SUPPLEMENTARY INFORMATION:
Regulations governing the butterfish fishery are found at 50 CFR part 648. The regulations require specifications for maximum sustainable yield, initial optimum yield, allowable biological catch, domestic annual harvest (DAH), domestic annual processing, joint venture processing, and total allowable levels of foreign fishing for the species managed under the Atlantic Mackerel, Squid, and Butterfish Fishery Management Plan (FMP). The procedures for setting the annual initial specifications are described in §648.21.

The 2010 specification of DAH for butterfish was set at 485 mt (75 FR 5537, February 3, 2010). The 2010 specification of DAH for butterfish is closed and vessels issued Federal permits for butterfish may not retain or land more than 250 lb (0.11 mt) of butterfish per trip or calendar day.

The directed butterfish fishery from exceeding its domestic harvest (DAH) of 485 mt, and to allow for the effective management of this stock. The Administrator, Northeast Region, NMFS, based on dealer reports and other available information, has determined that 80 percent of the DAH for butterfish in 2010 fishing will be harvested. Therefore, effective 0001 hours, August 24, 2010, the directed fishery for the butterfish fishery is closed and vessels issued Federal permits for butterfish may not retain or land more than 250 lb (0.11 mt) of butterfish per trip or calendar day. The directed fishery will reopen effective 0001 hours, January 1, 2011, when the 2011 DAH becomes available.

Classification
This action is required by 50 CFR part 648, and is exempt from review under Executive Order 12866.

The Assistant Administrator for Fisheries, NOAA (AA), finds good cause pursuant to 5 U.S.C. 553(b)(B) to waive prior notice and the opportunity for public comment because it would be contrary to the public interest. This action closes the butterfish fishery until January 1, 2011, under current regulations. The regulations at §648.21 require such action to ensure that butterfish vessels do not exceed the 2010 TAC. Data indicating the butterfish fleet will have landed at least 80 percent of the 2010 TAC have only recently become available. If implementation of this closure if delayed to solicit prior public comment, the quota for this year will be exceeded, thereby undermining the conservation objectives of the FMP. The AA further finds, pursuant to 5 U.S.C. 553(d)(3), good cause to waive the 30–day delayed effectiveness period for the reasons stated above.

Authority: 16 U.S.C. 1801 et seq.

[Docket No. 090428799–9802–01]
RIN 0648–BA10
Magnuson-Stevens Act Provisions;
Fisheries Off West Coast States;
Inseason Adjustments to Fishery Management Measures
AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.
ACTION: Final rule; inseason adjustments to biennial groundfish management measures; request for comments.
SUMMARY: This final rule makes inseason adjustments to commercial fishery management measures for several groundfish species taken in the U.S. exclusive economic zone (EEZ) off the coasts of Washington, Oregon, and California. These actions, which are authorized by the Pacific Coast Groundfish Fishery Management Plan (FMP), are intended to allow fisheries to access more abundant groundfish stocks while protecting overfished and depleted stocks.
DATES: Effective 0001 hours (local time) August 18, 2010. Comments on this final rule must be received no later than 5 p.m., local time on September 22, 2010.
ADDRESSES: You may submit comments, identified by RIN 0648–BA10, by any one of the following methods:
• Fax: 206–526–6147, Attn: Gretchen Hanshew
Instructions: No comments will be posted for public viewing until after the comment period has closed. All comments received are a part of the public record and will generally be posted to http://www.regulations.gov without change. All Personal Identifying Information (for example, name, address, etc.) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information.
NMFS will accept anonymous comments (enter N/A in the required fields, if you wish to remain anonymous). You may submit attachments to electronic comments in Microsoft Word, Excel, WordPerfect, or Adobe PDF file formats only.
FOR FURTHER INFORMATION CONTACT: Gretchen Hanshew (Northwest Region, NMFS), 206–526–6147, fax: 206–526–6736, gretchen.hanshew@noaa.gov.
SUPPLEMENTARY INFORMATION:
Electronic Access
This final rule is accessible via the Internet at the Office of the Federal Register’s Web site at http://www.gpoaccess.gov/fr/index.html. Background information and documents are available at the Pacific Fishery Management Council’s (the Council or PFMC) Web site at http://www.pcouncil.org/.
Background
On December 31, 2008, NMFS published a proposed rule to implement the 2009–2010 specifications and management measures for the Pacific Coast groundfish fishery (73 FR 80516). The final rule to implement the 2009–2010 specifications and management measures for the Pacific Coast Groundfish Fishery was published on March 6, 2009 (74 FR 9874). This final rule was subsequently amended by inseason actions on April 27, 2009 (74 FR 19011), July 6, 2009 (74 FR 31874), October 28, 2009 (74 FR 55468), February 26, 2010 (75 FR 8820), May 4, 2010 (75 FR 23620), July 1, 2010 (75 FR 38030), and July 16, 2010 (75 FR 41386). Additional changes to the 2009–2010 specifications and management measures for petrale sole were made in two final rules: On November 4, 2009 (74 FR 57117), and December 10, 2009 (74 FR 65480). NMFS issued a final rule in response to a duly issued court order on July 8, 2010 (75 FR 39178). These specifications and management measures are at 50 CFR part 660, subpart G.
Limited Entry Non-Whiting Trawl Fishery Management Measures
Changes to the groundfish management measures implemented by this action were recommended by the Council, in consultation with Pacific Coast Treaty Indian Tribes and the States of Washington, Oregon, and California, at its June 11–17, 2010, meeting in Foster City, CA. The Council recommended adjusting the groundfish management measures to respond to updated fishery information and other inseason management needs. These changes include increases to bi-monthly cumulative limits in the commercial fisheries off Washington, Oregon, and California and a change to the lingcod retention regulations for salmon troll fishermen. The increases to cumulative limits are intended to allow additional harvest opportunities for species for which catch estimates through the end of the year are lower than anticipated. The change to the lingcod retention regulations is intended to relieve a restriction for salmon trollers that do not fish inside the groundfish rockfish conservation area (RCA). The increase to chilipepper rockfish trip limits in the limited entry trawl fishery slightly increases the projected impacts to bocaccio, a co-occurring overfished species. However, even with the slight increase in impacts for bocaccio, when combined with the projected impacts from all other fisheries, the 2010 OY for this rebuilding species is not projected to be exceeded.
Estimated mortality of overfished and target species are the result of management measures designed to meet the Pacific Coast Groundfish FMP objective of achieving, to the extent possible, but not exceeding, OYs of target species, while fostering the rebuilding of overfished stocks by remaining within their rebuilding OYs.
Limited Entry Non-Whiting Trawl Fishery
Chilipepper rockfish is an underutilized species, primarily due to fishery management measures that are intended to reduce impacts to co-occurring bocaccio, an overfished species. Recent inseason restrictions to trip limits for sablefish, Dover sole, petrale sole and other flatfish in the limited entry trawl fishery to prevent exceeding the 2010 OY for petrale sole and the limited entry trawl allocation for sablefish have reduced projected impacts to bocaccio in the trawl fishery. Due to the lower than anticipated projected impacts to bocaccio, the Council considered increasing the trip limits for chilipepper rockfish to provide additional harvest opportunities for this underutilized healthy stock. With the recommended chilipepper rockfish trip limit adjustments, projected impacts to overfished bocaccio are anticipated to be 7.5 mt, or 47 percent of the trawl fisheries’ initially projected bocaccio impacts of...
