I. Introduction

Under section 101 of the Federal Mine Safety and Health Act of 1977, a mine operator may petition and the Secretary of Labor (Secretary) may modify the application of a mandatory safety standard to that mine if the Secretary determines that: (1) An alternative method exists that will guarantee no less protection for the miners affected than that provided by the standard; or (2) that the application of the standard will result in a diminution of safety to the affected miners.

MSHA bases the final decision on the petitioner's statements, any comments and information submitted by interested persons, and a field investigation of the conditions at the mine. In some instances, MSHA may approve a petition for modification on the condition that the mine operator complies with other requirements noted in the decision.

SUPPLEMENTARY INFORMATION:

I. Background

Section 101(c) of the Federal Mine Safety and Health Act of 1977 (Mine Act) allows the mine operator or representative of miners to file a petition to modify the application of any mandatory safety standard to a coal or other mine if the Secretary determines that: (1) An alternative method of achieving the result of such standard exists which will at all times guarantee no less than the same measure of protection afforded the miners of such mine by such standard; or (2) that the application of such standard to such mine will result in a diminution of safety to the miners in such mine. In addition, the regulations at 30 CFR §§ 44.10 and 44.11 establish the requirements and procedures for filing petitions for modification.

II. Petitions for Modification

Docket Number: M-2010-044-C.

Petitioner: Emerald Coal Resources, LP, Three Gateway Center, Suite 1340, 401 Liberty Avenue, Pittsburgh, Pennsylvania 15222-1000.

Mine: Emerald Mine, MSHA I.D. No. 36-05466, located in Greene County, Pennsylvania.

Regulation Affected: 30 CFR 75.1700 (oil and gas wells).

Modification Request: The petitioner requests a modification of the existing

standard to permit an alternative method of compliance with the standard with respect to vertical degasification wells with horizontal laterals into the underground coal seam. The Emerald Mine proposes to plug vertically drilled degasification gas wells in order to mine through them. The petitioner proposes to use the following procedures when mining through vertically drilled degasification boreholes with horizontal laterals to permit mining through the boreholes: (a) Plugging Procedures: (1) The borehole will be filled with flexible gel prior to the anticipated mine through. Alternative grouting methods including cementations or polyurethane grout may be used; (2) a packer will be installed at a location in the lateral to ensure that an appropriate amount of the lateral will be filled with gel; (3) any water present in the hole will be tested for chlorides prior to the time of the gelling. The gel quality will be adjusted to compensate for the chloride concentration; (4) a triplex piston pump will be utilized to pump (1.75) times the calculated hole volume of gel underground. The calculated volume of gel will be pumped until the volume of gel is depleted, (100-140) psi pressure is realized, or until gel leakage is observed along the ribs underground. The gel will be pumped through the drill string and inflated packer equipped with a one-way check valve. After the calculated (1.75) times the hole volume of gel has been pumped, a robber wiper will be run down the string under the wiper to the top of the packer will be the final gel injection pressure. The one-way check valve will prevent the gel to flow back into the drill string; and (5) the volume of fill required will be calculated and (1.75) times that amount will be pumped unless the (100-140) psi pressure is reached; (b) Procedures for mining through degasification boreholes that are plugged as specified: (1) Prior to mining within 300 feet of the boreholes or lateral, MSHA, the Bureau of Deep Mine Safety, and a representative of the miners will be notified. This notification will be both verbally and through a letter accompanied by a drawing of the borehole location and a copy of a certification that plugging has occurred as specified in this petition; (2) the District Mine inspector from the Bureau of Deep Mine Safety, MSHA District Manager, and a representative of the United Mine Workers of America will be notified in sufficient time prior to the mining through to have representatives present during the actual mining through operations if they so choose; (3) at the beginning of the shift in which a
