More recently, Seashore staff has turned their attention to the potential impacts of deer on native vegetation in other natural zones of the Seashore and the cultural landscape of the William Floyd Estate.

Information collected as part of this research has indicated the need for a management plan to address changes in deer abundance and deer behavior due to the presence of human food sources and habituation to the unthreatening presence of humans; adverse impacts on native vegetation resulting from current levels of deer browsing; and adverse impacts on natural and cultural resources at the William Floyd Estate resulting from current deer population levels.
