is important that reviewers provide their comments at such times and in such manner that they are useful to the agency’s preparation of the environmental impact statement. Therefore, comments should be provided prior to the close of the comment period and should clearly articulate the reviewer’s concerns and contentions. Public meetings are anticipated to be held following publication of the Draft Environmental Impact Statement.

Comments received in response to this solicitation, including names and addresses of those who comment, will be part of the public record for this proposed action. Comments submitted anonymously will be accepted and considered; however, anonymous comments will not provide the Agency with the ability to provide the respondent with subsequent environmental documents.

Dated: June 15, 2011.

Lyle E. Powers,
Acting Forest Supervisor.

DEPARTMENT OF COMMERCE
Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: U.S. Census Bureau.

Title: The American Community Survey.

OMB Control Number: 0607–0810.

Form Number(s): ACS–1, ACS–1(SP), ACS–1(PR), ACS–1(GQ), ACS–1(PR)(GQ), GQFQ, ACS CATI (HU), ACS CAP I (HU), ACS (HU)

Type of Request: Extension of a currently approved collection.

Burden Hours: 2,337,868.

Number of Respondents: 3,760,000.

Average Hours oer Response: 38 minutes.

Needs and Uses: The U.S. Census Bureau requests continued authorization from the Office of Management and Budget (OMB) to conduct the American Community Survey (ACS). The Census Bureau has developed a methodology to collect and update every year demographic, social, economic, and housing data that are essentially the same as the “long-form” data that the Census Bureau traditionally has collected once a decade as part of the decennial census. Federal and state government agencies use such data to evaluate and manage federal programs and to distribute funding for various programs that include food stamp benefits, transportation dollars, and housing grants. State, county, and community governments, nonprofit organizations, businesses, and the general public use information like housing quality, income distribution, journey-to-work patterns, immigration data, and regional age distributions for decision-making and program evaluation.

In years past, the Census Bureau collected the long-form data only once every ten years, which become out of date over the course of the decade. To provide more timely data, the Census Bureau expanded the ACS. The ACS blends the strength of small area estimation with high quality of current surveys. There is an increasing need for current data describing lower geographic detail. The ACS is now the only source of data available for small-area levels across the Nation and in Puerto Rico. In addition, there is an increased interest in obtaining data for small subpopulations such as groups within the Hispanic, Asian, and American Indian populations, the elderly, and children. The ACS provides current data throughout the decade for small areas and subpopulations.

The ACS began providing up-to-date profiles in 2006 for areas and population groups of 65,000 or more people, providing policymakers, planners, and service providers in the public and private sectors with information every year—not just every ten years. The ACS program will provide estimates annually for all states and for all medium and large cities, counties, and metropolitan areas. For smaller areas and population groups, it took three to five years to accumulate information to provide accurate estimates. The first three-year estimates were released in 2008; the first five-year estimates in 2010. These multiyear estimates will be updated annually.

Using the Master Address File (MAF) from the decennial census that is updated each year, we will select a sample of addresses, mail survey forms each month to a new group of potential households, and attempt to conduct interviews over the telephone with households that have not responded. Upon completion of the telephone follow-up, we will select a sub-sample of the remaining households, which have not responded, typically at a rate of one in three, to designate a household for a personal interview. We will also conduct interviews with a sample of residents at a sample of group quarters (GQ) facilities. Collecting these data from a new sample of housing unit (HU) and GQ facilities every month provides more timely data and lessened respondent burden in the 2010 Census. We will release a yearly microdata file, similar to the Public Use Microdata Sample file of the Census 2000 long-form records. In addition, we will produce total population summary tabulations similar to the Census 2000 tabulations down to the block group level. The microdata files, tabulated files, and their associated documentation are available through the Internet.

In January 2005, the Census Bureau began full implementation of the ACS in households with a sample of approximately 250,000 addresses per month in the 50 states and the District of Columbia. In addition, we select
