

that would allow anyone to identify respondents.

Description of the Need for the Information and Proposed Use of the Information—The National Highway Traffic Safety Administration's (NHTSA) mission is to save lives, prevent injuries, and reduce healthcare and other economic costs associated with motor vehicle crashes. Over thirty percent of all fatal crashes are estimated to be speed-related crashes, defined as racing, exceeding the speed limit, or driving too fast for conditions. Speed-related crashes resulted in 11,674 lives lost in 2008 and an estimated cost of \$40.4 billion in 2000. In order to plan and evaluate programs intended to reduce speed-related crashes, NHTSA periodically conducts telephone surveys to update its knowledge and understanding of the public's attitudes and behaviors with respect to speeding issues.

NHTSA has conducted two previous administrations of the National Survey of Speeding Attitudes and Behavior—once in 1997 and again in 2002. In the 2010 survey, NHTSA intends to examine the extent to which drivers speed, who the speeders are, when and why drivers speed, and what countermeasures are most acceptable and effective in reducing speeding. Furthermore, NHTSA plans to assess whether or not self-reported behaviors, attitudes, and perceptions regarding speeding and associated

countermeasure strategies have changed over time, since the administration of the 1997 and 2002 national surveys. The 2010 survey will also include new questions on emerging speed-related technologies. The findings from this proposed collection of information will assist NHTSA in designing, targeting, and implementing programs intended to reduce speed on the roadways and to provide data to States, localities, and law enforcement agencies that will aid in their efforts to reduce speed-related crashes and injuries.

Description of the Likely Respondents (Including Estimated Number, and Proposed Frequency of Response to the Collection of Information)—Under this proposed effort, the Contractor would conduct telephone interviews averaging approximately 20 minutes in length with 6,000 randomly selected members of the general driving public, age 16 and older. The respondent sample would be selected from all 50 States and the District of Columbia. Interviews would be conducted with randomly selected persons with residential phones or cell phones. Businesses are ineligible for the sample and would not be interviewed. No more than one respondent would be

selected per household. Each member of the sample would complete one interview.

Prior to the administration of the survey, a total of 15 pretest interviews, averaging 20 minutes in length would be administered to test the computer programming of the questionnaire, and to determine if any final adjustments to the questionnaire are needed. Following any revisions carried out as a result of the pretest, the Contractor would begin the main survey administration.

Estimate of the Total Annual Reporting and Recordkeeping Burden Resulting From the Collection of Information—NHTSA estimates that respondents will spend an average of 20 minutes each to complete the survey, for a total of 2,005 hours for the 15 pretest respondents and 6,000 survey respondents. The respondents would not incur any reporting cost from the information collection. The respondents also would not incur any recordkeeping burden or recordkeeping cost from the information collection.
