SUPPLEMENTARY INFORMATION: The Draft EIS analyzes the potential environmental impacts associated with amending the CDCA Plan to make available approximately 20,762 acres of BLM-managed surface lands (acquired lands included) for solar, wind and geothermal testing and development in a renewable energy evaluation area located near Niland, California. The Draft EIS also analyzes the potential environmental impacts of approving a pending geothermal lease application within the renewable energy evaluation area.

This CDCA Draft Plan Amendment/ Draft EIS analyzes 6 alternatives, including (1) No Action Alternative (the CDCA Plan would not be amended, and existing plan decisions, stipulations, and allocations would not change as a direct result of this planning process), (2) No Development Alternative, (3) Renewable Energy Development Emphasis, (4) Geothermal Development Only, (5) Solar Development Emphasis with Moderate Geothermal Development and No Wind Development, and (6) Geothermal Development Emphasis with Moderate Solar Development and No Wind Development. If an alternative is selected that establishes the evaluation area as available for solar energy development, it will be identified as a solar energy zone.

The principal issues identified thus far include Native American concerns; potential land use conflicts including recreation; cumulative impacts considering existing, proposed, and potential geothermal projects in the area; and potential impacts on cultural resources, wildlife, visual resources, and surface and groundwater resources. The Draft EIS also addresses geology, mining, geothermal resources, vegetation, threatened or endangered species, air quality, noise,

transportation, human health and safety, and social and economic issues, as well as other issues raised during the scoping process.

The Draft EIS identifies stipulations and mitigation measures that could be applied to future energy projects. This document will not authorize any specific energy developments at this time. Additional project-specific environmental analyses would need to be conducted before on-the-ground development activities could occur.

The BLM, in compliance with FLPMA, NEPA, and all other relevant Federal laws, Executive orders, and management policies of the BLM, used an interdisciplinary approach in developing the EIS, working collaboratively in order to consider the variety of resource issues and concerns identified.
