withdrawn from sale for reasons of safety or effectiveness. Accordingly, the Agency will continue to list ROCEPHIN (ceftriaxone sodium) Injection, 250mg, 500mg, 1g, 2g, and 10g base/vial, approved under NDA 050585, in the “Discontinued Drug Product List” section of the Orange Book. The “Discontinued Drug Product List” delineates, among other items, drug products that have been withdrawn from sale for reasons other than safety or effectiveness. ANDAs that refer to any of the products described in this notice may be approved by FDA as long as they meet all other legal and regulatory requirements for the approval of ANDAs. If FDA determines that labeling for any of these drug products should be revised to meet current standards, the Agency will advise ANDA applicants to submit such labeling.

Dated: March 9, 2011.

Leslie Kux,

Acting Assistant Commissioner for Policy.

[Docket No. FDA–2011–D–0104]

Draft Guidance for Industry on Non-Penicillin Beta-Lactam Risk Assessment: A CGMP Framework; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of a draft guidance for industry entitled “Non-Penicillin Beta-Lactam Risk Assessment: A CGMP Framework.” This guidance describes the importance of implementing appropriate steps during the manufacturing process to prevent cross-contamination of finished pharmaceuticals and APIs with non-penicillin beta-lactam antibiotics. It also provides information regarding the relative health risk of, and the potential for, cross-reactivity in the classes of sensitizing beta-lactams (penicillins and non-penicillin beta-lactams).

Drug cross-contamination is the contamination of one drug with one or more different drugs. Cross-contamination with non-penicillin beta-lactam drugs can initiate drug-induced hypersensitivity reactions, including anaphylaxis, an allergic reaction that may be a life-threatening event. One critical aspect of manufacturing non-penicillin beta-lactam drugs is preventing cross-contamination to reduce the potential for drug-induced, life-threatening allergic reactions. FDA is recommending that manufacturers establish appropriate separation and control systems designed to prevent the following types of cross-contamination:

1. Non-penicillin beta-lactam contamination in a non-beta-lactam product (e.g., cefaclor in aspirin).

2. Non-penicillin beta-lactam contamination in another non-penicillin beta-lactam (e.g., cephalexin in imipenem).

This draft guidance is being issued consistent with FDA’s good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the Agency’s current thinking on non-penicillin beta-lactam risk assessment. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statute and regulations.

II. Comments

Interested persons may submit to the Division of Dockets Management (see ADDRESSES) either electronic or written comments regarding this document. It is only necessary to send one set of comments. It is no longer necessary to send two copies of mailed comments. Identify comments with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

III. Electronic Access

Persons with access to the Internet may obtain the document at either http://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm or http://www.regulations.gov.
