**SUPPLEMENTARY INFORMATION:**

**I. Abstract**

The Census Bureau has conducted the Annual Survey of Manufactures (ASM) since 1949 to provide key measures of manufacturing activity during intercensal periods. In census years ending in "2" and "7", we mail and collect the ASM as part of the Economic Census covering the Manufacturing Sector. This survey is an integral part of the Government's statistical program. The ASM furnishes up-to-date estimates of employment and payroll, hours and wages of production workers, value added by manufacture, cost of materials, value of shipments by product class, inventories, and expenditures for both plant and equipment and structures. The survey provides data for most of these items for each of the 5-digit and selected 6-digit industries as defined in the North American Industry Classification System (NAICS). It also provides geographic data by state at a more aggregated industry level.

The survey also provides valuable information to private companies, research organizations, and trade associations. Industry makes extensive use of the annual figures on product class shipments at the U.S. level in its market analysis, product planning, and investment planning. The ASM data are used to benchmark and reconcile monthly and quarterly data on manufacturing production and inventories. This ASM clearance request will be for the year 2011. There will be no changes to the information requested from respondents.

**II. Method of Collection**

The ASM statistics are based on a survey that includes both mail and nonmail components. The mail portion of the survey consists of a probability

sample of approximately 51,000 manufacturing establishments that was selected from a frame of approximately 117,000 establishments. The frame contained all manufacturing establishments of multiunit companies (companies with operations at more than one location) plus the largest single-location manufacturing companies within each manufacturing industry. The nonmail component contains the remaining single-location companies; approximately 211,000 companies. No data are collected from companies in the nonmail component. Rather, data are directly obtained from the administrative records of the Internal Revenue Service (IRS), the Social Security Administration (SSA), and the Bureau of Labor Statistics (BLS). Although the nonmail companies account for nearly two-thirds of the population, they account for less than 7 percent of the manufacturing output.

The 51,000 sampled establishments in the mail portion of the ASM will be mailed either a long report form (MA-10000(L)) or a short form (MA-10000(S)) based on mail selection procedures. The MA-10000(L) will be mailed to all establishments of single-location companies plus the large remaining single-location companies in the sample will receive the MA-10000(S) form. We estimate that the MA-10000(L) will be mailed to approximately 48,000 establishments and the MA-10000(S) will be mailed to 3,000 establishments.

#### SUPPLEMENTARY INFORMATION:

##### I. Abstract

The U.S. Census Bureau plans to request approval of the 2011 Government Units Survey data collection form. The Government Units Survey (GUS) is the directory survey for the 2012 Census of Governments. The survey has the following purposes: (1) To produce the official count of local government units in the United States; (2) To obtain descriptive information on the basic characteristics of governments; (3) To identify and delete inactive units; (4) To identify file duplicates and units that were dependent on other governments; and (5) To update and verify the mailing addresses of governments.

In 2007, the Government Organization form was mailed to special districts only. The form (G-30) collected only basic information on the governing board, authorizing legislation, the Web address, agency activity, and employment and payroll data. The employment and payroll data were used in lieu of a response to the March 2007 Census of Governments: Employment for special district governments.

For 2012, the GUS collects more data and will be mailed out to municipalities, townships, counties, and special districts. The GUS contains nine broad content areas: Background information, debt, license and permit fees, taxes, retirement/pension plan, government activity, public services, judicial or legal activities, and finance. The first eight content areas consist predominantly of yes/no questions and are designed to collect information on general characteristics of the government. The finance section of the questionnaire requests four numerical values on payroll, expenditures, revenue, and debt.

Two GUS forms are currently being pretested using a split panel design to study the effects of using headers to inform the respondent of section content versus a form with no section segmentation. The final questionnaire will be determined pending the results of the split panel design analysis.

## II. Method of Collection

Each of the estimated 76,500 non-school governments will be sent a form. Respondents will be asked to verify their existence, correct name and address information, answer questions on the form, and return it. Both a paper collection instrument and a Web collection instrument will be available for respondents to use beginning October 11, 2011.
