

parts of the agency's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

Regulatory Guide 1.216, "Containment Structural Integrity Evaluation for Internal Pressure Loadings Above Design-Basis Pressure," was issued with a temporary identification as Draft Regulatory Guide, DG-1203. This guide describes methods that the NRC staff considers acceptable for (1) predicting the internal pressure capacity for containment structures above the design-basis accident pressure, (2) demonstrating containment structural integrity related to combustible gas control, and (3) demonstrating containment structural integrity to meet the Commission's performance goals related to the prevention and mitigation of severe accidents. It provides guidance on methods for satisfying requirements in Title 10 of the *Code of Federal Regulations* (10 CFR) Part 52, "Licenses, Certifications, and Approvals for Nuclear Power Plants." Requirements in 10 CFR 52.47, "Contents of Applications; Technical Information," and in 10 CFR 52.79, "Contents of Applications; Technical Information in Final Safety Analysis Report [FSAR]," relate to the structural integrity of containments under internal pressurization that pertain to the containment structural capacity above design-basis pressures, to combustible gas control, and to the prevention and mitigation of severe accidents. This guidance is intended to be consistent with the Commission's goals and other related guidance, as discussed in the remainder of this section. This regulatory guide does not address requirements and guidance for the structural evaluation of containments for design-basis pressure.

SUPPLEMENTARY INFORMATION:

I. Introduction

The U.S. Nuclear Regulatory Commission (NRC) is issuing for public comment a draft guide in the agency's "Regulatory Guide" series. This series was developed to describe and make available to the public such information as methods that are acceptable to the NRC staff for implementing specific parts of the NRC's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

The draft regulatory guide (DG) is temporarily identified by its task number, DG-1228, which should be mentioned in all related correspondence. DG-1228 is proposed Revision 1 of Regulatory Guide 1.179,

dated January 1999. This guide provides general procedures for the preparation of license termination plans for nuclear power reactors. Use of this regulatory guide will help to ensure the completeness of the information provided in a license termination plan, assist the staff of the NRC and others in locating pertinent information, and facilitate the review process. However, the NRC does not require conformance with the procedures, which are provided for guidance only.

OPM established the Ombudsman to provide a neutral, independent and confidential resource to review, identify, facilitate and timely resolve individual claims, concerns or complaints by OPM customers and employees. In order to provide the best service to OPM's customers, one form is required and two forms are optional. The mandatory form, Privacy Release, enables representatives of the Ombudsman to obtain any information requested, examine and/or copy any records related to a request for assistance to identify, facilitate and timely resolve individuals' claims, concerns or complaints by OPM customers and employees. This allows OPM's representatives to properly perform their role and not violate customer privacy without the proper authorization. The second form, Third Party Authorization, allows customers of the Ombudsman to designate someone in addition to themselves, or other than themselves, to give and receive information about their request for assistance. The Third Party Authorization will not be used in every request for assistance.
