SUPPLEMENTARY INFORMATION: The design of cave-in protection systems is needed by employers in the construction industry and OSHA compliance officers to ensure cave-in protection systems are designed, installed, and used in a manner to protect workers adequately. Regulations 29 CFR 1926.652 paragraphs (b) and (c) contain paperwork requirements that impose burden hours or costs on employers. These paragraphs require employers to use protective systems to prevent cave-ins during excavation work; these systems include sloping the side of the trench, benching the soil away from the excavation, or using a support system or shield (such as a trench box). The Standard specifies allowable configurations and slopes for excavations, and provides appendices to assist employers in designing protective systems. The regulations also provide options to how the required records are developed.
