SUPPLEMENTARY INFORMATION: The subject modification to Permit No. 10027, issued on July 30, 2008 (73 FR 44224), is requested under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222-226).

The permit currently authorizes the permit holder to study the population biology and connectivity of green (*Chelonia mydas*) and hawksbill (*Eretmochelys imbricata*) sea turtles focusing on distribution and abundance, ecology, health, and threats to sea turtles at the Palmyra Atoll in the Pacific Ocean. The permit holder requests a modification to their existing permit to increase the number of green sea turtles taken annually from 100 to 250 turtles per year. Of the total 250 green sea turtles, researchers request to increase the number tagged with sonic transmitters from 30 to 40 turtles annually. The modification is needed to accommodate higher than anticipated capture rates and an increase in capture efforts. These data will help determine if temporal, stage-specific, or sex-specific movement patterns exist for the population of sea turtles at Palmyra. The modified permit would expire July 31, 2013.

Dated: June 10, 2011.
