Nebraska until their removal to their present-day reservation in Oklahoma in 1875. The Kitkahahki or Republican band of the Pawnee lived in villages along the Republican River. Cambridge, NE, is also located along the Republican River. Historical records also suggest that the Pawnee inhabited this region to the exclusion of other tribes.

Officials of the Wisconsin Historical Society, Museum Division, have determined that, pursuant to 25 U.S.C. 3001(9), the human remains described above represent the physical remains of one individual of Native American ancestry. Officials of the Wisconsin Historical Society, Museum Division, also have determined that, pursuant to 25 U.S.C. 3001(2), there is a relationship of shared group identity that can be reasonably traced between the Native American human remains and the Pawnee Nation of Oklahoma.

Representatives of any other Indian tribe that believes itself to be culturally affiliated with the human remains should contact Jennifer L. Kolb, Wisconsin Historical Museum, 30 N. Carroll St., Madison, WI 53703, telephone (608) 261–2461, before August 18, 2010. Repatriation of the human remains to the Pawnee Nation of Oklahoma may proceed after that date if no additional claimants come forward.

The Wisconsin Historical Society, Museum Division, is responsible for notifying the Pawnee Nation of Oklahoma that this notice has been published.

Dated: July 9, 2010.

Sherry Hutt,
Manager, National NAGPRA Program.

Public Land Order No. 7744;
Withdrawal of National Forest System Land for Inyan Kara Area; WY

AGENCY: Bureau of Land Management, Interior.

ACTION: Public Land Order.

SUMMARY: This order withdraws 1,278.09 acres of National Forest System land from location and entry under the United States mining laws for a period of 20 years on behalf of the United States Forest Service to protect the Inyan Kara area of the Black Hills National Forest in Crook County, Wyoming. The land has been and will remain open to mineral leasing and to all other forms of disposition which may by law be made of National Forest System land.

DATES: Effective Date: July 19, 2010.

FOR FURTHER INFORMATION CONTACT: Janelle Wrigley, BLM Wyoming State Office, 5353 N. Yellowstone Road, P.O. Box 1828, Cheyenne, Wyoming 82003, 307–775–6257.

SUPPLEMENTARY INFORMATION: The United States Forest Service will manage the land to protect and preserve the significant historic and prehistoric Native American cultural and archeological sites known as the Inyan Kara area within the Black Hills National Forest. The land will also be managed for its unusual scenic and geological characteristics.

Order

By virtue of the authority vested in the Secretary of the Interior by Section 204 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714, it is ordered as follows:

1. Subject to valid existing rights, the following described National Forest System land is hereby withdrawn from location and entry under the United States mining laws, 30 U.S.C. Ch. 2, but not from the mineral leasing laws or other forms of disposition which may by law be made of National Forest System land, to protect the Inyan Kara area of the Black Hills National Forest:

Sixth Principal Meridian

T. 49 N., R. 62 W.,
Sec. 19, lots 1 to 4, inclusive, E½, and E½W½;
Sec. 30, lots 1 and 2, N½NE¼, and E½NW¼.
T. 49 N., R. 63 W.,
Sec. 24, E½E½;
Sec. 25, NE¼ and N½SE¼.

The area described contains 1,278.09 acres, more or less, in Crook County.

2. The withdrawal made by this order does not alter the applicability of those public land laws governing the use of National Forest System land other than the mining laws (30 U.S.C. Ch. 2).

3. This withdrawal will expire 20 years from the effective date of this order unless, as a result of a review conducted before the expiration date pursuant to Section 204(f) of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714(f), the Secretary determines that the withdrawal shall be extended.

Dated: June 30, 2010.

Wilma A. Lewis,
Assistant Secretary—Land and Minerals Management.

DEPARTMENT OF THE INTERIOR
Fish and Wildlife Service

[612.0x792.0]

Recovery Plan for the Ivory-billed Woodpecker (Campephilus principalis)

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of document availability.

SUMMARY: We, the U.S. Fish and Wildlife Service, announce the availability of the Final Recovery Plan for the Ivory-billed Woodpecker (Campephilus principalis). This final recovery plan includes criteria and measures that should be taken in order to begin to effectively recover the species to the point where delisting is warranted under the Endangered Species Act of 1973, as amended (Act).

ADDRESSES: Copies of the draft recovery plan are available by request from the Lafayette Field Office of the U.S. Fish and Wildlife Service, 646 Cajundome Boulevard, Suite 400, Lafayette, LA 70506, or by download from our recovery plan Web site at http:// endangered.fws.gov/recovery/index.html#plans.

FOR FURTHER INFORMATION CONTACT: Deborah Fuller, at the above address or telephone (337) 291–3100.

SUPPLEMENTARY INFORMATION: Restoring listed animals and plants to the point where they are again secure, self-sustaining components of their ecosystems is a primary goal of our threatened and endangered species program. To help guide the recovery effort, we prepare recovery plans for listed species native to the United States, pursuant to section 4(f) of the Act (16 U.S.C. 1531 et seq.), unless such a plan would not promote the conservation of a particular species. Recovery plans describe actions that may be necessary for conservation of the species, establish criteria for reclassification from endangered to threatened status or removal from the list of threatened and endangered species, and estimate the time and cost for implementing the needed recovery measures.

Prior to European settlement, the ivory-billed woodpecker appeared to be...
widely distributed throughout the southeastern United States. Since then the species has become extremely rare and was, until recently, commonly accepted as extirpated from its known range in the United States. The ivory-billed woodpecker’s disappearance is closely linked with logging and clearing of the contiguous forest habitats which once covered much of the southeastern United States. Additionally, as habitats became fragmented and access to the birds increased, collecting and other direct mortality may have had a significant impact.

Despite this species’ having been listed since 1967, no recovery plan was prepared, in large part due to the lack of any clear, undisputed evidence (since 1944) of the species’ continued existence. However, evidence supporting the presence of at least one bird in the Bayou de View area of Cache River National Wildlife Refuge in 2004, as well as additional supporting information, generated the need to complete a recovery plan. Given the limited information on the current number of individuals throughout the species’ range and the limited knowledge on biology, habitat requirements, and genetic information, we recognize the need to generate scientific information to better address the threats and limiting factors to this species and to develop additional specific recovery criteria.

The recovery strategy initially focuses on learning more about the species’ status and ecology, including documenting known locations and characterizing these habitats. Population goals are not identified, but are acknowledged as key to recovery. Initial efforts include development of models and additional research that will generate these spatially explicit population goals. Neither an appropriate time to recovery nor cost estimate are meaningful at this time, due to the difficulty in reliably locating individual birds or their roosting or nesting cavities.

Recovery Objectives

This recovery plan identifies many interim actions needed to achieve long-term viability for the ivory-billed woodpecker and to accomplish these goals. Recovery of the ivory-billed woodpecker focuses on the following objectives:

1. Identify and delineate any existing populations.
2. Identify and reduce risks to any existing population.
3. Protect and enhance suitable habitat once populations are identified.
4. Reduce or eliminate threats sufficient to allow successful restoration of multiple populations when those populations are identified.

The emphasis for recovery will be on the distribution of additional viable populations in the historic range of the species. Discovery, documentation, and subsequent management of additional populations must meet scientifically accepted goals for the promotion of viable populations of listed species.

At present, the limited knowledge on the population abundance, distribution, habitat requirements, and biology of the ivory-billed woodpecker prevents development of more specific recovery criteria. The following interim criteria will lead us to the development of more specific, quantifiable criteria that should be met before we consider the delisting of this species:

1. Survey potential habitats for any occurrences of the species.
2. Determine current habitat use and needs of any existing populations.
3. Conserve and enhance habitat on public land where ivory-billed woodpeckers are located. Acquire additional acreage, if needed, from willing sellers and list in the public habitat inventory.
4. Conserve and enhance habitat on private lands through the use of voluntary agreements (e.g., conservation easements, habitat conservation plans) and public outreach.
5. Analyze viability of any existing populations (numbers, breeding success, population genetics, and ecology).
6. Determine the number and geographic distribution of subpopulations needed to create conditions favorable to a self-sustaining metapopulation and to evaluate habitat suitable for species re-introduction.

The draft recovery plan was completed and released for public comment on August 22, 2007 (72 FR 47064). We solicited review and comment from local, State, and Federal agencies and the public on the draft recovery plan. We considered all comments we received during the comment period, peer review comments, and additional recovery team comments prior to the decision to approve of the revised recovery plan. Responses to these comments are found in Appendix K of the recovery plan. We welcome continuing public comment on this recovery plan, and we will consider all substantive comments on an ongoing basis to inform the implementation of recovery activities and future updates to the recovery plan.

Authority: The authority for this action is section 4(f) of the Endangered Species Act, 16 U.S.C. 1533(f).
