Need and Use of the Information: The ginning data collected provides (1) all segments of the cotton industry—buyers, brokers, crushers, shippers, textile firms, and researchers with exact quantities of cotton available at specific geographic locations within the U.S. on a regular basis; (2) precise statistics, especially when at least 50 percent of the forecasted cotton production has been ginned in a state; and (3) final season ginning data is used to establish final production. If the information were collected less frequent, the cotton industry would be without county level quantities ginned that could seriously affect transportation costs and marketing strategies.

Title: Equine Survey.

OMB Control Number: 0535–0227.

Summary of Collection: The primary objective of the National Agricultural Statistics Service (NASS) is to prepare and issue current official State and national estimates of crop and livestock production, disposition, and prices. Services such as statistical consultation, data collection, summary tabulation, and analysis are performed for other Federal and State agencies on a reimbursable basis as the need arises. In the past, equine surveys have been conducted in twelve States where equine is a significant portion of their agriculture. The results are used to provide an assessment of the equine industry's contribution to the State's economy in terms of infrastructure and value.

Need and Use of the Information: NASS will collect information on equine inventories, by category; equine revenue, by activity; and equine related expenditures, by purpose. In addition, these surveys will provide NASS with names and addresses of equine operations that can be used for Census of Agriculture enumeration and for the NASS program that seeks to cover 99 percent of U.S. agricultural cash receipts.
