

embedded option has intrinsic value to the bank, the floor or ceiling should be ignored and the instrument should be treated as a floating rate instrument. However, if the embedded option has intrinsic value to the bank's counterparty, the contractual floor or ceiling should continue to be taken into account and the instrument should be treated as a fixed rate instrument. For example, when the interest rate on a floating rate loan reaches its contractual ceiling, the embedded option represented by the ceiling has intrinsic value to the borrower and is a detriment to the bank because the loan's yield to the bank is lower than what it would have been without the ceiling. When the interest rate on a floating rate loan reaches its contractual floor, the embedded option represented by the floor has intrinsic value to the bank and is a benefit to the bank because the loan's yield to the bank is higher than what it would have been without the floor.

Accordingly, the agencies are proposing to revise the instructions for reporting maturity and repricing data in the four Call Report schedules identified above. As revised, the instructions would indicate that a floating rate asset that has reached its contractual ceiling and a floating rate liability that has reached its contractual floor would be treated as a fixed rate instrument and reported based on the time remaining until its contractual maturity date. In contrast, the instructions would state that a floating rate asset that has reached its contractual floor and a floating rate liability that has reached its contractual ceiling would be treated as a floating rate instrument and reported based on the time remaining until the next interest rate adjustment date (or the contractual maturity date, if earlier).
