Applications for New Awards; Arts in Education National Program

AGENCY: Office of Innovation and Improvement, Department of Education.

ACTION: Notice.

Overview Information

Arts in Education National Program. Notice inviting applications for new awards for fiscal year (FY) 2011.

Catalog of Federal Domestic Assistance (CFDA) Number: 84.351F.

Dates:

Applications Available: July 14, 2011.

Deadline for Transmittal of

Applications: August 15, 2011.

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The Arts in Education National Program supports national level high-quality arts education projects and programs for children and youth, with special emphasis on serving students from low-income families and students with disabilities.

Priorities: This notice includes one absolute priority and one competitive preference priority. We are establishing these priorities for the FY 2011 grant competition only, in accordance with section 437(d)(1) of the General Education Provisions Act (GEPA), 20 U.S.C. 1232(d)(1).

Absolute Priority: For FY 2011, this priority is an absolute priority. Under 34 CFR 75.105(c)(3) we consider only applications that meet this priority.

This priority is:

Model Projects.

High-quality projects that are designed to develop and implement, or expand, initiatives in arts education and arts integration on a national level for pre-kindergarten-through-grade-12 children and youth, with special emphasis on serving students from low-income families and students with disabilities.

In order to meet this priority, an applicant must demonstrate that the project for which it seeks funding will provide services and develop initiatives in multiple schools, school districts, and communities throughout the country.

Competitive Preference Priority: For FY 2011, this priority is a competitive

preference priority. Under 34 CFR 75.105(c)(2)(i) we award up to an additional 10 points to an application, depending on how well the application meets this priority.

This priority is:

Supporting Programs, Practices, or Strategies for which there are Strong or Moderate Evidence of Effectiveness.

Projects that are supported by strong or moderate evidence. A project that is supported by strong evidence (as defined in this notice) will receive more points than a project that is supported by moderate evidence (as defined in this notice).

Application Requirements:

A project must describe how it would (a) Serve low-income students and students with disabilities; and (b) implement the following activities on a national level:

1. Professional development based on national standards for pre-kindergarten-through-grade-12 arts educators.

Note: *National standards* refers to the arts standards developed by the Consortium of National Arts Education Associations. The standards outline what students should know and be able to do in the arts. These are not Department standards. To view the standards, please go to <http://www.menc.org/resources/view/the-national-standards-for-arts-education-a-brief-history>.

2. Development and dissemination of instructional materials, including online resources, in multiple arts disciplines for arts educators.

3. Arts-based educational programming in music, dance, theater, media arts, and visual arts, including folk arts for pre-kindergarten-through-grade-12 students and arts educators.

4. Community and national outreach activities that strengthen and expand partnerships among schools, school districts, and communities throughout the country.

Definitions:

As used in this notice—

Arts means music, dance, theater, media arts, and visual arts, including folk arts.

Arts educator means a teacher or other instructional staff who work in music, dance, theater, media arts, or visual arts, including folk arts.

Carefully matched comparison group design means a type of quasi-experimental study (as defined in this notice) that attempts to approximate an experimental study (as defined in this notice). More specifically, it is a design in which project participants are matched with non-participants based on key characteristics that are thought to be related to the outcome. These characteristics include, but are not limited to: (1) Prior test scores and other

measures of academic achievement (preferably, the same measures that the study will use to evaluate outcomes for the two groups); (2) Demographic characteristics, such as age, disability, gender, English proficiency, ethnicity, poverty level, parents' educational attainment, and single- or two-parent family background; (3) The time period in which the two groups are studied (e.g., the two groups are children entering kindergarten in the same year as opposed to sequential years); and (4) Methods used to collect outcome data (e.g., the same test of reading skills administered in the same way to both groups).

Experimental study means a study that employs random assignment of, for example, students, teachers, classrooms, schools, or districts to participate in a project being evaluated (treatment group) or not to participate in the project (control group). The effect of the project is the average difference in outcomes between the treatment and control groups.

Integration means (i) Encouraging the use of high-quality arts instruction within other academic content areas, and (ii) strengthening the arts as a core academic subject in the school curriculum.

Interrupted time series design means a type of quasi-experimental study (as defined in this notice) in which the outcome of interest is measured multiple times before and after the treatment for program participants only. If the program had an impact, the outcomes after treatment will have a different slope or level from those before treatment. That is, the series should show an "interruption" of the prior situation at the time when the program was implemented. Adding a comparison group time series, such as schools not participating in the program or schools participating in the program in a different geographic area, substantially increases the reliability of the findings.¹

¹ A single subject or single case design is an adaptation of an interrupted time series design that relies on the comparison of treatment effects on a single subject or group of single subjects. There is little confidence that findings based on this design would be the same for other members of the population. In some single subject designs, treatment reversal or multiple baseline designs are used to increase internal validity. In a treatment reversal design, after a pretreatment or baseline outcome measurement is compared with a post treatment measure, the treatment would then be stopped for a period of time; a second baseline measure of the outcome would be taken, followed by a second application of the treatment or a different treatment. A multiple baseline design addresses concerns about the effects of normal development, timing of the treatment, and amount of the treatment with treatment-reversal designs by using a varying time schedule for introduction of
