Overview of This Information Collection

(1) *Type of Information Collection:* New collection.

(2) *Title of the Form/Collection:* *Teen Dating Relationships: Opportunities for Youth to Define what's Healthy and Unhealthy.*

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: ATF F 3312.1 and ATF F 3312.2. National Institute of Justice, Office of Justice Programs.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Youth, ages 11-22 and adult practitioners, advocates and

researchers in professions related to youth and youth relationships. A recent review of the teen dating violence research indicated that youth are rarely involved in research designed to better understand this issue. The purpose of this data collection is to better understand how youth conceptualize healthy and unhealthy dating relationships by intentionally involving youth in the research process. In the first phase of the study, concept mapping will be used to create a visual representation of the ways youth and adults perceive teen dating relationships. Concept mapping is a well-documented method of applied research that makes explicit, implicit theoretical models that can be used for planning and action. The process requires respondents to brainstorm a set of statements relevant to the topic of interest ("brainstorming" task), individually sort these statements into piles based on perceived similarity ("sorting" task), rate each statement on one or more scales ("rating" task), and interpret the graphical representation that result from several multivariate analyses. The collection of data for all concept mapping activities will be facilitated via a dedicated project website. The second phase of the study includes a series of eight face-to-face facilitated discussions with relevant stakeholder groups, practitioners, researchers and youth. Guiding questions and discussion prompts, derived from the concept mapping results, will be used to gather information from the respondents on the meaning and potential use of the concept mapping results. This input will be aggregated and linked to the emerging conceptual framework that will result in a better understanding of adolescent relationship features, including the range of healthy, unhealthy, and abusive characteristics, from the standpoint of youth, and determine how prevention and intervention efforts can effectively target relationship characteristics related to abusive behavior.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that 400 respondents total will participate in the concept mapping phase of this collection, and that 80 respondents total will participate in the facilitated discussions. The table below shows the estimated number of respondents for each portion of the collection:
