chooses this option.

(3) On or after January 1, 2011, this option is available only for complex rehabilitative power-driven wheelchairs.

Subpart F—Competitive Bidding for Certain Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS)

34. Section 414.402 is amended by adding the definitions of "Affected party," "Breach of contract," "Corrective Action Plan," "Hearing Officer," "Mail order item," "National mail order competitive bidding program," "Nonmail order item" and "Parties to the hearing" in alphabetical order to read as follows:

§ 414.402 Definitions.

Affected party means a contract supplier that has been notified that their DMEPOS CBP contract will be terminated for a breach of contract.

* * * * *

Breach of contract means any deviation from contract requirements, including a failure to comply with a governmental agency or licensing organization requirements, constitutes a breach of contract.

* * * * *

Corrective action plan (CAP) means a contract supplier's written document with supporting information that describes the actions the contract supplier will take within a specified timeframe to remedy a breach of contract.

* * * * *

Hearing Officer (HO) means an individual, who was not involved with the CBIC recommendation to terminate a DMEPOS Competitive Bidding Program contract, who is designated by CMS to review and make an unbiased and independent determination following the Competitive Bidding Implementation Contractor's (CBIC's) recommendation to terminate a DMEPOS Competitive Bidding Program contract.

* * * * *

Mail order item means any item (for example, diabetic testing supplies) shipped or delivered to the beneficiary's home, regardless of the method of delivery.

* * * * *

National mail order competitive bidding program means a program and competition resulting in the award of contracts to suppliers for furnishing mail order items throughout the nation.

* * * * *

Nonmail order item means any item (for example, diabetic testing supplies) that a beneficiary or caregiver picks up in person at a local pharmacy or supplier storefront.

Parties to the hearing means the DMEPOS contract supplier and CMS.

* * * * *

35. Section 414.404 is amended by revising paragraph (b)(1)(i) to read as follows:

§ 414.404 Scope and applicability.

* * * * *

(b) * * *

(1) * * *

(i) The items furnished are limited to crutches, canes, walkers, folding manual wheelchairs, blood glucose monitors, and infusion pumps that are DME, and,

in addition, off-the-shelf (OTS) orthotics.

* * * * *

36. Section 414.408 is amended by-–

A. Revising paragraph (f)(1).

B. Redesignating paragraphs (h)(2) through (h)(7) as paragraphs (h)(3) through (h)(8) respectively.

C. Adding new paragraph (h)(2).

D. In newly designated paragraphs (h)(3)(i) and (ii), remove the phrase "(h)(2)" and add in its place the phrase "(h)(3)."

The revision and addition reads as follows:

§ 414.408 Payment rules.

* * * * *

(f) * * *

(1) The single payment amounts for new purchased durable medical equipment, including power wheelchairs that are purchased when the equipment is initially furnished, and enteral nutrition equipment are calculated based on the bids submitted and accepted for these items. For contracts entered into beginning on or after January 1, 2011, payment on a lump sum purchase basis is only available for power wheelchairs classified as complex rehabilitative power wheelchairs.

* * * * *

(h) * * *

(2) For contracts entered into beginning on or after January 1, 2011, the monthly fee schedule amount for rental of power wheelchairs equals 15 percent of the single payment amounts calculated for new durable medical equipment under paragraph (f)(1) of this section for each of the first 3 months, and 6 percent of the single payment amounts calculated for these items for each of the remaining months 4 through 13.

* * * * *

37. Section 414.410 is amended as follows:

A. Revising paragraphs (a)(2) and (a)(3).

B. Adding a new paragraph (a)(4).

The revisions and addition read as follows:

§ 414.410 Phase-in implementation of competitive bidding programs.

(a) * * *

(2) In CY 2011, in an additional 91 MSAs (the additional 70 MSAs selected by CMS as of June 1, 2008, and the next 21 largest MSAs by total population based on 2009 population estimates, and not already phased in as of June 1, 2008). CMS may subdivide any of the 91 MSAs with a population of greater than 8,000,000 into separate CBAs, thereby resulting in more than 91 CBAs.

(3) After CY 2011, additional CBAs (or, in the case of national mail order for items and services, after CY 2010).

(4) For competitions (other than for national mail order items and services) after CY 2011 and prior to CY 2015, the following areas are excluded:

(i) Rural areas.

(ii) MSAs not selected under paragraphs (a)(1) or (a)(2) of this section with a population of less than 250,000.

(iii) An area with low population density within an MSA not selected under paragraphs (a)(1) or (a)(2) of this section.

* * * * *

38. Section 414.411 is added to read as follows:

§ 414.411 Special rule in case of competitions for diabetic testing strips conducted on or after January 1, 2011.

(a) *National mail order competitions.* A supplier must demonstrate that their bid submitted as part of a national mail order competition for diabetic testing strips covers the furnishing of a sufficient number of different types of diabetic testing strip products that, in the aggregate, and taking into account volume for the different products, includes at least 50 percent of all the different types of products on the market. A type of diabetic testing strip means a specific brand and model of testing strips.

(b) *Other competitions.* CMS may apply this special rule to non-mail order or local competitions for diabetic testing strips.

39. Section 414.422 is amended by adding paragraph (e)(3) to read as follows:

§ 414.422 Term of contracts.

* * * * *

(e) * * *

(3) Contract suppliers for diabetic testing supplies must furnish the brand of diabetic testing supplies that works with the home blood glucose monitor selected by the beneficiary. The contract supplier is prohibited from influencing or incentivizing the beneficiary by persuading, pressuring, or advising them to switch from their current brand or for new beneficiaries from their preferred brand of glucose monitor and testing supplies. The contract supplier may not furnish information about alternative brands to the beneficiary unless the beneficiary requests such information.

* * * * *

40. Section 414.423 is added to read as follows:

§ 414.423 Appeals process for termination of competitive bidding contract.

This section implements an appeals process for suppliers that CMS has determined are in breach of their Medicare DMEPOS Competitive Bidding Program contracts and where CMS has taken action to terminate the supplier's contract. Except as specified in this regulation termination decisions made under this section are final and binding.

(a) *Terminations for breach of contract.* CMS may terminate a supplier's DMEPOS Competitive Bidding Program contract when it determines that the supplier has violated any of the terms of its contract.

(b) *Notice of termination*—(1) *CMS notification.* If CMS determines a supplier to be in breach of its contract either in part or in whole, it will notify the Medicare DMEPOS supplier of the termination by certified mail.

(2) *Content of the notice.* The CMS notice sent by the CBIC will include the following:

(i) The reasons for the termination.

(ii) The right to request a hearing by a CBIC Hearing Officer, and depending on the nature of the breach, the supplier may also be allowed to submit a CAP in lieu of requesting a hearing by a CBIC Hearing Officer, as specified in paragraph (c)(1)(i) of this section.

(iii) The address to which the written request for a hearing must be mailed.

(iv) The address to which the CAP must be mailed, if applicable.

(v) Penalties that will accompany the termination, such as not being eligible to bid in future rounds of competitive bidding.

(vi) The effective date of termination is 45 days from the date of the notification letter unless a timely hearing request has been filed or a Corrective Action Plan (CAP) has been submitted within 30 days of the date on the notification letter.

(c) *Corrective Action Plan.*

(1) *Option for Corrective Action Plan (CAP).*

(i) CMS has the option to allow a DMEPOS supplier to provide a written Corrective Action Plan (CAP) to remedy the deficiencies identified in the notice, when CMS determines that the delay in the termination date caused by allowing a CAP will not cause harm to beneficiaries, for example, we would not allow a CAP if the supplier has been excluded, debarred, or convicted of a healthcare related crime.

(ii) If a supplier chooses not to submit a CAP or if CMS determines that a supplier's CAP is insufficient, the supplier may request a hearing on the termination.

(2) *Submission of a CAP.*

(i) A Corrective Action Plan must be submitted within 30 calendar days from the date on the notification letter. If the supplier decides not to submit a Corrective Action Plan the supplier may within 30 days of the date on the termination letter may request a hearing by a CBIC hearing officer.

(ii) Suppliers will only have the opportunity to submit a CAP when they are first notified that they have been determined to be in breach of contract. If the CAP is not acceptable or properly implemented, suppliers will receive a termination notice.

(d) *The purpose of the Corrective Action Plan.*

(1) For the supplier to eliminate all of the deficiencies that were identified in the CBIC notice to terminate its contract to avoid contract termination.

(2) To identify the timeframes by which the supplier will implement each of the components of the CAP.

(e) *Review of the CAP.*

(1) The CBIC will review the CAP and submit a recommendation to CMS concerning whether the CAP includes the steps necessary to remedy the contract deficiencies as identified in the notice.

(2) If CMS accepts the CAP, including supplier's designated timeframe for its completion; the supplier must provide a follow-up report within 5 days after the supplier has fully implemented the CAP that verifies that all of the deficiencies identified in the CAP have been corrected in accordance with the timeframes accepted by CMS.

(3) If the supplier does not implement an acceptable CAP the supplier will receive a new notice that their contract will be terminated within 45 calendar days of the date on the notice to terminate.

(f) *Right to request a hearing by the CBIC hearing officer (HO).*

(1) A supplier who has received a notice that CMS considers the supplier in breach of contract or that the supplier's CAP is not acceptable has the right to request a hearing before a HO who was not involved with the original determination.

(2) A supplier who wishes to appeal the termination notice must submit a written request to the CBIC. The request for a hearing must be received by the CBIC within 30 calendar days from the date of the notice to terminate.

(3) A request for hearing must be in writing and submitted by an authorized official of the supplier.

(4) The appeals process for the Medicare DMEPOS Competitive Bidding Program is not to be used in place of other existing appeals processes that apply to other parts of Medicare.

(5) In the absence of submitting a CAP when the supplier is offered the opportunity to submit a CAP within 30 days of the notice in accordance with paragraph (c)(1) of this section, a supplier's failure to timely request a hearing will result in a termination of the supplier's DMEPOS Competitive Bidding Program contract effective 45 days from the date on the notice to terminate.

(g) *The CBIC Hearing Officer schedules and conducts the hearing.*

(1) Within 30 calendar days from the receipt of the supplier's timely request for a hearing the hearing officer will contact the parties to schedule the hearing.

(2) The hearing may be held in person or by telephone at the supplier's request.

(3) The scheduling notice to the parties must indicate the time and place for the hearing and must be sent to the supplier 30 days before the date of the hearing.

(4) The HO may, on his or her own motion, or at the request of a party, change the time and place for the hearing, but must give the parties to the hearing 30 day notice of the change.

(5) The HO's scheduling notice must provide the parties to the hearing and the CBIC the following information:

(i) Description of the hearing procedure.

(ii) The general and specific issues to be resolved.

(iii) The supplier has the burden to prove it is not in violation of the contract.

(iv) The opportunity for parties to the hearing to submit evidence to support their positions.

(v) All evidence submitted, both from the supplier and CMS, in preparation for the hearing with all affected parties within 15 days prior to the scheduled dated of the hearing.

(h) *Burden of proof.*

(1) The burden of proof is on the Competitive Bidding Program contract supplier to demonstrate to the HO with convincing evidence that it has not breached its contract or that termination is not appropriate.

(2) The supplier's supporting evidence must be submitted with its request for a hearing.

(3) If the Medicare DMEPOS supplier fails to submit this evidence at the time of its submission, the Medicare DMEPOS supplier is precluded from introducing new evidence later during the hearing process, unless permitted by the hearing officer.

(4) The CBIC and CMS also have the opportunity to submit evidence to the HO within 10 days of receiving a notice announcing the hearing.

(5) The HO will share all evidence submitted, both from the supplier and/or CMS, in preparation for the hearing with all affected parties within 15 days prior to the scheduled date of the hearing.

(i) *Role of the Hearing Officer.* The HO will conduct a thorough and independent review of the evidence including the information and documentation submitted for the hearing and other information that the HO considers pertinent for the hearing. The role of the HO includes, at a minimum, the following:

(1) Conducts the hearing and decides the order in which the evidence and the arguments of the parties are presented;

(2) Determine the rules on admissibility of the evidence;

(3) Examines the witnesses, in addition to the examinations conducted by CMS, CBIC and the contract supplier;

(4) The CBIC may assist CMS in the appeals process including being present at the hearing, testifying as a witness, or performing other, related ministerial duties.

(5) Determines the rules for requesting documents and other evidence from other parties;

(6) Ensures a complete record of the hearing is made available to all parties to the hearing;

(7) Prepares a file of the record of the hearing which includes all evidence submitted as well as any relevant documents identified by the HO and considered as part of the hearing; and

(8) Complies with all applicable provisions of 42 U.S.C. Title 18 and related provisions of the Act, the applicable regulations issued by the Secretary, and manual instructions issued by CMS.

(j) *Hearing Officer recommendation.*

(1) The HO will issue a written recommendation to CMS within 30 days of the close of the hearing or as soon as practical after the hearing.

(2) The recommendation will explain the basis and the rationale for the HO's recommendation.

(3) The hearing officer must include the record of the hearing, along with evidence and documents produced during the hearing along with its recommendation.

(k) *CMS' consideration of a HO's recommendation.*

(1) CMS' review of the HO recommendation will not allow the supplier to submit new information.

(2) After reviewing the HO recommendation, CMS' decision will be made within 30 days from the date of receipt of the HO's recommendation.

(3) A CMS decision to terminate will indicate the effective date of the termination.

(4) This decision is final and binding.

(l) *Effect of contract termination.*

(1) A contract supplier whose contract has been terminated may no longer furnish competitive bid items to beneficiaries within a CBA and be reimbursed by Medicare for these items after the effective date of the termination.

(2) A contract supplier whose contract has been terminated must notify all beneficiaries who are receiving rented competitive bid items or competitive bid items received on a recurring basis, of the termination of their contract. The notice to the beneficiary from the supplier whose contract was terminated must be provided within 5 days of receipt of the final notice of termination. The notification to the beneficiaries must inform the beneficiaries that they are going to have to select a new contract supplier to furnish these items in order for Medicare to pay these items.

(m) *Effective date of the contract termination.*

(1) A supplier's DMEPOS CBP contract is terminated effective on the termination date specified in the CBIC notice to the supplier, unless the supplier timely requests a hearing with the HO or the supplier has submitted a CAP under paragraph (x) of this section.

(2) If a supplier requests an HO review of the CMS decision to terminate its contract, and CMS based upon on the HO recommendation terminates the supplier's contract, the effective date of the termination will be the date specified in the CBIC notice to the supplier.

(3) For violations of the terms of the supplier's DMEPOS CBP contract that may harm beneficiaries, such as a supplier providing an inferior product that causes harm to the beneficiary, no delays of the effective date of the termination will be allowed.

Subpart H–Fee Schedule for Ambulance Services

39. Section 414.610 is amended by revising paragraphs (c)(1)(i), (c)(5)(ii), (f), and (h) to read as follows:

§ 414.610 Basis of payments.

* * * * *

(c) * * *

(1) *Ground ambulance service levels.*

(i) The CF is multiplied by the applicable RVUs for each level of service to produce a service-level base rate. For services furnished during the period July 1, 2004 through December 31, 2006, ambulance services originating in urban areas (both base rate and mileage) are paid based on a rate that is one percent higher than otherwise is applicable under this section, and ambulance services originating in rural areas (both base rate and mileage) are paid based on a rate that is two percent higher than otherwise is applicable under this section. For services furnished during the period July 1, 2008 through December 21, 2010, ambulance services originating in urban areas (both base rate and mileage) are paid based on a rate that is two percent higher than otherwise is applicable under this section, and ambulance services originating in rural areas (both base rate and mileage) are paid based on a rate that is three percent higher than otherwise is applicable under this section.

* * * * *

(5) * * *

(ii) For services furnished during the period July 1, 2004 through December 31, 2010, the payment amount for the ground ambulance base rate is increased by 22.6 percent where the point of pickup is in a rural area determined to be in the lowest 25 percent of rural population arrayed by population density. The amount of this increase is based on CMS's estimate of the ratio of the average cost per trip for the rural areas in the lowest quartile of population compared to the average cost per trip for the rural areas in the highest quartile of population. In making this estimate, CMS may use data provided by the GAO.

* * * * *

(f) *Updates.* The CF, the air ambulance base rates, and the mileage rates are updated annually by an inflation factor established by law. The inflation factor is based on the consumer price index for all urban consumers (CPI–U) (U.S. city average) for the 12-month period ending with June of the previous year and, as of January 1, 2011, is reduced by the 10-year moving average of changes in annual economy-wide private nonfarm business multi-factor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period.)

* * * * *

(h) *Treatment of certain areas for payment for air ambulance services.* Any area that was designated as a rural area for purposes of making payments under the ambulance fee schedule for air ambulance services furnished on December 31, 2006, must be treated as a rural area for purposes of making payments under the ambulance fee schedule for air ambulance services furnished during the period July 1, 2008 through December 31, 2010.

40. Section 414.620 is revised to read as follows:

§ 414.620 Publication of the ambulance fee schedule.

(a) Changes in payment rates resulting from incorporation of the annual inflation factor and the multi-factor productivity adjustment as described in § 414.610(f) will be announced by CMS by instruction and on the CMS Web site.

(b) CMS will follow applicable rulemaking procedures in publishing revisions to the fee schedule for ambulance services that result from any factors other than those described in § 414.610(f).

Subpart J—Submission of Manufacturer's Average Sales Price Data

41. Section 414.804 is amended by—

A. Redesignating paragraph (a)(6) as (a)(7).

B. Adding new paragraph (a)(6).

The addition reads as follows:

§ 414.804 Basis of payment.

(a) * * *

(6) The manufacturer's average sales price must be calculated based on the amount of product in a vial or other container as conspicuously reflected on the FDA approved label as defined by section 201(k) of the Food, Drug, and Cosmetic Act.

* * * * *

Subpart K—Payment for Drugs and Biologicals Under Part B

42. Section 414.902 is amended by adding the definitions of "Biosimilar biological product" and "Reference biological product" in alphabetical order to read as follows:

§ 414.902 Definitions.

* * * * *

Biosimilar biological product means a biological product approved under an abbreviated application for a license of a biological product that relies in part on data or information in an application for another biological product licensed under section 351 of the Public Health Service Act (PHSA) as defined at section 1847A(c)(6)(H) of the Act.

* * * * *

Reference biological product means the biological product licensed under such section 351 of the PHSA that is referred to in the application of the biosimilar biological product as defined at section 1847A(c)(6)(I) of the Act.

* * * * *

43. Section 414.904 is amended by—

A. Adding paragraphs (a)(3), (i), and (j).

B. Revising paragraph (d)(3).

The revisions and additions read as follows:

§ 414.904 Average sales price as the basis for payment.

(a) * * *

(3) For purposes of this section—

(i) CMS calculates an average sales price payment limit based on the amount of product included in a vial or other container as reflected on the FDA-approved label.

(ii) Additional product contained in the vial or other container does not represent a cost to providers and is not incorporated into the ASP payment limit.

(iii) No payment shall be made for amounts of product in excess of that reflected on the FDA-approved label.

* * * * *

(d) * * *

(3) *Widely available market price and average manufacturer price.* If the Inspector General finds that the average sales price exceeds the widely available market price or the average manufacturer price by the applicable threshold percentage specified in paragraph (d)(3)(iii) of this section, the Inspector General is responsible for informing the Secretary (at such times as specified by the Secretary) and the payment amount for the drug or biological will be substituted by the lesser of the widely available market price or 103 percent of the average manufacturer price as subject to the following adjustments:

(i) The payment amount substitution will be applied at the next ASP payment amount calculation period after the Inspector General informs the Secretary (at such times specified by the Secretary) about drugs or biologicals that have exceeded the applicable threshold percentage, and will remain in effect for one quarter after publication.

(ii) Payment at 103 percent of the average manufacturer price for a billing code will be applied at such times when:

(A) The threshold for making price substitutions, as defined in section (iii) is met; and,

(B) When 103 percent of the AMP is less than the 106 percent of the ASP during the quarter in which the average manufacturer price would be applied.

(iii) The applicable threshold for AMP comparisons for calendar years 2005, 2006, 2007, 2008, 2009, 2010, is 5 percent. For CY 2011, the threshold for ASP comparisons is reached when:

(A) The ASP for the billing code has exceeded the AMP for the billing code by 5 percent or more in two consecutive quarters, or three of the last four quarters; immediately preceding the quarter to which the price substitution recommendation would apply; and,

(B) The average manufacturer price for the billing code is calculated using the same set of NDCs used for the average sales price calculation as per this section for the billing code;

(iv) The applicable threshold for WAMP comparisons for calendar years 2005 through 2011 is 5 percent.

(v) No payment amount substitutions will occur before the preliminary injunction issued on December 19, 2007, by the United States District of Columbia in *National Association of Chain Drug Stores et al.* v. *Health and Human Services,* Civil Action No. 1:07–cv–02017 (RCL), is vacated.

* * * * *

(i) If manufacturer ASP data is not available prior to the publication deadline for quarterly payment limits, the payment limit is calculated by carrying over the most recent available manufacturer ASP price from a previous quarter for an NDC, adjusted by the weighted average of the change in the manufacturer ASPs for the NDCs that were reported during both the most recently available quarter and the current quarter.

(j) *Biosimilar biological products.* Effective July 1, 2010, the payment amount for a biosimilar biological drug product (as defined in § 414.902 of this subpart) is the sum of the average sales price of all NDCs assigned to the biosimilar biological product as determined under section 1847A(b)(6) of the Act and 6 percent of the amount determined under section 1847A(b)(4) of the Act for the reference drug product (as defined in § 414.902 of this subpart).

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

44. The authority citation for part 415 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

Subpart C—Part B Carrier Payments for Physician Services to Beneficiaries in Providers

45. Section 415.130 is amended by revising paragraph (d) to read as follows:

§ 415.130 Conditions for payment: Physician pathology services.

* * * * *

(d) *Physician pathology services furnished by an independent laboratory.*

(1) The technical component of physician pathology services furnished by an independent laboratory to a hospital inpatient or outpatient on or before December 31, 2010, may be paid to the laboratory by the contractor under the physician fee schedule if the Medicare beneficiary is a patient of a covered hospital as defined in paragraph (a)(1) of this section.

(2) For services furnished after December 31, 2010, an independent laboratory may not bill the Medicare contractor for the technical component of physician pathology services furnished to a hospital inpatient or outpatient.

(3) For services furnished on or after January 1, 2008, the date of service policy in § 414.510 of this chapter applies to the TC of specimens for physician pathology services.

PART 424—CONDITIONS FOR MEDICARE PAYMENT

46. The authority citation for part 424 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

Subpart B—Certification and Plan of Treatment Requirements

47. Section 424.20 is amended by revising paragraph (e)(2) to read as follows:

§ 424.20 Requirements for posthospital SNF care.

* * * * *

(e) * * *

(2) A physician extender (that is, a nurse practitioner, a clinical nurse specialist, or a physician assistant as those terms are defined in section 1861(aa)(5) of the Act) who does not have a direct or indirect employment relationship with the facility but who is working in collaboration with a physician. For purposes of this section—

(i) *Collaboration.*

(A) Collaboration means a process whereby a physician extender works with a doctor of medicine or osteopathy to deliver health care services.

(B) The services are delivered within the scope of the physician extender's professional expertise, with medical direction and appropriate supervision as provided for in guidelines jointly developed by the physician extender and the physician or other mechanisms defined by Federal regulations and the law of the State in which the services are performed.

(ii) *Types of employment relationships.*

(A) *Direct employment relationship.* A direct employment relationship with the facility is one in which the physician extender meets the common law definition of the facility's "employee," as specified in 20 CFR 404.1005, 404.1007, and 404.1009. When a physician extender meets this definition with respect to an entity other than the facility itself, and that entity has an agreement with the facility for the provision of nursing services under § 409.21 of this subchapter, the facility is considered to have an indirect employment relationship with the physician extender.

(B) *Indirect employment relationship.* (*1*) When a physician extender meets the definition of a direct employment relationship in paragraph (e)(2)(ii)(A) of this section with respect to an entity other than the facility itself, and that entity has an agreement with the facility for the provision of nursing services under § 409.21 of this subchapter, the facility is considered to have an indirect employment relationship with the physician extender.

(*2*) An indirect employment relationship does not exist if the agreement between the entity and the facility involves only the performance of delegated physician tasks under § 483.40(e) of this chapter.

* * * * *

Subpart C—Claims for Payment

48. Section 424.44 is amended by revising paragraphs (a), (b), and (e) to read as follows:

§ 424.44 Time limits for filing claims.

(a) *Time limits.*

(1) For services furnished on or after January 1, 2010, except as provided in paragraphs (b) and (e) of this section, the claim must be filed no later than the close of the period ending 1 calendar year after the date of service.

(2) For services furnished before January 1, 2010, except as provided in paragraphs (b) and (e) of this section, the claim must be filed on or before December 31 of the following year for services that were furnished during the first 9 months of a calendar year, and on or before December 31st of the second following year for services that were furnished during the last 3 months of the calendar year, except that for services furnished during the last 3 months of 2009 all claims must be filed no later than December 31, 2010.

(b) *Exceptions to time limits.* Exceptions to the time limits for filing claims include the following:

(1) The time for filing a claim will be extended if CMS or one of its contractors determines that a failure to meet the deadline in paragraph (a) of this section was caused by error or misrepresentation of an employee, Medicare contractor (including Medicare Administrative Contractor, intermediary, or carrier), or agent of the Department that was performing Medicare functions and acting within the scope of its authority.

(2) The time for filing a claim will be extended if CMS or one of its contractors determines that a failure to meet the deadline in paragraph (a) of this section is caused by all of the following conditions:

(i) At the time the service was furnished the beneficiary was not entitled to Medicare.

(ii) The beneficiary subsequently received notification of Medicare entitlement effective retroactively to or before the date of the furnished service.

(3) The time for filing a claim will be extended if CMS or one of its contractors determines that a failure to meet the deadline in paragraph (a) of this section is caused by all of the following conditions:

(i) At the time the service was furnished the beneficiary was not entitled to Medicare.

(ii) The beneficiary subsequently received notification of Medicare entitlement effective retroactively to or before the date of the furnished service.

(iii) A State Medicaid agency recovered the Medicaid payment for the furnished service from a provider or supplier 11 months or more after the service was furnished.

(4) *Extension of time.* (i) The time to file a claim will be extended through the last day of the 6th calendar month following the month in which the error or misrepresentation referenced in paragraph (b)(1) of this section, is corrected. However, no extension of time will be granted for paragraph (b)(1) when the request for that exception is made to CMS or one of its contractors more than 4 years after the date of service.

(ii) If CMS or one of its contractors determines that both of the conditions are met in paragraph (b)(2) of this section but that all of the conditions in paragraph (b)(3) are not satisfied, the time to file a claim will be extended through the last day of the 6th calendar month following the month in which the beneficiary received notification of Medicare entitlement effective retroactively to or before the date of the furnished service.

(iii) If CMS or one of its contractors determines that all of the conditions are met in paragraph (b)(3) of this section, the time to file a claim will be extended through the last day of the 6th calendar month following the month in which the State Medicaid agency recovered the Medicaid payment for the furnished service from the provider or supplier.

* * * * *

(e) As specified in §§ 424.520 and 424.521 of this subpart, there are restrictions on the ability of the following newly-enrolled suppliers to submit claims for items or services furnished prior to the effective date of their Medicare billing privileges:

(1) Physician or non-physician practitioner organizations.

(2) Physicians.

(3) Nonphysician practitioners.

(4) Independent diagnostic testing facilities.

* * * * *

Subpart P—Requirements for Establishing and Maintaining Medicare Billing Privileges

49. Section 424.502 is amended by adding a definition of "Voluntary termination" in alphabetical order to read as follows:

§ 424.502 Definitions.

* * * * *

Voluntary termination means that a provider or supplier, including an individual physician or non-physician practitioner, submits written confirmation to CMS of its decision to discontinue enrollment in the Medicare program.

50. Section 424.510 is amended by revising paragraph (d)(1)(iii) to read as follows:

§ 424.510 Requirements for enrolling in the Medicare program.

* * * * *

(d) * * *

(1) * * *

(iii) Submission of all documentation, including all applicable Federal and State licenses, certifications (including, but not limited to Federal Aviation Administration and Clinical Laboratory Improvement Act certifications), and regulatory requirements that apply to the specific provider or supplier type that relate to providing health care service, required by CMS under this or other statutory or regulatory authority, or under the Paperwork Reduction Act of 1995, to establish the provider or supplier's eligibility to furnish Medicare covered items or services to beneficiaries in the Medicare program.

* * * * *

51. Section 424.516 is amended by adding paragraph (e)(3) to read as follows:

§ 424.516 Additional provider and supplier requirements for enrolling and maintaining active enrollment status in the Medicare program.

* * * * *

(e) * * *

(3) Within 30 days any revocation or suspension of a Federal or State license or certification (including Federal Aviation Administration and Clinical Laboratory Improvement Act certifications), an air ambulance supplier must report a revocation or suspension of its license or certification to the applicable Medicare contractor.

* * * * *

Authority: (Catalog of Federal Domestic Assistance Program No. 93.773, Medicare—Hospital Insurance; and Program No. 93.774, Medicare—Supplementary Medical Insurance Program).

Dated: June 18, 2010.

Marilyn Tavenner,

Acting Administrator and Chief Operating Officer, Centers for Medicare & Medicaid Services.

Approved: June 24, 2010.

Kathleen Sebelius,

Secretary.

ADDENDUM A: Explanation and Use of Addendum B

The Addenda on the following pages provide various data pertaining to the Medicare fee schedule for physicians' services furnished in CY 2011. Addendum B contains the RVUs for work, nonfacility PE, facility PE, and malpractice expense, and other information for all services included in the PFS.

In previous years, we have listed many services in Addendum B that are not paid under the PFS. To avoid publishing as many pages of codes for these services, we are not including clinical laboratory codes or the alpha-numeric codes (Healthcare Common Procedure Coding System (HCPCS) codes not included in CPT) not paid under the PFS in Addendum B.

Addendum B contains the following information for each CPT code and alpha-numeric HCPCS code, except for: Alpha-numeric codes beginning with B (enteral and parenteral therapy); "E" (durable medical equipment); "K" (temporary codes for nonphysicians' services or items); or "L" (orthotics); and codes for anesthesiology. Please also note the following:

- An "NA" in the "Nonfacility PE RVUs" column of Addendum B means that CMS has not developed PE RVUs in the nonfacility setting for the service because it is typically performed in the hospital (for example, an open heart surgery is generally performed in the hospital setting and not a physician's office). If there is an "NA" in the nonfacility PE RVU column, and the contractor determines that this service can be performed in the nonfacility setting, the service will be paid at the facility PE RVU rate.
- Services that have an "NA" in the "Facility PE RVUs" column of Addendum B are typically not paid under the PFS when provided in a facility setting. These services (which include "incident to" services and the technical portion of diagnostic tests) are generally paid under either the hospital outpatient prospective payment system or bundled into the hospital inpatient prospective payment system payment. In some cases, these services may be paid in a facility setting at the PFS rate (for example, therapy services), but there would be no payment made to the practitioner under the PFS in these situations.

1. CPT/HCPCS code. This is the CPT or alpha-numeric HCPCS number for the service. Alpha-numeric HCPCS codes are included at the end of this Addendum.

2. Modifier. A modifier is shown if there is a technical component (modifier TC) and a professional component (PC) (modifier-26) for the service. If there is a PC and a TC for the service, Addendum B contains three entries for the code, specifically a code for: The global values (both professional and technical); modifier—26 (PC); and modifier—TC. The global service is not designated by a modifier, and physicians must bill using the code without a modifier if the physician furnishes both the PC and the TC of the service. Modifier-53 is shown for a discontinued procedure, for example a colonoscopy that is not completed. There will be RVUs for a code with this modifier.

3. Status indicator. This indicator shows whether the CPT/HCPCS code is included in the PFS and whether it is separately payable if the service is covered.

A = Active code. These codes are separately payable under the PFS if covered. There will be RVUs for codes with this status. The presence of an "A" indicator does not mean that Medicare has made a national coverage determination regarding the service. Contractors remain responsible for coverage decisions in the absence of a national Medicare policy.

B = Bundled code. Payments for covered services are always bundled into payment for other services not specified. If RVUs are shown, they are not used for Medicare payment. If these services are covered, payment for them is subsumed by the payment for the services to which they are incident (an example is a telephone call from a hospital nurse regarding care of a patient).

C = Contractors price the code. Contractors establish RVUs and payment amounts for these services, generally on an individual case basis following review of documentation, such as an operative report.

E = Excluded from the PFS by regulation. These codes are for items and services that CMS chose to exclude from the PFS by regulation. No RVUs are shown, and no payment may be made under the PFS for these codes. Payment for them, when covered, continues under reasonable charge procedures.

I = Not valid for Medicare purposes. Medicare uses another code for the reporting of, and the payment for these services. (Codes not subject to a 90-day grace period.)

M = Measurement codes, used for reporting purposes only. There are no RVUs and no payment amounts for these codes. CMS uses them to aid with performance measurement. No separate payment is made. These codes should be billed with a zero (($0.00) charge and are denied) on the MPFSDB.

N = Noncovered service. These codes are noncovered services. Medicare payment may not be made for these codes. If RVUs are shown, they are not used for Medicare payment.

R = Restricted coverage. Special coverage instructions apply. If the service is covered and no RVUs are shown, it is contractor-priced.

T = There are RVUs for these services, but they are only paid if there are no other services payable under the PFS billed on the same date by the same provider. If any other services payable under the PFS are billed on the same date by the same provider, these services are bundled into the service(s) for which payment is made.

X = Statutory exclusion. These codes represent an item or service that is not within the statutory definition of "physicians' services" for PFS payment purposes. No RVUs are shown for these codes, and no payment may be made under the PFS. (Examples are ambulance services and clinical diagnostic laboratory services.)

4. Description of code. This is an abbreviated version of the narrative description of the code.

5. Physician work RVUs. These are the RVUs for the physician work in CY 2011.

6. Fully implemented nonfacility PE RVUs. These are the fully implemented resource-based PE RVUs for nonfacility settings.

7. CY 2011 transitional nonfacility PE RVUs. These are the CY 2011 resource-based PE RVUs for nonfacility settings.

8. Fully implemented facility PE RVUs. These are the fully implemented resource-based PE RVUs for facility settings.

9. CY 2011 Transitional facility PE RVUs. These are the CY 2011 resource-based PE RVUs for facility settings.

10. Malpractice expense RVUs. These are the RVUs for the malpractice expense for CY 2011.

Note: The BN reduction resulting from the chiropractic demonstration is *not* reflected in the RVUs for CPT codes 98940, 98941 and 98942. The required reduction will only be reflected in the files used for Medicare payment.

11. Global period. This indicator shows the number of days in the global period for the code (0, 10, or 90 days). An explanation of the alpha codes follows:

MMM = Code describes a service furnished in uncomplicated maternity cases, including antepartum care, delivery, and postpartum care. The usual global surgical concept does not apply. See the Physicians' Current Procedural Terminology for specific definitions.

XXX = The global concept does not apply.

YYY = The global period is to be set by the contractor (for example, unlisted surgery codes).

ZZZ = Code related to another service that is always included in the global period of the other service. (Note: Physician work and PE are associated with intra-service time and, in some instances, with the post-service time.)

* Indicates multiple contractors.

** GAF reflects a 1.5 work GPCI floor in Alaska established by the MIPPA.
*** 2011 GAF reflects a 1.0 PE GPCI floor for frontier states as required by the Affordable Care Act.
[1] 2010 GAF equation: (0.52466*work GPCI)+(0.43669*PE GPCI)+(0.03865*MP GPCI).
2010 GAF contains a 1.0 work GPCI floor and reflects a limited recognition of cost differences for the rent and employee compensation components of the PE GPCI as required by the Affordable Care Act.
[2] 2011 GAF equation: (0.48266*work GPCI) + (0.47439*PE GPCI) + (0.04295*MP GPCI).
2011 GAF does not contain a 1.0 work GPCI floor which expires December 31, 2010 as required by the Affordable Care Act. 2011 GAF reflects a limited recognition of cost differences for the rent and employee compensation components of the PE GPCI as required by the Affordable Care Act.

[1] 2010 work GPCI reflects a 1.0 floor required by the Affordable Care Act.
[2] 2010 PE GPCI reflects a limited recognition of cost differences for the rent and employee compensation components and application of the hold harmless provision as required by Affordable Care Act.
[3] 2011 and 2012 work GPCI does not reflect a 1.0 floor which expires December 31, 2010 as required by the Affordable Care Act.
[4] 2012 PE GPCI does not reflect a limited recognition of cost differences for the rent and employee compensation components which expires December 31, 2011 as required by the Affordable Care Act.
* Indicates multiple contractors.
** Work GPCI reflects a 1.5 floor in Alaska established by the MIPPA.
*** 2011 and 2012 PE GPCIs reflect a 1.0 floor for frontier states as required by the Affordable Care Act.
****2011 GPCIs are the first year of the update transition; 2012 GPCIs are the fully implemented updated GPCIs.
2011 work GPCI transition: ½ the difference between 2010 (without 1.0 work GPCI floor) and 2012 work GPCI.
2011 PE GPCI transition (and hold harmless as required by the ACA): Greater of ½ the difference between 2010 PE GPCI and 2012 PE GPCI with limited recognition of cost differences for the rent and employee compensation components (as required by the Affordable Care Act) or ½ the difference between 2010 PE GPCI and 2012 PE GPCI without the limited recognition of cost differences for the rent and employee compensation components. 2011 MP GPCI transition: ½ the difference between 2010 MP GPCI and 2012 MP GPCI.

ADDENDUM F--Proposed CY 2011 Diagnostic Imaging Services Subject to the Multiple Procedure Payment Reduction

Addendum H--Proposed CY 2011 "Always Therapy" Services* Subject to the Multiple Procedure Payment Reduction

HCPCS/CPT Code	Short Descriptor
92506	Speech/hearing evaluation
92507	Speech/hearing therapy
92508	Speech/hearing therapy
92526	Oral function therapy
92597	Oral speech device eval
92607	Ex for speech device rx, 1hr
92608	Ex for speech device rx addl
92609	Use of speech device service
96125	Cognitive test by hc pro
97001	Pt evaluation
97002	Pt re-evaluation
97003	Ot evaluation
97004	Ot re-evaluation
97012	Mechanical traction therapy
97016	Vasopneumatic device therapy
97018	Paraffin bath therapy
97022	Whirlpool therapy
97024	Diathermy eg, microwave
97026	Infrared therapy
97028	Ultraviolet therapy
97032	Electrical stimulation
97033	Electric current therapy
97034	Contrast bath therapy
97035	Ultrasound therapy
97036	Hydrotherapy
97110	Therapeutic exercises
97112	Neuromuscular reeducation
97113	Aquatic therapy/exercises
97116	Gait training therapy
97124	Massage therapy
97140	Manual therapy
97150	Group therapeutic procedures
97530	Therapeutic activities
97533	Sensory integration
97535	Self care mngment training
97537	Community/work reintegration
97542	Wheelchair mngment training

HCPCS/CPT Code	Short Descriptor
97750	Physical performance test
97755	Assistive technology assess
97760	Orthotic mgmt and training
97761	Prosthetic training
97762	C/o for orthotic/prosth use
G0281	Elec stim unattend for press
G0283	Elec stim other than wound
G0329	Electromagntic tx for ulcers

*Excludes contractor-priced codes and bundled codes.

Defense Federal Acquisition Regulation Supplement; Payments in Support of Emergencies and Contingency Operations (DFARS Case 2009–D020)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Interim rule with request for comments.

SUMMARY: DoD is issuing an interim rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to bring DoD into compliance with OMB implementation of the Prompt Payment Act by exempting military contingencies, and certain payments related to emergencies and the release or threatened release of hazardous substances.

DATES: *Effective Date:* July 13, 2010.

Comment date: Comments on this interim rule should be submitted in writing to the address shown below on or before September 13, 2010, to be considered in the formation of the final rule.

ADDRESSES: You may submit comments, identified by DFARS Case 2009–D020, using any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

E-mail: dfars@osd.mil. Include DFARS Case 2009–D020 in the subject line of the message.

Fax: 703–602–0350.

Mail: Defense Acquisition Regulations System, Attn: Mr. Julian E. Thrash, OUSD (AT&L) DPAP/DARS, Room 3B855, 3060 Defense Pentagon, Washington, DC 20301–3060.

Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal information provided.

FOR FURTHER INFORMATION CONTACT: Mr. Julian E. Thrash, 703–602–0310.

SUPPLEMENTARY INFORMATION:

A. Background

This rule implements the full authority granted by 5 CFR 1315.1 for payments covered by 5 CFR 1315.1(b)(2) that are either certified for payment in an operational area, or are contingent upon the receipt of necessary supporting documentation (*i.e.,* contract, invoice, receiving report) emanating from an operational area.

5 CFR part 1315 exempts Prompt Payment Act compliance for payments related to emergencies (defined in the Disaster Relief Act of 1974, Pub. L. 93–288, as amended (42 U.S.C. 5121, *et seq.*); contingency operations (as defined in 10 U.S.C. 101(a)(13)); and the release/threatened release of hazardous substances (as defined in 4 U.S.C. 9606, Section 106). DoD requires the flexibility provided by 5 CFR 1315, Exemption from the Prompt Payment Act, because of the potential for unstable environments during emergencies and contingency operations.

This DFARS change will provide DoD needed flexibility in limited circumstances. The head of the contracting activity shall make subsequent determinations, after consultation with the cognizant comptroller, as the operational area evolves into a more stable business environment to enable the provisions of FAR 32.9 to apply.

This DFARS change adds section 232.901, Applicability, which provides criteria that the head of the contracting activity will use in determining when conditions exist that limit normal business operations during emergencies and contingency operations. It also adds DFARS 232.908, Contract clauses, which prescribes the use of the new clause 252.232–7011, Payments in Support of Emergencies and Contingency Operations. A conforming change is also required to 212.301, Solicitation provisions and contract clauses for the acquisition of commercial items.

This rule was subject to review under Section 6(b) of Executive Order 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

B. Regulatory Flexibility Act

DoD does not expect this rule to have a significant economic impact on small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* However, an initial regulatory flexibility analysis has been performed as follows:

This initial regulatory flexibility analysis has been prepared consistent with 5 U.S.C. 604.

1. Reasons for the Action

On May 22, 2008, the Department of Defense Inspector General (DoD IG) issued the results of an audit, Report No. D–2008–098, entitled "Internal Controls Over Payments Made in Iraq, Kuwait, and Egypt." The audit report cited inconsistencies in FAR 32.9, DFARS 232.9, and 5 CFR in regard to compliance with the Prompt Payment Act for military contingency operations. The report further recommended that DoD establish procedures to address contingency operations.

During emergencies and contingency operations, the operational area can be so fluid and dynamic that carrying out normal business practices can be extremely challenging. It is necessary for the head of the contracting activity (HCA) to have the authority to appropriately respond to emergency and contingency operations accordingly whenever limited operational conditions exist. This includes the payment of contractors.

This interim rule will bring DoD into compliance with OMB implementation of the Prompt Payment Act, which exempts military contingencies.

2. Objectives of, and Legal Basis for, the Rule

The objectives of this rule allow the HCA to make a determination of whether stable business operations exist in theater, which allows the Prompt Payment Act to apply in an emergency and contingency operation. If stable conditions don't exist, then the HCA is authorized to apply the clause at 252.232–7011. When this clause is used, it will be used instead of the appropriate payment clause at FAR 52.232–25, 52.232–26, or 52.232–27. DFARS 232.901 will require the HCA to make subsequent determinations as the operational area evolves into a more stable environment to enable the provisions of the Prompt Payment Act to apply. It will also require the contracting officer to notify, by contract modification, each contractor that has a contract containing DFARS clause 252.232.7011, that it is no longer applicable, and the applicable FAR Prompt Payment clause in the contract applies.

3. Description of and Estimate of the Number of Small Entities to Which the Rule Will Apply

This interim rule will have an economic impact on small entities. It is expected the rule will initially be applied to contracts supporting Afghanistan. Currently, normal business operations are hindered in Afghanistan due to the uncertain environment and instability in the region. It may be impractical for U.S. forces to adequately match receipt of necessary supporting documentation (*i.e.,* contract, invoice, and receiving report) in such an operational area. It is expected that the HCA for Afghanistan could exempt

"payments made in the theater of operations" from Prompt Payment Act interest and interest penalties.

A review of Federal Procurement Data System (FPDS) data for FY08 shows that of the 140 awards made to U.S. firms, only 21 were made to small business entities. This total represents 15% of all awards made during this time period. Therefore, the overall impact of this rule is not expected to have a significant aggregate economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* However, a regulatory flexibility analysis was completed because there is an economic impact to consider.

4. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Rule, Including an Estimate of the Classes of Small Entities Which Will Be Subject to the Requirement and the Type of Professional Skills Necessary for Preparation of the Report or Record

There is no reporting requirement established by this rule. See preceding item 3 regarding an estimate of the effect on small entities that will be subject to this requirement.

5. Relevant Federal Rules Which May Duplicate, Overlap, or Conflict With the Rule

This rule does not duplicate, overlap, or conflict with any other Federal rules.

6. Description of any Significant Alternatives to the Rule Which Accomplish the Stated Objectives of Applicable Statutes and Which Minimize Any Significant Economic Impact of the Rule on Small Entities

There are no significant alternatives which accomplish the stated objectives. This rule will bring DoD into compliance with OMB implementation of the Prompt Payment Act, which exempts military contingencies.

DoD invites comments from small businesses and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C 610 (DFARS case 2009–D020), in correspondence.

C. Paperwork Reduction Act

The Paperwork Reduction Act does not apply, because the rule does not impose any information collection requirements that require the approval of the Office of Management and Budget under 44 U.S.C. 3501, *et seq.*

D. Determination To Issue an Interim Rule

A determination has been made under the authority of the Secretary of Defense that urgent and compelling reasons exist to publish an interim rule prior to affording the public an opportunity to comment. Specifically, during emergencies and contingency operations, the operational area can be so fluid and dynamic that carrying out normal business practices can become impractical. It is necessary for the head of the contracting activity to have the authority to incorporate the Payments in Support of Emergencies and Contingency Operations clause provided by 252.232–7011, when an unstable business environment exists. This case brings DoD into compliance with OMB implementation of the Prompt Payment Act, which exempts military contingencies under 5 CFR 1315.1(b)(2).

List of Subjects in 48 CFR Parts 212, 232, and 252

Government procurement.

Ynette R. Shelkin,

Editor, Defense Acquisition Regulations System.

■ Therefore, 48 CFR parts 212, 232, and 252 are amended as follows:

■ 1. The authority citation for 48 CFR parts 212, 232, and 252 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR chapter 1.

PART 212—ACQUISITION OF COMMERCIAL ITEMS

■ 2. Section 212.301 is amended by adding paragraph (f)(xiv) to read as follows:

212.301 Solicitation provisions and contract clauses for the acquisition of commercial items.

(f) * * *

(xiv) Use the clause at 252.232–7011, Payments in Support of Emergencies and Contingency Operations, as prescribed in 232.908.

PART 232—CONTRACT FINANCING

■ 3. Section 232.901 is added to read as follows:

232.901 Applicability.

(1) FAR subpart 32.9, Prompt Payment, does not apply when—

(i) There is—

(A) An emergency, as defined in the Disaster Relief Act of 1974;

(B) A contingency operation (*see* FAR 2.101(b)); or

(C) The release or threatened release of hazardous substances (as defined in 4 U.S.C. 9606, Section 106); and

(ii) The head of the contracting activity has made a determination, after consultation with the cognizant comptroller, that conditions exist that limit normal business operations; and

(iii) Payments will be made in the operational area or made contingent upon receiving supporting documentation (*i.e.,* contract, invoice, and receiving report) from the operational area.

(2) Criteria limiting normal business operations during emergencies and contingency operations that restrict the use of FAR 32.9 may include such conditions as—

(i) Support infrastructure, hardware, communications capabilities, and bandwidth are not consistently available such that normal business operations can be carried out;

(ii) Support resources, facilities, and banking needs are not consistently available for use as necessary in carrying out normal business operations;

(iii) Military mission priorities override the availability of appropriately skilled personnel in support of back-office operations;

(iv) Mobility impairments and security concerns restrict free movement of personnel and documents necessary for timely processing;

(v) Foreign vendors are not familiar with or do not understand DoD contract requirements (*i.e.,* proper invoice, receiving documentation, and contracting terms); or

(vi) Documents received in support of payment requests and shipments require language translations that cannot be performed and documented within normal business processing times.

(3) *Subsequent Determinations.* The head of the contracting activity shall make subsequent determinations, after consultation with the cognizant comptroller, as the operational area evolves into either a more stable or less stable environment.

(i) If the head of the contracting activity determines that the operational area has evolved into a more stable environment, the contracting officer shall notify, by issuance of a contract modification, each contractor performing in the operational area under review. The modification deactivates clause 252.232–7011 and activates the applicable FAR Prompt Payment clause in the contract.

(ii) If after deactivation of clause 252.232–7011, the head of the

contracting activity subsequently determines that the operational area has evolved into a less stable environment, the head of the contracting activity will make a determination that conditions exist that limit normal business operations. The contracting officer will then reactivate clause 252.232–7011 by issuance of a contract modification.

■ 4. Section 232.908 is added to read as follows:

232.908 Contract clauses

Use the clause at 252.232–7011, Payments in Support of Emergencies and Contingency Operations, in solicitations and contracts in addition to the approved clause prescribed in FAR 32.908 in acquisitions that meet the applicability criteria at 232.901(1).

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 5. Section 252.232–7011 is added to read as follows:

252.232–7011 Payments in Support of Emergencies and Contingency Operations.

As prescribed in section 232.908, use the following clause:

PAYMENTS IN SUPPORT OF EMERGENCIES AND CONTINGENCY OPERATIONS (JUL 2010)

(a) Definitions of pertinent terms are set forth in sections 2.101, 32.001, and 32.902 of the Federal Acquisition Regulation.

(b) Notwithstanding any other payment clause in this contract, the Government will make invoice payments under the terms and conditions specified in this clause. The Government considers payment as being made on the day a check is dated or the date of an electronic funds transfer

(c) *Invoice payments.*

(1) *Due date.*

(i) Payment will be made as soon as possible once a proper invoice is received and matched with the contract and the receiving/acceptance report.

(ii) If the contract does not require submission of an invoice for payment (*e.g.,* periodic lease payments), the due date will be as specified in the contract.

(2) *Contractor's invoice.* The Contractor shall prepare and submit invoices to the designated billing office specified in the contract. A proper invoice should include the items listed in paragraphs (c)(2)(i) through (c)(2)(x) of this clause.

(i) Name and address of the Contractor.

(ii) Invoice date and invoice number. (The Contractor should date invoices as close as possible to the date of the mailing or transmission.)

(iii) Contract number or other authorization for supplies delivered or services performed (including order number and contract line item number).

(iv) Description, quantity, unit of measure, unit price, and extended price of supplies delivered or services performed.

(v) Shipping and payment terms (*e.g.,* shipment number and date of shipment, discount for prompt payment terms). Bill of lading number and weight of shipment will be shown for shipments on Government bills of lading.

(vi) Name and address of Contractor official to whom payment is to be sent (must be the same as that in the contract or in a proper notice of assignment).

(vii) Name (where practicable), title, phone number, and mailing address of person to notify in the event of a defective invoice.

(viii) Taxpayer Identification Number (when required). The taxpayer identification number is required for all payees subject to the U.S. Internal Revenue Code.

(ix) Electronic funds transfer banking information.

(A) The Contractor shall include electronic funds transfer banking information on the invoice only if required elsewhere in this contract.

(B) If electronic funds transfer banking information is not required to be on the invoice, in order for the invoice to be a proper invoice, the Contractor shall have submitted correct electronic funds transfer banking information in accordance with the applicable solicitation provision (*e.g.,* 52.232–38, Submission of Electronic Funds Transfer Information with Offer), contract clause (*e.g.,* 52.232–33, Payment by Electronic Funds Transfer—Central Contractor Registration, or 52.232–34, Payment by Electronic Funds Transfer-Other Than Central Contractor Registration), or applicable agency procedures.

(C) Electronic funds transfer banking information is not required if the Government waived the requirement to pay by electronic funds transfer.

(x) Any other information or documentation required by the contract (*e.g.,* evidence of shipment).

(3) *Discounts for prompt payment.* The designated payment office will take cost-effective discounts if the payment is made within the discount terms of the contract.

(4) *Contract financing payment.* If this contract provides for contract financing, the Government will make contract financing payments in accordance with the applicable contract financing clause.

(5) *Overpayments.* If the Contractor becomes aware of a duplicate contract financing or invoice payment or that the Government has otherwise overpaid on a contract financing or invoice payment, the Contractor shall—

(i) Remit the overpayment amount to the payment office cited in the contract along with a description of the overpayment, including the—

(A) Circumstances of the overpayment (*e.g.,* duplicate payment, erroneous payment, liquidation errors, date(s) of overpayment);

(B) Affected contract number and delivery order number, if applicable;

(C) Affected contract line item or subline item, if applicable; and

(D) Contractor point of contact; and

(ii) Provide a copy of the remittance and supporting documentation to the Contracting Officer.

(d) This clause is applicable until otherwise notified by the Contracting Officer. Upon notification by issuance of a contract modification, the appropriate FAR Prompt Payment clause in the contract becomes applicable.

(End of clause)

SUPPLEMENTARY INFORMATION:

A. Background

This DFARS case implements section 820 of the National Defense Authorization Act for Fiscal Year 2010. Section 820 is entitled "Publication of Notification of Bundling of Contracts of the Department of Defense."

The new statute requires DoD contracting officers to publish a notification "consistent with the requirements" of FAR 10.001(c)(2) on FedBizOpps.gov, or any successor site, at least 30 days prior to the release of a solicitation for a bundled acquisition. In addition, if the DoD agency has determined that "measurably substantial benefits are expected to be derived as a result of bundling," the notification must include a brief description of those benefits. The acquisitions covered by section 820 are defined at 820(b) as those that are funded entirely by DoD funds and covered by FAR 7.107, entitled "Additional requirements for acquisitions involving bundling."

The statute, at section 820(c), provides that nothing in the new requirement shall be construed to—

(a) Alter any other publication or synopsis requirement;

(b) Require the public availability of information that is protected by the FOIA (5 U.S.C. 552(b)); or

(c) Require contracting officers to delay the issuance of a solicitation in order to meet the 30-day period (between the notification and the release of the solicitation) if the expedited issuance of the solicitation is otherwise authorized under any other requirement of law or regulation.

The FAR, at 10.001(c), addresses the market research requirements for agencies contemplating a bundled contract award. Currently, FAR 10.001(c)(2) requires that the agency, at least 30 days before release of a solicitation for a potential bundled procurement or 30 days prior to placing a bundled order without a solicitation, must notify any affected incumbent small businesses of (a) the intention to bundle the requirement and (b) how the small businesses can contact the appropriate SBA representative. This requirement is somewhat different from that in section 820. Therefore, a cross-reference to the section 820 requirement has been added at DFARS 210.001(c)(2).

The notification requirement is added as a new DFARS 205.205–70. FAR 5.205 addresses special synopsis situations. It currently covers R&D advance notices, public-private competitions under OMB–Circular A–76, and other requirements that differ somewhat from the general synopsis requirement at FAR 5.201. Therefore, this appears to be the proper location for the bundling notification. However, because the new requirement applies only when using DoD funds, it is proposed as a new DFARS section 205.205–70, entitled "Notification of bundling of DoD contracts." The basic publication requirement is established here, but it was not deemed necessary to repeat the limitations and exclusions at section 820(c) of the statute because nothing in the new language states or implies that the opposite is, or could be, the case.

This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of Executive Order 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

B. Regulatory Flexibility Act

DoD does not expect that this interim rule will have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because the rule does not impose any additional requirements on small businesses. In fact, availability of the notice of potential bundling may enable small businesses to compete for more work of which the firms might otherwise have been unaware. Prior to enactment of this statute, FAR 10.001(c)(2) required notification of incumbent small businesses only in circumstances where one of the requirements to be bundled is currently held by a small business. Such notification of incumbent small businesses is designed to afford them the opportunity to react prior to a final decision on bundling existing requirements, thus providing these small businesses with an opportunity to engage with Government requirements officials in the interest of retaining unbundled business (if bundled, the small business might not have the necessary capability to enable it to bid). However, the new provision enables any small businesses, whether or not an incumbent contractor, to become aware of a potential bundled opportunity, generally 30 days prior to the release of the solicitation. This broader notification requirement will provide a much wider segment of the small-business community awareness of upcoming business opportunities and then to either (1) submit a proposal for the bundled procurement or (2) interact with the requiring agency to request unbundling before the solicitation is finalized. Because of the potential for positive impact on small businesses, an Initial Regulatory Flexibility Analysis has been performed and is summarized above.

DoD invites comments from small business concerns and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2009–D033) in correspondence.

C. Paperwork Reduction Act

The Paperwork Reduction Act does not apply because the interim rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under 44 U.S.C. chapter 35, *et seq.*

D. Determination To Issue an Interim Rule

A determination has been made under the authority of the Secretary of Defense (DoD) that urgent and compelling circumstances exist to promulgate this interim rule without prior opportunity for public comments pursuant to 41 U.S.C. 418b and FAR 1.501–3(b). This action is necessary because section 820 of the National Defense Authorization Act for Fiscal Year 2010 became effective upon enactment, October 28, 2009. The rule implements section 820's requirement for contracting officers to publish a notification on FedBizOpps.gov at least 30 days prior to the release of a solicitation for a bundled acquisition. It is imperative that DoD contracting officers be made aware of this requirement as quickly as possible so that small businesses may have the benefit of the procurement planning information and the agency can comply with the statutory requirement. DoD will consider public comments received in response to this interim rule in the formation of the final rule.

List of Subjects in 48 CFR Parts 205 and 210

Government procurement.

Ynette R. Shelkin,

Editor, Defense Acquisition Regulations System.

■ Therefore, 48 CFR parts 205 and 210 are amended as follows:

■ 1. The authority citation for 48 CFR parts 205 and 210 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR chapter 1.

PART 205—PUBLICIZING CONTRACT ACTIONS

■ 2. Section 205.205 is added to read as follows:

205.205 Special situations.

205.205–70 Notification of bundling of DoD contracts.

(a) When a proposed acquisition is funded entirely using DoD funds and potentially involves bundling, the contracting officer shall, at least 30 days prior to the release of a solicitation or 30 days prior to placing an order without a solicitation, publish in FedBizOpps.gov (or any successor site) a notification of the intent to bundle the requirement. In addition, if the agency has determined that measurably substantial benefits are expected to be derived as a result of bundling, the notification shall include a brief description of those benefits (*see* FAR 7.107).

(b) This requirement is in addition to the notification requirements at FAR 10.001(c)(2)(i) and (ii).

PART 210—MARKET RESEARCH

■ 3. Paragraph (c)(2) is added to section 210.001 to read as follows:

210.001 Policy.

* * * * *

(c)(2) In addition to the notification requirements at FAR 10.001(c)(2)(i) and (ii), see 205.205–70 for the bundling notification publication requirement.

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Part 216

Defense Federal Acquisition Regulation Supplement; Notification Requirements for Awards of Single-Source Task or Delivery Orders (DFARS Case 2009–D036)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Interim rule with request for comments.

SUMMARY: DoD is issuing an interim rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to implement section 814 of the National Defense Authorization Act for Fiscal Year 2010.

DATES: *Effective date:* July 13, 2010.

Comment date: Comments on the interim rule should be submitted in writing to the address shown below on or before September 13, 2010, to be considered in the formation of the final rule.

ADDRESSES: Submit comments identified by DFARS Case 2009–D036, using any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *E-mail: dfars@osd.mil.* Include DFARS Case 2009–D036 in the subject line of the message.
- *Fax:* 703–602–0350.
- *Mail:* Defense Acquisition Regulations System, Attn: Ms. Meredith Murphy, OUSD (AT&L) DPAP/DARS, Room 3B855, 3060 Defense Pentagon, Washington, DC 20301–3060.

Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal information provided.

FOR FURTHER INFORMATION CONTACT: Meredith Murphy, Defense Acquisition Regulations System, OUSD (AT&L) DPAP (DARS), Room 3B855, 3060 Defense Pentagon, Washington, DC 20301–3060. Telephone 703–602–1302; facsimile 703–602–0350.

SUPPLEMENTARY INFORMATION:

A. Background

This DFARS rule implements section 814 of the National Defense Authorization Act for Fiscal Year 2010 (Pub. L. 111–84), enacted October 28, 2009. Section 814 is entitled "Amendment to Notification Requirements for Awards of Single-Source Task or Delivery Orders." 10 U.S.C. 2304a(d)(3)(A) prohibits the award of a sole-source task or delivery order that is estimated to exceed $100 million (including all options) unless the head of the agency determines in writing that—

(1) The task or delivery orders expected under the contract are so integrally related that only a single source can reasonably perform the work;

(2) The contract provides only for firm-fixed-price task orders or delivery orders for products for which unit prices are established in the contract or services for which prices are established in the contract for the specific tasks to be performed;

(3) Only one source is qualified and capable of performing the work at a reasonable price to the government; or

(4) Because of exceptional circumstances, it is necessary in the public interest to award the contract to a single source.

Section 814 requires agency heads to notify the congressional defense committees within 30 days after making any determination for the reasons in (1) through (4) previously cited. In addition, if the task or delivery order concerns intelligence activities of the Department of Defense, the agency head also is required to provide notification within 30 days of the determination to the Permanent Select Committee on Intelligence of the House of Representatives if the order relates to tactical intelligence and intelligence-related activities, and to the Select Committee on Intelligence of the Senate and the Permanent Select Committee on Intelligence of the House of Representatives if the order relates to intelligence and intelligence-related activities other than those activities previously mentioned.

Given the need for consistency of content and format in the information provided to the Congress and the necessity for meeting the 30-day deadline for reporting the determinations to the Congress, agency heads are being asked to provide the determinations, not directly to the congressional committees, but to the Office of the Under Secretary of Defense (Acquisition, Technology, and Logistics) Defense Procurement and Acquisition Policy, Contract Policy and International Contracting. This will also enable a single office to oversee and manage the DoD picture for single-source task and delivery orders. The new reporting requirement is located at DFARS 216.504(c)(1)(ii)(D)(*2*).

This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of Executive Order 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 604.

B. Regulatory Flexibility Act

DoD does not expect that this interim rule will have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because the rule does not impose any additional requirements on small businesses and is concerned with internal Government operating procedures. Section 814 of the FY 2010 NDAA builds upon the existing requirements for justification of sole-source awards of task or delivery order contracts that are estimated to exceed $100 million (including all options). The dollar threshold and the circumstances justifying a sole-source award are not changed by section 814. The new statute, however, requires agency heads to notify the congressional defense committees within 30 days after

making any determination regarding the making of sole-source awards. This is a change to internal operating procedures of the Government with no impact on contractors or offerors. Therefore, an initial regulatory flexibility analysis has not been performed. However, DoD invites comments from small business concerns and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2009–D036) in correspondence.

C. Paperwork Reduction Act

The Paperwork Reduction Act does not apply because the interim rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under 44 U.S.C., *et seq.*

D. Determination To Issue an Interim Rule

A determination has been made under the authority of the Secretary of Defense (DoD) that urgent and compelling circumstances exist to promulgate this interim rule without prior opportunity for public comments pursuant to 41 U.S.C. 418b and FAR 1.501–3(b). This interim rule implements section 814 of the National Defense Authorization Act for FY 2010, which prohibits the award of a sole-source task or delivery order that is estimated to exceed $100 million (including all options) unless the head of the agency determines that one of four exceptions applies, and notifies appropriate congressional defense committees (and intelligence activities, if the order concerns intelligence activities) within 30 days of the determination. An interim rule is necessary because the statute became effective upon enactment on October 28, 2009, and it is imperative that DoD contracting officers be aware of additional congressional notification requirements as soon as possible in order to enable them to comply with the law. DoD will consider public comments received in response to this interim rule in the formation of the final rule.

List of Subjects in 48 CFR Part 216

Government procurement.

Ynette R. Shelkin,

Editor, Defense Acquisition Regulations System.

■ Therefore, 48 CFR part 216 is amended as follows:

PART 216—TYPES OF CONTRACTS

■ 1. The authority citation for 48 CFR part 216 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR chapter 1.

■ 2. Section 216.504 is revised to read as follows:

216.504 Indefinite-quantity contracts.

(c)(1)(ii)(D) *Limitation on single-award contracts.*

* * * * *

(2) The head of the agency must notify the congressional defense committees within 30 days after any determination under this section and provide a copy of the determination and notification to the Deputy Director, Defense Procurement and Acquisition Policy (Contract Policy and International Contracting), OUSD (AT&L) DPAP/CPIC, 3060 Defense Pentagon, Washington, DC 20301–3060. If the award concerns intelligence or intelligence-related activities of DoD, notification shall also be provided to the Select Committee on Intelligence of the Senate and the Permanent Select Committee on Intelligence of the House of Representatives. (See sample notification at PGI 216.504(c)(1)(ii)(D)*(2).*)

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Part 252

Defense Federal Acquisition Regulation Supplement; Technical Amendment

AGENCY: Defense Acquisition Regulations System. Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is making a technical amendment to the Defense Federal Acquisition Regulation Supplement (DFARS) to correct the date of DFARS clause 252.222–7006.

DATES: *Effective Date:* July 13, 2010.

FOR FURTHER INFORMATION CONTACT: Ms. Ynette R. Shelkin, Defense Acquisition Regulations System, OUSD (AT&L) DPAP/DARS, Room 3B855, 3060 Defense Pentagon, Washington, DC 20301–3060. Telephone 703–602–8384; facsimile 703–602–0350.

SUPPLEMENTARY INFORMATION: This final rule amends the revision date of DFARS clause 252.222–7006. DoD published an interim rule at 75 FR 27946 on May 19, 2010, for DFARS Case 2010–D004, Restrictions on the Use of Mandatory Arbitration Agreements, in which it failed to cite a date for DFARS clause 252.222–7006. The date for the clause should have been May 19, 2010, the date the interim rule was published.

List of Subjects in 48 CFR Part 252

Government Procurement.

Ynette R. Shelkin,

Editor, Defense Acquisition Regulations System.

■ Therefore 48 CFR part 252 is amended as follows:

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 1. The authority citation for 48 CFR part 252 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR chapter 1.

■ 2. Section 252.222–7006 is amended by revising the clause date as follows:

252.222–7006 Restrictions on the Use of Mandatory Arbitration Agreements

* * * * *

RESTRICTIONS ON THE USE OF MANDATORY ARBITRATION AGREEMENTS (MAY 2010)

* * * * *

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It may be used in conjunction with ''P L U S'' (Public Laws Update Service) on 202–741–6043. This list is also available online at *http://www.archives.gov/federal-register/laws.html*.

The text of laws is not published in the **Federal Register** but may be ordered in ''slip law'' (individual pamphlet) form from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone, 202–512–1808). The text will also be made available on the Internet from GPO Access at *http://www.gpoaccess.gov/plaws/index.html*. Some laws may not yet be available.

S. 1660/P.L. 111–199
Formaldehyde Standards for Composite Wood Products Act (July 7, 2010; 124 Stat. 1359)

S. 2865/P.L. 111–200
Congressional Award Program Reauthorization Act of 2009 (July 7, 2010; 124 Stat. 1368)

S.J. Res. 32/P.L. 111–201
Recognizing the 60th anniversary of the outbreak of the Korean War and reaffirming the United States-Korea alliance. (July 7, 2010; 124 Stat. 1371)

Last List July 7, 2010

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to *http://listserv.gsa.gov/archives/publaws-l.html*

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
