SUPPLEMENTARY INFORMATION:

I. Background

The purpose of this survey is to develop and maintain a timely list of retail, wholesale, and service establishments where urban consumers shop for specified items. This information is used as the sampling universe for selecting establishments at which prices of specific items are collected and monitored for use in calculating the Consumer Price Index (CPI). The survey has been ongoing since 1980 and also provides expenditure data that allows items that are priced in the CPI to be properly weighted.

II. Current Action

Office of Management and Budget clearance is being sought for the Telephone Point of Purchase Survey (TPOPS).

Since 1997, the survey has been administered quarterly via a computer-assisted-telephone-interview. This survey is flexible and creates the possibility of introducing new products

into the CPI in a timely manner. The data collected in this survey are necessary for the continuing construction of a current outlet universe from which locations are selected for the price collection needed for calculating the CPI. Furthermore, the TPOPS provides the weights used in selecting the items that are priced at these establishments. This sample design produces an overall CPI market basket that is more reflective of the prices faced and the establishments visited by urban consumers.

For this clearance, the BLS will be implementing a cell phone frame to address a coverage issue associated with landline RDD surveys. The goal of including a cell phone frame is to contact respondents who reside in households with no landline service, but with cellular phone service. The implementation process will begin with a pre-test beginning in the first quarter of 2011 to assess cell phone frame interviewing and to determine the correct amount of sample to pull for each primary sampling unit or geographic area in the CPI. The cell phone frame will be deployed into production in the third quarter of 2011.

SUPPLEMENTARY INFORMATION:**I. Abstract**

Since 1998, the National Science Foundation (NSF) has supported interdisciplinary training of doctoral students across the nation through the Integrative Graduate Education and Research Traineeship (IGERT) Program. NSF awards IGERT grants to institutions that develop innovative, interdisciplinary doctoral training programs in science, technology, engineering, and mathematics (STEM) disciplines. Unlike traditional graduate research or teaching assistantships, IGERT provides doctoral students with unrestricted funds, including a living stipend plus tuition and fees. NSF intends to conduct an implementation evaluation of the program to learn what program elements are most effective in fostering interdisciplinary

collaborations, research, and learning. Specifically, the evaluation will assess the program's perceived progress towards its three goals of fostering interdisciplinary education, recruiting and retaining a diverse population of graduate students, and catalyzing cultural change within institutions to better support interdisciplinary endeavors. Data from this collection will be used by NSF to respond to OMB and congressional inquiries, document best practices for training interdisciplinary scientists, and inform decisions about future project modifications.

II. Method of Collection

Data will be collected via interviews and surveys from faculty members and students who have participated in the five most recent cohorts (2005–2009) of IGERT projects.
