Pages 73935–74604

Federal Register

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register**, *www.gpoaccess.gov/nara,* available through GPO Access, is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

For more information about GPO Access, contact the GPO Access User Support Team, call toll free 1-888-293-6498; DC area 202-512-1530; fax at 202-512-1262; or via e-mail at *gpoaccess@gpo.gov.* The Support Team is available between 7:00 a.m. and 9:00 p.m. Eastern Time, Monday–Friday, except official holidays.

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 75 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WHEN: Tuesday, December 7, 2010
9 a.m.–12:30 p.m.

WHERE: Office of the Federal Register
Conference Room, Suite 700
800 North Capitol Street, NW.
Washington, DC 20002

RESERVATIONS: (202) 741–6008

Printed on recycled paper.

Rules and Regulations

Federal Register
Vol. 75, No. 229
Tuesday, November 30, 2010

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

NUCLEAR REGULATORY COMMISSION

10 CFR Parts 2, 10, 20, 25, 26, 30, 34, 40, 50, 54, 70, 71, 72, 95, 110, and 150

RIN 3150–AH49

[NRC–2009–0085]

Miscellaneous Administrative Changes

AGENCY: Nuclear Regulatory Commission.

ACTION: Final rule.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC or the Commission) is amending its regulations to make miscellaneous administrative changes, including an update of the list of Agreement and Non-Agreement States, the merging of the Region II materials program with that of Region I, the correction of office titles associated with the Office of Nuclear Material Safety and Safeguards and the Office of Federal and State Materials and Environmental Management Programs, the inclusion of references to new Executive Order (E.O.) 13526, and other edits, corrections, and conforming changes. This document is necessary to inform the public of these changes to the NRC's regulations.

DATES: This rule is effective December 30, 2010.

FOR FURTHER INFORMATION CONTACT: Angella Love Blair, Rules, Announcements, and Directives Branch, Division of Administrative Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, telephone: 301–492–3671, e-mail: *Angella.Love-Blair@nrc.gov.*

ADDRESSES: You can access publicly available documents related to this document using the following methods:

NRC's Public Document Room (PDR): The public may examine and have copied for a fee publicly available documents at the NRC's PDR, Room O1 F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland.

NRC's Agencywide Documents Access and Management System (ADAMS): Publicly available documents created or received at the NRC are available electronically at the NRC's Electronic Reading Room at *http://www.nrc.gov/reading-rm/adams.html.* From this page, the public can gain entry into ADAMS, which provides text and image files of NRC's public documents. If you do not have access to ADAMS or if there are problems in accessing the documents located in ADAMS, contact the NRC's PDR reference staff at 1–800–397–4209, 301–415–4737, or by e-mail to *pdr.resource@nrc.gov.*

Federal Rulemaking Web Site: Supporting materials related to this final rule can be found at *http://www.regulations.gov* by searching on Docket ID: NRC–2009–0085.

SUPPLEMENTARY INFORMATION:

Introduction

The NRC is amending its regulations at Title 10 of the *Code of Federal Regulations* (10 CFR) parts 2, 10, 20, 25, 26, 30, 34, 40, 50, 54, 70, 71, 72, 95, 110, and 150 to make miscellaneous administrative changes, including an update of the list of Agreement and Non-Agreement States, the merging of the Region II materials program with that of Region I, the correction of office titles associated with the Office of Nuclear Material Safety and Safeguards and the Office of Federal and State Materials and Environmental Management Programs, the inclusion of references to new E.O. 13526, and other edits, corrections, and conforming changes.

Summary of Changes

Include Electronic Watermarks to Denote Proprietary Content

In § 2.390(b)(1)(i)(A) and (b)(1)(i)(B), the language is revised to include electronic watermarks to denote proprietary content. Current regulations at § 2.390(b)(1)(i)(A) and (b)(1)(i)(B) currently require proprietary marking at the top of the first page, and on succeeding, affected pages, either adjacent to the material sought to be withheld from public disclosure, or at the top of the page, if the entire page is sought to be withheld. At the time the regulations were written, information technology alternatives, such as electronic watermarks, were not in common use, if the technology was available at all. Various alternatives such as electronic watermark, margin notation, or other suitable markings may now be available to denote proprietary content, and would be acceptable as being completely within the spirit of the regulations, since the goal of the regulations is simply to ensure that there is notice of proprietary content to whoever is handling the document and not to be unnecessarily prescriptive, either as to methodology or terminology.

Update the List of Non-Agreement States

In §§ 30.6(b)(2)(i), 40.5(b)(2)(i), and 70.5(b)(2)(i), Maine, Massachusetts, Pennsylvania and New Jersey no longer appear because they are Agreement States. In §§ 30.6(b)(2)(iii)(B), 40.5(b)(2)(iii)(B), and 70.5(b)(2)(iii)(B), Ohio, Wisconsin and Minnesota no longer appear because they are Agreement States and in §§ 30.6(b)(2)(iv)(B), 40.5(b)(2)(iv)(B), and 70.5(b)(2)(iv)(B), Oklahoma no longer appears because it is an Agreement State.

Add a List of Mining and Milling Agreement States

In §§ 30.6(b)(2)(iii)(A), 40.5(b)(2)(iii)(A), and 70.5(b)(2)(iii)(A), Illinois and Ohio are now properly identified as mining and milling Agreement States and in §§ 30.6(b)(2)(iv)(A), 40.5(b)(2)(iv)(A), and 70.5(b)(2)(iv)(A), Colorado, Utah, Texas and Washington are also identified as mining and milling Agreement States. This addition was made to highlight those Agreements States who selected oversight authority concerning this type of regulation.

Amend Relevant Sections to Identify That Region II's Materials Program Has Been Merged Into That of Region I

The contact information for material licensees has been updated in §§ 30.6(b)(2)(ii), 40.5(b)(2)(ii), 70.5(b)(2)(ii) to reflect Region I because Region II's materials program has been merged into that of Region I.

Remove Obsolete Text

Sections 30.37, 40.43, and 70.33 are revised to remove obsolete text, contained in paragraph (b) of each section, that is related to a final rule published on January 16, 1996 (61 FR

1109). The final rule provided, on a one-time basis, a five-year extension for certain licenses. Those license extensions are now expired.

Correct Office Title Associated with the Office of Nuclear Material Safety and Safeguards

The office title "Spent Fuel Project Office" is corrected to "Division of Spent Fuel Storage and Transportation" in §§ 71.1, 71.17(c)(3), 71.95(c), 71.101(c), 72.4, 72.16(a), 72.44(f), and 72.186(b).

Use the Formal Title for the Office of Federal and State Materials and Environmental Management Programs

Section 71.97(c)(3)(iii) is revised to change the office title from "Office of State Programs" to "Office of Federal and State Materials and Environmental Management Programs".

Remove Text for an Exemption that Expired on October 18, 2004

In a petition for rulemaking (PRM) submitted by the Nuclear Energy Institute on April 16, 2008 (PRM–70–8; Docket ID NRC–2009–0184), the petitioner requested removal of the exemption in the introductory text to Appendix A to 10 CFR part 70 because this exemption expired on October 18, 2004. The NRC agrees with the petitioner and the text is removed.

Correct Column Heading in Appendix B of 10 CFR Part 20

In the second table that appears in Appendix B to 10 CFR part 20, the heading for the second column of Table 1 which reads "μCi/ml" is corrected to read "μCi".

Correct to Use the Defined Term "Watchman"

In § 26.4(a)(5), the term "watchperson" is replaced with the defined term "watchman".

Correct the Spelling of the Word "Measures"

In § 50.70(b)(3), the spelling of the word "measures" is corrected.

Remove References to Information Collections

In § 34.8(b), the reference to § 34.53 is removed because it does not contain any information collections. In § 71.6(b), the reference to § 71.20 is removed because the information collection in that section has expired.

Add Missing Punctuation

In § 50.56, a comma is added after the word "contrary".

Remove Reference to Section That Does Not Exist

In § 150.10, the reference to § 150.18 is removed because that section does not exist.

Correct Name of NUREG

In § 150.17(b), the name "NUREG/BR–007" is corrected to read "NUREG/BR–0007".

Correct Executive Order Reference

Executive Order (E.O.) 12958 was revoked and replaced with E.O. 13526 in early 2010. References were corrected to E.O. 13526 in the authority citations to 10 CFR parts 25, 54, and 95; definitions in §§ 10.5, 25.5, 95.5, and 110.2; and §§ 25.37(b) and 95.59.

Make Conforming Changes for Consistency and Correct an Error in 10 CFR Part 26

Conforming changes to refer to "review procedure" are made in § 26.39. Conforming changes to refer to individuals "constructing or directing the construction of safety- or security-related SSCs" are made in §§ 26.403(b)(2)(ii), 26.403(b)(3), 26.405(c)(1), 26.406(b), 26.406(d), 26.407 and 26.409. An incorrect reference to operators licensed under 10 CFR Part 52 is removed from the introductory text of § 26.719(b)(2).

Rulemaking Procedure

Because these amendments constitute minor administrative corrections to the regulations, the Commission finds that the notice and comment provisions of the Administrative Procedure Act are unnecessary and is exercising its authority under 5 U.S.C. 553(b)(B) to publish these amendments as a final rule. The amendments are effective 30 days after publication in the **Federal Register**. These amendments do not require action by any person or entity regulated by the NRC. Also, the final rule does not change the substantive responsibilities of any person or entity regulated by the NRC.

Environmental Impact: Categorical Exclusion

The NRC has determined that this final rule is the type of action described in categorical exclusion 10 CFR 51.22(c)(2), which excludes from a major action rules which are corrective or of a minor non-policy nature and do not substantially modify existing regulations. Therefore, neither an environmental impact statement nor an environmental assessment has been prepared for this rule.

Paperwork Reduction Act Statement

This final rule does not contain information collection requirements and, therefore, is not subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Public Protection Notification

The NRC may not conduct or sponsor, and a person is not required to respond to, a request for information or an information collection requirement unless the requesting document displays a currently valid Office of Management and Budget control number.

Backfit Analysis

The NRC has determined that the backfit rule does not apply to this final rule; therefore, a backfit analysis is not required for this final rule because these amendments are administrative in nature and do not involve any provisions that would impose backfits as defined in 10 CFR chapter I, or be inconsistent with the issue finality provisions in 10 CFR part 52.

Congressional Review Act (CRA)

Under the CRA of 1996, the NRC has determined that this action is not a major rule and has verified this determination with the Office of Information and Regulatory Affairs of OMB.

List of Subjects

10 CFR Part 2

Administrative practice and procedure, Antitrust, Byproduct material, Classified information, Environmental protection, Nuclear materials, Nuclear power plants and reactors, Penalties, Sex discrimination, Source material, Special nuclear material, Waste treatment and disposal.

10 CFR Part 10

Administrative practice and procedure, Classified information, Government employees, Security measures.

10 CFR Part 20

Byproduct material, Criminal penalties, Licensed material, Nuclear materials, Nuclear power plants and reactors, Occupational safety and health, Packaging and containers, Radiation protection, Reporting and recordkeeping requirements, Source material, Special nuclear material, Waste treatment and disposal.

10 CFR Part 25

Classified information, Criminal penalties, Investigations, Reporting and

recordkeeping requirements, Security measures.

10 CFR Part 26

Alcohol abuse, Alcohol testing, Appeals, Chemical testing, Drug abuse, Drug testing, Employee assistance programs, Fatigue, Fitness for duty, Management actions, Nuclear power reactors, Protection of information, Reporting and recordkeeping requirement.

10 CFR Part 30

Byproduct material, Criminal penalties, Government contracts, Intergovernmental relations, Isotopes, Nuclear materials, Radiation protection, Reporting and recordkeeping requirements.

10 CFR Part 34

Criminal penalties, Packaging and containers, Radiation protection, Radiography, Reporting and recordkeeping requirements, Scientific equipment, Security measures.

10 CFR Part 40

Criminal penalties, Government contracts, Hazardous materials transportation, Nuclear materials, Reporting and recordkeeping requirements, Source material, Uranium.

10 CFR Part 50

Antitrust, Classified information, Criminal penalties, Fire protection, Intergovernmental relations, Nuclear power plants and reactors, Radiation protection, Reactor siting criteria, Reporting and recordkeeping requirements.

10 CFR Part 54

Administrative practice and procedure, Age-related degradation, Backfitting, Classified information, Criminal penalties, Environmental protection, Nuclear power plants and reactors, Reporting and recordkeeping requirements.

10 CFR Part 70

Criminal penalties, Hazardous materials transportation, Material control and accounting, Nuclear materials, Packaging and containers, Radiation protection, Reporting and recordkeeping requirements, Scientific equipment, Security measures, Special nuclear material.

10 CFR Part 71

Criminal penalties, Hazardous materials transportation, Nuclear materials, Packaging and containers, Reporting and recordkeeping requirements.

10 CFR Part 72

Administrative practice and procedure, Criminal penalties, Manpower training programs, Nuclear materials, Occupational safety and health, Penalties, Radiation protection, Reporting and recordkeeping requirements, Security measures, Spent fuel, Whistleblowing.

10 CFR Part 95

Classified information, Criminal penalties, Reporting and recordkeeping requirements, Security measures.

10 CFR Part 110

Administrative practice and procedure, Classified information, Criminal penalties, Export, Import, Intergovernmental relations, Nuclear materials, Nuclear power plants and reactors, Reporting and recordkeeping requirements, Scientific equipment.

10 CFR Part 150

Criminal penalties, Hazardous materials transportation, Intergovernmental relations, Nuclear materials, Reporting and recordkeeping requirements, Security measures, Source material, Special nuclear material.

■ For the reasons set out in the preamble and under the authority of the Atomic Energy Act of 1954, as amended; the Energy Reorganization Act of 1974, as amended; and 5 U.S.C. 552 and 553, the NRC is adopting the following amendments to 10 CFR parts 2, 10, 20, 25, 26, 30, 34, 40, 50, 54, 70, 71, 72, 95, 110, and 150.

PART 2—RULES OF PRACTICE FOR DOMESTIC LICENSING PROCEEDINGS AND ISSUANCE OF ORDERS

■ 1. The authority citation for part 2 continues to read as follows:

Authority: Secs.161, 181, 68 Stat. 948, 953, as amended (42 U.S.C. 2201, 2231); sec. 191, as amended, Pub. L. 87–615, 76 Stat. 409 (42 U.S.C. 2241); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841); 5 U.S.C. 552; sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note).

Section 2.101 also issued under secs. 53, 62, 63, 81, 103, 104, 68 Stat. 930, 932, 933, 935, 936, 937, 938, as amended (42 U.S.C. 2073, 2092, 2093, 2111, 2133, 2134, 2135); sec. 114(f), Pub. L. 97–425, 96 Stat. 2213, as amended (42 U.S.C. 10143(f)); sec. 102, Pub. L. 91–190, 83 Stat. 853, as amended (42 U.S.C. 4332); sec. 301, 88 Stat. 1248 (42 U.S.C. 5871).

Sections 2.102, 2.103, 2.104, 2.105, 2.321 also issued under secs. 102, 103, 104, 105, 183i, 189, 68 Stat. 936, 937, 938, 954, 955, as amended (42 U.S.C. 2132, 2133, 2134, 2135, 2233, 2239). Section 2.105 also issued under Pub. L. 97–415, 96 Stat. 2073 (42 U.S.C. 2239). Sections 2.200–2.206 also issued under secs. 161 b, i, o, 182, 186, 234, 68 Stat. 948–951, 955, 83 Stat. 444, as amended (42 U.S.C. 2201(b), (i), (o), 2236, 2282); sec. 206, 88 Stat. 1246 (42 U.S.C. 5846). Section 2.205(j) also issued under Pub. L. 101–410, 104 Stat. 90, as amended by section 3100(s), Pub. L. 104–134, 110 Stat. 1321–373 (28 U.S.C. 2461 note). Subpart C also issued under sec. 189, 68 Stat. 955 (42 U.S.C. 2239). Section 2.301 also issued under 5 U.S.C. 554. Sections 2.343, 2.346, 2.712 also issued under 5 U.S.C. 557. Section 2.340 also issued under secs. 135, 141, Pub. L. 97–425, 96 Stat. 2232, 2241 (42 U.S.C. 10155, 10161). Section 2.390 also issued under sec. 103, 68 Stat. 936, as amended (42 U.S.C. 2133) and 5 U.S.C. 552. Sections 2.600–2.606 also issued under sec. 102, Pub. L. 91–190, 83 Stat. 853, as amended (42 U.S.C. 4332). Sections 2.800 and 2.808 also issued under 5 U.S.C. 553. Section 2.809 also issued under 5 U.S.C. 553, and sec. 29, Pub. L. 85–256, 71 Stat. 579, as amended (42 U.S.C. 2039). Subpart K also issued under sec. 189, 68 Stat. 955 (42 U.S.C. 2239); sec. 134, Pub. L. 97–425, 96 Stat. 2230 (42 U.S.C. 10154). Subpart L also issued under sec. 189, 68 Stat. 955 (42 U.S.C. 2239). Subpart M also issued under sec. 184 (42 U.S.C. 2234) and sec. 189, 68 Stat. 955 (42 U.S.C. 2239). Subpart N also issued under sec. 189, 68 Stat. 955 (42 U.S.C. 2239. Appendix A also issued under sec. 6, Pub. L. 91–550, 84 Stat. 1473 (42 U.S.C. 2135).

■ 2. In § 2.390, revise paragraphs (b)(1)(i)(A) and (b)(1)(i)(B) to read as follows:

§ 2.390 Public inspections, exemptions, requests for withholding.

* * * * *

(b) * * *

(1) * * *

(i) * * *

(A) The first page of the document, and each successive page containing such information, must be marked so as to be readily visible, at the top, or by electronic watermark or other suitable marking on the body of the page, with language substantially similar to: "confidential information submitted under 10 CFR 2.390," "withhold from public disclosure under 10 CFR 2.390," or "proprietary," to indicate that it contains information the submitter seeks to have withheld.

(B) Each document or page, as appropriate, containing information sought to be withheld from public disclosure must indicate, adjacent to the information, or as specified in paragraph (b)(1)(i)(A) of this section if the entire page is affected, the basis (*i.e.,* trade secret, personal privacy, etc.) for proposing that the information be withheld from public disclosure under paragraph (a) of this section.

* * * * *

PART 10—CRITERIA AND PROCEDURES FOR DETERMINING ELIGIBILITY FOR ACCESS TO RESTRICTED DATA OR NATIONAL SECURITY INFORMATION OR AN EMPLOYMENT CLEARANCE

■ 3. The authority citation for part 10 continues to read as follows:

Authority: Secs. 145, 161, 68 Stat. 942, 948, as amended (42 U.S.C. 2165, 2201); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841); E.O. 10450, 3 CFR parts 1949–1953 Comp., p. 936, as amended; E.O. 10865, 3 CFR 1959–1963 Comp., p. 398, as amended; 3 CFR Table 4; E.O. 12968, 3 CFR 1995 COM., p.396.

■ 4. In § 10.5, revise the definition of *National Security Information* to read as follows:

§ 10.5 Definitions.

* * * * *

National Security Information means information that has been determined under Executive Order 13526 or any predecessor or successor order to require protection against unauthorized disclosure and that is so designated.

* * * * *

PART 20—STANDARDS FOR PROTECTION AGAINST RADIATION

■ 5. The authority citation for part 20 continues to read as follows:

Authority: Secs. 53, 63, 65, 81, 103, 104, 161, 182, 186, 68 Stat. 930, 933, 935, 936, 937, 948, 953, 955, as amended, sec. 1701, 106 Stat. 2951, 2952, 2953 (42 U.S.C. 2073, 2093, 2095, 2111, 2133, 2134, 2201, 2232, 2236, 2297f), secs. 201, as amended, 202, 206, 88 Stat. 1242, as amended, 1244, 1246 (42 U.S.C. 5841, 5842, 5846); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); Energy Policy Act of 2005, Pub. L. 109–58, 119 stat. 594 (2005).

■ 6. In Appendix B to part 20, revise the first page of the second table that appears to read as follows:

Appendix B to Part 20—Annual Limits on Intake (ALIs) and Derived Air Concentrations (DACs) of Radionuclides for Occupational Exposure; Effluent Concentrations; Concentrations for Release to Sewerage

* * * * *

BILLING CODE 7590–01–P

PART 25—ACCESS AUTHORIZATION FOR LICENSEE PERSONNEL

■ 7. Revise the authority citation for part 25 to read as follows:

Authority: Secs. 145, 161, 68 Stat. 942, 948, as amended (42 U.S.C. 2165, 2201); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); E.O. 10865, as amended, 3 CFR 1959–1963 Comp., p. 398 (50 U.S.C. 401, note); E.O. 12829, 3 CFR, 1993 Comp., p. 570; E.O. 13526, as amended, 3 CFR, 1995 Comp., p. 333, as amended by E.O. 13292, 3 CFR 2004 Comp., p. 196; E.O. 12968, 3 CFR, 1995 Comp, p. 396;

Appendix A also issued under 96 Stat. 1051 (31 U.S.C. 9701).

■ 8. In § 25.5, revise the definition of *Classified National Security Information* to read as follows:

§ 25.5 Definitions.

* * * * *

Classified National Security Information means information that has been determined under E.O. 13526, as amended, or any predecessor or successor order to require protection against unauthorized disclosure and that is so designated.

* * * * *

■ 9. In § 25.37, revise paragraph (b) to read as follows:

§ 25.37 Violations.

* * * * *

(b) National Security Information is protected under the requirements and sanctions of Executive Order 13526, as amended, or any predecessor or successor orders.

PART 26—FITNESS FOR DUTY PROGRAMS

■ 10. The authority citation for part 26 continues to read as follows:

Authority: Secs. 53, 81, 103, 104, 107, 161, 68 Stat. 930, 935, 936, 937, 948, as amended, sec. 1701, 106 Stat. 2951, 2952, 2953 (42 U.S.C. 2073, 2111, 2112, 2133, 2134, 2137, 2201, 2297f); secs. 201, 202, 206, 88 Stat. 1242, 1244, 1246, as amended (42 U.S.C. 5841, 5842, 5846).

§ 26.4 [Amended]

■ 11. In § 26.4, paragraph (a)(5), remove the word "watchperson" and add in its place the word "watchman".

■ 12. Revise § 26.39 to read as follows:

§ 26.39 Review process for fitness-for-duty policy violations.

(a) Each licensee and other entity who is subject to this subpart shall establish procedures for the review of a determination that an individual who they employ or who has applied for authorization has violated the FFD policy. The review procedure must provide for an objective and impartial review of the facts related to the determination that the individual has violated the FFD policy.

(b) The review procedure must provide notice to the individual of the grounds for the determination that the individual has violated the FFD policy, and must provide an opportunity for the individual to respond and submit additional relevant information.

(c) The review procedure must ensure that the individual who conducts the review is not associated with the administration of the FFD program [*see* the description of FFD program personnel in § 26.4(g)]. Individuals who conduct the review may be management personnel.

(d) If the review finds in favor of the individual, the licensee or other entity shall update the relevant records to reflect the outcome of the review and delete or correct all information the review found to be inaccurate.

(e) When a C/V is administering an FFD program on which licensees and other entities rely, and the C/V determines that its employee, subcontractor, or applicant has violated its FFD policy, the C/V shall ensure that the review procedure required in this section is provided to the individual. Licensees and other entities who rely on a C/V's FFD program need not provide the review procedure required in this section to a C/V's employee, subcontractor, or applicant when the C/V is administering its own FFD program and the FFD policy violation was determined under the C/V's program.

■ 13. In § 26.403, revise paragraphs (b)(2)(ii) and (b)(3) to read as follows:

§ 26.403 Written policy and procedures.

* * * * *

(b) * * *

(2) * * *

(ii) Consumed alcohol to excess before or while constructing or directing the construction of safety- or security-related SSCs, as determined by a test that accurately measures BAC;

* * * * *

(3) The process to be followed if an individual's behavior or condition raises a concern regarding the possible use, sale, or possession of illegal drugs on or off site; the possible use or possession of alcohol while constructing or directing the construction of safety- or security-related SSCs; or impairment from any cause which in any way could adversely affect the individual's ability to safely and competently perform his or her duties.

■ 14. In § 26.405, revise paragraph (c)(1) to read as follows:

26.405 Drug and alcohol testing.

* * * * *

(c) * * *

(1) Pre-assignment. Before assignment to construct or direct the construction of safety- or security-related SSCs;

* * * * *

■ 15. In § 26.406, revise paragraphs (b) and (d) to read as follows:

§ 26.406 Fitness monitoring.

* * * * *

(b) Licensees and other entities shall implement a fitness monitoring program to deter substance abuse and detect indications of possible use, sale, or possession of illegal drugs; use or possession of alcohol while constructing or directing the construction of safety- or security-related SSCs; or impairment from any cause that if left unattended may result in a risk to public health and safety or the common defense and security.

* * * * *

(d) Licensees and other entities shall ensure that the fitness of individuals specified in § 26.4(f) is monitored effectively while the individuals are constructing or directing the construction of safety- and security-related SSCs, commensurate with the potential risk to public health and safety and the common defense and security imposed by the construction activity. To achieve this objective, licensees and other entities shall consider the number and placement of monitors required, the necessary ratio of monitors to individuals specified in § 26.4(f), and the frequency with which the individuals specified in § 26.4(f) shall be monitored while constructing or directing the construction of each safety- or security-related SSC.

■ 16. Revise § 26.407 to read as follows:

§ 26.407 Behavioral observation.

While the individuals specified in § 26.4(f) are constructing or directing the construction of safety- or security-related SSCs, licensees and other entities shall ensure that these individuals are subject to behavioral observation, except if the licensee or other entity has implemented a fitness monitoring program under § 26.406.

■ 17. Revise § 26.409 to read as follows:

§ 26.409 Sanctions.

Licensees and other entities who implement an FFD program under this

subpart shall establish sanctions for FFD policy violations that, at a minimum, prohibit the individuals specified in § 26.4(f) from being assigned to construct or direct the construction of safety- or security-related SSCs unless or until the licensee or other entity determines that the individual's condition or behavior does not pose a potential risk to public health and safety or the common defense and security.

■ 18. In § 26.719, revise the introductory text of paragraph (b)(2) to read as follows:

§ 26.719 Reporting requirements.

* * * * *

(b) * * *

(2) Any acts by any person licensed under 10 CFR part 55 to operate a power reactor, as well as any acts by SSNM transporters, FFD program personnel, or any supervisory personnel who are authorized under this part, if such acts—

PART 30—RULES OF GENERAL APPLICABILITY TO DOMESTIC LICENSING OF BYPRODUCT MATERIAL

■ 19. The authority citation for part 30 continues to read as follows:

Authority: Secs. 81, 82, 161, 182, 183, 186, 68 Stat. 935, 948, 953, 954, 955, as amended, sec. 234, 83 Stat. 444, as amended (42 U.S.C. 2111, 2112, 2201, 2232, 2233, 2236, 2282); secs. 201, as amended, 202, 206, 88 Stat. 1242, as amended, 1244, 1246 (42 U.S.C. 5841, 5842, 5846); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); Energy Policy Act of 2005, Pub. L. No. 109–58, 119 Stat. 549 (2005).

Section 30.7 also issued under Pub. L. 95–601, sec. 10, 92 Stat. 2951 as amended by Pub. L. 102–486, sec. 2902, 106 Stat. 3123 (42 U.S.C. 5851). Section 30.34(b) also issued under sec. 184, 68 Stat. 954, as amended (42 U.S.C. 2234). Section 30.61 also issued under sec. 187, 68 Stat. 955 (42 U.S.C. 2237).

■ 20. In § 30.6, revise paragraph (b)(2) to read as follows:

§ 30.6 Communications.

* * * * *

(b) * * *

(2) *Submissions.* (i) *Region I.* The regional licensing program involves all Federal facilities in the region and non-Federal licensees in the following Region I non-Agreement States and the District of Columbia: Connecticut, Delaware, and Vermont. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region I, Nuclear Material Section B, 475 Allendale Road, King of Prussia, PA 19406–1415; where e-mail is appropriate it should be addressed to *RidsRgn1MailCenter.Resource@nrc.gov*.

(ii) *Region II.* The regional licensing program involves all Federal facilities in the region and non-Federal licensees in the following Region II non-Agreement States and territories: West Virginia, Puerto Rico, and the Virgin Islands. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region I, Nuclear Material Section B, 475 Allendale Road, King of Prussia, PA 19406–1415; where e-mail is appropriate it should be addressed to *RidsRgn1MailCenter.Resource@nrc.gov*.

(iii) *Region III.* (A) The regional licensing program for mining and milling involves all Federal facilities in the region, and non-Federal licensees in the Region III non-Agreement States of Indiana, Michigan, Missouri and the Region III Agreement States of Minnesota, Wisconsin, and Iowa. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region III, Material Licensing Section, 2443 Warrenville Road, Suite 210, Lisle, IL 60532–4352; where e-mail is appropriate it should be addressed to *RidsRgn3MailCenter.Resource@nrc.gov.*

(B) Otherwise, the regional licensing program involves all Federal facilities in the region and non-Federal licensees in the Region III non-Agreement States of Indiana, Michigan, and Missouri. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region III, Material Licensing Section, 2443 Warrenville Road, Suite 210, Lisle, IL 60532–4352; where e-mail is appropriate it should be addressed to *RidsRgn3MailCenter.Resource@nrc.gov.*

(iv) *Region IV.* (A) The regional licensing program for mining and milling involves all Federal facilities in the region, and non-Federal licensees in the Region IV non-Agreement States and territory of Alaska, Hawaii, Idaho, Montana, South Dakota, Wyoming and Guam and Region IV Agreement States of Oregon, California, Nevada, New Mexico, Louisiana, Mississippi, Arkansas, Oklahoma, Kansas, Nebraska, and North Dakota. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region IV, Division of Nuclear Materials Safety, 612 E. Lamar Blvd., Suite 400, Arlington, TX 76011–4125; where e-mail is appropriate it should be addressed to *RidsRgn4MailCenter.Resource@nrc.gov.*

(B) Otherwise, the regional licensing program involves all Federal facilities in the region and non-Federal licensees in the following Region IV non-Agreement States and territory: Alaska, Hawaii, Idaho, Montana, South Dakota, Wyoming, and Guam. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region IV, Division of Nuclear Materials Safety, 612 E. Lamar Blvd., Suite 400, Arlington, TX 76011–4125; where e-mail is appropriate it should be addressed to *RidsRgn4MailCenter.Resource@nrc.gov.*

■ 21. Revise § 30.37 to read as follows:

§ 30.37 Application for renewal of licenses.

Application for renewal of a specific license must be filed on NRC Form 313 and in accordance with § 30.32.

PART 34—LICENSES FOR INDUSTRIAL RADIOGRAPHY AND RADIATION SAFETY REQUIREMENTS FOR INDUSTRIAL RADIOGRAPHIC OPERATIONS

■ 22. The authority citation for part 34 continues to read as follows:

Authority: Secs. 81, 161, 182, 183, 68 Stat. 935, 948, 953, 954, as amended (42 U.S.C. 2111, 2201, 2232, 2233); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note). Section 34.45 also issued under sec. 206, 88 Stat. 1246, (42 U.S.C. 5846).

§ 34.8 [Amended]

■ 23. In § 34.8, paragraph (b), to remove the reference "34.53,".

PART 40—DOMESTIC LICENSING OF SOURCE MATERIAL

■ 24. The authority citation for part 40 continues to read as follows:

Authority: Secs. 62, 63, 64, 65, 81, 161, 182, 183, 186, 68 Stat. 932, 933, 935, 948, 953, 954, 955, as amended, secs. 11e(2), 83, 84, Pub. L. 95–604, 92 Stat. 3033, as amended, 3039, sec. 234, 83 Stat. 444, as amended (42 U.S.C. 2014(e)(2), 2092, 2093, 2094, 2095, 2111, 2113, 2114, 2201, 2232, 2233, 2236, 2282); sec. 274, Pub. L. 86–373, 73 Stat. 688 (42 U.S.C. 2021); secs. 201, as amended, 202, 206, 88 Stat. 1242, as amended, 1244, 1246 (42 U.S.C. 5841, 5842, 5846); sec. 275, 92 Stat. 3021, as amended by Pub. L. 97–415, 96 Stat. 2067 (42 U.S.C. 2022); sec. 193, 104 Stat. 2835, as amended by Pub. L. 104–134, 110 Stat. 1321, 1321–349 (42 U.S.C. 2243); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); Energy Policy Act of 2005, Pub. L. No. 109–59, 119 Stat. 594 (2005).

Section 40.7 also issued under Pub. L. 95–601, sec. 10, 92 Stat. 2951 as amended by Pub. L. 102–486, sec. 2902, 106 Stat. 3123 (42 U.S.C. 5851). Section 40.31(g) also issued under sec. 122, 68 Stat. 939 (42 U.S.C. 2152). Section 40.46 also issued under sec. 184, 68 Stat. 954, as amended (42 U.S.C. 2234). Section 40.71 also issued under sec. 187, 68 Stat. 955 (42 U.S.C. 2237).

■ 25. In § 40.5, revise paragraph (b)(2) to read as follows:

§ 40.5 Communications.

* * * * *

(b) * * *

(2) *Submissions.* (i) *Region I.* The regional licensing program involves all Federal facilities in the region and non-Federal licensees in the following Region I non-Agreement States and the District of Columbia: Connecticut, Delaware, and Vermont. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment or renewal of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region I, Nuclear Material Section B, 475 Allendale Road, King of Prussia, PA 19406–1415; where e-mail is appropriate it should be addressed to *RidsRgn1MailCenter.Resource@nrc.gov.*

(ii) *Region II.* The regional licensing program involves all Federal facilities in the region and non-Federal licensees in the following Region II non-Agreement States and territories: West Virginia, Puerto Rico, and the Virgin Islands. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region I, Nuclear Material Section B, 475 Allendale Road, King of Prussia, PA 19406–1415; where e-mail is appropriate it should be addressed to *RidsRgn1MailCenter.Resource@nrc.gov.*

(iii) *Region III.* (A) The regional licensing program for mining and milling involves all Federal facilities in the region, and non-Federal licensees in the Region III non-Agreement States of Indiana, Michigan, Missouri and Region III Agreement States of Minnesota, Wisconsin, and Iowa. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region III, Material Licensing Section, 2443 Warrenville Road, Suite 210, Lisle, IL 60532–4352; where e-mail is appropriate it should be addressed to *RidsRgn3MailCenter.Resource@nrc.gov.*

(B) Otherwise, the regional licensing program involves all Federal facilities in the region and non-Federal licensees in the following Region III non-Agreement States: Indiana, Michigan, and Missouri. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, or renewal of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region III, Material Licensing Section, 2443 Warrenville Road, Suite 210, Lisle, IL 60532–4352; where e-mail is appropriate it should be addressed to *RidsRgn3MailCenter.Resource@nrc.gov.* Outside of this jurisdiction, concerning the licensing program involving mining and milling, the Agreement States of Illinois and Ohio should be contacted.

(iv) *Region IV.* (A) The regional licensing program for mining and milling involves all Federal facilities in the region, and non-Federal licensees in the Region IV non-Agreement States and territory of Alaska, Hawaii, Idaho, Montana, South Dakota, Wyoming and Guam and Region IV Agreement States of Oregon, California, Nevada, New Mexico, Louisiana, Mississippi, Arkansas, Oklahoma, Kansas, Nebraska, and North Dakota. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination, request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region IV, Division of Nuclear Materials Safety, 612 E. Lamar Blvd., Suite 400, Arlington, TX 76011–4125; where e-mail is appropriate it should be addressed to *mail to: RidsRgn4MailCenter.Resource@nrc.gov.*

(B) Otherwise, the regional licensing program involves all Federal facilities in the region and non-Federal licensees in the following Region IV non-Agreement States and territory: Alaska, Hawaii, Idaho, Montana, South Dakota, Wyoming, and Guam. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment or renewal of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region IV, Division of Nuclear Materials Safety, 612 E. Lamar Blvd., Suite 400, Arlington, TX 76011–4125; where e-mail is appropriate it should be addressed to *RidsRgn4MailCenter.Resource@nrc.gov.*

■ 26. Revise § 40.43 to read as follows:

§ 40.43 Renewal of licenses.

Application for renewal of a specific license must be filed on NRC Form 313 and in accordance with § 40.31.

PART 50—DOMESTIC LICENSING OF PRODUCTION AND UTILIZATION FACILITIES

■ 27. The authority citation for part 50 continues to read as follows:

Authority: Secs. 102, 103, 104, 105, 161, 182, 183, 186, 189, 68 Stat. 936, 937, 938, 948, 953, 954, 955, 956, as amended, sec. 234, 83 Stat. 444, as amended (42 U.S.C. 2132, 2133, 2134, 2135, 2201, 2232, 2233, 2236, 2239, 2282); secs. 201, as amended, 202, 206, 88 Stat. 1242, as amended, 1244, 1246 (42 U.S.C. 5841, 5842, 5846); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); Energy Policy Act of 2005, Pub. L. No. 109–58, 119 Stat. 194 (2005). Section 50.7 also issued under Pub. L. 95–601, sec. 10, 92 Stat. 2951 as amended by Pub. L. 102–486, sec. 2902, 106 Stat. 3123 (42 U.S.C. 5841). Section 50.10 also issued under secs. 101, 185, 68 Stat. 955, as amended (42 U.S.C. 2131, 2235); sec. 102, Pub. L. 91–190, 83 Stat. 853 (42 U.S.C. 4332). Sections 50.13, 50.54(dd), and 50.103 also issued under sec. 108, 68 Stat. 939, as amended (42 U.S.C. 2138).

Sections 50.23, 50.35, 50.55, and 50.56 also issued under sec. 185, 68 Stat. 955 (42 U.S.C. 2235). Sections 50.33a, 50.55a and Appendix Q also issued under sec. 102, Pub. L. 91–190, 83 Stat. 853 (42 U.S.C. 4332). Sections 50.34 and 50.54 also issued under sec. 204, 88 Stat. 1245 (42 U.S.C. 5844). Sections 50.58, 50.91, and 50.92 also issued under Pub. L. 97–415, 96 Stat. 2073 (42 U.S.C. 2239). Section 50.78 also issued under sec. 122, 68 Stat. 939 (42 U.S.C. 2152). Sections 50.80–50.81 also issued under sec. 184, 68 Stat. 954, as amended (42 U.S.C. 2234). Appendix F also issued under sec. 187, 68 Stat. 955 (42 U.S.C. 2237).

§ 50.56 [Amended]

■ 28. In § 50.56, add a comma after the word "contrary".

§ 50.70 [Amended]

■ 29. In § 50.70, paragraph (b)(3), remove the word "meaures" and add in its place the word "measures".

PART 54—REQUIREMENTS FOR RENEWAL OF OPERATING LICENSES FOR NUCLEAR POWER PLANTS

■ 30. Revise the authority citation for part 54 to read as follows:

Authority: Secs. 102, 103, 104, 161, 181, 182, 183, 186, 189, 68 Stat. 936, 937, 938, 948, 953, 954, 955, as amended, sec. 234, 83 Stat. 1244, as amended (42 U.S.C. 2132, 2133, 2134, 2135, 2201, 2232, 2233, 2236, 2239, 2282); secs 201, 202, 206, 88 Stat. 1242, 1244, as amended (42 U.S.C. 5841, 5842).

Section 54.17 also issued under E.O.12829, 3 CFR, 1993 Comp., p.570; E.O. 13526, as amended, 3 CFR, 1995 Comp., p. 333; E.O. 12968, 3 CFR, 1995 Comp., p.391.

PART 70—DOMESTIC LICENSING OF SPECIAL NUCLEAR MATERIAL

■ 31. The authority citation for part 70 continues to read as follows:

Authority: Secs. 51, 53, 161, 182, 183, 68 Stat. 929, 930, 948, 953, 954, as amended, sec. 234, 83 Stat. 444, as amended, (42 U.S.C. 2071, 2073, 2201, 2232, 2233, 2282, 2297f); secs. 201, as amended, 202, 204, 206, 88 Stat. 1242, as amended, 1244, 1245, 1246 (42 U.S.C. 5841, 5842, 5845, 5846). Sec. 193, 104 Stat. 2835 as amended by Pub.L. 104–134, 110 Stat. 1321, 1321–349 (42 U.S.C. 2243); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); Energy Policy Act of 2005, Pub. L. No. 109–58, 119 Stat. 194 (2005).

Sections 70.1(c) and 70.20a(b) also issued under secs. 135, 141, Pub. L. 97–425, 96 Stat. 2232, 2241 (42 U.S.C. 10155, 10161).

Section 70.7 also issued under Pub. L. 95–601, sec. 10, 92 Stat. 2951 as amended by Pub. L. 102–486, sec. 2902, 106 Stat. 3123 (42 U.S.C. 5851). Section 70.21(g) also issued under sec. 122, 68 Stat. 939 (42 U.S.C. 2152). Section 70.31 also issued under sec. 57d, Pub. L. 93–377, 88 Stat. 475 (42 U.S.C. 2077). Sections 70.36 and 70.44 also issued under sec. 184, 68 Stat. 954, as amended (42 U.S.C. 2234). Section 70.81 also issued under secs. 186, 187, 68 Stat. 955 (42 U.S.C. 2236, 2237). Section 70.82 also issued under sec. 108, 68 Stat. 939, as amended (42 U.S.C. 2138).

■ 32. In § 70.5, revise paragraph (b)(2) to read as follows:

§ 70.5 Communications.

* * * * *

(b) * * *

(2) *Submissions.* (i) *Region I.* The regional licensing program involves all Federal facilities in the region and non-Federal licensees in the following Region I non-Agreement States and the District of Columbia: Connecticut, Delaware, and Vermont. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment or renewal of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region I, Nuclear Material Section B, 475 Allendale Road, King of Prussia, PA 19406–1415; where e-mail is appropriate it should be addressed to *RidsRgn1MailCenter.Resource@nrc.gov.*

(ii) *Region II.* The regional licensing program involves all Federal facilities in the region and non-Federal licensees in the following Region II non-Agreement States and territories: West Virginia, Puerto Rico, and the Virgin Islands. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region I, Nuclear Material Section B, 475 Allendale Road, King of Prussia, PA 19406–1415; where e-mail is appropriate it should be addressed to *RidsRgn1MailCenter.Resource@nrc.gov.*

(iii) *Region III.* (A) The regional licensing program for mining and milling involves all Federal facilities in the region, and non-Federal licensees in the Region III non-Agreement States of Indiana, Michigan, Missouri and Region III Agreement States of Minnesota, Wisconsin, and Iowa. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region III, Material Licensing Section, 2443 Warrenville Road, Suite 210, Lisle, IL 60532–4352; where e-mail is appropriate it should be addressed to *RidsRgn3MailCenter.Resource@nrc.gov.*

(B) Otherwise, the regional licensing program involves all Federal facilities in the region and non-Federal licensees in the following Region III non-Agreement States: Indiana, Michigan, and Missouri. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, or renewal of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region III, Material Licensing Section, 2443 Warrenville Road, Suite 210, Lisle, IL 60532–4352; where e-mail is appropriate it should be addressed to *RidsRgn3MailCenter.Resource@nrc.gov.* Outside of this jurisdiction, concerning the licensing program involving mining and milling, the Agreement States of Illinois and Ohio should be contacted.

(iv) *Region IV.* (A) The regional licensing program for mining and milling involves all Federal facilities in the region, and non-Federal licensees in the Region IV non-Agreement States and territory of Alaska, Hawaii, Idaho, Montana, South Dakota, Wyoming and Guam and Region IV Agreement States of Oregon, California, Nevada, New Mexico, Louisiana, Mississippi, Arkansas, Oklahoma, Kansas, Nebraska, and North Dakota. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment, renewal, or termination request of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region IV, Division of Nuclear Materials Safety, 612 E. Lamar Blvd., Suite 400, Arlington, TX 76011–4125; where e-mail is appropriate it should be addressed to *RidsRgn4MailCenter.Resource@nrc.gov.*

(B) Otherwise, the regional licensing program involves all Federal facilities in the region and non-Federal licensees in the following Region IV non-Agreement States and territory: Alaska, Hawaii, Idaho, Montana, South Dakota, Wyoming, and Guam. All mailed or hand-delivered inquiries, communications, and applications for a new license or an amendment or renewal of an existing license specified in paragraph (b)(1) of this section must use the following address: U.S. Nuclear Regulatory Commission, Region IV, Division of Nuclear Materials Safety, 612 E. Lamar Blvd., Suite 400, Arlington, TX 76011–4125; where e-mail is appropriate it should be addressed to *RidsRgn4MailCenter.Resource@nrc.gov.* Outside of this jurisdiction, concerning the licensing program involving mining and milling, the Agreement States of Colorado, Utah, Texas and Washington should be contacted.

■ 33. Revise § 70.33 to read as follows:

§ 70.33 Applications for renewal of licenses.

Applications for renewal of a license should be filed in accordance with §§ 70.21 and 70.22. Information contained in previous applications, statements or reports filed with the Commission under the license may be incorporated by reference, provided that such references are clear and specific.

■ 34. In Appendix A to part 70, revise the introductory text to read as follows:

Appendix A to Part 70—Reportable Safety Events

Licensees must comply with reporting requirements in this appendix. As required by 10 CFR 70.74, licensees subject to the requirements in subpart H of part 70, shall report:

* * * * *

PART 71—PACKING AND TRANSPORTATION OF RADIOACTIVE MATERIAL

■ 35. The authority citation for part 71 continues to read as follows:

Authority: Secs. 53, 57, 62, 63, 81, 161, 182, 183, 68 Stat. 930, 932, 933, 935, 948, 953, 954, as amended, sec. 1701, 106 Stat. 2951, 2952, 2953 (42 U.S.C. 2073, 2077, 2092, 2093, 2111, 2201, 2232, 2233, 2297f); secs. 201, as amended, 202, 206, 88 Stat. 1242, as amended, 1244, 1246 (42 U.S.C. 5841, 5842, 5846); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); Energy Policy Act of 2005, Pub. L. No. 109–58, 119 Stat. 594 (2005). Section 71.97 also issued under sec. 301, Pub. L. 96–295, 94 Stat. 789–790.

§ 71.1 [Amended]

■ 36. In § 71.1, the first sentence of paragraph (a), remove the words "Spent Fuel Project Office" and add in their place the words "Division of Spent Fuel Storage and Transportation".

§ 71.6 [Amended]

■ 37. In § 71.6, paragraph (b), remove the reference "71.20,".

§ 71.17 [Amended]

■ 38. In § 71.17, paragraph (c)(3), remove the words "Spent Fuel Project Office" and add in their place the words "Division of Spent Fuel Storage and Transportation".

§ 71.95 [Amended]

■ 39. In § 71.95, the fourth sentence of the introductory text of paragraph (c), remove the words "Spent Fuel Project Office" and add in their place the words "Division of Spent Fuel Storage and Transportation".

§ 71.97 [Amended]

■ 40. In § 71.97, paragraph (c)(3)(iii), remove the words "Office of State Programs" and add in their place the words "Office of Federal and State Materials and Environmental Management Programs".

§ 71.101 [Amended]

■ 41. In § 71.101, the second sentence of paragraph (c)(1), remove the words "Spent Fuel Project Office" and add in their place the words "Division of Spent Fuel Storage and Transportation".

PART 72—LICENSING REQUIREMENTS FOR THE INDEPENDENT STORAGE OF SPENT NUCLEAR FUEL, HIGH-LEVEL RADIOACTIVE WASTE, AND REACTOR-RELATED GREATER THAN CLASS C WASTE

■ 42. The authority citation for part 72 continues to read as follows:

Authority: Secs. 51, 53, 57, 62, 63, 65, 69, 81, 161, 182, 183, 184, 186, 187, 189, 68 Stat. 929, 930, 932, 933, 934, 935, 948, 953, 954, 955, as amended, sec. 234, 83 Stat. 444, as amended (42 U.S.C. 2071, 2073, 2077, 2092, 2093, 2095, 2099, 2111, 2201, 2232, 2233, 2234, 2236, 2237, 2238, 2282); sec. 274, Pub. L. 86–373, 73 Stat. 688, as amended (42 U.S.C. 2021); sec. 201, as amended, 202, 206, 88 Stat. 1242, as amended, 1244, 1246 (42 U.S.C. 5841, 5842, 5846); Pub. L. 95–601, sec. 10, 92 Stat. 2951 as amended by Pub. L. 102–486, sec. 7902, 106 Stat. 3123 (42 U.S.C. 5851); sec. 102, Pub. L. 91–190, 83 Stat. 853 (42 U.S.C. 4332); secs. 131, 132, 133, 135, 137, 141, Pub. L. 97–425, 96 Stat. 2229, 2230, 2232, 2241, sec. 148, Pub. L. 100–203, 101 Stat. 1330–235 (42 U.S.C. 10151, 10152, 10153, 10155, 10157, 10161, 10168); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); sec. 651(e), Pub. L. No. 109–58, 119 Stat. 806–810 (42 U.S.C. 2014, 2021, 2021b, 2111).

Section 72.44(g) also issued under secs. 142(b) and 148(c), (d), Pub. L. 100–203, 101 Stat. 1330–232, 1330–236 (42 U.S.C. 10162(b), 10168(c), (d)). Section 72.46 also issued under sec. 189, 68 Stat. 955 (42 U.S.C. 2239); sec. 134, Pub. L. 97–425, 96 Stat. 2230 (42 U.S.C. 10154).

Section 72.96(d) also issued under sec. 145(g), Pub. L. 100–203, 101 Stat. 1330–235 (42 U.S.C. 10165(g)).

Subpart J also issued under secs. 2(2), 2(15), 2(19), 117(a), 141(h), Pub. L. 97–425, 96 Stat. 2202, 2203, 2204, 2222, 2224 (42 U.S.C. 10101, 10137(a), 10161(h)).

Subparts K and L are also issued under sec. 133, 98 Stat. 2230 (42 U.S.C. 10153) and sec. 218(a), 96 Stat. 2252 (42 U.S.C. 10198).

§ 72.4 [Amended]

■ 43. In § 72.4, the first sentence, remove the words "Spent Fuel Project Office" and add in their place the words "Division of Spent Fuel Storage and Transportation".

§ 72.16 [Amended]

■ 44. In § 72.16, paragraph (a), remove the words "Spent Fuel Project Office" and add in their place the words "Division of Spent Fuel Storage and Transportation".

§ 72.44 [Amended]

■ 45. In § 72.44, the third sentence of paragraph (f), remove the words "Spent Fuel Project Office" and add in their place the words "Division of Spent Fuel Storage and Transportation".

§ 72.186 [Amended]

■ 46. In § 72.186, the second sentence of paragraph (b), remove the words "Spent Fuel Project Office" and add in their place the words "Division of Spent Fuel Storage and Transportation".

PART 95—FACILITY SECURITY CLEARANCE AND SAFEGUARDING OF NATIONAL SECURITY INFORMATION AND RESTRICTED DATA

■ 47. Revise the authority citation for part 95 to read as follows:

Authority: Secs. 145, 161, 193, 68 Stat. 942, 948, as amended (42 U.S.C. 2165, 2201); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); E.O. 10865, as amended, 3 CFR 1959–1963 Comp., p. 398 (50 U.S.C. 401, note); E.O. 12829, 3 CFR, 1993 Comp., p. 570; E.O. 13526, as amended, 3 CFR, 1995 Comp., p. 333, as amended by E.O. 13292, 3 CFR, 2004 Comp., p. 196; E.O. 12968, 3 CFR, 1995 Comp., p. 391.

■ 48. In § 95.5, revise the definitions of *Classified National Security Information* and *Infraction* to read as follows:

§ 95.5 Definitions.

* * * * *

Classified National Security Information means information that has been determined under E.O. 13526, as amended, or any predecessor or successor order to require protection against unauthorized disclosure and that is so designated.

* * * * *

Infraction means any knowing, willful, or negligent action contrary to the requirements of E.O. 13526, as amended, or any predecessor or successor order, or its implementing directives that does not comprise a "violation," as defined in this section.

* * * * *

■ 49. Revise § 95.59 to read as follows:

§ 95.59 Inspections.

The Commission shall make inspections and reviews of the premises, activities, records and procedures of any licensee, certificate holder, or other person subject to the regulations in this part as the Commission and CSA deem necessary to effect the purposes of the Act, E.O. 13526, as amended, or any predecessor or successor order, and/or NRC rules.

PART 110—EXPORT AND IMPORT OF NUCLEAR EQUIPMENT AND MATERIAL

■ 50. The authority citation for part 110 continues to read as follows:

Authority: Secs. 51, 53, 54, 57, 63, 64, 65, 81, 82, 103, 104, 109, 111, 126, 127, 128, 129, 134, 161, 170H., 181, 182, 187, 189, 68 Stat. 929, 930, 931, 932, 933, 936, 937, 948, 953, 954, 955, 956, as amended (42 U.S.C. 2071, 2073, 2074, 2077, 2092–2095, 2111, 2112, 2133, 2134, 2139, 2139a, 2141, 2154–2158, 2160d., 2201, 2210h., 2231–2233, 2237, 2239); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841; sec. 5, Pub. L. 101–575, 104 Stat. 2835 (42 U.S.C. 2243); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); Energy Policy Act of 2005; Pub. L. 109–58, 119 Stat. 594 (2005).

Sections 110.1(b)(2) and 110.1(b)(3) also issued under Pub. L. 96–92, 93 Stat. 710 (22 U.S.C. 2403). Section 110.11 also issued under sec. 122, 68 Stat. 939 (42 U.S.C. 2152) and secs. 54c and 57d, 88 Stat. 473, 475 (42 U.S.C. 2074). Section 110.27 also issued under sec. 309(a), Pub. L. 99–440. Section 110.50(b)(3) also issued under sec. 123, 92 Stat. 142(42 U.S.C. 2153). Section 110.51 also issued under sec. 184, 68 Stat. 954, as amended (42 U.S.C. 2234). Section 110.52 also issued under sec. 186, 68 Stat. 955 (42 U.S.C. 2236). Sections 110.80–110.113 also issued under 5 U.S.C. 552, 554. Sections 110.130–110.135 also issued under 5 U.S.C. 553. Sections 110.2 and 110.42(a)(9) also issued under sec. 903, Pub. L. 102–496 (42 U.S.C. 2151 *et seq.*).

■ 51. In § 110.2, revise the definition of *Classified Information* to read as follows:

§ 110.2 Definitions.

* * * * *

Classified Information means Classified National Security Information under Executive Order 13526, as amended, or any predecessor or successor Executive Order and Restricted Data under the Atomic Energy Act.

* * * * *

PART 150—EXEMPTIONS AND CONTINUED REGULATORY AUTHORITY IN AGREEMENT STATES AND IN OFFSHORE WATERS UNDER SECTION 274

■ 52. The authority citation for part 150 continues to read as follows:

Authority: Sec. 161, 68 Stat. 948, as amended, sec. 274, 73 Stat. 688 (42 U.S.C. 2201, 2021); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); Energy Policy Act of 2005, Pub. L. No. 109–58, 119 Stat. 594 (2005). Sections 150.3, 150.15, 150.15a, 150.31, 150.32 also issued under secs. 11e(2), 81, 68 Stat. 923, 935, as amended, secs. 83, 84, 92 Stat. 3033, 3039 (42 U.S.C. 2014e(2), 2111, 2113, 2114). Section 150.14 also issued under sec. 53, 68 Stat. 930, as amended (42 U.S.C. 2073).

Section 150.15 also issued under secs. 135, 141, Pub. L. 97–425, 96 Stat. 2232, 2241 (42 U.S.C. 10155, 10161). Section 150.17a also issued under sec. 122, 68 Stat. 939 (42 U.S.C. 2152). Section 150.30 also issued under sec. 234, 83 Stat. 444 (42 U.S.C. 2282).

§ 150.10 [Amended]

■ 53. In § 150.10, the first sentence, remove the reference "150.18,".

§ 150.17 [Amended]

■ 54. In § 150.17, the last sentence of paragraph (b)(1), remove the reference "NUREG/BR–007" and add in its place the reference "NUREG/BR–0007".

Dated at Rockville, Maryland, this 19th day of November 2010.

For the Nuclear Regulatory Commission.

Cindy Bladey,

Chief, Rules, Announcements, and Directives Branch, Division of Administrative Services, Office of Administration.

BILLING CODE 7590–01–P

DEPARTMENT OF ENERGY

10 CFR Part 851

Worker Safety and Health Program: Safety Conscious Work Environment

AGENCY: Office of the General Counsel, Department of Energy (DOE).

ACTION: Notice of denial of petition for rulemaking.

SUMMARY: The Department of Energy received a petition from the Hanford Challenge on August 18, 2009, requesting the initiation of a rulemaking regarding safety policies at DOE's nuclear facilities. The petition calls for DOE to establish by regulation a safety program using the Nuclear Regulatory Commission's "Safety-Conscious Work Environment" guidelines as a model. DOE published this petition and a request for comment on October 16, 2009. DOE denies the petition for rulemaking.

DATES: This notice is effective November 30, 2010.

FOR FURTHER INFORMATION CONTACT: Steven L. Krahn, Acting Deputy Assistant Secretary, Safety Management and Operations, Environmental Management Office, U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585–0121, (202) 586–2281, e-mail: *steve.krahn@em.doe.gov.*

SUPPLEMENTARY INFORMATION: DOE received numerous comments in response to the notice of the Hanford Challenge petition for rulemaking, published on October 16, 2009. 74 FR 53190. The vast majority of those comments recommended denial of the petition, for two reasons. First, DOE already has numerous regulations in place to protect and encourage employees to raise work-related concerns. Second, not only would instituting a "Safety-Conscious Work Environment" by regulation be redundant, but it would also fail to add any additional protections not already in place. The comments DOE received in favor of the petition were generally related to the existing culture of safety and whistleblower protection. The main concern in these comments was that DOE facilities would be unsafe without an environment where employees could raise concerns without fear of retaliation or reprisal.

After reviewing the existing protections, DOE agrees with the majority of the comments that granting the petition for rulemaking would be unnecessary. Currently, employee protection and safety programs exist in the following statutory and regulatory authorities: 42 U.S.C. 5851, 10 CFR part 708, 10 CFR part 851, 29 CFR 1960.28, 48 CFR 970.0309, and 29 CFR part 24, as well as numerous internal DOE orders and directives including DOE's Employee Concerns Program (DOE Order 442.1A) and Differing Professional Opinions Manual (DOE Manual 442.1–1). These authorities provide sufficient guidance and protections in which employees can properly raise concerns that will be promptly reviewed and appropriately resolved with timely feedback.

DOE denies the petition for rulemaking because the existing regulations provide legal protection to employees while adequately promoting worker involvement in raising and resolving concerns. Implementing the "Safety-Conscious Work Environment" would be redundant and would fail to add any substantive protections not currently in place. While the petitioner believes that the existing regulations are inadequate, neither DOE's internal review nor the comments submitted in response to the petition demonstrate that to be the case.

Nevertheless, DOE recognizes that the existing authorities governing safety and employee protection programs can be diverse and confusing. In an attempt to provide as much clarity on this issue as possible, DOE has created a Web site summarizing the existing law and providing a central location consolidating all the relevant standards on this issue. This Web site can be accessed at: *http://www.gc.energy.gov/1630.htm.* The Department believes that this Web site will increase awareness of the existing protections for DOE employees and DOE contractors and will address the underlying concerns evident in the Hanford Challenge petition for rulemaking and the comments in support thereof.

Issued in Washington, DC, on November 23, 2010.

Scott Blake Harris,

General Counsel.

BILLING CODE 6450–01–P

FEDERAL DEPOSIT INSURANCE CORPORATION

12 CFR Part 335

RIN 3064–AD67

Securities of Nonmember Insured Banks

AGENCY: Federal Deposit Insurance Corporation.

ACTION: Interim final rule; request for comment.

SUMMARY: The FDIC is revising its securities disclosure regulations applicable to state nonmember banks with securities required to be registered under section 12 of the Securities Exchange Act of 1934 (Exchange Act). The final rule cross references changes in regulations adopted by the Securities and Exchange Commission (SEC) into the provisions of the FDIC's securities regulations. Cross referencing will assure that the FDIC's regulations remain substantially similar to the SEC's regulations, as required by law. The final rule provides general references to SEC regulations by title and part of the Code of Federal Regulations (CFR), rather than by specific references to sections and subparts of the CFR as are currently provided in part 335. This revision reflects changes to SEC regulations with respect to small business issuers and will provide general guidance to FDIC filers regarding the electronic filing of certain documents. The amendments to part 335 references to SEC regulations will greatly reduce the need for future revisions of part 335, and the FDIC's regulations will be consistent with the SEC regulations through the cross reference stated in 12 CFR 335.101.

DATES: These amendments are effective on November 30, 2010. Comments must be submitted on or before January 31, 2011.

ADDRESSES: Interested parties are invited to submit written comments to the FDIC by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Agency Web Site: http://www.fdic.gov/regulations/laws/federal/propose.html.* Follow the instructions for submitting comments on the FDIC Web site.
- *E-mail: comments@FDIC.gov.* Include "Part 335—Securities of Nonmember Insured Banks" in the subject line of the message.
- *Mail:* Robert E. Feldman, Executive Secretary, Attention: Comments, Federal Deposit Insurance Corporation, 550 17th Street, NW., Washington, DC 20429.
- *Hand Delivery/Courier:* Comments may be hand-delivered to the guard station located at the rear of the FDIC's 550 17th Street building (accessible from F Street) on business days between 7 a.m. and 5 p.m.

Instructions: All submissions must include the agency name and use the title "Part 335—Securities of Nonmember Insured Banks." All comments received will be posted, generally without change, to: *http://www.fdic.gov/regulations/laws/federal/propose.html,* including any personal information provided. Paper copies of public comments may be ordered from the FDIC's Public Information Center by telephone at (877) 275–3342 or (703) 562–2200.

FOR FURTHER INFORMATION CONTACT: Dennis Chapman, Senior Staff Accountant, Division of Supervision and Consumer Protection, (202) 898–8922 or *dchapman@fdic.gov;* Maureen Loviglio, Senior Staff Accountant, Division of Supervision and Consumer Protection, (202) 898–6777 or *mloviglio@fdic.gov;* or Mark G. Flanigan, Counsel, Legal Division, (202) 898–7426 or *mflanigan@fdic.gov,* Federal Deposit Insurance Corporation, 550 17th Street, NW., Washington, DC 20429.

SUPPLEMENTARY INFORMATION:

I. Background

Section 12(i) of the Exchange Act, as amended (15 U.S.C. 78l(i)), authorizes the FDIC to issue regulations applicable to the securities of state nonmember banks that are substantially similar to those of the SEC with respect to its powers, functions, and duties to administer and enforce sections 10A(m) (standards relating to audit committees), 12 (securities registration), 13 (periodic reporting), 14(a) (proxies and proxy solicitation), 14(c) (information statements), 14(d) (tender offers), 14(f) (arrangements for changes in directors), and 16 (beneficial ownership and reporting) of the Exchange Act, and sections 302 (corporate responsibility for financial reports), 303 (improper influence on conduct of audits), 304 (forfeiture of certain bonuses and profits), 306 (insider trades during blackout periods), 401(b) (disclosure of pro forma financial information), 404 (management assessment of internal controls), 406 (code of ethics for senior financial officers), and 407 (disclosure of audit committee financial expert) of the Sarbanes-Oxley Act (codified at 15 U.S.C. 7241, 7242, 7243, 7244, 7261, 7262, 7264, and 7265). These regulations must be substantially similar to the regulations of the SEC under the listed sections of the Exchange Act and the Sarbanes-Oxley Act, unless the FDIC publishes its reasons for deviating from the SEC's rules. The proposed amendments to this part provide references to titles and parts of the CFR, and eliminate references to specific CFR sections and subparts, as a general cross reference is provided in § 335.101. The elimination of CFR section and subpart references provides efficiency as regulatory revisions by the SEC impacting CFR sections and subparts will no longer require amendments to part 335 each time a CFR section and subpart is amended.

II. Section by Section Analysis

Part 335 will be amended throughout to reflect the elimination of certain references to sections and subparts of the Code of Federal Regulations that the FDIC is currently required to administer and enforce under section 12(i) of the Exchange Act, provide a general cross reference to the relevant title and part of the Code of Federal Regulations, and reflect required and voluntary electronic filing of FDIC forms. Accordingly, the following sections in part 335 will be amended, where appropriate, to remove references to specific CFR sections and subparts in the SEC's regulations that have been cross referenced in section 335.101: § 335.111 (Forms and schedules), § 335.121 (Listing standards related to audit committees), § 335.201 (Securities exempted from registration), § 335.211 (Registration and reporting), section 335.221 (Forms for registration of securities and other matters), § 335.231 (Certification, suspension of trading, and removal from listing by exchanges), § 335.241 (Unlisted trading), § 335.251 (Forms for notification of action taken by national securities exchanges), § 335.261 (Exemptions; terminations; and definitions), § 335.301 (Reports of issuers of securities registered pursuant to § 12), § 335.311 (Forms for annual, quarterly, current, and other reports of issuers), § 335.321 (Maintenance of records and issuer's representations in connection with required reports), § 335.331 (Acquisition statements, acquisition of securities by issuers, and other matters), § 335.401 (Solicitation of proxies), § 335.501 (Tender offers), § 335.601 (Requirements of section 16 of the Securities Exchange

Act of 1934), § 335.611 (Initial statement of beneficial ownership of securities), § 335.612 (Statement of changes in beneficial ownership of securities), § 335.613 (Annual statement of beneficial ownership of securities), § 335.701 (Filing requirements, public reference, and confidentiality), and § 335.801 (Inapplicable SEC regulations; FDIC substituted regulations; additional information).

Section 335.111 (Forms and Schedules) will be amended to provide information regarding access to and the use of beneficial ownership Forms 3, 4, and 5 from the FDIC Web site.

Section 335.221 (Forms for registration of securities and other matters) will be revised to delete paragraph (c) in order to reflect amendments to SEC regulations that eliminate the optional forms for small business issuer filing requirements. To accommodate this revision, current paragraph (d), which cross references the requirements of SEC Regulation FD (Fair Disclosure) (17 CFR 243.100 through 243.103), will be renamed paragraph (c).

Section 335.311 (Forms for annual, quarterly, current, and other reports of issuers) will be amended to delete references to "small business issuers" and optional forms for filing requirements in order to reflect amendments to SEC regulations that no longer provide optional forms for filing by small business issuers.

Section 335.601 (Requirements of section 16 of the Securities Exchange Act of 1934), § 335.701 (Filing requirements, public reference, and confidentiality), and § 335.801 (Inapplicable SEC regulations; FDIC substituted regulations; additional information) will be amended, where applicable, to reflect the electronic filing requirements with respect to Beneficial Ownership Report Forms 3, 4, and 5 required by the Exchange Act, as amended by the Sarbanes-Oxley Act of 2002. The sections also will be amended to reflect the availability of voluntary electronic filing on the FDIC Web site. In addition, § 335.801 will be amended to reflect the appropriate forms for the hardship exemption from mandatory electronic filing.

Finally, the FDIC will make certain nonsubstantive changes to Part 335 to improve its clarity and readability and to correct outdated terms.

III. Request for Comments

The FDIC requests comments on all aspects of the rule changes. Commenters suggesting that the FDIC modify the requirements of the SEC's rules, regulations, and forms for state nonmember banks should support their request by demonstrating how such modification would satisfy the requirements of section 12(i) of the Exchange Act.

Comments are also welcome on the general organization of Part 335.

IV. Regulatory Analysis and Procedure

A. Administrative Procedure Act

The process of amending Part 335 by means of this Interim Rule is governed by the Administrative Procedure Act (APA). Pursuant to section 553(b)(B) of the APA, general notice and opportunity for public comment are not required with respect to a rulemaking when (1) the rule is interpretative or relates to an agency's rules of organization, procedure, or practice, and (2) an agency for good cause finds that "notice and public procedure thereon are impracticable, unnecessary, or contrary to the public interest." Similarly, sections 553(d)(2), (3) of the APA provide that the publication of a rule shall be made not less than 30 days before its effective date, except if the rule is interpretative and "as otherwise provided by the agency for good cause found and published with the rule."

Consistent with sections 553(b)(A), (B) of the APA, the FDIC finds that good cause exists for a finding that general notice and opportunity for public comment are unnecessary in that certain portions of part 335 that are being amended in light of the issuance of regulations by the SEC, which SEC issuances already have been subjected to public notice and request for comment. In addition, certain other changes to part 335 are organizational in nature and are exempt from the APA's general notice and public comment requirement. Accordingly, pursuant to the APA, the FDIC is foregoing the general notice and public comment requirement as to this rulemaking.

Further, immediate issuance of this Interim Rule furthers the public interest by conforming the FDIC's rules with the SEC's requirements and organizing the rule to reduce redundancies and increase readability. For these same reasons, the FDIC finds good cause to publish this Interim Rule with an immediate effective date.[1]

Although general notice and opportunity for public comment are not required prior to the effective date, the FDIC invites comments on all aspects of the Interim Rule, which the FDIC may revise if necessary or appropriate in light of the comments received.

[1] 5 U.S.C. 553(d)(3).

B. Riegle Community Development and Regulatory Improvement Act

The Riegle Community Development and Regulatory Improvement Act provides that any new regulations or amendments to regulations prescribed by a Federal banking agency that impose additional reporting, disclosures, or other new requirements on insured depository institutions shall take effect on the first day of a calendar quarter which begins on or after the date on which the regulations are published in final form, unless the agency determines, for good cause published with the rule, that the rule should become effective before such time.[2] For the same reasons discussed above, the FDIC finds that good cause exists for an immediate effective date for the Interim Rule.

C. Paperwork Reduction Act

This rule contains no new collections of information as defined by the Paperwork Reduction Act.

D. Regulatory Flexibility Act

A regulatory flexibility analysis is required only when the agency must publish a notice of proposed rulemaking (5 U.S.C. 603, 604). Because the revisions to part 335 are published in interim final form without a notice of proposed rulemaking, no regulatory flexibility analysis is required.

E. Small Business Regulatory Enforcement Fairness Act

The Office of Management and Budget (OMB) has determinedthat the Interim Rule is not a "major rule" within the meaning of the relevant sections of the Small Business Regulatory Enforcement Act of 1996 (SBREFA), 5 U.S.C. 801 *et seq.* As required by SBREFA, the FDIC will file the appropriate reports with Congress and the Government Accountability Office as soon as it receives a determination from OMB. Nevertheless, as discussed above, consistent with section 553(b)(B) of the APA, the FDIC has determined for good cause that general notice and opportunity for public comment is unnecessary. Therefore, in accordance with 5 U.S.C. 808(2), this Interim Rule will take effect upon publication in the **Federal Register.**

List of Subjects in 12 CFR Part 335

Accounting, Banks, Banking, Confidential business information, Reporting and recordkeeping requirements, Securities.

[2] 12 U.S.C. 4802.

■ For the reasons set forth in the preamble, the Board of Directors of the Federal Deposit Insurance Corporation hereby amends part 335 of title 12 of the Code of Federal Regulations as follows:

PART 335—SECURITIES OF NONMEMBER INSURED BANKS

■ 1. The authority citation for part 335 continues to read as follows:

Authority: 12 U.S.C. 1819; 15 U.S.C. 78l(i), 78m, 78n, 78p, 78w, 7241, 7242, 7243, 7244, 7261, 7262, 7264, and 7265.

■ 2. Section 335.111 is revised to read as follows:

§ 335.111 Forms and schedules.

The Exchange Act regulations of the SEC, which are cross referenced under this part, require the filing of forms and schedules as applicable. Reference is made to SEC Exchange Act regulation 17 CFR part 249 regarding the availability of all applicable SEC Exchange Act forms. Required schedules are codified and are found within the context of the SEC's regulations. All forms and schedules shall be titled with the name of the FDIC in substitution for the name of the SEC. The filing of forms and schedules shall be made with the FDIC at the address in § 335.701 or may be filed electronically at FDIC*connect* at *https://www2.fdicconnect.gov/index.asp.* However, electronic filing of Beneficial Ownership Forms 3, 4 and 5 is required. Copies of Forms 3 (§ 335.611), 4 (§ 335.612) and 5 (§ 335.613) and the instructions thereto may be printed and downloaded from *https://www.fdic.gov/regulations/laws/forms.*

■ 3. Section 335.121 is revised to read as follows:

§ 335.121 Listing standards related to audit committees.

The provisions of the applicable SEC regulation under section 10(A)(m) of the Exchange Act shall be followed as codified at 17 CFR part 240.

■ 4. Section 335.201 is revised to read as follows:

§ 335.201 Securities exempted from registration.

Persons subject to registration requirements under Exchange Act section 12 and subject to this part shall follow the applicable and currently effective SEC regulations relative to exemptions from registration issued under sections 3 and 12 of the Exchange Act as codified at 17 CFR part 240.

■ 5. Section 335.211 is revised to read as follows:

§ 335.211 Registration and reporting.

Persons with securities subject to registration under Exchange Act sections 12(b) and 12(g), required to report under Exchange Act section 13, and subject to this part shall follow the applicable and currently effective SEC regulations issued under section 12(b) of the Exchange Act as codified at 17 CFR part 240.

■ 6. Section 335.221 is revised to read as follows:

§ 335.221 Forms for registration of securities and cross reference to Regulation FD (Fair Disclosure).

(a) The applicable forms for registration of securities and similar matters are codified in 17 CFR part 249. All forms shall be filed with the FDIC as appropriate and shall be titled with the name of the FDIC instead of the SEC.

(b) The requirements for Financial Statements can generally be found in Regulation S–X (17 CFR part 210). Banks may also refer to the instructions for Federal Financial Institutions Examination Council (FFIEC) Consolidated Reports of Condition and Income when preparing unaudited interim statements. The requirements for Management's Discussion and Analysis of Financial Condition and Results of Operations can be found at 17 CFR part 229. Additional requirements are provided at Industry Guide 3, Statistical Disclosure by Bank Holding Companies, which is found at 17 CFR part 229.

(c) The provisions of the applicable and currently effective SEC regulation FD shall be followed as codified at 17 CFR part 243.

■ 7. Section 335.231 is revised to read as follows:

§ 335.231 Certification, suspension of trading, and removal from listing by exchanges.

The provisions of the applicable and currently effective SEC regulations under section 12(d) of the Exchange Act shall be followed as codified at 17 part CFR 240.

■ 8. Section 335.241 is revised to read as follows:

§ 335.241 Unlisted trading.

The provisions of the applicable and currently effective SEC regulations under section 12(f) of the Exchange Act shall be followed as codified at 17 CFR part 240.

■ 9. Section 335.251 is revised to read as follows:

§ 335.251 Forms for notification of action taken by national securities exchanges.

The applicable forms for notification of action taken by national securities exchanges are codified in 17 CFR part 249. All forms shall be filed with the FDIC as appropriate and shall be titled with the name of the FDIC instead of the SEC.

■ 10. Section 335.261 is revised to read as follows:

§ 335.261 Exemptions, terminations, and definitions.

The provisions of the applicable and currently effective SEC regulations under sections 12(g) and 12(h) of the Exchange Act shall be followed as codified in 17 CFR part 240.

■ 11. Section 335.301 is revised to read as follows:

§ 335.301 Reports of issuers of securities registered pursuant to section 12.

The provisions of the applicable and currently effective SEC regulations under section 13(a) of the Exchange Act shall be followed as codified at 17 CFR part 240.

■ 12. Section 335.311 is revised to read as follows:

§ 335.311 Forms for annual, quarterly, current, and other reports of issuers.

(a) The applicable forms for annual, quarterly, current, and other reports are codified in 17 CFR part 249. All forms shall be filed with the FDIC as appropriate and shall be titled with the name of the FDIC instead of the SEC.

(b) The requirements for Financial Statements can generally be found in Regulation S–X (17 CFR part 210). Banks may also refer to the instructions for FFIEC Consolidated Reports of Condition and Income when preparing unaudited interim reports. The requirements for Management's Discussion and Analysis of Financial Condition and Results of Operations can be found at 17 CFR part 229. Additional requirements are included in Industry Guide 3, Statistical Disclosure by Bank Holding Companies, which is found at 17 CFR part 229.

■ 13. Section 335.321 is revised to read as follows:

§ 335.321 Maintenance of records and issuer's representations in connection with required reports.

The provisions of the applicable and currently effective SEC regulations under 13(b) of the Exchange Act shall be followed as codified at 17 CFR part 240.

■ 14. Section 335.331 is revised to read as follows:

§ 335.331 Acquisition statements, acquisition of securities by issuers, and other matters.

The provisions of the applicable and currently effective SEC regulations under sections 13(d) and 13(e) of the Exchange Act shall be followed as codifed at 17 CFR part 240.

■ 15. Section 335.401 is revised to read as follows:

§ 335.401 Solicitations of proxies.

The provisions of the applicable and currently effective SEC regulations under sections 14(a) and 14(c) of the Exchange Act shall be followed as codified at 17 CFR part 240.

■ 16. Section 335.501 is revised to read as follows:

§ 335.501 Tender offers.

The provisions of the applicable and currently effective SEC regulations under sections 14(d), 14(e), and 14(f) of the Exchange Act shall be followed as codified at 17 CFR part 240.

■ 17. Section 335.601 is revised to read as follows:

§ 335.601 Requirements of section 16 of the Securities Exchange Act of 1934.

Persons subject to section 16 of the Exchange Act with respect to securities registered under this part shall follow the applicable and currently effective SEC regulations issued under section 16 of the Exchange Act (17 CFR part 240), except that the forms described in § 335.611 (FDIC Form 3), § 335.612 (FDIC Form 4), and § 335.613 (FDIC Form 5) shall be used in lieu of SEC Form 3, Form 4, and Form 5, respectively. FDIC Forms 3, 4, and 5 shall be filed electronically on FDIC*connect* at *https://www2.fdicconnect.gov/index.asp.* Copies of FDIC Forms 3, 4, and 5 and the instructions thereto can be printed and downloaded at *https://www.fdic.gov/regulations/laws/forms.*

■ 18. Section 335.611 is revised to read as follows:

§ 335.611 Initial statement of beneficial ownership of securities (Form 3).

This form shall be filed in lieu of SEC Form 3 pursuant to SEC rules for initial statements of beneficial ownership of securities. The FDIC is authorized to solicit the information required by this form pursuant to sections 16(a) and 23(a) of the Exchange Act (15 U.S.C. 78p and 78w) and the rules and regulations thereunder. SEC regulations referenced in this form are codified at 17 CFR part 240.

■ 19. Section 335.612 is revised to read as follows:

§ 336.612 Statement of changes in beneficial ownership of securities (Form 4).

This form shall be filed in lieu of SEC Form 4 pursuant to SEC Rules for statements of changes in beneficial ownership of securities. The FDIC is authorized to solicit the information required by this form pursuant to sections 16(a) and 23(a) of the Exchange Act (15 U.S.C. 78p and 78w) and the rules and regulations thereunder. SEC regulations referenced in this form are codified at 17 CFR part 240.

■ 20. Section 335.613 is revised to read as follows:

§ 336.613 Annual statement of beneficial ownership of securities (Form 5).

This form shall be filed in lieu of SEC Form 5 pursuant to SEC Rules for annual statements of beneficial ownership of securities. The FDIC is authorized to solicit the information required by this form pursuant to sections 16(a) and 23(a) of the Exchange Act (15 U.S.C. 78p and 78w) and the rules and regulations thereunder. SEC regulations referenced in this form are codified at 17 CFR part 240.

■ 21. Section 335.701 is revised to read as follows:

§ 335.701 Filing requirements, public reference, and confidentiality.

(a) *Filing requirements.* Unless otherwise indicated in this part, one original and four conformed copies of all papers required to be filed with the FDIC under the Exchange Act or regulations thereunder shall be filed at its office in Washington, DC. Official filings may be filed electronically at *https://www2.fdicconnect.gov/index.asp,* except for FDIC Beneficial Ownership Forms 3, 4, and 5 for which electronic filing is mandatory as described in § 335.801(b). Paper filings should be submitted to the FDIC's office in Washington, DC, and should be addressed as follows: Accounting and Securities Disclosure Section, Division of Supervision and Consumer Protection, Federal Deposit Insurance Corporation, 550 17th Street, NW., Washington, DC 20429. Material may be filed by delivery to the FDIC through the mails or otherwise. The date on which paper filings are actually received by the designated FDIC office shall be the date of filing.

(b) *Inspection.* Except as provided in paragraph (c) of this section, all information filed regarding a security registered with the FDIC will be available for inspection at the Federal Deposit Insurance Corporation, Accounting and Securities Disclosure Section, Division of Supervision and Consumer Protection, 550 17th Street, NW., Washington, DC. Beneficial ownership report forms and other official filings that are electronically submitted to the FDIC are available for inspection on the FDIC's Web site at *http://www2.fdic.gov/efr/.*

(c) *Nondisclosure of certain information filed.* Any person filing any statement, report, or document with the FDIC under the Exchange Act may make a written objection to the public disclosure of any information contained therein in accordance with the procedure set forth in this paragraph (c) or the instructions provided for electronic filing available on the FDIC's Web site *https://www2.fdicconnect.gov/index.asp.*

(1) The person shall omit from the statement, report, or document, when it is filed, the portion thereof that it desires to keep undisclosed (hereinafter called the confidential portion). In lieu thereof, it shall indicate at the appropriate place in the statement, report, or document that the confidential portion has been so omitted and filed separately with the FDIC.

(2) The person shall file with the copies of the statement, report, or document filed with the FDIC:

(i) As many copies of the confidential portion, each clearly marked "Confidential Treatment," as there are copies of the statement, report, or document filed with the FDIC and with each exchange, if any. Each copy shall contain the complete text of the item and, notwithstanding that the confidential portion does not constitute the whole of the answer, the entire answer thereto; except that in the case where the confidential portion is part of a financial statement or schedule, only the particular financial statement or schedule need be included. All copies of the confidential portion shall be in the same form as the remainder of the statement, report, or document;

(ii) An application making objection to the disclosure of the confidential portion. Such application shall be on a sheet or sheets separate from the confidential portion and shall contain:

(A) An identification of the portion of the statement, report, or document that has been omitted;

(B) A statement of the grounds of the objection;

(C) Consent that the FDIC may determine the question of public disclosure upon the basis of the application, subject to proper judicial reviews;

(D) The name of each exchange, if any, with which the statement, report, or document is filed;

(iii) The copies of the confidential portion and the application filed in accordance with this paragraph shall be enclosed in a separate envelope marked "Confidential Treatment" and addressed to Executive Secretary, Federal Deposit Insurance Corporation, Washington, DC 20429.

(3) Pending the determination by the FDIC as to the objection filed in accordance with paragraph (c)(2)(ii) of this section, the confidential portion will not be disclosed by the FDIC.

(4) If the FDIC determines that the objection shall be sustained, a notation to that effect will be made at the appropriate place in the statement, report, or document.

(5) If the FDIC determines that disclosure of the confidential portion is in the public interest, a finding and determination to that effect will be entered and notice of the finding and determination will be sent by registered or certified mail to the person.

(6) The confidential portion shall be made available to the public:

(i) Upon the lapse of 15 days after the dispatch of notice by registered or certified mail of the finding and determination of the FDIC described in paragraph (c)(5) of this section, or the date of the electronic filing, if prior to the lapse of such 15 days the person shall not have filed a written statement that he intends in good faith to seek judicial review of the finding and determination;

(ii) Upon the lapse of 60 days after the dispatch of notice by registered or certified mail, or the date of the electronic filing, of the finding and determination of the FDIC, if the statement described in paragraph (c)(6)(i) of this section shall have been filed and if a petition for judicial review shall not have been filed within such 60 days; or

(iii) If such petition for judicial review shall have been filed within such 60 days upon final disposition, adverse to the person, of the judicial proceedings.

(7) If the confidential portion is made available to the public, a copy thereof shall be attached to each copy of the statement, report, or document filed with the FDIC and with each exchange concerned.

■ 22. Amend Section 335.801 by revising paragraphs (b)(1), (b)(2), (b)(6)(iv), and (b)(6)(v) to read as follows:

§ 335.801 Inapplicable SEC regulations; FDIC substituted regulations; additional information.

* * * * *

(b) *Electronic filings.* (1) The FDIC does not participate in the SEC's EDGAR (Electronic Data Gathering Analysis and Retrieval) electronic filing program (17 CFR part 232). The FDIC permits voluntary electronically transmitted filings and submissions of correspondence and other materials in electronic format to the FDIC, with the exception of Beneficial Ownership Reports (Forms 3, 4, and 5) for which electronic filing is mandatory. Beneficial Ownership Report filing requirements are provided in paragraph (b)(2) of this section.

(2) All reporting persons must electronically file Beneficial Ownership Reports (FDIC Forms 3, 4, and 5), including amendments and exhibits thereto, using the Internet-based interagency Beneficial Ownership Filings System, except that a reporting person that has obtained a continuing hardship exemption under these rules may file the forms with the FDIC in paper format. For electronic filing purposes, FDIC Forms 3, 4, and 5 are accessible at the Internet-based interagency Web site for Beneficial Ownership Filings at FDIC*connect* at *https://www2.fdicconnect.gov/index.asp.* These forms and the instructions thereto are available for printing and downloading at *http://www.fdic.gov/regulations/laws/forms.* A reporting person that has obtained a continuing hardship exemption under these rules may file the appropriate forms with the FDIC in paper format. Instructions for continuing hardship exemptions are provided in paragraph (b)(6) of this section.

* * * * *

(6) * * *

(iv) Where a continuing hardship exemption is granted with respect to an exhibit only, the paper format exhibit shall be filed with the FDIC under Form SE (17 CFR part 249). The name of the FDIC shall be substituted for the name of the SEC on the form. Form SE shall be filed as a paper cover sheet to all exhibits to Beneficial Ownership Reports submitted to the FDIC in paper form pursuant to a hardship exemption.

(v) Form SE may be filed with the FDIC up to six business days prior to, or on the date of filing of, the electronic form to which it relates but shall not be filed after such filing date. If a paper exhibit is submitted in this manner, requirements that the exhibit be filed with, provided with, or accompany the electronic filing shall be satisfied. Any requirements as to delivery or furnishing the information to persons other than the FDIC shall not be affected by this section.

By order of the Board of Directors.

Federal Deposit Insurance Corporation.

Dated at Washington, DC, this 9th day of November 2010.

Robert E. Feldman,

Executive Secretary.

[FR Doc. 2010–30078 Filed 11–29–10; 8:45 am]

BILLING CODE 6714–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 1, 14, and 17

[Docket No. FDA–2010–N–0560]

RIN 0910–AG55

Amendments to General Regulations of the Food and Drug Administration

AGENCY: Food and Drug Administration, HHS.

ACTION: Direct final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending certain of its general regulations to include tobacco products, where appropriate, in light of FDA's authority to regulate these products under the Family Smoking Prevention and Tobacco Control Act (Tobacco Control Act). With these amendments, tobacco products will be subject to the same general requirements that apply to other FDA-regulated products. Elsewhere in this issue of the **Federal Register**, we are publishing a companion proposed rule under FDA's usual procedures for notice and comment to provide a procedural framework to finalize the rule in the event we receive significant adverse comment and withdraw this direct final rule.

DATES: This rule is effective April 14, 2011. Submit either electronic or written comments by February 14, 2011. If we receive no significant adverse comments within the specified comment period, we intend to publish a document confirming the effective date of the final rule in the **Federal Register** within 30 days after the comment period on this direct final rule ends. If we receive any timely significant adverse comment, we will withdraw this final rule in part or in whole by publication of a document in the **Federal Register** within 30 days after the comment period ends.

ADDRESSES: You may submit comments, identified by Docket No. FDA–2010–N–0560 and/or RIN number 0910–AG55, by any of the following methods:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

Written Submissions

Submit written submissions in the following ways:

- *FAX:* 301–827–6870.
- *Mail/Hand delivery/Courier (for paper, disk, or CD–ROM submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

Instructions: All submissions received must include the Agency name and docket number and Regulatory Information Number (RIN) for this rulemaking. All comments received may be posted without change to *http://www.regulations.gov,* including any personal information provided. For additional information on submitting comments, see the "Comments" heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Gerie A. Voss, Center for Tobacco Products, Food and Drug Administration, 9200 Corporate Blvd., rm. 240G, Rockville, MD 20850, 1–877–CTP–1373, *gerie.voss@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. What is the background of the rule?

The Tobacco Control Act was enacted on June 22, 2009, amending the Federal Food, Drug, and Cosmetic Act (the FD&C Act) and providing FDA with the authority to regulate tobacco products (Pub. L. 11–31; 123 Stat. 1776). In enacting the Tobacco Control Act, Congress sought to ensure that FDA had authority to provide effective oversight and to impose appropriate regulatory controls on tobacco products. In order to effectuate these purposes, FDA is amending several provisions of its general regulations to reflect the Agency's new authority and mandate regarding tobacco products.

II. What does this direct final rulemaking do?

In this direct final rule, FDA is making the following amendments to its existing general regulations, reflecting the Agency's authority over tobacco products under the Tobacco Control Act:

1. Revising 21 CFR 1.1(b) to ensure the applicability of definitions contained in the Tobacco Control Act;
2. Removing the reference to "package" in 21 CFR 1.1(c), as this definition now also is covered by the Tobacco Control Act and is no longer provided solely by the Fair Packaging and Labeling Act;
3. Revising 21 CFR 1.20 to exclude from this definition of "package" the term "package" as defined in section 900(13) of the Tobacco Control Act (21 U.S.C. 387q(13));
4. Adding paragraph (f) to 21 CFR 14.55 to identify the Tobacco Products Scientific Advisory Committee as a permanent statutory advisory committee; and
5. Adding paragraph (j) to 21 CFR 17.1 and revising 21 CFR 17.2 to reflect FDA's authority to impose civil monetary penalties on tobacco-related violations.

III. What are the procedures for issuing a direct final rule?

In the **Federal Register** of November 21, 1997 (62 FR 62466), FDA announced the availability of the guidance document entitled "Guidance for FDA and Industry: Direct Final Rule Procedures" that described when and how FDA will employ direct final rulemaking. We believe that this rule is appropriate for direct final rulemaking because it is intended to make noncontroversial changes to existing regulations. We anticipate no significant adverse comments.

Consistent with FDA's procedures on direct final rulemaking, we are publishing elsewhere in this issue of the **Federal Register** a companion proposed rule that is identical to the direct final rule. The companion proposed rule provides a procedural framework within which the rule may be finalized in the event the direct final rule is withdrawn because of any significant adverse comment. The comment period for this direct final rule runs concurrently with the comment period of the companion proposed rule. Any comments received in response to the companion proposed rule will also be considered as comments regarding this direct final rule.

We are providing a comment period on the direct final rule of 75 days after the date of publication in the **Federal Register**. If we receive any significant adverse comment, we intend to withdraw this final rule before its effective date by publication of a notice in the **Federal Register** within 30 days after the comment period ends. A significant adverse comment is defined as a comment that explains why the rule would be inappropriate, including challenges to the rule's underlying premise or approach, or would be ineffective or unacceptable without change. In determining whether an adverse comment is significant and warrants terminating a direct final rulemaking, we will consider whether the comment raises an issue serious enough to warrant a substantive response in a notice-and-comment process in accordance with the Administrative Procedure Act (APA) (5 U.S.C. 553). Comments that are frivolous, insubstantial, or outside the scope of the rule will not be considered significant or adverse under this procedure. For example, a comment recommending an additional change to the rule will not be considered a significant adverse comment, unless the comment states why the rule would be ineffective without the additional change. In addition, if a significant adverse comment applies to part of a rule and that part can be severed from the remainder of the rule, we may adopt as final those parts of the rule that are not the subject of a significant adverse comment.

If we withdraw the direct final rule, all comments received will be considered under the companion proposed rule in developing a final rule under the usual notice-and-comment procedures under the APA. If we receive no significant adverse comment during the specified comment period, we intend to publish a confirmation document in the **Federal Register** within 30 days after the comment period ends.

You can find additional information about FDA's direct final rulemaking procedures in the guidance document entitled "Guidance for FDA and Industry: Direct Final Rule Procedures" (62 FR 62466). This guidance document may be accessed at *http://www.fda.gov/RegulatoryInformation/Guidances/ucm125166.htm.*

IV. What is the legal authority for this rule?

FDA is issuing this direct final rule under provisions of the FD&C Act, as amended by the Tobacco Control Act (21 U.S.C. 321, 331, 333, 387, 387a, and 387q).

V. What is the environmental impact of this rule?

The Agency has determined under 21 CFR 25.30(h) and (i) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VI. What is the economic impact of this rule?

FDA has examined the impacts of the final rule under Executive Order 12866 and the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The Agency believes that this direct final rule is not a significant regulatory action under the Executive order.

The Regulatory Flexibility Act requires agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because this direct final rule does not impose any new requirements on tobacco product manufacturers, retailers, or distributors, the Agency certifies that the final rule will not have a significant economic impact on a substantial number of small entities.

Section 202(a) of the Unfunded Mandates Reform Act of 1995 requires that agencies prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing "any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted annually for inflation) in any one year." The current threshold after adjustment for inflation is $135 million, using the most current (2009) Implicit Price Deflator for the Gross Domestic Product. FDA does not expect this final rule to result in any 1-year expenditure that would meet or exceed this amount.

VII. Paperwork Reduction Act of 1995

FDA concludes that the regulatory revisions and amendments identified in this document are not subject to review by the Office of Management and Budget because they do not constitute a "collection of information" under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

VIII. What are the federalism impacts of this rule?

FDA has analyzed this final rule in accordance with the principles set forth in Executive Order 13132. FDA has determined that the rule does not contain policies that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the Agency has concluded that the rule does not contain policies that have federalism implications as defined in the Executive order and, consequently, a federalism summary impact statement is not required.

IX. How do you submit comments on this rule?

Interested persons may submit to the Division of Dockets Management (*see* **ADDRESSES**) either electronic or written comments regarding this document. It is only necessary to send one set of comments. It is no longer necessary to send two copies of mailed comments. Identify comments with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects

21 CFR Part 1

Cosmetics, Drugs, Exports, Food labeling, Imports, Labeling, Reporting and recordkeeping requirements.

21 CFR Part 14

Administrative practice and procedure, Advisory committees, Color additives, Drugs, Radiation protection.

21 CFR Part 17

Administrative practice and procedure, Penalties.

■ Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 1, 14, and 17 are amended as follows:

PART 1—GENERAL ENFORCEMENT REGULATIONS

■ The authority citation for part 1 is revised to read as follows:

Authority: 15 U.S.C. 1453, 1454, 1455; 19 U.S.C. 1490, 1491; 21 U.S.C. 321, 331, 333, 334, 335a, 343, 350c, 350d, 352, 355, 360b, 362, 371, 374, 381, 382, 387, 387a, 393; 42 U.S.C. 216, 241, 243, 262, 264.

■ 2. In § 1.1, revise paragraph (b); and in the first sentence of paragraph (c), remove "*package* in § 1.20 and of" to read as follows:

§ 1.1 General.

* * * * *

(b) The definitions and interpretations of terms contained in sections 201 and 900 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321 and 387) shall be applicable also to such terms when used in regulations promulgated under that act.

* * * * *

■ 3. Amend § 1.20 by revising the introductory text to read as follows:

§ 1.20 Presence of mandatory label information.

Except as otherwise provided by section 900(13) of the Family Smoking Prevention and Tobacco Control Act (21 U.S.C. 387(13)) defining "package," the term *package* means any container or wrapping in which any food, drug, device, or cosmetic is enclosed for use in the delivery or display of such commodities to retail purchasers, but does not include:

* * * * *

PART 14—PUBLIC HEARING BEFORE A PUBLIC ADVISORY COMMITTEE

■ 4. The authority citation for part 14 continues to read as follows:

Authority: 5 U.S.C. App. 2; 15 U.S.C. 1451–1461, 21 U.S.C. 41–50, 141–149, 321–394, 467f, 679, 821, 1034; 28 U.S.C. 2112; 42 U.S.C. 201, 262, 263b, 264; Pub. L. 107–109; Pub. L. 108–155.

■ 5. Amend § 14.55 by adding paragraph (f) to read as follows:

§ 14.55 Termination of advisory committees.

* * * * *

(f) The Tobacco Products Scientific Advisory Committee is a permanent statutory advisory committee established by section 917 of the Family Smoking Prevention and Tobacco Control Act (21 U.S.C. 387q) (Pub. L. 111–31) and is not subject to termination and renewal under paragraph (a) of this section.

PART 17—CIVIL MONEY PENALTIES HEARINGS

■ 6. The authority citation for part 17 continues to read as follows:

Authority: 21 U.S.C. 331, 333, 337, 351, 352, 355, 360, 360c, 360f, 360i, 360j, 371; 42 U.S.C. 262, 263b, 300aa–28; 5 U.S.C. 554, 555, 556, 557.

■ 7. Amend § 17.1 by adding paragraph (j) to read as follows:

§ 17.1 Scope.

* * * * *

(j) Section 303(f) of the act authorizing civil money penalties for any person who violates a requirement of the Family Smoking Prevention and Tobacco Control Act which relates to tobacco products.

■ 8. Revise § 17.2 to read as follows:

§ 17.2 Maximum penalty amounts.

The following table shows maximum civil monetary penalties associated with the statutory provisions authorizing civil monetary penalties under the act or the Public Health Service Act.

CIVIL MONETARY PENALTIES AUTHORITIES ADMINISTERED BY FDA AND ADJUSTED MAXIMUM PENALTY AMOUNTS

U.S.C. Section	Former maximum penalty amount (in dollars)[1]	Assessment method	Date of last penalty figure or adjustment	Adjusted maximum penalty amount (in dollars)
		21 U.S.C.		
333(b)(2)(A)	55,000	For each of the first two violations in any 10-year period	2008	60,000.
333(b)(2)(B)	1,100,000	For each violation after the second conviction in any 10-year period.	2008	1,200,000.
333(b)(3)	110,000	Per violation	2008	120,000.
333(f)(1)(A)	16,500	Per violation	2008	16,500 (not adjusted).
333(f)(1)(A)	1,100,000	For the aggregate of violations	2008	1,200,000.
333(f)(2)(A)	55,000	Per individual	2008	60,000.
333(f)(2)(A)	275,000	Per "any other person"	2008	300,000.
333(f)(2)(A)	550,000	For all violations adjudicated in a single proceeding	2008	600,000.
333(f)(3)(A)	10,000	For all violations adjudicated in a single proceeding	2007	10,000 (not adjusted).
333(f)(3)(B)	10,000	For each day the violation is not corrected after a 30-day period following notification until the violation is corrected.	2007	10,000 (not adjusted).
333(f)(4)(A)(i)	250,000	Per violation	2007	250,000 (not adjusted).
333(f)(4)(A)(i)	1,000,000	For all violations adjudicated in a single proceeding	2007	1,000,000 (not adjusted).
333(f)(4)(A)(ii)	250,000	For the first 30-day period (or any portion thereof) of continued violation following notification.	2007	250,000 (not adjusted).
333(f)(4)(A)(ii)	1,000,000	For any 30-day period, where the amount doubles for every 30-day period of continued violation after the first 30-day period.	2007	1,000,000 (not adjusted).
333(f)(4)(A)(ii)	10,000,000	For all violations adjudicated in a single proceeding	2007	10,000,000 (not adjusted).
333(f)(9)(A)	[1] N/A	Per violation	2009	15,000 (not adjusted).
333(f)(9)(A)	N/A	For all violations adjudicated in a single proceeding	2009	1,000,000 (not adjusted).
333(f)(9)(B)(i)(I)	N/A	Per violation	2009	250,000 (not adjusted).
333(f)(9)(B)(i)(I)	N/A	For all violations adjudicated in a single proceeding	2009	1,000,000 (not adjusted).
333(f)(9)(B)(i)(II)	N/A	For the first 30-day period (or any portion thereof) of continued violation following notification.	2009	250,000 (not adjusted).
333(f)(9)(B)(i)(II)	N/A	For any 30-day period, where the amount doubled for every 30-day period of continued violation after the first 30-day period.	2009	1,000,000 (not adjusted).
333(f)(9)(B)(i)(II)	N/A	For all violations adjudicated in a single proceeding	2009	10,000,000 (not adjusted).
333(f)(9)(B)(ii)(I)	N/A	Per violation	2009	250,000 (not adjusted).
333(f)(9)(B)(ii)(I)	N/A	For all violations adjudicated in a single proceeding	2009	1,000,000 (not adjusted).
333(f)(9)(B)(ii)(II)	N/A	For the first 30-day period (or any portion thereof) of continued violation following notification.	2009	250,000 (not adjusted).
333(f)(9)(B)(ii)(II)	N/A	For any 30-day period, where the amount doubled for every 30-day period of continued violation after the first 30-day period.	2009	1,000,000 (not adjusted).
333(f)(9)(B)(ii)(II)	N/A	For all violations adjudicated in a single proceeding	2009	10,000,000 (not adjusted).
333(g)(1)	250,000	For the first violation in any 3-year period	2007	250,000 (not adjusted).
333(g)(1)	500,000	For each subsequent violation in any 3-year period	2007	500,000 (not adjusted).
333 note	N/A	For the second violation (following a first violation with warning) within a 12-month period by a retailer with an approved training program.	2009	250 (not adjusted).
333 note	N/A	For the third violation within a 24-month period by a retailer with an approved training program.	2009	500 (not adjusted).
333 note	N/A	For the fourth violation within a 24-month period by a retailer with an approved training program.	2009	2,000 (not adjusted).
333 note	N/A	For the fifth violation within a 36-month period by a retailer with an approved training program.	2009	5,000 (not adjusted).
333 note	N/A	For the six or subsequent violation within a 48-month period by a retailer with an approved training program.	2009	10,000 (not adjusted).
333 note	N/A	For the first violation by a retailer without an approved training program.	2009	250 (not adjusted).
333 note	N/A	For the second violation within a 12-month period by a retailer without an approved training program.	2009	500 (not adjusted).
333 note	N/A	For the third violation within a 24-month period by a retailer without an approved training program.	2009	1,000 (not adjusted).

CIVIL MONETARY PENALTIES AUTHORITIES ADMINISTERED BY FDA AND ADJUSTED MAXIMUM PENALTY AMOUNTS—Continued

U.S.C. Section	Former maximum penalty amount (in dollars)[1]	Assessment method	Date of last penalty figure or adjustment	Adjusted maximum penalty amount (in dollars)
333 note	N/A	For the fourth violation within a 24-month period by a retailer without an approved training program.	2009	2,000 (not adjusted).
333 note	N/A	For the fifth violation within a 36-month period by a retailer without an approved training program.	2009	5,000 (not adjusted).
333 note	N/A	For the six or subsequent violation within a 48-month period by a retailer without an approved training program.	2009	10,000 (not adjusted).
335b(a)	275,000	Per violation for an individual	2008	300,000.
335b(a)	1,100,000	Per violation for "any other person"	2008	1,200,000.
360pp(b)(1)	1,100	Per violation per person	2008	1,100 (not adjusted).
360pp(b)(1)	330,000	For any related series of violations	2008	355,000.
42 U.S.C.				
263b(h)(3)	11,000	Per violation	2008	11,000 (not adjusted).
300aa–28(b)(1)	110,000	Per occurrence	2008	120,000.

[1] Maximum penalties assessed under The Family Smoking Prevention and Tobacco Control Act do not have a "former maximum penalty."

Dated: November 23, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

BILLING CODE 4160–01–P

FEDERAL MINE SAFETY AND HEALTH REVIEW COMMISSION

29 CFR Part 2700

Penalty Settlement Procedure

AGENCY: Federal Mine Safety and Health Review Commission.

ACTION: Final rule.

SUMMARY: The Federal Mine Safety and Health Review Commission (the "Commission") is an independent adjudicatory agency that provides hearings and appellate review of cases arising under the Federal Mine Safety and Health Act of 1977, or Mine Act. Hearings are held before the Commission's Administrative Law Judges, and appellate review is provided by a five-member Review Commission appointed by the President and confirmed by the Senate. The Commission is publishing a final rule to streamline the process for settling civil penalties assessed under the Mine Act.

DATES: The final rule takes effect on December 30, 2010. The Commission will accept written and electronic comments received on or before December 15, 2010.

ADDRESSES: Written comments should be mailed to Michael A. McCord, General Counsel, Office of the General Counsel, Federal Mine Safety and Health Review Commission, 601 New Jersey Avenue, NW., Suite 9500, Washington, DC 20001, or sent via facsimile to 202–434–9944. Persons mailing written comments shall provide an original and three copies of their comments. Electronic comments should state "Comments on Penalty Settlement Rule" in the subject line and be sent to *mmccord@fmshrc.gov.*

FOR FURTHER INFORMATION CONTACT: Michael A. McCord, General Counsel, Office of the General Counsel, 601 New Jersey Avenue, NW., Suite 9500, Washington, DC 20001; telephone 202–434–9935; fax 202–434–9944.

SUPPLEMENTARY INFORMATION:

Background

On April 27, 2010, the Commission published in the **Federal Register** an interim rule regarding the Commission's civil penalty settlement procedures. 75 FR 21987. The Commission explained that since 2006, the number of new cases filed with the Commission has dramatically increased, and that in order to deal with that burgeoning caseload, the Commission is considering methods to simplify how it processes civil penalty settlements. The interim rule became effective on May 27, 2010, and the Commission accepted comments on the rule through June 28, 2010. The Commission received comments from the Secretary of Labor (the "Secretary") through the U.S. Department of Labor's Office of the Solicitor, individual Conference and Litigation Representatives ("CLRs"), and a few members of the mining community.

Under section 110(k) of the Mine Act, 30 U.S.C. 820(k), a proposed civil penalty that has been contested before the Commission may be settled only with the approval of the Commission. Under the Commission's practice prior to the effective date of the interim rule, a party submitted to a Commission Administrative Law Judge a motion to approve a penalty settlement that included for each violation the amount of the penalty proposed by the Department of Labor's Mine Safety and Health Administration ("MSHA"), the amount of the penalty agreed to in settlement, and facts in support of the penalty agreed to by the parties. 29 CFR 2700.31(b) (2009). A Commission Judge considered the motion and evaluated the penalty agreed to by the parties based on the criteria set forth in section 110(i) of the Mine Act, 30 U.S.C. 820(i). If the Judge concluded that the settlement was consistent with the statutory criteria, the Judge issued a decision approving the settlement and setting forth the reasons for approval.

The interim rule changed the current procedure by adding two new requirements. First, in all penalty proceedings, except for discrimination proceedings arising under section 105(c) of the Mine Act, 30 U.S.C. 815(c), or proceedings against individuals pursuant to section 110(c) of the Mine Act, 30 U.S.C. 820(c), the interim rule requires that a party filing a motion to approve a penalty settlement submit a proposed decision approving settlement ("proposed order") with the motion. Second, it requires the filing party to submit the motion and proposed order electronically. The basic requirements

for content of a motion to approve settlement are relatively unchanged in that the interim rule requires that a movant include in the motion for each violation the amount of the proposed penalty, the amount of the penalty agreed to in settlement, and facts that support the penalty agreed to by the parties. The Commission explained in the preamble to the interim rule that a filing party may set forth this information in the proposed order and incorporate the proposed order by reference in the motion.

The interim rule also includes a new requirement that the party filing the motion must certify that the opposing party has reviewed the motion and has authorized the filing party to represent that the opposing party consents to the granting of the motion and the entry of the proposed order approving settlement. In addition, the interim rule requires that, if a motion had been filed by a CLR on behalf of the Secretary of Labor, the accompanying proposed order must include a provision in which the Judge accepts the CLR to represent the Secretary in accordance with the notice of either limited or unlimited appearance previously filed with the Commission. The Commission has made sample forms for proposed orders approving settlement available on the Commission's Web site (*http://www.fmshrc.gov*).

The interim rule provides that in all penalty proceedings, except discrimination and section 110(c) proceedings, parties must file any settlement motion electronically in accordance with the rule and the Commission's Web site instructions. The Commission provides in the interim rule that a party may file non-electronically only with the permission of the Judge.

The interim rule further requires that a copy of a motion and proposed order be served on the opposing party as expeditiously as possible. In recognition that some parties may not have the capability of being served with the motion and proposed order by e-mail, facsimile transmission, or commercial delivery, the interim rule provides that, in such circumstances, the filing party may serve the motion and proposed order on the opposing party by mail.

The interim rule also provides that if a party filing a motion to approve settlement and proposed order fails to include required information in the motion and proposed order, the Commission will not accept for filing the motion and proposed order. Rather, the Commission will inform the filing party of the need for correction and resubmission.

As previously mentioned, before the interim rule became effective parties were required to include in a motion to approve settlement the amount of the proposed penalty, the amount of the penalty agreed to in settlement, and facts in support of the penalty agreed to by the parties. The final rule provides that such factual support must be submitted in the motion to approve settlement and proposed order. However, in order to minimize any extra work required of parties, the Commission has clarified in the final rule that a filing party need only submit the amount of the proposed penalty, the amount of the penalty agreed to in settlement, and facts in support of the penalty agreed to by the parties in the proposed order, and may incorporate that factual support by reference in the motion. Thus, the parties need to provide the factual support for a settlement only in one document filed with the Commission, as was the practice before the interim rule became effective.

It is important to emphasize that the Commission intends for each proposed order to be able to stand alone as a description of the settlement and reasons for any approval of the settlement without reference to the motion. Thus, although the motion may be brief and incorporate by reference the factual support set forth in detail in the proposed order, the reverse is not true. A party may not submit a brief order that incorporates by reference the factual support set forth in detail in the motion. If a party submits a motion that contains detailed factual support and a proposed order that merely incorporates by reference the detailed information provided in the motion, the Commission will not accept the motion and proposed order for filing in accordance with the provisions of paragraph (f) of the final rule. The proposed order must set forth the amount of the proposed penalty, the amount of the penalty agreed to in settlement, and facts in support of the penalty agreed to by the parties.

Although motions may be submitted in PDF format, it is important that proposed orders not be submitted in PDF format. Judges are unable to make electronic changes to proposed orders that are submitted in PDF format. The Commission will be able to process settlements more efficiently if orders are submitted in a format in which the Judge may easily make any necessary changes.

Commenters have also complained that they are having technical difficulties with the forms available on the Commission's Web site, and that the interim rule is ambiguous as to whether parties are required to use the forms. The Secretary suggested that the final rule should clarify that the proposed order does not have to conform to one of the templates on the Commission's Web site as long as the proposed order includes the required information. The Secretary also commented that the final rule should require that the proposed order include language telling operators where to send penalty checks.

The Commission has clarified in the final rule that parties are not required to use the proposed order forms available on the Commission's Web site. The final rule provides, however, that if a proposed order fails to include pertinent information, the motion and proposed order may be rejected for filing by the Commission in accordance with paragraph (f) of the final rule. The Commission has not included in the final rule a requirement that a proposed order must include language telling operators where to send penalty checks. Such language is provided in the Commission's proposed order forms, however. The Commission notes that parties may include such language in the proposed orders even if they do not use the forms.

As to the certification requirement set forth in the interim rule, the Secretary commented that her attorneys and CLRs have difficulty verifying that operators have actually reviewed the settlement. She suggests that the purpose of the rule, *i.e.,* streamlining the settlement of penalty proceedings, would be better served if the filing party were only required to certify that the opposing party has authorized the granting of the motion and the entry of the proposed order.

In a related comment, a member of the mining community stated that on occasion CLRs have unilaterally filed "joint" settlement motions that have not been reviewed or approved by the operator. The commenter suggested that the Commission should require that any settlement motions must either be signed by both parties' representatives or, prior to filing, a settlement motion and proposed order must be submitted to the opposing party for review at least three business days prior to filing.

The Commission agrees with these comments and has revised the language of the rule accordingly. The final rule provides that the party filing a motion must certify that the opposing party has authorized the granting of the motion and the entry of the proposed order. The final rule does not require a certification that the opposing party has reviewed the motion and proposed order. In order to ensure that an opposing party has reviewed the motion and proposed

order, the Commission has added a provision to the final rule requiring that a settlement motion and proposed order must be served on all parties or if the parties are represented, on their representatives, at least five business days before the motion and proposed order are filed with the Commission. The Commission has included a five-day requirement rather than a three-day requirement in order to provide as much review time as possible to the parties, particularly if the settlement motion and proposed order are served by mail. The Commission notes that both the five-day service requirement and the certification requirement apply in every case where a settlement motion and proposed order are filed.

The Secretary commented that the final rule should clarify that before filing a settlement motion on behalf of the Secretary, a CLR does not need to have obtained Commission authorization to represent the Secretary in that proceeding. The Commission has included that change in the final rule.

One commenter stated that section 110(c) proceedings are frequently consolidated with, and/or are settled with, the related civil penalty proceeding against the operator. The commenter stated that in such circumstances, it makes sense to discuss the settlement of both cases in a single motion. The commenter suggested that section 110(c) proceedings should be covered by the final rule and should not be specifically excluded. The Commission agrees and has made this change. Thus, discrimination cases are the only cases in which a party must submit a hard paper copy of a motion to approve settlement to the Judge that includes for each violation the amount of the proposed penalty, the amount of the penalty agreed to in settlement, and the supporting facts. In discrimination proceedings, a proposed order need not be submitted. Filing and service in discrimination proceedings shall be accomplished in accordance with the provisions of 29 CFR 2700.5 and 2700.7.

Notice and Public Procedure

Although notice-and-comment rulemaking requirements under the Administrative Procedure Act ("APA") do not apply to rules of agency procedure (*see* 5 U.S.C. 553(b)(3)(A)), the Commission invites members of the interested public to submit comments on the final rule. The Commission will accept public comments until December 15, 2010.

The Commission is an independent regulatory agency and, as such, is not subject to the requirements of E.O. 12866, E.O. 13132, or the Unfunded Mandates Reform Act, 2 U.S.C. 1501 *et seq.*

The Commission has determined under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) that this rule would not have a significant economic impact on a substantial number of small entities. Therefore, a Regulatory Flexibility Statement and Analysis has not been prepared.

The Commission has determined that the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) does not apply because this rule does not contain any information collection requirements that require the approval of the OMB.

The Commission has determined that the Congressional Review Act (5 U.S.C. 801) is not applicable here because, pursuant to 5 U.S.C. 804(3)(C), this rule "does not substantially affect the rights or obligations of non-agency parties."

List of Subjects in 29 CFR Part 2700

Administrative practice and procedure, Mine safety and health, Penalties, Whistleblowing.

■ For the reasons stated in the preamble, the Federal Mine Safety and Health Review Commission amends 29 CFR part 2700 as follows:

PART 2700—PROCEDURAL RULES

■ 1. The authority citation for part 2700 continues to read as follows:

Authority: 30 U.S.C. 815, 820, 823, and 876.

■ 2. Section 2700.5 is amended by revising paragraph (b) to read as follows:

§ 2700.5 General requirements for pleadings and other documents; status or informational requests.

* * * * *

(b) *Where to file.* Unless otherwise provided for in the Act, these rules, or by order:

(1) Until a Judge has been assigned to a case, all documents shall be filed with the Commission. Documents filed with the Commission shall be addressed to the Executive Director and mailed or delivered to the Docket Office, Federal Mine Safety and Health Review Commission, 601 New Jersey Avenue, NW., Suite 9500, Washington, DC 20001; facsimile delivery as allowed by these rules (*see* section 2700.5(e)), shall be transmitted to (202) 434–9954.

(2) After a Judge has been assigned, and before a decision has been issued, documents shall be filed with the Judge at the address set forth on the notice of the assignment.

(3) Documents filed in connection with interlocutory review shall be filed with the Commission in accordance with section 2700.76.

(4) After the Judge has issued a final decision, documents shall be filed with the Commission as described in paragraph (b)(1) of this section.

* * * * *

■ 3. Section 2700.31 is revised to read as follows:

§ 2700.31 Penalty settlement.

(a) *General.* A proposed penalty that has been contested before the Commission may be settled only with the approval of the Commission upon motion. In all penalty proceedings, except for discrimination proceedings arising under section 105(c) of the Mine Act, 30 U.S.C. 815(c), a settlement motion must be accompanied by a proposed order approving settlement. In discrimination proceedings, a party shall file a motion to approve settlement that includes the factual support described in paragraph (b)(1) of this section, and that shall be filed and served in accordance with the provisions of 29 CFR 2700.5 and 2700.7, respectively. In discrimination proceedings, a party need not file a proposed order.

(b) *Content of motion.*

(1) *Factual support.* A motion to approve a penalty settlement shall include for each violation the amount of the penalty proposed by the Secretary, the amount of the penalty agreed to in settlement, and facts in support of the penalty agreed to by the parties. Rather than setting forth such information in detail, the motion may incorporate by reference the information which has been included in the accompanying proposed order as required by paragraph (c)(1) of this section.

(2) *Certification.* The party filing a motion must certify that the opposing party has authorized the filing party to represent that the opposing party consents to the granting of the motion and the entry of the proposed order approving settlement.

(c) *Content of proposed order.*

(1) *Factual support.* A proposed order approving a penalty settlement shall include for each violation the amount of the penalty proposed by the Secretary, the amount of the penalty agreed to in settlement, and facts in support of the penalty agreed to by the parties. Forms for proposed orders approving settlement are available on the Commission's Web site (*http://www.fmshrc.gov*). Although parties are not required to use the forms on the Commission's Web site, if proposed orders fail to include pertinent information, the motion and proposed order may be rejected for filing by the Commission in accordance with paragraph (f) of this section. Proposed

orders shall not be submitted in PDF format.

(2) *Appearance by CLR.* If a motion has been filed by a Conference and Litigation Representative ("CLR") on behalf of the Secretary, the proposed order approving settlement accompanying the motion shall include a provision in which the Judge accepts the CLR to represent the Secretary in accordance with the notice of either limited or unlimited appearance previously filed with the Commission. A CLR does not need to obtain authorization from the Commission to represent the Secretary before the CLR files a motion to approve settlement and proposed order.

(d) *Filing and service of motion accompanied by proposed order.*

(1) *Electronic filing.* A motion and proposed order shall be filed electronically according to the requirements set forth in this rule and instructions on the Commission's Web site (*http://www.fmshrc.gov*). Filing is effective upon the date of the electronic transmission of the motion and proposed order. The transmitting party is responsible for retaining records showing the date of transmission, including receipts.

(i) *Signatures.* Any signature line set forth within a motion to approve settlement submitted electronically shall include the notation "/s/" followed by the typewritten name of the party or representative of the party filing the document. Such representation of the signature shall be deemed to be the original signature of the representative for all purposes unless the party representative shows that such representation of the signature was unauthorized. *See* 29 CFR 2700.6.

(ii) *Status of documents.* A motion and proposed order filed electronically constitute written documents for the purpose of applying the Commission's procedural rules (29 CFR part 2700), and such rules apply unless an exception to those rules is specifically set forth in this rule. Any copies of the motion and proposed order which have been printed and placed in the official case file by the Commission shall have the same force and effect as original documents.

(2) *Filing by non-electronic means.* A party may file a motion to approve settlement and an accompanying proposed order by non-electronic means only with the permission of the Judge.

(3) *Service.* A settlement motion and proposed order shall be served on all parties or, if parties are represented, upon their representatives, by the most expeditious means possible and at least five business days before the motion and proposed order are filed with the Commission. If a party cannot be served by e-mail, facsimile transmission, or commercial delivery, a copy of the motion and proposed order may be served by mail. A certificate of service shall accompany the motion and proposed order setting forth the date and manner of service.

(e) *Filing of motion and proposed order prior to filing of petition.* If a motion to approve settlement and proposed order is filed with the Commission before the Secretary has filed a petition for assessment of penalty, the filing party must also submit as attachments, electronic copies of the proposed penalty assessment and citations and orders at issue. If such attachments are filed, the Secretary need not file a petition for assessment of penalty.

(f) *Non-acceptance of motion and proposed order.* If a party filing a motion to approve settlement and a proposed order fails to include in the motion and proposed order pertinent information required by this rule and the Commission's instructions posted on the Commission's Web site, the Commission will not accept for filing the motion and proposed order. Rather, the Commission will inform the filing party of the need for correction and resubmission.

(g) *Final order.* Any order by the Judge approving a settlement shall set forth the reasons for approval and shall be supported by the record. Such order shall become the final order of the Commission 40 days after issuance unless the Commission has directed that the order be reviewed. A Judge may correct clerical errors in an order approving settlement in accordance with the provisions of 29 CFR 2700.69(c).

Dated: November 23, 2010.

Mary Lu Jordan,

Chairman, Federal Mine Safety and Health Review Commission.

BILLING CODE 6735–01–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

31 CFR Part 548

Belarus Sanctions Regulations

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Final rule.

SUMMARY: The Department of the Treasury's Office of Foreign Assets Control ("OFAC") is amending the Belarus Sanctions Regulations ("BSR") in the Code of Federal Regulations to authorize U.S. persons to engage in otherwise prohibited transactions with two blocked entities, Lakokraska OAO and/or Polotsk Steklovolokno OAO, until May 31, 2011. In addition, OFAC is amending the BSR to make a technical correction to the authority citation.

DATES: *Effective Date:* November 30, 2010.

FOR FURTHER INFORMATION CONTACT: Assistant Director for Compliance, Outreach & Implementation, tel.: 202/622–2490, Assistant Director for Licensing, tel.: 202/622–2480, Assistant Director for Policy, tel.: 202/622–4855, Office of Foreign Assets Control, or Chief Counsel (Foreign Assets Control), tel.: 202/622–2410, Office of the General Counsel, Department of the Treasury (not toll free numbers).

SUPPLEMENTARY INFORMATION:

Electronic and Facsimile Availability

This document and additional information concerning OFAC are available from OFAC's Web site (*http://www.treas.gov/ofac*). Certain general information pertaining to OFAC's sanctions programs also is available via facsimile through a 24-hour fax-on-demand service, tel.: 202/622–0077.

Background

The Belarus Sanctions Regulations, 31 CFR part 548 ("BSR"), implement Executive Order 13405 of June 16, 2006, "Blocking Property of Certain Persons Undermining Democratic Processes or Institutions in Belarus" ("E.O. 13405"). Pursuant to E.O. 13405, on May 15, 2008, OFAC designated the entities Lakokraska OAO and Polotsk Steklovolokno OAO, blocking their property and interests in property (73 FR 29849, May 22, 2008). On September 4, 2008, before the publication of the BSR, OFAC issued and posted on its Web site Belarus General License No. 1, which authorized all transactions between U.S. persons and Lakokraska OAO and/or Polotsk Steklovolokno OAO from September 4, 2008, until March 2, 2009. This authorization was subject to the proviso that all property and interests in property of Lakokraska OAO or Polotsk Steklovolokno OAO that previously had been blocked pursuant to E.O. 13405 were to remain blocked. OFAC subsequently amended Belarus General License No. 1 four times to extend its authorization for transactions between U.S. persons and the two entities. The latest of those

amendments, Belarus General License No. 1–D, extended the authorization for all transactions between U.S. persons and Lakokraska OAO and/or Polotsk Steklovolokno OAO until November 30, 2010.

The BSR were published on February 3, 2010 (75 FR 5502). Section 548.509 of the BSR memorialized General License No. 1, as amended, and authorized all transactions between U.S. persons and Lakokraska OAO and/or Polotsk Steklovolokno OAO for a limited period of time. Today, OFAC is amending section 548.509(a) of the BSR to extend the authorization until May 31, 2011. U.S. persons may continue to engage in all transactions otherwise prohibited by the BSR with Lakokraska OAO and/or Polotsk Steklovolokno OAO, except that, as provided in section 548.509(b), any property and interests in property that were blocked prior to September 4, 2008, still remain blocked.

This rule also corrects a typographical error in the BSR's authority citation.

Public Participation

Because the amendments of the Regulations involve a foreign affairs function, the provisions of Executive Order 12866 and the Administrative Procedure Act (5 U.S.C. 553) requiring notice of proposed rulemaking, opportunity for public participation, and delay in effective date are inapplicable. Because no notice of proposed rulemaking is required for this rule, the Regulatory Flexibility Act (5 U.S.C. 601–612) does not apply.

Paperwork Reduction Act

The collections of information related to the Regulations are contained in 31 CFR part 501 (the "Reporting, Procedures and Penalties Regulations"). Pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3507), those collections of information have been approved by the Office of Management and Budget under control number 1505–0164. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number.

List of Subjects in 31 CFR Part 548

Administrative practice and procedure, Banks, Banking, Belarus, Blocking of assets, Credit, Foreign trade, Penalties, Reporting and recordkeeping requirements, Securities, Services.

■ For the reasons set forth in the preamble, the Department of the Treasury's Office of Foreign Assets Control amends 31 CFR part 548 as follows:

PART 548—BELARUS SANCTIONS REGULATIONS

■ 1. Revise the authority citation to part 548 to read as follows:

Authority: 3 U.S.C. 301; 31 U.S.C. 321(b); 50 U.S.C. 1601–1651, 1701–1706; Pub. L. 101–410, 104 Stat. 890 (28 U.S.C. 2461 note); Pub. L. 110–96, 121 Stat. 1011 (50 U.S.C. 1705 note); E.O. 13405, 71 FR 35485; 3 CFR, 2007 Comp., p. 231.

Subpart E—Licenses, Authorizations, and Statements of Licensing Policy

■ 2. Revise § 548.509(a) to read as follows:

§ 548.509 Transactions with certain blocked persons authorized.

(a) Except as provided in paragraph (b) of this section, U.S. persons are authorized to engage in all transactions otherwise prohibited by this part with Lakokraska OAO and/or Polotsk Steklovolokno OAO, entities whose property and interests in property are blocked pursuant to § 548.201(a)(2), until May 31, 2011.

BILLING CODE 4810–AL–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2010–1045]

RIN 1625–AA00

Safety Zone; Chicago Harbor, Navy Pier Southeast, Chicago, IL

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce the Navy Pier Southeast Safety Zone in Chicago Harbor from December 4, 2010 through January 1, 2011. This action is necessary and intended to ensure safety of life on the navigable waters of the United States immediately prior to, during, and immediately after fireworks events. This rule will establish restrictions upon, and control movement of, vessels in a specified area immediately prior to, during, and immediately after fireworks events. During the enforcement period, no person or vessel may enter the safety zones without permission of the Captain of the Port, Sector Lake Michigan.

DATES: The regulations in 33 CFR 165.931 will be enforced from 6:15 p.m. on December 4, 2010 to 12:30 a.m. on January 1, 2011.

FOR FURTHER INFORMATION CONTACT: If you have questions on this notice, call or email BM1 Adam Kraft, Prevention Department, Coast Guard Sector Lake Michigan, Milwaukee, WI at 414–747–7154, e-mail *Adam.D.Kraft@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the Safety Zone; Chicago Harbor, Navy Pier Southeast, Chicago, IL listed in 33 CFR 165.931 for the following events:

(1) *Navy Pier Fireworks;* on December 4, 2010 from 6:15 p.m. through 6:30 p.m.; on December 31, 2010 from 7:45 p.m. through 8:15 p.m.; and from 11:45 p.m. on December 31, 2010 to 12:30 a.m. on January 1, 2011.

All vessels must obtain permission from the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative to enter, move within or exit the safety zone. Vessels and persons granted permission to enter the safety zone shall obey all lawful orders or directions of the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative. While within a safety zone, all vessels shall operate at the minimum speed necessary to maintain a safe course.

This notice is issued under authority of 33 CFR 165.931 and 5 U.S.C. 552 (a). In addition to this notice in the **Federal Register**, the Coast Guard will provide the maritime community with advance notification of these enforcement periods via broadcast Notice to Mariners or Local Notice to Mariners. The Captain of the Port, Sector Lake Michigan, will issue a Broadcast Notice to Mariners notifying the public when enforcement of the safety zone established by this section is suspended. If the Captain of the Port, Sector Lake Michigan, determines that the safety zone need not be enforced for the full duration stated in this notice, he or she may use a Broadcast Notice to Mariners to grant general permission to enter the safety zone. The Captain of the Port, Sector Lake Michigan, or his or her on-scene representative may be contacted via VHF Channel 16.

Dated: November 19, 2010.

S.R. Schenk,

Commander, U.S. Coast Guard, Captain of the Port, Sector Lake Michigan, Acting.

[FR Doc. 2010–30133 Filed 11–29–10; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR PART 165

[Docket No. USCG–2010–1013]

RIN 1625–AA00

Safety Zone; "Contagion" Movie Filming, Calumet River, Chicago, IL

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone on the Calumet River near Chicago, Illinois. This zone is intended to restrict vessels from a portion of the Calumet River due to the filming of a movie involving high speed boat chases and other dangerous stunts on the water. This temporary safety zone is necessary to protect the surrounding public and vessels from the hazards associated with the stunts that will be performed on the river during the filming of this movie.

DATES: This rule is effective from 7 a.m. on December 11, 2010 until 7 a.m. on December 12, 2010. This rule will be enforced from 7 a.m. on December 11, 2010 until 7 a.m. on December 12, 2010.

ADDRESSES: Documents indicated in this preamble as being available in the docket are part of docket USCG–2010–1013 and are available online by going to *http://www.regulations.gov,* inserting USCG–2010–1013 in the "Keyword" box, and then clicking "search." They are also available for inspection or copying at the Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary rule, contact or e-mail BM1 Adam Kraft, U.S. Coast Guard Sector Lake Michigan, at 414–747–7154 or *Adam.D.Kraft@uscg.mil.* If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION:

Regulatory Information

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when an agency for good cause finds that those procedures are "impracticable, unnecessary, or contrary to the public interest." Under U.S.C. 553 (b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the final details for this event were not submitted to the Coast Guard until October 27, 2010. As such, it is impracticable to provide a full comment period due to lack of time. In addition, given the high risks of injury and damage that will be created during the filming of the movie Contagion, a delay in enacting this safety zone would be contrary to the public interest.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. A 30-day notice period is not possible for the same reasons that publishing an NPRM was not possible. Due to the high risks of personal injury and property damage that will be created during the filming of the movie Contagion, delaying the effective date of this rule would be contrary to the public interest.

Background and Purpose

This temporary safety zone is necessary to protect vessels from the hazards associated with the filming of the motion picture Contagion. The filming of dangerous boat chases and other stunts on the water poses serious risks of injury to persons and property. As such, the Captain of the Port, Sector Lake Michigan, has determined that the filming of this motion picture does pose significant risks to public safety and property and that a safety zone is necessary.

Discussion of Rule

The safety zone will encompass all U.S. navigable waters of the Calumet River in the vicinity of the South Torrence Avenue Bridge between Mile Marker 329.0 and Mile Marker 327.5 of the Calumet River in Chicago, IL. [DATUM: NAD 83].

All persons and vessels shall comply with the instructions of the Coast Guard Captain of the Port, Sector Lake Michigan, or his or her on-scene representative. Entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative. The Captain of the Port, Sector Lake Michigan, or his or her on-scene representative may be contacted via VHF Channel 16.

Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on 13 of these statutes or executive orders.

Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order.

This determination is based on the minimal time that vessels will be restricted from the zone and the zone is an area where the Coast Guard expects insignificant adverse impact to mariners from the zones' activation.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered whether this rule will have a significant economic impact on a substantial number of small entities. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

This rule will affect the following entities, some of which might be small entities: The owners or operators of vessels intending to transit or anchor on a portion of the Calumet River between 7 a.m. on December 11, 2010 until 7 a.m. on December 12, 2010.

This safety zone will not have a significant economic impact on a substantial number of small entities for the following reasons: This rule will only be enforced while unsafe conditions exist. The Coast Guard also expects that traffic will generally be very low based on the time of year that this closure will occur.

In the event that this temporary safety zone affects shipping, commercial vessels may request permission from the Captain of The Port, Sector Lake Michigan, or his or her on-scene representative to transit through the safety zone. The Coast Guard will give notice to the public via a Broadcast to Mariners that the regulation is in effect.

Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we offer to assist small entities in understanding the rule so that they could better evaluate its effects on them and participate in the rulemaking process. Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of compliance on them. We have analyzed this rule under that Order and have determined that it does not have implications for federalism.

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such expenditure, we do discuss the effects of this rule elsewhere in this preamble.

Taking of Private Property

This rule will not affect a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not concern an environmental risk to health or risk to safety that may disproportionately affect children.

Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

Energy Effects

We have analyzed this rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. We have determined that it is not a "significant energy action" under that order because it is not a "significant regulatory action" under Executive Order 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The Administrator of the Office of Information and Regulatory Affairs has not designated it as a significant energy action. Therefore, it does not require a Statement of Energy Effects under Executive Order 13211.

Technical Standards

The National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note) directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through the Office of Management and Budget, with an explanation of why using these standards would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (*e.g.,* specifications of materials, performance, design, or operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.lD, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have concluded this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This rule is categorically excluded, under figure 2–1, paragraph (34)(g), of the Instruction. This rule involves the establishment of a safety zone and is therefore categorically excluded under paragraph 34(g) of the Instruction. This rule involves the establishment of a temporary safety zone that will be effective for less than twenty four hours. As such, it fits within the categorical exclusion for safety zones.

A final environmental analysis checklist and categorical exclusion determination are available in the docket where indicated under **ADDRESSES**.

List of Subjects in 33 CFR Part 165

Harbors, Marine Safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. A new temporary § 165.T09–1013 is added as follows:

§ 165.T09–1013 Safety Zone; Contagion Movie Filming, Calumet River, Chicago, Illinois

(a) *Location.* The safety zone will encompass all U.S. navigable waters of the Calumet River in the vicinity of the South Torrence Avenue Bridge between Mile Marker 329.0 and Mile Marker 327.5 of the Calumet River in Chicago, IL. [DATUM: NAD 83].

(b) *Effective period.* This regulation is effective from 7 a.m. on December 11, 2010 until 7 a.m. on December 12, 2010. This regulation will be enforced from 7 a.m. on December 11, 2010 until 7 a.m. on December 12, 2010. The Captain of the Port, Sector Lake Michigan, or his or her on-scene representative may suspend and restart the enforcement of the safety zone at any time.

(c) *Regulations.* (1) In accordance with the general regulations in section 165.23 of this part, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative.

(2) This safety zone is closed to all vessel traffic, except as may be permitted by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative.

(3) The "on-scene representative" of the Captain of the Port, Sector Lake Michigan, is any Coast Guard commissioned, warrant or petty officer who has been designated by the Captain of the Port, Sector Lake Michigan, to act on his or her behalf. The on-scene representative of the Captain of the Port, Sector Lake Michigan, will be on land in the vicinity of the safety zone and will have constant communications with the Chicago Marine Unit vessels that will be on-scene to assist the Coast Guard in enforcing the safety zone.

(4) Vessel operators desiring to enter or operate within the safety zone shall contact the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative to obtain permission to do so. The Captain of the Port, Sector Lake Michigan, or his or her on-scene representative may be contacted via VHF Channel 16. Vessel operators given permission to enter or operate in the safety zone must comply with all directions given to them by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative.

Dated: November 17, 2010.

S.R. Schenk,

Commander, U.S. Coast Guard, Captain of the Port, Sector Lake Michigan, Acting.

Coast Guard

33 CFR Part 165

[Docket No. USCG–2010–1043]

RIN 1625–AA00

Safety Zone; Bridge Demolition; Illinois River, Seneca, IL

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone on the Illinois River near Seneca, Illinois. This zone is intended to restrict vessels from a portion of the Illinois River due to the demolition of the Seneca Highway Bridge. This temporary safety zone is necessary to protect the surrounding public and vessels from the hazards associated with the demolition of the Seneca Highway Bridge.

DATES: This rule is effective in the CFR on November 30, 2010 through 6 a.m. on December 11, 2010. This rule is effective with actual notice for purposes of enforcement on 6 a.m. on November 18, 2010 through 6 a.m. on November 19, 2010. This rule will be enforced again from 6 a.m. on December 2, 2010 through 6 a.m. on December 11, 2010.

ADDRESSES: Documents indicated in this preamble as being available in the docket are part of docket USCG–2010–1043 and are available online by going to *http://www.regulations.gov,* inserting USCG–2010–1043 in the "Keyword" box, and then clicking "search." They are also available for inspection or copying at the Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary rule, contact or e-mail BM1 Adam Kraft, U.S. Coast Guard Sector Lake Michigan, at 414–747–7154 or *Adam.D.Kraft@uscg.mil.* If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION:

Regulatory Information

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when an agency for good cause finds that those procedures are "impracticable, unnecessary, or contrary to the public interest." Under U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable as the final details for this demolition were not received by the Coast Guard until November 9, 2010. Furthermore, the Coast Guard has reached out to potentially affected waterway users and has determined that potential impacts as a result of this safety zone will be minimal. Given the short time frame, low impact of the zone, and hazards associated with a bridge demolition, delaying the enactment of this rule would be contrary to the public interest.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. A 30 day notice period is impracticable given the short time frame for enacting this regulation. Given the hazards created by a bridge demolition, delaying the effective date of this rule would be contrary to the public interest.

Background and Purpose

This temporary safety zone is necessary to protect vessels from the hazards associated with the demolition of the Seneca Highway Bridge. The detonation of explosives and the falling debris associated with the demolition of this bridge pose serious risks of injury to persons and property. As such, the Captain of the Port, Sector Lake Michigan, has determined that the demolition of the Seneca Highway Bridge does pose significant risks to public safety and property and that a safety zone is necessary.

Discussion of Rule

The safety zone will encompass all U.S. navigable waters of the Illinois River in the vicinity of Seneca Highway Bridge between Mile Marker 252.5 and Mile Marker 253.0 of the Illinois River in Seneca, IL. [DATUM: NAD 83].

All persons and vessels shall comply with the instructions of the Coast Guard Captain of the Port, Sector Lake Michigan, or his or her on-scene representative. Entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative. The Captain of the Port, Sector Lake Michigan, or his or her on-

scene representative may be contacted via VHF Channel 16.

Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on 13 of these statutes or executive orders.

Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order.

This determination is based on the minimal time that vessels will be restricted from the zone and the zone is an area where the Coast Guard expects insignificant adverse impact to mariners from the zones' activation.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered whether this rule will have a significant economic impact on a substantial number of small entities. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

This rule will affect the following entities, some of which might be small entities: The owners or operators of vessels intending to transit or anchor on a portion of the Illinois River between 6 a.m. on November 18, 2010 through 6 a.m. on November 19, 2010 and again from 6 a.m. on December 2, 2010 through 6 a.m. on December 11, 2010.

This safety zone will not have a significant economic impact on a substantial number of small entities for the following reasons: This rule will only be enforced while unsafe conditions exist. Vessel traffic will be minimal due to the time of year that this closure will occur and because the location of the safety zone is in an area that typically does not experience high volumes of vessel traffic. Several commercial traffic entities have already been contacted concerning this closure and have confirmed that it will not affect them in a negative way.

In the event that this temporary safety zone affects shipping, commercial vessels may request permission from the Captain of The Port, Sector Lake Michigan, or his or her on scene representative to transit through the safety zone. The Coast Guard will give notice to the public via a Broadcast to Mariners that the regulation is in effect.

Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we offer to assist small entities in understanding the rule so that they could better evaluate its effects on them and participate in the rulemaking process. Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of compliance on them. We have analyzed this rule under that Order and have determined that it does not have implications for federalism.

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such expenditure, we do discuss the effects of this rule elsewhere in this preamble.

Taking of Private Property

This rule will not affect a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not concern an environmental risk to health or risk to safety that may disproportionately affect children.

Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

Energy Effects

We have analyzed this proposed rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. We have determined that it is not a "significant energy action" under that order because it is not a "significant regulatory action" under Executive Order 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The Administrator of the Office of Information and Regulatory Affairs has not designated it as a significant energy action. Therefore, it does not require a Statement of Energy Effects under Executive Order 13211.

Technical Standards

The National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note) directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through the Office of Management and Budget, with an explanation of why using these standards would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are

technical standards (*e.g.,* specifications of materials, performance, design, or operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.lD, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have concluded this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This rule is categorically excluded, under figure 2–1, paragraph (34)(g), of the Instruction. This rule involves the establishment of a safety zone and is therefore categorically excluded under paragraph 34(g) of the Instruction.

A final environmental analysis check list and categorical exclusion determination are available in the docket where indicated under **ADDRESSES**.

List of Subjects in 33 CFR Part 165

Harbors, Marine Safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

■ For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 46 U.S.C. Chapter 701; 50 U.S.C. 191, 195; 33 CFR 1.05–1(g), 6.04–1, 6.04–6, and 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. A new temporary § 165.T09–1043 is added as follows:

§ 165.T09–1043 Safety Zone; Bridge Demolition, Illinois River, Seneca, Illinois.

(a) *Location.* The safety zone will encompass all U.S. navigable waters of the Illinois River in the vicinity of the Seneca Highway Bridge between Mile Marker 252.5 and Mile Marker 253.0 of the Illinois River in Seneca, IL. [DATUM: NAD 83].

(b) *Effective period.* This regulation is effective from 6 a.m. on November 18, 2010 until 6 a.m. on December 11, 2010. This regulation will be enforced from 6 a.m. on November 18, 2010 until 6 a.m. on November 19, 2010 and then again from 6 a.m. on December 2, 2010 until 6 a.m. on December 11, 2010. The Captain of the Port, Sector Lake Michigan, or his or her on-scene representative may suspend and restart the enforcement of the safety zone during the effective period at any time.

(c) *Regulations.*

(1) In accordance with the general regulations in section 165.23 of this part, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative.

(2) This safety zone is closed to all vessel traffic, except as may be permitted by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative.

(3) The "on-scene representative" of the Captain of the Port, Sector Lake Michigan, is any Coast Guard commissioned, warrant or petty officer who has been designated by the Captain of the Port, Sector Lake Michigan, to act on his or her behalf. The on-scene representative of the Captain of the Port, Sector Lake Michigan, will be on land in the vicinity of the safety zone and will have constant communications with the involved safety vessels which will be provided by the contracting company and the Illinois Department of Transportation.

(4) Vessel operators desiring to enter or operate within the safety zone shall contact the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative to obtain permission to do so. The Captain of the Port, Sector Lake Michigan, or his or her on-scene representative may be contacted via VHF Channel 16. Vessel operators given permission to enter or operate in the safety zone must comply with all directions given to them by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative.

Dated: November 15, 2010.

L. Barndt,

Captain, U.S. Coast Guard, Captain of the Port, Sector Lake Michigan.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2010–1044]

RIN 1625–AA00

Safety Zone; USS Fort Worth Launch, Marinette, WI

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone on the Menominee River in Marinette, Wisconsin. This zone is intended to restrict vessels from a portion of Menominee River during the launching of the USS Fort Worth on December 4, 2010. This temporary safety zone is necessary to protect spectators and vessels from the hazards associated with the launching of this extremely large ship.

DATES: This rule is effective from 8 a.m. to 2 p.m. on December 4, 2010. This rule will be enforced from 8 a.m. to 2 p.m. on December 4, 2010.

ADDRESSES: Documents indicated in this preamble as being available in the docket are part of docket USCG–2010–1044 and are available online by going to *http://www.regulations.gov,* selecting the Advanced Docket Search option on the right side of the screen, inserting USCG–2010–1044 in the Docket ID box, pressing Enter, and then clicking on the item in the Docket ID column. They are also available for inspection or copying at the Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary rule, contact or e-mail BM1 Adam Kraft, U.S. Coast Guard Sector Lake Michigan, at 414–747–7154 or *Adam.D.Kraft@uscg.mil.* If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION:

Regulatory Information

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act

(APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are "impracticable, unnecessary, or contrary to the public interest." Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the final details for this event were not received by the Coast Guard with sufficient time to allow for a public comment period. Given the hazards associated with this ship launching, delaying this rule to provide for public comment would be contrary to the public interest. Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule to provide a 30-day notice period is contrary to the public interest due to the hazards associated with a ship launching.

Background and Purpose

This temporary safety zone is necessary to protect vessels from the hazards associated with the launching of the USS Fort Worth in Marinette, WI. The Captain of the Port, Sector Lake Michigan, has determined that the launching of the USS Fort Worth does pose significant risks to public safety and property. As such, this safety zone is necessary to prevent injury to persons and damage to property.

Discussion of Rule

This temporary safety zone will encompass all waters of the Menominee River, in the vicinity of Marinette Marine Corporation, between the Bridge Street Bridge located in position 45°06′12″ N, 087°37′34″ W and a line crossing the river perpendicularly passing through position 45°05′57″ N, 087°36′43″ W, in the vicinity of the Ansul Company. (DATUM: NAD 83).

All persons and vessels shall comply with the instructions of the Coast Guard Captain of the Port, Sector Lake Michigan, or his or her on-scene representative. Entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative. The Captain of the Port, Sector Lake Michigan, or his or her on-scene representative may be contacted via VHF Channel 16.

Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on 13 of these statutes or executive orders.

Regulatory Planning and Review

This rule is not a "significant regulatory action" under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order.

This determination is based on the minimal time that vessels will be restricted from the zone and the zone is an area where the Coast Guard expects insignificant adverse impact to mariners from the zones' activation.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered whether this rule will have a significant economic impact on a substantial number of small entities. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

This rule will affect the following entities, some of which might be small entities: The owners or operators of vessels intending to transit or anchor in a portion of Menominee River between 8 a.m. and 2 p.m. on December 4, 2010.

This temporary safety zone will not have a significant economic impact on a substantial number of small entities for the following reasons: Vessel traffic should be minimal given the location and the time of year that this event is occurring. Furthermore, this safety zone will only be in effect for six hours. In the event that this temporary safety zone affects shipping, commercial vessels may request permission from the Captain of The Port, Sector Lake Michigan, to transit through the safety zone. The Coast Guard will give notice to the public via a Broadcast to Mariners that the regulation is in effect.

Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we offered to assist small entities in understanding the rule so that they could better evaluate its effects on them and participate in the rulemaking process. Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of compliance on them. We have analyzed this rule under that Order and have determined that it does not have implications for federalism.

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such expenditure, we do discuss the effects of this rule elsewhere in this preamble.

Taking of Private Property

This rule will not affect a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not concern an environmental risk to health or risk to safety that may disproportionately affect children.

Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

Energy Effects

We have analyzed this proposed rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. We have determined that it is not a "significant energy action" under that order because it is not a "significant regulatory action" under Executive Order 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The Administrator of the Office of Information and Regulatory Affairs has not designated it as a significant energy action. Therefore, it does not require a Statement of Energy Effects under Executive Order 13211.

Technical Standards

The National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note) directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through the Office of Management and Budget, with an explanation of why using these standards would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (*e.g.,* specifications of materials, performance, design, or operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.lD, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have concluded this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This rule is categorically excluded, under figure 2–1, paragraph (34)(g), of the Instruction. This rule involves the establishment of a temporary safety zone that will be in place for only six hours. Therefore paragraph (34)(g) of the Instruction applies.

An environmental analysis checklist and a categorical exclusion determination are available in the docket where indicated under **ADDRESSES**.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

■ For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. A new temporary § 165.T09–1044 is added as follows

§ 165.T09–1044 Safety Zone; USS Fort Worth Launch, Marinette, Wisconsin.

(a) *Location.* All waters of the Menominee River, in the vicinity of Marinette Marine Corporation, between the Bridge Street Bridge located in position 45°06′12″ N, 087°37′34″ W and a line crossing the river perpendicularly passing through position 45°05′57″ N, 087°36′43″ W, in the vicinity of the Ansul Company. (DATUM: NAD 83).

(b) *Effective period.* This rule is effective from 8 a.m. to 2 p.m. on December 4, 2010. This rule will be enforced from 8 a.m. to 2 p.m. on December 4, 2010. The Captain of the Port, Sector Lake Michigan, or his or her on-scene representative may terminate this event at anytime.

(c) *Regulations.*

(1) In accordance with the general regulations in section 165.23 of this part, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative.

(2) This safety zone is closed to all vessel traffic, except as may be permitted by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative.

(3) The "on-scene representative" of the Captain of the Port, Sector Lake Michigan, is any Coast Guard commissioned, warrant or petty officer who has been designated by the Captain of the Port, Sector Lake Michigan, to act on his or her behalf. The on-scene representative of the Captain of the Port, Sector Lake Michigan, will be aboard either a Coast Guard or Coast Guard Auxiliary vessel.

(4) Vessel operators desiring to enter or operate within the safety zone shall contact the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative to obtain permission to do so. The Captain of the Port, Sector Lake Michigan, or his or her on-scene representative may be contacted via VHF Channel 16. Vessel operators given permission to enter or operate in the safety zone must comply with all directions given to them by the Captain of the Port, Sector Lake Michigan, or his or her on-scene representative.

Dated: November 19, 2010.

S.R. Schenk,

Commander, U.S. Coast Guard, Captain of the Port, Sector Lake Michigan, Acting.

[FR Doc. 2010–30137 Filed 11–29–10; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2010–1027]

Safety Zone, Brandon Road Lock and Dam to Lake Michigan Including Des Plaines River, Chicago Sanitary and Ship Canal, Chicago River, and Calumet-Saganashkee Channel, Chicago, IL

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a segment of the Safety Zone; Brandon Road Lock and Dam to Lake Michigan including Des Plaines River, Chicago Sanitary and Ship Canal, Chicago River, Calumet-Saganashkee Channel on all waters of the Chicago Sanitary and Ship Canal from Mile Marker 296.1 to Mile

Marker 296.7 daily from 7 a.m. to 11 a.m. and from 1 p.m. to 5 p.m. on December 6, 2010 through December 11, 2010 and from December 13, 2010 through December 18, 2010. This enforcement action will then occur again from 7 a.m. on December 20, 2010 through 5 p.m. on December 23, 2010. This action is necessary to protect the waterways, waterway users, and vessels from hazards associated with the U.S. Army Corps of Engineers' startup testing of the new dispersal barrier IIB, which will help control the spread of aquatic nuisance species that have the potential of devastating the waters of the Great Lakes.

During the enforcement period, entry into, transiting, mooring, laying-up or anchoring within the enforced area of this safety zone by any person or vessel is prohibited unless authorized by the Captain of the Port, Sector Lake Michigan, or his or her designated representative.

DATES: The regulations in 33 CFR 165.T09–0166 will be enforced from 7 a.m. on December 6, 2010 through 5 p.m. on December 23, 2010.

FOR FURTHER INFORMATION CONTACT: If you have questions on this notice, call or e-mail CDR Tim Cummins, Deputy Prevention Division, Ninth Coast Guard District, telephone 216–902–6045, e-mail address *Timothy.M.Cummins@uscg.mil*.

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce a segment of the Safety Zone; Brandon Road Lock and Dam to Lake Michigan including Des Plaines River, Chicago Sanitary and Ship Canal, Chicago River, Calumet-Saganashkee Channel, Chicago, IL, listed in 33 CFR 165.T09–0166, on all waters of the Chicago Sanitary and Ship Canal from Mile Marker 296.1 to Mile Marker 296.7 daily from 7 a.m. to 11 a.m. and from 1 p.m. to 5 p.m. on December 6, 2010 through December 11, 2010 and from December 13, 2010 through December 18, 2010. This enforcement action will then occur again from 7 a.m. on December 20, 2010 through 5 p.m. on December 23, 2010.

This enforcement action is necessary because the Captain of the Port, Sector Lake Michigan has determined that the U.S. Army Corps of Engineers' dispersal barrier IIB startup testing poses risks to life and property. The combination of vessel traffic and electric current in the water makes the control of vessels through the impacted portion of the Chicago Sanitary and Ship Canal necessary to prevent injury and property loss.

In accordance with the general regulations in § 165.23 of this part, entry into, transiting, mooring, laying up, or anchoring within the enforced area of this safety zone by any person or vessel is prohibited unless authorized by the Captain of the Port, Sector Lake Michigan, or his or her designated representative.

This notice is issued under authority of 33 CFR 165.T09–0166 and 5 U.S.C. 552(a). In addition to this notice in the **Federal Register**, the Captain of the Port, Sector Lake Michigan, will also provide notice through other means, which may include but are not limited to Broadcast Notice to Mariners, Local Notice to Mariners, local news media, distribution in leaflet form, and on-scene oral notice. Additionally, the Captain of the Port, Sector Lake Michigan, may notify representatives from the maritime industry through telephonic and e-mail notifications.

Dated: November 17, 2010.

S.R. Schenk,

Commander, U.S. Coast Guard, Captain of the Port, Sector Lake Michigan, Acting.

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 62

[EPA–R03–OAR–2010–0771; FRL–9233–4]

Approval and Promulgation of State Air Quality Plans for Designated Facilities and Pollutants, State of Delaware; Control of Emissions From Existing Hospital/Medical/Infectious Waste Incinerator (HMIWI) Units, Negative Declaration and Withdrawal of EPA Plan Approval

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: EPA is taking direct final action to approve the State of Delaware's negative declaration and request for EPA withdrawal of its section 111(d)/129 plan (the plan) approval for HMIWI units.

DATES: This rule is effective January 31, 2011 without further notice, unless EPA receives adverse written comment by December 30, 2010. If EPA receives such comments, it will publish a timely withdrawal of the direct final rule in the **Federal Register** and inform the public that the rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA–R03–OAR–2010–0771 by one of the following methods:

A. *http://www.regulations.gov.* Follow the on-line instructions for submitting comments.

B. *E-mail: wilkie.walter@epa.gov.*

C. *Mail:* EPA–R03–OAR–2010–0771, Walter K. Wilkie, Associate Director, Air Protection Division, Office of Air Monitoring and Analysis, Mailcode 3AP40, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103.

D. *Hand Delivery:* At the previously-listed EPA Region III address. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–R03–OAR–2010–0771. EPA's policy is that all comments received will be included in the public docket without change, and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or e-mail. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov,* your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the electronic docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *i.e.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form.

Publicly available docket materials are available either electronically in *http://www.regulations.gov* or in hard copy during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Copies of the State submittal are available at the Delaware Department of Natural Resources and Environmental Control, 89 Kings Highway, P.O. Box 1401, Dover, Delaware 19903.

FOR FURTHER INFORMATION CONTACT: James B. Topsale, P.E., at (215) 814–2190, or by e-mail at *topsale.jim@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

The Delaware HMIWI plan and related state rule were approved by EPA in the April 14, 2000 edition of the **Federal Register** and codified in 40 CFR part 62, subpart I. (65 FR 20090). However, since that time, all three designated incinerator facilities in the plan inventory have been dismantled, according to the Delaware Department of Natural Resources and Environmental Control (DNREC). On October 6, 2009, EPA promulgated revised HMIWI emission guidelines under 40 CFR part 60, subpart Ce, that triggered the need for revised state plans. As a result, on June 17, 2010, the DNREC requested EPA's approval of its negative declaration and plan withdrawal request. The submitted negative declaration contains the name of each designated facility that was dismantled, and the year it was dismantled.

II. Final Action

EPA is approving the State of Delaware's negative declaration and request for EPA withdrawal of its plan approval for HMIWI units. DNREC has determined that there are now no designated facilities, subject to subpart Ce requirements, in its air pollution control jurisdiction. EPA accepts that determination. Accordingly, EPA is amending part 62 to reflect approval of the DNREC June 17, 2010 negative declaration and request for EPA withdrawal of the HMIWI plan approval. However, if an affected Delaware HMIWI unit is discovered in the future, all the requirements of the Federal Plan (including revisions or amendments), part 62, subpart HHH, will be applicable to the affected unit.

III. Statutory and Executive Order Reviews

A. General Requirements

Under Executive Order 12866 (58 FR 51735, October 4, 1993), this action is not a "significant regulatory action" and therefore is not subject to review by the Office of Management and Budget. For this reason, this action is also not subject to Executive Order 13211, "Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use" (66 FR 28355, May 22, 2001). This action merely approves state law as meeting Federal requirements and imposes no additional requirements beyond those imposed by state law. Accordingly, the Administrator certifies that this rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). Because this rule approves pre-existing requirements under state law and does not impose any additional enforceable duty beyond that required by state law, it does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). This rule also does not have tribal implications because it will not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes, as specified by Executive Order 13175 (65 FR 67249, November 9, 2000). This action also does not have Federalism implications because it does not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999). This action merely approves a state rule implementing a Federal requirement, and does not alter the relationship or the distribution of power and responsibilities established in the Clean Air Act (CAA). This rule also is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997), because it approves a state rule implementing a Federal standard.

In reviewing section 111(d)/129 plan submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. In this context, in the absence of a prior existing requirement for the State to use voluntary consensus standards (VCS), EPA has no authority to disapprove a 111(d)/129 plan submission for failure to use VCS. It would thus be inconsistent with applicable law for EPA, when it reviews a 111(d)/129 plan submission, to use VCS in place of a 111(d)/129 plan submission that otherwise satisfies the provisions of the CAA. Thus, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply. This rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

B. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This rule is not a "major rule" as defined by 5 U.S.C. 804(2).

C. Petitions for Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by January 31, 2011. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action approving the Delaware section 111(d)/129 negative declaration and request for EPA withdrawal of the HMIWI plan approval may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 62

Environmental protection, Administrative practice and procedure, Air pollution control, Aluminum, Fertilizers, Fluoride, Intergovernmental relations, Paper and paper products industry, Phosphate, Reporting and recordkeeping requirements, Sulfur oxides, Sulfur acid plants, Waste treatment and disposal.

Dated: November 17, 2010.

W.C. Early,

Acting Regional Administrator, Region III.

■ 40 CFR part 62 is amended as follows:

PART 62—[AMENDED]

■ 1. The authority citation for part 62 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart I—Delaware

■ 2. Section 62.1975 is amended by revising the section heading, designating the existing paragraph as (a) and adding paragraph (b) to read as follows:

§ 62.1975 Identification of plan—negative declaration.

* * * * *

(b) On June 17, 2010, the Delaware Department of Natural Resources and Environmental Control submitted a negative declaration and request for withdrawal of EPA's plan approval under paragraph (a) of this section.

§ 62.1976 [Removed]

■ 3. Section 62.1976 is removed.

■ 4. Section 62.1977 is revised to read as follows:

§ 62.1977 Effective date.

The effective date of the negative declaration and EPA withdrawal of the plan approval is January 31, 2011.

[EPA–R04–OAR–2010–0614–201055; FRL–9234–2]

Approval and Promulgation of Implementation Plans; Extension of Attainment Date for the Atlanta, GA 1997 8-Hour Ozone Moderate Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is taking final action to approve a request from the State of Georgia, through the Georgia Department of Natural Resources' Environmental Protection Division (EPD), to grant a one-year extension of the attainment date for the 1997 8-hour ozone national ambient air quality standards (NAAQS) for the Atlanta, Georgia Area (hereafter referred to as the "Atlanta Area"). This request was sent to EPA via letter from EPD on June 9, 2010. The Atlanta Area consists of Barrow, Bartow, Carroll, Cherokee, Clayton, Cobb, Coweta, DeKalb, Douglas, Fayette, Forsyth, Fulton, Gwinnett, Hall, Henry, Newton, Paulding, Rockdale, Spalding, and Walton Counties in Georgia. In today's action, EPA is finalizing a determination that the State of Georgia has met the Clean Air Act (CAA or Act) requirements to obtain a one-year extension to its attainment date for the 1997 8-hour ozone NAAQS for the Atlanta Area. As a result, EPA is approving a one-year extension of the 1997 8-hour ozone moderate attainment date for the Atlanta Area. Specifically, EPA (through this final action) is extending the Atlanta Area's attainment date from June 15, 2010, to June 15, 2011.

DATES: *Effective Date:* This rule will be effective December 30, 2010.

ADDRESSES: EPA has established a docket for this action under Docket Identification No. EPA–R04–OAR–2010–0614. All documents in the docket are listed on the *http://www.regulations.gov* Web site. Although listed in the index, some information is not publicly available, *i.e.,* Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through *http://www.regulations.gov* or in hard copy at the Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street, SW., Atlanta, Georgia 30303–8960. EPA requests that if at all possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding Federal holidays.

FOR FURTHER INFORMATION CONTACT: Ms. Jane Spann or Ms. Sara Waterson, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street, SW., Atlanta, Georgia 30303–8960. The telephone number for Ms. Spann is (404) 562–9029. Ms. Spann can also be reached via electronic mail at *spann.jane@epa.gov.* The telephone number for Ms. Waterson is (404) 562–9061. Ms. Waterson can also be reached via electronic mail at *waterson.sara@epa.gov.*

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Background
II. Today's Action
III. Final Action
IV. Statutory and Executive Order Reviews

I. Background

Detailed background information and rationale for today's final action can be found in EPA's proposed rule entitled "Approval and Promulgation of Implementation Plans; Extension of Attainment Date for the Atlanta, GA 1997 8–Hour Ozone Moderate Nonattainment Area," 75 FR 56943 (September 17, 2010). The comment period for EPA's proposed action closed on October 18, 2010. EPA did not receive any comments, adverse or otherwise, on its proposed action to extend the attainment date for the Atlanta 1997 8-hour ozone area. This section includes a brief summary of the background information and rationale for EPA's approval of Georgia's one-year extension request.

Section 181(b)(2)(A) requires the Administrator, within six months of the attainment date, to determine whether an ozone nonattainment area attained the NAAQS. CAA section 181(b)(2)(A) states that, for areas classified as marginal, moderate, or serious, if the Administrator determines that the area did not attain the standard by its attainment date, the area must be reclassified to the next classification. However, in accordance with CAA Section 181(a)(5), EPA may grant up to 2 one-year extensions of the attainment date under specified conditions. Specifically, in relevant part, Section 181(a)(5) states:

> "Upon application by any State, the Administrator may extend for one additional year (hereinafter referred to as the "Extension Year") the date specified in table 1 of paragraph (1) of this subsection if—
>
> (A) the State has complied with all requirements and commitments pertaining to the area in the applicable implementation plan, and
>
> (B) no more than 1 exceedance of the national ambient air quality standard level for ozone has occurred in the area in the year preceding the Extension Year.

With regard to the first element, "applicable implementation plan" is defined in Section 302(q) of the CAA as, the portion (or portions) of the implementation plan, or most recent revision thereof, which has been approved under Section 110, or promulgated under Section 110(c), or promulgated or approved pursuant to regulations promulgated under Section 301(d) and which implements the relevant requirements of the CAA.

The language in section 181(a)(5)(B) reflects the form of the 1-hour ozone NAAQS, which is exceedance based and does not reflect the 1997 8-hour ozone NAAQS, which is concentration based. Because section 181(a)(5)(B) does not reflect the form of the 8-hour NAAQS and application would produce an absurd result, EPA interprets this provision in a manner consistent with Congressional intent but reflecting the form of the 1997 8-hour NAAQS. Therefore, EPA adopted an interpretation that under both section 172(a)(2)(C) and 181(a)(5), an area will be eligible for the first of the one-year extensions under the 8-hour NAAQS if, for the attainment year, the area's 4th highest daily 8-hour average is 0.084 ppm or less. The area will be eligible for the second extension if the area's 4th highest daily 8-hour value averaged over both the original attainment year and the first extension year is 0.084 ppm or less. No more than 2 one-year extensions may be issued for a single nonattainment area.

EPA interprets the CAA and implementing regulations to allow the granting of a one-year extension under the following minimum conditions: (1) The State requests a one-year extension; (2) all requirements and commitments in the EPA-approved SIP for the area have been complied with; and (3) the area has a 4th highest daily 8-hour average of 0.084 ppm or less for the attainment year (or an area's 4th highest daily 8-hour value averaged over both the original attainment year and the first extension year is 0.084 ppm or less, if a second one-year extension is requested). Because the Atlanta Area attainment date was June 15, 2010, the "attainment year" used for this purpose is the 2009 ozone season. The Georgia ozone season runs from March 1 to October 31 of any given year.

II. Today's Action

EPA has determined that Georgia has met the CAA requirements to obtain a one-year extension of the attainment date for the 1997 8-hour ozone NAAQS for the Atlanta Area. As a result, EPA is taking final action to extend the Atlanta Area's attainment date from June 15, 2010, to June 15, 2011, for the 1997 8-hour ozone NAAQS. Specifically, EPA has determined that Georgia is in compliance with the requirements and commitments associated with the EPA-approved implementation plan, and that the 4th highest daily 8-hour ozone average concentration for 2009 for the Atlanta Area is below the 1997 8-hour ozone NAAQS as required by the CAA. EPA has reviewed the 1997 8-hour ozone NAAQS ambient air quality monitoring data for the Atlanta Area, consistent with the requirements contained in 40 CFR part 50 and as recorded in the EPA Air Quality System database. On the basis of that review, EPA has concluded that for the attainment year, 2009, the Atlanta Area's 4th highest daily 8-hour average concentration was 0.077 ppm which is below the 8-hour ozone NAAQS of 0.08 ppm (effectively 0.084 ppm). This final action is based upon complete, quality assured, quality controlled, and certified ambient air monitoring data for 2009. As provided in 40 CFR 51.907, this final action extends, by one year, the deadline by which the Atlanta Area must attain the 1997 8-hour ozone NAAQS. It also extends the timeframe by which EPA must make an attainment determination for the area.

EPA notes that this final action only relates to the initial one-year extension. As described in Section 181(a)(5) of the CAA, areas may qualify for up to 2 one-year extensions. If requested at a future date, EPA will make a determination of the appropriateness of a second one-year extension for the Atlanta Area for the 1997 8-hour ozone NAAQS in a separate rulemaking.

III. Final Action

EPA is taking final action to approve Georgia's June 9, 2010, request for EPA to grant a one-year extension (from June 15, 2010, to June 15, 2011) of the Atlanta Area attainment date for the 1997 8-hour ozone NAAQS. EPA has determined that Georgia has met the statutory requirements for such an extension.

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission or request from the states that comply with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing the state's request for an extension of the 1997 8-hour ozone NAAQS attainment date for the Atlanta Area, EPA's role is to approve state's request, provided that they meet the criteria of the CAA. Accordingly, this action merely approves a state's request for an extension of the 1997 8-hour ozone NAAQS attainment date as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the state, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this

action must be filed in the United States Court of Appeals for the appropriate circuit by January 31, 2011. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 81

Environmental protection, Air pollution control.

Dated: November 17, 2010.

Stanley Meiburg,

Acting Regional Administrator, Region 4.

■ 40 CFR part 81 is amended as follows:

PART 81—[AMENDED]

■ 1. The authority citation for part 81 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

■ 2. In § 81.311, the table entitled "Georgia—Ozone (8-Hour Standard)" is amended under "Atlanta, GA" by revising the entries for "Barrow County," "Bartow County," "Carroll County," "Cherokee County," "Clayton County," "Cobb County," "Coweta County," "DeKalb County," "Douglas County," "Fayette County," "Forsyth County," "Fulton County," "Gwinnett County," "Hall County," "Henry County," "Newton County," "Paulding County," "Rockdale County," "Spalding County," and "Walton County" to read as follows:

§ 81.311 Georgia.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 261

[EPA–R06–RCRA–2009–0312; SW FRL–9231–3]

Hazardous Waste Management System; Identification and Listing of Hazardous Waste; Removal of Direct Final Exclusion

AGENCY: Environmental Protection Agency (EPA).

ACTION: Removal of Direct Final Exclusion.

SUMMARY: Because EPA received adverse comment, we are removing the direct final exclusion for Eastman Chemical Company—Texas Operations, published on September 24, 2010.

DATES: Effective November 30, 2010.

FOR FURTHER INFORMATION CONTACT: Michelle Peace, Environmental Protection Agency, Multimedia Planning and Permitting Division, RCRA Branch, Mail Code: 6PD–C, 1445 Ross Avenue, Dallas, TX 75202, by calling (214) 665–7430 or by e-mail at *peace.michelle@epa.gov*.

SUPPLEMENTARY INFORMATION: Because EPA received adverse comment, we are removing the direct final exclusion for Eastman Chemical Company—Texas Operations, published on September 24, 2010, 75 FR 58315. We stated in that direct final rule that if we received adverse comment by October 25, 2010, the direct final rule would not take effect and we would publish a timely removal in the **Federal Register**. We subsequently received adverse comment on that direct final rule. We will address the comments submitted in a subsequent final action which will be based on the parallel proposed rule also published on September 24, 2010, 75 FR 58346. As stated in the direct final rule and the parallel proposed rule, we will not institute a second comment period on this action.

Lists of Subjects in 40 CFR Part 261

Environmental Protection, Hazardous waste, Recycling, Reporting and recordkeeping requirements.

Authority: Sec. 3001(f) RCRA, 42 U.S.C. 6921(f).

Dated: November 16, 2010.

Bill Luthans,

Acting Director, Multimedia Planning and Permitting Division.

■ 40 CFR part 261 is amended as follows:

PART 261—IDENTIFICATION AND LISTING OF HAZARDOUS WASTE

■ 1. The authority citation for part 261 continues to read as follows:

Authority: 42 U.S.C. 6905, 6912(a), 6921, 6922, and 6938.

■ 2. In Tables 1, 2 and 3 of Appendix IX of part 261 remove the following facility's waste streams: for Facility: Eastman Chemical Company—Texas Operations, Address: Longview, TX; Waste Description: RKI bottom ash, RKI fly ash and RKI scrubber water blowdown.

Medicaid Program; Cost Limit for Providers Operated by Units of Government and Provisions To Ensure the Integrity of Federal-State Financial Partnership

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule; implementation of court orders.

SUMMARY: This final rule amends Medicaid regulations to conform with the decision by the United States District Court for the District of Columbia on May 23, 2008 in *Alameda County Medical Center, et al.* v. *Michael O. Leavitt, Secretary, U.S. Department of Health and Human Services, et al.,* 559 F. Supp. 2d (2008) that vacated a final rule with comment period published in the **Federal Register** in May 29, 2007. This regulatory action takes ministerial steps to remove the vacated provisions from the Code of Federal Regulations and reinstate the prior regulatory language impacted by the May 29, 2007 final rule with comment period.

DATES: *Effective Date:* This regulation is effective immediately on date of publication November 30, 2010.

FOR FURTHER INFORMATION CONTACT: Rob Weaver, (410) 786–5914.

SUPPLEMENTARY INFORMATION:

I. Background

A. Introduction

Title XIX of the Social Security Act (the Act) authorizes Federal grants to States for Medicaid programs that provide medical assistance to low-income families, the elderly and persons with disabilities. Each State administers the Medicaid program in accordance with an approved Medicaid State plan. States have considerable flexibility in designing their programs, but must comply with Federal requirements specified in the Medicaid statute, regulations, and program guidance. Sections 1902(a)(2), 1903(a), and 1905(b) of the Act set forth requirements that describe how the responsibility to fund the Medicaid program will be shared between the Federal and State governments. Section 1905(b) of the Act delineates a percentage referred to as the Federal medical assistance percentage (FMAP) that determines on a State-by-State basis the Federal and non-Federal share of program expenditures. Section 1903(a) of the Act requires Federal reimbursement to the State of the Federal share. Section 1902(a)(2) of the Act and implementing regulations at 42 CFR 433.50(a)(1) permit a State to delegate some responsibility for the non-Federal share of medical assistance expenditures to local units of government sources under some circumstances.

The U.S. Troop Readiness, Veterans Care, Katrina Recovery and Iraq Accountability Appropriations Act of 2007 prohibited the Secretary of Health and Human Services from finalizing or otherwise implement the provisions contained in a proposed rule published on January 18, 2007, titled "Medicaid Program; Cost Limit for Providers Operated by Units of Government and Provisions To Ensure the Integrity of Federal-State Financial Partnership" (72 FR 2236 through 2248).

B. Final Rule With Comment Period Published May 29, 2007

On May 29, 2007, the Department of Human and Human Services (DHHS) published a final rule with comment period titled, "Medicaid Program; Cost Limit for Providers Operated by Units of Government and Provisions To Ensure the Integrity of Federal-State Financial Partnership" in the **Federal Register** (72 FR 29747 through 29836).

That final rule eliminated, modified, or implemented regulatory requirements pertaining to the financial relationship

between the Federal and State governments. Specifically, this rule consisted of the following:

- Clarified that entities involved in the financing of the non-Federal share of Medicaid payments must be a unit of government.
- Clarified the documentation necessary to support a Medicaid certified public expenditure.
- Limited Medicaid reimbursement for health care providers that are operated by units of government to an amount that does not exceed the health care provider's cost of providing services to Medicaid individuals.
- Required all health care providers to receive and retain the full amount of total computable payments for services furnished under the approved Medicaid State plan.
- Made conforming changes to provisions governing the Child Health Insurance Program (CHIP) to make the same requirements applicable, with the exception of the cost limit on reimbursement.

On May 23, 2008, the United States District Court for the District of Columbia, in *Alameda County Medical Center, et al.* v. *Michael O. Leavitt, Secretary, U.S. Department of Health and Human Services, et al., 559 F. Supp. 2d,* found that DHHS had improperly promulgated these regulations. The court stated that DHHS violated the Congressional moratorium on finalization of this regulation in the Troop Readiness, Veteran's Care, Katrina Recovery and Iraq Accountability Appropriation Act of 2007 (UTRA), (Pub. L. 110–28) and vacated the rule and remanded the matter to DHHS. Accordingly, DHHS is removing the vacated rule from the Code of Federal Regulations.

Section 7001 of the Supplemental Appropriations Act of 2008 Public Law 110–252 extended the moratorium on finalizing the Cost rule to April 1, 2009. The Congress considered this matter again in the passage of the American Recovery and Reinvestment Act (ARRA) of 2009. Section 5003(d) of ARRA expressed the sense of Congress that the Cost rule should not be adopted as a final rule.

II. Provisions of the Final Regulations

In this final rule, DHHS is removing all of the provisions that were issued in the May 29, 2007 final rule with comment period. Concurrently, DHHS is restoring regulation text so that the regulatory language impacted by the May 2007 final rule will appear in the Code of Federal Regulations as it did prior to issuance of that rule.

Part 433—State Fiscal Administration

(Sec. 433.50) Basis, Scope, and Applicability

In § 433.50(a)(1), DHHS is removing the language that states "and section 1903(w)(7)(G)." DHHS is also removing "units of." DHHS is also adding "s" to the word "government" and adding the word "both" before the words "State and local governments." In addition, DHHS is removing paragraphs (a)(1)(i) and (a)(1)(ii) of this regulation.

(Sec. 433.51) Funds From Units of Government as the State Share of Financial Participation

In § 433.51, DHHS is revising the section heading to read "*§ 433.51 Public funds as the State share of financial participation*."

In § 433.51(a), DHHS is adding the word "Public" before the word "funds." DHHS is also removing the words "from units of government" of this regulation.

In § 433.51(b), DHHS is revising the paragraph to read "The public funds are appropriated directly to the State or local Medicaid agency, or are transferred from other public agencies (including Indian tribes) to the State or local agency and under its administrative control, or certified by the contributing public agency as representing expenditures eligible for FFP under this section."

In § 433.51(c), DHHS is adding the word "Public" before the word "funds." DHHS is also removing the words "from units of government" of this regulation.

Part 447—Payments For Services

(Sec. 447.206) Cost Limit for Providers Operated by Units of Government

In part 447, DHHS is removing the entire provisions of § 447.206 of this regulation. (§ 447.207) Retention of payments.

In part 447, DHHS is removing the entire provisions of § 447.207 of this regulation.

(Sec. 447.271) Upper Limits Based on Customary Charges

In § 447.271(a), DHHS is adding an introductory phrase to read "Except as provided in paragraph (b) of this section,".

In § 447.271(b), DHHS is removing the word "Reserved" and replacing it with "The agency may pay a public provider that provides services free or at a nominal charge at the same rate that would be used if the provider charges were equal to or greater than its costs."

(Sec. 447.272) Inpatient Services: Application of Upper Payment Limits

In § 447.272(a), DHHS is removing the word "nursing facilities" replacing it with "NFs."

In § 447.272(a)(1), DHHS is revising the paragraph to read "State government-owned or operated facilities (that is, all facilities that are either owned or operated by the State)."

In § 447.272(a)(2), DHHS is revising the paragraph to read "Non-State government-owned or operated facilities (that is, all government facilities that are neither owned nor operated by the State)."

In § 447.272(a)(3), DHHS is revising the paragraph to read "Privately-owned and operated facilities."

In § 447.272(b)(1), DHHS is removing the words "For privately operated facilities."

In § 447.272(b)(2), DHHS is revising the paragraph to read "Except as provided for in paragraph (c) of this section, aggregate Medicaid payments to a group of facilities within one of the categories described in paragraph (a) of this section may not exceed the upper payment limit described in paragraph (b)(1) of this section."

In § 447.272(b)(3), DHHS is removing entire provision of this regulation.

In § 447.272(b)(4), DHHS is removing entire provision of this regulation.

In § 447.272(c), DHHS is removing symbol "—" and replacing it with ".".

In § 447.272, DHHS is removing paragraph (c)(3) of this regulation.

In § 447.272(d)(1), DHHS is revising the paragraph to read "For non-State government owned or operated hospitals—March 19, 2002."

(Sec. 447.321) Outpatient Hospital and Clinic Services: Application of Upper Payment Limits

In § 447.321(a)(1), DHHS is revising the paragraph to read "State government-owned or operated facilities (that is, all facilities that are owned or operated by the State)."

In § 447.321(a)(2), DHHS is revising the paragraph to read "Non-State government owned or operated facilities (that is, all government operated facilities that are neither owned nor operated by the State)."

In § 447.321(a)(3), DHHS is revising the paragraph to read "Privately-owned and operated facilities."

In § 447.321(b)(1), DHHS is removing the words "For privately operated facilities,".

In § 447.321(b)(2), DHHS is revising the provision to read "Except as provided for in paragraph (c) of this section, aggregate Medicaid payments to

a group of facilities within one of the categories described in paragraph (a) of this section may not exceed the upper payment limit described in paragraph (b)(1) of this section."

In § 447.321, DHHS is removing paragraph (b)(3) of this regulation.

In § 447.321, DHHS is removing pargraph (b)(4) of this regulation.

In § 447.321(c)(1), DHHS is removing the designated number "(1)" of this regulation.

In § 447.321, DHHS is removing paragraph (c)(2) of this regulation.

In § 447.321, DHHS is removing paragraph (c)(3) of this regulation.

In § 447.321(d), DHHS is removing reference to paragraph "(b)" and replacing it with a reference to paragraph "(b)(1)."

In § 447.321(d)(1), DHHS is revising the paragraph to read "For non-State government-owned or operated hospitals—March 19, 2002."

In § 447.321, DHHS is removing paragraph (d)(2) and redesignating paragraph (d)(3) as paragraph (d)(2) of this regulation.

Sec. 457.220 Funds From Units of Government as the State Share of Financial Participation

In § 457.220(a), DHHS is adding the word "Public" before the word "Funds." DHHS is also removing the words "from units of government."

In § 457.220(b), DHHS is revising the paragraph to read "The public funds are appropriated directly to the State or local SCHIP agency, or are transferred from other public agencies (including Indian tribes) to the State or local agency and are under its administrative control, or are certified by the contributing public agency as representing expenditures eligible for FFP under this section."

In § 457.220(c), DHHS is adding the word "public" after the word "The" before the word "funds." DHHS is also removing the words "from units of government."

Sec. 457.628 Other Applicable Federal Regulations

In § 457.628(a), DHHS is removing the parenthesis "(" before the word "sources" and removing the parenthesis ")" after the word "Donations" and adding a semicolon and the word "Donations." In addition, DHHS is removing the words "and § 447.207 of this chapter (Retention of payments)."

III. Collection of Information

This document does not impose information collection and recordkeeping requirements. Consequently, it need not be reviewed by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995.

IV. Waiver of Proposed Rulemaking and Delayed Effective Date

DHHS ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on the proposed rule. The notice of proposed rulemaking includes a reference to the legal authority under which the rule is proposed, and the terms and substances of the proposed rule or a description of the subjects and issues involved. This procedure can be waived, however, if an agency finds good cause that a notice-and-comment procedure is impractical, unnecessary, or contrary to the public interest and incorporates a statement of the finding and its reasons in the rule issued. DHHS has determined that providing prior notice and opportunity for comment on the amending regulations is unnecessary. This final rule merely removes regulatory language relating to CMS–2258–FC, which was vacated by the United States District Court for the District of Columbia. As a result of this decision, the regulatory language related to CMS–2258–FC has no force or effect, and public comment would not affect that status. The presence of that language in the Code of Federal Regulations can be confusing, and thus the public interest would be served by removal of that language. Furthermore, removing this language from the Code of Federal Regulations and reinstating the prior regulatory language has no legal impact but simply reflects this final judicial determination.

For the same reasons, DHHS believes there is good cause for waiving any delay in the effective date, making the reinstated regulatory provisions immediately effective. See 5 U.S.C. 553(d).

V. Regulatory Impact Statement

DHHS has examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). This regulatory action only removes those regulations vacated by the United States District Court for the District of Columbia. Therefore, this action is not a "significant" regulatory action as defined by E.O. 12866. This rule also does not reach the economic threshold and thus is not considered a major rule.

The RFA requires agencies to analyze options for regulatory relief of small businesses. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having revenues of $7 million to $34.5 million in any one year. Individuals and States are not included in the definition of a small entity. DHHS is not preparing an analysis for the RFA because DHHS has determined, and the Secretary certifies, that this final rule will not have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Core-Based Statistical Area (for Medicaid) and outside a Metropolitan Statistical Area for Medicare) and has fewer than 100 beds. DHHS is not preparing an analysis for section 1102(b) of the Act because we have determined, and the Secretary certifies, that this final rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2010, that threshold is approximately $135 million. This rule will have no consequential effect on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates

regulations that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. Since this regulation does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

List of Subjects

42 CFR Part 433

Administrative practice and procedure, Child support, Claims, Grant programs—health, Medicaid, Reporting and recordkeeping requirements.

42 CFR Part 447

Accounting, Administrative practice and procedure, Drugs, Grant programs—health, Health facilities, Health professions, Medicaid, Reporting and recordkeeping requirements, Rural areas.

42 CFR Part 457

Administrative practice and procedure, Grant programs—health, Health insurance, Reporting and recordkeeping requirements.

■ For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 433—STATE FISCAL ADMINISTRATION

■ 1. The authority citation for part 433 continues to read as follows:

Authority: Sec. 1102 of the Social Security Act (42 U.S.C. 1302).

Subpart B—General Administrative Requirements State Financial Participation

■ 2. Section § 433.50 is amended by revising paragraph (a)(1) to read as follows:

§ 433.50 Basis, scope, and applicability.

(a) * * *

(1) Section 1902(a)(2) of the Act which requires States to share in the cost of medical assistance expenditures and permit both State and local governments to participate in the financing of the non-Federal portion of medical assistance expenditures.

* * * * *

■ 3. Section 433.51 is revised to read as follows:

§ 433.51 Public Funds as the State share of financial participation.

(a) Public Funds may be considered as the State's share in claiming FFP if they meet the conditions specified in paragraphs (b) and (c) of this section.

(b) The public funds are appropriated directly to the State or local Medicaid agency, or are transferred from other public agencies (including Indian tribes) to the State or local agency and under its administrative control, or certified by the contributing public agency as representing expenditures eligible for FFP under this section.

(c) The public funds are not Federal funds, or are Federal funds authorized by Federal law to be used to match other Federal funds.

PART 447—PAYMENTS FOR SERVICES

■ 4. The authority citation for part 447 continues to read as follows:

Authority: Sec. 1102 of the Social Security Act (42 U.S.C. 1302).

Subpart B—Payment Methods: General Provisions

§ 447.206 [Removed]

■ 5. Section 447.206 is removed.

§ 447.207 [Removed]

■ 6. Section 447.207 is removed.

Subpart C—Payment for Inpatient Hospital and Long-Term Care Facility Services

Upper Limits

■ 7. Section § 447.271 is revised to read as follows:

§ 447.271 Upper limits based on customary charges.

(a) Except as provided in paragraph (b) of this section, the agency may not pay a provider more for inpatient hospital services under Medicaid than the provider's customary charges to the general public for the services.

(b) The agency may pay a public provider that provides services free or at a nominal charge at the same rate that would be used if the provider charges were equal to or greater than its costs.

■ 8. Section 447.272 is amended by—

■ A. Revising paragraphs (a), (b), and (d)(1).

■ B. Revising the heading for paragraph (c).

■ C. Removing paragraph (c)(3).

The revisions read as follows:

§ 447.272 Inpatient services: Application of upper payment limits.

(a) *Scope.* This section applies to rates set by the agency to pay for inpatient services furnished by hospitals, NFs, and ICFs/MR within one of the following categories:

(1) State government-owned or operated facilities (that is, all facilities that are either owned or operated by the State).

(2) Non-State government-owned or operated facilities (that is, all government facilities that are neither owned nor operated by the State).

(3) Privately-owned and operated facilities.

(b) *General rules.*

(1) Upper payment limit refers to a reasonable estimate of the amount that would be paid for the services furnished by the group of facilities under Medicare payment principles in subchapter B of this chapter.

(2) Except as provided for in paragraph (c) of this section, aggregate Medicaid payments to a group of facilities within one of the categories described in paragraph (a) of this section may not exceed the upper payment limit described in paragraph (b)(1) of this section.

(c) *Exceptions.*

* * * * *

(d) * * *

(1) For non-State government owned or operated hospitals,—March 19, 2002.

* * * * *

Subpart F—Payment Methods for Other Institutional and Noninstitutional Services

Outpatient Hospital and Clinic Services

■ 9. Section 447.321 is amended by—

■ A. Revising paragraphs (a), (b), (c) and (d)(1).

■ B. Revising introductory text of paragraph (d) by removing the phrase "paragraph (b)" and adding in its place the phrase "paragraph (b)(1)."

■ C. Removing paragraphs (d)(2).

■ D. Redesignating paragraph (d)(3)as paragraph (d)(2).

The revisions read as follows:

§ 447.321 Outpatient hospital and clinic services: Application of upper payment limits.

(a) *Scope.* This section applies to rates set by the agency to pay for outpatient services furnished by hospitals and clinics within one of the following categories:

(1) State government-owned or operated facilities (that is, all facilities that are owned or operated by the State.)

(2) Non-State government owned or operated facilities (that is, all government operated facilities that are neither owned nor operated by the State).

(3) Privately-owned and operated facilities.

(b) *General rules.* (1) Upper payment limit refers to a reasonable estimate of the amount that would be paid for the services furnished by the group of facilities under Medicare payment principles in subchapter B of this chapter.

(2) Except as provided in paragraph (c) of this section, aggregate Medicaid payments to a group of facilities within one of the categories described in paragraph (a) of this section may not exceed the upper payment limit described in paragraph (b)(1) of this section.

(c) *Exceptions.* Indian Health Services and tribal facilities. The limitation in paragraph (b) of this section does not apply to Indian Health Services facilities and tribal facilities that are funded through the Indian Self-Determination and Education Assistance Act (Pub. L. 93–638).

(d) * * *

(1) For non-State government-owned or operated hospitals—March 19, 2002.

* * * * *

PART 457—ALLOTMENTS AND GRANTS TO STATES

■ 10. The authority for part 457 continues to read as follows:

Authority: Sec. 1102 of the Social Security Act (42 U.S.C. 1302).

Subpart B—General Administration—Reviews and Audits; Withholding for Failure To Comply; Deferral and Disallowance of Claims; Reduction of Federal Medical Payments

■ 11. Section 457.220 is revised to read as follows:

§ 457.220 Funds from units of government as the State share of financial participation.

(a) Public funds may be considered as the State's share in claiming FFP if they meet the conditions specified in paragraphs (b) and (c) of this section.

(b) The public funds are appropriated directly to the State or local SCHIP agency, or are transferred from other public agencies (including Indian tribes) to the State or local agency and are under its administrative control, or are certified by the contributing public agency as representing expenditures eligible for FFP under this section.

(c) The public funds are not Federal funds, or are Federal funds authorized by Federal law to be used to match other Federal funds.

Subpart F—Payments to States

■ 12. Section 457.628 is amended by revising the introductory text and paragraph (a) to read as follows:

§ 457.628 Other applicable Federal regulations.

Other regulations applicable to SCHIP programs include the following:

(a) HHS regulations in 42 Subpart B—433.51–433.74 sources of non-Federal share and Health Care-Related Taxes and Provider-Related Donations; apply to States' SCHIP programs in the same manner as they apply to States' Medicaid programs.

BILLING CODE 4120–01–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket No. 09–52; FCC 10–24]

Policies To Promote Rural Radio Service and To Streamline Allotment and Assignment Procedures

AGENCY: Federal Communications Commission.

ACTION: Final rule; announcement of compliance date.

SUMMARY: In this document, the Commission announces that the Office of Management and Budget (OMB) has approved, for a period of three years, the information collection requirements associated with the Commission's rules and FCC Forms 301, 314, 315, 316 and 340. These rules and form changes were approved on May 27, 2010 and June 4, 2010 and the compliance date will be November 30, 2010.

DATES: The compliance date for §§ 73.3571(k), 73.7000, 73.7002(b), and 73.7002(c) and FCC Forms 301, 314, 315, 316 and 340 published at 75 FR 9797, March 4, 2010 is November 30, 2010.

FOR FURTHER INFORMATION CONTACT: Cathy Williams on (202) 418–2918 or send an e-mail to: *Cathy.Williams@fcc.gov.*

SUPPLEMENTARY INFORMATION: As required by the Paperwork Reduction Act of 1995 (44 U.S.C. 3507), the Commission is notifying the public that it received OMB approval on May 27, 2010, and June 4, 2010, for a period of three years, for the information collection requirements contained in Sections 73.3571(k), 73.7000, 73.7002(b), and 73.7002(c) of the Commission's rules and FCC Forms 301, 314, 315, 316 and 340 and that the compliance date for these rules and forms published at 75 FR 9797, March 4, 2010, is November 30, 2010. If you have any comments on the burden estimates, or how the Commission can improve the collections and reduce any burdens caused thereby, please contact Cathy Williams, Federal Communications Commission, Room 1–C823, 445 12th Street, SW., Washington, DC 20554. Please include OMB Control Numbers 3060–0029, 3060–0027, 3060–0996, 3060–0031 and/or 3060–0009 in your correspondence. The Commission also will accept your comments via the Internet if you send them to *PRA@fcc.gov.* To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an e-mail to *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at (202)418–0530 (voice), (202) 418–0432 (TTY).

Under 5 CFR 1320, an agency may not conduct or sponsor a collection of information unless it displays a current, valid OMB Control Number.

No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act that does not display a valid OMB Control Number. The OMB Control Numbers are 3060–0027, 3060–0029, 3060–0996, 3060–0031 and 3060–0009 and the total annual reporting burdens and costs for respondents are as follows:

OMB Control Number: 3060–0029.

OMB Approval Date: June 4, 2010.

Expiration Date: June 30, 2013.

Title: Application for Construction Permit for Reserved Channel Noncommercial Educational Broadcast Station.

Form Number: FCC Form 340.

Respondents: Business or other for-profit entities; Not-for-profit institutions; State, local or tribal government.

Number of Respondents and Responses: 2,710 respondents and 2,710 responses.

Estimated Time per Response: 2 to 5 hours.

Frequency of Response: On occasion reporting requirement; Third party disclosure requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this collection of information is contained in Sections

154(i), 303 and 308 of the Communications Act of 1934, as amended.

Total Annual Burden: 6,700 hours.

Total Annual Costs: $27,894,950.00.

Nature and Extent of Confidentiality: There is no need for confidentiality and respondents are not being asked to submit confidential information to the Commission.

Needs and Uses: On April 7, 2009, the Commission adopted a Notice of Proposed Rule Making in the Matter of Policies to Promote Rural Radio Service and to Streamline Allotment and Assignment Procedures, MB Docket No. 09–52, FCC 09–30, 24 FCC Rcd 5239 (2009). On January 28, 2010, the Commission adopted a First Report and Order in the Matter of Policies to Promote Rural Radio Service and to Streamline Allotment and Assignment Procedures (the "Order"), MB Docket No. 09–52, FCC 10–24, 25 FCC Rcd 1583 (2010). In the Order, the Commission adopted the Tribal Priority proposed in the Notice of Proposed Rule Making, with some modifications. Under the Tribal Priority, a Section 307(b) priority will apply to an applicant meeting all of the following criteria: (1) The applicant is either a federally recognized Tribe or tribal consortium, or an entity 51 percent or more of which is owned or controlled by a Tribe or Tribes (with the Tribes or entities occupying tribal lands that are covered by at least 50 percent of the daytime principal community contour of the proposed facility); (2) at least 50 percent of the daytime principal community contour of the proposed facilities covers tribal lands, in addition to meeting all other Commission technical standards; (3) the specified community of license is located on tribal lands; and (4) the applicant proposes the first local tribal-owned noncommercial educational transmission service at the proposed community of license. The proposed Tribal Priority would apply, if applicable, before the fair distribution analysis currently used by noncommercial educational applicants. The Tribal Priority does not prevail over an applicant proposing first overall reception service to a significant population.

FCC Form 340 and its instructions are being revised to accommodate those applicants qualifying for the new Tribal Priority. Specifically, we are adding new Questions 1 and 2, which seek information as to the applicant's eligibility for the Tribal Priority and direct applicants claiming the priority to prepare and attach an exhibit, to Section III. The instructions for Section III have been revised to assist applicants with completing the new questions and preparing the exhibit. Also, the Commission removed FCC Form 302–DTV, Application for Digital Television Broadcast Station License, and FCC Form 349, Application for Authority to Construct or Make Changes in an FM Translator or FM Booster Station, from this information collection to allow the Commission to more effectively manage the information collections.

OMB Control Number: 3060–0027.

OMB Approval Date: June 4, 2010.

Expiration Date: June 30, 2013.

Title: Application for Construction Permit for Commercial Broadcast Station.

Form Number: FCC Form 301.

Respondents: Business or other for-profit entities; Not-for-profit institutions; State, local or tribal government.

Number of Respondents and Responses: 4,453 respondents and 7,889 responses.

Estimated Time per Response: 3 to 6.25 hours.

Frequency of Response: On occasion reporting requirement; Third party disclosure requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this collection of information is contained in Sections 154(i), 303 and 308 of the Communications Act of 1934, as amended.

Total Annual Burden: 19,561 hours.

Total Annual Costs: $85,096,314.00.

Nature and Extent of Confidentiality: There is no need for confidentiality and respondents are not being asked to submit confidential information to the Commission.

Needs and Uses: On January 28, 2010, the Commission adopted a First Report and Order and Further Notice of Proposed Rulemaking (the "Order") in MB Docket No. 09–52, FCC 10–24, 25 FCC Rcd 1583 (2010). The Order adopts changes to certain procedures associated with the award of broadcast radio construction permits by competitive bidding, including modifications to the manner in which it awards preferences to applicants under the provisions of Section 307(b) of the Communications Act of 1934, as amended (the "Act"). With regard to AM application processing, the Commission adopted a proposal to explicitly prohibit the downgrading of proposed AM facilities that receive a dispositive preference under Section 307(b) of the Act and thus are not awarded through competitive bidding. Specifically, an AM applicant that receives a dispositive preference under Section 307(b) will not be allowed to later modify that proposal to serve a smaller population or otherwise negate the factors that led to the award of the preference. The Commission imposed these restrictions for a period of four years of on-air operations. These procedural safeguards are necessary to protect the integrity of our Section 307(b) analyses. Consistent with actions taken by the Commission in the Order, FCC Form 301 has been revised to add questions, specifically asking the applicant to certify that the construction permit application complies with the four year service requirements. The instructions for FCC Form 301 have been revised to assist applicants with completing the new questions.

OMB Control Number: 3060–0996.

OMB Approval Date: May 27, 2010.

Expiration Date: May 31, 2013.

Title: AM Auction Section 307(b) Submissions.

Form Number: N/A.

Respondents: Business or other for-profit entities; Not-for-profit institutions; State, local or tribal government.

Number of Respondents and Responses: 160 respondents and 160 responses.

Estimated Time per Response: 0.5 to 3 hours.

Frequency of Response: On occasion reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this collection of information is contained in Sections 154(i), 307(b) and 309 of the Communications Act of 1934, as amended.

Total Annual Burden: 375 hours.

Total Annual Costs: $71,200.00.

Nature and Extent of Confidentiality: There is no need for confidentiality and respondents are not being asked to submit confidential information to the Commission.

Needs and Uses: On January 28, 2010, the Commission adopted a First Report and Order and Further Notice of Proposed Rulemaking (the "Order") in MB Docket No. 09–52, FCC 10–24, 25 FCC Rcd 1583 (2010). The Order adopts changes to certain procedures associated with the award of broadcast radio construction permits by competitive bidding, including modifications to the manner in which it awards preferences to applicants under the provisions of Section 307(b). In the Order, the Commission added a new Section 307(b) priority that would apply only to Native American and Alaska Native Tribes, tribal consortia, and majority tribal-owned entities proposing to serve tribal lands. The priority is only

available when all of the following conditions are met: (1) The applicant is either a federally recognized Tribe or tribal consortium, or an entity that is 51 percent or more owned or controlled by a Tribe or Tribes; (2) at least 50 percent of the daytime principal community contour of the proposed facilities will cover tribal lands, in addition to meeting all other Commission technical standards; (3) the specified community of license is located on tribal lands; and (4) in the commercial AM service, the applicant must propose first or second aural reception service or first local commercial tribal-owned transmission service to the proposed community of license, which must be located on tribal lands. Applicants claiming Section 307(b) preferences using these factors will submit information to substantiate their claims. The Commission will dismiss, without further processing, the previously filed AM auction filing window application and technical proposal of any applicant that fails to file an amendment addressing the Section 307(b) criteria, where required. Mutually exclusive AM applicants may not use this as an opportunity to change the technical proposal specified in the AM auction filing window application. The Section 307(b) showing must be based on the technical proposal as specified in the AM auction filing window application.

OMB Control Number: 3060–0031.

OMB Approval Date: May 27, 2010.

Expiration Date: May 31, 2013.

Title: Application for Consent to Assignment of Broadcast Station Construction Permit or License, FCC Form 314; Application for Consent to Transfer Control of Entity Holding Broadcast Station Construction Permit or License, FCC Form 315; Section 73.3580, Local Public Notice of Filing of Broadcast Applications.

Form Number: FCC Forms 314 and 315.

Respondents: Business or other for-profit entities; Not-for-profit institutions; State, local or tribal government.

Number of Respondents and Responses: 4,820 respondents and 12,520 responses.

Estimated Time per Response: 2 to 6 hours.

Frequency of Response: On occasion reporting requirement; Third party disclosure requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this collection of information is contained in Sections 154(i), 303(b) and 308 of the Communications Act of 1934, as amended.

Total Annual Burden: 18,443 hours.

Total Annual Costs: $36,168,450.00.

Nature and Extent of Confidentiality: There is no need for confidentiality and respondents are not being asked to submit confidential information to the Commission.

Needs and Uses: On January 28, 2010, the Commission adopted a First Report and Order and Further Notice of Proposed Rulemaking (the "Order") in MB Docket No. 09–52; FCC 10–24, 25 FCC Rcd 1583 (2010). The Order adopts rule changes designed to streamline and clarify certain procedures associated with the award of broadcast radio construction permits by competitive bidding. In the Order, the Commission also adopted a priority under Section 307(b) of the Communications Act of 1934, as amended, to assist federally recognized Native American Tribes and Alaska Native Villages ("Tribes"), enrolled members of Tribes, and entities primarily owned or controlled by Tribes or enrolled members of Tribes, in obtaining broadcast radio construction permits designed primarily to serve tribal lands (the "Tribal Priority"). Applicants affiliated with Tribes who meet certain conditions regarding tribal membership and signal coverage qualify for the Tribal Priority, which in most cases will enable the qualifying applicants to obtain construction permits without proceeding to competitive bidding, in the case of commercial stations, or to point system evaluation, in the case of noncommercial educational ("NCE") stations. Once a permit is obtained, it cannot be assigned or transferred to another person or entity for a period beginning with issuance of the construction permit until the station has completed four years of on-air operations, unless the assignee or transferee also qualifies for the Tribal Priority.

Consistent with actions taken by the Commission in the Order, the following changes are made to Forms 314 and 315: Section I of each form includes a new question asking applicants to indicate whether any of the authorizations involved in the transaction were obtained (or, in the case of non-reserved band commercial FM stations the allotment for the station was obtained) through the Tribal Priority. The instructions for Section I of Forms 314 and 315 have been revised to assist applicants with completing the new questions.

OMB Control Number: 3060–0009.

OMB Approval Date: May 27, 2010.

Expiration Date: May 31, 2013.

Title: Application for Consent to Assignment of Broadcast Station Construction Permit or License or Transfer of Control of Corporation Holding Broadcast Station Construction Permit or License.

Form Number: FCC Form 316.

Respondents: Business or other for-profit entities; Not-for-profit institutions; State, local or tribal government.

Number of Respondents and Responses: 750 respondents and 750 responses.

Estimated Time per Response: 1.5 to 4.5 hours.

Frequency of Response: On occasion reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this collection of information is contained in Sections 154(i) and 310(d) of the Communications Act of 1934, as amended.

Total Annual Burden: 1,231 hours.

Total Annual Costs: $711,150.00.

Nature and Extent of Confidentiality: There is no need for confidentiality and respondents are not being asked to submit confidential information to the Commission.

Needs and Uses: On January 28, 2010, the Commission adopted a First Report and Order and Further Notice of Proposed Rulemaking (the "Order") in MB Docket No. 09–52, FCC 10–24, 25 FCC Rcd 1583 (2010). The Order adopts rule changes designed to streamline and clarify certain procedures associated with the award of broadcast radio construction permits by competitive bidding. To prevent unjust enrichment by parties that acquire broadcast construction permits through the use of a bidding credit in an auction, Section 73.5007(c) of the Rules requires reimbursement to the Commission of all or part of the bidding credit upon a subsequent assignment or transfer of control, if the proposed assignee or transferee is not eligible for the same percentage of bidding credit. The rule is routinely applied to "long form" assignment or transfer applications filed on FCC Forms 314 and 315. In the Order, the Commission also sought to clarify that the unjust enrichment payments to the government must be made even when an assignment or transfer is pro forma in nature and therefore filed on FCC Form 316. This ensures that applicants do not use the summary pro forma assignment and transfer procedures to circumvent the unjust enrichment requirements.

Consistent with actions taken by the Commission in the Order, FCC Form 316 has been revised to add the broadcast auction-based questions presently included on FCC Forms 314

and 315, specifically asking the applicants to certify that the proposed assignment or transfer complies with the unjust enrichment provisions of the Commission's competitive bidding rules. The instructions for FCC Form 316 have been revised to assist applicants with completing the new questions.

Federal Communications Commission.

[Docket No. 100813358–0560–02]

RIN 0648–BA16

Fisheries of the Northeastern United States; Discard Provision for Herring Midwater Trawl Vessels Fishing in Groundfish Closed Area I

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: Through this action, NMFS removes a regulatory exemption for midwater trawl herring vessels, which was originally implemented by a November 2, 2009, final rule. The exemption allowed midwater trawl vessels with an All Areas and/or Areas 2 and 3 Atlantic herring limited access permit fishing in Northeast (NE) multispecies Closed Area I (CA I) to release fish that cannot be pumped from the net at the end of pumping operations, without those fish being sampled by a NMFS at-sea observer. As a result of this rule, vessels will be required to bring the fish on board the vessel and make them available to the at-sea observer for sampling. The publication of this action is part of a Court-approved joint motion to stay pending litigation.

DATES: Effective January 31, 2011.

FOR FURTHER INFORMATION CONTACT: Douglas Potts, Fishery Policy Analyst, (978) 281–9341, fax (978) 281–9135.

SUPPLEMENTARY INFORMATION:

Background

On September 4, 2009, NMFS published a proposed rule (74 FR 45798) to implement changes to access requirements for midwater trawl vessels fishing in CA I, at the request of the New England Fishery Management Council (Council), with the intended goal of collecting better information on bycatch in the midwater trawl fishery. A final rule was published on November 2, 2009 (74 FR 56562), that implemented regulations requiring 100-percent observer coverage of trips by vessels with limited access Atlantic herring All Areas and/or Areas 2 and 3 category permits fishing for herring in CA I with midwater trawl gear. The rule also prohibited these vessels from releasing fish from the codend of the net, transferring fish to another vessel that is not carrying an observer, or otherwise discarding fish at sea, unless the fish has first been brought on board the vessel and made available for sampling and inspection by the observer. The regulations implemented by the November 2, 2009, rule (74 FR 56562) provided the following exemptions to this prohibition:

- The vessel operator has determined there is a compelling safety reason; or
- A mechanical failure precludes bringing the fish aboard the vessel for inspection; or,
- After pumping of fish onto the vessel has begun, the vessel operator determines that pumping becomes impossible as a result of spiny dogfish clogging the pump intake. Under this scenario, the vessel operator must take reasonable measures (such as strapping and splitting the net) to remove all fish that can be pumped from the net prior to release; or
- When there are small amounts of fish that cannot be pumped and remain in the net at the completion of pumping operations.

Additionally, under these regulations, if a codend is released in accordance with one of the first three exemptions, the vessel operator must complete and sign an affidavit to NOAA's Office of Law Enforcement (OLE) stating the vessel name and permit number; the vessel trip report (VTR) serial number; where, when, and for what reason the catch was released; the total weight of fish caught on that tow; and the weight of fish released (if less than the full tow). Completed affidavits are to be submitted to OLE at the conclusion of the trip. Following a released codend under one of the first three exemptions, the vessel may not fish in CA I for the remainder of the trip.

The exception allowing small amounts of fish that cannot be pumped from the net (sometimes called operational discards) to be released unobserved from the net while still in the water was not specifically mentioned in the proposed rule. NMFS considered this exemption to be a logical outgrowth of the proposed rule that needed no further public comment because it addressed a foreseeable practical problem that a small amount of fish may be left in a net after pumping operations were completed.

However, following publication of the final rule three fishermen filed a lawsuit challenging the exemption allowing the release of small amounts of fish that remain after pumping (*Taylor et al.* v. *Locke,* 09–CV–02289–HHK). Plaintiffs alleged that this additional exemption violated the Administrative Procedure Act because it was not a "logical outgrowth" of the proposed rule and should have been subjected to public comment, and that it violated conservation requirements of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) by allowing fish to be released from herring nets unobserved. Plaintiffs also claimed that the terms "small amounts of fish" and "at the completion of pumping operations" were not adequately defined.

Without admitting any violation of applicable law in publishing the original final rule, NMFS and the plaintiffs agreed to stay the litigation while NMFS repromulgated the challenged provision, to solicit public comment. On September 7, 2010, NMFS published a proposed rule (75 FR 54292), that repromulgated the challenged provision (§ 648.80(d)(7)(ii)(D)) and solicited public comment on whether to retain, delete, or amend the additional exemption in question. The proposed rule sought comment on: Retaining the exemption as it currently exists (status quo); eliminating the exemption (Alternative 1); modifying the exemption by specifying a maximum of 200 lb (90.7 kg) of fish that could be released (Alternative 2); or modifying the exemption by requiring that the codend either be brought on board or lifted out of the water, at the captain's discretion, so the observer could better estimate the amount and type of fish being released (Alternative 3). Public comments were accepted through October 7, 2010. Comments received are summarized and responded to below.

Based on public comment received, NMFS is implementing "Alternative 1," and is removing the exemption for operational discards at § 648.80(d)(7)(ii)(D). Therefore, if fish remain in the net at the conclusion of pumping operations, those fish will have to be brought on board the vessel and made available for sampling and

inspection by the observer, unless one of the other three exemptions applies. Therefore, fish that have not been pumped on board the vessel may be released if the vessel operator finds that: Pumping the catch could compromise the safety of the vessel; mechanical failure precludes bringing some or all of a catch on board the vessel; or spiny dogfish have clogged the pump and consequently prevent pumping of the rest of the catch. If a net is released for any of these three reasons, the vessel operator must complete and sign a CA I Midwater Trawl Released Codend Affidavit stating where, when, and why the net was released, as well as a good-faith estimate of both the total weight of fish caught on that tow and the weight of fish released (if the tow had been partially pumped). The completed affidavit form must be submitted to NMFS within 48 hr of the completion of the trip.

Following the release of a net for one of the three exemptions, the vessel is required to exit CA I. The vessel may continue to fish, but may not fish in CA I for the remainder of the trip.

Comments and Responses

A total of 5,924 comments were received during the comment period for the proposed rule from: 2 representatives of the commercial herring midwater trawl industry; 2 coalitions of herring advocacy groups; 5 representatives of recreational fishing organizations; 4 commercial groundfish organizations; 2 state elected officials (MA State Senator Robert A. O'Leary and MA State Representative Sarah K. Peake); 1 U.S. Congressman (Representative William Delahunt, MA); 6 environmental organizations; 1 community organization; 2 agriculture and fishery advocacy groups; the Atlantic States Marine Fisheries Commission (ASMFC); and 5,898 individuals. One comment was received after the close of the comment period. The vast majority of comments were form letters submitted by environmental organizations. The two representatives from the commercial herring midwater trawl industry supported the status quo. All other comments received supported Alternative 1 in the proposed rule. Alternatives 2 or 3 were not supported by any commenters and were criticized as being impractical or ineffective.

Comment 1: The two representatives of the commercial midwater trawl herring industry supported the status quo measure and raised concerns about each of the proposed alternatives. To illustrate their concerns, they described current procedures and how these procedures are not compatible with the proposed alternatives. The commenters noted that, under current operations, a vessel typically brings the full net alongside the vessel, where the end of the net is hoisted aboard in order to attach the pump. The pump and net are then lowered back into the water and splitting lines and straps are used to move catch to the pump. When the pump is moving mostly water, with an occasional fish, pumping is stopped, and the pump is removed from the net, leaving the codend open and releasing any fish that are still in the net. The empty net is then brought aboard in order to reset clips and rings before being set out for the next tow. The commenters assert that it could be dangerous for a vessel to attempt to re-cinch the end of the net after pumping is concluded in order to then bring the net aboard with the remaining catch.

Response: NMFS acknowledges that some vessels may need to adjust their fishing practices in order to remove the fish pump from the net without releasing the remaining fish, so that the fish in the net can be brought aboard for the observer to sample. The time between publication of this rule and when it becomes effective can be used by these vessels to develop alternative methods that allow safe operation within these requirements. A vessel may continue to fish outside of CA I while new procedures are developed. NMFS believes the safety and other exemptions sufficiently address commenters' concerns regarding the practical and safety operational difficulties of bringing nets on board vessels after pumping operations while creating a disincentive to invoke the exemption without justification. For any safety problems in bringing the net on board for inspection after pumping operations are complete, the vessel operator may take advantage of the exemption allowing release of fish for vessel safety. However, the vessel would still need to abide by the requirements of this exemption, including leaving CA I for the remainder of that trip.

Comment 2: The two representatives of the commercial midwater trawl herring industry asserted that it is impossible for these vessels to safely bring full nets and brailers over the side or over the stern of the vessel. In contrast, several other commenters cited remarks from a member of the commercial herring midwater trawl industry at the July 15, 2010, meeting of the Council's Atlantic Herring Plan Development Team, that a midwater trawl vessel could not bring aboard a full net, but could bring aboard up to 1 ton (907.1 kg) of fish in the net. A commenter who claimed experience on both midwater trawl and purse seine herring vessels also asserted that up to 1 ton (907.1 kg) of fish could safely be brought on board a midwater trawl vessel.

Response: This action does not require full nets and brailers to be brought aboard a vessel. The intent of the subject exemption was the release of very small amounts of fish, perhaps a few hundred pounds per tow, which physically could not be pumped. It was not intended to cover the release of larger amounts of fish. Three other exemptions, for safety, mechanical failure, or spiny dogfish clogging the pump allow release of larger catches that cannot be pumped aboard.

Comment 3: The representatives of the commercial midwater trawl herring industry stated that the proposed alternatives are unnecessary because at-sea observers are currently provided nearly every opportunity to estimate the volume, and most often the species of fish, remaining in the net before it is released. Conversely, on this subject several individuals, commercial groundfish organizations, and coalitions of herring advocacy groups opposed observer sampling protocols that rely on such "visual access" to the codend to estimate catch that is released. These commenters supported Alternative 1 as the only way to accurately account for all catch by the midwater trawl vessels operating in CA I.

Response: When determining the volume of fish before release, the at-sea observer must often rely on the estimations provided by the vessel operator and crew who are much more familiar with the specific gear in use. Species identification of fish remaining in the net is not typically possible. Observers may be able to identify large-bodied organisms in the net, but are unable to reliably differentiate many fish to their species. Even if fish at the surface of the net are identifiable, the contents may not be homogeneous and the observer cannot determine the full composition of the net. Therefore, released catch is typically classified as "Fish, NK" (i.e., fish, species not known). The Council's request for increased observer coverage in CA I was intended in part to provide additional information on the total catch of this fishery that could then inform future management actions. In order to provide the most complete and valuable information for this purpose, it is important to record, as completely and accurately as possible, the catch of vessels subject to this increased observer coverage. The removal of this exemption may help to address continued questions regarding

stratification of catch within a net or whether the pump housing, which is primarily designed to keep the net out of the pump, might also exclude some larger bodied species.

Comment 4: The ASMFC supported Alternative 1, but suggested NMFS periodically review this measure to determine if the level of data collection continues to be necessary and if the burden to the industry is justified.

Response: This rule may be re-considered and even superseded by a future Council action modifying the catch monitoring program for the Atlantic herring fishery as a whole. If the Council does not choose to review and reevaluate the requirements for access to CA I, the regulations would still be subject to the normal periodic review process and could be changed to account for new information about the burden on the fishery if necessary or appropriate.

Comment 5: No commenter supported either Alternative 2 or Alternative 3. Representatives of the commercial herring midwater trawl industry, representatives of commercial groundfish industry, and environmental groups all criticized these proposed alternatives as being unworkable.

Response: As explained in the proposed rule, these alternatives were intended as examples of possible modification to the existing regulation. The limit on how much can be released in Alternative 2 would be difficult to estimate, and could put the observer in an enforcement role. Alternative 3 would require the vessel crew to re-cinch the net after pumping, which is one of the major hurdles to bringing the catch on board. In addition, raising the net out of the water does not address the question of catch composition within the net and may pose even more logistical problems than bringing the net and catch on board. Therefore, NMFS did not consider either of these as acceptable alternatives for this final rule.

Comment 6: Some commenters objected to the Council granting midwater trawl vessels access to CA I for various reasons, including that midwater trawl access to groundfish closed areas was authorized based on less research and analysis than was required for the establishment of the NE Multispecies CA I Hook Gear Haddock Special Access Program (SAP). These comments included opposition to all midwater trawling, requests that the 100 percent observer coverage requirements apply to all groundfish closed areas, questions on the use and enforcement of the Closed Area I Midwater Trawl Released Codend Affidavit, and objections to the Council's requirement that in order to access CA I vessels targeting groundfish through the NE Multispecies CA I, Hook Gear Haddock Special Access Program had to meet a higher hurdle in terms of documenting bycatch than did midwater trawl vessels.

Response: These comments question the underlying provision of allowing midwater trawl vessels access to CA I, and other attendant requirements, which is beyond the scope of this rule, and, therefore not addressed in this final rule.

Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this final rule is consistent with the Atlantic Herring and NE Multispecies FMPs, other provisions of the Magnuson-Stevens Act, and other applicable law.

This final rule has been determined to be not significant for purposes of Executive Order 12866.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule and is not repeated here. NMFS received no comments questioning or regarding this certification.

Dated: November 24, 2010.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

■ For the reasons set out in the preamble, 50 CFR part 648 is amended as follows:

PART 648—FISHERIES OF THE NORTHEASTERN UNITED STATES

■ 1. The authority citation for part 648 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

§ 648.80 [Amended]

■ 2. In § 648.80, remove paragraph (d)(7)(ii)(D).

[FR Doc. 2010–30152 Filed 11–29–10; 8:45 am]

50 CFR Part 679

[Docket No. 0910131362–0087–02]

RIN 0648–XA066

Fisheries of the Exclusive Economic Zone Off Alaska; Big Skate in the Central Regulatory Area of the Gulf of Alaska

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting retention of big skate in the Central Regulatory Area of the Gulf of Alaska (GOA). This action is necessary because the 2010 total allowable catch (TAC) of big skate in the Central Regulatory Area of the GOA has been reached.

DATES: Effective 1200 hrs, Alaska local time (A.l.t.), November 24, 2010, through 2400 hrs, A.l.t., December 31, 2010.

FOR FURTHER INFORMATION CONTACT: Josh Keaton, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The 2010 TAC of big skate in the Central Regulatory Area of the GOA is 2,049 metric tons (mt) as established by the final 2010 and 2011 harvest specifications for groundfish of the GOA (75 FR 11749, March 12, 2010).

In accordance with § 679.20(d)(2), the Administrator, Alaska Region, NMFS (Regional Administrator), has determined that the 2010 TAC of big skate in the Central Regulatory Area of the GOA has been reached. Therefore, NMFS is requiring that big skate caught in the Central Regulatory Area of the GOA be treated as prohibited species in accordance with § 679.21(b).

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA

(AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay prohibiting the retention of big skate in the Central Regulatory Area of the GOA. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of November 22, 2010.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and § 679.21 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: November 24, 2010.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

RIN 0648–XA067

Fisheries of the Exclusive Economic Zone Off Alaska; Longnose Skate in the Western Regulatory Area of the Gulf of Alaska

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting retention of longnose skate in the Western Regulatory Area of the Gulf of Alaska (GOA). This action is necessary because the 2010 total allowable catch (TAC) of longnose skate in the Western Regulatory Area of the GOA has been reached.

DATES: Effective 1200 hrs, Alaska local time (A.l.t.), November 24, 2010, through 2400 hrs, A.l.t., December 31, 2010.

FOR FURTHER INFORMATION CONTACT: Josh Keaton, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The 2010 TAC of longnose skate in the Western Regulatory Area of the GOA is 81 metric tons (mt) as established by the final 2010 and 2011 harvest specifications for groundfish of the GOA (75 FR 11749, March 12, 2010).

In accordance with § 679.20(d)(2), the Administrator, Alaska Region, NMFS (Regional Administrator), has determined that the 2010 TAC of longnose skate in the Western Regulatory Area of the GOA has been reached. Therefore, NMFS is requiring that longnose skate caught in the Western Regulatory Area of the GOA be treated as prohibited species in accordance with § 679.21(b).

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. Proposed Rules

Federal Register
Vol. 75, No. 229
Tuesday, November 30, 2010

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

FEDERAL DEPOSIT INSURANCE CORPORATION

12 CFR Part 327

RIN 3064–AD66

Assessments, Large Bank Pricing

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Notice of proposed rulemaking; correction.

SUMMARY: This document corrects the preamble to a proposed rule published in the **Federal Register** of November 24, 2010, regarding Assessments, Large Bank Pricing. This correction clarifies that the comment period for the Assessments, Large Bank Pricing ends January 3, 2011.

FOR FURTHER INFORMATION CONTACT: Lisa Ryu, Chief, Large Bank Pricing Section, Division of Insurance and Research, (202) 898–3538; Christine Bradley, Senior Policy Analyst, Banking and Regulatory Policy Section, Division of Insurance and Research, (202) 898–8951; Brenda Bruno, Senior Financial Analyst, Division of Insurance and Research, (630) 241–0359 x 8312; Robert L. Burns, Chief, Exam Support and Analysis, Division of Supervision and Consumer Protection (704) 333–3132 x 4215; Christopher Bellotto, Counsel, Legal Division, (202) 898–3801; Sheikha Kapoor, Counsel, Legal Division, (202) 898–3960.

Correction

In proposed rule FR Doc. 2010–29138, beginning on page 72612 in the issue of November 24, 2010, make the following correction, the **DATES** section is corrected to read:

''**DATES:** Comments must be received on or before January 3, 2011.''

Dated: November 24, 2010.

Federal Deposit Insurance Corporation,

Robert E. Feldman,

Executive Secretary.

BILLING CODE 6741–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

Proposed Modification of the Salt Lake City, UT, Class B Airspace Area; Public Meetings

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of meetings.

SUMMARY: This notice announces three fact-finding informal airspace meetings to solicit information from airspace users and others concerning a proposal to revise the Class B airspace area at Salt Lake City, UT. The purpose of these meetings is to provide interested parties an opportunity to present views, recommendations, and comments on the proposal. All comments received during these meetings will be considered prior to any revision or issuance of a notice of proposed rulemaking.

DATES: The informal airspace meetings will be held on Wednesday, January 26, 2011, from 6 p.m.–9 p.m.; Tuesday, February 1, 2011, from 6 p.m.–9 p.m.; and Thursday, February 3, 2011, from 6 p.m.–9 p.m. Comments must be received on or before March 15, 2011.

ADDRESSES: (1) The meeting on Wednesday, January 26, 2011, will be held in the Ogden Conference Room, Ogden Hinckley Airport Terminal, 3909 Airport Road, Ogden, UT, 84405. (2) The meeting on Tuesday, February 1, 2011, will be held in the Conference room in the Executive Terminal, 397 North 2370 West, Salt Lake City, UT 84116. (3) The meeting on Thursday, February 3, 2011, will be held at Utah Valley University Aviation Flight Center, Hanger A, 1158 Mike Jense Parkway, Provo, UT 84601.

Comments: Send comments on the proposal, in triplicate, to: John Warner, Manager, Operations Support Group, AJV–W2, Western Service Center, Air Traffic Organization, Federal Aviation Administration, 1601 Lind Avenue, SW., Renton WA 98057.

FOR FURTHER INFORMATION CONTACT: To obtain details including a graphic depiction regarding this proposal, please contact Ken Whitaker, FAA Support Manager Salt Lake City TRACON, Salt Lake City ATCT/TRACON, 1201 North 4000 West, Salt Lake City, UT 84116. (801) 325–9630.

SUPPLEMENTARY INFORMATION:

Meeting Procedures

(a) Doors open 30 minutes prior to the beginning of each meeting. The meetings will be informal in nature and will be conducted by one or more representatives of the FAA. A representative from the FAA will present a briefing on the planned modification to the Class B airspace at Salt Lake City, UT. Each participant will be given an opportunity to deliver comments or make a presentation, although a time limit may be imposed. Only comments concerning the plan to modify the Class B airspace area at Salt Lake City, UT, will be accepted.

(b) The meetings will be open to all persons on a space-available basis. There will be no admission fee or other charge to attend and participate.

(c) Any person wishing to make a presentation to the FAA panel will be asked to sign in and estimate the amount of time needed for such presentation. This will permit the panel to allocate an appropriate amount of time for each presenter. These meetings will not be adjourned until everyone on the list has had an opportunity to address the panel.

(d) Position papers or other handout material relating to the substance of these meetings will be accepted. Participants wishing to submit handout material should present an original and two copies (3 copies total) to the presiding officer. There should be additional copies of each handout available for other attendees.

(e) These meetings will not be formally recorded. However, a summary of comments made at the meeting will be filed in the docket.

Agenda for the Meetings

—Sign-in.

—Presentation of meeting procedures.

—FAA explanation of the planned Class B airspace area modifications.

—Solicitation of public comments.

—Closing comments.

Issued in Washington DC, November 22, 2010.

Edith V. Parish,

Manager, Airspace Regulation and ATC Procedures Group.

BILLING CODE 4910–13–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 1, 14, and 17

[Docket No. FDA–2010–N–0560]

RIN 0910–AG55

Amendments to General Regulations of the Food and Drug Administration

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is proposing to amend certain of its general regulations to include tobacco products, where appropriate, in light of FDA's authority to regulate these products under the Family Smoking Prevention and Tobacco Control Act (Tobacco Control Act). With these amendments, tobacco products will be subject to the same general requirements that apply to other FDA-regulated products. This proposed rule is a companion document to the direct final rule published elsewhere in this issue of the **Federal Register**.

DATES: Submit either electronic or written comments by February 14, 2011.

ADDRESSES: You may submit comments, identified by Docket No. FDA–2010–N–0560 and/or RIN number 0910–AG55, by any of the following methods:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

Written Submissions

Submit written submissions in the following ways:

- *FAX:* 301–827–6870.
- *Mail/Hand delivery/Courier (for paper, disk, or CD–ROM submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

Instructions: All submissions received must include the Agency name and docket number and Regulatory Information Number (RIN) for this rulemaking. All comments received may be posted without change to *http://www.regulations.gov,* including any personal information provided. For additional information on submitting comments, see the "Comments" heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Gerie A. Voss, Center for Tobacco Products, Food and Drug Administration, 9200 Corporate Blvd., rm. 240G, Rockville, MD 20850, 1–877–CTP–1373, *gerie.voss@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Why is this rule being issued as a companion proposed rule?

This proposed rule is a companion to the direct final rule regarding amendments to general regulations that is published in the final rules section of this issue of the **Federal Register**. The direct final rule and this companion proposed rule are identical. This companion proposed rule provides the procedural framework to finalize the rule in the event that the direct final rule receives any significant adverse comment and is withdrawn. We are publishing the direct final rule because the rule is noncontroversial, and we do not anticipate that it will receive any significant adverse comments. If no significant adverse comment is received in response to the direct final rule, no further action will be taken related to this proposed rule. Instead, we will publish a confirmation document within 30 days after the comment period ends confirming when the direct final rule will go into effect.

If we receive any significant adverse comment regarding the direct final rule, we will withdraw the direct final rule within 30 days after the comment period ends and proceed to respond to all of the comments under this companion proposed rule using usual notice-and-comment rulemaking procedures under the Administrative Procedure Act (APA) (5 U.S.C. 553). The comment period for this companion proposed rule runs concurrently with the direct final rule's comment period. Any comments received under this companion proposed rule will also be considered as comments regarding the direct final rule.

A significant adverse comment is defined as a comment that explains why the rule would be inappropriate, including challenges to the rule's underlying premise or approach, or would be ineffective or unacceptable without a change. In determining whether an adverse comment is significant and warrants terminating a direct final rulemaking, we will consider whether the comment raises an issue serious enough to warrant a substantive response in a notice-and-comment process in accordance with the APA. Comments that are frivolous, insubstantial, or outside the scope of the rule will not be considered significant or adverse under this procedure. For example, a comment recommending an additional change to the rule will not be considered a significant adverse comment, unless the comment states why the rule would be ineffective without the additional change. In addition, if a significant adverse comment applies to part of a rule and that part can be severed from the remainder of the rule, we may adopt as final those parts of the rule that are not the subject of a significant adverse comment.

You can find additional information about FDA's direct final rulemaking procedures in the guidance document entitled "Guidance for FDA and Industry: Direct Final Rule Procedures" (62 FR 62466, November 21, 1997). This guidance document may be accessed at *http://www.fda.gov/RegulatoryInformation/Guidances/ucm125166.htm.*

II. What is the background of the rule?

The Tobacco Control Act was enacted on June 22, 2009, amending the Federal Food, Drug, and Cosmetic Act (the FD&C Act) and providing FDA with the authority to regulate tobacco products (Pub. L. 11–31; 123 Stat. 1776). In enacting the Tobacco Control Act, Congress sought to ensure that FDA had authority to provide effective oversight and to impose appropriate regulatory controls on tobacco products. In order to effectuate these purposes, FDA is amending several provisions of its general regulations to reflect the Agency's new authority and mandate regarding tobacco products.

III. What does this companion proposed rule do?

FDA proposes to make the following amendments to its existing general regulations, reflecting the Agency's authority over tobacco products under the Tobacco Control Act:

1. Revising 21 CFR 1.1(b) to ensure the applicability of definitions contained in the Tobacco Control Act;

2. Removing the reference to "package" in 21 CFR 1.1(c), as this definition now also is covered by the Tobacco Control Act and is no longer provided solely by the Fair Packaging and Labeling Act;

3. Revising 21 CFR 1.20 to exclude from this definition of "package" the

term "package" as defined in section 900(13) of the Tobacco Control Act (21 U.S.C. 387q(13));

4. Adding paragraph (f) to 21 CFR 14.55 to identify the Tobacco Products Scientific Advisory Committee as a permanent statutory advisory committee; and

5. Adding paragraph (j) to 21 CFR 17.1 and revising 21 CFR 17.2 to reflect FDA's authority to impose civil monetary penalties on tobacco-related violations.

IV. What is the legal authority for this proposed rule?

FDA is issuing this proposed rule under provisions of the FD&C Act, as amended by the Tobacco Control Act (21 U.S.C. 321, 331, 333, 387, 387a, and 387q).

V. What is the environmental impact of this proposed rule?

The Agency has determined under 21 CFR 25.30(h) and (i) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VI. What is the economic impact of this proposed rule?

FDA has examined the impacts of the proposed rule under Executive Order 12866 and the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The Agency believes that this proposed rule is not a significant regulatory action under the Executive order.

The Regulatory Flexibility Act requires agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because the proposed rule would not impose any new requirements on tobacco product manufacturers, retailers, or distributors, the Agency proposes to certify that the rule will not have a significant economic impact on a substantial number of small entities.

Section 202(a) of the Unfunded Mandates Reform Act of 1995 requires that agencies prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing "any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted annually for inflation) in any one year." The current threshold after adjustment for inflation is $135 million, using the most current (2009) Implicit Price Deflator for the Gross Domestic Product. FDA does not expect this proposed rule to result in any 1-year expenditure that would meet or exceed this amount.

VII. Paperwork Reduction Act of 1995

FDA concludes that the regulatory revisions and amendments identified in this document are not subject to review by the Office of Management and Budget because they do not constitute a "collection of information" under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

VIII. What are the federalism impacts of this proposed rule?

FDA has analyzed this proposed rule in accordance with the principles set forth in Executive Order 13132. FDA has determined that the proposed rule, if finalized, would not contain policies that would have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the Agency has concluded that the proposed rule does not contain policies that have federalism implications as defined in the Executive order and, consequently, a federalism summary impact statement is not required.

IX. How do you submit comments on this proposed rule?

Interested persons may submit to the Division of Dockets Management (*see* **ADDRESSES**) either electronic or written comments regarding this document. It is only necessary to send one set of comments. It is no longer necessary to send two copies of mailed comments. Identify comments with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects

21 CFR Part 1

Cosmetics, Drugs, Exports, Food labeling, Imports, Labeling, Reporting and recordkeeping requirements.

21 CFR Part 14

Administrative practice and procedure, Advisory committees, Color additives, Drugs, Radiation protection.

21 CFR Part 17

Administrative practice and procedure, Penalties.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, it is proposed that 21 CFR parts 1, 14, and 17 be amended to read as follows:

PART 1—GENERAL ENFORCEMENT REGULATIONS

1. The authority citation for part 1 is revised to read as follows:

Authority: 15 U.S.C. 1453, 1454, 1455; 19 U.S.C. 1490, 1491; 21 U.S.C. 321, 331, 333, 334, 335a, 343, 350c, 350d, 352, 355, 360b, 362, 371, 374, 381, 382, 387, 387a, 393; 42 U.S.C. 216, 241, 243, 262, 264.

2. In § 1.1 revise paragraph (b); and in the first sentence of paragraph (c), remove "*package* in § 1.20 and of" to read as follows:

§ 1.1 General.

* * * * *

(b) The definitions and interpretations of terms contained in sections 201 and 900 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321 and 387) shall be applicable also to such terms when used in regulations promulgated under that act.

3. Amend § 1.20 by revising the introductory text to read as follows:

§ 1.20 Presence of mandatory label information.

Except as otherwise provided by section 900(13) of the Family Smoking Prevention and Tobacco Control Act (21 U.S.C. 387(13)) defining "package," the term *package* means any container or wrapping in which any food, drug, device, or cosmetic is enclosed for use in the delivery or display of such commodities to retail purchasers, but does not include:

* * * * *

PART 14—PUBLIC HEARING BEFORE A PUBLIC ADVISORY COMMITTEE

4. The authority citation for part 14 continues to read as follows:

Authority: 5 U.S.C. App. 2; 15 U.S.C. 1451–1461, 21 U.S.C. 41–50, 141–149, 321–394, 467f, 679, 821, 1034; 28 U.S.C. 2112; 42 U.S.C. 201, 262, 263b, 264; Pub. L. 107–109; Pub. L. 108–155

5. Amend § 14.55 by adding paragraph (f) to read as follows:

§ 14.55 Termination of advisory committees.

* * * * *

(f) The Tobacco Products Scientific Advisory Committee is a permanent statutory advisory committee established by section 917 of the Family Smoking Prevention and Tobacco Control Act (21 U.S.C. 387q) (Pub. L. 111–31) and is not subject to termination and renewal under paragraph (a) of this section.

PART 17—CIVIL MONEY PENALTIES HEARINGS

6. The authority citation for part 17 continues to read as follows:

Authority: 21 U.S.C. 331, 333, 337, 351, 352, 355, 360, 360c, 360f, 360i, 360j, 371; 42 U.S.C. 262, 263b, 300aa–28; 5 U.S.C. 554, 555, 556, 557.

7. Amend § 17.1 by adding paragraph (j) to read as follows:

§ 17.1 Scope.

* * * * *

(j) Section 303(f) of the act authorizing civil money penalties for any person who violates a requirement of the Family Smoking Prevention and Tobacco Control Act which relates to tobacco products.

8. Revise § 17.2 to read as follows:

§ 17.2 Maximum penalty amounts.

The following table shows maximum civil monetary penalties associated with the statutory provisions authorizing civil monetary penalties under the act or the Public Health Service Act.

CIVIL MONETARY PENALTIES AUTHORITIES ADMINISTERED BY FDA AND ADJUSTED MAXIMUM PENALTY AMOUNTS

U.S.C. section	Former maximum penalty amount (in dollars) [1]	Assessment method	Date of last penalty figure or adjustment	Adjusted maximum penalty amount (in dollars)
		21 U.S.C.		
333(b)(2)(A)	55,000	For each of the first two violations in any 10-year period	2008	60,000.
333(b)(2)(B)	1,100,000	For each violation after the second conviction in any 10-year period.	2008	1,200,000.
333(b)(3)	110,000	Per violation	2008	120,000.
333(f)(1)(A)	16,500	Per violation	2008	16,500 (not adjusted).
333(f)(1)(A)	1,100,000	For the aggregate of violations	2008	1,200,000.
333(f)(2)(A)	55,000	Per individual	2008	60,000.
333(f)(2)(A)	275,000	Per "any other person"	2008	300,000.
333(f)(2)(A)	550,000	For all violations adjudicated in a single proceeding	2008	600,000.
333(f)(3)(A)	10,000	For all violations adjudicated in a single proceeding	2007	10,000 (not adjusted).
333(f)(3)(B)	10,000	For each day the violation is not corrected after a 30-day period following notification until the violation is corrected.	2007	10,000 (not adjusted).
333(f)(4)(A)(i)	250,000	Per violation	2007	250,000 (not adjusted).
333(f)(4)(A)(i)	1,000,000	For all violations adjudicated in a single proceeding	2007	1,000,000 (not adjusted).
333(f)(4)(A)(ii)	250,000	For the first 30-day period (or any portion thereof) of continued violation following notification.	2007	250,000 (not adjusted).
333(f)(4)(A)(ii)	1,000,000	For any 30-day period, where the amount doubles for every 30-day period of continued violation after the first 30-day period.	2007	1,000,000 (not adjusted).
333(f)(4)(A)(ii)	10,000,000	For all violations adjudicated in a single proceeding	2007	10,000,000 (not adjusted).
333(f)(9)(A)	[1] N/A	Per violation	2009	15,000 (not adjusted).
333(f)(9)(A)	N/A	For all violations adjudicated in a single proceeding	2009	1,000,000 (not adjusted).
333(f)(9)(B)(i)(I)	N/A	Per violation	2009	250,000 (not adjusted).
333(f)(9)(B)(i)(I)	N/A	For all violations adjudicated in a single proceeding	2009	1,000,000 (not adjusted).
333(f)(9)(B)(i)(II)	N/A	For the first 30-day period (or any portion thereof) of continued violation following notification.	2009	250,000 (not adjusted).
333(f)(9)(B)(i)(II)	N/A	For any 30-day period, where the amount doubled for every 30-day period of continued violation after the first 30-day period.	2009	1,000,000 (not adjusted).
333(f)(9)(B)(i)(II)	N/A	For all violations adjudicated in a single proceeding	2009	10,000,000 (not adjusted).
333(f)(9)(B)(ii)(I)	N/A	Per violation	2009	250,000 (not adjusted).
333(f)(9)(B)(ii)(I)	N/A	For all violations adjudicated in a single proceeding	2009	1,000,000 (not adjusted).
333(f)(9)(B)(ii)(II)	N/A	For the first 30-day period (or any portion thereof) of continued violation following notification.	2009	250,000 (not adjusted).
333(f)(9)(B)(ii)(II)	N/A	For any 30-day period, where the amount doubled for every 30-day period of continued violation after the first 30-day period.	2009	1,000,000 (not adjusted).
333(f)(9)(B)(ii)(II)	N/A	For all violations adjudicated in a single proceeding	2009	10,000,000 (not adjusted).
333(g)(1)	250,000	For the first violation in any 3-year period	2007	250,000 (not adjusted).
333(g)(1)	500,000	For each subsequent violation in any 3-year period	2007	500,000 (not adjusted).
333 note	N/A	For the second violation (following a first violation with warning) within a 12-month period by a retailer with an approved training program.	2009	250 (not adjusted).
333 note	N/A	For the third violation within a 24-month period by a retailer with an approved training program.	2009	500 (not adjusted).
333 note	N/A	For the fourth violation within a 24-month period by a retailer with an approved training program.	2009	2,000 (not adjusted).
333 note	N/A	For the fifth violation within a 36-month period by a retailer with an approved training program.	2009	5,000 (not adjusted).

BILLING CODE 4160–01–P

DEPARTMENT OF LABOR

Employee Benefits Security Administration

29 CFR Part 2550

RIN 1210–AB38

Target Date Disclosure

AGENCY: Employee Benefits Security Administration, Labor.

ACTION: Proposed regulation.

SUMMARY: The Department published in the **Federal Register** of October 24, 2007 a final regulation (the qualified default investment alternative regulation) providing relief from certain fiduciary responsibilities for fiduciaries of participant-directed individual account plans who, in the absence of directions from a participant, invest the participant's account in a qualified default investment alternative. On October 20, 2010, the Department published a final regulation that requires the disclosure of certain plan and investment-related information, including fee and expense information, to participants and beneficiaries in participant-directed individual account plans (the participant-level disclosure regulation). This document contains proposed amendments to the qualified default investment alternative regulation to provide more specificity as to the information that must be disclosed in the required notice to participants and beneficiaries concerning investments in qualified default investment alternatives, including target date or similar investments. This document also contains a proposed amendment to the participant-level disclosure regulation that would require the disclosure of the same information concerning target date or similar investments to all participants and beneficiaries in participant-directed individual account plans.

DATES: Written comments on the proposed regulation should be received by the Department of Labor no later than January 14, 2011.

ADDRESSES: To facilitate the receipt and processing of comments, EBSA encourages interested persons to submit their comments electronically to *e-ORI@dol.gov,* or by using the Federal eRulemaking portal *http://www.regulations.gov* (following instructions for submission of comments). Persons submitting comments electronically are encouraged not to submit paper copies. Persons interested in submitting comments on paper should send or deliver their comments (preferably three copies) to: Office of Regulations and Interpretations, Employee Benefits Security Administration, Room N–5655, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210, Attention: Target Date Amendments. All comments will be available to the public, without charge, online at *http://www.regulations.gov* and *http://www.dol.gov/ebsa,* and at the Public Disclosure Room, Employee Benefits Security Administration, U.S. Department of Labor, Room N–1513, 200 Constitution Avenue, NW., Washington, DC 20210.

FOR FURTHER INFORMATION CONTACT: Kristen L. Zarenko, Office of Regulations and Interpretations, Employee Benefits Security Administration, (202) 693–8500. This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

A. Background

Section 624(a) of the Pension Protection Act of 2006 (Pension Protection Act) added a new section 404(c)(5) to ERISA. Section 404(c)(5)(A) of ERISA provides that, for purposes of

section 404(c)(1) of ERISA, a participant in an individual account plan shall be treated as exercising control over the assets in the account with respect to the amount of contributions and earnings which, in the absence of an investment election by the participant, are invested by the plan in accordance with regulations prescribed by the Secretary of Labor. On October 24, 2007, the Department of Labor (Department) published a final regulation implementing the provisions of section 404(c)(5) of ERISA.[1] Correcting amendments to the final regulation were published on April 30, 2008.[2] A fiduciary of a plan that complies with the final regulation, as amended, will not be liable for any loss, or by reason of any breach, that occurs as a result of investment in a qualified default investment alternative. The regulation describes the types of investments that qualify as default investment alternatives under section 404(c)(5) of ERISA and the other requirements that must be satisfied in order for a fiduciary to obtain the relief from liability described above.

The final regulation provides that, in order for a fiduciary to obtain relief, participants and beneficiaries must receive information concerning the investments that may be made on their behalf. Specifically, paragraph (c)(3) of the final rule requires that participants and beneficiaries be furnished both an initial notice (generally thirty days in advance of a participant's eligibility to participate in the plan) and an annual notice for subsequent plan years. Paragraph (d) of the final rule sets forth the information that must be included in these notices. In addition to the notice requirement, paragraph (c)(4) of the final regulation required that fiduciaries provide certain investment-related information that must be disclosed under the Department's 404(c) regulation. Specifically, paragraph (c)(4) requires fiduciaries to provide to defaulted participants or beneficiaries the material described in sections 2550.404c–1(b)(2)(i)(B)(*1*)(*viii*) and (*ix*) and 2550.404c–1(b)(2)(i)(B)(*2*).

Since publication of the final rule, the Department has received many questions about the notice requirement, for example concerning the timing requirements for the notice and how much information must be disclosed concerning investment fees and expenses. The Department addressed these and other issues in a series of questions and answers concerning the final rule that was published in a Field Assistance Bulletin in April 2008.[3] With respect to the disclosure of investment fee and expense information, the Department indicated at that time that it was developing a regulation to establish disclosure requirements for all participant-directed individual account plans. The Department anticipated that furnishing the investment information required by such regulation, when finalized, would satisfy the investment-related fee and expense disclosures required by the qualified default investment alternative regulation. Nonetheless, the Department continues to receive requests for more formal guidance as to how the content requirements of the qualified default investment alternative notice may be satisfied. As discussed below, the Department proposes amending the qualified default investment alternative regulation to provide more specificity as to the information that must be disclosed.

In addition to questions about the notice requirement, recent attention has been paid to the increased use of "target date" or "lifecycle" funds and other similar investments (TDFs) as an investment alternative in participant-directed retirement plans, such as 401(k) plans.[4] The Department's final regulation included TDFs as one of the permissible categories of investment funds or products that may be used as a qualified default investment alternative, if all of the requirements of the final rule have been satisfied. The growing popularity of these products led to a focus in recent years on issues relating to the design, operation, and selection of TDFs for 401(k) plans, both as investment alternatives for plans generally and as qualified default investment alternatives for participants that do not provide investment direction. The designation of all investment alternatives, including TDFs, to be made available under a private sector retirement plan is governed by the fiduciary responsibility provisions of ERISA. Persons with this responsibility must prudently select and monitor investment alternatives, including alternatives intended to be qualified default investment alternatives.

In 2008, the Department's ERISA Advisory Council studied several aspects of TDFs as 401(k) plan investment alternatives, including the challenges and risks they may pose to participants who invest in TDFs, the different types of TDFs, and appropriate criteria for selecting and monitoring TDFs. In its report to the Secretary of Labor, the Council recommended that the Department provide additional guidance to both plan fiduciaries and plan participants to enhance understanding of TDFs and the risks associated with TDF investing.[5] In addition, there has been Congressional interest in target date fund issues.[6] In June 2009, the Department and the Securities and Exchange Commission (Commission) held a joint public hearing to explore issues related to TDFs, including how they are managed at the investment level, how they are selected by plan fiduciaries and by investors, and how information about them is disclosed to plan participants and investors.

Following the public hearing and extensive review of the testimony presented and supplemental materials concerning TDFs, the Department was persuaded that both plan fiduciaries and plan participants would benefit from additional guidance concerning TDFs. Accordingly, the Department and the Commission recently published a joint Investor Bulletin to better educate investors and plan participants who are considering investing in TDFs.[7] The Commission also recently proposed rules to address concerns regarding the potential for investor misunderstandings about TDFs.[8] The Department further intends to publish a series of tips intended to assist plan fiduciaries in obtaining and evaluating relevant information when selecting and monitoring TDFs as investment options for participant-directed retirement plans.

The Department also determined that improvements can be made in the information that is disclosed to participants and beneficiaries concerning their plan investment in TDFs, whether by their own investment direction or pursuant to the qualified default investment alternative regulation. To ensure that consistent information concerning TDFs is furnished to defaulted participants and to participants who give investment

directions, the Department is publishing in this Notice proposed amendments to both the qualified default investment alternative regulation and the participant-level disclosure regulation. The amendment to the participant-level disclosure regulation, at § 2550.404a–5 (75 FR 64910, October 20, 2010), will be included in paragraph (i)(4) of that regulation, which was reserved for this purpose. More detailed information about the participant-level disclosure regulation, including the general investment-related disclosure requirements, can be found in the Supplementary Information for that regulation.

B. Description of Amendments

This proposal amends paragraphs (c)(4) and (d)(3), (4), and (5) of the qualified default investment alternative regulation to more specifically describe certain investment-related information that must be included in the required notice to participants and beneficiaries. This information is intended to complement the new investment-related disclosure requirements contained in the participant-level disclosure regulation.

Paragraph (c)(4) of the rule is being revised to reflect amendments to the Department's 404(c) regulation that were made as part of the participant-level disclosure regulation. Rather than referring to requirements previously contained in the 404(c) regulation, this paragraph of the qualified default investment alternative regulation now requires fiduciaries to provide the comparable materials that are described in section 2550.404a–5(d)(3) and (4) of the participant-level disclosure regulation.[9]

Paragraph (d)(3) of the rule requires that the notice include: "[a] Description of the qualified default investment alternative, including a description of the investment objectives, risk and return characteristics (if applicable), and fees and expenses attendant to the investment alternative[.]"[10] To ensure that plan fiduciaries understand the specific investment information that must be disclosed to defaulted participants and beneficiaries about qualified default investment alternatives, and to better conform these requirements to those of all participant-directed individual account plans pursuant to the Department's participant-level disclosure regulation, proposed paragraph (d)(3) contains six separate elements. The description of the qualified default investment alternative must first include the name of the investment's issuer. Second, the description must include the investment's objectives or goals. Third, the description must include the investment's principal strategies (including a general description of the types of assets held by the investment), and principal risks (*e.g.,* as required by Securities and Exchange Commission Form N–1A). Fourth, the description must include the investment's historical performance data (*e.g.,* 1-, 5-, and 10-year returns) and, if applicable, any fixed return, annuity, guarantee, death benefit, or other ancillary features; as well as a statement indicating that an investment's past performance is not necessarily an indication of how the investment will perform in the future. Fifth, the description must include the investment's attendant fees and expenses, including: Any fees charged directly against the amount invested in connection with acquisition, sale, transfer of, or withdrawal (*e.g.,* sales loads, sales charges, deferred sales charges, redemption fees, surrender charges, exchange fees, account fees, and purchase fees); any annual operating expenses (*e.g.,* expense ratio); and any ongoing expenses in addition to annual operating expenses (*e.g.,* mortality and expense fees). For purposes of these requirements to disclose an investment's objectives or goals, principal strategies and principal risks, historical performance, and fees and expenses, the Department requests comment on the extent to which these requirements should conform to the final participant-level disclosure regulation; for example, should the more specific standards for investment-related information contained in the participant-level disclosure regulation be incorporated by reference into the qualified default investment alternative regulation? The Department believes that conforming the requirements will make it easier for plan fiduciaries and administrators to comply and help to avoid confusion among participants and beneficiaries who will receive the required disclosures.

The sixth requirement will ensure that participants and beneficiaries obtain comprehensive information about TDFs that apply age or target retirement-based asset allocations, described in paragraph (e)(4)(i) of the qualified default investment alternative regulation. Specifically, to the extent the information is not already disclosed pursuant to the preceding requirements of paragraph (d)(3) of the rule, the description must satisfy three requirements. The first is an explanation of the asset allocation, how the asset allocation will change over time, and the point in time when the investment will reach its most conservative asset allocation, including a chart, table, or other graphical representation that illustrates such change in asset allocation over time and that does not obscure or impede a participant's or beneficiary's understanding of the information explained pursuant to this requirement. The Department understands that many investment issuers and service providers already include simple and straight-forward graphs, pie chart series, or other illustrations to assist investors by showing them how asset allocations in TDFs change over time. To the extent such illustrations are not already furnished to participants and beneficiaries, the Department is persuaded that any additional burden associated with preparation of a compliant illustration will prove highly beneficial to enhance participants' and beneficiaries' understanding of a TDF's asset allocation and how it will change over time.

The second requirement depends on whether the alternative is named, or otherwise described, with reference to a particular date (*e.g.,* a target date). For example, many funds include a target retirement date in the name itself (*e.g.,* a "2030 fund" or a "2040 fund"). In some cases the name of the alternative may not include a date, but a retirement or other target date may be referenced or implied in the description of the alternative's objectives or goals, or principal strategies or principal risks; this requirement applies to those alternatives as well. The notice must explain the age group for whom the investment is designed, the relevance of the date, and any assumptions about a participant's or beneficiary's contribution and withdrawal intentions on or after such date. The third requirement is a statement that the participant or beneficiary may lose money by investing in the qualified default investment alternative, including losses near and following retirement, and that there is no guarantee that investment in the qualified default investment alternative will provide adequate retirement income. All of the information required to be disclosed concerning TDFs and similar products is consistent with the analysis discussed in the Department's recent guidance to plan participants and expected guidance to plan fiduciaries

[9] Consistent with the participant-level disclosure regulation, the material required by section 2550.404a–5(d)(4), which is referred to in paragraph (c)(4) of this amendment, must be furnished upon request.

[10] § 2550.404(c)–5(d)(3).

concerning the factors that must be taken into account when selecting and monitoring, or investing in, these products. The Department is interested in comments as to whether, and to what extent, the final rule should include disclosure elements or concepts contained in the Commission's rulemaking.[11]

To ensure that all participants and beneficiaries in participant-directed individual account plans, not only participant and beneficiaries who are invested in a qualified default investment alternative, receive the same information about TDFs, the Department also is proposing in this Notice to include the same three disclosure requirements concerning TDFs in the participant-level disclosure regulation. Specifically, these new requirements, if adopted, will be added to paragraph § 2550.404a–5(i)(4) of the participant-level disclosure regulation, which was reserved for this purpose. To ensure consistency between these regulations, the Department expects that any changes made to the TDF disclosure requirements in response to comments on this Notice will be reflected in both the qualified default investment alternative regulation and the participant-level disclosure regulation.

Paragraph (d)(4) of the qualified default investment alternative regulation requires that the notice to participants contain a "description of the right of the participants and beneficiaries on whose behalf assets are invested in a qualified default investment alternative to direct the investment of those assets to any other investment alternative under the plan, including a description of any applicable restrictions, fees or expenses in connection with such transfer[.]"[12] In the proposal published today, this paragraph has been modified. If any such fees or restrictions are applicable, this paragraph would only require a statement that certain fees and limitations may apply in connection with such transfer. The requirement to disclose the fees and expenses themselves would be moved to paragraph (d)(3)(v), discussed above; if other limitations may apply, the notice must so state.

Finally, paragraph (d)(5) of the qualified default investment alternative regulation would be broadened to clarify that comprehensive information about the qualified default investment alternative, as well as the other investment alternatives available under the plan, is available to participants and beneficiaries. Currently, paragraph (d)(5) only requires "[a]n explanation of where the participants and beneficiaries can obtain investment information concerning the other investment alternatives available under the plan."[13] As amended by this proposal, this paragraph requires an explanation of where the participants and beneficiaries can obtain additional investment information concerning *the qualified default investment alternative and the other* investment alternatives available under the plan. The Department included this modification to conform to the participant-level disclosure regulation. Specifically, the Department expects that paragraph (d)(5), if adopted in final form, will ensure that defaulted participants and beneficiaries know where to obtain any additional investment information required to be disclosed pursuant to the final participant-level disclosure regulation concerning all of the plan's investment alternatives, including qualified default investment alternatives.

C. Furnishing Required Disclosures

In conjunction with the adoption of the final participant-level disclosure regulation, § 2550.404a–5 (75 FR 64910, October 20, 2010), the Department explained in the Supplementary Information that, given the differing views on the use of and standards for electronic disclosure, it would be undertaking a review of the safe harbor applicable to the use of electronic media for furnishing information to plan participants and beneficiaries (29 CFR 2520.104b–1(c)). The Department further indicated that, in the very near future, it will be publishing a **Federal Register** notice requesting public comments, views, and data relating to the electronic distribution of plan information to plan participants and beneficiaries. The Department also noted that, pending the completion of its review and the issuance of further guidance, the general disclosure regulation at 29 CFR 2520.104b–1 applies to material furnished under the participant-level disclosure regulation, including the safe harbor for electronic disclosures at paragraph (c) of the general disclosure regulation. The Department anticipates that resolution of the issues involved with the electronic disclosure of plan information will directly affect the manner in which materials required by the amendments contained in this notice may be furnished to participants and beneficiaries. Accordingly, interested persons are encouraged to participate in the Department's forthcoming solicitation of comments on the use of electronic media for furnishing plan information.

D. Effective Date

The Department proposes that the amendments to regulation sections 2550.404a–5 and 2550.404c–5 contained in this notice will be effective 90 days after publication of the final rule in the **Federal Register**. The Department invites comment on whether the final rule should be effective on a different date.

E. Regulatory Impact Analysis

Executive Order 12866 Statement

Under Executive Order 12866, the Department must determine whether a regulatory action is "significant" and therefore subject to the requirements of the Executive Order and subject to review by the Office of Management and Budget (OMB). Under section 3(f) of the Executive Order, a "significant regulatory action" is an action that is likely to result in a rule (1) Having an effect on the economy of $100 million or more in any one year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities (also referred to as "economically significant"); (2) creating serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order. Although the Department believes that this regulatory action is not economically significant within the meaning of section 3(f)(1) of the Executive Order, the action has been determined to be significant within the meaning of section 3(f)(4) of the Executive Order, and accordingly, OMB has reviewed this notice of proposed rulemaking pursuant to the Executive Order. The Department provides the following assessment of the potential costs and benefits associated with the proposed regulation below.

Need for Regulatory Action

As discussed earlier in this preamble, on October 24, 2007, the Department published a final regulation implementing the provisions of section

[11] See footnote 8, above.

[12] § 2550.404(c)–5(d)(4).

[13] § 2550.404(c)–5(d)(5).

404(c)(5) of ERISA.[14] A fiduciary of a plan that complies with the final regulation, as amended, will not be liable for any loss, or by reason of any breach, that is the direct and necessary result of investing all or a part of a participant's or beneficiary's account in a qualified default investment alternative. As noted in the regulation, this relief does not apply to fiduciary duties or liability related to the selection or monitoring of particular qualified default investment alternatives. The regulation describes the types of investments that qualify as default investment alternatives under section 404(c)(5) of ERISA and the other requirements that must be satisfied in order for a fiduciary to obtain the relief from liability described above.

As discussed earlier, the Department's final qualified default investment alternative regulation includes TDFs as one of the permissible categories of investment funds or products that may be used as a qualified default investment alternative, if all of the requirements of the final rule have been satisfied. Since the issuance of the Department's final qualified default investment alternative regulation, plans have increased their use of TDFs as an investment alternative.[15] At the end of the first quarter of 2009, the amount of employer sponsored defined contribution plan assets invested in TDFs totaled $145 billion, compared to $37 billion in 2003.[16] A recent survey found that nearly 60 percent of plans have made TDFs the qualified default investment alternative for participants that do not provide investment direction and nearly 60 percent of participant-directed individual account plans, such as 401(k) plans, offer TDFs as an investment alternative.[17]

The financial market downturn that started in 2008 increased volatility and lowered returns of TDFs.[18] Many TDFs designed for people recently nearing or entering retirement suffered large losses. For example, on average, participants invested in TDFs dated 2010 and 2015 lost about a quarter of their value in 2008. Many of these funds typically held about half of the holdings in stocks, following glide paths that did not significantly reduce that percentage for 5 years or more after the average investor retired.[19] The Background discussion, above, summarizes responses to this development, for example from the U.S. Senate Special Committee on Aging, and activities undertaken by the Department and the Securities and Exchange Commission since then.

Experts within the investment community agree that TDF disclosures to participants and beneficiaries need to be improved. For example, the Investment Company Institute (ICI) Target Date Fund Disclosure Working Group reviewed existing TDF disclosures and in a June 2009 Report, recommended that TDFs display prominently five key pieces of information to help enhance investors' understanding such as the relevance of the target date used in a fund's name, the assumptions the fund makes regarding the investor's withdrawal intentions at and after the target date, the age group for whom the fund is designed, an illustration of the glide path that the TDF follows to reduce its equity exposure and become more conservative over time, and a statement that the risks associated with a TDF include the risk of loss near, at, or after the target date and that there is no guarantee that the fund will provide adequate income at and through the investor's retirement.[20]

Based on the foregoing, the Department is proposing to amend its final qualified default investment alternative and participant-level disclosure regulations to improve the information that is disclosed to participants and beneficiaries regarding TDFs.

Affected Entities

Based on the latest available information, the Department estimates that there are approximately 483,000 participant-directed individual account plans.[21] The Department's proposed amendment to its final qualified default investment alternative rule would affect the approximately 114,000 participant-directed individual account plans that use TDFs as their qualified default investment alternative and the proposed amendment to its participant-level disclosure final rule would affect 278,000 participant-directed individual account plans that offer TDFs as an investment alternative.[22] The Department also estimates that 43.6 million participants and beneficiaries are covered by plans using TDFs as an investment alternative.

Benefits

The Department expects that the enhanced disclosures required by the proposed regulation would benefit participants and beneficiaries by providing them with critical information they need to evaluate the quality of TDFs and how specific TDFs match their risk profile. This should lead to improved investment results and retirement planning decisions. The TDF disclosures would foster a better understanding of how TDFs operate and the glide path that is associated with each fund. The Department believes that the disclosures under this proposed regulation, combined with the greater transparency required by the Department's participant-level disclosure regulation, would allow participants and beneficiaries to determine whether the efficient way in which TDFs allow them to invest in a mix of asset classes and rebalance their asset allocation periodically is worth the price differential they generally pay for such funds.[23]

[18] Deloitte Financial Advisory Services LLP, *Target Date Funds: Historical Volatility/Return Profiles,* unpublished presentation to the U.S. Department of Labor, Employee Benefits Security Administration (Sept. 30, 2009). In particular, the research found that the 1-year volatility was generally greater than the 3-year volatility and the 1-year returns were lower than the 3-year returns. Deloitte also found that funds with target date 2010 were more volatile in 2008 than they were in 2007. In addition, Deloitte reports that volatility among 2010 TDFs correlated with the fraction of the funds that are invested in stock and small 2010 funds are more heterogeneous in rates of return and in volatility than large funds.

Continued

Although the Department is unable to quantify the benefits associated with the proposed regulation, it is confident that the benefits justify their costs.

Costs

The Department estimates that the proposed regulation would result in 66.2 million TDF disclosures being distributed. The associated total hour burden for affected plans is estimated to be 29,000 hours with an equivalent cost of $1.8 million annually. The estimated cost burden for plans to distribute the notices is $4.1 million annually. Because these costs are associated with information collection requests covered by the Paperwork Reduction Act, the data and methodology used in developing the cost estimates are more fully discussed in the Paperwork Reduction Act section, below.

Paperwork Reduction Act

As part of its continuing effort to reduce paperwork and respondent burden, the Department of Labor conducts a preclearance consultation program to provide the general public and federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA 95) (44 U.S.C. 3506(c)(2)(A)). This helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed.

Currently, EBSA is soliciting comments concerning the information collection request (ICR) included in the Proposed Rule on the Fiduciary Requirements for Disclosure and Default Investment Alternatives Under Participant Directed Individual Account Plans. A copy of the ICR may be obtained by contacting the PRA addressee shown below.

The Department has submitted a copy of the proposed rule to OMB in accordance with 44 U.S.C. 3507(d) for review of its information collections. The Department and OMB are particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Comments should be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503; Attention: Desk Officer for the Employee Benefits Security Administration. OMB requests that comments be received within 30 days of publication of the proposed rule to ensure their consideration.

PRA Addressee: Address requests for copies of the ICR to G. Christopher Cosby, Office of Policy and Research, U.S. Department of Labor, Employee Benefits Security Administration, 200 Constitution Avenue, NW., Room N–5718, Washington, DC 20210.

Telephone (202) 693–8410; Fax: (202) 219–5333. These are not toll-free numbers. ICRs submitted to OMB also are available at *http://www.RegInfo.gov.*

(a) Proposed Amendment to Qualified Default Investment Alternative Regulation

Under the proposed amendment to paragraph (d)(3) of the Department's qualified default investment alternative regulation, the notice provided to participants and beneficiaries that use TDFs as a qualified default investment alternative (the QDIA notice) would be required to contain comprehensive information about TDFs. This information is described in detail earlier in this preamble, along with other changes to the information required to be disclosed in the QDIA notice that do not relate specifically to TDFs.

The Department understands that many investment issuers and service providers currently furnish straightforward graphs, pie chart series, and other illustrations to demonstrate to investors how asset allocations in TDFs change over time and other information that would be required to be disclosed in the QDIA notice by the proposed regulation. Therefore, the burden that would be imposed by this proposed regulation stems primarily from incorporating the more comprehensive TDF disclosure into the QDIA notice. The Department invites comments regarding this assumption.

The Department believes that a financial professional should be able to incorporate the TDF disclosures into the QDIA notice, on average, in approximately 15 minutes at a labor rate of approximately $63 per hour.[24] The Department estimates that the hour burden imposed on the approximately 114,000 affected plans would be 28,520 hours (114,079 plans * 0.25 hours) with an equivalent cost of $1.79 million (114,079 plans * .25 hours per plan * $62.81/hour).

The Department estimates that the disclosure would add two pages to the QDIA notice, and that an estimated 18.4 million participants would be required to receive the disclosures.[25] The Department expects that 38 percent of participants would receive the disclosure by electronic means, leaving an estimated 11.4 million paper disclosures that would be sent via mail. The Department estimates that 6.8 percent of participants are new to a plan[26] in a given year; therefore, 780,000[27] participants generally would be required to receive the QDIA notice at least 30 days in advance of the date of plan eligibility. No mailing costs are included in the cost estimates, because the TDF disclosure would be incorporated into the QDIA notice. In total, 12.2 million paper disclosures would be required. Assuming paper costs of $.05 per page, the Department estimates that the cost burden associated with this proposed regulation's amendment to the QDIA notice would be $1.2 million.

author finds that the median fee for TDFs is approximately .85 (depending on the age of the saver). However, some expense ratios are as low as .19 percent, while others are as high as 1.50 percent.

[24] EBSA estimates of labor rates include wages, other benefits, and overhead based on the National Occupational Employment Survey (May 2008, Bureau of Labor Statistics) and the Employment Cost Index (June 2009, Bureau of Labor Statistics).

[25] The Department estimate of 18.4 million participants is derived as follows: 76.6 percent of eligible workers participate in employer-sponsored pension plans. Based on 2007 Form 5500 data, the Department estimates that 59.6 million individuals are active participants in participant-directed individual account plans. Using those two numbers, the Department estimates that 77.8 million workers are eligible to participate in participant-directed individual account plans (77.8 million * .766 = 59.6 million). The Department estimates that 39.6 percent of plans have automatic enrollment, and 59.7 percent of these plans use TDFs as their QDIA (77.8 million*.396 * .597=18.4 million).

[26] These individuals receive the QDIA notice twice in their first year of participation: Once when they are eligible to participate in the plan and once when all participants receive the plan's annual QDIA notice.

[27] 18.4 million * .062 * .068=.78 million (rounded).

(b) Proposed Amendment to Participant-Level Disclosure Regulation

The proposed amendment to the Department's participant-level disclosure regulation would require participant-directed individual account plans that offer TDFs as a designated investment alternative to include the TDF disclosures as an appendix to the participant-level disclosures required by 29 CFR 2550.404a–5(d)(1) and (d)(2).

The Department assumes that plans would incur a de minimis cost to prepare the appendix, because, as stated above, investment issuers and service providers already have the TDF information readily available to provide to plans. No additional mailing costs are expected, because the TDF disclosures would be attached as an appendix to, and distributed with, the participant-level disclosure. Thus, the only anticipated additional costs would pertain to the additional paper costs associated with including the additional TDF appendix with the participant-level disclosure.

The TDF appendix is expected, on average, to add two pages to the participant-level disclosure. As discussed above, the Department estimates that 43.6 million participants are covered by participant-directed individual account plans that offer TDFs as an investment alternative.[28] The Department estimates that 6.8 percent of participants are new to a plan in a given year; therefore, 2.96 million additional disclosures would be required [29] resulting in a total of 46.5 million TDF fund appendices being distributed annually. The Department estimates that 38 percent of the disclosures would be distributed electronically at a de minimis cost, leaving 28.8 million paper disclosures to be distributed via mail. Assuming paper costs of $0.10 per participant ($.05 per page), the proposed amendment to the participant-level disclosure regulation would impose an additional cost of approximately $2.9 million to the participant-level disclosure.

(c) Summary

Overall, the proposed amendments to the qualified default investment alternative and participant-level disclosure regulations would result in approximately 66.2 million TDF disclosures being distributed. The total hour burden associated with the additional disclosures would be an estimated 29,000 hours with an equivalent cost of $1.8 million (all allocated to the qualified default investment alternative regulation). The Department estimates that the total cost burden for the disclosures would be $4.1 million ($1,217,000 (qualified default investment alternative); $2,884,000 (participant-level disclosure)).

These paperwork burden estimates are summarized as follows:

Type of Review: Revised collections.

Agency: Employee Benefits Security Administration, Department of Labor.

Title: Default Investment Alternatives Under Participant Directed Individual Account Plans (QDIA Regulation Amendment) and Fiduciary Requirements for Disclosure in Participant-Directed Individual Account Plans (Participant-Level Disclosure Regulation Amendment).

OMB Control Number: 1210–0132; 1210–0090.

Affected Public: Business or other for-profit; not-for-profit institutions.

Respondents: 114,000 (QDIA Regulation Amendment); 278,000 (Participant-Level Disclosure Amendment).

Responses: 66,157,539 (19,636,964 QDIA Regulation Amendment; 46,520,575 Participant-Level Disclosure Regulation Amendment).

Frequency of Response: Annually.

Estimated Total Annual Burden Hours: 29,000 hours (first year and subsequent years; all allocated to QDIA Regulation Amendment).

Estimated Total Annual Burden Cost: $4,102,000 (first year and subsequent years); $1,217,500 (QDIA Regulation Amendment); $2,884,500 (Participant-Level Disclosure Regulation Amendment).

Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) (RFA) imposes certain requirements with respect to Federal rules that are subject to the notice and comment requirements of section 553(b) of the Administrative Procedure Act (5 U.S.C. 551 *et seq.*) and which are likely to have a significant economic impact on a substantial number of small entities. Unless the head of an agency certifies that a proposed rule is not likely to have a significant economic impact on a substantial number of small entities, section 603 of the RFA requires that the agency present an initial regulatory flexibility analysis at the time of the publication of the notice of proposed rulemaking describing the impact of the rule on small entities and seeking public comment on such impact.

For purposes of the RFA, the Department continues to consider a small entity to be an employee benefit plan with fewer than 100 participants.[30] Further, while some large employers may have small plans, in general small employers maintain most small plans. Thus, the Department believes that assessing the impact of this proposed rule on small plans is an appropriate substitute for evaluating the effect on small entities. The definition of small entity considered appropriate for this purpose differs, however, from a definition of small business that is based on size standards promulgated by the Small Business Administration (SBA) (13 CFR 121.201) pursuant to the Small Business Act (15 U.S.C. 631 *et seq.*). The Department therefore requests comments on the appropriateness of the size standard used in evaluating the impact of this proposed rule on small entities.

The Department certifies, as required by the RFA, that while the proposed regulation would impact a substantial number of small entities, the economic impact of the proposed rule would not be significant. The Department estimates that the cost per plan to prepare the notice would be less than $20, because much of the required information is expected to be readily available from service providers. Moreover, the anticipated cost per participant for plans to send the qualified default investment alternative and participant-level fee TDF disclosures are estimated to be $0.20 annually.

Based on industry survey data, the Department believes that small plans would be less likely to be affected by this regulation, because while small plans are slightly more likely to be participant-directed, they are less likely to default participants into TDFs or provide access to such funds as an investment alternative. The survey showed that 56.3 percent of plans with 5,000 or more participants have automatic enrollment compared to just 15.8 percent of plans with 1–49 participants, and that while 64 percent of participant-directed plans with more than 5,000 participants offer TDFs as an investment option, only 47.9 percent of such plans with 1–49 participants offer TDFs as an investment option.[31] The

[28] The Department's estimate is based on the Profit Sharing/401k Council of America, 52nd Annual Survey of Profit Sharing and 401(k) plans, for plan year 2008.

[29] 43.6 million * .068 = 2.96 million.

[30] The basis for this definition is found in section 104(a)(2) of the Act, which permits the Secretary of Labor to prescribe simplified annual reports for pension plans that cover fewer than 100 participants..

[31] Profit Sharing/401k Council of America, 52nd Annual Survey of Profit Sharing and 401(k) Plans, for plan year 2008.

burden that would be imposed by the proposed regulation on small plans also would be mitigated by the fact that most of the information required for the TDF disclosures is expected to be readily available from service providers.

Congressional Review Act

The proposed rule is subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*) and, if finalized, will be transmitted to Congress and the Comptroller General for review. The proposed rule is not a "major rule" as that term is defined in 5 U.S.C. 804, because it is not likely to result in (1) An annual effect on the economy of $100 million or more; (2) a major increase in costs or prices for consumers, individual industries, or Federal, State, or local government agencies, or geographic regions; or (3) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.

Unfunded Mandates Reform Act

For purposes of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), as well as Executive Order 12875, the proposed rule does not include any Federal mandate that may result in expenditures by State, local, or tribal governments in the aggregate of more than $100 million, adjusted for inflation, or increase expenditures by the private sector of more than $100 million, adjusted for inflation.

Federalism Statement

Executive Order 13132 (August 4, 1999) outlines fundamental principles of federalism, and requires the adherence to specific criteria by Federal agencies in the process of their formulation and implementation of policies that have substantial direct effects on the States, the relationship between the national government and States, or on the distribution of power and responsibilities among the various levels of government. The proposed regulation does not have federalism implications because it has no substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Section 514 of ERISA provides, with certain exceptions specifically enumerated, that the provisions of Titles I and IV of ERISA supersede any and all laws of the States as they relate to any employee benefit plan covered under ERISA. The requirements that would be implemented in the proposed rule do not alter the fundamental reporting and disclosure requirements of the statute with respect to employee benefit plans, and as such have no implications for the States or the relationship or distribution of power between the national government and the States.

List of Subjects in 29 CFR Part 2550

Employee benefit plans, Exemptions, Fiduciaries, Investments, Pensions, Prohibited transactions, Real estate, Securities, Surety bonds, Trusts and Trustees.

For the reasons set forth in the preamble, the Department of Labor proposes to amend 29 CFR part 2550 as follows:

PART 2550—RULES AND REGULATIONS FOR FIDUCIARY RESPONSIBILITY

1. The authority citation for part 2550 is revised to read as follows:

Authority: 29 U.S.C. 1135 and Secretary of Labor's Order No. 6–2009, 74 FR 21524 (May 7, 2009). Sec. 2550.401c–1 also issued under 29 U.S.C. 1101. Sec. 2550.404a–1 also issued under sec. 657, Pub. L. 107–16, 115 Stat. 38. Sections 2550.404c–1 and 2550.404c–5 also issued under 29 U.S.C. 1104. Sec. 2550.408b–1 also issued under 29 U.S.C. 1108(b)(1) and sec. 102, Reorganization Plan No. 4 of 1978, 5 U.S.C. App. 1. Sec. 2550.408b–19 also issued under sec. 611, Pub. L. 109–280, 120 Stat. 780, 972, and sec. 102, Reorganization Plan No. 4 of 1978, 5 U.S.C. App. 1. Sec. 2550.412–1 also issued under 29 U.S.C. 1112.

2. Amend § 2550.404a–5 by revising paragraph (i)(4) to read as follows:

§ 2550.404a–5 Fiduciary requirements for disclosure in participant-directed individual account plans.

* * * * *

(i) * * *

(4) *Target date or similar funds.* In the case of a designated investment alternative that is described in 29 CFR 2550.404c–5(e)(4)(1) (*e.g.,* "life-cycle" or "target date" funds) the plan administrator shall, in addition to the information required by paragraph (d)(1) and, if applicable, paragraph (i) of this section, furnish to each participant or beneficiary the following information as an appendix or appendices to the chart or similar document intended to satisfy paragraph (d)(2) of this section—

(i) An explanation of the alternative's asset allocation, how the asset allocation will change over time, and the point in time when the alternative will reach its most conservative asset allocation; including a chart, table, or other graphical representation that illustrates such change in asset allocation over time and that does not obscure or impede a participant's or beneficiary's understanding of the information explained pursuant to this paragraph (i)(4)(i);

(ii) If the alternative is named, or otherwise described, with reference to a particular date (*e.g.,* a target date), an explanation of the age group for whom the alternative is designed, the relevance of the date, and any assumptions about a participant's or beneficiary's contribution and withdrawal intentions on or after such date; and

(iii) A statement that the participant or beneficiary may lose money by investing in the alternative, including losses near and following retirement, and that there is no guarantee that the alternative will provide adequate retirement income.

* * * * *

3. Amend § 2550.404c–5 by revising paragraphs (c)(4), (d)(3), (d)(4), and (d)(5) to read as follows:

§ 2550.404c–5 Fiduciary relief for investments in qualified default investment alternatives.

* * * * *

(c) * * *

(4) A fiduciary provides to a participant or beneficiary the material set forth in 29 CFR 2550.404a–5(d)(3) and (4) relating to a participant's or beneficiary's investment in a qualified default investment alternative;

* * * * *

(d) * * *

(3) A description of the qualified default investment alternative, including:

(i) The name of the investment's issuer;

(ii) The investment's objectives or goals;

(iii) The investment's principal strategies (including a general description of the types of assets held by the investment) and principal risks;

(iv) The investment's historical performance data and a statement indicating that an investment's past performance is not necessarily an indication of how the investment will perform in the future; and, if applicable, a description of any fixed return, annuity, guarantee, death benefit, or other ancillary features;

(v) The investment's attendant fees and expenses, including:

(A) Any fees charged directly against the amount invested in connection with acquisition, sale, transfer of, or

withdrawal (*e.g.,* commissions, sales loads, sales charges, deferred sales charges, redemption fees, surrender charges, exchange fees, account fees, and purchase fees);

(B) Any annual operating expenses (*e.g.,* expense ratio); and

(C) Any ongoing expenses in addition to annual operating expenses (*e.g.,* mortality and expense fees); and

(vi) For an investment fund product or model portfolio intended to satisfy paragraph (e)(4)(i) of this section, and to the extent not already disclosed pursuant to this paragraph (d)(3):

(A) An explanation of the asset allocation, how the asset allocation will change over time, and the point in time when the qualified default investment alternative will reach its most conservative asset allocation; including a chart, table, or other graphical representation that illustrates such change in asset allocation over time and that does not obscure or impede a participant's or beneficiary's understanding of the information explained pursuant to this paragraph (d)(3)(vi)(A);

(B) If the qualified default investment alternative is named, or otherwise described, with reference to a particular date (*e.g.,* a target date), an explanation of the age group for whom the investment is designed, the relevance of the date, and any assumptions about a participant's or beneficiary's contribution and withdrawal intentions on or after such date; and

(C) If applicable, a statement that the participant or beneficiary may lose money by investing in the qualified default investment alternative, including losses near and following retirement, and that there is no guarantee that the investment will provide adequate retirement income.

(4) A description of the right of the participants and beneficiaries on whose behalf assets are invested in a qualified default investment alternative to direct the investment of those assets to any other investment alternative under the plan and, if applicable, a statement that certain fees and limitations may apply in connection with such transfer; and

(5) An explanation of where the participants and beneficiaries can obtain additional investment information concerning the qualified default investment alternative and the other investment alternatives available under the plan.

* * * * *

Signed at Washington, DC, this 16th day of November, 2010.

Phyllis C. Borzi

Assistant Secretary, Employee Benefits Security Administration, Department of Labor.

[FR Doc. 2010–29509 Filed 11–29–10; 8:45 am]

BILLING CODE 4510–29–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Parts 70, 71, 72, 75, and 90

RIN 1219–AB64

Lowering Miners' Exposure to Respirable Coal Mine Dust, Including Continuous Personal Dust Monitors

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Proposed rule; rescheduling of public hearings; correction.

SUMMARY: The Mine Safety and Health Administration (MSHA) is rescheduling the dates of two public hearings and announcing the date and location of an additional public hearing on the proposed rule addressing Lowering Miners' Exposure to Respirable Coal Mine Dust, Including Continuous Personal Dust Monitors. This notice also corrects one error in the preamble to the proposed rule. On November 15, 2010, MSHA published the dates and locations of six public hearings to be held on the proposed rule.

MSHA published the proposed rule on October 19, 2010; it is available on MSHA's Web site at *http://www.msha.gov/REGS/FEDREG/PROPOSED/2010PROP/2010-25249.pdf.* The proposed rule would revise the Agency's existing standards on miners' occupational exposure to respirable coal mine dust and lower miners' exposure to respirable coal mine dust.

DATES: The public hearing dates and locations are listed in the **SUPPLEMENTARY INFORMATION** section of this document.

Post-hearing comments must be received by midnight Eastern Standard Saving Time on February 28, 2011.

ADDRESSES: Comments must be identified with "RIN 1219–AB64" and may be sent by any of the following methods:

(1) *Federal e-Rulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

(2) *Electronic mail: zzMSHA-comments@dol.gov.* Include "RIN 1219–AB64" in the subject line of the message.

(3) *Facsimile:* 202–693–9441. Include "RIN 1219–AB64" in the subject line of the message.

(4) *Regular Mail:* MSHA, Office of Standards, Regulations, and Variances, 1100 Wilson Boulevard, Room 2350, Arlington, Virginia 22209–3939.

(5) *Hand Delivery or Courier:* MSHA, Office of Standards, Regulations, and Variances, 1100 Wilson Boulevard, Room 2350, Arlington, Virginia. Sign in at the receptionist's desk on the 21st floor.

MSHA will post all comments on the Internet without change, including any personal information provided. Comments can be accessed electronically at *http://www.msha.gov* under the "Rules & Regs" link. Comments may also be reviewed in person at the Office of Standards, Regulations, and Variances, 1100 Wilson Boulevard, Room 2350, Arlington, Virginia. Sign in at the receptionist's desk on the 21st floor.

MSHA maintains a list that enables subscribers to receive e-mail notification when the Agency publishes rulemaking documents in the **Federal Register**. To subscribe, go to *http://www.msha.gov/subscriptions/subscribe.aspx.*

FOR FURTHER INFORMATION CONTACT: Patricia W. Silvey, Director, Office of Standards, Regulations, and Variances, MSHA, at *Silvey.Patricia@dol.gov* (E-mail), 202–693–9440 (Voice), or 202–693–9441 (Fax).

SUPPLEMENTARY INFORMATION:

I. Public Hearings

On November 15, 2010, MSHA announced that it would hold six public hearings on the proposed rule (75 FR 69617). Due to a scheduling conflict and in response to requests from the public, to provide maximum opportunity for public participation in this rulemaking, MSHA is rescheduling two public hearings and adding an additional public hearing. The dates of public hearings that were scheduled in Washington, PA, and Arlington, VA, are changed to February 8, 2011, and February 15, 2011, respectively. The locations of these two hearings remain the same. MSHA will hold an additional public hearing on February 10, 2011, in Prestonsburg, Kentucky.

MSHA will accept post-hearing written comments and other appropriate information for the record from any interested party, including those not presenting oral statements. Comments must be received by midnight Eastern Standard Saving Time on February 28, 2011. For the convenience of interested parties, the chart below includes the dates and locations of all seven public hearings:

Date	Location	Contact No.
December 7, 2010	National Mine Health and Safety Academy, 1301 Airport Road, Beaver, WV 25813	304–256–3201
January 11, 2011	Marriott Evansville Airport, 7101 Highway, 41 North Evansville, IN 47725	812–867–7999
January 13, 2011	Sheraton Birmingham, 2101 Richard Arrington Jr., Blvd., North Birmingham, AL 35203	205–324–5000
January 25, 2011	Marriott Salt Lake City, 75 S West Temple, Salt Lake City, UT 84101	801–531–0800
February 8, 2011	The George Washington Hotel, 60 South Main Street, Washington, PA 15301	724–225–3200
February 10, 2011	Jenny Wiley State Resort Park, Wilkinson/Stumbo Conference Center, 75 Theatre Court, Prestonsburg, KY 41653.	606–889–1790
February 15, 2011	Mine Safety and Health Administration, 25th Floor Conference Room, 1100 Wilson Blvd., Arlington, VA 22209.	202–693–9440

II. Correction

MSHA published the proposed rule on October 19, 2010 (75 FR 64412); it is available on MSHA's Web site at *http://www.msha.gov/REGS/FEDREG/PROPOSED/2010PROP/2010-25249.pdf.* The following error in the preamble to the proposed rule is corrected to read as follows:

1. On page 64421, third column, first line, "mg^3" should read "m^3".

Dated: November 24, 2010.

Joseph A. Main,

Assistant Secretary of Labor for Mine Safety and Health.

[FR Doc. 2010–30099 Filed 11–29–10; 8:45 am]

BILLING CODE 4510–43–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 62

[EPA–R03–OAR–2010–0771; FRL–9233–5]

Approval and Promulgation of State Air Quality Plans for Designated Facilities and Pollutants; State of Delaware; Control of Emissions From Existing Hospital/Medical/Infectious Waste Incinerator (HMIWI) Units, Negative Declaration and Withdrawal of EPA Plan Approval

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA proposes to approve the State of Delaware's negative declaration and request for EPA withdrawal of its section 111(d)/129 plan (the plan) approval for HMIWI units. Submittal of a negative declaration or state plan revision is a requirement of the Clean Air Act (CAA). In the Final Rules section of this **Federal Register**, EPA is approving the State of Delaware's negative declaration and request for EPA withdrawal of its plan approval for HMIWI units. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this action, no further activity is contemplated. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time.

DATES: Comments must be received in writing by December 30, 2010.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA–R03–OAR–2010–0771 by one of the following methods:

A. *http://www.regulations.gov.* Follow the online instructions for submitting comments.

B. *E-mail: wilkie.walter@epa.gov.*

C. *Mail:* EPA–R03–OAR–2010–0771, Walter K. Wilkie, Associate Director, Air Protection, Division, Office of Air Monitoring and Analysis, Mailcode 3AP40, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103.

D. *Hand Delivery:* At the previously-listed EPA Region III address. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–R03–OAR–2010–0771. EPA's policy is that all comments received will be included in the public docket without change, and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or e-mail. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov,* your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the electronic docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *i.e.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in *http://www.regulations.gov* or in hard copy during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Copies of the State agency submittals are available at the Delaware Department of Natural Resources and Environmental Control, 89 Kings Highway, P.O. Box 1401, Dover, Delaware 19903.

FOR FURTHER INFORMATION CONTACT: James B. Topsale, P.E., at (215) 814–2190, or by e-mail at *topsale.jim@epa.gov.* Please note that while questions may be posed via phone and e-mail, formal comments must be submitted in writing, as indicated in the **ADDRESSES** section of this document.

SUPPLEMENTARY INFORMATION: For further information, please see the information provided in the direct final action, with the same title, that is located in the"Rules and Regulations" section of this **Federal Register** publication.

Dated: November 17, 2010.

W.C. Early,

Acting Regional Administrator, EPA Region III.

[FR Doc. 2010–30103 Filed 11–29–10; 8:45 am]

BILLING CODE 6560–50–P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Part 252

Defense Federal Acquisition Regulation Supplement; Definition of Sexual Assault (DFARS Case 2010–D023)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Proposed rule with request for comments.

SUMMARY: DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS), regarding Contractor Personnel Authorized to Accompany U.S. Armed Forces Deployed Outside the United States, to ensure contractor employees are aware of the DoD definition of "sexual assault" as defined in DoD Directive 6495.01, Sexual Assault Prevention and Response (SAPR) Program. In addition to ensuring an awareness of the definition, the proposed change will inform contractors that, for contractor employees accompanying U.S. Armed Forces, such offenses are covered under the Uniform Code of Military Justice.

DATES: Comments on this proposed rule should be submitted in writing to the address shown below on or before January 31, 2011, to be considered in the formation of the final rule.

ADDRESSES: You may submit comments, identified by DFARS Case 2010–D023, using any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *E-mail: dfars@osd.mil.* Include DFARS Case 2010–D023 in the subject line of the message.
- *Fax:* 703–602–0350.
- *Mail:* Defense Acquisition Regulations System, Attn: Mr. Julian E. Thrash, OUSD (AT&L) DPAP/DARS, Room 3B855, 3060 Defense Pentagon, Washington, DC 20301–3060.
- Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal information provided.
- To confirm receipt of your comment(s), please check *http://www.regulations.gov* approximately two to three days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

FOR FURTHER INFORMATION CONTACT: Mr. Julian E. Thrash, 703–602–0310.

SUPPLEMENTARY INFORMATION:

I. Background

DoD Inspector General audit D–2010–052, entitled "Efforts to Prevent Sexual Assault/Harassment Involving DoD Contractors During Contingency Operations," dated April 16, 2010, provided recommendations for the Under Secretary of Defense for Acquisition, Technology, and Logistics to develop requirements in all DoD contracts supporting contingency operations to ensure contractor employees accompanying U.S. Armed Forces are aware of the definition of "sexual assault," as defined in DoD Directive 6495.01, Sexual Assault Prevention and Response (SAPR) Program (*http://www.dtic.mil/whs/directives/corres/pdf/649501p.pdf.*)

This proposed change will add a new item for compliance with laws and regulations at DFARS 252.225–7040(d)(3). This change would require that contractor employees accompanying U.S. Armed Forces are aware of the DoD definition of "sexual assault" as defined in DoD Directive 6495.01, Sexual Assault Prevention and Response Program. It would also inform contractor employees accompanying U.S. Armed Forces, that such offenses are covered under the Uniform Code of Military Justice, Title 10, Chapter 47 (*http://www.constitution.org/mil/ucmj19970615.htm*).

II. Executive Order 12866

This is a significant regulatory action and therefore was subject to review under section 6(b) of Executive Order 12866, Regulatory Planning and Review, dated September 20, 1993. This is not a major rule under 5 U.S.C. 804.

III. Regulatory Flexibility Act

DoD does not expect this rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because the rule does not impose any additional requirements on small businesses. DFARS 252.225–7040(e)(2)(iv) already informs contractors that contractor personnel authorized to accompany U.S. Armed Forces in the field are subject to the jurisdiction of the Uniform Code of Military Justice. This proposed change clarifies that sexual assault is an offense covered under the Uniform Code of Military Justice. Therefore, DoD has not performed an Initial Regulatory Flexibility Analysis.

DoD invites comments from small business concerns and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS case 2010–D023) in correspondence.

IV. Paperwork Reduction Act

The Paperwork Reduction Act does not apply, because the rule does not impose any information collection requirements that require the approval of the Office of Management and Budget under 44 U.S.C. 3501, *et seq.*

List of Subjects in 48 CFR Part 252

Government procurement.

Clare M. Zebrowski,

Editor, Defense Acquisition Regulations System.

Therefore, DoD proposes to amend 48 CFR part 252 as follows:

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

1. The authority citation for 48 CFR part 252 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR chapter 1.

2. Amend section 252.225–7040 by adding paragraph (d)(3), to read as follows:

252.225–7040 Contractor Personnel Authorized to Accompany U.S. Armed Forces Deployed Outside the United States.

* * * * *

(d) * * *

(3) The Contractor shall ensure contractor employees accompanying U.S. Armed Forces are aware of the DoD definition of "sexual assault" in DoDD 6495.01, Sexual Assault Prevention and Response Program, at *http://www.dtic.mil/whs/directives/corres/pdf/649501p.pdf,* and advise them that such offenses are covered under the Uniform Code of Military Justice (see paragraph (e)(2)(iv) of this clause).

BILLING CODE 5001–08–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

49 CFR Part 571

[Docket No. NHTSA–2010–0132]

RIN 21217–AK17

Federal Motor Vehicle Safety Standards; New Pneumatic Tires for Motor Vehicles With a Gross Vehicle Weight Rating (GVWR) of More Than 4,536 Kilograms (10,000 Pounds) and Motorcycles

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Extension of comment period.

SUMMARY: NHTSA has received a petition asking the agency to extend the comment period for its proposal to upgrade the Federal motor vehicle safety standard (FMVSS) that applies to new pneumatic tires for use on vehicles with a gross vehicle weight rating (GVWR) greater than 10,000 pounds and motorcycles. In the proposal, NHTSA established a deadline for the submission of written comments of November 29, 2010. In light of that petition and the need to ensure that all interested parties have a sufficient amount of time to fully develop their comments, the agency is extending the deadline for the submission of written comments by 30 days.

DATES: Written comments must be received by December 29, 2010.

ADDRESSES: You may submit comments (identified by the NHTSA Docket ID Number above) by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Mail:* Docket Management Facility: U.S. Department of Transportation, 1200 New Jersey Avenue, SE., West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.
- *Fax:* 202–493–2251.

Privacy Act: Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78).

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov* or the street address listed above. Follow the online instructions for accessing the dockets.

FOR FURTHER INFORMATION CONTACT: George Soodoo, NHTSA Office of Rulemaking (Telephone: 202–366–2720) (Fax: 202–493–2739) or Thomas Healy, NHTSA Office of Chief Counsel (Telephone: 202–366–7161) (Fax: 202–366–3820). The mailing address for these officials is: National Highway Traffic Safety Administration, U.S. Department of Transportation, 1200 New Jersey Avenue, SE., West Building, Washington, DC 20590.

SUPPLEMENTARY INFORMATION: NHTSA issued a notice of proposed rulemaking (NPRM) proposing to upgrade FMVSS No. 119 (49 CFR 571.119), which applies to new pneumatic tires for vehicles with a GVWR greater than 10,000 pounds and motorcycles. The NPRM was published on September 29, 2010 (75 FR 60037, Docket No. NHTSA–2010–0132). In the NPRM, among other matters, NHTSA proposed to amend FMVSS No. 119 to adopt a more stringent endurance test and a new high speed test for heavy vehicle tires with a load range of F, G, H, J, and L.

The Rubber Manufacturers Association (RMA), which represents manufacturers of finished rubber products, including tire manufacturers, has petitioned for an extension of the comment period on the NPRM. RMA said that it is requesting a 30-day extension so that its members can complete all of their additional testing to evaluate the more stringent endurance test proposed by the agency and to develop new data to demonstrate differences in outcomes with tire break-in versus no break-in for the new proposed high speed test. RMA indicated that it also intends to supplement its earlier test data submitted to the agency on April 14, 2009. RMA believes that the earlier data set submitted to the docket, combined with additional new data, will assist NHTSA in evaluating RMA's comments and arriving at a final rule. RMA maintains that its members require several weeks to complete even a small test program of the 47-hour endurance test. Therefore, RMA indicates that it is not possible for its members to complete all of their additional testing and have it ready for submittal by November 29, 2010.

In considering the extension request, NHTSA weighed the complexity and importance of this rulemaking and the basis for the request. We have decided there is good cause to grant the petition and extend the comment period 30 days. The extension is in the public interest since it will provide the public additional time to prepare and submit useful technical information that should benefit agency decision-making in this rulemaking action. Accordingly, NHTSA extends the period for the submission of written comments in this proceeding to December 29, 2010.

Authority: 49 U.S.C. 322, 30111, 30115, 30166 and 30177; delegation of authority at 49 CFR 1.50.

Issued: November 24, 2010.

Joseph S. Carra,

Acting Associate Administrator for Rulemaking.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

November 23, 2010.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments regarding (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques and other forms of information technology should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), *OIRA_Submission@OMB.EOP.GOV* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602. Comments regarding these information collections are best assured of having their full effect if received within 30 days of this notification. Copies of the submission(s) may be obtained by calling (202) 720–8681.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Forest Service

Title: Publications Evaluation Card.

OMB Control Number: 0596–0163.

Summary of Collection: Executive Order 12862 issued September 11, 1993, directed Federal agencies to change the way they do business, to reform their management practices, to provide service to the public that matches or exceeds the best service available in the private sector, and to establish and implement customer service standards to carry out principles of the National Performance Review. In response to this Executive Order, the Forest Service (FS) Southern Research Station developed a "Publication Comment" Card for inclusion when distributing scientific research publications. FS has come to realize that some changes in their publications may be necessary to achieve their goals and wishes to elicit voluntary feedback from their readers to help determine the changes to make. FS will collect information using the comment card.

Need and Use of the Information: FS will collect information, which will ask the respondents to rate the publication that they received or read. The information will be used to improve the readability and usefulness of FS articles, papers, and books. The collected information will also help scientists and authors provide relevant information on effective, efficient, responsible land management. If the information is not collected FS will forgo any opportunity to learn if publications meet customers' expectations and address customers' needs.

Description of Respondents: Individuals or households.

Number of Respondents: 72,000.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 4,800.

Forest Service

Title: Predecisional Objection Process for Hazardous Fuel Reduction Projects Authorized by Healthy Forest Restoration Act of 2003.

OMB Control Number: 0596–0172.

Summary of Collection: On December 3, 2003, President Bush signed into law the Healthy Forests Restoration Act of 2003 to reduce the threat of destructive wildfires while upholding environmental standards and encouraging early public input during review and planning processes. One of the provisions of the Act, in Section 105 requires that not later than 30 days after the date of the enactment of this Act, the Secretary of Agriculture shall promulgate interim final regulations to establish a predecisional administrative review process. This process services as the sole means by which a person can seek administrative review regarding an authorized hazardous fuel reduction project on Forest Service (FS) land.

Need and Use of the Information: Participants in the predecisional administrative review process must provide information the FS needs to respond to their concern. This written information needs to include the objector's name, address, phone number; the name of the project; name and title of the Responsible Official, the project location; and sufficient narrative description of those parts of the project that are objected to; specific issues related to the proposed decision, and suggested remedies which would resolve the objection. The collected information will be used by the Reviewing Officer in responding to those who participate in the objection process prior to a decision by the Responsible Official. FS could not meet the intent of Congress without collecting this information.

Description of Respondents: Individuals or households; State, Local or Tribal Government; Not-for-profit institutions.

Number of Respondents: 121.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 968.

Forest Service

Title: Financial Information Security Request Form.

OMB Control Number: 0596–0204.

Summary of Collection: The majority of Forest Service's (FS) financial records are in databases stored at the National Finance Center (NFC). The Federal Information Security Reform Act of 2002 (Pub. L. 107–347) and Information Technology Management Reform Act of 1996 (Pub. L. 104–106) authorize the Forest Service to obtain information necessary for employees and contractors to access and maintain these records.

Need and Use of the Information: The Forest Service uses a paper and electronic version of its form FS–6500–

214 to gather name, work email, work telephone number, job title, etc. for a specific employee or contractor to apply to NFC for access. Prior to filling out the form, contractors must first complete specific training before a user may request access to certain financial systems. NFC grants access to users only at the request of Client Security Officers. The unit's Client Security Officer is responsible for management of access to computers and coordinates all requests for NFC. The information collected is shared with those managing or overseeing the financial systems used by the FS; this includes auditors.

Description of Respondents: Contracted Employees.

Number of Respondents: 50.

Frequency of Reponses: Reporting: Yearly.

Total Burden Hours: 75.

Charlene Parker,

Departmental Information Collection Clearance Officer.

[FR Doc. 2010–30011 Filed 11–29–10; 8:45 am]

BILLING CODE 3410–11–P

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

November 23, 2010.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments regarding (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), *OIRA_Submission@OMB.EOP.GOV* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602. Comments regarding these information collections are best assured of having their full effect if received within 30 days of this notification. Copies of the submission(s) may be obtained by calling (202) 720–8681.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Rural Utilities Service

Title: 7 CFR 1777, Section 306C Water & Waste Disposal (WWD) Loans & Grants.

OMB Control Number: 0572–0109.

Summary of Collection: Rural Utilities Service is authorized to make loans and grants under Section 306C of the Consolidated Farm and Rural Development Act (7 U.S.C. 1926c). This program funds facilities and projects in low income rural communities whose residents face significant health risks. These communities do not have access to or are not served by adequate affordable water supply systems or waste disposal facilities. The loans and grants will be available to provide water and waste disposal facilities and services to these communities.

Need and Use of the Information: Eligible applicants submit an application package and other information to Rural Development field offices to develop or improve community water and waste disposal systems. In one percent of the cases an applicant will use the funds to enable individuals to connect to the applicant's system or improve residences to use the water or waste disposal system. In this situation, an applicant will make loans and grants to individuals and the applicant will submit an implementation plan, memorandum of agreement and use of funds report.

Description of Respondents: Not-for-profit institutions; Individuals or households.

Number of Respondents: 1.

Frequency of Responses: Reporting: Annually.

Total Burden Hours: 9.

Rural Utility Service

Title: High Energy Cost Grants and State Bulk Fuel Revolving Grant Programs.

OMB Control Number: 0572–0136.

Summary of Collection: The Rural Electrification Act of 1936 (RE Act) (7 U.S.C. 901 *et seq.*) was amended in November 2000 to create new grant and loan authority to assist rural communities with extremely high energy costs (Pub. L. 106–472). This amendment gives authorization to Rural Utilities Service (RUS) to provide competitive grants for energy generation, transmission, or distribution facilities serving communities in which the national average is at least 275% for residential expenditure for home energy. All applicants are required to submit a project proposal containing the elements in the prescribed format.

Need and Use of the Information: USDA will collect information from applicants to confirm that the eligibility requirements and the proposals are consistent with the purposes set forth in the statute. Various forms and progress reports are used to monitor compliance with grant agreements, track expenditures of Federal funds and measure the success of the program. Without collecting the listed information, USDA will not be assured that the projects and communities served meet the statutory requirements for eligibility or that the proposed projects will deliver the intended benefits.

Description of Respondents: Not-for-profit institutions; Business or other for-profit; and State, Local or Tribal Government

Number of Respondents: 112.

Frequency of Responses: Recordkeeping: Reporting: On occasion.

Total Burden Hours: 1,365.

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: Pursuant to the authorities in the Federal Advisory Committee Act (Pub. L. 92–463) and under the Secure Rural Schools and Community Self-Determination Act of 2000 (Pub. L. 110–343) the Idaho Panhandle Resource Advisory Committee will meet Friday, December 3, 2010, at 9 a.m. in Coeur d'Alene, Idaho for a business meeting. The business meeting is open to the public.

DATES: December 3, 2010.

ADDRESSES: The meeting location is the Idaho Panhandle National Forests'

Supervisor's Office, located at 3815 Schreiber Way, Coeur d'Alene, Idaho 83815.

FOR FURTHER INFORMATION CONTACT: Ranotta K. McNair, Forest Supervisor and Designated Federal Official, at (208) 765–7369.

SUPPLEMENTARY INFORMATION: The meeting agenda will focus on reviewing proposals for forest projects and recommending funding during the business meeting.

The public forum begins at 11 a.m.

Dated: November 22, 2010.

Ranotta K. McNair,

Forest Supervisor.

BILLING CODE 3410–11–M

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: National Institute of Standards and Technology (NIST).

Title: Manufacturing Extension Partnership Expanded Services Client Impact Survey.

OMB Control Number: None.

Form Number(s): None.

Type of Request: Regular submission (new information collection).

Burden Hours: 375.

Number of Respondents: 1,500.

Average Hours per Response: 15 Minutes.

Needs and Uses: The objective of the NIST Hollings Manufacturing Extension Partnership Program (HMEP) is to enhance productivity, technological performance, and strengthen the global competitiveness of small- and medium-sized U.S.-based manufacturing firms. Through this client impact survey, the MEP will collect data necessary for program accountability; analysis and research into the effectiveness of the MEP program; reports to stakeholders; Government Performance and Results Act; continuous improvement efforts; knowledge sharing across the MEP system; and identification of best practices. The collection of this data is needed in order to comply with the MEP charter, as mandated by Congress.

Affected Public: NIST MEP Competitive Award Recipients.

Frequency: Quarterly.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Jasmeet Seehra, (202) 395–3123.

Copies of the above information collection proposal can be obtained by calling or writing Diana Hynek, Departmental Paperwork Clearance Officer, (202) 482–0266, Department of Commerce, Room 6616, 14th and Constitution Avenue, NW., Washington, DC 20230 (or via the Internet at *dHynek@doc.gov*).

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to, OMB Desk Officer, Jasmeet Seehra, (202) 395–3123, FAX Number (202) 395–5167, or *Jasmeet_K._Seehra@omb.eop.gov*).

Dated: November 24, 2010.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

BILLING CODE 3510–13–P

DEPARTMENT OF COMMERCE

International Trade Administration Mission Statement

Application Deadline Extended; Secretarial Business India High Technology Mission

AGENCY: Department of Commerce.

ACTION: Notice.

SUMMARY: Secretary of Commerce Gary Locke will lead a senior-level business development trade mission to New Delhi, Mumbai and Bangalore, India, February 6–11, 2011. The overall focus of the trip will be commercial opportunities for U.S. companies, including joint ventures and export opportunities. In each city participants will have a market briefings followed by one-on-one appointments with potential buyers/partners and meetings with high level government officials.

DATES: The application deadline has been extended to Friday, December 3, 2010. Applications should be submitted to the Office of Business Liaison at *IndiaMission2011@doc.gov*. Applications received after that date will be considered only if space and scheduling constraints permit.

FOR FURTHER INFORMATION CONTACT: Office of Business Liaison; Room 5062; Department of Commerce; Washington, DC 20230; *Tel:* (202) 482–1360; *Fax:* (202) 482–4054.

Timeframe for Recruitment and Applications: Mission recruitment will be conducted in an open and public manner, including publication in the **Federal Register**, posting on the Commerce Department trade events page (*http://www.export.gov/tradeevents/*) and other Internet web sites, press releases to general and trade media, direct mail, broadcast fax, notices by industry trade associations and other multiplier groups, and publicity at industry meetings, symposia, conferences, and trade shows. The Commerce Department's Office of Business Liaison and the International Trade Administration will explore and welcome outreach assistance from other interested organizations, including other U.S. Government agencies.

Recruitment for this mission will begin immediately upon approval. Applications can be completed on-line at the India High Technology Development Missions' Web site at *http://www.trade.gov/IndiaMission2011* or can be obtained by contacting the U.S. Department of Commerce Office of Business Liaison (202–482–1360 or *IndiaMission2011@doc.gov*). The application deadline has been extended to Friday, December 3, 2010. Completed applications should be submitted to the Office of Business Liaison. Applications received after Friday, December 3, 2010 will be considered only if space and scheduling constraints permit.

General Information and Applications: The Office of Business Liaison, 1401 Constitution Avenue, NW., Room 5062, Washington, DC 20230, *Tel:* 202–482–1360, *Fax:* 202–482–4054, *E-mail: IndiaMission2011@doc.gov*.

Dated: November 24, 2010.

Jennifer Andberg,

Deputy Director, Office of Business Liaison, U.S. Department of Commerce.

BILLING CODE 3510–FP–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Docket 67–2010]

Foreign-Trade Zone 72—Indianapolis, IN, Application for Subzone, GEA Bloomington Production Operations, LLC (Refrigerator Manufacturing), Bloomington, IN

An application has been submitted to the Foreign-Trade Zones Board (the Board) by the Indianapolis Airport Authority, grantee of FTZ 72, requesting special-purpose subzone status for the refrigerator manufacturing facility of GEA Bloomington Production Operations, LLC (GEA Bloomington), located in Bloomington, Indiana. The

application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the Board (15 CFR part 400). It was formally filed on November 19, 2010.

The GEA Bloomington facility (500 employees, 80.0 acres, 800,000 unit capacity) is located at 301 N. Curry Pike, Bloomington, Indiana. The facility is used for the manufacture and distribution of refrigerators. Components and materials sourced from abroad (representing 50% of the value of the finished product) include: ABS resin, plastic fittings, rubber gaskets, screws, bolts, hinges, brackets, metal plates, compressors, filters, taps, valves, motors, inverters, wire harnesses, switches, plugs, sockets, electronic control boards, lamps, light dispensers, harness machines, conductors, and refrigerator parts (duty rate ranges from duty free to 8.6%).

FTZ procedures could exempt GEA Bloomington from customs duty payments on the foreign components used in export production. The company anticipates that less than 1% of the plant's shipments will be exported. On its domestic sales, GEA Bloomington would be able to choose the duty rates during customs entry procedures that apply to refrigerators and refrigerator parts (duty free) for the foreign inputs noted above. FTZ designation would further allow GEA Bloomington to realize logistical benefits through the use of weekly customs entry procedures. Customs duties also could possibly be deferred or reduced on foreign status production equipment. The request indicates that the savings from FTZ procedures would help improve the plant's international competitiveness.

In accordance with the Board's regulations, Maureen Hinman of the FTZ Staff is designated examiner to evaluate and analyze the facts and information presented in the application and case record and to report findings and recommendations to the Board.

Public comment is invited from interested parties. Submissions (original and 3 copies) shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is January 31, 2011. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to February 14, 2011.

A copy of the application will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 2111, U.S. Department of Commerce, 1401 Constitution Avenue, NW., Washington, DC 20230–0002, and in the "Reading Room" section of the Board's Web site, which is accessible via *http://www.trade.gov/ftz.*

For further information, contact Maureen Hinman at *maureen.hinman@trade.gov* or (202) 482–0627.

Dated: November 19, 2010.

Andrew McGilvray,

Executive Secretary.

[A–570–831]

Fresh Garlic From the People's Republic of China: Extension of Time Limit for Preliminary Results of Antidumping Duty New Shipper Reviews

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

DATES: *Effective Date:* November 30, 2010.

FOR FURTHER INFORMATION CONTACT: Jacqueline Arrowsmith (Yantai Jinyan Trading, Inc.), Milton Koch (Jining Yifa Garlic Produce Co., Ltd.), Justin Neuman (Shenzhen Bainong Co., Ltd.), AD/CVD Operations, Office 6, Import Administration, International Trade Administration, Department of Commerce, Room 7866, 14th Street and Constitution Avenue, NW., Washington DC 20230; telephone: (202) 482–5255, (202) 482–2584, and (202) 482–0486, respectively.

Background

On July 7, 2010, the Department published the initiation of the new shipper reviews of the antidumping duty order on fresh garlic from the People's Republic of China for three exporters: Shenzhen Bainong Co., Ltd. (Bainong), Jining Yifa Garlic Produce Co., Ltd, (Yifa) and Yantai Jinyan Trading, Inc. (Jinyan). The period of review (POR) for Bainong and Yifa is November 1, 2009 through April 30, 2010. The POR for Jinyan is November 1, 2009 through May 31, 2010. *See Fresh Garlic From the People's Republic of China: Initiation of New Shipper Reviews,* 75 FR 38986 (July 7, 2010).

Extension of Time Limit for the Preliminary Results

Section 751(a)(2)(B)(iv) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.214(i)(1) require the Department to issue the preliminary results of a new shipper review within 180 days after the date on which the review was initiated, and the final results of the review within 90 days after the date on which the preliminary results were issued. However, if the Department concludes that a new shipper review is extraordinarily complicated, section 751(a)(2)(B)(iv) of the Act and 19 CFR 351.214(i)(2) allow the Department to extend the 180-day period to 300 days, and to extend the 90-day period to 150 days. The current deadline for the preliminary results is December 27, 2010. The Department has determined that these new shipper reviews involve extraordinarily complicated methodological issues, which require the examination of importer and customer information for Bainong, Jinyan, and Yifa. Additional time is also required to ensure that the Department can fully examine whether the sales under review are *bona fide* for each of the three companies under review.

Therefore, the Department is extending the deadline for completion

of the preliminary results of these new shipper reviews to 300 days, in accordance with section 751(a)(2)(B)(iv) of the Act and 19 CFR 351.214(i)(2). Accordingly, the deadline for the completion of these preliminary results is now no later than April 26, 2011.

This notice is issued and published pursuant to sections 751(a)(3)(A) and 777(i)(1) of the Act.

Dated: November 22, 2010.

Susan H. Kuhbach,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

International Trade Administration

[C–570–913]

Certain New Pneumatic Off-the-Road Tires From the People's Republic of China: Partial Rescission of Countervailing Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) is rescinding, in part, the administrative review of the countervailing duty order on certain new pneumatic off-the-road tires (OTR Tires) from the People's Republic of China (PRC) for the period January 1, 2009, through December 31, 2009, with respect to Guizhou Tyre Co., Ltd., Guizhou Advanced Rubber Co., Ltd., and Guizhou Tyre Import and Export Corporation (collectively, Guizhou Tyre). This partial rescission is based on the withdrawal by Guizhou Tyre of its request for a review.

DATES: *Effective Date:* November 30, 2010.

FOR FURTHER INFORMATION CONTACT: Emily Halle, AD/CVD Operations, Office 6, Import Administration, International Trade Administration, Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; telephone: (202) 482–0176.

SUPPLEMENTARY INFORMATION:

Background

The Department published a notice of opportunity to request an administrative review of the countervailing duty order on OTR Tires from the PRC. *See Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity To Request Administrative Review,* 75 FR 53635 (September 1, 2010). Guizhou Tyre timely requested an administrative review of the countervailing duty order on OTR Tires from the PRC for the period January 1, 2009, through December 31, 2009. In addition, the Department received timely requests from eight other companies: Tianjin United Tire and Rubber International Co., Ltd. (TUTRIC); Shandong Huitong Tyre Co., Ltd.; Qingdao Hengda Tyres Co., Ltd.; Qingdao Sinorient International Ltd.; Qingdao Qizhou Rubber Co., Ltd.; Techking Tires Limited; Qingda Etyre International Trade Co., Ltd.; and Wengdeng Sanfeng Tyre Co., Ltd. These eight companies only requested reviews of themselves. In accordance with section 751(a)(1) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.221(c)(1)(i), the Department published a notice initiating an administrative review of the countervailing duty order. *See Initiation of Antidumping and Countervailing Duty Administrative Reviews,* 75 FR 66349 (October 28, 2010).

Rescission, in Part, of Countervailing Duty Administrative Review

The Department's regulations provide that the Department will rescind an administrative review if the party that requested the review withdraws its request for review within 90 days of the date of publication of the notice of initiation. *See* 19 CFR 351.213(d)(1). Guizhou Tyre timely withdrew its request within the 90-day deadline. Therefore, as no other party requested a review of Guizhou Tyre, in accordance with 19 CFR 351.213(d)(1), the Department is rescinding this administrative review of the countervailing duty order with respect to Guizhou Tyre. The Department will choose mandatory respondents from the remaining eight companies for which a review was requested: TUTRIC; Shandong Huitong Tyre Co., Ltd.; Qingdao Hengda Tyres Co., Ltd.; Qingdao Sinorient International Ltd.; Qingdao Qizhou Rubber Co., Ltd.; Techking Tires Limited; Qingda Etyre International Trade Co., Ltd.; and Wengdeng Sanfeng Tyre Co., Ltd.

Assessment

The Department will instruct U.S. Customs and Border Protection (CBP) to assess countervailing duties on all appropriate entries. For Guizhou Tyre, countervailing duties shall be assessed at rates equal to the cash deposit or bonding rate of the estimated countervailing duties required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(1)(i). The Department intends to issue appropriate assessment instructions directly to CBP 15 days after publication of this notice.

Notification Regarding Administrative Protective Order

This notice serves as a final reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

This notice is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213(d)(4).

Dated: November 23, 2010.

Susan H. Kuhbach,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

RIN 0648–XA060

Endangered Species; Permit No. 15677

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application.

SUMMARY: Notice is hereby given that South Carolina Department of Natural Resources (hereinafter "Permit Holder"), P.O. Box 12559 Charleston, SC 29422 [Responsible Party/Principal Investigator: William C. Post] has applied in due form to take shortnose sturgeon (*Acipenser brevirostrum*) for purposes of scientific research.

DATES: Written, telefaxed, or e-mail comments must be received on or before December 30, 2010.

ADDRESSES: The application and related documents are available for review by selecting "Records Open for Public Comment" from the *Features* box on the Applications and Permits for Protected Species (APPS) home page, *https://*

apps.nmfs.noaa.gov/, and then selecting File No. 15677 from the list of available applications.

These documents are available upon written request or by appointment in the following offices:

• Permits, Conservation and Education Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910; phone (301) 713–2289; fax (301) 713–0376; and

• Southeast Region, NMFS, 263 13th Avenue South, Saint Petersburg, Florida 33701; phone (727) 824–5312; fax (727) 824–5309.

Written comments on this application should be submitted to the Chief, Permits, Conservation and Education Division.

• By e-mail to *NMFS.Pr1Comments@noaa.gov* (include the File No. in the subject line)

• By facsimile to (301) 713–0376, or

• At the address listed above.

Those individuals requesting a public hearing should submit a written request to the Chief, Permits, Conservation and Education Division at the address listed above. The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Malcolm Mohead or Colette Cairns, (301) 713–2289.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222–226).

The applicant's goal is to assess presence, abundance, and distribution of shortnose sturgeon within South Carolina rivers (Savannah, Edisto, Cooper, Santee Rivers, Santee-Cooper Lakes, and Winyah Bay system). During 2011–2016, up to 134 shortnose sturgeon in all South Carolina rivers would be captured using gill nets, trammel nets and trawls. Annually, shortnose sturgeon would be taken in good condition and measured, weighed, sampled for genetic tissue analysis, and PIT tagged. Additionally, selected adults and juveniles would be captured, anesthetized, and implanted with an internal sonic transmitter. In addition, shortnose sturgeon sex would be determined from a sample of fish annually by either laparoscopy or tubular biopsy. Blood from known sexes would be collected and processed determining the level of endrocrine disrupters in the environment. Manual tracking and passive detections of telemetered fish at fixed receiver stations would be used to provide information about movements and habitat use. Recaptures of tagged fish may also be used for estimating abundance if appropriate.

Dated: November 23, 2010.

P. Michael Payne,

Chief, Permits, Conservation and Education Division, Office of Protected Resources, National Marine Fisheries Service.

RIN 0648–XA059

Atlantic Highly Migratory Species; Advisory Panel

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: NMFS solicits nominations for the Advisory Panel (AP) for Atlantic Highly Migratory Species (HMS) Southeast Data, Assessment, and Review (SEDAR) Workshops (this AP is also called the "SEDAR Pool"). The SEDAR Pool is comprised of a group of individuals whom may be selected to review data and advise NMFS regarding the scientific information, including but not limited to data and models, used in stock assessments for oceanic sharks in the Atlantic Ocean, Gulf of Mexico, and Caribbean Sea. Nominations are being sought for a three-year appointment (2011–2014). Individuals with definable interests in the recreational and commercial fishing and related industries, environmental community, academia, and non-governmental organizations will be considered for membership on the SEDAR Pool.

DATES: Nominations must be received on or before December 30, 2010.

ADDRESSES: You may submit nominations and request the SEDAR Pool Statement of Organization, Practices, and Procedures by any of the following methods:

• *E-mail: SEDAR.pool@noaa.gov.*

• *Mail:* Karyl Brewster-Geisz, Highly Migratory Species Management Division, NMFS, 1315 East-West Highway, Silver Spring, MD 20910. Include on the envelope the following identifier: "SEDAR Pool Nomination."

• *Fax:* 301–713–1917.

Additional information on SEDAR and the SEDAR guidelines can be found at *http://www.sefsc.noaa.gov/sedar/.*

FOR FURTHER INFORMATION CONTACT: Karyl Brewster-Geisz, (301) 713–2347 ext. 111.

SUPPLEMENTARY INFORMATION:

Introduction

Section 302(g)(2) of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), 16 U.S.C. 1801 *et seq.,* states that each Council shall establish such advisory panels as are necessary or appropriate to assist it in carrying out its functions under the Act. For the purposes of this section, NMFS considers the Council provision to be applicable to the HMS Management Division as well. As such, NMFS has established the SEDAR Pool under this section. The SEDAR Pool currently consists of 28 individuals who can be selected to review data and advise NMFS regarding the scientific information, including but not limited to data and models, used in stock assessments for oceanic sharks in the Atlantic Ocean, Gulf of Mexico, and Caribbean Sea. While the SEDAR Pool was created specifically for Atlantic oceanic sharks, it may be expanded to include other HMS, as needed.

The primary purpose of the individuals in the SEDAR Pool is to review, at SEDAR workshops, the scientific information, including but not limited to data and models, used in stock assessments that are used to advise NMFS, as a delegate to the Secretary of Commerce (Secretary), about the conservation and management of the Atlantic HMS, specifically but not limited to, Atlantic sharks. Individuals in the SEDAR Pool, if selected, may participate in the various data, assessment, and review workshops during the SEDAR process of any HMS stock assessment. In order to ensure that the peer review is unbiased, individuals who participated in a data and/or assessment workshop for a particular stock assessment will not be allowed to serve as reviewers for the same stock assessment. However, these individuals may be asked to attend the review workshop to answer specific questions from the reviewers concerning the data and/or assessment workshops. Members of the SEDAR Pool may serve as members of other APs concurrent with, or following, their service on the SEDAR Pool.

Procedures and Guidelines

A. Participants

The SEDAR Pool is comprised of individuals representing the commercial and recreational fishing communities for Atlantic HMS, the environmental community active in the conservation and management of Atlantic HMS, and the academic community that have relevant expertise either with sharks or shark-like species and/or stock assessment methodologies for marine fish species. Members of the SEDAR Pool must have demonstrated experience in the fisheries, related industries, research, teaching, writing, conservation, or management of marine organisms. The distribution of representation among the interested parties is not defined or limited.

Additional members of the SEDAR Pool may also include representatives from each of the five Atlantic Regional Fishery Management Councils, each of the 18 constituent states, both the U.S. Virgin Islands and Puerto Rico, and each of the constituent interstate commissions: The Atlantic States Marine Fisheries Commission and the Gulf States Marine Fisheries Commission.

If NMFS requires additional members to ensure a diverse pool of individuals to draw from for data or assessment workshops, NMFS may request individuals to become members of the SEDAR Pool outside of the annual nomination period.

Panel members serve at the discretion of the Secretary. Not all members will attend each SEDAR workshop. Rather, NMFS will invite certain members to participate at specific stock assessment workshops dependent on their ability to participate, discuss, and recommend scientific decisions regarding the species being assessed. If an invited SEDAR Pool member is unable to attend the workshop, the member may send a designee who may represent them and participate in the activities of the workshop. In order to ensure the designee meets the requirements of participating in the data and/or assessment workshop, the designee must receive written approval of the Deputy Director of the Office of Sustainable Fisheries at least six weeks in advance of the beginning of the relevant data and/or assessment workshop. Written notification must include the name, address, telephone, e-mail, and position of the individual designated. A designee may not name another designee.

NMFS is not obligated to fulfill any requests (*e.g.,* requests for an assessment of a certain species) that may be made by the SEDAR Pool or its individual members. Members of the SEDAR Pool who are invited to attend stock assessment workshops will not be compensated for their services but may be reimbursed for their travel-related expenses to attend such workshops.

B. Nomination Procedures for Appointments to the SEDAR Pool

Member tenure will be for three years. Nominations are sought for terms beginning February 2011 and expiring January 2014. Nomination packages should include:

1. The name, address, phone number, and e-mail of the applicant or nominee;
2. A description of his/her interest in Atlantic shark stock assessments or the Atlantic shark fishery;
3. A statement of background and/or qualifications; and
4. A written commitment that the applicant or nominee shall participate actively and in good faith in the tasks of the SEDAR Pool, as requested.

C. Meeting Schedule

Individual members of the SEDAR Pool meet to participate in stock assessments at the discretion of the Office of Sustainable Fisheries, NMFS. Stock assessment timing, frequency, and relevant species will vary depending on the needs determined by NMFS and SEDAR staff. Meetings and meeting logistics will be determined according to the SEDAR Guidelines. All meetings are open for observation by the public.

Dated: November 24, 2010.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Fisheries of the Northeastern United States; Monkfish Fishery; Scoping Process

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; intent to prepare an environmental impact statement (EIS) and scoping meetings; request for comments.

SUMMARY: The New England Fishery Management Council (NEFMC) announces its intent to prepare an amendment (Amendment 6) to the Fishery Management Plan (FMP) for monkfish (*Lophius americanus*) and an EIS to analyze the impacts of any proposed management measures. The purpose of Amendment 6 is to consider one or more catch share management approaches for the monkfish fishery, including, but not limited, to Individual Fishery Quotas (IFQs), sectors, and/or community quotas. The NEFMC is initiating a public process to determine the scope of issues and range of alternatives to be addressed in Amendment 6 and its EIS. The purpose of this notification is to alert the interested public of the commencement of the scoping process and to provide for public participation in compliance with environmental documentation requirements.

DATES: Written and electronic scoping comments must be received on or before 5 p.m., local time, February 15, 2011.

ADDRESSES: Written comments on Amendment 6 may be sent by any of the following methods:

- E-mail to the following address: *monkfisha6@noaa.gov;*
- Mail to Patricia A. Kurkul, Regional Administrator, NMFS, Northeast Regional Office, 55 Great Republic Drive, Gloucester, MA 01930. Mark the outside of the envelope "Scoping Comments on Monkfish Amendment 6;" or
- Fax to Patricia A. Kurkul, 978–281–9135.

Requests for copies of the scoping document and other information should be directed to Paul J. Howard, Executive Director, New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950, telephone 978–465–0492. The scoping document is accessible electronically via the Internet at *http://www.nefmc.org.*

FOR FURTHER INFORMATION CONTACT: Paul J. Howard, Executive Director, New England Fishery Management Council, 978–465–0492.

SUPPLEMENTARY INFORMATION:

Background

The U.S. monkfish fishery is jointly managed by the New England and Mid-Atlantic Councils, with the NEFMC having the administrative lead. The Councils manage monkfish under a two-area program (northern and southern), primarily due to differences in the characteristics of the fisheries in the two areas, although no conclusive evidence exists supporting the idea that there are two biological stocks. The Monkfish FMP became effective on November 8, 1999. The Councils have modified the

management program several times since the original FMP was adopted, most recently in 2010 with the completion of Amendment 5, containing Annual Catch Limits, Annual Catch Targets (ACT) and specification of days-at-sea (DAS) allocations and trip limits for the 2011–2013 fishing years.

While a significant portion of the monkfish catch in both areas is incidental to other fishing activities, a directed fishery also exists. The Councils have adopted incidental catch possession limits for all non-directed fisheries, and currently manages the directed fishery through a combination of DAS allocations and trip limits designed to achieve the ACT.

Measures Under Consideration

The Councils are considering catch shares for the monkfish fishery as a way to improve the economic performance of the fishery by increasing flexibility, maintaining catch within set limits, achieving optimum yield, promoting safety, and reducing the regulatory burden on vessel operators. Additionally, nearly 75-percent of limited access monkfish permit holders also hold a limited access permit in the Northeast multispecies fishery, where a catch share program (in the form of sector management) has been implemented. As a consequence, many monkfish permit holders have requested that the Councils consider a catch share program in the monkfish fishery to coordinate the management and improve the performance of both fisheries.

"Catch shares" is a generic term for a fishery management program that allocates a specific portion of a total fishery catch to individuals, communities, or cooperatives (including sectors). In contrast to managing through effort or input controls such as DAS and trip limits, catch shares management focuses on allocating and monitoring the catch or output controls. Specific catch share approaches include, but are not limited to, IFQs, Individual Transferrable Quotas (ITQs), Community Quotas, Harvest Cooperatives (including "sectors" such as those as recently adopted in the Northeast Multispecies FMP), area-based fishing rights, and non-vessel allocations (*e.g.,* dealer or processor shares). At this stage in the amendment process, the Councils have not eliminated any of the various types of catch share management approaches from consideration. Rather, they intend to collect early comments from stakeholders and interested parties to guide them in the development of appropriate catch-share alternatives. The Councils are also interested in hearing from stakeholders what their concerns might be with various catch share elements, including, but not limited to, limits on accumulation of shares, costs of monitoring individual catch, barriers or incentives for new entrants, and the effect of consolidation on fishing communities.

The Magnuson-Stevens Fishery Conservation and Management Act (MSA) authorizes and provides a regulatory framework for Councils to establish Limited Access Privilege Programs (LAPPs), of which ITQs are one type. In addition to the requirements and standards for all LAPPs, the MSA requires the NEFMC specifically to hold a referendum and gain approval of more than two-thirds of the voters for an IFQ program prior to submitting the plan to NMFS. The Councils will determine who is eligible to participate in the referendum from among the potential pool that includes permit holders and crew members who derive a significant part of their total income from the fishery. If an IFQ system is adopted, the Council would allocate individual proportions of the available catch to qualified participants who may then be allowed, under yet-unspecified terms and restrictions, to buy, sell, trade or otherwise transfer their shares to other entities or participants.

Scoping Process

All persons affected by or otherwise interested in monkfish fishery management are invited to participate in determining the scope and significance of issues to be analyzed by submitting written comments (*see* **ADDRESSES**) or by attending one of the meetings where scoping comments will be taken. Scoping consists of identifying the range of actions, alternatives (including taking no action), and impacts to be considered in developing an amendment that addresses the purposes and goals discussed in this notice. Impacts may be direct, indirect, or cumulative. This scoping process will also identify and eliminate from detailed analysis issues that are not significant, as well as alternatives that do not achieve the goals of the FMP or this amendment.

The scoping process for Amendment 5 to the Monkfish FMP (74 FR 7880; February 20, 2009) also considered the development of a catch share program for the monkfish fishery in the range of issues to be considered in that amendment. However, by September 2009, the Councils recognized that, due to their complexity, development of catch share alternatives would likely delay Amendment 5, and risk not meeting the statutory deadline for annual catch limits and accountability measures under the MSA. At that time, the Councils agreed to separate the catch shares portion of the amendment to focus on the remaining elements, and consider catch shares in the next management action. Any comments concerning the development of a catch share program for the monkfish fishery that were received in conjunction with the scoping process for Amendment 5 will be carried forward in the development of Amendment 6.

After the scoping process is completed, the NEFMC will identify the range of alternatives to be considered in the Amendment 6, and to be analyzed in the EIS. Once a draft amendment document, including a draft EIS, is completed, the NEFMC will hold public hearings to receive comments on the alternatives and the analysis of its impacts presented in the draft EIS. Following that public comment period, the NEFMC will identify its proposed action and complete a final amendment document that includes a final EIS, as well as documentation and analysis required by all other applicable laws. The NEFMC will then submit the amendment to NMFS for review, approval and implementation.

Scoping Hearing Schedule

At this time, only one scoping meeting is scheduled. The Councils will schedule additional meetings in the near future, and announce those meetings in the **Federal Register,** as well as on the Councils' Web site and through other channels. The first scheduled meeting is to be held in conjunction with the Mid-Atlantic Fishery Management Council meeting:

1. Wednesday, December 15, 2010, 4:30 p.m.; Hilton Beach Oceanfront, 3001 Atlantic Avenue, Virginia Beach, VA 23451, telephone: (757) 213–3000.

Special Accommodations

The meetings are accessible to people with physical disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Paul J. Howard (*see* **ADDRESSES**) at least 5 days prior to this meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: November 24, 2010.

Federal Aquatic Nuisance Species Research Risk Analysis Protocol

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of availability of finalized research protocol.

SUMMARY: The National Oceanic and Atmospheric Administration (NOAA) announces the availability of the finalized Federal Aquatic Nuisance Species Research Risk Analysis Protocol (Protocol), developed by the Research Protocol Committee, a committee of the Aquatic Nuisance Species Task Force (ANSTF).

ADDRESSES: Electronic copies of the finalized Protocol are available on the ANSTF Web site, *http://anstaskforce.gov/documents.php.* To obtain a hard copy of the Protocol, see Document Availability under **SUPPLEMENTARY INFORMATION.**

FOR FURTHER INFORMATION CONTACT: Margaret M. (Peg) Brady, Phone: 301–713–0174; e-mail: *Peg.Brady@noaa.gov.*

SUPPLEMENTARY INFORMATION:

Introduction

The Aquatic Nuisance Species Task Force (ANSTF) is an intergovernmental organization dedicated to preventing and controlling aquatic nuisance species, and implementing the Non-indigenous Aquatic Nuisance Prevention and Control Act. The National Oceanic and Atmospheric Administration and U.S. Fish and Wildlife Service serve as co-chairs of the ANSTF. The ANSTF developed a research protocol as is required by the Non-indigenous Aquatic Nuisance Prevention and Control Act of 1990 (NANPCA, Public Law 101–646, 104 STAT. 4671, 16 U.S.C. 4701–4741), as amended by the National Invasive Species Act, 1996. Section 1202(f)(2) of NANPCA directs the ANSTF to establish a protocol ''to ensure that research activities carried out under [NANPCA] do not result in the introduction of aquatic nuisance species to waters of the United States.''

Responsibility for actual use of this Protocol is specified in section (f)(3) of the NANPCA: ''The Task Force shall allocate funds authorized under this Act for competitive research grants to study all aspects of aquatic nuisance species, which shall be administered through the National Sea Grant College Program and the Cooperative Fishery and Wildlife Research Units. Grants shall be conditioned to ensure that any recipient of funds follows the protocol established under paragraph (2) of this subsection.''

Throughout this document both the descriptors ''non-indigenous'' and/or ''nuisance'' are used when referring to aquatic species that are the target of this risk analysis. Language used in the NANPCA differentiates between a non-indigenous species and a nuisance species, with a ''non-indigenous'' label being solely based on the historic range of the species, while a ''nuisance'' designation is based on a species being both non-indigenous and potentially harmful (''threatens the diversity or abundance of native species or the ecological stability of infested waters, or commercial, agricultural, aquacultural or recreational activities dependent on such waters''). The ANSTF Research Committee adopted a precautionary approach by targeting this risk analysis to all aquatic non-indigenous species research, regardless of the ''nuisance'' designation. The intent of the procedures outlined herein is to minimize to the extent practicable the risk of release and spread of aquatic non-indigenous species into areas they do not yet inhabit, since any non-indigenous species may become a nuisance species. Not only is it often not possible to be sure that a species won't become a nuisance (as defined) in the future, the possession and/or release of non-indigenous species may be illegal under various Federal, State, or local laws, which may or may not differentiate between non-indigenous and nuisance species.

Background

The finalized document (''the Protocol'') will replace the previously established ''Protocol for Evaluating Research Proposals Concerning Aquatic Non-indigenous Species,'' adopted in draft form in 1992 and finalized and published by the ANSTF in July 1994. The 1994 protocol applies only to research involving aquatic non-indigenous species (ANS) and is designed to reduce the risk that research activities may cause introduction or spread of such aquatic species. Other potential means of introduction, such as bait movement, aquaria disposal, ballast water discharge, movement of recreational boats, movement of fishing gear, and horticultural sales, are not addressed in the 1994 protocol.

In 2008 the ANSTF requested the Research Committee (a Committee of the ANSTF) to evaluate and recommend revisions to the 1994 protocol, as needed. According to the Society for Risk Analysis (SRA, *http://www.sra.org*), the elements or components of a risk analysis include risk assessment, risk characterization, risk communication, risk management, and policy relating to risk. This revised Protocol incorporates three of those elements—it requires a risk assessment (Part I) and then, if needed, establishment and implementation of a risk management plan (Part II), with the combined results communicated to the funding agency as part of the proposal and funding process. Therefore, this revised Protocol is renamed ''Federal Aquatic Nuisance Species Research Risk Analysis Protocol.'' The draft was approved by the ANSTF on November 5, 2009. A notice of availability of the draft revised research protocol and request for comments was published in the **Federal Register** on August 31, 2010 (75 FR 53273). The period of public comment expired on October 15, 2010. During this time period one comment was received. The ANSTF reviewed and considered this comment and determined the statement was not pertinent to the Protocol; thus, further revision of the document was not necessary and the Protocol was accepted to be finalized.

The revised Protocol supplements, but does not replace, other existing Federal guidelines established to control activities with specific major classes of organisms. This document does not eliminate or in any way affect other legal requirements.

The Protocol encourages the incorporation of a Hazard Analysis and Critical Control Point (HACCP) approach for prevention planning within research activities. Information about the use of HACCP is available at *http://www.seagrant.umn.edu/ais/haccp.* A Web site detailing the application of HACCP to natural resource pathways, plus a link to download a HACCP wizard that helps create HACCP plans, can be found at *http://www.haccp-nrm.org.*

Document Availability

You may obtain copies of the Protocol by any one of the following methods:

- *Internet: http://anstaskforce.gov/documents.php*
- *Write:* Susan Pasko, National Oceanic and Atmospheric Administration. 1315 East West Highway, SSMC 3, Rm. 15531 Silver Spring, MD 20910; Telephone: (301) 713–0174 x 165; E-mail: *Susan.Pasko@noaa.gov.*

• *Mail or hand-delivery:* Susan Pasko, National Oceanic and Atmospheric Administration. 1315 East West Highway, SSMC 3, Rm. 15531 Silver Spring, MD 20910.

National Oceanic and Atmospheric Administration

RIN 0648–XA065

New England Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: The New England Fishery Management Council's (Council) Herring Committee will meet jointly with its Advisory Panel to consider actions affecting New England fisheries in the exclusive economic zone (EEZ).

DATES: The meeting will be held on Monday, December 20, 2010 at 9:30 a.m.

ADDRESSES: The meeting will be held at the Sheraton Harborside Hotel, 250 Market Street, Portsmouth, NH 03801; telephone: (603) 431–2300; fax: (603) 433–5649.

Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950.

FOR FURTHER INFORMATION CONTACT: Paul J. Howard, Executive Director, New England Fishery Management Council; telephone: (978) 465–0492.

SUPPLEMENTARY INFORMATION: The items of discussion in the committee and advisory panel's agenda are as follows:

1. Continue development of alternatives for consideration in Amendment 5 to the Atlantic Herring Fishery Management Plan (FMP), with particular focus on management measures to address river herring bycatch;

2. Discuss alternatives for identifying river herring hotspots; consider streamlining and develop recommendations;

3. Discuss management alternatives to apply to river herring hotspots; consider streamlining and develop recommendations;

4. Discuss possible options for river herring catch caps;

5. Discuss alternatives for establishing criteria for herring vessel access to groundfish closed areas; and

6. Address other outstanding issues related to Amendment 5 as time permits.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Paul J. Howard (*see* **ADDRESSES**) at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: November 23, 2010.

Tracey L. Thompson,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XA068

Gulf of Mexico Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meetings.

SUMMARY: The Gulf of Mexico Fishery Management Council will convene a public meeting of the Florida/Alabama Habitat Protection Advisory Panel (AP).

DATES: The meeting will convene at 3 p.m. Central Time on Friday, December 17, 2010 and conclude no later than 4 p.m.

ADDRESSES: This meeting will be held via conference call. To listen to the teleconference call (1–888) 450–5996. At the prompt enter passcode 6273501.

Council address: Gulf of Mexico Fishery Management Council, 2203 North Lois Avenue, Suite 1100, Tampa, FL 33607.

FOR FURTHER INFORMATION CONTACT: Jeff Rester, Habitat Support Specialist, Gulf States Marine Fisheries Commission; telephone: (228) 875–5912.

SUPPLEMENTARY INFORMATION: At this meeting, the only item on the agenda is for the AP to review the Council's Essential Fish Habitat 5-Year Review Report.

The Florida/Alabama group is part of a three unit Habitat Protection Advisory Panel (AP) of the Gulf of Mexico Fishery Management Council. The principal role of the advisory panels is to assist the Council in attempting to maintain optimum conditions within the habitat and ecosystems supporting the marine resources of the Gulf of Mexico. Advisory panels serve as a first alert system to call to the Council's attention proposed projects being developed and other activities that may adversely impact the Gulf marine fisheries and their supporting ecosystems. The panels may also provide advice to the Council on its policies and procedures for addressing environmental affairs.

Although other issues not on the agenda may come before the panel for discussion, in accordance with the Magnuson-Stevens Fishery Conservation and Management Act, those issues may not be the subject of formal panel action during this meeting. Panel action will be restricted to those issues specifically identified in the agenda listed as available by this notice.

For more information about the meeting, please call (813) 348–1630. Special Accommodations.

This meeting is physically accessible to people with disabilities. Requests for auxiliary aids should be directed to Trish Kennedy at the Council (*see* **ADDRESSES**) at least 5 working days prior to the meeting.

Dated: November 24, 2010.

Tracey L. Thompson,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

CONSUMER PRODUCT SAFETY COMMISSION

[CPSC Docket No. 11–C0001]

Jake's Fireworks, Inc., Far East Imports, Inc., Wholesale Fireworks Enterprises LLC, Pacific Northwest Fireworks, Inc., Provisional Acceptance of a Settlement Agreement and Order

AGENCY: Consumer Product Safety Commission.

ACTION: Notice.

SUMMARY: It is the policy of the Commission to publish settlements which it provisionally accepts under the Consumer Product Safety Act in the **Federal Register** in accordance with the terms of 16 CFR 1118.20(e). Published below is a provisionally-accepted Settlement Agreement with Jake's Fireworks, Inc., Far East Imports, Inc., Wholesale Fireworks Enterprises LLC, Pacific Northwest Fireworks, Inc., containing a civil penalty of $100,000.00.

DATES: Any interested person may ask the Commission not to accept this agreement or otherwise comment on its contents by filing a written request with the Office of the Secretary by December 15, 2010.

ADDRESSES: Persons wishing to comment on this Settlement Agreement should send written comments to the Comment 11–C0001, Office of the Secretary, Consumer Product Safety Commission, 4330 East West Highway, Room 820, Bethesda, Maryland 20814–4408.

FOR FURTHER INFORMATION CONTACT: Michelle Faust Gillice, Trial Attorney, Division of Enforcement and Information, Office of the General Counsel, Consumer Product Safety Commission, 4330 East West Highway, Bethesda, Maryland 20814–4408; telephone (301) 504–7667.

SUPPLEMENTARY INFORMATION: The text of the Agreement and Order appears below.

Dated: November 24, 2010.

Todd A. Stevenson,

Secretary.

Settlement Agreement

1. In accordance with 16 CFR 1118.20, Jake's Fireworks, Inc., Far East Imports, Inc., Wholesale Fireworks Enterprises, LLC and Pacific Northwest Fireworks, Inc., and the staff ("Staff") of the United States Consumer Product Safety Commission ("Commission") enter into this Settlement Agreement ("Agreement"). This Agreement and the incorporated attached Order resolve the staff's allegations set forth below.

The Parties

2. The Staff is the staff of the Commission, an independent federal regulatory agency responsible for the enforcement of the Consumer Product Safety Act ("CPSA"), 15 U.S.C. 2051–2089 and the Federal Hazardous Substances Act ("FHSA"), 15 U.S.C. 1261–1278.

3. Jake's Fireworks, Inc. is a corporation organized and existing under the laws of Kansas, with its principal offices located in Pittsburg, Kansas. Far East Imports, Inc. and Wholesale Fireworks Enterprises, LLC are incorporated under the laws of Kansas and share the same address as Jake's Fireworks in Pittsburg, Kansas. Pacific Northwest Fireworks, Inc. is a Washington corporation located in Aberdeen, Washington. At all times relevant hereto, Jake's Fireworks, Inc., Far East Imports, Inc., Wholesale Fireworks Enterprises, LLC, and Pacific Northwest Fireworks, Inc. (hereinafter collectively referred to as the "Respondents") introduced or caused to be introduced into interstate commerce certain violative fireworks.

Staff Allegations

4. Between December 2006 and September 2007, Respondents imported over 200,000 fireworks that failed to comply with the Commission's fireworks regulations at 16 CFR 1500.17(a)(3) and 16 CFR Part 1507. (Fireworks subject to this Agreement and Order are identified in *Attachment A.)*

5. Between December 2006 and September 2007, Commission staff issued 98 separate Letters of Advice to Respondents notifying the firms that the fireworks devices sampled at import were in violation of the Commission's fireworks regulations. Of the 98 violations, 81 violations were for failure to comply with the regulation set forth at 16 CFR 1500.17(a)(3). Section 1500.17(a)(3) requires that fireworks intended to produce an audible effect contain no more than two (2) grains of pyrotechnic composition.

6. The fireworks devices referenced in paragraph 4 are banned hazardous substances pursuant to section 2(q)(1)(B) of the FHSA, 15 U.S.C. 1261(q)(1)(B), and 16 CFR 1500.17(a)(3).

7. Respondents knowingly introduced or caused the introduction into interstate commerce or received in interstate commerce and delivered or proffered delivery thereof for pay or otherwise, the banned hazardous substances referenced in paragraph 4 above, in violation of sections 4(a) and (c) of the FHSA, 15 U.S.C. 1263(a) and (c).

Respondents Response to Allegations

8. Respondents deny the allegations of the staff set forth in paragraphs 4 through 7 above.

Agreement of the Parties

9. The Commission has jurisdiction over this matter and over Respondents under the CPSA and the FHSA.

10. The parties enter this Agreement for settlement purposes only. The Agreement does not constitute an admission by Respondents nor a determination by the Commission that Respondents knowingly violated the FHSA.

11. In settlement of the staff's allegations, Respondents shall pay a civil penalty of one hundred thousand dollars ($100,000.00), for which all Respondents are jointly and severally liable, within twenty (20) calendar days of service of the Commission's final Order accepting this Agreement. The payment shall be by check and made payable to the order of the United States Treasury.

12. Within six (6) months of service of the Commission's final Order, Respondents shall destroy at their own cost, the inventory of all violative fireworks referenced in *Attachment A,* subject to the terms and conditions set forth in paragraphs 13 through 16. Destruction of the fireworks shall be in accordance with all federal, state and local laws and regulations.

13. Respondents shall provide the Commission staff with seven (7) days advance notice of the time and place of each destruction event so that a Commission investigator may witness the destruction. By witnessing a destruction event, CPSC does not prescribe nor approve specific methods of destruction as safe. At each destruction event, a principal or an employee authorized by a Respondent company principal shall complete and sign an affidavit of destruction, under the penalty of perjury. The affidavit shall identify the fireworks destroyed by model name, Commission sample number, and the number of units of destroyed. Respondents shall submit the signed Affidavit of Destruction to Michelle Gillice, Trial Attorney, Office of the General Counsel, U.S. Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814, no later than seven (7) days after the destruction event.

14. Should Respondents fail to destroy the entire inventory of violative fireworks referenced in *Attachment A* within six (6) months of service of the final Order, they shall be subject to additional penalties as set forth in paragraphs 15 and 16.

15. Should Respondents fail to comply with the terms of destruction set forth in paragraphs 12 and 13 of this Agreement, Respondents shall pay a penalty of five thousand dollars ($5,000.00) in liquidated damages for each day such violation continues, for which all Respondents are jointly and severally liable, to the United States

Treasury. The amount of liquidated damages in this paragraph shall not exceed seven hundred and fifty thousand dollars ($750,000.00) in any one calendar year. The remedy in this paragraph shall be in addition to any other remedies available to the United States under the law.

16. The penalties referenced in paragraph 15 will not be imposed if Respondents fail to meet the deadline in performing hereunder if such delay or default is caused by the following events or conditions beyond its reasonable control: force majeure or "Acts of God", wars, insurrections, and Government restrictions, and Respondents notify the Commission within seven (7) days of such event or condition with documentation evidencing the occurrence. Force majeure does not refer to: staff shortages; sick leaves; late supplies or shortcomings on the part of a third party contracted by Respondents. In case of force majeure or one of the above referenced events or conditions, provided Respondents notify the Commission within the allotted time frame, the destruction obligation will be temporarily suspended during the event or condition period to the extent that such performance is reasonably affected thereby.

17. Upon the Commission's provisional acceptance of the Agreement, the Agreement shall be placed on the public record and published in the **Federal Register** in accordance with the procedures set forth in 16 CFR 1118.20(e). In accordance with 16 CFR 1118.20(f), if the Commission does not receive any written requests not to accept the Agreement within 15 calendar days, the Agreement shall be deemed finally accepted on the 16th calendar day after the date it is published in the **Federal Register**.

18. Upon the Commission's final acceptance of the Agreement and issuance of the final Order, Respondents knowingly, voluntarily and completely waive any rights they may have in this matter to the following: (i) An administrative or judicial hearing; (ii) judicial review or other challenge or contest of the validity of the Commission's Order or actions; (iii) a determination by the Commission as to whether Respondents failed to comply with the FHSA and the underlying regulations; (iv) a statement of findings of fact and conclusions of law; and (v) any claims under the Equal Access to Justice Act.

19. The Commission may publicize the terms of the Agreement and Order.

20. The Agreement and Order shall apply to, and be binding upon, Respondents and each of their successors and assigns.

21. The Commission issues the Order under the provisions of the FHSA, and a violation of the Order may subject those referenced in paragraph 20 above to appropriate legal action.

22. This Agreement may be used in interpreting the Order. Understandings, agreements, representations, or interpretations apart from those contained in the Agreement and the Order may not be used to vary or contradict their terms. The Agreement shall not be waived, amended, modified, or otherwise altered without written agreement thereto executed by the party against whom such waiver, amendment, modification, or alteration is sought to be enforced.

23. If any provision of this Agreement and Order is held to be illegal, invalid, or unenforceable under present or future laws effective during the terms of the Agreement and Order, such provision shall be fully severable. The balance of the Agreement and Order shall remain in full force and effect, unless the Commission and Respondents determine that severing the provision materially affects the purpose of the Agreement and Order.

Order

Upon consideration of the Settlement Agreement entered into between Jake's Fireworks, Inc., Far East Imports, Inc., Wholesale Fireworks Enterprises, LLC and Pacific Northwest Fireworks, Inc., (hereinafter, "Respondents") and the staff of the United States Consumer Product Safety Commission ("Commission"), and the Commission having jurisdiction over the subject matter and over Respondents, and it appearing that the Settlement Agreement and Order are in the public interest, it is

Ordered, that the Settlement Agreement, be and hereby is, accepted; and it is

Further ordered, that Respondents shall pay a civil penalty in the amount of one hundred thousand dollars ($100,000.00) within twenty (20) calendar days of service of the Commission's final Order accepting the Agreement. The payment shall be made by check payable to the order of the United States Treasury. Upon the failure of Respondents to make the foregoing payment when due, interest on the unpaid amount shall accrue and be paid by Respondents at the federal legal rate of interest set forth at 28 U.S.C. 1961(a) and (b); and it is

Further ordered, that within six (6) months of service of the Final Order, in accordance with the terms set forth in the Settlement Agreement, Respondents shall destroy at their own cost, the entire inventory of violative fireworks referenced in *Attachment A* to the Settlement Agreement. Upon the failure of Respondents to comply with the terms of destruction set forth in the Settlement Agreement, the firm agrees to pay to the United States of America, five thousand dollars in liquidated damages for each day such violation continues. The amount of liquidated damages in this paragraph shall not exceed $750,000.00 in any one calendar year;

Provisionally accepted and provisional Order issued on the *24th* day of *November* 2010.

By Order of the Commission.

Todd A. Stevenson,
Secretary, U.S. Consumer Product Safety Commission.

The Honorable Nancy Pelosi
Speaker
U.S. House of Representatives
Washington, DC 20515

Dear Madam Speaker:

Pursuant to the reporting requirements of Section 36(b)(1) of the Arms Export Control Act, as amended, we are forwarding herewith Transmittal No. 10-24, concerning the Department of the Army's proposed Letter(s) of Offer and Acceptance to the Kingdom of Saudi Arabia for defense articles and services estimated to cost $71 million. After this letter is delivered to your office, we plan to issue a press statement to notify the public of this proposed sale.

Sincerely,

Jeanne L. Farmer
Acting Deputy Director

Enclosures:
1. Transmittal
2. Policy Justification
3. Regional Balance (Classified Document Provided Under Separate Cover)

Transmittal No. 10-24

Notice of Proposed Issuance of Letter of Offer
Pursuant to Section 36(b)(1)
of the Arms Export Control Act

(i) Prospective Purchaser: Kingdom of Saudi Arabia

(ii) Total Estimated Value:

Major Defense Equipment*	$59 million
Other	$12 million
TOTAL	$71 million

(iii) Description and Quantity or Quantities of Articles or Services under Consideration for Purchase: 150 JAVELIN Guided Missiles, 12 Fly-to-Buy Missiles, 20 JAVELIN Command Launch Units (CLUs) with Integrated Day/Thermal Sight, containers, missile simulation rounds, Enhanced Producibility Basic Skills Trainer (EPBST), rechargeable and non-rechargeable batteries, battery dischargers, chargers, and coolant units, support equipment, spare and repair parts, publications and technical data, U.S. Government and contractor engineering and logistics personnel services, and other related elements of logistics support.

(iv) Military Department: Army (VBG)

(v) Prior Related Cases, if any: None

(vi) Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid: None

(vii) Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold: None

(viii) Date Report Delivered to Congress: NOV 18 2010

* as defined in Section 47(6) of the Arms Export Control Act.

POLICY JUSTIFICATION

Kingdom of Saudi Arabia – JAVELIN Missiles

The Kingdom of Saudi Arabia has requested a possible sale of 150 JAVELIN Guided Missiles, 12 Fly-to-Buy Missiles, 20 JAVELIN Command Launch Units (CLUs) with Integrated Day/Thermal Sight, containers, missile simulation rounds, Enhanced Producibility Basic Skills Trainer (EPBST), rechargeable and non-rechargeable batteries, battery dischargers, chargers, and coolant units, support equipment, spare and repair parts, publications and technical data, U.S. Government and contractor engineering and logistics personnel services, and other related elements of logistics support. The estimated cost is $71 million.

This proposed sale will contribute to the foreign policy and national security of the United States by helping to improve the security of a friendly country which has been and continues to be an important force for political stability and economic progress in the Middle East.

The proposed sale will improve Saudi Arabia's capability to meet current and future threats. Saudi Arabia will use the enhanced capability as a deterrent to regional threats and to strengthen its homeland defense. Saudi Arabia currently does not have JAVELIN Anti-tank missiles in its inventory, but will have no difficulty absorbing these additional missiles.

The proposed sale of these defense articles to the Kingdom of Saudi Arabia will not alter the basic military balance in the region.

The prime contractors will be Javelin Joint Venture of Raytheon in Tucson, Arizona, and Lockheed Martin, in Orlando Florida. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this sale will not require the assignment of any U.S. Government or contractor representatives to the Kingdom of Saudi Arabia.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 10-49

Notice of Proposed Issuance of Letter of Offer
Pursuant to Section 36(b)(1)
of the Arms Export Control Act, as amended

(i) Prospective Purchaser: Oman

(ii) Total Estimated Value:

Major Defense Equipment*	$ 21 million
Other	$ 55 million
TOTAL	$ 76 million

(iii) Description and Quantity or Quantities of Articles or Services under Consideration for Purchase: logistics support and training for one (1) C-130J-30 aircraft being procured through a Direct Commercial Sale, 1 AN/AAQ-24(V) Large Aircraft Infrared Countermeasures System, 7 AN/AAR-54 Missile Approach Warning Systems, 2 AN/ALR-56M Radar Warning Receivers, 2 AN/ALE-47 Countermeasure Dispenser Sets, communication and navigation equipment, software support, repair and return, installation, aircraft ferry and refueling support, spare and repair parts, support and test equipment, publications and technical documentation, personnel training and training equipment, U.S. Government and contractor engineering, technical, and logistics support services, and related elements of logistical and program support.

(iv) Military Department: Air Force (QAH)

(v) Prior Related Cases, if any: None

(vi) Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid: None

(vii) Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold: See Annex Attached

(viii) Date Report Delivered to Congress: NOV 18 2010

* as defined in Section 47(6) of the Arms Export Control Act.

POLICY JUSTIFICATION

Oman – Logistics Support and Training for 1 C-130J-30

The Government of Oman has requested a possible sale of logistics support and training for one (1) C-130J-30 aircraft being procured through a Direct Commercial Sale, 1 AN/AAQ-24(V) Large Aircraft Infrared Countermeasures System, 7 AN/AAR-54 Missile Approach Warning Systems, 2 AN/ALR-56M Radar Warning Receivers, 2 AN/ALE-47 Countermeasure Dispenser Sets, communication and navigation equipment, software support, repair and return, installation, aircraft ferry and refueling support, spare and repair parts, support and test equipment, publications and technical documentation, personnel training and training equipment, U.S. Government and contractor engineering, technical, and logistics support services, and related elements of logistical and program support. The estimated cost is $76 million.

This proposed sale will contribute to the foreign policy and national security of the United States by helping to improve the security of a friendly country that has been, and continues to be, an important force for political stability and economic progress in the Middle East.

The proposed sale will provide Oman the capability to meet current and future regional threats to the Sultanate of Oman. The support for the additional C-130J-30 aircraft will ensure operational capability and will facilitate movement within the region, as well as, support U.S interests. The Royal Flight of Oman currently operates two Boeing 747s and one Airbus A320 aircraft and will have no difficulty absorbing the support case for this aircraft into its armed forces.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The prime contractor will be Northrop Grumman Corporation in Rolling Meadows, Illinois. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will require annual trips to Oman involving up to ten U.S. Government and ten contractor representatives for technical reviews/support, and program management for a period of approximately six years.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 10-49

Notice of Proposed Issuance of Letter of Offer
Pursuant to Section 36(b)(1)
of the Arms Export Control Act

Annex
Item No. vii

(vii) Sensitivity of Technology:

1. The AN/AAQ-24(V) is a stand-alone Directional Infrared Countermeasures (DIRCM) system that protects aircraft against ground launched infrared (IR) missiles. The AN/AAQ-24(V) is a small, passive/active, electro-optic, threat warning device used to detect surface-to-air missiles fired at helicopters and low-flying fixed-wing aircraft and automatically provide countermeasures, as well as audio and visual warning messages to the aircrew. The basic system consists of multiple Optical Sensor Converter (OSC) units, Small Laser Turret Assembly (SLTA), Computer Processor (CP), Control Indicator (CI), and a User Data Memory (UDM) containing the laser jam codes. The UDM card is loaded into CP prior to flight; when not in use the UDM card is removed from the CP and put in secure storage. The set of OSC units (AAR-54), which normally consist of four, is mounted on the aircraft exterior to provide omni-directional protection. The OSC detects the rocket plume of missiles and sends appropriate signals to the CP for processing. The CP analyses the data from each OSC and automatically deploys the appropriate countermeasures via the SLTA. The CP also contains comprehensive BIT circuitry. The CI displays the incoming threat, so that the pilot can take appropriate action. The hardware, software, and technical data and documentation to be provided are classified Secret.

2. The AN/ALR-56M Radar Warning Receiver (RWR) is designed to detect incoming radar signals, identify and characterize those signals to a specific threat, and alert the aircrew through the Tactical Electronic Warfare System display. The system consists of external antennae mounted on the fuselage and wingtips. The solid state ALR-56 is based on a digitally-controlled, dual channel receiver that scans within a specific frequency spectrum and is capable of adjusting to threat changes by modifications to the software. The RWR will not be provided In Country Reprogramming capability. The hardware and technical data and documentation to be provided are Unclassified. The software is Secret.

3. The AN/AAR-54 Missile Approach Warning System warns of threat missile approach by detecting radiation associated with the rocket motor and automatically initiates flare ejection. The AN/AAR-54 is a small, lightweight, passive, electro-optic, threat warning device used to detect surface-to-air missiles fired at helicopters and low-flying fixed-wing aircraft and automatically provide countermeasures, as well as audio and visual-sector warning messages to the aircrew. The basic system consists of multiple Optical

Sensor Converter (OSC) units, a Computer Processor (CP) and a Control Indicator (CI). The set of OSC units, which normally consist of four, is mounted on the aircraft exterior to provide omni-directional protection. The OSC detects the rocket plume of missiles and sends appropriate signals to the CP for processing. The CP analyses the data from each OSC and automatically deploys the appropriate countermeasures. The CP also contains comprehensive BIT circuitry. The CI displays the incoming direction of the threat, so that the pilot can take appropriate action. The hardware and technical data and documentation to be provided are Unclassified. The software is Secret.

4. The AN/ALE-47 Countermeasure Dispenser Set (CMDS) provides an integrated threat-adaptive, computer controlled capability for dispensing chaff, flares, and active radio frequency expendables. The AN/ALE-47 system enhances aircraft survivability in sophisticated threat environments. The threats countered by the CMDS include radar-directed anti-aircraft artillery (AAA), radar command-guided missiles, radar homing guided missiles, and infrared (IR) guided missiles. The system is internally mounted and may be operated as a stand-alone system or may be integrated with other on-board Electronic Warfare (EW) and avionics systems. The AN/ALE-47 uses threat data received over the aircraft interfaces to assess the threat situation and determine a response. Expendable routines tailored to the immediate aircraft and threat environment may be dispensed using one of four operational modes. The hardware and technical data and documentation to be provided are Unclassified. The software is Secret.

5. If a technologically advanced adversary were to obtain knowledge of the specific hardware in the proposed sale, the information could be used to develop countermeasures which might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.

BILLING CODE 5001–06–C

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DOD–2010–OS–0156]

Privacy Act of 1974; System of Records

AGENCY: National Security Agency/Central Security Service, DoD.

ACTION: Notice To Alter a System of Records.

SUMMARY: The National Security Agency/Central Security Service is proposing to alter a system of records in its existing inventory of records systems subject to the Privacy Act of 1974, (5 U.S.C. 552a), as amended.

DATES: This proposed action will be effective without further notice on December 30, 2010 unless comments are received which result in a contrary determination.

ADDRESSES: You may submit comments, identified by docket number and/ Regulatory Information Number (RIN) and title, by any of the following methods:

- *Federal Rulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Federal Docket Management System Office, Room 3C843, 1160 Defense Pentagon, Washington, DC 20301–1160.

Instructions: All submissions received must include the agency name and docket number or Regulatory Information Number (RIN) for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: National Security Agency/Central Security Service, Freedom of Information Act and Privacy Act Office, 9800 Savage Road, Suite 6248, Ft. George G. Meade, MD 20755–6248, Ms. Anne Hill at (301) 688–6527.

SUPPLEMENTARY INFORMATION: The National Security Agency/Central Security Service system of records notices subject to the Privacy Act of 1974, (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the **FOR FURTHER INFORMATION CONTACT** address above.

The proposed system report, as required by 5 U.S.C. 552a of the Privacy Act of 1974, as amended, was submitted on November 17, 2010, to the House Committee on Oversight and Government Reform, the Senate Committee on Homeland Security and Governmental Affairs, and the Office of Management and Budget (OMB) pursuant to paragraph 4c of Appendix I to OMB Circular No. A–130, "Federal Agency Responsibilities for Maintaining Records About Individuals, "dated February 8, 1996 (February 20, 1996, 61 FR 6427).

Dated: November 18, 2010.

National Security Agency/Central Security Service, Ft. George G. Meade, MD 20755–6000.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals identified in foreign intelligence, counterintelligence, or information system security reports and supportive materials, including individuals involved in matters of foreign intelligence interest, information systems security interest, the compromise of classified information, or terrorism.

CATEGORIES OF RECORDS IN THE SYSTEM:

Records include individual's name, Social Security Number (SSN), employee identification number; administrative information; biographic information; intelligence requirements, analysis and reporting; information systems security analysis and reporting; operational records; articles, public-source data, and other published information on individuals and events of interest to NSA/CSS; actual or purported compromises of classified intelligence; countermeasures in connection therewith; and identification of classified source documents and distribution thereof.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

National Security Agency Act of 1959, as amended (Pub. L. 86–36) (codified at 50 U.S.C. 402 note); E.O. 12333, as amended, United States Intelligence Activities; E.O. 13526, Classified National Security Information; National Security Directive 42, National Policy for the Security of National Security Telecommunications and Information Systems; and E.O. 9397 (SSN), as amended.

PURPOSE(S):

To maintain records on foreign intelligence, counterintelligence, and information systems security matters relating to the mission of the National Security Agency.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act of 1974, these records contained therein may specifically be disclosed outside the DoD as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

To U.S. Government agencies, and in some instances foreign government agencies or their representatives, to provide foreign intelligence, counterintelligence, information systems security information, and other information.

To U.S. Government officials regarding compromises of classified information including the document(s) apparently compromised, implications of disclosure of intelligence sources and methods, investigative data on compromises, and statistical and substantive analysis of the data.

To any U.S. Government organization in order to facilitate any security, employment, detail, liaison, or contractual decision by any U.S. Government organization.

Records may further be disclosed to agencies involved in the protection of

intelligence sources and methods to facilitate such protection and to support intelligence analysis and reporting.

The DoD 'Blanket Routine Uses' published at the beginning of the NSA/CSS' compilation of systems of records notices apply to this system.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Paper records in file folders and electronic storage media.

RETRIEVABILITY:

Information is retrieved by individual's name, Social Security Number (SSN), and/or employee identification number.

SAFEGUARDS:

Buildings are secured by a series of guarded pedestrian gates and checkpoints. Access to facilities is limited to security-cleared personnel and escorted visitors only. Within the facilities themselves, access to paper and computer printouts are controlled by limited-access facilities and lockable containers. Access to electronic means is controlled by computer password protection.

RETENTION AND DISPOSAL:

Intelligence Reports: Permanent, transfer to the NSA/CSS Records Center when 5 years old and transfer to the National Archives and Records Administration when 50 years old.

Intelligence Products: Permanent, transfer to the NSA/CSS Records Center when 5 years old and transfer to the National Archives and Records Administration when 50 years old.

Intelligence Collection Records: Temporary, transfer to NSA/CSS Records Center annually, review every 5 years for destruction. Production records: Temporary, review every 5 years for destruction.

Records are destroyed by pulping, burning, shredding, or erasure or destruction of magnet media.

SYSTEM MANAGER(S) AND ADDRESS:

Director, National Security Agency/Central Security Service, Ft. George G. Meade, MD 20755–6000.

NOTIFICATION PROCEDURE:

Individuals seeking to determine whether information about themselves is contained in this system should address written inquiries to the National Security Agency/Central Security Service, Freedom of Information Act/Privacy Act Office, 9800 Savage Road, Suite 6248, Ft. George G. Meade, MD 20755–6248.

Written inquiries should contain the individual's full name, address and telephone number.

RECORD ACCESS PROCEDURES:

Individuals seeking access to information about themselves contained in this system should address written inquiries to the National Security Agency/Central Security Service, Freedom of Information Act/Privacy Act Office, 9800 Savage Road, Suite 6248, Ft. George G. Meade, MD 20755–6248.

Written inquiries should contain the individual's full name, address and telephone number.

CONTESTING RECORD PROCEDURES:

The NSA/CSS rules for contesting contents and appealing initial determinations are published at 32 CFR part 322 or may be obtained by written request addressed to the National Security Agency/Central Security Service, Freedom of Information Act/Privacy Act Office, 9800 Savage Road, Suite 6248, Ft. George G. Meade, MD 20755–6248.

RECORD SOURCE CATEGORIES:

Individuals themselves; U.S. agencies and organizations; media, including periodicals, newspapers, and broadcast transcripts; public and classified reporting; intelligence source documents; investigative reports; and correspondence.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

Information specifically authorized to be classified under E.O. 12958, as implemented by DoD 5200.1–R, may be exempt pursuant to 5 U.S.C. 552a(k)(1).

Investigatory material compiled for law enforcement purposes, other than material within the scope of subsection 5 U.S.C. 552a(j)(2), may be exempt pursuant to 5 U.S.C. 552a(k)(2). However, if an individual is denied any right, privilege, or benefit for which he would otherwise be entitled by Federal law or for which he would otherwise be eligible, as a result of the maintenance of the information, the individual will be provided access to the information exempt to the extent that disclosure would reveal the identity of a confidential source. NOTE: When claimed, this exemption allows limited protection of investigative reports maintained in a system of records used in personnel or administrative actions.

Investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for federal civilian employment, military service, federal contracts, or access to classified information may be exempt pursuant to 5 U.S.C. 552a(k)(5), but only to the extent that such material would reveal the identity of a confidential source.

An exemption rule for this record system has been promulgated according to the requirements of 5 U.S.C. 553(b)(1), (2), and (3), (c) and (e) and published in 32 CFR part 322. For additional information contact the system manager.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Renewal of Department of Defense Federal Advisory Committees

AGENCY: Department of Defense.

ACTION: Notice of renewal of Federal Advisory Committee.

SUMMARY: Under the provisions of 10 U.S.C. 1114 and the Federal Advisory Committee Act of 1972, (5 U.S.C. Appendix), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b), and 41 CFR 102–3.50, the Department of Defense gives notice that it is renewing the charter for the Department of Defense Medicare-Eligible Retiree Health Care Board of Actuaries (hereafter referred to as the "Board").

The Board is a non-discretionary Federal advisory committee that shall provide independent advice and recommendations related to actuarial matters associated with the Department of Defense Medicare-Eligible Retiree Health Care Fund and on matters referred by the Secretary of Defense, including that regarding;

a. Valuations of the Fund under Title 10, United States Code, Section 1115(c);

b. Recommendations for such changes as in the Board's judgment are necessary to protect the public interest and maintain the Fund on a sound actuarial basis; and

c. Advice the Secretary of Defense on all actuarial matters necessary to make determinations in order to finance liabilities of the Fund on an actuarially sound basis.

The Secretary of Defense, through the Under Secretary of Defense (Personnel and Readiness), may act upon the Board's advice and recommendations.

The Board shall be composed of not three Board members appointed by the Secretary of Defense from among qualified professional actuaries who are members of the Society of Actuaries. Except for those member of the Board who were first appointed under Title 10, United States Code, Section, Section

1114(B), the Board members shall serve for a term of 15 years; except those Board members appointed to fill a vacancy occurring before the end of the term for which the predecessor was appointed shall serve only until the end of such term. Board members may serve after the end of the term until a successor has taken office. No Board member, other than those originally appointed for less than 15-year term or a Board member appointed to fill an unexpired term may be reappointed for successive terms.

Board members shall be appointed by the Secretary of Defense, and their membership shall be renewed by the Secretary of Defense on an annual basis. A member of the Board may be removed by the Secretary of Defense for misconduct or failure to perform functions vested in the Board, and for no other reason.

Board members appointed by the Secretary of Defense, who are not full-time or permanent part-time federal officers or employees, shall serve as special government employees under the authority of 5 U.S.C. 3109, and shall, under the authority of 10 U.S.C. 1114(a)(3), serve with compensation, to include travel and per diem for official travel, in accordance with Title 5, United States Code, Section 5703.

The Chairperson of the Board shall be designated by the Under Secretary of Defense (Personnel and Readiness), on behalf of the Secretary of Defense.

With DoD approval, the Board is authorized to establish subcommittees, as necessary and consistent with its mission. These subcommittees shall operate under the provisions of the Federal Advisory Committee Act of 1972, the Government in the Sunshine Act of 1976 (5 U.S.C. 552b), and other Governing Federal statutes and regulations.

Such subcommittees shall not work independently of the chartered Board, and shall report all their recommendations and advice to the Board for full deliberation and discussion. Subcommittees have no authority to make decisions on behalf of the chartered Board; nor can they report directly to the Department of Defense or any Federal officers or employees who are not Board members.

Subcommittee members who are not Board members, shall be appointed in the same manner as the Board members.

FOR FURTHER INFORMATION CONTACT: Contact Jim Freeman, Deputy Advisory Committee Management Officer for the Department of Defense, 703–601–6128.

SUPPLEMENTARY INFORMATION: The Board shall meet at the call of the Board's Designated Federal Officer, in consultation with the Chairperson. The estimated number of Board meetings is one per year.

The Designated Federal Officer, pursuant to DoD policy, shall be a full-time or permanent part-time DoD employee, and shall be appointed in accordance with governing DoD policies and procedures. In addition, the Designated Federal Officer is required to be in attendance at all Board and subcommittee meetings; however, in the absence of the Designated Federal Officer, the Alternate Designated Federal Officer shall attend the meeting.

Pursuant to 41 CFR 102–3.105(j) and 102–3.140, the public or interested organizations may submit written statements to the Department of Defense Medicare-Eligible Retiree Health Care Board of Actuaries' membership about the Board's mission and functions. Written statements may be submitted at any time or in response to the stated agenda of planned meeting of Department of Defense Medicare-Eligible Retiree Health Care Board of Actuaries.

All written statements shall be submitted to the Designated Federal Officer for the Department of Defense Medicare-Eligible Retiree Health Care Board of Actuaries, and this individual will ensure that the written statements are provided to the membership for their consideration. Contact information for the Department of Defense Medicare-Eligible Retiree Health Care Board of Actuaries Designated Federal Officer can be obtained from the GSA's FACA Database—*https://www.fido.gov/facadatabase/public.asp*.

The Designated Federal Officer, pursuant to 41 CFR 102–3.150, will announce planned meetings of the Department of Defense Medicare-Eligible Retiree Health Care Board of Actuaries. The Designated Federal Officer, at that time, may provide additional guidance on the submission of written statements that are in response to the stated agenda for the planned meeting in question.

Dated: November 18, 2010.

Morgan F. Park,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEFENSE NUCLEAR FACILITIES SAFETY BOARD

[Recommendation 2010–1]

Safety Analysis Requirements for Defining Adequate Protection for the Public and the Workers

AGENCY: Defense Nuclear Facilities Safety Board.

ACTION: Notice, recommendation; correction

SUMMARY: Pursuant to 42 U.S.C. 2286a(a)(5), the Defense Nuclear Facilities Safety Board has made a recommendation to the Secretary of Energy requesting an amendment to the Department of Energy's nuclear safety rule, 10 CFR part 830. An incorrect electronic file was submitted to the **Federal Register** and published on November 15, 2010 (75 FR 69648). The corrected text of the recommendation approved by the Board is below. The Board is extending the public comment period to allow for consideration of this correction by all interested parties.

DATES: Comments, data, views, or arguments concerning the recommendation are due on or before December 30, 2010.

ADDRESSES: Send comments, data, views, or arguments concerning this recommendation to: Defense Nuclear Facilities Safety Board, 625 Indiana Avenue, NW., Suite 700, Washington, DC 20004–2901.

FOR FURTHER INFORMATION CONTACT: Brian Grosner or Andrew L. Thibadeau at the address above or telephone number (202) 694–7000.

Correction: In the **Federal Register** of November 15, 2010 (75 FR 69648), immediately following the signature block, the recommendation should read as follows:

Dated: November 23, 2010.

Peter S. Winokur,

Chairman.

Recommendation 2010–1 to the Secretary of Energy

Safety Analysis Requirements for Defining Adequate Protection for the Public and the Workers, Pursuant to 42 U.S.C. 2286a(a)(5), Atomic Energy Act of 1954, As Amended

Dated: October 29, 2010

Background

The Department of Energy's (DOE) nuclear safety regulations were developed as a result of a mandate by Congress in the Price Anderson Act Amendments of 1988. These regulations now appear in Parts 820, 830, and 835 of Title 10 in the Code of Federal Regulations (CFR). In this Recommendation, the Defense Nuclear Facilities Safety Board (Board) addresses recent changes in DOE's

"interpretation" of certain critical provisions of Title 10 CFR Part 830, *Nuclear Safety Management* (10 CFR Part 830), provisions that are intended to provide adequate protection of public health and safety. As explained below, in the Board's view this revised interpretative posture weakens the safety structure the rule is designed to hold firmly in place.

10 CFR Part 830 imposes a requirement that a documented safety analysis (DSA) is to be prepared for every DOE nuclear facility. This DSA, once approved by DOE, forms the regulatory basis for safety of the facility or operation. 10 CFR Part 830 does more, however: its Appendix A provides "safe harbors" for the preparation and approval of DSAs. These safe harbors are, in the main, references to detailed guidance issued by DOE. A DSA that is prepared following applicable guidance found in safe harbors should be found acceptable, meaning that the facility's safety systems are adequate to protect public health and safety from nuclear hazards.

One of the key safe harbor guides for the preparation of DSAs is DOE Standard 3009–94, *Preparation Guide for U.S. Department of Energy Nonreactor Nuclear Facility Safety Analysis Reports.*[1] First issued in July of 1994, this Standard was intended to provide guidance on meeting the requirements imposed by DOE Order 5480.23, Nuclear Safety Analysis Reports, a set of nuclear safety requirements that preceded and were supplanted by 10 CFR Part 830. The Standard stated that "Technical Standards, such as this document, support the guides by providing additional guidance into how the requirements [of Orders and Rules] should be met." As such, it did not contain any nuclear safety requirements. Five years after its initial issuance, DOE amended Standard 3009–94 by the addition of Appendix A, currently entitled "Evaluation Guideline." The guideline applies a dose criterion to the results of accident calculations found in DSAs. Stated broadly, the Standard mandates that safety class systems, structures, and components (SSCs) be installed if in a potential accident the unmitigated dose consequence calculations for a release scenario at the site boundary approach the Evaluation Guideline numerical value. The Evaluation Guideline value established in DOE–STD–3009–94 Appendix A is 25 rem Total Effective Dose Equivalent (TEDE). The Standard further states that although 25 rem is not considered an acceptable public exposure, it is generally accepted as a value indicative of no significant health effects.

When 10 CFR Part 830 was promulgated in final form in early 2001, the version of DOE Standard 3009–94 incorporated into Appendix A of the rule as a safe harbor included the Evaluation Guideline. This combination of the rule's requirement for an approved DSA and the application of the Evaluation Guideline of DOE Standard 3009–94 formed the basis upon which adequate protection of the public health and safety would be gauged. Whenever dose consequence calculations showed that an accident scenario would result in offsite doses approaching 25 rem TEDE, the expectation was that safety related SSCs would function as designed, ensuring that public doses would never exceed a small fraction of the Evaluation Guideline.

Developments Since 2001

As a safe harbor for 10 CFR Part 830, the Evaluation Guideline described in DOE Standard 3009–94 has been enforced and met for the majority of DOE's defense nuclear facilities, assuring adequate protection of the public, workers, and the environment. However, in December 2008, the National Nuclear Security Administration (NNSA) approved a DSA for the Plutonium Facility at Los Alamos National Laboratory that represented a significant departure from the accepted methodology, as discussed in the Board's Recommendation 2009–2, *Los Alamos National Laboratory Plutonium Facility Seismic Safety.* The Board followed up its Recommendation with a letter to the Deputy Secretary of Energy on March 15, 2010, that sought to determine whether DOE's current interpretation of 10 CFR Part 830 and DOE Standard 3009–94 still supports the principles of providing adequate protection of the public, workers, and the environment from the hazards of operating DOE's defense nuclear facilities. The Board's letter particularly expressed concern regarding the appearance that DOE's present interpretation is that the nuclear safety Evaluation Guideline established in DOE Standard 3009–94 does not have to be met.

DOE's June 10, 2010, response to the Board's letter states that DOE's utilization and implementation of DOE Standard 3009–94 has not changed since issuance of 10 CFR Part 830. DOE's response observes that DOE Standard 3009–94 "was not written as a prescriptive item-by-item requirements document; rather it provides an overall approach and guidance for preparing a DSA." DOE's response states that the Standard describes steps that the contractor may take if the postulated accident consequences cannot be mitigated below the Evaluation Guideline. DOE's response also cites guidance for DOE approval authorities contained in DOE Standard 1104–2009, *Review and Approval of Nuclear Facility Safety Basis and Safety Design Basis Documents*, and notes that the Safety Basis Approval Authority may prescribe interim controls and planned improvements if the Evaluation Guideline is exceeded. DOE's response closes by stating that its managers "are expected to carefully evaluate situations that fall short of expectations and only provide their approval of documented safety analyses when they are satisfied that operations can be conducted safely * * *, that options to meet DOE expectations have been evaluated, and that adequate commitments to achieve an appropriate safety posture in a timely manner have been made."

The lack of definitive statements in DOE's June 10, 2010, response illustrates the difficulties inherent in applying a guidance document as a safe harbor for implementing the requirements of a regulation. Furthermore, NNSA's approval of the DSA for the Los Alamos National Laboratory's Plutonium Facility in December 2008 demonstrates that, despite DOE's stated expectations, it is not always true that DOE's managers will ensure safety by imposing conditions of approval that address inadequacies in the safety basis. This is illustrated to a lesser extent at the other NNSA facilities—described in follow-up correspondence NNSA issued to the Board on June 30, 2010—which have not implemented controls or compensatory measures sufficient to reduce accident consequences below the Evaluation Guideline. DOE Standard 1104–2009 serves as a source of guidance for DOE Safety Basis Approval Authorities, but it, too, is a guidance document, unequivocally stating, "This Standard does not add any new requirements for DOE or its contractors."

DOE's standards-based regulatory system needs a clear and unambiguous set of nuclear safety requirements to ensure that adequate protection of the public, workers, and the environment is provided. Further, it is imperative that DOE provide clear direction to its Safety Basis Approval Authorities to ensure that, if nuclear safety requirements cannot be met prior to approval of a DSA, DOE imposes clear conditions of approval for compensatory measures for the short term and facility modifications for the longer term to achieve the required safety posture. This acceptance of risk and commitment to future upgrades must be approved at a level of authority within DOE that is high enough to control both the resources needed to accomplish the upgrades as well as the programmatic decision-making involved in determining that the risk of continuing operations is offset by sufficiently compelling programmatic needs.

Item 4 of the Recommendation below deserves a further word of explanation. The Board does not recommend lightly a change to DOE's nuclear safety regulations. But as explained above, DOE has chosen over the past several years to drift away from the principles that underlay the rule as originally intended. The Board has chosen to recommend a rule change because this action would tend, in the long run, to prevent future shifts in DOE safety policy that would once again have to be challenged and argued against. For these reasons, the Board recommends that the nuclear safety rule, 10 CFR Part 830, be amended as stated below.

Recommendation

Therefore, the Board recommends that DOE:

1. Immediately affirm the requirement that unmitigated, bounding-type accident scenarios will be used at DOE's defense nuclear facilities to estimate dose consequences at the site boundary, and that a sufficient combination of SSCs must be designated safety class to prevent exposures at the site boundary from approaching 25 rem TEDE.

2. For those defense nuclear facilities that have not implemented compensatory measures sufficient to reduce exposures at the site boundary below 25 rem TEDE, direct

[1] When DOE issued Change Notice 2, the title of this Standard was revised to *Preparation Guide for U.S. Department of Energy Nonreactor Nuclear Facility Documented Safety Analyses.*

the responsible program secretarial officer to develop a formal plan to meet this requirement within a reasonable timeframe.

3. Revise DOE Standard 3009–94 to identify clearly and unambiguously the requirements that must be met to demonstrate that an adequate level of protection for the public and workers is provided through a DSA. This should be accomplished, at a minimum, by:

a. Clearly defining methodologies and providing acceptability criteria for controls, parameters, processes, analytical tools, and other data that should be used in preparation of a DSA,

b. Delineating the criteria to be met for identification and analyses of an adequate set of Design Basis Accidents (for new facilities), or Evaluation Basis Accidents (for existing facilities),

c. Providing criteria that must be met by the safety-class SSCs to (i) mitigate the consequences to a fraction of the Evaluation Guideline, or (ii) prevent the events by demonstrating an acceptable reliability for the preventive features, and

d. Establishing a process and path forward to meeting (a) through (c) above through compensatory measures and planned improvements if the DSA cannot demonstrate compliance.

4. Amend 10 CFR Part 830 by incorporating the revised version of DOE Standard 3009–94 into the text as a requirement, instead of as a safe harbor cited in Table 2.

5. Formally establish the minimum criteria and requirements that govern federal approval of a DSA, by revision to DOE Standard 1104–2009 and other appropriate documents. The criteria and requirements should include:

a. The authorities that can be delegated, the required training and qualification of the approval authority, and the boundaries and limitations of the approval authority's responsibilities,

b. Actions to be taken if conditions are beyond the delegated approval authority's specified boundaries or limitations,

c. The organization or the individual who can approve a DSA that is beyond the delegated approval authority's specified boundaries or limitations,

d. The regulatory process that must be followed if conditions are beyond the delegated approval authority's specified boundaries or limitations, and any compensatory actions to be taken, and

e. The criteria an approval authority must use to quantify the acceptance of risk for continued operations when offsite dose consequences approach the Evaluation Guideline.

6. Formally designate the responsible organization and identify the processes for performing oversight to ensure that the responsibilities identified in Item 5 above are fully implemented.

Peter S. Winokur, Ph.D., Chairman

BILLING CODE 3670–01–P

DEPARTMENT OF EDUCATION

Notice of Submission for OMB Review

AGENCY: Department of Education.

ACTION: Comment Request.

SUMMARY: The Director, Information Collection Clearance Division, Regulatory Information Management Services, Office of Management invites comments on the submission for OMB review as required by the Paperwork Reduction Act of 1995 (Pub. L. 104–13).

DATES: Interested persons are invited to submit comments on or before December 30, 2010.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs, Attention: Education Desk Officer, Office of Management and Budget, 725 17th Street, NW., Room 10222, New Executive Office Building, Washington, DC 20503, be faxed to (202) 395–5806 or e-mailed to *oira_submission@omb.eop.gov* with a cc: to *ICDocketMgr@ed.gov.* Please note that written comments received in response to this notice will be considered public records.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. The OMB is particularly interested in comments which: (1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Dated: November 24, 2010.

Darrin A. King,

Director, Information Collection Clearance Division Regulatory Information Management Services Office of Management.

Institute of Education Sciences

Type of Review: New.

Title of Collection: Study of Schools Targeted for Improvement Using Title I Section 1003(g) Funds Provided Under the American Recovery and Reinvestment Act (Study of School Turnaround).

OMB Control Number: Pending.

Agency Form Number(s): N/A.

Frequency of Responses: Annually.

Affected Public: Not-for-profit institutions; State, Local, or Tribal Government, State Educational Agencies, Local Educational Agencies.

Total Estimated Number of Annual Responses: 8,463.

Total Estimated Annual Burden Hours: 3,803.

Abstract: The purpose of the Study of School Turnaround is to document over time the intervention models, approaches, and strategies adopted and implemented by a subset of 60 schools receiving federal School Improvement Grants (SIG), Title I Section 1003(g), provided under the American Recovery and Reinvestment Act. To this end, the evaluation will employ multiple data collection strategies, including telephone interviews with school principals, district administrators and state officials; site visits to case study schools; teacher surveys; and collection of fiscal data. Specifically, the study will conduct telephone interviews with building principals and will administer teacher surveys in 60 schools, over three years. This set of 60 SIG-awarded schools will include three nested subsamples: One set of 25 schools in which the study team will conduct in-depth case studies over three years, and two sets of 10 "special topics" schools in which the study team will collect interview, focus group, and survey data on topics of policy interest over a period of two years. The study will produce annual reports, accompanied by more focused research briefs on special topics related to the change process in the nation's lowest-performing schools.

Requests for copies of the information collection submission for OMB review may be accessed from the *RegInfo.gov* Web site at *http://www.reginfo.gov/public/do/PRAMain* or from the Department's Web site at *http://edicsweb.ed.gov,* by selecting the "Browse Pending Collections" link and by clicking on link number 4446. When you access the information collection, click on "Download Attachments " to view. Written requests for information should be addressed to U.S. Department of Education, 400 Maryland Avenue, SW., LBJ, Washington, DC 20202–4537. Requests may also be electronically mailed to the Internet address *ICDocketMgr@ed.gov* or faxed to 202–401–0920. Please specify the complete title of the information collection and

OMB Control Number when making your request.

Director Information Collection Clearance Division, Regulatory Information Management Services Office of Management.

Institute of Education Sciences

Type of Review: New.

Title of Collection: Integrated Evaluation of ARRA Funding, Implementation and Outcomes, Recruitment Package.

OMB Control Number: 1850–NEW.

Agency Form Number(s): N/A.

Frequency of Responses: Once.

Affected Public: State, Local, or Tribal Government, State Educational Agencies or Local Educational Agencies.

Total Estimated Number of Annual Responses: 5,551.

Total Estimated Annual Burden Hours: 1,509.

Abstract: On February 17, 2009, President Obama signed the American Recovery and Reinvestment Act (ARRA) into law (Pub. L. 111–5). ARRA supports investments in innovative strategies that are intended to lead to improved results for students, long-term gains in school and local education agency (LEA) capacity for success, and increased productivity and effectiveness.

This evaluation will focus on answering four sets of policy/research questions:

- To what extent did ARRA funds go to the intended recipients?
- Is ARRA associated with the implementation of the key reform strategies it promoted?
- What implementation supports and challenges are associated with ARRA?
- Is ARRA associated with improved outcomes?

The integrated evaluation will draw on existing data, including ED data collections, ED ARRA program files, ARRA required reporting, and databases of achievement and other outcomes. The evaluation will also collect new information through surveys of (1) the 50 states and the District of Columbia, (2) a nationally representative sample of school districts, and (3) a nationally representative sample of schools within the sampled school districts. Surveys are planned for spring 2011, spring 2012, and spring 2013. Subsamples of school districts will also be drawn to receive a smaller set of questions (polls); these polls will be administered twice between 2011 and 2013.

A report will be prepared in the first year of the evaluation to describe the distribution of funding. A report and state tabulations will be prepared after each annual survey. The first report, based on the 2011 surveys, will focus on early ARRA implementation and strategies. The second report, based on the 2012 surveys, will expand upon strategies implemented under ARRA. The final report will draw upon existing data on outcomes as well as data from the 2013 surveys.

This collection is for the recruitment phase of the evaluation.

Requests for copies of the information collection submission for OMB review may be accessed from the *RegInfo.gov* Web site at *http://www.reginfo.gov/public/do/PRAMain* or from the Department's Web site at *http://edicsweb.ed.gov,* by selecting the "Browse Pending Collections" link and by clicking on link number 4385. When you access the information collection, click on "Download Attachments" to view. Written requests for information should be addressed to U.S. Department of Education, 400 Maryland Avenue, SW., LBJ, Washington, DC 20202–4537. Requests may also be electronically mailed to the Internet address *ICDocketMgr@ed.gov* or faxed to 202–401–0920. Please specify the complete title of the information collection and OMB Control Number when making your request.

Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339.

BILLING CODE 4000–01–P

ELECTION ASSISTANCE COMMISSION

Procedural Manual for the Election Assistance Commission's Voting System Testing and Certification Program, Version 2.0

AGENCY: United States Election Assistance Commission (EAC).

ACTION: Notice; publication of Voting System Testing and Certification Manual, Version 2.0, for 60 day public comment period on EAC Web site.

SUMMARY: The U.S. Election Assistance Commission (EAC) is publishing a procedural manual for its Voting System Testing and Certification Program. This manual sets the administrative procedures for obtaining an EAC Certification for voting systems. Participation in the program is strictly voluntary. The program is mandated by the Help America Vote Act (HAVA) at 42 U.S.C. 15371.

DATES: Submit written or electronic comments on this draft procedural manual on or before 5 p.m. EDT on January 31, 2011.

ADDRESSES: Submit comments via e-mail to *VotingSystemGuidelines@eac.gov;* via mail to Brian Hancock, Director of Voting System Certification, U.S. Election Assistance Commission, 1201 New York Avenue, Suite 300, Washington, DC 20005; or via fax to 202–566–1392. An electronic copy of the proposed manual may be found on the EAC's Web site, *http://www.eac.gov/open/comment.aspx.*

FOR FURTHER INFORMATION CONTACT: Brian Hancock, Director, Voting System Certification, Washington, DC (202) 566–3100, Fax: (202) 566–1392.

SUPPLEMENTARY INFORMATION:

Background. HAVA requires that the EAC certify and decertify voting systems. Section 231(a)(1) of HAVA (42 U.S.C. 15371) specifically requires the EAC to "* * * provide for the testing, certification, decertification and recertification of voting system hardware and software by accredited laboratories." To meet this obligation, the EAC has created a voluntary program to test voting systems to Federal voting system standards. The Voting System Testing and Certification Manual, published below, will set the procedures for this program.

In creating the Certification Manual in 2006 the EAC sought input from experts and stakeholders. Specifically, the EAC conducted meetings with representatives from the voting system test laboratory and voting system manufacturing community. The Commission also held a public hearing in which it received testimony from State election officials, the National Institute of Standards and Technology, academics, electronic voting system experts and public interest groups. Finally, the EAC sought input from the public.

EAC is required to resubmit the Testing and Certification Manual for renewal in accordance with Paperwork Reduction Act of 1995 requirements. The Testing and Certification Division has updated sections of the manual to reflect proposed changes in certification procedures. These sections are highlighted for ease of review.

Comments. Please submit comments consistent with the information below. Comments should identify and cite the section of the manual at issue. Where a substantive issue is raised, please propose a recommended change or alternative policy.

This notice is published in accordance with the Paperwork Reduction Act of 1995, to request comments regarding the burden of responding to the information collection activities of the proposed manual; please refer to the EAC's Web site, *http://www.eac.gov,* for further information about the submission of comments regarding burden.

Alice Miller,

Chief Operating Officer, U.S. Election Assistance Commission.

BILLING CODE 6820–KF–P

DEPARTMENT OF ENERGY

Biomass Research and Development Technical Advisory Committee

AGENCY: Department of Energy, Office of Energy Efficiency and Renewable Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces an open meeting of the Biomass Research and Development Technical Advisory Committee under Section 9008(d) of the Food, Conservation, and Energy Act of 2008. The Federal Advisory Committee Act requires that agencies publish these notices in the **Federal Register** to allow for public participation. This notice announces the meeting of the Biomass Research and Development Technical Advisory Committee.

DATES: December 15, 2010 at 8 a.m.-5:15 p.m. EDT

ADDRESSES: Williamsburg Room (104–A), USDA Whitten Building, 1400 Independence Ave., SW., Washington, DC 20250.

FOR FURTHER INFORMATION CONTACT: Laura McCann, Designated Federal Officer for the Committee, Office of Energy Efficiency and Renewable Energy, U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585, (202) 586–7766, *laura.mccann@ee.doe.gov;* or Chrissy Fagerholm, (202) 586–2933, *Christina.Fagerholm@ee.doe.gov.*

SUPPLEMENTARY INFORMATION:

Purpose of Meeting: To provide advice and guidance that promotes research and development leading to the production of biobased fuels and biobased products.

Tentative Agenda: Agenda will include the following:

- Update on USDA Biomass R&D Activities.
- Update on DOE Biomass R&D Activities.
- Presentation from the National Alliance for Advanced Biofuels and Bioproducts. (NAABB) Algae Consortium.
- Presentation on the Knowledge Discovery Framework.
- Presentation on USDA sustainability findings.

Public Participation: In keeping with procedures, members of the public are welcome to observe the business of the Biomass Research and Development Technical Advisory Committee. To attend the meeting and/or to make oral statements regarding any of the items on the agenda, you must contact Laura McCann at 202–586–7766; E-mail: *laura.mccann@ee.doe.gov* or Chrissy Fagerholm at (202) 586–2933; E-mail: *Christina.Fagerholm@ee.doe.gov at least 5 business days* prior to the meeting. Please note that this meeting will be held in a Federal building, and therefore a photo ID and advance notice will be required to enter. Members of the public will be heard in the order in which they sign up at the beginning of the meeting. Reasonable provision will be made to include the scheduled oral statements on the agenda. The Chair of the Committee will make every effort to hear the views of all interested parties. If you would like to file a written statement with the Committee, you may do so either before or after the meeting. The Chair will conduct the meeting to facilitate the orderly conduct of business.

Minutes: The minutes of the meeting will be available for public review and copying at *http://www.brdisolutions.com/publications/default.aspx#meetings.*

Issued at Washington, DC, on November 24, 2010.

Rachel Samuel,

Deputy Committee Management Officer.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP11–29–000]

CenterPoint Energy Gas Transmission Company; Notice of Application

November 22, 2010.

Take notice that on November 12, 2010, CenterPoint Energy Gas Transmission Company (CenterPoint), 1111 Louisiana Street, Houston, Texas 77002, filed in Docket No. CP11–29–000, a request for abandonment authority, pursuant to 18 CFR part 157

and section 7(b) of the Natural Gas Act, to abandon, in place, the Enid Compressor Station (Enid Station) located on Line 2 in Garfield County, Oklahoma. Specifically, CenterPoint proposes to abandon two 1,200 horsepower compressor units and one 1,350 horsepower compressor unit, fuel meter, compressor building and associated yard and station piping located at the Enid Station. CenterPoint states that the Enid Station has been inactive for several years, is no longer needed and no service will be abandoned or adversely affected, all as more fully set forth in the application, which is on file with the Commission and open to public inspection. The filing may also be viewed on the Web at *http://www.ferc.gov* using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC at *FERCOnlineSupport@ferc.gov* or call toll-free, (866) 208–3676 or TTY, (202) 502–8659.

Any questions regarding this application should be directed to B. Michelle Willis, Manager, Regulatory & Compliance CenterPoint Energy Gas Transmission Company, P.O. Box 21734, Shreveport, LA 71151, telephone no. (318) 429–3708, facsimile no. (318) 429–3133, and e-mail: *michelle.willis@centerpointenergy.com*; Lawrence O. Thomas, Senior Director, P.O. Box 21734, Shreveport, LA 71151, telephone no. (318) 429–2804, and e-mail: *larry.thomas@centerpointenergy.com*; and Mark C. Schroeder, Sr. VP and General Counsel, P.O Box 1700, Houston, TX 77210, telephone no. (713) 207–3395, facsimile no. (713) 207–0711, and e-mail: *mark.schroeder@centerpointenrgy.com.*

Pursuant to section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice the Commission staff will either: complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all Federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

There are two ways to become involved in the Commission's review of this project. First, any person wishing to obtain legal status by becoming a party to the proceedings for this project should, on or before the comment date stated below file with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, a motion to intervene in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and by all other parties. A party must submit 7 copies of filings made in the proceeding with the Commission and must mail a copy to the applicant and to every other party. Only parties to the proceeding can ask for court review of Commission orders in the proceeding.

However, a person does not have to intervene in order to have comments considered. The second way to participate is by filing with the Secretary of the Commission, as soon as possible, an original and two copies of comments in support of or in opposition to this project. The Commission will consider these comments in determining the appropriate action to be taken, but the filing of a comment alone will not serve to make the filer a party to the proceeding. The Commission's rules require that persons filing comments in opposition to the project provide copies of their protests only to the party or parties directly involved in the protest.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commentors will be placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commentors will not be required to serve copies of filed documents on all other parties. However, the non-party commentors will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right to seek court review of the Commission's final order.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the "eFiling" link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy regulatory Commission, 888 First Street, NE., Washington, DC 20426.

This filing is accessible on-line at *http://www.ferc.gov*, using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an "eSubscription" link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail *FERCOnlineSupport@ferc.gov*, or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Comment Date: December 13, 2010.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket Nos. CP11–31–000; PF10–16–000

Transcontinental Gas Pipeline Company, LLC; Notice of Application

November 23, 2010.

Take notice that on November 12, 2010, Transcontinental Gas Pipeline Company, LLC (Transco), 2800 Post Oak Boulevard, Houston, Texas 77056–6106, filed an application in Docket No. CP11–31–000 pursuant to sections 7(b) and 7(c) of the Natural Gas Act (NGA), and Part 157(A) of the Commission's regulations for a certificate of public convenience and necessity authorizing Transco to construct and operate its Mid-Atlantic Connector Expansion Project. This expansion project will provide 142,000 dekatherms per day (Dth/d) of incremental firm transportation service to Virginia Power Services Energy Corp. Inc., and Baltimore Gas and Electric Company (MAC Shippers). Specifically, Transco proposes to construct approximately 2.78 miles of new pipeline looping facilities and replacement pipeline facilities on Transco's existing mainline, 18,950 horsepower of additional compression at two existing compressor stations, and construction or modification of above-ground facilities. The project will also involve the retirement of four compressor units at Transco's existing Compressor Station 175 in Fluvanna County, Virginia and abandonment in place of approximately 0.12 miles of Mainline B pipeline in Fairfax County, Virginia. Transco seeks authorization under NGA section 7(b) and Part 157 of the Commission's regulations for the abandonment of these facilities. The application is on file with the Commission and open to public inspection. This filing is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at *http://www.ferc.gov* using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659.

Any questions regarding this application should be directed to Bela Patel, Regulatory Analyst, Transcontinental Gas Pipe Line Company, P.O. Box 1396, Houston, TX, 77251–1396, or by calling (713) 215–2659 (telephone).

Transco states that by letter dated April 23, 2010, in Docket No. PF10–16–000, the Commission's Office of Energy Projects granted Transco's April 15, 2010, request to utilize the National Environmental Policy Act (NEPA) Pre-Filing Process for the Projects. Transco has also submitted an applicant-prepared Draft Environmental Assessment that was prepared during the Pre-Filing Process that was included with this application. Now, as of the filing of this application on November 12, 2010, the NEPA Pre-Filing Process for this project has ended. From this time forward, this proceeding will be conducted in Docket No. CP11–31–000, as noted in the caption of this notice.

Pursuant to Section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice the Commission staff will either: Complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

There are two ways to become involved in the Commission's review of this project. First, any person wishing to obtain legal status by becoming a party to the proceedings for this project should, on or before the comment date stated below, file with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, a motion to intervene in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and by all other parties. A party must submit 14 copies of filings made with the Commission and must mail a copy to the applicant and to every other party in the proceeding. Only parties to the proceeding can ask for court review of Commission orders in the proceeding.

However, a person does not have to intervene in order to have comments considered. The second way to participate is by filing with the Secretary of the Commission, as soon as possible, an original and two copies of comments in support of or in opposition to this project. The Commission will consider these comments in determining the appropriate action to be taken, but the filing of a comment alone will not serve to make the filer a party to the proceeding. The Commission's rules require that persons filing comments in opposition to the project provide copies of their protests only to the party or parties directly involved in the protest.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commentors will be placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commentors will not be required to serve copies of filed documents on all other parties. However, the non-party commentors will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right to seek court review of the Commission's final order.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the "eFiling" link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy regulatory Commission, 888 First Street, NE., Washington, DC 20426.

This filing is accessible on-line at *http://www.ferc.gov*, using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington, DC. Comment Date: 5 p.m. Eastern Time on Wednesday, December 8, 2010.

Any person desiring to intervene or to protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) on or before 5 p.m. Eastern time on the specified comment date. It is not necessary to separately intervene again in a subdocket related to a compliance filing if you have previously intervened in the same docket. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant. In reference to filings initiating a new proceeding, interventions or protests submitted on or before the comment deadline need not be served on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be

listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First St. NE., Washington, DC 20426.

The filings in the above proceedings are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC There is an eSubscription link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed dockets(s). For assistance with any FERC Online service, please e-mail *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

Comment Date: 5 p.m. Eastern Time on Tuesday, December 7, 2010.

Any person desiring to intervene or to protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) on or before 5 p.m. Eastern time on the specified comment date. It is not necessary to separately intervene again in a subdocket related to a compliance filing if you have previously intervened in the same docket. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant. In reference to filings initiating a new proceeding, interventions or protests submitted on or before the comment deadline need not be served on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First St., NE., Washington, DC 20426.

The filings in the above proceedings are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

Filed Date: 11/18/2010.

Accession Number: 20101118–5072.

Comment Date: 5 p.m. Eastern Time on Thursday, December 9, 2010.

Any person desiring to intervene or to protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) on or before 5 p.m. Eastern time on the specified comment date. It is not necessary to separately intervene again in a subdocket related to a compliance filing if you have previously intervened in the same docket. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant. In reference to filings initiating a new proceeding, interventions or protests submitted on or before the comment deadline need not be served on persons other than the Applicant.

As it relates to any qualifying facility filings, the notices of self-certification [or self-recertification] listed above, do not institute a proceeding regarding qualifying facility status. A notice of self-certification [or self-recertification]

simply provides notification that the entity making the filing has determined the facility named in the notice meets the applicable criteria to be a qualifying facility. Intervention and/or protest do not lie in dockets that are qualifying facility self-certifications or self-recertifications. Any person seeking to challenge such qualifying facility status may do so by filing a motion pursuant to 18 CFR 292.207(d)(iii). Intervention and protests may be filed in response to notices of qualifying facility dockets other than self-certifications and self-recertifications.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First St., NE., Washington, DC 20426.

The filings in the above proceedings are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Docket Numbers: ER11–2158–000.
Applicants: Entergy Power, LLC.
Description: Entergy Power, LLC submits tariff filing per 35.13(a)(2)(iii: EPI–EWO Ritchie Contract to be effective 2/1/2012.
Filed Date: 11/19/2010.
Accession Number: 20101119–5146.
Comment Date: 5 p.m. Eastern Time on Friday, December 10, 2010.

Any person desiring to intervene or to protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) on or before 5 p.m. Eastern time on the specified comment date. It is not necessary to separately intervene again in a subdocket related to a compliance filing if you have previously intervened in the same docket. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant. In reference to filings initiating a new proceeding, interventions or protests submitted on or before the comment deadline need not be served on persons other than the Applicant.

As it relates to any qualifying facility filings, the notices of self-certification [or self-recertification] listed above, do not institute a proceeding regarding qualifying facility status. A notice of self-certification [or self-recertification] simply provides notification that the entity making the filing has determined the facility named in the notice meets the applicable criteria to be a qualifying facility. Intervention and/or protest do not lie in dockets that are qualifying facility self-certifications or self-recertifications. Any person seeking to challenge such qualifying facility status may do so by filing a motion pursuant to 18 CFR 292.207(d)(iii). Intervention and protests may be filed in response to notices of qualifying facility dockets other than self-certifications and self-recertifications.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First St., NE., Washington, DC 20426.

The filings in the above proceedings are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings #1

November 22, 2010.

Take notice that the Commission received the following electric corporate filings:

Docket Numbers: EC11–21–000.
Applicants: Alta Wind I, LLC, Alta Wind I Holding Company, LLC.
Description: Application for Authorization of Sale/Leaseback Transactions of Alta Wind I Holding Company, LLC, *et al.*
Filed Date: 11/19/2010.
Accession Number: 20101119–5204.
Comment Date: 5 p.m. Eastern Time on Friday, December 10, 2010.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER03–534–011.
Applicants: Ingenco Wholesale Power, L.L.C.
Description: Supplement to Notice of Change in Status of Ingenco Wholesale Power, L.L.C..
Filed Date: 11/19/2010.
Accession Number: 20101119–5144.
Comment Date: 5 p.m. Eastern Time on Friday, December 10, 2010.

Docket Numbers: ER05–1178–015; *ER09–838–001.*
Applicants: Gila River Power LP, Entegra Power Services LLC.
Description: Supplement to Updated Market Power Analysis for Continued Market-Based Rate Authority in Compliance with Order No. 697 of Gila River Power, L.P., *et al.*

Filed Date: 11/19/2010.
Accession Number: 20101119–5206.
Comment Date: 5 p.m. Eastern Time on Friday, December 10, 2010.

Docket Numbers: ER10–2235–001.
Applicants: San Diego Gas & Electric Company.
Description: San Diego Gas and Electric Company submits revised worksheets and a refund report under ER10–2235.
Filed Date: 11/08/2010.
Accession Number: 20101109–0201.
Comment Date: 5 p.m. Eastern Time on Monday, November 29, 2010.

Docket Numbers: ER11–1890–000; ER11–1890–001; ER11–1892–000; ER11–1892–001; ER11–1893–000; ER11–1893–001; ER11–1894–000; ER11–1894–001; ER11–1881–000; ER11–1881–001; ER11–1882–000; ER11–1882–001; ER11–1883–000; ER11–1883–001; ER11–1885–000; ER11–1885–001; ER11–1886–000; ER11–1886–001; ER11–1887–000; ER11–1887–001; ER11–1889–000; ER11–1889–001.
Applicants: Camp Reed Wind Park, LLC, Payne's Ferry Wind Park, LLC, Salmon Falls Wind Park, LLC, Yahoo Creek Wind Park, LLC, Burley Butte Wind Park, LLC, Golden Valley Wind Park, LLC, Milner Dam Wind Park, LLC, Oregon Trail Wind Park, LLC, Pilgrim Stage Station Wind Park, LLC, Thousand Springs Wind Park, LLC, Tuana Gulch Wind Park, LLC.
Description: Second Supplement to the Market-Based Rate Applications of Burley Butte Wind Park, LLC, *et al.*
Filed Date: 11/19/2010.
Accession Number: 20101119–5212.
Comment Date: 5 p.m. Eastern Time on Friday, December 10, 2010.

Docket Numbers: ER11–2159–000.
Applicants: Verso Maine Energy LLC.
Description: Verso Maine Energy LLC submits tariff filing per 35.12: Verso Maine Energy LLC—MBR Application to be effective 1/18/2011.
Filed Date: 11/19/2010.
Accession Number: 20101119–5157.
Comment Date: 5 p.m. Eastern Time on Friday, December 10, 2010.

Docket Numbers: ER11–2160–000.
Applicants: FPL Energy Montezuma Wind, LLC.
Description: FPL Energy Montezuma Wind, LLC submits tariff filing per 35.12: FPL Energy Montezuma Wind, LLC MBR Application to be effective 11/20/2010.
Filed Date: 11/19/2010.
Accession Number: 20101119–5172.
Comment Date: 5 p.m. Eastern Time on Friday, December 10, 2010.

Docket Numbers: ER11–2161–000.
Applicants: Entergy Texas, Inc.
Description: Entergy Texas, Inc submits a revised, lower depreciation rates for their use in all applicable FERC formula rates relating to steam production accounts.
Filed Date: 11/19/2010.
Accession Number: 20101122–0201.
Comment Date: 5 p.m. Eastern Time on Friday, December 10, 2010.

Docket Numbers: ER11–2162–000.
Applicants: AP Holdings Southaven, LLC.
Description: Notice of Cancellation of AP Holdings Southaven, LLC.
Filed Date: 11/22/2010.
Accession Number: 20101122–5056.
Comment Date: 5 p.m. Eastern Time on Monday, December 13, 2010.

Docket Numbers: ER11–2163–000.
Applicants: BTEC New Albany LLC.
Description: Notice of Cancellation of BTEC New Albany LLC.
Filed Date: 11/19/2010.
Accession Number: 20101119–5211.
Comment Date: 5 p.m. Eastern Time on Friday, December 10, 2010.

Docket Numbers: ER11–2164–000.
Applicants: Comverge Inc.
Description: Application of Comverge, Inc. Docket for limited waiver of Section III.13.1.4.8.1 of Market Rule 1 of ISO New England.
Filed Date: 11/19/2010.
Accession Number: 20101119–5173
Comment Date: 5 p.m. Eastern Time on Friday, December 10, 2010.

Any person desiring to intervene or to protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) on or before 5 p.m. Eastern time on the specified comment date. It is not necessary to separately intervene again in a subdocket related to a compliance filing if you have previously intervened in the same docket. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant. In reference to filings initiating a new proceeding, interventions or protests submitted on or before the comment deadline need not be served on persons other than the Applicant.

As it relates to any qualifying facility filings, the notices of self-certification [or self-recertification] listed above, do not institute a proceeding regarding qualifying facility status. A notice of self-certification [or self-recertification] simply provides notification that the entity making the filing has determined the facility named in the notice meets the applicable criteria to be a qualifying facility. Intervention and/or protest do not lie in dockets that are qualifying facility self-certifications or self-recertifications. Any person seeking to challenge such qualifying facility status may do so by filing a motion pursuant to 18 CFR 292.207(d)(iii). Intervention and protests may be filed in response to notices of qualifying facility dockets other than self-certifications and self-recertifications.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First St., NE., Washington, DC 20426.

The filings in the above proceedings are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER11–2154–000]

Twin Eagle Resource Management, LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

November 22, 2010.

This is a supplemental notice in the above-referenced proceeding, of Twin Eagle Resource Management, LLC's

application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability is December 13, 2010.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First St., NE., Washington, DC 20426.

The filings in the above-referenced proceeding(s) are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Western Area Power Administration

[DOE/EIS–0461]

Intent To Prepare an Environmental Impact Statement and To Conduct Scoping Meetings: Interconnection of the Proposed Hyde County Wind Energy Center Project, South Dakota

AGENCY: Western Area Power Administration, DOE.

ACTION: Notice of Intent to Prepare an Environmental Impact Statement and to Conduct Scoping Meetings; Notice of Floodplain and Wetlands Involvement.

SUMMARY: NextEra Energy Resources (NextEra) applied to interconnect its proposed 150-megawatt (MW) Hyde County Wind Energy Center Project (Project), located in Hyde County, South Dakota, with the Western Area Power Administration's (Western) existing Fort Thompson Substation in Buffalo County, South Dakota. Western will prepare an environmental impact statement (EIS) on the proposal to interconnect the Project in accordance with the National Environmental Policy Act of 1969 (NEPA), U.S. Department of Energy (DOE) NEPA Implementing Procedures, and the Council on Environmental Quality (CEQ) regulations for implementing NEPA.

Western's need for agency action is precipitated by NextEra's application to interconnect with Western's power transmission system. Western needs to consider NextEra's interconnection request under its Open Access Transmission Service Tariff (Tariff). This EIS will address Western's Federal action of interconnecting the proposed Project to Western's transmission system, making changes within Western's existing Fort Thompson Substation to physically connect NextEra's proposed Project, and making any necessary system modifications to accommodate the interconnection. Existing transmission line approaches to Fort Thompson Substation may also need to be realigned. By taking these actions, power generated by NextEra's proposed Project would use Western's transmission system to reach the market.

Portions of NextEra's proposed Project may affect floodplains and wetlands, so this Notice of Intent (NOI) also serves as a notice of proposed floodplain or wetland action in accordance with DOE floodplain and wetland environmental review requirements.

DATES: A public scoping meeting will be held on December 14, 2011, from 5 p.m. to 8 p.m. in Highmore, South Dakota.

The public scoping period starts with the publication of this notice and ends on January 14, 2011. Western will consider all comments on the scope of the EIS received or postmarked by that date. The public is invited to submit comments on the proposed Project at any time during the EIS process.

ADDRESSES: Western will host public scoping meetings at the Hyde County Senior Center, 103 Iowa Avenue South, Highmore, South Dakota, to provide information on the Project and gather comments on the proposal. Oral or written comments may be provided at the public scoping meetings or mailed or e-mailed to Matt Marsh, Upper Great Plains Regional Office, Western Area Power Administration, P.O. Box 35800, Billings, MT 59107–5800, e-mail *MMarsh@wapa.gov,* telephone (800) 358–3415.

FOR FURTHER INFORMATION CONTACT: For additional information on the proposed Project, the EIS process, or to receive a copy of the Draft EIS when it is published, contact Matt Marsh at the addresses above. For general information on the DOE's NEPA review process, contact Carol M. Borgstrom, Director, Office of NEPA Policy and Compliance, GC–54, U.S. Department of Energy, 1000 Independence Avenue SW., Washington, DC 20585–0119, telephone (202) 586–4600 or (800) 472–2756, facsimile (202) 586–7031.

SUPPLEMENTARY INFORMATION: Western is a Federal power marketing agency within the DOE that markets and delivers Federal wholesale electric power (principally hydroelectric power) to municipalities, rural electric cooperatives, public utilities, irrigation districts, Federal and State agencies, and Native American tribes in 15 western and central States. NextEra's proposed Project would be located within Western's Upper Great Plains Region, which operates in North and South Dakota, most of Montana, and portions of Iowa, Minnesota, and Nebraska. NextEra applied to interconnect their proposed 150-MW Project with Western's existing Fort Thompson Substation in Buffalo County, South Dakota. The proposed wind farm Project would be located entirely on private lands; no State- or Federal-managed land would be affected. The transmission line connecting the proposed wind farm to Fort Thompson Substation would, however, cross lands of the Crow Creek Indian Reservation. There are no designated cooperating agencies at this time, but cooperating agencies could be identified at a later date.

Western will prepare an EIS on the interconnection of the proposed Project in accordance with NEPA (42 U.S.C. 4321–4347); DOE NEPA Implementing Procedures (10 CFR part 1021), and the CEQ regulations for implementing NEPA (40 CFR parts 1500–1508).[1]

Purpose and Need for Agency Action

Western's need for agency action is precipitated by NextEra's application to interconnect with Western's power transmission system. Western needs to consider NextEra's interconnection request under Western's Tariff, which provides for open access to its transmission system through an interconnection if there is available capacity in the transmission system. This EIS will address Western's Federal action of interconnecting NextEra's proposed Project with Fort Thompson Substation, making changes within the substation to physically accomplish the interconnection, and making any necessary system modifications to accommodate the interconnection. Preliminary studies indicate that the power system can accommodate the proposed interconnection without negatively affecting system reliability or power deliveries to existing customers. The transmission system may require network and/or transmission system upgrades as determined in the final studies. Any such upgrades would be funded by NextEra as a condition of the interconnection.

[1] On October 4, 1999, DOE's Assistant Secretary for Environmental, Safety and Health delegated to Western's Administrator the authority to approve EISs for integrating transmission facilities with Western's transmission grid.

Proposed Action

In compliance with the provisions of the Tariff, and considering the environmental impacts of NextEra's proposed Project as identified by the EIS process, Western will consider NextEra's interconnection request. If approved the necessary changes within Fort Thompson Substation would be made to accomplish the interconnection, and power generated by the proposed Project would use Western's transmission system to reach the market. Western will consult with the U.S. Fish and Wildlife Service under Section 7 of the Endangered Species Act and with the South Dakota State Historic Preservation Office under section 106 of the National Historic Preservation Act.

Alternatives

Western must respond to NextEra's proposed Project as it is described in the interconnection application, and make a decision on interconnection based on that application. However, Western will use the information in NextEra's interconnection request to evaluate possible options for transmission line approaches to Fort Thompson Substation. The location of the interconnection bay within the substation, other transmission lines, and any future development plans will all be considered in siting the approach. Under the no action alternative, Western would not approve the interconnection request, nor construct the interconnection facility.

Applicant's Proposed Project

NextEra's proposed Project would consist of up to 100 wind turbine generators with a combined total generating capacity of 150 MW, located within an approximately 15,000-acre site in Hyde County, South Dakota, north of Fort Thompson Substation and Pierre. The turbines would be located in short east-west oriented strings, with the strings widely scattered over an area of roughly 6 by 7 miles in size. Each turbine would be approximately 389 feet tall from tip of blade to base, and 262 feet tall from the ground to the hub. In addition to the turbines, other proposed Project facilities would include all-weather access roads to each turbine location; underground power collection lines linking turbines to the Project collector substation; the Project collector substation; an approximately 25-mile-long high-voltage transmission line linking the collector substation to Western's Fort Thompson Substation; operation and maintenance facilities and yard; Supervisory Control and Data Acquisition equipment and metering equipment; and two or three permanent meteorological towers.

NextEra plans to upgrade the existing East River Electric Cooperative (East River) 69-kilovolt (kV) transmission line that passes the west boundary of its site and continues south into Fort Thompson Substation to provide the necessary transmission link to the substation. NextEra would need to upgrade approximately 25 miles of the existing transmission line to 230-kV to provide a suitable transmission path for their proposed Project.

While Western's Federal action is to consider the interconnection request and the physical interconnection to Western's existing substation, the EIS will also identify and review the environmental impacts of NextEra's proposed Project. NextEra will be responsible for completing necessary coordination with State and local agencies to permit their proposed Project.

NextEra intends to provide renewable energy to local utilities in response to South Dakota's Renewable Energy Portfolio Standards, passed in 2008, which mandate that 10 percent of all electricity consumed in the State be produced from renewable sources by 2015.

Floodplain or Wetland Involvement

Since the proposed Project may involve action in floodplains or wetlands, this NOI also serves as a notice of proposed floodplain or wetland action. The EIS will include a floodplain/wetland assessment and floodplain/wetland statement of findings following DOE regulations for compliance with floodplain and wetlands environmental review (10 CFR part 1022). NextEra intends to avoid disturbance to all wetland areas within the proposed Project area if possible.

Environmental Issues

The location of the proposed Project is in a relatively sparsely populated portion of eastern South Dakota. The area is characterized by extensive agriculture and pasture with scattered farmsteads on section line roads. NextEra has secured leases with willing landowners for its wind generation turbines and related facilities. Available overview information indicates this area has a relatively low probability of substantial natural resources conflicts. NextEra's siting process for the wind turbine strings and associated facilities considered sensitive resources, and the proposed Project was designed to avoid these areas. The EIS will evaluate the level of impact the interconnection and NextEra's proposed Project would have on environmental resources within the 15,000-acre site, which may lead to minor modifications in the proposed Project to further avoid or minimize resource impacts. While no substantive resource conflicts have been identified thus far, the EIS will analyze the potential impacts on potentially affected environmental resources. Wind farm projects are generally known to have visual and noise effects, and may affect birds and bats.

Public Participation

Interested parties are invited to participate in the scoping process to help define the scope, significant resources, and issues to be analyzed in depth, and to eliminate from detailed study issues that are not pertinent. The scoping process will involve all interested agencies (Federal, State, county, and local), Native American tribes, public interest groups, businesses, affected landowners, and individual members of the public.

Western will consult with the Crow Creek Sioux and other potentially affected or interested tribes to jointly evaluate and address the potential effects on cultural resources, traditional cultural properties, or other resources important to the tribes. These nation-to-nation consultations will be conducted in accordance with Executive Order 13175, Consultation and Coordination with Indian Tribal Governments (65 FR 67249), the President's memorandum of April 29, 1994, Government-to-Government Relations with Native American Tribal Governments (59 FR 22951), DOE-specific guidance on tribal interactions, and applicable natural and cultural resources laws and regulations.

A public scoping meeting will be held as described under **DATES** and **ADDRESSES** above. The meeting will be informal, and attendees will be able to speak directly with Western and NextEra representatives about the proposed Project. The public is encouraged to provide information and comments on issues it believes Western should address in the EIS. Comments may be broad in nature or restricted to specific areas of concern. After gathering comments on the scope of the EIS, Western will address those issues raised in the EIS. Comments on the interconnection and NextEra's proposed Project will be accepted at any time during the EIS process, and may be directed to Western as described under **ADDRESSES** above.

Western's EIS process will include the public scoping meetings; consultation and coordination with appropriate Federal, State, county, and local

agencies and tribal governments; involvement with affected landowners; distribution of and public review and comment on the Draft EIS; a formal public hearing or hearings on the Draft EIS; distribution of a published Final EIS; and publication of Western's Record of Decision in the **Federal Register**.

Dated: November 19, 2010.

Timothy J. Meeks,

Administrator.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Western Area Power Administration

[DOE/EIS–0462]

Intent To Prepare an Environmental Impact Statement and To Conduct Scoping Meetings: Interconnection of the Proposed Crowned Ridge Wind Energy Center Project, South Dakota

AGENCY: Western Area Power Administration, DOE.

ACTION: Notice of Intent To Prepare an Environmental Impact Statement and To Conduct Scoping Meetings; Notice of Floodplain and Wetlands Involvement.

SUMMARY: NextEra Energy Resources (NextEra) applied to interconnect its proposed 150-megawatt (MW) Crowned Ridge Wind Energy Center Project (Project) with the Western Area Power Administration's (Western) existing Watertown Substation in Codington County, South Dakota. The proposed Project would be located in Codington and Grant counties, South Dakota. Western will prepare an environmental impact statement (EIS) on the proposal to interconnect the Project in accordance with the National Environmental Policy Act of 1969 (NEPA), U.S. Department of Energy (DOE) NEPA Implementing Procedures, and the Council on Environmental Quality (CEQ) regulations for implementing NEPA.

Western's need for agency action is precipitated by NextEra's application to interconnect with Western's power transmission system. Western needs to consider NextEra's interconnection request under its Open Access Transmission Service Tariff (Tariff). This EIS will address Western's Federal action of interconnecting the proposed Project to Western's transmission system, making changes within Western's existing Watertown Substation to physically connect NextEra's proposed Project, and making any necessary system modifications to accommodate the interconnection. By taking these actions, power generated by NextEra's proposed Project would use Western's transmission system to reach the market.

Portions of NextEra's proposed Project may affect floodplains and wetlands, so this Notice of Intent (NOI) also serves as a notice of proposed floodplain or wetland action in accordance with DOE floodplain and wetland environmental review requirements.

DATES: A public scoping meeting will be held on December 15, 2011, from 5 p.m. to 8 p.m. in Watertown, South Dakota.

The public scoping period starts with the publication of this notice and ends on January 14, 2011. Western will consider all comments on the scope of the EIS received or postmarked by that date. The public is invited to submit comments on the proposed Project at any time during the EIS process.

ADDRESSES: Western will host public scoping meetings at the Watertown Public Library Community Room, 160 6th Street North, Watertown, South Dakota, to provide information on the Project and gather comments on the proposal. Oral or written comments may be provided at the public scoping meetings or mailed or e-mailed to Matt Marsh, Upper Great Plains Regional Office, Western Area Power Administration, P.O. Box 35800, Billings, MT 59107–5800, e-mail *MMarsh@wapa.gov,* telephone (800) 358–3415.

FOR FURTHER INFORMATION CONTACT: For additional information on the proposed Project, the EIS process, or to receive a copy of the Draft EIS when it is published, contact Matt Marsh at the addresses above. For general information on the DOE's NEPA review process, contact Carol M. Borgstrom, Director, Office of NEPA Policy and Compliance, GC–54, U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585–0119, telephone (202) 586–4600 or (800) 472–2756, facsimile (202) 586–7031.

SUPPLEMENTARY INFORMATION: Western is a Federal power marketing agency within the DOE that markets and delivers Federal wholesale electric power (principally hydroelectric power) to municipalities, rural electric cooperatives, public utilities, irrigation districts, Federal and State agencies, and Native American tribes in 15 western and central States. NextEra's proposed Project would be located within Western's Upper Great Plains Region, which operates in North and South Dakota, most of Montana, and portions of Iowa, Minnesota, and Nebraska. NextEra applied to interconnect their proposed 150–MW Project with Western's existing Watertown Substation in Codington County, South Dakota. The proposed wind farm Project would be located entirely on private lands; no State- or Federal-managed land would be affected. There are no designated cooperating agencies at this time, but cooperating agencies could be identified at a later date.

Western will prepare an EIS on the interconnection of the proposed Project in accordance with NEPA (42 U.S.C. 4321–4347); DOE NEPA Implementing Procedures (10 CFR part 1021), and the CEQ regulations for implementing NEPA (40 CFR parts 1500–1508).[1]

Purpose and Need for Agency Action

Western's need for agency action is precipitated by NextEra's application to interconnect with Western's power transmission system. Western needs to consider NextEra's interconnection request under Western's Tariff, which provides for open access to its transmission system through an interconnection if there is available capacity in the transmission system. This EIS will address Western's Federal action of interconnecting NextEra's proposed Project with Watertown Substation, making changes within the substation to physically accomplish the interconnection, and making any necessary system modifications to accommodate the interconnection. Preliminary studies indicate that the power system can accommodate the proposed interconnection without negatively affecting system reliability or power deliveries to existing customers. The transmission system may require network and/or transmission system upgrades as determined in the final studies. Any such upgrades would be funded by NextEra as a condition of the interconnection.

Proposed Action

In compliance with the provisions of the Tariff, and considering the environmental impacts of NextEra's proposed Project as identified by the EIS process, Western will consider NextEra's interconnection request. If approved the necessary changes within Watertown Substation would be made to accomplish the interconnection, and power generated by the proposed Project would use Western's transmission system to reach the

[1] On October 4, 1999, DOE's Assistant Secretary for Environmental, Safety and Health delegated to Western's Administrator the authority to approve EISs for integrating transmission facilities with Western's transmission grid.

market. Western will consult with the U.S. Fish and Wildlife Service under section 7 of the Endangered Species Act and with the South Dakota State Historic Preservation Office under section 106 of the National Historic Preservation Act.

Alternatives

Western must respond to NextEra's proposed Project as it is described in the interconnection application, and make a decision on interconnection based on that application. However, Western will use the information in NextEra's interconnection request to evaluate possible options for transmission line approaches to Watertown Substation. The location of the interconnection bay within the substation, other transmission lines, and any future development plans will all be considered in siting the approach. Under the no action alternative, Western would not approve the interconnection request, nor construct the interconnection facility.

Applicant's Proposed Project

NextEra's proposed Project would consist of up to 100 wind turbine generators with a combined total generating capacity of 150 MW, located within an approximately 20,000-acre site in Codington and Grant counties, northeast of Watertown and east of Interstate 29. The turbines would be located in short east-west or southwest-northeast oriented strings, with the strings widely scattered over an area of roughly 6 by 11 miles in size. Each turbine would be approximately 389 feet tall from tip of blade to base, and 262 feet tall from the ground to the hub. In addition to the turbines, other proposed Project facilities would include all-weather access roads to each turbine location; underground power collection lines linking turbines to the Project collector substation; the Project collector substation; an approximately 15-mile-long high-voltage transmission line linking the collector substation to Western's Watertown Substation; operation and maintenance facilities and yard; Supervisory Control and Data Acquisition equipment and metering equipment; and two or three permanent meteorological towers.

While Western's Federal action is to consider the interconnection request and the physical interconnection to Western's existing substation, the EIS will also identify and review the environmental impacts of NextEra's proposed Project. NextEra will be responsible for completing necessary coordination with State and local agencies to permit their proposed Project.

NextEra intends to provide renewable energy to local utilities in response to South Dakota's Renewable Energy Portfolio Standards, passed in 2008, which mandate that 10 percent of all electricity consumed in the State be produced from renewable sources by 2015.

Floodplain or Wetland Involvement

Floodplains and wetlands are common in this part of South Dakota. Since the proposed Project may involve action in floodplains or wetlands, this NOI also serves as a notice of proposed floodplain or wetland action. The EIS will include a floodplain/wetland assessment and floodplain/wetland statement of findings following DOE regulations for compliance with floodplain and wetlands environmental review (10 CFR part 1022).

Environmental Issues

The location of the proposed Project is in a relatively sparsely populated portion of eastern South Dakota. The area is characterized by extensive agriculture and pasture with scattered farmsteads on section line roads. NextEra has secured leases with willing landowners for its wind generation turbines and related facilities. Available overview information indicates this area has a relatively low probability of substantial natural resources conflicts. NextEra's siting process for the wind turbine strings and associated facilities considered sensitive resources, and the proposed Project was designed to avoid these areas. The EIS will evaluate the level of impact the interconnection and NextEra's proposed Project would have on environmental resources within the 20,000-acre site, which may lead to minor modifications in the proposed Project to further avoid or minimize resource impacts. While no substantive resource conflicts have been identified thus far, the EIS will analyze the potential impacts on potentially affected environmental resources. Wind farm projects are generally known to have visual and noise effects, and may affect birds and bats.

Public Participation

Interested parties are invited to participate in the scoping process to help define the scope, significant resources, and issues to be analyzed in depth, and to eliminate from detailed study issues that are not pertinent. The scoping process will involve all interested agencies (Federal, State, county, and local), Native American tribes, public interest groups, businesses, affected landowners, and individual members of the public.

Western will consult with potentially affected or interested tribes to jointly evaluate and address the potential effects on cultural resources, traditional cultural properties, or other resources important to the tribes. These nation-to-nation consultations will be conducted in accordance with Executive Order 13175, Consultation and Coordination with Indian Tribal Governments (65 FR 67249), the President's memorandum of April 29, 1994, Government-to-Government Relations with Native American Tribal Governments (59 FR 22951), DOE-specific guidance on tribal interactions, and applicable natural and cultural resources laws and regulations.

A public scoping meeting will be held as described under **DATES** and **ADDRESSES** above. The meeting will be informal, and attendees will be able to speak directly with Western and NextEra representatives about the proposed Project. The public is encouraged to provide information and comments on issues it believes Western should address in the EIS. Comments may be broad in nature or restricted to specific areas of concern. After gathering comments on the scope of the EIS, Western will address those issues raised in the EIS. Comments on Western's proposed action and NextEra's proposed Project will be accepted at any time during the EIS process, and may be directed to Western as described under **ADDRESSES** above.

Western's EIS process will include the public scoping meetings; consultation and coordination with appropriate Federal, State, county, and local agencies and tribal governments; involvement with affected landowners; distribution of and public review and comment on the Draft EIS; a formal public hearing or hearings on the Draft EIS; distribution of a published Final EIS; and publication of Western's Record of Decision in the **Federal Register**.

Dated: November 19, 2010.

Timothy J. Meeks,

Administrator.

BILLING CODE 6450–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OAR–2007–0478; FRL–9233–8; EPA ICR No. 1367.09; OMB Control No. 2060–0178]

Agency Information Collection Activities; Proposed Collection; Comment Request; Gasoline Volatility

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), this document announces that EPA is planning to submit a request to renew an existing approved Information Collection Request (ICR) to the Office of Management and Budget (OMB). This ICR is scheduled to expire on May 31, 2011. Before submitting the ICR to OMB for review and approval, EPA is soliciting comments on specific aspects of the proposed information collection as described below.

DATES: Comments must be submitted on or before January 31, 2011.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–HQ–OAR–2007–0478, by one of the following methods:

- *http://www.regulations.gov:* Follow the on-line instructions for submitting comments.
- *E-mail: a-and-r-docket@epa.gov.*
- *Fax:* (202) 566–1741.
- *Mail:* Air and Radiation Docket, Docket ID No. EPA–HQ–OAR–2007–0478, Environmental Protection Agency, Mailcode: 6102T, 1200 Pennsylvania Avenue, NW., Washington, DC 20460.
- *Hand Delivery:* EPA Docket Center, Public Reading Room, EPA West Building, Room 3334, 1301 Constitution Avenue, NW., Washington, DC 20460. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–HQ–OAR–2007–0478. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or e-mail. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov* your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm.*

FOR FURTHER INFORMATION CONTACT: James W. Caldwell, Office of Transportation and Air Quality, Mailcode: 6406J, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460; telephone number: (202) 343–9303; fax number: (202) 343–2802; e-mail address: *caldwell.jim@epa.gov.*

SUPPLEMENTARY INFORMATION:

How can I access the docket and/or submit comments?

EPA has established a public docket for this ICR under Docket ID No. EPA–HQ–OAR–2007–0478, which is available for online viewing at *http://www.regulations.gov*, or in-person viewing at the Air and Radiation Docket in the EPA Docket Center (EPA/DC), EPA West, Room B102, 1301 Constitution Avenue, NW., Washington, DC. The EPA/DC Public Reading Room is open from 8 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Reading Room is 202–566–1744, and the telephone number for the Air and Radiation Docket is 202–566–1742.

Use *http://www.regulations.gov* to obtain a copy of the draft collection of information, submit or view public comments, access the index listing of the contents of the docket, and to access those documents in the public docket that are available electronically. Once in the system, select "search," then key in the docket ID number identified in this document.

What information is EPA particularly interested in?

Pursuant to section 3506(c)(2)(A) of the PRA, EPA specifically solicits comments and information to enable it to:

(i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(ii) Evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(iii) Enhance the quality, utility, and clarity of the information to be collected; and

(iv) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses. In particular, EPA is requesting comments from very small businesses (those that employ less than 25) on examples of specific additional efforts that EPA could make to reduce the paperwork burden for very small businesses affected by this collection.

What should I consider when I prepare my comments for EPA?

You may find the following suggestions helpful for preparing your comments:

1. Explain your views as clearly as possible and provide specific examples.

2. Describe any assumptions that you used.

3. Provide copies of any technical information and/or data you used that support your views.

4. If you estimate potential burden or costs, explain how you arrived at the estimate that you provide.

5. Offer alternative ways to improve the collection activity.

6. Make sure to submit your comments by the deadline identified under **DATES.**

7. To ensure proper receipt by EPA, be sure to identify the docket ID number assigned to this action in the subject line on the first page of your response. You may also provide the name, date, and **Federal Register** citation.

What information collection activity or ICR does this apply to?

Affected entities: Entities potentially affected by this action are those who produce or import gasoline containing

ethanol, or who wish to obtain a testing exemption.

Title: Regulation of Fuels and Fuel Additives: Gasoline Volatility, Reporting Requirements for Parties Which Produce of Import Gasoline Containing Ethanol, and Reporting Requirements for Parties Seeking a Testing Exemption (40 CFR 80.27) .

ICR numbers: EPA ICR No. 1367.09, OMB Control No. 2060–0178.

ICR status: This ICR is currently scheduled to expire on May 31, 2011. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: Gasoline volatility, as measured by Reid Vapor Pressure (RVP) in pounds per square inch (psi), is controlled in the spring and summer in order to minimize evaporative hydrocarbon emissions from motor vehicles. RVP is subject to a Federal standard of 7.8 psi or 9.0 psi, depending on location. The addition of ethanol to gasoline increases the RVP by about 1 psi. Gasoline that contains 9 volume percent to 10 volume percent ethanol is subject to a standard that is 1.0 psi greater. As an aid to industry compliance and EPA enforcement, the product transfer document, which is prepared by the producer or importer and which accompanies a shipment of gasoline containing ethanol, is required by regulation to contain a legible and conspicuous statement that the gasoline contains ethanol and the percentage concentration of ethanol. This is intended to deter the mixing within the distribution system, particularly in retail storage tanks, of gasoline with ethanol in the 9 percent to 10 percent range with gasoline which does not contain ethanol in that range. Such mixing would likely result in a gasoline which is in violation of its RVP standard. Also, a party wishing a testing exemption for research on gasoline that is not in compliance with the applicable volatility standard must submit certain information to EPA. EPA has proposed additional PTD requirements for gasoline containing ethanol at 75 FR 68044 (November 4, 2010). Those requirements will be addressed in a separate ICR.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 1 second per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

The ICR provides a detailed explanation of the Agency's estimate, which is only briefly summarized here:

Estimated total number of potential respondents: 2,000.

Frequency of response: On occasion.

Estimated total average number of responses for each respondent: 22,000.

Estimated total annual burden hours: 12,330.

Estimated total annual costs: $1.4 million. This includes an estimated burden cost of $1.4 million and an estimated cost of $20 for capital investment or maintenance and operational costs.

Are there changes in the estimates from the last approval?

There is a decrease of 1,667 hours in the total estimated annual respondent burden compared with that identified in the ICR currently approved by OMB. This decrease reflects EPA's updating of burden estimates. The decrease is due to an increase in the use of computer-generated product transfer documents.

What is the next step in the process for this ICR?

EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval pursuant to 5 CFR 1320.12. At that time, EPA will issue another **Federal Register** notice pursuant to 5 CFR 1320.5(a)(1)(iv) to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB. If you have any questions about this ICR or the approval process, please contact the technical person listed under **FOR FURTHER INFORMATION CONTACT**.

Dated: November 23, 2010.

Margo Tsirigotis Oge,

Director, Office of Transportation and Air Quality.

Guidance on Planning, Implementing, Maintaining, and Enforcing Institutional Controls at Contaminated Sites

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability.

SUMMARY: EPA is interested in soliciting individual stakeholder input regarding the issues addressed in the EPA interim final guidance, titled *Institutional Controls: A Guide to Planning, Implementing, Maintaining, and Enforcing Institutional Controls at Contaminated Sites.* The Agency will consider the information gathered from this notice and other sources before finalizing this guidance.

DATES: Comments must be received on or before January 14, 2011, 45 days after publication in the **Federal Register**.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–HQ–SFUND–2010–0894 by one of the following methods:

- *http://www.regulations.gov:* Follow the on-line instructions for submitting comments.
- *E-mail: superfund.docket@epa.gov*
- *Fax:* (202) 566–9744
- *Mail:* U.S. Environmental Protection Agency; EPA Docket Center, Superfund Docket, Mail Code 28221T; 1200 Pennsylvania Avenue, NW., Washington, DC 20460
- *Hand Delivery:* EPA Docket Center—Public Reading Room; EPA West Building, Room 3334; 1301 Constitution Avenue, NW., Washington, DC 20004. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–HQ–SFUND–2010–0894. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any

personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or *superfund.docket@epa.gov.* The *http://www.regulations.gov* website is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov* your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm.*

Docket: All documents in the docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *http://www.regulations.gov* or in hard copy at the EPA Docket Center—Public Reading Room, EPA/DC, EPA West, Room 3334; 1301 Constitution Ave., NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the Superfund docket is (202) 566–0276.

FOR FURTHER INFORMATION CONTACT: Chip Love, phone: (703) 603–0695, e-mail: *love.chip@epa.gov,* Construction and Post Construction Management Branch, Assessment and Remediation Division, Office of Superfund Remediation and Technology Innovation (mail code 5204P), U.S. Environmental Protection Agency, 1200 Pennsylvania Avenue, NW., Washington, DC 20460.

SUPPLEMENTARY INFORMATION: EPA's interim final guidance on *Institutional Controls: A Guide to Planning, Implementing, Maintaining, and Enforcing Institutional Controls at Contaminated Sites* addresses some of the common issues that may be encountered during the cleanup process and provides recommendations on how ICs can complement other response actions (such as engineered response action components) at a site. This interim final guidance also provides an overview of EPA's policy regarding the roles and responsibilities of the parties involved in the various aspects of planning, implementing, maintaining, and enforcing institutional controls. The guidance is available at *http://www.regulations.gov.* This guidance does not represent a regulation, and is not subject to the formal provisions of the Administrative Procedures Act. However, EPA recognizes the potential importance of this guidance to its Federal, state, local, and tribal partners, to the regulated community, and to the public, and therefore through this Federal Register notice seeks public input on the topics addressed in this interim final guidance and its implementation. This public input opportunity will be available until January 14, 2011.

EPA intends to evaluate whether any changes to the interim final guidance are appropriate and expects to issue a final version of this guidance. For purposes of this Federal Register notice, EPA in particular seeks input on the following:

- Are there ways EPA can better evaluate the capacity, willingness, and financial assurance of state, tribal and local governments to assist with ICs and engineering controls when such controls are necessary at a site?
- What potential barriers exist with respect to state, local, and tribal government involvement with ICs and what tools or possible solutions could EPA promote to improve the awareness of and involvement in IC activities?
- How can site managers better engage and involve affected community stakeholders and local land use decision-makers concerning ICs that may be needed and relied upon to complement other response actions (i.e., engineered response action components) at cleanup sites?
- How can information concerning ICs and the underlying land and/or resource use restrictions be made more available to local land use decision-makers?
- How can EPA better identify and account for the full life cycle costs of ICs?

EPA intends to accept input on the interim final guidance until January 14, 2011. EPA also intends to fully consider all public input in evaluating whether changes to the interim final guidance are appropriate, and to issue a final version of this guidance.

Dated: November 23, 2010.

Mathy Stanislaus,

Assistant Administrator, Office of Solid Waste and Emergency Response.

[FR Doc. 2010–30111 Filed 11–29–10; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9234–1]

Proposed Consent Decree, Clean Air Act Citizen Suit

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of Proposed Consent Decree; Request for Public Comment.

SUMMARY: In accordance with section 113(g) of the Clean Air Act, as amended ("Act"), 42 U.S.C. 7413(g), notice is hereby given of a proposed consent decree, to address a lawsuit filed by WildEarth Guardians: *WildEarth Guardians* v. *Jackson,* Civil Action No. 1:10–cv–01672–RPM (D. CO). On or about July 14, 2010, WildEarth Guardians filed a complaint alleging that EPA Administrator Jackson failed to fulfill a mandatory duty to respond to an administrative petition to object to issuance of air permit No. 96OPMR129 to the Public Service Company of Colorado doing business as Xcel Energy to operate the Pawnee coal-fired power plant in Morgan County, Colorado (the "Pawnee Petition") within the 60 days specified in section 505(b)(2) of the Clean Air Act and asking the court to enter judgment: (i) Declaring that EPA has violated the Clean Air Act by failing to grant or deny the administrative petition; and, (ii) Ordering EPA to grant or deny the administrative petition in accordance with an expeditious schedule prescribed by the Court. On September 1, 2010, WildEarth Guardians filed a first amended complaint alleging that EPA Administrator Jackson failed to fulfill a mandatory duty to respond to administrative petitions to object to the issuance of air permit No. 96OPAD137 to Xcel Energy to operate the Cherokee

coal-fired power plant in Denver, Colorado (the "Cherokee Petition") and air permit No. 960PBO131 to Xcel Energy to operate the Valmont coal-fired power plant in Boulder County, Colorado (the "Valmont Petition"). Under the terms of the proposed consent decree, EPA agrees to: (i) Sign a response to the Pawnee Petition no later than June 30, 2011; (ii) sign a response to the Valmont Petition no later than September 30, 2011; and, (iii) sign a response to the Cherokee Petition no later than October 31, 2011.

DATES: Written comments on the proposed consent decree must be received by *December 30, 2010.*

ADDRESSES: Submit your comments, identified by Docket ID number EPA–HQ–OGC–2010–0984, online at *http://www.regulations.gov* (EPA's preferred method); by e-mail to *oei.docket@epa.gov;* by mail to EPA Docket Center, Environmental Protection Agency, Mailcode: 2822T, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001; or by hand delivery or courier to EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave., NW., Washington, DC, between 8:30 a.m. and 4:30 p.m. Monday through Friday, excluding legal holidays. Comments on a disk or CD–ROM should be formatted in Word or ASCII file, avoiding the use of special characters and any form of encryption, and may be mailed to the mailing address above.

FOR FURTHER INFORMATION CONTACT: Richard H. Vetter, Air and Radiation Law Office (2344A), Office of General Counsel, U.S. Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460; *telephone:* (919) 541–2127; fax number (919) 541–4991; *e-mail address: vetter.rick@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Additional Information About the Proposed Consent Decree

On or about July 14, 2010, WildEarth Guardians, a non-profit conservation organization, filed a complaint in the United States District Court for the District of Colorado (Civil Action No. 1:10-cv-01672–RPM). In the complaint, WildEarth Guardians alleges that EPA has failed to fulfill a mandatory duty to respond to an administrative petition to object to issuance of air permit No. 96OPMR129 to the Colorado Public Service Company, doing business as Xcel Energy for the Pawnee coal-fired power plant in Morgan County, Colorado (the "Pawnee Petition") within the 60 days specified in section 505(b)(2) of the Clean Air Act. On September 1, 2010, WildEarth Guardian filed a first amended complaint alleging that EPA Administrator Jackson failed to fulfill a mandatory duty to respond to administrative petitions to object to the issuance of air permit No. 960PAD137 to Xcel Energy to operate the Cherokee coal-fired power plant in Denver, Colorado (the "Cherokee Petition") and air permit No. 960PBO131 to Xcel Energy to operate the Valmont coal-fired power plant in Boulder County, Colorado (the "Valmont Petition") within the 60 days specified in section 505(b)(2) of the Clean Air Act.

The EPA and WildEarth Guardians chose to enter into a proposed consent decree to avoid protracted and costly litigation and to preserve judicial resources. Under the terms of the proposed consent decree, EPA is to: (i) Sign a response to the Pawnee Petition no later than June 30, 2011; (ii) sign a response to the Valmont Petition no later than September 30, 2011; and, (iii) sign a response to the Cherokee Petition no later than October 31, 2011.

For a period of thirty (30) days following the date of publication of this notice, the Agency will receive written comments relating to the proposed consent decree from persons who were not named as parties or intervenors to the litigation in question. EPA or the Department of Justice may withdraw or withhold consent to the proposed consent decree if the comments disclose facts or considerations that indicate that such consent is inappropriate, improper, inadequate, or inconsistent with the requirements of the Clean Air Act. Unless EPA or the Department of Justice determines that consent to the consent decree should be withdrawn, the terms of the decree will be affirmed.

II. Additional Information About Commenting On the Proposed Consent Decree

A. How can I get a copy of the consent decree?

Direct your comments to the official public docket for this action under Docket ID No. EPA–HQ–OGC–2010–0984 which contains a copy of the consent decree. The official public docket is available for public viewing at the Office of Environmental Information (OEI) Docket in the EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave., NW., Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OEI Docket is (202) 566–1752.

An electronic version of the public docket is available through *http://www.regulations.gov.* You may use the *http://www.regulations.gov* to submit or view public comments, access the index listing of the contents of the official public docket, and to access those documents in the public docket that are available electronically. Once in the system, key in the appropriate docket identification number, then select "search."

It is important to note that EPA's policy is that public comments, whether submitted electronically or on paper, will be made available for public viewing online at *http://www.regulations.gov* without change, unless the comment contains copyrighted material, CBI, or other information whose disclosure is restricted by statute. Information claimed as CBI and other information whose disclosure is restricted by statute is not included in the official public docket or in the electronic public docket. EPA's policy is that copyrighted material, including copyrighted material contained in a public comment, will not be placed in EPA's electronic public docket but will be available only in printed, paper form in the official public docket. Although not all docket materials may be available electronically, you may still access any of the publicly available docket materials through the EPA Docket Center.

B. How and to whom do I submit comments?

You may submit comments as provided in the **ADDRESSES** section. Please ensure that your comments are submitted within the specified comment period. Comments received after the close of the comment period will be marked "late." EPA is not required to consider these late comments.

If you submit an electronic comment, EPA recommends that you include your name, mailing address, and an e-mail address or other contact information in the body of your comment and with any disk or CD–ROM you submit. This ensures that you can be identified as the submitter of the comment and allows EPA to contact you in case EPA cannot read your comment due to technical difficulties or needs further information on the substance of your comment. Any identifying or contact information provided in the body of a comment will be included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification,

EPA may not be able to consider your comment.

Use of the *http://www.regulations.gov* Web site to submit comments to EPA electronically is EPA's preferred method for receiving comments. The electronic public docket system is an "anonymous access" system, which means EPA will not know your identity, e-mail address, or other contact information unless you provide it in the body of your comment. In contrast to EPA's electronic public docket, EPA's electronic mail (e-mail) system is not an "anonymous access" system. If you send an e-mail comment directly to the Docket without going through *http://www.regulations.gov,* your e-mail address is automatically captured and included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket.

Dated: November 23, 2010.

Richard B. Ossias,

Associate General Counsel.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9234–5]

Proposed Consent Decree, Clean Air Act Citizen Suit

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of proposed consent decree; request for public comment.

SUMMARY: In accordance with section 113(g) of the Clean Air Act, as amended ("CAA" or the "Act"), 42 U.S.C. 7413(g), notice is hereby given of a proposed consent decree to address a lawsuit filed by Sierra Club and Kentucky Environmental Foundation (collectively "Plaintiffs") in the United States District Court for the District of Columbia: *Sierra Club, et al.* v. *Jackson,* No. 10–cv–00889–CKK (D. DC). On May 26, 2010, Plaintiffs filed a complaint alleging that EPA failed to perform nondiscretionary duties, under section 110(k)(2) of the CAA, 42 U.S.C. 7410(k)(2), to take action on certain State Implementation Plan ("SIP") submittals by the State of Kentucky. The proposed consent decree establishes deadlines for EPA to take action.

DATES: Written comments on the proposed consent decree must be received by *December 30, 2010.*

ADDRESSES: Submit your comments, identified by Docket ID number EPA–HQ–OGC–2010–0956, online at *http://www.regulations.gov* (EPA's preferred method); by e-mail to *oei.docket@epa.gov;* by mail to EPA Docket Center, Environmental Protection Agency, *Mailcode:* 2822T, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001; or by hand delivery or courier to EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave., NW., Washington, DC, between 8:30 a.m. and 4:30 p.m. Monday through Friday, excluding legal holidays. Comments on a disk or CD–ROM should be formatted in Word or ASCII file, avoiding the use of special characters and any form of encryption, and may be mailed to the mailing address above.

FOR FURTHER INFORMATION CONTACT: Winifred Okoye, Air and Radiation Law Office (2344A), Office of General Counsel, U.S. Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460; telephone: (202) 564–5446; fax number (202) 564–5603; e-mail address: *okoye.winifred@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Additional Information About the Proposed Consent Decree

The proposed consent decree would resolve a lawsuit seeking to compel action by the Administrator to take final action under section 110(k) of the CAA on certain Kentucky SIP submissions. The proposed consent decree requires EPA, on or before April 15, 2011, to sign and thereafter forward within fifteen (15) business days to the Office of Federal Register for review and publication a notice of final action on the Commonwealth of Kentucky's May 27, 2008 SIP submittals titled as follows: (a) Ozone maintenance plan SIP revision for a portion of Greenup County located within the Kentucky portion of the Huntington-Ashland 8-hour ozone 110(a)(1) maintenance area; (b) the Edmonson County 8-hour ozone 110(a)(1) maintenance area; and (c) the Lexington 8-hour ozone 110(a)(1) maintenance area (Fayette and Scott Counties).

The proposed consent decree also requires EPA, on or before March 15, 2012, to sign and thereafter forward within fifteen (15) days to the Office of Federal Register for review and publication a notice of final action on the Commonwealth of Kentucky's June 25, 2008 SIP submittal of a Regional Haze State Implementation Plan.

For a period of thirty (30) days following the date of publication of this notice, the Agency will accept written comments relating to the proposed consent decree from persons who were not named as parties or intervenors to the litigation in question. EPA or the Department of Justice may withdraw or withhold consent to the proposed consent decree if the comments disclose facts or considerations that indicate that such consent is inappropriate, improper, inadequate, or inconsistent with the requirements of the Act. Unless EPA or the Department of Justice determines that consent to this consent decree should be withdrawn, the terms of the decree will be affirmed.

II. Additional Information About Commenting on the Proposed Consent Decree

A. How can I get a copy of the consent decree?

The official public docket for this action (identified by Docket ID No. EPA–HQ–OGC–2010–0956) contains a copy of the proposed consent decree. The official public docket is available for public viewing at the Office of Environmental Information (OEI) Docket in the EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave., NW., Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OEI Docket is (202) 566–1752.

An electronic version of the public docket is available through *http://www.regulations.gov.* You may use *http://www.regulations.gov* to submit or view public comments, access the index listing of the contents of the official public docket, and to access those documents in the public docket that are available electronically. Once in the system, key in the appropriate docket identification number then select "search".

It is important to note that EPA's policy is that public comments, whether submitted electronically or in paper, will be made available for public viewing online at *http://www.regulations.gov* without change, unless the comment contains copyrighted material, CBI, or other information whose disclosure is restricted by statute. Information claimed as CBI and other information whose disclosure is restricted by statute is not included in the official public docket or in the electronic public docket. EPA's policy is that copyrighted material, including copyrighted material contained in a public comment, will not be placed in EPA's electronic public docket but will be available only in printed, paper form in the official public docket. Although not all docket materials may be available

electronically, you may still access any of the publicly available docket materials through the EPA Docket Center.

B. How and to whom do I submit comments?

You may submit comments as provided in the **ADDRESSES** section. Please ensure that your comments are submitted within the specified comment period. Comments received after the close of the comment period will be marked "late." EPA is not required to consider these late comments.

If you submit an electronic comment, EPA recommends that you include your name, mailing address, and an e-mail address or other contact information in the body of your comment and with any disk or CD–ROM you submit. This ensures that you can be identified as the submitter of the comment and allows EPA to contact you in case EPA cannot read your comment due to technical difficulties or needs further information on the substance of your comment. Any identifying or contact information provided in the body of a comment will be included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment.

Use of the http://*www.regulations.gov* website to submit comments to EPA electronically is EPA's preferred method for receiving comments. The electronic public docket system is an "anonymous access" system, which means EPA will not know your identity, e-mail address, or other contact information unless you provide it in the body of your comment. In contrast to EPA's electronic public docket, EPA's electronic mail (e-mail) system is not an "anonymous access" system. If you send an e-mail comment directly to the Docket without going through *http://www.regulations.gov,* your e-mail address is automatically captured and included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Submitted for Review and Approval to the Office of Management and Budget (OMB), Comments Requested

November 15, 2010.

Summary: As part of its continuing effort to reduce paperwork burden and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the Federal Communications Commission invites the general public and other Federal agencies to comment on the following information collection. Comments are requested concerning: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and (e) ways to further reduce the information collection burden for small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a valid control number.

Dates: Written Paperwork Reduction Act (PRA) comments should be submitted on or before December 30, 2010. If you anticipate that you will be submitting PRA comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the FCC contact listed below as soon as possible.

Addresses: Direct all PRA comments to Nicholas A. Fraser, Office of Management and Budget, via fax at 202–395–5167 or the Internet at *Nicholas_A._Fraser@omb.eop.gov*; and to the Federal Communications Commission's PRA mailbox (e-mail address: *PRA@fcc.gov*). Include in the e-mail the OMB control number of the collection as shown in the **SUPPLEMENTARY INFORMATION** section below, or if there is no OMB control number, include the Title as shown in the **SUPPLEMENTARY INFORMATION** section. If you are unable to submit your comments by email, contact the person listed below to make alternate arrangements.

For Further Information Contact: For additional information, contact Judith B. Herman at 202–418–0214 or via the Internet at *Judith-b.herman@fcc.gov*.

Supplementary Information:

OMB Control Number: 3060–1092.

Title: Interim Procedures for Filing Applications Seeking Approval for Designated Entity Reportable Eligibility Events and Annual Reports.

Form Nos.: FCC Form 609–T and 611–T.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit, not-for-profit institutions, and state, local or tribal government.

Number of Respondents: 1,100 respondents; 2,750 responses.

Estimated Time per Response: FCC Form 609–T is estimated at 4 hours per response; FCC Form 611–T is estimated at 6 hours per response.

Frequency of Response: Annual and on occasion reporting requirement and third party disclosure requirement.

Obligation To Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 4(i), 308(b), 309(j)(3) and 309(j)(4).

Total Annual Burden: 7,288 hours.

Total Annual Cost: $1,494,625.

Privacy Act Impact Assessment: N/A.

Nature and Extent of Confidentiality: Some respondents may assert that some data and/or agreements that they are filing in response to these information collection requirements include confidential information or trade secrets. The Commission has long established procedures for accepting confidential and market-sensitive documents and information via the Commission's Universal Licensing System (ULS). These long standing procedures will be followed to ensure that no confidential materials or trade secrets are disclosed.

Most of the information collected will be made available for public inspection. Applicants may seek confidential treatment pursuant to 47 CFR 0.459 of the Commission's rules governing requests to withhold from public inspection information submitted to the Commission. The ULS allows for information to be filed confidentially. Confidentially filed materials will only be accessible to Commission employees who have been issued passwords.

Needs and Uses: The Commission will submit this expiring information collection (IC) to the OMB during this comment period. The Commission is reporting no change in its burden hour or annual cost estimates. The

Commission is seeking OMB approval for an extension (there are no change to the reporting requirements).

FCC Form 609–T is used by Designated Entities (DEs) to request prior Commission approval pursuant to Section 1.2114 of the Commission's rules for any reportable eligibility event. The data collected on the form is used by the FCC to determine whether the public interest would be served by the approval of the reportable eligibility event.

FCC Form 611–T is used by DE licensees to file an annual report, pursuant to section 1.2110(n) of the Commission's rules, related to eligibility for designated entity benefits.

The information collected will be used to ensure that only legitimate small businesses reap the benefits of the Commission's designated entity program. Further, this information will assist the Commission in preventing companies from circumventing the objectives of the designated entity eligibility rules by allowing us to review: (1) The FCC Form 609–T applications seeking approval for "reportable eligibility events" and (2) the FCC Form 611–T annual reports to ensure that licensees receiving designated entity benefits are in compliance with the Commission's policies and rules.

Marlene H. Dortch,

Secretary.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Submitted for Review and Approval to the Office of Management and Budget (OMB), Comments Requested

November 9, 2010.

SUMMARY: As part of its continuing effort to reduce paperwork burden and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the Federal Communications Commission invites the general public and other Federal agencies to comment on the following information collection. Comments are requested concerning: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and (e) ways to further reduce the information collection burden for small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a valid control number.

DATES: Written Paperwork Reduction Act (PRA) comments should be submitted on or before December 30, 2010. If you anticipate that you will be submitting PRA comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the FCC contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicholas A. Fraser, Office of Management and Budget, via fax at 202–395–5167 or the Internet at *Nicholas_A._Fraser@omb.eop.gov;* and to the Federal Communications Commission's PRA mailbox (e-mail address: *PRA@fcc.gov*). Include in the e-mail the OMB control number of the collection as shown in the **SUPPLEMENTARY INFORMATION** section below, or if there is no OMB control number, include the Title as shown in the **SUPPLEMENTARY INFORMATION** section. If you are unable to submit your comments by e-mail, contact the person listed below to make alternate arrangements.

FOR FURTHER INFORMATION CONTACT: For additional information, contact Judith B. Herman at 202–418–0214 or via the Internet at *Judith-b.herman@fcc.gov.*

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0984.

Title: Section 90.35(b)(2), Industrial/Business Pool and Section 90.175(b)(1), Frequency Coordinator Requirements.

Form No.: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit and state, local or tribal government.

Number of Respondents: 7,341 respondents; 7,341 responses.

Estimated Time per Response: 1 hour.

Frequency of Response: One-time reporting requirement and third party disclosure requirement.

Obligation To Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 154(i), 161, 303(g), 303(r), and 332(c)(7).

Total Annual Burden: 7,341 hours.

Total Annual Cost: N/A.

Privacy Act Impact Assessment: N/A.

Nature and Extent of Confidentiality: There is no need for confidentiality.

Needs and Uses: The Commission will submit this expiring information collection (IC) to the OMB during this comment period. The Commission is reporting a 392 hour increase in burden since the last time this was submitted to OMB. The increase in burden is now adjusted due to 392 additional respondents.

Sections 90.35 and 90.175 require third party disclosures by applicants proposing to operate a land mobile radio station. If they have service contours that overlap an existing land mobile station they are required to obtain written concurrence of the frequency coordinator associated with the industry for which the existing station license was issued, or the written concurrence of the licensee of the existing station.

The requirement will be used by Commission personnel in evaluating the applicant's need for such frequencies and to minimize the interference potential to other stations operating on the proposed frequencies.

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

Public Safety and Homeland Security Bureau; Federal Advisory Committee Act; Communications Security, Reliability, and Interoperability Council

AGENCY: Federal Communications Commission.

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, this notice advises interested persons that the Federal Communications Commission's (FCC) Communications Security, Reliability, and Interoperability Council (CSRIC) will hold its fourth meeting on December 13, 2010, at 9 a.m. in the Commission Meeting Room of the Federal Communications Commission, Room TW–C305, 445 12th Street, SW., Washington, DC 20554.

DATES: December 13, 2010.

ADDRESSES: Federal Communications Commission, Room TW–C305

(Commission Meeting Room), 445 12th Street, SW., Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Jeffery Goldthorp, Designated Federal Officer of the FCC's CSRIC, (202) 418–1096 (voice) or *jeffery.goldthorp@fcc.gov* (e-mail); or Lauren Kravetz, Deputy Designated Federal Officer of the FCC's CSRIC, 202–418–7944 (voice) or *Lauren.kravetz@fcc.gov* (e-mail).

SUPPLEMENTARY INFORMATION: The CSRIC is a Federal Advisory Committee that provides recommendations to the FCC regarding best practices and actions the FCC can take to ensure optimal security, reliability, and interoperability of communications systems. On March 19, 2009, the FCC, pursuant to the Federal Advisory Committee Act, renewed the charter for the CSRIC for a period of two years, through March 18, 2011.

Members of the various working groups will report to the Council on conclusions and recommendations reached, or progress made thereto, with respect to the issues that are the focus of the group. Topics likely to be covered at this meeting include: Cybersecurity best practices, ISP network protection practices, transition to NG9–1–1, technical options for E9–1–1 location accuracy, priority service requirements for pandemic planning, and implementation of best practices. CSRIC may take action on recommendations presented.

Members of the general public may attend the meeting. The FCC will attempt to accommodate as many people as possible; however, admittance will be limited to seating availability. The Commission will provide audio and/or video coverage of the meeting over the Internet from the FCC's Web page at *http://www.fcc.gov/live.* The public may submit written comments before the meeting to Jeffery Goldthorp, the FCC's Designated Federal Officer for the CSRIC by e-mail to *Jeffery.goldthorp@fcc.gov* or U.S. Postal Service Mail to Jeffery Goldthorp, Associate Chief for Cybersecurity and Communications Reliability Public Safety and Homeland Security Bureau, Federal Communications Commission, 445 12th Street, SW., Room 7–A325, Washington, DC 20554.

Open captioning will be provided for this event. Other reasonable accommodations for people with disabilities are available upon request. Requests for such accommodations should be submitted via e-mail to *fcc504@fcc.gov* or by calling the Consumer & Governmental Affairs 418–0432 (TTY). Such requests should include a detailed description of the accommodation needed. In addition, please include a way the FCC can contact you if it needs more information. Please allow at least five days advance notice; last minute requests will be accepted, but may be impossible to fill.

Additional information regarding the CSRIC can be found at: *http://www.fcc.gov/pshs/advisory/csric/.*

Federal Communications Commission.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

[CC Docket No. 92–237; DA 10–2238]

Next Meeting of the North American Numbering Council

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: The Commission released a public notice announcing the meeting and agenda of the North American Numbering Council (NANC). The intended effect of this action is to make the public aware of the NANC's next meeting and agenda.

DATES: Thursday, December 16, 2010, 9:30 a.m.

ADDRESSES: Requests to make an oral statement or provide written comments to the NANC should be sent to Deborah Blue, Competition Policy Division, Wireline Competition Bureau, Federal Communications Commission, Portals II, 445 Twelfth Street, SW., Room 5–C162, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Deborah Blue, Special Assistant to the Designated Federal Officer (DFO) at (202) 418–1466 or *Deborah.Blue@fcc.gov.* The fax number is: (202) 418–1413. The TTY number is: (202) 418–0484.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's document in CC Docket No. 92–237, DA 10–2238 released November 24, 2010. The complete text in this document is available for public inspection and copying during normal business hours in the FCC Reference Information Center, Portals II, 445 12th Street, SW., Room CY–A257, Washington, DC 20554. The document my also be purchased from the Commission's duplicating contractor, Best Copy and Printing, Inc., 445 12th Street, SW., Room CY–B402, Washington, DC 20554, telephone (800) 378–3160 or (202) 863–2893, facsimile (202) 863–2898, or via the Internet at *http://www.bcpiweb.com.* It is available on the Commission's Web site at *http://www.fcc.gov.*

The North American Numbering Council (NANC) has scheduled a meeting to be held Thursday, December 16, 2010, from 9:30 a.m. until 5 p.m. The meeting will be held at the Federal Communications Commission, Portals II, 445 Twelfth Street, SW., Room TW–C305, Washington, DC. This meeting is open to members of the general public. The FCC will attempt to accommodate as many participants as possible. The public may submit written statements to the NANC, which must be received two business days before the meeting. In addition, oral statements at the meeting by parties or entities not represented on the NANC will be permitted to the extent time permits. Such statements will be limited to five minutes in length by any one party or entity, and requests to make an oral statement must be received two business days before the meeting. People with Disabilities: To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an e-mail to *fcc504@fcc.gov* or call the Consumer and Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty). Reasonable accommodations for people with disabilities are available upon request. Include a description of the accommodation you will need, including as much detail as you can. Also include a way we can contact you if we need more information. Please allow at least five days advance notice; last minute requests will be accepted, but may be impossible to fill.

Proposed Agenda: Thursday, December 16, 2010, 9:30 a.m.*

1. Announcements and Recent News
2. Approval of Transcript
   —Meeting of October 22, 2010
3. Report of the North American Numbering Plan Administrator (NANPA)
4. Report of the National Thousands Block Pooling Administrator (PA)
5. Report of the Numbering Oversight Working Group (NOWG)
6. Report of the North American Numbering Plan Billing and Collection (NANP B&C) Agent
7. Report of the Billing and Collection Working Group (B&C WG)
8. Report of the North American Portability Management LLC (NAPM LLC)
   —Process for Procurement of Local Number Portability Administration Contract

9. Report of the Local Number Portability Administration (LNPA) Working Group
10. Report of the Telcordia Dispute Resolution Team: Telcordia Appeal
11. Status of the Industry Numbering Committee (INC) activities
12. Report of the Future of Numbering Working Group (FoN WG)
13. Summary of Action Items
14. Public Comments and Participation (5 minutes per speaker)
15. Other Business

Adjourn no later than 5 p.m.

* The Agenda may be modified at the discretion of the NANC Chairman with the approval of the DFO.

Federal Communications Commission.

Marilyn Jones,

Attorney, Wireline Competition Bureau.

BILLING CODE 6712–01–P

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than December 13, 2010.

A. Federal Reserve Bank of San Francisco (Kenneth Binning, Vice President, Applications and Enforcement) 101 Market Street, San Francisco, California 94105–1579:

1. *Marc Jonathan Foulkrod,* Moorpark, California; to acquire additional voting shares of Mission Valley Bancorp, Sun Valley, California, and thereby indirectly acquire shares of Mission Valley Bank, Sun Valley, California.

Board of Governors of the Federal Reserve System, November 23, 2010.

Robert deV. Frierson,

Deputy Secretary of the Board.

[FR Doc. 2010–29998 Filed 11–29–10; 8:45 am]

BILLING CODE 6210–01–P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than December 23, 2010.

A. Federal Reserve Bank of New York (Ivan Hurwitz, Vice President), 33 Liberty Street, New York, New York 10045–0001:

1. Chemung Financial Corporation, Elmira, New York; to acquire and thereby merge with Fort Orange Financial Corp., and thereby indirectly acquire Capital Bank & Trust Company, both in Albany, New York.

Board of Governors of the Federal Reserve System, November 24, 2010.

Robert deV. Frierson,

Deputy Secretary of the Board.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[ATSDR–268]

Availability of Final Toxicological Profiles

AGENCY: Agency for Toxic Substances and Disease Registry (ATSDR), Department of Health and Human Services (HHS).

ACTION: Notice of availability.

SUMMARY: This notice announces the availability of one new and six updated final toxicological profiles of priority hazardous substances comprising the twenty-first set prepared by ATSDR.

FOR FURTHER INFORMATION CONTACT: Ms. Olga Dawkins, Division of Toxicology and Environmental Medicine, Agency for Toxic Substances and Disease Registry, Mailstop F–62, 1600 Clifton Road, NE., Atlanta, Georgia 30333, telephone (770) 488–3315. Electronic access to these documents is also available at the ATSDR Web site: *http://www.atsdr.cdc.gov/toxprofiles/index.asp*

SUPPLEMENTARY INFORMATION: The Superfund Amendments and Reauthorization Act of 1986 (SARA) (42 U.S.C. 9601 *et seq.*) amended the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA or Superfund) (42 U.S.C. 9601 *et seq.*) by establishing certain requirements for ATSDR and the U.S. Environmental Protection Agency (EPA) with regard to hazardous substances that are most commonly found at facilities on the CERCLA National Priorities List (NPL). Among these statutory requirements is a mandate for the Administrator of ATSDR to prepare toxicological profiles for each substance included on the priority lists of hazardous substances. These lists identified 275 hazardous substances that ATSDR and EPA determined pose the most significant potential threat to human health. The availability of the revised list of the 275 priority substances was announced in the **Federal Register** on December 7, 2005 (70 FR 234). For prior versions of the list of substances, *see* **Federal Register** notices dated April 17, 1987 (52 FR 12866); October 20, 1988 (53 FR 41280); October 26, 1989 (54 FR 43619); October 17, 1990 (55 FR 42067); October 17, 1991 (56 FR 52166); October 28, 1992 (57 FR 48801); February 28, 1994 (59 FR 9486); April 29, 1996 (61 FR 18744; November 17, 1997 (62 FR 61332); October 21, 1999 (64 FR 56792); October 25, 2001 (66 FR 54014) and November 7, 2003 (68 FR 63098).

Notice of the availability of drafts toxicological profiles for public review and comment was published in the **Federal Register** on October 23rd, 2007, (72 FR 60020), with notice of a 90-day public comment period for each profile, starting from the actual release date. Following the close of the comment period, chemical-specific comments were addressed, and, where appropriate, changes were incorporated into each profile. The public comments and other data submitted in response to the **Federal Register** notices bear the docket control number ATSDR–236. This material is available for public inspection at the Division of Toxicology and Environmental Medicine, Agency for Toxic Substances and Disease Registry, 4700 Buford Highway, Building 106, Second Floor, Chamblee, Georgia 30341 between 8 a.m. and 4:30 p.m., Monday through Friday, except legal holidays.

Availability

This notice announces the availability of one new and six updated final toxicological profiles of priority hazardous substances comprising the twenty-first set prepared by ATSDR.

The following toxicological profiles are now available through the U.S. Department of Commerce, National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, Virginia 22161, telephone 1–800–553–6847. There is a charge for these profiles as determined by NTIS.

TWENTY-FIRST SET

Toxicological profile	NTIS order No.	CAS No.
1. Boron (Update)	PB2010–100001	7440–42–8
2. Chlorine	PB2010–100002	7782–50–5
3. Ethylbenzene (Update)	PB2010–100004	100–41–4
4. Ethylene Glycol (Update)	PB2010–100005	107–21–1
5. Plutonium (Update)	PB2010–100006	7440–07–5
6. Styrene (Update)	PB2010–100007	100–42–5

Dated: November 23, 2010.

Ken Rose,

Director, Office of Policy, Planning and Evaluation, National Center for Environmental Health/Agency for Toxic Substances and Disease Registry.

Centers for Disease Control and Prevention

[30Day–11–09CL]

Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To request more information on the proposed project or to obtain a copy of data collection plans and instruments, call the CDC Reports Clearance Officer on 404–639–5960 or send comments to CDC Assistant Reports Clearance

Officer, 1600 Clifton Road, MS D–74, Atlanta, GA 30333 or send an e-mail to *omb@cdc.gov.* Written comments should be received within 30 days of this notice.

Proposed Project

Calibration of the Short Strengths and Difficulties Questionnaire (SDQ) in the National Health Interview Survey (NHIS)—New—National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Section 306 of the Public Health Service (PHS) Act (42 U.S.C. 242k), as amended, authorizes that the Secretary of Health and Human Services (DHHS), acting through NCHS, shall collect statistics on the extent and nature of illness and disability of the population of the United States. Section 520 [42 U.S.C. 290bb–31] of the Public Health Service Act establishes the Center for Mental Health Services (CMHS), Substance Abuse and Mental Health Services Administration (SAMHSA), and authorizes the CMHS to conduct surveys with respect to mental health. To monitor the prevalence of children and youth with mental health problems, CMHS and the National Institute of Mental Health (NIMH), through a reimbursable agreement with the NCHS have funded questions on children's mental health on the National Health Interview Study (NHIS).

One component of the NHIS is the short Strengths and Difficulties Questionnaire (short SDQ), a module that has obtained data on the mental health of children aged 4–17 years since 2001. As part of its mission, CMHS has undertaken the task of improving its methods for providing national estimates related to child mental health, specifically by conducting studies that determine validity and appropriate cut-points for measuring serious emotional disturbance in children. To ensure that the short SDQ is a valid measure of child mental health, the proposed study calibrates the short SDQ on the NHIS to a standard psychiatric measure. Highly trained clinical interviewers will administer, via telephone, the Child and Adolescent Psychiatric Assessment (CAPA) or the Pre-School Age Psychiatric Assessment (PAPA) to the parents of a sample of children aged 4–17 years identified in the NHIS as having mental health problems. Children aged 12–17 years will also be interviewed using the Child and Adolescent Psychiatric Assessment (CAPA). Clinical interviewers will also administer these assessments to a suitable control group of parents and children. Approximately 800 adults and 600 children will take part in the study. A 24-month clearance is being sought to conduct this study.

Data collected in the follow-up interviews will then be used to calibrate the short SDQ as it is used in the NHIS. Data will not be used to produce national estimates. There is no cost to respondents other than their time. The total estimated annualized burden hours are 633.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondent	Type of form	Number of respondents	Number of responses per respondent	Average burden per response in hours
Parents of children aged 4–8 years	Pre-school Age Psychiatric Assessment (PAPA).	63	1	1
Parents of children aged 9–17 years	Child and Adolescent Psychiatric Assessment: Parent Version (CAPA).	338	1	1
Children, aged 12–17	Child and Adolescent Psychiatric Assessment: Child Version (CAPA).	300	1	45/60
Parents	Short Strengths and Difficulties Questionnaire (SDQ).	401	1	1/60

Dated: November 23, 2010.

Catina Conner,

Acting Reports Clearance Officer, Centers for Disease Control and Prevention.

Agency Forms Undergoing Paperwork Reduction Act Review

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 639–5960 or send an e-mail to *omb@cdc.gov.* Send written comments to CDC Desk Officer, Office of Management and Budget, Washington, DC or by fax to (202) 395–5806.

Proposed Project

National Voluntary Environmental Assessment Information System (NVEAIS)—New—National Center for Environmental Health (NCEH), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The CDC is requesting OMB approval for a National Voluntary Environmental Assessment Information System to collect data from foodborne illness outbreak environmental assessments routinely conducted by local, state, territorial, or tribal food safety programs during outbreak investigations. Environmental assessment data are not currently collected at the national level. The data reported through this information system will provide timely data on the causes of outbreaks, including environmental factors associated with outbreaks, and are essential to environmental public health regulators' efforts to respond more effectively to outbreaks and prevent future, similar outbreaks.

The information system was developed by the Environmental Health Specialists Network (EHS-Net), a collaborative project of federal and state public health agencies. The EHS-Net has developed a standardized instrument for reporting data relevant to foodborne illness outbreak environmental assessments.

State, local, tribal, and territorial food safety programs are the respondents for this data collection. Although it is not possible to determine how many programs will choose to participate, as NVEAIS is voluntary, the maximum

potential number of program respondents is approximately 3,000.

However, these programs will be reporting data on outbreaks, not their programs or personnel. It is not possible to determine exactly how many outbreaks will occur in the future, nor where they will occur. However, we can estimate, based on existing data that a maximum of 1,400 foodborne illness outbreaks will occur annually. Only programs in the jurisdictions in which these outbreaks occur would report to NVEAIS. Consequently, we have based our respondent burden estimate on the number of outbreaks likely to occur each year. Assuming each outbreak occurs in a different jurisdiction, there will be one respondent per outbreak. Each respondent will respond only once per outbreak investigated.

There are two activities for which we need to estimate burden for these programs. The first is entering all requested environmental assessment data into NVEAIS. This will be done once for each outbreak. This will take approximately 120 minutes per outbreak.

The second activity requiring a burden estimate is the manager interview that will be conducted at each establishment associated with an outbreak. Most outbreaks are associated with only one establishment; however, some are associated with multiple establishments. We estimate that a maximum average of 4 manager interviews will be conducted per outbreak. Each interview will take about 20 minutes.

The total estimated annual burden is 4,667 hours (see Table). There is no cost to the respondents other than their time.

ESTIMATED ANNUAL BURDEN HOURS

Respondents	Data collection activity/form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
Food safety program personnel	Reporting environmental assessment data into electronic system.	1,400	1	2
Food safety program personnel	Manager interview	1,400	4	20/60

Dated: November 23, 2010.

Catina Conner,

Acting Reports Clearance Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Submission for OMB Review; Comment Request

Title: State Personal Responsibility Education Program (PREP).

OMB No.: 0970–0380.

Description: The Patient Protection and Affordable Care Act, 2010, also known as health care reform, amends Title V of the Social Security Act (42 U.S.C. 701 *et seq.*) as amended by sections 2951 and 2952(c), by adding section 513, authorizing the Personal Responsibility Education Program (PREP). The President signed into law the Patient Protection and Affordable Care Act on March 23, 2010, Public Law 111–148, which adds the new PREP formula grant program. The purpose of this program is to educate adolescents on both abstinence and contraception to prevent pregnancy and sexually transmitted infections (STIs); and at least three adulthood preparation subjects. The Personal Responsibility Education grant program funding is available for fiscal years 2010 through 2014.

An emergency request is being made to solicit comments from the public on paperwork reduction as it relates to ACYF's receipt of the following documents from applicants and awardees: Application for Mandatory Formula Grant. State Plan. Performance Progress Report.

Respondents: 50 States and 9 Territories, to include, District of Columbia, Puerto Rico, Virgin Islands, Guam, American Samoa, Northern Mariana Islands, the Federated States of Micronesia, the Marshall Islands and Palau.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
Application, to include program narrative	59	1	24	1,416
State Plan	59	1	40	2,360
Performance Progress Reports	59	2	16	1,888

Estimated Total Annual Burden Hours: 5,664.

Additional Information: Copies of the proposed collection may be obtained by writing to the Administration for Children and Families, Office of Administration, Office of Information Services, 370 L'Enfant Promenade, SW., Washington, DC 20447, *Attn:* ACF Reports Clearance Officer. All requests should be identified by the title of the information collection. *E-mail address: infocollection@acf.hhs.gov.*

OMB Comment: OMB is required to make a decision concerning the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication. Written comments and recommendations for the proposed information collection should be sent directly to the following: Office of Management and Budget, Paperwork Reduction Project, *Fax:* 202–395–7285, *e-mail: OIRA_SUBMISSION@OMB.EOP.GOV, Attn:* Desk Officer for the Administration for Children and Families.

Dated: November 24, 2010.

Robert Sargis,

Reports Clearance Officer.

[FR Doc. 2010–30105 Filed 11–29–10; 8:45 am]

BILLING CODE 4184–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Request for Public Comment on the Proposed Adoption of Administration for Native Americans (ANA) Program Policies and Procedures

AGENCY: Administration for Native Americans, ACF, HHS.

ACTION: Notice.

SUMMARY: Pursuant to Section 814 of the Native American Programs Act of 1974 (NAPA), as amended, the Administration for Native Americans (ANA) is required to provide members of the public an opportunity to comment on proposed changes in interpretive rules, general statements of policy, and rules of agency procedure or practice, and to give notice of the final adoption of such changes at least 30 days before the changes become effective. In accordance with notice requirements of NAPA, ANA herein describes its proposed interpretive rules, general statements of policy, and rules of agency procedure or practice as they relate to the Fiscal Year (FY) 2011 Funding Opportunity Announcements (FOA) for the following programs: Social and Economic Development Strategies (SEDS), Social and Economic Development Strategies—Tribal Governance (SEDS—TG), Social and Economic Development Strategies—Assets for Independence (SEDS—AFI), Native Language Preservation and Maintenance (Language P&M), Native Language Preservation and Maintenance—Esther Martinez Initiative (Language—EMI), and Environmental Regulatory Enhancement (ERE). This notice also provides additional information about ANA's plan for administering the programs.

DATES: The deadline for receipt of comments is 30 days from the date of publication in the **Federal Register**.

ADDRESSES: Comments in response to this notice should be addressed to Lillian Sparks, Commissioner, Administration for Native Americans, 370 L'Enfant Promenade, SW., Mail Stop: Aerospace 2—West, Washington, DC 20447. Delays may occur in mail delivery to Federal offices; therefore, a copy of comments should be faxed to (202) 690–7441. Comments will be available for inspection by members of the public at the Administration for Native Americans, 901 D Street, SW., Washington, DC 20447.

FOR FURTHER INFORMATION CONTACT: Kathy Killian, Program Specialist, (877) 922–9262.

SUPPLEMENTARY INFORMATION: Section 814 of NAPA, as amended, requires ANA to provide notice of its proposed interpretive rules, general statements of policy, and rules of agency organization, procedure, or practice. The proposed clarifications, modifications, and new text will appear in the FY 2011 FOAs: SEDS, SEDS—TG, SEDS—AFI, Language P&M, Language—EMI, and ERE. This notice serves to fulfill this requirement.

A. Funding Opportunity Announcements

1. Social and Economic Development Strategies (SEDS)

In FY 2011, ANA will combine the SEDS and SEDS—Special Initiative (SEDS—SI) FOAs from FY 2010 into one SEDS FOA. The SEDS FOA will include all program areas of interest from the previous FOAs which address Social Development, Economic Development, and Strengthening Families. Governance projects will be addressed in a separate FOA (see SEDS—TG, below). The SEDS FOA will include two funding ranges with the higher funding amount being the disqualification factor for applications (*see* Section C of this Notice for more information on funding ranges). Furthermore, through the SEDS FOA, ANA will fund project proposals from Tribes to prepare applications for Federal recognition. Tribes will only be allowed to receive funding for this priority area once, as per the funding restriction which states, "ANA does not fund projects that are essentially identical or similar in whole or in part to previously funded projects proposed by the same applicant or activities or projects proposed by a consortium that duplicate activities for which any consortium member also receives funding from ANA." This is a return to the ANA priority of the 1990s. (Legal authority: Section 803(a) of NAPA, as amended.)

2. SEDS—Tribal Governance (TG)

In FY 2011 ANA will introduce SEDS—TG to fund tribal governance projects. These types of projects were formerly funded under SEDS. ANA will expand the governance priority to emphasize projects that strengthen the internal capacity and infrastructure of tribal governments to increase services provided to children and families. The FOA will also emphasize increasing the tribal government's ability to exercise local control and decision making over their resources. ANA is particularly interested in projects designed to develop strong linkages between social services, health programs, and schools serving Native children. Program areas of interest will be expanded to include:

(1) *Interoperability:* Promote program coordination among human and social service programs for tribal communities to strengthen the programs they provide to their children, youth, and families.

(2) *Comprehensive Strategies:* Develop comprehensive intergovernmental strategies involving tribal, State and Federal governments to meet the needs of tribal children and youth.

(3) *Self-Governance:* Build the capacity and infrastructure of tribal governments to enter into self-governance compacts.

ANA believes this FOA will encourage Tribes and Native communities to look at new opportunities and methods for providing services to their communities. Applicants eligible for this FOA are the same as those identified for SEDS. (Legal authority: Section 803(a) of NAPA, as amended.)

3. SEDS—Assets for Independence (AFI)

ANA is partnering with the Office of Community Services' (OCS) AFI program to support Tribes and Native organizations in planning and implementing comprehensive asset-building projects. ANA and OCS are providing this support through funding opportunities, training, and technical assistance. The AFI program is an assets-based approach for assisting low-income families out of poverty. The program assists individuals and families to save earned income in special-purpose, matched savings accounts called Individual Development Accounts (IDAs). Every dollar in savings deposited into an IDA by a participant will be combined with non-participant funds (from $1 to $8 combined Federal (AFI) and non-Federal funds). The program promotes savings and enables a participant to acquire a lasting asset. An AFI participant can use the IDA savings to achieve any of three objectives: acquire a first home, capitalize a small business, or enroll in postsecondary education or training.

ANA, through its SEDS program, and OCS, through its AFI program, are offering Tribes and Native organizations a joint funding initiative. The purpose of the joint SEDS–AFI funding is to support Tribes and Native organizations

implement asset building projects with an AFI-funded IDA component. The ANA–SEDS portion of the funding will focus on the operational and staffing costs necessary to implement the project, financial literacy training, capacity building, and other activities. The OCS–AFI portion will be used to provide funding for IDAs and limited administrative costs. This FOA will request one application with two project budgets to complete the project. The two project budgets will separately identify the SEDS portion of the funding and corresponding match and the AFI portion of the funding and corresponding match. These two project budgets will be the basis for two awards needed to complete the project. The project will be monitored by a team representing both ANA and OCS. ANA will provide a funding opportunity for applicants to apply for a 5-year (five 12-month budget periods) grant to accompany award of a standard 5-year AFI grant.

Eligible applicants include non-profit organizations that serve Native American populations, or Tribes, and Alaska Native villages if they are joint applicants with a non-profit organization serving Native American populations. The eligibility reflects the overlap between ANA's target populations and the AFI program's legislative eligibility requirements. Individual participants who open IDAs under this program must meet AFI participant guidelines, which are: Members of a household that is eligible for assistance under Temporary Assistance for Needy Families (TANF), or whose adjusted gross income is either equal to or less than 200 percent of the Federal poverty line, or is eligible for Federal Earned Income Tax Credit and has less than $10,000 in assets (excluding the value of a primary dwelling unit and one motor vehicle).

The partnership includes a training and technical assistance (T/TA) component, through which ANA's T/TA providers will conduct pre-application trainings and provide one-on-one technical assistance to potential SEDS—AFI applicants.

This partnership between OCS and ANA will allow these two programs to provide enhanced funding opportunities to our common target communities and maximize the impact of grant dollars. Interoperability between programs within ACF is an ACF priority. (Legal authority: Section 803(a) of NAPA, as amended.)

4. Native Language Preservation and Maintenance (Language P&M) and Esther Martinez Initiative (Language—EMI)

All Language P&M and Language—EMI projects funded in FY2011 will have a start date of August 1, 2011. The revision to the start date will allow projects to better align with most school schedules throughout ANA's target communities. To accommodate this revision, the Language FOAs will be published and application due dates will be earlier in the year than all other FOAs. (Legal authority: Section 803(a) and 803C of NAPA, as amended, 42 U.S.C. 2991b and § 2991b-3 and Pub. L. 109–394.)

B. *Administrative Policies:* In FY 2011, ANA will add five administrative policies.

1. Grantees can have only one active grant per Catalog of Federal Domestic Assistance (CFDA) number.

2. ANA will increase the reach of its limited funding. Therefore, applicants that have received funding from ANA for at least two projects consecutively and within one CFDA number may not be funded for a third consecutive project within the same CFDA number if other applicants who have not received ANA funding in the past 3 years are within the scoring range to be funded.

3. Applicants are requested to identify a target amount of leveraged resources (target of zero is acceptable) and a target number of partnerships. The value of the targets will not be evaluated and scored; however, the indicators' contribution within the overall strategy of project implementation and its sustainability is included in the evaluation criteria. Grantees will be required to track these indicators quarterly throughout the project period. Leveraged resources are in addition to the statutory matching requirement of 20 percent and are not a requirement of this grant.

4. Business plans should be submitted for all SEDS applications requesting an equity investment on behalf of the Federal government.

The first two administrative policies will allow ANA to maximize its limited funding to benefit the most communities. The intent of the first policy, to restrict funding to one grant per entity per CFDA number, will also be stated in the eligibility and funding restriction sections of all FOAs. Due to the change in the project period start date for language projects, ANA will waive this restriction if a language project is ending within 2 months of a new project start date (*i.e.,* organizations or Tribes with projects ending 9/29/2011 can receive new awards with a 8/1/2011 start date). In addition to maximizing the benefit of ANA's limited funds, the first administrative policy will encourage current grantees to successfully complete project objectives within the originally defined project periods and avoid requests for No Cost Extensions (NCEs). Past experience has shown that project success is increased when a grantee can complete one project prior to starting a second project. Overlapping projects, specifically a new award and an extension, can result in delays or significant challenges to one or both projects because of limited financial and personnel resources.

The second administrative policy allows the ANA commissioner to limit the frequency of the same organizations receiving funding, thus allowing it to address more communities. (Legal authority: Section 803(a), 803(d), and 803C of NAPA, as amended, 42 U.S.C. 2991b and 2991b–3 and Pub. L. 109–394.)

The third administrative policy allows ANA to continue to measure leveraged resources and partnerships for all funded projects, but removes the target numbers for these indicators from being evaluated and scored by panel reviewers. ANA is required to measure these important indicators, as per the Government Performance Reporting Act (GPRA) for all negotiated awards. (Legal authority: Section 803(a), 803(d), and 803C of NAPA, as amended, 42 U.S.C. 2991b and 2991b–3 and Pub. L. 109–394.)

The last administrative policy is specific to SEDS FOA. The business plan will not be evaluated for the merit of the plan itself; however, the business plan will be reviewed to ensure that the project strategy is in line with the business plan. (Legal authority: Section 803(a) of NAPA, as amended.)

C. *Award Information:* In all FOAs, ANA identifies funding floors and funding ceilings, as well as project periods. In FY 2011, the thresholds and project periods for SEDS, SEDS—TG, and SEDS—AFI are new or have changed.

The funding ranges and project periods for the combined and new FOAs (see Section A of this Notice) will be as follows:

SEDS

$50,000 to $149,999 per budget period, and
$150,000 to $400,000 per budget period.
12-month project and budget period, or
24-month project period with two 12-month budget periods, or

36-month project period with three 12-month budget periods.

The SEDS FOA will identify how many applications will be funded in each of the two funding ranges. Only the upper limit of the two ranges ($400,000) will be used as a disqualification factor.

SEDS—TG

$50,000 to $375,000 per budget period.
12-month project and budget period, or
24-month project period with two 12-month budget periods, or
36-month project period with three 12-month budget periods.

SEDS—AFI

$50,000 to $250,000 per budget period.
60-month project period with five 12-month budget periods.

The SEDS—AFI range reflects the ANA portion of the funding only. OCS will provide up to $1 million for a 5-year budget and project period. (Legal authority: Section 803(a) of NAPA, as amended.)

Disqualification Factors: ANA will revise for clarification two factors that are specific to applications submitted for ANA funding. Applications that are submitted without this documentation will be considered non-responsive to the FOA and will not be considered for competition.

The first ANA-specific disqualification factor applies to all applicants. The documentation required from the Tribe, Alaska Native village or organization stating approval of the proposed project must come in the form of a Board Resolution.

The second ANA-specific disqualification factor applies only to applicants that are *not* Tribes or Native Alaska villages. Organizations applying for funding must show that a majority of board members approving the project proposal are representative of the community to be served. ANA will revise the categories of representatives of the community to be served to include: (1) Members of Federally or State recognized Tribes; (2) persons eligible to be a participant or beneficiary to the project to be funded; (3) persons who are recognized by the eligible community to be served as having a cultural relationship with the community to be served; or (4) persons considered to be Native American as defined in title 45, part 1336, section 10 of the Code of Federal Regulations (CFR), and Native American Pacific Islander as defined in the Native American Programs Act.

These disqualification factors will be revised to better establish board support for a project and to demonstrate a stronger link between an organization's board and the community to be served. (Legal authority: Section 803(a) and 814 of NAPA, as amended.)

D. *Definitions:* ANA will revise and add definitions for terms used in the FOA.

Leveraged Resources—Any resource, not including the Federal share, non-Federal contribution, and program income, acquired or utilized during the project period that supports the project. Leveraged resources are expressed as a dollar amount and may include natural, financial, personnel, and physical resources provided to assist in the successful completion of the project.

Interoperability—Collaborative administration or information sharing that integrates the efforts of individual programs, projects, departments, etc. in order to strengthen programs and provide comprehensive service.

Program Income—Gross income earned by a recipient and/or subrecipient that was directly generated by the grant-supported activity or earned as a result of the award. Program income includes (but is not limited to) fees for services performed, the use or rental of real or personal property acquired under the grant, the sale of commodities or items fabricated under an award, license fees and royalties on patents and copyrights, and payments of interest on loans made with grant funds. Except as otherwise provided in statute, regulation, or the terms and conditions of the award, program income does not include rebates, credits, discounts, or interest earned in relation to program income; the receipt of principal on loans or interest the recipient earns on those amounts after receiving them from the borrower; taxes, special assessments, levies, fines, or similar revenues raised by a governmental recipient or subrecipient. The term also does not include interest earned on advances of Federal funds and proceeds from the sale of equipment or real property acquired under an award, which have distinct accountability requirements.

The leveraged resources definition will be revised to state that program income cannot be included. Interoperability is defined because the evaluation criteria will include a reference to the integration of the proposed project into other programs, if appropriate for the proposed project. Interoperability is an ACF priority, both within ACF and in the entities it funds. Program income is defined to clarify the definition of leveraged resources. (Legal authority: Section 803(b) and 814 of NAPA, as amended and 42 U.S.C. 2991b-3(b)(7)(C).)

E. *Cost Sharing or Matching:* The matching requirement waiver for Insular Areas will no longer be available for nongovernmental entities.

1. All matching is waived for consolidated grants to governments of the Insular Areas;

2. The first $200,000 of matching is waived for non-consolidated grants to governments of American Samoa, Guam, the Virgin Islands, or the Northern Mariana Islands; however, matching over the first $200,000 is not waived;

3. Matching is not waived for grants to nongovernmental entities of the Insular Areas.

Although there is not an automatic waiver for all applicants from the Insular Areas, any applicant may request an individual match requirement waiver, in accordance with NAPA. (Legal authority: 48 U.S.C. 1469(a)(d) and 45 CFR 1336.50(b)(3).)

F. *Funding Restrictions:* The restriction that prevents ANA from funding "counseling or therapeutic activities that are medically-based" will not be included in the following FOAs: Language—P&M, Language—EMI, SEDS—AFI, SEDS—TG, and ERE. In the SEDS FOA, the restriction will be revised to state:

ANA does not fund couples or family counseling activities that are medically based.

ANA will revise this restriction in SEDS in order to fund medically based activities in projects that address such health issues as diabetes prevention and care projects, elder health care, or other similar types of health issues. This funding restriction will not appear in other FOAs. (Legal authority: Sections 803(a) and 814 of NAPA, as amended.)

G. *ANA Application Evaluation Criteria:* ANA will revise the evaluation criteria throughout the Language—P&M, Language—EMI, SEDS, SEDS—TG, and ERE FOAs to clarify how reviewers will evaluate and score applications. The content of evaluation criteria will mirror the content of the project description section of the FOAs, which instructs applicants on what to include in an application.

i. *Titles and Assigned Weight:* In FY 2011, ANA will rename the criteria and adjust the weighted scores.

For FY 2011, the criteria will be titled and weighted as follows:

—Objectives and Need for Assistance 20 points;
—Outcomes Expected 15 points;
—Approach 50 points;
—Sub-criterion—Project Strategy 30 points;
—Sub-criterion—Objective Work Plan (OWP) 20 points and

—Budget and Budget Justification 15 points.

For FY 2011, the two criteria for the SEDS–AFI FOA will be titled and weighted as follows:

—Approach 90 points and
—Budget and Budget Justification 10 points.

The criteria titles will match the titles found in the project description section of the FOAs. Matching titles will help applicants to better understand the connection between the two sections of the FOAs. The assigned weights better reflect what ANA considers to be the most important elements of the project application. (Legal authority: Section 803(c) of NAPA, as amended.)

ii. *ANA Evaluation Criteria:* Included here is a summary of each criterion. The FOAs will include a more detailed description of the evaluation criteria and the associated project description.

(a) *Objectives and Need for Assistance:* Under this criterion, applications will be evaluated on the applicant's community and applicant identification, connection to the community, community participation in the project development, the problem statement, and the briefly stated objectives.

(b) *Outcomes Expected:* Under this criterion, applications will be evaluated on the strength of the project outcomes expected, which include the project goal, the results and benefits expected, and one project-specific impact indicator. For language applications that are designed to teach a Native language, applicants must include an impact indicator that shows advancement of language fluency. All other language projects should provide an impact indicator that measures an increase in community interest to preserve the language.

(c) *Approach:* Under this criterion, the application will be evaluated on the strength of the project approach. This criterion includes two sub-criteria: The project strategy and the OWP. The project strategy sub-criterion includes a detailed description of the implementation plan, community involvement and outreach during implementation, and contingency planning to support project implementation. In addition, partnerships and leveraged resources will be evaluated as to their contribution within the overall strategy of project implementation and its sustainability; however, the target numbers will not be evaluated or scored. In this section reviewers will also consider organizational capacity and project sustainability. The OWP sub-criterion includes a review of the OWP form and its strength as an effective implementation tool.

(d) *Budget:* Under this criterion, the application will be evaluated on the strength of the budget and how well it supports successful completion of the project objectives. This criterion includes a line-item budget and budget justification for each line item for each budget period.

The changes to the content of evaluation criteria, and the complementary changes to the project description section of the FOA, will more effectively guide panel reviewers and applicants on what ANA believes are critical components of a project application. (Legal authority: Section 803(c) of NAPA, as amended.)

Dated: November 22, 2010.

Lillian Sparks,

Commissioner, Administration for Native Americans.

BILLING CODE 4184–34–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2010–N–0583]

Agency Information Collection Activities: Proposed Collection; Comment Request; Radioactive Drug Research Committees

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act of 1995 (the PRA), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on the information collection contained in regulations governing the use of radioactive drugs for basic informational research (21 CFR 361.1).

DATES: Submit either electronic or written comments on the collection of information by January 31, 2011.

ADDRESSES: Submit electronic comments on the collection of information to *http://www.regulations.gov.* Submit written comments on the collection of information to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane., rm. 1061, Rockville, MD 20852. All comments should be identified with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Elizabeth Berbakos, Office of Information Management, Food and Drug Administration, 1350 Piccard Dr., PI50–400B, Rockville, MD 20850, 301–796–3792, *Elizabeth.Berbakos@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. "Collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Radioactive Drug Research Committees—(OMB Control Number 0910–0053)

Under sections 201, 505, and 701 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321, 355, and 371), FDA has the authority to issue regulations governing the use of radioactive drugs

for basic scientific research. Section 361.1 (21 CFR 361.1) sets forth specific regulations regarding the establishment and composition of Radioactive Drug Research Committees and their role in approving and monitoring basic research studies utilizing radiopharmaceuticals. No basic research study involving any administration of a radioactive drug to research subjects is permitted without the authorization of an FDA approved Radioactive Drug Research Committee (§ 361.1(d)(7)). The type of research that may be undertaken with a radiopharmaceutical drug must be intended to obtain basic information and not to carry out a clinical trial for safety or efficacy. The types of basic research permitted are specified in the regulation, and include studies of metabolism, human physiology, pathophysiology, or biochemistry.

Section 361.1(c)(2) requires that each Radioactive Drug Research Committee shall select a chairman, who shall sign all applications, minutes, and reports of the committee. Each committee shall meet at least once each quarter in which research activity has been authorized or conducted. Minutes shall be kept and shall include the numerical results of votes on protocols involving use in human subjects. Under § 361.1(c)(3), each Radioactive Drug Research Committee shall submit an annual report to FDA. The annual report shall include the names and qualifications of the members of, and of any consultants used by, the Radioactive Drug Research Committee, using FDA Form 2914, and a summary of each study conducted during the proceeding year, using FDA Form 2915.

Under § 361.1(d)(5), each investigator shall obtain the proper consent required under the regulations. Each female research subject of childbearing potential must state in writing that she is not pregnant, or on the basis of a pregnancy test be confirmed as not pregnant.

Under § 361.1(d)(8), the investigator shall immediately report to the Radioactive Drug Research Committee all adverse effects associated with use of the drug, and the committee shall then report to FDA all adverse reactions probably attributed to the use of the radioactive drug.

Section 361.1(f) sets forth labeling requirements for radioactive drugs. These requirements are not in the reporting burden estimate because they are information supplied by the Federal Government to the recipient for the purposes of disclosure to the public (5 CFR 1320.3(c)(2)).

Types of research studies not permitted under this regulation are also specified, and include those intended for immediate therapeutic, diagnostic, or similar purposes or to determine the safety or effectiveness of the drug in humans for such purposes (*i.e.,* to carry out a clinical trial for safety or efficacy). These studies require filing of an investigational new drug application (IND) under 21 CFR part 312, and the associated information collections are covered in OMB Control Number 0910–0014.

The primary purpose of this collection of information is to determine whether the research studies are being conducted in accordance with required regulations and that human subject safety is assured. If these studies were not reviewed, human subjects could be subjected to inappropriate radiation or pharmacologic risks.

Respondents to this information collection are the chairperson(s) of each individual Radioactive Drug Research Committee, investigators, and participants in the studies.

The burden estimates are based on FDA's experience with these reporting and recordkeeping requirements over the past few years and the number of submissions received by FDA under the regulations.

FDA estimates the burden of this collection of information as follows:

TABLE 1.—ESTIMATED ANNUAL REPORTING BURDEN[1]

21 CFR Section	Forms	Number of respondents	Annual frequency per response	Total annual responses	Hours per response	Total hours
361.1(c)(3) & (4)	FDA 2914	80	1	80	1	80
361.1(c)(3)	FDA 2915	50	6.8	340	3.5	1,190
361.1(d)(8)		50	6.8	340	0.1	34
Total						1,304

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

TABLE 2—ESTIMATED ANNUAL RECORDKEEPING BURDEN[1]

21 CFR section	Number of recordkeepers	Annual frequency per recordkeeping	Total annual records	Hours per record	Total hours
361.1(c)(2)	80	4	320	10	3,200
361.1(d)(5)	50	6.8	340	.75	255
Total					3,455

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Dated: November 23, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2010–N–0594]

Agency Information Collection Activities; Proposed Collection; Comment Request; Focus Groups as Used by the Food and Drug Administration (All Food and Drug Administration Regulated Products)

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (the PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on focus groups as used by FDA to gauge public opinion on all FDA-regulated products.

DATES: Submit either electronic or written comments on the collection of information by January 31, 2011.

ADDRESSES: Submit electronic comments on the collection of information to *http://www.regulations.gov.* Submit written comments on the collection of information to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. All comments should be identified with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Jonna Capezzuto, Office of Information Management, Food and Drug Administration, 1350 Piccard Dr., PI50–400B, Rockville, MD 20850, 301–796–3794, e-mail: *Jonnalynn.capezzuto@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. "Collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Focus Groups as Used by the Food and Drug Administration (All FDA-Regulated Products)—(OMB Control Number 0910–0497)—Extension

FDA conducts focus group interviews on a variety of topics involving FDA-regulated products, including drugs, biologics, devices, food, tobacco, and veterinary medicine.

Focus groups provide an important role in gathering information because they allow for a more indepth understanding of consumers' attitudes, beliefs, motivations, and feelings than do quantitative studies. Focus groups serve the narrowly defined need for direct and informal opinion on a specific topic and as a qualitative research tool have three major purposes:

- To obtain consumer information that is useful for developing variables and measures for quantitative studies,
- To better understand consumers' attitudes and emotions in response to topics and concepts, and
- To further explore findings obtained from quantitative studies.

FDA will use focus group findings to test and refine their ideas but will generally conduct further research before making important decisions, such as adopting new policies and allocating or redirecting significant resources to support these policies.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN[1]

Activity	Number of respondents	Annual frequency per response	Total annual responses	Hours per response	Total hours
Focus Group Interviews	1,440	1	1,440	1.75	2,520

[1] There are no capital or operating and maintenance costs associated with this collection of information.

Annually, FDA projects about 20 focus group studies using 160 focus groups with an average of 9 persons per group, and lasting an average of 1.75 hours each. FDA is requesting this burden for unplanned focus groups so as not to restrict the Agency's ability to gather information on public sentiment of its proposals in its regulatory and communications programs.

Dated: November 23, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2010–N–0588]

Agency Information Collection Activities; Proposed Collection; Comment Request; Exceptions or Alternatives to Labeling Requirements for Products Held by the Strategic National Stockpile

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (the PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on the information collection requirements for FDA regulations related to the exceptions or alternatives to labeling requirements for products held by the Strategic National Stockpile (SNS).

DATES: Submit either electronic or written comments on the collection of information by January 31, 2011.

ADDRESSES: Submit electronic comments on the collection of information to *http://www.regulations.gov.* Submit written comments on the collection of information to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. All comments should be identified with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Elizabeth Berbakos, Office of Information Management, Food and Drug Administration, 1350 Piccard Dr., PI50–400B, Rockville, MD 20850, 301–796–3792, *Elizabeth.Berbakos@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. "Collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Exceptions or Alternatives to Labeling Requirements for Products Held by the Strategic National Stockpile—(OMB Control Number 0910–0614)—Extension

Under the Public Health Service Act (the PHS Act), the Department of Health and Human Services stockpiles medical products that are essential to the health security of the Nation (see section 319F–2 of the PHS Act (42 U.S.C. 247d-6b)). This collection of medical products for use during national health emergencies, known as the SNS, is to "provide for the emergency health security of the United States, including the emergency health security of children and other vulnerable populations, in the event of a bioterrorist attack or other public health emergency."

It may be appropriate for certain medical products that are or will be held in the SNS to be labeled in a manner that would not comply with certain FDA labeling regulations given their anticipated circumstances of use in an emergency. However, noncompliance with these labeling requirements could render such products misbranded under section 502 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 352).

In the **Federal Register** of December 28, 2007 (72 FR 73589), FDA published an interim final rule entitled "Exceptions or Alternatives to Labeling Requirements for Products Held by the Strategic National Stockpile." In the interim final rule, FDA issued regulations under §§ 201.26, 610.68, 801.128, and 809.11 (21 CFR 201.26, 610.68, 801.128, and 809.11), which allow the appropriate FDA Center Director to grant a request for an exception or alternative to certain regulatory provisions pertaining to the labeling of human drugs, biological products, medical devices, and in vitro diagnostics that currently are or will be included in the SNS if certain criteria are met. The appropriate FDA Center Director may grant an exception or alternative to certain FDA labeling requirements if compliance with these labeling requirements could adversely affect the safety, effectiveness, or availability of products that are or will be included in the SNS. An exception or alternative granted under the regulations may include conditions or safeguards so that the labeling for such products includes appropriate information necessary for the safe and effective use of the product given the product's anticipated circumstances of use. Any grant of an exception or alternative will only apply to the specified lots, batches, or other units of medical products in the request. The appropriate FDA Center Director may also grant an exception or alternative to the labeling provisions specified in the regulations on his or her own initiative.

Under § 201.26(b)(1)(i) (human drug products), § 610.68(b)(1)(i) (biological products), § 801.128(b)(1)(i) (medical devices), and § 809.11(b)(1)(i) (in vitro diagnostic products for human use) an SNS official or any entity that manufactures (including labeling, packing, relabeling, or repackaging), distributes, or stores such products that are or will be included in the SNS may submit, with written concurrence from a SNS official, a written request for an exception or alternative to certain labeling requirements to the appropriate

FDA Center Director. Except when initiated by an FDA Center Director, a request for an exception or alternative must be in writing and must:

- Identify the specified lots, batches, or other units of the affected product;
- Identify the specific labeling provisions under this rule that are the subject of the request;
- Explain why compliance with the specified labeling provisions could adversely affect the safety, effectiveness, or availability of the product subject to the request;
- Describe any proposed safeguards or conditions that will be implemented so that the labeling of the product includes appropriate information necessary for the safe and effective use of the product given the anticipated circumstances of use of the product;
- Provide copies of the proposed labeling of the specified lots, batches, or other units of the affected product that will be subject to the exception or alternative; and
- Provide any other information requested by the FDA Center Director in support of the request.

If the request is granted, the manufacturer may need to report to FDA any resulting changes to the New Drug Application, Biologics License Application, Premarket Approval Application or Premarket Notification (510(k)) in effect, if any. The submission and grant of an exception or an alternative to the labeling requirements specified in the interim final rule (72 FR 73589) may be used to satisfy certain reporting obligations relating to changes to product applications under § 314.70 (21 CFR 314.70) (human drugs), § 601.12 (21 CFR 601.12) (biological products), § 814.39 (21 CFR 814.39) (medical devices subject to premarket approval), or § 807.81 (21 CFR 807.81) (medical devices subject to 510(k) clearance requirements). The information collection provisions in §§ 314.70, 601.12, 807.81, and 814.39 have been approved under OMB control numbers 0910–0001, 0910–0338, 0910–0120, and 0910–0231, respectively. On a case-by-case basis, the appropriate FDA Center Director may also determine when an exception or alternative is granted that certain safeguards and conditions are appropriate, such as additional labeling on the SNS products, so that the labeling of such products would include information needed for safe and effective use under the anticipated circumstances of use.

Respondents to this collection of information are entities that manufacture (including labeling, packing, relabeling, or repackaging), distribute or store affected SNS products. Based on the number of requests for an exception or alternative received by FDA since issuance of the interim final rule, FDA estimates an average of two requests annually. FDA is estimating that each respondent will spend an average of 24 hours preparing each request. The hours per response for each submission are based on the estimated time that it takes to prepare a supplement to an application, which may be considered similar to a request for an exception or alternative. To the extent that labeling changes not already required by FDA regulations are made in connection with an exception or alternative granted under the interim final rule, FDA is estimating one occurrence annually in the event FDA would require any additional labeling changes not already covered by FDA regulations, and that it would take 8 hours to develop and revise the labeling to make such changes.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

21 CFR section	Number of respondents	Annual frequency per response	Total annual responses	Hours per response	Total hours
201.26(b)(1)(i), 610.68(b)(1)(i), 801.128(b)(1)(i), and 809.11(b)(1)(i)	2	1	2	24	48
201.26(b)(1)(i), 610.68(b)(1)(i), 801.128(b)(1)(i), and 809.11(b)(1)(i)	1	1	1	8	8
Total					56

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Dated: November 23, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2010–N–0576]

Supplemental Funding Under the Food and Drug Administration's Convener of Active Medical Product Surveillance Discussions (U13) RFA–FD–09–012; Request for Supplemental Application

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of intent.

SUMMARY: The Food and Drug Administration (FDA) is announcing a program expansion of its Conference Cooperative Agreement Program (U13), awarded to the Engelberg Center for Health Care Reform at the Brookings Institution (Brookings). The goal of this expansion is to plan and hold meetings and conferences that will ensure broad stakeholder input on FDA programs and initiatives related to disseminating information from active medical product surveillance activities and other sources of product information.

DATES: Important dates are as follows:

1. The supplemental application due date is December 13, 2010.

2. The award anticipated start date is January 1, 2011.

3. The opening date is November 30, 2010.

4. The expiration date is December 14, 2010.

FOR FURTHER INFORMATION AND ADDITIONAL REQUIREMENTS CONTACT:

Melissa Robb, Office of Medical Policy, Food and Drug Administration, 10903 New Hampshire Ave, Bldg. 51, rm. 6360, Silver Spring, MD 20993–0002, 301–796–2500, e-mail: *Melissa.Robb@fda.hhs.gov;* or

Camille R. Peake, Division of Acquisition Support and Grants, Food and Drug Administration, 5630 Fishers Lane (HFA–500), Rockville, MD 20857, 301–827–7175, FAX: 301–827–7101, e-mail: *Camille.Peake@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Funding Opportunity Description

For more information on the original full funding opportunity announcement (FOA) RFA–FD–09–012, go to *http://www.fda.gov/Safety/FDAsSentinelInitiative/ucm168759.htm.*

A. Background

This FOA, issued by FDA, announces a proposed program expansion of FDA's Conference Cooperative Agreement Grant U13 FD003802 awarded to Brookings. The goal of this program is to plan and hold meetings and conferences that will ensure broad stakeholder input on FDA programs and initiatives related to disseminating information from active medical product surveillance activities and other sources of product information. The information obtained through these meetings and workshops is being used to develop, implement, and evaluate medical product surveillance methods and systems, which support the gathering, analysis, and communication of medical product safety information.

Supplementing the parent grant to incorporate expansion of the scope of work would support activities including convening discussions, leveraging the information learned from medical product surveillance, and engaging stakeholders, namely the health care community, consumers and industry, on topics related to patient counseling and dissemination of product information on the risks, benefits, and safe use of prescription drugs. Discussions would cover issues related to developing a quality systems approach to make sure that user-friendly, easily accessible, up-to-date information is available to the public and health care practitioners who are interacting with patients to prescribe and dispense medications. It is important that practitioners and pharmacists are able to adequately inform patients about the proper use of medications being prescribed or dispensed. This supplement would include convening meetings and synthesizing, summarizing, and communicating the findings on topics such as those listed in the Research Objectives. (*See* section B of this document.)

During Year 1, a supplement was awarded that allowed for the convening of discussions on topics related to the development and appropriate dissemination of Patient Medication Information (PMI). With this FOA, FDA proposes to further expand the scope of work of the 2009 supplement and increase the amount of supplemental funding for each budget year to $501,534 total cost (direct costs only), beginning in 2010, and future years 2011, 2012, and 2013. (Funding for this supplement will be subject to availability of funds and satisfactory progress of the project).

B. Research Objectives

This supplement will expand the existing program to convene meetings and synthesize, summarize, and communicate relevant findings on topics such as those discussed in the following paragraphs.

• Patient Medication Information (PMI)

To be able to use prescription medications safely, consumers need to receive clear, actionable medication information that is accurate, balanced, and delivered in a consistent and easily understood format. In February 2009, FDA's Risk Communication Advisory Committee recommended FDA adopt a single, standard document for communicating essential information about prescription drugs, which would replace Consumer Medical Information, Patient Package Insert (PPI), and Medication Guides. Such changes to the delivery of PMI may require changes to the Federal Food, Drug, and Cosmetics Act law and/or regulations to implement. Following a series of public workshops convened by FDA, the Agency developed three draft patient information prototypes as well as a strategy for evaluating the prototypes. Upon approval from the Office of Management and Budget, FDA plans to evaluate the three prototypes using an experimental consumer testing study. As part of its evaluation process, FDA intends to hold a series of workshops to ensure continued, broad public input on the prototypes. In addition, Brookings also convened three workshops in cooperation with FDA (Year 1) to discuss optimizing, implementing, and evaluating adoption of a single, standard medication information document. As a followup to the outcomes and recommendations received from the meetings described previously, FDA is interested in obtaining additional feedback, guidance, and expert opinion from a broad range of stakeholders during the supplemented years needed to move the PMI initiative forward, including, for example, through pilot projects for PMI distribution using modern media and exploration of additional issues related to PMI monitoring, compliance, and enforcement, as well as by developing processes for follow-up assessments.

• Professional Labeling

In the **Federal Register** of January 24, 2006 (71 FR 3922), FDA published a final rule that amended the requirements for the content and format of the package insert for human prescription drug and biologic products. The purpose of the new requirements was to improve the management of the risks of medical product use and reduce medical errors by health care professionals, as well as enable health care practitioners to better communicate risk information to their patients. The new regulation (21 CFR 201.57) was designed to make information in the prescription package insert easier for health care practitioners to access, read, and use, thereby facilitating use of the package insert to make prescribing decisions. The final rule has a phased-in implementation schedule that initially targets new and recently approved drugs. These new requirements have been in effect for 4 years, and many drugs on the market have package inserts in the new format.

Because complying with these new requirements is essential for meeting the objective of better risk communication, FDA is interested in obtaining feedback from health care practitioners on whether the new package insert format is being implemented in a manner that meets the needs of the practicing physician and other health care practitioners or whether there are areas in which FDA could improve implementation.

• Risk Evaluation and Mitigation Strategies (REMS)

With the additional regulatory authority granted to FDA in the FDA Amendments Act of 2007, FDA has begun requiring REMS, with the components of each individual strategy varying by the risks involved and patient populations eligible.

Based on existing FDA guidance, REMS components have included medication guides ("MedGuides"); patient package inserts; communication plan(s) for health care practitioners (*e.g.* "Dear Provider" letters); and elements to assure safe use (ETASU), including requirements for those who prescribe, dispense, or use the drug. In some cases, MedGuides have been the only component required; in other cases, FDA has required ETASU of varying designs, such as those requiring that a drug be dispensed to patients with evidence (*e.g.,* restricted distribution) or other documentation of safe-use conditions (*e.g.,* certain laboratory test result outcomes required before a drug may be dispensed).

The current REMS requirement process has led to the implementation of more than 100 new strategies, with varying elements based on the severity

of risk projected and different approaches taken by manufacturers seeking to meet those requirements. FDA would like to convene sessions of experts and hold focused meetings over the next 3 years to discuss REMS implementation to date, and explore practical policy approaches relevant to restricted distribution processes and quality care counseling.

C. Eligibility Information

This supplement is available only to the existing grant recipient, Brookings.

D. Requirements of the Supplemental Application

1. The application clearly demonstrates an understanding of the purpose and objectives of the program expansion as described in section B of this document.

2. The application clearly describes the steps involved in a proposed schedule for planning, implementing, and accomplishing the activities to be carried out under the program expansion.

3. The application establishes Brookings ability to perform the responsibilities under the program expansion including the availability of appropriate staff and sufficient funding.

4. The application describes Brookings ability to act as a neutral, independent third party to convene a wide group of diverse stakeholders with relevant expertise related to selected topics.

5. The application specifies the manner in which interaction with FDA will be maintained throughout the lifetime of the project.

6. The application specifies how Brookings will monitor progress of the work under the program expansion and how progress will be reported to FDA.

7. The application shall include a detailed budget that shows: (1) Anticipated costs for personnel, travel, communications and postage, and supplies and (2) the sources of funds to meet those needs, if other than FDA.

II. Award Information/Funds Available

A. Award Amount

FDA anticipates supplementing this program expansion by providing approximate total cost of $501,534 (direct costs only) in each budget period beginning in 2010, and the remaining budget periods (years: 2011, 2012, and 2013).

B. Length of Support

The initial supplemental award will be awarded to correspond with the 2010 budget period, and the remaining budget periods (2011, 2012, and 2013) will be dependant on the grantee's successful performance, and financial management.

III. Paper Application and Submission Information

To submit a paper application in response to this supplemental notice, applicants should download the PHS–398 form at *http://grants.nih.gov/grants/funding/phs398/phs398.html.* (FDA has verified the Web site address, but FDA is not responsible for any subsequent changes to the Web site after this document publishes in the **Federal Register**.)

For all paper application submissions, the following steps are required:

Submit paper via Express mail to (*see* the *For Further Information and Additional Requirements Contact* section of this document).

Dated: November 23, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

[FR Doc. 2010–30054 Filed 11–29–10; 8:45 am]

BILLING CODE 4160–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Proposed Collection: Comment Request

In compliance with the requirement for opportunity for public comment on proposed data collection projects (section 3506(c)(2)(A) of Title 44, United States Code, as amended by the Paperwork Reduction Act of 1995, Pub. L. 104–13), the Health Resources and Services Administration (HRSA) publishes periodic summaries of proposed projects being developed for submission to the Office of Management and Budget (OMB), under the Paperwork Reduction Act of 1995. To request more information on the proposed project or to obtain a copy of the data collection plans and draft instruments, e-mail *paperwork@hrsa.gov* or call the HRSA Reports Clearance Officer at (301) 443–1129.

Comments are invited on: (a) The proposed collection of information for the proper performance of the functions of the agency; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: Ryan White HIV/AIDS Program Core Medical Services Waiver Application Requirements (OMB No. 0915–0307)—Extension

HRSA utilizes standards for granting waivers of the core medical services requirement for the Ryan White HIV/AIDS Program. These standards meet the intent of the Ryan White HIV/AIDS Program to increase access to core medical services, including antiretroviral drugs, for persons with HIV/AIDS and to ensure that grantees receiving waivers demonstrate the availability of such services for individuals with HIV/AIDS who are identified and eligible under Title XXVI of the Public Health Service (PHS) Act. The core medical services waiver uniform standard and waiver request process will apply to Ryan White HIV/AIDS Program Grant awards under Parts A, B, and C of Title XXVI of the PHS Act. Core medical services waivers will be effective for a 1-year period that is consistent with the grant award period.

Title XXVI, Section 2671 of the PHS Act, as amended by the Ryan White HIV/AIDS Treatment Extension Act of 2009, Public Law 111–87, (Ryan White HIV/AIDS Program), requires that grantees expend 75 percent of Parts A, B, and C funds on core medical services, including antiretroviral drugs, for individuals with HIV/AIDS who are identified and eligible under the legislation. In order for grantees under Parts A, B, and C to be exempt from the 75 percent core medical services requirement, they must request and receive a waiver from HRSA.

Grantees must submit the waiver request with the annual grant application that includes the certifications and documentation which will be utilized by HRSA in making determinations regarding waiver requests. Grantees must provide evidence that all of the core medical services listed in the statute, regardless of whether such services are funded by the Ryan White HIV/AIDS Program, are available to all individuals with HIV/AIDS who are identified and eligible under Title XXVI of the PHS Act in the service area within 30 days.

The annual estimate of burden is as follows:

Application	Number of respondents	Responses per respondent	Total responses	Hours per response	Total burden hours
Waiver Request	10	1	10	6.5	65
Total	10	1	10	6.5	65

E-mail comments to *paperwork@hrsa.gov* or mail the HRSA Reports Clearance Officer, Room 10–33, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857. Written comments should be received within 30 days of this notice.

Dated: November 23, 2010.

Robert Hendricks,

Director, Division of Policy and Information Coordination.

BILLING CODE 4165–15–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Proposed Collection: Comment Request

In compliance with the requirement for opportunity for public comment on proposed data collection projects (section 3506(c)(2)(A) of Title 44, United States Code, as amended by the Paperwork Reduction Act of 1995, Pub. L. 104–13), the Health Resources and Services Administration (HRSA) publishes periodic summaries of proposed projects being developed for submission to the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995. To request more information on the proposed project or to obtain a copy of the data collection plans and draft instruments, e-mail *paperwork@hrsa.gov* or call the HRSA Reports Clearance Officer at (301) 443–1129.

Comments are invited on: (a) The proposed collection of information for the proper performance of the functions of the agency; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: Healthy Weight Collaborative (OMB No. 0915–NEW)—[NEW].

Background: The mission of the Healthy Weight Collaborative (HWC) is to discover, identify, develop, and disseminate both evidence-based and promising clinical and community-based interventions to prevent and treat obesity. The HWC was funded by the Health Resources and Services Administration under Title V, Section 501(a)(2) of the Social Security Act (42 U.S.C. 701(a)(2)) and Section 4002 of the Patient Protection and Affordable Care Act (Pub. L. 111–148).

The goal of the HWC is to value and leverage each community team's strengths, networks, grantees, and expertise towards the common goal of promoting healthy weight for all populations, especially those at high risk for overweight and obesity.

The HWC is modeled after the Institute for Healthcare Improvement Collaborative Model for achieving breakthrough improvement. Also known as the Breakthrough Series, this model was developed in 1996 to help healthcare organizations make breakthrough improvements in quality while reducing costs. This model is designed to close the gap between science and practice by creating a structure in which organizations can easily learn from each other and from recognized experts in topic areas in which they want to make quality improvements.

Approximately 50 community teams will be recruited to participate in the HWC. The intended beneficiaries of this program are children and their families, and teams in the HWC can include health departments, community-based organizations, HRSA and the Department of Health and Human Services (HHS) grantees; especially safety net providers and other stakeholders in the HRSA and HHS program network. Teams will be asked to report on non-personally identifiable aggregate information from clinical and public health or community interventions related to four domains, including clinical and public health:

- Body Mass Index (BMI), collected from an electronic health record.
- Nutrition, which includes measures related to change in knowledge, attitudes, behavior, and consumption.
- Physical Activity, which includes measures related to change in knowledge, attitudes, behavior, and levels of activity.
- Partnerships and Process Improvement, which includes measures related to linkages made between clinical and community-based or public health programs, increased efficiencies related to these linkages, and the number of people served by these linkages.

The annual estimate of burden is as follows:

Instrument	Number of respondents	Responses per respondent	Total responses	Hours per response	Total burden hours
BMI	50	30	1,500	.10	150
Nutrition	50	30	1,500	.20	300
Physical Activity	50	30	1,500	.20	300
Partnerships and Process Improvement	50	50	2,500	.20	500
Total	50	.....	7,000	.....	1,250

E-mail comments to *paperwork@hrsa.gov* or mail the HRSA Reports Clearance Officer, Room 10–33, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857. Written comments should be received within 60 days of this notice.

Dated: November 24, 2010.

Robert Hendricks,

Director, Division of Policy and Information Coordination.

Agency Information Collection Activities: Proposed Collection: Comment Request

In compliance with the requirement for opportunity for public comment on proposed data collection projects (section 3506(c)(2)(A) of Title 44, United States Code, as amended by the Paperwork Reduction Act of 1995, Pub. L. 104–13), the Health Resources and Services Administration (HRSA) publishes periodic summaries of proposed projects being developed for submission to the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995. To request more information on the proposed project or to obtain a copy of the data collection plans and draft instruments, e-mail *paperwork@hrsa.gov* or call the HRSA Reports Clearance Officer on (301) 443–1129.

Comments are invited on: (a) The proposed collection of information for the proper performance of the functions of the agency; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project Title: Evaluation of the text4baby Program—(OMB No. 0915–NEW)—NEW

Background: Text4baby is a free mobile health education service that provides pregnant women and mothers with an infant under one year of age with free, evidence-based, brief health messages. An educational program led by the National Healthy Mothers, Healthy Babies coalition (HMHB), text4baby is intended to help women in having safe and healthy pregnancies by empowering them with information they need to give their babies the best possible start in life. The text4baby service was launched nationally in February 2010. Text4baby is made possible through a broad, public-private partnership that includes government and tribal agencies, corporations, academic institutions, professional associations, and non-profit organizations.

The goal of this program evaluation is to examine the characteristics of women who utilize the text4baby mobile phone-based program, assess their experience with the program, and determine whether text4baby is associated with timely access to prenatal care and healthy behaviors during pregnancy and through the first year of the infant's life. This information will help the Department of Health and Human Services to understand the usefulness of using mobile technology and the potential for expanding and/or adapting mobile phone messaging to additional health topics or conditions. The study may also offer insight into planning and implementing similar projects.

Purpose: The purpose of the evaluation is to assess behavior change and the usefulness of the text4baby messages on current subscribers to the program. There are four components to the evaluation:

- Mobile survey of current subscribers to the text4baby program.
- Consumer Safety Net Survey of subscribers and non-subscribers to the text4baby program in safety net settings.
- Focus Groups of current subscribers to ensure more in-depth qualitative data are collected regarding the usefulness of the messages and the program.
- Key Informant Interviews of a diverse mix of providers in safety net settings to examine any utility from the provider perspective. Providers could include case managers, outreach workers, and health educators.
- Key Stakeholder Interviews of community stakeholders that have built partnerships and coalitions around text4baby at a local, State, regional or national level to examine factors related to coalition building, sustainability and partnership.

The estimated response burden is as follows:

Instrument	Number of respondents	Responses per respondent	Total responses	Hours per response	Total burden hours
Mobile Survey	10,000	4	40,000	.16	6,667
Consumer Safety Net Survey	2,000	2	4,000	1	4,000
Focus Groups	80	1	80	1.5	120
Key Informant Interviews	20	1	20	.75	15
Stakeholder Interviews	30	1	30	.75	22.5
Total	12,130		44,130		10,824.50

E-mail comments to *paperwork@hrsa.gov* or mail the HRSA Reports Clearance Officer, Room 10–33, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857. Written comments should be received within 60 days of this notice.

Dated: November 23, 2010.

Robert Hendricks,

Director, Division of Policy and Information Coordination.

BILLING CODE 4165–15–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Submission for OMB Review; Comment Request

Periodically, the Health Resources and Services Administration (HRSA) publishes abstracts of information collection requests under review by the Office of Management and Budget (OMB), in compliance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35). To request a copy of the clearance requests submitted to OMB for review, e-mail *paperwork@hrsa.gov* or call the HRSA Reports Clearance Office on (301) 443–1129.

The following request has been submitted to the Office of Management and Budget for review under the Paperwork Reduction Act of 1995:

Proposed Project: Performance Report for Grants and Cooperative Agreements (OMB No. 0915–0061)—Revision

The HRSA Bureau of Health Professions (BHPr) Performance Report for Grants and Cooperative Agreements is used to report grantee activities for Title VII and VIII health professions and nursing education and training programs. The reporting system measures the grantee's success in meeting (1) the objectives of the grant project, and (2) the cross-cutting outcomes developed for the Bureau of Health Professions' Title VII and VIII health professions and nursing education and training programs. The reporting system has two parts: Part I of the performance report is designed to collect information on activities specific to a given program and Part II, the core performance measures, collects data on overall project performance related to BHPr's strategic goals, objectives, outcomes, and legislative requirements. Progress will be measured based on the objectives of the grant project, and outcome measures and indicators developed by the Bureau to meet requirements of the Government Performance and Results Act (GPRA) and other statutory authorities.

BHPr is revising the grantee burden reported on the previous information collection request. As a result of eliminating multiple race combinations for two or more races, the hours per response has decreased. In addition, measures will be added to collect outcome data on a new program as a result of the Affordable Care Act (*i.e.,* State Workforce Development Grants). New measures will also be added to collect outcome data on the State Primary Care Offices (PCOs) program and the Oral Health Program. Based on a more accurate estimation of BHPr grantees reporting, the hours per response is approximately 8.5 hours.

The estimated annual burden is as follows:

Report	Number of respondents	Responses per respondent	Total responses	Hours per response	Total burden hours
BHPr Performance Report	1,100	1	1,100	8.5	9,350
Total	1,100		1,100		9,350

Written comments and recommendations concerning the proposed information collection should be sent within 30 days of this notice to the desk officer for HRSA, either by e-mail to *OIRA_submission@omb.eop.gov* or by fax to 202–395–6974. Please direct all correspondence to the "attention of the desk officer for HRSA."

Dated: November 23, 2010.

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Citizenship and Immigration Services

Agency Information Collection Activities: Form I–589; Extension of an Existing Information Collection; Comment Request

ACTION: 60-Day Notice of Information Collection Under Review; Form I–589, Application for Asylum and Withholding for Removal; OMB Control No. 1615–0067.

The Department of Homeland Security, U.S. Citizenship and Immigration Services (USCIS) will be submitting the following information collection request for review and clearance in accordance with the Paperwork Reduction Act of 1995. The information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for sixty days until January 31, 2011.

During this 60 day period, USCIS will be evaluating whether to revise the Form I–589. Should USCIS decide to revise Form I–589 we will advise the public when we publish the 30-day notice in the **Federal Register** in accordance with the Paperwork Reduction Act. The public will then have 30 days to comment on any revisions to the Form I–589.

Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the Department of Homeland Security (DHS), USCIS, Chief, Regulatory Products Division, Clearance Officer, 20 Massachusetts Avenue, NW., Washington, DC 20529–2020. Comments may also be submitted to DHS via facsimile to 202–272–0997or via e-mail at *rfs.regs@dhs.gov.* When submitting comments by e-mail, please make sure to add OMB Control No. 1615–0067 in the subject box. Written comments and suggestions from the public and affected agencies concerning the collection of information should

address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agencies, estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of this Information Collection

(1) *Type of Information Collection:* Extension of an existing information collection.

(2) *Title of the Form/Collection:* Application for Asylum and Withholding of Removal.

(3) *Agency form number, if any, and the applicable component of the Department of Homeland Security sponsoring the collection:* Form I–589; U.S. Citizenship and Immigration Services (USCIS).

(4) *Affected public who will be asked or required to respond, as well as a brief abstract: Primary:* Individuals or households. Form I–589 is necessary to determine whether an alien applying for asylum and/or withholding of deportation in the United States is classified as refugee, and is eligible to remain in the United States.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* 63,138 responses at 12 hours per response.

(6) *An estimate of the total public burden (in hours) associated with the collection:* 757,656 annual burden hours.

If you need a copy of the information collection instrument, please visit the Web site at: *http://www.regulations.gov/.*

We may also be contacted at: USCIS, Regulatory Products Division, 20 Massachusetts Avenue, NW., Washington, DC 20529–2020, Telephone number 202–272–8377.

Dated: November 22, 2010.

Sunday A. Aigbe,

Chief, Regulatory Products Division, U.S. Citizenship and Immigration Services, Department of Homeland Security.

BILLING CODE 9111–97–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Citizenship and Immigration Services

Agency Information Collection Activities: Form I–829, Extension of a Currently Approved Information Collection; Comment Request

ACTION: 60-Day notice of information collection under review: Form I–829, Petition by Entrepreneur to Remove Conditions; OMB Control No. 1615–0045.

The Department of Homeland Security, U.S. Citizenship and Immigration Services (USCIS) will be submitting the following information collection request for review and clearance in accordance with the Paperwork Reduction Act of 1995. The information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for sixty days until January 31, 2011.

Written comments and suggestions regarding items contained in this notice, and especially with regard to the estimated public burden and associated response time should be directed to the Department of Homeland Security (DHS), USCIS, Chief, Regulatory Products Division, Clearance Office, 201 Massachusetts Avenue, NW., 5th Floor, Suite 5012, Washington, DC 20529–2020. Comments may also be submitted to DHS via facsimile to 202–272–0997, or via e-mail at *rfs.regs@dhs.gov.* When submitting comments by e-mail add the OMB Control Number 1615–0045 in the subject box.

During this 60-day period USCIS will be evaluating whether to revise the Form I–829. Should USCIS decide to revise the Form I–829 it will advise the public when it publishes the 30 day notice in the **Federal Register** in accordance with the Paperwork Reduction Act. The public will then have 30 days to comment on any revisions to the Form I–829.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information should address one or more of the following four points:

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques, or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of this information collection:

(1) *Type of Information Collection:* Extension of an existing information collection.

(2) *Title of the Form/Collection:* Petition by Entrepreneur to Remove Conditions.

(3) *Agency form number, if any, and the applicable component of the Department of Homeland Security sponsoring the collection:* Form I–829. U.S. Citizenship and Immigration Services.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract: Primary:* Individuals and households. This form is used by a conditional resident alien entrepreneur who obtained such status through a qualifying investment, to apply to remove conditions on his or her conditional residence, and on the conditional residence for his or her spouse and children(s).

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* 200 responses at 2 hours and 5 minutes (2.083) per response.

(6) *An estimate of the total public burden (in hours) associated with the collection:* 416 annual burden hours.

If you have additional comments, suggestions, or need a copy of the information collection instrument, please visit: *http://www.regulations.gov/search/index.jsp.*

DEPARTMENT OF HOMELAND SECURITY

U.S. Citizenship and Immigration Services

Agency Information Collection Activities: Form I–601, Revision of a Currently Approved Information Collection; Comment Request

ACTION: 60-Day Notice of Information Collection Under Review: Form I–601, Application for Waiver of Grounds of Inadmissibility; OMB Control Number 1615–0029.

The Department of Homeland Security, U.S. Citizenship and Immigration Services will be submitting the following information collection request for review and clearance in accordance with the Paperwork Reduction Act of 1995. The information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for sixty days until January 31, 2011.

Written comments and suggestions regarding items contained in this notice and especially with regard to the estimated public burden and associated response time should be directed to the Department of Homeland Security (DHS), USCIS, Chief, Regulatory Products Division, Clearance Office, 20 Massachusetts Avenue, NW., 5th Floor Suite 5012, Washington, DC 20529. Comments may also be submitted to DHS via facsimile to 202–272–0997, or via e-mail at *rfs.regs@dhs.gov.* When submitting comments by e-mail, please add the OMB Control Number 1615–0029 in the subject box.

Written comments and suggestions from the public and affected agencies concerning the collection of information should address one or more of the following four points:

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agencies estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Revision of a currently approved information collection.

(2) *Title of the Form/Collection:* Application for Waiver of Grounds of Inadmissibility.

(3) *Agency form number, if any, and the applicable component of the Department of Homeland Security sponsoring the collection:* Form I–601. U.S. Citizenship and Immigration Services.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract*: *Primary:* Individuals or Households. The information collected on this form is used by U.S Citizenship and Immigration Services (USCIS) to determine whether the applicant is eligible for a waiver of excludability under section 212 of the Immigration and Nationality Act.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* 15,500 responses at 1½; hours per response.

(6) *An estimate of the total public burden (in hours) associated with the collection:* 23,250 annual burden hours.

If you have additional comments, suggestions, or need a copy of the information collection instrument, please visit: *http://www.regulations.gov/search/index.jsp.*

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R9–MB–2010-N264; 1200–1232–0000-P2]

Information Collection Sent to the Office of Management and Budget (OMB) for Approval; OMB Control Number 1018–0022; Federal Fish and Wildlife Permit Applications and Reports—Migratory Birds and Eagles

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: We (U.S. Fish and Wildlife Service) have sent an Information Collection Request (ICR) to OMB for review and approval. We summarize the ICR below and describe the nature of the collection and the estimated burden and cost. This information collection is scheduled to expire on November 30, 2010. We may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. However, under OMB regulations, we may continue to conduct or sponsor this information collection while it is pending at OMB.

DATES: You must submit comments on or before December 29, 2010.

ADDRESSES: Send your comments and suggestions on this information collection to the Desk Officer for the Department of the Interior at OMB-OIRA at (202) 395–5806 (fax) or *OIRA_DOCKET@OMB.eop.gov* (e-mail). Please provide a copy of your comments to the Service Information Collection Clearance Officer, U.S. Fish and Wildlife Service, MS 222–ARLSQ, 4401 North Fairfax Drive, Arlington, VA 22203 (mail), or *infocol@fws.gov (e-mail).*

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Susan Lawrence, Division of Migratory Bird Management, U.S. Fish and Wildlife Service, MS MBSP–4107, 4501 North Fairfax Drive, Arlington, VA 22203 (mail); *Susan_M_Lawrence@fws.gov* (e-mail); or 703–358–2016 (telephone).

SUPPLEMENTARY INFORMATION:

OMB Control Number: 1018–0022.

Title: Federal Fish and Wildlife License/Permit Applications and Reports, Migratory Birds and Eagles, 50 CFR 10, 13, 21, and 22.

Service Form Numbers: 3–200–6 through 3–200–18, 3–200–67, 3–200–68, 3–200–71, 3–200–72, 3–200–77, 3–200–78, 3–200–79, 3–200–81, 3–200–82, 3–202–1 through 3–202–17, 3–186, and 3–186A.

Type of Request: Revision of a currently approved collection.

Description of Respondents: Individuals; zoological parks; museums; universities; scientists; taxidermists; businesses; and Federal, State, tribal, and local governments.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion for applications; annually or on occasion for reports.

Number of Respondents: 57,260.

Estimated Number of Annual Responses: 57,260.

Completion Time per Response: Varies from 15 minutes to 40 hours depending on activity.

Estimated Total Annual Burden Hours: 93,402.

Estimated Annual Nonhour Burden Cost: $1,049,925 for fees associated with permit applications.

Abstract: Our Regional Migratory Bird Permit Offices use information that we collect on permit applications to determine the eligibility of applicants for permits requested in accordance with the criteria in various Federal wildlife conservation laws and international treaties, including:

(1) Migratory Bird Treaty Act (16 U.S.C. 703 *et seq.*).

(2) Lacey Act (16 U.S.C. 3371 *et seq.*).

(3) Bald and Golden Eagle Protection Act (16 U.S.C. 668).

Service regulations implementing these statutes and treaties are in Chapter I, Subchapter B of Title 50 Code of Federal Regulations (CFR). These regulations stipulate general and specific requirements that, when met, allow us to issue permits to authorize activities that are otherwise prohibited.

All Service permit applications are in the 3–200 series of forms, each tailored to a specific activity based on the requirements for specific types of permits. We collect standard identifier information for all permits. The information that we collect on applications and reports is the minimum necessary for us to determine if the applicant meets/continues to meet issuance requirements for the particular activity. This revised ICR includes modifications to the format and content of the currently approved applications so that they (a) are easier to understand and complete and (b) will accommodate future electronic permitting.

This ICR includes four permit application and report forms that are currently approved under OMB Control Number 1018–0136. Once OMB takes action on this IC, we will discontinue OMB Control No. 1018–0136.

- FWS Form 3–200–71 (Eagle Take (Disturb)).
- FWS Form 3–200–72 (Eagle Nest Take).
- FWS Form 3–202–15 (Eagle Take Monitoring and Annual Report).
- FWS Form 3–202–16 (Eagle Nest Take Monitoring and Reporting).

In addition, we are proposing three new forms:

- FWS Form 3–200–81 (Special Purpose—Utility) will provide an application specifically tailored for utilities (*e.g.,* power, communications) to request permits to salvage migratory birds on their property and rights-of-way.
- FWS Form 3–200–82 (Eagle Transport Into and Out of the United States) will provide an application for permits under the Bald and Golden Eagle Protection Act to transport dead eagle specimens into and out of the country temporarily for scientific or exhibition purposes, such as for museum exhibits.
- FWS Form 3–202–17 (Special Purpose—Utility Annual Report) will provide a standardized annual report form for Special Purpose—Utility permits.

Comments: On April 7, 2010, we published in the **Federal Register** (75 FR 17757) a notice of our intent to request that OMB renew approval for this information collection. In that notice, we solicited comments for 60 days, ending on June 7, 2010. We did not receive any comments.

We again invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our estimate of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask OMB in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Dated: November 23, 2010.

Hope Grey,

Information Collection Clearance Officer, Fish and Wildlife Service.

Endangered and Threatened Wildlife and Plants; Draft Revised Recovery Plan for the Northern Spotted Owl (Strix occidentalis caurina); Reopening of Public Comment Period

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of document availability; reopening of comment period.

SUMMARY: We, the U.S. Fish and Wildlife Service, recently announced the availability of the Draft Revised Recovery Plan for the Northern Spotted Owl (*Strix occidentalis caurina*) for public review and comment. See **SUPPLEMENTARY INFORMATION** for details. We now reopen the comment period. If you have previously submitted comments, please do not resubmit them, because we have already incorporated them in the public record and will fully consider them in developing our final recovery plan.

DATES: To ensure consideration, please send your written comments by December 15, 2010.

ADDRESSES: Electronic copies of the draft revised recovery plan are available online at: *http://ecos.fws.gov/docs/recovery_plan/100915.pdf* and *http://www.fws.gov/oregonfwo/Species/Data/NorthernSpottedOwl/Recovery/*. Printed copies of the draft revised recovery plan are available by request from the Field Supervisor, U.S. Fish and Wildlife Service, Oregon Fish and Wildlife Office, 2600 SE. 98th Avenue, Ste. 100, Portland, OR 97266 (phone: 503/231–6179). Written comments regarding this recovery plan, or requests for copies of the plan, should be addressed to the above Portland address or sent by e-mail to: *NSORPComments@fws.gov*.

FOR FURTHER INFORMATION CONTACT: Brendan White or (for draft copies of population response model output) Diana Acosta, Fish and Wildlife Biologists, at the above address and phone number.

SUPPLEMENTARY INFORMATION: On September 15, 2010, we published a **Federal Register** notice (75 FR 56131) announcing the availability of the Draft Revised Recovery Plan for the Northern Spotted Owl (*Strix occidentalis caurina*) for public review and comment under the Endangered Species Act (16 U.S.C 1531 *et seq.*). We originally opened this comment period for 60 days, from September 15, 2010, to November 15, 2010. We are re-opening the public comment period until December 15, 2010, in response to several requests for additional time to review and comment on the draft revised recovery plan.

For background information on the draft revised recovery plan, see our September 15, 2010, notice. As stated in that notice, we particularly seek comments concerning portions of the draft revised recovery plan that have been updated from the 2008 recovery plan. Appendix C of the draft revised recovery plan described stages 1 and 2 of our ongoing three-stage spotted owl modeling effort. Since its release we have continued this effort, initiating population response modeling using the individual-based population program HexSim. Though still at preliminary draft stage, population response simulations from this portion of the modeling process are available for public review by request from our office. These simulations do not estimate what will occur in the future, but provide comparative information on potential population responses to different conservation scenarios as described in the draft revised recovery plan.

Public Availability of Comments

Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority

The authority for this action is section 4(f) of the Endangered Species Act, 16 U.S.C. 1533(f).

Dated: November 15, 2010.

Richard R. Hannan,

Acting Regional Director, Region 1, U.S. Fish and Wildlife Service.

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce the availability of our final comprehensive conservation plan (CCP) and finding of no significant impact (FONSI) for the environmental assessment (EA) for the Laguna Atascosa National Wildlife Refuge (NWR). In this final CCP, we describe how we will manage this refuge for the next 15 years.

ADDRESSES: You may view or obtain copies of the final CCP and FONSI/EA by any of the following methods. You may request a hard copy or CD–ROM.

Agency Web Site: Download a copy of the document(s) at *http://www.fws.gov/southwest/refuges/Plan/index.html.*

E-mail: mark_sprick@fws.gov. Include "Laguna Atascosa final CCP" in the subject line of the message.

Mail: Mark Sprick, AICP, Natural Resource Planner, U.S. Fish and Wildlife Service, Division of Planning, P.O. Box 1306, Albuquerque, NM 87103–1306.

In-Person Viewing or Pickup: Call 505–248–7411 to make an appointment during regular business hours at 500 Gold Avenue, SW., Albuquerque, NM 87102.

FOR FURTHER INFORMATION CONTACT: Sonny Perez, Refuge Manager, Laguna Atascosa NWR, 22817 Ocelot Road, Los Fresnos, TX 78566; by phone, 956–748–3607; or by e-mail, *sonny_perez@fws.gov.*

SUPPLEMENTARY INFORMATION:

Introduction

With this notice, we finalize the CCP process for the Laguna Atascosa NWR. We started this process through a notice in the **Federal Register** July 19, 2004 (69 FR 43010).

Laguna Atascosa NWR is located in Cameron and Willacy Counties, Texas, and encompasses 97,007 acres of brush lands, coastal prairies, freshwater and brackish pothole wetlands, estuarine wetlands, lomas (clay ridges), wind tidal flats, and barrier island beaches and

dunes. Management efforts focus on protecting, enhancing, and restoring Refuge habitats and water management for the benefit of important fish and wildlife resources. The Refuge is a premiere bird watching destination with 415 recorded bird species, more than any other national wildlife refuge. A total of eight federally listed endangered or threatened species occur within the Refuge, including four species of sea turtles. The largest U.S. population of endangered ocelot cats is located on the Refuge, making it the center for ocelot conservation and recovery.

Laguna Atascosa NWR was formally established by the Migratory Bird Commission on October 31, 1945, and the first tract forming the Refuge was acquired on March 29, 1946. The purposes of the Refuge are: "[F]or use as an inviolate sanctuary, or for any other management purpose, for migratory birds" (Migratory Bird Conservation Act of 1929 (16 U.S.C. 715d), as amended); "for wildlife conservation purposes if the real property has particular value in carrying out the national migratory bird management program" (Transfer of Certain Real Property for Wildlife Conservation Purposes Act of 1948 (16 U.S.C. 667b–667d), Public Law 80–537, as amended); "for the development, advancement, management, conservation and protection of fish and wildlife resources" (Fish and Wildlife Act of 1956 (16 U.S.C. 742(a)(4), as amended); and "for the benefit of the United States Fish and Wildlife Service, in performing its activities and services. Such acceptance may be subject to the terms of any restrictive or affirmative covenant, or condition of servitude" (Fish and Wildlife Act of 1956 (16 U.S.C. 742(b)(1), as amended).

We announce our decision and the availability of the FONSI for the final CCP for the Laguna Atascosa NWR in accordance with National Environmental Policy Act (NEPA) (40 CFR 1506.6(b)) requirements. We completed a thorough analysis of impacts on the human environment, which we included in the EA that accompanied the draft CCP.

The CCP will guide us in managing and administering the Laguna Atascosa National Wildlife Refuge for the next 15 years. Alternative B, with modifications as described in Appendix H (Response to Public Comments), is selected as the management direction for the Final Plan.

Background

The National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd–668ee) (Refuge Administration Act), as amended by the National Wildlife Refuge System Improvement Act of 1997, requires us to develop a CCP for each national wildlife refuge. The purpose for developing a CCP is to provide refuge managers with a 15-year plan for achieving refuge purposes and contributing toward the mission of the National Wildlife Refuge System, consistent with sound principles of fish and wildlife management, conservation, legal mandates, and our policies. In addition to outlining broad management direction on conserving wildlife and their habitats, CCPs identify wildlife-dependent recreational opportunities available to the public, including opportunities for hunting, fishing, wildlife observation and photography, and environmental education and interpretation. We will review and update the CCP at least every 15 years in accordance with the Refuge Administration Act.

CCP Alternatives, Including Selected Alternative

Our draft CCP and our EA (74 FR 66148) addressed several issues. To address these, we developed and evaluated the following alternatives.

	A: No-action alternative	B: Proposed action alternative	C: Optimize public-use alternative
Issue 1: Habitat Management Activities.	Biological program and habitat management would continue under existing plans; any expansions would occur opportunistically..	Integrated biological and habitat management efforts with landscape-level and ecosystem-level plans; emphasis on protection and monitoring of Federal trust species and priority species and their habitats..	Same as No-Action Alternative (Alternative A).
Issue 2: Improvements to public use opportunities.	Limited to current public use under existing plans; any expansions would occur opportunistically..	Improvement of priority public uses, particularly hunting, fishing, and wildlife observation, to meet demand when compatible with wildlife needs and Refuge purposes; expansion of research efforts and dynamic partnerships..	Expand and emphasize all priority public uses, particularly hunting and fishing and access to all Refuge areas to the maximum extent when compatible, based on public comments.
Issue 3: Staffing, Facilities, and Infrastructure.	Existing staffing (17 permanent positions) and facilities; any additional staff and facility expansions would occur opportunistically..	Addition of 11 staff to existing base; addition of over 6 miles of hike/bike trails; one auto tour route; two separate parking areas; new visitor center at Laguna Atascosa Unit. Visitor contact and research station at Bahia Grande..	Base funding and staffing would increase by four positions (Outdoor Recreation Planner and three Park Rangers); several additional miles of auto tour routes, seven hike/bike trails and associated parking areas; visitor contact station; all primarily at Bahia Grande.

Comments

We accepted comments on the draft CCP and the EA for the Laguna Atascosa NWR from December 14, 2009, to February 12, 2010 (74 FR 66148). Subsequently, the Draft Plan/EA were made available for public review starting on December 14, 2009, at the Refuge, at eight local municipal and county libraries in the south Texas area near the Refuge, and at the Regional Office in Albuquerque, New Mexico. Four open house meetings were held in communities near the Refuge in January 2010. In all, 98 individuals signed the attendance rosters at the open house meetings and a total of 52 comments were submitted in writing or phoned in to the Refuge/Regional Office. Additionally, one State agency, one university, and six nongovernmental

organizations responded prior to the end of the 60-day public comment period. Based on the comments received, we changed the Draft Plan/EA to include: Improved inventory and assessment of water resources to meet protection goals, recommended strategies for bird surveys, modification of a wildlife objective to clarify protections for falcons, and strategies to address future establishment of artificial water sources.

Selected Alternative

After considering the comments we received, we have selected Alternative B for implementation. This alternative describes how habitat objectives will be accomplished through a combination of management activities to encourage ecological integrity, promote restoration of coastal prairie habitats, control invasive plant species, and provide/enhance brush land, wetland and grassland habitat for ocelots, migratory waterfowl, and other resident wildlife. This alternative was selected because it best meets refuge purposes and goals of the Laguna Atascosa National Wildlife Refuge. This action will not adversely impact endangered or threatened species or their habitat. Opportunities for wildlife-dependent recreation activities, such as hunting, fishing, observation, photography, environmental education, and interpretation, will be enhanced. Future management actions will have a neutral or positive impact on the local economy, and the recommendations in the Plan will ensure that Refuge management is consistent with the mission of the National Wildlife Refuge System.

Public Availability of Documents

In addition to the methods in **ADDRESSES**, you can view or obtain documents at the following locations:

- Our Web site: *http://www.fws.gov/southwest/refuges/texas/STRC/laguna/Index_Laguna.html.*

Tishomingo National Wildlife Refuge, Johnston County, OK; Final Comprehensive Conservation Plan and Finding of No Significant Impact for Environmental Assessment

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce the availability of our final comprehensive conservation plan (CCP) and finding of no significant impact (FONSI) for the environmental assessment (EA) for the Tishomingo National Wildlife Refuge (NWR). In this final CCP, we describe how we will manage this Refuge for the next 15 years.

ADDRESSES: You may view or obtain copies of the final CCP and FONSI/EA by any of the following methods. You may request a hard copy or CD–ROM.

Agency Web Site: Download a copy of the document(s) at *http://www.fws.gov/southwest/refuges/Plan/index.html.*

E-mail: Joseph_Lujan@fws.gov. Include "Tishomingo Final CCP" in the subject line of the message.

Mail: Joseph R. Lujan, Natural Resource Planner, U.S. Fish and Wildlife Service, Division of Planning, P.O. Box 1306, Albuquerque, NM 87103–1306.

In-Person Viewing or Pickup: Call 505–248–7458 to make an appointment during regular business hours at 500 Gold Avenue SW., Albuquerque, NM 87102.

FOR FURTHER INFORMATION CONTACT: Kris Patton, Refuge Manager, Tishomingo NWR, 12000 South Refuge Road, Tishomingo, OK 73625; by phone, 580–371–2402; or by e-mail, *kris_patton@fws.gov.*

SUPPLEMENTARY INFORMATION:

Introduction

With this notice, we finalize the CCP process for the Tishomingo NWR. We started this process through a notice in the **Federal Register** November 17, 1999 (64 FR 62683).

Tishomingo NWR is located in Johnston County, Oklahoma, and encompasses 16,464 acres located in south-central Oklahoma. Management efforts focus on protecting, enhancing, and restoring Refuge habitats and water management for the benefit of fish and wildlife resources. Cumberland Pool, a part of Lake Texoma, takes up a quarter of the Refuge and serves as the focal point for many visitors because of its birds and fish. The Refuge also has a strong historical context. The Refuge was once the homeland of the Chickasaw Nation, and later became the Washita and Chapman Farms, integrating an entire community.

On January 24, 1946, the Refuge was authorized and established to preserve nesting grounds for migrating waterfowl, by order of President Harry S. Truman under Public Land Order 312. U.S. Army Corps of Engineers' and the Service's cooperative agreement, along with a cooperative agreement between the Service, Oklahoma Department of Wildlife Conservation, and the Corps, are the foundation of refuge management authority for the Service.

We announce our decision and the availability of the FONSI for the final CCP for the Tishomingo NWR in accordance with National Environmental Policy Act (NEPA) (40 CFR 1506.6(b)) requirements. We completed a thorough analysis of impacts on the human environment, which we included in the EA that accompanied the draft CCP.

The CCP will guide us in managing and administering the Tishomingo National Wildlife Refuge for the next 15 years. Alternative B, with modifications

as described in Appendix I (Response to Public Comments), is selected as the management direction for the Final Plan.

Background

The National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd–668ee) (Refuge Administration Act), as amended by the National Wildlife Refuge System Improvement Act of 1997, requires us to develop a CCP for each national wildlife refuge. The purpose for developing a CCP is to provide Refuge managers with a 15-year plan for achieving refuge purposes and contributing toward the mission of the National Wildlife Refuge System, consistent with sound principles of fish and wildlife management, conservation, legal mandates, and our policies. In addition to outlining broad management direction on conserving wildlife and their habitats, CCPs identify wildlife-dependent recreational opportunities available to the public, including opportunities for hunting, fishing, wildlife observation and photography, and environmental education and interpretation. We will review and update the CCP at least every 15 years in accordance with the Refuge Administration Act.

CCP Alternatives, Including Selected Alternative

Our draft CCP and our EA (75 FR 3753) addressed several issues. To address these, we developed and evaluated the following alternatives.

	A: No-action alternative	B: Proposed action alternative	C: Expanded public-use alternative
Issue 1: Habitat Management Activities.	Biological program and habitat management would continue under existing plans; any expansions would occur opportunistically.	Integrated biological and habitat management efforts with landscape level and ecosystem level plans; implement adaptive management practices that would contribute to ongoing monitoring and modification of Refuge resources.	Same as Proposed Action (Alternative B).
Issue 2: Improvements to public use opportunities.	Limited to current public use under existing plans; Any expansions would occur opportunistically.	Improvement of priority public uses, particularly hunting, fishing and wildlife observation, to meet demand when compatible with wildlife needs and Refuge purposes; expansion of research efforts and dynamic partnerships.	Expand and emphasize all priority public uses, particularly hunting within the Wildlife Management Unit portion of the Refuge.
Issue 3: Staffing, Facilities, and Infrastructure.	Existing staffing (seven permanent positions) and facilities; any additional staff and facility expansions would occur opportunistically.	Addition of a Visitors Service Manager to existing base; addition of over 5 miles of hiking trails with pull outs and parking areas; development of primitive camping areas.	Same as Proposed Action (Alternative B) plus additional 10 miles of hiking trails, an 8-mile canoe interpretive trail and a 12-mile auto tour route.

Comments

We solicited comments on the draft CCP and the EA for the Tishomingo NWR from January 22, 2010, to March 23, 2010 (75 FR 3753). The Draft Plan/EA was made available for public review on January 22, 2010, at the Refuge; at the local library in Tishomingo, OK; and at the Regional Office in Albuquerque, New Mexico. A total of 12 meetings were held with other local, State, and Federal governments as well as the local Chickasaw nation and nongovernment agencies, including one university. An open house public meeting was also held on February 24, 2010, in the Redbud Environmental Education Center on the Tishomingo NWR, where a total of 15 individuals signed the attendance rosters. A total of 82 comments were submitted in writing to the Refuge/Regional Office. Additionally, one State agency, one university, and two nongovernmental organizations responded prior to the end of the 60-day public comment period.

Based on the comments received, the Draft Plan/EA was changed to include rationale on how management direction for Lake Texoma is consistent with the purpose of establishment of the Refuge and remains focused on waterfowl, migratory birds, and other wildlife. Additional rationale was also incorporated to maintain the current amount of farming but increase moist soil units in an attempt to improve waterfowl habitat.

Selected Alternative

After considering the comments we received, we have selected Alternative B for implementation. This alternative describes how habitat objectives will be accomplished through a combination of adaptive management activities to encourage ecological integrity, promote restoration of grasslands, and control invasive plant species to promote habitat for migratory birds, waterfowl and other resident wildlife. This alternative was selected because it best meets Refuge purposes and goals. This action will not adversely impact endangered or threatened species or their habitat. Opportunities for wildlife-dependent recreation activities, such as hunting, fishing, wildlife observation, wildlife photography, environmental education, and interpretation, will be enhanced. Future management actions will have a neutral or positive impact on the local economy, and the recommendations in the Plan will ensure that Refuge management is consistent with the mission of the National Wildlife Refuge System.

Public Availability of Documents

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Information Collection for Native American Business Development Institute Funding for Economic Development Feasibility Studies and Long-Term Strategic, Reservation-Wide Economic Development Plans; Comment Request

AGENCIES: Bureau of Indian Affairs, Interior.

ACTION: Notice of proposed information collection.

SUMMARY: The Division of Economic Development (DED), Office of Indian Energy and Economic Development (IEED) seeks to spur job growth and sustainable economies on American Indian reservations. DED created the Native American Business Development Institute (NABDI) to provide Tribes and tribal businesses with expert advice regarding economic development matters. In compliance with the Paperwork Reduction Act of 1995, DED is seeking comments on a proposed information collection related to the NABDI's funding of economic development feasibility studies (studies) and long-term strategic, reservation-wide economic development plans (plans). Federally recognized Indian tribes, on their own behalf or on behalf of tribally owned business, may apply for the funding by providing certain information. Applicants receiving funding must provide a final report summarizing the progress of and results of studies and plans. This notice requests comments on the information collection associated with the application and final report.

DATES: Interested persons are invited to submit comments on or before January 31, 2011.

ADDRESSES: You may submit comments on the information collection to Mr. Victor Christiansen, Division of Economic Development, Office of Indian Energy and Economic Development, U.S. Department of the Interior, Room 14—South Interior Building, 1951 Constitution Avenue, NW., Washington, DC 20245, fax (202) 208–4564; e-mail: *Victor.Christiansen@bia.gov.*

FOR FURTHER INFORMATION CONTACT: You may request further information from Mr. Victor Christiansen, Division of Economic Development, Office of Indian Energy and Economic Development, U.S. Department of the Interior. Telephone: (202) 219–0739.

SUPPLEMENTARY INFORMATION:

I. Abstract

DED established the NABDI to provide technical assistance funding to federally recognized American Indian tribes seeking to retain universities and colleges, private consulting firms, non-academic/non-profit entities, or others to prepare studies of economic development opportunities or plans. These studies and plans will empower American Indian tribes and tribal businesses to make informed decisions regarding their economic futures. Studies may concern the viability of an economic development project or business or the practicality of a technology a tribe may choose to pursue. DED will specifically exclude from consideration proposals for research and development projects, requests for funding of salaries for tribal government personnel, funding to pay legal fees, and requests for funding for the purchase or lease of structures, machinery, hardware or other capital items. Plans may encompass future periods of five years or more and include one or more economic development factors including but not limited to land and retail use, industrial development, tourism, energy, resource development and transportation.

This is an annual program whose primary objective is to create jobs and foster economic activity within tribal communities. DED will administer the program within IEED; and studies and plans as described herein will be the sole discretionary projects DED will consider or fund absent a competitive bidding process. When funding is available, DED will solicit proposals for studies and plans. To receive these funds, tribes may use the contracting mechanism established by Public Law 93–638, the Indian Self-Determination Act or may obtain adjustments to their funding from the Office of Self-Governance. *See* 25 U.S.C. 450 *et seq.*

Interested applicants must submit a tribal resolution requesting funding, a statement of work describing the project for which the study is requested or the scope of the plan envisioned, the identity of the academic institution or other entity the applicant wishes to retain (if known) and a budget indicating the funding amount requested and how it will be spent. DED expressly retains the authority to reduce or otherwise modify proposed budgets and funding amounts.

Applications for funding will be juried and evaluated on the basis of a proposed project's potential to generate jobs and economic activity on the reservation.

II. Request for Comments

DED requests that you send your comments on this collection to the location listed in the **ADDRESSES** section. Your comments should address: (a) The necessity of the information collection for the proper performance of the agencies, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection of the information on the respondents, such as through the use of automated collection techniques or other forms of information technology.

Please note that an agency may not sponsor or conduct, and an individual need not respond to, a collection of information unless it has a valid OMB Control Number.

It is our policy to make all comments available to the public for review at the location listed in the **ADDRESSES** section during the hours of 9 a.m.–5 p.m., Eastern Time, Monday through Friday except for legal holidays. Before including your address, phone number, e-mail address or other personally identifiable information, be advised that your entire comment—including your personally identifiable information—may be made public at any time. While you may request that we withhold your personally identifiable information, we cannot guarantee that we will be able to do so.

III. Data

OMB Control Number: 1076–0XXX.

Type of Review: New.

Title: NABDI Funding Solicitation for Economic Development Feasibility Studies and Long-Term Strategic, Reservation-Wide Economic Development Plans.

Brief Description of Collection: Indian tribes that would like to apply for NABDI funding must submit an application that includes certain information. A complete application must contain:

- A duly-enacted, signed resolution of the governing body of the tribe;
- A proposal describing the planned activities and deliverable products; and
- The identity (if known) of the academic institution, private consultant, non-profit/non-academic entity, or other entity the tribe has chosen to perform the study or prepare the plan; and
- A detailed budget estimate, including contracted personnel costs, travel estimates, data collection and analysis costs, and other expenses, though DED reserves authority to reduce or otherwise modify this budget.

DED requires this information to ensure that it provides funding only to those projects that meet the economic development and job creation goals for which NABDI was established. Applications will be evaluated on the basis of the proposed project's potential to generate jobs and economic activity on the reservation. Upon completion of the funded project, a tribe must then submit a final report summarizing events, accomplishments, problems and/or results in executing the project. DED estimates that approximately 20 tribes will apply each year, and that DED will accept approximately all 20 into the program annually.

Respondents: Indian tribes with trust or restricted land.

Number of Respondents: 20 applicants per year; 20 project participants each year.

Estimated Time per Response: 40 hours per application; 1.5 hours per report.

Frequency of Response: Once per year for applications and final report.

Total Annual Burden to Respondents: 830 hours (800 for applications and 30 for final reports).

Dated: November 22, 2010.

Alvin Foster,

Acting Chief Information Officer—Indian Affairs.

[FR Doc. 2010–30092 Filed 11–29–10; 8:45 am]

BILLING CODE 4310–4J–P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Information Collection for Tribal Energy Development Capacity Program; Comment Request

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of Proposed Information Collection.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the Office of Indian Energy and Economic Development (IEED) is seeking comments on a proposed information collection related to funds provided under the Tribal Energy Development Capacity (TEDC) program. Indian tribes, including Alaska Native regional and village corporations, may be considered for funding under the TEDC if they provide certain information as part of an application. Once an application is accepted, the Indian tribe must then submit reports regarding the progress of their project. This notice requests comments on the information collection associated with the application and progress reports.

DATES: Interested persons are invited to submit comments on or before January 31, 2011.

ADDRESSES: You may submit comments on the information collection to Ashley Stockdale, Department of the Interior, Office of Indian Energy and Economic Development, Room 20—South Interior Building, 1951 Constitution Avenue, NW., Washington, DC 20245, fax (202) 208–4564; *e-mail: Ashley.Stockdale@bia.gov*.

FOR FURTHER INFORMATION CONTACT: You may request further information from Ashley Stockdale, Department of the Interior, Office of Indian Energy and Economic Development. Telephone (202) 219–0740.

SUPPLEMENTARY INFORMATION:

I. Abstract

The Energy Policy Act of 2005 authorizes the Secretary of the Interior to provide assistance to Indian tribes for energy development and appropriates funds for such projects on a year-to-year basis. *See* 25 U.S.C. 3502. When funding is available, the Office of IEED may solicit proposals for projects for building capacity for tribal energy resource development on Indian land from Indian tribes, including Alaska Native regional and village corporations under the TEDC program. For the purposes of this program, "Indian land" includes: All land within the boundaries of an Indian reservation, pueblo, or rancheria; any land outside those boundaries that is held by the United States in trust for a tribe or individual Indian or by a tribe or individual Indian with restrictions on alienation; and land owned by an Alaska Native regional or village corporation.

Tribes may use the contracting mechanism established by the Indian Self-Determination Act or may receive the money through adjustments to their funding from the Office of Self-Governance. *See* 25 U.S.C. 450 *et seq.* Indian tribes that would like to submit a TEDC project proposal must submit an application that includes certain information and, once funding is received, must submit reports on how they are using the funding. A complete application must contain the following elements:

- A formal signed resolution of the governing body of the tribe;
- A proposal describing the planned activities and deliverable products; and
- A detailed budget estimate, including contracted personnel costs, travel estimates, data collection and analysis costs, and other expenses.

The project proposal must include information about the tribe sufficient to allow IEED to evaluate the proposal based on the following criteria:

(a) Energy resource potential;

(b) Tribe's energy resource development history and current status;

(c) Tribe's existing energy resource development capabilities;

(d) Demonstrated willingness of the tribe to develop an independent energy resource development business entity;

(e) Intent to develop and retain energy development capacity within tribal government or business entities; and

(f) Tribal commitment of staff, training, or monetary resources.

IEED requires this information to ensure that it provides funding only to those projects that meet the goals of the TEDC and the purposes for which Congress provides the appropriations.

II. Request for Comments

IEED requests that you send your comments on this collection to the location listed in the **ADDRESSES** section. Your comments should address: (a) The necessity of the information collection for the proper performance of the agencies, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used; (c) ways we could enhance the quality, utility and clarity of the information to be collected; and (d) ways we could

minimize the burden of the collection of the information on the respondents, such as through the use of automated collection techniques or other forms of information technology.

Please note that an agency may not sponsor or conduct, and an individual need not respond to, a collection of information unless it has a valid OMB Control Number.

It is our policy to make all comments available to the public for review at the location listed in the **ADDRESSES** section during the hours of 9 a.m.–5 p.m., Eastern Time, Monday through Friday except for legal holidays. Before including your address, phone number, e-mail address or other personally identifiable information, be advised that your entire comment—including your personally identifiable information—may be made public at any time. While you may request that we withhold your personally identifiable information, we cannot guarantee that we will be able to do so.

III. Data

OMB Control Number: 1076–0XXX.

Type of Review: New.

Title: Tribal Energy Development Capacity Program Proposal Solicitation

Brief Description of Collection: Indian tribes that would like to apply for TEDC funding must submit an application that includes certain information. A complete application must contain a formal signed resolution of the governing body of the tribe, a proposal describing the planned activities and deliverable products; and a detailed budget estimate, including contracted personnel costs, travel estimates, data collection and analysis costs, and other expenses. IEED requires this information to ensure that it provides funding only to those projects that meet the goals of the TEDC program and purposes for which Congress provides the appropriation. Upon acceptance of an application, a tribe must then submit one- to two-page quarterly progress reports summarizing events, accomplishments, problems and/or results in executing the project. IEED estimates that approximately 20 tribes will apply each year, and that IEED will accept approximately 10 of those applicants into the program.

Respondents: Indian tribes under 25 U.S.C. 3502.

Number of Respondents: 20 applicants per year; 10 project participants each year.

Estimated Time per Response: 40 hours per application; 1.5 hours per progress report.

Frequency of Response: Once per year for applications; 4 times per year for progress reports.

Total Annual Burden to Respondents: 860 hours (800 for applications and 60 for progress reports).

Dated: November 22, 2010.

National Park Service

[2280–665]

National Register of Historic Places; Notification of Pending Nominations and Related Actions

Nominations for the following properties being considered for listing, removal, or related actions in the National Register were received by the National Park Service before October 30, 2010. Pursuant to sections 60.13 and 60.15 of 36 CFR part 60, written comments are being accepted concerning the significance of the nominated properties under the National Register criteria for evaluation. Comments may be forwarded by United States Postal Service, to the National Register of Historic Places, National Park Service, 1849 C St., NW., MS 2280, Washington, DC 20240; by all other carriers, National Register of Historic Places, National Park Service,1201 Eye St., NW., 8th floor, Washington, DC 20005; or by fax, 202–371–6447. Written or faxed comments should be submitted by November 30, 2010.

Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

J. Paul Loether,

Chief, National Register of Historic Places/National, Historic Landmarks Program.

BILLING CODE 4312–51–P

INTERNATIONAL TRADE COMMISSION

Inv. No. 337–TA–749

In the Matter of Certain Liquid Crystal Display Devices, Including Monitors, Televisions, and Modules, and Components Thereof; Notice of Investigation; Notice of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Institution of investigation pursuant to 19 U.S.C. 1337.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on October 25, 2010, under section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, on behalf of Thomson Licensing SAS of France and Thomson Licensing LLC of Princeton, New Jersey. The complaint alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain liquid crystal display devices, including monitors, televisions, and modules, and components thereof by reason of infringement of certain claims of U.S. Patent No. 5,978,063 ("the '063 patent"); U.S. Patent No. 5,621,556 ("the '556 patent"); and U.S. Patent No. 5,375,006 ("the '006 patent"). The complaint further alleges that an industry in the United States exists as required by subsection (a)(2) of section 337.

The complainants request that the Commission institute an investigation and, after the investigation, issue an exclusion order and cease and desist orders.

ADDRESSES: The complaint, except for any confidential information contained therein, is available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street, SW., Room 112, Washington, DC 20436, telephone 202–205–2000. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server at *http://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov.*

FOR FURTHER INFORMATION CONTACT: Daniel L. Girdwood, Esq., Office of Unfair Import Investigations, U.S. International Trade Commission, telephone (202) 205–3409.

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, and in section 210.10 of the Commission's Rules of Practice and Procedure, 19 CFR 210.10 (2010).

Scope of Investigation

Having considered the complaint, the U.S. International Trade Commission, on November 23, 2010, *ordered that*—

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain liquid crystal display devices, including monitors, televisions, and modules, and components thereof that infringe one or more of claim 3 of the '556 patent; claims 1–4, 8, 11, 12, 14, 17, and 18 of the '063 patent; and claims 4, 7–10, and 14 of the '006 patent, and whether an industry in the United States exists as required by subsection (a)(2) of section 337;

(2) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served:

(a) The complainants are:

Thomson Licensing SAS, 1–5 rue Jeanne d'Arc, 92130 Issy-les-Moulineaux, France.
Thomson Licensing LLC, 2 Independence Way, Princeton, NJ 08543.

(b) The respondents are the following entities alleged to be in violation of section 337, and are the parties upon which the complaint is to be served:

Qisda Corporation, 157 Shan-Ying Road Gueishan, Taoyuan 333, Taiwan.

Qisda America Corporation, 8941 Research Drive, Suite 200, Irvine, CA 92618.

Qisda (Suzhou) Co., Ltd., 169 Zhujiang Road, Suzhou, China 215015.

BenQ Corporation, 16 Jihu Road, Neihu, Taipei 114, Taiwan.

BenQ America Corporation, 15375 Barranca Parkway, Suite A–205, Irvine, CA 92618.

BenQ Latin America Corporation, 8200 NW 33rd Street, Suite 301, Miami, FL 33122.

AU Optronics Corporation, No. 1, Li-Hsin Road 2, Hsinchu Science Park, Hsinchu, Taiwan.

AU Optronics Corporation America, 9720 Cypresswood Drive, Suite 241, Houston, TX 77070–3355.

(c) The Commission investigative attorney, party to this investigation, is Daniel L. Girdwood, Esq., Office of Unfair Import Investigations, U.S. International Trade Commission, 500 E Street, SW., Suite 401, Washington, DC 20436; and

(3) For the investigation so instituted, the Honorable Paul J. Luckern, Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

Responses to the complaint and the notice of investigation must be submitted by the named respondents in accordance with section 210.13 of the Commission's Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(d)–(e) and 210.13(a), such responses will be considered by the Commission if received not later than 20 days after the date of service by the Commission of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of a respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.

Marilyn R. Abbott,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Inv. No. 337–TA–750]

In the Matter of Certain Mobile Devices and Related Software; Notice of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Institution of investigation pursuant to 19 U.S.C. 1337.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on October 29, 2010, under section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, on behalf of Apple Inc., f/k/a Apple Computer, Inc. of Cupertino, California. The complaint alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain mobile devices and related software by reason of infringement of certain claims of U.S. Patent No. 7,812,828 ("the '828 patent"); U.S. Patent No. 7,663,607 ("the '607 patent"); and U.S. Patent No. 5,379,430 ("the '430 patent"). The complaint further alleges that an industry in the United States exists as required by subsection (a)(2) of section 337.

The complainant requests that the Commission institute an investigation and, after the investigation, issue an exclusion order and a cease and desist order.

ADDRESSES: The complaint, except for any confidential information contained therein, is available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street, SW., Room 112, Washington, DC 20436, telephone 202–205–2000. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its Internet server at *http://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov.*

FOR FURTHER INFORMATION CONTACT: Benjamin Levi, Esq., Office of Unfair Import Investigations, U.S. International Trade Commission, telephone (202) 205–2781.

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, and in section 210.10 of the Commission's Rules of Practice and Procedure, 19 CFR 210.10 (2010).

Scope of Investigation: Having considered the complaint, the U.S. International Trade Commission, on November 23, 2010, *ordered that—*

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain mobile devices and related software that infringe one or more of claims 1, 2, 10, 11, 24–26 and 29 of the '828 patent; claims 1–7 and 10 of the '607 patent; and claims 1, 3, and 5 of the '430 patent, and whether an industry in the United States exists as required by subsection (a)(2) of section 337;

(2) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served:

(a) The complainant is: Apple Inc., f/k/a Apple Computer, Inc., 1 Infinite Loop, Cupertino, CA 95014.

(b) The respondents are the following entities alleged to be in violation of section 337, and are the parties upon which the complaint is to be served: Motorola, Inc., 1303 East Algonquin Road, Schaumburg, IL 60196;

Motorola Mobility, Inc., 600 North U.S. Highway 45, Libertyville, IL 60048.

(c) The Commission investigative attorney, party to this investigation, is Benjamin Levi, Esq., Office of Unfair Import Investigations, U.S. International Trade Commission, 500 E Street, SW., Suite 401, Washington, DC 20436; and

(3) For the investigation so instituted, the Honorable Paul J. Luckern, Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

Responses to the complaint and the notice of investigation must be

submitted by the named respondents in accordance with section 210.13 of the Commission's Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(d)–(e) and 210.13(a), such responses will be considered by the Commission if received not later than 20 days after the date of service by the Commission of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of a respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.
Issued: November 23, 2010.

Marilyn R. Abbott,

Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Bureau of Alcohol, Tobacco, Firearms and Explosives

[OMB Number 1140–0091]

Agency Information Collection Activities: Proposed Collection; Comments Requested

ACTION: 60-Day notice of information collection under review: customer satisfaction surveys.

The Department of Justice (DOJ), Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. This notice requests comments from the public and affected agencies concerning the proposed information collection. Comments are encouraged and will be accepted for "sixty days" until January 31, 2011. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Mary Lynn Wolfe, *Mary.Wolfe@atf.gov,* Arson and Explosives Programs Division, Fax# (202) 648–9660, 99 New York Avenue, NE., Washington, DC 20226.

Written comments and suggestions from the public and affected agencies concerning the proposed information collection are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
—Enhance the quality, utility, and clarity of the information to be collected; and
—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Summary of This Information Collection

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *Title of the Form/Collection:* Customer Satisfaction Surveys.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: None. Bureau of Alcohol, Tobacco, Firearms and Explosives.

(4) *Affected public who will be asked or required to respond, Primary:* State, Local or Tribal Government. Other: None.

Need for Collection

The Arson and Explosives Programs Division (AEPD) of the Bureau of Alcohol, Tobacco, Firearms and Explosives distribute program-specific customer satisfaction surveys to more effectively capture customer perception/satisfaction of services. AEPD's strategy is based on a commitment to provide the kind of customer service that will better accomplish ATF's mission.

An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond: It is estimated that 500 respondents will complete a 15 minute survey.

An estimate of the total public burden (in hours) associated with the collection: There are an estimated 125 annual total burden hours associated with this collection.

If additional information is required contact Lynn Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, 2 Constitution Square, Room 2E–502, 145 N Street, NE., Washington, DC 20530.

Dated: November 23, 2010.

Lynn Murray,

Department Clearance Officer, PRA, Department of Justice.

BILLING CODE 4410–FY–P

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Job Corps Placement and Assistance Record

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) hereby announces the submission of the Employment and Training Administration (ETA) sponsored information collection request (ICR) titled, "Job Corps Placement and Assistance Record," to the Office of Management and Budget (OMB) for review and approval for continued use in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35).

DATES: Submit comments on or before December 30, 2010.

ADDRESSES: A copy of this ICR, with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained from the RegInfo.gov Web site, *http://www.reginfo.gov/public/do/PRAMain* or by contacting Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or sending an e-mail to *DOL_PRA_PUBLIC@dol.gov.*

Submit comments about this request to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the Department of Labor, Employment and Training Administration (ETA), Office of Management and Budget, Room 10235,

Washington, DC 20503, Telephone: 202–395–6929/Fax: 202–395–6881 (these are not toll-free numbers), e-mail: *OIRA_submission@omb.eop.gov.*

FOR FURTHER INFORMATION: Contact Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or by e-mail at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: Form ETA 678 is used to obtain information about student training for placement of students in jobs, further education or military service. The form used to evaluate overall program effectiveness and is the only form that documents a student's post-center status. The form is prepared by Job Corps centers and placement specialists for each student separating from Job Corps centers.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is currently approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number. *See* 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under OMB Control Number 1205–0035. The current OMB approval is scheduled to expire on November 30, 2010; however, it should be noted that information collections submitted to the OMB receive a month-to-month extension while they undergo review. For additional information, see the related notice published in the **Federal Register** on August 20, 2010 (75 FR 51484).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within 30 days of publication of this notice in the **Federal Register**. In order to ensure the appropriate consideration, comments should reference OMB Control Number 1205–0035. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Agency: Employment and Training Administration (ETA).

Type of Review: Extension without change of a currently approved collection.

Title of Collection: Job Corps Health Questionnaire.

Form Number: ETA 678.

OMB Control Number: 1205–0035.

Affected Public: Individuals or Households.

Total Estimated Number of Respondents: 40,000.

Total Estimated Number of Responses: 40,000.

Total Estimated Annual Burden Hours: 4,953.

Total Estimated Annual Costs Burden: $39,737.

Dated: November 22, 2010.

Michel Smyth,

Departmental Clearance Officer.

BILLING CODE 4510–30–P

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Welding, Cutting and Brazing

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) hereby announces the submission of the Occupational Safety and Health Administration (OSHA) sponsored information collection request (ICR) titled, "Welding, Cutting and Brazing," to the Office of Management and Budget (OMB) for review and approval for continued use in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35).

DATES: Submit comments on or before December 30, 2010.

ADDRESSES: A copy of this ICR, with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained from the *RegInfo.gov* Web site, *http://www.reginfo.gov/public/do/PRAMain* or by contacting Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or sending an email to *DOL_PRA_PUBLIC@dol.gov.*

Submit comments about this request to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the Department of Labor, Occupational Safety and Health Administration (OSHA), Office of Management and Budget, Room 10235, Washington, DC 20503, Telephone: 202–395–6929/Fax: 202–395–6881 (these are not toll-free numbers), e-mail: *OIRA_submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Contact Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: This ICR relates to the regulatory requirement that a periodic inspection of resistance welding equipment be made by qualified maintenance personnel and that a certification record be generated and maintained. The certification shall include the date of the inspection, the signature of the person who performed the inspection, and the serial number or other identifier for the equipment inspected. The record shall be made available to an OSHA inspector upon request. The maintenance inspection ensures that welding equipment is in safe operating condition while the maintenance record provides evidence to workers and Agency compliance officers that employers performed the required inspections.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is currently approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number. *See* 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under OMB Control Number 1218–0207. The current OMB approval is scheduled to expire on November 30, 2010; however, it should be noted that information collections submitted to the OMB receive a month-to-month extension while they undergo review. For

additional information, see the related notice published in the **Federal Register** on August 24, 2010 (75 FR 52037).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within 30 days of publication of this notice in the **Federal Register**. In order to ensure the appropriate consideration, comments should reference OMB Control Number 1218–0207. The OMB is particularly interested in comments that:

• Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

• Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

• Enhance the quality, utility, and clarity of the information to be collected; and

• Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Agency: Occupational Safety and Health Administration (OSHA).

Type of Review: Extension without change of a currently approved collection.

Title of Collection: Welding, Cutting and Brazing.

OMB Control Number: 1218–0207.

Affected Public: Private sector—Businesses or other for profits.

Total Estimated Number of Respondents: 21,164.

Total Estimated Number of Responses: 84,952.

Total Estimated Annual Burden Hours: 5,935.

Total Estimated Annual Costs Burden: $0.

Dated: November 23, 2010.

Michel Smyth,

Departmental Clearance Officer.

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Portable Fire Extinguishers—Annual Maintenance Certification Record

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) hereby announces the submission of the Occupational Safety and Health Administration (OSHA) sponsored information collection request (ICR) titled, "Portable Fire Extinguishers—Annual Maintenance Certification Record," to the Office of Management and Budget (OMB) for review and approval for continued use in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35).

DATES: Submit comments on or before December 30, 2010.

ADDRESSES: A copy of this ICR, with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained from the *RegInfo.gov* Web site, *http://www.reginfo.gov/public/do/PRAMain* or by contacting Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or sending an e-mail to *DOL_PRA_PUBLIC@dol.gov.*

Submit comments about this request to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the Department of Labor, Occupational Safety and Health Administration (OSHA), Office of Management and Budget, Room 10235, Washington, DC 20503, Telephone: 202–395–6929/Fax: 202–395–6881 (these are not toll-free numbers), e-mail: *OIRA_submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Contact Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or by e-mail at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: This ICR relates to the regulatory requirement that employers must subject each portable fire extinguisher to an annual maintenance inspection and record the date of the inspection. This provision requires employers to retain the inspection record for one year after the last entry or for the life of the shell, whichever is less, and to make the record available to OSHA on request. This recordkeeping requirement assures employees and OSHA compliance officers that portable fire extinguishers located in the workplace will operate normally in case of fire; in addition, this requirement provides evidence to OSHA compliance officers during an inspection that the employer performed the required maintenance checks on the portable fire extinguishers.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is currently approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under OMB Control Number 1218–0238. The current OMB approval is scheduled to expire on November 30, 2010; however, it should be noted that information collections submitted to the OMB receive a month-to-month extension while they undergo review. For additional information, see the related notice published in the **Federal Register** on August 24, 2010 (75 FR 52034).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within 30 days of publication of this notice in the **Federal Register**. In order to ensure the appropriate consideration, comments should reference OMB Control Number 1218–0238. The OMB is particularly interested in comments that:

• Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

• Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

• Enhance the quality, utility, and clarity of the information to be collected; and

• Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology,

e.g., permitting electronic submission of responses.

Agency: Occupational Safety and Health Administration (OSHA).

Type of Review: Extension without change of a currently approved collection.

Title of Collection: Portable Fire Extinguishers—Annual Maintenance Certification Record.

OMB Control Number: 1218–0238.

Affected Public: Private sector—Businesses or other for profits.

Total Estimated Number of Respondents: 135,990.

Total Estimated Number of Responses: 135,990.

Total Estimated Annual Burden Hours: 67,995.

Total Estimated Annual Costs Burden: $19,888,538.

Dated: November 23, 2010.

Michel Smyth,

Departmental Clearance Officer.

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Application for Occupational Safety and Health Administration Training Grant

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) hereby announces the submission of the Occupational Safety and Health Administration (OSHA) sponsored information collection request (ICR) titled, "Application for OSHA Training Grant," to the Office of Management and Budget (OMB) for review and approval for continued use in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35).

DATES: Submit comments on or before December 30, 2010.

ADDRESSES: A copy of this ICR, with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained from the RegInfo.gov Web site, *http://www.reginfo.gov/public/do/PRAMain* or by contacting Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or sending an e-mail to *DOL_PRA_PUBLIC@dol.gov.*

Submit comments about this request to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the Department of Labor, Occupational Safety and Health Administration (OSHA), Office of Management and Budget, Room 10235, Washington, DC 20503, Telephone: 202–395–6929/Fax: 202–395–6881 (these are not toll-free numbers), e-mail: *OIRA_submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Contact Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or by e-mail at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The OSHA awards grants to non-profit organizations to provide training under the Occupation Safety and Health Act. To obtain such a grant, an organization must complete the training grant application. The OSHA uses the information in this application to evaluate: the organization's competence to provide the proposed training (including the qualifications of the personnel who manage and implement the training); the goals and objectives of the proposed training program; a work plan that describes in detail the tasks that the organization will implement to meet these goals and objectives; the appropriateness of the proposed costs; and compliance with Federal regulations governing nonprocurement, debarment, and suspension, maintaining a drug-free workplace, and lobbying activities. Also required is a program summary that Agency officials use to review and evaluate the highlights of the overall proposal. After awarding a training grant, the OSHA uses the work plan and budget information provided in the application to monitor the organization's progress in meeting training goals and objectives, as well as planned expenditures. The initial grant award is for one year.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is currently approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number. *See* 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under OMB Control Number 1218–0020. The current OMB approval is scheduled to expire on November 30, 2010; however, it should be noted that information collections submitted to the OMB receive a month-to-month extension while they undergo review. For additional information, see the related notice published in the **Federal Register** on September 21, 2010 (75 FR 57503).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within 30 days of publication of this notice in the **Federal Register**. In order to ensure the appropriate consideration, comments should reference OMB Control Number 1218–0020. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Benefits Timeliness and Quality Review System

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) hereby announces the submission of the Employment and Training Administration (ETA) sponsored information collection request (ICR) titled, "Benefits Timeliness and Quality Review System," (BTQ) to the Office of Management and Budget (OMB) for review and approval for continued use in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35).

DATES: Submit comments on or before December 30, 2010.

ADDRESSES: A copy of this ICR, with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained from the RegInfo.gov Web site, *http://www.reginfo.gov/public/do/PRAMain* or by contacting Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or sending an e-mail to *DOL_PRA_PUBLIC@dol.gov.*

Submit comments about this request to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the Department of Labor, Employment and Training Administration (ETA), Office of Management and Budget, Room 10235, Washington, DC 20503, Telephone: 202–395–6929/Fax: 202–395–6881 (these are not toll-free numbers), e-mail: *OIRA_submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or by e-mail at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The Secretary of Labor, under the Social Security Act, Title III, Section 302 (42 U.S.C. 502), funds the necessary cost of proper and efficient administration of each State Unemployment Insurance law. The BTQ system collects information and analyzes data. BTQ data measure the timeliness and quality of states' administrative actions and administrative decisions related to Unemployment Insurance benefit payments.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is currently approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number. *See* 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under OMB Control Number 1205–0359. The current OMB approval is scheduled to expire on November 30, 2010; however, it should be noted that information collections submitted to the OMB receive a month-to-month extension while they undergo review. For additional information, see the related notice published in the **Federal Register** on September 10, 2010 (75 FR 55357).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within 30 days of publication of this notice in the **Federal Register**. In order to ensure the appropriate consideration, comments should reference OMB Control Number 1205–0357. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Agency: Employment and Training Administration (ETA).

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Nonmonetary Determination Activity Report

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) hereby announces the submission of the Employment and Training Administration (ETA) sponsored information collection request (ICR) titled, "Nonmonetary Determination Activity Report," to the Office of Management and Budget (OMB) for review and approval for continued use in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35).

DATES: Submit comments on or before December 30, 2010.

ADDRESSES: A copy of this ICR, with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained from the RegInfo.gov Web site, *http://www.reginfo.gov/public/do/PRAMain* or by contacting Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or sending an e-mail to *DOL_PRA_PUBLIC@dol.gov.*

Submit comments about this request to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the Department of Labor, Employment and Training Administration (ETA), Office of Management and Budget, Room 10235, Washington, DC 20503, Telephone: 202–395–6929/Fax: 202–395–6881

(these are not toll-free numbers), e-mail: *OIRA_submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or by e-mail at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: Form ETA 207 collects data on the number and types of issues that are adjudicated when unemployment insurance (UI) claims are filed. The Form also collects data on the number of disqualifications that are issued for reasons associated with a claimant's separation from employment and reasons related to a claimant's continuing eligibility for benefits. These data are used by the Office of Unemployment Insurance to determine workload counts for allocation of administrative funds, to analyze the ratio of disqualifications to determinations, and to examine and evaluate the program effect of nonmonetary activities.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is currently approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number. *See* 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under OMB Control Number 1205–0150. The current OMB approval is scheduled to expire on November 30, 2010; however, it should be noted that information collections submitted to the OMB receive a month-to-month extension while they undergo review. For additional information, see the related notice published in the **Federal Register** on September 2, 2010 (75 FR 53982).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within 30 days of publication of this notice in the **Federal Register**. In order to ensure the appropriate consideration, comments should reference OMB Control Number 1205–0150. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

BILLING CODE 4510–30–P

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Benefit Appeals Report

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) hereby announces the submission of the Employment and Training Administration (ETA) sponsored information collection request (ICR) titled, "Benefit Appeals Report," to the Office of Management and Budget (OMB) for review and approval for continued use in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35).

DATES: Submit comments on or before December 30, 2010.

ADDRESSES: A copy of this ICR, with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained from the RegInfo.gov Web site, *http://www.reginfo.gov/public/do/PRAMain* or by contacting Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or sending an e-mail to *DOL_PRA_PUBLIC@dol.gov.*

Submit comments about this request to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the Department of Labor, Employment and Training Administration (ETA), Office of Management and Budget, Room 10235, Washington, DC 20503, Telephone: 202–395–6929/Fax: 202–395–6881 (these are not toll-free numbers), e-mail: *OIRA_submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or by e-mail at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The Benefit Appeals Report contains information on the number of unemployment insurance appeals and the resultant decisions classified by program, appeals level, cases filed and disposed of (workflow), and decisions by level, appellant, and issue. The data in this report are used by the DOL to monitor the benefit appeals process in the State Workforce Agencies and to develop any needed plans for remedial action. The data are also needed for workload forecasts and to determine administrative funding. If this information were not available, developing problems might not be discovered early enough to allow for timely solutions and avoidance of time consuming and costly corrective action.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is currently approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number. *See* 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under OMB Control Number 1205–0172. The current OMB approval is scheduled to

expire on November 30, 2010; however, it should be noted that information collections submitted to the OMB receive a month-to-month extension while they undergo review. For additional information, see the related notice published in the **Federal Register** on September 2, 2010 (75 FR 53983).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within 30 days of publication of this notice in the **Federal Register**. In order to ensure the appropriate consideration, comments should reference OMB Control Number 1205–0172. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Job Corps Enrollee Allotment Determination

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) hereby announces the submission of the Employment and Training Administration (ETA) sponsored information collection request (ICR) titled, "Job Corps Enrollee Allotment Determination," to the Office of Management and Budget (OMB) for review and approval for continued use in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. chapter 35).

DATES: Submit comments on or before December 30, 2010.

ADDRESSES: A copy of this ICR, with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained from the RegInfo.gov Web site, *http://www.reginfo.gov/public/do/PRAMain,* or by contacting Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or sending an e-mail to *DOL_PRA_PUBLIC@dol.gov.*

Submit comments about this request to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the Department of Labor, Employment and Training Administration (ETA), Office of Management and Budget, Room 10235, Washington, DC 20503, Telephone: 202–395–6929/Fax: 202–395–6881 (these are not toll-free numbers), e-mail: *OIRA_submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or by e-mail at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: Job Corps enrollees may elect to have a portion of their readjustment allowance/transition payment sent to a dependent biweekly, and Form ETA 658 provides the information necessary to administer these allotments. This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is currently approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number. *See* 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under OMB Control Number 1205–0030. The current OMB approval is scheduled to expire on November 30, 2010; however, it should be noted that information collections submitted to the OMB receive a month-to-month extension while they undergo review. For additional information, see the related notice published in the **Federal Register** on August 20, 2010 (75 FR 51486).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within 30 days of publication of this notice in the **Federal Register**. In order to ensure the appropriate consideration, comments should reference OMB Control Number 1205–0030. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice (10–149)]

NASA Advisory Council; Science Committee; Astrophysics Subcommittee; Meeting

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, Public Law 92–463, as amended, the National Aeronautics and Space Administration (NASA) announces a meeting of the Astrophysics Subcommittee of the NASA Advisory Council (NAC). This Subcommittee reports to the Science Committee of the NAC. The Meeting will be held for the purpose of soliciting from the scientific community and other persons scientific and technical information relevant to program planning.

DATES: Wednesday, December 22, 2010, 1 p.m. to 2 p.m. EST.

ADDRESSES: This meeting will take place telephonically and by WebEx. Any interested person may call the USA toll free conference call number 888–972–9925 or toll number 312–470–0184, pass code APS, to participate in this meeting by telephone. The WebEx link is *https://nasa.webex.com,* meeting number 996 142 777, and password APS$Dec2010.

SUPPLEMENTARY INFORMATION: The meeting will be open to the public. The agenda for the meeting includes the following topics:

—Astrophysics Division Update

—James Webb Space Telescope Update

It is imperative that the meeting be held on these dates to accommodate the scheduling priorities of the key participants.

Dated: November 23, 2010.

P. Diane Rausch,

Advisory Committee Management Officer, National Aeronautics and Space Administration.

AGENCY: National Archives and Records Administration (NARA).

ACTION: Notice of availability of proposed records schedules; request for comments.

SUMMARY: The National Archives and Records Administration (NARA) publishes notice at least once monthly of certain Federal agency requests for records disposition authority (records schedules). Once approved by NARA, records schedules provide mandatory instructions on what happens to records when no longer needed for current Government business. They authorize the preservation of records of continuing value in the National Archives of the United States and the destruction, after a specified period, of records lacking administrative, legal, research, or other value. Notice is published for records schedules in which agencies propose to destroy records not previously authorized for disposal or reduce the retention period of records already authorized for disposal. NARA invites public comments on such records schedules, as required by 44 U.S.C. 3303a(a).

DATES: Requests for copies must be received in writing on or before *December 30, 2010.* Once the appraisal of the records is completed, NARA will send a copy of the schedule. NARA staff usually prepare appraisal memorandums that contain additional information concerning the records covered by a proposed schedule. These, too, may be requested and will be provided once the appraisal is completed. Requesters will be given 30 days to submit comments.

ADDRESSES: You may request a copy of any records schedule identified in this notice by contacting the Life Cycle Management Division (NWML) using one of the following means:

Mail: NARA (NWML), 8601 Adelphi Road, College Park, MD 20740–6001.

E-mail: request.schedule@nara.gov.

Fax: 301–837–3698.

Requesters must cite the control number, which appears in parentheses after the name of the agency which submitted the schedule, and must provide a mailing address. Those who desire appraisal reports should so indicate in their request.

FOR FURTHER INFORMATION CONTACT: Laurence Brewer, Director, Life Cycle Management Division (NWML), National Archives and Records Administration, 8601 Adelphi Road, College Park, MD 20740–6001. *Telephone:* 301–837–1539. *E-mail: records.mgt@nara.gov.*

SUPPLEMENTARY INFORMATION: Each year Federal agencies create billions of records on paper, film, magnetic tape, and other media. To control this accumulation, agency records managers prepare schedules proposing retention periods for records and submit these schedules for NARA's approval, using the Standard Form (SF) 115, Request for Records Disposition Authority. These schedules provide for the timely transfer into the National Archives of historically valuable records and authorize the disposal of all other records after the agency no longer needs them to conduct its business. Some schedules are comprehensive and cover all the records of an agency or one of its major subdivisions. Most schedules, however, cover records of only one office or program or a few series of records. Many of these update previously approved schedules, and some include records proposed as permanent.

The schedules listed in this notice are media neutral unless specified otherwise. An item in a schedule is media neutral when the disposition instructions may be applied to records regardless of the medium in which the records are created and maintained. Items included in schedules submitted to NARA on or after December 17, 2007, are media neutral unless the item is limited to a specific medium. (*See* 36 CFR 1225.12(e).)

No Federal records are authorized for destruction without the approval of the Archivist of the United States. This approval is granted only after a thorough consideration of their administrative use by the agency of origin, the rights of the Government and of private persons directly affected by the Government's activities, and whether or not they have historical or other value.

Besides identifying the Federal agencies and any subdivisions requesting disposition authority, this public notice lists the organizational unit(s) accumulating the records or indicates agency-wide applicability in the case of schedules that cover records that may be accumulated throughout an agency. This notice provides the control number assigned to each schedule, the total number of schedule items, and the number of temporary items (the records proposed for destruction). It also includes a brief description of the temporary records. The records schedule itself contains a full

description of the records at the file unit level as well as their disposition. If NARA staff has prepared an appraisal memorandum for the schedule, it too includes information about the records. Further information about the disposition process is available on request.

Schedules Pending

1. Department of the Army, Agency-wide (N1–AU–10–34, 1 item, 1 temporary item). Master files of an electronic information system used to identify and prioritize construction and repair projects for Installation Management Command.

2. Department of the Army, Agency-wide (N1–AU–10–58, 3 items, 3 temporary items). Master files of electronic information systems that contain maintenance and repair management information, including work plans, inventories, inspections, and budgeting information.

3. Department of the Army, Agency-wide (N1–AU–10–63, 1 item, 1 temporary item). Master files of an electronic information system that contains energy consumption data for active Army, Reserve, and National Guard installations.

4. Department of the Army, Agency-wide (N1–AU–11–24, 1 item, 1 temporary item). Master files of an electronic information system containing information on inventories of military equipment and ammunition.

5. Department of Commerce, Census Bureau (N1–29–10–5, 66 items, 45 temporary items). Records relating to the 2010 Census, covering such processes as address list development, testing of approaches and techniques for implementing the census, data collection, capture and processing, and resolution of challenges to counts. Proposed for permanent retention are scanned images of respondent census forms; the Individual Census Record File containing response data and linkage information to the scanned images; summary data files that provide population totals and counts of population characteristics sorted at a variety of geographic levels; a public use microdata sample file providing demographic, social, economic, and housing data for a sample of the population; record set of publications, studies, and reports; and geographic products and outputs, including maps showing boundaries and names of geographic areas covered by the census and thematic maps illustrating the distribution of population characteristics.

6. Department of Health and Human Services, Office of the Secretary (N1–468–10–2, 1 item, 1 temporary item). Master files of an electronic information system containing data about grants awarded by all operating divisions of the Department of Health and Human Services.

Department of Homeland Security, U.S. Citizenship and Immigration Services (N1–566–10–4, 1 item, 1 temporary item). Master files of an electronic information system containing information necessary to support monitoring and compliance activities for researching and managing misuse, abuse, discrimination, breach of privacy, and fraudulent use of immigration status verification information.

7. Department of Homeland Security, U.S. Coast Guard (N1–26–10–1, 3 items, 3 temporary items). Master files and outputs of an electronic information system used to provide Search and Rescue authorities with accurate information on the positions and characteristics of vessels near a reported distress.

8. Department of the Interior, National Business Center, (N1–48–09–4, 1 item, 1 temporary item). Master files of an electronic information system used to catalog materials housed in the agency's library system, including titles, authors, subject headings, call numbers, and bibliographic entries.

9. Department of the Interior, National Business Center, (N1–48–09–4, 1 item, 1 temporary item). Master files of an electronic information system used to catalog materials housed in the agency's museum system, including information used to identify and track museum objects.

10. Department of Justice, Tax Division (N1–60–09–57, 1 item, 1 temporary item). Master files of an electronic information system containing human resources tracking data.

11. Department of Justice, Justice Management Division (N1–60–10–22, 1 item, 1 temporary item). Files maintained by the Special Authorizations Unit approving the use of funds to cover expenses for witnesses appearing in Federal courts on behalf of the Department of Justice attorneys.

12. Department of Labor, Occupational Safety and Health Administration (N1–100–07–1, 20 items, 14 temporary items). Records pertaining to the Voluntary Protection Program and Strategic Partnership Program, including site approval files, administrative documents, outreach materials, and verification reports. Proposed for permanent retention are program policy files.

13. Department of State, Bureau of Administration (N1–059–10–16, 13 items, 13 temporary items). Master files and reports of an electronic information system that contains data on the agency's Freedom of Information Act requests and responses, including full and partial releases and denied requests. Also includes non-responsive documents, internal research requests, ethics in government and constituent congressional requests, special collections, pre-publication reviews of manuscripts, and other review requests. Statistical and case management reports are also covered on this schedule.

14. Department of State, Bureau of Administration (N1–59–10–17, 13 items, 13 temporary items). Records include department notices and announcements; post reports; records related to requesting, tracking, and billing for printing jobs; service reports for equipment; records related to ordering and maintaining photocopiers; master files of an electronic information system containing information on publication distribution; and an intranet site. The intranet site contains notices and announcements, post reports, post information, photos, forms, and other product and service information for the Office of Global Publishing Solutions.

15. Administrative Office of the United States Courts, Agency-wide (N1–116–10–1, 1 item, 1 temporary item). Working papers used in conducting voluntary management reviews.

16. Export-Import Bank of the United States, Agency-wide (N1–275–10–6, 1 item, 1 temporary item). Master files of an electronic information system used to validate data used for reporting requirements for medium-term loan guarantees, insurance policies, and working capital.

17. National Aeronautics and Space Administration, Agency-wide (N1–255–10–2, 3 items, 3 temporary items). Master files of electronic information systems containing information on quality and management, including audits, evaluations, quality reports, customer feedback surveys, survey responses, and corrective actions.

18. National Aeronautics and Space Administration, Agency-wide (N1–255–10–5, 24 items, 21 temporary items). Records relating to environmental management files, including routine correspondence, baseline documents, summaries, monitoring activities, waste manifests, permit applications, and functional review reports. Proposed for permanent retention are records and waste manifests of significant programs, projects, and incidents that have large impacts on the environment.

19. National Archives and Records Administration, Office of the General Counsel (DAA–64–2010–5, 1 item, 1 temporary item). Master files of an electronic information system used to track garnishment actions.

20. National Mediation Board, Agency-wide (N1–13–11–1, 4 items, 1 temporary item). Records of the Presidential Emergency Boards, including routine case notes. Proposed for permanent retention are official case files and reports.

Dated: November 24, 2010.

Michael J. Kurtz,

Assistant Archivist for Records Services—Washington, DC.

[FR Doc. 2010–30216 Filed 11–29–10; 8:45 am]

BILLING CODE 7515–01–P

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

Senior Executive Service (SES) Performance Review Board; Members

AGENCY: National Archives and Records Administration.

ACTION: Notice; SES Performance Review Board.

SUMMARY: Notice is hereby given of the appointment of members of the National Archives and Records Administration (NARA) Performance Review Board.

DATES: *Effective Date:* This appointment is effective on November 30, 2010.

FOR FURTHER INFORMATION CONTACT: Pamela S. Pope, Human Resources Services Division (NAH), National Archives and Records Administration, 9700 Page Avenue, St. Louis, MO 63132, (314) 801–0882.

SUPPLEMENTARY INFORMATION: Section 4314(c) of Title 5, U.S.C., requires each agency to establish, in accordance with regulations prescribed by the Office of Personnel Management, one or more SES Performance Review Boards. The Board shall review the initial appraisal of a senior executive's performance by the supervisor and recommend final action to the appointing authority regarding matters related to senior executive performance.

The members of the Performance Review Board for the National Archives and Records Administration are: Adrienne C. Thomas, Deputy Archivist of the United States, Michael J. Kurtz, Assistant Archivist for Records Services—Washington, DC, Thomas E. Mills, Assistant Archivist for Regional Records Services, and Miriam M. Nisbet, Director, Office of Government Information Services. These appointments supersede all previous appointments.

Dated: November 23, 2010.

David S. Ferriero,

Archivist of the United States.

BILLING CODE 7515–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2010–0367]

Biweekly Notice; Applications and Amendments to Facility Operating Licenses Involving No Significant Hazards Considerations

I. Background

Pursuant to section 189a.(2) of the Atomic Energy Act of 1954, as amended (the Act), the U.S. Nuclear Regulatory Commission (NRC or the Commission) is publishing this regular biweekly notice. The Act requires the Commission publish notice of any amendments issued, or proposed to be issued and grants the Commission the authority to issue and make immediately effective any amendment to an operating license upon a determination by the Commission that such amendment involves no significant hazards consideration, notwithstanding the pendency before the Commission of a request for a hearing from any person.

This biweekly notice includes all notices of amendments issued, or proposed to be issued from November 3, 2010, to November 17, 2010. The last biweekly notice was published on November 16, 2010 (75 FR 70032).

Notice of Consideration of Issuance of Amendments To Facility Operating Licenses, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The Commission has made a proposed determination that the following amendment requests involve no significant hazards consideration. Under the Commission's regulations in Title 10 of the *Code of Federal Regulations* (10 CFR), 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. The basis for this proposed determination for each amendment request is shown below.

The Commission is seeking public comments on this proposed determination. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determination.

Normally, the Commission will not issue the amendment until the expiration of 60 days after the date of publication of this notice. The Commission may issue the license amendment before expiration of the 60-day period provided that its final determination is that the amendment involves no significant hazards consideration. In addition, the Commission may issue the amendment prior to the expiration of the 30-day comment period should circumstances change during the 30-day comment period such that failure to act in a timely way would result, for example in derating or shutdown of the facility. Should the Commission take action prior to the expiration of either the comment period or the notice period, it will publish in the **Federal Register** a notice of issuance. Should the Commission make a final No Significant Hazards Consideration Determination, any hearing will take place after issuance. The Commission expects that the need to take this action will occur very infrequently.

Written comments may be submitted by mail to the Chief, Rules, Announcements and Directives Branch (RADB), TWB–05–B01M, Division of Administrative Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, and should cite the publication date and page number of this **Federal Register** notice. Written comments may also be faxed to the RADB at 301–492–3446. Documents may be examined, and/or copied for a fee, at the NRC's Public Document Room (PDR), located at One White Flint North, Room O1–F21, 11555 Rockville Pike (first floor), Rockville, Maryland 20852.

Within 60 days after the date of publication of this notice, any person(s) whose interest may be affected by this action may file a request for a hearing and a petition to intervene with respect to issuance of the amendment to the subject facility operating license. Requests for a hearing and a petition for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR Part 2. Interested person(s) should consult a current copy of 10 CFR 2.309, which is available at the Commission's PDR, located at One White Flint North, Room O1–F21, 11555 Rockville Pike (first floor), Rockville, Maryland 20854. Publicly available records will be accessible from the Agencywide

Documents Access and Management System's (ADAMS) Public Electronic Reading Room on the Internet at the NRC Web site, *http://www.nrc.gov/reading-rm/doc-collections/cfr/.* If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or a presiding officer designated by the Commission or by the Chief Administrative Judge of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition; and the Secretary or the Chief Administrative Judge of the Atomic Safety and Licensing Board will issue a notice of a hearing or an appropriate order.

As required by 10 CFR 2.309, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following general requirements: (1) The name, address, and telephone number of the requestor or petitioner; (2) the nature of the requestor's/petitioner's right under the Act to be made a party to the proceeding; (3) the nature and extent of the requestor's/petitioner's property, financial, or other interest in the proceeding; and (4) the possible effect of any decision or order which may be entered in the proceeding on the requestor's/petitioner's interest. The petition must also identify the specific contentions which the requestor/petitioner seeks to have litigated at the proceeding.

Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the requestor/petitioner shall provide a brief explanation of the bases for the contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the requestor/petitioner intends to rely in proving the contention at the hearing. The requestor/petitioner must also provide references to those specific sources and documents of which the petitioner is aware and on which the requestor/petitioner intends to rely to establish those facts or expert opinion. The petition must include sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact. Contentions shall be limited to matters within the scope of the amendment under consideration. The contention must be one which, if proven, would entitle the requestor/petitioner to relief. A requestor/petitioner who fails to satisfy these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing.

If a hearing is requested, the Commission will make a final determination on the issue of no significant hazards consideration. The final determination will serve to decide when the hearing is held. If the final determination is that the amendment request involves no significant hazards consideration, the Commission may issue the amendment and make it immediately effective, notwithstanding the request for a hearing. Any hearing held would take place after issuance of the amendment. If the final determination is that the amendment request involves a significant hazards consideration, any hearing held would take place before the issuance of any amendment.

All documents filed in NRC adjudicatory proceedings, including a request for hearing, a petition for leave to intervene, any motion or other document filed in the proceeding prior to the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities participating under 10 CFR 2.315(c), must be filed in accordance with the NRC E-Filing rule (72 FR 49139, August 28, 2007). The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases to mail copies on electronic storage media. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, at least ten (10) days prior to the filing deadline, the participant should contact the Office of the Secretary by e-mail at *hearing.docket@nrc.gov,* or by telephone at 301–415–1677, to request (1) a digital ID certificate, which allows the participant (or its counsel or representative) to digitally sign documents and access the E-Submittal server for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a request or petition for hearing (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals/apply-certificates.html.* System requirements for accessing the E-Submittal server are detailed in NRC's "Guidance for Electronic Submission," which is available on the agency's public Web site at *http://www.nrc.gov/site-help/e-submittals.html.* Participants may attempt to use other software not listed on the Web site, but should note that the NRC's E-Filing system does not support unlisted software, and the NRC Meta System Help Desk will not be able to offer assistance in using unlisted software.

If a participant is electronically submitting a document to the NRC in accordance with the E-Filing rule, the participant must file the document using the NRC's online, Web-based submission form. In order to serve documents through the Electronic Information Exchange System, users will be required to install a Web browser plug-in from the NRC Web site. Further information on the Web-based submission form, including the installation of the Web browser plug-in, is available on the NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals.html.*

Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit a request for hearing or petition for leave to intervene. Submissions should be in Portable Document Format (PDF) in accordance with NRC guidance available on the NRC public Web site at *http://www.nrc.gov/site-help/e-submittals.html.* A filing is considered complete at the time the documents are submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. Eastern Time on the due date. Upon receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an e-mail notice confirming receipt of the document. The E-Filing system also distributes an e-mail notice that provides access to the document to the NRC Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the documents on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must

apply for and receive a digital ID certificate before a hearing request/petition to intervene is filed so that they can obtain access to the document via the E-Filing system.

A person filing electronically using the agency's adjudicatory E-Filing system may seek assistance by contacting the NRC Meta System Help Desk through the "Contact Us" link located on the NRC Web site at *http://www.nrc.gov/site-help/e-submittals.html,* by e-mail at MSHD.Resource@nrc.gov, or by a toll-free call at 1–866–672–7640. The NRC Meta System Help Desk is available between 8 a.m. and 8 p.m., Eastern Time, Monday through Friday, excluding government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, Sixteenth Floor, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852, Attention: Rulemaking and Adjudications Staff. Participants filing a document in this manner are responsible for serving the document on all other participants. Filing is considered complete by first-class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service upon depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in NRC's electronic hearing docket which is available to the public at *http://ehd.nrc.gov/EHD_Proceeding/home.asp,* unless excluded pursuant to an order of the Commission, or the presiding officer. Participants are requested not to include personal privacy information, such as social security numbers, home addresses, or home phone numbers in their filings, unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

Petitions for leave to intervene must be filed no later than 60 days from the date of publication of this notice. Non-timely filings will not be entertained absent a determination by the presiding officer that the petition or request should be granted or the contentions should be admitted, based on a balancing of the factors specified in 10 CFR 2.309(c)(1)(i)–(viii).

For further details with respect to this license amendment application, *see* the application for amendment which is available for public inspection at the Commission's PDR, located at One White Flint North, Public File Area O1F21, 11555 Rockville Pike (first floor), Rockville, Maryland. Publicly available records will be accessible from the ADAMS Public Electronic Reading Room on the Internet at the NRC Web site, *http://www.nrc.gov/reading-rm/adams.html.* Persons who do not have access to ADAMS or who encounter problems in accessing the documents located in ADAMS, should contact the NRC PDR Reference staff at 1–800–397–4209, 301–415–4737, or by e-mail to *pdr.resource@nrc.gov.*

Detroit Edison Company, Docket No. 50–341, Fermi 2, Monroe County, Michigan

Date of amendment request: September 24, 2010.

Description of amendment request: The proposed amendment would revise the Fermi 2 Radiological Emergency Response Preparedness (RERP) Plan to increase the staff augmentation times for Technical Support Center-related functions from 30 to 60 minutes and for Emergency Operations Facility-related functions from 60 to 90 minutes.

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

1. The proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

The proposed extension of staff augmentation times has no effect on normal plant operation or on any accident initiator. The change affects the response to radiological emergencies under the Fermi 2 Radiological Emergency Response Preparedness (RERP) Plan. The ability of the emergency response organization to respond adequately to radiological emergencies has been evaluated. Improvements have been made to equipment, procedures, and training since initial approval of the Fermi 2 Emergency Plan that have resulted in a significant increase in the on-shift capabilities and knowledge such that there would be no degradation or loss of Emergency Plan function as a result of the proposed change. A functional analysis was also performed on the effect of the proposed change on the timeliness of performing major tasks for the major functional areas of the RERP Plan. The analysis concluded that extension of staff augmentation times would not significantly affect the ability to perform the required tasks.

Therefore, the proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. The proposed change does not create the possibility of a new or different kind of accident from any accident previously evaluated.

The proposed change affects the required response times for supplementing onsite personnel in response to a Radiological emergency. It has been evaluated and determined not to significantly affect the ability to perform that function. It has no effect on the plant design or on the normal operation of the plant and does not affect how the plant is physically operated under emergency conditions. The extension of staff augmentation times in the RERP Plan does not affect the plant Operating, Abnormal Operating, or Emergency Operating procedures which are performed by plant staff during all plant conditions.

Therefore, since the proposed change does not affect the design or method of operation of the plant, it does not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. The proposed change does not involve a significant reduction in the margin of safety.

The proposed change does not affect plant design or method of operation. 10 CFR 50.47(b) and 10 CFR Part 50, Appendix E establish emergency planning standards that require adequate staffing, satisfactory performance of key functional areas and critical tasks; and timely augmentation of the response capability. Since the initial NRC approval of the Emergency Plan, there have been improvements in the technology used to support the RERP functions and in the capabilities of onsite personnel. A functional analysis was performed on the effect of the proposed change on the timeliness of performing major tasks for the functional areas of the RERP Plan. The analysis concluded that an increase in staff augmentation times would not significantly affect the ability to perform the required RERP tasks. Thus, the proposed change has been determined not to adversely affect the ability to meet the emergency planning standards as described in 10 CFR 50.47(b) and 10 CFR Part 50, Appendix E.

Therefore, the proposed change will not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee's analysis and, based on this

review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

Attorney for licensee: David G. Pettinari, Attorney—Corporate Matters, 688 WCB, Detroit Edison Company, One Energy Plaza, Detroit, Michigan 48226–1279.

NRC Branch Chief: Robert J. Pascarelli.

Exelon Generation Company, LLC, and PSEG Nuclear, LLC, Docket Nos. 50–277 and 50–278, Peach Bottom Atomic Power Station (PBAPS), Units 2 and 3, York and Lancaster Counties, Pennsylvania

Date of amendment request: January 6, 2010, as supplemented by letters dated August 20, 2010, and October 14, 2010.

Description of amendment request: The proposed amendment would enable PBAPS, Units 2 and 3, to possess byproduct and special nuclear material from Limerick Generating Station (LGS), Units 1 and 2. Specifically, the revised license paragraph would permit storage of low-level radioactive waste (LLRW) from LGS in the PBAPS LLRW Storage Facility. The PBAPS LLRW Storage Facility currently provides storage for LLRW generated at PBAPS.

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration (NSHC), which is presented below:

1. Does the proposed change involve a significant increase in the probability or consequences of an accident previously evaluated?

Response: No.

The proposed change is an amendment to the PBAPS FOLs [Facility Operating Licenses] that will enable PBAPS to receive and store Class B/C LLRW from LGS in the PBAPS LLRWSF [Low Level Radioactive Waste Storage Facility]. This proposed change does not impact any initiators or precursors of previously analyzed accidents. The storage of Class B/C LLRW from LGS does not impact the failure of any plant structures, systems, or components. The proposed change does not have a detrimental impact on the integrity of any plant structure, system, or component that initiates an analyzed event. The proposed change does not affect any active or passive failure mechanisms that could lead to an accident. The PBAPS LLRWSF is not safety related, and is not used for plant shutdown resulting from accident or nonstandard operational conditions.

The proposed change does not significantly increase the consequences of postulated design basis events (i.e., seismic, flood, tornado, fire, and container drop events), in that the postulated impact of these events remains well below regulatory requirements (i.e., less than 10 percent of 10 CFR Part 100, "Reactor Site Criteria" acceptance criteria).

Therefore, the proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed change create the possibility of a new or different kind of accident from any previously evaluated?

Response: No.

The proposed change is an amendment to the PBAPS FOLs that will enable PBAPS to receive and store Class B/C LLRW from LGS in the PBAPS LLRWSF. The proposed amendment does not involve any change to the plant equipment or system design functions. EGC has verified that the storage of Class B/C LLRW from LGS in the PBAPS LLRWSF does not affect the ability of the PBAPS LLRWSF to perform its design function, including compliance with NRC regulatory requirements and guidance. No new accident initiators are introduced by this amendment.

Therefore, the proposed amendment does not create the possibility of a new or different kind of accident from any previously evaluated.

3. Does the proposed change involve a significant reduction in the margin of safety?

Response: No.

The proposed change is an amendment to the PBAPS FOLs that will enable PBAPS to receive and store Class B/C LLRW from LGS in the PBAPS LLRWSF. The proposed amendment does not involve any change to plant equipment or system design functions. The margin of safety is established through the design of the plant structures, systems, and components, the parameters within which the plant is operated, and the setpoints for the actuation of equipment relied upon to respond to an event. The proposed amendment does not affect the PBAPS safety limits or setpoints at which protective actions are initiated.

The proposed amendment does not significantly increase the dose rate at the exterior wall of the LLRWSF, the nearest restricted area boundary, and the nearest residence when the LLRWSF is filled to capacity with Class B/C LLRW. Therefore, these dose rates will remain within limits specified in 10 CFR Part 20 and 40 CFR Part 190.

Additionally, the potential radiological impact of a postulated design basis container drop accident is less than 10 percent of the 10 CFR Part 100 acceptance criteria.

Therefore the margin of safety is not reduced by the proposed change.

The NRC staff has reviewed the licensee's analysis and, based on this review, it appears that the three standards of 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves NSHC.

Attorney for licensee: Mr. J. Bradley Fewell, Associate General Counsel, Exelon Generation Company LLC, 4300 Winfield Road, Warrenville, IL 60555.

NRC Branch Chief: Harold K. Chernoff.

Exelon Generation Company, LLC, and PSEG Nuclear, LLC, Docket Nos. 50–277 and 50–278, Peach Bottom Atomic Power Station (PBAPS), Units 2 and 3, York and Lancaster Counties, Pennsylvania.

Date of amendment request: June 25, 2010, as supplemented by letter dated August 16, 2010.

Description of amendment request: The proposed amendment would revise Technical Specification (TS) Surveillance Requirement (SR) 3.6.1.3, "Primary Containment Isolation Valves (PCIVs)," and SR 3.6.1.5, "Reactor Building-to-Suppression Chamber Vacuum Breakers," to modify the required level for the liquid nitrogen storage tank.

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration (NSHC), which is presented below:

1. Does the proposed amendment involve a significant increase in the probability or consequences of an accident previously evaluated?

Response: No.

The proposed TS changes to increase the level in the liquid nitrogen storage tank from ≥ 16 inches water column to a level of ≥ 22 inches water column, or equivalent volume of ≥ 124,000 scf [standard cubic feet] at 250 psig, is necessary in order to correct a non-conservative TS value. Increasing the level is intended to ensure continued operability of the PCIVs (SR 3.6.1.3.1) and Reactor Building-to-Suppression Chamber Vacuum Breakers (SR 3.6.1.5.1) via the SGIG [safety grade instrument gas] system. The non-conservative TS condition was identified based on a re-analysis of the liquid nitrogen storage tank operation. The leakage allowance that was previously assumed was not based on a rigorous empirical value. The re-analysis of the leakage allowance assumes more reasonable system leakage based on operational data. Exelon determined that the current PBAPS, Units 2 and 3, TS SR value for the minimum level in the liquid nitrogen storage tank of ≥ 16 inches water column is non-conservative and that the guidance of Nuclear Regulatory Commission (NRC) Administrative Letter 98–10, "*Dispositioning of Technical Specifications that are Insufficient to Assure Plant Safety,*" applies. Exelon has implemented administrative controls to maintain the amount of nitrogen in the liquid nitrogen storage tank at a level of > 22 inches water column in support of SGIG system operation.

Exelon is submitting this License Amendment Request to address this non-conservative condition. The proposed TS

changes do not introduce new equipment or new equipment operating modes, nor do the proposed changes alter existing system relationships. The proposed changes do not affect plant operation, design function or any analysis that verifies the capability of a system, structure or component (SSC) to perform a design function. Further, the proposed changes do not increase the likelihood of the malfunction of any SSC or impact any analyzed accident. Consequently, the probability or consequences of an accident previously evaluated are not affected.

Therefore, the proposed amendments do not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed amendment create the possibility of a new or different kind of accident from any accident previously evaluated?

Response: No.

The proposed TS change to increase the level in the liquid nitrogen storage tank from ≥16 inches water column to a level of ≥22 inches water column, or equivalent volume of ≥124,000 scf at 250 psig, for the PCIVs (SR 3.6.1.3.1) and Reactor Building-to-Suppression Chamber Vacuum Breakers (SR 3.6.1.5.1) is needed to correct a non-conservative value based on a revised analysis. The proposed TS changes do not alter the design function or operation of any SSC. There is no new system component being installed, no construction of a new facility, and no performance of a new test or maintenance function. The proposed TS changes do not create the possibility of a new credible failure mechanism or malfunction. The proposed changes do not modify the design function or operation of any SSC. Further, the proposed changes do not introduce new accident initiators. Consequently, the proposed changes cannot create the possibility of a new or different kind of accident from any accident previously evaluated.

Therefore, the proposed amendments do not create the possibility of a new or different kind of accident from any accident previously analyzed.

3. Does the proposed amendment involve a significant reduction in a margin of safety?

Response: No.

The proposed TS changes to increase the level in the liquid nitrogen storage tank from ≥16 inches water column to a level of ≥22 inches water column, or equivalent volume of ≥124,000 scf at 250 psig, for the PCIVs (SR 3.6.1.3.1) and Reactor Building-to-Suppression Chamber Vacuum Breakers (SR 3.6.1.5.1) are necessary to correct an existing non-conservative TS value. The proposed TS changes are needed based on a revised analysis that utilizes empirical data for nitrogen system uses and losses. The proposed changes do not exceed or alter a design basis or a safety limit for a parameter established in the PBAPS, Units 2 and 3, Updated Final Safety Analysis Report (UFSAR) or the PBAPS, Units 2 and 3, Renewed Facility Operating License (FOL). Consequently, the proposed changes do not result in a reduction in the margin of safety.

Therefore, the proposed amendments do not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee's analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves NSHC.

Attorney for licensee: Mr. J. Bradley Fewell, Associate General Counsel, Exelon Generation Company LLC, 4300 Winfield Road, Warrenville, IL 60555.

NRC Branch Chief: Harold K. Chernoff.

Exelon Generation Company, LLC, Docket No. 50–289, Three Mile Island Nuclear Station, Unit 1, Dauphin County, Pennsylvania

Date of amendment request: September 22, 2010.

Description of amendment request: The proposed amendment would relocate the list of pumps, fans, and valves in Technical Specification (TS) 4.5.1.1b, Sequence and Power Transfer Test, to the Three Mile Island, Unit 1 (TMI–1) Updated Final Safety Analysis Report. In addition, TS 4.5.1.2b, TS 4.5.2.2a, and TS 4.5.2.2b refer to this test and are proposed for revision to reflect the proposed change to TS 4.5.1.1b.

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below with an NRC edit in brackets:

1. Does the proposed amendment involve a significant increase in the probability or consequences of any accident previously evaluated?

Response: No.

The proposed license amendment does not add, delete or modify plant equipment. The proposed changes are administrative in nature. The proposed amendment would relocate the list of pumps, fans and valves in Technical Specification (TS) 4.5.1.1b, Sequence and Power Transfer Test, to the TMI–1 Updated Final Safety Analysis Report (UFSAR) Section 8.3, Tests and Inspections.

The proposed changes relocate surveillance requirement details that are not required by 10 CFR 50.36, and are [partially] consistent with standard technical specifications, NUREG–1430, "Standard Technical Specifications Babcock and Wilcox Plants." The proposed changes do not change current surveillance requirements. The subject list of pumps, fans and valves that will be relocated to the UFSAR Section 8.3 will continue to be administratively controlled and future changes will be controlled under 10 CFR 50.59.

The probability of an accident is not increased by these proposed changes because the Sequence and Power Transfer Test is not an initiator of any design basis event. Additionally, the proposed changes do not involve any physical changes to plant structures, systems, or components (SSCs), or the manner in which these SSCs are operated, maintained, or controlled. The consequences of an accident will not be increased because the proposed administrative changes to the Sequence and Power Transfer Test and Sequence Test will continue to provide a high degree of assurance that the Electric Power System will meet its safety related function.

Therefore, the proposed changes do not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed amendment create the possibility of a new or different kind of accident from any previously evaluated?

Response: No.

The proposed changes do not alter the physical design, safety limits, safety analyses assumptions, or the manner in which the plant is operated or tested. The proposed changes are administrative in nature and the surveillance requirements remain the same. Accordingly, the proposed changes do not introduce any new accident initiators, nor do they reduce or adversely affect the capabilities of any plant SSC in the performance of their safety function.

Therefore, the proposed changes do not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. Does the proposed amendment involve a significant reduction in the margin of safety?

Response: No.

The margin of safety is associated with the confidence in the ability of the fission product barriers (*i.e.,* fuel cladding, reactor coolant pressure boundary, and containment structure) to limit the level of radiation to the public. There are no physical changes to SSCs or operating and testing procedures associated with the proposed amendment.

The proposed changes do not impact the assumptions of any design basis accident, and do not alter assumptions relative to the mitigation of an accident or transient event. The proposed changes are administrative in nature and the surveillance requirements remain the same.

Therefore, the proposed changes do not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee's analysis and, based on this review, with the NRC edit noted above incorporated, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

Attorney for licensee: J. Bradley Fewell, Esquire, Associate General Counsel, Exelon Generation Company, LLC, 4300 Winfield Road, Warrenville, IL 60555.

NRC Branch Chief: Harold K. Chernoff.

Exelon Generation Company, LLC, Docket No. 50–289, Three Mile Island Nuclear Station, Unit 1, Dauphin County, Pennsylvania

Date of amendment request: September 24, 2010.

Description of amendment request: The proposed amendment would revise Technical Specification (TS) 3.4.1.2.3, to allow up to two Main Steam Safety Valves (MSSVs) per steam generator to be inoperable with no required reduction in power level. It would also revise the required maximum overpower trip setpoints for any additional inoperable MSSVs consistent with the plant transient analysis. The proposed change requires that with less than four MSSVs associated with either steam generator operable, the plant would be required to be brought to the hot shutdown condition.

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below, with NRC edits in brackets:

1. Does the proposed amendment involve a significant increase in the probability or consequences of any accident previously evaluated?

Response: No.

The proposed amendment is not a change to the plant structures, systems, or components. There is no increase to the likelihood of Main Steam Safety Valve (MSSV) related failures. The MSSVs are relied upon to mitigate the effects of Updated Final Safety Analysis Report (UFSAR) Chapter 14 design basis events including the loss of load (turbine trip), which is the limiting event for secondary system overpressure. Analyses, performed in accordance with NRC approved methods, have demonstrated that with reduced MSSV availability and following the specified power level restrictions, the MSSVs will continue to limit the secondary system pressure to less than 110 percent of the design pressure of the Once Through Steam Generators (OTSGs) and the Main Steam (MS) System as required by [the American Society of Mechanical Engineers] ASME code. Therefore, the proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed amendment create the possibility of a new or different kind of accident from any previously evaluated?

Response: No.

The proposed amendment is not a change to the plant structures, systems, or components (SSCs). Furthermore, within the current licensing basis, the MSSVs are accident mitigation SSCs. The current licensing basis does not [explicitly] include consideration of a MSSV failure as an event initiator [and a failed open MSSV has been shown to be bounded by the larger maximum break size analysis presented in the TMI–1 UFSAR]. The proposed amendment will not fundamentally alter or create any new operator actions. Therefore, the proposed change does not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. Does the proposed amendment involve a significant reduction in the margin of safety?

Response: No.

The limiting event for secondary system overpressure is a loss of load event (turbine trip). The event has been analyzed for varying MSSVs out of service, using NRC approved methods. The results of the analysis demonstrate that the existing design acceptance criteria (i.e., MS and OTSG pressure remain less than 110 percent of the design pressure) are met for all combinations of inoperable MSSVs and initial power levels described in the proposed change. Therefore, the proposed change does not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee's analysis, and based on this review, including the edits listed above, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

Attorney for licensee: J. Bradley Fewell, Esquire, Associate General Counsel, Exelon Generation Company, LLC, 4300 Winfield Road, Warrenville, IL 60555.

NRC Branch Chief: Harold K. Chernoff.

FPL Energy, Point Beach, LLC, Docket Nos. 50–266 and 50–301, Point Beach Nuclear Plant, Units 1 and 2, Town of Two Creeks, Manitowoc County, Wisconsin

Date of amendment request: January 27, 2010.

Description of amendment request: The proposed changes would amend Renewed Facility Operating Licenses DPR–24 and DPR–27 for the Point Beach Nuclear Plant, Units 1 and 2, respectively. The proposed amendment consists of changes to Technical Specification 3.8.3, "Diesel Fuel Oil and Starting Air."

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration which is presented below:

1. Does the proposed amendment involve a significant increase in the probability or consequences of an accident previously evaluated?

Response: No.

This proposed change increases the minimum required amount of stored diesel fuel in the associated common fuel oil storage tank [FOST] for two standby emergency power sources to start, load to their respective loading limits and to operate continuously up to a maximum of 48 hours. An increase in the minimum required fuel oil volume required in the fuel oil storage tanks does not increase the probability or consequences of an accident previously evaluated.

[Limiting Condition for Operation] LCO 3.8.3 Condition A, currently requires that one or more standby emergency power sources have ≥ 11,000 gallons of fuel when the associated [emergency diesel generator] EDG is declared operable. The proposed change increases the amount of stored fuel to ≥ 24,000 gallons for two standby EDGs. It further adds new Required Action A.2 if the FOST stored capacity falls below the minimum required values. The proposed change also accounts for instrument indicator loop uncertainty values for unusable volume.

New LCO [3.8.3] Condition B, addresses the case of one EDG operating in either Train "A" or Train "B." The new condition specifies that the minimum volume of diesel fuel required to support continued operation of a single EDG for 48 hours at rated load is ≥ 13,000 gallons. This proposed change also accounts for instrument indicator loop uncertainty values for unusable volume.

[Surveillance Requirement] SR 3.8.3.1 is revised to reflect the increased amount of diesel fuel required to be maintained to support operation of the EDGs following recalculation of required values.

Following implementation of this proposed change, there will be no change in the ability of the EDGs to supply maximum post-accident load demands for 48 hours. The proposed minimum volume of fuel, ≥ 24,000 gallons for two EDGs and ≥ 13,000 gallons for one EDG per train, ensures that a 48-hour supply of fuel is available when the associated standby emergency power source is required to be operable.

Therefore, the proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed amendment create the possibility of a new or different kind of accident from any accident previously evaluated?

Response: No.

The EDGs and the associated support systems, such as the fuel oil storage and transfer systems, are designed to mitigate accidents and are not accident initiators. Following this change, the EDGs will continue to supply the required maximum post-accident load demand. The current 48-hour fuel supply requirements will be maintained following this change. The new required fuel oil volumes are within the capacities of the fuel oil storage tanks.

Therefore, the proposed change does not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. Does the proposed amendment involve a significant reduction in a margin of safety?

Response: No.

There are two underground fuel oil storage tanks on site. Each tank has a capacity of approximately 35,000 gallons and each common fuel tank supports one EDG train.

Fuel can be manually transferred from one tank to another via a cross-connect valve. Sufficient fuel is maintained between the two tanks to allow one EDG to operate continuously at the required load for seven (7) days. At the proposed minimum required level, which is ≥ 24,000 gallons in the common fuel oil storage tanks for two standby emergency power sources, one tank could provide enough fuel for two EDGs in either Train A or Train B to continue operation for great than 48 hours. At the proposed minimum required level, which is ≥ 13,000 gallons in each fuel oil storage tanks, one tank could provide enough fuel for one EDG in Train A and Train B to continue operation for greater than 48 hours.

Therefore, the proposed change does not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee's analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

Attorney for licensee: William Blair, Senior Attorney, NextEra Energy Point Beach, LLC, P.O. Box 14000, Juno Beach, FL 33408–0420.

NRC Branch Chief: Robert J. Pascarelli.

Tennessee Valley Authority, Docket Nos. 50–259, 50–260 and 50–296, Browns Ferry Nuclear Plant, Units 1, 2 and 3, Limestone County, Alabama

Date of amendment request: August 27, 2010.

Description of amendment request: The proposed amendment would add a new Action to Technical Specification (TS) 3.7.3, "Control Room Emergency Ventilation (CREV) System," to permit one or more CREV subsystems to be inoperable for up to 90 days when the inoperability is due to inoperable CREV System High Efficiency Particulate Air (HEPA) filter and/or charcoal absorbers. The proposed TS changes also include an administrative change to correct errors in Unit 2 TS page header information that occurred during issuance of TS pages for a previous amendment.

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

1. Does the proposed amendment involve a significant increase in the probability or consequences of an accident previously evaluated?

Response: No.

UFSAR [Updated Finale Safety Analysis Report] Chapter 14, "Plant Safety Analysis," evaluates operational transients and accidents that result in radiological releases that affect control room occupants. UFSAR section 14.6, "Analysis of Design Basis Accidents—Uprated," evaluates accidents that release fission products to the environment. The CREV System is not an accident initiator for any of the accidents described. The CREV System processes outside air needed to provide ventilation and pressurization for control room habitability to limit the control room dose during accidents evaluated in the UFSAR. Without crediting the performance of the HEPA filter or charcoal adsorbers, the analyses results concludes that the 30[-]day integrated post-accident doses in the control room are within the limits of 5 rem TEDE [total effective dose equivalent], as specified in 10 CFR 50.67 and GDC [General Design Criterion]-19. The control room dose increase is less than 10 percent; leaving more than 60 percent remaining margin to the regulatory limit.

Therefore, the proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed amendment create the possibility of a new or different kind of accident from any accident previously evaluated?

Response: No.

The CREV System is a ventilation system that filters outside air used to pressurize the control rooms to provide a protected environment from which operators can control the unit during airborne challenges from radioactivity during accident conditions. The CREV System does not initiate accidents. The proposed amendment allows the CREV HEPA filters and charcoal adsorbers to be repaired or replaced without shutting down the operating unit(s). No new modes of operation are introduced.

Therefore, the proposed change does not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. Does the proposed amendment involve a significant reduction in a margin of safety?

Response: No.

Analyses associated with the prior approval of Alternate Source Term methodology for design basis accident dose consequences previously did not credit the CREV System charcoal adsorbers. Recent analyses have been performed to assess the post-accident 30-day control room dose removing credit for the CREV System HEPA filter. The results indicate a minimal increase in dose consequences (9.5 percent increase) due to removing credit for the CREV System HEPA filter. Even with no credit for either the CREV System HEPA filter or CREV System charcoal filter, the resultant control room dose maintains more than 60 percent margin to the regulatory limit of 5 rem TEDE. As such there is no reduction in a margin of safety for any duration of inoperability of the CREV System HEPA filter or charcoal adsorbers. While the HEPA filter and charcoal adsorbers are not credited for accident mitigation, they remain required by the BFN TS for compliance with the LCO 3.7.3, "Control Room Emergency Ventilation (CREV) System," further minimizing any potential reduction in a margin of safety.

Therefore, the proposed change does not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee's analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

Attorney for licensee: General Counsel, Tennessee Valley Authority, 400 West Summit Hill Drive, 6A West Tower, Knoxville, Tennessee 37902.

NRC Branch Chief: Douglas A. Broaddus.

Virginia Electric and Power Company, Docket Nos. 50–338 and 50–339, North Anna Power Station, Units No. 1 and No. 2, Louisa County, Virginia

Date of amendment request: October 21, 2010.

Description of amendment request: The proposed action involves the inclusion of the Westinghouse Best-Estimate (BE) Large Break Loss-of-Coolant Accident (LBLOCA) analysis methodology using the Automated Statistical Treatment of Uncertainty Method (ASTRUM) for the analysis of LBLOCA to the list of methodologies approved for reference in the Core Operating Limits Report (COLR) in Technical Specification (TS) 5.6.5.b. This action also removes four obsolete COLR references that supported North Anna Improved Fuel (NAIF) product, Westinghouse Vantage 5, since this product is not planned to be used in future North Anna cores.

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

[Criterion 1]

Does the change involve a significant increase in the probability or consequences of an accident previously evaluated?

Response: No.

No physical plant changes are being made as a result of using the Westinghouse Best Estimate Large Break LOCA (BE–LBLOCA) analysis methodology. The proposed TS change simply involves updating the references in TS 5.6.5.b, Core Operating Limits Report (COLR), to reference the Westinghouse BE–LBLOCA analysis methodology, which is an NRC approved methodology, and to delete unnecessary references. Therefore, the probability of LOCA occurrence is not affected by the change. Further, the consequences of a LOCA are not increased, since the BE–LBLOCA analysis has demonstrated that the performance of the Emergency Core Cooling

System (ECCS) continues to conform to the criteria contained in 10 CFR 50.46, "Acceptance Criteria for Emergency Core Cooling Systems for Light-Water Nuclear Power Reactors." No other accident consequence is potentially affected by this change.

Systems will continue to be operated in accordance with current design requirements under the new analysis, therefore no new components or system interactions have been identified that could lead to an increase in the probability of any accident previously evaluated in the Updated Final Safety Analysis Report (UFSAR). No changes were required to the Reactor Protection System (RPS) or Engineering Safety Features (ESF) setpoints because of the new analysis methodology.

An analysis of the LBLOCA accident for North Anna Units 1 and 2 has been performed with the Westinghouse BE–LBLOCA analysis methodology using ASTRUM. The analysis was performed in compliance with the NRC conditions and limitations as identified in WCAP–1 6009–P–A. Based on the analysis results, it is concluded that the North Anna Units 1 and 2 continue to satisfy the limits prescribed by 10 CFR 50.46.

There are no changes to assumptions of the radiological dose calculations. Hence, there is no increase in the predicted radiological consequences of accidents postulated in the UFSAR.

Therefore, neither the probability of occurrence nor the consequences of an accident previously evaluated is significantly increased.

[Criterion 2]

Does the change create the possibility of a new or different kind of accident from any accident previously evaluated?

Response: No.

The use of the Westinghouse BE–LBLOCA analysis methodology with ASTRUM does not impact any of the applicable design criteria and pertinent licensing basis criteria continue to be met. Demonstrated adherence to the criteria in 10 CFR 50.46 precludes new challenges to components and systems that could introduce a new type of accident. Safety analysis evaluations have demonstrated that the use of Westinghouse BE–LBLOCA analysis methodology with ASTRUM is acceptable. Design and performance criteria continue to be met and no new single failure mechanisms have been created. The use of the Westinghouse BE–LBLOCA analysis methodology with ASTRUM does not involve any alteration to plant equipment or procedures that would introduce any new or unique operational modes or accident precursors. Furthermore, no changes have been made to any RPS or ESF actuation setpoints. Based on this review, it is concluded that no new accident scenarios, failure mechanisms, or limiting single failures are introduced as a result of the proposed changes.

Therefore, the possibility for a new or different kind of accident from any accident previously evaluated is not created.

[Criterion 3]

Does this change involve a significant reduction in a margin of safety?

Response: No.

It has been demonstrated that the analytical technique used in the Westinghouse BE–LBLOCA analysis methodology using ASTRUM realistically describes the expected behavior of the reactor system during a postulated LOCA. Uncertainties have been accounted for as required by 10 CFR 50.46. A sufficient number of LOCAs with different break sizes, different locations, and other variations in properties have been considered to provide assurance that the most severe postulated LOCAs have been evaluated. The analysis has demonstrated that the acceptance criteria contained in 10 CFR 50.46 continue to be satisfied.

Therefore, it is concluded that this change does not involve a significant reduction in the margin of safety.

The NRC staff has reviewed the licensee's analysis and, based on this review, it appears that the three standards of 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

Attorney for licensee: Lillian M. Cuoco, Senior Counsel, Dominion Resources Services, Inc., 120 Tredegar Street, RS–2, Richmond, VA 23219.

NRC Branch Chief: Gloria Kulesa.

Notice of Issuance of Amendments to Facility Operating Licenses

During the period since publication of the last biweekly notice, the Commission has issued the following amendments. The Commission has determined for each of these amendments that the application complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

Notice of Consideration of Issuance of Amendment to Facility Operating License, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing in connection with these actions was published in the **Federal Register** as indicated.

Unless otherwise indicated, the Commission has determined that these amendments satisfy the criteria for categorical exclusion in accordance with 10 CFR 51.22. Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared for these amendments. If the Commission has prepared an environmental assessment under the special circumstances provision in 10 CFR 51.22(b) and has made a determination based on that assessment, it is so indicated.

For further details with respect to the action see (1) The applications for amendment, (2) the amendment, and (3) the Commission's related letter, Safety Evaluation and/or Environmental Assessment as indicated. All of these items are available for public inspection at the Commission's Public Document Room (PDR), located at One White Flint North, Room O1–F21, 11555 Rockville Pike (first floor), Rockville, Maryland 20854. Publicly available records will be accessible from the Agencywide Documents Access and Management System (ADAMS) Public Electronic Reading Room on the internet at the NRC Web site, *http://www.nrc.gov/reading-rm/adams.html.* If you do not have access to ADAMS or if there are problems in accessing the documents located in ADAMS, contact the PDR Reference staff at 1–800–397–4209, 301–415–4737 or by e-mail to *pdr.resource@nrc.gov.*

Arizona Public Service Company, et al., Docket Nos. STN 50–528, STN 50–529, and STN 50–530, Palo Verde Nuclear Generating Station, Unit Nos. 1, 2, and 3, Maricopa County, Arizona

Date of application for amendment: April 29, 2010.

Brief description of amendment: The amendments adopted Nuclear Regulatory Commission (NRC)-approved TS Task Force (TSTF) Standard Technical Specification change traveler TSTF–491, Revision 2, "Removal of Main Steam and Main Feedwater Valve Isolation Times from Technical Specifications." The isolation times will be located outside of the TSs in a document subject to control by the 10 CFR 50.59 process.

Date of issuance: November 5, 2010.

Effective Date: As of the date of issuance and shall be implemented within 90 days from the date of issuance.

Amendment No.: Unit 1—181; Unit 2—181; Unit 3—181.

Facility Operating License Nos. NPF–41, NPF–51, and NPF–74: The amendment revised the Operating Licenses and Technical Specifications.

Date of initial notice in the ***Federal Register***: July 27, 2010 (75 FR 44024).

The Commission's related evaluation of the amendments is contained in a Safety Evaluation dated November 5, 2010.

No significant hazards consideration comments received: No.

Entergy Operations, Inc., Docket No. 50–368, Arkansas Nuclear One, Unit No. 2, Pope County, Arkansas

Date of application for amendment: June 23, 2010.

Brief description of amendment: Current Technical Specification (TS) 6.5.8, "Inservice Testing Program," contains references to the American Society of Mechanical Engineers (ASME) Boiler and Pressure Vessel Code, Section XI as the source of requirements for the inservice testing (IST) of ASME Code Class 1, 2, and 3 pumps and valves. The amendment deleted the references to Section XI of the Code and incorporated references to the ASME Code for Operation and Maintenance of Nuclear Power Plants (ASME OM Code). The amendment also indicates that there may be some nonstandard frequencies utilized in the IST Program in which the provisions of Surveillance Requirement (SR) 3.0.2 are applicable. The changes are consistent with Technical Specification Task Force (TSTF) Technical Change Travelers TSTF–479–A, "Changes to Reflect Revision of 10 CFR 50.55a," and TSTF–497–A, "Limit Inservice Testing Program SR 3.0.2 Application to Frequencies of 2 Years or Less."

Date of issuance: November 5, 2010.

Effective Date: As of the date of issuance and shall be implemented within 90 days from the date of issuance.

Amendment No.: 291.

Renewed Facility Operating License No. NPF–6: Amendment revised the Technical Specifications/license.

Date of initial notice in the ***Federal Register***: August 10, 2010 (75 FR 48375).

The Commission's related evaluation of the amendment is contained in a Safety Evaluation dated November 5, 2010.

No significant hazards consideration comments received: No.

Luminant Generation Company LLC, Docket Nos. 50–445 and 50–446, Comanche Peak Nuclear Power Plant, Unit Nos. 1 and 2, Somervell County, Texas

Date of amendment request: May 27, 2010, as supplemented by letter dated August 26, 2010.

Brief description of amendments: The amendments revised Technical Specification (TS) 3.8.3, "Diesel Fuel Oil, Lube Oil, and Starting Air," by relocating the current stored diesel fuel oil and lube oil numerical volume and level requirements from the TSs to the TS Bases so that it may be modified under licensee control. The TSs have been modified so that the stored diesel fuel oil and lube oil inventory will require that a 7-day supply be available for each diesel generator. Condition A and Condition B in the Action table and Surveillance Requirements (SRs) 3.8.3.1 and 3.8.3.2 are also revised to reflect the above change. The changes are consistent with NRC-approved Revision 1 to Technical Specification Task Force (TSTF) Improved Standard Technical Specification Change Traveler TSTF–501, "Relocate Stored Fuel Oil and Lube Oil Volume Values to Licensee Control." The availability of the TS improvement was announced in the **Federal Register** on May 26, 2010, as part of the consolidated line item improvement process.

Date of issuance: November 4, 2010.

Effective Date: As of the date of issuance and shall be implemented within 120 days from the date of issuance.

Amendment Nos.: Unit 1—153; Unit 2—153.

Facility Operating License Nos. NPF–87 and NPF–89: The amendments revised the Facility Operating Licenses and Technical Specifications.

Date of initial notice in the ***Federal Register***: August 10, 2010 (75 FR 48376). The supplemental letter dated August 26, 2010, provided additional information that clarified the application, did not expand the scope of the application as originally noticed, and did not change the staff's original proposed no significant hazards consideration determination as published in the **Federal Register**.

The Commission's related evaluation of the amendments is contained in a Safety Evaluation dated November 4, 2010.

No significant hazards consideration comments received: No.

Southern Nuclear Operating Company, Inc., Georgia Power Company, Oglethorpe Power Corporation, Municipal Electric Authority of Georgia, City of Dalton, Georgia, Docket Nos. 50–321 and 50–366, Edwin I. Hatch Nuclear Plant, Units 1 and 2, Appling County, Georgia

Date of application for amendments: December 17, 2009.

Brief description of amendments: The amendments revised the Technical Specifications (TSs) for Limiting Condition for Operations 3.1.2 "Reactivity Anomalies" changing Surveillance Requirement 3.1.2.1 methodology.

Date of issuance: November 4, 2010.

Effective Date: As of the date of issuance and shall be implemented within 60 days from the date of issuance.

Amendment Nos.: 263 and 207.

Renewed Facility Operating License Nos. DPR–57 and NPF–5: Amendments revised the licenses and the TSs.

Date of initial notice in ***Federal Register***: February 23, 2010.

The Commission's related evaluation of the amendments is contained in a Safety Evaluation dated November 4, 2010.

No significant hazards consideration comments received: No.

Dated at Rockville, Maryland, this 19th day of November 2010.

For the Nuclear Regulatory Commission.

Joseph G. Giitter,

Director, Division of Operating Reactor Licensing, Office of Nuclear Reactor Regulation.

[FR Doc. 2010–29941 Filed 11–29–10; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 70–143; License No. SNM–124; EA–10–076; NRC–2010–0365]

In the Matter of Nuclear Fuel Services, Inc., Erwin, TN; Confirmatory Order Modifying License (Effective Immediately)

I

Nuclear Fuel Services, Inc. (NFS or Licensee) is the holder of Special Nuclear Materials License No. SNM–124 issued by the Nuclear Regulatory Commission (NRC or Commission) pursuant to Title 10 of the Code of Federal Regulations (10 CFR) part 70 on July 2, 1999. The license authorizes the operation of the NFS facility in accordance with the conditions specified therein. The facility is located on the Licensee's site in Erwin, Tennessee.

This Confirmatory Order is the result of an agreement reached during an Alternative Dispute Resolution (ADR) session conducted on October 4, 2010.

II

On October 7, 2009, the NRC Office of Investigations (OI) began an investigation (OI Case No. 2–2010–001) at NFS. Based on the evidence developed during its investigation, OI substantiated that a former Industrial Safety Specialist at NFS willfully provided the NRC incomplete and inaccurate information concerning fire damper inspections at NFS on two separate occasions. The results of the investigation, completed on February 26, 2010, were sent to NFS in a letter

dated July 20, 2010. The NRC's July 20, 2010, letter offered NFS the opportunity to resolve the enforcement aspects of this matter through the NRC's normal enforcement process, or through ADR. In response to the NRC's offer, NFS requested use of the NRC ADR process to resolve the matter.

On October 4, 2010, the NRC and NFS met in an ADR session mediated by a professional mediator, arranged through Cornell University's Institute on Conflict Resolution. ADR is a process in which a neutral mediator with no decision-making authority assists the parties in reaching an agreement on resolving any differences regarding the dispute. This confirmatory order is issued pursuant to the agreement reached during the ADR process.

III

During the ADR session, a preliminary settlement agreement was reached. The elements of the agreement consisted of the following:

1. NFS agreed that two examples of a violation of 10 CFR 70.9(a), occurred, which requires that information provided to the NRC be complete and accurate in all material respects. The violation involved the following:

a. On November 25, 2008, NFS submitted to the NRC a Reply to Notice of Violation that was not complete and accurate in all material respects. NFS's letter documented that all fire dampers in procedure NFS–GH–22 were inspected in September of 2008, and passed the inspection, when in fact, 12 of the fire dampers had not been inspected (three of which were designated as items relied on for safety). The NRC preliminarily concluded that the submittal of inaccurate information was due, in part, to the willful actions of a former Industrial Safety Specialist at NFS who was tasked with drafting the written reply to the Notice of Violation. The inaccurate information was material to the NRC because it was used by the NRC to confirm that the required fire damper inspections had been completed.

b. During the NRC's August 2009 inspection, the NRC attempted to verify the corrective actions as documented in the November 25, 2008 Reply to Notice of Violation. In support of the inspection, the aforementioned former Industrial Safety Specialist at NFS created and provided a document to the NRC inspector, which indicated that all but one of the fire dampers had been fully inspected during 2008, when in fact, more than one of the dampers had not been fully inspected. The NRC preliminarily concluded that this inaccurate information was willfully provided to the NRC. This information was material to the NRC because it was used during the inspection to confirm that the required fire damper inspections had been completed.

2. The NRC concluded that the actions of the former NFS Industrial Safety Specialist were willful. In its investigation, NFS did not reach any conclusions regarding willfulness.

3. In response to the violation described above, NFS implemented numerous corrective actions and enhancements, including but not limited to a prompt investigation into the incident, a root cause and corrective action review, an extent of condition and extent of cause review, a Safety Culture Implications Review, organizational and process changes in response to the 10 CFR 70.9 violation, training and communication initiatives, initiatives to improve employee awareness of the incident and lessons learned, and initiatives to gauge employee awareness of NFS's corrective actions, enhancements, and lessons learned.

4. In response to the issues as described in Section III.1(a) and (b) above, NFS agreed to the following actions:

a. Within 30 days of issuance of this Confirmatory Order, NFS will submit a Reply to a Notice of Violation, which documents its corrective actions and enhancements as discussed in Section III.3 above. NFS's Reply to a Notice of Violation will be consistent with the requirements of 10 CFR 2.201.

b. Within one year of issuance of this Confirmatory Order, NFS will conduct an effectiveness review of each completed corrective action identified in its written Reply to a Notice of Violation. In response to its effectiveness review, NFS will implement additional corrective actions to address any deficiencies or weaknesses, and will continue to do so until such deficiencies and weaknesses are resolved.

c. Within six months of issuance of this Confirmatory Order, NFS will conduct an assessment of the effectiveness of its actions to assure the adequacy and accuracy of information submitted to the NRC, including continuous improvements to its processes and changes to its organizational structure. The assessment will be conducted by an independent group (*i.e.,* from outside the safety organization). NFS will address, through enhancements and corrective actions, the issues identified as a result of the assessment.

d. NFS agrees to develop and implement an appropriate safety culture improvement plan to address the findings identified in the second Safety Culture Assessment report that was provided to the NRC on June 29, 2010. NFS also agrees to assess the effectiveness of its plan and implement additional corrective actions for any weaknesses or deficiencies identified, by June 2012. Corrective actions will continue to be implemented until such time that NFS demonstrates to NRC that the actions were fully effective.

e. NFS will conduct integrated independent safety culture assessments using a variety of appropriate assessment tools (which may include, but are not limited to, an independent third party review, employee surveys, Nuclear Safety Review Board inputs, self-assessments), no later than June 2013, and at least every 24 months thereafter, to an accepted nuclear industry standard. The safety culture assessments will include the following provisions and attributes:

i. The integrated assessment results will be shared with NFS staff within 30 days of completion of results.

ii. The integrated assessment results will be provided to the NRC within 30 days of completion of results.

iii. The corrective action plans to address the issues identified in these integrated assessments will be provided to the NRC within 60 days of completion of results.

iv. Appropriate and timely corrective actions will be implemented to address the issues identified in these assessments.

v. Effectiveness reviews of corrective actions will be implemented within one year of completion of the corrective action. Additional corrective action will be taken to address those actions which were not fully effective.

vi. NFS will inform the NRC when it has determined that improvements in safety culture are sufficient and sustainable.

vii. The above actions involving independent safety culture assessments will continue until NRC has concluded that the actions were fully effective.

f. NFS will complete an assessment of its current corrective action program against the requirements of NQA–1–2008, Part III, Subpart 3.1, "Non-Mandatory Appendix 16A–1." Based on this assessment, NFS will submit a license amendment request within nine months of the date of issuance of this Confirmatory Order incorporating into the license its current corrective action program including the additional enhancements made to the program as a result of the assessment.

g. NFS shall implement metrics to measure overall safety performance at the facility.

5. The NRC and NFS agree that the above elements will be incorporated into a Confirmatory Order, and that the two examples of a violation of 10 CFR 70.9 will be cited as a Notice of Violation, and included as an attachment to the final Confirmatory Order. In addition, NFS agrees to waive its hearing rights for the issues documented in the Confirmatory Order.

6. In consideration of the commitments delineated in Section III.4 above and in Section V, the NRC agrees to refrain from proposing a civil penalty for all matters discussed in the NRC's letter to NFS of July 20, 2010 (EA–10–076).

7. Issuance of this Confirmatory Order for the above actions supersedes the NRC's Confirmatory Order to NFS, dated February 21, 2007, which is now closed.

8. This agreement is binding upon successors and assigns of NFS.

IV

Since the licensee has agreed to take additional actions to address NRC concerns, as set forth in Section V, the NRC has concluded that its concerns can be resolved through issuance of this Confirmatory Order.

I find that NFS's commitments as set forth in Section V are acceptable and necessary and conclude that with these commitments, the public health and safety are reasonably assured. In view of the foregoing, I have determined that public health and safety require that NFS's commitments be confirmed by this Order. Based on the above and NFS's consent, this Confirmatory Order is immediately effective upon issuance.

V

Accordingly, pursuant to Sections 51, 53, 161b, 161i, 161o, 182 and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.202 and 10 CFR part 70, *it is hereby ordered,* effective immediately, that License No. SNM–124 Is modified as follows:

1. Within 30 days of issuance of this Confirmatory Order, NFS will submit a Reply to a Notice of Violation, which documents its corrective actions and enhancements as discussed in Section III.3 above. NFS's Reply to the Notice of Violation will be consistent with the requirements of 10 CFR 2.201.

2. Within one year of issuance of this Confirmatory Order, NFS will conduct an effectiveness review of each completed corrective action identified in its written Reply to a Notice of Violation. In response to its effectiveness review, NFS will implement additional corrective actions to address any deficiencies or weaknesses, and will continue to do so until such deficiencies and weaknesses are resolved.

3. Within six months of issuance of this Confirmatory Order, NFS will conduct an assessment of the effectiveness of its actions to assure the adequacy and accuracy of information submitted to the NRC, including continuous improvements to its processes and changes to its organizational structure. The assessment should be conducted by an independent group (i.e., from outside the safety organization). NFS will then address the issues identified as a result of the assessment.

4. NFS agrees to develop and implement an appropriate safety culture improvement plan to address the findings identified in the second Safety Culture Assessment report that was provided to the NRC on June 29, 2010. NFS also agrees to assess the effectiveness of its plan, and implement additional corrective actions for any weaknesses or deficiencies identified, by June 2012. Corrective actions will continue to be implemented until such time that NFS has demonstrated that the actions were fully effective.

5. NFS will conduct integrated independent safety culture assessments using a variety of appropriate assessment tools (which may include, but are not limited to, an independent third party review, employee surveys, Nuclear Safety Review Board inputs, self-assessments), no later than June 2013, and at least every 24 months thereafter, to an accepted nuclear industry standard. The safety culture assessments will include the following provisions and attributes:

a. The integrated assessment results will be shared with NFS staff within 30 days of completion of results.

b. The integrated assessment results will be provided to the NRC within 30 days of completion of results.

c. The corrective action plans to address the issues identified in these integrated assessments will be provided to the NRC within 60 days of completion of results.

d. Appropriate and timely corrective actions will be implemented to address the issues identified in these assessments.

e. Effectiveness reviews of corrective actions will be implemented within one year of completion of the corrective action. Additional corrective action is taken to address those actions which were not fully effective.

f. NFS will inform the NRC when it has determined that improvements in safety culture are sufficient and sustainable.

g. The above actions involving independent safety culture assessments will continue until NRC has concluded that the actions were fully effective.

6. NFS will complete an assessment of its current corrective action program against the requirements of NQA–1–2008, Part III, Subpart 3.1, "Non-Mandatory Appendix 16A–1." Based on this assessment, NFS will submit a license amendment request within nine months of the date of issuance of this Confirmatory Order, incorporating into the license its current corrective action program including the additional enhancements made to the program as a result of the assessment.

7. NFS shall implement metrics to measure overall safety performance at the facility.

The Regional Administrator, NRC Region II, may relax or rescind, in writing, any of the above conditions upon a showing by NFS of good cause.

VI

Any person adversely affected by this Confirmatory Order, other than NFS, may request a hearing within 20 days of its publication in the **Federal Register**. Where good cause is shown, consideration will be given to extending the time to request a hearing. A request for extension of time must be made in writing to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and include a statement of good cause for the extension.

All documents filed in NRC adjudicatory proceedings, including a request for hearing, a petition for leave to intervene, any motion or other document filed in the proceeding prior to the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities participating under 10 CFR 2.315(c), must be filed in accordance with the NRC E-Filing rule (72 FR 49139, August 28, 2007). The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases to mail copies on electronic storage media. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, at least ten (10) days prior to the filing deadline, the participant should contact the Office of the Secretary by e-mail at

hearing.docket@nrc.gov, or by telephone at (301) 415–1677, to request (1) a digital ID certificate, which allows the participant (or its counsel or representative) to digitally sign documents and access the E-Submittal server for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a request or petition for hearing (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals/apply-certificates.html.* System requirements for accessing the E-Submittal server are detailed in NRC's "Guidance for Electronic Submission," which is available on the agency's public Web site at *http://www.nrc.gov/site-help/e-submittals.html.* Participants may attempt to use other software not listed on the Web site, but should note that the NRC's E-Filing system does not support unlisted software, and the NRC Meta System Help Desk will not be able to offer assistance in using unlisted software.

If a participant is electronically submitting a document to the NRC in accordance with the E-Filing rule, the participant must file the document using the NRC's online, Web-based submission form. In order to serve documents through the Electronic Information Exchange (EIE), users will be required to install a Web browser plug-in from the NRC Web site. Further information on the Web-based submission form, including the installation of the Web browser plug-in, is available on the NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals.html.*

Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit a request for hearing or petition for leave to intervene. Submissions should be in Portable Document Format (PDF) in accordance with NRC guidance available on the NRC public Web site at *http://www.nrc.gov/site-help/e-submittals.html.* A filing is considered complete at the time the documents are submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. Eastern Time on the due date. Upon receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an e-mail notice confirming receipt of the document. The E-Filing system also distributes an e-mail notice that provides access to the document to the NRC Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the documents on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before a hearing request/petition to intervene is filed so that they can obtain access to the document via the E-Filing system.

A person filing electronically using the agency's adjudicatory E-Filing system may seek assistance by contacting the NRC Meta System Help Desk through the "Contact Us" link located on the NRC Web site at *http://www.nrc.gov/site-help/e-submittals.html*, by e-mail at *MSHD.Resource@nrc.gov,* or by a toll-free call at (866) 672–7640. The NRC Meta System Help Desk is available between 8 a.m. and 8 p.m., Eastern Time, Monday through Friday, excluding government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, Sixteenth Floor, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852, Attention: Rulemaking and Adjudications Staff. Participants filing a document in this manner are responsible for serving the document on all other participants. Filing is considered complete by first-class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service upon depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in NRC's electronic hearing docket which is available to the public at *http://ehd.nrc.gov/EHD_Proceeding/home.asp,* unless excluded pursuant to an order of the Commission, or the presiding officer. Participants are requested not to include personal privacy information, such as social security numbers, home addresses, or home phone numbers in their filings, unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

If a person (other than NFS) requests a hearing, that person shall set forth with particularity the manner in which his interest is adversely affected by this Confirmatory Order and shall address the criteria set forth in 10 CFR 2.309(d) and (f).

If a hearing is requested by a person whose interest is adversely affected, the Commission will issue an order designating the time and place of any hearing. If a hearing is held, the issue to be considered at such hearing shall be whether this Confirmatory Order should be sustained.

In the absence of any request for hearing, or written approval of an extension of time in which to request a hearing, the provisions specified in Section V above shall be final 20 days from the date this Confirmatory Order is published in the **Federal Register** without further order or proceedings. If an extension of time for requesting a hearing has been approved, the provisions specified in Section V shall be final when the extension expires if a hearing request has not been received.

A request for hearing shall not stay the immediate effectiveness of this order.

Dated this 16th day of November 2010.

For the Nuclear Regulatory Commission.

Victor M. McCree,

Deputy Regional Administrator for Operations.

[FR Doc. 2010–30116 Filed 11–29–10; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards (ACRS) Meeting of the ACRS Subcommittee on AP1000; Notice of Meeting

The ACRS Subcommittee on AP1000 will hold a meeting on December 15–16, 2010, Room T–2B1, 11545 Rockville Pike, Rockville, Maryland.

The meeting will be open to public attendance with the exception of portions that may be closed to protect unclassified safeguards information, pursuant to 5 U.S.C. 552b(c)(3), and information designated as proprietary to Westinghouse Electric Company and its contractors, pursuant to 5 U.S.C. 552b(c)(4).

The agenda for the subject meeting shall be as follows:

Wednesday, December 15, 2010 and Thursday, December 16, 2010—8:30 a.m. Until 5 p.m.

The Subcommittee will review the Final Safety Evaluation Report associated with the combined license application for the Vogtle Units 3 and 4. The Subcommittee will also review the staff's evaluation of the Aircraft Impact Assessment for the proposed AP1000 design. The Subcommittee will hear presentations by and hold discussions with the NRC staff, Westinghouse, and other interested persons regarding these matters. The Subcommittee will gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the Full Committee.

Members of the public desiring to provide oral statements and/or written comments should notify the Designated Federal Official (DFO), Weidong Wang (Telephone 301–415–6279 or E-mail: *Weidong.Wang@nrc.gov*) five days prior to the meeting, if possible, so that appropriate arrangements can be made. Thirty-five hard copies of each presentation or handout should be provided to the DFO thirty minutes before the meeting. In addition, one electronic copy of each presentation should be emailed to the DFO one day before the meeting. If an electronic copy cannot be provided within this timeframe, presenters should provide the DFO with a CD containing each presentation at least thirty minutes before the meeting. Electronic recordings will be permitted only during those portions of the meeting that are open to the public. Detailed procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on October 21, 2010, (75 FR 65038–65039).

Detailed meeting agendas and meeting transcripts are available on the NRC Web site at *http://www.nrc.gov/reading-rm/doc-collections/acrs.* Information regarding topics to be discussed, changes to the agenda, whether the meeting has been canceled or rescheduled, and the time allotted to present oral statements can be obtained from the website cited above or by contacting the identified DFO. Moreover, in view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with these references if such rescheduling would result in a major inconvenience.

Dated: *November 23, 2010.*

Antonio Dias,

Chief Reactor Safety Branch B, Advisory Committee on Reactor Safeguards.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2010–0002]

Sunshine Act Notice

DATES: Weeks of November 29, December 6, 13, 20, 27, 2010, January 3, 2011.

PLACE: Commissioners' Conference Room, 11555 Rockville Pike, Rockville, Maryland.

STATUS: Public and Closed.

Week of November 29, 2010

Tuesday, November 30, 2010

10 a.m.—Affirmation Session (Public Meeting) (Tentative)

a. *Tennessee Valley Authority* (Watts Bar Nuclear Plant, Unit 2), Southern Alliance for Clean Energy's Petition for Interlocutory Review of LBP–10–12 (Denying SACE's Waiver Petition) (July 14, 2010) (Tentative).

b. *Entergy Nuclear Operations, Inc.* (Indian Point Nuclear Generating Units 2 and 3) Motions for Interlocutory Review by Staff and Applicant of LBP–10–13 (contention admissibility decision) (Tentative).

c. *Final Rule:* Decommissioning Planning (10 CFR parts 20, 30, 40, 50, 70, and 72; RIN–3150–AI55) (Tentative).

1 p.m.—Briefing on Security Issues (Closed—Ex. 1)

Week of December 6, 2010—Tentative

There are no meetings scheduled for the week of December 6, 2010.

Week of December 13, 2010—Tentative

Thursday, December 16, 2010

2 p.m.—Briefing on Construction Reactor Oversight Program (cROP) (Public Meeting) (*Contact:* Aida Rivera-Varona, 301–415–4001)

This meeting will be webcast live at the Web address—*http://www.nrc.gov.*

Week of December 20, 2010—Tentative

Tuesday, December 21, 2010

9:30 a.m.—Briefing on the Threat Environment Assessment (Closed—Ex. 1)

1 p.m.—Briefing on Security Issues (Closed—Ex. 1)

Week of December 27, 2010—Tentative

There are no meetings scheduled for the week of December 27, 2010.

Week of January 3, 2011—Tentative

There are no meetings scheduled for the week of January 3, 2011.

* * * * *

* The schedule for Commission meetings is subject to change on short notice. To verify the status of meetings, call (recording)—(301) 415–1292. Contact person for more information: Rochelle Bavol, (301) 415–1651.

NUCLEAR REGULATORY COMMISSION

Request for a License To Export Radioactive Waste

Pursuant to 10 CFR 110.70 (b) "Public Notice of Receipt of an Application," please take notice that the Nuclear Regulatory Commission (NRC) has received the following request for an export license. Copies of the request are available electronically through ADAMS and can be accessed through the Public Electronic Reading Room (PERR) link *http://www.nrc.gov/reading-rm.html* at the NRC Homepage.

A request for a hearing or petition for leave to intervene may be filed within thirty days after publication of this notice in the **Federal Register**. Any request for hearing or petition for leave to intervene shall be served by the requestor or petitioner upon the applicant, the office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555; the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555; and the Executive Secretary, U.S. Department of State, Washington, DC 20520.

A request for a hearing or petition for leave to intervene may be filed with the NRC electronically in accordance with NRC's E–Filing rule promulgated in August 2007, 72 FR 49139 (Aug. 28, 2007). Information about filing electronically is available on the NRC's public Web site at *http://www.rnc.gov/site-help/e-submittals.html.* To ensure timely electronic filing, at least 5 (five) days prior to the filing deadline, the petitioner/requestor should contact the Office of the Secretary by e-mail at *HEARINGDOCKET@NRC.GOV,* or by calling (301) 415–1677, to request a digital ID certificate and allow for the creation of an electronic docket.

In addition to a request for hearing or petition for leave to intervene, written comments, in accordance with 10 CFR 110.81, should be submitted within thirty (30) days after publication of this notice in the **Federal Register** to Office of the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555, *Attention:* Rulemaking and Adjudications.

The information concerning this export license application follows.

NRC EXPORT LICENSE APPLICATION

Description of material

Name of applicant; date of application; date received; application no. docket No.	Material type	Total quantity	End use	Recipient country
EnergySolutions, August 27, 2010, November 3, 2010, XW018, 11005897.	Radioactive waste consisting of contaminated ash resulting from the incineration of contaminated materials as well as non-incinerable and non-conforming material.	Not to exceed 1,000 tons (amount imported).	Return to two licensed facilities for appropriate disposition.	Germany.

For The Nuclear Regulatory Commission.

Dated this 17th day of November 2010 at Rockville, Maryland.

Stephen Dembek,

Acting Deputy Director, Office of International Programs.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 52–008; NRC–2008–0476]

Dominion Virginia Power and Old Dominion Electric Cooperative; Notice of Consideration of Issuance of Amendment to Early Site Permit, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

AGENCY: U.S. Nuclear Regulatory Commission (NRC).

ACTION: Notice of license amendment request, opportunity to comment, and opportunity to request a hearing.

DATES: Submit comments by December 30, 2010. Requests for a hearing or leave to intervene must be filed by January 31, 2011.

FOR FURTHER INFORMATION CONTACT: Chandu Patel, Project Manager, US–APWR Projects Branch, Division of New Reactor Licensing, Office of New Reactors, U.S. Nuclear Regulatory Commission, Washington, DC 20555–001. Telephone: (301) 415–3025; fax number: (301) 415–6350; e-mail: *Chandu.Patel@nrc.gov.*

ADDRESSES: You may submit comments by any one of the following methods. Please include Docket ID NRC–2008–0476 in the subject line of your comments. Comments submitted in writing or in electronic form will be posted on the NRC Web site and on the Federal rulemaking Web site *http://www.regulations.gov.* Because your comments will not be edited to remove any identifying or contact information, the NRC cautions you against including any information in your submission that you do not want to be publicly disclosed. The NRC requests that any party soliciting or aggregating comments received from other persons for submission to the NRC inform those persons that the NRC will not edit their comments to remove any identifying or contact information, and therefore, they should not include any information in their comments that they do not want publicly disclosed.

You may submit comments by any one of the following methods.

Federal Rulemaking Web site: Go to *http://www.regulations.gov* and search for documents filed under Docket ID NRC–2008–0476. Address questions about NRC dockets to Carol Gallagher at 301–492–3668 or via e-mail at *Carol.Gallagher@nrc.gov.*

Mail comments to: Chief, Rules, Announcements and Directives Branch, Office of Administration, Mail Stop: TWB–05–B01M, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, or via fax to RADB at (301) 492–3446.

You can access publicly available documents related to this notice using the following methods:

NRC's Public Document Room (PDR): The public may examine, and have copied for a fee, publicly available documents at the NRC's PDR, Room O–1 F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. These documents may also be viewed electronically on the Public computer located at the NRC's PDR at 11555 Rockville Pike, Rockville, MD 20852.

NRC's Agencywide Documents Access and Management System (ADAMS): Publicly available documents created or received at the NRC are available electronically at the NRC's Electronic Reading Room at *http://www.nrc.gov/reading-rm/adams.html.* From this page, the public can gain entry into ADAMS, which provides text and image files of NRC's public documents. If you do not have access to ADAMS or if there are problems in accessing the documents located in ADAMS, contact the NRC's PDR reference staff at 1–800–397–4209, 301–415–4737, or via e-mail to *pdr.resource@nrc.gov.* The application for amendment dated September 2, 2010, is available electronically in ADAMS under accession number ML102500209.

Federal Rulemaking Web site: Public comments and supporting materials related to this notice can be found at *http://www.regulations.gov* by searching for Docket ID: NRC–2008–0476.

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC (the Commission) is considering issuance of an amendment to Early Site Permit (ESP) number ESP–003, issued to Virginia Electric and Power Company doing business as Dominion Virginia Power, and Old Dominion Electric Cooperative for the North Anna site located near Louisa, Virginia.

The proposed amendment would delete ESP permit condition 3.G, which prescribes the notification conditions associated with the implementation of certain activities authorized by the permit. Specifically, permit condition 3.G requires the permit holder to notify the NRC Regional Administrator for Region II and the operator of North Anna Power Station at least 120 days before the commencement of certain activities described in Appendix E of the permit, the Site Redress Plan. Condition 3.G also states that the permit holder will certify in the notification that it has obtained all other permits, licenses, and certifications required for those activities. The proposed amendment eliminates the notifications by deleting the condition in its entirety.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards consideration. Under the Commission's regulations in Title 10 of the Code of Federal Regulations, Section 50.92, this means that performance of site preparation and preliminary construction activities described in site redress plan at the North Anna ESP site in accordance with the proposed amendment would not (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety.

As required by 10 CFR 50.91(a), the applicant has provided its analysis of the issue of no significant hazards consideration, which is presented below:

1. Does the proposed amendment involve a significant increase in the probability or consequences of an accident previously evaluated?

Response: No.

The proposed amendment deletes ESP condition 3.G, which prescribes the notification conditions associated with the implementation of activities authorized by the permit. This change is administrative in nature and does not affect the fabrication, construction, or operation of any plant structure, system, or component.

Therefore, the proposed ESP change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed amendment create the possibility of a new or different kind of accident from any accident previously evaluated?

Response: No.

The proposed amendment deletes ESP condition 3.G, which prescribes the

notification conditions associated with the implementation of activities authorized by the permit. This change is administrative in nature and does not affect the fabrication, construction, or operation of any plant structure, system, or component.

Therefore, the proposed ESP change does not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. Does the proposed amendment involve a significant reduction in a margin of safety?

Response: No.

The proposed amendment deletes ESP condition 3.G, which prescribes the notification conditions associated with the implementation of activities authorized by the permit. This change is administrative in nature and does not affect the fabrication, construction, or operation of any plant structure, system, or component.

Therefore, the proposed ESP change does not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the applicant's analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

The Commission is seeking public comments on this proposed determination. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determination. You may submit comments using any of the methods discussed under the **ADDRESSES** section of this notice, which is above.

Before issuing the amendment, regardless of whether a hearing is requested, the Commission will make a final determination on the issue of no significant hazards consideration. The final determination will serve to decide when the hearing is held, if one is requested. If the final determination is that the amendment request involves no significant hazards consideration, the Commission may issue the amendment and make it immediately effective, notwithstanding the request for a hearing. Any hearing held would take place after issuance of the amendment. If the final determination is that the amendment request involves a significant hazards consideration, any hearing held would take place before the issuance of any amendment.

II. Opportunity to Request a Hearing

Requirements for hearing requests and petitions for leave to intervene are found in 10 CFR 2.309, "Hearing requests, Petitions to Intervene, Requirements for Standing, and Contentions." Interested persons should consult 10 CFR 2.309, which is available at the NRC's PDR, located at O–1 F21, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852 (or call the PDR at (800) 397–4209 or (301) 415–4737). NRC regulations are also accessible electronically from the NRC's Electronic Reading Room on the NRC Web site at *http://www.nrc.gov.*

III. Petitions for Leave to Intervene

Within 60 days of this notice, any person whose interest may be affected by this amendment and who wishes to participate as a party in the proceeding must file a written petition for leave to intervene. As required by 10 CFR 2.309, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding. The petition must provide the name, address, and telephone number of the petitioner and specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order that may be entered in the proceeding on the petitioner's interest.

A petition for leave to intervene must also include a specification of the contentions that the petitioner seeks to have litigated in the hearing. For each contention, the petitioner must provide a specific statement of the issue of law or fact to be raised or controverted, as well as a brief explanation of the basis for the contention. Additionally, the petitioner must demonstrate that the issue raised by each contention is within the scope of the proceeding and is material to the findings the NRC must make to support the granting of a license amendment in response to the application. The petition must also include a concise statement of the alleged facts or expert opinions which support the position of the petitioner and on which the petitioner intends to rely at hearing, together with references to the specific sources and documents on which the petitioner intends to rely. Finally, the petition must provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact, including references to specific portions of the application for amendment that the petitioner disputes and the supporting reasons for each dispute, or, if the petitioner believes that the application for amendment fails to contain information on a relevant matter as required by law, the identification of each failure and the supporting reasons for the petitioner's belief.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing. The Licensing Board will set the time and place for any prehearing conferences and evidentiary hearings, and the appropriate notices will be provided.

Non-timely petitions for leave to intervene and contentions, amended petitions, and supplemental petitions will not be entertained absent a determination by the Commission, the Licensing Board or a Presiding Officer that the petition should be granted and/or the contentions should be admitted based upon a balancing of the factors specified in 10 CFR 2.309(c)(1)(i)–(viii).

A State, county, municipality, Federally-recognized Indian Tribe, or agencies thereof, may submit a petition to the Commission to participate as a party under 10 CFR 2.309(d)(2). The petition should be submitted to the Commission by January 31, 2011. The petition must be filed in accordance with the filing instructions in Section IV of this document, and should meet the requirements for petitions for leave to intervene set forth in this section, except that State and Federally-recognized Indian Tribes do not need to address the standing requirements in 10 CFR 2.309(d)(1) if the facility is located within its boundaries. The entities listed above could also seek to participate in a hearing as a nonparty pursuant to 10 CFR 2.315(c).

Any person who does not wish, or is not qualified, to become a party to this proceeding may request permission to make a limited appearance pursuant to the provisions of 10 CFR 2.315(a). A person making a limited appearance may make an oral or written statement of position on the issues, but may not otherwise participate in the proceeding. A limited appearance may be made at any session of the hearing or at any prehearing conference, subject to such limits and conditions as may be imposed by the Licensing Board.

IV. Electronic Submissions (E–Filing)

All documents filed in the NRC adjudicatory proceedings, including a request for hearing, a petition for leave to intervene, any motion or other document filed in the proceeding prior to the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities participating under 10 CFR 2.315(c), must be filed in

accordance with the NRC E–Filing rule (72 FR 49139, August 28, 2007). The E–Filing process requires participants to submit and serve all adjudicatory documents over the Internet, or in some cases to mail copies on electronic storage media. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E–Filing, at least ten days prior to the filing deadline, the participant should contact the Office of the Secretary via e-mail at *hearing.docket@nrc.gov,* or via telephone at (301) 415–1677, to request (1) a digital ID certificate, which allows the participant (or its counsel or representative) to digitally sign documents and access the E–Submittal server for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a request or petition for hearing (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals/apply-certificates.html.* System requirements for accessing the E–Submittal server are detailed in NRC's "Guidance for Electronic Submission," which is available on the agency's public Web site at *http://www.nrc.gov/site-help/e-submittals.html.* Participants may attempt to use other software not listed on the Web site, but should note that the NRC's E–Filing system does not support unlisted software, and the NRC Meta System Help Desk will not be able to offer assistance in using unlisted software.

If a participant is electronically submitting a document to the NRC in accordance with the E–Filing rule, the participant must file the document using the NRC's online, Web-based submission form. In order to serve documents through Electronic Information Exchange, users will be required to install a Web browser plug-in from the NRC Web site. Further information on the Web-based submission form, including the installation of the Web browser plug-in, is available on the NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals.html.*

Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit a request for hearing or petition for leave to intervene. Submissions should be in Portable Document Format in accordance with the NRC guidance available on the NRC public Web site at *http://www.nrc.gov/site-help/e-submittals.html.* A filing is considered complete at the time the documents are submitted through the NRC's E–Filing system. To be timely, an electronic filing must be submitted to the E–Filing system no later than 11:59 p.m. eastern time on the due date. Upon receipt of a transmission, the E–Filing system time-stamps the document and sends the submitter an e-mail notice confirming receipt of the document. The E–Filing system also distributes an e-mail notice that provides access to the document to the NRC Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the documents on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before a hearing request/petition to intervene is filed so that they can obtain access to the document via the E–Filing system.

A person filing electronically using the agency's adjudicatory E–Filing system may seek assistance by contacting the NRC Meta System Help Desk through the "Contact Us" link located on the NRC Web site at *http://www.nrc.gov/site-help/e-submittals.html,* via e-mail at *MSHD.Resource@nrc.gov,* or via toll-free call at (866) 672–7640. The NRC Meta System Help Desk is available between 8 a.m. and 8 p.m., Eastern Time, Monday through Friday, excluding government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, Sixteenth Floor, One White Flint North, 11555 Rockville Pike, Rockville, Maryland, 20852, Attention: Rulemaking and Adjudications Staff.

Participants filing a document in this manner are responsible for serving the document on all other participants. Filing is considered complete by first-class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service upon depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E–Filing, may require a participant or party to use E–Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E–Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket which is available to the public at *http://ehd.nrc.gov/EHD_Proceeding/home.asp,* unless excluded pursuant to an order of the Commission, or the presiding officer. Participants are requested not to include personal privacy information, such as social security numbers, home addresses, or home phone numbers in their filings, unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

Petitions for leave to intervene must be filed no later than 60 days from November 30, 2010. Non-timely filings will not be entertained absent a determination by the presiding officer that the petition or request should be granted or the contentions should be admitted, based on a balancing of the factors specified in 10 CFR 2.309(c)(1)(i)–(viii).

Dated at Rockville, Maryland this 23rd day of November, 2010.

For the Nuclear Regulatory Commission.

Hossein G. Hamzehee,

Chief, US–APWR Projects Branch, Division of New Reactor Licensing, Office of New Reactors.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

Request for a License To Import Radioactive Waste

Pursuant to 10 CFR 110.70(b) "Public Notice of Receipt of an Application," please take notice that the Nuclear Regulatory Commission (NRC) has received the following request for an

export license. Copies of the request are available electronically through ADAMS and can be accessed through the Public Electronic Reading Room (PERR) link *http://www.nrc.gov/reading-rm.html* at the NRC Homepage.

A request for a hearing or petition for leave to intervene may be filed within thirty days after publication of this notice in the **Federal Register**. Any request for hearing or petition for leave to intervene shall be served by the requestor or petitioner upon the applicant, the office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555; the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555; and the Executive Secretary, U.S. Department of State, Washington, DC 20520.

A request for a hearing or petition for leave to intervene may be filed with the NRC electronically in accordance with NRC's E-Filing rule promulgated in August 2007, 72 FR 49139 (Aug. 28, 2007). Information about filing electronically is available on the NRC's public Web site at *http://www.rnc.gov/site-help/e-submittals.html.* To ensure timely electronic filing, at least 5 (five) days prior to the filing deadline, the petitioner/requestor should contact the Office of the Secretary by e-mail at *HEARINGDOCKET@NRC.GOV*, or by calling (301) 415–1677, to request a digital ID certificate and allow for the creation of an electronic docket.

In addition to a request for hearing or petition for leave to intervene, written comments, in accordance with 10 CFR 110.81, should be submitted within thirty (30) days after publication of this notice in the **Federal Register** to Office of the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention Rulemaking and Adjudications.

The information concerning this export license application follows.

NRC IMPORT LICENSE APPLICATION

Description of material

BILLING CODE 7590–01–P

POSTAL REGULATORY COMMISSION

[Docket No. A2011–4; Order No. 597]

Post Office Closing

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: This document informs the public that an appeal of the closing of the Eugene Post Office's University Station in Eugene, Oregon, has been filed. It identifies preliminary steps and provides a procedural schedule. Publication of this document will allow the Postal Service, petitioner, and others to take appropriate action.

DATES: *Answer to application for suspension due (from Postal Service):* December 2, 2010; *administrative record due (from Postal Service):* December 7, 2010; *deadline for petitions to intervene:* December 20, 2010. *See* the Procedural Schedule in the **SUPPLEMENTARY INFORMATION** section for other dates of interest.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: Stephen L. Sharfman, General Counsel, at *stephen.sharfman@prc.gov* or 202–789–6820.

SUPPLEMENTARY INFORMATION: Notice is hereby given that pursuant to 39 U.S.C. 404(d), the Commission has received a petition for review of the closing of the Eugene Post Office's University Station located in Eugene, Oregon. The petition, which was filed by Steven Shapiro (Petitioner), is postmarked November 16, 2010, and was posted on the Commission's Web site November 22, 2010. The Commission hereby institutes a proceeding under 39 U.S.C. 404(d)(5) and designates the case as Docket No. A2011–4 to consider the Petitioner's appeal. If the Petitioner would like to further explain his position with supplemental information or facts, he may either file a Participant Statement on PRC Form 61 or file a brief with the Commission by no later than December 27, 2010.

Categories of issues apparently raised. The categories of issues raised include: Failure to follow the post office closure requirements and failure to consider the effect on the community. *See* 39 U.S.C. 39 U.S.C. 404(d)(1) and 404(d)(2)(A)(i).

After the Postal Service files the administrative record and the Commission reviews it, the Commission may find that there are more legal issues than the two set forth above, or that the Postal Service's determination disposes of one or more of those issues. The deadline for the Postal Service to file the administrative record with the Commission is December 7, 2010. *See* 39 CFR 3001.113.

Application for suspension. Petitioner also requests a suspension of the closing/consolidation process pending the outcome of the appeal. The post office is scheduled to close December 31, 2010. The answer to the application is due December 2, 2001. *See* 39 CFR 3001.114(b).

Availability; Web site posting. The Commission has posted the appeal and supporting material on its Web site at *http://www.prc.gov.* Additional filings in this case and participants' submissions also will be posted on the Web site, if provided in electronic format or amenable to conversion, and not subject to a valid protective order.

Information on how to use the Commission's Web site is available online or by contacting the Commission's webmaster via telephone at 202–789–6873 or via electronic mail at *prc-webmaster@prc.gov.*

The appeal and all related documents are also available for public inspection in the Commission's docket section. Docket section hours are 8 a.m. to 4:30 p.m., Monday through Friday, except on Federal government holidays. Docket section personnel may be contacted via electronic mail at *prc-dockets@prc.gov* or via telephone at 202–789–6846.

Filing of documents. All filings of documents in this case shall be made using the Internet (Filing Online) pursuant to Commission rules 9(a) and 10(a) at the Commission's Web site, *http://www.prc.gov,* unless a waiver is obtained. *See* 39 CFR 3001.9(a) and 10(a). Instructions for obtaining an account to file documents online may be found on the Commission's Web site, *http://www.prc.gov,* or by contacting the Commission's docket section at *prc-dockets@prc.gov* or via telephone at 202–789–6846.

Intervention. Those, other than the Petitioner and respondent, wishing to be heard in this matter are directed to file a notice of intervention. *See* 39 CFR 3001.111. Notices of intervention in this case are to be filed on or before December 20, 2010. A notice of intervention shall be filed using the Internet (Filing Online) at the Commission's Web site, *http://www.prc.gov,* unless a waiver is obtained for hardcopy filing. *See* 39 CFR 3001.9(a) and 10(a).

Further procedures. By statute, the Commission is required to issue its decision within 120 days from the date it receives the appeal. *See* 39 U.S.C. 404(d)(5). A procedural schedule has been developed to accommodate this statutory deadline. In the interest of expedition, in light of the 120-day decision schedule, the Commission may request the Postal Service or other participants to submit information or memoranda of law on any appropriate issue. As required by the Commission rules, if any motions are filed, responses are due 7 days after any such motion is filed. *See* 39 CFR 3001.21.

It is ordered:

1. The Postal Service shall file the administrative record in this appeal, or otherwise file a responsive pleading to the appeal, by December 7, 2010.

2. The answer to the application for suspension is due December 2, 2010.

3. The procedural schedule listed below is hereby adopted.

4. Pursuant to 39 U.S.C. 505, Cassandra L. Hicks is designated officer of the Commission (Public Representative) to represent the interests of the general public.

5. The Secretary shall arrange for publication of this notice and order and procedural schedule in the **Federal Register.**

PROCEDURAL SCHEDULE

November 22, 2010	Filing of Appeal.
December 2, 2010	Deadline for the Postal Service to answer application for suspension of the determination (*see* 39 CFR 3001.1114(a) and (b)).
December 7, 2010	Deadline for Postal Service to file administrative record in this appeal or responsive pleading.
December 20, 2010	Deadline for notices to intervene (*see* 39 CFR 3001.111(b)).
December 27, 2010	Deadline for Petitioner's Form 61 or initial brief in support of petition (*see* 39 CFR 3001.115(a) and (b)).
January 18, 2011	Deadline for answering brief in support of Postal Service (*see* 39 CFR 3001.115(c)).
February 2, 2011	Deadline for reply briefs in response to answering briefs (*see* 39 CFR 3001.115(d)).
February 9, 2011	Deadline for motions by any party requesting oral argument; the Commission will schedule oral argument only when it is a necessary addition to the written filings (*see* 39 CFR 3001.116).
March 16, 2011	Expiration of the Commission's 120-day decisional schedule (*see* 39 U.S.C. 404(d)(5)).

By the Commission.

Shoshana M. Grove,

Secretary.

BILLING CODE 7710–FW–P

POSTAL REGULATORY COMMISSION

[Docket No. A2011–3; Order No. 596]

Post Office Closing

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: This document informs the public that an appeal of the closing of the Graves Mill, Virginia post office has been filed. It identifies preliminary steps and provides a procedural schedule. Publication of this document will allow the Postal Service, petitioner, and others to take appropriate action.

DATES: *Administrative record due (from Postal Service):* December 7, 2010; *deadline for petitions to intervene:* December 20, 2010. *See* the Procedural Schedule in the **SUPPLEMENTARY INFORMATION** section for other dates of interest.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: Stephen L. Sharfman, General Counsel, at 202–789–6820 or *stephen.sharfman@prc.gov.*

SUPPLEMENTARY INFORMATION: Notice is hereby given that pursuant to 39 U.S.C. 404(d), the Commission has received a petition for review of the closing of the Graves Mill Post Office located in Graves Mill, Virginia. The petition, which was filed by Douglas M. Graves (Petitioner), is postmarked November 15, 2010, and was posted on the Commission's Web site November 22, 2010. The Commission hereby institutes a proceeding under 39 U.S.C. 404(d)(5) and designates the case as Docket No. A2011–3 to consider the Petitioner's appeal. If the Petitioner would like to further explain his position with supplemental information or facts, he may either file a Participant Statement on PRC Form 61 or file a brief with the Commission by no later than December 27, 2010.

Categories of issues apparently raised. The categories of issues raised include: Failure to follow the post office closure requirements and failure to consider the effect on the community. *See* 39 U.S.C. 39 U.S.C. 404(d)(1) and 404(d)(2)(A)(i).

After the Postal Service files the administrative record and the Commission reviews it, the Commission may find that there are more legal issues than the two set forth above, or that the Postal Service's determination disposes

of one or more of those issues. The deadline for the Postal Service to file the administrative record with the Commission is December 7, 2010. *See* 39 CFR 3001.113.

Availability; Web site posting. The Commission has posted the appeal and supporting material on its Web site at *http://www.prc.gov.* Additional filings in this case and participants' submissions also will be posted on the Web site, if provided in electronic format or amenable to conversion, and not subject to a valid protective order. Information on how to use the Commission's Web site is available online or by contacting the Commission's webmaster via telephone at 202–789–6873 or via electronic mail at *prc-webmaster@prc.gov.*

The appeal and all related documents are also available for public inspection in the Commission's docket section. Docket section hours are 8 a.m. to 4:30 p.m., Monday through Friday, except on Federal government holidays. Docket section personnel may be contacted via electronic mail at *prc-dockets@prc.gov* or via telephone at 202–789–6846.

Filing of documents. All filings of documents in this case shall be made using the Internet (Filing Online) pursuant to Commission rules 9(a) and 10(a) at the Commission's Web site, *http://www.prc.gov,* unless a waiver is obtained. *See* 39 CFR 3001.9(a) and 10(a). Instructions for obtaining an account to file documents online may be found on the Commission's Web site, *http://www.prc.gov,* or by contacting the Commission's docket section at *prc-dockets@prc.gov* or via telephone at 202–789–6846.

Intervention. Those, other than the Petitioner and respondent, wishing to be heard in this matter are directed to file a notice of intervention. *See* 39 CFR 3001.111. Notices of intervention in this case are to be filed on or before December 20, 2010. A notice of intervention shall be filed using the Internet (Filing Online) at the Commission's Web site, *http://www.prc.gov,* unless a waiver is obtained for hardcopy filing. *See* 39 CFR 3001.9(a) and 10(a).

Further procedures. By statute, the Commission is required to issue its decision within 120 days from the date it receives the appeal. *See* 39 U.S.C. 404(d)(5). A procedural schedule has been developed to accommodate this statutory deadline. In the interest of expedition, in light of the 120-day decision schedule, the Commission may request the Postal Service or other participants to submit information or memoranda of law on any appropriate issue. As required by the Commission rules, if any motions are filed, responses are due 7 days after any such motion is filed. *See* 39 CFR 3001.21.

It is ordered:

1. The Postal Service shall file the administrative record in this appeal, or otherwise file a responsive pleading to the appeal, by December 7, 2010.

2. The procedural schedule listed below is hereby adopted.

3. Pursuant to 39 U.S.C. 505, Katrina Martinez is designated officer of the Commission (Public Representative) to represent the interests of the general public.

4. The Secretary shall arrange for publication of this Notice and Order and Procedural Schedule in the **Federal Register.**

PROCEDURAL SCHEDULE

November 22, 2010	Filing of Appeal.
December 7, 2010	Deadline for Postal Service to file administrative record in this appeal or responsive pleading.
December 20, 2010	Deadline for petitions to intervene (*see* 39 CFR 3001.111(b)).
December 27, 2010	Deadline for petitions to intervene (*see* 39 CFR 3001.111(b)).
December 13, 2010	Deadline for Petitioner's Form 61 or initial brief in support of petition (see 39 CFR 3001.115(a), (b) and (e)).
January 18, 2011	Deadline for answering brief in support of Postal Service (*see* 39 CFR 3001.115(c)).
February 2, 2011	Deadline for reply briefs in response to answering briefs (*see* 39 CFR 3001.115(d)).
February 9, 2011	Deadline for motions requesting oral argument; the Commission will schedule oral argument only when it is a necessary addition to the written filings (*see* 39 CFR 3001.116).
March 15, 2011	Expiration of the Commission 120-day decisional schedule (*see* 39 U.S.C. 404(d)(5)).

By the Commission.

Shoshana M. Grove,

Secretary.

BILLING CODE 7710–FW–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–63361; File No. SR–FICC–2010–09]

Self-Regulatory Organizations; Fixed Income Clearing Corporation; Notice of Filing of a Proposed Rule Change To Introduce Cross-Margining of Certain Positions Cleared at the Fixed Income Clearing Corporation and Certain Positions Cleared at New York Portfolio Clearing, LLC

November 23, 2010.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] and Rule 19b–4 thereunder[2] notice is hereby given that on November 12, 2010, the Fixed Income Clearing Corporation ("FICC") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared primarily by FICC. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change would allow FICC to offer cross-margining of certain positions cleared at its Government Securities Division ("GSD") and certain positions cleared at New York Portfolio Clearing, LLC ("NYPC"). The proposed rule change also would make certain other related changes to GSD's rules.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FICC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. FICC has prepared summaries, set forth in sections (A), (B) and (C) below, of the most significant aspects of these statements.[3]

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The purpose of the proposed rule change is to: (i) Introduce cross-margining of certain positions cleared at the GSD and of certain positions cleared at NYPC and (ii) make certain other changes to the GSD Rules as set forth below.[4]

NYPC has applied for registration with the Commodity Futures Trading Commission ("CFTC") as a derivatives clearing organization ("DCO") pursuant to Section 5b of the Commodity Exchange Act and Part 39 of the Regulations of the CFTC.[5] FICC would not implement the proposed rule change until NYPC obtains such registration. Upon registration as a DCO, NYPC proposes initially to clear U.S. dollar-denominated interest rate futures contracts.

The proposed rule change would allow certain GSD Members to combine their positions at the GSD with their positions or those of certain permitted affiliates cleared at NYPC, within a single margin portfolio ("Margin Portfolio").

1. Cross-Margining With NYPC

Background

Currently, the GSD maintains a clearing fund ("Clearing Fund") comprised of deposits of cash and eligible securities from its members (each a "GSD Member") to provide liquidity and satisfy any losses that might otherwise be incurred as a result of a GSD Member's default and the subsequent close out of its positions. The amount of a GSD Member's required deposit to the Clearing Fund ("Required Fund Deposit") is calculated with reference to several factors relating to an analysis of the possible losses associated with the GSD Member's positions. Currently, this analysis is performed with respect to the GSD Member's positions in a particular account.

Proposed Cross-Margining With NYPC

The cross-margining arrangement with NYPC contemplated herein ("NYPC Arrangement") is to be distinguished from the cross-margining arrangement currently conducted between the Chicago Mercantile Exchange ("CME") and FICC ("CME Arrangement"). In the CME Arrangement, each of FICC and CME holds and manages its own positions and collateral, and independently determines the amount of margin that it will make available for cross-margining, referred to as the "residual margin amount," that remains after each of FICC and CME conducts its own internal offsets. FICC then computes the amount by which the cross-margining participant's margin requirement can be reduced at each clearing organization ("cross-margining reduction") by comparing the participant's positions and the related margin requirements at FICC as against those at CME. FICC offsets each cross-margining participant's residual margin amount based on related positions at FICC against the offsetting residual margin amounts of the participant or its affiliate at CME. FICC and CME may then reduce the amount of collateral that they collect to reflect the offsets between the cross-margining participant's positions at FICC and its or its affiliate's positions at CME.

Under the proposed NYPC Arrangement, a member of FICC that is also an NYPC clearing member ("Joint Clearing Member") could, at the discretion of NYPC and FICC, and in accordance with the provisions of the GSD and NYPC Rules, elect to have its margin requirement with respect to eligible positions in its proprietary account at NYPC and its margin requirement with respect to eligible positions at FICC calculated by taking into consideration the net risk of such eligible positions at both clearing organizations. In addition, an affiliate of a member of FICC that is a clearing member of NYPC ("Permitted Margin Affiliate") could agree to have its positions and margin at NYPC margined together with eligible positions of the FICC member.

The NYPC Arrangement would allow (i) Joint Clearing Members and (ii) members of FICC and their Permitted Margin Affiliates to have their margin requirements for FICC and NYPC positions determined on a combined basis, with FICC and NYPC each having a security interest in such members' margin deposits and other collateral to secure such members' obligations to FICC and NYPC.

The following types of FICC members would not be eligible to participate in the NYPC Arrangement in order to allow FICC to maintain segregation of certain business or member types that are treated differently for purposes of loss allocation: (i) GSD Sponsored Members, (ii) Inter-Dealer Broker Netting Members and (iii) Dealer Netting Members with respect to their segregated brokered accounts. In addition, in order for a Banking Netting Member to combine its accounts into a Margin Portfolio with any other accounts, it would have to demonstrate to the satisfaction of FICC and NYPC that doing so would comply with the regulatory requirements applicable to the Bank Netting Member.

In order to distinguish between the CME Arrangement and the NYPC Arrangement, FICC is proposing to amend the definition of "Cross-Margining Agreement" in the GSD Rules, which would be defined as an agreement entered into between FICC and one or more FCOs (as defined in GSD Rule 1) pursuant to which a Cross-Margining Participant, at the discretion of FICC and in accordance with the provisions of the GSD Rules, could elect to have its Required Fund Deposit with respect to Eligible Positions at FICC, and its or its Permitted Margin Affiliate's, if applicable, margin requirements with respect to Eligible Positions at such FCO(s), calculated either (i) by taking into consideration the net risk of such Eligible Positions at each of the clearing organizations or (ii) as if such positions were in a single portfolio. Therefore, the CME Arrangement would fall into clause (i) of the definition whereas the NYPC Arrangement would fall into clause (ii). Conforming changes would be made to GSD Rule 1, Definitions, relating to cross-margining. GSD Rule 43, Cross-Margining Arrangements, also would be amended to add provisions regarding single-portfolio margining (*i.e.,* the proposed NYPC Arrangement). To implement this proposal, FICC and NYPC would enter into a cross-margining agreement ("NYPC Agreement"), which would be appended to the GSD Rules and made a part thereof.

Pursuant to the NYPC Agreement, and consistent with previous approvals of cross-margining arrangements involving

[3] The Commission has modified the text of the summaries prepared by FICC.

[4] The specific language of the proposed provision can be found at *http://www.dtcc.com/downloads/legal/rule_filings/2010/ficc/2010-09.pdf.*

[5] NYPC's DCO application may be viewed on the CFTC's Web site: *http://www.cftc.gov/IndustryOversight/IndustryFilings/index.htm.*

DCOs, cross-margining with certain NYPC positions would be limited to positions carried in proprietary accounts of clearing members of NYPC. Customers of NYPC clearing members would not be permitted to participate in the cross-margining arrangement. Participation in the NYPC Arrangement would be voluntary. Participants and their Permitted Margin Affiliates would be required to execute the requisite cross-margining participant agreements (the Joint Member or Affiliated Member version, as applicable), which are exhibits to the NYPC Agreement.

FICC would be responsible for performing the margin calculations in its capacity as the Administrator under the terms of the NYPC Agreement. Specifically, FICC would determine the combined FICC Clearing Fund and NYPC Original Margin [6] requirement for each participant. FICC would calculate those requirements using a Value-at-Risk ("VaR") methodology, with a 99 percent confidence level and a 3-day liquidation period for cash positions and a 1-day liquidation period for futures positions. In addition, each cross-margining participant's one-pot margin requirement would be subject to a daily back test, and a "coverage component" would be applied and charged to the participant in the event that the back test reflects insufficient coverage. The one-pot margin requirement for each participant would then be allocated between FICC and NYPC in proportion to the clearing organizations' respective "stand-alone" margin requirements—in other words, an amount reflecting the ratio of what each clearing organization would have required from that participant if it was not participating in the cross-margining program ("Constituent Margin Ratio"). The NYPC Agreement provides that either FICC or NYPC could, at any time, require additional margin to be deposited by a participant above what is calculated under the NYPC Agreement based upon the financial condition of the participant, unusual market conditions or other special circumstances. The standards that FICC proposes to use for these purposes are the standards currently contained in the GSD Rules, so that notwithstanding the calculation of a member's Clearing Fund requirement pursuant to the NYPC Agreement, FICC would still retain the rights contained within the GSD Rules to charge additional Clearing Fund under the circumstances specified in the GSD Rules. For example, the GSD Rules currently contain a provision providing that if a Dealer Netting Member falls below its minimum financial requirement it shall be required to post additional Clearing Fund equal to the greater of (i) $1 million or (ii) 25 percent of its Required Fund Deposit.

FICC would utilize the same VaR engine for futures and cash positions. Under this method, the prior 250 days of historical information for futures positions and the prior 252 days of historical information for cash positions, including prices, spreads and market variables such as Treasury zero-coupon yields and London Interbank Offered Rate curves, are used to simulate the market environments in the forthcoming 1 day for futures positions and the forthcoming 3 days for cash positions. Projected portfolio profits and losses are calculated assuming these simulated environments will actually be realized. These simulations would be used to calculate VaR. Historical simulation is a continuation of the FICC margin methodology.

With respect to the confidence level, FICC currently utilizes extreme value theory to determine the 99th percentile of loss distribution. Upon implementation of the FICC–NYPC one-pot margining, FICC would utilize a front-weighting mechanism to determine the 99th percentile of loss distribution. This front-weighting mechanism would place more emphasis on more recent observations. Additionally, FICC's VaR engine would be enhanced to accommodate more securities; this means that certain CUSIPs which are now considered to be "non-priceable" (because, for example, of a lack of historical information regarding the security) and subject to a "haircut" requirement (*i.e.,* fixed percentage charge) where offsets are not permitted, would be treated as "priceable" and therefore included in the core VaR calculation.

Based on preliminary analyses, FICC expects that the FICC VaR component of the Clearing Fund requirement may be reduced by as much as approximately 20 percent for common FICC–NYPC members as a result of the NYPC Arrangement. FICC has performed backtesting analysis to verify that there will be sufficient coverage after the FICC–NYPC cross-margining reductions are applied. Moreover, an independent firm has performed backtesting analysis of the FICC–NYPC one-pot methodology, as well as FICC's and NYPC's stand-alone methodologies. Both such analyses demonstrated that the VaR methodologies provide coverage at the 99th confidence level.

In the event of the insolvency or default of a member that participates in the NYPC Arrangement, the positions in such participant's one-pot portfolio including, where applicable, the positions of its Permitted Margin Affiliate at NYPC, would be liquidated by FICC and NYPC as a single portfolio and the liquidation proceeds would be applied to the defaulting participant's obligations to FICC and NYPC in accordance with the provisions of the NYPC Agreement.

The NYPC Agreement provides for the sharing of losses by FICC and NYPC in the event that the one-pot portfolio margin deposits of a defaulting participant would not be sufficient to cover the losses resulting from the liquidation of that participant's trades and positions:

- If either clearing organization had a net loss ("worse-off party"), and the other had a net gain ("better-off party") that is equal to or exceeds the worse-off party's net loss, then the better-off party pays the worse-off party the amount of the latter's net loss. In this scenario, one clearing organization's gain would extinguish the entire loss of the other clearing organization.
- If either clearing organization had a net loss ("worse-off party") and the other clearing organization had a net gain ("better-off party") that is less than or equal to the worse-off party's net loss, then the better-off party would pay the worse-off party an amount equal to the net gain. Thereafter, if such payment did not extinguish the net loss of the worse-off party, the better-off party would pay the worse-off party an amount equal to the lesser of: (i) The amount necessary to ensure that the net loss of each clearing organization is in proportion to the Constituent Margin Ratio or (ii) the better-off party's "Maximum Transfer Payment" less the better-off party's net gain. The "Maximum Transfer Payment" would be defined with respect to each clearing organization to mean an amount equal to the product of (i) the sum of the margin reductions of the clearing organizations and (ii) the other clearing organization's Constituent Margin Ratio—in other words, the amount by which the other clearing organization reduced its margin requirements in reliance on the cross-margining arrangement. In this scenario, one clearing organization's gain does not completely extinguish the entire loss of the other clearing organization, and the better-off clearing organization would be required to make an additional payment to the worse-off clearing organization. This potential additional payment would be capped as described in this paragraph.

[6] Original Margin is the NYPC equivalent of the Clearing Fund.

• If either clearing organization had a net loss, and the other had the same net loss, a smaller net loss, or no net loss, then:

○ In the event that the net losses of the clearing organizations were in proportion to the Constituent Margin Ratio, no payment would be made.

○ In the event that the net losses of the clearing organizations were not in proportion to the Constituent Margin Ratio, then the clearing organization that had a net loss which was less than its proportionate share of the total net losses incurred by the clearing organizations ("better-off party") would pay the other clearing organization ("worse-off party") an amount equal to the lesser of: (i) The better-off party's Maximum Transfer Payment or (ii) the amount necessary to ensure that the clearing organizations' respective net losses were allocated between them in proportion to the Constituent Margin Ratio.

• If FICC had a net gain after making a payment as described above, FICC would pay to NYPC the amount of any deficiency in the defaulting member's customer segregated funds accounts or, if applicable, such defaulting member's Permitted Margin Affiliate held at NYPC up to the amount of FICC's net gain.

• If FICC received a payment under the Netting Contract and Limited Cross-Guaranty ("Cross-Guaranty Agreement") to which it is a party (*i.e.,* because FICC had a net loss), and NYPC had a net loss, FICC would share the cross-guaranty payment with NYPC pro rata, where such pro rata share is determined by comparing the ratio of NYPC's net loss to the sum of FICC's and NYPC's net losses.[7] This allocation is appropriate because the "single pot" combines FICC and NYPC proprietary positions into a unified portfolio that would be margined and liquidated as a single unit. This requirement would not apply after NYPC becomes a party to the Cross-Guaranty Agreement. The GSD Rules would further provide that in the event of a close out of a cross-margining participant under the NYPC Agreement, FICC would offset its liquidation results first with NYPC because the liquidation will essentially be of a single portfolio and then present its results for purposes of the Cross-Guaranty Agreement.

The GSD Rules would further provide that FICC would offset its liquidation results in the event of a close out of a cross-margining participant in the NYPC Agreement first with NYPC because the liquidation would essentially be of a single Margin Portfolio and then would present its results for purposes of the multilateral Cross-Guaranty Agreement.

2. Other GSD Proposed Rule Changes

The proposed rule filing would allow FICC to permit margining of positions held in accounts of an affiliate of a member within GSD, akin to the inter-affiliate margining in the CME Arrangement and the proposed NYPC Arrangement. Thus, as in those arrangements, if a GSD member defaults, its GSD Clearing Fund deposits, cash settlement amounts and other available collateral would be available to FICC to cover the member's default, as would the GSD Clearing Fund deposits and available collateral of any Permitted Margin Affiliate with which it cross-margins.

Loss Allocation

Under the current loss allocation methodology in GSD Rule 4, Clearing Fund and Loss Allocation, GSD allocates losses first to the most recent counterparties of a defaulting member. The proposed changes to GSD Rule 4 would delete this step in the loss allocation methodology in order to achieve a more equitable result. Instead, any loss allocation would first be made against the retained earnings of FICC attributable to GSD in an amount up to 25 percent of FICC's retained earnings or such higher amount as may be approved by the Board of Directors of FICC.

If a loss still remained, GSD would divide the loss between the FICC Tier 1 Netting Members and the FICC Tier 2 Netting Members. "Tier One Netting Member" and "Tier Two Netting Member" have been introduced in the GSD Rules to reflect two different categories which have been designated as such by FICC for loss allocation purposes. Currently, only investment companies registered under the Investment Company Act of 1940, as amended, would qualify as Tier 2 Netting Members. Tier 2 Netting Members would only be subject to loss to the extent they traded with the defaulting members, due to regulatory requirements applicable to them.

Tier 1 Netting Members would be allocated the loss applicable to them first by assessing the Clearing Fund deposit of each such member in the amount of up to $50,000, equally. If a loss remains, Tier 1 Netting Members would be assessed ratably in accordance with the respective amounts of their Required Fund Deposits based on the average daily amount of the member's Required Fund Deposit over the prior twelve months. Consistent with the current Rules, GSD members that are acting as Inter-Dealer Brokers would be limited to a loss allocation of $5 million in respect of their inter-dealer broker activity.

Margin Calculation—Intraday Margin Calls

In order to facilitate the NYPC Arrangement, GSD is proposing to adopt the futures clearing house convention of calculating Clearing Fund requirements twice per day. GSD would retain its regular calculation and call as set out in the GSD Rules. An additional daily intra-day calculation and call ("Intraday Supplemental Clearing Fund Deposit") would be made subject to a threshold that would be identified in FICC's risk management procedures. In addition, the GSD would process a mark-to-market pass-through twice per day, instead of the current practice of once daily. The second collection and pass-through of mark-to-market amounts would include a limited set of components to be defined in FICC's risk management procedures. All mark-to-market debits would be collected in full. FICC would pay out mark-to-market credits only after any intra-day Clearing Fund deficit is met.

Since GSD would be recalculating and margining a GSD Member's exposure intra-day, the margin calculation methodology set forth in GSD Rule 4, Clearing Fund and Loss Allocation, would be revised to eliminate the Margin Requirement Differential component of the FICC Clearing Fund calculation. In addition, GSD Rule 4 would be revised to provide that in the case of a Margin Portfolio that contains accounts of a Permitted Margin Affiliate, FICC would apply the highest VaR confidence level applicable to the GSD Member or the Permitted Margin Affiliate. Application of a higher VaR confidence levels would result in a higher margin rate. Consistent with current GSD Rules, a minimum Required Fund Deposit of $5 million would apply to a member that maintains broker accounts.

Consolidated Funds-Only Settlement

The funds-only settlement process at GSD currently requires a member to appoint a settling bank that will settle the member's net debit or net credit amount due to or from the division by way of the National Settlement Service of the Board of Governors of the Federal Reserve System ("NSS"). Any funds-only settling bank that would settle for a member that is also an NYPC member or that would settle for a member and a Permitted Margin Affiliate that is an

[7] The other parties to the Cross-Guaranty Agreement are The Depository Trust Company, National Securities Clearing Corporation and The Options Clearing Corporation.

NYPC member would have its net-net credit or debit balances at each clearing corporation, other than balances with respect to futures positions of a "customer" as such term is defined in CFTC Regulation 1.3(k), aggregated and netted for operational convenience and would pay or be paid such netted amount. The proposed rule change makes clear that, notwithstanding the consolidated settlement, the member would remain obligated to GSD for the full amount of its funds-only settlement amount.

Submission of Locked-in Trades From NYPC

The current GSD Rules allow for submission of "locked-in trades" (*i.e.,* trades that are deemed compared when the data on the trade is received from a single source) submitted by a locked-in trade source on behalf of a GSD Member. Currently, designated locked-in trade sources are Federal Reserve Banks on behalf of the Treasury Department, Freddie Mac and GCF-Authorized Inter-Dealer Brokers for GCF Repo transactions. Under the proposed rule change, GSD Rule 6C, Locked-In Comparison, would be amended to include NYPC as an additional locked-in trade source. This would be necessary because there would be futures transactions cleared by NYPC that would proceed to physical delivery. NYPC would submit the trade data as a locked-in trade source for processing through FICC, identifying the GSD Member that had authorized FICC to accept the locked-in trade from NYPC. Once these transactions are submitted to FICC, they would no longer be futures but rather would be in the form of buy-sells eligible for processing by GSD. As would be the case with other locked-in trade submissions accepted by FICC, the GSD Member designated in the trade information would have executed FICC documentation evidencing to FICC its authorization of NYPC.

Deletion of Category 1/Category 2 Distinction

The proposed rule change would delete the legacy characterization of certain types of members as either "Category 1" or "Category 2", a distinction that currently applies to Dealer Netting Members, Futures Commission Merchant Netting Members and Inter-Dealer Broker Netting Members at GSD. Historically, the two categories were used to margin lower capitalized members (*i.e.,* Category 2) at a higher rate. With the adoption of the VaR margin methodology, this distinction is no longer necessary. Rather than margin Netting Members at higher rates solely due to a single static capitalization threshold, FICC is able, by use of the VaR margin methodology, to margin Netting Members at a higher rate by applying a higher confidence level against any Netting Member which, regardless of size, FICC believes may pose a higher risk.

With the deletion of the Category 1/Category 2 distinction, Section 1 of GSD Rule 13, Funds-Only Settlement, is proposed to be changed to provide that all Netting Members could receive forward mark adjustment payments, subject to FICC's general discretion to withhold credits that would be otherwise due to a distressed Netting Member.

Amendment of CME Agreement

The proposed NYPC Arrangement would necessitate an amendment to the CME Agreement to clarify that the NYPC Arrangement would take priority over the CME Arrangement when determining residual FICC positions that would be available for cross-margining with the CME. In addition, when calculating and presenting liquidation results under the CME Agreement, the amendment would provide that FICC's liquidation results would include FICC's liquidation results in combination with NYPC's liquidation results because the NYPC Agreement would provide for a right of first offset between FICC and NYPC. The CME Agreement showing the proposed changes was filed as an attachment to the proposed rule change as part of Exhibit 5.

3. Summary of Other Proposed Changes to Rule Text

In GSD Rule 1, Definitions, the following definitions are proposed to be added, revised or deleted:

The terms "Broker Account" and "Dealer Account" would be added to the text of the GSD Rules. A "Broker Account" is an account that is maintained by an inter-dealer broker netting member, or a segregated broker account of a netting member that is a not an inter-dealer broker netting member. An account that is not a Broker Account is referred to as a Dealer Account.

"Coverage Charge" would be revised to refer to the additional charge with respect to the member's Required Fund Deposit (rather that its VaR Charge) which brings the member's coverage to a targeted confidence level.

"Current Net Settlement Positions" would be corrected to clarify its current intent, that it is calculated with respect to a certain Business Day and not necessarily on that day, since it may be calculated after market close on the day prior to its application (*i.e.,* before or after midnight between the close of business one day and the open of business on the next day).

"Excess Capital Differential" would be corrected to refer to the amount by which a member's VaR Charge exceeds its Excess Capital, instead of by reference to the amount by which its required Clearing Fund deposit exceeds its Excess Capital.

"Excess Capital Premium Calculation Amount" would be deleted because, with the introduction of VaR methodology, the calculation is no longer applicable. The terms "Excess Capital Differential" and "Excess Capital Ratio" would be amended to delete archaic references to "Excess Capital Premium Calculation Amount" and to refer instead to the comparison of a member's capital calculation to its VaR Charge. In addition, the text of Section 14 of GSD Rule 3 would be amended to provide that the Excess Capital Premium charge applies to any type of entity that is a GSD Netting Member rather than limiting its applicability to only the specified types formerly identified in the text.

"Excess Capital Ratio" would be amended to mean the quotient resulting from dividing the amount of a member's VaR Charge by its Excess Net Capital.

"GSD Margin Group" would be added to refer to the GSD Accounts within a Margin Portfolio.

"Margin Portfolio" would be added to refer to the positions designated by the member as grouped for cross-margining, subject to the rules set forth in GSD Rule 4. Dealer Accounts and Broker Accounts could not be combined in a common Margin Portfolio. A Sponsoring Member Omnibus Account could not be combined with any other Accounts.

"Unadjusted GSD Margin Portfolio Amount" would be added to define the amount calculated by GSD with regard to a Margin Portfolio, before application of premiums, maximums or minimums. It includes the VaR Charge and the Coverage Charge for GSD. In the case of a cross-margining participant of GSD, the Unadjusted GSD Margin Portfolio Amount also would include the cross-margining reduction, if any.

The terms "Category 2 Gross Margin Amount", "Margin Adjustment Amount", "Repo Volatility Factor" and "Revised Gross Margin Amount" would be deleted from GSD Rule 1 since they are no longer used elsewhere in the GSD Rules. The Schedule of Repo Volatility Factors would be deleted because it is no longer applicable.

In Section 2 of GSD Rule 3, Ongoing Membership Requirements, the

requirement that GCF counterparties submit information relating to the composition of their NFE-related accounts, would be amended to require the submission of such information periodically, rather than on a quarterly basis. GSD currently requires this information every other month and by this change, FICC could institute periodic reporting on a schedule that is appropriate at such time, in response to current conditions.

In Section 9 of GSD Rule 4, Clearing Fund and Loss Allocation, concerning the return of excess deposits and payments, FICC's discretion to withhold the return of excess Clearing Fund to a member that has an outstanding payment obligation to FICC would be changed to refer to FICC's determination that the member's anticipated transactions or obligations in the near future (rather than specifying over the next 90 calendar days, as in the current text) may reasonably be expected to be materially different than those of the recent past rather than the 90 prior calendar days, as in the current text.

In addition, technical and clarifying changes are proposed to be made to the rules and cross-references to rule sections contained throughout. The rules have been reviewed by FICC and proposed to be corrected as needed to reflect the correct rule section references as originally intended.

The proposed rule change to permit cross-margining of positions held at FICC and NYPC may increase the available offsets among positions held at FICC and NYPC, thereby allowing a more efficient use of participant collateral and promoting efficiencies in the fixed income securities marketplace. The proposed rule change is therefore consistent with the Securities Exchange Act of 1934, as amended, and the rules and regulations promulgated thereunder because it supports the prompt and accurate clearance and settlement of securities transactions.

B. Self-Regulatory Organization's Statement on Burden on Competition

FICC does not believe that the proposed rule change would have any negative impact, or impose any burden, on competition. To the contrary, FICC believes NYPC would be a powerful catalyst for competition by offering all FICC members as well as other futures exchanges and DCOs an equal opportunity to benefit from the innovative efficiencies of "one-pot" portfolio margining. FICC states that, because of these unique and groundbreaking open access policies, NYPC would set a new industry standard as the most fair, open and accessible DCO in the market.

The NYPC Arrangement has been structured in a way that access to, and the benefits of, the "single pot" are provided to other futures exchanges and DCOs on fair and reasonable terms as described below. The proposed single pot is required to be accessed by other futures exchanges and DCOs via NYPC.[8] As described below, this is done to ensure the uniformity and consistency of risk methodologies and risk management, to simplify and standardize operational requirements for new participants and to maximize the effectiveness of the one-pot arrangement.

The proposed one-pot cross-margining method would allow members to post margin based on the net risk of their aggregate positions across asset classes, thereby releasing excess capital into the economy for more efficient use. By linking positions in fixed income securities held at FICC with interest rate products traded on NYSE Liffe U.S. and other designated contract markets ("DCMs"), the proposal between FICC and NYPC has the potential to create a substantial pool of highly correlated assets that are capable of being cross-margined. This pool will deepen as more DCOs and DCMs join NYPC, creating the potential for even greater margin and risk offsets.

NYPC will initially clear certain contracts transacted on NYSE Liffe U.S. NYPC will clear for additional DCMs that are interested in clearing through NYPC as soon as it is feasible for NYPC do so. Such additional DCMs will be treated in the same way as NYSE Liffe US, *i.e.,* they must: (i) Be eligible under the rules of NYPC, (ii) contribute to NYPC's guaranty fund, (iii) demonstrate that they have the operational and technical ability to clear through NYPC and (iv) enter into a clearing services agreement with NYPC.

Moreover, NYPC has also committed to admit other DCOs as limited purpose participants as soon as it is feasible, thereby allowing such DCOs to participate in the one-pot margining arrangement with FICC through their limited purpose membership in NYPC.[9] Such DCOs will be required to satisfy pre-defined, objective criteria set forth in NYPC's rules.[10] In particular, such DCOs must: (i) Submit trades subject to the limited purpose participant agreement between NYPC and each DCO that would otherwise be cleared by the DCO to NYPC, with NYPC acting as central counterparty and DCO with respect to such trades,[11] (ii) be eligible under the rules of NYPC and agree to be bound by the NYPC rules,[12] (iii) contribute to NYPC's guaranty fund,[13] (iv) provide clearing services to unaffiliated markets on a "horizontal" basis (*i.e.,* not limit their provision of clearing services on a vertical basis to a single market or limited number of markets) [14] and (v) agree to participate using the uniform risk methodology and risk management policies, systems and procedures that have been adopted by FICC and NYPC for implementation and administration of the NYPC Arrangement.[15] Reasonable clearing fees will be allocated between NYPC and the limited purpose participant DCO as may be agreed by NYPC and the DCO, taking into account factors such as the cost of services (including capital expenditures incurred by NYPC), technology that may be contributed by the limited purpose participant, the volume of transactions, and such other factors as may be relevant.

As a basic structure, FICC and NYPC anticipate that the limited purpose participant agreement will encompass the foregoing requirements for limited purpose membership contained in NYPC's rules. Because each DCO could present different operational issues, terms beyond the basic rules provisions will be discussed on a case-by-case basis and reflected in the respective limited purpose participant agreement accordingly. FICC and NYPC envision that a possible structure for DCO limited purpose participation could be an omnibus account, with the DCO limited

[8] Section 16 of the NYPC Agreement provides that FICC covenants and agrees that, during the term of the NYPC Agreement: (i) NYPC-cleared contracts shall have priority for margin offset purposes over any other cross-margining agreement; (ii) FICC will not enter into any other cross-margining agreement if such agreement would adversely affect the priority of NYPC and FICC under the NYPC Agreement with respect to available assets; and (iii) FICC will not, without the prior written consent of NYPC, amend the CME Agreement, if such further amendment would adversely affect NYPC's right to cross-margin positions in eligible products prior to any cross-margining of CME positions with FICC-cleared contracts or adversely affect the priority of NYPC and FICC under the NYPC Agreement with respect to available assets.

[9] *See* NYPC Agreement, Section 14.

[10] NYPC's rules can be viewed as part of NYPC's DCO registration application on the CFTC's Web site (*http://www.cftc.gov*), as well as on NYPC's Web site (*http://www.nypclear.com*).

[11] *See* NYPC Rule 801(b)(1).

[12] *See* NYPC Rule 801(b)(2).

[13] Pursuant to NYPC Rule 801(b)(3), limited purpose participants will be required to make a contribution to the NYPC guaranty fund in form and substance similar to and in an amount not less than the NYSE guaranty, which will initially consist of a $50,000,000 guaranty secured by $25,000,000 in cash during the first year of NYPC's operations.

[14] *See* NYPC Rule 801(c)(1)(i).

[15] *See* NYPC Rule 801(c)(1)(ii).

purpose participant essentially acting as a processing agent for its clearing members vis-a-vis NYPC with respect to the submission of eligible positions of the DCO's clearing members to NYPC for purposes of inclusion in the one-pot arrangement with FICC. In order for their eligible positions to be included in the single pot, clearing members of the DCO limited purpose participant would need to authorize the DCO to submit their positions to NYPC. Under such a structure, the DCO would be responsible for fulfilling all margin and guaranty fund requirements associated with the activity in the omnibus account.

With respect to both the clearance of trades for unaffiliated DCMs and the admission of DCOs as limited purpose participants, NYPC has committed that it will complete the substantial operational effort of admitting and integrating another DCM or DCO as soon as feasible, but no later than 24 months from the start of operations. FICC states that this provision is necessary to the effective implementation of the one-pot cross-margining methodology and that this narrow window of time is required to allow for refinement and enhancement of certain systems post go-live, to allow time for the possible simultaneous integration with multiple major clearing members so that fair market access is assured, and to allow time for the completion of the material operational challenge of connecting and integrating with the separate technologies of other DCMs and/or DCOs. However, this period does not preclude NYPC from engaging in discussions with other DCMs and DCOs immediately, and NYPC is currently, in fact, having such discussions with interested parties. NYPC anticipates that it will be able to complete the integration of additional DCMs and/or DCOs in advance of that two-year period.

DCMs and DCOs will be required to contribute to the NYPC guaranty fund in the same manner as NYSE Euronext has done. This provision is designed to ensure that the financial resources supporting NYPC remain robust as the risks of new DCMs and/or DCOs are introduced. As NYPC's business grows over time and more participants join NYPC and contribute to the guaranty fund, FICC would expect that the contribution from DCMs (including NYSE Euronext) and DCOs could be reduced across these entities on a pro rata basis as concentration risk is reduced. It should be noted that exchange contribution to clearing organization default resources is standard practice both in the U.S. and in Europe.

FICC further believes that the NYPC Arrangement meets the competition standard of Section 17A of the Exchange Act, which provides that the rules of a clearing agency may not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act. The proposed one-pot method of cross-margining will allow NYPC to compete in the market for clearing U.S. dollar denominated interest rate futures products. NYPC, in turn, will commit to provide fair access to all DCMs and DCOs that are interested in participating as described above. FICC members and other market participants will benefit greatly from the entry of NYPC as a competitor in the U.S. futures market via greater competition, increased capital and operational efficiencies, and enhanced transparency.

FICC's cross-margining arrangement with NYPC will enable NYPC to provide an innovative and highly efficient clearing solution to the U.S. futures market, while, at the same time, providing enhanced cross-margining benefits to FICC members. By their terms, the rules and provisions governing the FICC–NYPC proposal would not affect the ability of another clearing organization to access NYPC, only the means of such access. As stated above, any qualified DCO may access the single pot and NYPC will offer the service on non-discriminatory terms to all qualified participants. FICC states that these unprecedented open access provisions are far superior to the cross-margining arrangements offered by any of NYPC's competitors and that there is no other clearinghouse in the global futures market that is similarly obligated by charter to inter-operate with other DCMs and/or DCOs, including, potentially, direct competitors.

With the recent passage of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act"),[16] which states that "under no circumstances shall a derivatives clearing organization be compelled to accept the counterparty credit risk of another clearing organization",[17] this type of open access clearing for futures becomes even more difficult to achieve unless accomplished through industry-led initiative. NYPC's unprecedented admission policy sets such a new industry standard by both providing market participants with a real alternative from the dominant vertical clearing model and creating a level playing field that will enable multiple new entrants to compete in the U.S. futures market.

FICC strongly believes that the ability to deliver one-pot margin efficiencies depends on FICC's ability to appropriately manage its risk, which FICC believes can best be achieved by requiring other DCOs to link into NYPC to join the one-pot arrangement. Utilizing NYPC as a standardized portal for the one-pot arrangement provides FICC with needed assurance, in light of NYPC's contractual obligations to FICC, that operational issues and risk methodologies and management are understood, uniform and consistent for all participants in the one-pot arrangement. Without such a mechanism, this transformative innovation could not be delivered to the marketplace in a manner that minimizes systemic risk, thereby depriving the U.S. futures market of the most promising opportunity it has seen to-date for true competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Prior to submitting this rule filing to the Commission, FICC received a letter in 2009 from the ELX Futures Exchange which encouraged FICC to reconsider its plan to enter into a relationship with NYSE. FICC has also received two letters from NASDAQ OMX in 2010 questioning the manner in which DTCC determined to enter into the joint venture with NYSE to form NYPC, arguing that the venture is contrary to DTCC's mission and suggesting that DTCC consider instead an enhanced form of "two-pot" cross-margining. FICC will notify the Commission of any additional written comments.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and

[16] Public Law 111–203 (July 21, 2010). *See* Dodd-Frank Wall Street Reform and Consumer Protection Act § 725(h).

[17] *See* Section 725(h) of the Dodd-Frank Act.

arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act and with respect to the following:

• The Commission requests comment on all aspects of the proposed single pot margining arrangement, including the risk management of the combined positions cleared by GSD and NYPC. What unique risk management issues does a single pot cross margining arrangement raise in comparison with the two pot arrangements previously approved by the Commission? Would the VaR margining methodology proposed to be used by FICC as the administrator of the single-pot margining arrangement adequately measure the risk exposures of the positions? Are there other risk management standards or requirements that should be established regarding a single-pot margining methodology?

• The Commission requests comment on the proposed loss allocation between FICC and NYPC. Does the loss allocation arrangement, in all scenarios, fairly reflect the risks presented by each clearing entity? Does it pose any undue risks to either FICC or NYPC or to any of their participants? If so, how would those risks be remediated?

• The Commission requests comment on the burden on competition, if any, that the proposed single pot cross margining arrangement may have. Does the proposal to admit other DCOs as limited purpose participants of NYPC mitigate any perceived burden on competition? If not, why not? Is there a more effective means of address concerns related to competition?

• The Commission requests comment on the implementation timeframe for the single pot margining arrangement and on the potential 24 month time period before unaffiliated DCOs or DCMs are admitted to the cross-margining arrangement. What are commenters' views on the proposed time period? Is a shorter or longer time period justified based on the operational issues associated with starting the new cross-margining arrangement?

• The Commission requests comment on the proposed guarantee fund contribution required of all DCOs (including NYPC) and DCMs. Is a sizable guarantee fund contribution needed to assure the safeguarding of securities and funds within the cross-margining arrangement? Is a higher or lower contribution justified? What is the impact on competition of such a requirement?

Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*) or

• Send an e-mail to *rule-comments@sec.gov.* Please include File Number SR–FICC–2010–09 on the subject line.

Paper Comments

• Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–FICC–2010–09. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Section, 100 F Street, NE., Washington, DC 20549–1090, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filings will also be available for inspection and copying at the principal office of FICC and on FICC's Web site at *http://dtcc.com/downloads/legal/rule_filings/2010/ficc/2010-09.pdf.* All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–FICC–2010–09 and should be submitted on or before December 21, 2010.

For the Commission by the Division of Trading and Markets, pursuant to delegated authority.[18]

Elizabeth M. Murphy,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–63368; File No. SR–NSCC–2010–15]

Self-Regulatory Organizations; National Securities Clearing Corporation; Notice of Filing of Proposed Rule Change Relating to Establishing an Automated Service for the Processing of Transfers, Replacements, and Exchanges of Insurance and Retirement Products

November 23, 2010.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),[1] notice is hereby given that on November 18, 2010, the National Securities Clearing Corporation ("NSCC") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared primarily by NSCC. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change would allow NSCC to add a new automated service to process transfers, replacements, and exchanges of insurance and retirement products through NSCC's Insurance and Retirement Processing Service ("IPS").

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, NSCC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. NSCC has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of these statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The purpose of the proposed rule change is to allow NSCC to offer a new automated service to transfer, replace, or exchange (collectively referred to as a "Replacement") an existing insurance contract that is eligible for NSCC's IPS.

[1] 15 U.S.C. 78s(b)(1).

1. Background

Currently, the Replacement process is not conducted through a centralized or automated process and requires extensive manual processing of paper forms and other documents. The insurance industry currently utilizes Transfer of Assets forms, 1035 Exchange Forms, or other similar paperwork (collectively referred to as "TOA") to document the request and the authorization for a Replacement. Currently, once an authorization has been obtained and the needed forms have been executed, the documents are transmitted by facsimile, mail, electronic mail, or other means. Because there is no centralized and automated mechanism for processing Replacements, there is also no centralized and automated settlement process for managing the movement of funds associated with Replacements. This lack of centralized and automated processing makes the overall Replacement process time consuming and labor intensive.

2. Proposed Amendments

NSCC proposes to add a new Section 11 to Rule 57 ("Insurance and Retirement Processing Services") so that NSCC can provide a service that will centralize and automate the processing of Replacements and will decrease the administrative burden on and risk to NSCC Members, Insurance Carrier/Retirement Service Members, Mutual Fund/Insurance Services Members, and Data Services Only Members.

Under the proposal, an Insurance Carrier/Retirement Services Member would be able to initiate a Replacement ("Receiving Carrier") by submitting an instruction to NSCC to process a Replacement ("Request for Replacement"). NSCC would then transmit the Request for Replacement to the designated Insurance Carrier/Retirement Services Member ("Delivering Carrier"). The Delivery Member would have to confirm, reject, or request modification to the Request for Replacement in the format and by such time as established by NSCC. NSCC would delete from the IPS transfers that are not confirmed or rejected. The IPS would also incorporate and automate the settlement of confirmed Replacements into NSCC's existing settlement process for IPS.

NSCC states that the proposed service would decrease the operational risk inherent in the processing of paper documentation, would provide a uniform platform for Replacements, and would provide uniform rules and procedures for Replacements.

Under the proposed new Section 11, the Delivering Carrier waives the obligation of the Receiving Carrier to submit a signed physical copy of the TOA unless specifically required by state or local law. The transfer of any physical documents related to Replacements that are required under state law would continue to be transferred outside of NSCC. It would be the sole obligation of the Insurance Carrier/Retirement Services Members involved in the Replacement to confirm that all legal requirements, including any requirement to obtain a signed physical copy of the TOA imposed by applicable state or local law, are satisfied prior to confirming a Request for Replacement. The Replacement service would permit the transfer of documentation as an attachment to the Request for Replacement, but this would not be a requirement to utilize the Replacement service. The waiver of the obligation to submit signed physical documents is intended to improve the orderly processing of Replacements.

Finally, NSCC proposes to update the Fee Schedule to incorporate the fees associated with processing a Request for Replacement. The fee associated with a Request for Replacement, including submitting incremental replacement status messages and money settlement would be $5.00 per Request for Replacement. The cost would be divided between the carriers associated with the transaction with the Receiving Carrier responsible for $3.75 per transaction, which is three-fourths of the cost of the Replacement service, and the Delivering Carrier responsible for the remaining $1.25 fee, which is one-fourth of the cost. The fee associated with obtaining the status of a pending Request for Replacement, including incremental statuses, would be $1.00 per pending status request. The cost would be divided evenly between the Receiving Carrier and the Distributor, each of which would be responsible for paying a fee of $0.50.

3. Implementation Timeframe

NSCC intends for the Replacement service to be implemented on or after January 1, 2011. Members would be advised of the specific implementation date through the issuance of an NSCC Important Notice.

NSCC states that the proposed rule change is consistent with the requirements of Section 17A of the Act[2] and the rules and regulations thereunder because it will assist NSCC's Members in processing Replacements in a timely and efficient manner. NSCC further states that the proposed rule change is also consistent with Recommendation 15 of the CPSS/IOSCO Recommendations for Securities Settlement Systems in that the Replacement service should reduce manual errors, lower costs, and increase the speed of processing Replacements through the use of automation.

B. Self-Regulatory Organization's Statement on Burden on Competition

NSCC believes that the proposed rule change will not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

NSCC has not solicited or received written comments relating to the proposed rule change. NSCC will notify the Commission of any written comments it receives.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

- Electronic comments may be submitted by using the Commission's Internet comment form *http://www.sec.gov/rules/sro.shtml,* or send an e-mail to *rule-comment@sec.gov.* Please include File No. SR–NSCC–2010–15 on the subject line.
- Paper comments should be sent in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090.

All submissions should refer to File No. SR–NSCC–2010–15. This file

[2] 15 U.S.C. 78q–1.

number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site *http://www.sec.gov/rules/sro.shtml.* Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street, NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at NSCC's principal office and NSCC's Web site *http://www.dtcc.com/legal/rule_filings/nscc/2010.php.* All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submission should refer to File No. SR–NSCC–2010–15 and should be submitted within December 21, 2010 days after the date of publication.[3]

For the Commission by the Division of Trading and Markets, pursuant to delegated authority.

Elizabeth M. Murphy,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–63366; File No. SR–NYSEAmex–2010–103]

Self-Regulatory Organizations; NYSE Amex LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the NYSE Amex LLC Company Guide To Adopt Additional Criteria for Listing Special Purpose Acquisition Companies (SPACs) That Have Indicated That Their Business Plan Is To Engage in a Merger or Acquisition With an Unidentified Company or Companies

November 23, 2010.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act") [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 12, 2010, NYSE Amex LLC ("Exchange" or "NYSE Amex") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the NYSE Amex LLC Company Guide (the "Guide") to adopt additional criteria for listing companies that have indicated that their business plan is to engage in a merger or acquisition with an unidentified company or companies (an "acquisition vehicle") and to provide transparency to the criteria the Exchange will apply in doing so. The text of the proposed rule change is available at the Exchange, the Commission's Public Reference Room, and *http://www.nyse.com.*

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Guide to adopt additional criteria for listing companies that have indicated that their business plan is to engage in a merger or acquisition with an acquisition vehicle.[3] The Exchange has permitted certain of such companies to list on the Exchange under Initial Listing Standards 3 or 4, which do not require prior operating history, as long as certain protections were provided to investors in such companies.[4] In order to provide greater transparency to the listing criteria that would be applicable to such companies, the Exchange proposes to adopt new Section 119 of the Guide.[5]

First, these companies must meet all applicable initial listing requirements. Thus, for initial listing, companies seeking to list on the Exchange must meet NYSE Amex Initial Listing Standard 3 or 4, which require, among other things, a minimum market value of listed securities of $50 million or $75 million, respectively.[6] In addition, the Exchange has determined to impose the following additional criteria for listing a company whose business plan is to complete an initial public offering and

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] Section 101 of the Guide provides the Exchange with broad discretionary authority over the initial and continued listing of securities in order to maintain the quality of and public confidence in its market, to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and to protect investors and the public interest, even though the securities meet all enumerated criteria for initial or continued listing.

[4] As it does with any initial listing, the Exchange will evaluate the reputation of the company's management pursuant to Section 101 of the Guide in determining whether listing is appropriate.

[5] New York Stock Exchange LLC ("NYSE") and The Nasdaq Stock Market also have adopted standards for listing acquisition companies. *See* NYSE Listed Company Manual Section 102.06, Nasdaq IM–5101–2. Except where otherwise noted, the new Section 119 standards are the same as Nasdaq's current standards. *See* infra notes 8 and 9.

[6] *See* Section 101(c) and (d) of the Guide, which sets forth these market capitalization standards as well as other listing standards relating to aggregate market value of publicly held shares, stock price, distribution and other requirements. Note that given the nature of these companies, they will not satisfy the initial listing requirements of Initial Listing Standards 1 and 2 because of the prior operating history requirements of those standards. As noted below, these companies will be required to satisfy the initial listing requirements following subsequent business combinations.

engage in a subsequent, unidentified merger or acquisition: [7]

(a) At least 90% of the gross proceeds from the initial public offering and any concurrent sale by the company of equity securities must be deposited in a trust account maintained by an independent trustee, an escrow account maintained by an "insured depository institution," as that term is defined in Section 3(c)(2) of the Federal Deposit Insurance Act [8] or in a separate bank account established by a registered broker or dealer (collectively, a "deposit account").

(b) Within 36 months of the effectiveness of its initial public offering registration statement, or such shorter period that the company specifies in its registration statement, the company must complete one or more business combinations having an aggregate fair market value of at least 80% of the value of the deposit account (excluding any deferred underwriter's fees and taxes payable on the income earned on the deposit account) at the time of the agreement to enter into the initial combination.

(c) Until the company has satisfied the condition in paragraph (b) above, each business combination must be approved by a majority of the company's independent directors.

(d) Until the company has satisfied the condition in paragraph (b) above, each business combination must be approved by a majority of the shares of common stock voting at the meeting at which the combination is being considered.

(e) Until the company has satisfied the condition in paragraph (b) above, public shareholders voting against a business combination must have the right to convert their shares of common stock into a pro rata share of the aggregate amount then in the deposit account (net of taxes payable and amounts distributed to management for working capital purposes) if the business combination is approved and consummated. A company may establish a limit (set no lower than 10% of the shares sold in the initial public offering) as to the maximum number of shares with respect to which any shareholder, together with any affiliate of such shareholder or any person with whom such shareholder is acting as a "group" (as such term is used in Sections 13(d) and 14(d) of the Securities Exchange Act of 1934 (the "Act") [9]), may exercise such conversion rights. For these purposes, "public shareholder" would be defined to exclude officers and directors of the company, the company's sponsor, the founding shareholders of the company, any family member or affiliate of any of the foregoing persons, and other concentrated holdings of 10% or more.[10] The Exchange proposes to define "family member" as a person's spouse, parents, children and siblings, whether by blood, marriage or adoption, or anyone residing in such person's home.[11]

The Exchange will also review such a company in connection with each acquisition to assure that it remains appropriate to continue to list the company. In that regard, the Exchange will require that the company meet the initial listing requirements upon conclusion of the transaction [12] and will conduct a regulatory review of any individuals that become newly involved with the company as a result of the transaction. If the company does not meet the requirements for initial listing following a business combination or does not comply with one of the requirements set forth above, the Exchange would commence delisting proceedings under Section 1010 to delist the company's securities; the company would not be eligible to follow the procedures to cure deficiencies outlined in Section 1009 of the Guide.[13]

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[14] in general, and furthers the objectives of Section 6(b)(5) of the Act,[15] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. The Exchange believes the proposed rule change is consistent with these requirements in that it imposes additional requirements on acquisition vehicles, which are designed to protect investors and the public interest and prevent fraudulent and manipulative acts and practices on the part of acquisition vehicles and their promoters. The Exchange also notes that the provision of conversion rights for public shareholders that oppose a business combination offers investor protection and is consistent with SEC Rule 419.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [16] and Rule 19b–4(f)(6) [17] thereunder because the proposal does not: (i) Significantly affect the protection of investors or the public

[7] These criteria originally were derived from protections the Exchange has observed built into recent transactions and Rule 419 under the Securities Act of 1933, 17 CFR 230.419. *See supra* n. 3 and Securities Exchange Act Release No. 57685 (April 18, 2008), 73 FR 22191 at n. 8 (April 24, 2008) (SR–NASDAQ–2008–013). Rule 419(b)(2)(vi), 17 CFR 230.419(b)(2)(vi), permits the registrant to receive up to 10 percent of the proceeds remaining after payment of underwriting commissions, underwriting expenses and permitted dealer allowances, exclusive of interest or dividends, as those proceeds are deposited into the escrow or trust account.

[8] 12 U.S.C. 1813(c)(2).

[9] 15 U.S.C. 78m(d) and 78n(d).

[10] Nasdaq currently excludes a beneficial holder of more than 10% of the total shares outstanding from its definition of "Public Holders" in Nasdaq's general listing rules. *See* Nasdaq Rule 5005(a)(34). However, Nasdaq does not exclude concentrated holders from its definition of "public Shareholder" in its acquisition vehicle rule (IM–5101–2) but has proposed to do so by defining public Shareholder to exclude the beneficial holder of more than 10% of the total shares outstanding. *See* Securities Exchange Act Release No. 63239 (November 3, 2010), 75 FR 68846 (November 9, 2010) (SR–NASDAQ–2010–137). The NYSE's acquisition company rule excludes concentrated holdings of 10% or more in calculating the number of publicly-held shares. *See* Section 102.06(A) of the NYSE Listed Company Manual. Similarly, the Exchange proposes to exclude concentrated holdings of 10% or more in calculating the number of publicly-held shares in proposed Section 119(e).

[11] The Guide does not currently define the term "family member." The Exchange proposes to adopt the definition of "Family Member" used in Nasdaq's Rules. *See* Nasdaq Rule 5005(a)(17) (referencing Nasdaq Rule 5605(a)(2)) and IM–5101–2.

[12] Companies will not be required to pay a new listing fee in connection with such a review. However, if there is a change of legal entity in connection with the business combination, the company will have to pay an original listing fee ($7,500). *See* Section 142(d) of the Guide. If additional shares are issued in the transaction, the company will pay initial listing fees on those shares. *See* Section 142(a) of the Guide.

[13] This aspect of the proposed rule change is based on Section 802.01B of the NYSE Listed Company Manual.

[14] 15 U.S.C. 78f(b).

[15] 15 U.S.C. 78f(b)(5).

[16] 15 U.S.C. 78s(b)(3)(A).

[17] 17 CFR 240.19b–4(f)(6).

interest; (ii) impose any significant burden on competition; and (iii) by its terms, become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest, provided that the Exchange has given the Commission notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission.[18]

A proposed rule change filed under Rule 19b–4(f)(6) normally may not become operative prior to 30 days after the date of filing. However, Rule 19b–4(f)(6)(iii) [19] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay period.

The Commission believes that waiver of the 30-day operative delay period is consistent with the protection of investors and the public interest. Specifically, the Commission notes that the proposal is substantially identical to Nasdaq's listing standards for special purpose acquisition companies ("SPACs") and raises no new or novel regulatory issues. The Commission notes that the proposal differs from Nasdaq's rules in three respects. First, the proposal's definition of "public shareholder" would exclude any person with concentrated holdings of 10% or more. The Commission notes that this proposed definition is consistent with the Exchange's current definition.[20] Second, the proposal would include a definition of "family member." The Commission notes that while the term "family member" is used in Nasdaq's SPAC rules, it is not specifically defined in those rules because it is defined elsewhere in Nasdaq's rules. The definition of "family member" in the Exchange's proposal, however, is identical to the definition of "family member" as defined in Nasdaq's rules and referenced in Nasdaq's SPAC listing standards.[21] Finally, the proposal would specify that SPACs that do not meet the Exchange's initial listing standards following a business combination or that do not comply with one of the SPAC listing standards in proposed Section 119 of the Guide would not be eligible to follow the cure procedures in Section 1009 of the Guide, which allows listed companies up to 18 months to cure certain continued listing standards deficiencies. Instead, under the proposal, the Exchange would immediately commence delisting proceedings pursuant to Section 1010 of the Guide. The Commission notes that this proposal is identical to NYSE's listing standards for SPACs and helps to ensure that a SPAC unable to meet listing standards will not remain listed for an extended period of time.[22] Accordingly, based on the above, the Commission designates, consistent with the protection of investors and public interest, that the proposed rule change be operative upon filing.[23]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.[24]

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form *http://www.sec.gov/rules/sro.shtml;* or
- Send an e-mail to *rule-comments@sec.gov*. Please include File Number SR–NYSEAmex–2010–103 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEAmex–2010–103. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site *http://www.sec.gov/rules/sro.shtml.* Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street, NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEAmex–2010–103 and should be submitted on or before December 21, 2010.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[25]

Elizabeth M. Murphy,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–63364; File No. SR–BX–2010–078]

Self-Regulatory Organizations; NASDAQ OMX BX; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Extending the Pilot Period for Boston Options Exchange To Receive Inbound Routes of Orders From Nasdaq Options Services

November 23, 2010.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act") [1] and Rule 19b–4 thereunder,[2] notice is hereby given that, on November 17, 2010, NASDAQ OMX BX (the "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II,

[1] 15 U.S.C.78s(b)(1).

[2] 17 CFR 240.19b–4.

below, which Items have been prepared by the Exchange. The Exchange has designated the proposed rule change as constituting a non-controversial rule change under Rule 19b–4(f)(6) under the Act,[3] which renders the proposal effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange submits this proposed rule change to extend the pilot period of the Exchange's prior approval for Boston Options Exchange ("BOX") to receive inbound routes of certain option orders from Nasdaq Options Services, LLC ("NOS") through May 18, 2011.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Currently, NOS is the approved outbound routing facility of the NASDAQ Exchange for NOM, providing outbound routing from NOM to other market centers.[4] The Exchange and the NASDAQ Exchange have previously adopted rules to permit BOX to receive inbound routes of certain option orders by NOS in its capacity as an order routing facility of the NASDAQ Exchange for NOM.[5] The Exchange specifically has adopted a rule to prevent potential informational advantages resulting from the affiliation between BOX and NOS, as related to NOS's authority to route certain orders from NOM to BOX without checking the NOM book prior to routing.[6] NOS's authority to route these orders to BOX is subject to a pilot period ending November 17, 2010.[7] The Exchange hereby seeks to extend the previously approved pilot period (with the attendant obligations and conditions) for an additional 6 months, through May 18, 2011.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[8] in general, and with Section 6(b)(5) of the Act,[9] in particular, in that the proposal is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Specifically, the proposed rule change will allow BOX to continue receiving inbound routes of equities orders from NOS, acting in its capacity as a facility of the NASDAQ Exchange, in a manner consistent with prior approvals and established protections. The Exchange believes that extending the previously approved pilot period for three [sic] months is of sufficient length to permit both the Exchange and the Commission to assess the impact of the Exchange's authority to permit BOX to receive direct inbound routes of certain option orders via NOS (including the attendant obligations and conditions).

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing rule change does not: (1) Significantly affect the protection of investors or the public interest; (2) impose any significant burden on competition; and (3) become operative for 30 days after the date of this filing, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act[10] and Rule 19b–4(f)(6) thereunder.[11]

A proposed rule change filed under 19b–4(f)(6) normally may not become operative prior to 30 days after the date of filing.[12] However, Rule 19b–4(f)(6)(iii)[13] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay. The Exchange notes that the proposal will allow BOX to continue receiving inbound routes of equities orders from NOS, in a manner consistent with prior approvals and established protections, while also permitting the Exchange and the Commission to assess the impact of the pilot.[14] The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest because such waiver would allow the

[3] 17 CFR 240.19b–4(f)(6).

[4] NOM Rule Chapter VI, Section 11(c). Under NOM Rule Chapter VI, Section 11(c): (1) NOM routes orders in options via NOS, which serves as the sole "routing facility" of NOM; (2) the sole function of the routing facility is to route orders in options to away markets pursuant to NOM rules, solely on behalf of NOM; (3) NOS is a member of an unaffiliated self-regulatory organization, which is the designated examining authority for the broker-dealer; (4) the routing facility is subject to regulation as a facility of the NASDAQ Exchange, including the requirement to file proposed rule changes under Section 19 of the Act; (5) use of NOS to route order to other market centers is optional; (6) NOM must establish and maintain procedures and internal controls reasonably designed to adequately restrict the flow of confidential and proprietary information between the NASDAQ Exchange and its facilities (including the routing facility), and any other entity; and (7) the books, records, premises, officers, directors, agents, and employees of the routing facility, as a facility of the NASDAQ Exchange, shall be subject at all times to inspection and copying by the NASDAQ Exchange and the Commission.

[9] 15 U.S.C. 78f(b)(5).

[10] 15 U.S.C. 78s(b)(3)(A).

[11] 17 CFR 240.19b–4(f)(6).

[12] 17 CFR 240.19b–4(f)(6)(iii). In addition, Rule 19b–4(f)(6)(iii) requires that a self-regulatory organization submit to the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[13] *Id.*

[14] *See supra* Section II.A.2.

pilot period to be extended without interruption delay through May 18, 2011. For this reason, the Commission designates the proposed rule change to be operative upon filing with the Commission.[15]

At any time within 60 days of the filing of such proposed rule change the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an e-mail to *rule-comments@sec.gov.* Please include File Number SR–BX–2010–078 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–BX–2010–078. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–BX–2010–078 and should be submitted on or before December 21, 2010.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[16]

SOCIAL SECURITY ADMINISTRATION

[Docket No. SSA–2010–0054]

Office of the Commissioner; Cost-of-Living Increase and Other Determinations for 2011; Correction

AGENCY: Social Security Administration.

ACTION: Notice; correction.

We published a document in the **Federal Register** of October 26, 2010, Cost-of-Living Increase and Other Determinations for 2011. (75 FR 65696; FR Doc. 2010–26983) Subsequently we identified two wage-reporting irregularities. We have now excluded the irregularities and posted the updated AWI and corresponding automatic adjustments on our Web site at *http://www.ssa.gov/OACT/COLA/index.html.*

The updated notice is republished here in its entirety.

SUMMARY: Under title II of the Social Security Act (Act), there will be no cost-of-living increase in Social Security benefits effective for December 2010. As a result, the following items will remain at their 2010 levels:

(1) The maximum Federal Supplemental Security Income (SSI) monthly benefit amounts for 2011, under title XVI of the Act, will remain $674 for an eligible individual, $1,011 for an eligible individual with an eligible spouse, and $338 for an essential person;

(2) The special benefit amount under title VIII of the Act for certain World War II veterans will remain $505.50 in 2011;

(3) The student earned income exclusion under title XVI of the Act will remain $1,640 per month in 2011, but not more than $6,600 in all of 2011;

(4) The dollar fee limit for services performed as a representative payee will remain $37 per month ($72 per month in the case of a beneficiary who is disabled and has an alcoholism or drug addiction condition that leaves him or her incapable of managing benefits) in 2011;

(5) The dollar limit on the administrative-cost assessment charged to attorneys representing claimants will remain $83 in 2011;

(6) The Old-Age, Survivors, and Disability Insurance (OASDI) contribution and benefit base will remain $106,800 for remuneration paid in 2011 and self-employment income earned in taxable years beginning in 2011;

(7) The monthly exempt amounts under the Social Security retirement earnings test for taxable years ending in calendar year 2011 will remain $1,180 and $3,140;

(8) The "old-law" contribution and benefit base under title II of the Act will remain $79,200 for 2011; and

(9) The monthly amount deemed to constitute substantial gainful activity for statutorily blind individuals in 2011 will remain $1,640.

The national average wage index for 2009 is $40,711.61. This index affects the following items:

(1) The dollar amounts ("bend points") used in the primary insurance amount benefit formula for workers who become eligible for benefits, or who die before becoming eligible, in 2011 will be $749 and $4,517;

(2) The bend points used in the formula for computing maximum family benefits for workers who become eligible for benefits, or who die before becoming eligible, in 2011 will be $957, $1,382, and $1,803;

(3) The amount of taxable earnings a person must have to be credited with a quarter of coverage in 2011 will be $1,120;

(4) The monthly amount deemed to constitute substantial gainful activity for non-blind disabled persons will be $1,000 in 2011;

(5) The earnings threshold establishing a month as a part of a trial work period will be $720 for 2011; and

(6) Coverage thresholds for 2011 will be $1,700 for domestic workers and $1,500 for election officials and election workers.

FOR FURTHER INFORMATION CONTACT: Susan C. Kunkel, Office of the Chief Actuary, Social Security Administration, 6401 Security Boulevard, Baltimore, MD 21235, (410)

965–3016. Information relating to this notice is available on our Internet site at *http://www.socialsecurity.gov/oact/cola/index.html.* For information on eligibility or claiming benefits, call 1–800–772–1213, or visit our Internet site, Social Security Online, at *http://www.socialsecurity.gov.*

SUPPLEMENTARY INFORMATION: In accordance with the Act, we must publish on or before November 1 the national average wage index for 2009 (section 215(a)(1)(D)), the amount of earnings required to be credited with a quarter of coverage in 2011 (section 213(d)(2)), the formula for computing a primary insurance amount for workers who first become eligible for benefits or die in 2011 (section 215(a)(1)(D)), and the formula for computing the maximum amount of benefits payable to the family of a worker who first becomes eligible for old-age benefits or dies in 2011 (section 203(a)(2)(C)).

Cost-of-Living Increases

General

There will be no cost-of-living increase for benefits under titles II and XVI of the Act.

Computation

By law, a cost-of-living increase for benefits is determined based on the percentage increase, if any, in the Consumer Price Index (CPI) for Urban Wage Earners and Clerical Workers from the last computation quarter that resulted in a cost-of-living increase to the third quarter of the current year. Computation quarters are third calendar quarters. Because the last cost-of-living increase became effective for those eligible to receive Title II benefits for December 2008, the last computation quarter is the third quarter of 2008.

Section 215(i)(1) of the Act provides that the CPI for a cost-of-living computation quarter shall be the arithmetic mean of this index for the 3 months in that quarter. In accordance with 20 CFR 404.275, we round the arithmetic mean, if necessary, to the nearest 0.001. The CPI for Urban Wage Earners and Clerical Workers for each month in the quarter ending September 30, 2008, is: for July 2008, 216.304; for August 2008, 215.247; and for September 2008, 214.935. The arithmetic mean for that calendar quarter is 215.495. The corresponding CPI for each month in the quarter ending September 30, 2010, is: for July 2010, 213.898; for August 2010, 214.205; and for September 2010, 214.306. The arithmetic mean for this calendar quarter is 214.136. Thus, because the CPI for the calendar quarter ending September 30, 2010, is not greater than the CPI for the calendar quarter ending September 30, 2008, the calendar quarter ending September 30, 2010, is not a cost-of-living computation quarter and there is no cost-of-living increase.

Program Amounts that Change Based on the Cost-of-Living Increase

Several program amounts adjust based on the cost-of-living increase. These include the maximum Federal SSI benefit amounts under title XVI, the title VIII benefit amount, the student earned income exclusion, the fee for services performed by a representative payee, and the attorney assessment fee. Because there will be no cost-of-living increase, these program amounts will not increase in 2011, but rather will remain at their 2010 levels.

Program Amounts that May Increase Based on the Change in the National Average Wage Index, But Only If There Is a Cost-of-Living Increase

Certain other program amounts are adjusted annually based on the change in the national average wage index, rather than the CPI increase, but only if there also is a cost-of-living increase for benefits (as determined under section 215(i) of the Act). Moreover, these amounts cannot decrease even if there is a decrease in the national average wage index. These amounts include the OASDI contribution and benefit base, the retirement earnings test exempt amounts, the "old-law" contribution and benefit base, and the substantial gainful activity amount for individuals who are statutorily blind. Because there is no cost-of-living increase this year, these amounts will remain at their 2010 levels for 2011.

Program Amounts that May Change Based on the Change in the National Average Wage Index, Without Regard to the Cost-of-Living Increase

Some program amounts are adjusted annually based on the change (increase or decrease) in the national average wage index whether there is a cost-of-living increase in that year or not. These include:

- The dollar amounts ("bend points") in the formulae used to compute the primary insurance amount and maximum family benefit for workers who become eligible for benefits, or die before becoming eligible, in 2011;
- The amount of taxable earnings required to earn a quarter of coverage;
- The substantial gainful activity amount for non-blind disabled individuals;
- The earnings threshold to establish a trial work period;
- The domestic employee coverage threshold; and
- The coverage threshold for election officials and election workers.

In the sections that follow, we explain the calculation of the national average wage and the corresponding changes in each of these program amounts.

National Average Wage Index for 2009

Computation

We have determined the national average wage index for calendar year 2009 based on the 2008 national average wage index of $41,334.97 announced in the **Federal Register** on October 28, 2009 (74 FR 55614), along with the percentage change in the average wage from 2008 to 2009 measured by annual wage data. We tabulate the annual wage data, including contributions to deferred compensation plans, as required by section 209(k) of the Act. The average amounts of wages calculated directly from these data were $39,652.61 and $39,054.62 for 2008 and 2009, respectively. To determine the national average wage index for 2009 at a level that is consistent with the national average wage indexing series for 1951 through 1977 (published December 29, 1978, at 43 FR 61016), we multiply the 2008 national average wage index of $41,334.97 by the percentage change in the average wage from 2008 to 2009 (based on SSA-tabulated wage data) as follows, with the result rounded to the nearest cent.

Amount

Multiplying the national average wage index for 2008 ($41,334.97) by the ratio of the average wage for 2009 ($39,054.62) to that for 2008 ($39,652.61) produces the 2009 index, $40,711.61. The national average wage index for calendar year 2009 is about 1.51 percent lower than the 2008 index.

Computing Benefits After 1978

General

The Social Security Amendments of 1977 provided a method for computing benefits that generally applies when a worker first becomes eligible for benefits after 1978. This method uses the worker's "average indexed monthly earnings" (AIME) to compute the primary insurance amount. We adjust the computation formula each year to reflect changes in general wage levels, as measured by the national average wage index.

We also adjust, or "index," a worker's earnings to reflect the change in the general wage levels that occurred during

the worker's years of employment. Such indexing ensures that a worker's future benefit level will reflect the general rise in the standard of living that will occur during his or her working lifetime. To compute the average indexed monthly earnings, we first determine the required number of years of earnings. Then we select that number of years with the highest indexed earnings, add the indexed earnings for those years, and divide the total amount by the total number of months in those years. We then round the resulting average amount down to the next lower dollar amount. The result is the AIME.

Computing the Primary Insurance Amount

The primary insurance amount is the sum of three separate percentages of portions of the AIME. In 1979 (the first year the formula was in effect), these portions were the first $180, the amount between $180 and $1,085, and the amount over $1,085. We call the dollar amounts in the formula governing the portions of the average indexed monthly earnings the "bend points" of the formula. Thus, the bend points for 1979 were $180 and $1,085.

To obtain the bend points for 2011, we multiply each of the 1979 bend-point amounts by the ratio of the national average wage index for 2009 to that average for 1977. We then round these results to the nearest dollar. Multiplying the 1979 amounts of $180 and $1,085 by the ratio of the national average wage index for 2009 ($40,711.61) to that for 1977 ($9,779.44) produces the amounts of $749.34 and $4,516.83. We round these to $749 and $4,517. Accordingly, the portions of the AIME to be used in 2011 are the first $749, the amount between $749 and $4,517, and the amount over $4,517.

Consequently, for individuals who first become eligible for old-age insurance benefits or disability insurance benefits in 2011, or who die in 2011 before becoming eligible for benefits, their primary insurance amount will be the sum of:

(a) 90 percent of the first $749 of their AIME, plus

(b) 32 percent of their AIME over $749 and through $4,517, plus

(c) 15 percent of their AIME over $4,517.

We round this amount to the next lower multiple of $0.10 if it is not already a multiple of $0.10. This formula and the rounding adjustment described above are contained in section 215(a) of the Act.

Maximum Benefits Payable to a Family

General

The 1977 amendments continued the long established policy of limiting the total monthly benefits that a worker's family may receive based on his or her primary insurance amount. Those amendments also continued the then existing relationship between maximum family benefits and primary insurance amounts but changed the method of computing the maximum amount of benefits that may be paid to a worker's family. The Social Security Disability Amendments of 1980 (Pub. L. 96–265) established a formula for computing the maximum benefits payable to the family of a disabled worker. This formula applies to the family benefits of workers who first become entitled to disability insurance benefits after June 30, 1980, and who first become eligible for these benefits after 1978. For disabled workers initially entitled to disability benefits before July 1980, or whose disability began before 1979, we compute the family maximum payable the same as the old-age and survivor family maximum.

Computing the Old-Age and Survivor Family Maximum

The formula used to compute the family maximum is similar to that used to compute the primary insurance amount. It involves computing the sum of four separate percentages of portions of the worker's primary insurance amount. In 1979, these portions were the first $230, the amount between $230 and $332, the amount between $332 and $433, and the amount over $433. We refer to such dollar amounts in the formula as the "bend points" of the family-maximum formula.

To obtain the bend points for 2011, we multiply each of the 1979 bend-point amounts by the ratio of the national average wage index for 2009 to that average for 1977. Then we round this amount to the nearest dollar. Multiplying the amounts of $230, $332, and $433 by the ratio of the national average wage index for 2009 ($40,711.61) to that for 1977 ($9,779.44) produces the amounts of $957.49, $1,382.11, and $1,802.57. We round these amounts to $957, $1,382, and $1,803. Accordingly, the portions of the primary insurance amounts to be used in 2011 are the first $957, the amount between $957 and $1,382, the amount between $1,382 and $1,803, and the amount over $1,803.

Consequently, for the family of a worker who becomes age 62 or dies in 2011 before age 62, we will compute the total amount of benefits payable to them so that it does not exceed:

(a) 150 percent of the first $957 of the worker's primary insurance amount, plus

(b) 272 percent of the worker's primary insurance amount over $957 through $1,382, plus

(c) 134 percent of the worker's primary insurance amount over $1,382 through $1,803, plus

(d) 175 percent of the worker's primary insurance amount over $1,803.

We then round this amount to the next lower multiple of $0.10 if it is not already a multiple of $0.10. This formula and the rounding adjustment described above are contained in section 203(a) of the Act.

Quarter of Coverage Amount

General

The amount of earnings required for a quarter of coverage in 2011 is $1,120. A quarter of coverage is the basic unit for determining whether a worker is insured under the Social Security program. For years before 1978, we generally credited an individual with a quarter of coverage for each quarter in which wages of $50 or more were paid, or with 4 quarters of coverage for every taxable year in which $400 or more of self-employment income was earned. Beginning in 1978, employers generally report wages on an annual basis instead of a quarterly basis. With the change to annual reporting, section 352(b) of the Social Security Amendments of 1977 amended section 213(d) of the Act to provide that a quarter of coverage would be credited for each $250 of an individual's total wages and self-employment income for calendar year 1978, up to a maximum of 4 quarters of coverage for the year.

Computation

Under the prescribed formula, the quarter of coverage amount for 2011 shall be the larger of: (1) the 1978 amount of $250 multiplied by the ratio of the national average wage index for 2009 to that for 1976; or (2) the current amount of $1,120. Section 213(d) further provides that if the resulting amount is not a multiple of $10, it shall be rounded to the nearest multiple of $10.

Quarter of Coverage Amount

Multiplying the 1978 quarter of coverage amount ($250) by the ratio of the national average wage index for 2009 ($40,711.61) to that for 1976 ($9,226.48) produces the amount of $1,103.12. We then round this amount to $1,100. Because $1,100 is less than the current amount of $1,120, the

quarter of coverage amount is $1,120 for 2011.

Substantial Gainful Activity Amount for Non-Blind Disabled Individuals

General

A finding of disability under titles II and XVI of the Act requires that a person, except for a title XVI disabled child, be unable to engage in substantial gainful activity (SGA). A person who is earning more than a certain monthly amount (net of impairment-related work expenses) is ordinarily considered to be engaging in SGA. The amount of monthly earnings considered as SGA depends on the nature of a person's disability. Section 223(d)(4)(A) of the Act specifies a higher SGA amount for statutorily blind individuals under title II while Federal regulations (20 CFR 404.1574 and 416.974) specify a lower SGA amount for non-blind individuals.

Computation

The monthly SGA amount for non-blind disabled individuals for 2011 shall be the larger of: (1) Such amount for 2000 multiplied by the ratio of the national average wage index for 2009 to that for 1998; or (2) such amount for 2010. If the resulting amount is not a multiple of $10, it shall be rounded to the nearest multiple of $10.

Amount

Multiplying the 2000 monthly SGA amount for non-blind individuals ($700) by the ratio of the national average wage index for 2009 ($40,711.61) to that for 1998 ($28,861.44) produces the amount of $987.41. We then round this amount to $990. Because $990 is less than the current amount of $1,000, the monthly SGA amount for non-blind disabled individuals is $1,000 for 2011.

Trial Work Period Earnings Threshold

General

During a trial work period, a beneficiary receiving Social Security disability benefits may test his or her ability to work and still be considered disabled. We do not consider services performed during the trial work period as showing that the disability has ended until services have been performed in at least 9 months (not necessarily consecutive) in a rolling 60-month period. In 2010, any month in which earnings exceed $720 is considered a month of services for an individual's trial work period. In 2011, this monthly amount remains at $720.

Computation

The method used to determine the new amount is set forth in our regulations at 20 CFR 404.1592(b). Monthly earnings in 2011, used to determine whether a month is part of a trial work period, is such amount for 2001 ($530) multiplied by the ratio of the national average wage index for 2009 to that for 1999, or, if larger, such amount for 2010. If the amount so calculated is not a multiple of $10, we round it to the nearest multiple of $10.

Amount

Multiplying the 2001 monthly earnings threshold ($530) by the ratio of the national average wage index for 2009 ($40,711.61) to that for 1999 ($30,469.84) produces the amount of $708.15. We then round this amount to $710. Because $710 is less than the current amount of $720, the monthly earnings threshold is $720 for 2011.

Domestic Employee Coverage Threshold

General

The minimum amount a domestic worker must earn so that such earnings are covered under Social Security or Medicare is the domestic employee coverage threshold. For 2011, this threshold is $1,700. Section 3121(x) of the Internal Revenue Code provides the formula for increasing the threshold.

Computation

Under the formula, the domestic employee coverage threshold amount for 2011 shall be equal to the 1995 amount of $1,000 multiplied by the ratio of the national average wage index for 2009 to that for 1993. If the resulting amount is not a multiple of $100, it shall be rounded to the next lower multiple of $100.

Domestic Employee Coverage Threshold Amount

Multiplying the 1995 domestic employee coverage threshold amount ($1,000) by the ratio of the national average wage index for 2009 ($40,711.61) to that for 1993 ($23,132.67) produces the amount of $1,759.92. We then round this amount to $1,700. Accordingly, the domestic employee coverage threshold amount is $1,700 for 2011.

Election Official and Election Worker Coverage Threshold

General

The minimum amount an election official and election worker must earn so that such earnings are covered under Social Security or Medicare is the election official and election worker coverage threshold. For 2011, this threshold is $1,500. Section 218(c)(8)(B) of the Act provides the formula for increasing the threshold.

Computation

Under the formula, the election official and election worker coverage threshold amount for 2011 shall be equal to the 1999 amount of $1,000 multiplied by the ratio of the national average wage index for 2009 to that for 1997. If the amount so determined is not a multiple of $100, it shall be rounded to the nearest multiple of $100.

Election Official and Election Worker Coverage Threshold Amount

Multiplying the 1999 coverage threshold amount ($1,000) by the ratio of the national average wage index for 2009 ($40,711.61) to that for 1997 ($27,426.00) produces the amount of $1,484.42. We then round this amount to $1,500. Accordingly, the election official and election worker coverage threshold amount is $1,500 for 2011.

(Catalog of Federal Domestic Assistance: Program Nos. 96.001 Social Security-Disability Insurance; 96.002 Social Security-Retirement Insurance; 96.004 Social Security-Survivors Insurance; 96.006 Supplemental Security Income)

Dated: November 19, 2010.

Michael J. Astrue,

Commissioner of Social Security.

DEPARTMENT OF STATE

[Public Notice: 7252]

Culturally Significant Objects Imported for Exhibition Determinations: "Picasso: Guitars 1912–1914"

SUMMARY: Notice is hereby given of the following determinations: Pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.;* 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, and Delegation of Authority No. 236–3 of August 28, 2000, I hereby determine that the objects to be included in the exhibition "Picasso: Guitars 1912–1914," imported from abroad for temporary exhibition within the United States, are of cultural significance. The objects are imported pursuant to loan agreements with the foreign owners or custodians. I also determine that the exhibition or display of the exhibit objects at the Museum of Modern Art, New York, NY, from on or about February 13, 2011, until on or

about June 6, 2011, and at possible additional exhibitions or venues yet to be determined, is in the national interest. Public Notice of these Determinations is ordered to be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: For further information, including a list of the exhibit objects, contact Carol B. Epstein, Attorney-Adviser, Office of the Legal Adviser, U.S. Department of State (telephone: 202/632–6473). The address is U.S. Department of State, SA–5, L/PD, Fifth Floor, Washington, DC 20522–0505.

Dated: November 22, 2010.

BILLING CODE 4710–05–P

DEPARTMENT OF STATE

[Public Notice: 7250]

In the Matter of the Review of the Designation of Islamic Movement of Uzbekistan (IMU and Other Aliases) as a Foreign Terrorist Organization Pursuant to Section 219 of the Immigration and Nationality Act, as Amended

Based upon a review of the Administrative Record assembled in this matter pursuant to Section 219(a)(4)(C) of the Immigration and Nationality Act, as amended (8 U.S.C. 1189(a)(4)(C)) ("INA"), and in consultation with the Attorney General and the Secretary of the Treasury, I conclude that the circumstances that were the basis for the 2004 re-designation of the aforementioned organization as a foreign terrorist organization have not changed in such a manner as to warrant revocation of the designation and that the national security of the United States does not warrant a revocation of the designation.

Therefore, I hereby determine that the designation of the aforementioned organization as a foreign terrorist organization, pursuant to Section 219 of the INA (8 U.S.C. 1189), shall be maintained.

This determination shall be published in the **Federal Register**.

Dated: November 15, 2010.

James B. Steinberg,

Deputy Secretary of State.

BILLING CODE 4710–10–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Proposed Modification of the Philadelphia, PA Class B Airspace Area; Public Meetings

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of meetings.

SUMMARY: This notice announces six fact-finding informal airspace meetings to solicit information from airspace users and others, concerning a proposal to revise the Class B airspace area at Philadelphia, PA. The purpose of these meetings is to provide interested parties an opportunity to present views, recommendations, and comments on the proposal. All comments received during these meetings will be considered prior to any issuance of a notice of proposed rulemaking.

TIMES AND DATES: The informal airspace meetings will be held on Tuesday, February 15, 2011; Wednesday, February 16, 2011; Thursday, February 17, 2011; Tuesday, February 22, 2011; Wednesday, February 23, 2011; and Thursday, February 24, 2011. FAA presentations will begin at 4 p.m. and again at 7 p.m. on each meeting date. Comments must be received on or before March 26, 2011.

ADDRESSES: (1) The meeting on Tuesday, February 15, 2011, will be held at New Castle Airport, 151 North Dupont Highway, New Castle, DE 19720; (2) The meeting on Wednesday, February 16, 2011, will be held at New Garden Airport, 1235 Newark Road, Toughkenamon, PA 19374; (3) The meeting on Thursday, February 17, 2011, will be held at Wings Field Terminal Building, 1501 Narcissa Road, Blue Bell, PA 19422; (4) The meeting on Tuesday, February 22, 2011, will also be held at Wings Field Terminal Building, 1501 Narcissa Road, Blue Bell, PA 19422; (5) The meeting on Wednesday, February 23, 2011, will be held at Flying W Airport, 60 Fostertown Road, Medford, NJ 08055; and (6) The meeting on Thursday, February 24, 2011, will be held at Freefall Adventures Skydive School, 300 Dahlia Avenue, Williamstown, NJ 08094.

Comments: Send comments on the proposal to: Mark D. Ward, Manager, Operations Support Group, Eastern Service Area, Air Traffic Organization, Federal Aviation Administration, P.O. Box 20636, Atlanta, GA 30320.

FOR FURTHER INFORMATION CONTACT: Gail Swider, Support Manager, Philadelphia ATCT/TRACON, 15 Hog Island Road, Philadelphia, PA 19153; telephone: (215) 492–4100.

SUPPLEMENTARY INFORMATION:

Meeting Procedures

(a) Doors open 30 minutes prior to the beginning of each meeting. The meetings will be informal in nature and will be conducted by one or more representatives of the FAA Eastern Service Center. A representative from the FAA will present an informal briefing on the planned modification to the Class B airspace area at Philadelphia, PA. Following the presentation, there will be time for questions and presentations by attendees, although a time limit may be imposed. Only comments concerning the plan to modify the Class B airspace area at Philadelphia, PA, will be accepted.

(b) The meetings will be open to all persons on a space-available basis. There will be no admission fee or other charge to attend and participate.

(c) Any person wishing to make a presentation to the FAA panel will be asked to sign in and estimate the amount of time needed for such presentation. This will permit the panel to allocate an appropriate amount of time for each presenter. These meetings will not be adjourned until everyone on the list has had an opportunity to address the panel.

(d) Position papers or other handout material relating to the substance of these meetings will be accepted. Participants wishing to submit handout material should present an original and two copies to the presiding officer. There should be additional copies of each handout available for other attendees.

(e) These meetings will not be formally recorded. However, a summary of comments made at the meeting will be filed in the docket.

Agenda for the Meetings

—Sign-in

—Presentation of Meeting Procedures

—FAA presentation on the proposed Class B airspace area modifications

—Solicitation of public comments

—Closing Comments.

Issued in Washington, DC, on November 24, 2010.

Edith V. Parish,

Manager, Airspace and Rules Group.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Rescinding the Notice of Intent for an Environmental Impact Statement (EIS): Harrison and Stone Counties, MS

AGENCY: Federal Highway Administration, DOT.

ACTION: Rescind Notice of Intent to prepare an EIS.

SUMMARY: This notice rescinds the Notice of Intent for preparing an Environmental Impact Statement (EIS) for a proposed highway to provide a connection between U.S. Highway 49 near the town of Star to Interstate 20 near the Interchange with State Route 475 in the City of Pearl, Rankin County, Mississippi. The original Notice of Intent for this EIS process was published in the **Federal Register** on May 22, 2009.

FOR FURTHER INFORMATION CONTACT: Claiborne Barnwell, Project Development Team Leader, Federal Highway Administration, Mississippi Division, 100 West Capitol Street, Suite 1026, Jackson, Mississippi 39269, Telephone: (601) 965–4217.

SUPPLEMENTARY INFORMATION:

Background

The Federal Highway Administration (FHWA) in cooperation with the Mississippi Department of Transportation (MDOT) initiated an Environmental Impact Statement (EIS) with a Notice of Intent May 22, 2009, to provide a connector road, to be built to interstate standards, between U.S. Highway 49 and Interstate 20.

Due to funding constraints this Notice of Intent is rescinded.

Andrew H. Hughes,

Division Administrator, Mississippi, Federal Highway Administration, Jackson, Mississippi.

BILLING CODE M

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[FHWA Docket No. FHWA–2010–0159–]

Manual on Uniform Traffic Control Devices (MUTCD) Compliance Dates

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice; Request for comments.

SUMMARY: This notice requests comments on compliance dates for highway agencies to upgrade their existing non-compliant traffic control devices to comply with certain requirements established in the Manual on Uniform Traffic Control Devices (MUTCD). This notice asks for responses to a series of questions about compliance dates, their benefits and economic impacts, and other related issues.

DATES: Comments must be received on or before January 14, 2011.

ADDRESSES: Mail or hand deliver comments to the U.S. Department of Transportation, Dockets Management Facility, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590, or fax comments to (202) 493–2251. Alternatively, comments may be submitted to the Federal eRulemaking portal at *http://www.regulations.gov.* All comments must include the docket number that appears in the heading of this document. All comments received will be available for examination and copying at the above address from 9 a.m. to 5 p.m., e.t., Monday through Friday, except Federal holidays. Those desiring notification of receipt of comments must include a self-addressed, stamped postcard or you may print the acknowledgment page that appears after submitting comments electronically. Anyone is able to search the electronic form of all comments in any one of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, or labor union). Anyone may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70, Pages 19477–78), or you may visit *http://dms.dot.gov.*

FOR FURTHER INFORMATION CONTACT: For questions about the program discussed herein, contact Mr. Hari Kalla, MUTCD Team Leader, FHWA Office of Operations, (202) 366–5915, or via e-mail at *hari.kalla@dot.gov.* For legal questions, please contact Mr. Raymond Cuprill, Senior Attorney Advisor, FHWA Office of the Chief Counsel, (202) 366–1392, or via e-mail at *raymond.cuprill@dot.gov.* Business hours for the FHWA are from 8 a.m. to 4:30 p.m., e.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Electronic Access and Filing

You may submit or retrieve comments online through the Federal eRulemaking portal at: *http://www.regulations.gov.* The Web site is available 24 hours each day, 365 days each year. Electronic submission and retrieval help and guidelines are available under the help section of the Web site.

An electronic copy of this document may also be downloaded from Office of the Federal Register's home page at: *http://www.archives.gov/federal_register* and the Government Printing Office's Web page at: *http://www.gpoaccess.gov.*

Background

The MUTCD is incorporated by reference within Federal regulations at 23 CFR Part 655, approved by FHWA, and recognized as the national standard for traffic control devices used on all public roads. When new provisions are adopted in a new edition or revision of the MUTCD, any new or reconstructed traffic control devices being installed after adoption are generally required to be in compliance with the new provisions. Existing devices in the field that do not meet the new MUTCD provisions are expected to be upgraded by highway agencies over time to meet the new provisions via a systematic upgrading process, but there are no specific dates for required completion of the upgrades. The Code of Federal Regulations, at 23 CFR 655.603(d)(1), authorizes FHWA to establish target compliance dates for compliance of particular existing devices. The FHWA establishes such compliance dates via the Federal rulemaking process.

The Final Rule for the 2009 edition of the MUTCD [1] established 12 new specific compliance dates in Table I–2 for upgrading existing devices to comply with certain new provisions adopted in that edition. Table I–2 in the 2009 MUTCD also included 46 other compliance dates that had not been reached by 2009 that were established in previous Final Rules in 2000,[2] 2003,[3] and 2007 [4] for new provisions adopted in those Final Rules. The FHWA is aware of concerns on the part of some State and local highway agencies about the potential impacts of MUTCD compliance dates in the current economic downturn, which has significantly reduced the resources available to such agencies.

Purpose of This Notice

The FHWA is interested in examining the issues of the safety benefits provided by traffic control device uniformity and the economic hardships to State and local governments that might result from specific compliance dates for upgrading some non-compliant existing devices.

[1] 74 FR 66732, December 16, 2009.

[2] 65 FR 78923, December 18, 2000.

[3] 68 FR 65496, November 20, 2003.

[4] 72 FR 72574, December 21, 2007.

The purpose of this notice is to present a general discussion of issues related to MUTCD compliance dates, to present a discussion of existing compliance dates for seven specific 2009 MUTCD provisions, and to request comments and input on those issues and dates. This notice also includes a series of specific questions for which the FHWA requests input on each.

While there are questions presented on specific aspects of MUTCD compliance dates, comments and input may be offered on any part of this notice.

The FHWA is seeking comments from all interested parties to help FHWA in further examining these issues and evaluating potential future alternative courses of action, including additional rulemaking.

Discussion of General Compliance Date Issues

The FHWA has established MUTCD compliance dates for upgrading existing non-compliant devices based on what it believes to be a reasonable balance of the safety benefits afforded by uniformity of traffic control devices and the economic costs to agencies to achieve compliance. Highway agencies are allowed to use systematic upgrading programs (without specific compliance dates) to upgrade their existing devices in the field to meet the vast majority of all new MUTCD provisions. For example, the 2009 MUTCD requires that the lettering on street name signs shall be composed of combination of lower-case letters with initial upper case letters. However, there is no specific compliance date for replacement of existing Street Name signs that use all capital lettering. Existing Street Name signs using all capital letters can remain in place until they need to be replaced due to end of service life or some other reason. As a result, agencies do not incur any additional cost to meet this MUTCD requirement. In addition, FHWA has established specific compliance dates predominantly based on the useful service life of devices. This approach enables highway agencies to defer upgrading non-compliant devices until the device wears out, is damaged or destroyed, or is replaced due to other events such as highway reconstruction, thus minimizing economic impacts.

In the 2009 MUTCD, specific compliance dates were established for only 12 of the hundreds of new provisions that were adopted with that new edition. In those 12 cases, FHWA determined that the safety benefits that the traveling public would derive from those new provisions were so critical that compliance of existing devices in the field potentially prior to the end of their service lives was necessary. Traffic control device upgrades are eligible for use of Federal-aid highway funds, thus mitigating the impacts on State and local highway agencies.

The FHWA understands that there are many competing demands on State and local government resources, particularly to highway and public works agencies, that State and local governments must balance with highway safety and traffic control device uniformity in allocating their limited resources. The FHWA also believes that traffic control device uniformity is important to the safety of not only of motor vehicles, but also of pedestrians, bicyclists, and other road users, and as such this uniformity provides important benefits to society. The MUTCD was originally developed in 1930s because of the consensus among State and local governments, organizations representing motorists, and many safety-related organizations, that traffic control device uniformity was essential to reducing crashes and the deaths, injuries, and property damage that results from crashes. The 1966 Highway Safety Act [5] further recognized the safety benefits of traffic control device uniformity by legislating the change in status of the MUTCD from a recommended practice with voluntary compliance to a national standard with mandatory compliance.

Further, FHWA believes that the establishment of specific compliance dates for limited numbers of new MUTCD requirements is effective in achieving uniformity for those critical items. Requirements with specific compliance dates receive much greater attention and upgrading action by highway agencies because of the potential for tort liability and the potential loss of Federal-aid funds.

Discussion of Specific Compliance Dates

The FHWA has identified three compliance dates established in the December 2007 Final Rule on maintaining minimum sign retroreflectivity and four of the new compliance dates established in the Final Rule for the 2009 edition of the MUTCD that might potentially present the greatest challenges to overcome. A discussion of each follows.

Maintaining Minimum Sign Retroreflectivity (Section 2A.08)

On December 21, 2007, the Final Rule for revision number 2 of the 2003 edition of the MUTCD was issued regarding maintaining minimum levels of sign retroreflectivity. This rulemaking was in response to a statutory requirement.[6] As a part of this Final Rule, three specific compliance dates were established regarding the new requirements: (1) January 22, 2012 (4 years)—implementation and continued use of an assessment or management method that is designed to maintain traffic sign retroreflectivity at or above the established minimum levels; (2) January 22, 2015 (7 years)—replacement of regulatory, warning, and post-mounted guide (except street name) signs that are identified using the assessment or management method as failing to meet the established minimum levels; and (3) January 22, 2018 (10 years)—replacement of street name signs and overhead guide signs that are identified using the assessment or management method as failing to meet the established minimum levels.

The new minimum sign retroreflectivity requirements were intended to assure adequate nighttime visibility of traffic signs, especially for older drivers, but with significant safety benefits for all drivers, as clearly documented by research.[7] Further, the 7-year and 10-year compliance periods were set based on expected service life of sign sheeting materials.

One-Way Signs (Section 2B.40)

On December 16, 2009, the Final Rule for the 2009 edition of the MUTCD was issued and a compliance date of December 31, 2019, (10 years) was established for upgrading existing field locations to comply with a new requirement for the number and location of One-Way regulatory signs. The new requirement is that One-Way signs shall be installed on the near-right and far-left corners of each intersection with the directional roadways of a divided highway having a median width of 30 feet or more. This was a recommendation (Guidance) in the 2003 MUTCD that was strengthened to a requirement (Standard) in the 2009 MUTCD.

Some highway agencies already have a policy, per the 2003 guidance, to install near-right and far-left One-Way signs at each directional roadway intersection of their divided highways with medians 30 feet or wider.

Accepted for publication in the proceedings of the 2005 Mid-Continent Research Symposium, Ames, Iowa, August 2005. This paper can be found at *http://tcd.tamu.edu/Documents/MinRetro/MinRetro.htm.*

However, agencies that did not comply with the 2003 guidance at all or only at some of the applicable intersections now must change their policy for use of One-Way signs at newly constructed intersections, and, by the end of 2019, install any additional One-Way signs needed at their existing locations to meet the Standard. Even though 10 years is allowed for this work to be done, this might constitute a burden for some agencies with significant mileage of divided highways with medians 30 feet or wider.

The strengthening of this provision to a Standard was based on safety research as detailed in the Older Driver Handbook.[8] Further, the 10-year compliance date for existing locations was established in consideration of the demonstrated safety issues associated with wrong-way travel on divided highways and because FHWA anticipates that installation of the required additional signs at existing locations will provide significant safety benefits to road users. The FHWA believes that State and local highway agencies and owners of private roads open to public travel can schedule the installation of the additional required signs in conjunction with their programs for maintaining and replacing other signs at existing locations along divided highways that are worn out or damaged, thus minimizing any impacts.

Horizontal Alignment Warning Signs (Sections 2C.06 through 2C.14)

The 2009 MUTCD established new requirements that engineering practices shall be used to determine the appropriate advisory speed on horizontal curves and requiring a hierarchal approach to determine the use of various horizontal alignment warning signs, including Turn or Curve signs, Advisory Speed plaques, Chevrons and Large Arrow signs, and Exit Speed/Ramp Speed signs. For these signs, the Table 2C–5 matrix of "Required, Recommended, or Optional" must be used to determine use of each type of sign, based on the difference between the speed limit on the approach and the advisory speed of the curve. The new requirement applies to arterials and collectors with an Average Annual Daily Traffic volume of over 1,000 vehicles per day. A compliance date of December 31, 2019 (10 years), was established for upgrading signing at existing field locations to comply with the new horizontal alignment warning sign requirements.

Even though 10 years is allowed for this work to be done, this might constitute a burden for some agencies with a network of higher volume arterial and collector roads having large numbers of horizontal curves.

The new requirement for use of engineering practices to determine advisory speeds for curves and to use Table 2C–5 to determine the required, recommended, and optional use of horizontal alignment warning signs and plaques was determined to be needed because fatalities at horizontal curves account for 25 percent of all highway fatalities, even though horizontal curves are only a small portion of the nation's highway mileage, and because the past application of engineering judgment for determination of advisory speeds and horizontal curve signing, without specific uniform criteria, has not sufficiently improved the safety performance of horizontal curves. Also, the 10-year compliance date was established because of the demonstrated safety issues associated with run-off-the-road crashes at horizontal curves and because FHWA anticipates that a uniform method of determining advisory speeds and installation of the required additional signs at existing locations will provide significant safety benefits to road users. The FHWA believes that State and local highway agencies and owners of private roads open to public travel can schedule the installation of the additional required signs in conjunction with their programs for maintaining and replacing other signs at existing locations that are worn out or damaged, thus minimizing any financial impacts.

Yellow Change Intervals and Red Clearance Intervals (Section 4D.26)

The 2009 MUTCD established a new requirement that durations of yellow change intervals and red clearance intervals for traffic signals shall be determined using engineering practices, such as the kinematic formulas published by the Institute of Transportation Engineers that take into account approach speeds, deceleration rates of stopping vehicles, intersection width, and roadway grades. Previously, the MUTCD did not require or recommend any particular methods for determining the durations of these critical safety intervals in the traffic signal sequence. A compliance date of December 31, 2014 (5 years), or when timing adjustments are made to the individual intersection and/or corridor, whichever occurs first, was established for highway agencies to use engineering practices to determine times for the yellow change intervals and red clearance interval at their existing signalized locations and to revise the timing of those intervals based on the determinations.

Many highway agencies have been using engineering practices to determine yellow change interval and red clearance interval durations. However, there are some agencies that have been using jurisdiction-wide constant durations, "rules of thumb," or assigning durations to these intervals without applying any engineering factors. Such highway agencies might be burdened by the need to evaluate all their signalized intersections and adjust the durations of the yellow change intervals and red clearance intervals to comply with the new requirement within the 5-year compliance period.

As documented in the FHWA report "Signalized Intersections: Informational Guide,"[9] a variety of studies from 1985 through 2002 found significant safety benefits from using accepted engineering practices to determine the durations of yellow change and red clearance intervals. Subsequent safety studies[10] have further documented significant major reductions in crashes when jurisdictions have revised the durations of the yellow change and red clearance intervals using accepted engineering practices. The 5-year compliance date was established because of the demonstrated safety benefits, as discussed above, of proper engineering-based timing of these critical signal intervals, and because traffic signals and signal control equipment have a very long service life (30 to 50 years is not uncommon) and very long intervals between signal timing adjustments are typical at many traffic signal locations in many jurisdictions. The FHWA believes that relying on systematic upgrading provisions, based on service life, to achieve compliance with this critical timing need would take an inordinately long time, to the detriment of road user safety. The FHWA believes that State and local highway agencies and owners

[10] NCHRP Research Results Digest 299, November 2005, can be viewed at the following Internet Web site: *http://onlinepubs.trb.org/onlinepubs/nchrp/nchrp_rrd_299.pdf.* This digest includes data from the study "Changes in Crash Risk Following Retiming of the Traffic Signal Change Intervals," by R.A. Retting, J.F. Chapline, and A.F. Williams, as published in Accident Analysis and Prevention, Volume 34, number 2, pages 215–220, available from Pergamon Press, Oxford, NY.

of private roads open to public travel can minimize any impact of this signal timing requirement by adopting a policy that determines durations of yellow change and red clearance intervals that is based on engineering practices and then by applying that policy whenever an existing individual signal location or system of interconnected locations is being checked or adjusted for any reason, such as investigation of citizen complaints or routine maintenance.

Pedestrian Intervals and Signal Phases (Section 4E.06)

The 2009 MUTCD established a new requirement for pedestrian signals that the pedestrian change interval (flashing upraised orange hand) shall not extend into the red clearance interval and shall be followed by a buffer interval of at least 3 seconds. Previously, it was allowable to continue the flashing orange hand display into and through the vehicular red clearance interval, and thus there was no requirement for any pedestrian safety "buffer time" between the end of the flashing orange hand display and the start of green for conflicting traffic on the street being crossed by pedestrians. A compliance date of December 31, 2014 (5 years), or when timing adjustments are made to the individual intersection and/or corridor, whichever occurs first, was established for this new requirement.

Most highway agencies have operated their pedestrian signals so that the flashing upraised hand terminates no later than the start of the yellow change interval for parallel vehicular traffic. With this display sequence, the yellow time and any red clearance time serves as the buffer interval and would comply with the new requirement. However, there are some highway agencies that have made it a practice at some or all of their signals to extend the flashing orange hand to the end of the yellow change interval or even all the way to the end of the red clearance interval. Most such pedestrian signal displays do not provide the required minimum 3 seconds after the end of the flashing orange hand as a margin of safety that allows a pedestrian who underestimates the time needed to cross a roadway, with or without a countdown display, to better avoid a conflict with vehicles. Highway agencies that have existing pedestrian signals operated in this manner might be burdened by the need to adjust the control equipment and/or durations of timing intervals to comply with the new requirement within the 5-year compliance period.

The FHWA established the 5-year compliance date because of the demonstrated safety issues associated with pedestrian crossings at traffic signals, the need for consistent display of signal indications for pedestrians, and the pedestrian confusion that would likely occur as a result of a long-term mixing of a variety of pedestrian signal displays associated with the pedestrian clearance interval. Traffic signals and signal control equipment have a very long service life (30 to 50 years is not uncommon) and very long intervals between signal retiming are typical at many traffic signal locations in many jurisdictions. The FHWA believes that relying on systematic upgrading, based on service life, to achieve compliance with this critical timing need would take an inordinately long time, to the detriment of pedestrian safety. The FHWA believes that State and local highway agencies and owners of private roads open to public travel can minimize any impact of this signal timing requirement by adopting a policy for timing and display of pedestrian change intervals in relation to vehicular intervals in compliance with Section 4E.06 and then by applying that policy whenever an existing individual signal location or system of interconnected locations is being checked or adjusted for any reason, such as investigation of citizen complaints or routine maintenance.

Questions

A series of seven specific questions regarding MUTCD compliance dates are listed below, for which the FHWA requests input on each, to help further examine this issue.

The seven questions are as follows:

1. What, if any, difficulties does your organization anticipate in meeting the seven MUTCD compliance dates discussed above for upgrading existing non-compliant devices in the field?

2. Are there one or more of these seven compliance dates that are more problematic than the others for your organization? If so, which ones, and why?

3. If some or all of these seven compliance dates were extended, how long do you estimate it would take to complete the necessary traffic control device upgrades?

4. What safety or other impacts would result from extending some or all of these seven compliance dates?

5. Are there other MUTCD compliance dates not described in this notice that are problematic for your organization? If yes, which ones, and why?

6. What considerations should be applied to establish new compliance dates in the MUTCD?

7. What other comments or input do you wish to provide to FHWA regarding MUTCD compliance dates for upgrading existing traffic control devices?

Authority: 23 U.S.C. 101(a), 104, 109(d), 114(a), 217, 315, and 402(a); 23 CFR 1.32; and, 49 CFR 1.48(b).

Issued on: November 18, 2010.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Notice of Finding of No Significant Impact for the Washington State Portion of the Pacific Northwest Rail Corridor Upgrades Tier-1 Environmental Assessment

AGENCY: Federal Railroad Administration (FRA), United States Department of Transportation (DOT).

ACTION: Notice of availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969 (NEPA) and the FRA's Procedures for Considering Environmental Impacts (FRA Environmental Procedures) (64 FR 28545 (May 26, 1999)), the FRA and the Washington State Department of Transportation (WSDOT) prepared a Tier-1 Environmental Assessment (Tier-1 EA) that evaluates the impacts of a corridor improvements program to the Washington State portion of the Pacific Northwest Rail Corridor (PNWRC Program). This notice advises the public that FRA finds that the corridor improvement program will not have a significant impact on the quality of the human or natural environment and has issued a Finding of No Significant Impact (FONSI) supporting that determination. Copies of both the Tier-1 EA and FONSI are available on FRA's Web site at *http://www.fra.dot.gov/rpd/freight/3011.shtml.*

FOR FURTHER INFORMATION CONTACT: For further information regarding either the Tier-1 EA or FONSI please contact Melissa DuMond, Environmental Protection Specialist, Federal Railroad Administration, 1200 New Jersey Ave., SE., Stop 20, Washington, DC 20590, telephone: (202) 493–6366.

SUPPLEMENTARY INFORMATION: The purpose of the PNWRC Program in Washington State is to improve intercity passenger rail service by reducing travel times, achieving greater schedule reliability, and creating capacity for additional trip frequencies in order to accommodate growing intercity travel

demand. To achieve these goals WSDOT applied for Federal funding through the High Speed Intercity Passenger Rail Program (HSIPR Program) administered by the FRA and funded by the American Recovery and Reinvestment Act (Recovery Act). WSDOT's application under the Recovery Act was split into three Service Blocks, and identified incremental service benefits including increased service levels, improved on-time performance and schedule reliability, and reduced travel times. The FRA intends to provide funding under the HSIPR Program for projects contained in two of the three service blocks.

In order to comply with the requirements of the HSIPR Program Guidance (Interim Guidance) that described the eligibility requirements and procedures for obtaining funding under the HSIPR Program (74 FR 29901 (June 23, 2009)), WSDOT prepared a Tier-1 or "service" NEPA document that included the analysis of two alternatives; the "No Build" and the "Corridor Service Expansion Alternative." The Tier-1 EA was completed in September 2009 and was made available for comment between October 2, 2009 and October 23, 2009 on the WSDOT Web site. Thirteen agencies submitted written comments. No individual written comments were received.

Based on the analysis in the Tier-1 EA, FRA released a draft FONSI for public comment on July 8, 2010 for a period of 30 calendar days (75 FR 39325 (July 8, 2010)). FRA received six comments on the draft FONSI, including comments from one federal agency, two state agencies, and three local governments. In compliance with NEPA and the FRA's Environmental Procedures, FRA has addressed all comments on the FONSI and has determined that the PNWRC corridor improvements will not have a significant impact on the quality of the human or natural environment. Prior to release of construction funding for individual projects, WSDOT will successfully complete applicable mitigation measures detailed in the FONSI and complete appropriate project-level NEPA evaluations, documentation, and required determinations for the individual project.

Issued in Washington, DC, on November 19, 2010.

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Notice of Intent To Grant Buy America Waiver to Northern New England Passenger Rail Authority To Purchase 3,340 AREMA Specified Carbon Steel Standard 1⅛ Nominal Diameter Nuts

AGENCY: Federal Railroad Administration (FRA), United States Department of Transportation (DOT).

ACTION: Notice of intent to grant Buy America waiver.

SUMMARY: FRA is issuing this notice to advise the public that it intends to grant the Northern New England Passenger Rail Authority's (NNEPRA) waiver request from FRA's Buy America requirement, 49 U.S.C. 24405(a), for the purchase and use of 3,340 AREMA specified carbon steel standard 1⅛ nominal diameter nuts. FRA intends to grant the waiver because there are no domestic commercially available track nuts that meet the needed specifications and custom made fabricated track nuts that cannot be delivered for 10–16 weeks are not "reasonably available" under 49 U.S.C. 24405(a)(2)(B), especially given NNEPRA has mobilized for the track construction and Maine has a short construction season. In addition, NNEPRA used a competitive bidding process to procure the track nuts and no bidders came forward at that time who could comply with Buy America. Finally, FRA published public notice of the NNEPRA waiver request in the **Federal Register** on August 2, 2010. This notice also failed to identify a reasonably available domestic source. 49 U.S.C. 24405(a)(4) requires that the Secretary provide public notice of a determination that it is necessary to waive the Buy America requirement and provide a maximum fifteen day opportunity for public comment before the waiver becomes final.

DATES: Written comments on FRA's determination to grant NNEPRA's Buy America waiver request should be provided to the FRA on or before December 15, 2010.

ADDRESSES: Please submit your comments by one of the following means, identifying your submissions by docket number FRA–2010–0122. All electronic submissions must be made to the U.S. Government electronic site at *http://www.regulations.gov.* Commenters should follow the instructions below for mailed and hand-delivered comments.

(1) *Web Site: http://www.regulations.gov.* Follow the instructions for submitting comments on the U.S. Government electronic docket site;

(2) *Fax:* (202) 493–2251;

(3) *Mail:* U.S. Department of Transportation, 1200 New Jersey Avenue, SE., Docket Operations, M–30, Room W12–140, Washington, DC 20590–0001; or

(4) *Hand Delivery:* Room W12–140 on the first floor of the West Building, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Instructions: All submissions must make reference to the "Federal Railroad Administration" and include docket number FRA–2010–0122. Due to security procedures in effect since October 2001, mail received through the U.S. Postal Service may be subject to delays. Parties making submissions responsive to this notice should consider using an express mail firm to ensure the prompt filing of any submissions not filed electronically or by hand. Note that all submissions received, including any personal information therein, will be posted without change or alteration to *http://www.regulations.gov.* For more information, you may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477), or visit *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: For questions about this notice, please contact Ms. Linda Martin, Attorney-Advisor, FRA Office of Chief Counsel, (202) 493–6062 or via e-mail at *Linda.Martin@dot.gov.*

SUPPLEMENTARY INFORMATION: *See* waiver letter below.

Ms. Marina Douglass,
Manager of Budget and Administration,
Northern New England Passenger Rail Authority,
75 West Commercial Street, Suite 104,
Portland, ME 04101–4631,

Re: Request for Waiver of Buy America Requirement,

Dear Ms. Douglass:

This letter is in response to your July 14, 2010, request that the Northern New England Passenger Rail Authority (NNEPRA) be granted a waiver from the Federal Railroad Administration's (FRA) Buy America provision, at 49 U.S.C. 24405(a), to permit NNEPRA to purchase 3,340 foreign-made AREMA specified carbon steel standard 1⅛ nominal diameter track nuts. Section 24405(a) authorizes the Secretary of Transportation to obligate certain grant funds only if the steel, iron, and manufactured goods used in the project are produced in the United States. The

Secretary, or his delagatee, may waive the Buy America requirement provided that he or she finds that: (A) applying it would be inconsistent with the public interest; (B) the steel, iron, and goods manufactured in the United States are not produced in sufficient and reasonably available amount or are not of a satisfactory quality; (C) rolling stock or power train equipment cannot be bought or delivered to the United States within a reasonable time; or (D) including domestic material will increase the cost of the overall project by more than 25 percent. 49 U.S.C. 24405(a)(2)(A)–(D). The NNEPRA asserts that the specific required track nuts are not produced in the United States in sufficient and reasonably available amounts and that, therefore, a waiver is warranted under 49 U.S.C. 24405(a)(2)(B). For the following reasons, I am granting NNEPRA's request.

In January 2010, NNEPRA was awarded $35 million in America Recovery and Reinvestment Act (ARRA) funds to extend Amtrak's Downeaster passenger service from its existing route of Boston, Massachusetts to Portland, Maine further north to station stops in Freeport and Brunswick, Maine. The track bolts and nuts needed to be delivered to the project in time for the planned start of continuous welded rail installation the week of August 16, 2010. Consequently, delivery within 30 days of the notice of award was a requirement in the Invitation to Bid. The low bid for the nuts was $0.63 each with a total cost of $2,104.20, which includes shipping. The low bidder was able to meet the required delivery schedule. During the procurement process for these track bolts, all of the bid package holders asserted that while the track bolts were domestically produced, the standard square nuts no longer were and would have to be obtained from a foreign manufacturer.

In late June 2010, NNEPRA informally notified FRA staff that it could find no domestic source of 3,340 AREMA specified carbon steel standard 1⅛ nominal diameter track nuts, which were needed for the project. At that time, FRA asked NNEPRA to expand the search for a domestic source, and suggested they contact the Railway Supply Institute (RSI) and/or other suppliers of track equipment. The NNEPRA contacted many of the major railroad track material suppliers, including Harmer Steel, LB Foster, A&K Railroad Materials, Unitrac Railroad Materials, Atlantic Track & Turnout, Vossloh, Progress Rail, and Railroad Tools & Solutions. They all confirmed that they could not supply domestically produced AREMA standard square nuts for track bolts. The NNEPRA also attempted to determine if it would be possible to have the nuts custom-manufactured in the United States. The NNEPRA contacted Rockford Bolts, a major domestic producer of AREMA standard track bolts, and were told they could not custom fabricate the standard square nuts. The NNEPRA also contacted Lewis Bolt & Nut, a major U.S. bolt manufacturer, and they stated they would not custom fabricate the standard square nuts and did not know of any other U.S. manufacturer who would. The FRA also independently contacted RSI. The RSI knew of no domestic source of the track nuts. At that time, FRA staff told NNEPRA that its only option was to file a formal waiver request.

If FRA determines that it is necessary to grant a waiver, it is required to (before the date on which the finding takes effect) "(A) publish in the **Federal Register** a detailed written justification as to why the waiver is needed; and (B) provide notice of such finding and an opportunity for public comment on such finding for a reasonable period of time not to exceed 15 days." 49 U.S.C. 24405(a)(4). Though not required to publish waiver requests before a decision whether to grant or deny has been made, FRA published notice of NNEPRA's waiver request in the **Federal Register** on August 2, 2010 in order to invite public comment on whether there were or were not domestic sources of the required track nuts.

The FRA received five responses to its August 2, 2010 Public Notice, which are summarized here in no particular order.

- Allison Symmonds, representative for the Alliance for American Manufacturing requested that the waiver be denied, commenting that Dyson Corporation and Chicago Nut & Bolt could provide the specified track nuts.
- John A. Tolman, National Legislative Representative of the Brotherhood of Locomotive Engineers and Trainmen (BLET) and James A. Stern, Jr., National Legislative Director of the United Transportation Union (UTU) submitted a joint comment. The BLET and UTU reported that the tool and hardware supply company Grainger could supply the specified track nuts made in the United States. They requested denial of the waiver, or a design change if the design of the track bolt required foreign made nuts. The BLET and UTU expressed a desire to reserve Buy America exemptions for legitimate reasons and categorized the subject waiver as "trivial" and a "nuisance."
- W. Dan Pickett, President of the Brotherhood of Railroad Signalmen (BRS), opposed the waiver. The BRS also commented that the 10-day comment period was inadequate to submit detailed comments, and broadly asserted that more than one million domestically produced track bolts and nuts meeting the stated specifications are in service or supplier inventory and expressed confidence that numerous domestic producers can offer the required nuts. The BRS did not indicate any specific domestic producer.
- Rick Inclima, Director of Safety for the Brotherhood of Maintenance of Way Employees Division (BMWED) of the Teamsters Rail Conference opposed the waiver as well as the 10-day comment period as inadequate. The BMWED asserted that more than one million domestically produced track bolts and nuts meeting the stated specifications are in service or supplier inventory and expressed confidence that numerous domestic producers can offer the required nuts. The BMWED did not indicate any domestic producer.
- An anonymous commenter speculated that the quantity of nuts required should be sufficient for any American shop to become able to produce the order.

Because two of the responses indicated that there may be domestic sources of the track nuts, FRA requested that NNEPRA contact the identified sources and confirm whether in fact they could provide the track nuts. The NNEPRA contacted these sources and found as follows:

1. *Grainger Industrial Supply*

The NNEPRA confirmed that Grainger could not provide domestically produced AREMA standard square head track nuts.

2. *Chicago Track Nut and Bolt*

The NNEPRA confirmed that Chicago Track Nut & Bolt could in 10 to 12 weeks post-contract award custom fabricate standard square track nuts meeting the AREMA specifications for a cost of $59,518.80. This cost did not include delivery.

3. *Dyson Corp.*

The NNEPRA confirmed that Dyson Corp. could in 12 to 16 weeks post-contract award custom fabricate standard square track nuts meeting the AREMA specifications for a total cost of $16,432.80. This cost did not include delivery.

The NNEPRA concluded that while the identified domestic custom fabricated track nuts could be secured in 10 to 16 weeks at a cost of approximately $14,000 more than the lowest foreign bidder this did not mean

that domestic track nuts are "reasonably available" and the waiver should still be granted.

CONCLUSION:

For the following reason, FRA is granting NNEPRA's request. The FRA agrees with NNEPRA in that custom made fabricated track nuts that cannot be delivered for 10–16 weeks are not "reasonably available" under 49 U.S.C. 24405(a)(2)(B), especially given that NNEPRA has mobilized for construction, prompt project implementation is consistent with ARRA's economic recovery goals, and Maine has a short construction season. In addition, NNEPRA used a competitive bidding process to procure the track nuts. Neither Chicago Track Nut and Bolt nor Dyson Corp. came forward at that time, but instead NNEPRA received bids only from suppliers offering foreign-made track nuts. This waiver is granted only because of the specific facts of this project; any future requests for a waiver regarding this product will not be granted without a specific showing that domestic track nuts for that particular project also are not reasonably available at that time. This decision does not become final until fifteen (15) days after its publication in the **Federal Register.**

Sincerely,
Karen Rae
Deputy Administrator

Note: The Deputy Administrator is making this decision because Administrator Joseph C. Szabo is recused from making it. Mr. Szabo is a former United Transportation Union (UTU) employee. The UTU commented in opposition to granting the waiver request.

Issued in Washington, DC, on November 23, 2010.

Mark E. Yachmetz,

Associate Administrator for Railroad Development, Federal Railroad Administration.

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

State of Good Repair Bus and Bus Facilities Discretionary Program Funds

AGENCY: Federal Transit Administration (FTA), DOT.

ACTION: State of Good Repair Bus and Bus Facilities program announcement of project selections.

SUMMARY: The U.S. Department of Transportation's (DOT) Federal Transit Administration (FTA) announces the selection of projects funded with Section 5309 Bus and Bus Facilities program funds in support of the State of Good Repair (SGR) Initiative, which was announced in the State of Good Repair Initiative Notice of Funding Availability on May 4, 2010. The SGR Initiative makes funds available to public transit providers to finance capital projects to replace, rehabilitate, and purchase buses and related equipment and to construct bus-related facilities, including programs of bus and bus-related projects for assistance to subrecipients that are public agencies, private companies engaged in public transportation, or private non-profit organizations. Additionally, the SGR Initiative makes funds available for Transit Asset Management systems, which is a systematic process of operating, maintaining, improving, and expanding physical assets effectively throughout their life cycles.

FOR FURTHER INFORMATION CONTACT: Successful and unsuccessful applicants should contact the appropriate FTA Regional office (Appendix) for specific information regarding applying for the funds or proposal specific questions. For general program information on the Bus and Bus Facilities program, contact Kimberly Sledge, Office of Program Management, at (202) 366–2053, *e-mail: kimberly.sledge@dot.gov*, or Henrika Buchanan-Smith, Office of Program Management, at (202) 366–2053, *e-mail: henrika.buchanan-smith@dot.gov.*

SUPPLEMENTARY INFORMATION: A total of $776,474,305 was available for FTA's SGR Initiative. A total of 422 applicants requested $4.06 billion, indicating significant demand for funds. Project proposals were evaluated based on the criteria detailed in the May 4, 2010 Notice of Funding Availability. The projects selected and shown in Table 1 will provide funds to help maintain the nation's public transportation bus fleet, infrastructure, and equipment in a state of good repair.

Grantees selected for competitive discretionary funding under the SGR Initiative should work with their FTA regional office (Appendix) to finalize the application in FTA's Transportation Electronic Award Management system, (TEAM) so that funds can be obligated expeditiously. Funds must be used for projects detailed in the proposal and for the purposes specified in the project descriptions in the table. A discretionary project identification number has been assigned to each project for tracking purposes and must be used in the TEAM application. Selected projects have pre-award authority as of October 4, 2010. Post-award reporting requirements include submission of the Federal Financial Report (FFR) and Milestone Report in TEAM as appropriate (*see* FTA.C.5010.1D).

The grantee must comply with all applicable Federal statutes, regulations, executive orders, FTA circulars, and other Federal administrative requirements in carrying out the project supported by the FTA grant. Funds allocated in this announcement must be obligated in a grant by September 30, 2013.

Issued in Washington, DC, November 23, 2010.

Peter Rogoff,

Administrator.

BILLING CODE C

DEPARTMENT OF TRANSPORTATION

Maritime Administration

Reports, Forms and Recordkeeping Requirements; Agency Information Collection Activity Under OMB Review

AGENCY: Maritime Administration, DOT.

ACTION: Notice and request for comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, this notice announces that the Information Collection abstracted below will be submitted to the Office of Management and Budget (OMB) for review and approval. The nature of the information collection is described as well as its expected burden. The **Federal Register** Notice with a 60-day comment period soliciting comments on the following collection of information was published on August 26, 2010. No comments were received.

DATES: Comments must be submitted on or before December 30, 2010.

FOR FURTHER INFORMATION CONTACT: Joe Strassburg, Maritime Administration, 1200 New Jersey Avenue, SE., Washington, DC 20590. Telephone: (202) 366–4156; or e-mail: *joe.strassburg@dot.gov.* Copies of this collection also can be obtained from that office.

SUPPLEMENTARY INFORMATION: Maritime Administration (MARAD)

Title of Collection: War Risk Insurance, Applications and Related Information.

OMB Control Number: 2133–0011.

Type of Request: Extension of currently approved information collection.

Affected Public: Vessel owners or charterers interested in participating in MARAD's war risk insurance program.

Form Numbers: MA–355; MA–528; MA–742; MA–828, and MA–942.

Abstract: As authorized by Section 1202, Title XII, Merchant Marine Act, 1936, as amended, the Secretary of the U.S. Department of Transportation may provide war risk insurance adequate for the needs of the waterborne commerce of the United States if such insurance cannot be obtained on reasonable terms from qualified insurance companies operating in the United States. This collection is required for the program.

Expiration Date of Approval: Three years from date of approval by the Office of Management and Budget.

Annual Estimated Burden Hours: 256 hours.

ADDRESSES: Send comments to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street, NW., Washington, DC 20503, Attention: MARAD Desk Officer.

Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or

other forms of information technology. A comment to OMB is best assured of having its full effect, if OMB receives it within 30 days of publication.

By Order of the Maritime Administrator.

Dated: November 22, 2010.

Murray Bloom,

Acting Secretary, Maritime Administration.

BILLING CODE 4910–81–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2010–0161; Notice 1]

Receipt of Petition for Decision That Nonconforming 2010 Harley Davidson FL Series Motorcycles Are Eligible for Importation

AGENCY: National Highway Traffic Safety Administration, DOT.

ACTION: Notice of receipt of petition for decision that nonconforming 2010 Harley Davidson FL Series Motorcycles are eligible for importation.

SUMMARY: This document announces receipt by the National Highway Traffic Safety Administration (NHTSA) of a petition for a decision that 2010 Harley Davidson FL Series Motorcycles that were not originally manufactured to comply with all applicable Federal Motor Vehicle Safety Standards (FMVSS) are eligible for importation into the United States because (1) they are substantially similar to vehicles that were originally manufactured for sale in the United States and that were certified by their manufacturer as complying with the safety standards, and (2) they are capable of being readily altered to conform to the standards.

DATES: The closing date for comments on the petition is December 30, 2010.

ADDRESSES: Comments should refer to the docket and notice numbers above and be submitted by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Mail:* Docket Management Facility: U.S. Department of Transportation, 1200 New Jersey Avenue, SE., West Building Ground Floor, Room W12–140, Washington, DC 20590–0001
- *Hand Delivery or Courier:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.
- *Fax:* 202–493–2251.

Instructions: Comments must be written in the English language, and be no greater than 15 pages in length, although there is no limit to the length of necessary attachments to the comments. If comments are submitted in hard copy form, please ensure that two copies are provided. If you wish to receive confirmation that your comments were received, please enclose a stamped, self-addressed postcard with the comments. Note that all comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided. Please see the Privacy Act heading below.

Privacy Act: Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78).

How to Read Comments submitted to the Docket: You may read the comments received by Docket Management at the address and times given above. You may also view the documents from the Internet at *http://www.regulations.gov.* Follow the online instructions for accessing the dockets. The docket ID number and title of this notice are shown at the heading of this document notice. Please note that even after the comment closing date, we will continue to file relevant information in the Docket as it becomes available. Further, some people may submit late comments. Accordingly, we recommend that you periodically search the Docket for new material.

FOR FURTHER INFORMATION CONTACT: Coleman Sachs, Office of Vehicle Safety Compliance, NHTSA (202–366–3151).

SUPPLEMENTARY INFORMATION:

Background

Under 49 U.S.C. 30141(a)(1)(A), a motor vehicle that was not originally manufactured to conform to all applicable FMVSS shall be refused admission into the United States unless NHTSA has decided that the motor vehicle is substantially similar to a motor vehicle originally manufactured for sale in the United States, certified under 49 U.S.C. 30115, and of the same model year as the model of the motor vehicle to be compared, and is capable of being readily altered to conform to all applicable FMVSS.

Petitions for eligibility decisions may be submitted by either manufacturers or importers who have registered with NHTSA pursuant to 49 CFR part 592. As specified in 49 CFR 593.7, NHTSA publishes notice in the **Federal Register** of each petition that it receives, and affords interested persons an opportunity to comment on the petition. At the close of the comment period, NHTSA decides, on the basis of the petition and any comments that it has received, whether the vehicle is eligible for importation. The agency then publishes this decision in the **Federal Register**.

Masa Auto Wholesalers of Chandler, Arizona (Masa) (Registered Importer 94–018) has petitioned NHTSA to decide whether non-U.S. certified 2010 Harley Davidson FL series motorcycles are eligible for importation into the United States. The vehicles that Masa believes are substantially similar are 2010 Harley Davidson FL series motorcycles that were manufactured for sale in the United States and certified by their manufacturer as conforming to all applicable FMVSS.

The petitioner claims that it carefully compared non-U.S. certified 2010 Harley Davidson FL series motorcycles to their U.S. certified counterparts, and found the vehicles to be substantially similar with respect to compliance with most FMVSS.

Masa submitted information with its petition intended to demonstrate that non-U.S. certified 2010 Harley Davidson FL series motorcycles, as originally manufactured, conform to many FMVSS in the same manner as their U.S. certified counterparts, or are capable of being readily altered to conform to those standards. Specifically, the petitioner claims that non-U.S. certified 2010 Harley Davidson FL series motorcycles are identical to their U.S. certified counterparts with respect to compliance with Standard Nos. 106 *Brake Hoses,* 111 *Rearview Mirrors,* 116 *Brake Fluid,* 119 *New Pneumatic Tires for Vehicles other than Passenger Cars,* and 122 *Motorcycle Brake Systems.*

The petitioner further contends that the vehicles are capable of being readily altered to meet the following standards, in the manner indicated below:

Standard No. 108 *Lamps, Reflective Devices and Associated Equipment:* Installation of the following U.S.-certified components on vehicles not already so equipped: (a) Headlamp; (b) front and rear side-mounted reflex reflectors; (c) rear-mounted reflex reflector; (d) rear turn signal lamps; (e) stoplamp; (f) taillamp; and (g) license plate lamp.

Standard No. 120 *Tire Selection and Rims for Vehicles other than Passenger*

Cars: Installation of a tire information placard.

Standard No. 123 *Motorcycle Controls and Displays:* Installation of a U.S.-model speedometer/odometer unit to meet the requirements of this standard.

Standard No. 205 *Glazing Materials:* Inspection of all vehicles, and removal of noncompliant glazing or replacement of the glazing with U.S.-certified components on vehicles that are not already so equipped.

All comments received before the close of business on the closing date indicated above will be considered, and will be available for examination in the docket at the above addresses both before and after that date. To the extent possible, comments filed after the closing date will also be considered. Notice of final action on the petition will be published in the **Federal Register** pursuant to the authority indicated below.

Authority: 49 U.S.C. 30141(a)(1)(A) and (b)(1); 49 CFR 593.8; delegations of authority at 49 CFR 1.50 and 501.8.

Issued on: November 23, 2010.

Claude H. Harris,

Acting Associate Administrator for Enforcement.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

Release of Waybill Data

The Surface Transportation Board has received a request from McCarthy, Sweeney & Harkaway, P.C. on behalf of the State of Montana (WB10–069(1)), for permission to use certain data from the Board's 2006 through 2009 (when available) Carload Waybill Sample. This request was made pursuant to 49 CFR 1244.9(b)(4) because it is related to a proceeding before the Board, *State of Montana* v. *BNSF Railway Company,* NOR 42124. Because some of the waybill information requested is from entities not party to this proceeding (*i.e.,* Union Pacific Railroad Company and Canadian Pacific Railway Company), the Board is providing notice and an opportunity to comment on the request. (The Board's regulations do not specifically require **Federal Register** notice for this category of request.) A copy of the request may be obtained from the Office of Economics. See the contact listed below.

The Board will follow its procedures set forth in 49 CFR 1244.9(d) for handling this waybill sample request. The waybill sample contains confidential railroad and shipper data; therefore, if any party objects to this request, it should file the objections with the Director of the Board's Office of Economics within 14 calendar days of the publication of this notice. The rules for release of waybill data are codified at 49 CFR 1244.9.

Contact: Scott Decker, (202) 245–0330.

Jeffrey Herzig,

Clearance Clerk.

[FR Doc. 2010–30074 Filed 11–29–10; 8:45 am]

BILLING CODE 4915–01–P

DEPARTMENT OF THE TREASURY

Office of Financial Research; Statement on Legal Entity Identification for Financial Contracts

AGENCY: Office of Financial Research, Treasury.

ACTION: Statement of policy with request for comment.

SUMMARY: The Dodd-Frank Wall Street Reform and Consumer Protection Act (the "DFA"), Public Law 111–203, establishes the Office of Financial Research (the "Office") and provides it with the authority to collect data to support the Financial Stability Oversight Council (the "Council") and to set standards for reporting such data. To support the Council in identifying connections among market participants and monitoring systemic risk, the Office intends to standardize how parties to financial contracts are identified in the data it collects on behalf of the Council. The Office is issuing a statement of policy regarding its preference to adopt through rulemaking a universal standard for identifying parties to financial contracts that is established and implemented by private industry and other relevant stakeholders through a consensus process. The statement of policy provides guidance on how the Office will evaluate whether a standard is adequate for adoption, including its attributes and method of implementation. The Office seeks comment on this statement of policy, including but not limited to the desired characteristics for a Legal Entity Identifier ("LEI") and the institutional arrangements for issuing and maintaining identifiers and associated reference data.

DATES: Comments must be received by January 31, 2011.

ADDRESSES: Interested persons are invited to submit comments regarding this Statement according to the instructions for "Electronic Submission of Comments" below. All submissions must refer to the document title. The Office encourages the early submission of comments.

Electronic Submission of Comments. Interested persons must submit comments electronically through the Federal eRulemaking Portal at *http://www.regulations.gov.* Electronic submission of comments allows the commenter maximum time to prepare and submit a comment, ensures timely receipt, and enables the Office to make them available to the public. Comments submitted electronically through the *http://www.regulations.gov* Web site can be viewed by other commenters and interested members of the public. Commenters should follow the instructions provided on that site to submit comments electronically.

To receive consideration as public comments, comments must be submitted through the method specified above. All submissions must refer to the title of the Statement.

Public Inspection of Public Comments. All properly submitted comments will be available for inspection and downloading at *http://www.regulations.gov.*

Additional Instructions. In general, comments received, including attachments and other supporting materials, are part of the public record and are made available to the public. Do not submit any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

FOR FURTHER INFORMATION CONTACT: For further information regarding this Statement contact the Office of Domestic Finance, Treasury, at (202) 622–1766. All responses to this Statement should be submitted via *http://www.regulations.gov* to ensure consideration.

SUPPLEMENTARY INFORMATION:

I. Background

A. The Office of Financial Research

Section 152 of the DFA established the Office within the Department of the Treasury. Among other things, section 153(a) of the DFA authorizes the Office to collect data to support the Council's duties, to provide such data to the Council and member agencies, and to standardize the types and formats of such data. Section 153(a) also provides that the Office should assist member agencies in determining the types and formats of data authorized by the DFA to be collected by member agencies. Section 154(b)(2)(A) requires the Office to prepare and publish a financial company reference database, a financial

instrument reference database, and formats and standards for data reported to the Office. Section 151(6)(B) provides that those data include information that identifies counterparties.

B. The Need for a Universal Standard for Identifying Parties to Financial Contracts

Precise and accurate identification of legal entities engaged in financial transactions is important to private markets and government regulation. In the private sector, data identifying counterparties support communication between systems, facilitate transaction processing, and allow for accurate aggregation of positions vis-à-vis individual or classes of counterparties, which is necessary for effective risk management and calculation of margin. Sales, compliance, and due diligence functions also rely on unique identification of counterparties. In the public sphere, correctly identifying parties to financial contracts is critical to assessing the connections among financial firms and to monitoring systemic risk.

There is currently no universal system for identifying the legal entities that participate in financial markets. In the absence of such a system, private firms and regulators have created a variety of identifiers. This creates inefficiencies for firms and presents obstacles to regulators and policymakers.

At private firms, because there is no industry-wide legal entity identification standard, tracking counterparties and calculating exposures across multiple data systems is complicated, expensive, and can result in costly errors. For example, maintaining internal identifier databases and reconciling entity identification with counterparties is expensive for both large firms and small firms. Complete automation of back-office activities remains elusive, in part because of the lack of a universal identifier for legal entities. In the worst case scenario, transactions are broken or fail to settle because counterparties have not been properly identified.

The lack of a universal identification standard also poses problems for regulators and policymakers. For example, precise identification of financial firms is necessary to evaluate whether a firm poses a systemic risk, which involves the assessments of the relationships among firms operating across a range of markets. Indeed, the problems that firms face in aggregating exposure are magnified in measuring risk across the system. In addition, securities regulators must often identify parents and affiliates of broker-dealers manually and by name. Multiple and generally different identifiers for participants in securities trading make it difficult to create a consolidated order audit trail.

The financial crisis has focused both industry and regulators on this issue. The DFA created the Office, in part, to support the Council and its member agencies in addressing such data standardization issues. Sections 153 and 154 of the DFA require the Office to standardize the types and formats of data reported to and collected by the Office on behalf of the Council, and to prepare and publish formats and standards for that data. Section 151(6)(B) provides that those data include information that identifies counterparties.

In addition, section 154(b)(2) of the DFA requires the Office to prepare and publish a financial company reference database. Reference data for a legal entity could include its name, country of incorporation or principal place of business, and legal relationship to other entities. Identification of the legal entity is a fundamental ingredient in creating a reference database of financial companies.

Finally, the DFA requires the CFTC and SEC to put in place requirements for reporting swaps and security-based swaps, respectively, to data repositories by July 15, 2011. Public Law 111–203, Sec. 727–728. These agencies are working to develop standards for this reporting, including requirements for these data repositories to have unique and consistent identifiers for counterparties and reference entities.[1] The Office is coordinating with the CFTC and the SEC in these data standardization efforts.

II. Statement of Policy

In support of the Council's duties to identify and assess risks and potential threats to the stability of the U.S. financial system, the Office, in consultation with the Chairperson of the Council, intends to establish requirements for reporting data on financial contracts to the Office that include a standardized way of identifying counterparties. In establishing such rules the Office would prefer to adopt a universal standard developed and implemented by the financial industry and other relevant stakeholders through a consensus process. In addition, the Office believes that participation of international standard setting bodies would be beneficial in developing a standard that can be used widely.

If a LEI is established to the satisfaction the Office by July 15, 2011, the Office, in consultation with the Chairperson of the Council, plans to issue a regulation mandating the use of such a standard for data reported to the Office.

In making this determination the Office will consider the following aspects of LEI systems:

- The characteristics of the LEI, including the process of developing and maintaining standards for the LEI;
- The institutional arrangements for issuing LEIs to specific legal entities; and
- The institutional arrangements for developing, maintaining, and publishing related reference data.

A. Characteristics of the LEI, Including the Process of Developing and Maintaining Standards for the LEI

A LEI acceptable for use with data reported to the Office should:

(1) Be based on a standard developed and maintained via an international "voluntary consensus standards body," as defined in Office of Management and Budget ("OMB") Circular No. A–119 Revised, such as the International Organization for Standardization ("ISO");

(2) Be unique for each legally distinct entity, where each legal entity is assigned only one LEI which cannot be reassigned;

(3) Persist over the life of an entity regardless of corporate actions or other business or structural changes;

(4) Include minimal information about the entity in the identifier itself; [2]

(5) Accommodate growth in the number of legal entities that need to be identified in the full range of reporting systems and to potential industry and regulatory innovations;

(6) Be available for all eligible markets participants, including but not limited to all financial intermediaries, all companies that issue stock or debt listed on an exchange, all companies that trade stock or debt, infrastructure providers, all entities subject to financial regulation, and firms affiliated with such entities;

(7) Not be contractually restricted in use;

(8) Where possible, be compatible with existing systems, work across various platforms, and not conflict with

[1] *See*: *http://www.cftc.gov/ucm/groups/public/@otherif/documents/ifdocs/federalregister112210.pdf;* and *http://sec.gov/rules/proposed/2010/34-63446.pdf.*

[2] The identifier itself should not incorporate substantial information about the entity, such as name or principal place of business. Although such reference data may be useful, they are subject to change. Defining an identifier to include such information could threaten its persistence.

other numbering or identification schemes;

(9) Be readily accessible using secure and open standards;

(10) Be reliable and secure against corruption or misuse; and

(11) Be capable of becoming the single international standard for unique identification of legal entities in the financial sector.

B. Institutional Arrangements for Issuing LEIs

A LEI acceptable for use with data reported to the Office should be issued by an entity with expertise in implementing standards for the financial sector.

The entity should be organized and operated as a not-for-profit body and have a formally documented governance structure with balanced representation for relevant stakeholders. It should be subject to supervision and regulation. The entity should also have a strong ethics policy, addressing in part potential conflicts of interest.

Issuance of LEIs must be timely and non-discriminatory. The process of issuing new LEIs must not materially hinder the normal course of an entity's business.

All of the entity's processes must be adequately governed and auditable. Access to the master identifier list and the issuance process for new identifiers must be made available at all times.

The security and reliability of all IT systems involved in identifier issuance and database maintenance and publication must meet or exceed industry standards for a real-time, high-availability market service.

Identifiers must be available to the public without fees for storage, access, cross-referencing, or redistribution. However, consistent with OMB Circular No. A–119 Revised, the cost of issuing identifiers and maintaining their reliability may be recovered through other fees, as long as they are reasonable and they are not imposed on end-users.

C. Institutional Arrangements for Developing, Maintaining, and Publishing LEI Reference Data

A LEI acceptable for use with data reported to the Office should have a closely associated process for developing, maintaining and publishing related reference data for each LEI issued.

The scope of the reference data provided for each LEI issued should be sufficient to verify that users have correctly identified an entity and should include at a minimum the following information for each identifier:

(1) Name;

(2) Location;

(3) Electronic address; and

(4) Legal status.

The entity responsible for producing and publishing the LEI reference data should have expertise in this area. It must be operated on a not-for-profit basis and have a formally documented governance structure with balanced representation for relevant stakeholders. It should also be subject to supervision and regulation.

The entity must have a robust quality assurance process. Updates to the LEI reference data should be accomplished with minimal lag time and market participants and regulators should be able to challenge entries and request amendments. The quality assurance process should seek to ensure that duplicate identification numbers are not erroneously assigned. The quality assurance process should also include checks for existing entities including name searches, address searches, and combinations of text strings and other characteristics.

The entity's processes should be adequately governed and auditable. The security and reliability of all IT systems involved in developing, maintaining, and publishing LEI reference data should meet or exceed industry standards for a real-time, high availability market service. Reference data must be available to the public without fees for storage, access, cross-referencing, or redistribution. However, consistent with OMB Circular No. A–119 Revised, the cost of developing, maintaining, and publishing LEI reference data may be recovered through other fees, as long as they are reasonable and they are not imposed on those who use the reference data.

In addition, if a robust universal LEI is designated by the Office, under the principles outlined above for the purpose of reporting data to the Office, it is the expectation of the Office that such a LEI system, including the relevant reference data, would be the foundation for the financial company reference database that the Office would publish under the DFA section 154(b)(2)(A)(i).

D. Next Steps

In the event that a universal LEI is established to the satisfaction of the Office by July 15, 2011, the Office, in consultation with the Chairperson of the Council, plans to issue a regulation mandating the use of such a standard for data reported to the Office. Further, the Office will publish in the **Federal Register**, no later than 60 days prior to the earlier of the implementation dates established by the CFTC and SEC for their new reporting requirements,[3] the name of the identification system approved by the Office, the name and contact information of the entity through which counterparties can obtain LEIs provided through the approved identification system, and information concerning the procedure and requirements for obtaining such a LEI.

The Office invites comments on all aspects of this statement of policy, including but not limited to the desired characteristics for LEI and the institutional arrangements for issuing and maintaining identifiers and associated reference data.

Dated: November 23, 2010.

Lewis Alexander,

Counselor to the Secretary.

[FR Doc. 2010–30018 Filed 11–29–10; 8:45 am]

BILLING CODE 4810–25–P

DEPARTMENT OF THE TREASURY

Bureau of the Public Debt

Proposed Collection: Comment Request

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently the Bureau of the Public Debt within the Department of the Treasury is soliciting comments concerning the U.S. Treasury Auction Submitter Agreement.

DATES: Written comments should be received on or before February 1, 2011, to be assured of consideration.

ADDRESSES: Direct all written comments to Bureau of the Public Debt, Robert Schumacher, 200 Third Street, A4–A, Parkersburg, WV 26106–5312, or *Robert.Schumacher@bpd.treas.gov.*

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Robert Schumacher, Bureau of the Public Debt, 200 Third Street, A4–A, Parkersburg, WV 26106–5312, (304) 480–8150.

[3] *See*: *http://www.cftc.gov/stellent/groups/public/@otherif/documents/ifdocs/federalregister112210.pdf;* and *http://sec.gov/rules/proposed/2010/34-63446.pdf.*

SUPPLEMENTARY INFORMATION:

Title: U.S. Treasury Auctions Submitter Agreement.

OMB Number: 1535–0137.

Form Number: PD F 5441.

Abstract: The information is requested from entities wishing to participate in U.S. Treasury Securities Auctions via TAAPSLink.

Current Actions: None.

Type of Review: Extension.

Affected Public: Depository Institutions, Brokers/Dealers, Assessment Management Companies, Pension Funds, and other Institutional Investors.

Estimated Number of Respondents: 1,000.

Estimated Time Per Respondent: 5 minutes.

Estimated Total Annual Burden Hours: 80.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: November 22, 2010.

Robert Schumacher,

Manager, Information Management Branch.

Greenhouse Gas Emissions Standards and Fuel Efficiency Standards for Medium- and Heavy-Duty Engines and Vehicles

AGENCIES: Environmental Protection Agency (EPA) and National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Proposed rules.

SUMMARY: EPA and NHTSA, on behalf of the Department of Transportation, are each proposing rules to establish a comprehensive Heavy-Duty National Program that will reduce greenhouse gas emissions and increase fuel efficiency for on-road heavy-duty vehicles, responding to the President's directive on May 21, 2010, to take coordinated steps to produce a new generation of clean vehicles. NHTSA's proposed fuel consumption standards and EPA's proposed carbon dioxide (CO_2) emissions standards would be tailored to each of three regulatory categories of heavy-duty vehicles: Combination Tractors; Heavy-Duty Pickup Trucks and Vans; and Vocational Vehicles, as well as gasoline and diesel heavy-duty engines. EPA's proposed hydrofluorocarbon emissions standards would apply to air conditioning systems in tractors, pickup trucks, and vans, and EPA's proposed nitrous oxide (N_2O) and methane (CH_4) emissions standards would apply to all heavy-duty engines, pickup trucks, and vans. EPA is also requesting comment on possible alternative CO_2-equivalent approaches for model year 2012–14 light-duty vehicles.

EPA's proposed greenhouse gas emission standards under the Clean Air Act would begin with model year 2014. NHTSA's proposed fuel consumption standards under the Energy Independence and Security Act of 2007 would be voluntary in model years 2014 and 2015, becoming mandatory with model year 2016 for most regulatory categories. Commercial trailers would not be regulated in this phase of the Heavy-Duty National Program, although there is a discussion of the possibility of future action for trailers.

DATES: *Comments:* Comments on all aspects of this proposal must be received on or before January 31, 2011. Under the Paperwork Reduction Act, comments on the information collection provisions must be received by the Office of Management and Budget on or before December 30, 2010. *See* the **SUPPLEMENTARY INFORMATION** section on "Public Participation" for more information about written comments.

Public Hearings: NHTSA and EPA will jointly hold two public hearings on the following dates: November 15, 2010 in Chicago, IL; and November 18, 2010 in Cambridge, MA, as announced at 75 FR 67059, November 1, 2010. The hearing in Chicago will start at 11 a.m. local time and continue until 5 p.m. or until everyone has had a chance to speak. The hearing in Cambridge will begin at 10 a.m. and continue until 5 p.m. or until everyone has had a chance to speak. *See* "How Do I Participate in the Public Hearings?" below at B. (7) under the **SUPPLEMENTARY INFORMATION** section on "Public Participation" for more information about the public hearings.

ADDRESSES: Submit your comments, identified by Docket ID No. NHTSA–2010–0079 and/or EPA–HQ–OAR–2010–0162, by one of the following methods:

- *http://www.regulations.gov:* Follow the on-line instructions for submitting comments.
- *E-mail: a-and-r-docket@epa.gov.*
- *Fax: NHTSA:* (202) 493–2251; *EPA:* (202) 566–9744.
- *Mail:*

NHTSA: Docket Management Facility, M–30, U.S. Department of Transportation, West Building, Ground Floor, Rm. W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590.

EPA: Air Docket, Environmental Protection Agency, EPA Docket Center, Mailcode: 6102T, 1200 Pennsylvania Ave., NW., Washington, DC 20460. In addition, please mail a copy of your comments on the information collection provisions to the Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), Attn: Desk Officer for EPA, 725 17th St., NW., Washington, DC 20503.

- *Hand Delivery:*

NHTSA: West Building, Ground Floor, Rm. W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m. Eastern Time, Monday through Friday, except Federal Holidays.

EPA: EPA Docket Center, (Air Docket), U.S. Environmental Protection Agency, EPA West Building, 1301 Constitution Ave., NW., Room: 3334, Mail Code 2822T, Washington, DC. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. NHTSA–2010–0079 and/or EPA–HQ–OAR–2010–0162. *See* the **SUPPLEMENTARY INFORMATION** section on "Public Participation" for additional instructions on submitting written comments.

Docket: All documents in the docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, e.g., confidential business information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy in EPA's docket, but may be available electronically in NHTSA's docket at regulations.gov. Publicly available docket materials are available either electronically in *http://www.regulations.gov* or in hard copy at the following locations:

NHTSA: Docket Management Facility, M–30, U.S. Department of Transportation, West Building, Ground Floor, Rm. W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590. The Docket Management Facility is open between 9 a.m. and 5 p.m. Eastern Time, Monday through Friday, except Federal holidays.

EPA: EPA Docket Center, EPA/DC, EPA West, Room 3334, 1301 Constitution Ave., NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Air Docket is (202) 566–1742.

FOR FURTHER INFORMATION CONTACT: *NHTSA:* Rebecca Yoon, Office of Chief Counsel, National Highway Traffic Safety Administration, 1200 New Jersey Avenue, SE., Washington, DC 20590. Telephone: (202) 366–2992. *EPA:* Lauren Steele, Office of Transportation and Air Quality, Assessment and Standards Division (ASD), Environmental Protection Agency, 2000 Traverwood Drive, Ann Arbor, MI 48105; telephone number: (734) 214–4788; fax number: (734) 214–4816; e-mail address: *steele.lauren@epa.gov,* or Assessment and Standards Division Hotline; telephone number; (734) 214–4636; e-mail *asdinfo@epa.gov.*

SUPPLEMENTARY INFORMATION:

Does this action apply to me?

This action would affect companies that manufacture, sell, or import into the United States new heavy-duty engines and new Class 2b through 8 trucks, including combination tractors, school and transit buses, vocational vehicles such as utility service trucks, as well as ¾-ton and 1-ton pickup trucks and vans.[1] The heavy-duty category incorporates all motor vehicles with a gross vehicle weight rating of 8,500 pounds or greater, and the engines that power them, except for medium-duty passenger vehicles already covered by the greenhouse gas standards and corporate average fuel economy standards issued for light-duty model year 2012–2016 vehicles. This action also includes a discussion of the possible future regulation of commercial trailers and is requesting comment on possible alternative CO_2-equivalent approaches for model year 2012–14 light-duty vehicles. Potentially affected categories and entities include the following:

Category	NAICS Code[a]	Examples of Potentially Affected Entities
Industry	336111	Motor Vehicle Manufacturers, Engine and Truck Manufacturers
	336112	
	336120	
Industry	541514	Commercial Importers of Vehicles and Vehicle Components
	811112	
	811198	
Industry	336111	Alternative Fuel Vehicle Converters
	336112	
	422720	
	454312	
	541514	
	541690	
	811198	
Industry	336212	Truck Trailer Manufacturers[b]

Note:
[a] North American Industry Classification System (NAICS)
[b] This category is included for purposes of advance notice of possible future rulemaking action

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be regulated by this proposal. This table lists the types of entities that the agencies are now aware could potentially be regulated by this action. Other types of entities not listed in the table could also be regulated. To determine whether your activities may be regulated by this action, you should carefully examine the applicability criteria in 40 CFR parts 1036 and 1037, 49 CFR parts 523, 534, and 535, and the referenced regulations. You may direct questions regarding the applicability of this action to the persons listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

B. Public Participation

NHTSA and EPA request comment on all aspects of these joint proposed rules. This section describes how you can participate in this process.

(1) How do I prepare and submit comments?

In this joint proposal, there are many aspects of the program common to both EPA and NHTSA. For the convenience of all parties, comments submitted to the EPA docket (whether hard copy or electronic) will be considered comments submitted to the NHTSA docket, and vice versa. An exception is that comments submitted to the NHTSA docket on the Draft Environmental Impact Statement will not be considered submitted to the EPA docket. Therefore, the public only needs to submit comments to either one of the two agency dockets. Comments that are submitted for consideration by one agency should be identified as such, and comments that are submitted for consideration by both agencies should be identified as such. Absent such identification, each agency will exercise its best judgment to determine whether a comment is submitted on its proposal.

Further instructions for submitting comments to either the EPA or NHTSA docket are described below.

[1] For purposes of NHTSA's fuel consumption regulations, non-commercial recreational vehicles will not be covered, even if they would otherwise fall under these categories. *See* 49 U.S.C. 32901(a)(7).

NHTSA: Your comments must be written and in English. To ensure that your comments are correctly filed in the Docket, please include the Docket I.D No. NHTSA–2010–0079 in your comments. By regulation, your comments must not be more than 15 pages long (49 CFR 553.21). NHTSA established this limit to encourage you to write your primary comments in a concise fashion. However, you may attach necessary additional documents to your comments. There is no limit on the lenght of the attachments. If you are submitting comments electronically as a PDF (Adobe) file, we ask that the documents submitted be scanned using the Optical Character Recognition (OCR) process, thus allowing the agencies to search and copy certain portions of your submissions.[2] Please note that pursuant to the Data Quality Act, in order for the substantive data to be relied upon and used by the agencies, it must meet the information quality standards set forth in the OMB and Department of Transportation (DOT) Data Quality Act quidelines. Accordingly, we encourage you to consult the guidelines in preparing your comments. OMB's guidelines may be accessed at *http://www.whitehouse.gov/omb/fedreg/reproducible.html*. DOT's guidelines may be access at *http://regs.dot.gov*.

EPA: Direct your comments to Docket ID No EPA–HQ–OAR–2010–0162. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or e-mail. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov* your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm.*

(2) Tips for Preparing Your Comments

When submitting comments, remember to:

- Identify the rulemaking by docket number and other identifying information (subject heading, **Federal Register** date and page number).
- Follow directions—The agencies may ask you to respond to specific questions or organize comments by referencing a part or section number from the Code of Federal Regulations.
- Explain why you agree or disagree, suggest alternatives, and substitute language for your requested changes.
- Describe any assumptions and provide any technical information and/or data that you used.
- If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.
- Provide specific examples to illustrate your concerns, and suggest alternatives.
- Explain your views as clearly as possible, avoiding the use of profanity or personal threats.
- Make sure to submit your comments by the comment period deadline identified in the **DATES** section above.

(3) How can I be sure that my comments were received?

NHTSA: If you submit your comments by mail and wish Docket Management to notify you upon its receipt of your comments, enclose a self-addressed, stamped postcard in the envelope containing your comments. Upon receiving your comments, Docket Management will return the postcard by mail.

(4) How do I submit confidential business information?

Any CBI submitted to one of the agencies will also be available to the other agency.[3] However, as with all public comments, any CBI information only needs to be submitted to either one of the agencies' dockets and it will be available to the other. Following are specific instructions for submitting CBI to either agency.

NHTSA: If you wish to submit any information under a claim of confidentiality, you should submit three copies of your complete submission, including the information you claim to be CBI, to the Chief Counsel, NHTSA, at the address given above under **FOR FURTHER INFORMATION CONTACT**. When you send a comment containing CBI, you should include a cover letter setting forth the information specified in our CBI regulation. In addition, you should submit a copy from which you have deleted the claimed CBI to the Docket by one of the methods set forth above.

EPA: Do not submit CBI to EPA through *http://www.regulations.gov* or e-mail. Clearly mark the part or all of the information that you claim to be CBI. For CBI in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

(5) Will the agencies consider late comments?

NHTSA and EPA will consider all comments received before the close of business on the comment closing date indicated above under **DATES**. To the extent practicable, we will also consider comments received after that date. If interested persons believe that any new information the agency places in the docket affects their comments, they may submit comments after the closing date concerning how the agency should consider that information for the final rules. However, the agencies' ability to consider any such late comments in this rulemaking will be limited due to the time frame for issuing the final rules.

If a comment is received too late for us to practicably consider in developing the final rules, we will consider that comment as an informal suggestion for future rulemaking action.

[2] Optical character recognition (OCR) is the process of converting an image of text, such as a scanned paper document or electronic fax file, into computer-editable text.

[3] This statement constitutes notice to commenters pursuant to 40 CFR 2.209(c) that EPA will share confidential business information received with NHTSA unless commenters expressly specify that they wish to submit their CBI only to EPA and not to both agencies.

How can I read the comments submitted by other people?

You may read the materials placed in the dockets for this document (e.g., the comments submitted in response to this document by other interested persons) at any time by going to *http://www.regulations.gov.* Follow the online instructions for accessing the dockets. You may also read the materials at the NHTSA Docket Management Facility or the EPA Docket Center by going to the street addresses given above under **ADDRESSES.**

How do I participate in the public hearings?

EPA and NHTSA will jointly host two public hearings. The November 15 hearing will be held at the Millennium Knickerbocker Hotel Chicago, 163 East Walton Place (at N. Michigan Ave.), Chicago, Illinois 60611. The November 18, 2010 hearing will be held at the Hyatt Regency Cambridge, 575 Memorial Drive, Cambridge, Massachusetts 02139–4896. If you would like to present oral testimony at a public hearing, we ask that you notify both the NHTSA and EPA contact persons listed under **FOR FURTHER INFORMATION CONTACT** at least ten days before the hearing. Once the agencies learn how many people have registered to speak at the public hearings, we will allocate an appropriate amount of time to each participant, allowing time for necessary breaks. For planning purposes, each speaker should anticipate speaking for approximately ten minutes, although we may need to shorten that time if there is a large turnout. We request that you bring three copies of your statement or other material for the agencies' panels. To accommodate as many speakers as possible, we prefer that speakers not use technological aids (e.g., audio-visuals, computer slideshows). In addition, we will reserve a block of time for anyone else in the audience who wants to give testimony.

Each hearing will be held at a site accessible to individuals with disabilities. Individuals who require accommodations such as sign language interpreters should contact the persons listed under **FOR FURTHER INFORMATION CONTACT** section above no later than ten days before the date of the hearing.

EPA and NHTSA will conduct the hearings informally, and technical rules of evidence will not apply. We will arrange for a written transcript of each hearing and keep the official records of the hearings open for 30 days to allow you to submit supplementary information. You may make arrangements for copies of a transcript directly with the court reporter.

C. Additional Information About This Rulemaking

EPA's Advance Notice of Proposed Rulemaking for regulating greenhouse gases under the CAA (see 73 FR 44353, July 30, 2008) included a discussion of possible rulemaking paths for the heavy-duty transportation sector. This notice of proposed rulemaking relies in part on information that was obtained from that notice, which can be found in Public Docket EPA–HQ–OAR–2008–0318. That docket is incorporated into the docket for this action, EPA–HQ–OAR–2010–0162.

Table of Contents

A. Does this action apply to me?
B. Public Participation
C. Additional Information About This Rulemaking
I. Overview
  A. Introduction
  B. Building Blocks of the Heavy-Duty National Program
  C. Summary of the Proposed EPA and NHTSA HD National Program
  D. Summary of Costs and Benefits of the HD National Program
  E. Program Flexibilities
  F. EPA and NHTSA Statutory Authorities
  G. Future HD GHG and Fuel Consumption Rulemakings
II. Proposed GHG and Fuel Consumption Standards for Heavy-Duty Engines and Vehicles
  A. What vehicles would be affected?
  B. Class 7 and 8 Combination Tractors
  C. Heavy-Duty Pickup Trucks and Vans
  D. Class 2b–8 Vocational Vehicles
  E. Other Standards Provisions
III. Feasibility Assessments and Conclusions
  A. Class 7–8 Combination Tractor
  B. Heavy-Duty Pickup Trucks and Vans
  C. Class 2b–8 Vocational Vehicles
IV. Proposed Regulatory Flexibility Provisions
  A. Averaging, Banking, and Trading Program
  B. Additional Proposed Flexibility Provisions
V. NHTSA and EPA Proposed Compliance, Certification, and Enforcement Provisions
  A. Overview
  B. Heavy-Duty Pickup Trucks and Vans
  C. Heavy-Duty Engines
  D. Class 7 and 8 Combination Tractors
  E. Class 2b–8 Vocational Vehicles
  F. General Regulatory Provisions
  G. Penalties
VI. How would this proposed program impact fuel consumption, GHG emissions, and climate change?
  A. What methodologies did the agencies use to project GHG emissions and fuel consumption impacts?
  B. MOVES Analysis
  C. What are the projected reductions in fuel consumption and GHG emissions?
  D. Overview of Climate Change Impacts From GHG Emissions
  E. Changes in Atmospheric CO_2 Concentrations, Global Mean Temperature, Sea Level Rise, and Ocean pH Associated With the Proposal's GHG Emissions Reductions
VII. How would this proposal impact Non-GHG emissions and their associated effects?
  A. Emissions Inventory Impacts
  B. Health Effects of Non-GHG Pollutants
  C. Environmental Effects of Non-GHG Pollutants
  D. Air Quality Impacts of Non-GHG Pollutants
VIII. What are the agencies' estimated cost, economic, and other impacts of the proposed program?
  A. Conceptual Framework for Evaluating Impacts
  B. Costs Associated With the Proposed Program
  C. Indirect Cost Multipliers
  D. Cost Per Ton of Emissions Reductions
  E. Impacts of Reduction in Fuel Consumption
  F. Class Shifting and Fleet Turnover Impacts
  G. Benefits of Reducing CO_2 Emissions
  H. Non-GHG Health and Environmental Impacts
  I. Energy Security Impacts
  J. Other Impacts
  K. Summary of Costs and Benefits From the Greenhouse Gas Emissions Perspective
  L. Summary of Costs and Benefits From the Fuel Efficiency Perspective
IX. Analysis of Alternatives
  A. What are the alternatives that the agencies considered?
  B. How do these alternatives compare in overall GHG emissions reductions, fuel efficiency and cost?
  C. How would the agencies include commercial trailers, as described in alternative 7?
X. Recommendations From the 2010 NAS Report
  A. Overview
  B. What were the major findings and recommendations of the 2010 NAS report, and how is the proposed HD national program consistent with them?
XI. Statutory and Executive Order Reviews
XII. Statutory Provisions and Legal Authority
  A. EPA
  B. NHTSA

I. Overview

A. Introduction

EPA and NHTSA ("the agencies") are announcing a first-ever program to reduce greenhouse gas (GHG) emissions and improve fuel efficiency in the heavy-duty highway vehicle sector. This broad sector—ranging from large pickups to sleeper-cab tractors—together represent the second largest contributor to oil consumption and GHG emissions, after light-duty passenger cars and trucks.

In a recent memorandum to the Administrators of EPA and NHTSA (and the Secretaries of Transportation and

Energy), the President stated that "America has the opportunity to lead the world in the development of a new generation of clean cars and trucks through innovative technologies and manufacturing that will spur economic growth and create high-quality domestic jobs, enhance our energy security, and improve our environment."[4] Earlier this year, EPA and NHTSA established for the first time a national program to sharply reduce GHG emissions and fuel consumption from passenger cars and light trucks. Now, each agency is proposing rules that together would create a strong and comprehensive Heavy-Duty National Program ("HD National Program") designed to address the urgent and closely intertwined challenges of dependence on oil, energy security, and global climate change. At the same time, the proposed program would enhance American competitiveness and job creation, benefit consumers and businesses by reducing costs for transporting goods, and spur growth in the clean energy sector.

A number of major HD truck and engine manufacturers representing the vast majority of this industry, and the California Air Resources Board (California ARB), sent letters to EPA and NHTSA supporting a HD National Program based on a common set of principles. In the letters, the stakeholders commit to working with the agencies and with other stakeholders toward a program consistent with common principles, including:

- Increased use of existing technologies to achieve significant GHG emissions and fuel consumption reductions;
- A program that starts in 2014 and is fully phased in by 2018;
- A program that works towards harmonization of methods for determining a vehicle's GHG and fuel efficiency, recognizing the global nature of the issues and the industry;
- Standards that recognize the commercial needs of the trucking industry; and
- Incentives leading to the early introduction of advanced technologies.

The proposed HD National Program builds on many years of heavy-duty engine and vehicle technology development to achieve what the agencies believe would be the greatest degree of GHG emission and fuel consumption reduction appropriate, feasible, and cost-effective for the model years in question. Still, by proposing to take aggressive steps that are reasonably possible now, based on the technological opportunities and pathways that present themselves during these model years, the agencies and industry will also continue learning about emerging opportunities for this complex sector to further reduce GHG emissions and fuel consumption. For example, NHTSA and EPA have stopped short of proposing fuel consumption and GHG emissions standards for trucks based on use of hybrid powertrain technology. Similarly, we expect that the agencies will participate in efforts to improve our ability to accurately characterize the actual in-use fuel consumption and emissions of this complex sector. As such opportunities emerge in the coming years, we expect that we will propose a second phase of provisions in the future to reinforce these developments and maximize the achieved reductions in GHG emissions and fuel consumption reduction for the mid- and longer-term time frame.

In the May 21 memorandum, the President requested the Administrators of EPA and NHTSA to "immediately begin work on a joint rulemaking under the Clean Air Act (CAA) and the Energy Independence and Security Act of 2007 (EISA) to establish fuel efficiency and greenhouse gas emissions standards for commercial medium- and heavy-duty vehicles beginning with the 2014 model year (MY), with the aim of issuing a final rule by July 30, 2011." This proposed rulemaking is consistent with this Presidential Memorandum, with each agency proposing rules under its respective authority that together comprise a coordinated and comprehensive HD National Program.

Heavy-duty vehicles move much of the nation's freight and carry out numerous other tasks, including utility work, concrete delivery, fire response, refuse collection, and many more. Heavy-duty vehicles are primarily powered by diesel engines, although about 37 percent of these vehicles are powered by gasoline engines. Heavy-duty trucks[5] have always been an important part of the goods movement infrastructure in this country and have experienced significant growth over the last decade related to increased imports and exports of finished goods and increased shipping of finished goods to homes through Internet purchases.

The heavy-duty sector is extremely diverse in several respects, including types of manufacturing companies involved, the range of sizes of trucks and engines they produce, the types of work the trucks are designed to perform, and the regulatory history of different subcategories of vehicles and engines. The current heavy-duty fleet encompasses vehicles from the "18-wheeler" combination tractors one sees on the highway to school and transit buses, to vocational vehicles such as utility service trucks, as well as the largest pickup trucks and vans.

For purposes of this preamble, the term "heavy-duty" or "HD" is used to apply to all highway vehicles and engines that are not within the range of light-duty vehicles, light-duty trucks, and medium-duty passenger vehicles (MDPV) covered by the GHG and Corporate Average Fuel Economy (CAFE) standards issued for MY 2012–2016.[6] It also does not include motorcycles. Thus, in this notice, unless specified otherwise, the heavy-duty category incorporates all vehicles with a gross vehicle weight rating above 8,500 pounds, and the engines that power them, except for MDPVs.[7] We note that the Energy Independence and Security Act of 2007 requires NHTSA to set standards for "commercial medium- and heavy-duty on-highway vehicles and work trucks."[8] NHTSA interprets this to include all segments of the heavy-duty category described above, except for recreational vehicles, such as motor homes, since recreational vehicles are not commercial.

Setting GHG emissions standards for the heavy-duty sector will help to address climate change, which is widely viewed as a significant long-term threat to the global environment. As summarized in the Technical Support Document for EPA's Endangerment and Cause or Contribute Findings under Section 202(a) of the Clean Air Act, anthropogenic emissions of GHGs are very likely (a 90 to 99 percent probability) the cause of most of the

[4] Improving Energy Security, American Competitiveness and Job Creation, and Environmental Protection Through a Transformation of Our Nation's Fleet of Cars And Trucks," Issued May 21, 2010, published at 75 FR 29399, May 26, 2010.

[5] In this rulemaking, EPA and NHTSA use the term "truck" in a general way, referring to all categories of regulated heavy-duty highway vehicles (including buses). As such, the term is generally interchangeable with "heavy-duty vehicle."

[6] Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards; Final Rule 75 FR 25323,(May 7, 2010).

[7] The CAA defines heavy-duty as a truck, bus or other motor vehicle with a gross vehicle weight rating exceeding 6,000 pounds (CAA section 202(b)(3)). The term HD as used in this action refers to a subset of these vehicles and engines.

[8] 49 U.S.C. 32902(k)(2). "Commercial medium- and heavy-duty on-highway vehicles" are defined as on-highway vehicles with a gross vehicle weight rating of 10,000 pounds or more, while "work trucks" are defined as vehicles rated between 8,500 and 10,000 pounds gross vehicle weight that are not MDPVs. *See* 49 U.S.C. 32901(a)(7) and (a)(19).

observed global warming over the last 50 years.[9] The primary GHGs of concern are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). Mobile sources emitted 31 percent of all U.S. GHGs in 2007 (transportation sources, which do not include certain off-highway sources, account for 28 percent) and have been the fastest-growing source of U.S. GHGs since 1990.[10] Mobile sources addressed in the recent endangerment and contribution findings under CAA section 202(a)—light-duty vehicles, heavy-duty trucks, buses, and motorcycles—accounted for 23 percent of all U.S. GHG emissions in 2007.[11] Heavy-duty vehicles emit CO_2, CH_4, N_2O, and HFCs and are responsible for nearly 19 percent of all mobile source GHGs (nearly 6% of all U.S. GHGs) and about 25 percent of section 202(a) mobile source GHGs. For heavy-duty vehicles in 2007, CO_2 emissions represented more than 99 percent of all GHG emissions (including HFCs).[12]

Setting fuel consumption standards for the heavy-duty sector, pursuant to NHTSA's EISA authority, will also improve our energy security by reducing our dependence on foreign oil, which has been a national objective since the first oil price shocks in the 1970s. Net petroleum imports now account for approximately 60 percent of U.S. petroleum consumption. World crude oil production is highly concentrated, exacerbating the risks of supply disruptions and price shocks. Tight global oil markets led to prices over $100 per barrel in 2008, with gasoline reaching as high as $4 per gallon in many parts of the United States, causing financial hardship for many families and businesses. The export of U.S. assets for oil imports continues to be an important component of the historically unprecedented U.S. trade deficits. Transportation accounts for about 72 percent of U.S. petroleum consumption. Heavy-duty vehicles account for about 17 percent of transportation oil use, which means that they alone account for about 12 percent of all U.S. oil consumption.[13]

In developing this joint proposal, the agencies have worked with a large and diverse group of stakeholders representing truck and engine manufacturers, trucking fleets, environmental organizations, and States including the State of California.[14] While our discussions covered a wide range of issues and viewpoints, one widespread recommendation was that the two agencies should develop a common Federal program with consistent standards of performance regarding fuel consumption and GHG emissions. The HD National Program we are proposing in this notice is consistent with that goal. Further it is our expectation based on our ongoing work with the State of California that the California ARB will be able to adopt regulations equivalent in practice to those of this HD National Program, just as it has done for past EPA regulation of heavy-duty trucks and engines. NHTSA and EPA are committed to continuing to work with California ARB throughout this rulemaking process to help ensure our final rules can lead to that outcome.

In light of the industry's diversity, and consistent with the recommendations of the National Academy of Sciences (NAS) as discussed further below, the agencies are proposing a HD National Program that recognizes the different sizes and work requirements of this wide range of heavy-duty vehicles and their engines. NHTSA's proposed fuel consumption standards and EPA's proposed GHG standards would apply to manufacturers of the following types of heavy-duty vehicles and their engines; the proposed provisions for each of these are described in more detail below in this section:

- Heavy-Duty Pickup Trucks and Vans.
- Combination Tractors.
- Vocational Vehicles.

As in the recent light-duty vehicle rule establishing CAFE and GHG standards for MYs 2012–2016 light-duty vehicles, EPA's and NHTSA's proposed standards for the heavy-duty sector are largely harmonized with one another due to the close and direct relationship between improving the fuel efficiency of these vehicles and reducing their CO_2 tailpipe emissions. For all vehicles that consume carbon-based fuels, the amount of CO_2 emissions is essentially constant per gallon for a given type of fuel that is consumed. The more efficient a heavy-duty truck is in completing its work, the lower its environmental impact will be, because the less fuel consumed to move cargo a given distance, the less CO_2 emitted into the air. The technologies available for improving fuel efficiency, and therefore for reducing both CO_2 emissions and fuel consumption, are one and the same.[15] Because of this close technical relationship, NHTSA and EPA have been able to rely on jointly-developed assumptions, analyses, and analytical conclusions to support the standards and other provisions that NHTSA and EPA are proposing under our separate legal authorities.

The timelines for the implementation of the proposed NHTSA and EPA standards are also closely coordinated. EPA's proposed GHG emission standards would begin in model year 2014. In order to provide for the four full model years of regulatory lead time required by EISA, as discussed in Section I.B.(5) below, NHTSA's proposed fuel consumption standards would be voluntary in model years 2014 and 2015, becoming mandatory in model year 2016, except for diesel engine standards which would be voluntary in model years 2014, 2015 and 2016, becoming mandatory in model year 2017. Both agencies are also allowing early compliance in model year 2013. A detailed discussion of how the proposed standards are consistent with each agency's respective statutory requirements and authorities is found later in this notice.

Neither EPA nor NHTSA is proposing standards at this time for GHG emissions or fuel consumption, respectively, for heavy-duty commercial trailers or for vehicles or engines manufactured by small businesses. However, the agencies are considering proposing such standards in a future rulemaking, and request comment on such an action later in this preamble.

B. Building Blocks of the Heavy-Duty National Program

The standards that are being proposed in this notice represent the first time

[14] Pursuant to DOT Order 2100.2, NHTSA will place a memorandum recording those meetings that it attended and documents submitted by stakeholders which formed a basis for this proposal and which can be made publicly available in its docket for this rulemaking. DOT Order 2100.2 is available at *http://www.reg-group.com/library/DOT2100-2.PDF*.

[15] However, as discussed below, in addition to addressing CO_2, the EPA's proposed standards also include provisions to address other GHGs (nitrous oxide, methane, and air conditioning refrigerant emissions), as required by the Endangerment Finding under the CAA. *See* Section II.

that NHTSA and EPA would regulate the heavy-duty sector for fuel consumption and GHG emissions, respectively. The proposed HD National Program is rooted in EPA's prior regulatory history, the SmartWay® Transport Partnership program, and extensive technical and engineering analyses done at the Federal level. This section summarizes some of the most important of these precursors and foundations for this HD National Program.

(1) EPA's Traditional Heavy-Duty Regulatory Program

Since the 1980s, EPA has acted several times to address tailpipe emissions of criteria pollutants and air toxics from heavy-duty vehicles and engines. During the last 18 years, these programs have primarily addressed emissions of particulate matter (PM) and the primary ozone precursors, hydrocarbons (HC) and oxides of nitrogen (NO_X). These programs have successfully achieved significant and cost-effective reductions in emissions and associated health and welfare benefits to the nation. They have been structured in ways that account for the varying circumstances of the engine and truck industries. As required by the CAA, the emission standards implemented by these programs include standards that apply at the time that the vehicle or engine is sold as well as standards that apply in actual use. As a result of these programs, new vehicles meeting current emission standards will emit 98% less NO_X and 99% less PM than new trucks 20 years ago. The resulting emission reductions provide significant public health and welfare benefits. The most recent EPA regulations which were fully phased-in in 2010 are projected to provide greater than $70 billion in health and welfare benefits annually in 2030 alone (66 FR 5002, January 18, 2001).

EPA's overall program goal has always been to achieve emissions reductions from the complete vehicles that operate on our highways. The agency has often accomplished this goal for many heavy-duty truck categories through the regulation of heavy-duty engine emissions. A key part of this success has been the development over many years of a well-established, representative, and robust set of engine test procedures that industry and EPA now routinely use to measure emissions and determine compliance with emission standards. These test procedures in turn serve the overall compliance program that EPA implements to help ensure that emissions reductions are being achieved. By isolating the engine from the many variables involved when the engine is installed and operated in a HD vehicle, EPA has been able to accurately address the contribution of the engine alone to overall emissions. The agencies discuss below how the proposed program incorporates the existing engine-based approach used for criteria emissions regulations, as well as new vehicle-based approaches.

(2) NHTSA's Responsibilities To Regulate Heavy-Duty Fuel Efficiency Under EISA

With the passage of the EISA in December 2007, Congress laid out a framework developing the first fuel efficiency regulations for HD vehicles. As codified at 49 U.S.C. 32902(k), EISA requires NHTSA to develop a regulatory system for the fuel economy of commercial medium-duty and heavy-duty on-highway vehicles and work trucks in three steps: A study by NAS, a study by NHTSA, and a rulemaking to develop the regulations themselves.[16]

Specifically, section 102 of EISA, codified at 49 U.S.C. 32902(k)(2), states that not later than two years after completion of the NHTSA study, DOT (by delegation, NHTSA), in consultation with the Department of Energy (DOE) and EPA, shall develop a regulation to implement a "commercial medium-duty and heavy-duty on-highway vehicle and work truck fuel efficiency improvement program designed to achieve the maximum feasible improvement." NHTSA interprets the timing requirements as permitting a regulation to be developed earlier, rather than as requiring the agency to wait a specified period of time.

Congress specified that as part of the "HD fuel efficiency improvement program designed to achieve the maximum feasible improvement," NHTSA must adopt and implement:

- Appropriate test methods;
- Measurement metrics;
- Fuel economy standards; [17] and
- Compliance and enforcement protocols.

Congress emphasized that the test methods, measurement metrics, standards, and compliance and enforcement protocols must all be *appropriate, cost-effective,* and *technologically feasible* for commercial medium-duty and heavy-duty on-highway vehicles and work trucks. NHTSA notes that these criteria are different from the "four factors" of 49 U.S.C. 32902(f) [18] that have long governed NHTSA's setting of fuel economy standards for passenger cars and light trucks, although many of the same factors are considered under each of these provisions.

Congress also stated that NHTSA may set separate standards for different classes of HD vehicles, which the agency interprets broadly to allow regulation of HD engines in addition to HD vehicles, and provided requirements new to 49 U.S.C. 32902 in terms of timing of regulations, stating that the standards adopted as a result of the agency's rulemaking shall provide not less than four full model years of regulatory lead time, and three full model years of regulatory stability.

(3) National Academy of Sciences Report on Heavy-Duty Technology

As mandated by Congress in EISA, the National Research Council (NRC) under NAS recently issued a report to NHTSA and to Congress evaluating medium-duty and heavy-duty truck fuel efficiency improvement opportunities, titled "Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles." [19] This study covers the same universe of heavy-duty vehicles that is the focus of this proposed rulemaking—all highway vehicles that are not light-duty, MDPVs, or motorcycles. The agencies have carefully evaluated the research supporting this report and its recommendations and have incorporated them to the extent practicable in the development of this rulemaking. NHTSA's and EPA's detailed assessments of each of the relevant recommendations of the NAS

[16] The NAS study is described below, and the NHTSA study accompanies this NPRM.

[17] In the context of 49 U.S.C. 32902(k), NHTSA interprets "fuel economy standards" as referring not specifically to miles per gallon, as in the light-duty vehicle context, but instead more broadly to account as accurately as possible for MD/HD fuel *efficiency.* While it is a metric that NHTSA considered for setting MD/HD fuel efficiency standards, the agency recognizes that miles per gallon may not be an appropriate metric given the work that MD/HD vehicles are manufactured to do. NHTSA is thus proposing alternative metrics as discussed further below.

[18] 49 U.S.C. 32902(f) states that "When deciding maximum feasible average fuel economy under this section, [NHTSA] shall consider technological feasibility, economic practicability, the effect of other motor vehicle standards of the Government on fuel economy, and the need of the United States to conserve energy."

[19] Committee to Assess Fuel Economy Technologies for Medium- and Heavy-Duty Vehicles; National Research Council; Transportation Research Board (2010). "Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles," (hereafter, "NAS Report"). Washington, DC, The National Academies Press. Available electronically from the National Academies Press Web site at *http://www.nap.edu/catalog.php?record_id=12845* (last accessed September 10, 2010).

report are discussed in Section X of this preamble and in the NHTSA HD study accompanying this notice of proposed rulemaking (NPRM).

(4) The Recent NHTSA and EPA Light-Duty National GHG Program

On April 1, 2010, EPA and NHTSA finalized the first-ever National Program for light-duty cars and trucks, which set GHG emissions and fuel economy standards for model years 2012–2016. The agencies have used the light-duty National Program as a model for this proposed HD National Program in many respects. This is most apparent in the case of heavy-duty pickups and vans, which are very similar to the light-duty trucks addressed in the light-duty National Program both technologically as well as in terms of how they are manufactured (*i.e.,* the same company often makes both the vehicle and the engine). For these vehicles, there are close parallels to the light-duty program in how the agencies have developed our respective proposed standards and compliance structures, although in this proposal each agency proposes standards based on attributes other than vehicle footprint, as discussed below.

Due to the diversity of the remaining HD vehicles, there are fewer parallels with the structure of the light-duty program. However, the agencies have maintained the same collaboration and coordination that characterized the development of the light-duty program. Most notably, as with the light-duty program, manufacturers will be able to design and build to meet a closely coordinated Federal program, and avoid unnecessarily duplicative testing and compliance burdens.

(5) EPA's SmartWay Program

EPA's voluntary SmartWay Transport Partnership program encourages shipping and trucking companies to take actions that reduce fuel consumption and CO_2 by working with the shipping community and the freight sector to identify low carbon strategies and technologies, and by providing technical information, financial incentives, and partner recognition to accelerate the adoption of these strategies. Through the SmartWay program, EPA has worked closely with truck manufacturers and truck fleets to develop test procedures to evaluate vehicle and component performance in reducing fuel consumption and has conducted testing and has established test programs to verify technologies that can achieve these reductions. Over the last six years, EPA has developed hands-on experience testing the largest heavy-duty trucks and evaluating improvements in tire and vehicle aerodynamic performance. In 2010, according to vehicle manufacturers, approximately five percent of new combination heavy-duty trucks will meet the SmartWay performance criteria demonstrating that they represent the pinnacle of current heavy-duty truck reductions in fuel consumption.

In developing this HD National Program, the agencies have drawn from the SmartWay experience, as discussed in detail both in Sections II and III below (*e.g.,* developing test procedures to evaluate trucks and truck components) but also in the draft RIA (estimating performance levels from the application of the best available technologies identified in the SmartWay program). These technologies provide part of the basis for the GHG emission and fuel consumption standards proposed in this rulemaking for certain types of new heavy-duty Class 7 and 8 combination tractors.

In addition to identifying technologies, the SmartWay program includes operational approaches that truck fleet owners as well as individual drivers and their freight customers can incorporate, that the NHTSA and EPA believe will complement the proposed standards. These include such approaches as improved logistics and driver training, as discussed in the draft RIA. This approach is consistent with the one of the three alternative approaches that the NAS recommended be considered. The three approaches were raising fuel taxes, liberalizing truck size and weight restrictions, and encouraging incentives to disseminate information to inform truck drivers about the relationship between driving behavior and fuel savings. Taxes and truck size and weight limits are mandated by public law; as such, these options are outside EPA's and NHTSA's authority to implement. However, complementary operational measures like driver training, which SmartWay does promote, can complement the proposed standards and also provide benefits for the existing truck fleet, furthering the public policy objectives of addressing energy security and climate change.

(6.) Canada's Department of the Environment

The Government of Canada's Department of the Environment (Environment Canada) assisted EPA's development of this proposed rulemaking, by conducting emissions testing of heavy-duty vehicles at Environment Canada test facilities to gather data on a range of possible test cycles.

We expect the technical collaboration with Environment Canada to continue as we address issues raised by stakeholders in response to this NPRM, and as we continue to develop details of certain testing and compliance verification procedures. We may also be able to begin to develop a knowledge base enabling improvement upon this regulatory framework for model years beyond 2018 (for example, improvements to the means of demonstrating compliance). We also expect to continue our collaboration with Environment Canada on compliance issues.

C. Summary of the Proposed EPA and NHTSA HD National Program

When EPA first addressed emissions from heavy-duty trucks in the 1980s, it established standards for engines, based on the amount of work performed (grams of pollutant per unit of work, expressed as grams per brake horsepower-hour or g/bhp-hr).[20] This approach recognized the fact that engine characteristics are the dominant determinant of the types of emissions generated, and engine-based technologies (including exhaust aftertreatment systems) need to be the focus for addressing those emissions. Vehicle-based technologies, in contrast, have less influence on overall truck emissions of the pollutants that EPA has regulated in the past. The engine testing approach also recognized the relatively small number of distinct heavy-duty engine designs, as compared to the extremely wide range of truck designs. EPA concluded at that time that any incremental gain in conventional emission control that could be achieved through regulation of the complete vehicle would be small in comparison to the cost of addressing the many variants of complete trucks that make up the heavy-duty sector—smaller and larger vocational vehicles for dozens of purposes, various designs of combination tractors, and many others.

Addressing GHG emissions and fuel consumption from heavy-duty trucks, however, requires a different approach. Reducing GHG emissions and fuel consumption requires increasing the

[20] The term "brake power" refers to engine torque and power as measured at the interface between the engine's output shaft and the dynamometer. This contrasts with "indicated power", which is a calculated value based on the pressure dynamics in the combustion chamber, not including internal losses that occur due to friction and pumping work. Since the measurement procedure inherently measures brake torque and power, the proposed regulations refer simply to g/hp-hr. This is consistent with our other emission control programs, which generally include standards in g/kW-hr.

inherent efficiency of the engine as well as making changes to the vehicles to reduce the amount of work that the engine needs to do per mile traveled. This thus requires a focus on the entire vehicle. For example, in addition to the basic emissions and fuel consumption levels of the engine, the aerodynamics of the vehicle can have a major impact on the amount of work that must be performed to transport freight at common highway speeds. The 2010 NAS Report recognized this need and recommended a complete-vehicle approach to regulation. As described elsewhere in this preamble, the proposed standards that make up the HD National Program aim to address the complete vehicle, to the extent practicable and appropriate under the agencies' respective statutory authorities, through complementary engine and vehicle standards, in order to reduce the complexity of the regulatory system and achieve the greatest gains as soon as possible.

(1) Brief Overview of the Heavy-Duty Truck Industry

The heavy-duty truck sector spans a wide range of vehicles with often unique form and function. A primary indicator of the extreme diversity among heavy-duty trucks is the range of load-carrying capability across the industry. The heavy-duty truck sector is often subdivided by vehicle weight classifications, as defined by the vehicle's gross vehicle weight rating (GVWR), which is a measure of the combined curb (empty) weight and cargo carrying capacity of the truck.[21] Table I–1 below outlines the vehicle weight classifications commonly used for many years for a variety of purposes by businesses and by several Federal agencies, including the Department of Transportation, the Environmental Protection Agency, the Department of Commerce, and the Internal Revenue Service.

Table I-1: Vehicle Weight Classification

Class	2b	3	4	5	6	7	8
GVWR (lb)	8,501 - 10,000	10,001- 14,000	14,001- 16,000	16,001- 19,500	19,501 -26,000	26,001- 33,000	> 33,001

In the framework of these vehicle weight classifications, the heavy-duty truck sector refers to Class 2b through Class 8 vehicles and the engines that power those vehicles.[22] Unlike light-duty vehicles, which are primarily used for transporting passengers for personal travel, heavy-duty vehicles fill much more diverse operator needs. Heavy-duty pickup trucks and vans (Classes 2b and 3) are used chiefly as work truck and vans, and as shuttle vans, as well as for personal transportation, with an average annual mileage in the range of 15,000 miles. The rest of the heavy-duty sector is used for carrying cargo and/or performing specialized tasks. Commercial "vocational" vehicles, which may span Classes 2b through 8, vary widely in size, including smaller and larger van trucks, utility "bucket" trucks, tank trucks, refuse trucks, urban and over-the-road buses, fire trucks, flat-bed trucks, and dump trucks, among others. The annual mileage of these trucks is as varied as their uses, but for the most part tends to fall in between heavy-duty pickups/vans and the large combination tractors, typically from 15,000 to 150,000 miles per year, although some travel more and some less. Class 7 and 8 combination tractor-trailers—some equipped with sleeper cabs and some not—are primarily used for freight transportation. They are sold as tractors and sometimes run without a trailer in between loads, but most of the time they run with one or more trailers that can carry up to 50,000 pounds or more of payload, consuming significant quantities of fuel and producing significant amounts of GHG emissions. The combination tractor-trailers used in combination applications can travel more than 150,000 miles per year.

EPA and NHTSA have designed our respective proposed standards in careful consideration of the diversity and complexity of the heavy-duty truck industry, as discussed next.

(2) Summary of Proposed EPA GHG Emission Standards and NHTSA Fuel Consumption Standards

As described above, NHTSA and EPA recognize the importance of addressing the entire vehicle in reducing fuel consumption and GHG emissions. At the same time, the agencies understand that the complexity of the industry means that we will need to use different approaches to achieve this goal, depending on the characteristics of each general type of truck. We are therefore proposing to divide the industry into three discrete regulatory categories for purposes of setting our respective standards—combination tractors, heavy-duty pickups and vans, and vocational vehicles—based on the relative degree of homogeneity among trucks within each category. For each regulatory category, the agencies are proposing related but distinct program approaches reflecting the specific challenges that we see for manufacturers in these segments. In the following paragraphs, we discuss EPA's proposed GHG emission standards and NHTSA's proposed fuel consumption standards for the three regulatory categories of heavy-duty vehicles and their engines.

The agencies are proposing test metrics that express fuel consumption and GHG emissions relative to the most important measures of heavy-duty truck utility for each segment, consistent with the recommendation of the 2010 NAS Report that metrics should reflect and account for the work performed by various types of HD vehicles. This approach differs from NHTSA's light-duty program that uses fuel economy as the basis. The NAS committee discussed the difference between fuel economy (a measure of how far a vehicle will go on a gallon of fuel) and fuel consumption (the inverse measure, of how much fuel is consumed in driving a given distance) as potential metrics for MD/HD regulations. The committee concluded that fuel economy would not be a good metric for judging the fuel efficiency of a heavy-duty vehicle, and stated that NHTSA should alternatively consider fuel consumption as the basis for its standards. As a result, for heavy-duty

[21] GVWR describes the maximum load that can be carried by a vehicle, including the weight of the vehicle itself. Heavy-duty vehicles also have a gross combined weight rating (GCWR), which describes the maximum load that the vehicle can haul, including the weight of a loaded trailer and the vehicle itself.

[22] Class 2b vehicles designed as passenger vehicles (Medium Duty Passenger Vehicles, MDPVs) are covered by the light-duty GHG and fuel economy standards and not addressed in this rulemaking.

pickup trucks and vans, EPA and NHTSA are proposing standards on a per-mile basis (g/mile for the EPA standards, gallons/100 miles for the NHTSA standards), as explained in Section I.C.(2)(b) below. For heavy-duty trucks, both combination and vocational, the agencies are proposing standards expressed in terms of the key measure of freight movement, tons of payload miles or, more simply, ton-miles. Hence, for EPA the proposed standards are in the form of the mass of emissions from carrying a ton of cargo over a distance of one mile (g/ton-mi)). Similarly, the proposed NHTSA standards are in terms of gallons of fuel consumed over a set distance (one thousand miles), or gal/1,000 ton-mile. Finally, for engines, EPA is proposing standards in the form of grams of emissions per unit of work (g/bhp-hr), the same metric used for the heavy-duty highway engine standards for criteria pollutants today. Similarly, NHTSA is proposing standards for heavy-duty engines in the form of gallons of fuel consumption per 100 units of work (gal/100 bhp-hr).

Section II below discusses the proposed EPA and NHTSA standards in greater detail.

(a) Class 7 and 8 Combination Tractors

Class 7 and 8 combination tractors and their engines contribute the largest portion of the total GHG emissions and fuel consumption of the heavy-duty sector, approximately 65 percent, due to their large payloads, their high annual miles traveled, and their major role in national freight transport.[23] These vehicles consist of a cab and engine (tractor or combination tractor) and a detachable trailer. In general, reducing GHG emissions and fuel consumption for these vehicles would involve improvements such as aerodynamics and tires and reduction in idle operation, as well as engine-based efficiency improvements.

In general, the heavy-duty combination tractor industry consists of tractor manufacturers (which manufacture the tractor and purchase and install the engine) and trailer manufacturers. These manufacturers are usually separate from each other. We are not aware of any manufacturer that typically assembles both the finished truck and the trailer and introduces the combination into commerce for sale to a buyer. The owners of trucks and trailers are often distinct as well. A typical truck buyer will purchase only the tractor. The trailers are usually purchased and owned by fleets and shippers. This occurs in part because trucking fleets on average maintain 3 trailers per tractor and in some cases as many as 6 or more trailers per tractor. There are also large differences in the kinds of manufacturers involved with producing tractors and trailers. For HD highway tractors and their engines, a relatively limited number of manufacturers produce the vast majority of these products. The trailer manufacturing industry is quite different, and includes a large number of companies, many of which are relatively small in size and production volume. Setting standards for the products involved—tractors and trailers—requires recognition of the large differences between these manufacturing industries, which can then warrant consideration of different regulatory approaches.

Based on these industry characteristics, EPA and NHTSA believe that the most straightforward regulatory approach for combination tractors and trailers is to establish standards for tractors separately from trailers. As discussed below in Section IX, the agencies are proposing standards for the tractors and their engines in this rulemaking, but are not proposing standards for trailers in this rulemaking. The agencies are requesting comment on potential standards for trailers, but will address standards for trailers in a separate rulemaking.

As with the other regulatory categories of heavy-duty vehicles, EPA and NHTSA have concluded that achieving reductions in GHG emissions and fuel consumption from combination tractors requires addressing both the cab and the engine, and EPA and NHTSA each are proposing standards that reflect this conclusion. The importance of the cab is that its design determines the amount of power that the engine must produce in moving the truck down the road. As illustrated in Figure I–1, the loads that require additional power from the engine include air resistance (aerodynamics), tire rolling resistance, and parasitic losses (including accessory loads and friction in the drivetrain). The importance of the engine design is that it determines the basic GHG emissions and fuel consumption performance of the engine for the variety of demands placed on the engine, regardless of the characteristics of the cab in which it is installed. The agencies intend for the proposed standards to result in the application of improved technologies for lower GHG emissions and fuel consumption for both the cab and the engine.

[23] The vast majority of combination tractor-trailers are used in highway applications, and these vehicles are the focus of this proposed program. A small fraction of combination tractors are used in off-road applications and are treated differently, as described in Section II.

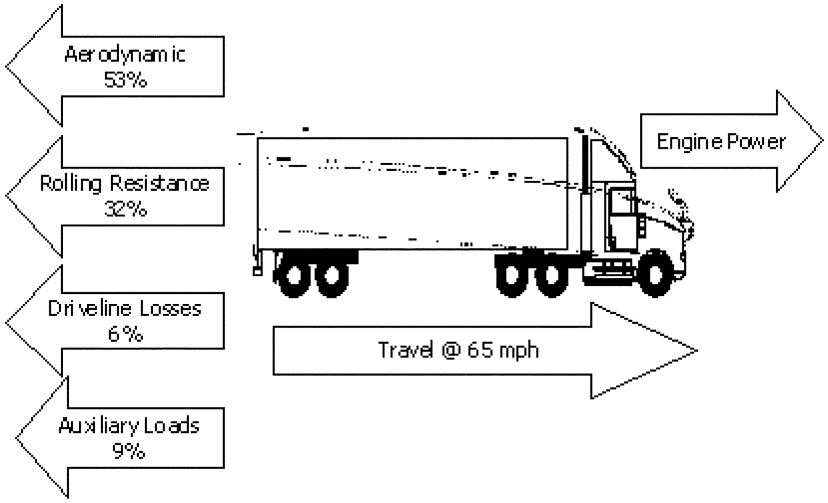

Figure I-1: Combination Tractor and Trailer Loads[24]

Accordingly, for Class 7 and 8 combination tractors, the agencies are each proposing two sets of standards. For vehicle-related emissions and fuel consumption, the agencies are proposing that tractor manufacturers meet respective vehicle-based standards. Compliance with the vehicle standard would typically be determined based on a customized vehicle simulation model, called the Greenhouse gas Emissions Model (GEM), which is consistent with the NAS Report recommendations to require compliance testing for combination tractors using vehicle simulation rather than chassis dynamometer testing. This compliance model was developed by EPA specifically for this proposal. It is an accurate and cost-effective alternative to measuring emissions and fuel consumption while operating the vehicle on a chassis dynamometer. Instead of using a chassis dynamometer as an indirect way to evaluate real-world operation and performance, various characteristics of the vehicle are measured and these measurements are used as inputs to the model. These characteristics relate to key technologies appropriate for this subcategory of truck—including aerodynamic features, weight reductions, tire rolling resistance, the presence of idle-reducing technology, and vehicle speed limiters. The model would also assume the use of a representative typical engine, rather than a vehicle-specific engine, because engines are regulated separately and include an averaging, banking, and trading program separate from the vehicle program. The model and appropriate inputs would be used to quantify the overall performance of the vehicle in terms of CO_2 emissions and fuel consumption. The model's development and design, as well as the sources for inputs and the evaluation of the model's accuracy, are discussed in detail in Section II below and in Chapter 4 of the draft RIA.

EPA and NHTSA also considered developing respective alternative standards based on the direct testing of the emissions and fuel consumption of the entire vehicle for this category of vehicles, as measured using a chassis test procedure. This would be similar to the proposed approach for standards for HD pickups and vans discussed below. The agencies believe that such an approach warrants continued consideration. However, the agencies are not prepared to propose chassis-test-based standards at this time, primarily because of the very small number of chassis-test facilities that currently exist, but rather are proposing only the tractor standards and the engine-based standards discussed above. The agencies seek comment on the potential benefits and trade-offs of chassis-test-based standards for combination tractors.

(1) Proposed Standards for Class 7 and 8 Combination Tractors

The vehicle standards that EPA and NHTSA are proposing for Class 7 and 8 combination tractor manufacturers are based on several key attributes related to GHG emissions and fuel consumption that we believe reasonably represent the many differences in utility among these vehicles. The proposed standards differ depending on GVWR (*i.e.,* whether the truck is Class 7 or Class 8), the height of the roof of the cab, and whether it is a "day cab" or a "sleeper cab." These later two attributes are important because the height of the roof, designed to correspond to the height of the trailer, significantly affects air resistance, and a sleeper cab generally corresponds to the opportunity for extended duration idle emission and fuel consumption improvements.

Thus, the agencies have created nine subcategories within the Class 7 and 8 combination tractor category based on the differences in expected emissions and fuel consumption associated with the key attributes of GVWR, cab type, and roof height. Table I–2 presents the agencies' respective proposed standards for combination tractor manufacturers for the 2017 model year for illustration.

BILLING CODE 6560–50–P

[24] Adapted from, Figure 4.1. Class 8 Truck Energy Audit, Technology Roadmap for the 21st Century Truck Program: A Government-Industry Research Partnership, 21CT–001, December 2000.

Table I-2: Heavy-duty Combination Tractor EPA Emissions Standards (g CO_2/ton-mile) and NHTSA Fuel Consumption Standards (gal/1,000 ton-mile)

2017 Model Year CO_2 Grams per Ton-Mile			
	Day Cab		Sleeper Cab
	Class 7	Class 8	Class 8
Low Roof	103	78	64
Mid Roof	103	78	69
High Roof	116	86	71
2017 Model Year Gallons of Fuel per 1,000 Ton-Mile			
	Day Cab		Sleeper Cab
	Class 7	Class 8	Class 8
Low Roof	10.1	7.7	6.3
Mid Roof	10.1	7.7	6.8
High Roof	11.4	8.5	7.0

In addition, the agencies are proposing separate performance standards for the engines manufactured for use in these trucks. EPA's proposed engine-based CO_2 standards and NHTSA's proposed engine-based fuel consumption standards would vary based on the expected weight class and usage of the truck into which the engine would be installed. EPA is also proposing engine-based N_2O and CH_4 standards for manufacturers of the engines used in combination tractors. EPA is proposing separate engine-based standards for these GHGs because the agency believes that N_2O and CH_4 emissions are technologically related solely to the engine, fuel, and emissions aftertreatment systems, and the agency is not aware of any influence of vehicle-based technologies on these emissions. However, NHTSA is not incorporating standards related to these GHGs due to their lack of influence on fuel consumption. EPA expects that manufacturers of current engine technologies would be able to comply with the proposed "cap" standards with little or no technological improvements; the value of the standards would be to prevent significant increases in these emissions as alternative technologies are developed and introduced in the future. Compliance with the proposed EPA engine-based CO_2 standards and the proposed NHTSA fuel consumption standards, as well as the proposed EPA N_2O and CH_4 standards, would be determined using the appropriate EPA engine test procedure, as discussed in Section II below.

As with the other categories of heavy-duty vehicles, EPA and NHTSA are proposing respective standards that would apply to Class 7 and 8 trucks at the time of production (as in Table I–2, above). In addition, EPA is proposing separate standards that would apply for a specified period of time in use. All of the proposed standards for these trucks, as well as details about the proposed provisions for certification and implementation of these standards, are discussed in more detail in Sections II, III, IV, and V below and in the draft RIA.

(ii) EPA Proposed Air Conditioning Leakage Standard for Class 7 and 8 Combination Tractors

In addition to the proposed EPA tractor- and engine-based standards for CO_2 and engine-based standards for N_2O, and CH_4 emissions, EPA is also proposing a separate standard to reduce leakage of HFC refrigerant from cabin air conditioning systems from combination tractors, to apply to the tractor manufacturer. This standard would be independent of the CO_2 tractor standard, as discussed below. Because the current refrigerant used widely in all these systems has a very high global warming potential, EPA is concerned about leakage of refrigerant over time.[25]

Because the interior volume to be cooled for most of these truck cabins is similar to that of light-duty trucks, the size and design of current truck A/C systems is also very similar. The proposed compliance approach for Class 7 and 8 tractors is therefore similar to that in the light-duty rule in that these proposed standards are design-based. Manufacturers would choose technologies from a menu of leak-reducing technologies sufficient to comply with the standard, as opposed to using a test to measure performance.

However, the proposed heavy-duty A/C provisions differ in two important ways from those established in the light-duty rule. First, the light-duty provisions were established as voluntary ways to generate credits towards the CO_2 g/mi standard, and EPA took into account the expected use of such credits in establishing the CO_2 emissions standards. In this rule, EPA is proposing that manufacturers actually meet a standard—as opposed to having the opportunity to earn a credit—for A/C refrigerant leakage. Thus, for this rule, refrigerant leakage is not accounted for in the development of the proposed CO_2 standards. We are taking this approach here recognizing that while the benefits of leakage control are almost identical between light-duty and heavy-duty vehicles on a per vehicle basis, these benefits on a per mile basis expressed as a percentage of overall GHG emissions are much smaller for heavy-duty vehicles due to their much higher CO_2 emissions rates and higher annual mileage when compared to light-duty vehicles. Hence a credit-based approach as done for light-duty vehicles would provide less motivation for manufacturers to install low leakage systems even though such systems represent a highly cost effective means to control GHG emissions. The second difference relates the expression of the leakage rate. The light-duty A/C leakage standard is expressed in terms of grams per year. For this heavy-duty rule, however, because of the wide variety of system designs and arrangements, a one-size-fits-all gram per year standard would likely be much less relevant, so EPA believes it is more appropriate to propose a standard in terms of percent of total refrigerant leakage per year. This requires the total refrigerant capacity of

[25] The global warming potential for HFC–134a refrigerant of 1430 used in this proposal is consistent with the Intergovernmental Panel on Climate Change Fourth Assessment Report.

the A/C system to be taken into account in determining compliance. EPA believes that this proposed approach—a standard instead of a credit, and basing the standard on percent leakage over time—is more appropriate for heavy-duty tractors than the light-duty vehicle approach and that it will achieve the desired reductions in refrigerant leakage. Compliance with the standard would be determined through a showing by the tractor manufacturer that its A/C system incorporated a combination of low-leak technologies sufficient to meet the percent leakage of the standard. This proposed "menu" of technologies is very similar to that established in the light-duty GHG rule.[25]

Finally, EPA is not proposing an A/C system efficiency standard in this heavy-duty rulemaking, although an efficiency credit was a part of the light-duty rule. The much larger emissions of CO_2 from a heavy-duty tractor as compared to those from a light-duty vehicle mean that the relative amount of CO_2 that could be reduced through A/C efficiency improvements is very small. We request comment on this decision and whether EPA should reflect A/C system efficiency in the final program either as a credit or a stand-alone standard based on the same technologies and performance levels as the light-duty program.

A more detailed discussion of A/C related issues is found in Section II of this preamble.

(b) Heavy-Duty Pickup Trucks and Vans (Class 2b and 3)

Heavy-duty vehicles with GVWR between 8,501 and 10,000 lb are classified in the industry as Class 2b motor vehicles per the Federal Motor Carrier Safety Administration definition. As discussed above, Class 2b includes MDPVs that are regulated by the agencies under the light-duty vehicle program, and the agencies are not considering additional requirements for MDPVs in this rulemaking. Heavy-duty vehicles with GVWR between 10,001 and 14,000 lb are classified as Class 3 motor vehicles. Class 2b and Class 3 heavy-duty vehicles (referred to in this proposal as "HD pickups and vans") together emit about 20 percent of today's GHG emissions from the heavy-duty vehicle sector.

About 90 percent of HD pickups and vans are ¾-ton and 1-ton pick-up trucks, 12- and 15-passenger vans, and large work vans that are sold by vehicle manufacturers as complete vehicles, with no secondary manufacturer making substantial modifications prior to registration and use. These vehicle manufacturers are companies with major light-duty markets in the United States, primarily Ford, General Motors, and Chrysler. Furthermore, the technologies available to reduce fuel consumption and GHG emissions from this segment are similar to the technologies used on light-duty pickup trucks, including both engine efficiency improvements (for gasoline and diesel engines) and vehicle efficiency improvements.

For these reasons, EPA believes it is appropriate to propose GHG standards for HD pickups and vans based on the whole vehicle, including the engine, expressed as grams per mile, consistent with the way these vehicles are regulated by EPA today for criteria pollutants. NHTSA believes it is appropriate to propose corresponding gallons per 100 mile fuel consumption standards that are likewise based on the whole vehicle. This complete vehicle approach being proposed by both agencies for HD pickups and vans is consistent with the recommendations of the NAS Committee in their 2010 Report. EPA and NHTSA also believe that the structure and many of the detailed provisions of the recently finalized light-duty GHG and fuel economy program, which also involves vehicle-based standards, are appropriate for the HD pickup and van GHG and fuel consumption standards as well, and this is reflected in the standards each agency is proposing, as detailed in Section II.C. These proposed commonalities include a new vehicle fleet average standard for each manufacturer in each model year and the determination of these fleet average standards based on production volume-weighted targets for each model, with the targets varying based on a defined vehicle attribute. Vehicle testing would be conducted on chassis dynamometers using the drive cycles from the EPA Federal Test Procedure (Light-duty FTP or "city" test) and Highway Fuel Economy Test (HFET or "highway" test).[27]

For the light-duty GHG and fuel economy standards, the agencies factored in vehicle size by basing the emissions and fuel economy targets on vehicle footprint (the wheelbase times the average track width).[28] For those standards, passenger cars and light trucks with larger footprints are assigned higher GHG and lower fuel economy target levels in acknowledgement of their inherent tendency to consume more fuel and emit more GHGs per mile. For HD pickups and vans, the agencies believe that setting standards based on vehicle attributes is appropriate, but feel that a weight-based metric provides a better attribute than the footprint attribute utilized in the light-duty vehicle rulemaking. Weight-based measures such as payload and towing capability are key among the parameters that characterize differences in the design of these vehicles, as well as differences in how the vehicles will be utilized. Buyers consider these utility-based attributes when purchasing a heavy-duty pick-up or van. EPA and NHTSA are therefore proposing standards for HD pickups and vans based on a "work factor" that combines their payload and towing capabilities, with an added adjustment for 4-wheel drive vehicles.

The agencies are proposing that each manufacturer's fleet average standard would be based on production volume-weighting of target standards for each vehicle that in turn are based on the vehicle's work factor. These target standards would be taken from a set of curves (mathematical functions), presented in Section II.C. EPA is also proposing that the CO_2 standards be phased in gradually starting in the 2014 model year, at 15–20–40–60–100 percent in model years 2014–2015–2016–2017–2018, respectively. The phase-in would take the form of a set of target standard curves, with increasing stringency in each model year, as detailed in Section II.C. The EPA standards proposed for 2018 (including a separate standard to control air conditioning system leakage) represent an average per-vehicle reduction in GHGs of 17 percent for diesel vehicles and 12 percent for gasoline vehicles, compared to a common baseline, as described in Sections II.C and III.B of this preamble. Section II.C also discusses the rationale behind the proposal of separate targets for diesel and gasoline vehicle standards. EPA is also proposing a manufacturer's alternative implementation schedule for

[25] At this time, EPA is considering approval of an alternative refrigerant, HFO–1234yf, which has a very low GWP. The proposed A/C leakage standard is designed to account for use of an alternative, low-GWP refrigerant. If in the future this refrigerant is approved and if it becomes widespread as a substitute for HFC–134a in mobile A/C systems, EPA may propose to revise or eliminate the leakage standard.

[27] The Light-duty FTP is a vehicle driving cycle that was originally developed for certifying light-duty vehicles and subsequently applied to HD chassis testing for criteria pollutants. This contrasts with the Heavy-duty FTP, which refers to the transient engine test cycles used for certifying heavy-duty engines (with separate cycles specified for diesel and spark-ignition engines).

[28] EISA requires CAFE standards for passenger cars and light trucks to be attribute-based; *see* 49 U.S.C. 32902(b)(3)(A).

model years 2016–2018 that parallels and is equivalent to NHTSA's first alternative described below.

NHTSA is proposing to allow manufacturers to select one of two fuel consumption standards alternatives for model years 2016 and later. To meet the EISA statutory requirement for three year regulatory stability, the first alternative would define individual gasoline vehicle and diesel vehicle fuel consumption target curves that would not change for model years 2016 and later. The proposed target curves for this alternative are presented in Section II.C. The second alternative would use target curves that are equivalent to the EPA program in each model year 2016 to 2018. Stringency for the alternatives has been selected to allow a manufacturer, through the use of the credit and deficit carry-forward provisions that the agencies are also proposing, to rely on the same product plans to satisfy either of these two alternatives, and also EPA requirements. NHTSA is also proposing that manufacturers may voluntarily opt into the NHTSA HD pickup and van program in model years 2014 or 2015. For these model years, NHTSA's fuel consumption target curves are equivalent to EPA's target curves.

The proposed EPA and NHTSA standard curves are based on a set of vehicle, engine, and transmission technologies expected to be used to meet the recently established GHG emissions and fuel economy standards for model year 2012–2016 light-duty vehicles, with full consideration of how these technologies would perform in heavy-duty vehicle testing and use. All of these technologies are already in use or have been announced for upcoming model years in some light-duty vehicle models, and some are in use in a portion of HD pickups and vans as well. The technologies include:

- Advanced 8-speed automatic transmissions
- Aerodynamic improvements
- Electro-hydraulic power steering
- Engine friction reductions
- Improved accessories
- Low friction lubricants in powertrain components
- Lower rolling resistance tires
- Lightweighting
- Gasoline direct injection
- Gasoline engine coupled cam phasing
- Diesel aftertreatment optimization
- Air conditioning system leakage reduction (for EPA program only)

See Section III.B for a detailed analysis of these and other potential technologies, including their feasibility, costs, and effectiveness when employed for reducing fuel consumption and CO_2 emissions in HD pickups and vans.

A relatively small number of HD pickups and vans are sold by vehicle manufacturers as incomplete vehicles, without the primary load-carrying device or container attached. We are proposing that these vehicles generally be regulated as Class 2b through 8 vocational vehicles, as described in Section I.C(2)(c), because, like other vocational vehicles, we have little information on baseline aerodynamic performance and expectations for improvement. However, a sizeable subset of these incomplete vehicles, often called cab-chassis vehicles, are sold by the vehicle manufacturers in configurations with many of the components that affect GHG emissions and fuel consumption identical to those on complete pickup truck or van counterparts—including engines, cabs, frames, transmissions, axles, and wheels. We are proposing that these vehicles be included in the chassis-based HD pickup and van program. These proposed provisions are described in Section V.B.

In addition to proposed EPA CO_2 emission standards and the proposed NHTSA fuel consumption standards for HD pickups and vans, EPA is also proposing standards for two additional GHGs, N_2O and CH_4, as well as standards for air conditioning-related HFC emissions. These standards are discussed in more detail in Section II.E. Finally, EPA is proposing standards that would apply to HD pickups and vans in use. All of the proposed standards for these HD pickups and vans, as well as details about the proposed provisions for certification and implementation of these standards, are discussed in Section II.C.

(c) Class 2b–8 Vocational Vehicles

Class 2b–8 vocational vehicles consist of a wide variety of vehicle types. Some of the primary applications for vehicles in this segment include delivery, refuse, utility, dump, and cement trucks; transit, shuttle, and school buses; emergency vehicles, motor homes,[29] tow trucks, among others. These vehicles and their engines contribute approximately 15 percent of today's heavy-duty truck sector GHG emissions.

Manufacturing of vehicles in this segment of the industry is organized in a more complex way than that of the other heavy-duty categories. Class 2b–8 vocational vehicles are often built as a chassis with an installed engine and an installed transmission. Both the engine and transmissions are typically manufactured by other manufacturers and the chassis manufacturer purchases and installs them. Many of the same companies that build Class 7 and 8 tractors are also in the Class 2b–8 chassis manufacturing market. The chassis is typically then sent to a body manufacturer, which completes the vehicle by installing the appropriate feature—such as dump bed, delivery box, or utility bucket—onto the chassis. Vehicle body manufacturers tend to be small businesses that specialize in specific types of bodies or specialized features.

EPA and NHTSA are proposing that in this vocational vehicle category the chassis manufacturers be the focus of the proposed GHG and fuel consumption standards. They play a central role in the manufacturing process, and the product they produce—the chassis with engine and transmissions—includes the primary technologies that affect emissions and fuel consumption. They also constitute a much more limited group of manufacturers for purposes of developing a regulatory program. In contrast, a focus on the body manufacturers would be much less practical, since they represent a much more diverse set of manufacturers, and the part of the vehicle that they add has a very limited impact on opportunities to reduce GHG emissions and fuel consumption (given the limited role that aerodynamics plays in the types of lower speed operation typically found with vocational vehicles). Therefore, the proposed standards in this vocational vehicle category would apply to the chassis manufacturers of all heavy-duty vehicles not otherwise covered by the HD pickup and van standards or Class 7 and 8 combination tractor standards discussed above. The agencies request comment on our proposed focus on chassis manufacturers.

As discussed above, EPA and NHTSA have concluded that reductions in GHG emissions and fuel consumption require addressing both the vehicle and the engine. As discussed above for Class 7 and 8 combination tractors, the agencies are each proposing two sets of standards for Class 2b–8 vocational vehicles. For vehicle-related emissions and fuel consumption, the agencies are proposing standards for chassis manufacturers: EPA CO_2 (g/ton-mile) standards and NHTSA fuel consumption (gal/1,000 ton-mile) standards). Also as in the case of Class 7 and 8 tractors, we propose to use GEM, a customized vehicle simulation model, to determine compliance with the vocational vehicle standards. The primary manufacturer-generated input

[29] Again, we note that NHTSA's proposed fuel consumption standards would not apply to non-commercial vehicles like motor homes.

into the proposed compliance model for this category of trucks would be a measure of tire rolling resistance, as discussed further below, because tire improvements are the primary means of vehicle improvement available at this time. The model would also assume the use of a typical representative engine in the simulation, resulting in an overall value for CO_2 emissions and one for fuel consumption. As is the case for combination tractors, the manufacturers of the engines intended for vocational vehicles would be subject to separate engine-based standards.

(i) Proposed Standards for Class 2b–8 Vocational Vehicles

Based on our analysis and research, the agencies believe that the primary opportunity for reductions in vocational vehicle GHG emissions and fuel consumption will be through improved engine technologies and improved tire rolling resistance. For engines, as proposed for combination tractors, EPA and NHTSA are proposing separate standards for the manufacturers of engines used in Class 2b–8 vocational vehicles. EPA's proposed engine-based CO_2 standards and NHTSA's proposed engine-based fuel consumption standards would vary based on the expected weight class and usage of the truck into which the engine would be installed. The agencies propose to use the groupings EPA currently uses for other heavy-duty engine standards—light heavy-duty, medium heavy-duty, and heavy heavy-duty, as discussed in Section II below.

Tire rolling resistance is closely related to the weight of the vehicle. Therefore, we propose that the vehicle-based standards for these trucks vary according to one key attribute, GVWR. For this initial HD rulemaking, we propose that these standards be based on the same groupings of truck weight classes used for the engine standards—light heavy-duty, medium heavy-duty, and heavy heavy-duty. These groupings are appropriate for the proposed vehicle-based standards because they parallel the general divisions among key engine characteristics, as discussed in Section II.

The agencies intend to monitor the development of and production feasibility of new vehicle-related GHG and fuel consumption reduction improving technologies and consider including these technologies in future rulemakings. As discussed below, we are including provisions to account for and credit the use of hybrid technology as a technology that can reduce emissions and fuel consumption. Hybrid technology can currently be a cost-effective technology in certain specific vocational applications, and the agencies want to recognize and promote the use of this technology. We also are proposing a mechanism whereby credits can be generated by use of other technologies not included in the compliance model. (*See* Sections I.E and IV below.)

Table I–3 presents EPA's proposed CO_2 standards and NHTSA's proposed fuel consumption standards for chassis manufacturers of Class 2b through Class 8 vocational vehicles for the 2017 model year for illustrative purposes.

Table I-3: Proposed 2017 Class 2b-8 Vocational Vehicle EPA CO_2 Standards and NHTSA Fuel Consumption Standards

EPA CO_2 (gram/ton-mile) Standard Effective 2017 Model Year			
	Light Heavy-Duty Class 2b-5	Medium Heavy-Duty Class 6-7	Heavy Heavy-Duty Class 8
CO_2 Emissions	344	204	107
NHTSA Fuel Consumption (gallon per 1,000 ton-mile) Standard Effective 2017 Model Year			
	Light Heavy-Duty Class 2b-5	Medium Heavy-Duty Class 6-7	Heavy Heavy-Duty Class 8
Fuel Consumption	33.8	20.0	10.5

At this time, NHTSA and EPA are not prepared to propose alternative standards based on a whole-vehicle chassis test for vocational vehicles in this initial heavy-duty rulemaking. As discussed above for combination tractors, the primary reason is the very small number of chassis-test facilities that currently exist. Thus, the agencies are proposing only the compliance-model based standards and engine standards discussed above, and seek comment on the appropriateness of chassis-test-based standards for the vocational vehicle category.

For vocational vehicles using hybrid technology, the agencies are proposing two specialized approaches to allow manufacturers to gain credit for the emissions and fuel consumption reductions associated with hybrid technology. One option to account for the reductions associated with vocational vehicles using hybrid technology would compare vehicle-based chassis tests with and without the hybrid technology. The other option would allow a manufacturer to simulate the operation of the hybrid system in an engine-based test. The options are further discussed in Section IV.

The proposed program also provides for opportunities to generate credits for technologies not measured by the GEM, again described more fully in Section IV.

As mentioned above for Class 7 and 8 combination tractors, EPA believes that N_2O and CH_4 emissions are technologically related solely to the engine, fuel, and emissions aftertreatment systems, and the agency is not aware of any influence of vehicle-based technologies on these emissions. Therefore, for Class 2b–8 vocational vehicles, EPA is not proposing separate vehicle-based standards for these GHGs, but is proposing engine-based N_2O and CH_4 standards for manufacturers of the engines to be used in vocational vehicles. EPA expects that

manufacturers of current engine technologies would be able to comply with the proposed "cap" standards with little or no technological improvements; the value of the standards would be in that they would prevent significant increases in these emissions as alternative technologies are developed and introduced in the future. Compliance with the proposed EPA engine-based CO_2 standards and the proposed NHTSA fuel consumption standards, as well as the proposed EPA N_2O and CH_4 standards, would be determined using the appropriate EPA engine test procedure, as discussed in Section II below.

As with the other regulatory categories of heavy-duty vehicles, EPA and NHTSA are proposing standards that would apply to Class 2b–8 vocational vehicles at the time of production, and EPA is proposing standards for a specified period of time in use. All of the proposed standards for these trucks, as well as details about the proposed provisions for certification and implementation of these standards, are discussed in more detail later in this notice and in the draft RIA.

EPA is not proposing A/C refrigerant leakage standards for Class 2b–8 vocational vehicles at this time, primarily because of the number of entities involved in their manufacture and thus the potential for different entities besides the chassis manufacturer to be involved in the A/C system production and installation. EPA requests comment on how A/C standards might practically be applied to manufacturers of vocational vehicles.

(d) What Manufacturers Are Not Covered by the Proposed Standards?

EPA and NHTSA are proposing to temporarily defer the proposed greenhouse gas emissions and fuel consumption standards for any manufacturers of heavy-duty engines, manufacturers of combination tractors, and chassis manufacturers for vocational vehicles that meet the "small business" size criteria set by the Small Business Administration. We are not aware of any manufacturers of HD pickups and vans that meet these criteria. For each of the other categories and for engines, we have identified a small number of manufacturers that would appear to qualify as small businesses. The production of these companies is small, and we believe that deferring the standards for these companies at this time would have a negligible impact on the GHG emission reductions and fuel consumption reductions that the program would otherwise achieve. We request comment on our assumption that the impact of these exemptions for small businesses will be small and further whether it will be possible to circumvent the regulations by creating new small businesses to displace existing manufacturers. We discuss the specific deferral provisions in more detail in Section II.

The agencies will consider appropriate GHG emissions and fuel consumption standards for these entities as part of a future regulatory action.

D. Summary of Costs and Benefits of the HD National Program

This section summarizes the projected costs and benefits of the proposed NHTSA fuel consumption and EPA GHG emissions standards. These projections help to inform the agencies' choices among the alternatives considered and provide further confirmation that the proposed standards are an appropriate choice within the spectrum of choices allowable under the agencies' respective statutory criteria. NHTSA and EPA have used common projected costs and benefits as the bases for our respective standards.

The agencies have analyzed in detail the projected costs and benefits of the proposed GHG and fuel consumption standards. Table I–4 shows estimated lifetime discounted costs, benefits and net benefits for all heavy-duty vehicles projected to be sold in model years 2014–2018. These figures depend on estimated values for the social cost of carbon (SCC), as described in Section VIII.G.

Table I-4: Estimated Lifetime Discounted Costs, Benefits, and Net Benefits for 2014-2018 Model Year HD Vehicles assuming the $22/ton SCC Value[a,b] (2008 dollars)

3% Discount Rate	$billions
Costs	$7.7
Benefits	$49
Net Benefits	$41
7% Discount Rate	
Costs	$7.7
Benefits	$34
Net Benefits	$27

Notes:

[a] Although the agencies estimated the benefits associated with four different values of a one ton CO_2 reduction (SCC: $5, $22, $36, $66), for the purposes of this overview presentation of estimated costs and benefits we are showing the benefits associated with the marginal value deemed to be central by the interagency working group on this topic: $22 per ton of CO_2, in 2008 dollars and 2010 emissions and fuel consumption. As noted in Section VIII.F, SCC increases over time.

[b] Note that net present value of reduced GHG emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, and 2.5 percent) is used to calculate net present value of SCC for internal consistency. Refer to Section VIII.F for more detail.

Table I–5 shows the estimated lifetime reductions in CO_2 emissions (in million metric tons (MMT)) and fuel consumption for all heavy-duty vehicles sold in the model years 2014–2018. The values in Table I–5 are projected lifetime totals for each model year and are not discounted. The two agencies' standards together comprise the HD National Program, and the agencies' respective GHG emissions and fuel consumption standards, jointly, are the source of the benefits and costs of the HD National Program.

Table I–5 are projected lifetime totals for each model year and are not discounted. The two agencies' standards together comprise the HD National Program, and the agencies' respective GHG emissions and fuel consumption standards, jointly, are the source of the benefits and costs of the HD National Program.

Table I-5: Estimated Lifetime Reductions in Fuel Consumption and CO_2 Emissions for 2014-2018 Model Year HD Vehicles

		2014	2015	2016	2017	2018	Total
All Heavy-Duty Vehicles	Fuel (billion gallons)	3.0	3.1	3.5	5.2	5.8	20.5
	Fuel (billion barrels)	0.07	0.07	0.08	0.12	0.14	0.5
	CO_2 (MMT)[a]	36.2	37.6	41.6	62.0	68.7	246

[a] Includes upstream and downstream CO_2 reductions.

Table I–6 shows the estimated lifetime discounted benefits for all heavy-duty vehicles sold in model years 2014–2018. Although the agencies estimated the benefits associated with four different values of a one ton CO_2 reduction ($5, $22, $36, $66), for the purposes of this overview presentation of estimated benefits the agencies are showing the benefits associated with one of these marginal values, $22 per ton of CO_2, in 2008 dollars and 2010 emissions. Table I–6 presents benefits based on the $22 value. Section VIII.F presents the four marginal values used to estimate monetized benefits of CO_2 reductions and Section VIII presents the program benefits using each of the four marginal values, which represent only a partial accounting of total benefits due to omitted climate change impacts and other factors that are not readily monetized. The values in the table are discounted values for each model year of vehicles throughout their projected lifetimes. The analysis includes other economic impacts such as fuel savings, energy security, and other externalities such as reduced accidents, congestion and noise. However, the analysis supporting the proposal omits other impacts such as benefits related to non-GHG emission reductions. The lifetime discounted benefits are shown for one of four different SCC values considered by EPA and NHTSA. The values in Table I–6 do not include costs associated with new technology required to meet the GHG and fuel consumption standards.

Table I-6: Estimated Lifetime Discounted Benefits for 2014-2018 Model Year HD Vehicles Assuming the $22/ton SCC Value[a,b] (billions of 2008 dollars)

Discount Rate	Model Year					
	2014	2015	2016	2017	2018	Total
3%	$7.0	$7.3	$8.2	$12	$14	$49
7%	$5.4	$5.4	$5.9	$8.4	$9.1	$34

Notes:

[a] The analysis includes impacts such as the economic value of reduced fuel consumption and accompanying climate-related economic benefits from reducing emissions of CO_2 (but not other GHGs), and reductions in energy security externalities caused by U.S. petroleum consumption and imports. The analysis also includes economic impacts stemming from additional heavy-duty vehicle use, such as the economic damages caused by accidents, congestion and noise.

[b] Note that net present value of reduced CO_2 emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, and 2.5 percent) is used to calculate net present value of SCC for internal consistency. Refer to Section VIII.F for more detail.

Table I–7 shows the agencies' estimated lifetime fuel savings, lifetime CO_2 emission reductions, and the monetized net present values of those fuel savings and CO_2 emission reductions. The gallons of fuel and CO_2 emission reductions are projected lifetime values for all vehicles sold in the model years 2014–2018. The estimated fuel savings in billions of barrels and the GHG reductions in million metric tons of CO_2 shown in Table I–7 are totals for the five model years throughout their projected lifetime and are not discounted. The monetized values shown in Table I–7 are the summed values of the discounted monetized-fuel consumption and

monetized-CO_2 reductions for the five model years 2014–2018 throughout their lifetimes. The monetized values in Table I–7 reflect both a 3 percent and a 7 percent discount rate as noted.

Table I-7: Estimated Lifetime Reductions and Associated Discounted Monetized Benefits for 2014-2018 Model Year HD Vehicles (monetized values in 2008 dollars)

	Amount	$ value (billions)
Fuel Consumption Reductions	0.5 billion barrels	$42, 3% discount rate $28, 7% discount rate
CO_2 Emission Reductions[a] Valued assuming $22/ton CO_2 in 2010	246 MMT CO_2	$4.1[b]

Notes:
[a] Includes both upstream and downstream CO_2 emission reductions.
[b] Note that net present value of reduced CO_2 emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, and 2.5 percent) is used to calculate net present value of SCC for internal consistency. Refer to Section VIII.F for more detail.

Table I–8 shows the estimated incremental and total technology outlays for all heavy-duty vehicles for each of the model years 2014–2018. The technology outlays shown in Table I–8 are for the industry as a whole and do not account for fuel savings associated with the program.

Table I-8: Estimated Incremental Technology Outlays for 2014-2018 Model Year HD Vehicles (billions of 2008 dollars)

	2014	2015	2016	2017	2018	Total
All Heavy-Duty Vehicles	$1.3	$1.3	$1.5	$1.6	$2.0	$7.7

Table I–9 shows EPA's estimated incremental cost increase of the average new heavy-duty vehicles for each model year 2014–2018. The values shown are incremental to a baseline vehicle and are not cumulative.

Table I-9: Estimated Incremental Increase in Average Cost for 2014-2018 Model Year HD Vehicles (2008 dollars per unit)

	2014	2015	2016	2017	2018
Combination Tractors	$5,896	$5,733	$5,480	$6,150	$5,901
HD Pickups &Vans	$225	$292	$567	$848	$1,411
Vocational Trucks	$374	$367	$400	$392	$359

BILLING CODE 6560–50–C

E. Program Flexibilities

For each of the heavy-duty vehicle and heavy-duty engine categories for which we are proposing respective standards, EPA and NHTSA are also proposing provisions designed to give manufacturers a degree of flexibility in complying with the standards. These proposed provisions have enabled the agencies to consider overall standards that are more stringent and that would become effective sooner than we could consider with a more rigid program, one in which all of a manufacturer's similar vehicles or engines would be required to achieve the same emissions or fuel consumption levels, and at the same time.[30] We believe that incorporating carefully structured regulatory flexibility provisions into the overall program is an important way to achieve each agency's goals for the program.

[30] NHTSA notes that it has greater flexibility in the HD program to include consideration of credits and other flexibilities in determining appropriate and feasible levels of stringency than it does in the light-duty CAFE program. *Cf.* 49 U.S.C. 32902(h), which applies to light-duty CAFE but not heavy-duty fuel efficiency under 49 U.S.C. 32902(k).

NHTSA's and EPA's proposed flexibility provisions are essentially identical to each other in structure and function. For combination tractor and vocational vehicle categories and for heavy-duty engines, we are proposing four primary types of flexibility—averaging, banking, and trading (ABT) provisions, early credits, advanced technology credits (including hybrid powertrains), and innovative technology credit provisions. The proposed ABT provisions are patterned on existing EPA ABT programs and would allow a vehicle manufacturer to reduce CO_2 emission and fuel consumption levels

further than the level of the standard for one or more vehicles to generate ABT credits. The manufacturer could then use those credits to offset higher emission or fuel consumption levels in other similar vehicles, "bank" the credits for later use, or "trade" the credits to another manufacturer. We are proposing similar ABT provisions for manufacturers of heavy-duty engines. For HD pickups and vans, we are proposing a fleet averaging system very similar to the light-duty GHG and CAFE fleet averaging system.

To best ensure that the overall emission and fuel consumption reductions of the program would be achieved and to minimize any effect on the ability of the market to respond to consumer needs, the agencies propose to restrict the use of averaging to limited sets of vehicles and engines expected to have similar emission or fuel consumption characteristics. For example, averaging would be allowed among Class 7 low-roof day cab vehicles, but not among those vehicles and Class 8 sleeper cabs or vocational vehicles. Also, we propose that credits generated by vehicles not be applicable to engine compliance, and vice versa. For HD pickups and vans, we propose that fleet averaging be allowed with minimum restriction within the HD pickup and van category.

In addition to ABT, the agencies are proposing that a manufacturer that reduces CO_2 emissions and fuel consumption below required levels prior to the beginning of the program be allowed to generate the same number of credits ("early credits") that they would after the program begins.

The agencies are also proposing that manufacturers that show improvements in CO_2 emissions and fuel consumption and incorporate certain technologies (including hybrid powertrains, Rankine engines, or electric vehicles) be eligible for special "advanced technology" credits. Unlike other credits in this proposal, the advanced technology credits could be applied to any heavy-duty vehicle or engine, and not be limited to the vehicle category generating the credit.

The technologies eligible for advanced technology credits above lend themselves to straightforward methodologies for quantifying the emission or fuel consumption reductions. For other technologies which can reduce CO_2 and fuel consumption, but for which there do not yet exist established methods for quantifying reductions, the agencies still seek to encourage the development of such innovative technologies, and are therefore proposing special "innovative technology" credits. These innovative technology credits would apply to technologies that are shown to produce emission and fuel consumption reductions that are not adequately recognized on the current test procedures and that are not yet in widespread use. Manufacturers would need to quantify the reductions in fuel consumption and CO_2 emissions that the technology could achieve, above and beyond those achieved on the existing test procedures. As with ABT, we propose that the use of innovative technology credits be only allowed among vehicles and engines expected to have similar emissions and fuel consumption characteristics (*e.g.,* within each of the nine Class 7 & 8 combination tractor subcategories, or within each of the three Class 2b–8 vocational vehicle subcategories).

A detailed discussion of each agency's ABT, early credit, advanced technology, and innovative technology provisions for each regulatory category of heavy-duty vehicles and engines is found in Section IV below.

F. EPA and NHTSA Statutory Authorities

(1) EPA Authority

Title II of the CAA provides for comprehensive regulation of mobile sources, authorizing EPA to regulate emissions of air pollutants from all mobile source categories. When acting under Title II of the CAA, EPA considers such issues as technology effectiveness, its cost (both per vehicle, per manufacturer, and per consumer), the lead time necessary to implement the technology, and based on this the feasibility and practicability of potential standards; the impacts of potential standards on emissions reductions of both GHGs and non-GHGs; the impacts of standards on oil conservation and energy security; the impacts of standards on fuel savings by customers; the impacts of standards on the truck industry; other energy impacts; as well as other relevant factors such as impacts on safety.

This proposal implements a specific provision from Title II, section 202(a).[31] Section 202(a)(1) of the CAA states that "the Administrator shall by regulation prescribe (and from time to time revise) * * * standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles * * *, which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare." With EPA's December 2009 final findings for greenhouse gases, section 202(a) authorizes EPA to issue standards applicable to emissions of those pollutants from new motor vehicles.

Any standards under CAA section 202(a)(1) "shall be applicable to such vehicles * * * for their useful life." Emission standards set by the EPA under CAA section 202(a)(1) are technology-based, as the levels chosen must be premised on a finding of technological feasibility. Thus, standards promulgated under CAA section 202(a) are to take effect only "after providing such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period" (section 202(a)(2); *see also NRDC* v. *EPA*, 655 F.2d 318, 322 (DC Cir. 1981)). EPA is afforded considerable discretion under section 202(a) when assessing issues of technical feasibility and availability of lead time to implement new technology. Such determinations are "subject to the restraints of reasonableness", which "does not open the door to 'crystal ball' inquiry." *NRDC*, 655 F.2d at 328, quoting *International Harvester Co.* v. *Ruckelshaus*, 478 F.2d 615, 629 (DC Cir. 1973). However, "EPA is not obliged to provide detailed solutions to every engineering problem posed in the perfection of the trap-oxidizer. In the absence of theoretical objections to the technology, the agency need only identify the major steps necessary for development of the device, and give plausible reasons for its belief that the industry will be able to solve those problems in the time remaining. The EPA is not required to rebut all speculation that unspecified factors may hinder 'real world' emission control." *NRDC,* 655 F.2d at 333–34. In developing such technology-based standards, EPA has the discretion to consider different standards for appropriate groupings of vehicles ("class or classes of new motor vehicles"), or a single standard for a larger grouping of motor vehicles (*NRDC,* 655 F.2d at 338).

Although standards under CAA section 202(a)(1) are technology-based, they are not based exclusively on technological capability. EPA has the discretion to consider and weigh various factors along with technological feasibility, such as the cost of compliance (*see* section 202(a)(2)), lead time necessary for compliance (section 202(a)(2)), safety (*see NRDC,* 655 F.2d at 336 n. 31) and other impacts on consumers, and energy impacts associated with use of the technology. *See George E. Warren Corp.* v. *EPA*, 159

[31] *See* 42 U.S.C. 7521(a).

F.3d 616, 623–624 (DC Cir. 1998) (ordinarily permissible for EPA to consider factors not specifically enumerated in the CAA). *See also Entergy Corp.* v. *Riverkeeper, Inc.*, 129 S.Ct. 1498, 1508–09 (2009) (congressional silence did not bar EPA from employing cost-benefit analysis under the Clean Water Act absent some other clear indication that such analysis was prohibited; rather, silence indicated discretion to use or not use such an approach as the agency deems appropriate).

In addition, EPA has clear authority to set standards under CAA section 202(a) that are technology forcing when EPA considers that to be appropriate, but is not required to do so (as compared to standards set under provisions such as section 202(a)(3) and section 213(a)(3)). EPA has interpreted a similar statutory provision, CAA section 231, as follows:

While the statutory language of section 231 is not identical to other provisions in title II of the CAA that direct EPA to establish technology-based standards for various types of engines, EPA interprets its authority under section 231 to be somewhat similar to those provisions that require us to identify a reasonable balance of specified emissions reduction, cost, safety, noise, and other factors. *See, e.g., Husqvarna AB* v. *EPA,* 254 F.3d 195 (DC Cir. 2001) (upholding EPA's promulgation of technology-based standards for small non-road engines under section 213(a)(3) of the CAA). However, EPA is not compelled under section 231 to obtain the "greatest degree of emission reduction achievable" as per sections 213 and 202 of the CAA, and so EPA does not interpret the Act as requiring the agency to give subordinate status to factors such as cost, safety, and noise in determining what standards are reasonable for aircraft engines. Rather, EPA has greater flexibility under section 231 in determining what standard is most reasonable for aircraft engines, and is not required to achieve a "technology forcing" result (70 FR 69664 and 69676, November 17, 2005).

This interpretation was upheld as reasonable in *NACAA* v. *EPA,* 489 F.3d 1221, 1230 (DC Cir. 2007). CAA section 202(a) does not specify the degree of weight to apply to each factor, and EPA accordingly has discretion in choosing an appropriate balance among factors. *See Sierra Club* v. *EPA,* 325 F.3d 374, 378 (DC Cir. 2003) (even where a provision is technology-forcing, the provision "does not resolve how the Administrator should weigh all [the statutory] factors in the process of finding the 'greatest emission reduction achievable' "). *Also see Husqvarna AB* v. *EPA,* 254 F.3d 195, 200 (DC Cir. 2001) (great discretion to balance statutory factors in considering level of technology-based standard, and statutory requirement "to [give appropriate] consideration to the cost of applying * * * technology" does not mandate a specific method of cost analysis); *see also Hercules Inc.* v. *EPA,* 598 F.2d 91, 106 (DC Cir. 1978) ("In reviewing a numerical standard the agencies must ask whether the agency's numbers are within a zone of reasonableness, not whether its numbers are precisely right"); *Permian Basin Area Rate Cases,* 390 U.S. 747, 797 (1968) (same); *Federal Power Commission* v. *Conway Corp.,* 426 U.S. 271, 278 (1976) (same); *Exxon Mobil Gas Marketing Co.* v. *FERC,* 297 F.3d 1071, 1084 (DC Cir. 2002) (same).

(a) EPA Testing Authority

Under section 203 of the CAA, sales of vehicles are prohibited unless the vehicle is covered by a certificate of conformity. EPA issues certificates of conformity pursuant to section 206 of the Act, based on (necessarily) pre-sale testing conducted either by EPA or by the manufacturer. The Heavy-duty Federal Test Procedure (Heavy-duty FTP) and the Supplemental Engine Test (SET) are used for this purpose. Compliance with standards is required not only at certification but throughout a vehicle's useful life, so that testing requirements may continue post-certification. Useful life standards may apply an adjustment factor to account for vehicle emission control deterioration or variability in use (section 206(a)).

(b) EPA established the Light-duty FTP for emissions measurement in the early 1970s. In 1976, in response to the Energy Policy and Conservation Act, EPA extended the use of the Light-duty FTP to fuel economy measurement (*See* 49 U.S.C. 32904(c)). EPA can determine fuel efficiency of a vehicle by measuring the amount of CO_2 and all other carbon compounds (*e.g.,* total hydrocarbons and carbon monoxide (CO)), and then, by mass balance, calculating the amount of fuel consumed.

(b) EPA Enforcement Authority

Section 207 of the CAA grants EPA broad authority to require manufacturers to remedy vehicles if EPA determines there are a substantial number of noncomplying vehicles. In addition, section 205 of the CAA authorizes EPA to assess penalties of up to $37,500 per vehicle for violations of various prohibited acts specified in the CAA. In determining the appropriate penalty, EPA must consider a variety of factors such as the gravity of the violation, the economic impact of the violation, the violator's history of compliance, and "such other matters as justice may require."

(2) NHTSA Authority

EISA authorizes NHTSA to create a fuel efficiency improvement program for "commercial medium- and heavy-duty on-highway vehicles and work trucks" [32] by rulemaking, which is to include standards, test methods, measurement metrics, and enforcement protocols. *See* 49 U.S.C. 32902(k)(2). Congress directed that the standards, test methods, measurement metrics, and compliance and enforcement protocols be "appropriate, cost-effective, and technologically feasible" for the vehicles to be regulated, while achieving the "maximum feasible improvement" in fuel efficiency.

Since this is the first rulemaking that NHTSA has conducted under 49 U.S.C. 32902(k)(2), the agency must interpret these elements and factors in the context of setting standards, choosing metrics, and determining test methods and compliance/enforcement mechanisms. Congress also gave NHTSA the authority to set separate standards for different classes of these vehicles, but required that all standards adopted provide not less than four full model years of regulatory lead-time and three full model years of regulatory stability.

In EISA, Congress required NHTSA to prescribe separate average fuel economy standards for passenger cars and light trucks in accordance with the provisions in 49 U.S.C. section 32902(b), and to prescribe standards for work trucks and commercial medium- and heavy-duty vehicles in accordance with the provisions in 49 U.S.C. section 32902(k). *See* 49 U.S.C. section 32902(b)(1). We note that Congress also added in EISA a requirement that NHTSA shall issue regulations prescribing fuel economy standards for at least 1, but not more than 5, model years. *See* 49 U.S.C. section 32902(b)(3)(B). For purposes of the fuel efficiency standards that the agency is proposing for HD vehicles and engines, NHTSA believes that one permissible reading of the statute is that Congress did not intend for the 5-year maximum limit to apply to standards promulgated in accordance with 49 U.S.C. section 32902(k), given the language in

[31] "Commercial medium- and heavy-duty on-highway vehicles" are defined at 49 U.S.C. 32901(a)(7), and "work trucks" are defined at (a)(19).

32902(b)(1). Based on this interpretation, NHTSA proposes that the standards ultimately finalized for HD vehicles and engines would remain in effect indefinitely at their 2018 or 2019 model year levels until amended by a future rulemaking action. In any future rulemaking action to amend the standards, NHTSA would ensure not less than four full model years of regulatory lead-time and three full model years of regulatory stability. NHTSA seeks comment on this interpretation of EISA.

(a) NHTSA Testing Authority

49 U.S.C. 32902(k)(2) states that NHTSA must adopt and implement appropriate, cost-effective, and technologically feasible test methods and measurement metrics as part of the fuel efficiency improvement program.

(b) NHTSA Enforcement Authority

49 U.S.C. 32902(k)(2) also states that NHTSA must adopt and implement appropriate, cost-effective, and technologically feasible compliance and enforcement protocols for the fuel efficiency improvement program.

In 49 U.S.C. 32902(k)(2), Congress did not speak directly to the "compliance and enforcement protocols" it envisioned. Instead, it left the matter generally to the Secretary. Congress' approach is unlike CAFE enforcement for passenger cars and light trucks, where Congress specified a program where a manufacturer either complies with standards or pays civil penalties. But Congress did not specify in 49 U.S.C. 32902(k) what it precisely meant in directing NHTSA to develop "compliance and enforcement protocols." It appears, therefore, that Congress has assigned this matter to the agency's discretion.

The statute is silent with respect to how "protocol" should be interpreted. The term "protocol" is imprecise. For example, in a case interpreting section 301(c)(2) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the DC Circuit noted that the word "protocols" has many definitions that are not much help. *Kennecott Utah Copper Corp., Inc.* v. *U.S. Dept. of Interior,* 88 F.3d. 1191, 1216 (DC Cir. 1996). Section 301(c)(2) of CERCLA prescribed the creation of two types of procedures for conducting natural resources damages assessments. The regulations were to specify (a) "standard procedures for simplified assessments requiring minimal field observation" (the "Type A" rules), and (b) "alternative protocols for conducting assessments in individual cases" (the "Type B" rules).[33] The court upheld the challenged provisions, which were a part of a set of rules establishing a step-by-step procedure to evaluate options based on certain criteria, and to make a decision and document the results.

Taking the considerations above into account, including Congress' instructions to adopt and implement compliance and enforcement protocols, and the Secretary's authority to formulate policy and make rules to fill gaps left, implicitly or explicitly, by Congress, the agency interprets "protocol" in the context of EISA as authorizing the agency to determine both whether manufacturers have complied with the standards, and to establish the enforcement mechanisms and decision criteria for non-compliance. NHTSA seeks comment on its interpretation of this statutory requirement.

G. Future HD GHG and Fuel Consumption Rulemakings

This proposal represents a first regulatory step by NHTSA and EPA to address the multi-faceted challenges of reducing fuel use and greenhouse gas emissions from these vehicles. By focusing on existing technologies and well-developed regulatory tools, the agencies are able to propose rules that we believe will produce real and important reductions in GHG emissions and fuel consumption within only a few years. Within the context of this regulatory timeframe, our proposal is very aggressive—with limited lead time compared to historic heavy-duty regulations—but pragmatic in the context of technologies that are available.

While we are now only proposing this first step, it is worthwhile to consider how future regulations that may follow this step may be constructed. Technologies such as hybrid drivetrains, advanced bottoming cycle engines, and full electric vehicles are promoted in this first step through incentive concepts as discussed in Section IV, but we believe that these advanced technologies would not be necessary to meet the proposed standards, which are premised on the use of existing technologies. When we begin our future work to develop a possible next set of regulatory standards, the agencies expect these advanced technologies to be an important part of the regulatory program and will consider them in setting the stringency of any standards beyond the 2018 model year.

We will not only consider the progress of technology in our future regulatory efforts, but the agencies are also committed to fully considering a range of regulatory approaches. To more completely capture the complex interactions of the total vehicle and the potential to reduce fuel consumption and GHG emissions through the optimization of those interactions may require a more sophisticated approach to vehicle testing than we are proposing for the largest heavy-duty vehicles. In future regulations, the agencies expect to fully evaluate the potential to expand the use of vehicle compliance models to reflect engine and drivetrain performance. Similarly, we intend to consider the potential for complete vehicle testing using a chassis dynamometer, not only as a means for compliance, but also as a complementary tool for the development of more complex vehicle modeling approaches. In considering these more comprehensive regulatory approaches, the agencies will also reevaluate whether separate regulation of trucks and engines remains necessary.

In addition to technology and test procedures, vehicle and engine drive cycles are an important part of the overall approach to evaluating and improving vehicle performance. EPA, working through the WP.29 Global Technical Regulation process, has actively participated in the development of a new World Harmonized Duty Cycle for heavy-duty engines. EPA is committed to bringing forward these new procedures as part of our overall comprehensive approach for controlling criteria and GHG emissions. However, we believe the important issues and technical work related to setting new criteria emissions standards appropriate for the World Harmonized Duty Cycle are significant and beyond the scope of this rulemaking. Therefore, the agencies are not proposing to adopt these test procedures in this proposal, but we are ready to work with interested stakeholders to adopt these procedures in a future action.

As with this proposal, our future efforts will be based on collaborative outreach with the stakeholder community and will be focused on a program that delivers on our energy security and environmental goals without restricting the industry's ability to produce a very diverse range of vehicles serving a wide range of needs.

[33] *State of Ohio* v. *U.S. Dept. of Interior,* 880 F.2d 432, 439 (DC Cir. 1989).

II. Proposed GHG and Fuel Consumption Standards for Heavy-Duty Engines and Vehicles

This section describes the standards and implementation dates that the agencies are proposing for the three categories of heavy-duty vehicles. The agencies have performed a technology analysis to determine the level of standards that we believe would be appropriate, cost-effective, and feasible during the rulemaking timeframe. This analysis, described in Section III and in more detail in the draft RIA Chapter 2, considered:

- The level of technology that is incorporated in current new trucks,
- The available data on corresponding CO_2 emissions and fuel consumption for these vehicles,
- Technologies that would reduce CO_2 emissions and fuel consumption and that are judged to be feasible and appropriate for these vehicles through 2018 model year,
- The effectiveness and cost of these technologies,
- Projections of future U.S. sales for trucks, and
- Forecasts of manufacturers' product redesign schedules.

A. What vehicles would be affected?

EPA and NHTSA are proposing standards for heavy-duty engines and also for what we refer to generally as "heavy-duty trucks." As noted in Section I, for purposes of this preamble, the term "heavy-duty" or "HD" is used to apply to all highway vehicles and engines that are not regulated by the light-duty vehicle, light-duty truck and medium-duty passenger vehicle greenhouse gas and CAFE standards issued for MYs 2012–2016. Thus, in this notice, unless specified otherwise, the heavy-duty category incorporates all vehicles rated with GVWR greater than 8,500 pounds, and the engines that power these vehicles, except for MDPVs. The CAA defines heavy-duty vehicles as trucks, buses or other motor vehicles with GVWR exceeding 6,000 pounds. *See* CAA section 202(b)(3). In the context of the CAA, the term HD as used in these proposed rules thus refers to a subset of these vehicles and engines. EISA section 103(a)(3) defines a 'commercial medium- and heavy-duty on-highway vehicle' as an on-highway vehicle with GVWR of 10,000 pounds or more.[34] EISA section 103(a)(6) defines a 'work truck' as a vehicle that is rated at between 8,500 and 10,000 pounds gross vehicle weight and is not a medium-duty passenger vehicle.[35] Therefore, the term "heavy-duty trucks" in this proposal refers to both work trucks and commercial medium- and heavy-duty on-highway vehicles as defined by EISA. Heavy-duty engines affected by the proposed standards are those that are installed in commercial medium- and heavy-duty trucks, except for the engines installed in vehicles certified to a complete vehicle emissions standard based on a chassis test, which would be addressed as a part of those complete vehicles, and except for engines used exclusively for stationary power when the vehicle is parked. The agencies' scope is the same with the exception of recreational vehicles (or motor homes), as discussed above. EPA is proposing to include recreational on-highway vehicles within their rulemaking, while NHTSA is limiting their scope to commercial trucks which would not include these vehicles.

EPA and NHTSA are proposing standards for each of the following categories, which together comprise all heavy-duty vehicles and all engines used in such vehicles.[36] In order to most appropriately regulate the broad range of heavy-duty vehicles, the agencies are proposing to set separate engine and vehicle standards for the combination tractors and the Class 2b through 8 vocational vehicles and the engines installed in them. The engine standards and test procedures for engines installed in the tractors and vocational vehicles are discussed within the applicable vehicle sections.

- Class 7 and 8 Combination Tractors.
- Heavy-Duty Pickup Trucks and Vans.
- Class 2b through 8 Vocational Vehicles.

As discussed in Section IX, the agencies are not proposing GHG emission and fuel consumption standards for trailers at this time. In addition, the agencies are proposing to not set standards at this time for engine, chassis, and vehicle manufacturers which are small businesses (as defined). More detailed discussion of each regulatory category is included in the subsequent sections below.

B. Class 7 and 8 Combination Tractors

EPA is proposing CO_2 standards and NHTSA is proposing fuel consumption standards for new Class 7 and 8 combination tractors. The standards are for the tractor cab, with a separate standard for the engines that are installed in the tractor. Together these standards would achieve reductions up to 20 percent from tractors. As discussed below, EPA is proposing to adopt the existing useful life definitions for heavy-duty engines for the Class 7 and 8 tractors. NHTSA is proposing fuel consumption standards for tractors, and engine standards for heavy-duty engines for Class 7 and 8 tractors. The agencies' analyses, as discussed briefly below and in more detail later in this preamble and in the draft RIA Chapter 2, show that these standards are appropriate and feasible under each agency's respective statutory authorities.

EPA is also proposing standards to control N_2O, CH_4, and HFC emissions from Class 7 and 8 combination tractors. The proposed heavy-duty engine standards for both N_2O and CH_4 and details of the standard are included in the discussion in Section II. The proposed air conditioning leakage standards applying to tractor manufacturers to address HFC emissions are included in Section II.

The agencies are proposing CO_2 emissions and fuel consumption standards for the combination tractors that will focus on reductions that can be achieved through improvements in the tractor (such as aerodynamics), tires, and other vehicle systems. The agencies are also proposing heavy-duty engine standards for CO_2 emissions and fuel consumption that would focus on potential technological improvements in fuel combustion and overall engine efficiency.

The agencies have analyzed the feasibility of achieving the CO_2 and fuel consumption standards, based on projections of what actions manufacturers are expected to take to reduce emissions and fuel consumption. EPA and NHTSA also present the estimated costs and benefits of the

[34] Codified at 49 U.S.C. 32901(a)(7).

[35] EISA Section 103(a)(6) is codified at 49 U.S.C. 32901(a)(19). EPA defines medium-duty passenger vehicles as any complete vehicle between 8,500 and 10,000 pounds GVWR designed primarily for the transportation of persons which meet the criteria outlined in 40 CFR 86.1803–01. The definition specifically excludes any vehicle that (1) Has a capacity of more than 12 persons total or, (2) is designed to accommodate more than 9 persons in seating rearward of the driver's seat or, (3) has a cargo box (*e.g.,* pick-up box or bed) of six feet or more in interior length. (*See* the Tier 2 final rulemaking, 65 FR 6698, February 10, 2000.)

[36] Both agencies have authority to develop separate standards for vehicle and engine categories, as appropriate. *See* CAA section 202(a)(1) (authority to establish standards for "any class or classes of new motor vehicles or engines" and 49 U.S.C 32902(k)(2) (authority to establish standards for HD vehicles that are "appropriate, cost-effective, and technologically feasible" that are designed to achieve the "maximum feasible improvement" in fuel efficiency; authority to establish "separate standards for different classes of vehicles under this subsection." NHTSA interprets 49 U.S.C. 32902(k)(2) to include a grant of authority to establish engines standards pursuant to the broader statement of authority to establish standards that achieve the maximum feasible improvement in fuel efficiency.

standards in Section III. In developing the proposed rules, the agencies have evaluated the kinds of technologies that could be utilized by engine and tractor manufacturers, as well as the associated costs for the industry and fuel savings for the consumer and the magnitude of the CO_2 and fuel savings that may be achieved.

EPA and NHTSA are proposing attribute-based standards for the Class 7 and 8 combination tractors, or, put another way, we are proposing to set different standards for different subcategories of these tractors with the basis for subcategorization being particular tractor attributes. Attribute-based standards in general recognize the variety of functions performed by vehicles and engines, which in turn can affect the kind of technology that is available to control emissions and reduce fuel consumption, or its effectiveness. Attributes that characterize differences in the design of vehicles, as well as differences in how the vehicles will be employed in-use, can be key factors in evaluating technological improvements for reducing CO_2 emissions and fuel consumption. Developing an appropriate attribute-based standard can also avoid interfering with the ability of the market to offer a variety of products to meet consumer demand. There are several examples of where the agencies have utilized an attribute-based standard. In addition to the example of the recent light-duty vehicle fuel economy and GHG rule, in which the standards are based on the attribute of vehicle "footprint," the existing heavy-duty highway engine criteria pollutant emission standards for many years have been based on a vehicle weight attribute (Light Heavy, Medium Heavy, Heavy Heavy) with different useful life periods, which is the same approach proposed for the engine GHG and fuel consumption standards discussed below.

Heavy-duty combination tractors are built to move freight. The ability of a truck to meet a customer's freight transportation requirements depends on three major characteristics of the tractor: The gross vehicle weight rating (which along with gross combined weight rating (GCWR) establishes the maximum carrying capacity of the tractor and trailer), cab type (sleeper cabs provide overnight accommodations for drivers), and the tractor roof height (to mate tractors to trailers for the most fuel-efficient configuration). Each of these attributes impacts the baseline fuel consumption and GHG emissions, as well as the effectiveness of possible technologies, like aerodynamics, and is discussed in more detail below.

The first tractor characteristic to consider is payload which is determined by a tractor's GVWR and GCWR relative to the weight of the tractor, trailer, fuel, driver, and equipment. Class 7 trucks, which have a GVWR of 26,001–33,000 pounds and a typical GCWR of 65,000 pounds, have a lesser payload capacity than Class 8 trucks. Class 8 trucks have a GVWR of greater than 33,000 pounds and a typical 80,000 pound GCWR. Consistent with the recommendation in the National Academy of Sciences 2010 Report to NHTSA,[37] the agencies are proposing a load-specific fuel consumption metric (g/ton-mile and gal/1,000 ton-mile) where the "ton" represents the amount of payload. Generally, higher payload capacity trucks have better specific fuel consumption and GHG emissions than lower payload capacity trucks. Therefore, since the amount of payload that a Class 7 truck can carry is less than the Class 8 truck's payload capacity, the baseline fuel consumption and GHG emissions performance per ton-mile differs between the categories. It is consequently reasonable to distinguish between these two vehicle categories, so that the agencies are proposing separate standards for Class 7 and Class 8 tractors.

The agencies are not proposing to set a single standard for both Class 7 and 8 tractors based on the payload carrying capabilities and assumed typical payload levels of Class 8 tractors alone, as that would quite likely have the perverse impact of increasing fuel consumption and greenhouse gas emissions. Such a single standard would penalize Class 7 vehicles in favor of Class 8 vehicles. However, the greater capabilities of Class 8 tractors and their related greater efficiency when measured on a per ton-mile basis is only relevant in the context of operations where that greater capacity is needed. For many applications such as regional distribution, the trailer payloads dictated by the goods being carried are lower than the average Class 8 tractor payload. In those situations, Class 7 tractors are more efficient than Class 8 tractors when measured by ton-mile of actual freight carried. This is because the extra capabilities of Class 8 tractors add additional weight to vehicle that is only beneficial in the context of its higher capabilities. The existing market already selects for vehicle performance based on the projected payloads. By setting separate standards the agencies do not advantage or disadvantage Class 7 or 8 tractors relative to one another and continue to allow trucking fleets to purchase the vehicle most appropriate to their business practices.

The second characteristic that affects fuel consumption and GHG emissions is the relationship between the tractor cab roof height and the type of trailer used to carry the freight. The primary trailer types are box, flat bed, tanker, bulk carrier, chassis, and low boys. Tractor manufacturers sell tractors in three roof heights—low, mid, and high. The manufacturers do this to obtain the best aerodynamic performance of a tractor-trailer combination, resulting in reductions of GHG emissions and fuel consumption, because it allows the frontal area of the tractor to be similar in size to the frontal area of the trailer. In other words, high roof tractors are designed to be paired with a (relatively tall) box trailer while a low roof tractor is designed to pull a (relatively low) flat bed trailer. The baseline performance of a high roof, mid roof, and low roof tractor differs due to the variation in frontal area which determines the aerodynamic drag. For example, the frontal area of a low roof tractor is approximately 6 square meters, while a high roof tractor has a frontal area of approximately 9.8 square meters. Therefore, as explained below, the agencies are proposing that the roof height of the tractor determine the trailer type required to be used to demonstrate compliance of a truck with the fuel consumption and CO_2 emissions standards. As with vehicle weight classes, setting separate standards for each tractor roof height helps ensure that all tractors are regulated to achieve appropriate improvements, without inadvertently leading to increased emissions and fuel consumption by shifting the mix of vehicle roof heights offered in the market away from a level customarily tied to the actual trailers vehicles will haul in-use.

Tractor cabs typically can be divided into two configurations—day cabs and sleeper cabs. Line haul operations typically require overnight accommodations due to Federal Motor Carrier Safety Administration hours of operation requirements.[38] Therefore,

[37] *See* 2010 NAS Report, Note 19, Recommendation 2–1.

[38] The Federal Motor Carrier Safety Administration's Hours-of-Service regulations put limits in place for when and how long commercial motor vehicle drivers may drive. They are based on an exhaustive scientific review and are designed to ensure truck drivers get the necessary rest to perform safe operations. *See* 49 CFR part 395, and *see also http://www.fmcsa.dot.gov/rules-regulations/topics/hos/index.htm* (last accessed August 8, 2010).

some truck buyers purchase tractor cabs with sleeping accommodations, also known as sleeper cabs, because they do not return to their home base nightly. Sleeper cabs tend to have a greater empty curb weight than day cabs due to the larger cab volume and accommodations, which lead to a higher baseline fuel consumption for sleeper cabs when compared to day cabs. In addition, there are specific technologies, such as extended idle reduction technologies, which are appropriate only for tractors which hotel—such as sleeper cabs. To respect these differences, the agencies are proposing to create separate standards for sleeper cabs and day cabs.

To account for the relevant combinations of these attributes, the agencies therefore propose to segment combination tractors into the following nine regulatory subcategories:

- Class 7 Day Cab with Low Roof
- Class 7 Day Cab with Mid Roof
- Class 7 Day Cab with High Roof
- Class 8 Day Cab with Low Roof
- Class 8 Day Cab with Mid Roof
- Class 8 Day Cab with High Roof
- Class 8 Sleeper Cab with Low Roof
- Class 8 Sleeper Cab with Mid Roof
- Class 8 Sleeper Cab with High Roof

The agencies have not identified any Class 7 or Class 8 day cabs with mid roof heights in the market today but welcome comments with regard to this market characterization.

Adjustable roof fairings are used today on what the agencies consider to be low roof tractors. The adjustable fairings allow the operator to change the fairing height to better match the type of trailer that is being pulled which can reduce fuel consumption and GHG emissions during operation. The agencies propose to treat tractors with adjustable roof fairings as low roof tractors and test with the fairing down. The agencies welcome comments on this approach and data to support whether to allow additional credits for their use.

The agencies are proposing to classify all vehicles with sleeper cabs as tractors. The proposed rules would not allow vehicles with sleeper cabs to be classified as vocational vehicles. This provision is intended prevent the initial manufacture of straight truck vocational vehicles with sleeper cabs that, soon after introduction into commerce, would be converted to combination tractors, as a means to circumvent the Class 8 sleeper cab regulations. The agencies welcome comments on the likelihood of manufacturers using such an approach to circumvent the regulations and the appropriate regulatory provisions the agencies should consider to prevent such actions.

(1) What are the proposed Class 7 and 8 tractor and engine CO_2 emissions and fuel consumption standards and their timing?

In developing the proposed tractor and engine standards, the agencies have evaluated the current levels of emissions and fuel consumption, the kinds of technologies that could be utilized by truck and engine manufacturers to reduce emissions and fuel consumption from tractors and engines, the associated lead time, the associated costs for the industry, fuel savings for the consumer, and the magnitude of the CO_2 and fuel savings that may be achieved. The technologies that the agencies considered while setting the proposed tractor standards include improvements in aerodynamic design, lower rolling resistance tires, extended idle reduction technologies, and vehicle empty weight reduction. The technologies that the agencies considered while setting the engine standards include engine friction reduction, aftertreatment optimization, and turbocompounding, among others. The agencies' evaluation indicates that these technologies are available today, but have very low application rates in the market. The agencies have analyzed the technical feasibility of achieving the proposed CO_2 and fuel consumption standards for tractors and engines, based on projections of what actions manufacturers would be expected to take to reduce emissions and fuel consumption to achieve the standards. EPA and NHTSA also present the estimated costs and benefits of the Class 7 and 8 combination tractor and engine standards in Section III and in draft RIA Chapter 2.

(a) Tractor Standards

The agencies are proposing the following standards for Class 7 and 8 combination tractors in Table II–1, using the subcategorization approach just explained. As noted, the agencies are not aware of any mid roof day cab tractors at this time, but are proposing that any Class 7 and 8 day cabs with a mid roof would meet the respective low roof standards, based on the similarity in baseline performance and similarity in expected improvement of mid roof sleeper cabs relative to low roof sleeper cabs.

As explained below in Section III, EPA has determined that there is sufficient lead time to introduce various tractor and engine technologies into the fleet starting in the 2014 model year, and is proposing standards starting for that model year predicated on performance of those technologies. EPA is proposing more stringent tractor standards for the 2017 model year which reflect the CO_2 emissions reductions required through the 2017 model year engine standards. (As explained in Section II.B.(2)(h)(v) below, engine performance is one of the inputs into the proposed compliance model, and that input will change in 2017 to reflect the 2017 MY engine standards.) The 2017 MY vehicle standards are not premised on tractor manufacturers installing additional vehicle technologies. EPA's proposed standards apply throughout the useful life period as described in Section V. Similar to EPA's non-GHG standards approach, manufacturers may generate and use credits from Class 7 and 8 combination tractors to show compliance with the standards.

NHTSA is proposing Class 7 and 8 tractor fuel consumption standards that are voluntary standards in the 2014 and 2015 model years and become mandatory beginning in the 2016 model year, as required by the lead time and stability requirement within EISA. NHTSA is also proposing new standards for the 2017 model year which reflect additional improvements in only the heavy-duty engines. While NHTSA proposes to use useful life considerations for establishing fuel consumption performance for initial compliance and for ABT, NHTSA does not intend to implement an in-use compliance program for fuel consumption because it is not currently anticipated there will be notable deterioration of fuel consumption over the useful life. NHTSA believes that the vehicle and engine standards proposed for combination tractors are appropriate, cost-effective, and technologically feasible in the rulemaking timeframe based on our analysis detailed below in Section III and in the Chapter 2 of the draft RIA.

EPA and NHTSA are not proposing to make the 2017 vehicle standards more stringent based on the application of additional truck technologies because projected application rates of truck technologies used in setting the 2014 model year truck standard already reflect the maximum application rates we believe appropriate for these vehicles given their specific use patterns as described in Section III. We considered setting more stringent standards for Class 7 and 8 tractors based on the application of more advanced aerodynamic systems, such as self-compensating side extenders or other advanced aerodynamic technologies, but concluded that those

technologies would not be fully developed in the necessary lead time. We request comment on this decision, supported by data as appropriate.

Table II-1: Heavy-duty Combination Tractor Emissions and Fuel Consumption Standards

2014 Model Year CO_2 Grams per Ton-Mile			
	Day Cab		Sleeper Cab
	Class 7	Class 8	Class 8
Low Roof	104	79	65
Mid Roof	104	79	70
High Roof	118	87	73
2014-2016 Model Year Gallons of Fuel per 1,000 Ton-Mile[39]			
	Day Cab		Sleeper Cab
	Class 7	Class 8	Class 8
Low Roof	10.3	7.8	6.3
Mid Roof	10.3	7.8	6.9
High Roof	11.6	8.6	7.1
2017 Model Year CO_2 Grams per Ton-Mile			
	Day Cab		Sleeper Cab
	Class 7	Class 8	Class 8
Low Roof	103	78	64
Mid Roof	103	78	69
High Roof	116	86	71
2017Model Year Gallons of Fuel per 1,000 Ton-Mile			
	Day Cab		Sleeper Cab
	Class 7	Class 8	Class 8
Low Roof	10.1	7.7	6.3
Mid Roof	10.1	7.7	6.8
High Roof	11.4	8.5	7.0

Based on our analysis, the 2017 model year standards represent up to a 20 percent reduction in CO_2 emissions and fuel consumption over a 2010 model year baseline, as detailed in Section III.A.2.

(i) Off-Road Tractor Standards

In developing the proposal EPA and NHTSA received comment from manufacturers and owners that tractors sometimes have very limited on-road usage. These trucks are defined to be motor vehicles under 40 CFR 85.1703, but they will spend the majority of their operations off-road. Tractors, such as those used in oil fields, will experience little benefit from improved aerodynamics and low rolling resistance tires. The agencies are therefore proposing to allow a narrow range of these de facto off-road trucks to be excluded from the proposed tractor standards because the trucks do not travel at speeds high enough to realize aerodynamic improvements and require special off-road tires such as lug tires. The trucks must still use a certified engine, which will provide fuel consumption and CO_2 emission reductions to the truck in all applications. To ensure the limited use of these trucks, the agencies are proposing requirements that the vehicles have off-road tires, have limited high speed operation, and are designed for specific off-road applications.[40] The agencies are proposing that a truck must meet the following requirements to qualify for an exemption from the vehicle standards for Class 7 and 8 tractors:

- Installed tires which are lug tires or contain a speed rating of less than or equal to 60 mph; and
- Include a vehicle speed limiter governed to 55 mph, and
- Contain Power Take-Off controls, or have axle configurations other than 4x2, 6x2, or 6x4 and has GVWR greater than 57,000 pounds; and
- Has a frame Resisting Bending Moment greater than 2,000,000 lb-in.[41]

EPA and NHTSA have concluded that the onroad performance losses and additional costs to develop a truck which meets these specifications will limit the exemption to trucks built for

[39] Manufacturers may voluntarily opt-in to the NHTSA fuel consumption program in 2014 or 2015. If a manufacturer opts-in, the program becomes mandatory. *See* Section [add cross reference] below for more information about NHTSA's voluntary opt-in program for MYs 2014 and 2015.

[40] For purposes of compliance with NHTSA's safety regulations, such as FMVSS Nos. 119 and 121, a manufacturer wishing for their vehicle to classify as "off-road" would still need to work with the relevant NHTSA office to declare its vehicle as "off-road" if it uses public roads at any point in its service.

[41] The agencies have found based on standard truck specifications, that vehicles designed for significant off-road applications, such as concrete pumper and logging trucks have resisting bending moment greater than 2,100,000 lb-in. (ranging up to 3,580,000 lb-in.). The typical on highway tractors have resisting bending moment of 1,390,000 lb-in.

the desired purposes.[42] The agencies welcome comment on the proposed requirements and exemptions.

(b) Engine Standards

EPA is proposing GHG standards and NHTSA is proposing fuel consumption standards for new heavy-duty engines. The standards will vary depending on the type of vehicle in which they are used, as well as whether the engines are diesel or gasoline powered. This section discusses the standards for engines used in Class 7 and 8 combination tractors and also provides some overall background information. More information is also provided in the discussion of the standards for engines used in vocational vehicles.

EPA's existing criteria pollutant emissions regulations for heavy-duty highway engines establish four regulatory categories that represent the engine's intended and primary truck application.[43] The Light Heavy-Duty (LHD) diesel engines are intended for application in Class 2b through Class 5 trucks (8,501 through 19,500 pounds GVWR). The Medium Heavy-Duty (MHD) diesel engines are intended for Class 6 and Class 7 trucks (19,501 through 33,000 pounds GVWR). The Heavy Heavy-Duty (HDD) diesel engines are primarily used in Class 8 trucks (33,001 pounds and greater GVWR). Lastly, spark ignition engines (primarily gasoline-powered engines) installed in incomplete vehicles less than 14,000 pounds GVWR and spark ignition engines that are installed in all vehicles (complete or incomplete) greater than 14,000 pounds GVWR are grouped into a single engine regulatory subcategory. The engines in these four regulatory subcategories range in size between approximately five liters and sixteen liters. The agencies welcome comments on updating the definitions of each subcategory, such as the typical horsepower levels, as described in 40 CFR 1036.140.

For the purposes of the GHG engine emissions and engine fuel consumption standards that EPA and NHTSA are proposing, the agencies intend to maintain these same four regulatory subcategories. This class structure would enable the agencies to set standards that appropriately reflect the technology available for engines for use in each type of vehicle, and that are therefore technologically feasible for these engines. This section discusses the MHD and HHD diesel engines used in Class 7 and 8 combination tractors. Additional details regarding the other heavy-duty engine standards are included in Section II.D.1.b.

EPA's proposed heavy-duty CO_2 emission standards for diesel engines installed in combination tractors are presented in Table II–2. We should note that this does not cover gasoline or LHDD engines as they are not used in Class 7 and 8 combination tractors. Similar to EPA's non-GHG standards approach, manufacturers may generate and use credits to show compliance with the standards. EPA is proposing to adopt the existing useful life definitions for heavy-duty engines. The EPA standards would become effective in the 2014 model year, with more stringent standards becoming effective in model year 2017. Recently, EPA's heavy-duty highway engine program for criteria pollutants provided new emissions standards for the industry in three year increments. Largely, the heavy-duty engine and truck manufacturer product plans have fallen into three year cycles to reflect this regulatory environment. The proposed two-step CO_2 emission standards recognize the opportunity for technology improvements over this timeframe while reflecting the typical diesel truck manufacturers' product plan cycles.

With respect to the lead time and cost of incorporating technology improvements that reduce GHG emissions and fuel consumption, EPA and NHTSA place important weight on the fact that during MYs 2014–2017 engine manufacturers are expected to redesign and upgrade their products. Over these four model years there will be an opportunity for manufacturers to evaluate almost every one of their engine models and add technology in a cost-effective way, consistent with existing redesign schedules, to control GHG emissions and reduce fuel consumption. The time-frame and levels for the standards, as well as the ability to average, bank and trade credits and carry a deficit forward for a limited time, are expected to provide manufacturers the time needed to incorporate technology that will achieve the proposed GHG and fuel consumption reductions, and to do this as part of the normal engine redesign process. This is an important aspect of the proposed rules, as it will avoid the much higher costs that would occur if manufacturers needed to add or change technology at times other than these scheduled redesigns. This time period will also provide manufacturers the opportunity to plan for compliance using a multi-year time frame, again in accord with their normal business practice. Further details on lead time, redesigns and technical feasibility can be found in Section III.

NHTSA's fuel consumption standards, also presented in Table II–2, would contain voluntary engine standards starting in 2014 model year, with mandatory engine standards starting in 2017 model year, harmonized with EPA's 2017 model year standards. A manufacturer may opt-in to NHTSA's voluntary standards in 2014, 2015 or 2016. Once a manufacturer opts-in, the standards become mandatory for the opt-in and subsequent model years, and the manufacturer may not reverse its decision. To opt into the program, a manufacturer must declare its intent to opt in to the program at the same time it submits the Pre-Certification Compliance Report. See 49 CFR 535.8 for information related to the Pre-Certification Compliance Report. A manufacturer opting into the program would begin tracking credits and debits beginning in the model year in which they opt into the program.

[42] The estimated cost for a lift axle is approximately $10,000. Axles with weight ratings greater than a typical on-road axle cost an additional $3,000.

[43] *See* 40 CFR 1036.140.

Table II-2: Proposed Heavy-duty Diesel Engine Standards for Engines Installed in Tractors

Effective 2014 Model Year		
	MHD Diesel Engine	HHD Diesel Engine
CO_2 Standard (g/bhp-hr)	502	475
Voluntary Fuel Consumption Standard (gallon/100 bhp-hr)	4.93	4.67
Effective 2017 Model Year		
	MHD Diesel Engine	HHD Diesel Engine
CO_2 Standard (g/bhp-hr)	487	460
Fuel Consumption (gallon/100 bhp-hr)	4.78	4.52

Combination tractors spend the majority of their operation at steady state conditions, and will obtain in-use benefit of technologies such as turbocompounding and other waste heat recovery technologies during this kind of typical engine operation. Therefore, the engines installed in tractors would be required to meet the standard based on the steady-state SET test cycle, as discussed further in Section II.B(2)(i).

The baseline HHD diesel engine performance in 2010 model year on the SET is 490 g CO_2/bhp-hr (4.81 gal/100 bhp-hr), as determined from confidential data provided by manufacturers and data submitted for the non-GHG emissions certification process. Similarly, the baseline MHD diesel engine performance on the SET cycle is 518 g CO_2/bhp-hr (5.09 gallon/100-bhp-hr) in the 2010 model year. Further discussion of the derivation of the baseline can be found in Section III The diesel engine standards that EPA is proposing and the voluntary standards being proposed by NHTSA for the 2014 model year would require diesel engine manufacturers to achieve on average a three percent reduction in fuel consumption and CO_2 emissions over the baseline 2010 model year performance for the engines. The agencies' assessment of the findings of the 2010 NAS Report and other literature sources indicates that there are technologies available to reduce fuel consumption by this level in the proposed timeframe. These technologies include improved turbochargers, aftertreatment optimization, low temperature exhaust gas recirculation, and engine friction reductions. Additional discussion on technical feasibility is included in Section III below and in draft RIA Chapter 2.

Furthermore, the agencies are proposing that diesel engines further reduce fuel consumption and CO_2 emissions from the 2010 model year baseline in 2017 model year. The proposed reductions represent on average a six percent reduction for MHD and HHD diesel engines required to use the SET-based standard. The additional reductions could likely be achieved through the increased refinement of the technologies projected to be implemented for 2014, plus the addition of turbocompounding or other waste heat recovery systems. The agencies' analysis indicates that this type of advanced engine technology would require a longer development time than the 2014 model year, and we therefore are proposing to provide additional lead time to allow for its introduction.

The agencies are aware that some truck and engine manufacturers would prefer to align their product development plans for these engine standards with their current plans to meet Onboard Diagnostic regulations for EPA and California in 2013 and 2016. We believe our proposed averaging, banking and trading provisions already provide these manufacturers with considerable flexibility to manage their GHG compliance plans consistent with the 2013 model year. Nevertheless, we are requesting comment on whether EPA and NHTSA should provide additional defined phase-in schedules that would more explicitly accommodate this request. For example, we request comment on a phase-in schedule with a standard of 485 g/bhp-hr for the model years 2013–2015 followed by a standard of 460 g/bhp-hr for 2016–18 model years with the associated fuel consumption values for the NHTSA program. This phase-in schedule is just one of many potential schedules that would provide identical fuel savings and emissions reductions for the period from 2013–2018. If commenters wish to discuss a different phase-in schedule than the one proposed by the agencies, we request that commenters include a description of their preferred phase-in schedule, including an analysis showing that it would be at least as effective (or more) as the primary program for the period through the 2018 model year. We also request comment on whether similar provisions should be made for the vocational engine standards discussed later in this section.

In proposing this standard for heavy-duty diesel engines used in Class 7 and 8 combination tractors, the agencies have examined the current performance levels of the engines across the fleet. EPA and NHTSA found that a large majority of the engines were generally relatively close to the average baseline, with some above and some below. We recognize, however, that when regulating a category of engines for the first time, there will be individual products that may deviate significantly from this baseline level of performance. For the current fleet there is a relatively small group of engines that are significantly worse than the average baseline for other engines. In proposing the standards, the agencies have looked primarily at the typical performance levels of the majority of the engines in the fleet, and the increased performance that would be achieved through increased spread of technology. The agencies also recognize that for the smaller group of products, the same reduction from the industry baseline may experience significant issues of available lead-time and cost because these products may require a total redesign in order to meet the standards. These are limited instances where certain engine families have high atypically high baseline CO_2 levels and limited line of engines across which to average performance. *See* 75 FR 25414–25419, which adopts temporary lead time allowance alternative standards to

deal with a similar issue for a subset of light-duty vehicles. To accommodate these situations, the agencies are proposing a regulatory alternative whereby a manufacturer, for a limited period, would have the option to comply with a unique standard based on a three percent reduction from an individual engine's own 2011 model year baseline level, rather than meeting the otherwise-applicable standard level. Our assessment is that this three percent reduction is appropriate given the potential for manufacturers to apply similar technology packages with similar cost to what we have estimated for the primary program. We do not believe this alternative needs to continue past the 2016 model year since manufacturers will have had ample opportunity to benchmark competitive products during redesign cycles and to make appropriate changes to bring their product performance into line with the rest of the industry. This alternative would not be available unless and until a manufacturer had exhausted all available credits and credit opportunities, and engines under the alternative standard could not generate credits. We are proposing that manufacturers can select engine families for this alternative standard without agency approval, but are proposing to require that manufacturers notify the agency of their choice and to include in that notification a demonstration that it has exhausted all available credits and credit opportunities.

The agencies are also requesting comment on the potential to extend this regulatory alternative for one additional year for a single engine family with performance measured in that year as six percent beyond the engine's own 2011 baseline level. We also request comment on the level of reduction beyond the baseline that is appropriate in this alternative. The three percent level reflects the aggregate improvement beyond the baseline we are requiring of the entire industry. As this provision is intended to address potential issues for legacy products that we would expect to be replaced or significantly improved at the manufacturer's next product redesign, we request comment if a two percent reduction would be more appropriate. We would consider two percent rather than three percent if we were convinced that making all of the changes we have outlined in our assessment of the technical feasibility of the standards was not possible for some engines due to legacy design issues that will change in the future. We are proposing that manufacturers making use of these provisions would need to exhaust all credits within this subcategory prior to using this flexibility and would not be able to generate emissions credits from other engines in the same regulatory subcategory as the engines complying using this alternate approach.

EPA and NHTSA considered setting even more stringent engine standards for the 2017 model year based on the use of more sophisticated waste heat recovery technologies such as bottoming cycle engine designs. We are not proposing more stringent standards because we do not believe this technology can be broadly available by 2017 model year. We request comment on the technological feasibility and cost-effectiveness of more stringent standards in the timeframe of the proposed standards.

(c) In-Use Standards

Section 202(a)(1) of the CAA specifies that EPA is to adopt emissions standards that are applicable for the useful life of the vehicle. The in-use standards that EPA is proposing would apply to individual vehicles and engines. NHTSA is not proposing to adopt in-use.

EPA is proposing that the in-use standards for heavy-duty engines installed in tractors be established by adding an adjustment factor to the full useful life emissions and fuel consumption results projected in the EPA certification process. EPA is proposing a 2 percent adjustment factor for the in-use standard to provide a reasonable margin for production and test-to-test variability that could result in differences between the initial emission test results and emission results obtained during subsequent in-use testing. Details on the development of the adjustment factor are included in draft RIA Chapter 3.

EPA is also proposing that the useful life for these engine and vehicles with respect to GHG emissions be set equal to the respective useful life periods for criteria pollutants. EPA proposes that the existing engine useful life periods, as included in Table II–3:, be broadened to include CO_2 emissions and fuel consumption for both engines and tractors (*see* 40 CFR 86.004–2).

Table II-3: Tractor and Engine Useful Life Periods

	Years	Miles
Medium Heavy-Duty Diesel Engines and Class 7 Tractors	10	185,000
Heavy Heavy-Duty Diesel Engines and Class 8 Tractors	10	435,000

EPA and NHTSA request comments on the magnitude and need for an in-use adjustment factor for the engine standard and the compliance model (GEM) based tractor standard.

(2) Test Procedures and Related Issues

The agencies are proposing a complete set of test procedures to evaluate fuel consumption and CO_2 emissions from Class 7 and 8 tractors and the engines installed in them. The test procedures related to the tractors are all new, while the engine test procedures build substantially on EPA's current non-GHG emissions test procedures, except as noted. This section discusses the proposed simulation model developed for demonstrating compliance with the tractor standard and the proposed engine test procedures.

(a) Truck Simulation Model

We are proposing to set separate engine and vehicle-based emission standards to achieve the goal of reducing emissions and fuel consumption for both trucks and engines. For the Class 7 and 8 tractors, engine manufacturers would be subject to the engine standards, and Class 7 and 8 tractor manufacturers would be required to install engines in their tractors certified for use in the tractor. The tractor manufacturer would be subject to a separate vehicle-based standard that would use a proposed truck simulation model to evaluate the

impact of the tractor cab design to determine compliance with the tractor standard.

A simulation model, in general, uses various inputs to characterize a vehicle's properties (such as weight, aerodynamics, and rolling resistance) and predicts how the vehicle would behave on the road when it follows a driving cycle (vehicle speed versus time). On a second-by-second basis, the model determines how much engine power needs to be generated for the vehicle to follow the driving cycle as closely as possible. The engine power is then transmitted to the wheels through transmission, driveline, and axles to move the vehicle according to the driving cycle. The second-by-second fuel consumption of the vehicle, which corresponds to the engine power demand to move the vehicle, is then calculated according to a fuel consumption map in the model. Similar to a chassis dynamometer test, the second-by-second fuel consumption is aggregated over the complete drive cycle to determine the fuel consumption of the vehicle.

NHTSA and EPA are proposing to evaluate fuel consumption and CO_2 emissions respectively through a simulation of whole-vehicle operation, consistent with the NAS recommendation to use a truck model to evaluate truck performance. The agencies developed the Greenhouse gas Emissions Model (GEM) for the specific purpose of this proposal to evaluate truck performance. The GEM is similar in concept to a number of vehicle simulation tools developed by commercial and government entities. The model developed by the agencies and proposed here was designed for the express purpose of vehicle compliance demonstration and is therefore simpler and less configurable than similar commercial products. This approach gives a compact and quicker tool for vehicle compliance without the overhead and costs of a more sophisticated model. Details of the model are included in Chapter 4 of the draft RIA. The agencies are aware of several other simulation tools developed by universities and private companies. Tools such as Argonne National Laboratory's Autonomie, Gamma Technologies' GT–Drive, AVL's CRUISE, Ricardo's VSIM, Dassault's DYMOLA, and University of Michigan's HE–VESIM codes are publicly available. In addition, manufacturers of engines, vehicles, and trucks often have their own in-house simulation tools. The agencies welcome comments on other simulation tools which could be used by the agencies. The use criteria for this model are that it must be able to be managed by the agencies for compliance purposes, has no cost to the end-user, is freely available and distributable as an executable file, contains open source code to provide transparency in the model's operation yet contains features which cannot be changed by the user, and is easy to use by any user with minimal or no prior experience.

GEM is designed to focus on the inputs most closely associated with fuel consumption and CO_2 emissions—*i.e.,* on those which have the largest impacts such as aerodynamics, rolling resistance, weight, and others.

EPA has validated GEM based on the chassis test results from a SmartWay certified tractor tested at Southwest Research Institute. The validation work conducted on these three vehicles is representative of the other Class 7 and 8 tractors. Many aspects of one tractor configuration (such as the engine, transmission, axle configuration, tire sizes, and control systems) are similar to those used on the manufacturer's sister models. For example, the powertrain configuration of a sleeper cab with any roof height is similar to the one used on a day cab with any roof height. Overall, the GEM predicted the fuel consumption and CO_2 emissions within 4 percent of the chassis test procedure results for three test cycles—the California ARB Transient cycle, 65 mph cruise cycle, and 55 mph cruise cycle. These cycles are the ones the agencies are proposing to utilize in compliance testing. Test to test variation for heavy-duty vehicle chassis testing can be higher than 4 percent based on driver variation. The proposed simulation model is described in greater detail in Chapter 4 of the draft RIA and is available for download by interested parties at (*http://www.epa.gov/otaq/climate/regulations.htm*). We request comment on all aspects of this approach to compliance determination in general and to the use of the GEM in particular.

The agencies are proposing that for demonstrating compliance, a Class 7 and 8 tractor manufacturer would measure the performance of specified tractor systems (such as aerodynamics and tire rolling resistance), input the values into GEM, and compare the model's output to the standard. The agencies propose that a tractor manufacturer would provide the inputs for each of following factors for each of the tractors it wished to certify under CO_2 standards and for establishing fuel consumption values: Coefficient of Drag, Tire Rolling Resistance Coefficient, Weight Reduction, Vehicle Speed Limiter, and Extended Idle Reduction Technology. These are the technologies on which the agencies' own feasibility analysis for these vehicles is predicated. An example of the GEM input screen is included in Figure II–3.

The input values for the simulation model would be derived by the manufacturer from test procedures proposed by the agencies in this proposal. The agencies are proposing several testing alternatives for aerodynamic assessment, a single procedure for tire rolling resistance coefficient determination, and a prescribed method to determine tractor weight reduction. The agencies are proposing defined model inputs for determining vehicle speed limiter and extended idle reduction technology benefits. The other aspects of vehicle performance are fixed within the model as defined by the agencies and are not varied for the purpose of compliance.

(b) Metric

Test metrics which are quantifiable and meaningful are critical for a regulatory program. The CO_2 and fuel consumption metric should reflect what we wish to control (CO_2 or fuel consumption) relative to the clearest value of its use: In this case, carrying freight. It should encourage efficiency improvements that will lead to reductions in emissions and fuel consumption during real world operation. The agencies are proposing standards for Class 7 and 8 combination tractors that would be expressed in terms of moving a ton (2000 pounds) of freight over one mile. Thus, NHTSA's proposed fuel consumption standards for these trucks would be represented as gallons of fuel used to move one ton of freight 1,000 miles, or gal/1,000 ton-mile. EPA's proposed CO_2 vehicle standards would be represented as grams of CO_2 per ton-mile.

Similarly, the NAS panel concluded, in their report, that a load-specific fuel consumption metric is appropriate for HD trucks. The panel spent considerable time explaining the advantages of and recommending a load-specific fuel consumption approach to regulating the fuel efficiency of heavy-duty trucks. *See* NAS Report pages 20 through 28. The panel first points out that the nonlinear relationship between fuel economy and fuel consumption has led consumers of light-duty vehicles to have difficulty in judging the benefits of replacing the most inefficient vehicles. The panel describes an example where a light-duty vehicle can save the same 107 gallons per year (assuming 12,000 miles travelled per year) by improving one vehicle's fuel efficiency from 14 to 16 mpg or improving another vehicle's fuel efficiency from 35 to 50.8 mpg. The use

of miles per gallon leads consumers to undervalue the importance of small mpg improvements in vehicles with lower fuel economy. Therefore, the NAS panel recommends the use of a fuel consumption metric over a fuel economy metric. The panel also describes the primary purpose of most heavy-duty vehicles as moving freight or passengers (the payload). Therefore, they concluded that the most appropriate way to represent an attribute-based fuel consumption metric is to normalize the fuel consumption to the payload.

With the approach to compliance NHTSA and EPA are proposing, a default payload is specified for each of the tractor categories suggesting that a gram per mile metric with a specified payload and a gram per ton-mile metric would be effectively equivalent. The primary difference between the metrics and approaches relates to our treatment of mass reductions as a means to reduce fuel consumption and greenhouse gas emissions. In the case of a gram per mile metric, mass reductions are reflected only in the calculation of the work necessary to move the vehicle mass through the drive cycle. As such it directly reduces the gram emissions in the numerator since a vehicle with less mass will require less energy to move through the drive cycle leading to lower CO_2 emissions. In the case of Class 7 and 8 tractors and our proposed gram/ton-mile metric, reductions in mass are reflected both in less mass moved through the drive cycle (the numerator) and greater payload (the denominator). We adjust the payload based on vehicle mass reductions because we estimate that approximately one third of the time the amount of freight loaded in a trailer is limited not by volume in the trailer but by the total gross vehicle weight rating of the tractor. By reducing the mass of the tractor the mass of the freight loaded in the tractor can go up. Based on this general approach, it can be estimated that for every 1,200 pounds in mass reduction total truck vehicle miles traveled and therefore trucks on the road could be reduced by one percent. Without the use of a per ton-mile metric it would not be clear or straightforward for the agencies to reflect the benefits of mass reduction from large freight carrying vehicles that are often limited in the freight they carry by the gross vehicle weight rating of the truck. The agencies seek comment on the use of a per ton-mile metric and also whether other metrics such as per cube-mile should be considered instead.

(c) Truck Aerodynamic Assessment

The aerodynamic drag of a vehicle is determined by the vehicle's coefficient of drag (Cd), frontal area, air density and speed. The agencies are proposing to establish and use pre-defined values for the input parameters to GEM which represent the frontal area and air density, while the speed of the vehicle would be determined in GEM through the proposed drive cycles. The agencies are proposing that the manufacturer would determine a truck's Cd, a dimensionless measure of a vehicle's aerodynamics, for input into the model through a combination of vehicle testing and vehicle design characteristics. Quantifying truck aerodynamics as an input to the GEM presents technical challenges because of the proliferation of truck configurations, the lack of a clearly preferable standardized test method, and subtle variations in measured Cd values among various test procedures. Class 7 and 8 tractor aerodynamics are currently developed by manufacturers using a range of techniques, including vehicle coastdown testing, wind tunnel testing, computational fluid dynamics, and constant speed tests as further discussed below. Reflecting that each of these approaches has limitations and no one approach appears to be superior to others, the agencies are proposing to allow all three aerodynamic evaluation methods to be used in demonstrating a vehicle's aerodynamic performance. The agencies welcome comments on each of these methods.

The agencies are proposing that the coefficient of drag assessment be a product of test data and vehicle characteristics using good engineering judgment. The primary tool the agencies expect to use in our own evaluation of aerodynamic performance is the coastdown procedure described in SAE Recommended Practice J2263. Allowing manufacturers to use multiple test procedures and modeling coupled with good engineering judgment to determine aerodynamic performance is consistent with the current approach used in determining representative road load forces for light-duty vehicle testing (40 CFR 86.129–00(e)(1)). The agencies anticipate that as we and the industry gain experience with assessing aerodynamic performance of HD vehicles for purposes of compliance a test-only approach may have advantages.

We believe this broad approach allowing manufacturers to use multiple different test procedures to demonstrate aerodynamic performance is appropriate given that no single test procedure is superior in all aspects to other approaches. However, we also recognize the need for consistency and a level playing field in evaluating aerodynamic performance. To accomplish this, the agencies propose to use a two-part approach that evaluates aerodynamic performance not only through testing but through the application of good engineering judgment and a technical description of the vehicles aerodynamic characteristics. The first part of the proposed evaluation approach uses a bin structure characterizing the expected aerodynamic performance of tractors based on definable vehicle attributes. This bin approach is described further below. The second proposed evaluation element uses aerodynamic testing to measure the vehicle's aerodynamic performance under standardized conditions. The agencies expect that the SAE J2263 coastdown procedures will be the primary aerodynamic testing tool but are interested in working with the regulated industry and other interested stakeholders to develop a primary test approach. Additionally, the agencies propose to have a process that would allow manufacturers to demonstrate that another aerodynamic test procedure should also be allowed for purposes of generating inputs used in assessing a truck's performance. We are requesting comment on methods that should form the primary aerodynamic testing tool, methods that may be appropriate as alternatives, and the mechanism (including standards, practices, and unique criteria) for the agencies to consider allowing alternative aerodynamic test methods.

NHTSA and EPA are proposing that manufacturers use a two part screening approach for determining the aerodynamic inputs to the GEM. The first part would require the manufacturers to assign each vehicle aerodynamic configuration to one of five aerodynamics bins created by EPA and NHTSA as described below. The assignment by bin reflects the aerodynamic characteristics of the vehicle. For each bin, EPA and NHTSA have already defined a nominal Cd that will be used in the GEM and a range of Cd values that would be expected from testing of vehicles meeting this bin description. The second part would require the manufacturer to then compare its own test results of aerodynamic performance (as conducted in accordance with the agencies' requirements) for the vehicle to confirm the actual aerodynamic performance was consistent with the agencies' expectations for vehicles within this

bin. If the predicted performance and actual observed performance match, the Cd value as an input for the GEM is the nominal Cd value defined for the bin. If, however, a manufacturer's test data demonstrates performance that is better than projected for the assigned bin a manufacturer may use the test data and good engineering judgment to demonstrate to the agencies that this particular vehicle's performance is in keeping with the performance level of a more aerodynamic bin and with the agencies' permission may use the Cd value of the more aerodynamic bin. Conversely, if the test data demonstrates that the performance is worse than the projected bin, then the manufacturer would use the Cd value from the less aerodynamic bin. Using this approach, the bin structure can be seen as the agencies' first effort to create a common measure of aerodynamic performance to benchmark the various test methods manufacturers may use to demonstrate aerodynamic performance. For example, if a manufacturer's test methods consistently produce Cd values that are better than projected by the agencies, EPA and NHTSA can use this information to further scrutinize the manufacturer's test procedure, helping to ensure that all manufacturers are competing on a level playing field.

The agencies are proposing aerodynamic technology bins which divide the wide spectrum of tractor aerodynamics into five bins (*i.e.,* categories). The first category, "Classic," represents tractor bodies which prioritize appearance or special duty capabilities over aerodynamics. The Classic trucks incorporate few, if any, aerodynamic features and may have several features which detract from aerodynamics, such as bug deflectors, custom sunshades, B-pillar exhaust stacks, and others. The second category for aerodynamics is the "Conventional" tractor body. The agencies consider Conventional tractors to be the average new tractor today which capitalizes on a generally aerodynamic shape and avoids classic features which increase drag. Tractors within the "SmartWay" category build on Conventional tractors with added components to reduce drag in the most significant areas on the tractor, such as fully enclosed roof fairings, side extending gap reducers, fuel tank fairings, and streamlined grill/hood/mirrors/bumpers. The "Advanced SmartWay" aerodynamic category builds upon the SmartWay tractor body with additional aerodynamic treatments such as underbody airflow treatment, down exhaust, and lowered ride height, among other technologies. And finally, "Advanced SmartWay II" tractors incorporate advanced technologies which are currently in the prototype stage of development, such as advanced gap reduction, rearview cameras to replace mirrors, wheel system streamlining, and advanced body designs. The agencies recognize that these proposed aerodynamic bins are static and referential and that there may be other technologies that may provide similar aerodynamic benefit. In addition, it is expected that aerodynamic equipment will advance over time and the agencies may find it appropriate and necessary to revise the bin descriptions.

Under this proposal, the manufacturer would then input into GEM the Cd value specified for each bin as also defined in Table II–4. For example, if a manufacturer tests a Class 8 sleeper cab high roof tractor with features which are similar to a SmartWay tractor and the test produces a Cd value of 0.59, then the manufacturer would assign this tractor to the Class 8 Sleeper Cab High Roof SmartWay bin. The manufacturer would then use the Cd value of 0.60 as the input to GEM.

Table II-4: Aerodynamic Input Definitions to GEM

	Class 7		Class 8				
	Day Cab		Day Cab		Sleeper Cab		
	Low/ Mid Roof	High Roof	Low/ Mid Roof	High Roof	Low Roof	Mid Roof	High Roof
Aerodynamics Test Results (Cd)							
Classic	≥0.83	≥0.73	≥0.83	≥0.73	≥0.83	≥0.78	≥0.73
Conventional	0.78-0.82	0.63-0.72	0.78-0.82	0.63-0.72	0.78-0.82	0.73-0.77	0.63-0.72
SmartWay	0.73-0.77	0.58-0.62	0.73-0.77	0.58-0.62	0.73-0.77	0.68-0.72	0.58-0.62
Advanced SmartWay	0.68-0.72	0.53-0.57	0.68-0.72	0.53-0.57	0.68-0.72	0.63-0.67	0.53-0.57
Advanced SmartWay II	≤0.67	≤0.52	≤0.67	≤0.52	≤0.67	≤0.62	≤0.52
Aerodynamic Input to GEM (Cd)							
Frontal Area (m^2)	6.0	9.8	6.0	9.8	6.0	7.7	9.8
Classic	0.85	0.75	0.85	0.75	0.85	0.80	0.75
Conventional	0.80	0.68	0.80	0.68	0.80	0.75	0.68
SmartWay	0.75	0.60	0.75	0.60	0.75	0.70	0.60
Advanced SmartWay	0.70	0.55	0.70	0.55	0.70	0.65	0.55
Advanced SmartWay II	0.65	0.50	0.65	0.50	0.65	0.60	0.50

Coefficient of drag and frontal area of the tractor-trailer combination go hand-in-hand to determine the force required to overcome aerodynamic drag. As explained above, the agencies are proposing that the Cd value is one of the GEM inputs which will be derived by the manufacturer. However, the agencies are proposing to specify the truck's frontal area for each regulatory category (i.e., each of the seven subcategories which are proposed and listed in Table II–4 under the Aerodynamic Input to GEM). The frontal area of a high roof tractor pulling a box trailer will be determined primarily by the box trailer's dimensions and the ground clearance of the tractor. The frontal area of low and mid roof tractors will be determined by the tractor itself. An alternate approach to the proposed frontal area specification is to create the aerodynamic input table (as shown in Table II–4) with values that represent the Cd multiplied by the frontal area. This approach will provide the same aerodynamic load, but it will not allow the comparison of aerodynamic efficiency across regulatory categories that can be done with the Cd values alone. The agencies are interested in comments regarding the frontal area of trucks, specifically whether the specified frontal areas are appropriate and whether the use of standard frontal areas may have unanticipated consequences.

EPA and NHTSA recognize that wind conditions, most notably wind direction, have a greater impact on real world CO_2 emissions and fuel consumption of heavy-duty trucks than of light-duty vehicles. As noted in the NAS report,[44] the wind average drag coefficient is about 15 percent higher than the zero degree coefficient of drag. The agencies considered proposing the use of a wind averaged drag coefficient in this regulatory program, but ultimately decided to propose using coefficient of drag values which represent zero yaw (*i.e.*, representing wind from directly in front of the vehicle, not from the side) instead. We are taking this approach recognizing that wind tunnels are currently the only tool to accurately assess the influence of wind speed and direction on a truck's aerodynamic performance. The agencies recognize, as NAS did, that the results of using the zero yaw approach may result in fuel consumption predictions that are offset slightly from real world performance levels, not unlike the offset we see today between fuel economy test results in the CAFE program and actual fuel economy performance observed in-use. We believe this approach will not impact technology effectiveness or change the kinds of technology decisions made by the tractor manufacturers in developing equipment to meet our proposed standards. However, the agencies are interested in receiving comment on approaches to develop wind averaged coefficient of drag values using computational fluid dynamics, coastdown, and constant speed test procedures.

The methodologies the agencies are considering for aerodynamic assessment include coastdown testing, wind tunnel testing, computational fluid dynamics, and constant speed testing. The agencies welcome information on a constant speed test procedure and how it could be applied to determine aerodynamic drag. In addition, the agencies seek comment on allowing multiple aerodynamic assessment methodologies and the need for comparison of aerodynamic assessment methods to determine method precision and accuracy.

(i) Coastdown Testing

The coastdown test procedure has been used extensively in the light-duty industry to capture the road load force by coasting a vehicle along a flat straightaway under a set of prescribed conditions. Coast down testing has been used less extensively to obtain road load forces for medium- and heavy-duty vehicles. EPA has conducted a significant amount of test work to demonstrate that coastdown testing per SAE J2263 produces reasonably repeatable test results for Class 7 and 8 tractor/trailer pairings, as described in draft RIA Chapter 3. The agencies propose that a manufacturer which chooses this method would determine a tractor's Cd value through analysis of the road load force equation derived from SAE J2263 Revised 2008–12 test results, as proposed in 40 CFR 1066.210.

(ii) Wind Tunnel Testing

A wind tunnel provides a stable environment yielding a more repeatable test than coastdown. This allows the manufacturer to run multiple baseline vehicle tests and explore configuration modifications for nearly the same effort (*e.g.,* time and cost) as conducting the coastdown procedure. In addition, wind tunnels provide testers with the ability to yaw the vehicle at positive and negative angles relative to the original centerline of the vehicle to accurately capture the influence of non-uniform wind direction on the Cd (*e.g.,* wind averaged Cd).

The agencies propose to allow the use of existing wind tunnel procedures adopted by SAE International with some minor modifications as discussed in Section V of this proposal. The agencies seek comments on the appropriateness of using the existing SAE wind tunnel procedures, and the modifications to these procedures, for this regulatory purpose.

(iii) Computational Fluid Dynamics

Computational fluid dynamics, or CFD, capitalizes on today's computing power by modeling a full size vehicle and simulating the flows around this model to examine the fluid dynamic properties, in a virtual environment. CFD tools are used to solve either the Navier-Stokes equations that relate the physical law of conservation of momentum to the flow relationship around a body in motion or a static body with fluid in motion around it, or the Boltzman equation that examines fluid mechanics and determines the characteristics of discreet, individual particles within a fluid and relates this behavior to the overall dynamics and behavior of the fluid. CFD analysis involves several steps: Defining the model structure or geometry based on provided specifications to define the basic model shape; applying a closed surface around the structure to define the external model shape (wrapping or surface meshing); dividing the control volume, including the model and the surrounding environment, up into smaller, discreet shapes (gridding); defining the flow conditions in and out of the control volume and the flow relationships within the grid (including eddies and turbulence); and solving the flow equations based on the prescribed flow conditions and relationships.

This approach can be beneficial to manufacturers since they can rapidly prototype (*e.g.,* design, research, and model) an entire vehicle without investing in material costs; they can modify and investigate changes easily; and the data files can be re-used and shared within the company or with corporate partners.

The accuracy of the outputs from CFD analysis is highly dependent on the inputs. The CFD modeler decides what method to use for wrapping, how fine the mesh cell and grid size should be, and the physical and flow relationships within the environment. A balance must be achieved between the number of cells, which defines how fine the mesh is, and the computational times for a result (*i.e.,* solution-time-efficiency). All of these decisions affect the results of the CFD aerodynamic assessment.

[44] *See* 2010 NAS Report, Note 19, Finding 2–4 on page 39.

Because CFD modeling is dependent on the quality of the data input and the design of the model, the agencies propose and seek comment on a minimum set of criteria applicable to using CFD for aerodynamic assessment in Section V.

(d) Tire Rolling Resistance Assessment

NHTSA and EPA are proposing that the tractor's tire rolling resistance input to the GEM be determined by either the tire manufacturer or tractor manufacturer using the test method adopted by the International Organization for Standardization, ISO 28580:2009.[45] The agencies believe the ISO test procedure is appropriate to propose for this program because the procedure is the same one used by NHTSA in its fuel efficiency tire labeling program [46] and is consistent with the direction being taken by the tire industry both in the United States and Europe. The rolling resistance from this test would be used to specify the rolling resistance of each tire on the steer and drive axle of the vehicle. The results would be expressed as a rolling resistance coefficient and measured as kilogram per metric ton (kg/metric ton). The agencies are proposing that three tire samples within each tire model be tested three times each to account for some of the production variability and the average of the nine tests would be the rolling resistance coefficient for the tire. The GEM would use a combined tire rolling resistance, where 15 percent of the gross weight of the truck and trailer would be distributed to the steer axle, 42.5 percent to the drive axles, and 42.5 percent to the trailer axles.[47] The trailer tires' rolling resistance would be prescribed by the agencies as part of the standardized trailer used for demonstrating compliance at 6 kg/metric ton, which was the average trailer tire rolling resistance measured during the SmartWay tire testing.[48]

We acknowledge that the useful life of original equipment tires used on tractors is shorter than the tractor's useful life. In this proposal, we are treating the tires as if the owner replaces the tire with tires that match the original equipment. Some owners opt for the original tires under the assumption that this is the best product. However, tractor tires are often retreaded or replaced. Steer tires on a highway tractor might need replacement after 75,000 to 150,000 miles. Drive tires might need retreading or replacement after 150,000 to 300,000 miles. Of course, tire removal miles can be much higher or lower, depending upon a number of factors that affect tire removal miles. These include the original tread depth; desired tread depth at removal to maintain casing integrity; tire material and construction; typical load; tire "scrub" due to urban driving and set back axles; and, tire under-inflation. Since it is common for both medium- and heavy-duty truck tires to be replaced and retreaded, we welcome comments in this area. We are specifically seeking data for the rolling resistance of retread and replacement heavy-duty tires and the typical useful life of tractor tires.

(e) Weight Reduction Assessment

EPA and NHTSA are seeking to account for the emissions and fuel consumption benefits of weight reduction as a control technology in heavy-duty trucks. Weight reduction impacts the emissions and fuel consumption performance of tractors in different ways depending on the truck's operation. For trucks that cube-out, the weight reduction will show a small reduction in grams of CO_2 emitted or fuel consumed per mile travelled. The benefit is small because the weight reduction is minor compared to the overall weight of the combination tractor and payload. However, a weight reduction in tractors which operate at maximum gross vehicle weight rating would result in an increase in payload capacity. Increased vehicle payload without increased GVWR significantly reduces fuel consumption and CO_2 emissions per ton mile of freight delivered. It also leads to fewer vehicle miles driven with a proportional reduction in traffic accidents.

The empty curb weight of tractors varies significantly today. Items as common as fuel tanks can vary between 50 and 300 gallons each for a given truck model. Information provided by truck manufacturers indicates that there may be as much as a 5,000 to 17,000 pound difference in curb weight between the lightest and heaviest tractors within a regulatory subcategory (such as Class 8 sleeper cab with a high roof). Because there is such a large variation in the baseline weight among trucks that perform roughly similar functions with roughly similar configurations, there is not an effective way to quantify the exact CO_2 and fuel consumption benefit of mass reduction using GEM because of the difficulty in establishing a baseline. However, if the weight reduction is limited to tires and wheels, then both the baseline and weight differentials for these are readily quantifiable and well-understood. Therefore, the agencies are proposing that the mass reduction that would be simulated be limited only to reductions in wheel and tire weight. In the context of this heavy-duty vehicle program with only changes to tires and wheels, the agencies do not foresee any related impact on safety.[49] The agencies welcome comments regarding this approach and detailed data to further improve the robustness of the agencies' assumed baseline truck tare/curb weights for each regulatory category used within the model, as outlined in draft RIA Chapter 3.5.

EPA and NHTSA are proposing to specify the baseline vehicle weight for each regulatory category (including the tires and wheels), but allow manufacturers to quantify weight reductions based on the wheel material selection and single wide versus dual tires per Table II–5. The agencies assume the baseline wheel and tire configuration contains dual tires with steel wheels because these represent the vast majority of new vehicle configurations today. The proposed weight reduction due to the wheels and tires would be reflected in the payload tons by increasing the specified payload by the weight reduction amount discounted by two thirds to recognize that approximately one third of the truck miles are travelled at maximum payload, as discussed below in the payload discussion.

[49] For more information on the estimated safety effects of this proposed rule, *see* Chapter 9 of the draft RIA.

Table II-5: Proposed Weight Reduction Values

Weight Reduction Technology		Weight Reduction (lb per tire/wheel)
Single Wide Drive Tire with ...	Steel Wheel	84
	Aluminum Wheel	139
	Light Weight Aluminum Wheel	147
Steer Tire or Dual Wide Drive Tire with ...	High Strength Steel Wheel	8
	Aluminum Wheel	21
	Light Weight Aluminum Wheel	30

(f) Extended Idle Reduction Technology Assessment

Extended idling from Class 8 heavy-duty long haul combination tractors contributes to significant CO_2 emissions and fuel consumption in the United States. The Federal Motor Carrier Safety Administration regulations require a certain amount of driver rest for a corresponding period of driving hours.[50] Extended idle occurs when Class 8 long haul drivers rest in the sleeper cab compartment during rest periods as drivers find it both convenient and less expensive to rest in the truck cab itself than to pull off the road and find accommodations. During this rest period a driver will idle the truck in order to provide heating or cooling or run on-board appliances. In some cases the engine can idle in excess of 10 hours. During this period, the truck will consume approximately 0.8 gallons of fuel and emit over 8,000 grams of CO_2 per hour. An average truck can consume 8 gallons of fuel and emit over 80,000 grams of CO_2 during overnight idling in such a case.

Idling reduction technologies are available to allow for driver comfort while reducing fuel consumptions and CO_2 emissions. Auxiliary power units, fuel operated heaters, battery supplied air conditioning, and thermal storage systems are among the technologies available today. The agencies are proposing to include extended idle reduction technology as an input to the GEM for Class 8 sleeper cabs. The manufacturer would input the value based on the idle reduction technology installed on the truck. As discussed further in Section III, if a manufacturer chooses to use idle reduction technology to meet the standard, then it would require an automatic main engine shutoff after 5 minutes to help ensure the idle reductions are realized in-use. As with all of the technology inputs discussed in this section, the agencies are not mandating the use of idle reductions or idle shutdown, but rather allowing their use as one part of a suite of technologies feasible for reducing fuel consumption and meeting the proposed standards. The proposed value (5 g CO_2/ton-mile or 0.5 gal/1,000 ton-mile) for the idle reduction technologies was determined using an assumption of 1,800 idling hours per year, 125,000 miles travelled, and a baseline idle fuel consumption of 0.8 gallons per hour. Additional detail on the emission and fuel consumption reduction values are included in draft RIA Chapter 2.

(g) Vehicle Speed Limiters

Fuel consumption and CO_2 emissions increase proportional to the square of vehicle speed.[51] Therefore, lowering vehicle speeds can significantly reduce fuel consumption and GHG emissions. A vehicle speed limiter (VSL), which limits the vehicle's maximum speed, is a simple technology that is utilized today. The feature is electronically programmed and controlled. Manufacturers today sell trucks with vehicle speed limiters and allow the customers to set the limit. However, as proposed the GEM will not provide a fuel consumption reduction for a limiter that can be overridden. In order to obtain a benefit for the program, the manufacturer must preset the limiter in such a way that the setting will not be capable of being easily overridden by the fleet or the owner. As with other engine calibration aspects of emission controls, tampering with a calibration would be considered unlawful by EPA. If the manufacturer installs a vehicle speed limiter into a truck that is not easily overridden, then the manufacturer would input the vehicle speed limit setpoint into GEM.

(h) Defined Vehicle Configurations in the GEM

As discussed above, the agencies are proposing methodologies that manufacturers would use to quantify the values to be input into the GEM for these factors affecting truck efficiency: Coefficient of Drag, Tire Rolling Resistance Coefficient, Weight Reduction, Vehicle Speed Limiter, and Extended Idle Reduction Technology. The other aspects of vehicle performance are fixed within the model and are not varied for the purpose of compliance. The defined inputs being proposed include the drive cycle, tractor-trailer combination curb weight, payload, engine characteristics, and drivetrain for each vehicle type, and others. We are seeking comments accompanied with data on the defined model inputs as described in draft RIA Chapter 4.

(i) Vehicle Drive Cycles

As noted by the 2010 NAS Report,[52] the choice of a drive cycle used in compliance testing has significant consequences on the technology that will be employed to achieve a standard as well as the ability of the technology to achieve real world reductions in emissions and improvements in fuel consumption. Manufacturers naturally will design vehicles to ensure they satisfy regulatory standards. If the agencies propose an ill-suited drive cycle for a regulatory category, it may encourage GHG emissions and fuel consumption technologies which satisfy the test but do not achieve the same benefits in use. For example, requiring all trucks to use a constant speed highway drive cycle will drive significant aerodynamic improvements. However, in the real world a combination tractor used for local

[51] *See* 2010 NAS Report, Note 19, Page 28. Road Load Force Equation defines the aerodynamic portion of the road load as ½ * Coefficient of Drag * Frontal Area * air density * vehicle speed squared.

[52] *See* 2010 NAS Report, Note 19, Chapters 4 and 8.

delivery may spend little time on the highway, reducing the benefits that would be achieved by this technology. In addition, the extra weight of the aerodynamic fairings will actually penalize the GHG and fuel consumption performance in urban driving and may reduce the freight carrying capability. The unique nature of the kinds of CO_2 emissions control and fuel consumption technology means that the same technology can be of benefit during some operation but cause a reduced benefit under other operation.[53] To maximize the GHG emissions and fuel consumption benefits and avoid unintended reductions in benefits, the drive cycle should focus on promoting technology that produces benefits during the primary operation modes of the application. Consequently, drive cycles used in GHG emissions and fuel consumption compliance testing should reasonably represent the primary actual use, notwithstanding that every truck has a different drive cycle in-use.

The agencies are proposing a modified version of the California ARB Heavy Heavy-duty Truck 5 Mode Cycle,[54] using the basis of three of the cycles which best mirror Class 7 and 8 combination tractor driving patterns, based on information from EPA's MOVES model.[55] The key advantage of the California ARB 5 mode cycle is that it provides the flexibility to use several different modes and weight the modes to fit specific truck application usage patterns. EPA analyzed the five cycles and found that some modifications to the modes appear to be needed to allow sufficient flexibility in weightings. The agencies are proposing the use of the Transient mode, as defined by California ARB, because it broadly covers urban driving. The agencies are also proposing altered versions of the High Speed Cruise and Low Speed Cruise modes which would reflect only constant speed cycles at 65 mph and 55 mph respectively. EPA and NHTSA relied on the EPA MOVES analysis of Federal Highway Administration data to develop the proposed mode weightings to characterize typical operations of heavy-duty trucks, per Table II–6 below.[56] A detailed discussion of drive cycles is included in draft RIA Chapter 3.[57]

Table II-6: Drive Cycle Mode Weightings

	Transient	55 mph Cruise	65 mph Cruise
Day Cabs	19%	17%	64%
Sleeper Cabs	5%	9%	86%

(ii) Empty Weight and Payload

The total weight of the tractor-trailer combination is the sum of the tractor curb weight, the trailer curb weight, and the payload. The total weight of a truck is important because it in part determines the impact of technologies, such as rolling resistance, on GHG emissions and fuel consumption. The agencies are proposing to specify each of these aspects of the vehicle.

The agencies developed the proposed tractor curb weight inputs from actual tractor weights measured in two of EPA's test programs and based on information from the manufacturers. The proposed trailer curb weight inputs were derived from actual trailer weight measurements conducted by EPA and weight data provided to ICF International by the trailer manufacturers.[58] Details of the individual weight inputs by regulatory category are included in draft RIA Chapter 3.

There are several methods that the agencies have considered for evaluating the GHG emissions and fuel consumption of tractors used to carry freight. A key factor in these methods is the weight of the truck that is assumed for purposes of the evaluation. In use, trucks operate at different weights at different times during their operations. The greatest freight transport efficiency (the amount of fuel required to move a ton of payload) would be achieved by operating trucks at the maximum load for which they are designed all of the time. However, logistics such as delivery demands which require that trucks travel without full loads, the density of payload, and the availability of full loads of freight limit the ability of trucks to operate at their highest efficiency all the time. M.J. Bradley analyzed the Truck Inventory and Use Survey and found that approximately 9 percent of combination tractor miles travelled empty, 61 percent are "cubed-out" (the trailer is full before the weight limit is reached), and 30 percent are "weighed out" (operating weight equal 80,000 pounds which is the gross vehicle weight limit on the Federal Interstate Highway System or greater than 80,000 pounds for vehicles traveling on roads outside of the interstate system).[59]

As described above, the amount of payload that a tractor can carry depends on the category (or GVWR) of the vehicle. For example, a typical Class 7 tractor can carry less payload than a Class 8 tractor. The Federal Highway Administration developed Truck Payload Equivalent Factors to inform the development of highway system strategies using Vehicle Inventory and Use Survey (VIUS) and Vehicle Travel Information System data. Their results

[53] This situation does not typically occur for heavy-duty emission control technology designed to control criteria pollutants such as PM and NO_X.

Analysis based on 1992 Truck Inventory and Use Survey data, where the survey data allowed developing the distribution of loads instead of merely the average loads.

found that the average payload of a Class 8 truck ranged from 36,247 to 40,089 pounds, depending on the average distance travelled per day.[60] The same results found that Class 7 trucks carried between 18,674 and 34,210 pounds of payload also depending on average distance travelled per day. Based on this data, the agencies are proposing to prescribe a fixed payload of 25,000 pounds for Class 7 tractors and 38,000 pounds for Class 8 tractors for their respective test procedures. The agencies are proposing a common payload for Class 8 day cabs and sleeper cabs because the data available does not distinguish based on type of Class 8 tractor. These payload values represent a heavily loaded trailer, but not maximum GVWR, since as described above the majority of tractors "cube-out" rather than "weigh-out." Additional details on proposed payloads are included in draft RIA Chapter 3.

(iii) Standardized Trailers

NHTSA and EPA are proposing that the tractor performance in the GEM would be judged by assuming it is pulling a standardized trailer. The agencies believe that an assessment of the tractor aerodynamics should be conducted using a tractor-trailer combination to reflect the impact of aerodynamic technologies in actual use, where tractors are designed and used with a trailer. Assessing the tractor aerodynamics using only the tractor would not be a reasonable way to assess in-use impacts. For example, the in-use aerodynamic drag while pulling a trailer is different than without the trailer and the full impact of an aerodynamic technology on reducing emissions and fuel consumption would not be reflected if the assessment is performed on a tractor without a trailer.

In addition to assessing the tractor with a trailer, it is appropriate to adopt a standardized trailer used for testing, and to vary the standardized trailer by the regulatory category. This is similar to the standardization of payload discussed above, as a way to reasonably reflect in-use operating conditions. High roof tractors are optimally designed to pull box trailers. The roof fairing on a tractor is the feature designed to minimize the height differential between the tractor and typical trailer to reduce the air flow disruption. Low roof tractors are designed to carry flat bed or low-boy trailers. Mid roof tractors are designed to carry tanker and bulk carrier trailers. The agencies conducted a survey of tractor-trailer pairing in-use to evaluate the representativeness of this premise. The survey of over 3,000 tractor-trailer combinations found that in 95 percent of the combination tractors the tractor's roof height was paired appropriately for the type of trailer that it was pulling.[61] The agencies also have evaluated the impact of pairing a low roof tractor with a box trailer in coastdown testing and found that the aerodynamic force increases by 20 percent over a high roof tractor pulling the same box trailer.[62] Therefore, drivers have a large incentive to use the appropriate matching to reduce their fuel costs. However, the agencies recognize that in operation tractors sometimes pull trailers other than the type that it was designed to carry. The agencies are proposing the matching of trailers to roof height for the test procedure. To do otherwise would necessarily result in a standard reflecting substandard aerodynamic performance, and thereby result in standards which are less stringent than would be appropriate based on the reasonable assumption that tractors will generally pair with trailer of appropriate roof height. The other aspects of the test procedure such as empty trailer weight, location of payload, and tractor-trailer gap are being proposed for each regulatory category to provide consistent test procedures.

(iv) Standardized Drivetrain

The agencies' assessment of the current vehicle configuration process at the truck dealer's level is that the truck companies provide tools to specify the proper drivetrain matched to the buyer's specific circumstances. These dealer tools allow a significant amount of customization for drive cycle and payload to provide the best specification for the customer. The agencies are not seeking to disrupt this process. Optimal drivetrain selection is dependent on the engine, drive cycle (including vehicle speed and road grade), and payload. Each combination of engine, drive cycle, and payload has a single optimal transmission and final drive ratio. The agencies are proposing to specify the engine's fuel consumption map, drive cycle, and payload; therefore, it makes sense to also specify the drivetrain that matches.

(v) Engine Input to GEM

As the agencies are proposing separate engine and tractor standards, the GEM will be used to assess the compliance of the tractor with the tractor standard. To maintain the separate assessments, the agencies are proposing to define the engine characteristics used in GEM, including the fuel consumption map which provides the fuel consumption at hundreds of engine speed and torque points. If the agencies did not standardize the fuel map, then a tractor that uses an engine with emissions and fuel consumption better than the standards would require fewer vehicle reductions than those technically feasible reductions being proposed. The agencies are proposing two distinct fuel consumption maps for use in GEM. EPA proposes the first fuel consumption map would be used in GEM for the 2014 through 2016 model years and represents an average engine which meets the 2014 model year engine CO_2 emissions standards being proposed. NHTSA proposes to use the same fuel map for its voluntary standards in the 2014 and 2015 model years, as well as its mandatory program in the 2016 model year. A second fuel consumption map would be used beginning in 2017 model year and represents an engine which meets the 2017 model year CO_2 emissions and fuel consumption standards and accounts for the increased stringency in the proposed MY 2017 standard. Effectively there is no change in stringency of the tractor vehicle (not including the engine) and there is stability in the tractor vehicle (not including engine) standards for the full rulemaking period.[63] These inputs are appropriate given the separate proposed regulatory requirement that Class 7 and 8 combination tractor manufacturers use only certified engines.

(i) Engine Test Procedure

The NAS panel did not specifically discuss or recommend a metric to evaluate the fuel consumption of heavy-duty engines. However, as noted above they did recommend the use of a load-specific fuel consumption metric for the evaluation of vehicles.[64] An analogous metric for engines would be the amount of fuel consumed per unit of work. Thus, EPA is proposing that GHG emission standards for engines under the CAA would be expressed as g/bhp-

[60] The U.S. Federal Highway Administration. Development of Truck Payload Equivalent Factor. Table 11. Last viewed on March 9, 2010 at *http://ops.fhwa.dot.gov/freight/freight_analysis/faf/faf2_reports/reports9/s510_11_12_tables.htm.*

[62] *See* the draft RIA Chapter 2 for additional detail.

[63] As noted earlier, use of the 2017 model year fuel consumption map as a GEM input results in numerically more stringent proposed vehicle standards for MY 2017.

[64] See NAS Report, Note 19, at page 39.

hr; NHTSA's proposed fuel consumption standards under EISA, in turn, would be represented as gal/100 bhp-hr. This metric is also consistent with EPA's current standards for non-GHG emissions for these engines.

EPA's criteria pollutant standards for engines require that manufacturers demonstrate compliance over the transient Heavy-duty FTP test cycle; the steady-state SET test cycle; and the not-to-exceed test (NTE test). EPA created this multi-layered approach to criteria emissions control in response to engine designs that optimized operation for lowest fuel consumption at the expense of very high criteria emissions when operated off the regulatory cycle. EPA's use of multiple test procedures for criteria pollutants helps to ensure that manufacturers calibrate engine systems for compliance under all operating conditions. With regard to GHG and fuel consumption control, the agencies believe it is more appropriate to set standards based on a single test procedure, either the Heavy-duty FTP or SET, depending on the primary expected use of the engine. For engines used primarily in line-haul combination tractor trailer operations, we believe the steady-state SET procedure more appropriately reflects in-use engine operation. By setting standards based on the most representative test cycle, we can have confidence that engine manufacturers will design engines for the best GHG and fuel consumption performance relative to the most common type of expected engine operation. There is no incentive to design the engines to give worse fuel consumption under other types of operation, relative to the most common type of operation, and we are not concerned if manufacturers further calibrate these designs to give better in-use fuel consumption during other operation, while maintaining compliance with the criteria emissions standards as such calibration is entirely consistent with the goals of our joint program.

Further, we are concerned that setting standards based on both transient and steady-state operating conditions for all engines could lead to undesirable outcomes. For example, turbocompounding is one technology that the agencies have identified as a likely approach for compliance against our proposed HHD SET standard described below. Turbocompounding is a very effective approach to lower fuel consumption under steady driving conditions typified by combination tractor trailer operation and is well reflected in testing over the SET test procedure. However, when used in driving typified by transient operation as we expect for vocational vehicles and as is represented by the Heavy-duty FTP, turbocompounding shows very little benefit. Setting an emission standard based on the Heavy-duty FTP only for engines intended for use in combination tractor trailers could lead manufacturers to not apply turbocompounding because the full benefits are not demonstrated on the Heavy-duty FTP even though it can be a highly cost-effective means to reduce GHG emissions and lower fuel consumption in more steady state applications.

The current non-GHG emissions engine test procedures also require the development of regeneration emission rates and frequency factors to account for the emission changes during a regeneration event (40 CFR 86.004–28). EPA and NHTSA are proposing to exclude the CO_2 emissions and fuel consumption increases due to regeneration from the calculation of the compliance levels over the defined test procedures. We considered including regeneration in the estimate of fuel consumption and GHG emissions and have decided not to do so for two reasons. First, EPA's existing criteria emission regulations already provide a strong motivation to engine manufacturers to reduce the frequency and duration of infrequent regeneration events. The very stringent 2010 NO_X emission standards cannot be met by engine designs that lead to frequent and extend regeneration events. Hence, we believe engine manufacturers are already reducing regeneration emissions to the greatest degree possible.

In addition to believing that regenerations are already controlled to the extent technologically possible, we believe that attempting to include regeneration emissions in the standard setting could lead to an inadvertently lax emissions standard. In order to include regeneration and set appropriate standards, EPA and NHTSA would have needed to project the regeneration frequency and duration of future engine designs in the timeframe of this proposal. Such a projection would be inherently difficult to make and quite likely would underestimate the progress engine manufacturers will make in reducing infrequent regenerations. If we underestimated that progress, we would effectively be setting a more lax set of standards than otherwise would be expected. Hence in setting a standard including regeneration emissions we faced the real possibility that we would achieve less effective CO_2 emissions control and fuel consumption reductions than we will achieve by not including regeneration emissions. We are seeking comments regarding regeneration emissions and what approach if any the agencies should use in reflecting regeneration emissions in this program.

In conclusion, for Class 7 and 8 tractors, compliance with the vehicle standard would be determined by establishing values for the variable inputs and using the prescribed inputs in GEM and compliance against the engine standard using the SET engine cycle. The model would produce CO_2 and fuel consumption results that would be compared against EPA's and NHTSA's respective standards.

(j) Chassis-Based Test Procedure

The agencies also considered proposing a chassis-based vehicle test to evaluate Class 7 and 8 tractors based on a laboratory test of the engine and vehicle together. A "chassis dynamometer test" for heavy-duty vehicles would be similar to the Federal Test Procedure used today for light-duty vehicles.

However, the agencies decided not to propose the use of a chassis test procedure to demonstrate compliance for tractor standards due to the significant technical hurdles to implementing such a program by the 2014 model year. The agencies recognize that such testing requires expensive, specialized equipment that is not yet widespread within the industry. The agencies have only identified approximately 11 heavy-duty chassis sites in the United States today and rapid installation of new facilities to comply with model year 2014 is not possible.[65]

In addition, and of equal if not greater importance, because of the enormous numbers of truck configurations that have an impact on fuel consumption, we do not believe that it would be reasonable to require testing of many combinations of tractor model configurations on a chassis dynamometer. The agencies evaluated the options available for one tractor model (provided as confidential business information from a truck manufacturer) and found that the company offered three cab configurations, six axle configurations, five front axles, 12 rear axles, 19 axle ratios, eight engines, 17 transmissions, and six tire sizes—where each of these options could impact the fuel consumption and CO_2 emissions of the

[65] For comparison, engine manufacturers typically own a large number of engine dynamometer test cells for engine development and durability (up to 100 engine dynamometers per manufacturer).

tractor. Even using representative grouping of tractors for purposes of certification, this presents the potential for many different combinations that would need to be tested if a standard was adopted based on a chassis test procedure.

Although the agencies are not proposing the use of a complete chassis based test procedure for Class 7 and 8 tractors, we believe such an approach could be appropriate in the future, if more testing facilities become available and if the agencies are able to address the complexity of tractor configurations issue described above. We request comments on the potential use of chassis based test procedures in the future to augment or replace the model based approach we are proposing.

(3) Summary of Proposed Flexibility and Credit Provisions

EPA and NHTSA are proposing four flexibility provisions specifically for heavy-duty tractor and engine manufacturers, as discussed in Section IV below. These are an averaging, banking and trading program for emissions and fuel consumption credits, as well as provisions for early credits, advanced technology credits, and credits for innovative vehicle or engine technologies which are not included as inputs to the GEM or are not demonstrated on the engine SET test cycle.

The agencies are proposing that credits earned by manufacturers under this ABT program be restricted for use to only within the same regulatory subcategory for two reasons. First, relating credits between categories is tenuous because of the differences in regulatory useful lives. We want to avoid having credits from longer useful life categories flooding shorter useful life categories, adversely impacting compliance with CO_2 or fuel consumption standards in the shorter useful life category, and we have not based the level of the standard on such impact on compliance. In addition, extending the use of credits beyond these designated categories could inadvertently have major impacts on the competitive market place, and we want to avoid such results. For example, a manufacturer which has multiple engine offerings over several regulatory categories could mix credits across engine categories and shift the burden between them, possibly impacting the competitive market place. Similarly, integrated manufacturers which produce both engines and trucks could shift credits between engines and trucks and have a similar effect. We would like to ensure that this proposal reduces the CO_2 emissions and fuel consumption but does not inadvertently have such impacts on the market place. However, we welcome comments on the extension of credits beyond the limitations we are proposing.

The agencies are also proposing to provide provisions to manufacturers for early credits, the use of advanced technologies and innovative technologies which are described in greater detail in Section IV.

(4) Deferral of Standards for Tractor and Engine Manufacturing Companies That Are Small Businesses

EPA and NHTSA are proposing to defer greenhouse gas emissions and fuel consumption standards for small tractor or engine manufacturers meeting the Small Business Administration (SBA) size criteria of a small business as described in 13 CFR 121.201.[66] The agencies will instead consider appropriate GHG and fuel consumption standards for these entities as part of a future regulatory action. This includes both U.S.-based and foreign small volume heavy-duty tractor or engine manufacturers.

The agencies have identified two entities that fit the SBA size criterion of a small business.[67] The agencies estimate that these small entities comprise less than 0.5 percent of the total heavy-duty combination tractors in the United States based on Polk Registration Data from 2003 through 2007,[68] and therefore that the exemption will have a negligible impact on the GHG emissions and fuel consumption improvements from the proposed standards.

To ensure that the agencies are aware of which companies would be exempt, we propose to require that such entities submit a declaration to EPA and NHTSA containing a detailed written description of how that manufacturer qualifies as a small entity under the provisions of 13 CFR 121.201.

C. Heavy-Duty Pickup Trucks and Vans

The primary elements of the EPA and NHTSA programs being proposed for complete HD pickups and vans are presented in this section. These provisions also cover incomplete HD pickups and vans that are sold by vehicle manufacturers as cab-chassis (chassis-cab, box-delete, bed-delete, cut-away van) vehicles, as discussed in detail in Section V.B(1)(e). Section II.C(1) explains the proposed form of the CO_2 and fuel consumption standards, the proposed numerical levels for those standards, and the proposed approach to phasing in the standards over time. The proposed measurement procedure for determining compliance is discussed in Section II.C(2), and the proposed EPA and NHTSA compliance programs are discussed in Section II.C(3). Sections II.C(4) discusses proposed implementation flexibility provisions. Section II.E discusses additional standards and provisions for N_2O and CH_4 emissions, for impacts from vehicle air conditioning, and for ethanol-fueled and electric vehicles.

(1) What Are the Proposed Levels and Timing of HD Pickup and Van Standards?

(a) Vehicle-Based Standards

About 90 percent of Class 2b and 3 vehicles are pickup trucks, passenger vans, and work vans that are sold by the vehicle manufacturers as complete vehicles, ready for use on the road. In addition, most of these complete HD pickups and vans are covered by CAA vehicle emissions standards for criteria pollutants today (*i.e.,* they are chassis tested similar to light-duty), expressed in grams per mile. This distinguishes this category from other, larger heavy-duty vehicles that typically have only the engines covered by CAA engine emission standards, expressed in grams per brake horsepower-hour.[69] As a result, Class 2b and 3 complete vehicles share much more in common with light-duty trucks than with other heavy-duty vehicles.

Three of these commonalities are especially significant: (1) Over 95 percent of the HD pickups and vans sold in the United States are produced by Ford, General Motors, and Chrysler—three companies with large light-duty vehicle and light-duty truck sales in the United States, (2) these companies typically base their HD pickup and van designs on higher sales volume light-duty truck platforms and technologies, often incorporating new light-duty truck design features into HD pickups and vans at their next design cycle, and (3) at this time most complete HD pickups and vans are certified to vehicle-based rather than engine-based EPA standards. There is also the potential for substantial GHG and fuel consumption reductions from vehicle design improvements beyond engine changes (such as through optimizing aerodynamics, weight, tires, and

[66] *See* § 1036.150 and § 1037.150.

[67] The agencies have identified Ottawa Truck, Inc. and Kalmar Industries USA as two potential small tractor manufacturers.

[68] M.J. Bradley. Heavy-duty Vehicle Market Analysis. May 2009.

[69] As discussed briefly in Section I and in more detail in Section V, this regulatory category also covers some incomplete Class 2b/3 vehicles.

brakes), and the manufacturer is generally responsible for both engine and vehicle design. All of these factors together suggest that it is appropriate and reasonable to set standards for the vehicle as a whole, rather than to establish separate engine and vehicle GHG and fuel consumption standards, as is proposed for the other heavy-duty categories. This approach for complete vehicles is consistent with Recommendation 8–1 of the NAS Report, which encourages the regulation of "the final stage vehicle manufacturers since they have the greatest control over the design of the vehicle and its major subsystems that affect fuel consumption."

(b) Weight-Based Attributes

In setting heavy-duty vehicle standards it is important to take into account the great diversity of vehicle sizes, applications, and features. That diversity reflects the variety of functions performed by heavy-duty vehicles, and this in turn can affect the kind of technology that is available to control emissions and reduce fuel consumption, and its effectiveness. EPA has dealt with this diversity in the past by making weight-based distinctions where necessary, for example in setting HD vehicle standards that are different for vehicles above and below 10,000 lb GVWR, and in defining different standards and useful life requirements for light-, medium-, and heavy-heavy-duty engines. Where appropriate, distinctions based on fuel type have also been made, though with an overall goal of remaining fuel-neutral.

The joint EPA GHG and NHTSA fuel economy rules for light-duty vehicles accounted for vehicle diversity in that segment by basing standards on vehicle footprint (the wheelbase times the average track width). Passenger cars and light trucks with larger footprints are assigned numerically higher target levels for GHGs and numerically lower target levels for fuel economy in acknowledgement of the differences in technology as footprint gets larger, such that vehicles with larger footprints have an inherent tendency to burn more fuel and emit more GHGs per mile of travel. Using a footprint-based attribute to assign targets also avoids interfering with the ability of the market to offer a variety of products to maintain consumer choice.

In developing this proposal, the agencies emphasized creating a program structure that would achieve reductions in fuel consumption and GHGs based on how vehicles are used and on the work they perform in the real world, consistent with the NAS report recommendations to be mindful of HD vehicles' unique purposes. Despite the HD pickup and van similarities to light-duty vehicles, we believe that the past practice in EPA's heavy-duty program of using weight-based distinctions in dealing with the diversity of HD pickup and van products is more appropriate than using vehicle footprint. Weight-based measures such as payload and towing capability are key among the things that characterize differences in the design of vehicles, as well as differences in how the vehicles will be used. Vehicles in this category have a wide range of payload and towing capacities. These weight-based differences in design and in-use operation are the key factors in evaluating technological improvements for reducing CO_2 emissions and fuel consumption. Payload has a particularly important impact on the test results for HD pickup and van emissions and fuel consumption, because testing under existing EPA procedures for criteria pollutants is conducted with the vehicle loaded to half of its payload capacity (rather than to a flat 300 lb as in the light-duty program), and the correlation between test weight and fuel use is strong.[70]

Towing, on the other hand, does not directly factor into test weight as nothing is towed during the test. Hence only the higher curb weight caused by heavier truck components would play a role in affecting measured test results. However towing capacity can be a significant factor to consider because HD pickup truck towing capacities can be quite large, with a correspondingly large effect on design.

We note too that, from a purchaser perspective, payload and towing capability typically play a greater role than physical dimensions in influencing purchaser decisions on which heavy-duty vehicle to buy. For passenger vans, seating capacity is of course a major consideration, but this correlates closely with payload weight.

Although heavy-duty vehicles are traditionally classified by their GVWR, we do not believe that GVWR is the best weight-based attribute on which to base GHG and fuel consumption standards for this group of vehicles. GVWR is a function of not only payload capacity but of vehicle curb weight as well; in fact, it is the simple sum of the two. Allowing more GHG emissions from vehicles with higher curb weight tends to penalize lightweighted vehicles with comparable payload capabilities by making them meet more stringent standards than they would have had to meet without the weight reduction. The same would be true for another common weight-based measure, the gross vehicle combined weight, which adds the maximum combined towing and payload weight to the curb weight.

Similar concerns about using weight-based attributes that include vehicle curb weight were raised in the EPA/NHTSA proposal for light-duty GHG and fuel economy standards: "Footprint-based standards provide an incentive to use advanced lightweight materials and structures that would be discouraged by weight-based standards", and "there is less risk of 'gaming' (artificial manipulation of the attribute(s) to achieve a more favorable target) by increasing footprint under footprint-based standards than by increasing vehicle mass under weight-based standards—it is relatively easy for a manufacturer to add enough weight to a vehicle to decrease its applicable fuel economy target a significant amount, as compared to increasing vehicle footprint" (74 FR 49685, September 28, 2009). The agencies believe that using payload and towing capacities as the weight-based attributes would avoid the above-mentioned disincentive for the use of lightweighting technology by taking vehicle curb weight out of the standards determination.

After taking these considerations into account, EPA and NHTSA have decided to propose standards for HD pickups and vans based on a "work factor" attribute that combines vehicle payload capacity and vehicle towing capacity, in pounds, with an additional fixed adjustment for four-wheel drive (4wd) vehicles. This adjustment would account for the fact that 4wd, critical to enabling the many off-road heavy-duty work applications, adds roughly 500 lb to the vehicle weight. Under our proposal, target GHG and fuel consumption standards would be determined for each vehicle with a unique work factor. These targets would then be production weighted and summed to derive a manufacturer's annual fleet average standards.

To ensure consistency and help preclude gaming, we are proposing that payload capacity be defined as GVWR minus curb weight, and towing capacity as GCWR minus GVWR. We are proposing that, for purposes of determining the work factor, GCWR be defined according to SAE Recommended Practice J2807 APR2008, GVWR be defined consistent with EPA's criteria pollutants program, and curb weight be defined as in 40 CFR

[70] Section II.C(2) discusses our decision to propose that GHGs and fuel consumption for HD pickups and vans be measured using the same test conditions as in the existing EPA program for criteria pollutants.

86.1803–01. We request comment on the need to establish additional regulations or guidance to ensure that these terms are determined and applied consistently across the HD pickup and van industry for the purpose of determining standards.

Based on analysis of how CO_2 emissions and fuel consumption correlate to work factor, we believe that a straight line correlation is appropriate across the spectrum of possible HD pickups and vans, and that vehicle distinctions such as Class 2b versus Class 3 need not be made in setting standards levels for these vehicles.[71] We request comment on this proposed approach.

We note that payload/towing-dependent gram per mile and gallon per 100 mile standards for HD pickups and vans parallel the gram per ton-mile and gallon per 1,000 ton-mile standards being proposed for Class 7 and 8 combination tractors and for vocational vehicles. Both approaches account for the fact that more work is done, more fuel is burned, and more CO_2 is emitted in moving heavier loads than in moving lighter loads. Both of these load-based approaches avoid penalizing truck designers wishing to reduce GHG emissions and fuel consumption by reducing the weight of their trucks. However, the sizeable diversity in HD work truck and van applications, which go well beyond simply transporting freight, and the fact that the curb weights of these vehicles are on the order of their payload capacities, suggest that setting simple gram/ton-mile and gallon/ton-mile standards for them is not appropriate. Even so, we believe that our proposal of payload-based standards for HD pickups and vans is consistent with the NAS Report's recommendation in favor of load-specific fuel consumption standards.

These attribute-based CO_2 and fuel consumption standards are meant to be relatively consistent from a stringency perspective. Vehicles across the entire range of the HD pickup and van segment have their respective target values for CO_2 emissions and fuel consumption, and therefore all HD pickups and vans would be affected by the standard. With the proposed attribute-based standards approach, EPA and NHTSA believe there should be no significant effect on the relative distribution of vehicles with differing capabilities in the fleet, which means that buyers should still be able to purchase the vehicle that meets their needs.

(c) Proposed Standards

The agencies are proposing standards based on a technology analysis performed by EPA to determine the appropriate HD pickup and van standards. This analysis, described in detail in draft RIA Chapter 2, considered:

- The level of technology that is incorporated in current new HD pickups and vans,
- The available data on corresponding CO_2 emissions and fuel consumption for these vehicles,
- Technologies that would reduce CO_2 emissions and fuel consumption and that are judged to be feasible and appropriate for these vehicles through the 2018 model year,
- The effectiveness and cost of these technologies for HD pickup and vans,
- Projections of future U.S. sales for HD pickup and vans, and
- Forecasts of manufacturers' product redesign schedules.

Based on this analysis, EPA is proposing the CO_2 attribute-based target standards shown in Figure II–1 and II–2, and NHTSA is proposing the equivalent attribute-based fuel consumption target standards, also shown in Figure II–1 and II–2, applicable in model year 2018. These figures also shows phase-in standards for model years before 2018, and their derivation is explained below, along with alternative implementation schedules to ensure equivalency between the EPA and NHTSA programs while meeting statutory obligations. Also, for reasons discussed below, separate targets are being established for gasoline-fueled (and any other Otto-cycle) vehicles and diesel-fueled (and any other Diesel-cycle) vehicles. The targets would be used to determine the production-weighted standards that apply to the combined diesel and gasoline fleet of HD pickups and vans produced by a manufacturer in each model year.

[71] Memorandum from Anthony Neam and Jeff Cherry, U.S.EPA, to docket EPA–HQ–OAR–2010–0162, October 18, 2010.

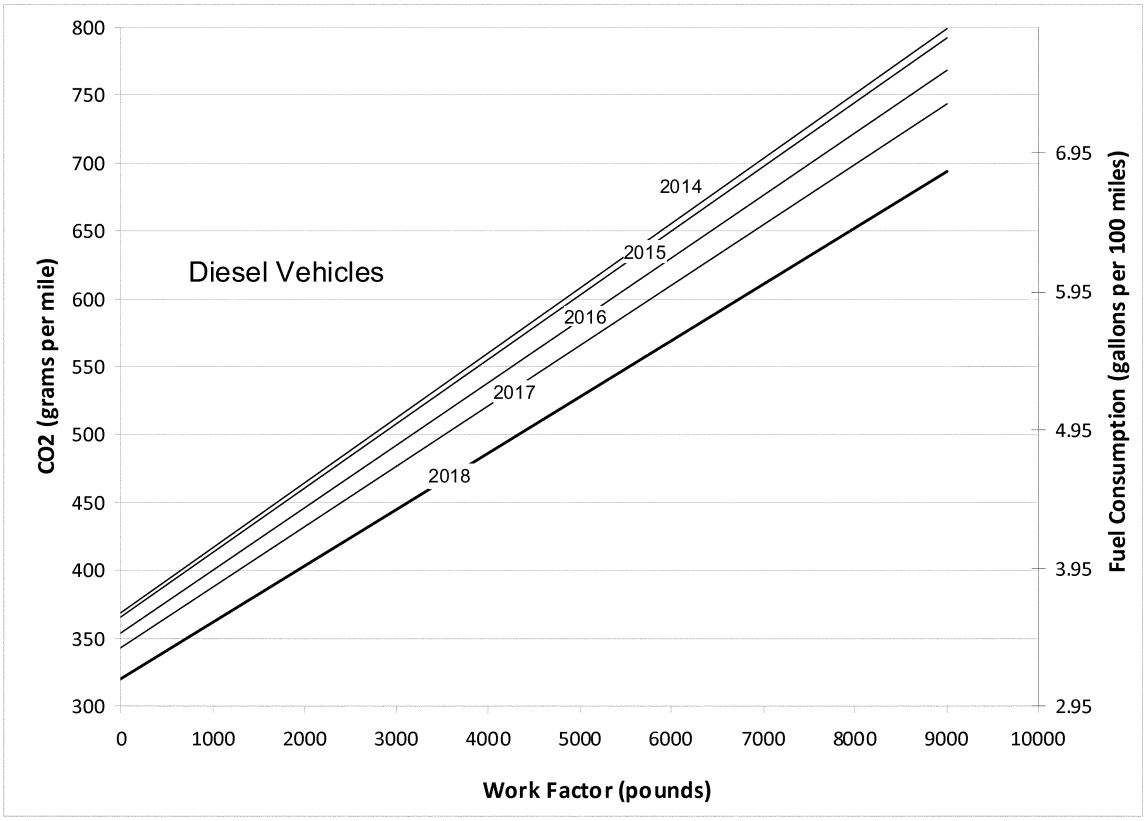

Figure II-1: Proposed EPA CO_2 Target Standards and NHTSA Fuel Consumption Target Standards for Diesel HD Pickups and Vans[72]

[72] The NHTSA proposal provides voluntary standards for model years 2014 and 2015. Target line functions for 2016–2018 are for the second NHTSA alternative described in Section II.C(d)(ii).

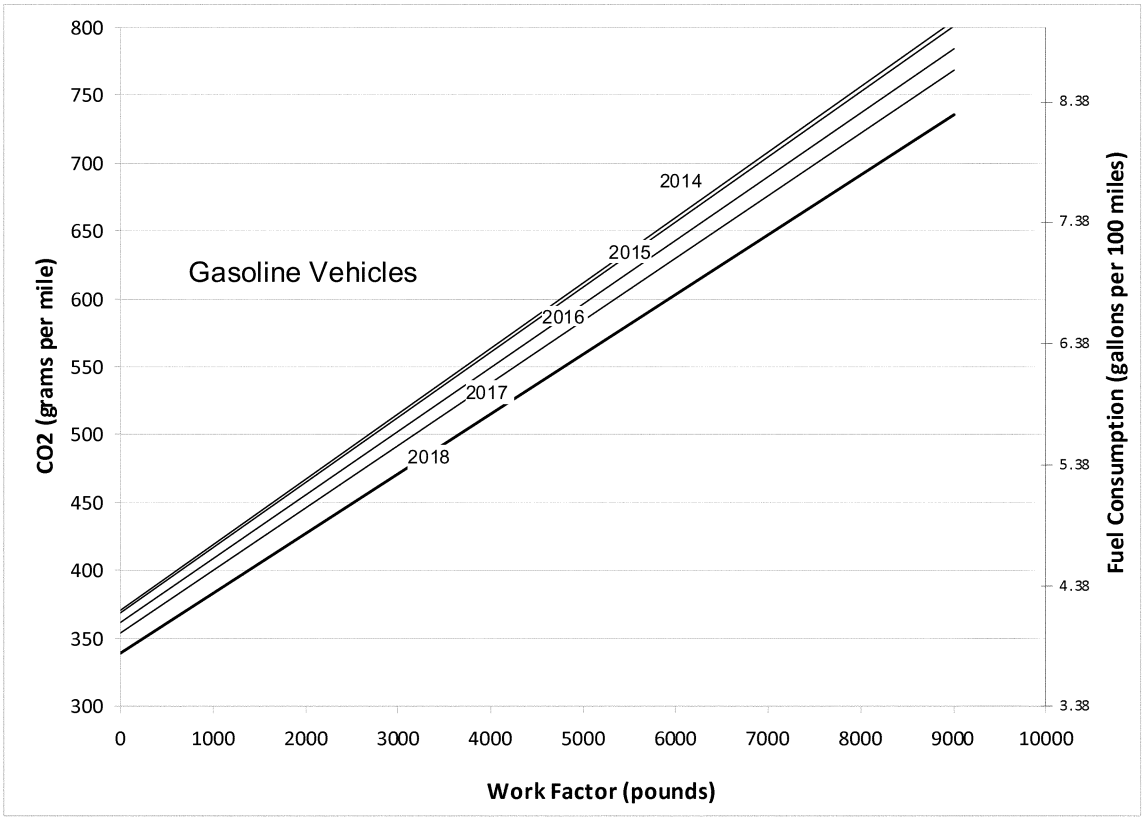

Figure II-2: Proposed EPA CO_2 Target Standards and NHTSA Fuel Consumption Target Standards for Gasoline HD Pickups and Vans[73]

Described [73] mathematically, EPA's and NHTSA's proposed functions are defined by the following formulae:

EPA CO_2 Target (g/mile) = [a × WF] + b

NHTSA Fuel Consumption Target (gallons/100 miles) = [c × WF] + d

Where:

WF = Work Factor = [0.75 × (Payload Capacity + xwd)] + [0.25 × Towing Capacity]

Payload Capacity = GVWR (lb) − Curb Weight (lb)

xwd = 500 lb if the vehicle is equipped with 4wd, otherwise equals 0 lb

Towing Capacity = GCWR (lb) − GVWR (lb)

Coefficients a, b, c, and d are taken from Table II–7 or Table II–8.[74]

[73] The NHTSA proposal provides voluntary standards for model years 2014 and 2015. Target line functions for 2016–2018 are for the second NHTSA alternative described in Section II.C(d)(ii).

[74] The NHTSA proposal provides voluntary standards for model years 2014 and 2015. Target line functions for 2016–2018 are for the second NHTSA alternative described in Section II.C(d)(ii).

Notes:
[a] NHTSA standards would be voluntary in 2014 and 2015

These targets are based on a set of vehicle, engine, and transmission technologies assessed by the agencies and determined to be feasible and appropriate for HD pickups and vans in the 2014–2018 timeframe. Much of the information used to make this technology assessment was developed for the recent 2012–2016 MY light-duty vehicle rule. *See* Section III.B for a detailed analysis of these vehicle, engine and transmission technologies, including their feasibility, costs, and effectiveness in HD pickups and vans.

To calculate a manufacturer's HD pickup and van fleet average standard, the agencies are proposing that separate target curves be used for gasoline and diesel vehicles. The agencies estimate that in 2018 the target curves will achieve 15 and 10 percent reductions in CO_2 and fuel consumption for diesel and gasoline vehicles, respectively, relative to a common baseline for current (model year 2010) vehicles. An additional two percent reduction in GHGs would be achieved by the EPA program from a proposed direct air conditioning leakage standard. These reductions are based on the agencies' assessment of the feasibility of incorporating technologies (which differ significantly for gasoline and diesel powertrains) in the 2014–2018 model years, and on the differences in relative efficiency in the current gasoline and diesel vehicles. The resulting reductions represent roughly equivalent stringency

levels for gasoline and diesel vehicles, which is important in ensuring our proposed program maintains product choices available to vehicle buyers.

The NHTSA fuel consumption target curves and the EPA GHG target curves are equivalent. The agencies established the target curves using the direct relationship between fuel consumption and CO_2 using conversion factors of 8,887 g CO_2/gallon for gasoline and 10,180 g CO_2/gallon for diesel fuel.

It is expected that measured performance values for CO_2 would generally be equivalent to fuel consumption. However, as explained below in Section II. E. (3), EPA is proposing an alternative for manufacturers to demonstrate compliance with N_2O and CH_4 emissions standards through the calculation of a CO_2-equivalent (CO_2eq) emissions level that would be compared to the CO_2-based standards, similar to the recently promulgated light-duty GHG standards for model years 2012–2016. For test families that do not use this compliance alternative, the measured performance values for CO_2 and fuel consumption would be equivalent because the same test runs and measurement data would be used to determine both values, and calculated fuel consumption would be based on the same conversion factors that are used to establish the relationship between the CO_2 and fuel consumption target curves (8887 g CO_2/gallon for gasoline and 10,180 g CO_2/gallon for diesel fuel). In this case, for example, if a manufacturer's fleet average measured compliance value exactly meets the fleet average CO_2 standard, it will also exactly meet the fuel consumption standard. The proposed NHTSA fuel consumption program will not use a CO_2eq metric. Measured performance to standards would be based on the measurement of CO_2 with no adjustment for N_2O and CH_4. For manufacturers that choose to use the EPA CO_2eq approach, compliance with the CO_2 standard would not be directly equivalent to compliance with the NHTSA fuel consumption standard.

(d) Proposed Implementation Plan

(i) EPA Program Phase-In MY 2014–2018

EPA is proposing that the GHG standards be phased in gradually over the 2014–2018 model years, with full implementation effective in the 2018 model year. Therefore, 100 percent of a manufacturer's vehicle fleet would need to meet a fleet-average standard that would become increasingly more stringent each year of the phase-in period. For both gasoline and diesel vehicles, this phase-in would be 15–20–40–60–100 percent in model years 2014–2015–2016–2017–2018, respectively. These percentages reflect stringency increases from a baseline performance level for model year 2010, determined by the agencies based on EPA and manufacturer data. Because these vehicles are not currently regulated for GHG emissions, this phase-in takes the form of target line functions for gasoline and diesel vehicles that become increasingly stringent over the phase-in model years. These year-by-year functions have been derived in the same way as the 2018 function, by taking a percent reduction in CO_2 from a common unregulated baseline. For example, in 2014 the reduction for both diesel and gasoline vehicles would be 15% of the fully-phased-in reductions. Figures II–1 and II–2, and Table II–7, reflect this phase-in approach.

EPA is also proposing to provide manufacturers with an optional alternative implementation schedule in model years 2016 through 2018, equivalent to NHTSA's proposed first alternative for standards that do not change over these model years, described below. Under this option the phase-in would be 15–20–67–67–67–100 percent in model years 2014–2015–2016–2017–2018–2019, respectively. Table II–8, above, provides the coefficients "a" and "b" for this manufacturer's alternative. As explained below, the stringency of this alternative was established by NHTSA such that a manufacturer with a stable production volume and mix over the model year 2016–2018 period could use Averaging, Banking and Trading to comply with either alternative and have a similar credit balance at the end of model year 2018.

Under the above-described alternatives, each manufacturer would need to demonstrate compliance with the applicable fleet average standard using that year's target function over all of its HD pickups and vans starting in 2014. EPA also requests comment on a different regulatory approach to the phase-in, intended to reduce the testing and certification burden on manufacturers during the 2014–2017 phase-in years, while achieving GHG reductions on the same schedule as the proposed phase-in. In this alternative approach, each manufacturer would be required to demonstrate compliance with the final 2018 targets, but only over a predefined percentage of its HD pickup and van production. The remaining vehicles produced each year would not be regulated for GHGs. Thus this approach would have the effect of setting final standards in 2014 that do not vary over time, but with an annually increasing set of regulated vehicles. The percentage of regulated vehicles would increase each year, to 100 percent in 2018. We think it likely that manufacturers would leave the highest emitting vehicles unregulated for as long as possible under this approach, because these vehicles would tend to be the costliest to redesign or may simply be phased out of production. We therefore expect that, to be equivalent, the percentage penetration each year would be higher than the 15–20–40–60 percent penetrations required under the proposed approach. EPA requests comment on this regulatory alternative, and on what percentage penetrations are appropriate to achieve equivalent program benefits.

(ii) NHTSA Program Phase-In 2016 and Later

NHTSA is proposing to allow manufacturers to select one of two fuel consumption standard alternatives for model years 2016 and later. Manufacturers would select an alternative at the same time they submit the model year 2016 Pre-Certification Compliance Report; and, once selected, the alternative would apply for model years 2016 and later, and could not be reversed. To meet the EISA statutory requirement for three years of regulatory stability, the first alternative would define a fuel consumption target line function for gasoline vehicles and a target line function for diesel vehicles that would not change for model years 2016 and later. The proposed target line function coefficients are provided in Table II–8.

The second alternative would be equivalent to the EPA target line functions in each model year starting in 2016 and continuing afterwards. Stringency of fuel consumption standards would increase gradually for the 2016 and later model years. Relative to a model year 2010 unregulated baseline, for both gasoline and diesel vehicles, stringency would be 40, 60, and 100 percent of the 2018 target line function in model years 2016, 2017, and 2018, respectively.

The stringency of the target line functions in the first alternative for model years 2016–2017–2018–2019 is 67–67–67–100 percent, respectively, of the 2018 stringency in the second alternative. The stringency of the first alternative was established so that a manufacturer with a stable production volume and mix over the model year 2016–2018 period, could use Averaging, Banking and Trading to comply with

either alternative and have a similar credit balance at the end of model year 2018 under the EPA and NHTSA programs.

NHTSA also requests comment on a different regulatory approach that would parallel the above-described EPA regulatory alternative involving certification of a pre-defined percentage of a manufacturer's HD pickup and van production.

(iii) NHTSA Voluntary Standards Period

NHTSA is proposing that manufacturers may voluntarily opt into the NHTSA HD pickup and van program in model years 2014 or 2015. If a manufacturer elects to opt into the program, the program would become mandatory and the manufacturer would not be allowed to reverse this decision. To opt into the program, a manufacturer must declare its intent to opt in to the program at the same time it submits the Pre-Certification Compliance Report. *See* proposed regulatory text for 49 CFR 535.8 for information related to the Pre-Certification Compliance Report. If a manufacturer elects to opt into the program in 2014, the program would be mandatory for 2014 and 2015. A manufacturer would begin tracking credits and debits beginning in the model year in which they opt into the program. The handling of credits and debits would be the same as for the mandatory program.

For manufacturers that opt into NHTSA's HD pickup and van fuel consumption program in 2014 or 2015, the stringency would increase gradually each model year. Relative to a model year 2010 unregulated baseline, for both gasoline and diesel vehicles, stringency would be 15–20 percent of the model year 2018 target line function (under the NHTSA second alternative) in model years 2014–2015, respectively. The corresponding absolute standards targets levels are provided in Figure II–1 and II–2, and the accompanying equations.

NHTSA also requests comment on a different regulatory approach that would parallel the above-described EPA regulatory alternative involving certification of a pre-defined percentage of a manufacturer's HD pickup and van production.

(2) What are the proposed HD pickup and van test cycles and procedures?

EPA and NHTSA are proposing that HD pickup and van testing be conducted using the same heavy-duty chassis test procedures currently used by EPA for measuring criteria pollutant emissions from these vehicles, but with the addition of the highway fuel economy test cycle (HFET) currently required only for light-duty vehicle GHG emissions and fuel economy testing. Although the highway cycle driving pattern would be identical to that of the light-duty test, other test parameters for running the HFET, such as test vehicle loaded weight, would be identical to those used in running the current EPA Federal Test Procedure for complete heavy-duty vehicles.

The GHG and fuel consumption results from vehicle testing on the Light-duty FTP and the HFET would be weighted by 55 percent and 45 percent, respectively, and then averaged in calculating a combined cycle result. This result corresponds with the data used to develop the proposed work factor-based CO_2 and fuel consumption standards, since the data on the baseline and technology efficiency was also developed in the context of these test procedures. The addition of the HFET and the 55/45 cycle weightings are the same as for the light-duty CO_2 and CAFE programs, as we believe the real world driving patterns for HD pickups and vans are not too unlike those of light-duty trucks, and we are not aware of data specifically on these patterns that would lead to a different choice of cycles and weightings. More importantly, we believe that the 55/45 weightings will provide for effective reductions of GHG emissions and fuel consumption from these vehicles, and that other weightings, even if they were to more precisely match real world patterns, are not likely to significantly improve the program results.

Another important parameter in ensuring a robust test program is vehicle test weight. Current EPA testing for HD pickup and van criteria pollutants is conducted with the vehicle loaded to its Adjusted Loaded Vehicle Weight (ALVW), that is, its curb weight plus ½ of the payload capacity. This is substantially more challenging than loading to the light-duty vehicle test condition of curb weight plus 300 pounds, but we believe that this loading for HD pickups and vans to ½ payload better fits their usage in the real world and would help ensure that technologies meeting the standards do in fact provide real world reductions. The choice is likewise consistent with use of an attribute based in considerable part on payload for the standard. We see no reason to set test load conditions differently for GHGs and fuel consumption than for criteria pollutants, and we are not aware of any new information (such as real world load patterns) since the ALVW was originally set this way that would support a change in test loading conditions. We are therefore proposing to use ALVW for test vehicle loading in GHG and fuel consumption testing.

EPA and NHTSA request comment on the proposed test cycles, weighting factors, test loading conditions, and other factors that are important for establishing an effective GHG and fuel consumption test program. Additional provisions for our proposed testing and compliance program are provided in Section V.B.

(3) How are the HD pickup and van standards structured?

EPA and NHTSA are proposing fleet average standards for new HD pickups and vans, based on a manufacturer's new vehicle fleet makeup. In addition, EPA is proposing in-use standards that would apply to the individual vehicles in this fleet over their useful lives. The compliance provisions for these proposed fleet average and in-use standards for HD pickups and vans are largely based on the recently promulgated light-duty GHG and fuel economy program, as described below and in greater detail in Section V.B. We request comment on any compliance provisions we have taken from the light-duty program that commenters feel would not be appropriate for HD pickups and vans or that should be adjusted in some way to better regulate HD GHGs and fuel consumption cost-effectively.

(a) Fleet Average Standards

In this proposal we outline how each manufacturer would have a GHG standard and a fuel consumption standard unique to its new HD pickup and van fleet in each model year, depending on the load capacities of the vehicle models produced by that manufacturer, and on the U.S.-directed production volume of each of those models in that model year. Vehicle models with larger payload/towing capacities would have individual targets at numerically higher CO_2 and fuel consumption levels than lower payload/towing vehicles would, as discussed in Section II.C(1). The fleet average standard for a manufacturer would be a production-weighted average of the work factor-based targets assigned to unique vehicle configurations within each model type produced by the manufacturer in a model year.

The fleet average standard with which the manufacturer must comply would be based on its final production figures for the model year, and thus a final assessment of compliance would occur after production for the model year ended. Because compliance with the fleet average standards depends on

actual test group production volumes, it is not possible to determine compliance at the time the manufacturer applies for and receives an EPA certificate of conformity for a test group. Instead, at certification the manufacturer would demonstrate a level of performance for vehicles in the test group, and make a good faith demonstration that its fleet, regrouped by unique vehicle configurations within each model type, is expected to comply with its fleet average standard when the model year is over. EPA would issue a certificate for the vehicles covered by the test group based on this demonstration, and would include a condition in the certificate that if the manufacturer does not comply with the fleet average, then production vehicles from that test group will be treated as not covered by the certificate to the extent needed to bring the manufacturer's fleet average into compliance. As in the light-duty program, additional "model type" testing would be conducted by the manufacturer over the course of the model year to supplement the initial test group data. The emissions and fuel consumption levels of the test vehicles would be used to calculate the production-weighted fleet averages for the manufacturer, after application of the appropriate deterioration factor to each result to obtain a full useful life value. *See* generally 75 FR 25470–25472.

EPA and NHTSA do not currently anticipate notable deterioration of CO_2 emissions and fuel consumption performance, and are therefore proposing that an assigned deterioration factor be applied at the time of certification: an additive assigned deterioration factor of zero, or a multiplicative factor of one would be used. EPA and NHTSA anticipate that the deterioration factor would be updated from time to time, as new data regarding emissions deterioration for CO_2 are obtained and analyzed. Additionally, EPA and NHTSA may consider technology-specific deterioration factors, should data indicate that certain control technologies deteriorate differently than others. *See also* 75 FR 25474.

(b) In-Use Standards

Section 202(a)(1) of the CAA specifies that EPA set emissions standards that are applicable for the useful life of the vehicle. The in-use standards that EPA is proposing would apply to individual vehicles. NHTSA is not proposing to adopt in-use standards because it is not required under EISA, and because it is not currently anticipated that there will be any notable deterioration of fuel consumption. For the EPA proposal, compliance with the in-use standard for individual vehicles and vehicle models will not impact compliance with the fleet average standard, which will be based on the production weighted average of the new vehicles.

EPA is proposing that the in-use standards for HD pickups and vans be established by adding an adjustment factor to the full useful life emissions and fuel consumption results used to calculate the fleet average. EPA is also proposing that the useful life for these vehicles with respect to GHG emissions be set equal to their useful life for criteria pollutants: 11 years or 120,000 miles, whichever occurs first (40 CFR 86.1805–04(a)).

As discussed above, we are proposing that certification test results obtained before and during the model year be used directly to calculate the fleet average emissions for assessing compliance with the fleet average standard. Therefore, this assessment and the fleet average standard itself do not take into account test-to-test variability and production variability that can affect measured in-use levels. For this reason, EPA is proposing an adjustment factor for the in-use standard to provide some margin for production and test-to-test variability that could result in differences between the initial emission test results used to calculate the fleet average and emission results obtained during subsequent in-use testing. EPA is proposing that each model's in-use CO_2 standard would be the model-specific level used in calculating the fleet average, plus 10 percent. This is the same as the approach taken for light-duty vehicle GHG in-use standards (*See* 75 FR 25473–25474).

As it does now for heavy-duty vehicle criteria pollutants, EPA would use a variety of mechanisms to conduct assessments of compliance with the proposed in-use standards, including pre-production certification and in-use monitoring once vehicles enter customer service. The full useful life in-use standards would apply to vehicles that had entered customer service. The same standards would apply to vehicles used in pre-production and production line testing, except that deterioration factors would not be applied.

(4) What HD pickup and van flexibility provisions are being proposed?

This proposal contains substantial flexibility in how manufacturers can choose to implement the EPA and NHTSA standards while preserving their timely benefits for the environment and energy security. Primary among these flexibilities are the gradual phase-in schedule, alternative compliance paths, and corporate fleet average approach described above. Additional flexibility provisions are described briefly here and in more detail in Section IV.

As explained in Section II.C(3), we are proposing that at the end of each model year, when production for the model year is complete, a manufacturer calculate its production-weighted fleet average CO_2 and fuel consumption. Under this proposed approach, a manufacturer's HD pickup and van fleet that achieves a fleet average CO_2 or fuel consumption level better than its standard would be allowed to generate credits. Conversely, if the fleet average CO_2 or fuel consumption level does not meet its standard, the fleet would incur debits (also referred to as a shortfall).

A manufacturer whose fleet generates credits in a given model year would have several options for using those credits to offset emissions from other HD pickups and vans. These options include credit carry-back, credit carry-forward, and credit trading. These provisions exist in the 2012–2016 MY light-duty vehicle National Program, and similar provisions are part of EPA's Tier 2 program for light-duty vehicle criteria pollutant emissions, as well as many other mobile source standards issued by EPA under the CAA. The manufacturer would be able to carry back credits to offset a deficit that had accrued in a prior model year and was subsequently carried over to the current model year, with a limitation on the carry-back of credits to three years, consistent with the light-duty program. We are proposing that, after satisfying any need to offset pre-existing deficits, a manufacturer may bank remaining credits for use in future years. We are also proposing that manufacturers may certify their HD pickup and van fleet a year early, in MY 2013, to generate credits against the MY 2014 standards. This averaging, banking, and trading program for HD pickups and vans is discussed in more detail in Section IV.A. For reasons discussed in detail in that section, we are not proposing any credit transferability to or from other credit programs, such as the light-duty GHG and fuel consumption programs or the proposed heavy-duty engine ABT program.

Consistent with the President's May 21, 2010 directive to promote advanced technology vehicles, we are proposing and seeking comment on flexibility provisions that would parallel similar provisions adopted in the light-duty program. These include credits for advance technology vehicles such as electric vehicles, and credits for

innovative technologies that are shown by the manufacturer to provide GHG and fuel consumption reductions in real world driving, but not on the test cycle. *See* Section IV.B.

We believe that it may also be appropriate to take steps to recognize the benefits of flexible-fueled vehicles (FFVs) and dedicated alternative-fueled vehicles based on the approach taken by EPA in the light-duty vehicle rule for later models years (2016 and later). However, unlike in that rule, we do not believe it is appropriate to create a provision for additional credits similar to the 2012–2015 light-duty program because the HD sector does not have the incentives mandated in EISA for light-duty vehicles. In fact, since heavy-duty vehicles were not included in the EISA incentives for FFVs, manufacturers have not in the past produced FFV heavy-duty vehicles. On the other hand, we do seek comment on how to properly recognize the impact of the use of alternative fuels, and E85 in particular, in HD pickups and vans, including the proper accounting for alternative fuel use in FFVs in the real world.[75] As proposed, FFV performance would be determined in the same way as for light-duty vehicles, with a 50–50 weighting of alternative and conventional fuel test results through MY 2015, and a manufacturer-determined weighting based on demonstrated fuel use in the real world after MY 2015 (defaulting to an assumption of 100 percent conventional fuel use). For dedicated alternative fueled vehicles, NHTSA proposes that vehicles be tested with the alternative fuel, and a petroleum equivalent fuel consumption level be calculated based on the Petroleum Equivalency Factor (PEF) that is determined by the Department of Energy. However, we are accepting comment on whether to provide a flexibility program similar to the program we currently offer for light-duty FFV vehicles.

D. Class 2b–8 Vocational Vehicles

Class 2b–8 vocational vehicles consist of a very wide variety of configurations including delivery, refuse, utility, dump, cement, transit bus, shuttle bus, school bus, emergency vehicle, motor homes,[76] and tow trucks, among others. The agencies are defining that Class 2b–8 vocational vehicles are all heavy-duty vehicles which are not included in the Heavy-duty Pickup Truck and Van or the Class 7 and 8 Tractor categories, with the exception of vehicles for which the agencies are deferring setting of standards, such as small business manufacturers. In addition, recreational vehicles are included under EPA's proposed standards but are not included under NHTSA's proposed standards.

As mentioned in Section I, vocational vehicles undergo a complex build process. Often an incomplete chassis is built by a chassis manufacturer with an engine purchased from an engine manufacturer and a transmission purchased from another manufacturer. A body manufacturer purchases an incomplete chassis which is then completed by attaching the appropriate features to the chassis.

The agencies face difficulties in establishing the baseline CO_2 and fuel consumption performance for the wide variety of vocational vehicles which makes it difficult to try and set different standards for a large number of potential regulatory categories. The diversity in the vocational vehicle segment can be primarily attributed to the variety of vehicle bodies rather than to the chassis. For example, a body builder can build either a Class 6 bucket truck or a Class 6 delivery truck from the same Class 6 chassis. The aerodynamic difference between these two vehicles due to their bodies will lead to different baseline fuel consumption and GHG emissions. However, the baseline fuel consumption and emissions due to the components included in the common chassis (such as the engine, drivetrain, frame, and tires) will be the same between these two types of complete vehicles. Furthermore, the agencies evaluated the aerodynamic improvement opportunities for vocational vehicles. For example, the aerodynamics of a fire truck are impacted significantly by the equipment such as ladders located on the exterior of the truck. The agencies found little opportunity to improve the aerodynamics of the equipment on the truck. The agencies also evaluated the aerodynamic opportunities discussed in the NAS report. The panel found that there was no fuel consumption reduction opportunity through aerodynamic technologies for bucket trucks, transit buses, and refuse trucks[77] primarily due to the low vehicle speed in normal operation. The panel did report that there are opportunities to reduce the fuel consumption of straight trucks by approximately 1 percent for trucks which operate at the average speed typical of a pickup and delivery truck (30 mph), although the opportunity is greater for trucks which operate at higher speeds.[78] To overcome the lack of baseline information from the different vehicle applications without sacrificing much fuel consumption or GHG emission reduction potential, the agencies propose to set standards for the chassis manufacturers of vocational vehicles (instead of the body builders) and the engine manufacturers.

EPA is proposing CO_2 standards and NHTSA is proposing fuel consumption standards for manufacturers of chassis for new vocational vehicles and for manufacturers of heavy-duty engines installed in these vehicles. The proposed heavy-duty engine standards for CO_2 emissions and fuel consumption would focus on potential technological improvements in fuel combustion and overall engine efficiency and those proposed controls would achieve most of the emission reductions. Further reductions from the Class 2b–8 vocational vehicle itself are possible within the timeframe of these proposed regulations. Therefore, the agencies are also proposing separate standards for vocational vehicles that will focus on additional reductions that can be achieved through improvements in vehicle tires. The agencies' analyses, as discussed briefly below and in more detail later in this preamble and in the draft RIA Chapter 2, show that these proposed standards appear appropriate under each agency's respective statutory authorities. Together these standards are estimated to achieve reductions of up to 11 percent from vocational vehicles.

EPA is also proposing standards to control N_2O and CH_4 emissions from Class 2b–8 vocational vehicles. The proposed heavy-duty engine standards for both N_2O and CH_4 and details of the standard are included in the discussion in Section II. EPA is not proposing air conditioning leakage standards applying to chassis manufacturers to address HFC emissions.

As discussed further below, the agencies propose to set CO_2 and fuel consumption standards for these chassis based on tire rolling resistance improvements and for the engines based on engine technologies. The fuel consumption and GHG emissions impact of tire rolling resistance is impacted by the mass of the vehicle. However the impact of mass on rolling resistance is relatively small so the agencies propose to aggregate several vehicle weight categories under a single category for setting the standards. The agencies propose to divide the vocational vehicle segment into three broad regulatory categories—Light

[75] E85 is a blended fuel consisting of nominally 15 percent gasoline and 85 percent ethanol.

[76] *See* above for discussion of applicability of NHTSA's standards to non-commercial vehicles.

[77] *See* 2010 NAS Report, Note 19, page 133.

[78] *See* 2010 NAS Report, Note 19, page 110.

Heavy-Duty (Class 2b through 5), Medium Heavy-Duty (Class 6 and 7), and Heavy Heavy-Duty (Class 8) which is consistent with the nomenclature used in the diesel engine classification. The agencies are interested in comment on this segmentation strategy (subcategorization). As the agencies move towards future heavy-duty fuel consumption and GHG regulations for post-2017 model years, we intend to gather GHG and fuel consumption data for specific vocational applications which could be used to establish application-specific standards in the future.

(1) What are the proposed CO_2 and fuel consumption standards and their timing?

In developing the proposed standards, the agencies have evaluated the current levels of emissions and fuel consumption, the kinds of technologies that could be utilized by manufacturers to reduce emissions and fuel consumption and the associated lead time, the associated costs for the industry, fuel savings for the consumer, and the magnitude of the CO_2 and fuel savings that may be achieved. The technologies that the agencies considered while setting the proposed vehicle-level standards include improvements in lower rolling resistance tires. The technologies that the agencies considered while setting the engine standards include engine friction reduction, aftertreatment optimization, among others. The agencies' evaluation indicates that these technologies are available today in the heavy-duty tractor and light-duty vehicle markets, but have very low application rates in the vocational market. The agencies have analyzed the technical feasibility of achieving the proposed CO_2 and fuel consumption standards, based on projections of what actions manufacturers would be expected to take to reduce emissions and fuel consumption to achieve the standards, and believe that the proposed standards are cost-effective and technologically feasible and appropriate within the rulemaking time frame. EPA and NHTSA also present the estimated costs and benefits of the proposed vocational vehicle standards in Section III.

(a) Proposed Chassis Standards

As shown in Table II–9, EPA is proposing the following CO_2 standards for the 2014 model year for the Class 2b through Class 8 vocational vehicle chassis. Similarly, NHTSA is proposing the following fuel consumption standards for the 2016 model year, with voluntary standards beginning in the 2014 model year. For the EPA GHG program, the proposed standard applies throughout the useful life of the vehicle.

EPA and NHTSA are proposing more stringent vehicle standards for the 2017 model year which reflect the CO_2 emissions reductions required through the 2017 model year engine standards. As explained in Section II. D. (2)(c)(iv) below, engine performance is one of the inputs into the compliance model, and that input will change in 2017 to reflect the 2017 MY engine standards. The 2017 MY vehicle standards are not premised on manufacturers installing additional vehicle technologies.

Table II-9: Proposed Class 2b-8 Vocational Vehicle CO_2 and Fuel Consumption Standards

EPA CO_2 (gram/ton-mile) Standard Effective 2014 Model Year			
	Light Heavy-Duty Class 2b-5	Medium Heavy-Duty Class 6-7	Heavy Heavy-Duty Class 8
CO_2 Emissions	358	212	109
NHTSA Fuel Consumption (gallon per 1,000 ton-mile) Standard Effective 2016 Model Year[79]			
	Light Heavy-Duty Class 2b-5	Medium Heavy-Duty Class 6-7	Heavy Heavy-Duty Class 8
Fuel Consumption	35.2	20.8	10.7
EPA CO_2 (gram/ton-mile) Standard Effective 2017 Model Year			
	Light Heavy-Duty Class 2b-5	Medium Heavy-Duty Class 6-7	Heavy Heavy-Duty Class 8
CO_2 Emissions	344	204	107
NHTSA Fuel Consumption (gallon per ton-mile) Standard Effective 2017 Model Year			
	Light Heavy-Duty Class 2b-5	Medium Heavy-Duty Class 6-7	Heavy Heavy-Duty Class 8
Fuel Consumption	33.8	20.0	10.5

(i) Off-Road Vocational Vehicle Standards

In developing the proposal EPA and NHSTA received comment from manufacturers and owners that certain vocational vehicles sometimes have very limited on-road usage. These trucks are defined to be motor vehicles under 40 CFR 85.1703, but they will spend the majority of their operations off-road. Trucks, such as those used in oil fields, will experience little benefit from low rolling resistance tires. The agencies are therefore proposing to allow a narrow range of these *de facto* off-road trucks to be excluded from the proposed vocational vehicle standards because the trucks require special off-road tires such as lug tires. The trucks must still use a certified engine, which will provide fuel consumption and CO_2 emission reductions to the truck in all

[79] Manufacturers may voluntarily opt-in to the NHTSA fuel consumption program in 2014 or 2015. If a manufacturer opts-in, the program becomes mandatory.

applications. To insure that these trucks are in fact used chiefly off-road, the agencies are proposing requirements that the vehicles have off-road tires, have limited high speed operation, and are designed for specific off-road applications. The agencies are specifically proposing that a truck must meet the following requirements to qualify for an exemption from the vocational vehicle standards:

- Installed tires which are lug tires or contain a speed rating of less than or equal to 60 mph; and
- Include a vehicle speed limiter governed to 55 mph.

EPA and NHTSA have concluded that the on-road performance losses and additional costs to develop a truck which meets these specifications will limit the exemption to trucks built for the desired purposes. The agencies welcome comment on the proposed requirements and exemptions.

(b) Proposed Heavy-duty Engine Standards

EPA is proposing GHG standards [80] and NHTSA is proposing fuel consumption standards for new heavy-duty engines installed in vocational vehicles. The standards will vary depending on whether the engines are diesel or gasoline powered. The agencies' analyses, as discussed briefly below and in more detail later in this preamble and in the draft RIA Chapter 2, show that these standards are appropriate and feasible under each agency's respective statutory authorities.

The agencies have analyzed the feasibility of achieving the GHG and fuel consumption standards, based on projections of what actions manufacturers are expected to take to reduce emissions and fuel consumption. EPA and NHTSA also present the estimated costs and benefits of the heavy-duty engine standards in Section III. In developing the proposed rules, the agencies have evaluated the kinds of technologies that could be utilized by engine manufacturers compared to a baseline engine, as well as the associated costs for the industry and fuel savings for the consumer and the magnitude of the GHG and fuel consumption savings that may be achieved.

With respect to the lead time and cost of incorporating technology improvements that reduce GHG emissions and fuel consumption, the agencies place important weight on the fact that during MYs 2014–2017, engine manufacturers are expected to redesign and upgrade their products only once. Over these four model years there will be an opportunity for manufacturers to evaluate almost every one of their engine models and add technology in a cost-effective way to control GHG emissions and reduce fuel consumption. The time-frame and levels for the standards, as well as the ability to average, bank and trade credits and carry a deficit forward for a limited time, are expected to provide manufacturers the time needed to incorporate technology that will achieve the proposed GHG and fuel consumption reductions, and to do this as part of the normal engine redesign process. This is an important aspect of the proposed rules, as it will avoid the much higher costs that would occur if manufacturers needed to add or change technology at times other than these scheduled redesigns. This time period will also provide manufacturers the opportunity to plan for compliance using a multi-year time frame, again in accord with their normal business practice. Further details on lead time, redesigns and technical feasibility can be found in Section III.

EPA's existing criteria pollutant emissions regulations for heavy-duty highway engines establish four regulatory categories (three for compression-ignition or diesel engines and one for spark ignition or gasoline engines) that represent the engine's intended and primary truck application, as shown in Table II–10 (40 CFR 1036.140). The agencies welcome comments on the existing definition of the regulatory categories (such as typical horsepower levels) as described in 40 CFR 1036.140. All heavy-duty engines are covered either under the heavy-duty pickup truck and van category or under the heavy-duty engine standards.

Table II-10: Engine Regulatory Subcategories

Engine Category	Intended Application
Light Heavy-duty (LHD) Diesel	Class 2b through Class 5 trucks (8,501 through 19,500 pounds GVWR)
Medium Heavy-duty (MHD) Diesel	Class 6 and Class 7 trucks (19,501 through 33,000 pounds GVWR)
Heavy Heavy-duty (HHD) Diesel	Class 8 trucks (33,001 pounds and greater GVWR
Gasoline	Incomplete vehicles less than 14,000 pounds GVWR and all vehicles (complete or incomplete) greater than 14,000 pounds GVWR

For the purposes of the GHG engine emissions and engine fuel consumption standards that EPA and NHTSA are proposing, the agencies intend to maintain these same four regulatory subcategories for GHG engine emissions standards and fuel consumption standards. This category structure would enable the agencies to set standards that appropriately reflect the technology available for engines for use in each type of vehicle.

(i) Diesel Engine Standards

EPA's proposed heavy-duty diesel engine CO_2 emission standards are presented in Table II–11. Similar to EPA's non-GHG standards approach, manufacturers may generate and use credits to show compliance with the standards. The EPA standards become effective in 2014 model year, with more stringent standards becoming effective in model year 2017. Recently, EPA's

[80] Specifically, EPA is proposing CO_2, N_2O, and CH_4 emissions standards for new heavy-duty engines over an EPA specified useful life period (*see* Section II. E. for the N_2O and CH_4 standards).

non-GHG heavy-duty engine program provided new emissions standards for the industry in three year increments. Largely, the heavy-duty engine and truck manufacturer product plans have fallen into three year cycles to reflect this environment. The proposed two-step CO_2 emission standards recognize the opportunity for technology improvements over this timeframe while reflecting the typical diesel truck manufacturer product plan cycles.

NHTSA's fuel consumption standards, also presented in Table II–11, would contain voluntary engine standards starting in 2014 model year, with mandatory engine standards starting in 2017 model year, synchronizing with EPA's 2017 model year standards. A manufacturer may opt-in to NHTSA's voluntary standards in 2014, 2015 or 2016. Once a manufacturer opts-in, the standards become mandatory for the opt-in and subsequent model years, and the manufacturer may not reverse its decision. To opt into the program, a manufacture must declare its intent to opt in to the program with documented communication of the intent, at the same time it submits the Pre-Certification Compliance Report. *See* 49 CFR 535.8 for information related to the Pre-Certification Compliance Report. A manufacturer opting into the program would begin tracking credits and debits beginning in the model year in which they opt into the program.

The agencies are proposing the same standard level for the Light Heavy and Medium Heavy diesel engine categories. The agencies found that there is an overlap in the displacement of engines which are currently certified as LHDD or MHDD. The agencies developed the baseline 2010 model year CO_2 emissions from data provided to EPA by the manufacturers during the non-GHG certification process. Analysis of CO_2 emissions from 2010 model year LHD and MHDD diesel engines showed little difference between LHD and MHD diesel engine baseline CO_2 performance, which overall averaged 630 g CO_2/bhp-hr (6.19 gal/100 bhp-hr),[81] in the 2010 model year. Furthermore, the technologies available to reduce fuel consumption and CO_2 emissions from these two categories of engines are similar. The agencies are proposing to maintain these two separate engine categories with the same standard level (instead of combining them into a single category) to respect the different useful life periods associated with each category. The agencies are proposing to evaluate compliance with the LHD/MHD diesel engine standards based on the Heavy-duty FTP cycle.

The agencies found a difference in the baseline 2010 model year CO_2 and fuel consumption performance between the LHD/MHD diesel engines, which averaged 630 g CO_2/bhp-hr (6.19 gal/100 bhp-hr),[82] and the HHD diesel engines, which averaged 584 g CO_2/bhp-hr (5.74 gal/100 bhp-hr). The HHD diesel engine data is also based on manufacturer submitted CO_2 data for non-GHG emissions certification process. In addition, the agencies believe that there may be some technologies available to reduce fuel consumption and CO_2 emissions that may not be appropriate for both the LHD/MHD diesel and the HHD diesel engines, such as turbocompounding. Therefore, the agencies are proposing a standard level for HHD diesel engines which differs from the LHD/MHD diesel engine standard level likewise to be evaluated on the Heavy-duty FTP cycle.

We are proposing standards based on the Heavy-duty FTP cycle for engines used in vocational vehicles reflecting their primary use in transient operating conditions typified by both frequent accelerations and decelerations as well as some steady cruise conditions as represented on the Heavy-duty FTP. The primary reason the agencies are proposing to set two separate HHD diesel engine standards—one for HHD diesel engines used in tractors and the other for HHD diesel engines used in vocational vehicles—is to encourage engine manufacturers to install technologies appropriate to the intended use of the engine with the vehicle. Tractors spend the majority of their operation at steady state conditions, and will obtain in-use benefit of technologies such as turbocompounding and other waste heat recovery technologies during this kind of typical engine operation. Therefore, the engines installed in line haul tractors would be required to meet the standard based on the SET, which is a steady state test cycle. On the other hand, vocational vehicles such as urban delivery trucks spend more time operating in transient conditions and may not realize the benefit of this type of technology in-use. The use of the Heavy-duty FTP for these engines would focus engine design on technologies that realize in-use benefits during the kind of operation typical for these engines. Therefore, we are proposing that engines installed in vocational vehicles be required to meet the standard and demonstrate compliance over the transient Heavy-duty FTP cycle. The levels of the standards reflect the difference in baseline emissions for the different test procedures.

As noted in Section II.B above, the engine standards that EPA is proposing and the voluntary standards being proposed by NHTSA for the 2014 model year would require diesel engine manufacturers to achieve on average a three percent reduction in fuel consumption and CO_2 emissions over the baseline 2010 model year performance for the HHD diesel engines and a five percent reduction for the LHD and MHD diesel engines. The agencies' assessment of the NAS report and other literature sources indicates that there are technologies available to reduce fuel consumption by this level in the proposed timeframe in a cost-effective manner. These technologies include improved turbochargers, aftertreatment optimization, low temperature exhaust gas recirculation, and engine friction reductions. Additional discussion on technical feasibility is included in Section III below and in draft RIA Chapter 2.

Additionally, the agencies are proposing that diesel engines further reduce fuel consumption and CO_2 emissions in the 2017 model year. The proposed 2017 model year standards for the LHD and MHD diesel engines represent a 9 percent reduction from the 2010 model year. The proposed reductions represent on average a five percent decrease over the 2010 baseline for HHD diesel engines required to test compliance using the Heavy-duty FTP test cycle. The additional reductions may be achieved through the increased development of the technologies evaluated for the 2014 model year standard. *See* draft RIA Chapter 2. The agencies' analysis indicates that this type of advanced engine development will require a longer development time than the 2014 model year and therefore are proposing to provide additional lead time to allow for its introduction.

Similar to EPA's non-GHG standards approach, manufacturers may generate and use credits by the same engine subcategory to show compliance with both agencies' standards.

[81] Calculated using the conversion 10,180 g CO_2/gallon for diesel fuel.

[82] Calculated using the conversion 10,180 g CO_2/gallon for diesel fuel.

Table II-11: Proposed Vocational Diesel Engine Standards Over the Heavy-Duty FTP Cycle

Model Year	Standard	Light Heavy-Duty Diesel	Medium Heavy-Duty Diesel	Heavy Heavy-Duty Diesel
2014-2016	CO_2 Standard (g/bhp-hr)	600	600	567
	Voluntary Fuel Consumption Standard (gallon/100 bhp-hr)	5.89	5.89	5.57
2017 and Later	CO_2 Standard (g/bhp-hr)	576	576	555
	Fuel Consumption (gallon/100 bhp-hr)	5.57	5.57	5.45

In proposing these standards for diesel engines used in vocational vehicles, the agencies have looked primarily at the typical performance levels of the majority of engines in the fleet. As explained above in Section II.B, we also recognize that when regulating a category of products for the first time, there will be individual products that may deviate from this baseline level of performance. Recognizing that for these products a reduction from the industry baseline may be more costly than the agencies have assumed or perhaps even not feasible in the lead time available for these standards, EPA and NHTSA are proposing a regulatory alternative whereby a manufacturer could comply with a unique standard based on a five percent reduction from the products own 2011 baseline level. Our assessment is that this five percent reduction is appropriate and technologically feasible given the manufacturers' ability to apply similar technology packages with similar cost to what we have estimated for the primary program. For this purpose, the agencies do not see that potential obstacles are greater or lesser for engine standards which are based on the SET procedure or Heavy-duty FTP cycle. We do not believe this alternative needs to continue past 2016 since manufacturers will have had ample opportunity to benchmark competitive products and make appropriate changes to bring their product performance into line with the rest of the industry.

However, we are requesting comment on the potential to extend this regulatory alternative for one additional year for a single engine family with performance measured in that year as nine percent beyond the engine's own 2011 model year baseline level. We also request comment on the level of reduction beyond the baseline that is appropriate in this alternative. The five percent level reflects the aggregate improvement beyond the baseline we are requiring of the entire industry. As this provision is intended to address potential issues for legacy products that we would expect to be replaced or significantly improved at the manufacturer's next product change, we request comment if a two percent reduction would be more appropriate. We would consider two percent rather than five percent if we were convinced that making all of the changes we have outlined in our assessment of the technical feasibility of the standards was not possible for some engines due to legacy design issues that will change in the next design cycle. We are proposing that manufacturers making use of these provisions would need to exhaust all credits within this subcategory prior to using this flexibility and would not be able to generate emissions credits from other engines in the same regulatory subcategory as the engines complying using this alternate approach.

(ii) Gasoline Engine Standard

Heavy-duty gasoline engines are also used in vocational vehicle applications. The number of engines certified in the past for this segment of vehicles is very limited and has ranged between three and five engine models. Unlike the purpose-built heavy-duty diesel engines typical of this segment, these gasoline engines are developed for heavy-duty pickup trucks and vans primarily, but are also sold as loose engines to vocational vehicle manufacturers. Therefore, the agencies evaluated these engines in parallel with the heavy-duty pickup truck and van standard development. As with the pickup truck and van segment, the agencies anticipate that the manufacturers will have only one engine re-design within the 2014–18 model years under consideration within this proposal. In our meetings with all three of the major manufacturers in this segment, confidential future product plans were shared with the agencies. Reflecting those plans and our estimates for when engine changes will be made in alignment with those product plans, we have concluded that the 2016 model year reflects the most logical model year start date for the heavy-duty gasoline engine standards. In order to meet the standards we are proposing for heavy-duty pickups and vans, we project that all manufacturers will have redesigned their gasoline engine offerings by the start of the 2016 model year. Given the small volume of loose gasoline engine sales relative to complete heavy-duty pickup sales, we think it is appropriate to set the timing for the heavy-duty gasoline engine standard in line with our projections for engine redesigns to meet the heavy-duty pickup truck standards. Therefore, NHTSA's proposed fuel consumption standard and EPA's proposed CO_2 standard for heavy-duty gasoline engines are first effective in the 2016 model year.

The baseline 2010 model year CO_2 performance of these heavy-duty gasoline engines over the Heavy-duty FTP cycle is 660 g CO_2/bhp-hr (6.48 gal/100 bhp-hr) in 2010 based on non-GHG certification data provided to EPA by the manufacturers. The agencies propose that manufacturers achieve a five percent reduction in CO_2 in the 2016 model year over the 2010 MY baseline through use of technologies such as coupled cam phasing, engine friction reduction, and stoichiometric gasoline direct injection. Additional detail on technology feasibility is included in Section III and in the draft RIA Chapter 2.

NHTSA is proposing a 7.05 gallon/100 bhp-hr standard for fuel consumption while EPA is proposing a 627 g CO_2/bhp-hr standard tested over the Heavy-duty FTP, effective in the 2016 model year. Similar to EPA's non-GHG standards approach, manufacturers may generate and use credits by the same engine subcategory to show compliance with both agencies' standards.

In the preceding section on diesel engines, we describe an alternative compliance approach for diesel engines based on improvements from an engine's own baseline of performance. We are not making a similar proposal for gasoline engines, but we request comment on the need for and appropriateness of such an approach. Comments suggesting the need for a

similar approach should include specific recommendations on how the approach would work and the technical reasons why such an approach would be necessary in order to make the gasoline engine standards feasible.

(c) In-Use Standards

Section 202(a)(1) of the CAA specifies that emissions standards are to be applicable for the useful life of the vehicle. The in-use standards that EPA is proposing would apply to individual vehicles and engines. NHTSA is not proposing to adopt in-use standards that would apply to the vehicles and engines in a similar fashion.

EPA is proposing that the in-use standards for heavy-duty engines installed in vocational vehicles be established by adding an adjustment factor to the full useful life emissions and fuel consumption results. EPA is proposing a 2 percent adjustment factor for the in-use standard to provide some margin for production and test-to-test variability that could result in differences between the initial emission test results and emission results obtained during subsequent in-use testing.

EPA is proposing that the useful life for these engine and vehicles with respect to GHG emissions be set equal to the respective useful life periods for criteria pollutants. EPA proposes that the existing engine useful life periods, as included in Table II–12, be broadened to include CO_2 emissions and fuel consumption for both engines and tractors (*see* 40 CFR 86.004–2). While NHTSA proposes to use useful life considerations for establishing fuel consumption performance for initial compliance and for ABT, NHTSA does not intend to implement an in-use compliance program for fuel consumption, because it is not required under EISA and because it is not currently anticipated there will be notable deterioration of fuel consumption over the engines' useful life.

Table II-12: Proposed Useful Life Periods

	Years	Miles
Class 2b-5 Vocational Vehicles, Spark Ignited, and Light Heavy-Duty Diesel Engines	10	110,000
Class 6-7 Vocational Vehicles and Medium Heavy-Duty Diesel Engines	10	185,000
Class 8 Vocational Vehicles and Heavy Heavy-Duty Diesel Engines	10	435,000

EPA requests comments on the magnitude and need for an in-use adjustment factor for the engine standard and the compliance model GEM, based chassis standard.

(2) Test Procedures and Related Issues

The agencies are proposing test procedures to evaluate fuel consumption and CO2 emissions of vocational vehicles in a manner very similar to Class 7 and Class 8 combination tractors. This section describes a simulation model for demonstrating compliance, engine test procedures, and a test procedure for evaluating hybrid powertrains (a potential means of generating credits, although not part of the technology on which the proposed standard is premised).

(a) Computer Simulation Model

As previously mentioned, to achieve the goal of reducing emissions and fuel consumption for both trucks and engines, we are proposing to set separate engine and vehicle-based emission standards. For the vocational vehicles, engine manufacturers would be subject to the engine standards, and chassis manufacturers would be required to install certified engines in their chassis. The chassis manufacturer would be subject to a separate vehicle-based standard that would use the proposed truck simulation model to evaluate the impact of the tire design to determine compliance with the truck standard.

A simulation model, in general, uses various inputs to characterize a vehicle's properties (such as weight, aerodynamics, and rolling resistance) and predicts how the vehicle would behave on the road when it follows a driving cycle (vehicle speed versus time). On a second-by-second basis, the model determines how much engine power needs to be generated for the vehicle to follow the driving cycle as closely as possible. The engine power is then transmitted to the wheels through transmission, driveline, and axles to move the vehicle according to the driving cycle. The second-by-second fuel consumption of the vehicle, which corresponds to the engine power demand to move the vehicle, is then calculated according to the fuel consumption map embedded in the compliance model. Similar to a chassis dynamometer test, the second-by-second fuel consumption is aggregated over the complete drive cycle to determine the fuel consumption of the vehicle.

NHTSA and EPA are proposing to evaluate fuel consumption and CO_2 emissions respectively through a simulation of whole-vehicle operation, consistent with the NAS recommendation to use a truck model to evaluate truck performance. The agencies developed the GEM for the specific purpose of this proposal to evaluate truck performance. The GEM is similar in concept to a number of vehicle simulation tools developed by commercial and government entities. The model developed by the agencies and proposed here was designed for the express purpose of vehicle compliance demonstration and is therefore simpler and less configurable than similar commercial products. This approach gives a compact and quicker tool for evaluating vehicle compliance without the overhead and costs of a more complicated model. Details of the model are included in Chapter 4 of the draft RIA.

GEM is designed to focus on the inputs most closely associated with fuel consumption and CO_2 emissions—*i.e.*, on those which have the largest impacts such as aerodynamics, rolling resistance, weight, and others.

EPA and NHTSA have validated GEM based on the chassis test results from three SmartWay certified tractors tested at Southwest Research Institute. The validation work conducted on these three vehicles is representative of the other Class 7 and 8 tractors. Many

aspects of one tractor configuration (such as the engine, transmission, axle configuration, tire sizes, and control systems) are similar to those used on the manufacturer's sister models. For example, the powertrain configuration of a sleeper cab is similar to the one used on a straight truck. Details of the validation testing and its representativeness are included in draft RIA Chapter 4. Overall, the GEM predicted the fuel consumption and CO_2 emissions within 4 percent of the chassis test procedure results for three test cycles—the California ARB Transient cycle, the California ARB High Speed Cruise cycle, and the Low Speed Cruise cycle. These cycles are very similar to the ones the agencies are proposing to utilize in compliance testing. Test to test variation for heavy-duty vehicle chassis testing can be higher than 4 percent based on driver variation. The proposed simulation model is described in greater detail in draft RIA Chapter 4 and is available for download by interested parties at (*http://www.epa.gov/otaq/*). We request comment on all aspects of this approach to compliance determination in general and to the use of the GEM in particular.

The agencies are proposing that for demonstrating compliance, a chassis manufacturer would measure the performance of tires, input the values into GEM, and compare the model's output to the standard. Tires are the only technology on which the agencies' own feasibility analysis for these vehicles is predicated. An example of the GEM input screen is included in Figure II–3. The input values for the simulation model would be derived by the manufacturer from tire test procedure proposed by the agencies in this proposal. The agencies are proposing that the remaining model inputs would be fixed values that are pre-defined by the agencies and are detailed in the draft RIA Chapter 4, including the engine fuel consumption map to be used in the simulation.

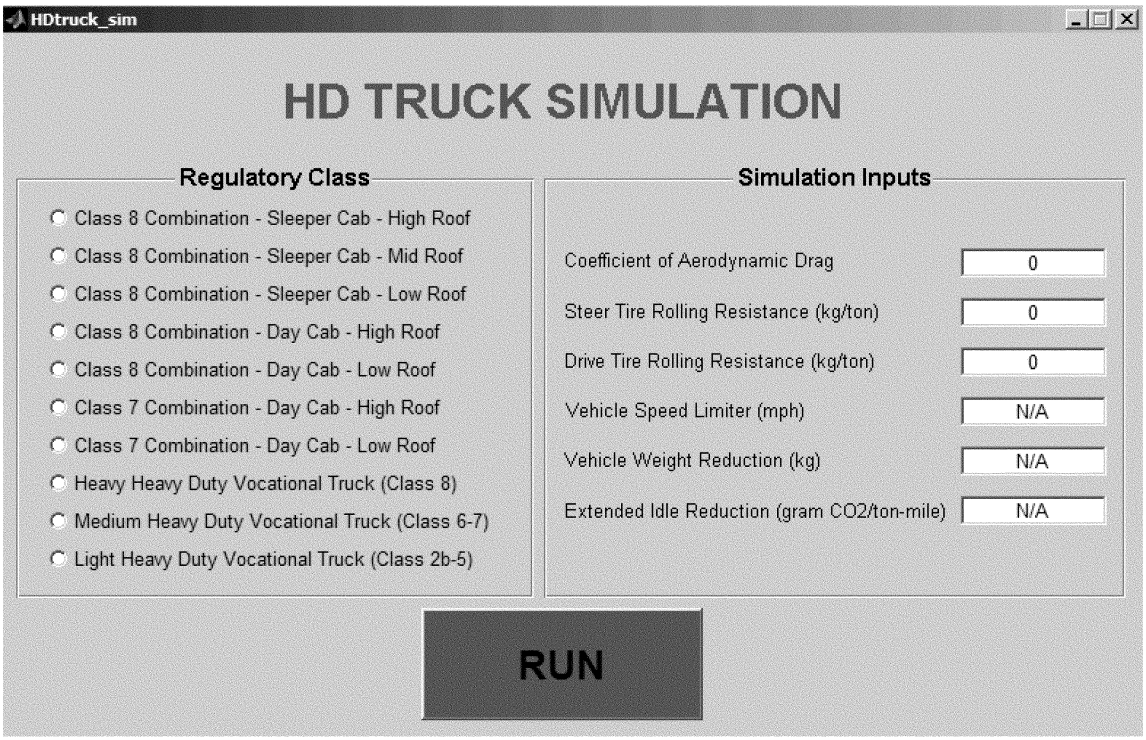

Figure II-3: Example GEM Input Screen

(b)Tire Rolling Resistance Assessment

As with the Class 7 and 8 combination tractors, NHTSA and EPA are proposing that the vocational vehicle's tire rolling resistance input to the GEM be determined using the ISO 28580:2009 test method.[83] The agencies believe the ISO test procedure is appropriate to propose for this program because the procedure is the same one used by the NHTSA tire fuel efficiency labeling program[84] and is consistent with the direction being taken by the tire industry both in the United States and Europe, and with the EPA SmartWay program. The rolling resistance from this test would be used to specify the rolling resistance of each tire on the steer and drive axle of the vehicle. The results would be expressed as a rolling resistance coefficient and measured as kilogram per ton (kg/metric ton). The agencies are proposing that three tire samples within each tire model be tested three times each to account for some of the production variability and the average of the three tests would be the rolling resistance coefficient for the tire.

(c)Defined Vehicle Configurations in the GEM

As discussed above, the agencies are proposing a methodology that chassis manufacturers would use to quantify the tire rolling resistance values to be input into the GEM. Moreover, the agencies are proposing to define the remaining

[83] ISO, 2009, Passenger Car, Truck, and Bus Tyres—Methods of Measuring Rolling Resistance—Single Point Test and Correlation of Measurement Results: ISO 28580:2009(E), First Edition, 2009–07–01.

[84] NHTSA, 2009. "NHTSA Tire Fuel Efficiency Consumer Information Program Development: Phase 1—Evaluation of Laboratory Test Protocols." DOT HS 811 119. June. (*http://www.regulations.gov*, Docket ID: NHTSA–2008–0121–0019).

GEM inputs (*i.e.,* specify them by rule), which may differ by the regulatory subcategory (for reasons described in the draft RIA). The defined inputs being proposed include the drive cycle, aerodynamics, truck curb weight, payload, engine characteristics, and drivetrain for each vehicle type, among others.

(i) Metric

Based on NAS's recommendation and feedback from the heavy-duty truck industry, NHTSA and EPA are proposing standards for vocational vehicles that would be expressed in terms of moving a ton of payload over one mile. Thus, NHTSA's proposed fuel consumption standards for these trucks would be represented as gallons of fuel used to move one ton of payload one thousand miles, or gal/1,000 ton-mile. EPA's proposed CO_2 vehicle standards would be represented as grams of CO_2 per ton-mile.

(ii) Drive cycle

The drive cycle being proposed for the vocational vehicles consists of the same three modes proposed for the Class 7–8 combination tractors. The agencies are thus proposing the use of the Transient mode, as defined by California ARB in the HHDDT cycle, a constant speed cycle at 65 mph and a 55 mph constant speed mode. However, we are proposing different weightings for each mode than proposed for Class 7 and 87 and 8 combination tractors, given the known difference in driving patterns between these two categories of vehicles. (The same reasoning underlies the agencies' proposal to use the Heavy-duty FTP cycle to evaluate compliance with the standards for diesel engines used in vocational vehicles.)

The variety of vocational vehicle applications makes it challenging to establish a single cycle which is representative of all such trucks. However, in aggregate, the vocational vehicles typically operate over shorter distances and spend less time cruising at highway speeds than combination tractors. The agencies evaluated two sources for mode weightings, as detailed in draft RIA Chapter 3. The agencies are proposing the mode weightings based on the vehicle speed characteristics of single unit trucks used in EPA's MOVES model which were developed using Federal Highway Administration data to distribute vehicle miles traveled by road type.[85] The proposed weighted CO_2 and fuel consumption value consists of 37 percent of 65 mph Cruise, 21 percent of 55 mph Cruise, and 42 percent of Transient performance, which are reflected in the GEM.

(iii) Empty Weight and Payload

The total weight of the vehicle is the sum of the tractor curb weight and the payload. The agencies are proposing to specify each of these aspects of the vehicle. The agencies developed the truck curb weight inputs based on industry information developed by ICF.[86] The proposed curb weights are 10,300 pounds for the LH trucks, 13,950 pounds for the MH trucks, and 29,000 pounds for the HH trucks.

NHTSA and EPA are also proposing the following payload requirement for each regulatory category. The payloads were developed from Federal Highway statistics based on averaging the payloads for the weight categories represented within each vehicle subcategory.[87] The proposed payload requirement is 5,700 pounds for the Light Heavy-Duty trucks, 11,200 pounds for Medium Heavy-Duty trucks, and 38,000 pounds for Heavy Heavy-Duty trucks. Additional information is available in draft RIA Chapter 3.

(iv) Engine

As the agencies are proposing separate engine and truck standards, the GEM will be used to assess the compliance of the chassis with the vehicle standard. To maintain the separate assessments, the agencies are proposing to use fixed values that are pre-defined by the agencies for the engine characteristics used in GEM, including the fuel consumption map which provides the fuel consumption at hundreds of engine speed and torque points. If the agencies did not standardize the fuel map, then a truck that uses an engine with emissions and fuel consumption better than the standards would require fewer vehicle reductions than those being proposed. The agencies are proposing that the engine characteristics used in GEM be representative of a diesel engine, because it represents the largest fraction of engines in this market.

The agencies are proposing two distinct sets of fuel consumption maps for use in GEM. The first fuel consumption map would be used in GEM for the 2014 through 2016 model years and represent a diesel engine which meets the 2014 model year engine CO_2 emissions standards. A second fuel consumption map would be used beginning in the 2017 model year and represents a diesel engine which meets the 2017 model year CO_2 emissions and fuel consumption standards and accounts for the increased stringency in the proposed MY 2017 standard). Effectively there is no change in stringency of the vocational vehicle standard (not including the engine) so that there is stability in the vocational vehicle (not including engine) standards for the full rulemaking period. These inputs are reasonable (indeed, seemingly necessitated) given the separate proposed regulatory requirement that vocational vehicle chassis manufacturers use only certified engines.

(v) Drivetrain

The agencies' assessment of the current vehicle configuration process at the truck dealer's level is that the truck companies provide software tools to specify the proper drivetrain matched to the buyer's specific circumstances. These dealer tools allow a significant amount of customization for drive cycle and payload to provide the best specification for the customer. The agencies are not seeking to disrupt this process. Optimal drivetrain selection is dependent on the engine, drive cycle (including vehicle speed and road grade), and payload. Each combination of engine, drive cycle, and payload has a single optimal transmission and final drive ratio. The agencies are proposing to specify the engine's fuel consumption map, drive cycle, and payload; therefore, it makes sense to specify the drivetrain that matches.

In conclusion, for vocational vehicles, compliance would be determined by establishing values for the tire rolling resistance and using the prescribed inputs in GEM. The model would produce CO_2 and fuel consumption results that would be compared against EPA's and NHTSA's respective standards.

(d) Engine Test Procedures

The NAS panel did not specifically discuss or recommend a metric to evaluate the fuel consumption of heavy-duty engines. However, as noted above they did recommend the use of a load-specific fuel consumption metric for the

[85] The Environmental Protection Agency. Draft MOVES2009 Highway Vehicle Population and Activity Data. EPA–420–P–09–001, August 2009 *http://www.epa.gov/otaq/models/moves/techdocs/420p09001.pdf.*

[86] ICF International. "Investigation of Costs for Strategies to Reduce Greenhouse Gas Emissions for Heavy-Duty On-Road Vehicles." July 2010. Pages 16–20. Docket ID# EPA–HQ–OAR–2010–0162–0044.

[87] The U.S. Federal Highway Administration. Development of Truck Payload Equivalent Factor. Table 11. Last viewed on March 9, 2010 at *http://ops.fhwa.dot.gov/freight/freight_analysis/faf/faf2_reports/reports9/s510_11_12_tables.htm.*

evaluation of vehicles.[88] An analogous metric for engines would be the amount of fuel consumed per unit of work. Thus, EPA is proposing that GHG emission standards for engines under the CAA would be expressed as g/bhp-hr: similarly, NHTSA's proposed fuel consumption standards under EISA would be represented as gallons of fuel per 100 horsepower-hour (gal/100 bhp-hr). EPA's metric is also consistent with EPA's current standards for non-GHG emissions for these engines.

EPA's criteria pollutant standards for engines currently require that manufacturers demonstrate compliance over the transient FTP cycle; over the steady-state SET procedure; and during not-to-exceed testing. EPA created this multi-layered approach to criteria emissions control in response to engine designs that optimized operation for lowest fuel consumption at the expense of very high criteria emissions when operated off the regulatory cycle. EPA's use of multiple test procedures for criteria pollutants helps to ensure that manufacturers calibrate engine systems for compliance under all operating conditions. With regard to GHG and fuel consumption control, the agencies believe it is more appropriate to set standards based on a single test procedure, either the Heavy-duty FTP or SET, depending on the primary expected use of the engine.

As discussed above, it is critical to set standards based on the most representative test cycles in order for performance in-use to obtain the intended (and feasible) air quality benefits. We further explained why the Heavy-duty FTP is the appropriate test cycle for engines used in vocational vehicles, and the steady-state SET procedure the most appropriate for engines used in combination tractors. We are not concerned if off-cycle manufacturers further calibrate these designs to give better in-use fuel consumption while maintaining compliance with the criteria emissions standards as such calibration is entirely consistent with the goals of our joint program. Further, we believe that setting standards based on both transient and steady-state operating conditions for all engines could lead to undesirable outcomes. For example, as noted earlier, turbocompounding is one technology that the agencies have identified as a likely approach for compliance with our proposed HHD SET standard described below. Turbocompounding is a very effective approach to lower fuel consumption under steady driving conditions typified by combination tractor trailer operation and is well reflected in testing over the SET test procedure. However, when used in driving typified by transient operation as we expect for vocational vehicles and as is represented by the Heavy-duty FTP, turbocompounding shows very little benefit. Setting an emission standard based on the Heavy-duty FTP for engines intended for use in combination tractor trailers could lead manufacturers to not apply turbocompounding even though it can be a highly cost effective means to reduce GHG emissions and lower fuel consumption.

The current non-GHG emissions engine test procedures also require the development of regeneration emission rates and frequency factors to account for the emission changes during a regeneration event (40 CFR 86.004–28). EPA and NHTSA are proposing to exclude the CO_2 emissions and fuel consumption increases due to regeneration from the calculation of the compliance levels over the defined test procedures. We considered including regeneration in the estimate of fuel consumption and GHG emissions and have decided not to do so for two reasons. First, EPA's existing criteria emission regulations already provide a strong motivation to engine manufacturers to reduce the frequency and duration of infrequent regeneration events. The very stringent 2010 NO_X emission standards cannot be met by engine designs that lead to frequent and extended regeneration events. Hence, we believe engine manufacturers are already reducing regeneration emissions to the greatest degree possible. In addition to believing that regenerations are already controlled to the extent technologically possible, we believe that attempting to include regeneration emissions in the standard setting could lead to an inadvertently lax emissions standard. In order to include regeneration and set appropriate standards, EPA and NHTSA would have needed to project the regeneration frequency and duration of future engine designs in the timeframe of this proposal. Such a projection would be inherently difficult to make and quite likely would underestimate the progress engine manufacturers will make in reducing infrequent regenerations. If we underestimated that progress, we would effectively be setting a more lax set of standards than otherwise would be expected. Hence in setting a standard including regeneration emissions we faced the real possibility that we would achieve less effective CO_2 emissions control and fuel consumption reductions than we will achieve by not including regeneration emissions. We are seeking comments regarding regeneration emissions and what approach if any the agencies should use in reflecting regeneration emissions in this program.

(e) Hybrid Powertrain Technology

Although the proposed vocational vehicle standards are not premised on use of hybrid powertrains, certain vocational vehicle applications may be suitable candidates for use of hybrids due to the greater frequency of stop-and-go urban operation and their use of power take-off (PTO) systems. Examples are vocational vehicles used predominantly in stop-start urban driving (*e.g.,* delivery trucks). As an incentive, the agencies are proposing to provide credits for the use of hybrid powertrain technology as described in Section IV. The agencies are proposing that any credits generated using such technologies could be applied to any heavy-duty vehicle or engine, and not be limited to the vehicle category generating the credit. Section IV below also details the proposed approach to account for the use of a hybrid powertrain when evaluating compliance with the truck standard. In general, manufacturers can derive the fuel consumption and CO_2 emissions reductions based on comparative test results using the proposed chassis testing procedures. We are proposing the same three drive cycles and cycle weightings discussed for the vocational vehicles to evaluate trucks that use hybrid powertrains to power the vehicle during motive operation (such as pickup and delivery trucks and transit buses). However, we are proposing an additional PTO test cycle for trucks which use a PTO to power equipment while the vehicle is either idling or moving (such as bucket or refuse trucks). The reductions due to the hybrid technology would be calculated relative to the same type of vehicle with a conventional powertrain tested using the same protocol.

(3) Summary of Proposed Flexibility and Credit Provisions

EPA and NHTSA are proposing a number of flexibility provisions for vocational vehicle chassis manufacturers and engine manufacturers, as discussed in Section IV below. These provisions are all based on an averaging, banking and trading program for emissions and fuel consumption credits. They include provisions to encourage the introduction of advanced technologies such as hybrid drivetrains, provisions to

[88] *See* 2010 NAS Report, Note 19, page 39.

incentivize early compliance with the proposed standards, and provisions to allow compliance using innovative technologies unanticipated by the agencies in developing this proposal.

(4) Deferral of Standards for Small Chassis Manufacturing and Small Engine Companies

EPA and NHTSA are proposing to defer greenhouse gas emissions and fuel consumption standards from small vocational vehicle chassis manufacturers meeting the SBA size criteria of a small business as described in 13 CFR 121.201 (*see* 40 CFR 1036.150 and 1037.150). The agencies will instead consider appropriate GHG and fuel consumption standards for these entities as part of a future regulatory action. This includes both U.S.-based and foreign small volume heavy-duty truck and engine manufacturers.

The agencies have identified ten chassis entities that appear to fit the SBA size criterion of a small business.[89] The agencies estimate that these small entities comprise less than 0.5 percent of the total heavy-duty vocational vehicle market in the United States based on Polk Registration Data from 2003 through 2007,[90] and therefore that the exemption will have a negligible impact on the GHG emissions and fuel consumption improvements from the proposed standards.

EPA and NHTSA have also identified three engine manufacturing entities that appear to fit the SBA size criteria of a small business based on company information included in Hoover's.[91] Based on 2008 and 2009 model year engine certification data submitted to EPA for non-GHG emissions standards, the agencies estimate that these small entities comprise less than 0.1 percent of the total heavy-duty engine sales in the United States. The proposed exemption from the standards established under this proposal would have a negligible impact on the GHG emissions and fuel consumption reductions otherwise due to the standards.

To ensure that the agencies are aware of which companies would be exempt, we propose to require that such entities submit a declaration to EPA and NHTSA containing a detailed written description of how that manufacturer qualifies as a small entity under the provisions of 13 CFR 121.201.

E. Other Standards Provisions

In addition to proposing CO_2 emission standards for heavy-duty vehicles and engines, EPA is also proposing separate standards for N_2O and CH_4 emissions.[92] NHTSA is not proposing comparable separate standards for these GHGs because they are not directly related to fuel consumption in the same way that CO_2 is, and NHTSA's authority under EISA exclusively relates to fuel efficiency. N_2O and CH_4 are important GHGs that contribute to global warming, more so than CO_2 for the same amount of emissions due to their high Global Warming Potential (GWP).[93] EPA is proposing N_2O and CH_4 standards which apply to HD pickup trucks and vans as well as to all heavy-duty engines. EPA is not proposing N_2O and CH_4 standards for the Class 7 and 8 tractor or Class 2b–8 chassis manufacturers because these emissions would be controlled through the engine program.

EPA is requesting comment in Section II.E.4 below on possible alternative CO_2 equivalent approaches to provide near-term flexibility for 2012–14 MY light-duty vehicles.

Almost universally across current engine designs, both gasoline- and diesel-fueled, N_2O and CH_4 emissions are relatively low today and EPA does not believe it would be appropriate or feasible to require reductions from the levels of current gasoline and diesel engines. This is because for the most part, the same hardware and controls used by heavy-duty engines and vehicles that have been optimized for nonmethane hydrocarbon (NMHC) and NO_X control indirectly result in highly effective control of N_2O and CH_4. Additionally, unlike criteria pollutants, specific technologies beyond those presently implemented in heavy-duty vehicles to meet existing emission requirements have not surfaced that specifically target reductions in N_2O or CH_4. Because of this, reductions in N_2O or CH_4 beyond current levels in most heavy-duty applications would occur through the same mechanisms that result in NMHC and NO_X reductions and would likely result in an increase in the overall stringency of the criteria pollutant emission standards. Nevertheless, it is important that future engine technologies or fuels not currently researched do not result in increases in these emissions, and this is the intent of the proposed "cap" standards. The proposed standards would act to cap emissions at today's levels to ensure that manufacturers maintain effective N_2O and CH_4 emissions controls currently used should they choose a different technology path from what is currently used to control NMHC and NO_X but also largely successful methods for controlling N_2O and CH_4. As discussed below, some technologies that manufacturers may adopt for reasons other than reducing fuel consumption or GHG emissions could increase N_2O and CH_4 emissions if manufacturers do not address these emissions in their overall engine and aftertreatment design and development plans. Manufacturers will be able to design and develop the engines and aftertreatment to avoid such emissions increases through appropriate emission control technology selections like those already used and available today. Because EPA believes that these standards can be capped at the same level, regardless of type of HD engine involved, the following discussion relates to all types of HD engines regardless of the vehicles in which such engines are ultimately used. In addition, since these standards are designed to cap current emissions, EPA is proposing the same standards for all of the model years to which the rules apply.

EPA believes that the proposed N_2O and CH_4 cap standards would accomplish the primary goal of deterring increases in these emissions as engine and aftertreatment technologies evolve because manufacturers will continue to target current or lower N_2O and CH_4 levels in order to maintain typical compliance margins. While the cap standards are set at levels that are higher than current average emission levels, the control technologies used today are highly effective and there is no reason to believe that emissions will slip to levels close to the cap, particularly considering compliance margin targets. The caps will protect against significant increases in emissions due to new or poorly implemented technologies. However, we also believe that an alternative compliance approach that allows manufacturers to convert these emissions to CO_2eq emission values and combine them with CO_2 into a single compliance value would also be appropriate, so long as it did not undermine the stringency of the CO_2 standard. As described below, EPA is proposing that such an alternative

[89] The agencies have identified Lodal, Indiana Phoenix, Autocar LLC, HME, Giradin, Azure Dynamics, DesignLine International, Ebus, Krystal Koach, and Millenium Transit Services LLC as potential small business chassis manufacturers.

[90] M.J. Bradley. Heavy-duty Vehicle Market Analysis. May 2009.

[91] The agencies have identified Baytech Corporation, Clean Fuels USA, and BAF Technologies, Inc. as three potential small businesses.

[92] NHTSA's statutory responsibilities relating to reducing fuel consumption are directly related to reducing CO_2 emissions, but not to the control of other GHGs.

[93] N_2O has a GWP of 298 and CH_4 has a GWP of 25 according to the IPCC Fourth Assessment Report.

compliance approach be available to manufacturers to provide certain flexibilities for different technologies.

EPA requests comments on the approach to regulating N_2O and CH_4 emissions including the appropriateness of "cap" standards, the technical bases for the levels of the proposed N_2O and CH_4 standards, the proposed test procedures, and the proposed timing for the standards. In addition, EPA seeks any additional emissions data on N_2O and CH_4 from current technology engines.

EPA is basing its proposed N_2O and CH_4 standards on available test data. We are soliciting additional data, and especially data for in-use vehicles and engines that would help to better characterize changes in emissions of these pollutants throughout their useful lives, for both gasoline and diesel applications. As is typical for EPA emissions standards, we are proposing that manufacturers should establish deterioration factors to ensure compliance throughout the useful life. We are not at this time aware of deterioration mechanisms for N_2O and CH_4 that would result in large deterioration factors, but neither do we believe enough is known about these mechanisms to justify proposing assigned factors corresponding to no deterioration, as we are proposing for CO_2, or for that matter to any predetermined level. We are therefore asking for comment on this subject.

In addition to N_2O and CH_4 standards, this section also discusses air conditioning-related provisions and EPA's proposal to extend certification requirements to all-electric HD vehicles and vehicles and engines designed to run on ethanol fuel.

(1) What is EPA's proposed approach to controlling N_2O?

N_2O is a global warming gas with a GWP of 298. It accounts for about 0.3% of the current greenhouse gas emissions from heavy-duty trucks.[94]

N_2O is emitted from gasoline and diesel vehicles mainly during specific catalyst temperature conditions conducive to N_2O formation. Specifically, N_2O can be generated during periods of emission hardware warm-up when rising catalyst temperatures pass through the temperature window when N_2O formation potential is possible. For current heavy-duty gasoline engines with conventional three-way catalyst technology, N_2O is not generally produced in significant amounts because the time the catalyst spends at the critical temperatures during warm-up is short. This is largely due to the need to quickly reach the higher temperatures necessary for high catalyst efficiency to achieve emission compliance of criteria pollutants. N_2O formation is generally only a concern with diesel and potentially with future gasoline lean-burn engines with compromised NO_X emissions control systems. If the risk for N_2O formation is not factored into the design of the controls, these systems can but need not be designed in a way that emphasizes efficient NO_X control while allowing the formation of significant quantities of N_2O. However, these future advanced gasoline and diesel technologies do not inherently require N_2O formation to properly control NO_X. Pathways exist today that meet criteria emission standards that would not compromise N_2O emissions in future systems as observed in current production engine and vehicle testing [95] which would also work for future diesel and gasoline technologies. Manufacturers would need to use appropriate technologies and temperature controls during future development programs with the objective to optimize for both NO_X and N_2O control. Therefore, future designs and controls at reducing criteria emissions would need to take into account the balance of reducing these emissions with the different control approaches while also preventing inadvertent N_2O formation, much like the path taken in current heavy-duty compliant engines and vehicles. Alternatively, manufacturers who find technologies that reduce criteria or CO_2 emissions but see increases N_2O emissions beyond the cap could choose to offset N_2O emissions with reduction in CO_2 as allowed in the proposed CO_2eq option discussed in Section II.E.3.

EPA is proposing an N_2O emission standard that we believe would be met by current-technology gasoline and diesel vehicles at essentially no cost. EPA believes that heavy-duty emission standards since 2008 model year, specifically the very stringent NO_X standards for both engine and chassis certified engines, directly result in stringent N_2O control. It is believed that the current emission control technologies used to meet the stringent NO_X standards achieve the maximum feasible reductions and that no additional technologies are recognized that would result in additional N_2O reductions. As noted, N_2O formation in current catalyst systems occurs, but their emission levels are inherently low, because the time the catalyst spends at the critical temperatures during warm-up when N_2O can form is short. At the same time, we believe that the proposed standard would ensure that the design of advanced NO_X control systems for future diesel and lean-burn gasoline vehicles would control N_2O emission levels. While current NO_X control approaches used on current heavy-duty diesel vehicles do not compromise N_2O emissions and actually result in N_2O control, we believe that the proposed standards would discourage any new emission control designs for diesels or lean-burn gasoline vehicles that achieve criteria emissions compliance at the cost of increased N_2O emissions. Thus, the proposed standard would cap N_2O emission levels, with the expectation that current gasoline and diesel vehicle control approaches that comply with heavy-duty vehicle emission standards for NO_X would not increase their emission levels, and that the cap would ensure that future diesel and lean-burn gasoline vehicles with advanced NO_X controls would appropriately control their emissions of N_2O.

(a) Heavy-Duty Pickup Truck and Van N_2O Exhaust Emission Standard

EPA is proposing a per-vehicle N_2O emission standard of 0.05 g/mi, measured over the Light-duty FTP and HFET drive cycles. Similar to the CO_2 standard approach, the N_2O emission level of a vehicle would be a composite of the Light-duty FTP and HFET cycles with the same 55 percent city weighting and 45 percent highway weighting. The standard would become effective in model year 2014 for all HD pickups and vans that are subject to the proposed CO_2 emission requirements. Averaging between vehicles would not be allowed. The standard is designed to prevent increases in N_2O emissions from current levels, *i.e.,* a no-backsliding standard.

The proposed N_2O level is approximately two times the average N_2O level of current gasoline and diesel heavy-duty trucks that meet the NO_X standards effective since 2008 model year.[96] Manufacturers typically use design targets for NO_X emission levels at approximately 50% of the standard, to account for in-use emissions deterioration and normal testing and production variability, and we expect manufacturers to utilize a similar approach for N_2O emission compliance. We are not proposing a more stringent

[94] Value adapted from "Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–2007. April 2009.

[95] Memorandum "N_2O Data from EPA Heavy-Duty Testing".

[96] Memorandum "N_2O Data from EPA Heavy-Duty Testing".

standard for current gasoline and diesel vehicles because the stringent heavy-duty NO_X standards already result in significant N_2O control, and we do not expect current N2O levels to rise for these vehicles particularly with expected manufacturer compliance margins.

Diesel heavy-duty pickup trucks and vans with advanced emission control technology are in the early stages of development and commercialization. As this segment of the vehicle market develops, the proposed N_2O standard would require manufacturers to incorporate control strategies that minimize N_2O formation. Available approaches include using electronic controls to limit catalyst conditions that might favor N_2O formation and considering different catalyst formulations. While some of these approaches may have associated costs, EPA believes that they will be small compared to the overall costs of the advanced NO_X control technologies already required to meet heavy-duty standards.

The light-duty GHG rule requires that manufacturers begin testing for N_2O by 2015 model year. The manufacturers of complete pickup trucks and vans (Ford, General Motors, and Chrysler) are already impacted by the light-duty GHG rule and will therefore have this equipment and capability in place for the timing of this proposal.

Overall, we believe that manufacturers of HD pickups and vans (both gasoline and diesel) would meet the proposed standard without implementing any significantly new technologies, only further refinement of their existing controls, and we do not expect there to be any significant costs associated with this standard.

(b) Heavy-Duty Engine N_2O Exhaust Emission Standard

EPA is also proposing a per engine N_2O emissions standard of 0.05 g/bhp-hr for heavy-duty engines which become effective in 2014 model year. These standards remain the same over the useful life of the engine. The N_2O emissions would be measured over the Heavy-duty FTP cycle because it is believed that this cycle poses the highest risk for N_2O formation versus the additional heavy-duty compliance cycles. Averaging between vehicles would not be allowed. The standard is designed to prevent increases in N_2O emissions from current levels, *i.e.,* a no-backsliding standard.

The proposed N_2O level is twice the average N_2O level of current diesel engines as demonstrated in the ACES Study and in EPA's testing of two additional engines with selective catalytic reduction aftertreatement systems.[97] Manufacturers typically use design targets for NO_X emission levels of about 50% of the standard, to account for in-use emissions deterioration and normal testing and production variability, and manufacturers are expected to utilize a similar approach for N_2O emission compliance. EPA requests comment on the agency's technical assessment of current and potential future N_2O formation in heavy-duty engines, as presented here.

Engine emissions regulations do not currently require testing for N_2O. The Mandatory GHG Reporting final rule requires reporting of N_2O and requires that manufacturers either measure N_2O or use a compliance statement based on good engineering judgment in lieu of direct N_2O measurement (74 FR 56260, October 30, 2009). The light-duty GHG final rule allows manufacturers to provide a compliance statement based on good engineering judgment through the 2014 model year, but requires measurement beginning in 2015 model year (75 FR 25324, May 7, 2010). EPA is proposing a consistent approach for heavy-duty engine manufacturers which allows them to delay direct measurement of N_2O until the 2015 model year. EPA welcomes comments on whether there are differences in the heavy-duty market which would warrant a different approach.

Manufacturers without the capability to measure N_2O by the 2015 model year would need to acquire and install appropriate measurement equipment in response to this proposed program. EPA has established four separate N_2O measurement methods, all of which are commercially available today. EPA expects that most manufacturers would use photo-acoustic measurement equipment, which EPA estimates would result in a one-time cost of about $50,000 for each test cell that would need to be upgraded.

Overall, EPA believes that manufacturers of heavy-duty engines, both gasoline and diesel, would meet the proposed standard without implementing any new technologies, and beyond relatively small facilities costs for any companies that still need to acquire and install N_2O measurement equipment, EPA does not project that manufacturers would incur significant costs associated with this proposed N_2O standard.

EPA is not proposing any vehicle-level N_2O standards for heavy-duty trucks (combination and vocational) in this proposal. The N_2O emissions would be controlled through the heavy-duty engine portion of the program. The only requirement of those truck manufacturers to comply with the N_2O requirements is to install a certified engine.

(2) What is EPA's proposed approach to controlling CH_4?

CH_4 is greenhouse gas with a GWP of 25. It accounts for about 0.03% of the greenhouse gases from heavy-duty trucks.[98]

EPA is proposing a standard that would cap CH_4 emission levels, with the expectation that current heavy-duty vehicles and engines meeting the heavy-duty emission standards would not increase their levels as explained earlier due to robust current controls and manufacturer compliance margin targets. It would ensure that emissions would be addressed if in the future there are increases in the use of natural gas or any other alternative fuel. EPA believes that current heavy-duty emission standards, specifically the NMHC standards for both engine and chassis certified engines directly result in stringent CH_4 control. It is believed that the current emission control technologies used to meet the stringent NMHC standards achieve the maximum feasible reductions and that no additional technologies are recognized that would result in additional CH_4 reductions. The level of the standard would generally be achievable through normal emission control methods already required to meet heavy-duty emission standards for hydrocarbons and EPA is therefore not attributing any cost to this part of the proposal. Since CH_4 is produced in gasoline and diesel engines similar to other hydrocarbon components, controls targeted at reducing overall NMHC levels generally also work at reducing CH_4 emissions. Therefore, for gasoline and diesel vehicles, the heavy-duty hydrocarbon standards will generally prevent increases in CH_4 emissions levels. CH_4 from heavy-duty vehicles is relatively low compared to other GHGs largely due to the high effectiveness of the current heavy-duty standards in controlling overall HC emissions.

EPA believes that this level for the standard would be met by current gasoline and diesel trucks and vans, and would prevent increases in future CH_4

[97] Coordinating Research Council Report: ACES Phase 1 of the Advanced Collaborative Emissions Study, 2009. (This study included detailed chemical characterization of exhaust species emitted from four 2007 model year heavy heavy diesel engines.)

[98] Value adapted from "Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–2007. April 2009.

emissions in the event that alternative fueled vehicles with high methane emissions, like some past dedicated compressed natural gas vehicles, become a significant part of the vehicle fleet. Currently EPA does not have separate CH_4 standards because, unlike other hydrocarbons, CH_4 does not contribute significantly to ozone formation.[99] However, CH_4 emissions levels in the gasoline and diesel heavy-duty truck fleet have nevertheless generally been controlled by the heavy-duty HC emission standards. Even so, without an emission standard for CH_4, future emission levels of CH_4 cannot be guaranteed to remain at current levels as vehicle technologies and fuels evolve.

In recent model years, a small number of heavy-duty trucks and engines were sold that were designed for dedicated use of natural gas. While emission control designs on these recent dedicated natural gas-fueled vehicles demonstrate CH_4 control can be as effective as gasoline or diesel equivalent vehicles, natural gas-fueled vehicles have historically produced significantly higher CH_4 emissions than gasoline or diesel vehicles. This is because the fuel is predominantly methane, and most of the unburned fuel that escapes combustion without being oxidized by the catalyst is emitted as methane. However, even if these vehicles meet the heavy-duty hydrocarbon standard and appear to have effective CH_4 control by nature of the hydrocarbon controls, the heavy-duty standards do not require CH_4 control and therefore some natural gas vehicle manufacturers have invested very little effort into methane control. While the proposed CH_4 cap standard should not require any different emission control designs beyond what is already required to meet heavy-duty hydrocarbon standards on a dedicated natural gas vehicle (*i.e.*, feedback controlled 3-way catalyst), the cap will ensure that systems provide robust control of methane much like a gasoline-fueled engine. We are not proposing more stringent CH_4 standards because we believe that the controls used to meet current heavy-duty hydrocarbon standards should result in effective CH_4 control when properly implemented. Since CH_4 is already measured under the current heavy-duty emissions regulations (so that it may be subtracted to calculate NMHC), the proposed standard would not result in additional testing costs. EPA requests comment on whether the proposed cap standard would result in any significant technological challenges for manufacturers of natural gas vehicles.

(a) Heavy-Duty Pickup Truck and Van CH_4 Standard

EPA is proposing a CH_4 emission standard of 0. 05 g/mi as measured on the Light-duty FTP and HFET drive cycles, to apply beginning with model year 2014 for HD pickups and vans subject to the proposed CO_2 standards. Similar to the CO_2 standard approach, the CH_4 emission level of a vehicle would be a composite of the Light-duty FTP and HFET cycles with the same 55% city weighting and 45% highway weighting.

The level of the proposed standard is approximately two times the average heavy-duty gasoline and diesel truck and van levels.[100] As with N_2O, this proposed level recognizes that manufacturers typically set emissions design targets with a compliance margin of approximately 50% of the standard. Thus, we believe that the proposed standard should be met by current gasoline vehicles with no increase from today's CH_4 levels. Similarly, since current diesel vehicles generally have even lower CH_4 emissions than gasoline vehicles, we believe that diesels would also meet the proposed standard with a larger compliance margin resulting in no change in today's CH_4 levels.

(b) Heavy-Duty Engine CH_4 Exhaust Emission Standard

EPA is proposing a heavy-duty engine CH_4 emission standard of 0.05 g/hp-hr as measured on the Heavy-duty FTP, to apply beginning in model year 2014. The proposed standard would cap CH_4 emissions at a level currently achieved by diesel and gasoline heavy-duty engines. The level of the standard would generally be achievable through normal emission control methods already required to meet 2007 emission standards for NMHC and EPA is therefore not attributing any cost to this part of this proposal (*see* 40 CFR 86.007–11).

The level of the proposed CH_4 standard is twice the average CH_4 emissions from the four diesel engines in the ACES study.[101] As with N_2O, this proposed level recognizes that manufacturers typically set emission design targets at about 50% of the standard. Thus, EPA believes the proposed standard would be met by current diesel and gasoline engines with little if any technological improvements. The agency believes a more stringent CH_4 standard is not necessary due to effective CH_4 controls in current heavy-duty technologies, since, as discussed above for N_2O, EPA believes that the challenge of complying with the CO_2 standards should be the primary focus of the manufacturers.

CH_4 is measured under the current 2007 regulations so that it may be subtracted to calculate NMHC. Therefore EPA expects that the proposed standard would not result in additional testing costs.

EPA is not proposing any vehicle-level CH_4 standards for heavy-duty trucks (combination or vocational) in this proposal. The CH_4 emissions would be controlled through the heavy-duty engine portion of the program. The only requirement of these truck manufacturers to comply with the CH_4 requirements is to install a certified engine.

(3) Alternative CO_2 Equivalent Option

If a manufacturer is unable to meet the N_2O or CH_4 cap standards, EPA is proposing that the manufacturer may choose to comply using CO_2 credits. In other words, a manufacturer could offset any N_2O emissions or any CH_4 emissions by taking steps to further reduce CO_2. A manufacturer choosing this option would convert its measured N_2O and CH_4 test results in excess of the applicable standards into CO_2eq to determine the amount of CO_2 credits required. For example, a manufacturer would use 25 Mg of positive CO_2 credits to offset 1 Mg of negative CH_4 credits or use 298 Mg of positive CO_2 credits to offset 1 Mg of negative N_2O credits.[102] By using the Global Warming Potential of N_2O and CH_4, the proposed approach recognizes the inter-correlation of these elements in impacting global warming and is environmentally neutral to meeting the proposed individual emissions caps.

The proposed NHTSA fuel consumption program will not use CO_2eq, as suggested above. Measured performance to the NHTSA fuel consumption standards will be based on the measurement of CO_2 with no adjustment for N_2O and/or CH_4. For manufacturers that use the EPA alternative CO_2eq credit, compliance to the EPA CO_2 standard will not be directly equivalent to compliance to the NHTSA fuel consumption standard.

[99] But *see Ford Motor Co.* v. *EPA*, 604 F. 2d 685 (DC Cir. 1979) (permissible for EPA to regulate CH_4 under CAA section 202(b)).

[102] N_2O has a GWP of 298 and CH_4 has a GWP of 25 according to the IPCC Fourth Assessment Report.

(4) Light-Duty Vehicle N_2O and CH_4 Standards

For light-duty vehicles, as part of the MY 2012–2016 rulemaking, EPA finalized standards for N_2O and CH_4 which take effect with MY 2012. 75 FR at 25421–24. Similar to the heavy-duty standards discussed in Section II.E above, the light-duty vehicle standards for N_2O and CH_4 were established to cap emissions and prevent future emissions increases, and were generally not expected to result in the application of new technologies for current vehicle designs or significant costs for the manufacturers. EPA also finalized an alternative CO_2 equivalent standard option, which manufacturers may choose to use in lieu of complying with the otherwise-applicable N_2O and CH_4 standards. The CO_2-equivalent standard option allows manufacturers to fold all N_2O and CH_4 emissions, on a CO_2-equivalent basis, along with CO_2 into their otherwise applicable CO_2 emissions standard level. For flexible-fueled vehicles, the N_2O and CH_4 standards must be met on both fuels (*e.g.*, both gasoline and E–85).

EPA has learned since the standards were finalized that some manufacturers may have difficulty meeting the N_2O and/or CH_4 standards in the early years of the program for a few of the vehicle models in their existing fleet. This is problematic in the near-term because there is little lead time to implement unplanned redesigns of vehicles to meet the standards. In such cases, manufacturers may need to either drop vehicle models from their fleet or to comply using the CO_2 equivalent alternative. On a CO_2 equivalent basis, folding in all N_2O and CH_4 emissions would add 3–4 g/mile or more to a manufacturer's overall fleet-average CO_2 emissions level because the alternative standard must be used for the entire fleet, not just for the problem vehicles. This could be especially challenging in the early years of the program for manufacturers with little compliance margin because there is very limited lead time to develop strategies to address these additional emissions. EPA believes this poses a legitimate issue of sufficiency of lead time in the short term (as well as an issue of cost, since EPA assumed that the N_2O and CH_4 standards were essentially cost free) but expects that manufacturers would be able to make technology changes (e.g., calibration or catalyst changes) to the few vehicle models not currently meeting the N_2O and/or CH_4 standards in the course of their planned vehicle redesign schedules in order to meet the standards.

Because EPA intended for these standards to be caps with little anticipated near-term impact on manufacturer's current product lines, EPA believes that it would be appropriate to provide additional flexibility in the near-term to allow manufacturers to meet the N_2O and CH_4 standards. EPA requests comments on the option of allowing manufacturers to use the CO_2 equivalent approach for one pollutant but not the other for their fleet—that is, allowing a manufacturer to fold in either CH_4 or N_2O as part of the CO_2-equivalent standard. For example, if a manufacturer is having trouble complying with the CH_4 standard but not the N_2O standard, the manufacturer could use the N_2O equivalent option including CH_4, but choose to comply separately with the applicable N_2O cap standard. EPA requests comments on allowing this approach in the light-duty program for MYs 2012–2014 as an additional flexibility to help manufacturers address any near-term issues that they may have with the N_2O and CH_4 standards.

EPA also requests comments on possible alternative approaches of providing additional near-term flexibility. For example, as discussed in Section II.E above, EPA is proposing for HD vehicles and engines to allow manufacturers to use CO_2 credits, on a CO_2 equivalent basis, to offset N_2O and CH_4 emissions above the applicable standard. EPA requests comment on whether this approach would be appropriate for the light-duty program as an additional flexibility. Again, the additional flexibility would be limited to MYs 2012–2014 for the reasons discussed above. EPA notes that, after considering all relevant comments, provisions to address this issue may be finalized in an action independent of the heavy-duty rulemaking process in the interest of finalizing the provisions as soon as possible to provide manufacturers with certainty for MY 2012 light-duty vehicles.

(5) EPA's Proposed Standards for Direct Emissions From Air Conditioning

Air conditioning systems contribute to GHG emissions in two ways—direct emissions through refrigerant leakage and indirect exhaust emissions due to the extra load on the vehicle's engine to provide power to the air conditioning system. HFC refrigerants, which are powerful GHG pollutants, can leak from the A/C system.[103] This includes the direct leakage of refrigerant as well as the subsequent leakage associate with maintenance and servicing, and with disposal at the end of the vehicle's life.[104] The most commonly used refrigerant in automotive applications—R134a, has a high GWP of 1430.[105] Due to the high GWP of R134a, a small leakage of the refrigerant has a much greater global warming impact than a similar amount of emissions of CO_2 or other mobile source GHGs.

Heavy-duty air conditioning systems today are similar to those used in light-duty applications. However, differences may exist in terms of cooling capacity (such that sleeper cabs have larger cabin volumes than day cabs), system layout (such as the number of evaporators), and the durability requirements due to longer truck life. However, the component technologies and costs to reduce direct HFC emissions are similar between the two types of vehicles.

The quantity of GHG refrigerant emissions from heavy-duty trucks relative to the CO_2 emissions from driving the vehicle and moving freight is very small. Therefore, a credit approach is not appropriate for this segment of vehicles because the value of the credit is too small to provide sufficient incentive to utilize feasible and cost-effective air conditioning leakage improvements. For the same reason, including air conditioning leakage improvements within the main standard would in many instances result in lost control opportunities. Therefore, EPA is proposing that truck manufacturers be required to meet a low leakage requirement for all air conditioning systems installed in 2014 model year and later trucks, with one exception. The agency is not proposing leakage standards for Class 2b–8 Vocational Vehicles at this time due to the complexity in the build process and the potential for different entities besides the chassis manufacturer to be involved in the air conditioning system production and installation, with consequent difficulties in developing a regulatory system.

EPA is proposing a leakage standard which is a "percent refrigerant leakage

[103] The United States has submitted a proposal to the Montreal Protocol which, if adopted, would phase-out production and consumption of HFCs.

[104] The U.S. EPA has reclamation requirements for refrigerants in place under Title VI of the Clean Air Act.

[105] The global warming potentials used in the NPRM analysis are consistent with Intergovernmental Panel on Climate Change (IPCC) Fourth Assessment Report. At this time, the global warming potential values from the IPCC Second Assessment Report have been agreed upon as the official U.S. framework for addressing climate change. The global warming potential values from the IPCC Second Assessment Report are used in the official U.S. greenhouse gas inventory submission to the climate change framework. When inventories are recalculated for the final rule, changes in global warming potential may lead to adjustments.

per year" to assure that high-quality, low-leakage components are used in each air conditioning system design. The agency believes that a single "gram of refrigerant leakage per year" would not fairly address the variety of air conditioning system designs and layouts found in the heavy-duty truck sector. EPA is proposing a standard of 1.50 percent leakage per year for Heavy-duty Pickup Trucks and Vans and Class 7 and 87 and 8 Tractors. The proposed standard was derived from the vehicles with the largest system refrigerant capacity based on the Minnesota GHG Reporting database.[106] The average percent leakage per year of the 2010 model year vehicles is 2.7 percent. This proposed level of reduction is roughly comparable to that necessary to generate credits under the light-duty vehicle program. *See* 75 FR 25426–25427. Since refrigerant leakage past the compressor shaft seal is the dominant source of leakage in belt-driven air conditioning systems, the agency is seeking comment on whether the stringency of a single "percent refrigerant leakage per year" standard fairly addresses the range of system refrigerant capacities likely to be used in heavy-duty trucks.[107] Since systems with less refrigerant may have a larger percentage of their annual leakage from the compressor shaft seal than systems with more refrigerant capacity, their relative percent refrigerant leakage per year could be higher, and a more extensive application of leakage reducing technologies could be needed to meet the standard). EPA welcomes comments relative to the stringency of the standard, and on whether manufacturers who adopt measures that improve the global warming impact of leakage emissions substantially beyond that achieved by the proposed standard should in some way be credited for this improvement.

Manufacturers can choose to reduce A/C leakage emissions in two ways. First, they can utilize leak-tight components. Second, manufacturers can largely eliminate the global warming impact of leakage emissions by adopting systems that use an alternative, low-GWP refrigerant. EPA believes that reducing A/C system leakage is both highly cost-effective and technologically feasible. The availability of low leakage components is being driven by the air conditioning program in the light-duty GHG rule which apply to 2012 model year and later vehicles. The cooperative industry and government Improved Mobile Air Conditioning program has demonstrated that new-vehicle leakage emissions can be reduced by 50 percent by reducing the number and improving the quality of the components, fittings, seals, and hoses of the A/C system.[108] All of these technologies are already in commercial use and exist on some of today's systems, and EPA does not anticipate any significant improvements in sealing technologies for model years beyond 2014. However, EPA does anticipate that updates to the SAE J2727 standard will be forthcoming (to address new materials and components which perform better than those originally used in the SAE analysis), and that it will be appropriate to include these updates in the regulations concerning refrigerant leakage.

Consistent with the 2012–2016 light-duty GHG rule, we are estimating costs for leakage control at $18 (2008$) in direct manufacturing costs. Including a low complexity indirect cost multiplier (ICM) of 1.14 results in costs of $21 in the 2014 model year. Time based learning is considered appropriate for A/C leakage control, so costs in the 2017 model year would be $19. These costs are applied to all heavy-duty pickups and vans, and to all combination tractors. EPA views these costs as minimal and the reductions of potent GHGs to be easily feasible and reasonable in the lead times provided by the proposed rules.

EPA proposes that manufacturers demonstrate improvements in their A/C system designs and components through a design-based method. The proposed method for calculating A/C leakage is based closely on an industry-consensus leakage scoring method, described below. This leakage scoring method is correlated to experimentally-measured leakage rates from a number of vehicles using the different available A/C components. Under the proposed approach, manufacturers would choose from a menu of A/C equipment and components used in their vehicles in order to establish leakage scores, which would characterize their A/C system leakage performance and calculate the percent leakage per year as this score divided by the system refrigerant capacity.

Consistent with the light-duty GHG rule, EPA is proposing that a manufacturer would compare the components of its A/C system with a set of leakage-reduction technologies and actions that is based closely on that being developed through the Improved Mobile Air Conditioning program and SAE International (as SAE Surface Vehicle Standard J2727, "HFC–134a, Mobile Air Conditioning System Refrigerant Emission Chart," August 2008 version). *See generally* 75 FR 25426. The SAE J2727 approach was developed from laboratory testing of a variety of A/C related components, and EPA believes that the J2727 leakage scoring system generally represents a reasonable correlation with average real-world leakage in new vehicles. Like the cooperative industry-government program, our proposed approach would associate each component with a specific leakage rate in grams per year that is identical to the values in J2727 and then sum together the component leakage values to develop the total A/C system leakage. However, in the heavy-duty truck program, the total A/C leakage score would then be divided by the value of the total refrigerant system capacity to develop a percent leakage per year.

EPA believes that the design-based approach would result in estimates of likely leakage emissions reductions that would be comparable to those that would eventually result from performance-based testing. At the same time, comments are encouraged on all developments that may lead to a robust, practical, performance-based test for measuring A/C refrigerant leakage emissions.

CO_2 emissions are also associated with air conditioner efficiency, since air conditioners create load on the engine. *See* 74 FR 49529. However, EPA is not proposing to set air conditioning efficiency standards for vocational vehicles and combination tractors. The CO_2 emissions due to air conditioning systems in these heavy-duty trucks are minimal compared to their overall emissions of CO_2. For example, EPA conducted modeling of a Class 8 sleeper cab using GEM to evaluate the impact of air conditioning and found that it leads to approximately 1 gram of CO_2/ton-mile. Therefore, a projected 24% improvement of the air conditioning system (the level projected in the light-duty GHG rulemaking), would only reduce CO_2 emissions by less than 0.3 g CO_2/ton-mile, or approximately 0.3 percent of the baseline Class 8 sleeper cab CO_2 emissions.

EPA is not specifying a specific in-use standard for leakage, as neither test procedures nor facilities exist to measure refrigerant leakage from a vehicle's air conditioning system. However, consistent with the light-duty GHG rule, where we require that manufacturers attest to the durability of

[106] The Minnesota refrigerant leakage data can be found at *http://www.pca.state.mn.us/climatechange/mobileair.html#leakdata*.

[107] Society of Automotive Engineers Surface Vehicle Standard J2727, issued August 2008, *http://www.sae.org*.

[108] Team 1—Refrigerant Leakage Reduction: Final Report to Sponsors, SAE, 2007.

components and systems used to meet the CO_2 standards (*see* 75 FR 25689), we will require that manufacturers of heavy-duty vehicles attest to the durability of these systems, and provide an engineering analysis which demonstrates component and system durability.

(6) Indirect Emissions From Air Conditioning

As just noted, in addition to direct emissions from refrigerant leakage, air conditioning systems also create indirect exhaust emissions due to the extra load on the vehicle's engine to provide power to the air conditioning system. These indirect emissions are in the form of the additional CO_2 emitted from the engine when A/C is being used due to the added loads. Unlike direct emissions which tend to be a set annual leak rate not directly tied to usage, indirect emissions are fully a function of A/C usage.

Due to the complexity of the heavy-duty market, it is difficult to estimate with any degree of precision what the actual impact of indirect emissions are across the vastly different applications and duty cycles of heavy-duty trucks. Depending on application, geographic location and even seasonal usage relationships, A/C systems usage will vary differently across the heavy-duty fleet and therefore efficiency improvements will also result in different indirect emission reductions. Moreover, as just stated, indirect A/C emissions from vocational vehicles and combination tractors are very small relative to total GHG emissions from these vehicles. For these reasons, EPA is not proposing an indirect emission standard like we have proposed for direct emissions from heavy-duty vehicles.

Instead, EPA is seeking comment on the applicability of an indirect emissions credit for A/C system efficiency improvements specifically in the heavy-duty pickup trucks and vans (*i.e.*, Class 2b and 3). These vehicles are most closely related to their light-duty counterparts that have an indirect emissions credit program established under the 2012–2016 MY Light-duty Vehicle Rule. It is likely that the light-duty and heavy-duty vehicles can share components used to improve the A/C system efficiency and reduce indirect A/C emissions. EPA also seeks comment on the level of the credit and if the fleet CO_2 target standards should be adjusted accordingly to reflect expected A/C efficiency improvements similar to the approach used in the light-duty rule.

(7) Ethanol-Fueled and Electric Vehicles

Current EPA emissions control regulations explicitly apply to heavy-duty engines and vehicles fueled by gasoline, methanol, natural gas and liquefied petroleum gas. For multi-fueled vehicles they call for compliance with requirements established for each consumed fuel. This contrasts with EPA's light-duty vehicle regulations that apply to all vehicles generally, regardless of fuel type. We are proposing to revise the heavy-duty vehicle and engine regulations to make them consistent with the light-duty vehicle approach, applying standards for all regulated criteria pollutants and GHGs regardless of fuel type, including application to all-electric vehicles (EVs). This provision would take effect in the 2014 model year, and be optional for manufacturers in earlier model years. However, to satisfy the CAA section 202(a)(3) lead time constraints, the provision would remain optional for all criteria pollutants through the 2015 model year.

This change would primarily affect manufacturers of ethanol-fueled vehicles (designed to operate on fuels containing at least 50 percent ethanol) and EVs. Flex-fueled vehicles (FFVs) designed to run on both gasoline and fuel blends with high ethanol content would also be impacted, as they would need to comply with requirements for operation both on gasoline and ethanol.

We are proposing that the specific regulatory requirements for certification on ethanol follow those already established for methanol, such as certification to NMHC equivalent standards and waiver of certain requirements. We would expect testing to be done using the same E85 test fuel as is used today for light-duty vehicle testing, an 85/15 blend of commercially-available ethanol and gasoline vehicle test fuel. EV certification would also follow light-duty precedents, primarily calling on manufacturers to exercise good engineering judgment in applying the regulatory requirements, but would not be allowed to generate NO_X or PM credits.

This proposed provision is not expected to result in any significant added burden or cost. It is already the practice of HD FFV manufacturers to voluntarily conduct emissions testing for these vehicles on E85 and submit the results as part of their certification application, along with gasoline test fuel results. No changes in certification fees are being proposed in connection with this proposed provision. We expect that there would be strong incentives for any manufacturers seeking to market these vehicles to also want them to be certified: (1) Uncertified vehicles would carry a disincentive to potential purchasers who typically have the benefit to the environment as one of their reasons for considering alternative fuels, (2) uncertified vehicles would not be eligible for the substantial credits they could likely otherwise generate, (3) EVs have no tailpipe or evaporative emissions and thus need no added hardware to put them in a certifiable configuration, and (4) emissions controls for gasoline vehicles and FFVs are also effective on dedicated ethanol-fueled vehicles, and thus costly development programs and specialized components would not be needed; in fact the highly integrated nature of modern automotive products make the emission control systems essential to reliable vehicle performance.

Regarding technological feasibility, as mentioned above, HD FFV manufacturers already test on E85 and the resulting data shows that they can meet emissions standards on this fuel. Furthermore, there is a substantial body of certification data on light-duty FFVs (for which testing on ethanol is already a requirement), showing existing emission control technology is capable of meeting even the more stringent Tier 2 standards in place for light-duty vehicles. EPA requests comment on this proposed application of its emission standards to HD vehicles and engines, regardless of the fuels they operate on.

III. Feasibility Assessments and Conclusions

In this section, NHTSA and EPA discuss several aspects of our joint technical analyses. These analyses are common to the development of each agency's proposed standards. Specifically we discuss: the development of the baseline used by each agency for assessing costs, benefits, and other impacts of the standards, the technologies the agencies evaluated and their costs and effectiveness, and the development of the proposed standards based on application of technology in light of the attribute based distinctions and related compliance measurement procedures. We also discuss consideration of standards that are either more or less stringent than those proposed.

This proposal is based on the need to obtain significant oil savings and GHG emissions reductions from the transportation sector, and the recognition that there are appropriate and cost-effective technologies to achieve such reductions feasibly. The decision on what standard to set is guided by each agency's statutory

requirements, and is largely based on the need for reductions, the effectiveness of the emissions control technology, the cost and other impacts of implementing the technology, and the lead time needed for manufacturers to employ the control technology. The availability of technology to achieve reductions and the cost and other aspects of this technology are therefore a central focus of this proposed rulemaking.

Here, the focus of the standards is on applying fuel efficiency and emissions control technology to reduce fuel consumption, CO_2 and other greenhouse gases. Vehicles combust fuel to generate power that is used to perform two basic functions: (1) Transport the truck and its payload, and (2) operate various accessories during the operation of the truck such as the PTO units. Engine-based technology can reduce fuel consumption and CO_2 emissions by improving engine efficiency, which increases the amount of power produced per unit of fuel consumed. Vehicle-based technology can reduce fuel consumption and CO_2 emissions by increasing the vehicle efficiency, which reduces the amount of power demanded from the engine to perform the truck's primary functions.

Our technical work has therefore focused on both engine efficiency improvements and vehicle efficiency improvements. In addition to fuel delivery, combustion, and aftertreatment technology, any aspect of the truck that affects the need for the engine to produce power must also be considered. For example, the drag due to aerodynamics and the resistance of the tires to rolling both have major impacts on the amount of power demanded of the engine while operating the vehicle.

The large number of possible technologies to consider and the breadth of vehicle systems that are affected mean that consideration of the manufacturer's design and production process plays a major role in developing the proposed standards. Engine and vehicle manufacturers typically develop many different models based on a limited number of platforms. The platform typically consists of a common engine or truck model architecture. For example, a common engine platform may contain the same configuration (such as inline), number of cylinders, valvetrain architecture (such as overhead valve), cylinder head design, piston design, among other attributes. An engine platform may have different calibrations, such as different power ratings, and different aftertreatment control strategies, such as exhaust gas recirculation (EGR) or selective catalytic reduction (SCR). On the other hand, a common vehicle platform has different meanings depending on the market. In the heavy-duty pickup truck market, each truck manufacturer usually has only a single pickup truck platform (for example the F series by Ford) with common chassis designs and shared body panels, but with variations on load capacity of the axles, the cab configuration, tire offerings, and powertrain options. Lastly, the combination tractor market has several different platforms and the trucks within each platform (such as LoneStar by Navistar) have less commonality. Tractor manufacturers will offer several different options for bumpers, mirrors, aerodynamic fairing, wheels, and tires, among others. However, some areas such as the overall basic aerodynamic design (such as the grill, hood, windshield, and doors) of the tractor are tied to tractor platform.

The platform approach allows for efficient use of design and manufacturing resources. Given the very large investment put into designing and producing each truck model, manufacturers of heavy-duty pickup trucks and vans typically plan on a major redesign for the models every 5 years or more. Recently, EPA's non-GHG heavy-duty engine program provided new emissions standards every three model years. Heavy-duty engine and truck manufacturer product plans typically have fallen into three year cycles to reflect this regime. While the recent non-GHG emissions standards can be handled generally with redesigns of engines and trucks, a complete redesign of a new heavy-duty engine or truck typically occurs on a slower cycle and often does not align in time due to the fact that the manufacturer of engines differs from the truck manufacturer. At the redesign stage, the manufacturer will upgrade or add all of the technology and make most other changes supporting the manufacturer's plans for the next several years, including plans related to emissions, fuel efficiency, and safety regulations.

A redesign of either engine or truck platforms often involves a package of changes designed to work together to meet the various requirements and plans for the model for several model years after the redesign. This often involves significant engineering, development, manufacturing, and marketing resources to create a new product with multiple new features. In order to leverage this significant upfront investment, manufacturers plan vehicle redesigns with several model years of production in mind. Vehicle models are not completely static between redesigns as limited changes are often incorporated for each model year. This interim process is called a refresh of the vehicle and it generally does not allow for major technology changes although more minor ones can be done (*e.g.,* small aerodynamic improvements, *etc*). More major technology upgrades that affect multiple systems of the vehicle thus occur at the vehicle redesign stage and not in the time period between redesigns.

As discussed below, there are a wide variety of CO_2 and fuel consumption reducing technologies involving several different systems in the engine and vehicle that are available for consideration. Many can involve major changes to the engine or vehicle, such as changes to the engine block and cylinder heads or changes in vehicle shape to improve aerodynamic efficiency. Incorporation of such technologies during the periodic engine, transmission or vehicle redesign process would allow manufacturers to develop appropriate packages of technology upgrades that combine technologies in ways that work together and fit with the overall goals of the redesign. By synchronizing with their multi-year planning process, manufacturers can avoid the large increase in resources and costs that would occur if technology had to be added outside of the redesign process. We considered redesign cycles both in our costing and in assessing the lead time required.

As described below, the vast majority of technology required by this proposal is commercially available and already being utilized to a limited extent across the fleet. Therefore the majority of the emission and fuel consumption reductions which would result from these proposed rules would result from the increased use of these technologies. EPA and NHTSA also believe that these proposed rules would encourage the development and limited use of more advanced technologies, such as advanced aerodynamics and hybrid powertrains in some vocational vehicle applications.

In evaluating truck efficiency, NHTSA and EPA have excluded fundamental changes in the engine or trucks' performance. Put another way, none of the technology pathways underlying the proposed standards involve any alteration in vehicle utility. For example, the agencies did not consider approaches that would necessitate reductions in engine power or otherwise limit truck performance. The agencies have thus limited the assessment of technical feasibility and resultant

vehicle cost to technologies which maintain freight utility.

The agencies worked together to determine component costs for each of the technologies and build up the costs accordingly. For costs, the agencies considered both the direct or "piece" costs and indirect costs of individual components of technologies. For the direct costs, the agencies followed a bill of materials approach utilized by the agencies in the light-duty fuel economy and GHG final rule. A bill of materials, in a general sense, is a list of components or sub-systems that make up a system—in this case, an item of technology which reduces GHG emissions and fuel consumption. In order to determine what a system costs, one of the first steps is to determine its components and what they cost. NHTSA and EPA estimated these components and their costs based on a number of sources for cost-related information. In general, the direct costs of fuel consumption-improving technologies for heavy-duty pickups and vans are consistent with those used in the 2012–2016 MY light-duty GHG rule, except that the agencies have scaled up certain costs where appropriate to accommodate the larger size and/or loads placed on parts and systems in the heavy-duty classes relative to the light-duty classes. For loose heavy-duty engines, the agencies have consulted various studies and have exercised engineering judgment when estimating direct costs. For technologies expected to be added to vocational vehicles and combination tractors, the agencies have again consulted various studies and have used engineering judgment to arrive at direct cost estimates. Once costs were determined, they were adjusted to ensure that they were all expressed in 2008 dollars using a ratio of gross domestic product deflators for the associated calendar years.

Indirect costs were accounted for using the ICM approach explained in Chapter 2 of the draft RIA, rather than using the traditional Retail Price Equivalent (RPE) multiplier approach. For the heavy-duty pickup truck and van cost projections in this proposal, the agencies have used ICMs developed for light-duty vehicles (with the exception that here return on capital has been incorporated into the ICMs, where it had not been in the light-duty rule) primarily because the manufacturers involved in this segment of the heavy-duty market are the same manufacturers that build light-duty trucks. For the Class 7 and 8 tractor, vocational vehicle, and heavy-duty engine cost projections in this proposal, EPA contracted with RTI International to update EPA's methodology for accounting for indirect costs associated with changes in direct manufacturing costs for heavy-duty engine and truck manufacturers.[109] In addition to the indirect cost multipliers varying by complexity and time frame, there is no reason to expect that the multipliers would be the same for engine manufacturers as for truck manufacturers. The report from RTI provides a description of the methodology, as well as calculations of new indirect cost multipliers. The multipliers used here include a factor of 5 percent of direct costs representing the return on capital for heavy-duty engines and truck manufacturers. These indirect cost multipliers are intended to be used, along with calculations of direct manufacturing costs, to provide improved estimates of the full additional costs associated with new technologies.

Details of the direct and indirect costs, and all applicable ICMs, are presented in Chapter 2 of the draft RIA. In addition, for details on the ICMs, please refer to the RTI report that has been placed in the docket. The agencies request comment on all aspects of the cost analysis, including the adjustment factors used in the RTI analysis—the levels associated with R&D, warranty, *etc.*—and whether those are appropriate or should be revised. If commenters suggest revisions, the agencies request supporting arguments and/or documentation.

EPA and NHTSA believe that the emissions reductions called for by the proposed standards are technologically feasible at reasonable costs within the lead time provided by the proposed standards, reflecting our projections of widespread use of commercially available technology. Manufacturers may also find additional means to reduce emissions and lower fuel consumption beyond the technical approaches we describe here. We encourage such innovation through provisions in our flexibility program as discussed in Section IV.

The agencies request comment on the methods and assumptions used to estimate costs, benefits, and technology cost-effectiveness for the main proposal and all of the alternatives. The agencies also seek comment on whether finalizing a different alternative stringency level for certain regulatory categories would be appropriate given agency estimates of costs and benefits.

[109] RTI International. Heavy-duty Truck Retail Price Equivalent and Indirect Cost Multipliers. July 2010.

The remainder of this section describes the technical feasibility and cost analysis in greater detail. Further detail on all of these issues can be found in the joint draft RIA Chapter 2.

A. Class 7–8 Combination Tractor

Class 7 and 8 tractors are used in combination with trailers to transport freight.[110] The variation in the design of these tractors and their typical uses drive different technology solutions for each regulatory subcategory.

EPA and NHTSA collected information on the cost and effectiveness of fuel consumption and CO_2 emission reducing technologies from several sources. The primary sources of information were the recent National Academy of Sciences report of Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles,[111] TIAX's assessment of technologies to support the NAS panel report,[112] EPA's Heavy-duty Lumped Parameter Model,[113] the analysis conducted by the Northeast States Center for a Clean Air Future, International Council on Clean Transport, Southwest Research Institute and TIAX for reducing fuel consumption of heavy-duty long haul combination tractors (the NESCCAF/ICCT study),[114] and the technology cost analysis conducted by ICF for EPA.[115] Following on the EISA of 2007, the National Research Council appointed a NAS committee to assess technologies for improving fuel efficiency of heavy-duty vehicles to support NHTSA's rulemaking. The 2010 NAS report assessed current and future technologies for reducing fuel consumption, how the technologies could be implemented, and

[110] "Tractor" is defined in proposed section 1037.801 to mean "a vehicle capable of pulling trailers that is not intended to carry significant cargo other than cargo in the trailer, or any other vehicle intended for the primary purpose of pulling a trailer."

identified the potential cost of such technologies. The NAS panel contracted TIAX to perform an assessment of technologies and their associated capital costs which provide potential fuel consumption reductions in heavy-duty trucks and engines. Similar to the Lumped Parameter model which EPA developed to assess the impact and interactions of GHG and fuel consumption reducing technologies for light-duty vehicles, EPA developed a new version to specifically address the effectiveness and interactions of the proposed pickup truck and light heavy-duty engine technologies. The NESCAFF/ICCT study assessed technologies available in the 2012 through 2017 to reduce CO_2 emissions and fuel consumption of line haul combination tractors and trailers. Lastly, the ICF report focused on the capital, maintenance, and operating costs of technologies currently available to reduce CO_2 emissions and fuel consumption in heavy-duty engines, combination tractors, and vocational vehicles.

(1) What technologies did the agencies consider to reduce the CO_2 emissions and fuel consumption of tractors?

Manufacturers can reduce CO_2 emissions and fuel consumption of combination tractors through use of, among others, engine, aerodynamic, tire, extended idle, and weight reduction technologies. The standards are premised on use of these technologies. The agencies note that SmartWay trucks are available today which incorporate the technologies that the agencies are considering as the basis for the standards in this proposal. We will also discuss other technologies that could potentially be used, such as vehicle speed limiters, although we are not basing the proposed standards on their use for the model years covered by this proposal, for various reasons discussed below.

In this section we discuss the baseline tractor and engine technologies for the 2010 model year, and then discuss the kinds of technologies that could be used to improve performance relative to this baseline.

(a) Baseline Tractor & Tractor Technologies

Baseline tractor: The agencies developed the baseline tractor to represent the average 2010 model year tractor. Today there is a large spread in aerodynamics in the new tractor fleet. Trucks sold may reflect classic styling, or may be sold with conventional or SmartWay aerodynamic packages. Based on our review of current truck model configurations and Polk data provided through MJ Bradley,[116] we believe the aerodynamic configuration of the baseline new truck fleet is approximately 25 percent classic, 70 percent conventional, and 5 percent SmartWay (as these configurations are explained above in Section II.B. (2)(c)). The baseline Class 7 and 8 day cab tractor consists of an aerodynamic package which closely resembles the "conventional" package described in Section II.B. (2)(c), baseline tire rolling resistance of 7.8 kg/metric ton for the steer tire and 8.2 kg/metric ton,[117] dual tires with steel wheels on the drive axles, and no vehicle speed limiter. The baseline tractor for the Class 8 sleeper cabs contains the same aerodynamic and tire rolling resistance technologies as the baseline day cab, does not include vehicle speed limiters, and does not include an idle reduction technology. The agencies assume the baseline transmission is a 10 speed manual.

Performance from this baseline can be improved by the use of the following technologies:

Aerodynamic technologies: There are opportunities to reduce aerodynamic drag from the tractor, but it is difficult to assess the benefit of individual aerodynamic features. Therefore, reducing aerodynamic drag requires optimizing of the entire system. The potential areas to reduce drag include all sides of the truck—front, sides, top, rear and bottom. The grill, bumper, and hood can be designed to minimize the pressure created by the front of the truck. Technologies such as aerodynamic mirrors and fuel tank fairings can reduce the surface area perpendicular to the wind and provide a smooth surface to minimize disruptions of the air flow. Roof fairings provide a transition to move the air smoothly over the tractor and trailer. Side extenders can minimize the air entrapped in the gap between the tractor and trailer. Lastly, underbelly treatments can manage the flow of air underneath the tractor. As discussed in the TIAX report, the coefficient of drag (Cd) of a SmartWay sleeper cab high roof tractor is approximately 0.60, which is a significant improvement over a truck with no aerodynamic features which has a Cd value of approximately 0.80.[118] The GEM demonstrates that an aerodynamic improvement of a Class 8 high roof sleeper cab with a Cd value from 0.60 (which represents a SmartWay tractor) provides a 5% reduction in fuel consumption and CO_2 emissions over a truck with a Cd of 0.68.

Lower Rolling Resistance Tires: A tire's rolling resistance results from the tread compound material, the architecture and materials of the casing, tread design, the tire manufacturing process, and its operating conditions (surface, inflation pressure, speed, temperature, *etc.*). Differences in rolling resistance of up to 50% have been identified for tires designed to equip the same vehicle. The baseline rolling resistance coefficient for today's fleet is 7.8 kg/metric ton for the steer tire and 8.2 kg/metric ton for the drive tire, based on sales weighting of the top three manufacturers based on market share.[119] Since 2007, SmartWay trucks have had steer tires with rolling resistance coefficients of less than 6.6 kg/metric ton for the steer tire and less than 7.0 kg/metric ton for the drive tire.[120] Low rolling resistance (LRR) drive tires are currently offered in both dual assembly and single wide-base configurations. Single wide tires can offer both the rolling resistance reduction along with improved aerodynamics and weight reduction. The GEM demonstrates that replacing baseline tractor tires with tires which meet the SmartWay level provides a 4% reduction in fuel consumption and CO_2 emissions over the prescribed test cycle.

Weight Reduction: Reductions in vehicle mass reduce fuel consumption and GHGs by reducing the overall vehicle mass to be accelerated and also through increased vehicle payloads which can allow additional tons to be carried by fewer trucks consuming less fuel and producing lower emissions on a ton-mile basis. Initially, the agencies considered evaluating vehicle mass reductions on a total vehicle basis for tractors and vocational trucks.[121] The agencies considered defining a baseline vehicle curb weight and the GEM model would have used the vehicle's actual curb weight to calculate the increase or decrease in fuel consumption related to the overall vehicle mass relative to that baseline. After considerable evaluation

[120] *Ibid.*

[121] The agencies are using the approach of evaluating total vehicle mass for heavy-duty pickups and vans. where we have more data on the current fleet vehicle mass.

of this issue, including discussions with the industry, we decided it would not be possible to define a single vehicle baseline mass for the tractors and for vocational trucks that would be appropriate and representative. Actual vehicle curb weights for these classes of vehicles vary by thousands of pounds dependent on customer features added to vehicles and critical to the function of the vehicle in the particular vocation in which it is used. This is true of vehicles such as Class 8 tractors considered in this section that may appear to be relatively homogenous but which in fact are quite heterogeneous.

This reality led us to the solution we are proposing. We reflect mass reductions for specific technology substitutions (*e.g.,* installing aluminum wheels instead of steel wheels) where we can with confidence verify the mass reduction information provided by the manufacturer even though we cannot estimate the actual curb weight of the vehicle. In this way, we are accounting for mass reductions where we can accurately account for its benefits. In the future, if we are able to develop an appropriate vehicle mass baseline for the diversity of vehicles within a segment and therefore could reasonable project overall mass reductions that would not inadvertently reduce customer utility, we would consider setting standards that take into account overall vehicle mass reductions. The agencies' baseline tire and wheel package consists of dual tires with steel wheels. A tractor's empty curb weight can be reduced from the replacement of dual tires with single wide tires and with the replacement of steel wheels with high strength steel or aluminum. Analysis of literature indicates that there is opportunity to reduce typical tractor curb weights by 80 to 670 pounds, or up to roughly 3 percent, through the use of lighter weight wheels and single wide tires, as described in draft RIA Chapter 2. High strength steel, aluminum, and light weight aluminum alloys provide opportunities to reduce the truck's mass relative to steel wheels. In addition, single wide tires (a single wide-based tire which replaces two standard tires in each wheel position) provide the opportunity to reduce the overall mass of wheels and tires due to the replacement of dual tires with singles. On average, these technologies together can reduce weight by over 400 pounds. A weight reduction of this magnitude applied to a truck which travels at 70,000 pounds will have a minimal impact on fuel consumption. However, for trucks which operate at the maximum GVWR which occurs approximately for one third of truck miles travelled, a reduced tare weight will allow for additional payload to be carried. The GEM demonstrates that a weight reduction of 400 pounds applied to the payload tons for one third of the trips provides a 0.3 percent reduction in fuel consumption and CO_2 emissions over the prescribed test cycle.

Extended Idle Reduction: Auxiliary power units (APU)s, fuel operated heaters, battery supplied air conditioning, and thermal storage systems are among the technologies available today to reduce main engine extended idling from sleeper cabs. Each of these technologies reduces the baseline fuel consumption during idling from a truck without this equipment (the baseline) from approximately 0.8 gallons per hour (main engine idling fuel consumption rate) to approximately 0.2 gallons per hour for an APU.[122] EPA and NHTSA agree with the TIAX assessment of a 6 percent reduction in overall fuel consumption reduction.[123]

Vehicle Speed Limiters: Fuel consumption and GHG emissions increase proportional to the square of vehicle speed. Therefore, lowering vehicle speeds can significantly reduce fuel consumption and GHG emissions. A vehicle speed limiter, which limits the vehicle's maximum speed, is a simple technology that is utilized today by some fleets (though the typical maximum speed setting is often higher than 65 mph). The GEM shows that using a vehicle speed limiter set at 62 mph will provide a 4 percent reduction in fuel consumption and CO_2 emissions over the prescribed test cycles over a baseline vehicle without a VSL or one set above 65 mph.

Transmission: As discussed in the 2010 NAS report, automatic and automated manual transmissions may offer the ability to improve vehicle fuel consumption by optimizing gear selection compared to an average driver. However, as also noted in the report and in the supporting TIAX report, the improvement is very dependent on the driver of the truck, such that reductions ranged from 0 to 8 percent.[124] Well-trained drivers would be expected to perform as well or even better than an automatic transmission since the driver can see the road ahead and anticipate a changing stoplight or other road condition that an automatic transmission can not anticipate. However, poorly-trained drivers that shift too frequently or not frequently enough to maintain optimum engine operating conditions could be expected to realize improved in-use fuel consumption by switching from a manual transmission to an automatic or automated manual transmission. While we believe there may be real benefits in reduced fuel consumption and GHG emissions through the application of automatic or automated manual transmission technology, we are not proposing to reflect that potential improvement in our standard setting nor in our compliance model. We have taken this approach because we cannot say with confidence what level of performance improvement to expect. However, we welcome comments on this decision supported where possible with data. If a clear measure of performance improvement can be defined for the use of automatic or automated manual transmission technologies, we will consider reflecting the technology in setting the stringency of the standards and in determining compliance with the standards.

Low Friction Transmission, Axle, and Wheel Bearing Lubricants: The 2010 NAS report assessed low friction lubricants for the drivetrain as a 1 percent improvement in fuel consumption based on fleet testing.[125] The light-duty fuel economy and GHG final rule and the pickup truck portion of this program estimate that low friction lubricants can have an effectiveness value between 0 and 1 percent compared to traditional lubricants. However, it is not clear if in many heavy-duty applications these low friction lubricants could have competing requirements like component durability issues requiring specific lubricants with different properties than low friction. The agencies are interested in comments on whether low friction lubricants should be included in the technologies modeled in GEM to obtain certification values for fuel consumption and CO_2 emissions and how manufacturers could ensure the use of these lubricants for the full useful life of the truck.

Hybrid: Hybrid powertrain development in Class 7 and 8 tractors has been limited to a few manufacturer demonstration vehicles to date. One of the key benefit opportunities for fuel consumption reduction with hybrids is less fuel consumption when a vehicle is idling, which are already included as a separate technology in the agencies' technology assessment. NAS estimated that hybrid systems would cost approximately $25,000 per truck in the 2015 through 2020 timeframe and

[122] *See* the draft RIA Chapter 2 for details.

[124] *See* TIAX, Note 112, above at 4–70.

[125] *See* the 2010 NAS Report, Note 111, page 67.

provide a potential fuel consumption reduction of 10 percent, of which 6 percent is idle reduction which can be achieved through other idle reduction technologies.[126] The limited reduction potential outside of idle reduction for Class 8 sleeper cab tractors is due to the mostly highway operation and limited start-stop operation. Due to the high cost and limited benefit during the model years at issue in this proposal, the agencies are not including hybrids in assessing standard stringency (or as an input to GEM). However as discussed in Section IV, the agencies are providing incentives to encourage the introduction of advanced technologies including hybrid powertrains in appropriate applications.

Management: The 2010 NAS report noted many operational opportunities to reduce fuel consumption, such as driver training and route optimization. The agencies have included discussion of several of these strategies in draft RIA Chapter 2, but are not using these approaches or technologies in the standard setting process. The agencies are looking to other resources, such as EPA's SmartWay Transport Partnership and regulations that could potentially be promulgated by the Federal Highway Administration and the Federal Motor Carrier Safety Administration, to continue to encourage the development and utilization of these approaches.

(b) Baseline Engine & Engine Technologies

The baseline engine for the Class 8 tractors is a Heavy Heavy-Duty Diesel engine with 15 liters of displacement which produces 455 horsepower. The agencies are using a smaller baseline engine for the Class 7 tractors because of the lower combined weights of this class of vehicles require less power, thus the baseline is an 11L engine with 350 horsepower. The agencies developed the baseline diesel engine as a 2010 model year engine with an aftertreatment system which meets EPA's 0.2 grams of NOX/bhp-hr standard with an SCR system along with EGR and meets the PM emissions standard with a diesel particulate filter with active regeneration. The baseline engine is turbocharged with a variable geometry turbocharger. The following discussion of technologies describes improvements over the 2010 model year baseline engine performance, unless otherwise noted. Further discussion of the baseline engine and its performance can be found in Section III.A.2.6 below.

Engine performance for CO2 emissions and fuel consumption can be improved by use of the following technologies:

Turbochargers: Improved efficiency of a turbocharger compressor or turbine could reduce fuel consumption by approximately 1 to 2 percent over variable geometry turbochargers in the market today.[127] The 2010 NAS report identified technologies such as higher pressure ratio radial compressors, axial compressors, and dual stage turbochargers as design paths to improve turbocharger efficiency.

Low Temperature Exhaust Gas Recirculation: Most medium- and heavy-duty vehicle diesel engines sold in the U.S. market today use cooled EGR, in which part of the exhaust gas is routed through a cooler (rejecting energy to the engine coolant) before being returned to the engine intake manifold. EGR is a technology employed to reduce peak combustion temperatures and thus NOX. Low-temperature EGR uses a larger or secondary EGR cooler to achieve lower intake charge temperatures, which tend to further reduce NOX formation. If the NOX requirement is unchanged, low-temperature EGR can allow changes such as more advanced injection timing that will increase engine efficiency slightly more than 1 percent.[128] Because low-temperature EGR reduces the engine's exhaust temperature, it may not be compatible with exhaust energy recovery systems such as turbocompounding or a bottoming cycle.

Engine Friction Reduction: Reduced friction in bearings, valve trains, and the piston-to-liner interface will improve efficiency. Any friction reduction must be carefully developed to avoid issues with durability or performance capability. Estimates of fuel consumption improvements due to reduced friction range from 0.5 to 1.5 percent.[129]

Selective catalytic reduction: This technology is common on 2010 the medium- and heavy-duty diesel engines used in Class 7 and 8 tractors (and the agencies therefore are considering it as part of the baseline engine, as noted above). Because SCR is a highly effective NO_X aftertreatment approach, it enables engines to be optimized to maximize fuel efficiency, rather than minimize engine-out NO_X. 2010 SCR systems are estimated to result in improved engine efficiency of approximately 3 to 5 percent compared to a 2007 in-cylinder EGR-based emissions system and by an even greater percentage compared to 2010 in-cylinder approaches.[130] As more effective low-temperature catalysts are developed, the NOX conversion efficiency of the SCR system will increase. Next-generation SCR systems could then enable additional efficiency improvements; alternatively, these advances could be used to maintain efficiency while down-sizing the aftertreatment. We estimate that continued optimization of the catalyst could offer 1 to 2 percent reduction in fuel use over 2010 model year systems in the 2014 model year.[131] The agencies estimate an additional 1 to 2 percent reduction may be feasible in the 2017 model year through additional refinement.

Improved Combustion Process: Fuel consumption reductions in the range of 1 to 3 percent over the baseline diesel engine are identified in the 2010 NAS report through improved combustion chamber design, higher fuel injection pressure, improved injection shaping and timing, and higher peak cylinder pressures.[132]

Reduced Parasitic Loads: Accessories that are traditionally gear or belt driven by a vehicle's engine can be optimized and/or converted to electric power. Examples include the engine water pump, oil pump, fuel injection pump, air compressor, power-steering pump, cooling fans, and the vehicle's air-conditioning system. Optimization and improved pressure regulation may significantly reduce the parasitic load of the water, air and fuel pumps. Electrification may result in a reduction in power demand, because electrically powered accessories (such as the air compressor or power steering) operate only when needed if they are electrically powered, but they impose a parasitic demand all the time if they are engine driven. In other cases, such as cooling fans or an engine's water pump, electric power allows the accessory to run at speeds independent of engine

[132] TIAX. Assessment of Fuel Economy Technologies for Medium- and Heavy-Duty Vehicles. November 2009. Page 4–13.

speed, which can reduce power consumption. The TIAX study used 2 to 4 percent fuel consumption improvement for accessory electrification, with the understanding that electrification of accessories will have more effect in short-haul/urban applications and less benefit in line-haul applications.[133]

Mechanical Turbocompounding: Mechanical turbocompounding adds a low pressure power turbine to the exhaust stream in order to extract additional energy, which is then delivered to the crankshaft. Published information on the fuel consumption reduction from mechanical turbocompounding varies between 2.5 and 5 percent.[134] Some of these differences may depend on the operating condition or duty cycle that was considered by the different researchers. The performance of a turbocompounding system tends to be highest at full load and much less or even zero at light load.

Electric Turbocompounding: This approach is similar in concept to mechanical turbocompounding, except that the power turbine drives an electrical generator. The electricity produced can be used to power an electrical motor supplementing the engine output, to power electrified accessories, or to charge a hybrid system battery. None of these systems have been demonstrated commercially, but modeled results by industry and DOE have shown improvements of 3 to 5 percent.[135]

Bottoming Cycle: An engine with bottoming cycle uses exhaust or other heat energy from the engine to create power without the use of additional fuel. The sources of energy include the exhaust, EGR, charge air, and coolant. The estimates for fuel consumption reduction range up to 10 percent as documented in the 2010 NAS report.[136] However, none of the bottoming cycle or Rankine engine systems has been demonstrated commercially and are currently in only the research stage.

(2) Projected Technology Package Effectiveness and Cost

(a) Class 7 and 8 Combination Tractors

EPA and NHTSA project that CO_2 emissions and fuel consumption reductions can be feasibly and cost-effectively achieved in these rules' timeframes through the increased application of aerodynamic technologies, LRR tires, weight reduction, extended idle reduction technologies, vehicle speed limiters, and engine improvements. As discussed above, the agencies believe that hybrid powertrains in tractors will not be cost-effective in the time frame of the rules. The agencies also are not proposing to include drivetrain technologies in the standard setting process, as discussed in Section II.

The agencies evaluated each technology and estimated the most appropriate application rate of technology into each tractor subcategory. The next sections describe the effectiveness of the individual technologies, the costs of the technologies, the projected application rates of the technologies into the regulatory subcategories, and finally the derivation of the proposed standards.

(i) Baseline Tractor Performance

The agencies developed the baseline tractor for each subcategory to represent an average 2010 model year tractor configured as noted earlier. The approach taken by the agencies was to define the individual inputs to GEM. For example, the agencies evaluated the industry's tractor offerings and concluded that the average tractor contains a generally aerodynamic shape (such as roof fairings) and avoids classic features such as exhaust stacks at the B-pillar, which increase drag. The agencies consider a baseline truck as having "conventional" aerodynamic package, though today there is a large spread in aerodynamics in the new tractor fleet. As noted earlier, our assessment of the baseline new truck fleet aerodynamics represents approximately 25 percent classic, 70 percent conventional, and 5 percent SmartWay. This mix of vehicle aerodynamics provides a Cd performance level slightly greater than the "conventional aerodynamic package" Cd value (for example the baseline high roof tractor has a Cd of 0.69 while the same tractor category with a conventional aerodynamic package has a Cd of 0.68). The baseline rolling resistance coefficient for today's fleet is 7.8 kg/metric ton for the steer tire and 8.2 kg/metric ton for the drive tire, based on sales weighting of the top three manufacturers based on market share.[137] The agencies use the inputs described in GEM to derive the baseline CO_2 emissions and fuel consumption of Class 7 and 8 tractors. The results are included in Table III–2.

(ii) Tractor Technology Package Effectiveness

The agencies' assessment of the proposed technology effectiveness was developed through the use of the GEM in coordination with chassis testing of three SmartWay certified Class 8 sleeper cabs. The agencies developed technology performance characteristics for each subcategory, described below. Each technology consists of an input parameter which is in turn modeled in GEM. Table III–3 describes our proposed model inputs for the range of Class 7 and 8 tractor aerodynamic packages and vehicle technologies. This was combined with a projected technology application rate to determine the stringency of the proposed standard.

The aerodynamic packages are categorized as Classic, Conventional, SmartWay, Advanced SmartWay, and Advanced SmartWay II. The Classic aerodynamic package refers to traditional styling such as a flat front, exposed air cleaners and exhaust stacks, among others. The conventional package refers to an overall aerodynamic appearance and best represents the aerodynamics of the majority of new tractor sales. The SmartWay aerodynamic package includes technologies such as roof fairings, aerodynamic hoods, aerodynamic mirrors, chassis fairings, and cab extenders. The Advanced SmartWay and Advanced SmartWay II packages reflect different degrees of new aerodynamic technology development such as active air management. A more complete description of these aerodynamic packages is included in Chapter 2 of the draft RIA. In general, the coefficient of drag values for each package and tractor subcategory were developed from EPA's coastdown testing of tractor-trailer combinations, the 2010 NAS report, and SAE papers.

The rolling resistance coefficient for the tires was developed from SmartWay's tire testing to develop the SmartWay certification. The benefits for the extended idle reductions were developed from literature, SmartWay work, and the 2010 NAS report. The weight reductions were developed from manufacturer information.

(iii) Tractor Technology Application Rates

As explained above, vehicle manufacturers often introduce major product changes together, as a package. In this manner the manufacturers can optimize their available resources, including engineering, development, manufacturing and marketing activities to create a product with multiple new features. In addition, manufacturers recognize that a truck design will need to remain competitive over the intended life of the design and meet future regulatory requirements. In some limited cases, manufacturers may implement an individual technology outside of a vehicle's redesign cycle.

With respect to the levels of technology application used to develop the proposed standards, NHTSA and EPA established technology application constraints. The first type of constraint was established based on the application of fuel consumption and CO_2 emission reduction technologies into the different types of tractors. For example, idle reduction technologies are limited to Class 8 sleeper cabs using the assumption that day cabs are not used for overnight hoteling. A second type of constraint was applied to most other technologies and limited their application based on factors reflecting the real world operating conditions that some combination tractors encounter. This second type of constraint was applied to the aerodynamic, tire, and vehicle speed limiter technologies. Table III–4 specifies the application rates that EPA and NHTSA used to develop the proposed standards.

The impact of aerodynamics on a truck's efficiency increases with vehicle speed. Therefore, the usage pattern of the truck will determine the benefit of various aerodynamic technologies. Sleeper cabs are often used in line haul applications and drive the majority of their miles on the highway travelling at speeds greater than 55 mph. The industry has focused aerodynamic technology development, including SmartWay tractors, on these types of trucks. Therefore the agencies are proposing the most aggressive aerodynamic technology application to this regulatory subcategory. All of the major manufacturers today offer at least one SmartWay truck model. The 2010 NAS Report on heavy-duty trucks found that manufacturers indicated that aerodynamic improvements which yield 3 to 4 percent fuel consumption reduction or 6 to 8 percent reduction in Cd values, beyond technologies used in today's SmartWay trucks are achievable.[139] EPA and NHTSA are proposing that the aerodynamic application rate for Class 8 sleeper cab high roof cabs (i.e., the degree of technology application on which the stringency of the proposed standard is premised) to consist of 20 percent of Advanced SmartWay, 70 percent SmartWay, and 10 percent conventional reflecting our assessment of the fraction of tractors in this segment that can

[138] Vehicle speed limiters are an applicable technology or all Class 7 and 8 tractors, however the standards are not premised on the use of this technology.

[139] TIAX. Assessment of Fuel Economy Technologies for Medium- and Heavy-Duty Vehicles. November 2009. Page 4–40.

successfully apply these aerodynamic packages. The small percentage of conventional truck aerodynamics reflects applications including tractors serving as refuse haulers which spend a portion of their time off-road at the landfill and generally operate at lower speeds with frequent stops—further reducing the benefit of aggressive aerodynamic technologies. Features such as chassis skirts are prone to damage in off-road applications; therefore we are not proposing standards that are based on all trucks having chassis skirts or achieving GHG reductions premised on use of such technology. The 90 percent of tractors that we project can either be SmartWay or Advanced SmartWay equipped reflects the bulk of Class 8 high roof sleeper cab applications. We are not projecting a higher fraction of Advanced SmartWay aerodynamic systems because of the limited lead time for the program and the need for these more advanced technologies to be developed and demonstrated before being applied across a wider fraction of the fleet. Our averaging, banking and trading provisions provide manufacturers with the flexibility to implement these technologies over time even though the standard changes in a single step. We request comment on our assessment of the potential for use of Advanced SmartWay technologies and the need for a fraction of these vehicles to continue to remain configured as conventional cabs due to their occasional use off-road.

The proposed aerodynamic application for the other tractor regulatory categories is less aggressive than for the Class 8 sleeper cab high roof. The agencies recognize that there are truck applications which require on/off-road capability and other truck functions which restrict the type of aerodynamic equipment applicable. We also recognize that these types of trucks spend less time at highway speeds where aerodynamic technologies have the greatest benefit. The 2002 VIUS data ranks trucks by major use.[140] The heavy trucks usage indicates that up to 35 percent of the trucks may be used in on/off-road applications or heavier applications. The uses include construction (16 percent), agriculture (12 percent), waste management (5 percent), and mining (2 percent). Therefore, the agencies analyzed the technologies to evaluate the potential restrictions that would prevent 100 percent application of SmartWay technologies for all of the tractor regulatory subcategories.

Trucks designed for on/off-road application may be restricted in the ability to improve the aerodynamic design of the bumper, chassis skirts, air cleaners, and other aspects of the truck which would typically be needed to move a conventional truck into the SmartWay bin. First, off-road applications may require the use of steel bumpers which tend to be less aerodynamic than plastic designs. Second, ground clearance may be an issue for some off road applications due to poor road surface quality. This may pose a greater likelihood that those items such as chassis skirts would incur damage in use and therefore would not be a technology desirable in these applications. Third, the trucks used in off-road applications may also experience dust which requires an additional air cleaner to manage the dirt. Fourth, some trucks are used in applications which require heavier load capacity, such as those with gross combined weights of greater than 80,000 pounds, which is today's Federal highway limit. Often these trucks are configured with different axle combinations than those traditionally used on-road. These trucks may contain either a lift axle or spread axle which allows for greater carrying capability. Both of these configurations limit the design and effectiveness of chassis skirts. Lastly, some work trucks require the use of PTO operation or access to equipment which may limit the application of side extenders and chassis skirts.

The agencies considered the on/off-road restriction to aerodynamic technology application, used VIUS estimate of approximately 35 percent of tractors may be used in this type of application, and used confidential data provided by truck manufacturers regarding the fraction of their current sales which go into the various applications, to project the aerodynamic application rates for each tractor category. For example, the agencies project that day cabs with low roofs will be used more often in these on/off-road applications than day cabs with high roof. Therefore, the agencies project technology application rate for conventional aerodynamics in day cab low roof as 40 percent while it would be 30 percent in day cab high roofs tractors. The agencies have also estimated that the development of advanced aerodynamic technologies would be applied first to high roof sleeper cabs and then follow with the other tractor categories. Therefore, the agencies propose to use a 10 percent application rate of the Advanced SmartWay aerodynamic technology package to the other tractor categories. The agencies welcome comment on our assessment of application rates and are interested in data that provide estimates on truck sales to the various applications where aerodynamics are less effective or restricted.

At least one LRR tire model is available today that meets the rolling resistance requirements of the SmartWay and Advanced SmartWay tire packages so the 2014 MY should afford manufacturers sufficient lead time to install these packages. However, tire rolling resistance is only one of several performance criteria that affect tire selection. The characteristics of a tire also influence durability, traction control, vehicle handling, comfort, and retreadability. A single performance parameter can easily be enhanced, but an optimal balance of all the criteria will require improvements in materials and tread design at a higher cost, as estimated by the agencies. Tire design requires balancing performance, since changes in design may change different performance characteristics in opposing directions. Similar to the discussion regarding lesser aerodynamic technology application in tractor segments other than sleeper cab high roof, the agencies believe that the proposed standards should not be premised on 100 percent application of LRR tires in all tractor segments. The agencies are proposing to base their analyses on application rates that vary by category and match the application rates used for the aerodynamic packages to reflect the on/off-road application of some tractors which require a different balancing of traction versus rolling resistance. We believe on- versus off-road traction (primarily tread pattern) is the only tire performance parameter which trades off with tire rolling resistance so significantly that tire manufacturers would be unable to develop tires meeting both the assumed lower rolling resistance performance while maintaining or improving other characteristics of tire performance. We seek comment on our assessment.

Weight reductions can be achieved through single wide tires replacing dual tires and lighter weight wheel material. Single wide tires can reduce weight by over 160 pounds per axle. Aluminum wheels used in lieu of steel wheels will reduce weight by over 80 pounds for a dual wheel axle. Light weight aluminum steer wheels and aluminum single wide drive wheels and tires package available today would provide a 670 pound weight reduction over the baseline steel steer and dual drive wheels. The

[140] U.S. Department of Energy. *Transportation Energy Data Book,* Edition 28–2009. Table 5.7.

agencies recognize that not all tractors can or will use single wide tires, and therefore are proposing a weight reduction package of 400 pounds. The agencies are proposing to use a 100 percent application rate for this weight reduction package. The agencies are unaware of reasons why a combination of lower weight wheels or tires cannot be applied to all combination tractors, but welcome comments.

Idle reduction technologies provide significant reductions in fuel consumption and CO_2 emissions for Class 8 sleeper cabs and are available on the market today, and therefore will be available in the 2014 model year. There are several different technologies available to reduce idling. These include APUs, diesel fired heaters, and battery powered units. Our discussions with manufacturers indicate that idle technologies are sometimes installed in the factory, but it is also a common practice to have the units installed after the sale of the truck. We would like to continue to incentivize this practice while providing certainty that the overnight idle operations will be eliminated. Therefore, we are allowing the installation of only an automatic engine shutoff, without override capability, to qualify for idle emission reductions in GEM to allow for aftermarket installations of idle reduction technology. We are proposing a 100 percent application rate for this technology for Class 8 sleeper cabs (note that the current fleet is estimated to have a 30 percent application rate). The agencies are unaware of reasons why extended idle reduction technologies could not be applied to all tractors with a sleeper cab, but welcome comments.

Vehicle speed limiters may be used as a technology to meet the standard, but in setting the standard we assumed a 0 percent application rate of vehicles speed limiters. Although we believe vehicles speed limiters are a simple, easy to implement, and inexpensive technology, we want to leave the use of vehicles speed limiters to the truck purchaser. Since truck fleets purchase trucks today with owner set vehicle speed limiters, we considered not including VSLs in our compliance model. However, we have concluded that we should allow the use of VSLs that cannot be overridden by the operator as a means of compliance for vehicle manufacturers that wish to offer it and truck purchasers that wish to purchase the technology. In doing so, we are providing another means of meeting that standard that can lower compliance cost and provide a more optimal vehicle solution for some truck fleets. For example, a local beverage distributor may operate trucks in a distribution network of primarily local roads. Under those conditions, aerodynamic fairings used to reduce aerodynamic drag provide little benefit due to the low vehicle speed while adding additional mass to the vehicle. A vehicle manufacturer could choose to install a VSL set at 55 mph for this customer. The resulting truck modeled in GEM could meet our proposed emission standard without the use of any specialized aerodynamic fairings. The resulting truck would be optimized for its intended application and would be fully compliant with our program all at a lower cost to the ultimate truck purchaser. We are seeking comment on the use of VSLs that cannot be overridden by the end-user as a means of compliance with our proposed standards.

We have chosen not to assume the use of a mandatory vehicle speed limiter in our proposal because of concerns about how to set a realistic application rate that avoids unintended adverse impacts. Although we expect there will be some use of VSL, currently it is used when the fleet involved decides it is feasible and practicable and increases the overall efficiency of the freight system for that fleet operator. However, at this point the agencies are not in a position to determine in how many additional situations use of a VSL would result in similar benefits to overall efficiency. Setting a mandatory expected use of such VSL carries the risk of requiring VSL in situations that are not appropriate from an efficiency perspective. To avoid such possibility, the agencies are not premising the proposed standards on use of VSL, and instead will rely on the industry to select VSL when circumstances are appropriate for its use. Implementation of this program may provide greater information for using this technology in standard setting in the future. Many stakeholders including the American Trucking Association have advocated for more widespread use of vehicle speed limits to address fuel efficiency and greenhouse gas emissions. We welcome comments on our decision not to premise the emission standards on the use of VSLs.

Table III–4 provides the proposed application rates of each technology broken down by weight class, cab configuration, and roof height.

Table III-4: Proposed Technology Application Rates for Class 7 and 8 Tractors

	Class 7		Class 8

(iv) Derivation of the Proposed Tractor Standards

The agencies used the technology inputs and proposed technology application rates in GEM to develop the proposed fuel consumption and CO_2 emissions standards for each subcategory of Class 7 and 8 combination tractors. The agencies derived a scenario truck for each subcategory by weighting the individual GEM input parameters included in Table III–3 by the application rates in Table III–4. For example, the Cd value for a Class 8 Sleeper Cab High Roof scenario case was derived as 10 percent times 0.68 plus 70 percent times 0.60 plus 20 percent times 0.55, which is equal to a Cd of 0.60. Similar calculations were done for tire rolling resistance, weight reduction, idle reduction, and vehicle speed limiters. To account for the two proposed engine standards, the agencies assumed a compliant engine in GEM. In other words, EPA is proposing the use of a 2014 model year fuel consumption map in GEM to derive the 2014 model year tractor standard and a 2017 model year fuel consumption map to derive the 2017 model year tractor standard.[141] The agencies then ran GEM with a single set of vehicle inputs, as shown in Table III–5, to derive the proposed standards for each subcategory. Additional detail is provided in the draft RIA Chapter 2.

[141] As explained further in Section V below, EPA would use these inputs in GEM even for engines electing to use the alternative engine standard.

Table III-5: GEM Inputs for the Class 7 and 8 Tractor Standard Setting

	Class 7		Class 8				
	Day Cab		Day Cab		Sleeper Cab		
	Low/Mid Roof	High Roof	Low/Mid Roof	High Roof	Low Roof	Mid Roof	High Roof
Aerodynamics (Cd)	0.77	0.62	0.77	0.62	0.76	0.72	0.60
Steer Tire CRR (kg/metric ton)	6.99	6.87	6.99	6.87	6.87	6.87	6.54
Drive Tire CRR (kg/metric ton)	7.38	7.26	7.38	7.26	7.26	7.26	6.92
Weight Reduction (lb)	400	400	400	400	400	400	400

Auxiliary Power Unit	N/A	N/A	N/A	N/A	$3,660	$3,660	$3,660
Air Conditioning	$21	$21	$21	$21	$21	$21	$21
Total	$2,593	$2,835	$3,275	$3,842	$7,312	$7,438	$7,814

Notes:

[a] Costs shown are for the 2014 model year so do not reflect learning impacts which would result in lower costs for later model years. For a description of the learning impacts considered in this analysis and how it impacts technology costs for other years, refer to Chapter 2 of the draft RIA.

[b] Note that values in this table include penetration rates. Therefore, the technology costs shown reflect the average cost expected for each of the indicated classes. To see the actual estimated technology costs exclusive of penetration rates, refer to Chapter 2 of the draft RIA.

(v) Reasonableness of the Proposed Standards

The proposed standards are based on aggressive application rates for control technologies which the agencies regard as the maximum feasible for the reasons given in Section (iii) above; *see also* draft RIA Chapter 2.5.8.2. These technologies, at the estimated application rates, are available within the lead time provided, as discussed in draft RIA Chapter 2.5. Use of these technologies would add only a small amount to the cost of the vehicle, and the associated reductions are highly cost effective, an estimated $10 per ton of CO_2eq per vehicle in 2030 without consideration of the substantial fuel savings.[142] This is even more cost effective than the estimated cost effectiveness for CO_2eq removal and fuel economy improvements under the light-duty vehicle rule, already considered by the agencies to be a highly cost effective reduction.[143] Moreover, the cost of controls is recovered due to the associated fuel savings, as shown in the payback analysis included in Table VIII–8 located in Section VIII below. Thus, overall cost per ton of the rule, considering fuel savings, is negative—fuel savings associated with the rule more than offset projected costs by a wide margin. *See* Table VIII–5 in Section VIII below. Given that the standards are technically feasible within the lead time afforded by the 2014 model year, are inexpensive and highly cost effective even without accounting for the fuel savings, and have no apparent adverse potential impacts (*e.g.,* there are no projected negative impacts on safety or vehicle utility), the proposed standards represent a reasonable choice under section 202(a) of the CAA and under NHTSA's EISA authority at 49 U.S.C. 32902(k)(2).

(vi) Alternative Tractor Standards Considered

The agencies are not proposing tractor standards less stringent than the proposed standards because the agencies believe these standards are appropriate, highly cost effective, and technologically feasible within the rulemaking time frame. We welcome comments supplemented with data on each aspect of this determination most importantly on individual technology efficacy to reduce fuel consumption and GHGs as well was our estimates of individual technology cost and lead-time.

The agencies considered proposing tractor standards which are more stringent than those proposed reflecting increased application rates of the technologies discussed. We also considered setting more stringent standards based on the inclusion of hybrid powertrains in tractors. We stopped short of proposing more stringent standards based on higher application rates of improved aerodynamic controls and tire rolling resistance because we concluded that the technologies would not be compatible with the use profile of a subset of tractors which operate in offroad conditions. The agencies welcome comment on the application rates for each type of technology and for each tractor category. We have not proposed more stringent standards for tractors based on the use of hybrid vehicle technologies, believing that additional development and therefore lead-time is needed to develop hybrid systems and battery technology for tractors that operate primarily in highway cruise operations. We know,

[142] *See* Section VIII.D below.

[143] The light-duty rule had an estimated cost per ton of $50 when considering the vehicle program costs only and a cost of −$210 per ton considering the vehicle program costs along with fuel savings in 2030. *See* 75 FR 25515, Table III.H.3–1.

for example, that hybrid systems are being researched to capture and return energy for tractors that operate in gently rolling hills. However, it is not clear to us today that these systems will be generally applicable to tractors in the timeframe of this regulation. We seek comment on our assessment on the appropriateness of setting standards based on the use of hybrid technologies. Further, the agencies request comment supported by data regarding additional technologies not considered by the agencies in proposing these standards.

(b) Tractor Engines

(i) Baseline Engine Performance

As noted above, EPA and NHTSA developed the baseline medium and heavy heavy-duty diesel engine to represent a 2010 model year engine compliant with the 0.2 g/bhp-hr NO_X standard for on-highway heavy-duty engines.

The agencies developed baseline SET values for medium and heavy heavy-duty diesel engines based on 2009 model year confidential manufacturer data and from testing conducted by EPA. The agencies adjusted the pre-2010 data to represent 2010 model year engine maps by using predefined technologies including SCR and other systems that are being used in current 2010 model year production. If an engine utilized did not meet the 0.2 g/bhp-hr NO_X level, then the individual engine's CO_2 result was adjusted to accommodate aftertreatment strategies that would result in a 0.2 g/bhp-hr NO_X emission level as described in draft RIA Chapter 2.4.2.1. The engine CO_2 results were then sales weighted within each regulatory subcategory to develop an industry average 2010 model year reference engine. While most of the engines fell within a few percent of this baseline at least one engine was more than six percent above this average baseline.

Table III-8: 2010 Model Year Baseline Diesel Engine Performance

	CO_2 Emissions (g/bhp-hr)	Fuel Consumption (gallon/100 bhp-hr)
Medium Heavy Diesel - SET	518	5.09
Heavy Heavy Diesel - SET	490	4.81

(ii) Engine Technology Package Effectiveness

The MHD and HHD diesel engine technology package for the 2014 model year includes engine friction reduction, improved aftertreatment effectiveness, improved combustion processes, and low temperature EGR system optimization. The agencies considered improvements in parasitic and friction losses through piston designs to reduce friction, improved lubrication, and improved water pump and oil pump designs to reduce parasitic losses. The aftertreatment improvements are available through lower backpressure of the systems and optimization of the engine-out NO_X levels. Improvements to the EGR system and air flow through the intake and exhaust systems, along with turbochargers can also produce engine efficiency improvements. We note that individual technology improvements are not additive due to the interaction of technologies. The agencies assessed the impact of each technology over each of the 13 SET modes to project an overall weighted SET cycle improvement in the 2014 model year of 3 percent, as detailed in draft RIA Chapter 2.4.2.9 through 2.4.2.14. All of these technologies represent engine enhancements already developed beyond the research phase and are available as "off the shelf" technologies for manufacturers to add to their engines during the engine's next design cycle. We have estimated that manufacturers will be able to implement these technologies on or before the 2014 engine model year. The agencies proposal therefore reflects a 100 percent application rate of this technology package. The agencies gave consideration to proposing a more stringent standard based on the application of turbocompounding, a mechanical means of waste heat recovery, but concluded that manufacturers would have insufficient lead-time to complete the necessary product development and validation work necessary to include this technology across the industry by model year 2014.

As explained earlier, EPA's heavy-duty highway engine standards for criteria pollutants apply in three year increments. The heavy-duty engine manufacturer product plans have fallen into three year cycles to reflect these requirements. The agencies are proposing to set fuel consumption and CO_2 emission standards recognizing the opportunity for technology improvements over this timeframe while reflecting the typical heavy-duty engine manufacturer product plan redesign and refresh cycles. Thus, the agencies are proposing to set a more stringent standard for heavy-duty engines beginning in the 2017 model year.

The MHDD and HHDD engine technology package for the 2017 model year includes the continued development of the 2014 model year technology package including refinement of the aftertreatment system plus turbocompounding. The agencies calculated overall reductions in the same manner as for the 2014 model year package. The weighted SET cycle improvements lead to a 6 percent reduction on the SET cycle, as detailed in draft RIA Chapter 2.4.2.12. The agencies' proposal is premised on a 100 percent application rate of this technology package. We gave consideration to proposing an even more stringent standard based on the use of advanced Rankine cycle (also called bottoming cycle) engine technology but concluded that there is insufficient lead-time between now and 2017 for this promising technology to be developed and applied generally to all heavy-duty engines.[144] Therefore, these technologies were not included in determining the stringency of the proposed standards. However, we do believe the bottoming cycle approach represents a significant opportunity to reduce fuel consumption and GHG emissions in the future. EPA and NHTSA are therefore both proposing provisions described in Section IV to create incentives for manufacturers to

[144] TIAX noted in their report to the NAS committee that the engine improvements beyond 2015 model year included in their report are highly uncertain, though they include Rankine cycle type waste heat recovery as applicable sometime between 2016 and 2020 (page 4–29).

continue to invest to develop this technology.

(iii) Derivation of Engine Standards

EPA developed the proposed 2014 model year CO_2 emissions standards (based on the SET cycle) for diesel engines by applying the three percent reduction from the technology package (just explained above) to the 2010 model year baseline values determined using the SET cycle. EPA developed the 2017 model year CO_2 emissions standards for diesel engines while NHTSA similarly developed the 2017 model year diesel engine fuel consumption standards by applying the 6 percent reduction from the 2017 model year technology package (reflecting performance of turbocompounding plus the 2014 MY technology package) to the 2010 model year baseline values. The proposed standards are included in Table III–9.

Table III-9: Proposed Diesel Engine Standards Over the SET Cycle

Model Year		MHD Diesel Engine	HHD Diesel Engine
2014 – 2016	CO_2 Standard (g/bhp-hr)	502	475
	Voluntary Fuel Consumption Standard (gallon/100 bhp-hr)	4.93	4.67
2017 and later	CO_2 Standard (g/bhp-hr)	487	460
	Fuel Consumption (gallon/100 bhp-hr)	4.78	4.52

(iv) Engine Technology Package Costs

EPA has historically used two different approaches to estimate the indirect costs (sometimes called fixed costs) of regulations including costs for product development, machine tooling, new capital investments and other general forms of overhead that do not change with incremental changes in manufacturing volumes. Where the Agency could reasonably make a specific estimate of individual components of these indirect costs, EPA has done so. Where EPA could not readily make such an estimate, EPA has instead relied on the use of markup factors referred to as indirect cost multipliers (ICMs) to estimate these indirect costs as a ratio of direct manufacturing costs. In general, EPA has used whichever approach it believed could provide the most accurate assessment of cost on a case by case basis. The agencies' general approach used elsewhere in this proposal (for HD pickup trucks, gasoline engines, combination tractors, and vocational vehicles) estimates indirect costs based on the use of ICMs. *See also* 75 FR 25376. We have used this approach generally because these standards are based on installing new parts and systems purchased from a supplier. In such a case, the supplier is conducting the bulk of the research and development on the new parts and systems and including those costs in the purchase price paid by the original equipment manufacturer. In this situation, we believe that the ICM approach provides an accurate and clear estimate of the additional indirect costs borne by the manufacturer.

For the heavy-duty diesel engine segment, however, the agencies do not consider this model to be the most appropriate because the primary cost is not expected to be the purchase of parts or systems from suppliers or even the production of the parts and systems, but rather the development of the new technology by the original equipment manufacturer itself. Most of the technologies the agencies are projecting the heavy-duty engine manufacturers will use for compliance reflect modifications to existing engine systems rather than wholesale addition of technology (*e.g.,* improved turbochargers rather than adding a turbocharger where it did not exist before as was done in our light-duty joint rulemaking in the case of turbo-downsizing). When the bulk of the costs come from refining an existing technology rather than a wholesale addition of technology, a specific estimate of indirect costs may be more appropriate. For example, combustion optimization may significantly reduce emissions and cost a manufacturer millions of dollars to develop but will lead to an engine that is no more expensive to produce. Using a bill of materials approach would suggest that the cost of the emissions control was zero reflecting no new hardware and ignoring the millions of dollars spent to develop the improved combustion system. Details of the cost analysis are included in the draft RIA Chapter 2.

The agencies developed the engineering costs for the research and development of diesel engines with lower fuel consumption and CO_2 emissions. The aggregate costs for engineering hours, technician support, dynamometer cell time, and fabrication of prototype parts are estimated at $6,750,000 per manufacturer per year over the five years covering 2012 through 2016. In aggregate, this averages out to $280 per engine during 2012 through 2016 using an annual sales value of 600,000 light-, medium- and heavy-HD engines. The agencies also are estimating costs of $100,000 per engine manufacturer per engine class (light-, medium- and heavy-HD) to cover the cost of purchasing photo-acoustic measurement equipment for two engine test cells. This would be a one-time cost incurred in the year prior to implementation of the standard (*i.e.,* the cost would be incurred in 2013). In aggregate, this averages out to $4 per engine in 2013 using an annual sales value of 600,000 light-, medium- and heavy-HD engines.

Where we projected that additional new hardware was needed to the meet the proposed standards, we developed the incremental costs for those technologies and marked them up using the ICM approach. Table III–10 below summarizes those estimates of cost on a per item basis. All costs shown in Table III–18 include a low complexity ICM of 1.11 and time based learning is considered applicable to each technology.

Table III-10: Heavy-duty Diesel Engine Component Costs for Combination Tractors (2008$)

	2014 Model Year	2017 Model Year
Cylinder Head (flow optimized, increased firing pressure, improved thermal management)	$6	$6
Exhaust Manifold (flow optimized, improved thermal management)	$0	$0
Turbocharger (improved efficiency)	$17	$16
EGR Cooler (improved efficiency)	$3	$3
Water Pump (optimized, variable vane, variable speed)	$87	$79
Oil Pump (optimized)	$4	$4
Fuel Pump (higher working pressure, increased efficiency, improved pressure regulation)	$4	$4
Fuel Rail (higher working pressure)	$10	$9
Fuel Injector (optimized, improved multiple event control, higher working pressure)	$10	$9
Piston (reduced friction skirt, ring and pin)	$3	$2
Aftertreatment system (improved effectiveness SCR, dosing, dpf)[a]	$0	$0
Valve Train (reduced friction, roller tappet, MHD only)	$78	$71
Mechanical Turbocompounding	$0	$823

Note:
[a] Costs for aftertreatment improvements for MH and HH diesel engines are covered via the engineering costs (see text). For LH diesel engines, we have included the cost of aftertreatment improvements as a technology cost.

The overall diesel engine technology package cost for a medium HD engine being placed in a combination tractor is $223 in the 2014 model year and $1,027 in the 2017 model year; for a heavy HD engine being placed in a combination tractor these costs are $145 and $955 in the 2014 and 2017 model years, respectively. The differences for the medium HD engines are the valve train friction reduction costs of $78 in 2014 ($71 in 2017) that are not applied to heavy HD engines.

(v) Reasonableness of the Proposed Standards

The proposed engine standards appear to be reasonable and consistent with the agencies' respective statutory authorities. With respect to the 2014 and 2017 MY standards, all of the technologies on which the standards are predicated have already been demonstrated in some capacity and their effectiveness is well documented. The proposal reflects a 100 percent application rate for these technologies. The costs of adding these technologies remain modest across the various engine classes as shown in Table III–10. Use of these technologies would add only a small amount to the cost of the vehicle,[145] and the associated reductions are highly cost effective, an estimated $6 per ton of CO_2eq per vehicle.[146] This is even more cost effective than the estimated cost effectiveness for CO_2eq removal under the light-duty vehicle rule, already considered by the agencies to be a highly cost effective reduction.[147] Even the more expensive 2017 MY proposed standard still represents only a small fraction of the vehicle's total cost and is even more cost effective than the light-duty vehicle rule. Moreover, costs are more than offset by fuel savings. Accordingly, EPA and NHTSA view these standards as reflecting an appropriate balance of the various statutory factors under section 202(a) of the CAA and under NHTSA's EISA authority at 49 U.S.C. 32902(k)(2).

[145] Sample 2010 MY day cabs are priced at $89,000 while 2010 MY sleeper cabs are priced at $113,000. See page 3 of ICF's "Investigation of Costs for Strategies to Reduce Greenhouse Gas Emissions for Heavy-Duty On-Road Vehicles." July 2010.

[146] See Tractor CO_2 savings and technology costs for Alternative 2 in Section IX.B.

[147] The light-duty rule had an estimated cost per ton of $50 when considering the vehicle program costs only and a cost of -$210 per ton considering the vehicle program costs along with fuel savings in 2030. *See* 75 FR 25515, Table III.H.3–1.

(vi) Temporary Alternative Standard for Certain Engine Families

As discussed above in Section II.B (1)(b), notwithstanding the general reasonableness of the proposed standards, the agencies recognize that heavy-duty engines have never been subject to GHG or fuel consumption (or fuel economy) standards and that such control has not necessarily been an independent priority for manufacturers. The result is that there are a group of legacy engines with emissions higher than the industry baseline for which compliance with the proposed 2014 MY standards may be more challenging and for which there may simply be inadequate lead time. The issue is not whether these engines' GHG and fuel consumption performance cannot be improved by utilizing the technology packages on which the proposed standards are based. Those technologies can be utilized by all engines and the same degree of reductions obtained. Rather the underlying base engine components of these engines reflect designs that are decades old and therefore have base performance levels below what is typical for the industry as a whole today. Manufacturers have been gradually replacing these legacy products with new engines. Engine

manufacturers have indicated to the agencies they will have to align their planned replacement of these products with our proposed standards and at the same time add additional technologies beyond those identified by the agencies as the basis for the proposed standard. Because these changes will reflect a larger degree of overall engine redesign, manufacturers may not be able to complete this work for all of their legacy products prior to model year 2014. To pull ahead these already planned engine replacements would be impossible as a practical matter given the engineering structure and lead-times inherent in the companies' existing product development processes. We have also concluded that the use of fleet averaging would not address the issue of legacy engines because each manufacturer typically produces only a limited line of MHDD and HHDD engines. (Because there are ample fleetwide averaging opportunities for heavy-duty pickups and vans, the agencies do not perceive similar difficulties for these vehicles.)

Facing a similar issue in the light-duty vehicle rule, EPA adopted a Temporary Lead Time Allowance provision whereby a limited number of vehicles of a subset of manufacturers would meet an alternative standard in the early years of the program, affording them sufficient lead time to meet the more stringent standards applicable in later model years. See 75 FR 25414–25418. The agencies are proposing a similar approach here. As explained above in Section II B. (1) (b), the agencies are proposing a regulatory alternative whereby a manufacturer, for a limited period, would have the option to comply with a unique standard requiring the same level of reduction of emissions (i.e., percent removal) and fuel consumption as otherwise required, but the reduction would be measured from its own 2011 model year baseline. We are thus proposing an optional standard whereby manufacturers would elect to have designated engine families meet a standard of 3% reduction from their 2011 baseline emission and fuel consumption levels for that engine family. Our assessment is that this three percent reduction is appropriate based on use of similar technology packages at similar cost as we have estimated for the primary program. As explained earlier, we are not proposing that the option to select an alternative standard continues past the 2016 MY. By this time, the engines should have gone through a redesign cycle which will allow manufacturers to replace those legacy engines which resulted in abnormally high baseline emission and fuel consumption levels and to achieve the MY 2017 standards which would be feasible using the technology package set out above (optimized NOX aftertreatment, improved EGR, reductions in parasitic losses, and turbocharging). Manufacturers would, of course, be free to adopt other technology paths which meet the proposed MY 2017 standards.

Since the alternative standard is premised on the need for additional lead time, manufacturers would first have to utilize all available flexibilities which could otherwise provide that lead time. Thus, the alternative would not be available unless and until a manufacturer had exhausted all available credits and credit opportunities, and engines under the alternative standard could not generate credits. *See* 75 FR 25417–25419 (similar approach for vehicles which are part of Temporary Lead Time Allowance under the light-duty vehicle rule). We are proposing that manufacturers can select engine families for this alternative standard without agency approval, but are proposing to require that manufacturers notify the agency of their choice and to include in that notification a demonstration that it has exhausted all available credits and credit opportunities. Manufacturers would also have to demonstrate their 2011 baseline calculations as part of the certification process for each engine family for which the manufacturer elects to use the alternative standard. *See* Section V.C.1(b)(i) below.

(vii) Alternative Engine Standards Considered

The agencies are not proposing engine standards less stringent than the proposed standards because the agencies believe these proposed standards are appropriate, highly cost effective, and technologically feasible, as just described. We welcome comments supplemented with data on each aspect of this determination most importantly on individual engine technology efficacy to reduce fuel consumption and GHG emissions. Comments should also address our estimates of individual technology cost and lead-time.

The agencies considered proposing engine standards which are more stringent. Since the proposed standards reflect 100 percent utilization of the various technology packages, some additional technology would have to be added. The agencies are proposing 2017 model year standards based on the use of turbocompounding. The agencies considered the inclusion of more advanced heat recovery systems, such as Rankine or bottoming cycles, which would provide further reductions. However, the agencies are not proposing this level of stringency because our assessment is that these technologies would not be available for production by the 2017 model year. The agencies welcome comments on whether waste heat recovery technologies are appropriate to consider for the 2017 model year standard, or if not, then when would they be appropriate.

B. Heavy-Duty Pickup Trucks and Vans

This section describes the process the agencies used to develop the standards the agencies are proposing for HD pickups and vans. We started by gathering available information about the fuel consumption and CO_2 emissions from recent model year vehicles. The core portion of this information comes primarily from EPA's certification databases, CFEIS and VERIFY, which contain the publicly available data [148] regarding emission and fuel economy results. This information is not extensive because manufacturers have not been required to chassis test HD diesel vehicles for EPA's criteria pollutant emissions standards, nor have they been required to conduct any testing of heavy-duty vehicles on the highway cycle. Nevertheless, enough certification activity has occurred for diesels under EPA's optional chassis-based program, and, due to a California NO_X requirement for the highway test cycle, enough test results have been voluntarily reported for both diesel and gasoline vehicles using the highway test cycle, to yield a reasonably robust data set. To supplement this data set, for purposes of this rulemaking EPA initiated its own testing program using in-use vehicles. This program and the results from it thus far are described in a memorandum to the docket for this rulemaking.[149]

Heavy-duty pickup trucks and vans are sold in a variety of configurations to meet market demands. Among the differences in these configurations that affect CO_2 emissions and fuel consumption are curb weight, GVWR, axle ratio, and drive wheels (two-wheel drive or four-wheel drive). Because the currently-available test data set does not capture all of these configurations, it is necessary to extend that data set across the product mix using adjustment factors. In this way a test result from, say a truck with two-wheel drive, 3.73:1 axle ratio, and 8000 lb test weight, can

[148] *http://www.epa.gov/otaq/certdata.htm.*

[149] Memorandum from Cleophas Jackson, U.S. EPA, to docket EPA–HQ–OAR–2010–0162, "Heavy-Duty Greenhouse Gas and Fuel Consumption Test Program Summary", September 20, 2010.

be used to model emissions and fuel consumption from a truck of the same basic body design, but with 4wd, a 4.10:1 axle ratio, and 8,500 lb test weight. The adjustment factors are based on data from testing in which only the parameters of interest are varied. These parameterized adjustments and their basis are also described in a memorandum to the docket for this rulemaking.[150]

The agencies requested and received from each of the three major manufacturers confidential information for each model and configuration, indicating the values of each of these key parameters as well as the annual production (for the U.S. market). Production figures are useful because, under our proposed standards for HD pickups and vans, compliance is judged on the basis of production-weighted (corporate average) emissions or fuel consumption level, not individual vehicle levels. For consistency and to avoid confounding the analysis with data from unusual market conditions in 2009, the production and vehicle specification data is from the 2008 model year. We made the simplifying assumption that these sales figures reasonably approximate future sales for purposes of this analysis.

One additional assessment was needed to make the data set useful as a baseline for the standards selection. Because the appropriate standards are determined by applying efficiency-improving technologies to the baseline fleet, it is necessary to know the level of penetration of these technologies in the latest model year (2010). This information was also provided confidentially by the manufacturers. Generally, the agencies found that the HD pickup and van fleet was at a roughly consistent level of technology application, with (1) the transition from 4-speed to 5- or 6-speed automatic transmissions mostly accomplished, (2) coupled cam phasing to achieve variable valve control on gasoline engines likewise mostly in place, and (3) substantial remaining potential for optimizing catalytic diesel NO_X aftertreatment to improve fuel economy (the new heavy-duty NO_X standards having taken effect in the 2010 model year).

Taking this 2010 baseline fleet, and applying the technologies determined to be feasible and appropriate by the 2018 model year, along with their effectiveness levels, the agencies could then make a determination of appropriate proposed standards. The assessment of feasibility, described immediately below, takes into account the projected costs of these technologies. The derivation of these costs, largely based on analyses developed in the light-duty GHG and fuel economy rulemaking, are described in Section III.B(3).

Our assessment concluded that the technologies that the agencies considered feasible and appropriate for HD pickups and vans could be consistently applied to essentially all vehicles across this sector by the 2018 model year. Therefore we did not apply varying penetration rates across vehicle types and models in developing and evaluating the proposed standards.

Since the manufacturers of HD pickups and vans generally only have one basic pick-up truck and van with different versions ((*i.e.,* different wheel bases, cab sizes, two-wheel drive, four-wheel drive, *etc.*) and do not have the flexibility of the light-duty fleet to coordinate model improvements over several years, changes to the HD pickups and vans to meet new standards must be carefully planned with the redesign cycle taken into account. The opportunities for large-scale changes (*e.g.,* new engines, transmission, vehicle body and mass) thus occur less frequently than in the light-duty fleet, typically at spans of 8 or more years. However, opportunities for gradual improvements not necessarily linked to large scale changes can occur between the redesign cycles. Examples of such improvements are upgrades to an existing vehicle model's engine, transmission and aftertreatment systems. Given this long redesign cycle and our understanding with respect to where the different manufacturers are in that cycle, the agencies have initially determined that the full implementation of the proposed standards would be feasible and appropriate by the 2018 model year.

Although we did not determine that it was necessary for feasibility to apply varying technology penetration levels to different vehicles, we did decide that a phased implementation schedule would be appropriate to accommodate manufacturers' redesign workload and product schedules, especially in light of this sector's relatively low sales volumes and long product cycles. We did not determine a specific cost of implementing the final standards immediately in 2014 without a phase-in, but we assessed it to be much higher than the cost of the phase-in we are proposing, due to the workload and product cycle disruptions it would cause, and also due to manufacturers' resulting need to develop some of these technologies for heavy-duty applications sooner than or simultaneously with light-duty development efforts. *See* generally 75 FR 25467–25468 explaining why attempting major changes outside the redesign cycle period raises very significant issues of both feasibility and cost. On the other hand, waiting until 2018 before applying any new standards could miss the opportunity to achieve meaningful and cost-effective early reductions not requiring a major product redesign when the largest changes and reductions are expected to occur.

The proposed phase-in schedule, 15–20–40–60–100 percent in 2014–2015–2016–2017–2018, respectively, was chosen to strike a balance between meaningful reductions in the early years (reflecting the technologies' penetration rates of 15 and 20 percent) and providing manufacturers with needed lead time via a gradually accelerating ramp-up of technology penetration.[151] By expressing the proposed phase-in in terms of increasing fleetwide stringency for each manufacturer, while also providing for credit generation and use (including averaging, carry-forward, and carry-back), we believe our proposal affords manufacturers substantial flexibility to satisfy the phase-in through a variety of pathways: the gradual application of technologies across the fleet (averaging a fifth of total production in each year), greater application levels on only a portion of the fleet, or a mix of the two.

We considered setting more stringent standards that would require the application of additional technologies by 2018. We expect, in fact, that some of these technologies may well prove feasible and cost-effective in this timeframe, and may even become technologies of choice for individual manufacturers. This dynamic has played out in EPA programs before and highlights the value of setting performance-based standards that leave engineers the freedom to find the most cost-effective solutions.

However, the agencies do believe that at this stage there is not enough information to conclude that the additional technologies provide an appropriate basis for standard-setting. For example, we believe that 42V stop-start systems can be applied to gasoline vehicles with significant GHG and fuel

[150] Memorandum from Anthony Neam and Jeff Cherry, U.S. EPA, to docket EPA–HQ–OAR–2010–0162, October 18, 2010.

[151] The NHTSA proposal provides voluntary standards for model years 2014 and 2015. NHTSA and EPA also propose to provide an alternative standards phase-in that meets EISA's requirement for three years of regulatory stability. *See* Section II.C.d.ii for a more detailed discussion.

consumption benefits, but we recognize that there is uncertainty at this time over the cost-effectiveness of these systems in heavy-duty applications, and over customer acceptance of vehicles with high GCWR towing large loads that would routinely stop running at idle. Hybrid electric technology likewise could be applied to heavy-duty vehicles, and in fact has already been so applied on a limited basis. However, the development, design, and tooling effort needed to apply this technology to a vehicle model is quite large, and seems less likely to prove cost-effective in this timeframe, due to the small sales volumes relative to the light-duty sector. Here again, potential customer acceptance would need to be better understood because the smaller engines that facilitate much of a hybrid's benefit are typically at odds with the importance pickup trucks buyers place on engine horsepower and torque, whatever the vehicle's real performance.

We also considered setting less stringent standards calling for a more limited set of applied technologies. However, our assessment concluded with a high degree of confidence that the technologies on which the proposed standards are premised are clearly available at reasonable cost in the 2014–2018 timeframe, and that the phase-in and other flexibility provisions allow for their application in a very cost-effective manner, as discussed in this section below.

More difficult to characterize is the degree to which more or less stringent standards might be appropriate because of under- or over-estimating effectiveness of the technologies whose performance is the basis of the proposed standards. Our basis for these estimates is described in Section III.B.(1)(1) . Because for the most part these technologies have not yet been applied to HD pickups and vans, even on a limited basis, we are relying to some degree on engineering judgment in predicting their effectiveness. Even so, we believe that we have applied this judgment using the best information available, primarily from our recent rulemaking on light-duty vehicle GHGs and fuel economy, and have generated a robust set of effectiveness values.

We solicit comment and new information that would aid the agencies in establishing the appropriate level of stringency for the HD pickup and van standards, and on all facets of the assessment described here and elsewhere in these rulemaking proposals.

(1) What technologies did the agencies consider?

The agencies considered over 35 vehicle technologies that manufacturers could use to improve the fuel consumption and reduce CO_2 emissions of their vehicles during MYs 2014–2018. The majority of the technologies described in this section is readily available, well known, and could be incorporated into vehicles once production decisions are made. Other technologies considered may not currently be in production, but are beyond the research phase and under development, and are expected to be in production in highway vehicles over the next few years. These are technologies which are capable of achieving significant improvements in fuel economy and reductions in CO_2 emissions, at reasonable costs. The agencies did not consider technologies in the research stage because there is insufficient time for such technologies to move from research to production during the model years covered by this proposal.

The technologies considered in the agencies' analysis are briefly described below. They fall into five broad categories: Engine technologies, transmission technologies, vehicle technologies, electrification/accessory technologies, and hybrid technologies.

In this class of trucks and vans, diesel engines are installed in about half of all vehicles. The ratio between gasoline and diesel engine purchases by consumers has tended to track changes in the overall cost of oil and the relative cost of gasoline and diesel fuels. When oil prices are higher, diesel sales tend to increase. This trend has reversed when oil prices fall or when diesel fuel prices are significantly higher than gasoline. In the context of our technology discussion for heavy-duty pickups and vans, we are treating gasoline and diesel engines separately so each has a set of baseline technologies. We discuss performance improvements in terms of changes to those baseline engines. Our cost and inventory estimates contained elsewhere reflect the current fleet baseline with an appropriate mix of gasoline and diesel engines. Note that we are not basing the proposed standards on a targeted switch in the mix of diesel and gasoline vehicles. We believe our proposed standards require similar levels of technology development and cost for both diesel and gasoline vehicles. Hence the proposed program does not force, nor does it discourage, changes in a manufacturer's fleet mix between gasoline and diesel vehicles. Although we considered setting a single standard based on the performance level possible for diesel vehicles, we are not proposing such an approach because the potential disruption in the HD pickup and van market from a forced shift would not be justified. Types of engine technologies that improve fuel efficiency and reduce CO_2 emissions include the following:

- *Low-friction lubricants*—low viscosity and advanced low friction lubricant oils are now available with improved performance and better lubrication. If manufacturers choose to make use of these lubricants, they would need to make engine changes and possibly conduct durability testing to accommodate the low-friction lubricants.
- *Reduction of engine friction losses*—can be achieved through low-tension piston rings, roller cam followers, improved material coatings, more optimal thermal management, piston surface treatments, and other improvements in the design of engine components and subsystems that improve engine operation.
- *Cylinder deactivation*—deactivates the intake and exhaust valves and prevents fuel injection into some cylinders during light-load operation. The engine runs temporarily as though it were a smaller engine which substantially reduces pumping losses.
- *Variable valve timing*—alters the timing of the intake valve, exhaust valve, or both, primarily to reduce pumping losses, increase specific power, and control residual gases.
- *Stoichiometric gasoline direct-injection technology*—injects fuel at high pressure directly into the combustion chamber to improve cooling of the air/fuel charge within the cylinder, which allows for higher compression ratios and increased thermodynamic efficiency.
- *Diesel engine improvements and diesel aftertreatment improvements*—improved EGR systems and advanced timing can provide more efficient combustion and, hence, lower fuel consumption. Aftertreatment systems are a relatively new technology on diesel vehicles and, as such, improvements are expected in coming years that allow the effectiveness of these systems to improve while reducing the fuel and reductant demands of current systems.

Types of transmission technologies considered include:

- *Improved automatic transmission controls*—optimizes shift schedule to maximize fuel efficiency under wide ranging conditions, and minimizes losses associated with torque converter slip through lock-up or modulation.

• *Six-, seven-, and eight-speed automatic transmissions*—the gear ratio spacing and transmission ratio are optimized for a broader range of engine operating conditions.

Types of vehicle technologies considered include:

• *Low-rolling-resistance tires*—have characteristics that reduce frictional losses associated with the energy dissipated in the deformation of the tires under load, therefore improving fuel efficiency and reducing CO_2 emissions.

• *Aerodynamic drag reduction*—is achieved by changing vehicle shape or reducing frontal area, including skirts, air dams, underbody covers, and more aerodynamic side view mirrors.

• *Mass reduction and material substitution*—Mass reduction encompasses a variety of techniques ranging from improved design and better component integration to application of lighter and higher-strength materials. Mass reduction is further compounded by reductions in engine power and ancillary systems (transmission, steering, brakes, suspension, *etc.*). The agencies recognize there is a range of diversity and complexity for mass reduction and material substitution technologies and there are many techniques that automotive suppliers and manufacturers are using to achieve the levels of this technology that the agencies have modeled in our analysis for this proposal.

Types of electrification/accessory and hybrid technologies considered include:

• *Electric power steering and Electro-Hydraulic power steering*—are electrically assisted steering systems that have advantages over traditional hydraulic power steering because it replaces a continuously operated hydraulic pump, thereby reducing parasitic losses from the accessory drive.

• *Improved accessories*—may include high efficiency alternators, electrically driven (i.e., on-demand) water pumps and cooling fans. This excludes other electrical accessories such as electric oil pumps and electrically driven air conditioner compressors.

• *Air Conditioner Systems*—These technologies include improved hoses, connectors and seals for leakage control. They also include improved compressors, expansion valves, heat exchangers and the control of these components for the purposes of improving tailpipe CO_2 emissions as a result of A/C use.[152]

[152] See draft RIA Chapter 2.3 for fuller technology descriptions.

How did the agencies determine the costs and effectiveness of each of these technologies?

Building on the technical analysis underlying the 2012–2016 MY light-duty vehicle rule, the agencies took a fresh look at technology cost and effectiveness values for purposes of this proposal. For costs, the agencies reconsidered both the direct or "piece" costs and indirect costs of individual components of technologies. For the direct costs, the agencies followed a bill of materials (BOM) approach employed by NHTSA and EPA in the light-duty rule.

For two technologies, stoichiometric gasoline direct injection (SGDI) and turbocharging with engine downsizing, the agencies relied to the extent possible on the available tear-down data and scaling methodologies used in EPA's ongoing study with FEV, Incorporated. This study consists of complete system tear-down to evaluate technologies down to the nuts and bolts to arrive at very detailed estimates of the costs associated with manufacturing them.[153]

For the other technologies, considering all sources of information and using the BOM approach, the agencies worked together intensively to determine component costs for each of the technologies and build up the costs accordingly. Where estimates differ between sources, we have used engineering judgment to arrive at what we believe to be the best cost estimate available today, and explained the basis for that exercise of judgment.

Once costs were determined, they were adjusted to ensure that they were all expressed in 2008 dollars using a ratio of gross domestic product (GDP) values for the associated calendar years,[154] and indirect costs were accounted for using the new approach developed by EPA and used in the 2012–2016 light-duty rule. NHTSA and EPA also reconsidered how costs should be adjusted by modifying or scaling content assumptions to account for differences across the range of vehicle sizes and functional requirements, and adjusted the associated material cost impacts to account for the revised content, although some of these adjustments may be different for each agency due to the different vehicle subclasses used in their respective models.

Regarding estimates for technology effectiveness, NHTSA and EPA used the estimates from the 2012–2016 light-duty rule as a baseline but adjusted them as appropriate, taking into account the unique requirement of the heavy-duty test cycles to test at curb weight plus half payload versus the light-duty requirement of curb plus 300 lb. The adjustments were made on an individual technology basis by assessing the specific impact of the added load on each technology when compared to the use of the technology on a light-duty vehicle. The agencies also considered other sources such as the 2010 NAS Report, recent CAFE compliance data, and confidential manufacturer estimates of technology effectiveness. NHTSA and EPA engineers reviewed effectiveness information from the multiple sources for each technology and ensured that such effectiveness estimates were based on technology hardware consistent with the BOM components used to estimate costs. Together, the agencies compared the multiple estimates and assessed their validity, taking care to ensure that common BOM definitions and other vehicle attributes such as performance and drivability were taken into account.

The agencies note that the effectiveness values estimated for the technologies may represent average values applied to the baseline fleet described earlier, and do not reflect the potentially-limitless spectrum of possible values that could result from adding the technology to different vehicles. For example, while the agencies have estimated an effectiveness of 0.5 percent for low friction lubricants, each vehicle could have a unique effectiveness estimate depending on the baseline vehicle's oil viscosity rating. Similarly, the reduction in rolling resistance (and thus the improvement in fuel efficiency and the reduction in CO_2 emissions) due to the application of LRR tires depends not only on the unique characteristics of the tires originally on the vehicle, but on the unique characteristics of the tires being applied, characteristics which must be balanced between fuel efficiency, safety, and performance. Aerodynamic drag reduction is much the same—it can improve fuel efficiency and reduce CO_2 emissions, but it is also highly dependent on vehicle-specific functional objectives. For purposes of this NPRM, NHTSA and EPA believe that employing average values for technology effectiveness estimates is an appropriate way of recognizing the potential variation in the specific benefits that individual manufacturers

[153] U.S. Environmental Protection Agency, "Draft Report—Light-Duty Technology Cost Analysis Pilot Study," Contract No. EP–C–07–069, Work Assignment 1–3, September 3, 2009.

[154] NHTSA examined the use of the CPI multiplier instead of GDP for adjusting these dollar values, but found the difference to be exceedingly small—only $0.14 over $100.

(and individual vehicles) might obtain from adding a fuel-saving technology. However, the agencies seek comment on whether additional levels of specificity beyond that already provided would improve the analysis for the final rules, and if so, how those levels of specificity should be analyzed.

The following section contains a detailed description of our assessment of vehicle technology cost and effectiveness estimates. The agencies note that the technology costs included in this NPRM take into account only those associated with the initial build of the vehicle. The agencies seek comment on the additional lifetime costs, if any, associated with the implementation of advanced technologies including maintenance and replacement costs. Based on comments, the agencies may decide to conduct additional analysis for the final rules regarding operating, maintenance and replacement costs.

(a) Engine Technologies

NHTSA and EPA have reviewed the engine technology estimates used in the 2012–2016 light-duty rule. In doing so NHTSA and EPA reconsidered all available sources and updated the estimates as appropriate. The section below describes both diesel and gasoline engine technologies considered for this proposal.

(i) Low Friction Lubricants

One of the most basic methods of reducing fuel consumption in both gasoline and diesel engines is the use of lower viscosity engine lubricants. More advanced multi-viscosity engine oils are available today with improved performance in a wider temperature band and with better lubricating properties. This can be accomplished by changes to the oil base stock (*e.g.*, switching engine lubricants from a Group I base oils to lower-friction, lower viscosity Group III synthetic) and through changes to lubricant additive packages (*e.g.*, friction modifiers and viscosity improvers). The use of 5W–30 motor oil is now widespread and auto manufacturers are introducing the use of even lower viscosity oils, such as 5W–20 and 0W–20, to improve cold-flow properties and reduce cold start friction. However, in some cases, changes to the crankshaft, rod and main bearings and changes to the mechanical tolerances of engine components may be required. In all cases, durability testing would be required to ensure that durability is not compromised. The shift to lower viscosity and lower friction lubricants will also improve the effectiveness of valvetrain technologies such as cylinder deactivation, which rely on a minimum oil temperature (viscosity) for operation.

Based on the 2012–2016 MY light-duty vehicle rule, and previously-received confidential manufacturer data, NHTSA and EPA estimated the effectiveness of low friction lubricants to be between 0 to 1 percent.

In the light-duty rule, the agencies estimated the cost of moving to low friction lubricants at $3 per vehicle (2007$). That estimate included a markup of 1.11 for a low complexity technology. For HD pickups and vans, we are using the same base estimate but have marked it up to 2008 dollars using the GDP price deflator and have used a markup of 1.17 for a low complexity technology to arrive at a value of $4 per vehicle. As in the light-duty rule, learning effects are not applied to costs for this technology and, as such, this estimate applies to all model years.[155] [156]

(ii) Engine Friction Reduction

In addition to low friction lubricants, manufacturers can also reduce friction and improve fuel consumption by improving the design of both diesel and gasoline engine components and subsystems. Approximately 10 percent of the energy consumed by a vehicle is lost to friction, and just over half is due to frictional losses within the engine.[157] Examples include improvements in low-tension piston rings, piston skirt design, roller cam followers, improved crankshaft design and bearings, material coatings, material substitution, more optimal thermal management, and piston and cylinder surface treatments. Additionally, as computer-aided modeling software continues to improve, more opportunities for evolutionary friction reductions may become available.

All reciprocating and rotating components in the engine are potential candidates for friction reduction, and minute improvements in several components can add up to a measurable fuel efficiency improvement. The 2012–2016 light-duty final rule, the 2010 NAS Report, and NESCCAF and Energy and Environmental Analysis reports, as well as confidential manufacturer data, indicate a range of effectiveness for engine friction reduction to be between 1 to 3 percent. NHTSA and EPA continue to believe that this range is accurate.

Consistent with the 2012–2016 MY light-duty vehicle rule, the agencies estimate the cost of this technology at $14 per cylinder compliance cost (2008$), including the low complexity ICM markup value of 1.17. Learning impacts are not applied to the costs of this technology and, as such, this estimate applies to all model years. This cost is multiplied by the number of engine cylinders.

(iii) Coupled Cam Phasing

Valvetrains with coupled (or coordinated) cam phasing can modify the timing of both the inlet valves and the exhaust valves an equal amount by phasing the camshaft of an overhead valve engine.[158] For overhead valve engines, which have only one camshaft to actuate both inlet and exhaust valves, couple cam phasing is the only variable valve timing implementation option available and requires only one cam phaser.[159]

Based on the 2012–2016 light-duty final rule, previously-received confidential manufacturer data, and the NESCCAF report, NHTSA and EPA estimated the effectiveness of couple cam phasing to be between 1 and 4 percent. NHTSA and EPA reviewed this estimate for purposes of the NPRM, and continue to find it accurate.

In the 2012–2016 light-duty final rule, the agencies estimated a $41 cost per cam phaser not including any markup (2007$). NHTSA and EPA believe that this estimate remains accurate. Using the new indirect cost multiplier of 1.17, for a low complexity technology, the compliance cost per cam phaser would be $46 (2008$) in the 2014 model year. Time-based learning is applied to this

[155] Note that throughout the cost estimates for this HD analysis, the agencies have used slightly higher markups than those used in the 2012–2016 MY light-duty vehicle rule. The new, slightly higher ICMs include return on capital of roughly 6%, a factor that was not included in the light-duty analysis.

[156] Note that the costs developed for low friction lubes for this analysis reflect the costs associated with any engine changes that would be required as well as any durability testing that may be required.

[157] "Impact of Friction Reduction Technologies on Fuel Economy," Fenske, G. Presented at the March 2009 Chicago Chapter Meeting of the 'Society of Tribologists and Lubricated Engineers' Meeting, March 18th, 2009. Available at: *http://www.chicagostle.org/program/2008-2009/Impact%20of%20Friction%20Reduction%20Technologies%20on%20Fuel%20Economy%20-%20with%20VGs%20removed.pdf* (last accessed July 9, 2009).

[158] Although couple cam phasing appears only in the single overhead cam and overhead valve branches of the decision tree, it is noted that a single phaser with a secondary chain drive would allow couple cam phasing to be applied to direct overhead cam engines. Since this would potentially be adopted on a limited number of direct overhead cam engines NHTSA did not include it in that branch of the decision tree.

[159] It is also noted that coaxial camshaft developments would allow other variable valve timing options to be applied to overhead valve engines. However, since they would potentially be adopted on a limited number of overhead valve engines, NHTSA did not include them in the decision tree.

technology. This technology was considered for gasoline engines only.

(iv) Cylinder Deactivation

In conventional spark-ignited engines throttling the airflow controls engine torque output. At partial loads, efficiency can be improved by using cylinder deactivation instead of throttling. Cylinder deactivation can improve engine efficiency by disabling or deactivating (usually) half of the cylinders when the load is less than half of the engine's total torque capability—the valves are kept closed, and no fuel is injected—as a result, the trapped air within the deactivated cylinders is simply compressed and expanded as an air spring, with reduced friction and heat losses. The active cylinders combust at almost double the load required if all of the cylinders were operating. Pumping losses are significantly reduced as long as the engine is operated in this "part-cylinder" mode.

Cylinder deactivation control strategy relies on setting maximum manifold absolute pressures or predicted torque within which it can deactivate the cylinders. Noise and vibration issues reduce the operating range to which cylinder deactivation is allowed, although manufacturers are exploring vehicle changes that enable increasing the amount of time that cylinder deactivation might be suitable. Some manufacturers may choose to adopt active engine mounts and/or active noise cancellations systems to address Noise Vibration and Harshness (NVH) concerns and to allow a greater operating range of activation. Cylinder deactivation is a technology keyed to more lightly loaded operation, and so may be a less likely technology choice for manufacturers designing for effectiveness in the loaded condition required for testing, and in the real world that involves frequent operation with heavy loads.

Cylinder deactivation has seen a recent resurgence thanks to better valvetrain designs and engine controls. General Motors and Chrysler Group have incorporated cylinder deactivation across a substantial portion of their V8-powered lineups.

Effectiveness improvements scale roughly with engine displacement-to-vehicle weight ratio: the higher displacement-to-weight vehicles, operating at lower relative loads for normal driving, have the potential to operate in part-cylinder mode more frequently.

NHTSA and EPA adjusted the 2012–2016 light-duty final rule estimates using updated power to weight ratings of heavy-duty trucks and confidential business information and confirmed a range of 3 to 4 percent for these vehicles, though as mentioned above there is uncertainty over how often this technology would be exercised on the test cycles, and a lower range may be warranted for HD vehicles.

NHTSA and EPA consider the costs for this technology to be identical to that for V8 engines on light-duty trucks. As such, the agencies have used the cost used in the 2012–2016 light-duty final rule. Using the new markup of 1.17 for a low complexity technology results in an estimate of $193 (2008$) in the 2014 model year. Time based learning is applied to this technology. This technology was considered for gasoline engines only.

(v) Stoichiometric Gasoline Direct Injection

SGDI engines inject fuel at high pressure directly into the combustion chamber (rather than the intake port in port fuel injection). SGDI requires changes to the injector design, an additional high pressure fuel pump, new fuel rails to handle the higher fuel pressures and changes to the cylinder head and piston crown design. Direct injection of the fuel into the cylinder improves cooling of the air/fuel charge within the cylinder, which allows for higher compression ratios and increased thermodynamic efficiency without the onset of combustion knock. Recent injector design advances, improved electronic engine management systems and the introduction of multiple injection events per cylinder firing cycle promote better mixing of the air and fuel, enhance combustion rates, increase residual exhaust gas tolerance and improve cold start emissions. SGDI engines achieve higher power density and match well with other technologies, such as boosting and variable valvetrain designs.

Several manufacturers have recently introduced vehicles with SGDI engines, including GM and Ford and have announced their plans to increase dramatically the number of SGDI engines in their portfolios.

The 2012–2016 light-duty final rule estimated the range of 1 to 2 percent for SGDI. NHTSA and EPA reviewed this estimate for purposes of the NPRM, and continue to find it accurate.

Consistent with the 2012–2016 light-duty final rule, NHTSA and EPA cost estimates for SGDI take into account the changes required to the engine hardware, engine electronic controls, ancillary and NVH mitigation systems. Through contacts with industry NVH suppliers, and manufacturer press releases, the agencies believe that the NVH treatments will be limited to the mitigation of fuel system noise, specifically from the injectors and the fuel lines. For this analysis, the agencies have estimated the costs at $395 (2008$) in the 2014 model year. Time based learning is applied to this technology. This technology was considered for gasoline engines only, as diesel engines already employ direct injection.

(b) Diesel Engine Technologies

Diesel engines have several characteristics that give them superior fuel efficiency compared to conventional gasoline, spark-ignited engines. Pumping losses are much lower due to lack of (or greatly reduced) throttling. The diesel combustion cycle operates at a higher compression ratio, with a very lean air/fuel mixture, and turbocharged light-duty diesels typically achieve much higher torque levels at lower engine speeds than equivalent-displacement naturally-aspirated gasoline engines. Additionally, diesel fuel has a higher energy content per gallon.[160] However, diesel fuel also has a higher carbon to hydrogen ratio, which increases the amount of CO_2 emitted per gallon of fuel used by approximately 15 percent over a gallon of gasoline.

Based on confidential business information and the 2010 NAS Report, two major areas of diesel engine design will be improved during the 2014–2018 timeframe. These areas include aftertreatment improvements and a broad range of engine improvements.

(i) Aftertreatment Improvements

The HD diesel pickup and van segment has largely adopted the SCR type of aftertreatment system to comply with criteria pollutant emission standards. As the experience base for SCR expands over the next few years, many improvements in this aftertreatment system such as construction of the catalyst, thermal management, and reductant optimization will result in a significant reduction in the amount of fuel used in the process. This technology was not considered in the 2012–2016 light-duty final rule. Based on confidential business information, EPA and NHTSA estimate the reduction in CO_2 as a result of these improvements at 3 to 5 percent.

The agencies have estimated the cost of this technology at $25 for each percentage improvement in fuel consumption. This estimate is based on

[160] Burning one gallon of diesel fuel produces about 15 percent more carbon dioxide than gasoline due to the higher density and carbon to hydrogen ratio.

the agencies' belief that this technology is, in fact, a very cost effective approach to improving fuel consumption. As such, $25 per percent improvement is considered a reasonable cost. This cost would cover the engineering and test cell related costs necessary to develop and implement the improved control strategies that would allow for the improvements in fuel consumption. Importantly, the engineering work involved would be expected to result in cost savings to the aftertreatment and control hardware (lower platinum group metal loadings, lower reductant dosing rates, *etc.*). Those savings are considered to be included in the $25 per percent estimate described here. Given the 4 percent average expected improvement in fuel consumption results in an estimated cost of $110 (2008$) for a 2014 model year truck or van. This estimate includes a low complexity ICM of 1.17 and time based learning from 2012 forward.

(ii) Engine Improvements

Diesel engines in the HD pickup and van segment are expected to have several improvements in their base design in the 2014–2018 timeframe. These improvements include items such as improved combustion management, optimal turbocharger design, and improved thermal management. This technology was not considered in the 2012–2016 light-duty final rule. Based on confidential business information, EPA and NHTSA estimate the reduction in CO_2 as a result of these improvements at 4 to 6 percent.

The cost for this technology includes costs associated with low temperature exhaust gas recirculation, improved turbochargers and improvements to other systems and components. These costs are considered collectively in our costing analysis and termed "diesel engine improvements." The agencies have estimated the cost of diesel engine improvements at $147 based on the cost estimates for several individual technologies. Specifically, the direct manufacturing costs we have estimated are: improved cylinder head, $9; turbo efficiency improvements, $16; EGR cooler improvements, $3; higher pressure fuel rail, $10; improved fuel injectors, $13; improved pistons, $2; and reduced valve train friction, $94. All values are in 2008 dollars and are applicable in the 2014MY. Applying a low complexity ICM of 1.17 results in a cost of $172 (2008$) applicable in the 2014MY. We consider time based learning to be appropriate for these technologies.

(c) Transmission Technologies

NHTSA and EPA have also reviewed the transmission technology estimates used in the 2012–2016 light-duty final rule. In doing so, NHTSA and EPA considered or reconsidered all available sources and updated the estimates as appropriate. The section below describes each of the transmission technologies considered for this proposal.

(i) Improved Automatic Transmission Control (Aggressive Shift Logic and Early Torque Converter Lockup)

Calibrating the transmission shift schedule to upshift earlier and quicker, and to lock-up or partially lock-up the torque converter under a broader range of operating conditions can reduce fuel consumption and CO_2 emissions. However, this operation can result in a perceptible degradation in NVH. The degree to which NVH can be degraded before it becomes noticeable to the driver is strongly influenced by characteristics of the vehicle, and although it is somewhat subjective, it always places a limit on how much fuel consumption can be improved by transmission control changes. Given that the Aggressive Shift Logic and Early Torque Converter Lockup are best optimized simultaneously due to the fact that adding both of them primarily requires only minor modifications to the transmission or calibration software, these two technologies are combined in the modeling. We consider these technologies to be present in the baseline, since 6-speed automatic transmissions are installed in the majority of Class 2b and 3 trucks in the 2010 model year timeframe.

(ii) Automatic 6- and 8-Speed Transmissions

Manufacturers can also choose to replace 4- 5- and 6-speed automatic transmissions with 8-speed automatic transmissions. Additional ratios allow for further optimization of engine operation over a wider range of conditions, but this is subject to diminishing returns as the number of speeds increases. As additional planetary gear sets are added (which may be necessary in some cases to achieve the higher number of ratios), additional weight and friction are introduced. Also, the additional shifting of such a transmission can be perceived as bothersome to some consumers, so manufacturers need to develop strategies for smooth shifts. Some manufacturers are replacing 4- and 5-speed automatics with 6-speed automatics already, and 7- and 8-speed automatics have entered production in light-duty vehicles, albeit in lower-volume applications in luxury and performance oriented cars.

As discussed in the light-duty final GHG rule, confidential manufacturer data projected that 6-speed transmissions could incrementally reduce fuel consumption by 0 to 5 percent from a 4-speed automatic transmission, while an 8-speed transmission could incrementally reduce fuel consumption by up to 6 percent from a 4-speed automatic transmission. GM has publicly claimed a fuel economy improvement of up to 4 percent for its new 6-speed automatic transmissions.[161]

NHTSA and EPA reviewed and revised these effectiveness estimates based on actual usage statistics and testing methods for these vehicles along with confidential business information. When combined with improved automatic transmission control, the agencies estimate the effectiveness for a conversion from a 4 to a 6-speed transmission to be 5.3% and a conversion from a 6 to 8-speed transmission to be 1.7%. While 8-speed transmissions were not considered in the 2012–2016 light-duty final rule, they are considered as a technology of choice for this analysis in that manufacturers are expected to upgrade the 6-speed automatic transmissions being implemented today with 8-speed automatic transmissions in the 2014–2018 timeframe. For this proposal, we are estimating the cost of an 8-speed automatic transmission at $231 (2008$) relative to a 6-speed automatic transmission in the 2014 model year. This estimate is based from the 2010 NAS Report and we have applied a low complexity ICM of 1.17 and time based learning. This technology applies to both gasoline and diesel trucks and vans.

(d) Electrification/Accessory Technologies

(i) Electrical Power Steering or Electrohydraulic Power Steering

Electric power steering (EPS) or Electrohydraulic power steering (EHPS) provides a potential reduction in CO_2 emissions and fuel consumption over hydraulic power steering because of reduced overall accessory loads. This eliminates the parasitic losses

[161] General Motors, news release, "From Hybrids to Six-Speeds, Direct Injection And More, GM's 2008 Global Powertrain Lineup Provides More Miles with Less Fuel" (released Mar. 6, 2007). Available at *http://www.gm.com/experience/fuel_economy/news/2007/adv_engines/2008-powertrain-lineup-082707.jsp* (last accessed Sept. 18, 2008).

associated with belt-driven power steering pumps which consistently draw load from the engine to pump hydraulic fluid through the steering actuation systems even when the wheels are not being turned. EPS is an enabler for all vehicle hybridization technologies since it provides power steering when the engine is off. EPS may be implemented on most vehicles with a standard 12V system. Some heavier vehicles may require a higher voltage system which may add cost and complexity.

The 2012–2016 light-duty final rule estimated a 1 to 2 percent effectiveness based on the 2002 NAS report for light-duty vehicle technologies, a Sierra Research report, and confidential manufacturer data. NHTSA and EPA reviewed these effectiveness estimates and found them to be accurate, thus they have been retained for purposes of this NPRM.

NHTSA and EPA adjusted the EPS cost for the current rulemaking based on a review of the specification of the system. Adjustments were made to include potentially higher voltage or heavier duty system operation for HD pickups and vans. Accordingly, higher costs were estimated for systems with higher capability. After accounting for the differences in system capability and applying the ICM markup of low complexity technology of 1.17, the estimated costs for this proposal are $108 for a MY 2014 truck or van (2008$). As EPS systems are in widespread usage today, time-based learning is deemed applicable. EHPS systems are considered to be of equal cost and both are considered applicable to gasoline and diesel engines.

(ii) Improved Accessories

The accessories on an engine, including the alternator, coolant and oil pumps are traditionally mechanically-driven. A reduction in CO_2 emissions and fuel consumption can be realized by driving them electrically, and only when needed ("on-demand").

Electric water pumps and electric fans can provide better control of engine cooling. For example, coolant flow from an electric water pump can be reduced and the radiator fan can be shut off during engine warm-up or cold ambient temperature conditions which will reduce warm-up time, reduce warm-up fuel enrichment, and reduce parasitic losses.

Indirect benefit may be obtained by reducing the flow from the water pump electrically during the engine warm-up period, allowing the engine to heat more rapidly and thereby reducing the fuel enrichment needed during cold starting of the engine. Further benefit may be obtained when electrification is combined with an improved, higher efficiency engine alternator. Intelligent cooling can more easily be applied to vehicles that do not typically carry heavy payloads, so larger vehicles with towing capacity present a challenge, as these vehicles have high cooling fan loads.[162]

The agencies considered whether to include electric oil pump technology for the rulemaking. Because it is necessary to operate the oil pump any time the engine is running, electric oil pump technology has insignificant effect on efficiency. Therefore, the agencies decided to not include electric oil pump technology for this proposal.

NHTSA and EPA jointly reviewed the estimates of 1 to 2 percent effectiveness estimates used in the 2012–2016 light-duty final rule and found them to be accurate for Improved Electrical Accessories. Consistent with the 2012–2016 light-duty final rule, the agencies have estimated the cost of this technology at $88 (2008$) including a low complexity ICM of 1.17. This cost is applicable in the 2014 model year. Improved accessory systems are in production currently and thus time-based learning is applied. This technology was considered for diesel trucks and vans only.

(e) Vehicle Technologies

(i) Mass Reduction

Reducing a vehicle's mass, or down-weighting the vehicle, decreases fuel consumption by reducing the energy demand needed to overcome forces resisting motion, and rolling resistance. Manufacturers employ a systematic approach to mass reduction, where the net mass reduction is the addition of a direct component or system mass reduction plus the additional mass reduction taken from indirect ancillary systems and components, as a result of full vehicle optimization, effectively compounding or obtaining a secondary mass reduction from a primary mass reduction. For example, use of a smaller, lighter engine with lower torque-output subsequently allows the use of a smaller, lighter-weight transmission and drive line components. Likewise, the compounded weight reductions of the body, engine and drivetrain reduce stresses on the suspension components, steering components, wheels, tires and brakes, allowing further reductions in the mass of these subsystems. The reductions in unsprung masses such as brakes, control arms, wheels and tires further reduce stresses in the suspension mounting points. This produces a compounding effect of mass reductions.

Estimates of the synergistic effects of mass reduction and the compounding effect that occurs along with it can vary significantly from one report to another. For example, in discussing its estimate, an Auto-Steel Partnership report states that "These secondary mass changes can be considerable—estimated at an additional 0.7 to 1.8 times the initial mass change."§[163] This means for each one pound reduction in a primary component, up to 1.8 pounds can be reduced from other structures in the vehicle (*i.e.*, a 180 percent factor). The report also discusses that a primary variable in the realized secondary weight reduction is whether or not the powertrain components can be included in the mass reduction effort, with the lower end estimates being applicable when powertrain elements are unavailable for mass reduction. However, another report by the Aluminum Association, which primarily focuses on the use of aluminum as an alternative material for steel, estimated a factor of 64 percent for secondary mass reduction even though some powertrain elements were considered in the analysis.[164] That report also notes that typical values for this factor vary from 50 to 100 percent. Although there is a wide variation in stated estimates, synergistic mass reductions do exist, and the effects result in tangible mass reductions. Mass reductions in a single vehicle component, for example a door side impact/intrusion system, may actually result in a significantly higher weight savings in the total vehicle, depending on how well the manufacturer integrates the modification into the overall vehicle design. Accordingly, care must be taken when reviewing reports on weight reduction methods and practices to ascertain if compounding effects have been considered or not.

[162] In the CAFE model, improved accessories refers solely to improved engine cooling. However, EPA has included a high efficiency alternator in this category, as well as improvements to the cooling system.

[163] "Preliminary Vehicle Mass Estimation Using Empirical Subsystem Influence Coefficients," Malen, D.E., Reddy, K. Auto-Steel Partnership Report, May 2007, Docket EPA–HQ–OAR–2009–0472–0169. Accessed on the Internet on May 30, 2009 at: *http://www.a-sp.org/database/custom/Mass%20Compounding%20-%20Final%20Report.pdf.*

[164] "Benefit Analysis: Use of Aluminum Structures in Conjunction with Alternative Powertrain Technologies in Automobiles," Bull, M. Chavali, R., Mascarin, A., Aluminum Association Research Report, May 2008, Docket EPA–HQ–OAR–2009–0472–0168. Accessed on the Internet on April 30, 2009 at: *http://www.autoaluminum.org/downloads/IBIS–Powertrain-Study.pdf.*

Mass reduction is broadly applicable across all vehicle subsystems including the engine, exhaust system, transmission, chassis, suspension, brakes, body, closure panels, glazing, seats and other interior components, engine cooling systems and HVAC systems. It is estimated that up to 1.25 kilograms of secondary weight savings can be achieved for every kilogram of weight saved on a vehicle when all subsystems are redesigned to take into account the initial primary weight savings.[165] [166]

Mass reduction can be accomplished by proven methods such as:

- *Smart Design:* Computer aided engineering (CAE) tools can be used to better optimize load paths within structures by reducing stresses and bending moments applied to structures. This allows better optimization of the sectional thicknesses of structural components to reduce mass while maintaining or improving the function of the component. Smart designs also integrate separate parts in a manner that reduces mass by combining functions or the reduced use of separate fasteners. In addition, some "body on frame" vehicles are redesigned with a lighter "unibody" construction.
- *Material Substitution:* Substitution of lower density and/or higher strength materials into a design in a manner that preserves or improves the function of the component. This includes substitution of high-strength steels, aluminum, magnesium or composite materials for components currently fabricated from mild steel.
- *Reduced Powertrain Requirements:* Reducing vehicle weight sufficiently allows for the use of a smaller, lighter and more efficient engine while maintaining or increasing performance. Approximately half of the reduction is due to these reduced powertrain output requirements from reduced engine power output and/or displacement, changes to transmission and final drive gear ratios. The subsequent reduced rotating mass (*e.g.*, transmission, driveshafts/halfshafts, wheels and tires) via weight and/or size reduction of components are made possible by reduced torque output requirements.
- Automotive companies have largely used weight savings in some vehicle subsystems to offset or mitigate weight gains in other subsystems from increased feature content (sound insulation, entertainment systems, improved climate control, panoramic roof, *etc.*).
- Lightweight designs have also been used to improve vehicle performance parameters by increased acceleration performance or superior vehicle handling and braking.

Many manufacturers have already announced proposed future products plans reducing the weight of a vehicle body through the use of high strength steel body-in-white, composite body panels, magnesium alloy front and rear energy absorbing structures reducing vehicle weight sufficiently to allow a smaller, lighter and more efficient engine. Nissan will be reducing average vehicle curb weight by 15% by 2015.[167] Ford has identified weight reductions of 250 to 750 lb per vehicle as part of its implementation of known technology within its sustainability strategy between 2011 and 2020.[168] Mazda plans to reduce vehicle weight by 220 pounds per vehicle or more as models are redesigned. [169, 170] Ducker International estimates that the average curb weight of light-duty vehicle fleet will decrease approximately 2.8% from 2009 to 2015 and approximately 6.5% from 2009 to 2020 via changes in automotive materials and increased change-over from previously used body-on-frame automobile and light-truck designs to newer unibody designs.167 While the opportunity for mass reductions available to the light-duty fleet may not in all cases be applied directly to the heavy-duty fleet due to the different designs for the expected duty cycles of a "work" vehicle, mass reductions are still available particularly to areas unrelated to the components necessary for the work vehicle aspects.

Due to the payload and towing requirements of these heavy-duty vehicles, engine downsizing was not considered in the estimates for CO_2 reduction in the area of mass reduction/material substitution. NHTSA and EPA estimate that a 3 percent mass reduction with no engine downsizing results in a 1 percent reduction in fuel consumption. In addition, a 5 and 10 percent mass reduction with no engine downsizing result in an estimated CO_2 reduction of 1.6 and 3.2 percent respectively. These effectiveness values are 50% of the 2012–2016 light-duty final rule values due to the elimination of engine downsizing for this class of vehicle.

Consistent with the 2012–2016 light-duty final rule, the agencies have estimated the cost of mass reduction at $1.32 per pound (2008$). For this analysis, the agencies are estimating a 5% mass reduction or, given the baseline weight of current trucks and vans, are estimating costs of $462, $544, $513, and $576 for Class 2b gasoline, 2b diesel, 3 gasoline, 3 diesel trucks and vans, respectively. All values are in 2008 dollars, are applicable in the 2014 model year and include a low complexity ICM of 1.17. Time based learning is considered applicable to mass reduction technologies.

The agencies have recently completed work on an Interim Joint Technical Assessment Report that considers light-duty GHG and fuel economy standards for the years 2017 through 2025.[171] In that report, the agencies have used updated cost estimates for mass reduction which were not available in time for use in this analysis but could be used in the final analysis. The agencies request comment on which mass reduction costs—those used in this draft analysis or those used in the Joint Technical Assessment Report—would be most appropriate for Class 2b & 3 trucks and vans along with supporting information.

(ii) Low Rolling Resistance Tires

Tire rolling resistance is the frictional loss associated mainly with the energy dissipated in the deformation of the tires under load and thus influences fuel efficiency and CO_2 emissions. Other tire design characteristics (*e.g.*, materials, construction, and tread design) influence durability, traction (both wet and dry grip), vehicle handling, and ride comfort in addition to rolling resistance. A typical LRR tire's attributes would include: increased tire inflation

pressure, material changes, and tire construction with less hysteresis, geometry changes (*e.g.*, reduced aspect ratios), and reduction in sidewall and tread deflection. These changes would generally be accompanied with additional changes to suspension tuning and/or suspension design.

EPA and NHTSA estimated a 1 to 2 percent increase in effectiveness with a 10 percent reduction in rolling resistance, which was based on the 2010 NAS Report findings and consistent with the 2012–2016 light-duty final rule.

Based on the 2012–2016 light-duty final rule and the 2010 NAS Report, the agencies have estimated the cost for LRR tires to be $6 per Class 2b truck or van, and $9 per Class 3 truck or van.[172] The higher cost for the Class 3 trucks and vans is due to the predominant use of dual rear tires and, thus, 6 tires per truck. Due to the commodity-based nature of this technology, cost learning is not applied. This technology is considered applicable to both gasoline and diesel.

(iii) Aerodynamic Drag Reduction

Many factors affect a vehicle's aerodynamic drag and the resulting power required to move it through the air. While these factors change with air density and the square and cube of vehicle speed, respectively, the overall drag effect is determined by the product of its frontal area and drag coefficient, Cd. Reductions in these quantities can therefore reduce fuel consumption and CO_2 emissions. Although frontal areas tend to be relatively similar within a vehicle class (mostly due to market-competitive size requirements), significant variations in drag coefficient can be observed. Significant changes to a vehicle's aerodynamic performance may need to be implemented during a redesign *(e.g.*, changes in vehicle shape). However, shorter-term aerodynamic reductions, with a somewhat lower effectiveness, may be achieved through the use of revised exterior components (typically at a model refresh in mid-cycle) and add-on devices that currently being applied. The latter list would include revised front and rear fascias, modified front air dams and rear valances, addition of rear deck lips and underbody panels, and lower aerodynamic drag exterior mirrors.

The 2012–2016 light-duty final rule estimated that a fleet average of 10 to 20 percent total aerodynamic drag reduction is attainable which equates to incremental reductions in fuel consumption and CO_2 emissions of 2 to 3 percent for both cars and trucks. These numbers are generally supported by confidential manufacturer data and public technical literature. For the heavy-duty truck category, a 5 to 10 percent total aerodynamic drag reduction was considered due to the different structure and use of these vehicles equating to incremental reductions in fuel consumption and CO_2 emissions of 1 to 2 percent.

Consistent with the 2012–2016 light-duty final rule, the agencies have estimated the cost for this technology at $54 (2008$) including a low complexity ICM of 1.17. This cost is applicable in the 2014 model year to both gasoline and diesel trucks and vans.

(3) What are the projected technology packages' effectiveness and cost?

The assessment of the proposed technology effectiveness was developed through the use of the EPA Lumped Parameter model developed for the light-duty rule. Many of the technologies were common with the light-duty assessment but the effectiveness of individual technologies was appropriately adjusted to match the expected effectiveness when implemented in a heavy-duty application. The model then uses the individual technology effectiveness levels but then takes into account technology synergies. The model is also designed to prevent double counting from technologies that may directly or indirectly impact the same physical attribute (*e.g.*, pumping loss reductions).

To achieve the levels of the proposed standards for gasoline and diesel powered heavy-duty vehicles, the technology packages were determined to generally require the technologies previously discussed respective to unique gasoline and diesel technologies. Although some of the technologies may already be implemented in a portion of heavy-duty vehicles, none of the technologies discussed are considered ubiquitous in the heavy-duty fleet. Also, as would be expected, the available test data shows that some vehicle models will not need the full complement of available technologies to achieve the proposed standards. Furthermore, many technologies can be further improved (*e.g.*, aerodynamic improvements) from today's best levels, and so allow for compliance without needing to apply a technology that a manufacturer might deem less desirable.

Technology costs for HD pickup trucks and vans are shown in Table III–11.

[172] "Tires and Passenger Vehicle Fuel Economy," Transportation Research Board Special Report 286, National Research Council of the National Academies, 2006, Docket EPA–HQ–OAR–2009–0472–0146.

Table III-11 Technology Costs for HD Pickup Trucks & Vans Inclusive of Indirect Cost Markups for the 2014MY (2008$)

Technology	Class 2b Gasoline	Class 2b Diesel	Class 3 Gasoline	Class 3 Diesel
Low friction lubes	$4	$4	$4	$4
Engine friction reduction	$108	N/A	$108	N/A
Coupled cam phasing	$46	N/A	$46	N/A
Cylinder deactivation	$193	N/A	$193	N/A
Stoichiometric gasoline direct injection	$395	N/A	$395	N/A
Engine improvements	N/A	$172	N/A	$172
8s automatic transmission (increment to 6s automatic transmission)	$231	$231	$231	$231
Improved accessories	N/A	$88	N/A	$88
Low rolling resistance tires	$6	$6	$9	$9
Aerodynamic improvements	$54	$54	$54	$54
Electric (or electro/hydraulic) power steering	$108	$108	$108	$108
Aftertreatment improvements	N/A	$110	N/A	$110
Mass reduction (5%)	$462	$544	$513	$576
Air conditioning	$21	$21	$21	$21
Total	$1,628	$1,338	$1,683	$1,373
At 15% phase-in in 2014	$244	$201	$252	$206

(4) Reasonableness of the Proposed Standards

The proposed standards are based on the application of the control technologies described in this section. These technologies are available within the lead time provided, as discussed in draft RIA Chapter 2.3. These controls are estimated to add costs of approximately $1,249 to $1,592 for MY 2018 heavy-duty pickups and vans. Reductions associated with these costs and technologies are considerable, estimated at a 12 percent reduction of CO_2eq emissions from the MY 2010 baseline for gasoline engine-equipped vehicles and 17 percent for diesel engine equipped vehicles, estimated to result in reductions of 21 MMT of CO_2eq emissions over the lifetimes of 2014 through 2018 MY vehicles.[173] The reductions are cost effective, estimated at $100 per ton of CO_2eq removed in 2030.[174] This cost is consistent with the light-duty rule which was estimated at $100 per ton of CO_2eq removed in 2020 excluding fuel savings. Moreover, taking into account the fuel savings associated with the program, the cost becomes −$200 per ton of CO_2eq in 2030. The cost of controls is fully recovered due to the associated fuel savings, with a payback period within the fifth and sixth year of ownership, as shown in Table VIII–6 below. Given the large, cost effective emission reductions based on use of feasible technologies which are available in the lead time provided, plus the lack of adverse impacts on vehicle safety or utility, EPA and NHTSA regard these proposed standards as appropriate and consistent with our respective statutory authorities under CAA section 202(a) and NHTSA's EISA authority under 49 U.S.C. 32902(k)(2).

C. Class 2b–8 Vocational Vehicles

Vocational vehicles cover a wide variety of applications which influence both the body style and usage patterns. They also are built using a complex process, which includes additional parties such as body builders. These factors have led the agencies to propose a vehicle standard for vocational vehicles for the first phase of the program that relies on less extensive addition of technology as well as focusing on the chassis manufacturer as the manufacturer subject to the standard. We believe that future rulemakings will consider increased stringency and possibly more application-specific standards. The agencies are proposing standards for the diesel and gasoline engines used in vocational vehicles, similar to those discussed above for Class 7 and 8 tractors.

(1) What technologies did the agencies consider to reduce the CO_2 emissions and fuel consumption of vocational vehicles?

Similar to the approach taken with tractors, the agencies evaluated aerodynamic, tire, idle reduction, weight reduction, hybrid powertrain, and engine technologies and their impact on reducing fuel consumption and GHG emissions. The engines used in vocational vehicles include both gasoline and diesel engines, thus, each type is discussed separately below. As explained in Section II.D.1.b, the proposed regulatory structure for heavy-duty engines separates the compression ignition (or "diesel") engines into three regulatory subcategories—light heavy, medium heavy, and heavy heavy diesel

[166] *See* Table VI–4.

[167] *See* Table VIII–3.

engines—while spark ignition (or "gasoline") engines are a single regulatory subcategory. Therefore, the subsequent discussion will assess each type of engine separately.

(a) Vehicle Technologies

Vocational vehicles typically travel fewer miles than combination tractors. They also tend to be used in more urban locations (with consequent stop and start drive cycles). Therefore the average speed of vocational vehicles is significantly lower than tractors. This has a significant effect on the types of technologies that are appropriate to consider for reducing CO_2 emissions and fuel consumption.

The agencies considered the type of technologies for vocational vehicles based on the energy losses of a typical vocational vehicle. The technologies are similar to the ones considered for tractors. Argonne National Lab conducted an energy audit using simulation tools to evaluate the energy losses of vocational vehicles, such as a Class 6 pickup and delivery truck. Argonne found that 74 percent of the energy losses are attributed to the engine, 13 percent to tires, 9 percent to aerodynamics, two percent to transmission losses, and the remaining four percent of losses to axles and accessories for a medium-duty truck traveling at 30 mph.[175]

Low Rolling Resistance Tires: Tires are the second largest contributor to energy losses of vocational vehicles, as found in the energy audit conducted by Argonne National Lab (as just mentioned). The range of rolling resistance of tires used on vocational vehicles today is large. This is in part due to the fact that the competitive pressure to improve rolling resistance of vocational vehicle tires has been less than that found in the line haul tire market. In addition, the drive cycles typical for these applications often lead truck buyers to value tire traction and durability more heavily than rolling resistance. Therefore, the agencies concluded that a regulatory program that seeks to optimize tire rolling resistance in addition to traction and durability can bring about fuel consumption and CO_2 emission reductions from this segment. The 2010 NAS report states that rolling resistance impact on fuel consumption reduces with mass of the vehicle and with drive cycles with more frequent starts and stops. The report found that the fuel consumption reduction opportunity for reduced rolling resistance ranged between one and three percent in the 2010 through 2020 timeframe.[176] The agencies estimate that average rolling resistance from tires in 2010 model year can be reduced by 10 percent by 2014 model year based on the tire development achievements over the last several years in the line haul truck market which would lead to a 2 percent reduction in fuel consumption based on GEM.

Aerodynamics: The Argonne National lab work shows that aerodynamics have less of an impact on vocational vehicle energy losses than do engines or tires. In addition, the aerodynamic performance of a complete vehicle is significantly influenced by the body of the truck. The agencies are not proposing to regulate body builders in this phase of regulations for the reasons discussed in Section II. Therefore, we are not basing any of the proposed standards for vocational vehicles on aerodynamic improvements. Nor would aerodynamic performance be input into GEM to demonstrate compliance.

Weight Reduction: NHTSA and EPA are also not basing any of the proposed standards on use of vehicle weight reduction. Thus, vehicle mass reductions would not be input into GEM. The vocational vehicle models are not designed to be application-specific. Therefore weight reductions are difficult to quantify.

Drivetrain: Optimization of vehicle gearing to engine performance through selection of transmission gear ratios, final drive gear ratios and tire size can play a significant role in reducing fuel consumption and GHGs. Optimization of gear selection versus vehicle and engine speed accomplished through driver training or automated transmission gear selection can provide additional reductions. The 2010 NAS report found that the opportunities to reduce fuel consumption in heavy-duty vehicles due to transmission and driveline technologies in the 2015 timeframe ranged between 2 and 8 percent.[177] Initially, the agencies considered reflecting transmission choices and technology in our standard setting process for both tractors and vocational vehicles (*see* previous discussion above on automated transmissions for tractors). We have however decided not to do so for the following reasons.

The primary factors that determine optimum gear selection are vehicle weight, vehicle aerodynamics, vehicle speed, and engine performance typically considered on a two dimensional map of engine speed and torque. For a given power demand (determined by speed, aerodynamics and vehicle mass) an optimum transmission and gearing setup will keep the engine power delivery operating at the best speed and torque points for highest engine efficiency. Since power delivery from the engine is the product of speed and torque a wide range of torque and speed points can be found that deliver adequate power, but only a smaller subset will provide power with peak efficiency. Said more generally, the design goal is for the transmission to deliver the needed power to the vehicle while maintaining engine operation within the engine's "sweet spot" for most efficient operation. Absent information about vehicle mass and aerodynamics (which determines road load at highway speeds) it is not possible to optimize the selection of gear ratios for lowest fuel consumption. Truck and chassis manufacturers today offer a wide range of tire sizes, final gear ratios and transmission choices so that final bodybuilders can select an optimal combination given the finished vehicle weight, general aerodynamic characteristics and expected average speed. In order to set fuel efficiency and GHG standards that would reflect these optimizations, the agencies would need to regulate a wide range of small entities that are final bodybuilders, would need to set a large number of uniquely different standards to reflect the specific weight and aerodynamic differences and finally would need test procedures to evaluate these differences that would not themselves be excessively burdensome. Finally, the agencies would need the underlying data regarding effectively all of the vocational trucks produced today in order to determine the appropriate standards. Because the market is already motivated to reach these optimizations themselves today, because we have insufficient data to determine appropriate standards, and finally, because we believe the testing burden would be unjustifiably high, we are not proposing to reflect transmission and gear ratio optimization in our GEM model or in our standard setting.

We are broadly seeking comment on our reasons for not reflecting these technology choices including recommendations for ways that the agencies could effectively reflect transmission related improvements. The agencies welcome comment on transmission and driveline technologies

[175] Argonne National Lab. Evaluation of Fuel Consumption Potential of Medium and Heavy-duty Vehicles through Modeling and Simulation. October 2009. Page 89.

[176] *See* 2010 NAS Report, Note 111, page 146.

[177] *See* 2010 NAS Report, Note 111, pp 134 and 137.

specific to the vocational vehicle market that can achieve fuel consumption and GHG emissions reductions.

Idle Reduction: Episodic idling by vocational vehicles occurs during the workday, unlike the overnight idling of combination tractors. Vocational vehicle idling can be divided into two typical types. The first type is idling while waiting—such as during a pickup or delivery. This type of idling can be reduced through automatic engine shut-offs. The second type of idling is to accomplish PTO operation, such as compacting garbage or operating a bucket. The agencies have found only one study that quantifies the emissions due to idling conducted by Argonne National Lab based on 2002 VIUS data.[178] EPA conducted a work assignment to assist in characterizing PTO operations. The study of a utility truck used in two different environments (rural and urban) and a refuse hauler found that the PTO operated on average 28 percent of time relative to the total time spent driving and idling. The use of hybrid powertrains to reduce idling is discussed below.

Hybrid Powertrains: Several types of vocational vehicles are well suited for hybrid powertrains. Vehicles such as utility or bucket trucks, delivery vehicles, refuse haulers, and buses have operational usage patterns with either a significant amount of stop-and-go activity or spend a large portion of their operating hours idling the main engine to operate a PTO unit. The industry is currently developing three types of hybrid powertrain systems—hydraulic, electric, and plug-in electric. The hybrids developed to date have seen fuel consumption and CO_2 emissions reductions between 20 and 50 percent in the field. However, there are still some key issues that are restricting the penetration of hybrids, including overall system cost, battery technology, and lack of cost-effective electrified accessories. The agencies are proposing to include hybrid powertrains as a technology to meet the vocational vehicle standard, as described in Section IV. However, the agencies are not proposing a vocational vehicle standard predicated on using a specific penetration of hybrids. We have not predicated the standards based on the use of hybrids reflecting the still nascent level of technology development and the very small fraction of vehicle sales they would be expected to account for in this timeframe—on the order of only a percent or two. Were we to overestimate the number of hybrids that could be produced, we would set a standard that is not feasible. We believe that it is more appropriate given the status of technology development and our high hopes for future advancements in hybrid technologies to encourage their production through incentives. The agencies welcome comments on this approach.

(b) Gasoline Engine Technologies

The gasoline (or spark ignited) engines certified and sold as loose engines into the heavy-duty truck market are typically large V8 and V10 engines produced by General Motors and Ford. The basic engine architecture of these engines is the same as the versions used in the heavy-duty pickup trucks and vans. Therefore, the technologies analyzed by the agencies mirror the gasoline engine technologies used in the heavy-duty pickup truck analysis in Section III.B above.

Building on the technical analysis underlying the 2012–2016 MY light-duty vehicle rule, the agencies took a fresh look at technology effectiveness values for purposes of this proposal using a starting point the estimates from that rule. The agencies then considered the impact of test procedures (such as higher test weight of HD pickup trucks and vans) on the effectiveness estimates. The agencies also considered other sources such as the 2010 NAS Report, recent CAFE compliance data, and confidential manufacturer estimates of technology effectiveness. NHTSA and EPA engineers reviewed effectiveness information from the multiple sources for each technology and ensured that such effectiveness estimates were based on technology hardware consistent with the BOM components used to estimate costs.

The agencies note that the effectiveness values estimated for the technologies may represent average values, and do not reflect the potentially-limitless spectrum of possible values that could result from adding the technology to different vehicles. For example, while the agencies have estimated an effectiveness of 0.5 percent for low friction lubricants, each vehicle could have a unique effectiveness estimate depending on the baseline vehicle's oil viscosity rating. For purposes of this NPRM, NHTSA and EPA believe that employing average values for technology effectiveness estimates is an appropriate way of recognizing the potential variation in the specific benefits that individual manufacturers (and individual engines) might obtain from adding a fuel-saving technology. However, the agencies seek comment on whether additional levels of specificity beyond that already provided would improve the analysis for the final rules, and if so, how those levels of specificity should be analyzed.

Baseline Engine: Similar to the gasoline engine used as the baseline in the light-duty GHG rule, the agencies assumed the baseline engine in this segment to be a naturally aspirated, overhead valve V8 engine. The following discussion of effectiveness is generally in comparison to 2010 baseline engine performance.

The technologies the agencies considered include the following:

Engine Friction Reduction: In addition to low friction lubricants, manufacturers can also reduce friction and improve fuel consumption by improving the design of engine components and subsystems. Examples include improvements in low-tension piston rings, piston skirt design, roller cam followers, improved crankshaft design and bearings, material coatings, material substitution, more optimal thermal management, and piston and cylinder surface treatments. The 2010 NAS, NESCCAF [179] and EEA [180] reports as well as confidential manufacturer data used in the light-duty vehicle rulemaking suggested a range of effectiveness for engine friction reduction to be between 1 to 3 percent. NHTSA and EPA continue to believe that this range is accurate.

Coupled Cam Phasing: Valvetrains with coupled (or coordinated) cam phasing can modify the timing of both the inlet valves and the exhaust valves an equal amount by phasing the camshaft of a single overhead cam engine or an overhead valve engine. Based on the 2012–2016 MY light-duty vehicle rule, previously-received confidential manufacturer data, and the NESCCAF report, NHTSA and EPA estimated the effectiveness of couple cam phasing CCP to be between 1 and 4 percent. NHTSA and EPA reviewed this estimate for purposes of the NPRM, and continue to find it accurate.

Cylinder Deactivation: In conventional spark-ignited engines throttling the airflow controls engine torque output. At partial loads, efficiency can be improved by using cylinder deactivation instead of throttling. Cylinder deactivation can improve engine efficiency by disabling or deactivating (usually) half of the

[178] Gaines, Linda, A. Vyas, J. Anderson (Argonne National Laboratory). *Estimation of Fuel Use by Idling Commercial Trucks.* January 2006.

[179] Northeast States Center for a Clean Air Future. "Reducing Greenhouse Gas Emissions from Light-Duty Motor Vehicles." September 2004.

[180] Energy and Environmental Analysis, Inc. "Technology to Improve the Fuel Economy of Light Duty Trucks to 2015." May 2006.

cylinders when the load is less than half of the engine's total torque capability—the valves are kept closed, and no fuel is injected—as a result, the trapped air within the deactivated cylinders is simply compressed and expanded as an air spring, with reduced friction and heat losses. The active cylinders combust at almost double the load required if all of the cylinders were operating. Pumping losses are significantly reduced as long as the engine is operated in this "part cylinder" mode. Effectiveness improvements scale roughly with engine displacement-to-vehicle weight ratio—the higher displacement-to-weight vehicles, operating at lower relative loads for normal driving, have the potential to operate in part-cylinder mode more frequently. Therefore, the agencies reduced the effectiveness assumed from this technology for trucks because of the lower displacement-to-weight ratio relative to light-duty vehicles. NHTSA and EPA adjusted the 2010 light-duty vehicle final rule estimates using updated power to weight ratings of heavy-duty trucks and confidential business information and confirmed a range of 3 to 4 percent for these vehicles.

Stoichiometric gasoline direct injection: SGDI (also known as spark-ignition direct injection engines) inject fuel at high pressure directly into the combustion chamber (rather than the intake port in port fuel injection). Direct injection of the fuel into the cylinder improves cooling of the air/fuel charge within the cylinder, which allows for higher compression ratios and increased thermodynamic efficiency without the onset of combustion knock. Recent injector design advances, improved electronic engine management systems and the introduction of multiple injection events per cylinder firing cycle promote better mixing of the air and fuel, enhance combustion rates, increase residual exhaust gas tolerance and improve cold start emissions. SGDI engines achieve higher power density and match well with other technologies, such as boosting and variable valvetrain designs. The 2012–2016 MY light-duty vehicle final rule estimated the effectiveness of SGDI to be between 2 and 3 percent. NHTSA and EPA revised these estimated accounting for the use and testing methods for these vehicles along with confidential business information estimates received from manufacturers while developing the proposal. Based on these revisions, NHTSA and EPA estimate the range of 1 to 2 percent for SGDI.

(c) Diesel Engine Technologies

Different types of diesel engines are used in vocational vehicles, depending on the application. They fall into the categories of Light, Medium, and Heavy Heavy-duty Diesel engines. The Light Heavy-duty Diesel engines typically range between 4.7 and 6.7 liters displacement. The Medium Heavy-duty Diesel engines typically have some overlap in displacement with the Light Heavy-duty Diesel engines and range between 6.7 and 9.3 liters. The Heavy Heavy-duty Diesel engines typically are represented by engines between 10.8 and 16 liters.

Baseline Engine: There are three baseline diesel engines, a Light, Medium, and a Heavy Heavy-duty Diesel engine. The agencies developed the baseline diesel engine as a 2010 model year engine with an aftertreatment system which meets EPA's 0.2 grams of NO_X/bhp-hr standard with an SCR system along with EGR and meets the PM emissions standard with a diesel particulate filter with active regeneration. The engine is turbocharged with a variable geometry turbocharger. The following discussion of technologies describes improvements over the 2010 model year baseline engine performance, unless otherwise noted. Further discussion of the baseline engine and its performance can be found in Section III.C.2.(c)(i) below. The following discussion of effectiveness is generally in comparison to 2010 baseline engine performance, and is in reference to performance in terms of the Heavy-duty FTP that would be used for compliance for these engine standards. This is in comparison to the steady state SET procedure that would be used for compliance purposes for the engines used in Class 7 and 8 tractors. *See* Section II.B.2.(i) above.

Turbochargers: Improved efficiency of a turbocharger compressor or turbine could reduce fuel consumption by approximately 1 to 2 percent over today's variable geometry turbochargers in the market today. The 2010 NAS report identified technologies such as higher pressure ratio radial compressors, axial compressors, and dual stage turbochargers as design paths to improve turbocharger efficiency.

Low Temperature Exhaust Gas Recirculation: Most LHDD, MHDD, and HHDD engines sold in the U.S. market today use cooled EGR, in which part of the exhaust gas is routed through a cooler (rejecting energy to the engine coolant) before being returned to the engine intake manifold. EGR is a technology employed to reduce peak combustion temperatures and thus NO_X. Low-temperature EGR uses a larger or secondary EGR cooler to achieve lower intake charge temperatures, which tend to further reduce NO_X formation. If the NO_X requirement is unchanged, low-temperature EGR can allow changes such as more advanced injection timing that will increase engine efficiency slightly more than one percent. Because low-temperature EGR reduces the engine's exhaust temperature, it may not be compatible with exhaust energy recovery systems such as turbocompound or a bottoming cycle.

Engine Friction Reduction: Reduced friction in bearings, valve trains, and the piston-to-liner interface will improve efficiency. Any friction reduction must be carefully developed to avoid issues with durability or performance capability. Estimates of fuel consumption improvements due to reduced friction range from 0.5 to 1.5 percent.[181]

Selective catalytic reduction: This technology is common on 2010 heavy-duty diesel engines. Because SCR is a highly effective NO_X aftertreatment approach, it enables engines to be optimized to maximize fuel efficiency, rather than minimize engine-out NO_X. 2010 SCR systems are estimated to result in improved engine efficiency of approximately 4 to 5 percent compared to a 2007 in-cylinder EGR-based emissions system and by an even greater percentage compared to 2010 in-cylinder approaches.[182] As more effective low-temperature catalysts are developed, the NO_X conversion efficiency of the SCR system will increase. Next-generation SCR systems could then enable still further efficiency improvements; alternatively, these advances could be used to maintain efficiency while down-sizing the aftertreatment. We estimate that continued optimization of the catalyst could offer 1 to 2 percent reduction in fuel use over 2010 model year systems in the 2014 model year.[183] The agencies also estimate that continued refinement and optimization of the SCR systems could provide an additional 2 percent reduction in the 2017 model year.

[182] Stanton, D. "Advanced Diesel Engine Technology Development for High Efficiency, Clean Combustion." Cummins, Inc. Annual Progress Report 2008 Vehicle Technologies Program: Advanced Combustion Engine Technologies, U.S. Department of Energy. Pp. 113–116. December 2008.

[183] TIAX Assessment of Fuel Economy Technologies for Medium and Heavy-duty Vehicles, Report to National Academy of Sciences, Nov 19, 2009, pg. 4–9.

Improved Combustion Process: Fuel consumption reductions in the range of 1 to 4 percent are identified in the 2010 NAS report through improved combustion chamber design, higher fuel injection pressure, improved injection shaping and timing, and higher peak cylinder pressures.[184]

Reduced Parasitic Loads: Accessories that are traditionally gear or belt driven by a vehicle's engine can be optimized and/or converted to electric power. Examples include the engine water pump, oil pump, fuel injection pump, air compressor, power-steering pump, cooling fans, and the vehicle's air-conditioning system. Optimization and improved pressure regulation may significantly reduce the parasitic load of the water, air and fuel pumps. Electrification may result in a reduction in power demand, because electrically powered accessories (such as the air compressor or power steering) operate only when needed if they are electrically powered, but they impose a parasitic demand all the time if they are engine driven. In other cases, such as cooling fans or an engine's water pump, electric power allows the accessory to run at speeds independent of engine speed, which can reduce power consumption. The TIAX study used 2 to 4 percent fuel consumption improvement for accessory electrification, with the understanding that electrification of accessories will have more effect in short-haul/urban applications and less benefit in line-haul applications.[185]

(2) What is the projected technology package's effectiveness and cost?

(a) Vocational Vehicles

(i) Baseline Vocational Vehicle Performance

The baseline vocational vehicle model is defined in GEM, as described in draft RIA Chapter 4.4.6. The agencies used a baseline rolling resistance coefficient for today's vocational vehicle fleet of 9 kg/metric ton.[186] Further vehicle technology is not included in this baseline, as discussed below in the discussion of the baseline vocational vehicle. The baseline engine fuel consumption represents a 2010 model year diesel engine, as described in draft RIA Chapter 4. Using these values, the baseline performance of these vehicles is included in Table III–12.

Table III-12: Baseline Vocational Vehicle Performance

	Vocational Vehicle		
	Light Heavy-Duty	Medium Heavy-Duty	Heavy Heavy-Duty
Fuel Consumption Baseline (gallon/1,000 ton-mile)	37.6	22.3	11.3
CO_2 Baseline (grams CO_2/ton-mile)	382	227	115

(ii) Vocational Vehicle Technology Package

The proposed program for vocational vehicles for this phase of regulatory standards is limited to performance of tire and engine technologies. Aerodynamics technology, weight reduction, drive train improvement, and hybrid power trains are not included for the reasons discussed above in Section III.C(1). The agencies are seeking comment on the appropriateness of this approach.

The assessment of the proposed technology effectiveness was developed through the use of the GEM. To account for the two proposed engine standards, EPA is proposing the use of a 2014 model year fuel consumption map in GEM to derive the 2014 model year truck standard and a 2017 model year fuel consumption map to derive the 2017 model year truck standard. (These fuel consumption maps reflect the main standards proposed for HD diesel engines, not the alternative standards.) EPA estimates that the rolling resistance of tires can be reduced by 10 percent in the 2014 model year. The vocational vehicle standards for all three regulatory categories were determined using a tire rolling resistance coefficient of 8.1 kg/metric ton with a 100 percent application rate by the 2014 model year. The set of input parameters which are modeled in GEM are shown in Table III–13.

Table III-13: GEM Inputs for Proposed Vocational Vehicle Standards

	2014 MY	2017 MY
Engine	2014 MY 7L for LHD/MHD and 15L for HHD Trucks	2017 MY 7L for LHD/MHD and 15L for HHD Trucks
Tire Rolling Resistance (kg/metric ton)	8.1	8.1

[184] *See* 2010 NAS Report, Note 111, page 56.

[185] TIAX. 2009. Pages 3–5.

[186] The baseline tire rolling resistance for this segment of vehicles was derived for the proposal based on the current baseline tractor and passenger car tires. The baseline tractor drive tire has a rolling resistance of 8.2 kg/metric ton based on SmartWay testing. The average passenger car has a tire rolling resistance of 9.75 kg/metric ton based on a presentation made to CARB by the Rubber Manufacturer's Association. Additional details are available in the draft RIA Chapter 2.

The agencies developed the proposed standards by using the engine and tire rolling resistance inputs in the GEM, as shown in Table III–13. The percent reductions shown in Table III–14 reflect improvements over the 2010 model year baseline vehicle with a 2010 model year baseline engine.

Table III-14: Proposed Vocational Vehicle Standards and Percent Reductions

	Vocational Vehicle		
	Light Heavy-Duty	Medium Heavy-Duty	Heavy Heavy-Duty
2016 MY Fuel Consumption Standard (gallon/1,000 ton-mile)	35.2	20.8	10.7
2017 MY Fuel Consumption Standard (gallon/1,000 ton-mile)	33.8	20.0	10.5
2014 MY CO_2 Standard (grams CO_2/ton-mile)	358	212	109
2017 MY CO_2 Standard (grams CO_2/ton-mile)	344	204	107
Percent Reduction from 2010 baseline in 2014 MY	6%	7%	6%
Percent Reduction from 2010 baseline in 2017 MY	10%	10%	7%

(iii) Technology Package Cost

EPA and NHTSA developed the costs of LRR tires based on the ICF report. The estimated cost per truck is $155 (2008$) for LHD and MHD trucks and $186 (2008$) for HHD trucks. These costs include a low complexity ICM of 1.14 and are applicable in the 2014 model year.

(iv) Reasonableness of the Proposed Standards

The proposed standards would not only add only a small amount to the vehicle cost, but are highly cost effective, an estimated $20 ton of CO_2eq per vehicle in 2030.[187] This is even less than the estimated cost effectiveness for CO_2eq removal under the light-duty vehicle rule, already considered by the agencies to be a highly cost effective reduction.[188] Moreover, the modest cost of controls is recovered almost immediately due to the associated fuel savings, as shown in the payback analysis included in Table VIII–7. Given that the standards are technically feasible within the lead time afforded by the 2014 model year, are inexpensive and highly cost effective, and do not have other adverse potential impacts (*e.g.,* there are no projected negative impacts on safety or vehicle utility), the proposed standards represent a reasonable choice under section 202(a) of the CAA and NHTSA's EISA authority under 49 U.S.C. 32902(k)(2), and the agencies believe that the standards are consistent with their respective authorities.

(v) Alternative Vehicle Standards Considered

The agencies are not proposing vehicle standards less stringent than the proposed standards because the agencies believe these standards are highly cost effective, as just explained.

The agencies considered proposing truck standards which are more stringent reflecting the inclusion of hybrid powertrains in those vocational vehicles where use of hybrid powertrains is appropriate. The agencies estimate that a 25 percent utilization rate of hybrid powertrains in MY 2017 vocational vehicles would add, on average, $30,000 to the cost of each vehicle and more than double the cost of the rule for this sector. *See* the draft RIA at Chapter 6.1.8. The emission reductions associated with these very high costs appear to be modest. *See* the draft RIA Table 6–14. In addition, the agencies are proposing flexibilities in the form of generally applicable credit opportunities for advanced technologies, to encourage use of hybrid powertrains. *See* Section IV.C.2 below. The agencies welcome comments on whether hybrid powertrain technologies are appropriate to consider for the 2017 model year standard, or if not, then when would they be appropriate.

(b) Gasoline Engines

(i) Baseline Gasoline Engine Performance

EPA and NHTSA developed the reference heavy-duty gasoline engines to represent a 2010 model year engine compliant with the 0.2 g/bhp-hr NO_X standard for on-highway heavy-duty engines.

NHTSA and EPA developed the baseline fuel consumption and CO_2 emissions for the gasoline engines from manufacturer reported CO_2 values used in the certification of non-GHG pollutants. The baseline engine for the analysis was developed to represent a 2011 model year engine, because this is the most current information available. The average CO_2 performance of the heavy-duty gasoline engines was 660 g/bhp-hour, which will be used as a baseline. The baseline gasoline engines are all stoichiometric port fuel injected V–8 engines without cam phasers or other variable valve timing technologies. While they may reflect some degree of static valve timing optimization for fuel efficiency they do not reflect the potential to adjust timing with engine speed.

(ii) Gasoline Engine Technology Package Effectiveness

The gasoline engine technology package includes engine friction reduction, coupled cam phasing, and SGDI to produce an overall five percent reduction from the reference engine based on the Heavy-duty Lumped Parameter model. The agencies are projecting a 100% application rate of

[187] *See* Section VIII.D.

[188] The light-duty rule had an estimated cost per ton of $50 when considering the vehicle program costs only and a cost of −$210 per ton considering the vehicle program costs along with fuel savings in 2030. *See* 75 FR 25515, Table III.H.3–1.

this technology package to the heavy-duty gasoline engines, which results in a CO_2 standard of 627 g/bhp-hr and a fuel consumption standard of 7.05 gallon/100 bhp-hr. As discussed in Section II.D.b.ii, the agencies propose that the gasoline engine standards begin in the 2016 model year based on the agencies' projection of the engine redesign schedules of the small number of engines in this category.

(iii) Gasoline Engine Technology Package Cost

For costs, the agencies reconsidered both the direct or "piece" costs and indirect costs of individual components of technologies. For the direct costs, the agencies followed a BOM approach employed by NHTSA and EPA in the 2012–2016 LD rule. NHTSA and EPA are proposing to use the marked up gasoline engine technology costs developed for the HD Pickup Truck and Van segment because they are made by the same manufacturers (primarily by Ford and GM) and, the same products simply sold as loose engines rather than complete vehicles. Hence the engine cost estimates are fundamentally the same. The costs are summarized in Table III–15. The costs shown in Table III–15 include a low complexity ICM of 1.17 and are applicable in the 2016 model year. No learning effects are applied to engine friction reduction costs, while time based learning is considered applicable to both coupled cam phasing and SGDI.

Table III-15: Heavy-duty Gasoline Engine Technology Costs inclusive of Indirect Cost Markups (2008$)

	2016MY
Engine Friction Reduction	$88
Coupled Cam Phasing	$43
Stoichiometric Gas Direct Injection	$372
Total	$504

(iv) Reasonableness of the Proposed Standard

The proposed engine standards appear to be reasonable and consistent with the agencies' respective authorities. With respect to the 2016 MY standard, all of the technologies on which the standards are predicated have been demonstrated and their effectiveness is well documented. The proposal reflects a 100 percent application rate for these technologies. The costs of adding these technologies remain modest across the various engine classes as shown in Table III–15. Use of these technologies would add only a small amount to the cost of the vehicle,[189] and the associated reductions are highly cost effective, an estimated $30 per ton of CO_2eq per vehicle.[190] This is even more cost effective than the estimated cost effectiveness for CO_2eq removal and fuel economy improvement under the light-duty vehicle rule, already considered by the agencies to be a highly cost effective reduction.[191] Accordingly, EPA and NHTSA view these standards as reflecting an appropriate balance of the various statutory factors under section 202(a) of the CAA and under NHTSA's EISA authority at 49 U.S.C. 32902(k)(2).

(v) Alternative Gasoline Engine Standards Considered

The agencies are not proposing gasoline standards less stringent than the proposed standards because the agencies believe these standards are feasible in the lead time provided, inexpensive, and highly cost effective. We welcome comments supplemented with data on each aspect of this determination most importantly on individual gasoline engine technology efficacy to reduce fuel consumption and GHGs as well was our estimates of individual technology cost and lead-time.

The proposed rule reflects 100 percent penetration of the technology package on whose performance the standard is based, so some additional technology would need to be added to obtain further improvements. The agencies considered proposing gasoline engine standards which are more stringent reflecting the inclusion of cylinder deactivation and other advanced technologies. However, the agencies are not proposing this level of stringency because our assessment is that these technologies would not be available for production by the 2017 model year. The agencies welcome comments on whether other gasoline technologies are appropriate to consider for the 2017 model year standard, or if not, then when would they be appropriate.

(c) Diesel Engines

(i) Baseline Diesel Engine Performance

EPA and NHTSA developed the baseline heavy-duty diesel engines to represent a 2010 model year engine compliant with the 0.2 g/bhp-hr NO_X standard for on-highway heavy-duty engines.

The agencies utilized 2007 through 2011 model year CO_2 certification levels from the Heavy-duty FTP cycle as the basis for the baseline engine CO_2 performance. The pre-2010 data are subsequently adjusted to represent 2010 model year engine maps by using predefined technologies including SCR and other systems that are being used in current 2010 production. The engine CO_2 results were then sales weighted within each regulatory subcategory to develop an industry average 2010 model year reference engine, as shown in Table III–16. The level of CO_2 emissions and fuel consumption of these engines varies significantly, where the engine with the highest CO_2 emissions is estimated to be 20 percent greater than the sales weighted average. Details of this analysis are included in draft RIA Chapter 2.

[189] Sample 2010 MY vocational vehicles range in price between $40,000 for a Class 4 work truck to approximately $200,000 for a Class 8 refuse hauler. *See* pages 16–17 of ICF's "Investigation of Costs for Strategies to Reduce Greenhouse Gas Emissions for Heavy-Duty On-Road Vehicles." July 2010.

[190] *See* Vocational Vehicle CO_2 savings and technology costs for Alternative 2 in Section IX.B.

[191] The light-duty rule had an estimated cost per ton of $50 when considering the vehicle program costs only and a cost of −$210 per ton considering the vehicle program costs along with fuel savings in 2030. *See* 75 FR 25515, Table III.H.3–1.

Table III-16: 2010 Model Year Reference Diesel Engine Performance Over the Heavy-duty FTP Cycle

	CO_2 Emissions (g/bhp-hr)	Fuel Consumption (gallon/100 bhp-hr)
LHD Diesel	630	6.19
MHD Diesel	630	6.19
HHD Diesel	584	5.74

(ii) Diesel Engine Packages

The diesel engine technology packages for the 2014 model year include engine friction reduction, improved aftertreatment effectiveness, improved combustion processes, and low temperature EGR system optimization. The improvements in parasitic and friction losses come through piston designs to reduce friction, improved lubrication, and improved water pump and oil pump designs to reduce parasitic losses. The aftertreatment improvements are available through lower backpressure of the systems and optimization of the engine-out NO_X levels. Improvements to the EGR system and air flow through the intake and exhaust systems, along with turbochargers can also produce engine efficiency improvements. It should be pointed out that individual technology improvements are not additive to each other due to the interaction of technologies. The agencies assessed the impact of each technology over the Heavy-duty FTP and project an overall cycle improvement in the 2014 model year of 3 percent for HHD diesel engines and 5 percent for LHD and MHD diesel engines, as detailed in draft RIA Chapter 2.4.2.9 and 2.4.2.10. EPA used a 100 percent application rate of this technology package to determine the level of the proposed 2014 MY standards

Recently, EPA's heavy-duty highway engine program for criteria pollutants provided new emissions standards for the industry in three year increments. The heavy-duty engine manufacturer product plans have fallen into three year cycles to reflect this environment. EPA is proposing set CO_2 emission standards recognizing the opportunity for technology improvements over this timeframe while reflecting the typical heavy-duty engine manufacturer product plan cycles. Thus, the agencies are proposing to establish initial standards for the 2014 model year and a more stringent standard for heavy-duty engines beginning in the 2017 model year.

The 2017 model year technology package for LHD and MHD diesel engine includes continued development and refinement of the 2014 model year technology package, in particular the additional improvement to aftertreatment systems. This package leads to a projected 9 percent reduction for LHD and MHD diesel engines in the 2017 model year. The HHD diesel engine technology packages for the 2017 model year include the continued development of the 2014 model year technology package plus turbocompounding. A similar approach to evaluating the impact of individual technologies as taken to develop the overall reduction of the 2014 model year package was taken with the 2017 model year package. The Heavy-duty FTP cycle improvements lead to a 5 percent reduction on the cycle for HHDD, as detailed in draft RIA Chapter 2.4.2.13. The agencies used a 100 percent application rate of the technology package to determine the proposed 2017 MY standards. The agencies believe that bottom cycling technologies are still in the development phase and will not be ready for production by the 2017 model year.[192] Therefore, these technologies were not included in determining the stringency of the proposed standards. However, we do believe the bottoming cycle approach represents a significant opportunity to reduce fuel consumption and GHG emissions in the future. EPA and NHTSA are therefore both proposing provisions described in Section IV to create incentives for manufacturers to continue to invest to develop this technology.

The overall projected improvements in CO_2 emissions and fuel consumption over the baseline are included in Table III–17.

Table III-17: Percent Fuel Consumption and CO_2 Emission Reductions Over the Heavy-duty FTP Cycle

	2014	2017
LHD Diesel	5%	9%
MHD Diesel	5%	9%
HHD Diesel	3%	5%

(iii) Technology Package Costs

NHTSA and EPA jointly developed costs associated with the engine technologies to assess an overall package cost for each regulatory category. Our engine cost estimates for diesel engines used in vocational vehicles include a separate analysis of the incremental part costs, research and development activities, and additional equipment, such as emissions equipment to measure N_2O emissions. Our general approach used elsewhere in this proposal (for HD pickup trucks, gasoline engines, Class 7 and 8 tractors, and Class 2b–8 vocational vehicles) estimates a direct manufacturing cost for a part and marks it up based on a factor to account for indirect costs. *See also* 75 FR 25376. We believe that approach is

[192] TIAX noted in their report to the NAS panel that the engine improvements beyond 2015 model year included in their report are highly uncertain, though they include waste heat recovery in the engine package for 2016 through 2020 (page 4–29).

appropriate when compliance with proposed standards is achieved generally by installing new parts and systems purchased from a supplier. In such a case, the supplier is conducting the bulk of the research and development on the new parts and systems and including those costs in the purchase price paid by the original equipment manufacturer. The indirect costs incurred by the original equipment manufacturer need not include much cost to cover research and development since the bulk of that effort is already done. For the MHD and HHD diesel engine segment, however, the agencies believe we can make a more accurate estimate of technology cost using this alternate approach because the primary cost is not expected to be the purchase of parts or systems from suppliers or even the production of the parts and systems, but rather the development of the new technology by the original equipment manufacturer itself. Therefore, the agencies believe it more accurate to directly estimate the indirect costs. EPA commonly uses this approach in cases where significant investments in research and development can lead to an emission control approach that requires no new hardware. For example, combustion optimization may significantly reduce emissions and cost a manufacturer millions of dollars to develop but will lead to an engine that is no more expensive to produce. Using a bill of materials approach would suggest that the cost of the emissions control was zero reflecting no new hardware and ignoring the millions of dollars spent to develop the improved combustion system. Details of the cost analysis are included in the draft RIA Chapter 2. To reiterate, we have used this different approach because the MHD and HHD diesel engines are expected to comply in large part via technology changes that are not reflected in new hardware but rather knowledge gained through laboratory and real world testing that allows for improvements in control system calibrations—changes that are more difficult to reflect through direct costs with indirect cost multipliers.

The agencies developed the engineering costs for the research and development of diesel engines with lower fuel consumption and CO_2 emissions. The aggregate costs for engineering hours, technician support, dynamometer cell time, and fabrication of prototype parts are estimated at $6,750,000 per manufacturer per year over the five years covering 2012 through 2016. In aggregate, this averages out to $280 per engine during 2012 through 2016 using a very rough annual sales value of 600,000 LHD, MHD and HHD diesel engines. The agencies also are estimating costs of $100,000 per engine manufacturer per engine class (LHD, MHD and HHD diesel) to cover the cost of purchasing photo-acoustic measurement equipment for two engine test cells. This would be a one-time cost incurred in the year prior to implementation of the standard (*i.e.,* the cost would be incurred in 2013). In aggregate, this averages out to $4 per engine in 2013 using a very rough annual sales value of 600,000 LHD, MHD and HHD diesel engines.

EPA also developed the incremental piece cost for the components to meet each of the 2014 and 2017 standards. These costs shown in Table III–18 which include a low complexity ICM of 1.11; time based learning is considered applicable to each technology.

Table III-18: Heavy-duty Diesel Engine Component Costs inclusive of Indirect Cost Markups (2008$)

	2014 Model Year	2017 Model Year
Cylinder Head (flow optimized, increased firing pressure, improved thermal management)	$6 (MHD & HH) $10 (LHD)	$6 (MHD & HHD) $9 (LHD)
Exhaust Manifold (flow optimized, improved thermal management)	$0	$0
Turbocharger (improved efficiency)	$17	$16
EGR Cooler (improved efficiency)	$3	$3
Water Pump (optimized, variable vane, variable speed)	$87	$79
Oil Pump (optimized)	$4	$4
Fuel Pump (higher working pressure, increased efficiency, improved pressure regulation)	$4	$4
Fuel Rail (higher working pressure)	$10 (MHD & HHD) $11 (LHD)	$9 (MHD & HHD) $10 (LHD)
Fuel Injector (optimized, improved multiple event control, higher working pressure)	$10 (MHD & HHD) $14 (LHD)	$9 (MHD & HHD) $13 (LHD)
Piston (reduced friction skirt, ring and pin)	$3	$2
Aftertreatment system (improved effectiveness SCR, dosing, dpf)[a]	$0 (MHD & HHD) $111 (LHD)	$0 (MHD & HHD) $101 (LHD)
Valve Train (reduced friction, roller tappet)	$78 (MHD) $104 (LHD)	$71 (MHD) $95 (LHD)

Note:
[a] Note that costs for aftertreatment improvements for MHD and HHD diesel engines are covered via the engineering costs (see text). For LH diesel engines, we have included the cost of aftertreatment improvements as a technology cost.

The overall costs for each diesel engine regulatory subcategory are included in Table III–19.

Table III-19: Diesel Engine Technology Costs per Engine (2008$)

	2014	2017
LHD Diesel	$369	$337
MHD Diesel	$223	$203
HHD Diesel	$145	$132

(iv) Reasonableness of the Proposed Standards

The proposed engine standards appear to be reasonable and consistent with the agencies' respective authorities. With respect to the 2014 and 2017 MY standards, all of the technologies on which the standards have already been demonstrated and their effectiveness is well documented. The proposal reflects a 100 percent application rate for these technologies. The costs of adding these technologies remain modest across the various engine classes as shown in Table III–19. Use of these technologies would add only a small amount to the cost of the vehicle,[193] and the associated reductions are highly cost effective, an estimated $30 per ton of CO_2eq per vehicle.[194] This is even more cost effective than the estimated cost effectiveness for CO_2eq removal and fuel economy improvement under the light-duty vehicle rule, already considered by

[193] Sample 2010 MY vocational vehicles range in price between $40,000 for a Class 4 work truck to approximately $200,000 for a Class 8 refuse hauler. *See* pages 16–17 of ICF's "Investigation of Costs for Strategies to Reduce Greenhouse Gas Emissions for Heavy-Duty On-Road Vehicles." July 2010.

[194] *See* Vocational Vehicle CO_2 savings and technology costs for Alternative 2 in Section IX.B.

the agencies to be a highly cost effective reduction.[195] Accordingly, EPA and NHTSA view these standards as reflecting an appropriate balance of the various statutory factors under section 202(a) of the CAA and under NHTSA's EISA authority at 49 U.S.C. 32902(k)(2).

(v) Alternative Diesel Engine Standards Considered

Other than the specific proposal related to legacy engine products, the agencies are not proposing diesel engine standards less stringent than the proposed standards because the agencies believe these standards are highly cost effective. We welcome comments supplemented with data on each aspect of this determination most importantly on individual engine technology efficacy to reduce fuel consumption and GHGs as well as our estimates of individual technology cost and lead-time.

The agencies considered proposing diesel engine standards which are more stringent reflecting the inclusion of other advanced technologies. However, the agencies are not proposing this level of stringency because our assessment is that these technologies would not be available for production by the 2017 model year. The agencies welcome comments on whether other diesel engine technologies are appropriate to consider for the 2017 model year standard, or if not, then when would they be appropriate.

IV. Proposed Regulatory Flexibility Provisions

This section discusses proposed flexibility provisions intended to achieve the goals of the overall program while providing alternate pathways to achieve those goals. The primary flexibility provisions the agencies are proposing for combination tractors and vocational vehicles relate to a program of Averaging, Banking, and Trading of credits that EPA and NHTSA are proposing in association with each agency's respective CO_2 and fuel consumption standards (*see* Section II above). For HD pickups and vans, the primary flexibility provision is the fleet averaging program patterned after the LD GHG and CAFE rule. EPA is not proposing an emission credit program associated with the proposed N_2O, CH_4, or HFC standards. This section also describes proposed flexibility provisions that would apply in specific circumstances.

[195] The light-duty rule had a cost per ton of $50 when considering the vehicle program costs only and a cost of −$210 per ton considering the vehicle program costs along with fuel savings in 2030. *See* 75 FR 25515, Table III.H.3–1.

A. Averaging, Banking, and Trading Program

Averaging, Banking, and Trading (ABT) of emissions credits have been an important part of many EPA mobile source programs under CAA Title II, including engine and vehicle programs. ABT programs can be important because they can help to address many issues of technological feasibility and lead-time, as well as considerations of cost. ABT programs are not just add-on provisions included to help reduce costs, but are usually an integral part of the standard setting itself. An ABT program is important because it provides manufacturers flexibilities that assist the development and implementation of new technologies efficiently and therefore enables new technologies to be implemented at a more progressive pace than without ABT. A well-designed ABT program can provide important environmental benefits and at the same time increase flexibility for and reduce costs to the regulated industry.

Section II above describes EPA's proposed GHG emission standards and NHTSA's proposed fuel consumption standards. For each of these respective sets of standards, the agencies are also proposing ABT provisions consistent with each agency's statutory authority. The agencies have worked closely together to design these proposed provisions to be essentially identical to each other in form and function. Because of this fundamental similarity, the remainder of this section refers to these provisions collectively as "the ABT program" except where agency-specific distinctions are required.

As discussed in detail below, the structure of this proposed GHG ABT program for HD engines is based closely on earlier ABT programs for HD engines; the proposed program for HD pickups and vans is built on the existing light-duty GHG program flexibility provisions; and we propose first-time ABT provisions for combination tractors and vocational vehicles that are as consistent as possible with our other HD vehicle regulations. The flexibility provisions associated with this new regulatory category are intended to systematically build upon the structure of the existing programs.

As an overview, "averaging" means the exchange of emission credits between engine families or truck families within a given manufacturer's regulatory subcategory. For example within each regulatory subcategory, engine manufacturers divide their product line into "engine families" that are comprised of engines expected to have similar emission characteristics throughout their useful life. Averaging allows a manufacturer to certify one or more engine families within the same regulatory subcategory at levels above the applicable emission standard. The increased emissions over the standard would need to be offset by one or more engine families within that manufacturer's regulatory subcategory that are certified below the same emission standard, such that the average emissions from all the manufacturer's engine families, weighted by engine power, regulatory useful life, and production volume, are at or below the level of the emission standard. (The inclusion of engine power, useful life, and production volume in the averaging calculations allows the emissions credits or debits to be expressed in total emissions over the useful life of the credit-using or generating engine sales.) Total credits for each regulatory subcategory within each model year are determined by summing together the credits calculated for every engine family within that specific regulatory subcategory.

"Banking" means the retention of emission credits by the manufacturer for use in future model year averaging or trading. "Trading" means the exchange of emission credits between manufacturers, which can then be used for averaging purposes, banked for future use, or traded to another manufacturer.

In the current HD program for criteria pollutants, manufacturers are restricted to only averaging, banking and trading credits generated within a regulatory subcategory, and we are proposing to continue this restriction in the GHG and fuel consumption program. However, the agencies are evaluating—and therefore request comment on—potential alternative approaches in which fewer restrictions are placed on the use of credits for averaging, banking, and trading. Particularly, the agencies request comment on removing prohibitions on averaging and trading between some or all regulatory categories in this proposal, and on removing restrictions between some or all regulatory subcategories that are within the same regulatory category (*e.g.,* allowing trading of credits between class 7 day cabs and class 8 sleeper cabs).

In the past, we have followed the practice of allowing averaging and trading between like products because we have recognized that the estimation of emissions credits is not an absolutely precise process, and actual emissions reductions or increases "in use" would vary due to differences in vehicle duty cycles, maintenance practices and any

number of other factors. By restricting credit averaging and trading to only allow averaging and trading between like products, the agencies gain some degree of assurance that the operation and use of the vehicles generating credits and consuming credits would be similar. The agencies also note that some industry participants have expressed concern that allowing credit averaging, banking and trading across different products may create an unlevel playing field for the regulated industry. Specifically, engine and truck manufacturers have commonly expressed to us a concern that some manufacturers with a wide range of product offerings spanning a number of regulatory categories would be able to use the ABT program provisions to generate credits in regulatory class markets where they face less competition and then use those credits to compete unfairly in other regulatory categories where they face greater competition. Finally, in the context of regulating criteria pollutants that can have localized and regional impacts, we have been concerned about the unintended consequence of unrestricted credit averaging or trading on local or regional concentrations of pollutants, whereby emissions reductions might become concentrated in some localities or regions to the detriment of other areas needing the reductions.

The agencies are evaluating the possibility of placing fewer restrictions on averaging and trading because increasing the flexibility offered to manufacturers to average, bank, and trade credits across regulatory subcategories and categories could potentially significantly reduce the overall cost of the program. Specifically, we request comment on the extent to which a difference—or unexpected difference—in the marginal costs of compliance per gallon of fuel saved or ton of GHG reduced across categories or subcategories, combined with provision for averaging and trading across categories and subcategories, can allow manufacturers to achieve the same overall reduction in fuel use and emissions at lower cost.

While trading restrictions in the context of past EPA rulemakings have been motivated in part by the local or regional nature of the pollutant being regulated, in this instance, opportunities for greater flexibility may exist in light of the fact that greenhouse gases are a global pollutant for which local consequences are related to global, not local or regional atmospheric concentrations. However, trading ratios may need to be established for averaging and trading across categories, and potentially across subcategories, to ensure that averaging and trading across categories and subcategories does not lead to a net increase in emissions or fuel use in light of differences in vehicle use patterns across categories and subcategories. Further, it is possible to design trading ratios that ensure a net reduction in emissions and fuel use as a result of averaging and trading. The agencies also request comment on the potential additional savings in costs (beyond those already calculated in this proposal) due to increased flexibility in averaging and trading provisions, on how such averaging and trading flexibilities could be designed to ensure environmental neutrality, on whether trading ratios should be designed to achieve a net reduction in emissions and fuel use as a result of trading, on the concerns that have been raised by some regarding impacts on intra-industry competition, and on how to address the above identified concerns about dissimilarities in operation and use of vehicles.

(1) Heavy-duty Engines

For the heavy-duty engine ABT program, EPA and NHTSA are proposing to use EPA's existing regulatory engine classifications as the subcategory designations under this engine ABT program. The proposed regulations use the term "averaging set" which aligns with the regulatory subcategories or regulatory class in the context that they define the same set of products. The existing diesel engine subcategories are light-heavy-duty (LHD), medium-heavy-duty (MHD), and heavy-heavy-duty (HHD). LHD diesel engines are primarily used in vehicles with a GVWR below 19,500 lb. Vehicle body types in this group might include any heavy-duty vehicle built for a light-duty truck chassis, van trucks, multi-stop vans, recreational vehicles, and some single axle straight trucks. Vehicles containing these engines would normally include personal transportation, light-load commercial hauling and delivery, passenger service, agriculture, and construction applications.

MHD diesel engines are normally used in vehicles whose GVWR varies from 19,501–33,000 lb. Vehicles containing these engines typically include school buses, tandem axle straight trucks, city tractors, and a variety of special purpose vehicles such as small dump trucks, and trash compactor trucks. Normally the applications for these vehicles would include commercial short haul and intra-city delivery and pickup.

HHD diesel engines are intended for use in vehicles which exceed 33,000 lb GVWR. Vehicles containing engines of this type are normally tractors, trucks, and buses used in inter-city, long-haul applications. HHD engines are generally regarded as designed for rebuild and have a long useful life period. LHD and MHD engines are typically not intended for rebuild, though some MHD engines are designed for rebuild, and have a shorter useful life.

Gasoline or spark ignited engines for heavy-duty vehicles fall into one separate regulatory subcategory. These engines are typically installed in trucks with a GVWR ranging from 8,500 pounds to 19,500 pounds although they can be installed into trucks of any size.

The compliance program we are proposing would adopt a slightly different method for generating a manufacturer's CO_2 emission and fuel consumption credit or deficit. The manufacturer's certification test result would serve as the basis for the generation of the manufacturer's Family Certification Level (FCL). The FCL is a new term we propose for this program to differentiate the purpose of this credit generation technique from the Family Emission Limit (FEL) previously used in a similar context in other EPA rules. A manufacturer could define its FCL at any level at or above the certification test result. Credits for the ABT program would be generated when the FCL is compared to its CO_2 and fuel consumption standard, as discussed in Section II. The credits earned in this section would be restricted to the engine subcategory and not tradable with other engine subcategories consistent with EPA's past practice for ABT programs as described previously. Credit calculation for the proposed Engine ABT and program would be generated, either positive or negative, according to Equation IV–1 and Equation IV–2:

Equation IV–1: Proposed HD Engine CO_2 credit (deficit)

$$\text{HD Engine } CO_2 \text{ credit (deficit) (metric tons)} = (\text{Std} - \text{FCL}) \times (\text{CF}) \times (\text{Volume}) \times (\text{UL}) \times (10^{-6})$$

Where:

Std = the standard associated with the specific engine regulatory subcategory (g/bhp-hr)

FCL = Family Certification Level for the engine family

CF = a transient cycle conversion factor in bhp-hr/mile which is the integrated total cycle brake horsepower-hour divided by the equivalent mileage of the Heavy-duty FTP cycle. For gasoline heavy-duty engines, the equivalent mileage is 6.3 miles. For diesel heavy-duty engines, the equivalent mileage is 6.5 miles. The agencies are proposing that the CF

determined by the Heavy-duty FTP cycle be used for engines certifying to the SET standard.
Volume = (projected or actual) production volume of the engine family
UL = useful life of the engine (miles)
10^{-6} converts the grams of CO_2 to metric tons

Equation IV–2: Proposed HD Engine Fuel Consumption credit (deficit) in gallons

HD Engine Fuel Consumption credit (deficit) (gallons) = (Std − FCL) × (CF) × (Volume) × (UL) × 10^2

Where:
Std = the standard associated with the specific engine regulatory subcategory (gallon/100 bhp-hr)
FCL = Family Certification Level for the engine family (gallon/100 bhp-hr)
CF = a transient cycle conversion factor in bhp-hr/mile which is the integrated total cycle brake horsepower-hour divided by the equivalent mileage of the Heavy-duty FTP cycle. For gasoline heavy-duty engines, the equivalent mileage is 6.3 miles. For diesel heavy-duty engines, the equivalent mileage is 6.5 miles. The agencies are proposing that the CF determined by the Heavy-duty FTP cycle be used for engines certifying to the SET standard.
Volume = (projected or actual) production volume of the engine family
UL = useful life of the engine (miles)
10^2 = conversion to gallons

To calculate credits or deficits, manufacturers would determine an FCL for each engine family they have designated for the ABT program. We have defined engine families in 40 CFR 1036.230 and manufacturers may designate how to group their engines for certification and compliance purposes. The FCL may be above (negative) or below (positive) its standard and would be used to establish the CO_2 credits earned (or used) in Equation IV–1. The proposed CO_2 and fuel consumption standards are associated with specific regulatory subcategories as described in Sections II.B and II.D (gasoline, light heavy-duty diesel, medium heavy-duty diesel, and heavy heavy-duty diesel). In the ABT program, engines certified with an FCL below the standard generate positive credits (g/bhp-hr and gal/100 bhp-hr). As discussed in Section II.B and II.D, engine families for which a manufacturer elects to use the alternative standard of a percent reduction from the engine family's 2011 MY baseline would be ineligible to either generate or use credits.

The volume used in Equations IV–1 and IV–2 refers to the total number of eligible engines sold per family participating in the ABT program during that model year. The useful life values in Equation IV–1 are proposed to be the same as the regulatory classifications previously used for the engine subcategories. Thus, the agencies propose that for LHD diesel engines and gasoline engines, the useful life values would be 110,000 miles; for MHD diesel engines, 185,000 miles; and for HHD diesel engines, 435,000 miles.

As noted above, credits generated by engine manufacturers under this ABT program would be restricted for use only within their engine subcategory based on performance against the standard as defined in Section II.B and II.D. Thus, LHD diesel engine manufacturers could only use their LHD diesel engine credits for averaging, banking and trading with LHD diesel engines, not with MHD diesel or HHD diesel engines. This limitation is consistent with ABT provisions in EPA's existing criteria pollutant program for engines and would help assure that credits earned to reduce GHG emissions and fuel consumption would be used to limit their growth and not circumvent the intent of the regulations. EPA and NHTSA are concerned that extending the use of credits beyond these designated subcategories could also create an advantage for large or integrated manufacturers that currently does not exist in the market. A manufacturer that produces both engines and heavy-duty highway vehicles could mix credits across engine and vehicle categories, shifting the burden between the sectors, not equally shared in either sector, to gain an advantage over competitors that are not integrated. Similarly, large volume manufacturers of engines can shift credits between heavy heavy-duty diesel engines and light heavy-duty diesel engines to gain an advantage in one subcategory over other manufacturers that may not have multiple engine offerings over several regulatory engine subcategories. Finally, relating credits between subcategories of engines could be problematic because of the differences in regulatory useful lives. The agencies want to avoid having credits from longer useful life categories flooding shorter useful life categories, adversely impacting compliance with the proposed CO_2 and fuel consumption standards in the shorter useful life category. The agencies would like to ensure that this regulation reduces CO_2 emissions and improves fuel consumption in each engine subcategory while not interfering with the ability of manufacturers to engage in free trade and competition. Limiting credit ABT to the regulatory subcategory and not between engines and vehicles would help prevent a competitive advantage due solely to the regulatory structure. Although the reasons for restricting engine credits to the same engine subcategory seem persuasive to us, the agencies welcome comments on the extension of credits beyond the limitations we are proposing.[196]

Under previous ABT programs for other rulemakings, EPA has allowed manufacturers to carry forward deficits from engines for a set period of time. The agencies are proposing to allow manufacturers of engines to carry forward deficits for up to three years before reconciling the short-fall. However, manufacturers would need to use credits, once credits are generated, to offset a shortfall before credits may be banked or traded for additional model years. This restriction reduces the chance of manufacturers passing forward deficits before reconciling shortfalls and exhausting those credits before reconciling past deficits. We will accept comments on alternative approaches for reconciling deficit shortfalls in the engine category.

As described in Section II above, EPA is proposing that a manufacturer may choose to comply with the N_2O or CH_4 cap standards using CO_2 credits. A manufacturer choosing this option would convert its N_2O or CH_4 test results into CO_2eq to determine the amount of CO_2 credits required. This approach recognizes the inter-correlation of these elements in impacting global warming. This option does not apply to the NHTSA fuel consumption program. To account for the different global warming potential of these GHGs, EPA proposes that manufacturers determine the amount of CO_2 credits required by multiplying the shortfall by the GWP. For example, a manufacturer would use 25 kg of positive CO_2 credits to offset 1 kg of negative CH_4 credits. Or a manufacturer would use 298 kg of positive CO_2 credits to offset 1 kg of negative N_2O credits. In general we do not expect manufacturers to use this provision. However, we are providing this alternative as a flexibility in the event an engine manufacturer has trouble meeting the CH_4 and/or N_2O emission caps. There are not ABT credits for performance that falls below the CH_4 or N_2O caps.

Additional flexibilities for engines are discussed later in Section IV(B).

[196] These concerns were not present in the 2012–2016 MY light-duty vehicle rule, where most manufacturers offer diverse product lines and there is not as much disparity among useful lives. That rule consequently does not restrict CO_2 credit trading opportunities between light-duty vehicle sectors.

(2) Class 7 and 8 Combination Tractors

In addition to the engine ABT program described above, the agencies are also proposing a vehicle ABT program to facilitate reductions in GHG emissions and fuel consumption based on combination tractor design changes and improvements. For this category, the structure of the proposed ABT program should create incentives for tractor manufacturers to advance new, clean technologies, or existing technologies earlier than they would otherwise.

As explained in Sections II and III above, combination tractor manufacturers are divided into nine regulatory subcategories under these proposed rules, as shown in the following table:

Table IV-1: Proposed Regulatory Subcategories for Combination Tractors

Class 7 Day Cab	Class 8 Day Cab	Class 8 Sleeper Cab
Low Roof	Low Roof	Low Roof
Mid Roof	Mid Roof	Mid Roof
High Roof	High Roof	High Roof

The proposed regulations use the term "averaging set" which aligns with the regulatory subcategories or regulatory class in the context that they define the same set of products. Vehicle credits for tractors in these classifications would be earned on a g/ton-mile or gallon/1,000 ton-mile basis for tractors which are below the standard. Credits generated within regulatory subcategories would be tradable between truck manufacturers in that specific regulatory subcategory only. Credits would not be fungible between engine and vehicle regulatory categories. This is similar to the restrictions we have described above for engine manufacturers.

This limitation would help ensure that credits earned to reduce GHG emissions and fuel consumption would be used to limit their growth and not circumvent the intent of our regulation. As with engine credits, we are concerned that extending the use of credits to be transferred or traded to other classes may create an advantage for large or integrated manufacturers that currently does not exist in the market. We would like to ensure that this regulation reduces the emission of CO_2 and fuel consumption but does not effectively penalize non-integrated manufacturers and those with limited participation in the market. ABT provides manufacturers the flexibility to deal with unforeseen shifts in the marketplace that affect sales volumes. This structure allows for a straightforward compliance program for each sector independently with aspects that are also independently quantifiable and verifiable. Credit calculation for the proposed Class 7 and 8 tractor CO_2 and fuel consumption credits would be generated, either positive or negative, according to Equation IV–3 and Equation IV–4:

Equation IV–3: The Proposed Class 7 and 8 Tractor CO_2 Credit (Deficit)

Class 7 and 8 Tractor CO_2 credit (deficit)(metric tons) = (Std-FEL) × (Payload Tons) × (Volume) × (UL) × (10^{-6})

Where:

Std = the standard associated with the specific tractor regulatory class (g/ton-mile)

Payload tons = the prescribed payload for each class in tons (12.5 tons for Class 7 and 19 tons for Class 8)

FEL = Family Emission Limit for the tractor family which is equal to the output from GEM (g/ton-mile)

Volume = (projected or actual) production volume of the tractor family

UL = useful life of the tractor (435,000 miles for Class 8 and 185,000 miles for Class 7)

10^{-6} converts the grams of CO_2 to metric tons

Equation IV–4: Proposed Class 7 and 8 Tractor Fuel Consumption credit (deficit) in gallons:

Class 7 and 8 Tractor Fuel Consumption credit (deficit)(gallons) = (Std − FEL) × (Payload Tons) × (Volume) × (UL) × 10^3

Where:

Std = the standard associated with the specific tractor regulatory subcategory (gallons/1,000 ton-mile)

Payload tons = the prescribed payload for each class in tons (12.5 tons for Class 7 and 19 tons for Class 8)

FEL = Family Emission Limit for the tractor family (gallons/1,000 ton-mile)

Volume = (projected or actual) production volume of the tractor family

UL = useful life of the tractor (435,000 miles for Class 8 and 185,000 miles for Class 7)

10^3 = conversion to gallons

Similar to the proposed Heavy-duty Engine ABT program described in the previous section, we are proposing that tractor manufacturers would be able to carry forward credit deficits from their regulatory subcategories for three years before reconciling the shortfall. However, just as in the engine category, manufacturers would need to use credits once those credits have been generated to offset a shortfall before those credits can be banked or traded for additional model years. This restriction reduces the chance of tractor manufacturers passing forward deficits before reconciling their shortfalls and exhausting those credits before reconciling past deficits. Manufacturers of vehicles that generate a deficit at the end of the model year could carry that deficit forward for three years following the model year for which that deficit was generated. Deficits would need to be reconciled at the reporting dates for year three. We will accept comments on alternative approaches of reconciling deficit shortfalls.

Additional flexibilities for Class 7 and 8 combination tractors are discussed later in Section IV.B.

(3) Class 2b–8 Vocational Vehicles

Similar to the Class 7 and 8 combination tractor manufacturers, we are offering a limited ABT program for Class 2b–8 vocational chassis manufacturers. Vehicle credits would be generated for those manufacturers that introduce products into the market with rolling resistance improvements which are better than required to meet the proposed vehicle standards, The certification of the chassis would be based on the use of LRR tires. Credit calculation for the proposed Class 2b–8 vocational vehicle CO_2 and fuel consumption credits (deficits) would be generated, either positive or negative, according to Equation IV–5 and Equation IV–6:

Equation IV–5: The proposed Vocational Vehicle CO_2 vehicle credit (deficit)

Vocational Vehicle CO_2 credit (deficit) (metric tons) = (Std − FEL) ×

(Payload Tons) × (Sales Volume) × (UL) × (10^{-6})

Where:

Std = the standard associated with the specific vocational vehicle subcategory (g/ton-mile)
Payload tons = the prescribed payload for each subcategory in tons (2.85 tons for LHD, 5.6 tons for MHD, and 19 tons for HHD vehicles)
FEL = Family Emission Limit for the vehicle family (g/ton-mile)
Volume = (projected or actual) production volume of the vehicle family
UL = useful life of the vehicle (110,000 miles for LHD, 185,000 miles for MHD, or 435,000 miles for HHD vehicles)
10^{-6} converts the grams of CO_2 to metric tons

Equation IV–6: Proposed Vocational Vehicle Fuel Consumption credit (deficit) in gallons

Vocational Vehicle Fuel Consumption credit for (deficit) (gallons) = (Std − FEL) × (Payload Tons) × (Sales Volume) × (UL) × 10^3

Where:

Std = the standard associated with the specific vocational vehicle regulatory subcategory (gallon/1,000 ton-mile)
Payload tons = the prescribed payload for each regulatory subcategory in tons (2.85 tons for LHD, 5.6 tons for MHD, and 19 tons for HHD vehicles)
FEL = Family Emission Limit for the vehicle family (gallon/1,000 ton-mile)
Volume = (projected or actual) production volume of the vehicle family
UL = useful life of the vehicle (110,000 miles for LHD, 185,000 miles for MHD, or 435,000 miles for HHD vehicles)
10^3 converts to gallons

Also, similar to the proposed heavy-duty engine and tractor ABT programs, the vehicle credits generated within each regulatory subcategory would be allowed to be averaged, banked, or traded between chassis manufacturers within their existing subcategories. For vocational vehicles the proposed vehicle subcategories are based on the vehicle's GVWR. We are proposing three vehicle subcategories LHD with a GVWR less than or equal to 19,500 pounds, MHD vehicles with a GVWR greater than 19,500 and less than or equal to 33,000 pounds, and HHD vehicles with a GVWR greater than 33,000 pounds. These three weight categories would form the subcategories for vocational vehicles and are found in 40 CFR 1037.230. The proposed regulations use the term "averaging set" which aligns with the regulatory categories or regulatory class in the context that they define the same set of products.

Similar to the proposed Heavy-duty Engine ABT program above, vocational chassis manufacturers would be able to carry forward deficits for three years before reconciling the shortfall. However, just as in the engine category, manufacturers would need to use credits earned once those credits have been generated to offset a shortfall before those credits can be banked or traded for additional model years. This restriction reduces the chance of chassis manufacturers passing forward deficits before reconciling their shortfalls and exhausting those credits before reconciling past deficits. Manufacturers of vocational vehicles that generate a deficit at the end of the model year could carry that deficit forward for three years following the model year for which that deficit was generated. Deficits would need to be reconciled at the reporting dates for year three. We will accept comments on alternative approaches of reconciling deficit shortfalls.

(4) Heavy-Duty Pickup Truck and Van Flexibility Provisions

EPA and NHTSA are proposing specific flexibility provisions for manufacturers of HD pickups and vans, similar to provisions adopted in the recent rulemaking for light-duty car and truck GHGs and fuel economy. Additional flexibilities that apply to the broad range of heavy-duty vehicles, including HD pickups and vans, are discussed in Section IV.B. All of these flexibilities would help enable new technologies to be implemented faster and more cost-effectively than without a flexibility program, and also help manufacturers deal with unexpected shifts in sales.

A manufacturer's credit or debit balance would be determined by calculating their fleet average performance and comparing it to the manufacturer's CO_2 and fuel consumption standards, as determined by their fleet mix, for a given model year. A target standard is determined for each vehicle with a unique payload, towing capacity and drive configuration. These unique targets, weighted by their associated production volumes, are summed at the end of the model year to derive the production volume-weighted manufacturer annual fleet average standard. A manufacturer would generate credits if its fleet average CO_2 or fuel consumption level is lower than its standard and would generate debits if its fleet average CO_2 or fuel consumption level is above that standard. The end-of-year reports would provide appropriate data to reconcile pre-compliance estimates with final model year figures. Similar to the light-duty GHG program, the agencies would address any ultimate deficits by a possible void of certificates on a sufficient number of vehicles to address the shortfall. Enforcement action would entail penalty or other relief as appropriate or applicable.

In addition to production weighting, we are proposing that the EPA credit calculations include a factor for the vehicle useful life, in miles, in order to allow the expression of credits in metric tons, as in the light-duty GHG program. The NHTSA credit calculation would use standard and performance levels in fuel consumption units (gallons per 100 miles), as opposed to fuel economy units (mpg) as done in the light-duty program, along with the vehicle useful life, in miles, allowing the expression of credits in gallons. We propose that other provisions for the generation, tracking, trading, and use of the credits be the same as those adopted in the light-duty GHG program, including a 5-year limit on credit carry-forward to future model years and a 3-year limit on deficit carry-forward (or credit carry-back).

The total model year fleet credit (debit) calculations would use the following equations:

CO_2 Credits (Mg) = [(CO_2 Std − CO_2 Act) × Volume × UL] ÷ 1,000,000

Fuel Consumption Credits (gallons) = (FC Std − FC Act) × Volume × UL × 100

Where:

CO_2 Std = Fleet average CO_2 standard (g/mi)
FC Std = Fleet average fuel consumption standard (gal/100 mile)
CO_2 Act = Fleet average actual CO_2 value (g/mi)
FC Act = Fleet average actual fuel consumption value (gal/100 mile)
Volume = the total production of vehicles in the regulatory class
UL = the useful life for the regulatory class (miles)

We are proposing that HD pickups and vans comprise a self-contained averaging set, such that credits earned may be used freely for other HD pickups and vans but not for other vehicles or engines, and credits generated by other vehicles or engines may not be used to demonstrate compliance for HD pickups and vans. We believe this approach is appropriate because the HD pickup and van fleet is relatively small and the balanced fleetwide averaging concept is critical for obtaining the desired technology development in the 2014–2018 timeframe, so that the potential for large credit flows into or out of this vehicle category would create unwarranted market uncertainty, which in turn could jeopardize the impetus to develop needed technologies. An exception to this approach is proposed for advanced technology credits as discussed in Section IV.B(2).

As described above, HD pickup and van manufacturers would be able to carry forward deficits from their fleet-wide average for three years before reconciling the shortfall. Manufacturers would be required to provide a plan in their pre-model year reports showing how they would resolve projected credit deficits. However, just as in the engine category, manufacturers would need to use credits earned once those credits have been generated to offset a shortfall before those credits can be banked or traded for additional model years. This restriction reduces the chance of vehicle manufacturers passing forward deficits before reconciling their shortfalls and exhausting those credits before reconciling past deficits. We request comments on all aspects of the proposed HD pickup and van credit program.

B. Additional Proposed Flexibility Provisions

The agencies are also proposing provisions to facilitate reductions in GHG emissions and fuel consumption beginning in the 2014 model year. While we view our proposed ABT and flexibility structure as sufficient to encourage reduction efforts by heavy-duty highway engine and vehicle manufacturers, we understand that other efforts may enhance the overall GHG and fuel consumption reduction we anticipate achieving. Therefore we propose the following flexibilities to create additional opportunities for manufacturers to reduce their GHG emissions and fuel consumption. These opportunities would help provide additional incentives for manufacturers to innovate and to develop new strategies and cleaner technologies.

(1) Early Credit Option

The agencies are proposing that manufacturers of HD engines, combination tractors, and vocational vehicles be eligible to generate early credits if they demonstrate improvements in excess of the proposed standards prior to model year they become effective. The start dates for EPA's GHG standards and NHTSA's fuel consumption standards vary by regulatory category (*see* Section II for the model years when the standards become effective). Specifically, manufacturers would need to certify their engines or vehicles to the standards at least six months before the start of the first model year of the mandatory standards. The limitations on the use of credits in the ABT programs—*i.e.*, limiting averaging to within each the regulatory category and vehicle or engine subcategory—would apply for the proposed early credits as well.

NHTSA and EPA also request comment on whether a credit multiplier, specifically a multiplier of 1.5, would be appropriate to apply to early credits from HD engines, combination tractors, and vocational vehicles, as a greater incentive for early compliance. Additionally, the agencies seek comment on whether or not a requirement that HD engines, combination tractors, and vocational vehicles that are eligible to generate early credits, be allowed to do so only if they certify prior to June 1, 2013 should a multiplier of 1.5 be applied to early credits.

We are proposing that manufacturers of HD pickups and vans who demonstrate improvements for model year 2013 such that their fleet average emissions and fuel consumption are lower than the model year 2014 standards be eligible for early credits. Under the proposed structure for the fleet average standards, this credit opportunity would entail certifying a manufacturer's entire HD pickup and van fleet in model year 2013, and assessing this fleet against the model year 2014 target levels discussed in Section II. The agencies consider the proposed availability of early credits to be a valuable complement to the overall program to the extent that they encourage early implementation of effective technologies. We request comment on ways the early credit opportunities can be tailored to accomplish this objective and protect against unanticipated windfalls.

(2) Advanced Technology Credits

EPA and NHTSA are proposing targeted provisions that we expect would promote the implementation of advanced technologies. Specifically, manufacturers that incorporate these technologies would be eligible for special credits that could be applied to other heavy-duty vehicles or engines, including those in other heavy-duty categories. We seek comment on any conversion factors that may be needed. Technologies that we propose to make eligible are:

- Hybrid powertrain designs that include energy storage systems.
- Rankine cycle engines.
- All-electric vehicles.
- Fuel cell vehicles.

NHTSA and EPA request comment on whether a credit multiplier, specifically a multiplier of 1.5, would be appropriate to apply to advanced technology credits, as a greater incentive for their introduction. NHTSA and EPA request comment on the list of technologies identified as advanced technologies and whether additional technologies should be added to the list. NHTSA and EPA also request comment on whether credits generated from vehicles complying prior to 2014 and using Advanced SmartWay or Advanced SmartWay II aerodynamic technologies should be designated as Advanced Technology Credits.

(a) All-Electric Vehicles and HD Pickup Truck and Van Hybrids

For HD pickup and van hybrids, we propose that testing would be done using adjustments to the test procedures developed for light-duty hybrids. NHTSA and EPA are also proposing that all-electric and other zero emission vehicles produced in model years before 2014 be able to earn credits for use in the 2014 and later HD pickup and van compliance program, provided the vehicles are covered by an EPA certificate of conformity for criteria pollutants. These credits would be calculated based on the 2014 diesel standard targets corresponding to the vehicle's work factor, and treated as though they were earned in 2014 for purposes of credit life. Manufacturers would not have to early-certify their entire HD pickup and van fleet in a model year as for other early-complying vehicles. NHTSA and EPA are also proposing that model year 2014 and later EVs and other zero emission vehicles be factored into the fleet average GHG and fuel consumption calculations based on the diesel standards targets for their model year and work factor. If advanced technology credits generated by pickups and vans are used in another HD vehicle category, these credits would, of course, be subtracted from the manufacturer's pickup and van category credit balance.

In the 2012–2016 MY Light-Duty Vehicle Rule, EPA discussed at length the issue of whether to account for upstream emissions of GHGs in assessing the amount of credit to offer to various types of electric vehicles—that is, GHG emissions associated with generation of the electricity needed to power the electric vehicle. *See* 75 FR 25434–25436. Although acknowledging that such emissions would not be accounted for if electric vehicle GHG emissions are assessed at zero for credit generating purposes, EPA believed that this was the appropriate course in order to provide an incentive for commercialization of this extremely promising technology. At the same time, EPA adopted a cumulative cap whereby upstream emissions would be accounted for if sales of EVs exceeded a given amount.

The agencies believe that these same considerations apply to heavy-duty vehicles. Indeed, the agencies believe that introduction of EVs into the heavy-duty fleet would be less frequent than for light-duty vehicles, so that there is less risk of dilution of the main standards by unexpectedly high introduction of EVs into the heavy-duty fleet and at least an equally compelling reason to provide an incentive for the technology's commercial introduction. Given the unlikelihood of significant penetration of the technology in the model years of these standards, the agencies similarly do not see a need to adopt the type of cumulative caps which would trigger an upstream emission accounting procedure as in the light-duty vehicle rule. The agencies solicit comment on these issues, however.

(b) Vocational Vehicle and Tractor Hybrids

For vocational vehicles or combination tractors incorporating hybrid powertrains, we propose two methods for establishing the number of credits generated, each of which is discussed next. The agencies are not aware of models that have been adequately peer reviewed with data that can assess this technology without the conclusion of a comparison test of the actual physical product.

(i) Chassis Dynamometer Evaluation

For hybrid certification to generate credits we propose to utilize chassis testing as an effective way to compare the CO_2 emissions and fuel consumption performance of conventional and hybrid vehicles. We are proposing that heavy-duty hybrid vehicles be certified using "A to B" vehicle chassis dynamometer testing. This concept allows a hybrid vocational vehicle manufacturer to directly quantify the benefit associated with use of its hybrid system on an application-specific basis. The concept would entail testing the conventional vehicle, identified as "A", using the cycles as defined in Section V. The "B" vehicle would be the hybrid version of vehicle "A". The "B" vehicle would need to be the same exact vehicle model as the "A" vehicle. As an alternative, if no specific "A" vehicle exists for the hybrid vehicle that is the exact vehicle model, the most similar vehicle model would need to be used for testing. We propose to define the "most similar vehicle" as a vehicle with the same footprint, same payload, same testing capacity, the same engine power system, the same intended service class, and the same coefficient of drag.

To determine the benefit associated with the hybrid system for GHG performance, the weighted CO_2 emissions results from the chassis test of each vehicle would define the benefit as described below:

1. (CO_2_A − CO_2_B)/(CO_2_A) = _____ (Improvement Factor)
2. Improvement Factor × GEM CO_2 Result_B = _____ (g/ton mile benefit)

Similarly, the benefit associated with the hybrid system for fuel consumption would be determined from the weighted fuel consumption results from the chassis tests of each vehicle as described below:

3. (Fuel Consumption_A − Fuel Consumption_B)/(Fuel Consumption_A) = _____ (Improvement Factor)
4. Improvement Factor × GEM Fuel Consumption Result_B = _____ (gallon/1,000 ton mile benefit)

The credits for the hybrid vehicle would be calculated as described in the ABT program by Equation IV–5 and Equation IV–6, except that the result from Equation 2 above replaces the (Std-FEL) value. We are proposing that the tons of CO_2 or gallons of fuel credits generated by a hybrid vehicle could flow into any regulatory subcategory.

The agencies are proposing two sets of duty cycles to evaluate the benefit depending on the vehicle application to assess hybrid vehicle performance—without and with PTO systems. The key difference between these two sets of vehicles is that one set (*e.g.*, delivery trucks) does not operate a PTO while the other set (*e.g.*, bucket and refuse trucks) does.

The first set of duty cycles would apply to the hybrid powertrains used to improve the motive performance of the vehicles without a PTO system (such as pickup and delivery trucks). The typical operation of these vehicles is very similar to the overall drive cycles proposed in Section II. Therefore, the agencies are proposing to use the same vehicle drive cycle weightings for testing these vehicles, as shown in Table IV–2.

Table IV-2: Proposed Drive Cycle Weightings for Hybrid Vehicles Without PTO

	Transient	55 mph	65 mph
Vocational Vehicles	42%	21%	37%
Day Cab Tractors	19%	17%	64%
Sleeper Cab Tractors	5%	9%	86%

The second set of duty cycles apply to testing hybrid vehicles used in applications such as utility and refuse trucks tend to have additional benefits associated with use of stored energy, which avoids main engine operation and related CO_2 emissions and fuel consumption during PTO operation. To appropriately address benefits, exercising the conventional and hybrid vehicles using their PTO would help to quantify the benefit to GHG emissions and fuel consumption reductions. The duty cycle proposed to quantify the hybrid CO_2 and fuel consumption impact over this broader set of operation would be the three primary drive cycles plus a PTO duty cycle. Our proposed PTO cycle is based on consideration of using alternate, appropriate duty cycles with Administrator approval in a public process. The PTO duty cycle as proposed takes into account the sales impact and population of utility trucks and refuse haulers. As described in draft RIA Chapter 3, the agencies are proposing to add an additional PTO cycle to measure the improvement achieved for this type of hybrid powertrain application. The proposed weightings for the hybrids with PTO are included in Table IV–3. The agencies welcome comments on the proposed drive cycle weightings and the proposed PTO cycle.

Table IV-3: Proposed Drive Cycle Weightings for Hybrid Vehicles with PTO

	Transient	55 mph	65 mph	PTO
Vocational Vehicles with PTO	30%	15%	27%	28%

(ii) Engine Dynamometer Evaluation
