Title: NSPS and NESHAP for Pulp and Paper Sector Residual Risk and Technology Review (RTR).

ICR numbers: EPA ICR Number 2393.01, OMB Control Number 2060-NEW.

ICR Status: This ICR is for a new information collection activity. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in Title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, displayed either by publication in the **Federal Register** or by other appropriate means, such as on the

related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: This ICR is being conducted by EPA's Office of Air and Radiation to assist the EPA Administrator, as required by sections 111(b), 112(d), and 112(f)(6) of the Clean Air Act (CAA) to determine the current affected population of pulp and paper processes and to re-evaluate emission standards for this source category. The three Federal emission standards that are the subject of this information collection include: (1) Standards of Performance for Kraft Pulp Mills (40 CFR part 60, subpart BB), (2) National Emission Standards for Hazardous Air Pollutants from the Pulp and Paper Industry (40 CFR part 63, subpart S), and (3) National Emission Standards for Hazardous Air Pollutants for Chemical Recovery Combustion Sources at Kraft, Soda, Sulphite, and Stand-Alone Semicheical Pulp Mills (40 CFR part 63, subpart MM).

The pulp and paper production source category includes any facility engaged in the production of pulp and/or paper. This category includes, but is not limited to, integrated mills (where pulp alone or pulp and paper or paperboard are manufactured on-site), non-integrated mills (where paper/paperboard or pulp are manufactured, but not both), and secondary fiber mills (where waste paper is used as the primary raw material). The pulp and paper production process units include operations such as pulping, bleaching, chemical recovery, and papermaking. Different pulping processes are used, including chemical processes (kraft, soda, sulphite, and semi-chemical) and mechanical, secondary fiber, or non-wood processes.

This one-time collection will solicit information under the authority of CAA section 114. The data collected will be used to update facility information and equipment configuration, develop new estimates of the population of affected units, and identify the control measures and alternative emission limits being used for compliance with the existing rules that are under review. This information, along with other information, will be used to establish a baseline for purposes of the regulatory reviews. The emissions test data (test reports and continuous emissions monitoring systems (CEMS) data) collected will be used to verify the performance of existing control measures, examine variability in emissions, evaluate emission limits, and to determine the performance of superior control measures considered
