

research programs of the reserve; updates the reserve boundary; proposes criteria for boundary expansion activities through acquisition and/or mitigation; as well as outlines plans for facility use and development to support reserve operations. The goals described in this plan are designed to provide a framework that supports program integration for collaborative management in a highly urbanized bi-national watershed.

Since the last approved management plan in 2000, the reserve has become fully staffed; added a coastal training program that delivers science-based information to key decision makers; developed a robust volunteer program that provides broad support to Reserve programs; added a bi-nationally focused Watershed Program; completed habitat restoration projects to improve estuary function; improved management of sediment delivery to the estuary; and constructed facilities to support essential functions of the reserve including interpretive structures, staff offices, and on-site laboratory.

This management plan amends the boundary of the reserve to be 2,293 acres, 220 acres less, as a result of excluding the Border Infrastructure System completed since the last approved management plan. This plan can be accessed for review at trnerr.org/visitors_center.html.
