PART 75—SAFETY STANDARDS FOR UNDERGROUND COAL MINES

1. The authority citation for part 75 is revised to read as follows:

2. Section 75.403 is republished to read as follows:

§ 75.403 Maintenance of incombustible content of rock dust.

Where rock dust is required to be applied, it shall be distributed upon the top, floor, and sides of all underground areas of a coal mine and maintained in such quantities that the incombustible content of the combined coal dust, rock dust, and other dust shall be not less than 80 percent. Where methane is present in any ventilating current, the percent of incombustible content of such combined dust shall be increased 0.4 percent for each 0.1 percent of methane.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2011–0492]

Drawbridge Operation Regulations; Connecticut River, Old Lyme, CT

AGENCY: Coast Guard, DHS.

ACTION: Notice of temporary deviation from regulations.

SUMMARY: The Commander, First Coast Guard District, has issued a temporary deviation from the regulation governing the operation of the Amtrak Railroad Bridge at mile 3.4, across the Connecticut River at Old Lyme, Connecticut. The deviation is necessary to facilitate scheduled maintenance at the bridge. This deviation allows the bridge to remain in the closed position during the deviation period.

DATES: This deviation is effective from 12:01 a.m. through 6 a.m. on June 23, 2011. Vessels that can pass under the bridge in the closed position may do so at any time.

METHOD OF APPEAL: The local marinas and commercial users were notified. No objections were received.

The bridge must return to its regular operating schedule immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35(e).

Dated: June 8, 2011.

Gary Kassof,
Bridge Program Manager, First Coast Guard District.

[Docket No. USCG–2011–0481]

Drawbridge Operation Regulations; Long Island, New York Inland Waterway From East Rockaway Inlet to Shinnecock Canal, Nassau, NY

AGENCY: Coast Guard, DHS.

ACTION: Notice of temporary deviation from regulations.

SUMMARY: The Commander, First Coast Guard District, has issued a temporary deviation from the regulation governing the operation of the Long Island Rail Road Bridge at mile 11, across the Inland Waterway from East Rockaway Inlet to Shinnecock Canal, Nassau County, New York. The deviation is necessary to facilitate scheduled maintenance at the bridge.

DATES: This deviation is effective from 12:01 a.m. through 6 a.m. on June 23, 2011. Vessels that can pass under the bridge in the closed position may do so at any time.

METHOD OF APPEAL: The local marinas and commercial users were notified. No objections were received.

The bridge must return to its regular operating schedule immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35(e).

Dated: June 8, 2011.

Gary Kassof,
Bridge Program Manager, First Coast Guard District.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Establishment of a Nonessential Experimental Population of Bull Trout in the Clackamas River Subbasin, OR

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: The U.S. Fish and Wildlife Service (Service), jointly with the State of Oregon, and in cooperation with the U.S. Forest Service, Mt. Hood National Forest (USFS), National Marine Fisheries Service (NMFS), and Confederated Tribes of the Warm Springs Reservation of Oregon (CTWSRO), will establish a nonessential experimental population (NEP) of bull trout (Salvelinus confluentus) in the Clackamas River and its tributaries in Clackamas and Multnomah Counties, Oregon, under section 10(j) of the Endangered Species Act of 1973, as amended (Act). The geographic boundaries of the NEP include the entire Clackamas River subbasin as well as the mainstem Willamette River, from Willamette Falls to its points of confluence with the Columbia River, including Multnomah Channel. The best available data indicate that reintroduction of bull trout to the Clackamas River subbasin is biologically feasible and will promote the conservation of the species.

DATES: This rule is effective June 21, 2011.

ADDRESSES: This final rule, along with the public comments, Environmental Assessment (EA), and Finding of No Significant Impact (FONSI), is available on the Internet at http://www.regulations.gov. Comments and materials received, as well as supporting documentation used in the preparation of this final rule, are also available for inspection, by appointment, during normal business hours, at the U.S. Fish and Wildlife Service, Oregon Fish and Wildlife Office, 2600 SE. 98th Avenue, Suite 100, Portland, Oregon 97266; (telephone 503–231–6179).

FOR FURTHER INFORMATION CONTACT: Chris Allen at the address listed above. If you use a telecommunication device for the deaf (TDD), call the Federal Information Relay Service (FIRS) at 800–877–8339.

SUPPLEMENTARY INFORMATION:

BACKGROUND

Statutory and Regulatory Framework

The 1982 amendments to the Act (16 U.S.C. 1531 et seq.) included the addition of section 10(j) which allows for the designation of reintroduced populations of listed species as “experimental populations.” Under section 10(j) of the Act and our regulations at 50 CFR 17.81, the Service may designate as an experimental population a population of endangered or threatened species that has been or will be released into suitable natural habitat outside the species’ current natural range (but within its probable historical range, absent a finding by the Director of the Service in the extreme case that the primary habitat of the species has been unsuitably and irreversibly altered or destroyed).

Before authorizing the release as an experimental population of any population (including eggs, propagules, or individuals) of an endangered or threatened species, and before authorizing any necessary transportation to conduct the release, the Service must find, by regulation, that such release will further the conservation of the species. In making such a finding, the Service uses the best scientific and commercial data available to consider: (1) Any possible adverse effects on extant populations of a species as a result of removal of individuals, eggs, or propagules for introduction elsewhere; (2) the likelihood that any such experimental population will become established and survive in the foreseeable future; (3) the relative effects that establishment of an experimental population will have on the recovery of the species; and (4) the extent to which the introduced population may be affected by existing or anticipated Federal or State actions or...
