41 CFR Chapters 101, 102, and 105, and Subtitle F

48 CFR Chapters 5 and 61

[EO 013563–OGP–1; Docket 2011–0010; Sequence 1]

Reducing Regulatory Burden; Retrospective Review under E.O. 13563

AGENCY: Office of Governmentwide Policy, General Services Administration (GSA).

ACTION: Request for information.

SUMMARY: The General Services Administration (GSA) is requesting public input on how it can best implement the goals of Executive Order (EO) 13563, “Improving Regulation and Regulatory Review.” E.O. 132563 was signed by President Obama on January 18, 2011, calls for an improvement in the creation and review of regulations and the better opportunities for the public to be part of this process. GSA will solicit public input through April 15, 2011, via comments received on a blog located at http://www.gsa.gov/improvingregulations. Later this year, GSA expects to release its retrospective review plan.

DATES: Comments will be accepted through April 15, 2011.

FOR FURTHER INFORMATION CONTACT: For clarification of content, contact General Services Administration, Office of Governmentwide Policy, Office of Travel, Transportation and Asset Management, at (202) 501–1777.

SUPPLEMENTARY INFORMATION:
A. Background

Executive Order 13563 directs each federal agency to consider “how best to promote retrospective analysis of rules that may be outmoded, ineffective, insufficient, or excessively burdensome.” The EO calls on every agency to develop “a preliminary plan, consistent with law and its resources and regulatory priorities, under which the agency will periodically review its existing significant regulations to determine whether such regulations should be modified, streamlined, expanded or repealed to make the agency’s regulatory program more effective and or less burdensome in achieving its regulatory objectives.”

B. Procedures

Comments on Executive Order 13563 can be posted on a blog located on the Internet at http://www.gsa.gov/improvingregulations. To view Executive Order 13563 got to http://www.gpo.gov/fdsys and enter “executive order 13563” in the search box.

Dated: March 17, 2011.

Janet Dobbs,
Director, Office of Travel, Transportation and Asset Management.

Tobacco Transition Payment Program; Cigar and Cigarette Per Unit Assessments

AGENCY: Commodity Credit Corporation and Farm Service Agency, USDA.

ACTION: Request for comments.

SUMMARY: The Commodity Credit Corporation (CCC) is requesting comments about the calculation of assessments to fund the Tobacco Transition Payment Program (TTPP). Currently the cigar portion of the assessment uses a per unit calculation that treats all cigars, large and small, the same. That policy is under review as the result of a court decision. This review could also affect cigarettes, which are subject to similar provisions.

DATES: We will consider comments that we receive by May 23, 2011.

ADDRESSES: We invite you to submit comments on this notice. In your comment, please specify RIN 0560–AI12 and include the volume, date, and page number of this issue of the Federal Register. You may submit comments by either of the following methods:

• Federal eRulemaking Portal: Go to http://www.regulations.gov. Follow the online instructions for submitting comments.

• Mail: Jane Reed, Economic and Policy Analysis Staff, Farm Service Agency, USDA, 1400 Independence Ave., SW., Mail Stop 0515, Washington, DC 20250–0514.

Comments may be inspected at the above address, in room 3722, between 8 a.m. and 4:30 p.m. Monday through Friday, except holidays.

FOR FURTHER INFORMATION CONTACT: Jane Reed; phone: (202) 720–6782. Persons with disabilities or who require alternative means for communication (Braille, large print, audio tape, etc.) should contact the USDA Target Center at (202) 720–2600 (voice and TDD).

SUPPLEMENTARY INFORMATION:
Background—TTPP Authority and Existing Regulations

TTPP was enacted in the Fair and Equitable Tobacco Reform Act of 2004 (FETRA) (7 U.S.C. 518–519a). FETRA was enacted as Title VI of Public Law 108–357. FETRA ended the former tobacco quota program and price supports, and created the 10-year (2005 through 2014) roughly $10 billion total TTPP. TTPP provides transition payments to certain tobacco producers and farm owners. TTPP is funded by assessments on manufacturers and importers of tobacco products. TTPP is sometimes called the “tobacco buyout” program. It is run by the Farm Service Agency (FSA) of the U.S. Department of Agriculture (USDA) on behalf of CCC. TTPP regulations are in 7 CFR part 1463.

Scope of This Request for Comments

This notice involves the collection of TTPP assessments, which are authorized in section 625 of FETRA (see 7 U.S.C. §18d). This notice focuses on the “Step B” cigar assessment, explained in greater detail below and addressed in §1463.7 of the regulations. More specifically, this notice focuses on how those assessments are calculated for cigars, given that cigars vary widely in size, weight, and value but are assessed using a method based on the number of cigars handled.
The relevant FETRA provisions are the same for cigarettes as for cigars. Cigarettes are, therefore, in theory subject to the same issue of interpretation that led to this notice, however, as a practical matter may not be substantially affected by its resolution because cigarettes, unlike cigars, are taxed at a constant rate and are generally uniform in size, or more uniform in size than cigars.

Each year, FETRA assessments amount to about $1 billion for all tobacco product categories together. The assessments are collected quarterly.

Current TPP Assessment Methodology

Calculation by USDA of the amount due from an individual manufacturer or importer currently involves two steps. “Step A” allots a percentage of the total program assessment to six product categories specifically identified in FETRA (subsection 518d(c)) by Congress. Those six categories are cigarettes, cigars, snuff, roll-your-own, pipe, and chewing tobacco.1 The initial Congress. Those six categories are FETRA (subsection 518d(c)) by

assessments to six product categories. Step A

importer currently involves two steps. “Step A” allots a percentage of the total program assessment to six product categories specifically identified in FETRA (subsection 518d(c)) by Congress. Those six categories are cigarettes, cigars, snuff, roll-your-own, pipe, and chewing tobacco.1 The initial Congress. Those six categories are

Categories of tobacco are taxed by weight. Tobacco Taxing Rates and Methods

USDA does not have the authority to set tobacco product excise taxes. Excise tax rates and methods are outside the scope of this notice, however, taxing rates and methods are relevant to how TPP assessments are calculated, or could be calculated, so some background on tobacco taxes is provided in this section to provide context.

“Small cigars” (for taxing purposes under other statutory, non-FETRA provisions) are those that weigh less than three pounds per 1,000 units. They are taxed, by agencies other than USDA, per unit (a certain dollar amount per 1,000 units). “Large cigars” (literally those that are not “small cigars”) are taxed at a percentage of their value up to a certain maximum amount per 1,000 units. Thus the maximum tax rate for large cigars is a unit tax, but not all large cigars are taxed at a unit rate, if the value generates a unit amount that is below the maximum. The tax rates changed in 2009. Cigarettes are taxed by unit—a certain amount per 1,000 units. There are two tax categories for cigarettes, large and small, but there are no actual marketings in the “large” category. The other four categories of tobacco are taxed by weight.

Step A Percentage Allotment Calculation Method

Step A percentage allotments to the tobacco product categories were initially set in FETRA. USDA adjusts those periodically for changes in volume under subsection 518d(c).

USDA analyzed the Congressional Step A allotments and determined that the initial percentages were calculated by taking historical data for the six categories and then multiplying the weights or units in each category by the maximum tax rate (units for cigars and cigarettes—computed separately for large and small cigars—and weight for the others). This puts all product categories on a dollar basis.

Although the calculation was done separately for small and large cigars, Congress assigned one Step A percentage to cigars as a single category. As a result, there are only six categories in subsection 518d(c), not seven. There is one cigar category, There is not a separate “small cigar” category and a separate “large cigar” category.

Each year USDA uses data from the U.S. Department of the Treasury (Treasury) and the U.S. Department of Homeland Security Bureau of Customs and Border Security (Customs)—the new volume figures (units for cigars and cigarettes)—and multiplies them by the 2004 tax rates to adjust the Step A allotments using the calculation Congress was determined to have used for the initial Step A allotments. Those former tax rates (not the 2009 revised rates) are used so that the adjustments to the Step A category allotments are for changes in volume (units and weights) only, not changes in tax rates.

USDA issued a technical amendment in the Federal Register published December 10, 2010 (75 FR 76921–76923), explaining this policy regarding Step A and clarifying the rules. The Step A calculation is being challenged in a lawsuit different than the one that resulted in this notice. There it is argued against the USDA position that the new 2009 tax rates should be used for the computation.

Step B Calculation

This immediate controversy, however, involves, as noted, Step B. Step B is where a category’s percentage allotment is divided among the manufacturers and importers in that category. As indicated, subsection 518d(g) has been implemented by USDA to divide the single cigar Step A category allotment among all cigars by unit. Subsection 518d(e) provides that no manufacturer or importer should have to pay more than the “pro rata” share of the volume in their category.

Small cigar manufacturers and importers have argued that calculating Step B by units makes them pay more than their “pro rata” share. They argue that “volume” under subsection 518d(e) cannot be measured by units in the manner currently undertaken by USDA despite subsection 518d(g).

USDA’s method treats all cigar units, large and small, the same for purposes of dividing up the single Step A cigar percentage allotment. USDA does not break out the cigar category first into small and large cigars and then apply the unit division of subsection 518d(g).

The discussion of cigar assessments in this notice references both FETRA (as it appears in the United States Code) and the current regulations (as they appear in the CFR). To help commenters understand the context of this notice, the full text of section 518d is available at: http://uscode.house.gov/uscode-cgi/fastweb.exe?getdoc+uscview+105108+2465+11++%28%29%209%20.52%20%20.20.FETRA was enacted October 22, 2004. The final rule implementing TPP was published on February 10, 2005 (70 FR

1 Throughout this document, we refer to “snuff, roll-your-own, pipe, and chewing tobacco” as the “other” four categories of tobacco.
7007–7014. There is a rulemaking exception in section 519a and the final rule was published without prior comment. The regulation was amended by a final rule published in the Federal Register on April 4, 2005 (70 FR 17150–17166). The regulation specifies a step-based Step B cigar calculation and treats cigars as one category not two. The relevant regulation (for Step B calculations) is in 7 CFR 1463.7.

Step B as Specified in FETRA

The Step B controversy arises out of Prime Time International, Inc., v. Vilsack (599 F.3d 678). There were several issues raised in the lawsuit. (The others will be addressed separately once the rulemaking issue is resolved.) The district court ruled for USDA on the Step B issue. The case then went to the Court of Appeals (the Court). The Court described the Step B unit disagreement this way:

Prime Time contends that USDA’s interpretation of the Fair and Equitable Tobacco Reform Act is contrary to ordinary construction and plain meaning of the word “volume” in the phrase “gross domestic volume,” which is defined in section 518d(a)(2) as the “volume of tobacco products—removed as defined by section 5702 of Title 26” and “not exempt from tax” pursuant to provisions not relevant to this appeal, supra note 1. It observes that where statutory terms, such as “volume” here, are not defined in a statute, courts give them their ordinary meaning, citing Asgrow Seed Co. v. Winterboer, 513 U.S. 179, 187, 115 S.Ct. 788, 130 L.Ed.2d 682 (1995). USDA responds that “volume” is “clearly explained” in FETRA to mean the number of cigars because section 518d(g)(3) provides that the number of cigars determines the “volume of domestic sales” and thus “market share” under section 518d(f).

The Court described the suggested alternative to USDA’s Step B calculation as dividing the Step A percentage into small and large cigar subclasses and then applying the unit division to each category separately. The Court said:

Prime Time maintains, because FETRA requires that the allocation within a tobacco category separately. The Court responded that “make any revisions necessary to ensure that each manufacturer and importer pays only its correct pro rata share of total gross domestic volume from all sources.” As to the government’s position that subsection 518d(g)(3) unambiguously required that all cigars be divided by unit (without a breakout of cigars into subclasses before the division by units), the Court said it did not see FETRA as being unambiguous:

The plain text of FETRA does not self-evidently vindicate USDA’s two step assessment method. Under FETRA, the “volume of domestic sales” and “market share” are not synonymous with “gross domestic volume.” FETRA provides, for example, that “[t]he volume of domestic sales shall be calculated based on gross domestic volume.” 7 U.S.C. §518d(g)(2) [emphasis added], indicating two different meanings for the terms. And section 518d(g)(3)(A) does not, on its face, require that a compound number of large and small cigars serve as the denominator when calculating a manufacturer’s/seller’s volume of domestic sales on a per-stick basis. Most critically, USDA’s interpretation appears to ignore the pro-rata-basis limitation Congress imposed on assessments within a tobacco class in subsection (e). As interpreted by USDA, it is irrelevant that one large cigar consumes far more tobacco than a small cigar, and so accounts for a far larger segment of the market than its per-stick contribution would indicate. Yet the text and structure of the title harmoniously, then the cigar assessment would be self-contradictory.

2. To, however, do the Step B Division strictly on weight (or on some other measure like taxes paid) would appear to disregard subsection 518d(g). If the point of the interpretation is to give meaning to all part of the statute, then dismissing subsection 518d(g) does not work. In the reply brief submitted in support of an alternative approach in the litigation, it was suggested that taxes paid would be used in lieu of weight:

If FETRA is read plainly, wholly and harmoniously, then the cigar assessment process is clean, simple, and direct: (A) Allocate the amount of the total assessment among the six classes based on the federal excise taxes paid by each class, with separate figures for large and small cigars as USDA currently does. (B) Divide the class assessment for cigars into large and small cigar segments. This would provide the market share of cigars along the lines of the overall size and weight (and coincidently market value) of the products removed. (C) For large cigars, divide the amount of the total cigar assessment attributable to large cigars by the number or stick count of the large cigars.
removed by each company to establish a company assessment. For small cigars, divide the amount of the total cigar assessment attributable to small cigars by the number of small cigars each company removes to establish the company assessment. This procedure respects all of FETRA’s sections, calculating market share based on number of cigars while also ensuring assessments do not exceed respective shares of total gross domestic volume from all sources, as required by FETRA.

That approach still leaves dividing up large cigars by units. (That is also a problem for small cigars if small cigars are not standard in size.) Therefore, it has the same internal contradiction problem as the strict weight based alternative. Plus, as noted below, weights and taxes for cigars do not vary proportionately. To the contrary, taxes actually in some cases, at least since 2009, vary inversely to the size of the cigar in those instances where smallish large cigars are big enough to be taxed on a value basis rather than a unit basis.

The Court referred to common uses of the term “volume.” It could be argued that volume might suggest weight in the proper instance. It does not, it would seem, suggest taxes paid. As for the use of units, there is no reason why volume cannot be a number and as to FETRA, as we note below, the word “volume” is strictly defined in subsection 518d(g) as a number and that makes particular sense it would seem since the government does not have weights for domestically manufactured cigars and it was based on units that the Step A calculation was made. Thus, and for the other reasons given here, the only definition for “volume” that makes sense is the actual one given in the statute— that which is in (g). This does not seem at all unusual for the reasons given. For example, if the issue were the volume of pedestrian traffic on a bridge, volume could well be measured as a number rather than the weight of the person who crossed the bridge or the taxes they paid.

Also, in the alternative suggested in the litigation, the Step A allotment would effectively be a seven category calculation. Yet, FETRA specifically only provides for six. There does not appear to be any rational reason why Congress would have put six in FETRA if seven were meant.

And, there is legislative history to suggest the use of six categories not seven was no accident. FETRA was enacted in October of 2004. The Senate Bill passed that summer had two assessments. One was to be a FDA assessment (ultimately jettisoned). The Bill’s FDA assessment followed the same structure as section 518d. There was in the FDA assessment a Step A division among categories but that Step A division had seven categories, not six, as “large” and “little” cigars were made separate categories (150 C.R. 16047 (July 16, 2004), also 150 C.R. S8389). (“Little” was defined the same as “small” is now.) The TTPP assessment in the Senate Bill did not cover cigars at all (150 C.R. 16056 (July 16, 2004), also 150 C.R. S8397). There were only five categories. But in the end, the FDA provisions were taken out of the legislation that enacted FETRA and cigars were added to the TTPP without the cigar subcategories of the FDA assessment. That is, in the TTPP provisions that are now law, Congress went from five to six categories, specifically rejecting the seven-category (two-cigar category).

FDA assessment model of the Bill that was at one time under consideration and which is what is actually suggested here. That is, Congress seems to have intentionally made cigars one category, not two, after considering the alternative. In addition, recent events noted below in which manufacturers have been fleeing the small cigar market share for the cheaper taxes of the large cigar category indicates that there is not much difference between cigars on either side of the margin of the two categories, making it seemingly burdensome and market-affecting to separate the categories, which may have been a motivation for Congress as well.

That would seem to be important in this instance since the alternative suggested in the litigation was a two-cigar category alternative. Seemingly, Congress considered, but rejected, the breakout. The Senate Bill TTPP assessment provisions as they stood before cigars were added as a category was basically the same as they are now. Cigars were simply added.

Before cigars were added, size differential was not really a potential issue in theory because the other four categories of tobacco were weight categories and cigarettes may not have the weight variations of cigars. Congress added cigars purposely as a single category and did nothing to add provisions dealing with separating cigars by size.

To add a size element now or subcategories would seem to be to legislate rather than to interpret the legislation. FETRA has been in existence for 6 years without change. The definition of volume that seems to apply and be intended is that of subsection 518d(g)(3). That is why, for now, USDA, pending comment, maintains the current regulation and Step B procedure.

Fairness of Assessment, Congressional Intent

With regard to the alternative, there is in its favor, to the extent relevant, the potential equitable concern of small cigars generating the same liability as large ones. We address that more below. The Step A calculations are done separately for small and large cigars even though the end result is one Step A category. In support, on the other hand, of the current method, reading subsection 518d(g) as requiring a unit method can be seen as actually giving meaning to the other provisions of FETRA rather than being contrary to them.

FETRA as it was finally enacted does bounce among several concepts. Among them are (1) “market share” and (2) “volume of domestic sales” and (3) “gross domestic volume.” Also there is the “pro rata” language. Under subsection 518d(e), USDA is to allocate Step B on a “pro rata” basis and subsection 518d(1)(4) specifies that each manufacturer and importer only pay their “correct share of total gross domestic volume from all sources.” Specifically in subsection 518d(e) FETRA provides that the assessment be “allocated on a pro rata basis” based on the manufacturer’s or importer’s “share of gross domestic volume.”

In the alternative view suggested in the litigation, it is suggested that a maker of small cigars is paying more than its “pro rata” share of the “gross domestic volume” if it pays the assessment as currently calculated because “gross domestic volume” cannot, it is suggested there, be based just on units. However, in subsection 518d(h) FETRA requires that the manufacturers and importers be assessed based on “market share” and “market share” is defined in subsection 518d(a) to mean “volume of domestic sales.”

There appears to be a logical progression towards subsection 518d(g), which is entitled “Determination of volume of domestic sales.” That is also the expression in the title of subsection 518d(h). Subsection 518d(g)(2) specifies that “the volume of domestic sales” be calculated based on “gross domestic volume” therefore tying the two concepts together, or seeming to, and then subsection 518d(g)(3) specifies that “volume of domestic sales” will be measured by units for cigars. Therefore, considering all of the sections together and weighing them all together with all of the potential for controversy that they may produce, it seems on balance at this time and subject to comment and further consideration that all FETRA
subsection 518d(g)(3) by tying the measure to units.
This interpretation of all the parts of the statute to resolve any ambiguities
produced by the various subsections
seems particularly strong when all the
suggested alternatives suggested so far
result in contradictory interpretation for
separate subsections of FETRA or
involve data that no Federal
Government agency has and cannot be
verified if supplied by manufacturers,
and would involve calculations that
Congress presumably would have laid
out in the statute. This view is not one
of convenience on the part of the agency
but reflects the actual provision of the
statute both as to what Congress did
express and what it did not.
Congress in subsection 518d(h)
specifically called for the use of official
government reports that do not include
weight data for domestically
manufactured cigars, and that section is
specifically entitled “Measurement of
Volume of Domestic Sales” and has only a
unit metric for cigars. It was Congress
that recognized the need for a ready
method to collect the assessment. It was
an add-on to the taxes paid elsewhere.
The reports show taxes paid, but taxes
paid is not a volume measure—a view
that may be at issue in the Step A
litigation referred to earlier—and, in any
event, (h) is referenced in (g) which
specifies that the “volume” method to be
used is a unit method.
If Congress wanted to calculate Step
B some other way, presumably Congress
would have told USDA what to do and
not left parts of the calculation to
speculation, particularly given how
detailed the specifications otherwise are
in FETRA. Congress could have omitted
the unit provision and specified that
payments would be made on the basis
taxes paid. They did not do that. It
may be that a particular party can show
that the unit figures used by USDA are
inaccurate. But that is a different issue
than the method of the assessment.
It seems to follow, pending comment,
that a manufacturer’s or importer’s “pro
rata” share of the cigar volume would
under FETRA and these provisions be
their share of the total number of units
together of all cigars thus resolving any
ambiguities that might otherwise be left
to debate by the more general provisions
elsewhere in FETRA. The word “based”
in subsection 518d(g)(2) would not seem
to mean merely “derived from” allowing
other elements to intercede in the
determination section subsection
518d(f) (in conjunction with subsection
518d(g)) providing that the “volume of
domestic sales” is determinative and
subsection 518d(g)(3) specifies that that
volume is a unit-based matter solely. It
is not derived from that number—it is
that number, or so FETRA seems to say.
The current approach therefore does
seem to give meaning to all parts of
FETRA. The current approach handles
the matter in a coherent and logically
consistent way. Companies,
accordingly, do seem under the current
regime to pay their pro rata share of the
correct volume. Subsection 518d(g)
defines “volume” (and is the only
provision to do so) and therefore gives
meaning to other parts of FETRA. Plus,
as noted, the calculation method in
FETRA is detailed and specific and
Congress only enacted six categories not
seven and seemed to do so
intentionally. Congress has never
changed FETRA even though it changed
other taxes among the tobacco product
categories in 2009.
The alternatives discussed in this
notice are largely based on
interpretations of 7 U.S.C. 518d(e) and
whether the current method provides a
fair assessment. It now seems as if the
company is paying more than its share of
gross domestic volume. The current method
that USDA uses could arguably be seen
as “unfair” because tiny cigars generate
as much assessment as very large, and
expensive, cigars. However, USDA
cannot change its obligations on the
basis of what it believes to be fair not
fair—that would be to legislate and it is
not clear that Congress was unaware of
these issues or regarded the current
method as unfair. There is nothing in
the statute to suggest that the
calculation method is a policy call and,
in any event on further consideration,
there is no reason to necessarily
consider the assessments “unfair” as
enacted—or now.
Rather, the Step B assessments have
only been about one-third of one cent
per unit for small cigars, or about $3 per
1,000 units. This does not seem to have
impeded the marketing of small cigars,
judging from the numbers that have
been reported to USDA from the tax
reports. Presumably, this very small
assessment was passed on to consumers.
It was common to all parties in the same
category so there was no competitive
advantage.
Further, we understand that small
cigars can be packaged like cigarettes,
can be about the same size, and can
compete with cigarettes. In 2004 the
difference in general tax rates between
small cigars and cigarettes was about
$18 per 1,000 units (“small cigars” were
taxed at about $2 per 1,000 units). The
FETRA assessment of $3 per 1,000 units
was that which could be and also
also cigarettes themselves generate a
FETRA assessment. “Small cigars” thus
would still have had an overall tax
advantage over cigarettes. That may have figured in
Congress’s thinking in enacting FETRA.
There have been some changes in the
tax situation since as noted above, the
2009 tax changes equalized “small cigar”
and cigarette tax rates at about $50 per
1,000 units, but made no changes to
FETRA. However, the tax changes
apparently motivated small cigar makers to
increase the size of their cigars so that
they could be taxed at a value rate
(about 50 percent of value) as “large
cigars” (which results in an amount well
below the maximum unit rate for large
cigars) and not at a unit rate as small
cigars.
At current rates, taxes for smaller
large cigars (those are just heavy enough
to be in the “large” category) are small
enough (because their value is low
enough) that they are taxed more
cheaply (converted to a per unit basis)
than those in the “small cigar” category.
That is, these now slightly bigger cigars
are now taxed, per unit, at a rate that is
well below the rough 1,000 units rate for “small cigars”
and cigarettes. In fact, the difference
between these smaller large cigars
(which still may be marketed like the
small cigars of old in packages of 20)
and cigarettes may even be greater than
the old difference between “small
cigars” and cigarettes prior to the 2009
tax changes. That difference, it appears,
can be even greater than the $18
difference under the former rates.
Smaller large cigars still have a tax
advantage over cigarettes.
We add in the way of perspective on
these issues that there has been a
reported shift in market volume from
the “small” cigar category into the large
category and cigar numbers have
increased steeply as reflected in the
change in the FETRA cigar Step A
allowment. This means that that those
that would benefit from a breakout of
“small cigars” may now no longer so
benefit from the alternate method of
making the Step B calculation, thus
suggesting a certain volatility in result
which of itself may have been
something that Congress would have
wanted to avoid. Some companies that
formerly exclusively sold small cigars
appear to be primarily selling “large”
cigars to maintain their tax advantages
over cigarettes. “Large cigar” market
volume numbers have increased
substantially since the 2009 tax change.
As for the future, if all small cigars are
reformulated to meet the weight per
1,000 units requirements of the large
cigar category and its cheaper tax rates,
it would be that those who market to
consumers at all in the small cigar category, in
which case the result of using the
alternate method would be exactly the same as the method currently used by USDA.

But assuming a situation in which there are substantial small cigar marketings in the actual “small cigar” tax category, changing the Step B method would substantially change assessment levels. Even applied to assessment data from the first quarter of 2010, it appears that the alternative method of using cigar subcategories would have increased the large cigar unit assessment as much as 12 times. That difference might actually have been greater before then because in 2010, the shift in market volume from small to large cigars had already begun.

We request comments on all aspects of the Step B assessment. Commenters can address whether they believe the Court’s decision absolutely requires a change or merely requires a change if agency reconsideration of the current method of Step B division suggests that a change is appropriate. Comments in support of a change should suggest where USDA would obtain the data to implement the alternative and how that information would be verified. Comments should address the question of whether a change would be retroactive for all, or prospective only, for those other than the company in connection with the current litigation. Commenters may want to indicate whether “small cigars” are standard in size or provide other marketing information that may be germane to the consideration of this issue.

Commenters may want to address whether cigarettes should be impacted by any potential resulting changes. Because the statutory provisions at issue are also used for the assessment of cigarettes, particularly with respect to the use of units, cigarette manufacturers and importers may wish to comment on whether the cigarette Step B method currently in use should be changed or remain the same. For example, if our assumption that all cigarettes weigh the same is inaccurate, a change to the Step B calculation to take weight into account could impact cigarette manufacturers or importers.

Conclusion and Guidance for Comments

CCC is requesting comments from the public on the method used to calculate TTPP assessments for cigar manufacturers and importers, and any related issues. Any change would be reflected in the regulations in 7 CFR part 1463. Specific comments addressing the issues raised above are preferred, but all comments are welcome. Proposals for alternatives should address data sources and costs and the provisions of FETRA that support the alternative. This notice does not change the regulations; any change would be published in a subsequent rulemaking document. Because FETRA exempts TTPP from notice and comment rulemaking, any future action would likely be a final rule.

The following suggestions may be helpful for preparing your comments:

- Explain your views as clearly as possible.
- Describe any assumptions that you used.
- Provide any technical information and data on which you based your views.
- Provide specific examples to illustrate your points.
- Offer specific alternatives to the current regulations or policies and indicate the source of necessary data, the estimated cost of obtaining the data, and how the data can be verified.
- Submit your comments to be received by FSA by the comment period deadline.

Executive Order 12866

The Office of Management and Budget (OMB) designated this notice as not significant under Executive Order 12866, “Regulatory Planning and Review,” and therefore has not reviewed this notice.

Signed in Washington, DC, on March 15, 2011.

Val Dolcini,
Acting Executive Vice President, Commodity Credit Corporation.

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Model 737–600, –700, –700C, –800, –900, and –900ER Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for the products listed above. For certain airplanes, this proposed AD would require a one-time inspection for damage of the hydraulic actuator rod ends and actuator attach fittings on the thrust reversers, and repair or replacement if necessary. For all airplanes, this proposed AD also would require repetitive inspections for damage of the hydraulic actuator rod ends, attach bolts, and nuts; repetitive inspections for damage of fitting assemblies, wear spacers, and actuator attach fittings on the thrust reverser; repetitive measurements of the wear spacer; and corrective actions if necessary. This proposed AD was prompted by in-service damage of the attachment fittings for the thrust reverser actuator. We are proposing this AD to detect and correct such damage, which could result in actuator attach fitting failure, loss of the thrust reverser auto restow function, and consequent loss of control of the airplane.

DATES: We must receive comments on this proposed AD by May 6, 2011.

ADDRESSES: You may send comments by any of the following methods:

- Hand Delivery: Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact Boeing Commercial Airplanes, Attention: Data & Services Management, P.O. Box 3707, MC 2H–65, Seattle, Washington 98124–2207; phone: 206–544–5000, extension 1; fax: 206–766–5680; e-mail: me.boecom@boeing.com; Internet: https://www.myboeingfleet.com. You may review copies of the referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Dayton, Washington. For information on the availability of this material at the FAA, call 425–227–1221.

Examining the AD Docket

You may examine the AD docket on the Internet at http://www.regulations.gov; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office
