For the first round of new unit set-aside allocations, the Administrator will promulgate a notice of data availability informing the public of the specific new unit allocations and provide an opportunity for submission of objections on the grounds that the allocations are not consistent with the requirements of the relevant final rule provisions. A second notice of data availability will subsequently be promulgated in order to make any necessary corrections in the specific new unit allocations. As discussed elsewhere in this preamble, the final rule establishes a different schedule for promulgation of these notices of data availability than the proposed rule. In particular, a single set of deadlines (*i.e.*, for the first notice in the first round of allocations, June 1 of the year for which the new unit allocations are described in the notice and, for the second notice of the first round, August 1 of that year) for promulgation of the notices is established for all of the Transport Rule trading programs. EPA believes that these deadlines will provide sufficient time for EPA to obtain final emissions data for the prior year for the units involved and to calculate the allocations and promulgate the notices. Further, the approach of using the same deadline for all of the Transport Rule trading programs will simplify EPA's implementation and reduce the complexity of the process for source owners and operators.

For the second round of new unit set-aside allocations, the Administrator will also promulgate two notices of data availability. However, the deadlines for the notices differ for the NO_X ozone season trading program and for the SO_2 and NO_X annual trading programs because control period emissions data (used in making second round allocations) become available sooner, and the compliance deadline for holding allowances covering emissions is sooner, in the NO_X ozone season trading program. The control period in the NO_X ozone season program ends on September 30, and fourth quarter emissions reports must be submitted to EPA by October 30, while the control periods in the SO_2 and NO_X annual programs end on December 31 and fourth quarter emission reports are due by January 30. Further, in order for the second round allocations to be available to be used for compliance with the allowance-holding requirement, the second round needs to be completed before the compliance dates, which are December 1 in the NO_X ozone season program and March 1 in the SO_2 and NO_X annual programs. Consequently, for the NO_X ozone season program the Administrator will promulgate by September 15 a notice of data availability identifying the units eligible for second round allocations and by November 15 a second NODA of the list of eligible units and their second round allocations, which will also be recorded in the allowance accounts by that date. The comparable deadlines for the SO_2 and NO_X annual programs are December 15 and February 15. EPA believes that these deadlines will provide sufficient time for EPA to identify the units and obtain their needed emissions data and to calculate the allocations and promulgate the notices.

d. Addition of Allowances to New Unit Set-Asides

As discussed elsewhere in this preamble, EPA proposed that, if a unit with an existing-unit allocation does not operate for 3 consecutive years, the allowances that would otherwise have been allocated to that unit, starting in the seventh year after the first year of non-operation, would be allocated to the new unit set-aside for the state in which the retired unit is located. EPA is retaining this provision in the final rule but is changing the time of non-operation to 2 years and the time of allowance allocation to a non-operating unit to 4 years. Starting in the fifth year of non-operation, allowances will be allocated to the new unit set-aside for the state in which the non-operating unit is located.

EPA received comments that the new unit set-asides were not sufficient to

encourage the operation of new units. One commenter suggested that allowance allocations should cease after 3 years of non-operation because the financial incentive gained from receiving allowances beyond the 3-year period is insignificant relative to operating and fuel costs. Another commenter said that providing allowances to non-operating units is unnecessary and distorts the market.

In addition to increasing the size of the new unit set-aside in this final rule, as described above, EPA is terminating existing unit allocations starting in the fifth year after the unit does not operate for 2 consecutive years and reallocating to the new unit set-aside the allowances that the unit otherwise would have received for the fifth and subsequent years in order to make them available for new units in the state. This approach allows the new unit set-asides to grow over time.

e. Allocations to New Units Locating in Indian Country

EPA received several comments on the proposed rule that it did not explicitly address the distribution of allowances to potential new units built in Indian country. EPA recognized this concern and requested comment on this topic in the January 7, 2011 NODA.

In the final rule, EPA is providing a mechanism to make allowances available in the future for new units built in Indian country. The final rule establishes an Indian country new unit set-aside for each pollutant in each state whose borders encompass Indian country (*i.e.,* Florida, Iowa, Kansas, Louisiana, Michigan, Minnesota, Mississippi, Nebraska, New York, North Carolina, South Carolina, Texas, and Wisconsin). EPA will retain administration of these Indian country new unit set-asides as part of the Transport Rule trading programs whether or not a Transport Rule state elects to modify or replace the Transport Rule FIPs through approved SIP revisions. EPA does not create Indian country new unit set-asides for states lacking Indian country within their borders.

EPA determined the size of each Indian country new unit set-aside by calculating the ratio of square mileage of Indian country to the square mileage of the state within whose borders Indian country is located. This calculation yielded a maximum percentage of 5 percent when assessing all of the states encompassing Indian country subject to the final Transport Rule; this is referred to as the ''5 percent Indian country factor'' below. To determine the maximum percentage, EPA used the American Indian Reservations/Federally Recognized Tribal Entities dataset, which contains data for the 562 federally recognized tribal entities in the contiguous U.S. and Alaska. EPA accessed the data to analyze the Transport Rule region and compare the square miles of Indian country with the square miles of the Transport Rule state that includes the Indian country. EPA then took the highest percentage as the number to be applied across all states with Indian country to determine the size of the Indian country new unit set-aside pertinent to that state's budgets under the Transport Rule. EPA chose to use the maximum percentage (5 percent) from the Indian country analysis to determine the Indian country set-aside for each state on the basis that this approach would reserve a reasonable number of allowances from each state's budget for potential allocation to new units that may locate in Indian country within that state's borders. Any allowances from the Indian country new unit set-aside that are not allocated in a given control period are redistributed into the state's new unit set-aside. As discussed above, any allowances not allocated from that new unit set-aside are redistributed to existing units based on the existing units' share of the total existing unit allocations.

To calculate the size of each tribal new unit set-aside, EPA applied this 5 percent Indian country factor to the portion of the state's new unit set-aside originally determined by accounting for ''potential'' new units, which as described above was set at 2 percent of each pollutant's budget in each state. Therefore, the Indian country new unit set-aside is 5 percent of 2 percent of a state's budget, or 0.1 percent of that total state budget. EPA did not apply the 5 percent Indian country factor to the state-specific planned unit portion of each state's new unit set-aside because the planned unit portion is determined using projected emissions from specific, known units coming online after January 1, 2010, and none of these known units are located in Indian country.

The Indian country new unit set-asides in the following Transport Rule states with Indian Country are shown in Table VII.D.2–2.

TABLE VII.D.2–2—NEW UNIT SET-ASIDE ALLOWANCES FOR INDIAN COUNTRY

[Tons]

	SO_2 2012–2013	SO_2 2014 and beyond	Annual NO_X 2012–2013	Annual NO_X 2014 and beyond	Ozone-season NO_X 2012–2013	Ozone-season NO_X 2014 and beyond
Florida	.....	.....	.....	.....	28	28
Iowa	107	75	38	38	.....	.....

Wisconsin	80	40	32	30	.....	.....

Under the FIPs, EPA allocates allowances from Indian country new unit set-asides in essentially the same manner as it allocates allowances from state new unit set-asides. The approach for identifying, and determining the number of allowances allocated to, new units in Indian country is the same as the approach for identifying and determining allocations for non-Indian country new units covered by the state new unit set-aside, and allocations are made in two rounds using the same schedules for promulgation of notices of data availability. However, as discussed above, unallocated allowances in the Indian country set-asides are handled differently from unallocated allowances in the state new unit set-asides in that unallocated Indian country new unit set-aside allowances are first transferred back into the state new unit set-aside and then, if still not allocated to new units, are distributed to existing units in the state. EPA believes that the above-described approach in establishing and handling the Indian country new unit set-asides and state new unit set-asides is a reasonable way of making a sufficient amount of allowances available for new units in the state and Indian country located in the state and ensuring that the entire state budget is available to either new or existing units in the state and Indian country. EPA retains administration of these Indian country new unit set-asides (and, of course, the portions of state budgets that comprise these set-asides) as part of the Transport Rule trading programs even if a state elects to modify or replace the Transport Rule FIPs through approved SIP revisions. EPA continues to manage and distribute the Indian country new unit set-aside allowances in the same manner as under the FIPs. Unallocated allowances in the Indian country new unit set-aside will be returned to the portion of the state budget allocated under the approved SIP's allocation provisions. EPA believes that this approach is reasonable because EPA, rather than the states, has the authority and responsibility of administering the Transport Rule with regard to new units that locate in Indian country.

E. Assurance Provisions

To ensure that the FIPs require the elimination of all emissions that EPA has identified that significantly contribute to nonattainment or interfere with maintenance within each individual state, the Agency is adopting assurance provisions in addition to the requirement that sources hold allowances sufficient to cover their emissions. These assurance provisions limit emissions from each state to an amount equal to that state's trading budget plus the variability limit for that state (*i.e.,* the state assurance level). As discussed in section VI of this preamble, this variability limit takes into account the inherent variability in baseline EGU emissions and recognizes that state emissions may vary somewhat after all significant contribution to nonattainment and interference with maintenance are eliminated. This approach also provides sources with flexibility to manage growth and electric reliability requirements, thereby ensuring the country's electric demand will be met, while meeting the statutory requirement of eliminating significant contribution to nonattainment and interference with maintenance.

Starting in 2012, EPA is establishing, as part of the FIPs, limits on the total emissions that may be emitted from EGUs at sources in each state. For any single year, the state's emissions must not exceed the state budget with the variability limit allowed for any single year for that state (*i.e.,* the state's 1-year variability limit). In other words, in addition to covered sources being required to hold allowances sufficient to cover their emissions, the total sum of EGU emissions in a particular state cannot exceed the state budget with the state's 1-year variability limit in any 1 year (*i.e.,* the state's assurance level). EPA is not finalizing 3-year variability limits that were included in the proposal for the reasons explained previously in section VI.E of this preamble. The state budgets, variability limits, and state assurance levels for each state are shown in Tables VI.F–1, VI.F–2 and VI.F–3 in section VI.F of this preamble. The basis for the variability limits is also described in section VI.E of this preamble. Additional details may be found in the Power Sector Variability Final Rule TSD in the docket to this rule.

To implement this requirement, EPA first evaluates whether any state's total EGU emissions in a control period exceeded the state's assurance level. If any state's EGU emissions in a control period exceed the state assurance level, then EPA applies additional criteria to determine which owners and operators of units in the state will be subject to an allowance surrender requirement. In applying the additional criteria, EPA evaluates which groups of units at the common designated representative (DR) level had emissions exceeding the respective common DR's share of the state assurance level (regardless of whether the source had enough allowances to cover its emissions) during the control period.[82]

The requirement that owners and operators surrender allowances under the assurance provisions will be triggered only if two criteria are met: (1) The group of sources and units with a common DR are located in a state where the total state EGU emissions for a control period exceed the state assurance level; and (2) that group with the common DR had emissions exceeding the respective DR's share of the state assurance level. The share of the assurance penalty borne by the owners and operators will be based on the amount by which the total emissions for the units in the group exceed the common DR's share of the state assurance level as a percentage of the total calculated for all such groups of sources and units in the state. Thus, the owners and operators of each such group of sources and units must surrender an amount of allowances equal to the excess of state EGU emissions over the state assurance level multiplied by the owners' and operators' percentage and multiplied by two (to reflect the penalty of two allowances for each ton of the state's excess EGU emissions). *See* Table VII.E–1 below for an illustrative example.

This approach in the final rule of implementing the assurance provisions on a common designated representative basis contrasts with the approach in the proposed rule of implementing the assurance provisions on an owner basis. In the January 7, 2011 NODA, EPA requested comment on the alternative of basing the assurance provision penalty using common designated representatives, and some commenters supported this alternative. The common designated representative approach is simpler and avoids the need to collect information on percentage ownership (which information is not used in any other provisions of the Transport Rule trading programs).

In addition, the common designated representative approach provides additional flexibility to owners and operators who have only one or a few units in a given state but have the option of selecting a common designated representative with owners and operators of other units in the state. EPA expects companies in various states will readily be able to manage their

[82] A group of one or more sources and units in a state has a common designated representative where the same individual is authorized as the designated representative (not the alternate designated representative) for that group of sources and units as of April 1 immediately following the allowance transfer deadline for the control period involved.

emissions to stay collectively below their state's assurance levels as they track emissions quarterly throughout the year and manage their generation units and pollution control efforts accordingly. However, if the state appears to be approaching its assurance level, this final rule also gives companies the ability to further ensure that they will not have excess emissions by combining multiple units under a common DR. This flexibility allows utilities to re-balance allowances and emissions to mitigate penalty risk if the state violates its assurance level. In a state that does not appear to risk violating its assurance level in a given period, utilities would not need to consider the assurance aspect of selecting DRs. However, EPA anticipates that in the event utilities desire additional certainty or mitigation of assurance penalty risk, they will take advantage of this common DR provision or pursue similar private arrangements with each other to cover their emissions at the lowest possible cost.

While the DR provision could benefit utilities by allowing them to pool their penalty risk, the utilities would still be subject to the antitrust laws. As with any joint venture between competitors, the efficiency benefits of pooling risk would be weighed against any anticompetitive harm associated with DRs.

This new feature in the final rule, in conjunction with the simplifications to the final rule's variability limits described in section VI.E, will give companies under the air quality-assured trading program greater flexibility in each state to determine the most cost-effective pattern of emission reductions while EPA ensures each state meets its assurance level needed to address the significant contribution in each state.

In the January 7, 2011 NODA, EPA also requested comment on continuing to link allocations to assurance provision allowance surrender requirements. Even though the final rule uses a different allowance allocation methodology than the allocation methodology that was proposed, the final rule continues to treat the groups of units with greater emissions than their allocations plus share of state variability as responsible for the state's excess of emissions over the state assurance level. EPA believes that this approach is reasonable because any state that exceeds its state assurance level likely does so because not all units have made the reductions necessary to eliminate the state's contribution to nonattainment or interference with maintenance. Moreover, the groups of units with emissions exceeding their allocations plus share of variability are the units most likely to have contributed to the state's exceedance of its state assurance level and thus to the state's triggering of the assurance provisions. Consequently, EPA concludes that it is reasonable to penalize owners and operators of those sources and units (grouped by common DR) for the state's exceedance through application of the assurance provision allowance surrender requirement. Some commenters stated that this is a reasonable approach.

While a few commenters suggested alternative approaches to the assurance provisions, EPA believes that the suggested alternatives are not workable and are likely to create implementation problems. These commenters suggested variations of approaches that would have created state-specific and vintage year-specific allowances that would have been traded independently of compliance allowances. These differentiated allowances would have fragmented the allowance markets and made the programs resemble the intrastate trading option that EPA rejected because of market power and other concerns described in the proposal.

The existence of the assurance provisions with significant penalties imposed if a state's emissions exceed the state budget with the variability limit, along with other features of the Transport Rule trading programs discussed below, will ensure that state emissions stay below the level of the budget with the variability limit. In making compliance decisions and determining to what extent to rely on purchased or banked allowances, owners and operators will have to take into account the risk of triggering the assurance provisions in the state involved and of incurring significant assurance provision penalties. The greater the extent to which units sharing a common DR have emissions exceeding the DR units' allocations plus share of the state variability limit, the greater the risk of being subject to the assurance provision penalties.

As discussed previously in section VII.D.2, EPA allocates allowances to a new unit for the control period during which the unit commences commercial operation from the new unit set-aside based on its emissions. In the case where assurance provisions for a state are triggered in the year that a new unit commences operation, the unit's share of the state assurance level is calculated using the unit's allocation from the new unit set-aside plus its proportional share of the variability limit. There is the possibility that a new unit would receive no allocation for the control period during which the unit commences commercial operation. EPA sees no reasonable basis for disadvantaging owners and operators because they started up a new unit and EPA had no emissions data on which to base an allocation from the new unit set-aside or no allowances were available for the unit in the state's new unit set-aside.[83] For these new units, EPA would use a specific surrogate number to calculate the maximum amount of emissions that the unit would likely have had during that year. The surrogate emission number applies only if the state's assurance provisions are triggered and only in the first year of the new unit's commercial operation for a new unit that did not receive an allocation from the set-aside. The methodology for calculating the surrogate emission number is essentially unchanged from the proposal (75 FR 45313). For more details on capacity factors for new units, see ''Capacity Factors Analysis for New Units Final Rule TSD.''

These assurance provisions are above and beyond the fundamental requirement for each source to hold enough allowances to cover its emissions in the control period. Failure to hold enough allowances to cover emissions is a violation of the CAA, subject to an automatic penalty and discretionary civil penalties, as described in section VII.F of this preamble.

Several features of the air quality-assured trading programs work in conjunction with the assurance provisions to ensure state emissions do not exceed state assurance levels. The air quality-assured trading programs have: State-specific budgets that do not include the variability limits and that are the basis for allocating allowances in each state so that total allocations in a state cannot exceed the state budget; a requirement that owners and operators of each source hold enough allowances to cover source emissions for each control period; assurance provisions that require owners and operators to hold a significant amount of additional allowances in a state if the assurance provisions are triggered; and additional penalties for failing to hold sufficient allowances under the assurance provisions. The underlying mechanism of cap and trade—with a cap on allowances issued and a requirement to

[83] Some other units (*e.g.,* those units with no data for the 2006–2010 base period) may have a zero allocation for a control period. However, those are highly likely to be units that will continue to operate rarely or not at all and so will incur little or none of the assurance provision penalties.

hold allowances covering emissions—has succeeded, even without assurance provisions, in broadly reducing emissions below allowance allocation levels. The accumulated data, history, and experience from cap and trade programs underscore that emission reduction requirements and environmental and public health goals of the programs have been met and, in many instances, exceeded. Additionally, EPA has now added assurance provisions to ensure that emissions within a state do not exceed the state budget with the variability limitation that eliminates the state's significant contribution to nonattainment and interference with maintenance in downwind states.

Emissions from a common DR's group of units in excess of the DR's share of the state budget with the variability limit are not a violation of the rule or the CAA, but do lead to strict allowance surrender requirements. Specifically, the owners and operators with a common DR will be required to surrender two allowances for each ton of their proportional share of the exceedance of the state budget with the variability limit. Failing to hold sufficient allowances to meet the allowance surrender requirement will be a violation of the regulations and the CAA and subject to discretionary civil penalties under CAA section 113. Allowances surrendered to meet an assurance provision penalty may be from the year immediately following the control period in which the state assurance level was exceeded (*i.e.,* the year during which the penalty is assessed) or any prior year. Any future vintage allowances beyond the year in which the penalty is assessed may not be used to meet an assurance provision penalty.

This penalty level is a change from the proposal, in which one allowance was to be surrendered for each ton of emissions over the state assurance level. EPA ran an IPM modeling scenario in order to assess the level of penalty that would be sufficient to deter sources from exceeding state assurance levels. According to the model, no state would exceed its assurance level and incur the two-for-one allowance penalty in either 2012 or 2014, although some states emit up to the assurance level. The two-for-one allowance surrender requirement is significant, and EPA believes that this penalty—along with the other elements of the Transport Rule discussed above—will be sufficient to ensure that the state emissions will not exceed the budgets plus the variability limits. *See* the Assurance Penalty Level Analysis Final Rule TSD for further details of the analysis.

Below are examples of how the penalty will be assessed for four common designated representatives in the same state if the assurance provisions are triggered. In the first case, DR1's combined units were allowed to emit up to 71 tons of SO_2 (60 * 118 percent), but actually emitted 75 tons during the control period, or 4 more than their share of the state assurance level. Since the state, as a whole exceeded the state assurance level by 15 tons, DR1's share of the penalty is 25 percent of the total penalty, or 8 allowances (25 percent of 30).

FIGURE VII.E–1—ASSURANCE PROVISION ALLOWANCE SURRENDER EXAMPLE

	Allowances allocated	Allocation + share of variability	Total emissions	Emissions above allocation	Emissions above allocation + share of variability	Share of state exceedance (%)	Penalty (allowances surrendered)
DR1	60	71	75	15	4	25%	8
DR2	20	24	33	13	9	56%	17
DR3	10	12	15	5	3	19%	6
DR4	10	12	10	0	−2	0%	–
Total	100	118	133	33	15	100%	30

DR1, DR2, DR3, and DR4 are all in the same state.
State budget plus 18 percent variability limit is 118 tons (100 + 18 = 118).
State exceeded its assurance level by 15 tons (133 − 118 = 15).
Penalty is 2 allowances per ton over the assurance level (2 × 15 = 30).
Some numbers may not add up due to rounding.

In the proposal, EPA took comment on whether assurance provisions should be implemented starting in 2012 or 2014. While a number of commenters supported the proposal to start in 2014, EPA received several comments making the case that starting assurance provisions in 2012 would be more compatible with the Court's opinion in *North Carolina,* which emphasized EPA's obligation to require elimination of emissions within the states that significantly contribute to nonattainment or interfere with maintenance. In this final rule, EPA makes the assurance provisions effective starting in 2012 because this approach provides even further assurance, consistent with *North Carolina,* that each state's prohibited emissions will be eliminated from the start of the Transport Rule trading programs.

F. Penalties

Under the final Transport Rule FIPs (like under the proposed rule), the owners and operators of each covered source must hold, as of the allowance transfer deadline, an allowance for each ton of SO_2 or NO_X emitted by the source and are subject to penalties if they fail to comply with this allowance-holding requirement.

In particular, the owners and operators must hold in the source's compliance account in the Allowance Management System enough allowances issued for the respective Transport Rule annual trading program (SO_2 Group 1, SO_2 Group 2, or annual NO_X program) to cover the annual emissions of the relevant pollutant from all covered units at the source. The allowances must have been issued for the year in which the emissions occurred or a prior year. If the owners and operators fail to meet this allowance-holding requirement, they must provide—for deduction by the Administrator from the source's compliance account—one allowance as an offset, and one allowance as an excess emissions penalty, for each ton of emissions (*i.e.,* excess emissions) in excess of the amount of allowances held. The allowances surrendered for the excess emissions penalty must be allocated for the control period in the year immediately following the year when the excess emissions occurred or for a control period in any prior year. The offset and the excess emissions penalty are automatic requirements in

that they must be met without any further action by EPA (*e.g.,* any additional proceedings) regardless of the reason for the occurrence of the excess emissions. In addition, each ton of excess emissions, as well as each day in the averaging period (*i.e.,* the control period of one calendar year), constitute a violation of the CAA, and the maximum discretionary civil penalty is $25,000 (inflation-adjusted to $37,500 for 2010) per violation under CAA section 113. This means that, if a source has emissions in excess of allowances held for the source as of the allowance transfer deadline for a control period, the number of tons of excess emissions multiplied by the total number of days in that control period and multiplied by $25,000 (inflation adjusted) equals the maximum discretionary civil penalty for that occurrence of excess emissions.

For the ozone-season NO_X trading program, the same provisions apply as for an annual program, except that the averaging period (*i.e.,* the control period) is the ozone season, not a calendar year. Consequently, the relevant emissions are for an ozone season, the allowances usable to meet the allowance-holding requirement are allowances issued for Transport Rule ozone-season NO_X trading program for the ozone season involved or a prior ozone season, and the number of days used in calculating the maximum civil penalty is the number in the ozone season.

Commenters expressed concern that the proposed FIPs expressly stated that, for purposes of determining the maximum discretionary civil penalty for failure to meet the allowance-holding requirement, each ton of emissions lacking a held allowance would be a violation and each day in the averaging period involved would be a violation. Some commenters compared the proposed penalty provisions for excess emissions with the excess emissions penalty provisions under the Acid Rain Program and claimed that the proposed penalty provisions differed from the Acid Rain Program provisions and were excessive.

In fact, however, the final FIP provisions concerning discretionary civil penalties are essentially the same as those under the Acid Rain Program, as well as those under the NO_X Budget Trading Program and the CAIR trading programs. In particular, the Acid Rain Program regulations state that each ton of SO_2 excess emissions constitutes ''a separate violation'' of the CAA. 40 CFR 72.9(c)(2). Moreover, while the Acid Rain Program regulations do not expressly address that each day in the averaging period (*i.e.,* a calendar year control period under the Acid Rain Program) constitutes a separate violation when a unit has excess emissions for the calendar year, the courts have addressed this question. In decisions applying the discretionary civil penalty provisions in section 309(d) of the Clean Water Act, which are analogous to the civil penalty provisions in CAA section 113, the courts have interpreted the provisions to mean that, when a source violates the emission limitation for a multi-day control period, the source has a violation for each day in the control period, as well as for each ton of excess emissions on each such day. *See, e.g., Chesapeake Bay Foun.* v. *Gwaltney of Smithfield,* 791 F.2d 304, 313–15 (4th Cir. 1986), *Atlantic States Legal Foun.* v. *Tyson Foods,* 897 F.2d 1128, 1139–40 (11th Cir. 1990), and *U.S.* v. *Allegheny Ludlum Corp.,* 366 F.3d 164, 169 (3d. Cir. 2004). As noted by the courts, the treatment of each ton and each day as a separate violation is used for purposes of setting the maximum discretionary civil penalty. Because CAA section 113 sets the maximum civil penalty, EPA, of course, has the discretion to tailor the penalty amount that it seeks in any specific occurrence of excess emissions to reflect the circumstances of that excess emission occurrence. *See* 42 U.S.C. 7413(b) (stating that the Administrator may commence a civil action ''to assess and recover a civil penalty of not more than $25,000 per day for each violation''). Moreover, when a district court imposes a civil penalty, the court ''retains discretion to assess a penalty much smaller than the maximum, as the situation requires.'' *Chesapeake Bay,* 791 F.2d at 316. In addition, the Acid Rain Program regulations state that any allowance deduction, excess emission penalty, or interest under the Acid Rain Program regulations ''shall not affect liability'' of the owners and operators ''for any additional fine, penalty, or assessment, or their obligation to comply with any other remedy, for the same violation, as ordered under the [CAA],'' including under CAA section 113 providing for discretionary civil penalties. 40 CFR 77.1(b). In summary, under the Acid Rain Program, each ton of excess emissions and each day in the averaging period (*i.e.,* the calendar year) constitute a violation, the resulting number of violations times $2,000 is the maximum civil penalty for violating owners and operators, and EPA has the discretion to impose a civil penalty at or below such maximum, in addition to the automatic requirement to surrender one allowance and pay $2,000 (inflation adjusted) for each ton of excess emissions.

The final FIPs take an analogous approach to that under the Acid Rain Program. Specifically, the final FIPs state both that each ton of excess emissions is a violation of the CAA and that each day in the averaging period (*i.e.,* a calendar year under the annual programs and the ozone season under the ozone-season program) is a violation. Moreover, the imposition of civil penalties at or below the maximum amount resulting from the maximum penalty calculation is in addition to the automatic allowance surrender and penalty totaling 2 allowances per ton of excess emissions. Thus, commenters' assertion that the approach in the final FIPs is inconsistent with the approach in the Acid Rain Program is incorrect. Moreover, EPA has taken this same general approach in two other trading programs (*i.e.,* the NO_X Budget Trading Program and the CAIR trading programs), whose regulations explicitly state that each ton and each day of the averaging period constitute a violation. *See* 40 CFR 96.54(d)(3) (NO_X Budget Trading Program); and 40 CFR 96.106(d) (CAIR).

In any event, EPA maintains that the approach of treating each excess emission ton and each day in the averaging period as a violation for purposes of calculating the maximum discretionary civil penalty is reasonable. Some commenters suggested that only the days on which a source's cumulative control period emissions exceed the amount of allowances that the source then holds for that control period should be treated as a violation. However, this suggested approach makes little sense in the context of the Transport Rule trading programs.

In order to provide owners and operators compliance flexibility, the Transport Rule trading programs do not require source owners and operators to hold any amount of allowances to cover emissions until the allowance transfer deadline, no matter what the source's cumulative control period emissions are before that deadline. The commenters' approach of comparing—each day, cumulative emissions and allowances held—for purposes of calculating maximum civil penalties would be inconsistent with the flexibility that EPA intends to provide owners and operators. For example, under the commenters' suggested approach, owners and operators that buy or sell allowances in the allowance market or hold allowances in a company-wide account, do not transfer allowances into their source's compliance account until just before the allowance transfer deadline, and end up with some excess emissions for the calendar year would

face a significantly higher maximum civil penalty than owners and operators that every day increase the amount of allowances held in their source's compliance account as the source's cumulative emissions increase and end up with the same amount of excess emissions for the calendar year. In short, the commenters' approach would penalize owners and operators that use some of the compliance flexibility that the trading programs are intended to provide.

EPA also maintains that it is reasonable to both impose the automatic allowance surrender and penalty provisions and to retain the discretion to impose civil penalties for the same occurrence of excess emissions. This approach encourages compliance with the allowance-holding requirement by ensuring that violating owners and operators are penalized automatically (*i.e.,* without any further administrative or judicial proceedings, except for appeals) and that EPA can seek additional penalties where the circumstances warrant discretionary civil penalties. In fact, the Acid Rain Program, for which CAA Title IV mandated this approach, has achieved a very high level of compliance with the requirement to hold allowances covering SO_2 emissions and therefore resulted in major reductions in utility SO_2 emissions. *See* 42 U.S.C.7651j(a). Similarly, the NO_X Budget Trading Program and CAIR trading programs, which took the same approach, also have achieved very high compliance levels and major utility emission reductions.

EPA notes that, in calculating maximum civil penalties when owners and operators fail to hold allowances required under the assurance provisions in the final FIPs, EPA takes a similar approach in determining the number of violations. Each ton for which an allowance is not held as required and each day in the control period involved constitute a violation of the CAA. As discussed elsewhere in this preamble, EPA believes that this calculation approach is also reasonable in the context of the assurance provisions and that taking an approach like the commenters' suggested approach described above would be inconsistent with some of the flexibility that the Transport Rule trading programs are intended to provide.

G. Allowance Management System

The final Transport Rule trading programs, like the proposed preferred remedy, utilize EPA's allowance management system (AMS), which currently supports allowance surrender, transfer, and tracking activity under the Acid Rain Program and CAIR. EPA received no adverse comment on this aspect of the proposed rule.

The primary role of AMS is to provide an efficient, automated means for covered sources to comply and for EPA to determine whether covered sources are complying, with the emissions-related provisions of the Transport Rule trading programs. As was proposed, each of the final SO_2 trading programs and final NO_X trading programs is separately handled in the AMS, which is used to track Transport Rule trading program SO_2 and NO_X allowances held by covered sources, as well as such allowances held by other entities or individuals.

In addition, the AMS tracks: The allocation of all SO_2 and NO_X allowances; holdings of SO_2 and NO_X allowances in compliance accounts (*i.e.,* accounts for individual covered sources), general accounts (*i.e.,* accounts for other entities such as companies and brokers), and assurance accounts (*i.e.,* accounts for allowance surrender by owners and operators of groups of sources and units with common designated representatives under the assurance provisions); deduction of SO_2 and NO_X allowances for compliance purposes (including deductions from assurance accounts where necessary); and transfers of allowances between accounts. The AMS also allows the public to see whether each source is in compliance and provides information to the allowance market and the public in general, including information on ownership of allowances, dates of allowance transfers, buyer and seller information, and the serial numbers of allowances transferred.

H. Emissions Monitoring and Reporting

Under the proposed rule, units subject to the Transport Rule trading programs would monitor and report NO_X and SO_2 mass emissions in accordance with 40 CFR part 75, as incorporated in the proposed rule, and with certain other specified requirements, such as compliance deadlines.

In the final rule, like the proposed rule, covered units must comply with emissions monitoring and reporting requirements that are largely incorporated from Part 75 monitoring and reporting requirements.

Under the final rule and under Part 75, a unit has several options for monitoring and reporting, namely the use of: a CEMS; an excepted monitoring methodology (NO_X mass monitoring for certain peaking units and SO_2 mass monitoring for certain oil- and gas-fired units); low mass emissions monitoring for certain non-coal-fired, low emitting units; or an alternative monitoring system approved by the Administrator through a petition process. In addition, the Administrator can approve petitions for alternatives to Transport Rule and Part 75 monitoring, recordkeeping, and reporting requirements.

Further, the final rule and Part 75 specify that each CEMS must undergo rigorous initial certification testing and periodic quality assurance testing thereafter, including the use of relative accuracy test audits (RATAs) and 24-hour calibrations. In addition, when a monitoring system is not operating properly, standard substitute data procedures are applied and result in a conservative estimate of emissions for the period involved.

In addition, the final rule and Part 75 require electronic submission, to the Administrator and in a format prescribed by the Administrator, of a quarterly emissions report. The report must contain all of the data required concerning NO_X annual and ozone-season and SO_2 annual emissions.

Most Transport Rule units are in states subject to CAIR and are already monitoring and reporting NO_X and/or SO_2 under CAIR and the Acid Rain Program, which programs also use Part 75 monitoring and reporting. Units under the Transport Rule annual trading programs and in states subject to CAIR generally have no changes to their monitoring and reporting requirements. These units must continue to monitor and submit reports on a year-round basis as they have under CAIR. Therefore, units in the following states must monitor and report both SO_2 and NO_X year-round under the Transport Rule: Alabama, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, West Virginia and Wisconsin.

Some states (Kansas, Minnesota, and Nebraska) subject to the Transport Rule annual trading programs were not subject to CAIR. Transport Rule units in those states must meet monitoring and reporting requirements that are new except to the extent the units were subject to Part 75 under some other program (such as the Acid Rain Program).

Further, some states (Florida, Louisiana, and Mississippi) subject to the Transport Rule ozone-season trading program but not the Transport Rule annual trading programs were subject to the annual and ozone-season trading programs under CAIR. Transport Rule

units in those states must continue to monitor and report in accordance with Part 75 but have the option of monitoring and reporting on a year-round or ozone-season-only basis.

In addition, one state (Arkansas) subject to the Transport Rule ozone-season trading program but not to the Transport Rule annual trading program was similarly subject to only the ozone-season trading program in CAIR. Transport Rule units in that state continue to have the option of monitoring and reporting NO_X on a year-round or ozone-season-only basis.

Finally, some states (Connecticut, Delaware, District of Columbia, and Massachusetts) that were subject to CAIR are not subject to the Transport Rule. Electric generating units in those states must continue to meet monitoring and reporting requirements only to the extent the units are subject to Part 75 under some other program (such as the Acid Rain Program or a state adopted program requiring such monitoring and reporting).

EPA is finalizing requirements for existing Transport Rule units in states covered by the Transport Rule annual trading programs to monitor and report SO_2 and NO_X emissions by January 1, 2012 programs and for existing Transport Rule units in states covered by the Transport Rule ozone-season trading program to monitor NO_X emissions by May 1, 2012. The use of Part 75 certified monitoring methodologies is required in both cases. As discussed previously, most covered existing units will generally have no changes to their monitoring and reporting requirements and will continue to monitor and submit reports under Part 75 as they have under CAIR. Existing units that have not been subject to Part 75 monitoring and reporting requirements in the past have less than 1 year to install, certify, and operate the required monitoring systems. EPA believes that these units will be able to comply with this requirement because the monitoring equipment needed is not extensive or is largely in place already for the purpose of meeting other requirements. Quality assurance and reporting provisions and data system upgrades may be necessary, but EPA believes that there is sufficient time to accomplish this by the deadline for existing units in the final rule.

In the proposed rule, the compliance deadline for installing, certifying, and operating the required monitoring systems at new units was based upon the date of commencement of commercial operation. A new unit would have to install and certify its monitoring system within 180 days of the commencement of commercial operation. The final rule adopts this deadline, which is consistent with the approach recently adopted in Part 75 under the Acid Rain Program. *See* 76 FR 17288, 17289 (March 28, 2011).

Using this deadline (rather than a deadline, used previously in Part 75, of the earlier of the unit's 90th operating day or 180 days after the unit's commencement of commercial operation) ensures that new units have sufficient time to complete installation and certification of monitoring systems and facilitates units' compliance. Because of unit shakedown problems, some new units have had difficulty meeting a deadline earlier than 180 days after commencement of commercial operation. Further, using this deadline facilitates owners' and operators, and EPA's, ability to track important dates related to monitoring, reporting, and allowance holding. Under the final rule, the requirement that a unit hold enough allowances to cover its emissions starts on the later of the commencement of the Transport Rule trading program involved or the deadline for installation and certification of the monitoring system. Having a simple, easily determined deadline (180 days after the commencement of commercial operation) makes it easier for owners and operators and EPA to determine when allowance-holding requirements begin, as well as when monitoring and reporting requirements begin. In contrast, using a deadline involving determination of a unit's 90th operating day required keeping track of any days on which the unit did not operate (*e.g.,* due to problems associated with shakedown of the unit). EPA found that owners and operators have had more difficulty reporting the 90th operating day than in reporting the commencement of commercial operation, and once the latter date is reported, EPA can independently determine the 180th calendar day after the reported date.

I. Permitting

1. Title V Permitting

The final Transport Rule (like the proposed rule) does not establish any permitting requirements independent of those under Title V of the CAA and the regulations implementing Title V, 40 CFR Parts 70 and 71.[84] All major stationary sources of air pollution and certain other sources are required to apply for title V operating permits that include emission limitations and other conditions as necessary to assure compliance with applicable requirements of the CAA, including the requirements of the applicable State Implementation Plan. CAA §§ 502(a) and 504(a), 42 U.S.C. 7661a(a) and 7661c(a). The ''applicable requirements,'' that must be addressed in title V permits are defined in the Title V regulations (40 CFR 70.2 and 71.2 (definition of ''applicable requirement'')).

EPA anticipates that, given the nature of the units covered by the final Transport Rule, most of the sources at which they are located are already or will be subject to Title V permitting requirements. For sources subject to Title V, the requirements applicable to them under the final FIPs will be ''applicable requirements'' under Title V and therefore will need to be addressed in the Title V permits. For example, requirements under the final FIPs concerning designated representatives, monitoring, reporting, and recordkeeping, the requirement to hold allowances covering emissions, the assurance provisions, and liability will be ''applicable requirements'' to be addressed in the permits.

The Title V permits program includes, among other things, provisions for permit applications, permit content, and permit revisions that will address the applicable requirements under the final FIPs in a manner that will provide the flexibility necessary to implement market-based programs such as the Transport Rule trading programs. For example, the Title V regulations provide that a permit issued under Title V must include, for any ''approved * * * emissions trading and other similar programs or processes'' applicable to the source, a provision stating that no permit revision is required ''for changes that are provided for in the permit.'' 40 CFR 70.6(a)(8) and 71.6(a)(8). Consistent with this provision in the Title V regulations, the Transport Rule trading program regulations include a provision stating that no permit revision is necessary for the allocation, holding, deduction, or transfer of allowances. Consistent with the Title V regulations, this provision will also be included in each Title V permit for a covered source. As a result, allowances can be traded (or allocated, held, or deducted) under the final FIPs without a revision of the Title V permit of any of the sources involved.

As a further example of flexibility under Title V, the Title V regulations allow the use of the minor permit modification procedures for permit modifications ''involving the use of economic incentives, marketable permits, emissions trading, and other

[84] Part 70 addresses requirements for state Title V programs, and Part 71 governs the federal Title V program.

similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in an applicable implementation plan or in applicable requirements promulgated by EPA.'' 40 CFR 70.7(e)(2)(i)(B) and 40 CFR 71.7(e)(1)(i)(B). The final FIPs set forth in detail, and reference relevant provisions in Part 75 concerning, the approaches that are available for covered units to use for monitoring and reporting emissions (*i.e.,* approaches using a continuous emission monitoring system, an excepted monitoring system under appendices D and E to Part 75, a low mass emissions excepted monitoring methodology under § 75.19, or an alternative monitoring system under subpart E of Part 75). The final FIPs also require unit owners and operators to submit monitoring system certification applications (or, for alternative monitoring systems, petitions) to EPA establishing the monitoring and reporting approach actually to be used by the unit and allow owners and operators to submit petitions for alternatives to any specific monitoring and reporting requirement. These applications and petitions are subject to EPA review and approval to ensure consistency in monitoring and reporting among all trading program participants, and EPA's responses to any petitions for alternative monitoring systems or for alternatives to specific monitoring or reporting requirements are to be posted on EPA's Web site. Moreover, EPA intends that each covered unit's Title V permit will include a description of the general approach that the covered unit is required to use for monitoring and reporting emissions and that the description will reference the relevant sections of the Transport Rule trading program regulations and Part 75 and will state that the requirements may be modified through EPA approval of petitions for alternatives to specific requirements. Finally, consistent with §§ 70.7(e)(2)(i)(B) and 71.7(e)(1)(i)(B) of the Title V regulations, the final FIPs provide that a description of the general monitoring and reporting approach for a covered unit can be added to, or an existing description of a unit's general monitoring and reporting approach can be changed, in a Title V permit, using minor permit modification procedures, provided that the approach being described in the changed or new general description and the requirements applicable to that approach are already incorporated elsewhere in the permit. As a result, minor permit modification procedures can be used to revise a covered unit's Title V permit to be consistent with the monitoring and reporting approach, or any changes in the approach, allowed for the unit by EPA through the monitoring system certification or petition process under the Transport Rule trading programs.

As new applicable requirements under Title V, the requirements for covered units under the final FIPs will be incorporated into covered sources' existing Title V permits either pursuant to the provisions for reopening for cause (40 CFR 70.7(f) and 40 CFR 71.7(f)) or the permit renewal provisions (40 CFR 70.7(c) and 71.7(c)).[85] In contrast to the approach in CAIR of imposing permitting requirements and deadlines independent of those under Title V, the approach to permitting under the final FIPS of imposing no independent permitting requirements should reduce the burden on sources already required to be permitted under Title V and on permitting authorities. For sources newly subject to Title V that will also be covered sources under the final FIPs, the initial Title V permit issued pursuant to 40 CFR 70.7(a) will address the final FIP requirements.

In order to ensure that covered sources' Title V permit provisions concerning the final FIPs will reflect the Transport Rule trading program requirements and flexibilities properly and in a manner consistent from permit to permit, EPA intends to issue guidance to assist permitting authorities. This guidance would include information on permit issuance and permit modification requirements, as well as a permit content template that will identify the applicable requirements under the applicable Transport Rule trading program and thereby ensure that they will be correctly and comprehensively reflected in each permit in a manner that will reduce the burden on sources and permitting authorities related to the issuance of the permit and will reduce the need for permit revisions.

2. New Source Review

a. Background

EPA recognizes that, following the vacatur of the new source review (NSR) pollution control project exemption in *New York* v. *EPA, 413 F.3d 3, 40–41 (D.C. Cir. 2005),* pollution control projects, including pollution control projects constructed to comply with this rule, have the potential to trigger NSR permitting.

This issue was previously addressed in the context of CAIR. On December 20, 2005, the EPA agreed to reconsider one specific aspect of CAIR. In that notice, EPA granted reconsideration and sought comment on the potential impact of the opinion in *New York* v. *EPA,* which vacated the previously existing NSR exemption for certain environmentally beneficial pollution control projects. For this reconsideration, EPA conducted an analysis which showed that the court decision did not impact the CAIR analyses. Details of this analysis can be found in a technical support document which is available on EPA's Web site at: *http://epa.gov/cair/pdfs/0053-2263.pdf*

Because GHG emissions were not considered by EPA to be air pollutants within the meaning of the CAA at the time of CAIR, GHG emissions were not addressed in the 2005 analysis. GHG requirements related to the component of NSR concerning the Prevention of Significant Deterioration (''PSD'') program are addressed in EPA's ''Interpretation of Regulations that Determine Pollutants Covered by Clean Air Act Permitting Programs,'' 75 FR 17004 (April 2, 2010), and ''Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule,'' 75 FR (June 3, 2010) (''Tailoring Rule''). Generally, as discussed in those actions, major stationary sources will be required to address GHG emissions as part of the PSD program if these sources emit GHG in amounts that equal or exceed the thresholds in the Tailoring Rule. Major sources that undergo a modification, including the addition of pollution control equipment, will trigger PSD requirements for their emissions of GHG if such emissions increase by at least 75,000[86] tons per year of CO_2 equivalent (CO_2e).

b. Proposed Rule

In the proposed rule, EPA presented the following conclusions:

(1) The 2005 analysis remains current and relevant for all pollutants except for GHG, and it shows that NSR requirements would not significantly impact the construction of controls that

[85] A permit is reopened for cause if any new applicable requirements (such as those under a FIP) become applicable to a covered source with a remaining permit term of 3 or more years. If the remaining permit term is less than 3 years, such new applicable requirements will be added to the permit during permit renewal. *See* 40 CFR 70.7(f)(1)(i) and 71.7(f)(1)(i).

[86] We note that, for sources that are modifying and are not subject to PSD for emissions of a non-GHG pollutant, in order to be subject to PSD for GHGs the source must not only have an emissions increase of 75,000 TPY CO_2e, but must also have a PTE of at least 100,000 TPY CO_2e and 100 TPY mass GHG. *See* 40 CFR 52.21(b)(49)(v)(b). However, since it is reasonable to assume that all sources that are potentially subject to the Transport Rule will have a PTE of at least 100,000 TPY CO_2e and 100 TPY, for the purposes of discussions in this section we will only note the requirement to have an emissions increase of 75,000 TPY CO_2e.

are installed to comply with the proposed Transport Rule.

(2) It is very unlikely that pollution control projects would cause GHG increases that would exceed the 75,000 tons per year threshold.

Consistent with these proposed conclusions, EPA also concluded that there would be no significant impacts from NSR for any pollution control projects resulting from the proposed rule such as low-NO_X burners, SO_2 scrubbers, or SCR. EPA requested comment on this issue.

c. Public Comments

EPA received a number of comments on the NSR issue, which can be divided into four types of comments: (1) Comments related to GHGs, (2) comments related to sulfuric acid mist, (3) comments related to CO emission increases from low-NO_X burners, and (4) suggested changes to the EPA rules.

Greenhouse Gases. A number of commenters recommended that EPA should document and substantiate its conclusion that greenhouse gases would be unlikely to trigger NSR requirements. Other commenters suggested that some units installing a FGD scrubber could exceed the 75,000 ton threshold for GHGs in the Tailoring Rule by emitting CO_2 produced from the chemical reaction of SO_2 with limestone. Commenters also suggested that NSR applicability for GHGs would also need to consider that an FGD would consume 1–3 percent of a scrubbed unit's generation, referred to as ''parasitic load,'' which (all else held equal) lowers that unit's net generation.[87] Commenters argued that any post-retrofit increase in generation to offset that ''parasitic load'' could lead to GHG increases potentially exceeding the 75,000 ton threshold.

Sulfuric Acid Mist. Two commenters noted that use of high sulfur fuels, in combination with SCR, can lead to increases in sulfuric acid mist, a pollutant regulated under NSR. One of these commenters noted that reagent injection was necessary to avoid triggering NSR for sulfuric acid mist when their SCR was installed.

Carbon Monoxide (CO). One commenter believed that EPA's 2005 analysis may not be adequate as it related to carbon monoxide emission increases that result from installation of low-NO_X burners. The commenter noted EPA's statement in the 2005 analysis that read as follows: ''Since the NO_X removal efficiencies used in EPA's analysis are not aggressive, it is believed that the units installing combustion controls can opt for moderate levels of overfire air flow rates and still achieve the NO_X reduction levels projected in EPA's analysis, without causing significant increases in the CO and unburned carbon emissions.'' The commenter suggested that the transport rule NO_X may be more aggressive than CAIR and thus EPA should conduct a review to determine whether EPA retains the same conclusion regarding CO emissions.

Recommended Rule Changes. Some commenters suggested changes to EPA rules to address their concerns that control equipment installed as a result of the Transport Rule could trigger NSR. Some commenters suggested that EPA craft an exclusion from NSR in the Transport Rule. One of these commenters suggested that EPA could do this by: (1) Providing special definition of baseline actual emissions; (2) a causation determination specifically tied to the Transport Rule; or (3) interpret the term ''stationary source'' in CAA 110(a)(4) in a way that doesn't impede Transport Rule compliance.

Other commenters expressed the concern that if NSR is triggered, the proposed Transport Rule did not allow enough time for compliance for sources needing to install control equipment. These commenters recommend that EPA should waive Transport Rule requirements or provide extra allowances until NSR review is complete.

d. Final Rule and Responses to Comments

Greenhouse Gases. EPA has carefully reviewed relevant data in assessing the comments suggesting that NSR permitting would likely be triggered for facilities installing FGD scrubbers to comply with this rule. EPA believes that sources installing FGD to comply with the Transport Rule can achieve those installations without triggering NSR.

EPA notes that its forecast of the number and extent of FGD scrubber installations substantially decreased since the time of proposal. For the proposed rule, EPA modeled 14 GW of FGD retrofit installations by 2014. For the final rule, EPA models a total of 5.7 GW of wet FGD installations from 7 units at 5 plants.

There are two factors associated with wet FGD scrubbers that commenters suggested individually or in combination could lead to increases above the 75,000 tons per year threshold in the Tailoring Rule. The first is the CO_2 chemically produced from the reaction of SO_2 with limestone in wet FGD scrubbers. The second is that owners or operators of the affected units may desire to increase coal usage after the retrofit is made to offset the ''parasitic load'' that is consumed on-site in order to operate the scrubber.

With respect to chemically produced CO_2, EPA concludes that only in very limited circumstances when installation of a scrubber is coupled with a change to considerably higher sulfur coal could installation of a wet limestone scrubber be associated with a more than 75,000 ton increase in CO_2 emissions. EPA finds this possibility unlikely to occur. For example, EPA's acid rain emissions reporting system shows that the plant with the greatest emissions from unscrubbed units in 2009 emitted about 103,000 tons of SO_2 from those units. If this plant installed a wet limestone scrubber assumed to reduce those SO_2 emissions by 96 percent, EPA calculates that chemically produced CO_2 could increase emissions by:

$103{,}000 \times (0.96) \times (44/64) = 67{,}980$ tons CO_2.[88]

Therefore, EPA finds that all currently uncontrolled units are technically capable of retrofitting with wet FGD without chemically produced CO_2 increases leading to a triggering of NSR. In limited circumstances, an owner or operator may elect to switch fuels to a significantly higher-sulfur coal subsequent to FGD installation and may risk an increase in chemically produced CO_2 emissions that would trigger NSR, but such a decision is not necessary in order to successfully install and operate the scrubber as a strategy for compliance with Transport Rule requirements.

With respect to the ''parasitic load'' issue, EPA estimates that today's wet FGD retrofit technology would consume typically about 1.7 percent of on-site generation.[89] If a facility made no other changes to its operation other than installing an FGD retrofit, that facility's CO_2 emissions from fuel combustion would remain constant. It is possible, however, that a source's owner or operator may elect to increase coal usage by some amount after retrofitting FGD, if for example the owner or operator desires to increase net generation after retrofitting. Under NSR, any such source would be able to

[87] ''Net generation'' refers to total generation minus the amount of power consumed on-site for various purposes, including operation of pollution control equipment.

[88] The factor 44/64 reflects the relative molecular weight of CO_2 and SO_2, respectively. A wet FGD's removal of one ton of SO_2 involves a chemical reaction that releases the equivalent molecular weight of CO_2 (thus equaling 44/64 of a ton of CO_2 emissions).

[89] Documentation Supplement for EPA Base Case v.4.10_FTransport—Updates for Final Transport Rule.

compare such a CO_2 emissions increase against the highest average annual emissions in any consecutive 24-month period from a 5-year historic baseline. Therefore, a unit retrofitting a scrubber under the Transport Rule may be able to increase its CO_2 emissions by more than 75,000 tons without triggering NSR if that increase would register as less than 75,000 tons against a higher emissions level in the aforementioned NSR baseline.

EPA also notes that scrubber installations provide facilities with the opportunity to make other capital improvements at the unit on which the scrubber is installed to improve the efficiency of boilers, steam turbines, motors, other auxiliary equipment, and plant control systems. Such improvements could allow a retrofitting unit to lower its CO_2 output rate such that a subsequent decision to increase net generation may not result in increased coal use, or may limit any CO_2 emission increase to less than the 75,000 tons per year threshold for triggering NSR.

As discussed in section VII.C, EPA notes that the Transport Rule does not mandate any specific control activity, including scrubber retrofitting, as a compliance strategy for units within a state to meet that state's SO_2 budget. As demonstrated by EPA's ''no FGD'' sensitivity analysis described in VII.C, covered sources within the Group 1 states are capable of meeting their emission reduction obligations through a variety of emission reduction strategies even if no unit is able to complete a scrubber installation by 2014. Therefore, EPA does not believe that NSR permitting presents an obstacle in any way to Transport Rule compliance, even if a given unit retrofitting with FGD triggers NSR for CO_2.

For some plants, EPA's IPM modeling forecasts installation and operation of dry sorbent injection (DSI) systems. EPA does not believe any of these systems would result in CO_2 emission increases above the 75,000 ton threshold. Moreover, given the relatively short construction schedule for DSI systems, EPA believes that if any of the plants did require NSR permitting, installation of DSI could still be accomplished by 2014.

In summary, EPA believes that the operators of plants projected to install scrubbers for Transport Rule SO_2 reductions could readily develop workable compliance strategies whether or not such an installation would trigger NSR. Plant owners could readily develop strategies to avoid emission increases that would trigger NSR, including but not limited to alternative SO_2 reduction strategies or technologies, efficiency improvements, or the ability to adjust net electricity generation to prevent a 75,000 ton increase in CO_2 emissions. EPA believes that projected scrubber installations under the Transport Rule are broadly unlikely to trigger NSR, but even in the limited conditions where such a triggering may occur, the NSR permitting process would not infringe on a state's ability to comply with its budgets under the Transport Rule. (*See* section VII.C for more details on EPA's analysis of a ''no FGD'' sensitivity supporting these points.)

Sulfuric Acid Mist. EPA continues to conclude that, consistent with the 2005 TSD, sulfuric acid mist increases due to compliance with this rule are very unlikely to trigger NSR permitting. Such increases are most commonly seen from installation of SCR units on facilities with relatively high sulfur coal. However, as acknowledged by one of the commenters, engineering solutions have been developed to prevent such increases, and EPA believes that facility owners would take this into account in designing such an SCR system. Moreover, EPA's IPM modeling of the NO_X budgets in the final rule suggests that no new SCR units will result from the final rule.

Carbon Monoxide. EPA concludes that any NSR permitting required due to CO increases associated with NO_X controls should not hinder the ability of sources to comply with Transport Rule requirements. For states that were included in the CAIR for either ozone, $PM_{2.5}$, or both, EPA finds no evidence to suggest that the NO_X control requirements of the Transport Rule would require more aggressive controls triggering NSR. As EPA's baseline analysis acknowledges, many sources in these states installed NO_X controls to comply with CAIR. In addition, their historic emissions reflect operation of these controls and there is no evidence to suggest that the Transport Rule will require sources to operate these controls more aggressively, thereby increasing CO emissions above the relevant threshold and triggering NSR. In a few states that were not covered by CAIR, a limited number of facilities may install new combustion controls (such as low-NO_X burners, overfire air, or other combustion controls or upgrades) as a result of the Transport Rule. EPA expects relatively few such installations, and believes that NSR permitting, if required, is not an obstacle to compliance with the rule. First, EPA believes that NSR permitting should be relatively straightforward for these installations and that the BACT determination for CO will be very straightforward. EPA expects a relatively short time period for permitting, and as discussed later, EPA is planning to initiate actions that will further expedite any required permitting.

Second, EPA notes that the rule achieves reductions through a trading program rather than direct control requirements. Accordingly, even if a few installations do not have controls in place at the very beginning of the compliance period, this should not hinder the ability of states to meet their ozone-season NO_X budgets. Covered sources have a suite of NO_X pollution control strategies and technologies available to them, including coal selection, selective non-catalytic reduction, gas re-burn, low-NO_X burner and overfire air installations or upgrades, and neural network optimization of combustion controls operation. Sources may consider all of these technologies and strategies, which can be designed and operated so as to minimize CO emission increases that may otherwise trigger NSR. EPA also notes that during the downtime for installation of the construction controls, there would be no NO_X emissions, and thus the source's allowance holding requirements would also be lower for that period.

Recommended Rule Changes. EPA disagrees with commenters who suggested rule changes, either to the NSR program or to this rule, to account for installations triggering NSR. As noted above, EPA concludes that NSR would be triggered at most for just a few of the projected control installations. EPA believes, however, that even if required these NSR permits would likely be issued in a timely manner given the overall environmental benefits resulting from the control equipment installation. In addition, this rule's requirements are based on a flexible trading approach rather than a direct control approach. Accordingly, if this affect occurs for only a few installations, EPA believes that any extra emissions that occur during the relatively short time needed to obtain an NSR permit could be accommodated within the overall trading system.

Expediting Permitting. In the limited circumstances where pollution control installations under the Transport Rule may trigger NSR, we also note that an expedited permitting process can occur with sufficient time to obtain permits and achieve emission reductions under the Transport Rule programs. For this reason, we strongly encourage permitting authorities to expedite

permitting for any such projects, which are likely to be very limited in number. To ensure that the permitting decisions are expedited, separate from this rulemaking EPA will provide assistance and guidance in order to expedite issuance of any such permits. For example, we are considering assistance that would serve to expedite BACT reviews or required air quality analysis. EPA requests early notification of any specific cases where such guidance and assistance may be needed.

J. How the Program Structure Is Consistent With Judicial Opinions Interpreting the Clean Air Act

The air quality-assured trading programs established by this rule eliminate all of the emissions that EPA has identified as significantly contributing to downwind nonattainment or interference with maintenance [90] in a manner that is consistent with section 110(a)(2)(D)(i) of the CAA as interpreted by the DC Circuit in *North Carolina,* 531 F.3d 896. The FIPs finalized in this action require sources to participate in air quality-assured interstate emission trading programs that include provisions to ensure that no state's emissions exceed that state's budget with variability limit. These assurance provisions, combined with the requirement that all sources hold emission allowances sufficient to cover their emissions, effectuate the requirement that emission reductions occur within the state. *See* 42 U.S.C. 7410(a)(1)(2)(D).

The state budgets developed in this rule represent an estimate of the emissions that will remain in a given state after the elimination of all emissions in that state that EPA has determined must be prohibited pursuant to section 110(a)(2)(D)(i)(I). However, for the reasons explained above, the amount of emissions that remain after the requirements of 110(a)(2)(D)(i)(I) are satisfied may vary. EPA recognizes that shifts in generation due to, among other things, changing weather patterns, demand growth, or disruptions in electricity supply from other units can affect the amount of generation needed in a specific state and thus baseline EGU emissions from that state. Because a state's significant contribution to nonattainment or interference with maintenance is defined by EPA as all emissions that can be eliminated for a specific cost (as explained above, using air quality considerations to identify this cost threshold), and because EGU baseline emissions are variable, the amount of emissions remaining in a state after all significant contribution or interference with maintenance is eliminated is also variable. In other words, EGU emissions in a state whose sources have installed all controls and taken all measures necessary to eliminate its significant contribution to nonattainment or interference with maintenance could exceed the state budget without variability.

For this reason, EPA determined that it is appropriate for the program to recognize the inherent variability in state EGU emissions. The program does so by identifying a variability range for each state in the program. The assurance provisions in the program, in turn, limit a state's emissions to the state's budget with variability limit.

In addition, the requirement that all sources hold emission allowances sufficient to cover their emissions (and the fact that the total number of emission allowances allocated will be equal to the sum of all state budgets without variability) ensures that the use of variability limits both takes into account the inherent variability of baseline EGU emissions in individual states (*i.e.,* the variability of total state EGU emissions before the elimination of significant contribution or interference with maintenance) and recognizes that this variability is not as great in a larger region. The variability of emissions across a larger region is not as large as the variability of emissions in a single state for several reasons. Increased EGU emissions in one state in one control period often are offset by reduced EGU emissions in another state within the control region in the same control period. In a larger region that includes multiple states, factors that affect electricity generation, and thus EGU emission levels, are more likely to vary significantly within the region so that resulting emission changes in different parts of the region are more likely to offset each other. For example, a broad region can encompass states with differing weather patterns, with the result that increased electricity demand and emissions due to weather in one state may be offset by decreased demand and emissions due to weather in another state. By further example, a broad region can encompass states with differing types of industrial and commercial electricity end-users, with the result that changes in electricity demand and emissions among the states due to the effect of economic changes on industrial and commercial companies may be offsetting. Similarly, because states in a broad region may vary in their degree of dependence on fossil-fuel-based electric generation, the impact of an outage of non-fossil-fuel-based generation (*e.g.,* a nuclear plant) in one state may have a very different impact in that state than on other states in the region. Thus, EPA does not believe it is necessary to allow total regional allowance allocations for the states covered by a given trading program to exceed the sum of all state budgets without variability for these states.

For these reasons, the fact that the use of state budgets with variability limits may allow limited shifting of emissions between states is not inconsistent with the court's holding that emission reductions must occur ''within the state.'' *North Carolina,* 531 F.3d at 907. Under the FIPs, no state may emit more than its budget with variability limit and total emissions cannot exceed the sum of all state budgets without variability. This approach takes into account the inherent variability of the baseline emissions without excusing any state from eliminating its significant contribution to nonattainment or interference with maintenance. It is thus consistent with the statutory mandate of section 110(a)(2)(D)(i)(I) as interpreted by the Court.

Most commenters voiced support for a remedy option that allows some degree of interstate trading. However, one commenter argued that the structure of the preferred trading remedy that EPA proposed is legally problematic. The program, the commenter argues, provides no legal assurance that the variability margins will be used by market participants to account for variability. The commenter does not suggest a solution, but instead says, if a solution cannot be found, EPA should not allow any amount of interstate trading.

EPA disagrees with the commenter that the structure of the preferred interstate trading program is legally problematic. In *North Carolina,* the Court held that the CAIR interstate trading programs were inconsistent with section 110(a)(2)(D)(i)(I), concluding that ''EPA's apportionment decisions have nothing to do with each state's 'significant contribution' '' (531 F.3d at

[90] As explained in greater detail in Section VI of this notice, for each covered state, EPA has identified emissions that must be prohibited pursuant to section 110(a)(2)(D)(i)(I). In most instances, EPA has determined that elimination of such emissions is sufficient to satisfy the requirements of that section. Thus, in these instances, the budgets represent an estimate of the emissions that will remain after the elimination of all emissions in that state that significantly contribute to nonattainment or interfere with maintenance of the NAAQS in another state. In a few limited instances, however, EPA determined that elimination of the emissions is necessary but may not be sufficient to satisfy the requirements of that section. In these instances, the budgets represent an estimate of the emissions that will remain after the elimination of all emissions that EPA, at this time, has determined must be eliminated.

907) and that ''EPA is not exercising its section 110(a)(2)(D)(i)(I) duty unless it is promulgating a rule that achieves something measurable toward the goal of prohibiting sources 'within the State' from contributing to nonattainment or interfering with maintenance 'in any other State.' '' (531 F.3d at 908). It emphasized that ''[t]he trading program is unlawful, because it does not connect states' emission reductions to any measure of their own significant contributions. To the contrary, it relates their SO_2 reductions to their Title IV allowances. * * * The allocation of NO_X caps is similarly arbitrary because EPA distributed allowances simply in the interest of fairness.'' 531 F.3d at 930. As explained in this rule, EPA has addressed these concerns by using source specific analysis to identify each individual state's significant contribution to nonattainment and interference with maintenance, and including assurance provisions to ensure that the necessary reductions occur in each state. The Court did not go further to prohibit all interstate trading. In fact, it notes that ''after rebuilding, a somewhat similar CAIR may emerge'' (531 F.3d at 930). For all of these reasons, EPA does not believe the opinion in *North Carolina* can be read to stand for the proposition that no interstate trading can be allowed unless the specific reasons behind market participants' decisions to purchase allowances can be ascertained. Because allowance purchase decisions are likely to be based on multiple factors, which can include the desire to hedge against potential emission variability as well as to address actually occurring variability, requiring ascertainment of the specific reasons for allowance purchases would be tantamount to prohibiting all interstate trading.

Moreover, as discussed above, variability is inherent to the operation of the electric generation system and thus to emissions from this sector. In fact, variability in emissions occurs every year in every state and, like variability of year-to-year weather conditions (which is a major cause of emission variability), cannot be accurately predicted. *See* the Power Sector Variability Final Rule TSD in the docket for this rulemaking. EPA maintains that its approach of allowing state EGU emissions each year to vary by up to the historically representative, annual amount of inherent, emission variability reasonably reflects the realities of the electric generation system and is consistent with the *North Carolina* decision. In summary, the variability limits take into account inherent variability over time of emissions in each state from this sector while also ensuring that each state makes necessary emission reductions to eliminate significant contribution and interference with maintenance. EPA thus concludes that the commenter's argument that the use of variability limits allows sources ''within the state'' to avoid eliminating their significant contribution or interference with maintenance is without merit.

VIII. Economic Impacts of the Transport Rule

A. Emission Reductions

The projected impacts of this final rule as presented throughout the preamble do not reflect minor technical corrections to SO_2 budgets in three states (KY, MI, and NY) made after the impact analyses were conducted. These projections also assumed preliminary variability limits that were smaller than the variability limits finalized in this rule. EPA conducted sensitivity analysis confirming that these differences do not meaningfully alter any of the Agency's findings or conclusions based on the projected cost, benefit, and air quality impacts presented for the final Transport Rule. The results of this sensitivity analysis are presented in Appendix F in the final Transport Rule RIA.

Table VIII.A–1 presents projected power sector emissions in the base case (*i.e.,* without the Transport Rule or CAIR) compared to projected emissions with the Transport Rule in 2012 and 2014 for all covered states. Table VIII.A–2 presents 2005 historical power sector emissions compared to projected emissions with the Transport Rule in 2012 and 2014. Note that for ozone-season emissions, these tables present results from a modeling scenario that reflects ozone-season NO_X requirements in 26 states. This modeling differs from the final Transport Rule because it includes ozone-season NO_X requirements for six states (Iowa, Kansas, Michigan, Missouri, Oklahoma, and Wisconsin) that the final Transport Rule does not cover (as discussed previously, EPA is issuing a supplemental proposal to request comment on inclusion of these six states).

TABLE VIII.A–1—PROJECTED SO_2 AND NO_X ELECTRIC GENERATING UNIT EMISSION REDUCTIONS IN COVERED STATES WITH THE TRANSPORT RULE COMPARED TO BASE CASE WITHOUT TRANSPORT RULE OR CAIR

[Million tons]

	2012 Base case emissions	2012 Transport rule emissions	2012 Emission reductions	2014 Base case emissions	2014 Transport rule emissions	2014 Emission reductions
SO_2	7.0	3.0	4.0	6.2	2.4	3.9
Annual NO_X	1.4	1.3	0.1	1.4	1.2	0.2
Ozone-Season NO_X	0.7	0.6	0.1	0.7	0.6	0.1

Notes: The SO_2 and annual NO_X emissions in this table reflect EGUs in the 23 states covered by this rule for purposes of the 24-hour and/or annual $PM_{2.5}$ NAAQS (Alabama, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, West Virginia, and Wisconsin).

The ozone-season NO_X emissions reflect EGUs in the 20 states covered by this rule for purposes of the ozone NAAQS (Alabama, Arkansas, Florida, Georgia, Illinois, Indiana, Kentucky, Louisiana, Maryland, Mississippi, New Jersey, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, and West Virginia) and the six states that would be covered for the ozone NAAQS if EPA finalizes its supplemental proposal (Iowa, Kansas, Michigan, Missouri, Oklahoma, and Wisconsin).

Tables VIII.A–3 through VIII.A–5 present projected state-level emissions with and without the Transport Rule in 2012 and 2014 from fossil-fuel-fired EGUs greater than 25 MW in covered states.

TABLE VIII.A–2—PROJECTED SO_2 AND NO_X ELECTRIC GENERATING UNIT EMISSION REDUCTIONS IN COVERED STATES WITH THE TRANSPORT RULE COMPARED TO 2005 ACTUAL EMISSIONS

[Million tons]

	2005 Actual emissions	2012 Transport rule emissions	2012 Emission reductions from 2005	2014 Transport rule emissions	2014 Emission reductions from 2005
SO_2	8.8	3.0	5.8	2.4	6.4
Annual NO_X	2.6	1.3	1.3	1.2	1.4
Ozone-Season NO_X	0.9	0.6	0.3	0.6	0.3

Notes: The SO_2 and annual NO_X emissions in this table reflect EGUs in the 23 states covered by this rule for purposes of the 24-hour and/or annual $PM_{2.5}$ NAAQS (Alabama, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, West Virginia, and Wisconsin).

The ozone-season NO_X emissions reflect EGUs in the 20 states covered by this rule for purposes of the ozone NAAQS (Alabama, Arkansas, Florida, Georgia, Illinois, Indiana, Kentucky, Louisiana, Maryland, Mississippi, New Jersey, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, and West Virginia) and the six states that would be covered for the ozone NAAQS if EPA finalizes its supplemental proposal (Iowa, Kansas, Michigan, Missouri, Oklahoma, and Wisconsin).

BILLING CODE 6560–50–C

B. The Impacts on $PM_{2.5}$ and Ozone of the Final SO_2 and NO_X Strategy

The air quality modeling platform described in section V was used by EPA to model the impacts of the final rule SO_2 and NO_X emission reductions on annual average $PM_{2.5}$, 24-hour $PM_{2.5}$, and 8-hour ozone concentrations. In brief, we ran the CAMx model for the meteorological conditions in the year of 2005 for the eastern U.S. modeling domain.[91] Modeling was performed for the 2014 base case and the 2014 air quality-assured trading (*i.e.,* remedy) scenario to assess the expected effects of the final rule on projected $PM_{2.5}$ and ozone design value concentrations and nonattainment and maintenance. The procedures used to project future design values and nonattainment and maintenance are described in section V.

The projected 2014 concentrations of annual $PM_{2.5}$, 24-hour $PM_{2.5}$, and ozone at each monitoring site in the East for which projections were made are provided in the Air Quality Modeling Final Rule TSD. The number of nonattainment and/or maintenance sites in the East for the 2012 base case, 2014 base case, and 2014 remedy for annual $PM_{2.5}$, 24-hour $PM_{2.5}$, and ozone are provided in Table VIII.B–1.[92] The average and peak reductions in annual $PM_{2.5}$, 24-hour $PM_{2.5}$, and ozone predicted at 2012 nonattainment and/or maintenance sites due the emission reductions between 2012 and the 2014 remedy are provided in Table VIII.B–2.

[91] As described in the Air Quality Modeling Final Rule TSD, the eastern U.S. was modeled at a horizontal resolution of 12 x 12 km. The remainder of the U.S. was modeled at a resolution of 36 x 36 km.

[92] To provide a point of reference, Table VIII.B–1 also includes the number of nonattainment and/maintenance sites based on ambient design values for the period 2003 through 2007.

TABLE VIII.B–1—PROJECTED REDUCTION IN NONATTAINMENT AND/OR MAINTENANCE PROBLEMS FOR $PM_{2.5}$ AND OZONE IN THE EASTERN U.S.

	Ambient (2003–2007)	2012 Base case	2014 Base case	2014 remedy	Percent reduction: 2012 base case vs. 2014 remedy (percent)	Percent reduction: 2014 base case vs. 2014 remedy
Annual $PM_{2.5}$ Nonattainment Sites[93]	103	12	7	0	100	100 percent.
Annual $PM_{2.5}$ Maintenance-Only Sites	22	4	3	0	100	100 percent.
24-hour $PM_{2.5}$ Nonattainment Sites	151	20	10	1	95	90 percent.
24-hour $PM_{2.5}$ Maintenance-Only Sites	48	21	12	4	81	67 percent.
Ozone Nonattainment Sites	104	7	4	4	43	No Change.
Ozone Maintenance-Only Sites	65	9	6	6	33	No Change.

TABLE VIII.B–2—AVERAGE AND PEAK REDUCTION IN ANNUAL $PM_{2.5}$, 24-HOUR $PM_{2.5}$, AND OZONE FOR SITES THAT ARE PROJECTED TO HAVE NONATTAINMENT AND/OR MAINTENANCE PROBLEMS IN THE 2012 BASE CASE

	Average reduction: 2012 base Case to 2014 remedy	Peak reduction: 2012 base case to 2014 remedy
Annual $PM_{2.5}$ Nonattainment Sites	2.73 $\mu g/m^3$	3.32 $\mu g/m^3$.
Annual $PM_{2.5}$ Maintenance-Only Sites	2.99 $\mu g/m^3$	3.26 $\mu g/m^3$.
24-hour $PM_{2.5}$ Nonattainment Sites	6.8 $\mu g/m^3$	11.7 $\mu g/m^3$.
24-hour $PM_{2.5}$ Maintenance-Only Sites	6.5 $\mu g/m^3$	11.0 $\mu g/m^3$.
Ozone Nonattainment Sites	1.9 ppb	2.3 ppb.
Ozone Maintenance-Only Sites	1.8 ppb	2.1 ppb.

The information in Table VIII.B–1 shows that there will be significant reductions in the extent of nonattainment and maintenance problems for annual $PM_{2.5}$, 24-hour $PM_{2.5}$, and ozone between 2012 and 2014 as a result of the emission budgets in this rule coupled with emission reductions during this time period from other existing control programs. Specifically, the results of the air quality modeling indicate that no sites are projected to be in nonattainment or projected to have a maintenance problem for annual $PM_{2.5}$ in 2014 with the emission reductions expected from the Transport Rule. As indicated in Table VIII.B–2, the average reduction in annual $PM_{2.5}$ across the twelve 2012 nonattainment sites is 2.73 $\mu g/m^3$ and the peak reduction at an individual nonattainment site is 3.32 $\mu g/m^3$. Large reductions are also projected at annual $PM_{2.5}$ maintenance-only sites.

For 24-hour $PM_{2.5}$, we project that the number of nonattainment sites will be reduced by 95 percent and the number of maintenance-only sites by 81 percent in 2014 compared to the 2012 base case. The average reduction in 24-hour $PM_{2.5}$ across the twenty 2012 nonattainment sites is 6.8 $\mu g/m^3$ and the peak reduction at an individual nonattainment site is 11.7 $\mu g/m^3$. Similarly large reductions are projected at 24-hour $PM_{2.5}$ maintenance-only sites, as indicated in Table VIII.B–2.

The emission reductions in the Transport Rule will result in considerable progress toward attainment and maintenance at the 5 sites that remain as nonattainment and/or maintenance for the 24-hour $PM_{2.5}$ standard. On average for these 5 sites, the predicted amount of $PM_{2.5}$ reduction in 2014 is 64 percent of what is needed for these sites to attain and/or maintain the 24-hour standard.

Thus, the SO_2 and NO_X emission reductions which will result from the Transport Rule will greatly reduce the extent of $PM_{2.5}$ nonattainment and maintenance problems by 2014 and beyond. As described previously, these emission reductions are expected to substantially reduce the number of $PM_{2.5}$ nonattainment and/or maintenance sites in the East and make attainment easier for those counties that remain nonattainment by substantially lowering $PM_{2.5}$ concentrations in residual nonattainment sites. The emission reductions will also help those locations that may have maintenance problems.

Based on the 2012 base air quality modeling for ozone, 16 sites in the East are projected to be nonattainment or have problems maintaining the 1997 ozone standard. The summer NO_X reductions are projected to lower 8-hour ozone concentration by 1.8 ppb, on average by 2014, at monitoring sites projected to be nonattainment and/or have maintenance problems in the 2012 base case. We expect that the number of nonattainment sites will be reduced by 43 percent and the number of maintenance-only sites by 33 percent in 2014 compared to the 2012 base case. Thus, our modeling indicates that by 2014 the summer NO_X emission reductions in this rule, coupled with other existing control programs, will lower ozone concentrations in the East and help bring areas closer to attainment for the 8-hour ozone NAAQS. As discussed in section III of this preamble, EPA plans to finalize its reconsideration of the 2008 revised ozone NAAQS soon, and these reductions will help areas achieve those revised NAAQS.

C. Benefits

1. Human Health Benefit Analysis

To estimate the human health benefits of the final Transport Rule, EPA used the BenMAP model to quantify the changes in $PM_{2.5}$ and ozone-related health impacts and monetized benefits based on changes in air quality. For context, it is important to note that the magnitude of the $PM_{2.5}$ benefits is largely driven by the concentration response function for premature mortality. Experts have advised EPA to consider a variety of assumptions, including estimates based both on empirical (epidemiological) studies and judgments elicited from scientific experts, to characterize the uncertainty in the relationship between $PM_{2.5}$

[93] ''Nonattainment'' is used to denote sites that are projected to have both nonattainment and maintenance problems.

concentrations and premature mortality. For this rule we cite two key empirical studies, one based on the American Cancer Society cohort study [94] and the other based on the extended Six Cities cohort study.[95]

The estimated benefits of this rule are substantial, particularly when viewed within the context of the total public health burden of $PM_{2.5}$ and ozone air pollution. A recent EPA analysis estimated that 2005 levels of $PM_{2.5}$ and ozone were responsible for between 130,000 and 320,000 $PM_{2.5}$-related and 4,700 ozone-related premature deaths, or about 6.1 percent of total deaths from all causes in the continental U.S. (using the lower end of the range for premature deaths).[96] In other words, 1 in 20 deaths in the U.S. is attributable to $PM_{2.5}$ and ozone exposure. This same analysis attributed almost 200,000 non-fatal heart attacks, 90,000 hospital admissions due to respiratory or cardiovascular illness, 2.5 million cases of aggravated asthma among children, and many other human health impacts to exposure to these two air pollutants.

We estimate that $PM_{2.5}$ improvements under the Transport Rule will, starting in 2014, annually reduce between 13,000 and 34,000 $PM_{2.5}$-related premature deaths, 15,000 non-fatal heart attacks, 8,700 incidences of chronic bronchitis, 8,500 hospital admissions, and 400,000 cases of aggravated asthma while also reducing 10 million days of restricted activity due to respiratory illness and approximately 1.7 million work-loss days. We also estimate substantial health improvements for children from fewer cases of upper and lower respiratory illness and acute bronchitis.

Ozone health-related benefits are expected to occur during the summer ozone season (usually ranging from May to September in the eastern U.S.). Based upon modeling for 2014, annual ozone related health benefits are expected to include between 27 and 120 fewer premature mortalities, 240 fewer hospital admissions for respiratory illnesses, 86 fewer emergency room admissions for asthma, 160,000 fewer days with restricted activity levels, and 51,000 fewer days where children are absent from school due to illnesses.

Table VIII.C–1 presents the primary estimates of annual reduced incidence of $PM_{2.5}$ and ozone-related health effects for the final rule based on 2014 air quality improvements. When adding the PM and ozone-related mortalities together, we find that the Transport Rule will yield between 13,000 and 34,000 fewer premature mortalities annually. By 2014, in combination with other federal and state air quality actions, the Transport Rule will address a substantial fraction of the total public health burden of $PM_{2.5}$ and ozone air pollution.

Source: EPA, 2011

2. Quantified and Monetized Visibility Benefits

Only a subset of the expected visibility benefits—those for Class I areas—are included in the monetary benefit estimates we project for this rule. We anticipate improvement in visibility in residential areas where people live, work, and recreate within the Transport Rule region for which we are currently unable to monetize benefits. For the Class I areas we estimate annual benefits of $4.1 billion beginning in 2014 for visibility improvements. The value of visibility benefits in areas where we are unable to monetize benefits could be substantial.

3. Benefits of Reducing GHG Emissions

When fully implemented in 2014, the Transport Rule will reduce emissions of CO_2 from electrical generating units by about 25 million metric tons annually. Using a ''social cost of carbon'' (SCC) estimate that accounts for the marginal dollar value (*i.e.,* cost) of climate-related damages resulting from CO_2 emissions, previous analyses, including the RIA for the Final Rulemaking to Establish Light-Duty Vehicle Greenhouse Gas Emissions Standards and Corporate Average Fuel Efficiency Standards, have found the total benefit of CO_2 reductions is substantial. The monetary value of these avoided damages also grows over time. Readers interested in learning more about the calculation of the SCC metric should refer to the SCC TSD, Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866 [Docket No. EPA–HQ–OAR–2009–0472].

4. Total Monetized Benefits

Table VIII.C–2 presents the estimated annual monetary value of reductions in the incidence of health and welfare effects. These estimates account for increases in the value of risk reduction over time. Total monetized benefits are driven primarily by the reduction in premature fatalities each year, which account for between 89 and 96 percent of total benefits.

VIII.C-2 Estimated Annual Monetary Value of Reductions in Incidence of Health and Welfare Effects Based on 2014 Modeling (Billions of 2007$)[A]

Health Effect	*Pollutant*	*Within Transport Rule Region*	*Beyond Transport Rule Region[B]*	*Total*
Premature Mortality (Pope et al. 2002 PM mortality and Bell et al. 2004 ozone mortality estimates)				
3% discount rate	$PM_{2.5}$ & O_3	$100 ($8.3—$320)	$0.3 ($0.01—$0.9)	$100 ($8.3—$320)
7% discount rate	$PM_{2.5}$ & O_3	$94 ($7.5—$280)	$0.2 ($0.01—$0.8)	$94 ($7.5—$290)
Premature Mortality (Laden et al. 2006 PM mortality and Levy et al. 2005 ozone mortality estimates)				
3% discount rate	$PM_{2.5}$ & O_3	$270 ($23—$770)	$0.7 ($0.05—$2)	$270 ($23—$770)
7% discount rate	$PM_{2.5}$ & O_3	$240 ($21—$700)	$0.6 ($0.05—$1.8)	$240 ($21—$700)
Chronic Bronchitis	$PM_{2.5}$	$4.2 ($0.2—$19)	$0.01 ($-0.003—$0.06)	$4.2 ($0.2—$19)
Non-fatal heart attacks				
3% discount rate	$PM_{2.5}$	$1.7 ($0.3—$4.2)	$0.004 ($0.003—$0.01)	$1.7 ($0.3—$4.2)
7% discount rate	$PM_{2.5}$	$1.3 ($0.3—$3.1)	$0.004 ($0.002—$0.001)	$1.3 ($0.3—$3.1)
Hospital admissions—respiratory	$PM_{2.5}$ & O_3	$0.04 ($0.02—$0.06)	---	$0.04 ($0.02—$0.06)
Hospital admissions—cardiovascular	$PM_{2.5}$	$0.09 ($0.01—$0.2)	---	$0.09 ($0.01—$0.2)
Emergency room visits for asthma	$PM_{2.5}$ & O_3	$0.003 ($0.002—$0.006)	---	$0.003 ($0.002—$0.006)
Acute bronchitis	$PM_{2.5}$	$0.008 (<$-0.01—$0.02)[C]	---	$0.008 (<$-0.01—$0.02)[C]
Lower respiratory symptoms	$PM_{2.5}$	$0.004 ($0.002—$0.009)	---	$0.004 ($0.002—$0.009)
Upper respiratory symptoms	$PM_{2.5}$	$0.005 (<$0.01—$0.014)	---	$0.005 (<$0.01—$0.014)
Asthma exacerbation	$PM_{2.5}$	$0.02 ($0.002—$0.08)	---	$0.02 ($0.002—$0.08)
Lost work days	$PM_{2.5}$	$0.2 ($0.17—$0.24)	---	$0.2 ($0.17—$0.24)
School loss days	O_3	$0.01	---	$0.01

		($0.004–$0.013)		($0.004–$0.013)
Minor restricted-activity days	$PM_{2.5}$ & O_3	$0.7 ($0.3–$1)	---	$0.7 ($0.3–$1)
Recreational visibility, Class I areas	$PM_{2.5}$			$4.1
Social cost of carbon (3% discount rate, 2014 value)	CO_2			$0.6

Monetized total Benefits (Pope et al. 2002 $PM_{2.5}$ mortality and Bell et al. 2004 ozone mortality estimates)

3% discount rate	$PM_{2.5}$, O_3	$110 ($8.8–$340)	$0.28 ($0.01–$0.9)	$120 ($14–$350)
7% discount rate	$PM_{2.5}$, O_3	$100 ($8–$310)	$0.25 ($0.01–$0.85)	$110 ($13–$320)

Monetized total Benefits (Laden et al. 2006 $PM_{2.5}$ mortality and Levy et al. 2005 ozone mortality estimates)

3% discount rate	$PM_{2.5}$, O_3	$270 ($24–$800)	$0.7 ($0.05–$2.1)	$280 ($29–$810)
7% discount rate	$PM_{2.5}$, O_3	$250 ($22–$720)	$0.6 ($0.04–$1.9)	$250 ($26–$730)

[A] Values rounded to two significant figures. Benefits from reducing other criteria pollutants and hazardous air pollutants and ecosystem effects are not included here.

[B] Monetary value of endpoints marked with dashes are < $100,000.

[C] The negative estimates for certain endpoints are the result of the weak statistical power of the study used to calculate these health impacts and do not suggest that increases in air pollution exposure result in decreased health impacts.

Source: EPA, 2011

BILLING CODE 6560–50–C

5. How do the benefits in 2012 compare to 2014?

The magnitude of SO_2 emission reductions achieved under the rule is actually larger in 2012 than in 2014, due to substantial emission reductions expected to occur in the baseline (*i.e.,* unrelated to the Transport Rule) between those years. As a consequence, EPA expects correspondingly greater reductions in harmful effects to accrue in 2012 compared to 2014.

As presented in Table VIII.C–1, the Transport Rule is expected to prevent between 13,000 and 34,000 premature deaths annually from 2014 onward due to reductions in ambient $PM_{2.5}$ concentrations, which are most significantly impacted by SO_2 emission reductions. Based on EPA's analysis of power sector emission reductions under the Transport Rule, the decline in SO_2 in 2012 is 4 percent greater than the decline in SO_2 in 2014 in the states modeled. EPA therefore anticipates that the Transport Rule will deliver greater reductions in ambient $PM_{2.5}$ concentrations in 2012 and increased annual benefits to human health and welfare beyond those presented in this section.

6. How do the benefits compare to the costs of this final rule?

The estimated annual private costs to implement the emission reduction requirements of the final rule for the Transport Rule states are $1.85 billion in 2012 and $0.83 billion in 2014 (2007 $). These costs are the annual incremental electric generation production costs that are expected to occur with the Transport Rule. The EPA uses these costs as compliance cost estimates in developing cost-effectiveness estimates.

In estimating the net benefits of regulation, the appropriate cost measure is ''social costs.'' Social costs represent the welfare costs of the rule to society. These costs do not consider transfer payments (such as taxes) that are simply redistributions of wealth. The social costs of this rule are estimated to be approximately $0.81 billion in 2014 assuming either a 3 percent discount rate or a 7 percent discount rate. Thus, the annual net benefit (social benefits minus social costs) as shown in Table VIII.C–3 for the Transport Rule is approximately $120 to $280 billion or

$110 to $250 billion (3 percent and 7 percent discount rates, respectively) in 2014. Implementation of the rule is expected to provide society with a substantial net gain in social welfare based on economic efficiency criteria.

A listing of the benefit categories that could not be quantified or monetized in our benefit estimates is provided in Table VIII.C–4.

TABLE VIII.C–3—SUMMARY OF ANNUAL BENEFITS, COSTS, AND NET BENEFITS OF THE FINAL TRANSPORT RULE IN 2014

[Billions of 2007$] [a]

Description	Transport Rule remedy (billions of 2007 $)	
	3% discount rate	7% discount rate
Social costs	$0.81	$0.81.
Total monetized benefits [b]	$120 to $280	$110 to $250.
Net benefits (benefits-costs)	$120 to $280	$110 to $250.

[a] All estimates are for 2014, and are rounded to two significant figures.

[b] The total monetized benefits reflect the human health benefits associated with reducing exposure to $PM_{2.5}$ and ozone and the welfare benefits associated with improved visibility in Class I areas. The reduction in premature mortalities account for over 90 percent of total monetized $PM_{2.5}$ and ozone benefits.

The annualized regional cost of the rule, as quantified here, is EPA's best assessment of the cost of implementing the Transport Rule. These costs are generated from rigorous economic modeling of changes in the power sector expected from the rule. This type of analysis, using IPM, has undergone peer review and been upheld in federal courts. The direct cost includes, but is not limited to, capital investments in pollution controls, operating expenses of the pollution controls, investments in new generating sources, and additional fuel expenditures. The EPA believes that these costs reflect, as closely as possible, the additional costs of the Transport Rule to industry. The relatively small cost associated with monitoring emissions, reporting, and recordkeeping for affected sources is not included in these annualized cost estimates, but EPA has done a separate analysis and estimated the cost to be about $26 million (see section XII.B, Paperwork Reduction Act). However, there may exist certain costs that EPA has not quantified in these estimates. These costs may include costs of transitioning to this rule, such as the costs associated with the retirement of smaller or less efficient EGUs, employment shifts as workers are retrained at the same company or re-employed elsewhere in the economy, and certain relatively small permitting costs associated with Title V that new program entrants face.

An optimization model was employed that assumes cost minimization. Costs may be understated if the regulated community chooses not to minimize its compliance costs in the same manner to comply with the rules. Although EPA has not quantified these costs, the Agency believes that they are small compared with the quantified costs of the program to the power sector. However, EPA's experience and results of independent evaluation suggests that costs are likely to be lower by some degree (see RIA for details). The annualized cost estimates presented are the best and most accurate based upon available information. In a separate analysis, EPA estimates the indirect costs and impacts of higher electricity prices on the entire economy. These impacts are summarized in the RIA for this final rule.

Every benefit-cost analysis examining the potential effects of a change in environmental protection requirements is limited to some extent by data gaps, model capabilities (such as geographic coverage), and uncertainties in the underlying scientific and economic studies used to configure the benefit and cost models. Gaps in the scientific literature often result in the inability to estimate quantitative changes in health and environmental effects, or to assign economic values even to those health and environmental outcomes that can be quantified. While uncertainties in the underlying scientific and economics literatures (that may result in overestimation or underestimation of benefits) are discussed in detail in the economic analyses and its supporting documents and references, the key uncertainties which have a bearing on the results of the benefit-cost analysis of this rule include the following:

- EPA's inability to quantify potentially significant benefit categories;
- Uncertainties in population growth and baseline incidence rates;
- Uncertainties in projection of emission inventories and air quality into the future;
- Uncertainty in the estimated relationships of health and welfare effects to changes in pollutant concentrations, including the shape of the C–R function, the size of the effect estimates, and the relative toxicity of the many components of the PM mixture;
- Uncertainties in exposure estimation; and
- Uncertainties associated with the effect of potential future actions to limit emissions.

Despite these uncertainties, we believe the benefit-cost analysis provides a reasonable indication of the expected economic benefits of the rulemaking in future years under a set of reasonable assumptions. This approach calculates a mean value across value of a statistical life (VSL) estimates derived from 26 labor market and contingent valuation studies published between 1974 and 1991. The mean VSL across these studies is $6.3 million (2000$).[97] The benefits estimates generated for this rule are subject to a number of assumptions and uncertainties, which are discussed throughout the RIA document.

As Table VIII.C–2 indicates, total annual monetary benefits are driven primarily by the reduction in premature mortalities each year. Some key assumptions underlying the primary estimate for the premature mortality category include the following:

(1) EPA assumes inhalation of fine particles is causally associated with premature death at concentrations near those experienced by most Americans on a 24-hour basis. Plausible biological mechanisms for this effect have been hypothesized for the endpoints included in the primary analysis, and the weight of the available epidemiological evidence supports an assumption of causality.

[97] In this analysis, we adjust the VSL to account for a different currency year (2007$) and to account for income growth to 2014. After applying these adjustments to the $6.3 million value, the VSL is $8.7 million.

(2) EPA assumes all fine particles, regardless of their chemical composition, are equally potent in causing premature mortality. This is an important assumption, because the proportion of certain components in the PM mixture produced via precursors emitted from EGUs may differ significantly from direct PM released from automotive engines and other industrial sources, but no clear scientific grounds exist for supporting differential effects estimates by particle type.

(3) We assume that the health impact function for fine particles is linear down to the lowest air quality levels modeled in this analysis. Thus, the estimates include health benefits from reducing fine particles in areas with varied concentrations of $PM_{2.5}$, including both regions that are in attainment with the fine particle standard and those that do not meet the standard down to the lowest modeled concentrations.

The EPA recognizes the difficulties, assumptions, and inherent uncertainties in the overall enterprise. The analyses upon which the Transport Rule is based were selected from the peer-reviewed scientific literature. We used up-to-date assessment tools, and we believe the results are highly useful in assessing this rule.

There are a number of health and environmental effects that we were unable to quantify or monetize. A complete benefit-cost analysis of the Transport Rule requires consideration of all benefits and costs expected to result from the rule, not just those benefits and costs which could be expressed here in dollar terms. A listing of the benefit categories that were not quantified or monetized in our estimate are provided in Table VIII.C–4.

TABLE VIII.C–4—UNQUANTIFIED AND NON-MONETIZED EFFECTS OF THE TRANSPORT RULE

Pollutant/Effect	Endpoint
PM: Health [a]	Low birth weight.
	Pulmonary function.
	Chronic respiratory diseases other than chronic bronchitis.
	Non-asthma respiratory emergency room visits.
	UVb exposure [b].
PM: Welfare	Household soiling.
	Visibility in residential areas.
	Visibility in non-class I areas and class 1 areas in NW, NE, and Central regions.
	UVb exposure [b].
	Global climate impacts [b].
Ozone: Health	Chronic respiratory damage.
	Premature aging of the lungs.
	Non-asthma respiratory emergency room visits.
	UVb exposure [b].
Ozone: Welfare	Yields for:
	—Commercial forests.
	—Fruits and vegetables, and
	—Other commercial and noncommercial crops.
	Damage to urban ornamental plants.
	Recreational demand from damaged forest aesthetics.
	Ecosystem functions.
	Increased exposure to UVb [b].
	Climate impacts.
NO_2: Health	Respiratory hospital admissions.
	Respiratory emergency department visits.
	Asthma exacerbation.
	Acute respiratory symptoms.
	Premature mortality.
	Pulmonary function.
NO_2: Welfare	Commercial fishing and forestry from acidic deposition effects.
	Commercial fishing, agriculture and forestry from nutrient deposition effects.
	Recreation in terrestrial and estuarine ecosystems from nutrient deposition effects.
	Other ecosystem services and existence values for currently healthy ecosystems.
	Coastal eutrophication from nitrogen deposition effects.
SO_2: Health	Respiratory hospital admissions.
	Asthma emergency room visits.
	Asthma exacerbation.
	Acute respiratory symptoms.
	Premature mortality.
	Pulmonary function.
SO_2: Welfare	Commercial fishing and forestry from acidic deposition effects.
	Recreation in terrestrial and aquatic ecosystems from acid deposition effects.
	Increased mercury methylation.
Mercury: Health	Incidence of neurological disorders.
	Incidence of learning disabilities.
	Incidences in developmental delays.
Mercury: Welfare	Impact on birds and mammals (*e.g.,* reproductive effects).
	Impacts to commercial, subsistence and recreational fishing.

Source: EPA.

[a] In addition to primary economic endpoints, there are a number of biological responses that have been associated with PM health effects including morphological changes and altered host defense mechanisms. The public health impact of these biological responses may be partly represented by our quantified endpoints.

[b] May result in benefits or disbenefits.

7. What are the unquantified and non-monetized benefits of the Transport Rule emission reductions?

Important benefits beyond the human health and welfare benefits quantified in this section and the RIA are expected to occur from this rule. These other benefits occur directly from NO_X and SO_2 emission reductions and from co-benefits due to Transport Rule compliance. These benefits are listed in Table VIII.C–4. Some of the more important examples include: Reduced acidification and, in the case of NO_X, eutrophication of water bodies; possible reduced nitrate contamination of drinking water; and reduced acid and particulate deposition that causes damages to cultural monuments, as well as, soiling and other materials damage. To illustrate the important nature of benefit categories EPA is currently unable to monetize, we discuss four categories of public welfare and environmental impacts related to reductions in emissions required by the Transport Rule: Reduced acid deposition, reduced eutrophication of estuaries, reduced mercury methylation and deposition, and reduced vegetation impairment from ozone.

a. What are the benefits of reduced deposition of sulfur and nitrogen to aquatic, forest, and coastal ecosystems?

Atmospheric deposition of sulfur and nitrogen, often referred to as acid rain, occurs when emissions of SO_2 and NO_X react in the atmosphere (with water, oxygen, and oxidants) to form various acidic compounds. These acidic compounds fall to earth in either a wet form (rain, snow, and fog) or a dry form (gases and particles). Prevailing winds can transport acidic compounds hundreds of miles, across state borders. These compounds are deposited onto terrestrial and aquatic ecosystems across the U.S., contributing to the problems of acidification.

(1) Acid Deposition and Acidification of Lakes and Streams

The extent of adverse effects of acid deposition on freshwater and forest ecosystems depends largely upon the ecosystem's ability to neutralize the acid. The neutralizing ability depends largely on the watershed's physical characteristics, such as geology, soils, and size. A key indicator of neutralizing ability is termed Acid Neutralizing Capacity (ANC). Higher ANC indicates greater ability to neutralize acidity. Acidic conditions occur more frequently during rainfall and snowmelt that cause high flows of water, and less commonly during low-flow conditions except where chronic acidity conditions are severe. Biological effects are primarily attributable to a combination of low pH and high inorganic aluminum concentrations. Biological effects of episodes include reduced fish condition factor—changes in species composition and declines in aquatic species richness across multiple taxa, ecosystems and regions—as well as fish mortality. Waters that are sensitive to acidification tend to be located in small watersheds that have few alkaline minerals and shallow soils. Conversely, watersheds that contain alkaline minerals, such as limestone, tend to have waters with a high ANC. Areas especially sensitive to acidification include portions of the Northeast (particularly, the Adirondack and Catskill Mountains, portions of New England, and streams in the mid-Appalachian highlands) and southeastern streams. This regulatory action will decrease acid deposition within and downwind of the transport region and is likely to have positive effects on the health and productivity of aquatic ecosystems in the region.

(2) Acid Deposition and Forest Ecosystem Impacts

Acidifying deposition has altered major biogeochemical processes in the U.S. by increasing the nitrogen and sulfur content of soils, accelerating nitrate and sulfate leaching from soil to drainage waters, depleting base cations (especially calcium and magnesium) from soils, and increasing the mobility of aluminum. Inorganic aluminum is toxic to some tree roots. Plants affected by high levels of aluminum from the soil often have reduced root growth, which restricts the ability of the plant to take up water and nutrients, especially calcium.[98] These direct effects can, in turn, influence the response of these plants to climatic stresses such as droughts and cold temperatures. They can also influence the sensitivity of plants to other stresses, including insect pests and disease,[99] leading to increased mortality of canopy trees.

Both coniferous and deciduous forests throughout the eastern U.S. are experiencing gradual losses of base cation nutrients from the soil due to accelerated leaching from acidifying deposition. This change in nutrient availability may reduce the quality of forest nutrition over the long term. Evidence suggests that red spruce and sugar maple in some areas in the eastern U.S. have experienced declining health because of this deposition. For red spruce *(Picea rubens)*, dieback or decline has been observed across high elevation landscapes of the northeastern U.S. and, to a lesser extent, the southeastern U.S. Acidifying deposition has been implicated as a causal factor.[100]

This regulatory action will decrease acid deposition within and downwind of the transport region and is likely to have positive effects on the health and productivity of forest systems in the region.

b. Coastal Ecosystems

Since 1990, a large amount of research has been conducted on the impact of nitrogen deposition to coastal waters. Nitrogen is often the limiting nutrient in coastal ecosystems. Increasing the levels of nitrogen in coastal waters can cause significant changes to those ecosystems. In recent decades, human activities have accelerated nitrogen nutrient inputs, causing excessive growth of algae and leading to degraded water quality and associated impairments of estuarine and coastal resources.

Atmospheric deposition of nitrogen is a significant source of nitrogen to many estuaries. The amount of nitrogen entering estuaries due to atmospheric deposition varies widely, depending on the size and location of the estuarine watershed and other sources of nitrogen in the watershed. A recent assessment of 141 estuaries nationwide by the National Oceanic and Atmospheric Administration (NOAA) concluded that 19 estuaries (13 percent) suffered from moderately high or high levels of eutrophication due to excessive inputs of both nitrogen and phosphorus, and a majority of these estuaries are located in the coastal area from North Carolina to Massachusetts.[101] For estuaries in the Mid-Atlantic region, the contribution of atmospheric distribution to total nitrogen loads is estimated to range between 10 percent and 58 percent.[102]

[102] Valigura, R.A., R.B. Alexander, M.S. Castro, T.P. Meyers, H.W. Paerl, P.E. Stacy, and R.E. Turner. 2001. Nitrogen Loading in Coastal Water

Eutrophication in estuaries is associated with a range of adverse ecological effects. The conceptual framework developed by NOAA emphasizes four main types of eutrophication effects: low dissolved oxygen (DO), harmful algal blooms (HABs), loss of submerged aquatic vegetation (SAV), and low water clarity. Low DO disrupts aquatic habitats, causing stress to fish and shellfish, which, in the short-term, can lead to episodic fish kills and, in the long-term, can damage overall growth in fish and shellfish populations. Low DO also degrades the aesthetic qualities of surface water. In addition to often being toxic to fish and shellfish, and leading to fish kills and aesthetic impairments of estuaries, HABs can, in some instances, also be harmful to human health. SAV provides critical habitat for many aquatic species in estuaries and, in some instances, can also protect shorelines by reducing wave strength. Therefore, declines in SAV due to nutrient enrichment are an important source of concern. Low water clarity is the result of accumulations of both algae and sediments in estuarine waters. In addition to contributing to declines in SAV, high levels of turbidity also degrade the aesthetic qualities of the estuarine environment.

Estuaries in the eastern United States are an important source of food production, in particular fish and shellfish production. The estuaries are capable of supporting large stocks of resident commercial species, and they serve as the breeding grounds and interim habitat for several migratory species.

This rule is anticipated to reduce nitrogen deposition within and downwind of the Transport Rule states. Thus, reductions in the levels of nitrogen deposition will have a positive impact upon current eutrophic conditions in estuaries and coastal areas in the region.

c. Mercury Methylation and Deposition

Mercury is a highly neurotoxic contaminant that enters the food web as a methylated compound, methylmercury.[103] The contaminant is concentrated in higher trophic levels, including fish eaten by humans. Experimental evidence has established that only inconsequential amounts of methylmercury can be produced in the absence of sulfate. Current evidence indicates that in watersheds where mercury is present, increased SO_X deposition very likely results in methylmercury accumulation in fish.[104] [105] The SO_2 Integrated Science Assessment concluded that evidence is sufficient to infer a causal relationship between sulfur deposition and increased mercury methylation in wetlands and aquatic environments.

d. Ozone Vegetation Effects

Ozone causes discernible injury to a wide array of vegetation.[106] In terms of forest productivity and ecosystem diversity, ozone may be the pollutant with the greatest potential for regional-scale forest impacts.[107] Studies have demonstrated repeatedly that ozone concentrations commonly observed in polluted areas can have substantial impacts on plant function.[108] [109]

Assessing the impact of ground-level ozone on forests in the eastern United States involves understanding the risks to sensitive tree species from ambient ozone concentrations and accounting for the prevalence of those species within the forest. As a way to quantify the risks to particular plants from ground-level ozone, scientists have developed ozone-exposure/tree-response functions by exposing tree seedlings to different ozone levels and measuring reductions in growth as ''biomass loss.'' Typically, seedlings are used because they are easy to manipulate and measure their growth loss from ozone pollution. The mechanisms of susceptibility to ozone within the leaves of seedlings and mature trees are identical, and the decreases predicted using the seedlings should be related to the decrease in overall plant fitness for mature trees, but the magnitude of the effect may be higher or lower depending on the tree species.[110] In areas where certain ozone-sensitive species dominate the forest community, the biomass loss from ozone can be significant. Significant biomass loss can be defined as a more than 2 percent annual biomass loss, which would cause long-term ecological harm, as the short-term negative effects on seedlings compound to affect long-term forest health.[111]

Urban ornamentals are an additional vegetation category likely to experience some degree of negative effects associated with exposure to ambient ozone levels. Because ozone causes visible foliar injury, the aesthetic value of ornamentals (such as petunia, geranium, and poinsettia) in urban landscapes would be reduced. Sensitive ornamental species would require more frequent replacement and/or increased maintenance (fertilizer or pesticide application) to maintain the desired appearance because of exposure to ambient ozone.[112] In addition, many businesses rely on healthy-looking vegetation for their livelihoods (*e.g.,* horticulturalists, landscapers, Christmas tree growers, farmers of leafy crops, etc.) and a variety of ornamental species have been listed as sensitive to ozone.[113]

D. Costs and Employment Impacts

1. Transport Rule Costs and Employment Impacts

For the affected region, the projected annual private incremental costs of the rule to the power industry are $1.4 billion in 2012 and $0.8 billion in 2014. These costs represent the private compliance cost to the electric generating industry of reducing NO_X and SO_2 emissions to meet the requirements set forth in the rule. Estimates are in 2007 dollars.

In estimating the net benefits of regulation, the appropriate cost measure

[113] Abt Associates, Inc. 2005. U.S. EPA. Urban ornamental plants: sensitivity to ozone and potential economic losses. Memorandum to Bryan Hubbell and Zachary Pekar.

is ''social costs.'' Social costs represent the welfare costs of the rule to society. These costs do not consider transfer payments (such as taxes) that are simply redistributions of wealth. The social costs of this rule are estimated to be approximately $0.8 billion annually in 2014. Overall, the economic impacts of the Transport Rule are modest in 2014, particularly in light of the large benefits ($120 to $280 billion annually at a 3 percent discount rate and $110 to $250 billion annually at a 7 percent discount rate) we expect, as shown in section XII.A of this preamble. Ultimately, we believe the electric power industry will pass along most of the costs of the rule to consumers, so that the costs of the rule will largely fall upon the consumers of electricity. For more information on electricity price changes that result from this final rule, refer to section XII.H (Statement of Energy Effects) later in this preamble.

For this rule, EPA analyzed the costs using the Integrated Planning Model (IPM). The IPM is a dynamic linear programming model that can be used to examine the economic impacts of air pollution control policies for SO_2 and NO_X throughout the contiguous United States for the entire power system. Documentation for IPM can be found in the docket for this rulemaking or at *http://www.epa.gov/airmarkets/progsregs/epa-ipm/index.html.*

EPA also included an analysis of impacts of the final rule to industries outside of the electric power sector by using the Multi-Market Model. This model is a partial equilibrium economic impact model that includes 100 sectors that cover energy, manufacturing, and service applications and is designed to capture the short-run effects associated with an environmental regulation. This model was used to estimate economic impacts for the proposed MATS, and the promulgated industrial boilers major and area source standards and CISWI standard.

We use the Multi-Market Model to estimate the social costs of the final rule. Using this model, we estimate the social costs of the final rule to be approximately $0.8 billion (2007 dollars), which is close to the compliance costs. Documentation for the Multi-Market Model can be found in the RIA for this final rule.

Also note that as explained in section V.B (Baseline for Pollution Transport Analysis), the baseline used in this analysis assumes no CAIR. As explained in that section, EPA believes that this is the most appropriate baseline to use for purposes of determining whether an upwind state has an impact on a downwind monitoring site in violation of section 110(a)(2)(D).

Although a stand-alone analysis of employment impacts is not included in a standard cost-benefit analysis, the current economic climate has led to heightened concerns about potential job impacts. Such an analysis is of particular concern in the current economic climate as sustained periods of excess unemployment may introduce a wedge between observed (market) wages and the social cost of labor. In such conditions, the opportunity cost of labor required by regulated sectors to bring their facilities into compliance with an environmental regulation may be lower than it would be during a period of full employment (particularly if regulated industries employ otherwise idled labor to design, fabricate, or install the pollution control equipment required under this rule). For that reason, EPA also includes estimates of job impacts associated with the final rule. EPA presents an estimate of short-term employment opportunities as a result of increased demand for pollution control equipment. Overall, the results suggest that the final rule could support a net increase of roughly 2,250 job-years in direct employment in 2014.

The basic approach to estimate these employment impacts involved using projections from IPM from the final rule analysis such as the amount of capacity that will be retrofit with control technologies, for various energy market implications, along with data on labor and resource needs of new pollution controls and labor productivity from secondary sources, to estimate employment impacts for 2014. This analysis was also applied for the proposed MATS. For more information, refer to Appendix D of the RIA for the final Transport Rule.''

EPA relied on Morgenstern, et al. (2002), a study that is a basis for employment impacts estimated for the final industrial boiler major and area source rules and CISWI standard, and the proposed MATS. The Morgenstern study identifies three economic mechanisms by which pollution abatement activities can indirectly influence jobs: (1) Higher production costs raise market prices, higher prices reduce consumption, and employment within an industry falls (''demand effect''); (2) pollution abatement activities require additional labor services to produce the same level of output (''cost effect''); and (3) post regulation production technologies may be more or less labor intensive (*i.e.,* more/less labor is required per dollar of output) (''factor-shift effect'').

Using plant-level Census information between the years 1979 and 1991, Morgenstern, et al., estimate the size of each effect for four polluting and regulated industries (petroleum, plastic material, pulp and paper, and steel). On average across the four industries, each additional $1 million spending on pollution abatement results in a small net increase of 1.6 jobs; however, the estimated effect is not statistically significant. As a result, the authors conclude that increases in pollution abatement expenditures do not necessarily cause economically significant employment changes. The conclusion is similar to Berman and Bui (2001), who found that increased air quality regulation in Los Angeles did not cause large employment changes. For more information, please refer to the RIA for this final rule.

The ranges of job effects calculated using the Morgenstern, et al., approach are listed in Table VIII.D–1.

TABLE VIII.D–1—RANGE OF JOB EFFECTS FOR THE ELECTRICITY SECTOR

[Estimates using Morgenstern, et al. (2002)]

	Demand effect	Cost effect	Factor shift effect	Net effect
Change in Full-Time Jobs per Million Dollars of Environmental Expenditure [a].	−3.56	2.42	2.68	1.55.
Standard Error	2.03	0.83	1.35	2.24.
EPA Estimate for Final Rule [b]	+ 200 to −3,000	+ 400 to 2,000	0 to 2,000	−1,000 to + 3,000.

[a] Expressed in 1987 dollars. *See* footnote a of Table 8–3 in the RIA for the inflation adjustment factor used in the analysis.

[b] According to the 2007 Economic Census, the electric power generation, transmission, and distribution sector (NAICS 2211) had approximately 510,000 paid employees.

EPA recognizes there may be other job effects which are not considered in the Morgenstern, et al., study. Although EPA has considered some economy-wide changes in industry output as shown earlier with the Multi-Market model, we do not have sufficient information to quantify other associated job effects associated with this rule.

2. End-Use Energy Efficiency

EPA believes that achievement of energy efficiency (EE) improvements in homes, buildings, and industry is an important component of achieving emission reductions from the power sector while minimizing associated compliance costs. By reducing electricity demand, energy efficiency avoids emissions of all pollutants associated with electricity generation, including emissions of NO_X and SO_2 targeted by this final rule, and reduces the need for investments in EGU emission control technologies in order to meet emission reduction requirements. Moreover, energy efficiency can often be implemented at a lower cost than traditional control technologies.

EPA recognizes that significant opportunities remain for energy efficiency improvements in businesses, homes, and industry. However, there are several informational and market barriers that limit investment in cost-effective energy efficient practices. Several federal programs authorized under the CAA, including ENERGY STAR, are designed to address these barriers.

Congress, EPA, and states have all recognized the value of incorporating energy efficiency into air regulatory programs. Several allowance-based programs—including the Acid Rain Program, EPA's NO_X Budget Trading program, and the Regional Greenhouse Gas Initiative (an effort of 10 states from the Northeast and Mid-Atlantic regions) – have provided mechanisms for rewarding energy efficiency through either the award of allowances, typically through the use of a fixed set-aside pool, or the use of revenues obtained through the auction of allowances. The emission caps established by these programs are unaffected by this approach. However, to the extent electricity demand reductions are realized, compliance costs are reduced. In addition to these allowance-based programs, EPA has also provided guidance [114] concerning the recognition, in SIPs, of emission reduction benefits of energy efficiency and has approved the inclusion of EE measures in individual SIPs.[115]

While all remedy options considered in the proposed rule would have lead to an increase in the relative cost-effectiveness of EE investments by internalizing environmental costs associated with emission of these pollutants, EPA took comment on whether EPA has authority, and whether it would be appropriate for EPA, to consider EE in developing the allowance allocation methodology and to consider other approaches for encouraging EE in the Transport Rule.

Some commenters suggested that EPA has authority to consider EE in developing the allocation methodology. Other commenters do not believe EPA has the authority to consider EE. Some commenters suggested that EPA should establish an EE set-aside provision. Other commenters suggested that EPA should allow, and help, states to establish EE set-asides as states transition from Transport Rule FIPs to SIPs. EPA believes that, while EE set-asides can be effective at encouraging incremental investments in EE, EE set-asides are more likely to be practically and effectively implemented at the state level. Establishing EE set-asides in the allowance allocation provisions in the final rule would not allow for the tailoring of the set-asides to the unique characteristics of individual states and would not build on the existing EE program delivery infrastructure that many states already possess. Instead of establishing EPA-administered EE set-asides in the final rule, EPA is clarifying that it allows and supports EE set-asides (including auction-based approaches) in abbreviated or full SIPs that states may submit, as provided in the final rule. Under this approach states have the ability to implement EE set-asides tailored to their state circumstances, if they choose. EPA anticipates providing additional information in the future for states on EE set-asides, as needed.[116]

As discussed elsewhere in this preamble, the final rule provides for submission and approval of abbreviated and full SIPs providing for continued state participation in the Transport Rule trading programs, and adopting alternative allowance allocation methodologies (which may include EE set-asides) to the allocation methodologies adopted in the FIPs. While the final rule establishes certain requirements for approval of any such alternative allocation methodology, the final rule provides states flexibility to create state-implemented EE set-asides.

IX. Related Programs and the Transport Rule

A. Transition From the Clean Air Interstate Rule

1. Key Differences Between the Transport Rule and CAIR

The Transport Rule replaces CAIR and its associated trading programs. There are a number of differences between implementation of the Transport Rule and implementation of CAIR. This section describes key implementation differences including differences in states covered, compliance deadlines, applicability, structure of the remedy, provisions for early reductions, and provisions for SIPs. The next section discusses the transition from CAIR to the Transport Rule.

States covered. The states covered by the Transport Rule differ somewhat from states covered by CAIR. This section summarizes differences in state coverage. EPA's approach to determine states covered by the Transport Rule is discussed in sections V and VI of this preamble.

The Transport Rule's SO_2 and annual NO_X requirements apply to covered sources in the 23 states listed in Table III–1 in section III of this preamble. CAIR's SO_2 and annual NO_X requirements applied to covered sources in 25 states. There are many states in common between the Transport Rule and CAIR SO_2 and annual NO_X programs. The differences are summarized in Table IX.A–1.

[114] U.S. EPA. 2004. Guidance on State Implementation Plan (SIP) Credits for Emission Reductions from Electric-Sector Energy Efficiency and Renewable Energy Measures. *http://www.epa.gov/ttn/oarpg/t1/memoranda/ereseerem_gd.pdf.*

[115] Metropolitan Washington Council of Governments developed a regional air quality plan for the eight-hour ozone standard for the DC Region nonattainment area that included an EE measure. The plan was adopted by Virginia, Maryland, and the District of Columbia and the respective ozone SIPs were approved by the EPA regions in 2007.

[116] Because the question of EPA authority to create EE set-asides in the FIPs would be best addressed in the context of actual FIP provisions for EPA-created EE set-asides and EPA is, for other reasons, not adopting such provisions in the final rule, EPA is not addressing in the final rule the question of EPA's authority.

TABLE IX.A–1—DIFFERENCES IN SO_2 AND ANNUAL NO_X STATE COVERAGE BETWEEN THE TRANSPORT RULE AND CAIR

State	Transport rule SO_2 and annual NO_X programs	CAIR SO_2 and annual NO_X programs
Kansas	Yes	No.
Minnesota	Yes	No.
Nebraska	Yes	No.
Delaware	No	Yes.
District of Columbia	No	Yes.
Florida	No	Yes.
Louisiana	No	Yes.
Mississippi	No	Yes.

The Transport Rule's ozone-season NO_X requirements apply to covered sources in the 20 states listed in Table III–1 in section III of this preamble, while CAIR's ozone-season NO_X requirements applied to 26 states. There are many states in common between the Transport Rule and CAIR ozone-season NO_X programs. The differences are summarized in Table IX.A–2.

TABLE IX.A–2—DIFFERENCES IN OZONE-SEASON NO_X STATE COVERAGE BETWEEN THE TRANSPORT RULE AND CAIR

State	Transport rule ozone-season NO_X program	CAIR ozone-season NO_X program
Georgia	Yes	No.
Texas	Yes	No.
Connecticut	No	Yes.
Delaware	No	Yes.
District of Columbia	No	Yes.
Iowa	No	Yes.
Massachusetts	No	Yes.
Michigan	No	Yes.
Missouri	No	Yes.
Wisconsin	No	Yes.

In addition, EPA is proposing a supplemental notice to apply Transport Rule ozone-season requirements to the states of Iowa, Kansas, Michigan, Missouri, Oklahoma, and Wisconsin, as discussed in section III of this preamble.

The transition from CAIR to the Transport Rule is discussed in section IX.A.2 and SIPs are discussed in section X of this preamble.

Compliance deadlines. The Transport Rule reduction requirements commence January 1, 2012 for annual NO_X and SO_2 requirements and May 1, 2012 for ozone-season NO_X requirements. More stringent SO_2 reduction requirements commence January 1, 2014 for Group 1 states.

In contrast, the first phase of CAIR NO_X reductions commenced January 1, 2009 for annual NO_X requirements and May 1, 2009 for ozone-season NO_X requirements. On January 1, 2010, the first phase of CAIR SO_2 requirements commenced. However, in anticipation of CAIR, SO_2 reductions actually started as early as 2006 because of the incentive to reduce emissions and bank Title IV Acid Rain Program SO_2 allowances for use when their value would increase under CAIR in 2010 and later. The second phase of CAIR reductions would have (if not replaced by the Transport Rule) commenced January 1, 2015 for annual NO_X and SO_2 requirements, and May 1, 2015 for ozone-season NO_X requirements.

Applicability. Except for the changes to the states covered, the general applicability provisions of the final Transport Rule trading programs are essentially the same as the CAIR general applicability provisions, with a few exceptions.

First, the final Transport Rule does not allow any non-covered units to opt into the trading programs, for the reasons discussed in section VII.B of this preamble. In contrast, under CAIR, through SIPs, the states could elect to allow boilers, combustion turbines, and other combustion devices to opt into the CAIR trading programs under opt-in provisions specified by EPA.

Second, the Transport Rule FIPs' ozone-season NO_X trading program applicability provisions do not cover NO_X SIP Call small EGUs and non-EGUs that a number of CAIR states brought into the CAIR ozone-season NO_X trading program. The Transport Rule does allow any state in the ozone-season NO_X program, through SIPs, to expand the applicability of the Transport Rule ozone-season NO_X trading program to cover small EGUs. However, the Transport Rule does not allow states to expand the applicability to cover NO_X SIP Call non-EGUs, for the reasons discussed elsewhere in this preamble.

In contrast, in the CAIR trading programs, a NO_X SIP Call state could expand the applicability of the CAIR ozone-season NO_X trading program in the state in order to include all units subject to the NO_X Budget Trading Program under the NO_X SIP Call. A number of states chose to expand the CAIR ozone-season NO_X trading program applicability in this way. The transition from CAIR to the Transport Rule is discussed in section IX.A.2 and SIPs are discussed in section X of this preamble.

Structure of the remedy. The CAIR FIPs (and CAIR model trading rules adopted by a number of states in their CAIR SIPs) implemented reductions through SO_2, annual NO_X, and ozone-season NO_X interstate emission trading programs covering primarily large EGUs. The owners and operators of a covered source could buy allowances

from or sell allowances to other covered sources (or other market participants) and were required to surrender allowances equal to the source's emissions for each compliance period. CAIR's trading programs did not impose limitations on the aggregate emissions from covered units within any covered state.

The Transport Rule FIPs will also achieve the required reductions through SO_2, annual NO_X, and ozone-season NO_X interstate trading programs. However, in contrast to CAIR and for the reasons discussed in section VII of this preamble, the Transport Rule FIPs include assurance provisions specifically designed to ensure that no state's emissions will exceed that state's emission budget plus the variability limit, *i.e.,* the state's assurance level.

Another difference in the remedy structure is in the design of the SO_2 trading programs. In CAIR all of the states required to reduce SO_2 emissions were grouped together in one SO_2 trading program with no restriction on the use of SO_2 allowances from any state in the program by any source in the program. In contrast, and for the reasons discussed in section VI of this preamble, the Transport Rule divides states required to reduce SO_2 emissions into two groups with emission reduction requirements of different stringency starting in 2014 (SO_2 Group 1, whose reduction requirements become more stringent starting in 2014, and SO_2 Group 2, whose reduction requirements in 2014 do not change). A covered source may only use for compliance—with the requirements to hold allowances covering emissions and, if applicable, to surrender allowances under the assurance provisions—an SO_2 allowance issued for the SO_2 Group in which the source's state is included. In other words, an SO_2 Group 1 source may only use a SO_2 Group 1 allowance for compliance, and likewise an SO_2 Group 2 source may only use a SO_2 Group 2 allowance for compliance.

Provisions for early reductions. CAIR included provisions for covered sources to make early reductions prior to the start of CAIR's SO_2 and NO_X trading programs, bank emission allowances, and carry banked allowances into its trading programs. In contrast, the Transport Rule does not include provisions for covered sources to carry over any allowances (*i.e.,* Title IV SO_2 allowances or CAIR annual or ozone-season NO_X allowances) into the Transport Rule trading programs. EPA's reasons for not allowing the use of banked Title IV SO_2 allowances or CAIR annual or ozone-season NO_X allowances in the Transport Rule trading programs are discussed in the next section.

Provisions for SIPs. The following is a summary of the key differences between the Transport Rule and CAIR provisions for SIPs. A more detailed discussion of Transport Rule SIPs is in section X of this preamble.

The SIP provisions in the Transport Rule and CAIR are very similar. Both include provisions that allow states to submit SIP revisions (referred to as full SIPs) that replace an applicable FIP trading program with a comparable SIP trading program that has certain limited differences from the FIP trading program. Similarly, both rules include provisions that allow states to submit SIP revisions (referred to as abbreviated SIPs) that may modify certain limited provisions in the FIP trading program, which remain in place. Inclusion of this provision in the Transport Rule allows a state to modify certain elements of a Transport Rule FIP trading program in order to better meet the needs of the state. Both the Transport Rule and CAIR allow full or abbreviated SIPs that involve one or more applicable FIP trading programs. However, there are a few differences.

In particular, under the Transport Rule, states may submit SIP revisions under which the state determines allocations for the applicable trading program using either full or abbreviated SIP revisions. States could submit similar revisions under CAIR. Under the Transport Rule, the state may use the same allocation methodology as that currently used in the Transport Rule FIP trading program or some other allocation methodology. However, the Transport Rule specifies certain requirements that must be met concerning, for example, the timing of such allocation determinations, and expressly allows allowance auctions to be used. CAIR did not include similar provisions. Further, the SIP submission deadlines, allocation submission, and allocation recordation dates are different between the Transport Rule and CAIR. The Transport Rule SIP submission deadlines and allocation recordation dates are discussed in section X of this preamble.

In addition, both the Transport Rule and CAIR include provisions that allow states to submit SIP revisions under which the state expands the general applicability provisions of the ozone-season NO_X trading programs to cover certain units subject to the NO_X SIP Call. However, for the reasons discussed elsewhere in this preamble, this flexibility is more limited in the Transport Rule than it was in CAIR.

While CAIR allowed states to adopt, through full or abbreviated SIPs, opt-in provisions, the Transport Rule does not allow for opt-in provisions. The reasons for this are discussed in section VII.B of this preamble.

Finally, neither full nor abbreviated SIPs can replace FIP provisions that apply to units in Indian country within the borders of a state. For example, the FIPs include, for states within whose borders Indian country is located, an Indian country new unit set-aside. For states not having Indian country within their borders, abbreviated SIPs are limited to replacing the allowance allocation provisions of the FIPs for the state involved and may replace some or all of those provisions. However, for states having Indian country within their borders, abbreviated SIPs cannot replace the FIP provisions for the Indian country new unit set-aside. Similarly, for states not having Indian country, full SIPs can replace an entire FIP, but, in doing so, can only change the allowance allocation provisions. For states having Indian country, full SIPs can replace the FIPs except for the Indian country new unit set-aside provisions, which will remain under the applicable FIPs, and, like the abbreviated SIPs, can only change the allowance allocation provisions that are replaced.

Details of the Transport Rule provisions for abbreviated and full SIP revisions, including deadlines for submission to EPA, are discussed in section X of this preamble.

2. Transition From the Clean Air Interstate Rule to the Transport Rule

The Transport Rule replaces CAIR and its associated trading programs. This section elaborates on areas of transition from CAIR to the Transport Rule.

a. Sunsetting of CAIR, CAIR SIPs, and CAIR FIPs

The proposal explained that, for control periods in 2012 and thereafter, CAIR, CAIR SIPs, and CAIR FIPs would be replaced entirely by the Transport Rule provisions. The proposal outlined implementation of the sunsetting of CAIR and CAIR FIPs, through revisions to CAIR, §§ 51.123 and 51.124, and the CAIR FIPs, §§ 52.35 and 52.36. For the control period in these years, the CAIR trading programs would not continue, and the Administrator would not carry out any of the functions established for the Administrator in the CAIR model trading rule, the CAIR FIPs, or any state trading programs approved under CAIR. Offset and automatic penalty provisions under CAIR would not apply to excess emissions for 2011 control periods.

Also discussed were the processes for modifying provisions in Part 52 reflecting state-specific CAIR SIP and CAIR FIP requirements, which would vary depending on whether a state has an approved CAIR SIP or a CAIR FIP. The proposal further explained that sources in some states covered by CAIR or the CAIR FIPs would not be subject to the Transport Rule and that to the extent that CAIR reductions were needed or relied upon to satisfy other SIP requirements, states might need to find alternative ways to satisfy requirements for their SIPs.

EPA is finalizing regulatory changes to sunset CAIR and the CAIR FIPs. The final rule revises the general CAIR and CAIR FIP provisions in Parts 51 and 52 applicable to all CAIR states. For control periods in 2012 and thereafter, the Administrator rescinds the determination that states must meet SIP requirements under CAIR, and the requirements of the CAIR FIPs are not applicable. Further, with regard to these control periods, the Administrator will no longer carry out any of the functions established for the Administrator in the CAIR model trading rule, the CAIR FIPs, or any state trading programs approved under CAIR with the exception of enforcing the provisions for the previous control periods, if necessary.

For the reasons discussed in the proposed rule preamble (75 FR 45337), CAIR allowances allocated for these control periods cannot be used in any CAIR trading program and, as discussed below, in any Transport Rule trading program. Specifically, for the reasons discussed in the proposed rule, offset and automatic allowance penalty provisions in the CAIR trading programs will not be applied to 2011 control period excess emissions, which will remain subject to discretionary civil penalties under CAA section 113. EPA still retains all enforcement options for excess emissions during the 2011 control period. CAIR allowances allocated for 2012 and thereafter are not usable in any CAIR or Transport Rule trading program. In light of that fact, in order to prevent any confusion by owners and operators and other members of the public concerning the status of such allowances, the final rule provides that, within 90 days after publication of the final Transport Rule, the Administrator will remove post-2011 CAIR annual NO_X and ozone-season allowances from the Allowance Tracking System.

The CAIR SO_2 trading program, of course, uses Acid Rain allowances, which will remain in the Allowance Tracking System because they were created by CAA Title IV and continue to be usable in the Acid Rain Program.

The final rule also adopts the discussion in the proposed rule concerning state-specific Part 52 provisions concerning CAIR (75 FR 45337–38). With regard to Part 52 provisions reflecting EPA's adoption of ongoing CAIR FIPs for some individual states, the final rule revises the CAIR FIP provisions to make them inapplicable to control periods in 2012 and thereafter and to require the Administrator to remove from the Allowance Tracking System, CAIR allowances for these control periods. The final, state-specific CAIR FIP provisions in Part 52 essentially echo the language in the final, general CAIR provisions in Part 52 discussed above. In making the CAIR FIP provisions inapplicable to control periods in 2012 and thereafter, the final, state-specific provisions sunset the applicable CAIR FIP trading programs whether or not the CAIR FIPs were revised by approved, abbreviated CAIR SIPs. (Under CAIR, abbreviated CAIR SIPs were adopted by certain states so that states, rather than EPA, made NO_X allowance allocations.) Consequently, states with approved, abbreviated CAIR SIPs will not need to revise their abbreviated CAIR SIPs in order to sunset the CAIR trading programs to which these abbreviated SIPs applied. Thus, although such abbreviated SIPs may remain in the state SIPs, they will have no force and effect, once the CAIR FIPs sunset.

With regard to Part 52 provisions reflecting EPA's approval of full CAIR SIPs submitted to EPA by many individual states, the Court's *North Carolina* decision essentially overrides these Agency approvals of individual CAIR SIPs. (Under CAIR, full CAIR SIPs were adopted by certain states to replace CAIR FIPs and continue participation through the CAIR SIPs in the CAIR trading programs.) The Court found CAIR to be illegal and only allowed it to remain in effect temporarily. For this reason, the CAIR SIPs though approved, can have no force and effect once CAIR is replaced by this rule. For this reason, although the proposed rule indicated that states would need to submit SIP revisions to, among other things, make the CAIR SIPs inapplicable to control periods after 2011, the final rule does not require states to take any actions to revise their full or abbreviated CAIR SIPs. For states covered by CAIR or CAIR FIPs that are not subject to the Transport Rule and have relied on CAIR reductions to satisfy other SIP requirements, EPA will discuss with states alternative ways to satisfy requirements for those SIP requirements, *e.g.,* through intrastate cap and trade programs that require the level of reductions on which the state has recently relied.

b. NO_X SIP Call Units

The NO_X Budget Trading program was used by states to reduce ozone-season NO_X emissions from EGUs and large non-EGUs under NO_X SIP Call requirements. The program started in 2003 and ended in 2008. Under CAIR, a state subject to the NO_X SIP Call was allowed to expand the applicability of the CAIR ozone-season NO_X trading program in the state in order to include all units subject to the NO_X Budget Trading Program under the NO_X SIP Call and thereby to continue to meet the state's NO_X SIP Call requirements. Fourteen states chose to expand the CAIR ozone-season NO_X applicability in this way, while six states chose not to expand the applicability and instead to meet their NO_X SIP Call obligations in other ways. EPA proposed to not allow this expansion in applicability for the Transport Rule, primarily because these sources as a group did not actually reduce emissions for the NO_X Budget Trading Program or CAIR. EPA took comment on the proposed approach.

Several commenters generally advocated allowing, at state discretion, all NO_X Budget Trading Program units to be regulated under the Transport Rule ozone-season NO_X trading program. Some also questioned how states would otherwise satisfy NO_X SIP Call requirements for these units. Some commenters argued that some units did in fact make emission reductions in the NO_X Budget Trading Program, but did not provide information on specific units.

The final rule provides states an option to expand the general applicability provisions of the Transport Rule ozone-season NO_X trading program to cover small EGUs, but not other units in the NO_X SIP Call. Specifically, consistent with the comments, EPA determined that it is appropriate to allow states to expand the applicability of the Transport Rule ozone-season NO_X trading program to include units serving a generator with a nameplate capacity equal to or greater than 15 MWe producing electricity for sale. This will allow states with NO_X SIP Call obligations to meet those requirements with respect to these small EGUs. These units can be brought into the program through abbreviated or full Transport Rule SIPs. However, if a state chooses to expand the general applicability provisions, the state Transport Rule ozone-season NO_X budget cannot be increased. EPA believes that the level of

emissions from small EGUs is sufficiently small that the existing Transport Rule state budget can accommodate these units. This is consistent with the approach taken in the NO_X Budget Trading Program, where the states that added these small EGUs did not increase their NO_X SIP Call EGU budgets. This also removes concern (expressed in the proposed rule) that increasing state budgets in the Transport Rule ozone-season NO_X trading program, as part of the expansion of the applicability provisions to include small EGUs, would jeopardize elimination of a state's significant contribution to nonattainment and interference with maintenance.

With regard to large non-EGUs that were included in the NO_X Budget Trading Program (the remainder of the sources in the NO_X Budget Trading Program), the final Transport Rule, like the proposed rule, does not allow expansion of the general applicability provisions for the ozone-season NO_X trading program to include such units. As explained in the proposed rule (75 FR 43340), while some of these units may have installed controls around the start of the NO_X Budget Trading Program, EPA analysis shows that, as a group, these units did not collectively reduce emissions, their current emission rates are nearly identical to their emission rates before the start of the NO_X Budget Trading Program, and their allocations are about twice their emissions, with the result that the excess allocations were sold to covered EGUs.[117] Moreover, EPA believes that there are little or no emission reductions available by non-EGUs at the cost thresholds used in the final rule and so no basis for developing non-EGUs state budgets reflecting the elimination of significant contribution to nonattainment and interference with maintenance. For these reasons, the final rule allows states to expand the ozone-season NO_X trading program to cover small EGUs that were in the NO_X Budget Trading Program, but not to cover large non-EGUs that were in that program. As explained in the proposed rule, if a state were to do so, emissions from these units could jeopardize elimination of the state's significant contribution to nonattainment or interference with maintenance. *See* 75 FR 45340. For states that relied on large non-EGUs for emission reductions required by the NO_X SIP Call, EPA will assist in identifying ways to ensure continued, future compliance with the NO_X SIP Call requirements.

c. Early Reduction Provisions

Substantial emission reductions have occurred as a result of previous emission trading programs, under both Title IV and CAIR. This has lead to substantial ''banks'' of allowances (*i.e.,* holdings of unused allowances allocated for years before the programs sunset) in each of the CAIR programs. In the proposal, EPA requested comment on whether to allow banked CAIR allowances to be used in the Transport Rule trading programs. EPA recognizes the importance of continuity in emission trading programs as a general principle. However, for the reasons explained below, EPA has decided not to allow banked CAIR allowances to be used in any of the Transport Rule trading programs. (1) SO_2 Allowance Bank

The bank of Title IV allowances was more than 12 million tons at the end of 2009. This bank is the result of emission reductions under the Title IV Acid Rain Program. Under the CAIR SO_2 trading program, EPA allowed banked (as well as future year) Title IV allowances to be used in the CAIR SO_2 trading program—in lieu of being used in the Acid Rain Program—for compliance with the requirement to hold allowances covering SO_2 emissions. This approach encouraged early reductions for the CAIR SO_2 trading program, but was held to be unlawful in *North Carolina.*

In the proposed rule, EPA took comment on whether sources should be allowed to use banked Title IV allowances in the Transport Rule SO_2 program. EPA proposed to not allow the use of Title IV allowances either as the basis for allocating Transport Rule SO_2 allowances or directly for compliance with allowance-holding requirements, in part, because EPA was concerned that those approaches would be perceived as inconsistent with the requirements of CAA section 110(a)(2)(D)(i)(I) as interpreted by the Court in *North Carolina. See* 75 FR 45338–39.

A number of commenters advocated that EPA recognize Title IV allowance holdings in the Transport Rule, either by allowing full or limited carryover of the allowances or by allocating all or a portion of the Transport Rule SO_2 allowances based on Title IV allowance holdings. Other commenters agreed with EPA's assessment that allowing Title IV allowance carryover in the Transport Rule is inconsistent with *North Carolina* and that any linkage of Transport Rule allocations with Title IV allowance holdings would carry unnecessary, significant legal risk. Therefore, for the reasons explained above and in the proposal, EPA has decided not to permit sources to use Title IV allowances for compliance with the Transport Rule SO_2 trading programs.

In addition, unlike CAIR, in the Transport Rule, EPA decided not to base allocation of Transport Rule SO_2 allowances on the specific distribution of existing Title IV allowances. Title IV allowances continue, of course, to be usable for compliance in the Acid Rain Program.[118]

(2) NO_X Allowance Banks

In the proposed rule, EPA estimated that the CAIR ozone-season NO_X bank would contain over 600,000 allowances and the CAIR annual NO_X bank would contain about 720,000 allowances after completion of true-up of allowance holdings and emissions for 2011. EPA considered the alternatives of allowing or not allowing pre-2012 CAIR NO_X allowances and CAIR ozone-season NO_X allowances to be used in the Transport Rule NO_X trading programs.

EPA also described and requested comment on several possible approaches for handling banked pre-2012 CAIR NO_X allowances in the Transport Rule NO_X trading programs and the pros and cons of each (75 FR 45339):

- Allow all such banked CAIR allowances to be brought into the Transport Rule NO_X programs, make the assurance provisions effective starting in 2012, and rely on the assurance provisions to ensure that each state continues to eliminate all of its significant contribution to nonattainment and interference with maintenance;
- Allow only a limited amount of banked pre-2012 CAIR allowances to be brought into the Transport Rule NO_X programs;
- Factor the bank into the calculation of state NO_X budgets by reducing the state NO_X budgets to take account of the banked pre-2012 CAIR allowances; and
- Do not allow the use of any banked pre-2012 CAIR allowances in the Transport Rule NO_X programs.

EPA proposed the last of these approaches and requested comment on all of the described approaches or suggestions on other ways to handle banked pre-2012 CAIR allowances in the Transport Rule NO_X programs.

[117] Although the proposed rule discussed the EPA analysis in the context of considering the treatment of both small EGUs and large non-EGUs from the NO_X Budget Trading Program, the analysis actually addresses, and draws conclusions about emission reductions, emission rates, and allowance allocations concerning only large non-EGUs.

[118] The Title IV allowance bank is expected to be about 14 million tons at the beginning of 2012.

• Many commenters advocated allowing the carryover of CAIR NO_X allowances to the Transport Rule. Reasons given included: preservation of early reduction investments; need for market continuity; increased flexibility during program start up and early years of the programs; preservation of the credibility of, and certainty under, trading approaches; and the lack of a prohibition in *North Carolina* of carryover of CAIR NO_X allowances. Commenters also suggested that surrender ratios be used to limit the amount, and negative effects, of a carryover.

• Many other commenters were against allowing CAIR NO_X allowance carryover into the Transport Rule. Reasons given included: unnecessary, significant legal risk; concerns about the efficacy of the Transport Rule if state budgets are supplemented by a carryover; and differences in the nature of the programs (the NO_X Budget Trading Program, which addressed the 1-hour ozone NAAQS, and the CAIR ozone-season NO_X trading program, which addressed the 1997 8-hour ozone NAAQS and was reversed in *North Carolina*) under which the allowances were banked, and the Transport Rule ozone-season NO_X trading program, which addresses the 1997 8-hour ozone NAAQS.

For the reasons explained below, after evaluating all comments on this issue, EPA decided not to allow the use of CAIR NO_X allowances in the Transport Rule NO_X trading programs. EPA reevaluated the estimated size of the potential carryover (allowances that will remain unused in the CAIR programs at the end of 2011 compliance periods), taking into account 2010 emissions. EPA estimates that more than 440,000 CAIR ozone-season NO_X allowances will remain and that more than 460,000 CAIR annual NO_X allowances will remain at the end of the 2011 compliance periods. EPA considered whether to allow these CAIR ozone-season NO_X and CAIR annual NO_X allowances to be used in the Transport Rule NO_X trading programs. The CAIR ozone-season NO_X allowances expected to remain unused represent nearly three-quarters of aggregate state ozone-season NO_X budgets [119] in a single year under the final Transport Rule. The allowances expected to remain unused in the annual NO_X program represent more than one-third of aggregate state annual NO_X budgets in a single year under the Transport Rule. As discussed in the proposal, if these allowances were carried over in addition to the Transport Rule state budgets, EPA could not be assured that significant contribution to nonattainment or interference with maintenance would be eliminated. EPA therefore rejects any approach under which all banked CAIR NO_X allowances would be added to the Transport Rule trading programs on top of each state's annual NO_X and/or ozone-season NO_X budgets.

In response to public comments, EPA considered whether the Transport Rule trading programs should allow some form of exchange of banked CAIR annual NO_X and ozone-season allowances for new Transport Rule NO_X allowances within each state's annual NO_X and/or ozone-season budgets, respectively. However, EPA believes that this type of approach carries substantial legal and technical problems. First, the state-by-state distribution of CAIR NO_X allowances resulted from the methodology applied by EPA in CAIR of using fuel factors to set the total amounts of allowance allocations in each state (*i.e.*, the state NO_X budgets). The CAIR NO_X allowance banks therefore are—at least in part—the result of this methodology, which was reversed in *North Carolina. See* North Carolina, 531 F.3d at 918–22. Thus, EPA did not use fuel factors in developing the Transport Rule state budgets. However, EPA is concerned that the distribution of some or all Transport Rule NO_X allowances through exchanges of banked CAIR NO_X allowances for Transport Rule NO_X allowances would blur the bright line between the methodology used for setting budgets in the Transport Rule and the methodology used for setting budgets in CAIR that was rejected by the Court. At least to some extent, the parties that were advantaged under EPA's budget-setting methodology in CAIR would continue to have an advantage under the Transport Rule by receiving more Transport Rule NO_X allowances. EPA therefore believes that allowing exchange of banked CAIR NO_X allowances for Transport Rule NO_X allowances carries significant legal risk.

Second, establishing a procedure for exchanging banked CAIR NO_X allowances for Transport Rule NO_X allowances within each state's budget would mean that Transport Rule NO_X allowances could not be allocated until after completion of the process for determining compliance with allowance-holding requirements for 2011 in the CAIR NO_X trading programs. This process cannot begin until after the allowance transfer deadline for the 2011 control periods (*i.e.*, March 1, 2012 for the CAIR annual NO_X program and November 1, 2011 for the CAIR ozone-season NO_X program) and will not likely be completed until mid-2012. At that time, EPA could begin the procedure of implementing, state-by-state, the exchanges of the remaining CAIR NO_X allowance banks held by parties (owners and operators, brokers, and other entities) for some or all of the allowances in the state NO_X budgets for 2012. The portion of each state budget that would be used up by such exchanges would likely vary from state to state. The resulting delay, and uncertainty about the unit-by-unit amounts, of Transport Rule NO_X allowance allocations for 2012 would undermine Transport Rule allowance market liquidity, significantly disrupt planning by owners and operators for compliance with allowance-holding requirements for the 2012 control periods, and likely impose increased compliance costs under the Transport Rule NO_X trading programs or impact the ability to comply with the 2012 limits.

In light of the specific circumstances in this case and the above-described legal and technical problems that would result from a carryover of CAIR NO_X allowances into the Transport Rule trading programs, the final rule does not allow any such carryover. EPA agrees that, as a general principle, it is desirable to provide continuity between sequential regulatory programs involving emission trading and thereby to ensure that allowances in the past program continue to have some value in the new program. Balancing the general desirability of providing program continuity against the potential negative consequences of a carryover in, and the specific circumstances of, this case, EPA concludes that the carryover of banked CAIR NO_X allowances into the Transport Rule trading programs should not be allowed. EPA notes that, in this case, it signaled the possibility that it would take such an approach in order to provide markets with full information and avoid unnecessary disruptions. After CAIR was remanded by the Court in *North Carolina,* 550 F.3d 1176, in December 2008, EPA was concerned about the future status of CAIR NO_X allowances and consequently advised the public—through a statement posted on the EPA Web site in March, 2009—that ''EPA's continued recording of CAIR NO_X allowances does not guarantee or imply that any allowances will continue to be usable for

[119] This analysis is for all states identified to be contributing significantly to nonattainment or interfering with maintenance. When the analysis is conducted using the aggregate state budgets for only those states for which we are finalizing ozone season requirements in this rule, the percentage increases.

compliance after a replacement rule is finalized or that they will continue to have value in the future.'' [120] EPA believes its decision to disallow carryover of banked allowances here reflects the specific factors in this case and should not be treated as setting any precedent for the treatment, in any future trading programs, of any past trading program's banked allowances.

However, EPA notes that, under the CAIR ozone-season NO_X trading program, where unused allowances were carried forward from the preceding NO_X Budget Trading Program, and under the CAIR annual NO_X trading program, where extra allowances (from the compliance supplement pool) were allocated for early reductions made during the NO_X Budget Trading Program, the vast majority of allowance allocation decisions were made by the states administering these programs. Moreover, a number of states did not allocate CAIR allowances to their sources using fuel adjustment factors, whose use the Court rejected in *North Carolina* in connection with EPA's setting of state NO_X emission budgets.

In light of the general desirability of providing continuity between state programs, states may want to address the CAIR NO_X banks when developing, in SIP revisions, the Transport Rule allowance allocations for control periods after 2012. EPA encourages each state that wants to allocate Transport Rule NO_X allowances through SIP revisions to consider using information on the CAIR NO_X allowance banks that will remain after 2011. Any such allowance allocations, of course, must be within the respective state's NO_X trading budget, and must be submitted to EPA within the applicable submission deadlines, established in the final rule for the control periods for which the allocations are made. The Agency intends to contact states concerning the desirability of holding a workshop to discuss issues related to state allowance allocations.

B. Interactions With NO_X SIP Call

The proposed rule explained that states covered by both the NO_X SIP Call and the Transport Rule would be required to comply with the requirements of both rules and that the Transport Rule would not preempt or replace the requirements of the NO_X SIP Call. Most, but not all, NO_X SIP Call states would be included in the Transport Rule. The proposed rule further explained that the Transport Rule ozone-season NO_X trading program would achieve the emission reductions required by the NO_X SIP Call from EGUs serving generators with a nameplate capacity greater than 25 MW and producing electricity for sale in most NO_X SIP Call states. (This would not be the case, of course, for those NO_X SIP Call states not covered by the Transport Rule.)

The NO_X SIP Call states used the NO_X Budget Trading Program to comply with the NO_X SIP Call requirements for EGUs serving a generator with a nameplate capacity greater than 25 MW and large non-EGUs with a maximum rated heat input capacity greater than 250 mmBtu/hour. (In some states, EGUs serving a generator with a nameplate capacity of 25 MW or less were also included in the NO_X Budget Trading Program as a carryover from the Ozone Transport Commission NO_X Budget Trading Program.) EPA stopped administering the NO_X Budget Trading Program under the NO_X SIP Call after the completion of compliance activities related to the 2008 ozone-season control period, and states used other mechanisms to comply with the NO_X SIP Call requirements.

The proposal further explained that, if EPA promulgated a final rule that did not allow the expansion of the Transport Rule to NO_X Budget Trading Program units, any state that allowed these units to participate in the CAIR ozone-season NO_X trading program would need to submit a SIP revision to address the state's NO_X SIP Call requirement for the reductions. The proposal also explained that states in the CAIR ozone-season NO_X trading program or the NO_X Budget Trading Program that would not be in the Transport Rule ozone-season NO_X trading program would need to submit SIP revisions addressing the NO_X SIP Call requirements for any emission reductions (by EGUs and non-EGUs) addressed in the NO_X Budget Trading Program and not addressed in some other way. *See* 75 FR 45340–41.

As discussed elsewhere in this preamble, the final Transport Rule allows states to expand the general applicability provisions of the Transport Rule ozone-season NO_X trading program to include small EGUs, which were included by some states in the NO_X Budget Trading Program, but not for large non-EGUs, which were included in the NO_X Budget Trading Program. This will allow states with NO_X SIP Call obligations to meet those requirements with respect to small EGUs brought into the Transport Rule trading program, but not with regard to large non-EGUs.

With the issuance of the final Transport Rule, NO_X SIP Call requirements remain in place. *See* 40 CFR 51.121. EPA is not changing any of the NO_X SIP Call requirements. The NO_X SIP Call generally requires that states choosing to rely on large EGUs and large non-EGUs for meeting NO_X SIP Call emission reduction requirements must establish a NO_X mass emissions cap on each source and require Part 75, subpart H monitoring. As an alternative to source-by-source NO_X mass emissions caps, a state may impose NO_X emission rate limits on each source and use maximum operating capacity for estimating NO_X mass emissions or may rely on other requirements that the state demonstrates to be equivalent to either the NO_X mass emissions caps or the NO_X emission rate limits that assume maximum capacity. Collectively, the caps or their alternatives cannot exceed the portion of the state budget for those sources. *See* 40 CFR 51.121(f)(2) and (i)(4). EPA will work with states to ensure that NO_X SIP Call obligations continue to be met (*e.g.,* through intrastate cap and trade programs that require the level of reductions on which the state has recently relied).

C. Interactions With Title IV Acid Rain Program

The final rule does not affect any Acid Rain Program requirements. Acid Rain Program requirements are established independently in Title IV of the CAA and are not replaced by the Transport Rule. Title IV sources that are subject to final Transport Rule provisions still need to continue to comply with all Acid Rain provisions. Title IV SO_2 and NO_X requirements continue to apply independently of the Transport Rule provisions. For the reasons explained above, Title IV SO_2 allowances are not allowed to be used in the Transport Rule trading programs. Similarly, Transport Rule SO_2 allowances are not usable in the Acid Rain Program.

The final Transport Rule does not include any opt-in unit provisions in the FIPs and does not allow SIP revisions to include opt-in unit provisions in the Transport Rule trading programs. Consequently, no sources, including those that have opted in to the Acid Rain Program, can opt-in to the Transport Rule trading programs.

There will likely be changes to emissions at some Acid Rain units outside of the Transport Rule area as a result of the transition from CAIR to the Transport Rule. Namely, emissions at some non-Transport Rule Acid Rain

[120] *http://epa.gov/airmarkets/business/cairallowancestatus.html.* EPA posed similar statements in the on-line systems for trading CAIR NO_X allowances. *See* 40 CFR 96.102 and 96.302 (definitions of ''CAIR NO_X Allowance Tracking System'' and ''CAIR NO_X Ozone Season Allowance Tracking System'').

units in the states that border the Transport Rule states may increase because of potential load-shifting from units in Transport Rule states and because of a potential decrease in the Title IV allowance price. There is a discussion of possible emission increases in non-covered states in section VI.C of this preamble.

D. Other State Implementation Plan Requirements

In this final action, EPA has not conducted any technical analysis to determine whether compliance with the Transport Rule would satisfy RACT requirements for EGUs in any nonattainment areas, or Regional Haze BART-related requirements. For that reason, EPA is neither making determinations nor establishing any presumptions that compliance with the Transport Rule satisfies any RACT or BART-related requirements for EGUs. Based on analyses that states conduct on a case-by-case basis, states may be able to conclude that compliance with the Transport Rule for certain EGUs fulfills nonattainment area RACT requirements. EPA intends to undertake a separate analysis to determine if compliance with the Transport Rule would provide sufficient reductions to satisfy BART requirements for EGUs in accordance with Regional Haze Rule requirements for alternative BART compliance options as soon as practicable following promulgation of the Transport Rule.

X. Transport Rule State Implementation Plans

EPA proposed (75 FR 45342) FIPs setting state-specific emission reduction requirements for each upwind state covered by the proposed Transport Rule and with respect to one or more of three air quality standards—the 1997 annual $PM_{2.5}$ NAAQS, the 2006 24-hour $PM_{2.5}$ NAAQS, and the 1997 ozone NAAQS. In CAIR, EPA allowed the states to replace the CAIR FIP with SIPs and provided substantial flexibility. In the proposed Transport Rule, EPA proposed to allow similar flexibility to states for addressing the CAA section 110(a)(2)(D)(i)(I) transport issues through a SIP. EPA proposed to allow a state to submit a SIP for the ozone requirements only, for the $PM_{2.5}$ requirements only, or for both the ozone and the $PM_{2.5}$ requirements with the specific quantity of emission reductions necessary for a state's SIP determined based on the state emission budgets provided in the final Transport Rule.

EPA received comments suggesting that if the proposal's remedy were finalized, EPA should allow states to replace the FIP allowance allocation provisions in the proposed Transport Rule trading programs by state-developed allocation provisions. Commenters referenced the two alternatives provided to states in the CAIR trading programs where: (1) EPA adopted a rule and model trading regulations under which states that adopted, as state SIP trading programs, the model regulations (with only certain limited changes allowed, *e.g.,* in the allocation provisions) could participate in the EPA-administered CAIR trading programs; and (2) EPA adopted a rule allowing states to adopt in SIPs provisions replacing only certain provisions in the CAIR FIPs (*e.g.,* the allocation provisions) and to remain in the CAIR trading programs under the CAIR FIPs. Under both approaches, the covered units in the state participated in the CAIR trading programs, albeit with state-, rather than EPA-, determined allocations. Comments on the Transport Rule proposal supported these two types of approaches for allowing states to replace EPA allocations under the proposed Transport Rule trading programs by state allocations. EPA requested additional comment on this topic in the NODA published January 7, 2011 (76 FR 1109).

Two approaches with associated deadlines were explained in the NODA. Under the first approach, EPA would adopt new provisions, as part of the proposed Transport Rule FIP that would allow a state to submit a SIP (referred as an abbreviated SIP) that would modify specified provisions of the proposed Transport Rule FIP trading programs. Specifically, the abbreviated SIP would substitute state allocation provisions for control periods in years after 2012, applicable to one or more of the proposed Transport Rule FIP trading programs that apply to the state. The NODA explained which specific provisions in the FIP could be replaced. If the state allocation provisions met certain requirements and the abbreviated SIP did not change any other provisions in the respective proposed Transport Rule FIP trading program, then EPA would approve the abbreviated SIP. In the substitute state allocation provisions, the state could allocate allowances to Transport Rule units (whether existing or new units) or other entities (such as renewable energy facilities) or could auction some or all of the allowances. The NODA went on to describe the requirements for EPA approval of an abbreviated SIP (76 FR 1119) including that the total amount of allowances allocated and auctioned each year could not exceed the applicable budget; allocations and auction results would need to be reported to EPA by the permitting authority (usually the state) by particular dates prior to the applicable control period depending on whether allowances were going to existing or new sources; the reported allocations and auction results could not be changed; and no other provisions of the FIP would be changed.

Under the second approach, EPA would adopt a new rule that would provide that, if a state submitted a SIP (referred to as a full SIP) that adopted trading program regulations meeting certain requirements for control periods in years after 2012, then EPA would approve the full SIP as correcting the deficiency under CAA section 110(a)(2)(D)(i)(I) in the state's SIP that was the basis for issuance of the comparable proposed Transport Rule FIP. In the state allocation provisions, the state could allocate allowances to Transport Rule units (whether existing or new units, except for opt-in units) or other entities (such as renewable energy facilities) or could auction allowances. Upon EPA approval of a state's full SIP, the state's SIP-based trading program would be integrated with the comparable FIP-based Transport Rule trading program (whether or not modified by an abbreviated SIP) covering other states. Moreover, covered sources in the state could participate in the integrated trading program, and the allowances issued under the SIP-based state trading program would be interchangeable with the allowances issued in the comparable FIP-based Transport Rule trading program.

The NODA went on to describe the limited changes that states could make under the full SIP option. Only allocation provisions could be modified with the same requirements as for abbreviated SIPs, including, among other things, that the total amount of allowances allocated each year could not exceed the applicable budget and that allocations would need to be reported to EPA by the permitting authority (usually the state) by particular dates prior to the applicable control period depending on whether allowances were going to existing or new sources.

The NODA also discussed the option for states to submit SIPs using emission reduction approaches other than the proposed Transport Rule trading programs to correct the deficiency under CAA section 110(a)(2)(D)(i)(I) in the state's SIP. EPA would review on a case-by-case basis SIPs using such alternative approaches (76 FR 1120).

Suggested deadlines for abbreviated and full SIPs were given in tables in the

NODA (76 FR 1120). These deadlines generally required states to submit SIPs about 2 years ahead of a particular control period for which state allocations would apply in order to give EPA time to review and approve the SIP and record allowances.

Most commenters on the NODA supported state allocation options, within the preferred FIP remedy, that would replace FIP allocations with SIP-based state allocations.

In the final rule, EPA adopts, with some revisions, both of the approaches described in the January 7, 2011 NODA. Under the first approach, a state may submit an abbreviated SIP that modifies a final Transport Rule FIP trading program in only a limited way (*i.e.,* by replacing the allowance allocation provisions in §§ 97.411(a) and (b)(1) and 97.412(a) for the annual NO_X trading program, §§ 97.511(a) and (b)(1) and 97.512(a) for the ozone-season NO_X trading program, §§ 97.611(a) and (b)(1) and 97.612(a) for the SO_2 Group 1 trading program, and §§ 97.711(a) and (b)(1) and 97.712(a) for the SO_2 Group 2 trading program). In the state's replacement provisions, the state may allocate allowances to Transport Rule units (whether existing or new units) [121] or other entities (such as renewable energy facilities) or may auction allowances. Additionally, state SIPs can address one or all of the pollutants addressed by the FIPs. For $PM_{2.5}$, EPA is finalizing the flexibility for a state SIP to address either SO_2 or NO_X, or both. Further, if a state is required to make ozone-season and annual NO_X reductions, the SIP could address either ozone-season or annual NO_X emissions, or both. In other words, states can replace provisions in all FIPs that apply or some subset of the FIPs that apply to a particular state, and leave in place the FIPs for the requirements not addressed by a SIP.

Further, EPA will approve the abbreviated SIP only if the state replacement for the Transport Rule FIP allocation provisions meets certain requirements and the abbreviated SIP does not change any other provisions in the Transport Rule FIP trading program. For EPA approval, the state allocation and, where applicable, auction provisions (and any accompanying definitions of terms applying only to terms as used in these provisions) must meet the following requirements. First, the provisions must provide that, for each year for which the state allocation and, where applicable, auction provisions will apply, the total amount of control period (annual or ozone-season) allowances allocated and, where applicable, auctioned in accordance with these provisions cannot exceed the applicable state budget (less any applicable Indian country new unit set-aside, which will continue to be administered by EPA) for that year under the relevant Transport Rule FIP trading program.

Second, to the extent the state provisions provide for allocations for, or auctions open to, existing units, the provisions must require that the state or the permitting authority under title V of the CAA for the state submit to the Administrator final allocations and, if any auction is to be held, final auction results in accordance with a schedule of deadlines discussed below. To the extent the provisions provide for allocations for or auctions open to new units or any other entities, the provisions must require that the permitting authority submit to the Administrator final allocations and, if applicable, auction results by July 1 of the year of the control period for which the allowances will be distributed. The allocation and auction results must be final and cannot be subject to modification (*e.g.,* through an allowance surrender adjusting the allocation or auction results).

As noted above, the state's submission to the Administrator of allocations or auction results with regard to existing units must meet a specified schedule of deadlines. These submission deadlines reflect, and are necessarily coordinated with, the deadlines for recordation by the Administrator of allowance allocations and any auction results under the Transport Rule trading programs. The recordation deadlines, which are discussed in detail in section XI of this preamble, provide that the Administrator must record existing-unit allowance allocations and auction results by: July 1, 2013 for the applicable control periods in 2014 and 2015; July 1, 2014 for the applicable control periods in 2016 and 2017; July 1, 2015 for the applicable control periods in 2018 and 2019; and July 1, 2016 and July 1 of each year thereafter for the control period in the fourth year after the year of the applicable recordation deadline. In order to provide the Administrator 1 month to review the submissions of allocations and auction results to ensure that the submissions include sufficient information (*e.g.,* the correct identification for each unit involved) to record correctly the submitted allocations and auction results, the state or permitting authority must make these submissions to the Administrator by: June 1, 2013 for the applicable control periods in 2014 and 2015; June 1, 2014 for the applicable control periods in 2016 and 2017; June 1, 2015 for the applicable control periods in 2018 and 2019; and June 1, 2016 and June 1 of each year thereafter for the applicable control period in the fourth year after the year of the applicable submission deadline.

Under the second approach, a state may submit a full SIP adopting a Transport Rule trading program that differs from the comparable Transport Rule FIP trading program only with regard to limited provisions of the FIP trading program. First, the full SIP may include new allocation or auction provisions instead of the Transport Rule FIP allowance allocation provisions other than those concerning the Indian country new unit set-aside. In the state allocation or auction provisions, the state may allocate allowances to Transport Rule units (whether existing or new units) or other entities (such as renewable energy facilities) or may auction allowances. EPA will approve the full SIP only if the state allocation or auction provisions (and any accompanying definitions of terms applying only to terms as used in these provisions) meet certain requirements. Second, the full SIP may substitute the name of the state for the term ''State'' as used in the FIP trading program provisions, provided that EPA determines that the substitutions are not substantive changes. Third, as discussed in more detail below, all references to units in Indian country, as used in the FIP trading program provisions, must be removed, and the full SIP cannot impose any requirements on units in Indian country within the borders of the state and may not include the Indian country set-aside provisions. Other than these allowed changes, all other provisions in the Transport Rule trading program in the full SIP must be the same as those in the Transport Rule FIP trading program with regard to non-Indian country units. For EPA approval, the state allocation provisions must meet the same requirements, as discussed above, that state allocation or auction provisions in an abbreviated SIP must meet.

A Transport Rule trading program adopted by a state in a full SIP, and approved by EPA, under the second approach will be fully integrated with the comparable Transport Rule FIP trading program (*i.e.,* the ''TR NO_X Annual Trading Program'', ''TR NO_X Ozone Season Trading Program'', ''TR SO_2 Group 1 Trading Program'', or ''TR SO_2 Group 2 Trading Program''

[121] EPA is not finalizing opt-in provisions, so the reference to federal-only opt-in allocations in the NODA has been removed.

respectively) for other states. This will apply whether the comparable Transport Rule FIP program for other states was modified by an abbreviated SIP approved by EPA under the first approach or was not modified by such an abbreviated SIP. The integration of these three types of trading programs will be accomplished primarily through the definitions of the terms, ''TR NO_X Annual allowance'', ''TR NO_X Ozone Season allowance'', ''TR SO_2 Group 1 allowance'', and ''TR SO_2 Group 2 allowance'' in the full SIPs approved by EPA and the TR FIP trading programs (whether or not the programs were modified by abbreviated SIPs). ''TR NO_X Annual allowance'' will be defined in the state and Transport Rule FIP trading programs as including allowances issued under any of the following trading programs: The comparable EPA-approved state Transport Rule trading programs; the comparable Transport Rule FIP trading programs with EPA-approved state allocation and auction provisions; and the Transport Rule FIP trading programs with EPA allocation provisions. Similarly, the definitions in the state and Transport Rule FIP trading programs of ''TR NO_X Ozone Season allowance'', ''TR SO_2 Group 1 allowance'', and ''TR SO_2 Group 2 allowance'' respectively will include allowances issued under all three types of trading programs. As a result, allowances issued in one approved state Transport Rule trading program will be interchangeable with allowances issued in the comparable Transport Rule FIP trading program (whether or not modified by an abbreviated SIP), and all these allowances will be available for use for compliance with the allowance-holding requirements (to cover emissions and to meet assurance provision requirements) in all three types of trading programs.

The integration of state and the proposed Transport Rule FIP trading programs will also be reflected in the definitions of ''TR NO_X Annual Trading Program,'' ''TR NO_X Ozone Season Trading Program'', ''TR SO_2 Group 1 Trading Program'', and ''TR SO_2 Group 2 Trading Program''. Each of these definitions in the state Transport Rule and Transport Rule FIP trading programs will expressly encompass the comparable Transport Rule FIP trading programs (whether or not modified by an abbreviated SIP) and the comparable EPA-approved state full SIP trading program.

The final rule also sets deadlines for the submission of complete abbreviated and full SIPs. These deadlines are based on the first year for which the state wants to allocate or auction allowances, reflect the above-discussed deadlines for the Administrator's recordation of allocations and auction results, and build in a 6-month period for EPA review, provision of notice and opportunity for public comment, and approval of the SIP revisions. This 6-month period is built into the final rule's SIP submission deadlines because that is the period EPA found was needed for reviewing, providing notice and comment for, and approving state trading program provisions in abbreviated and full SIPs under CAIR. As a result, the final rule requires that complete abbreviated and full SIPs must be submitted to the Administrator by: December 1, 2012 in order to govern allowance allocation and auction for control periods in 2014 and 2015; December 1, 2013 in order to govern control periods in 2016 and 2017; December 1, 2014 in order to govern allowance allocation and auction for control periods in 2018 and 2019; and December 1, 2015 and by December 1 of any year thereafter in order to govern allowance allocation and auction for control periods in the fifth year after such submission deadline.

EPA notes that, in cases where a state that has Indian country within its borders submits, and EPA approves, a full SIP, the comparable FIP will not be entirely replaced. In such cases, the FIP will continue to be in place with regard to the Transport Rule trading program provisions that concern units in Indian country, and the full SIP will encompass all other provisions of the trading program. Specifically, to the extent Transport Rule trading program provisions reference and apply to Indian country units (including, for example, references in the applicability provisions and the Indian country new unit set-aside provisions), those provisions, as they apply to Indian country units, will remain in the FIP. The full SIP will include those provisions only as they apply to non-Indian country units.

As a practical matter, this means that the Indian country new unit set-aside provisions, which apply exclusively to Indian country new units, will remain entirely in the FIP. Further, other trading program provisions that reference both non-Indian country units and Indian country units (such as the applicability provisions) will remain in the FIP to the extent of their application to Indian country units and will be included in the full SIP to the extent of their application to non-Indian country units.

However, EPA notes that the assurance provisions in each Transport Rule trading program require calculations using the entire state budget, including any portion of the budget that may be allocated to Indian country new units. Further, EPA notes that currently no new units are planned or anticipated to be located in Indian country. Under these circumstances, EPA will handle the assurance provisions as follows. The full SIP for a state having Indian country will initially include the assurance provisions, as set forth in the FIP, except with removal of any references to sources and units in Indian country. The FIP will initially not include the assurance provisions, which will be fully effective and enforceable under the full SIP. In the event that any new unit is located in Indian country in the state, EPA intends to modify its approval of the full SIP to take back the assurance provisions in order to apply, in the FIP, the assurance provisions to both Indian country and non-Indian country units.

This final rule not only allows a state to choose to submit an abbreviated or a full SIP; it also allows a state to choose to submit either form of SIP to replace any or all of the FIPs in this rule as they apply to a particular state. By promulgating these Transport Rule FIPs, EPA in no way affects the right of a state to submit, for review and approval, a SIP that replaces the federal requirements of the FIP with state requirements that do not involve state participation in the Transport Rule trading programs. In order to replace the FIP in a state, the state's SIP taking an approach other than participation in Transport Rule trading programs must provide adequate provisions to prohibit NO_X and SO_2 emissions that are determined in the Transport Rule to contribute significantly to nonattainment or interfere with maintenance in another state or states. EPA will review such a SIP on a case-by-case basis. The Transport Rule FIPs remain fully in place in each covered state until a state's SIP is submitted and approved by EPA to revise or replace a FIP.

In response to numerous comments urging EPA to allow states to determine allowance allocations as soon as possible, EPA has developed a SIP revision procedure that applies to 2013 allowance allocations only. In developing this procedure, EPA is balancing the desire to allow states the flexibility to tailor allowance allocations to the specific needs and situations in a particular state with the need to provide certainty to source owners and operators by having allowances recorded sufficiently ahead of the control period for which the allocations are made in order to facilitate owners'

and operators' efforts to optimize their compliance strategies. This final rule allows states to make 2013 allowance allocations through the use of a SIP revision that is narrower in scope than the other SIP revisions states can use to replace the FIPs and/or to make allocation decisions for 2014 and beyond. For 2013 allocations, the scope of the SIP revision is limited to allocations made to units that commence commercial operation before January 1, 2010 and provided in the form of a list of those units and their corresponding allocations for 2013. Additionally, this particular SIP revision may allocate only the portions of the state budgets set forth in Tables X–1 through X–3, *i.e.*, each state budget minus the new unit set-aside and the Indian country new unit set-aside.

In developing this procedure, EPA set deadlines for submissions of the SIP revisions for 2013 allocations and for recordation of the allocations that balanced the need to record allowances sufficiently ahead of the control period with the desire to allow state flexibility for 2013. EPA set deadlines that will allow sufficient time for EPA to review and approve these SIP revisions, taking into account that EPA approval must be final and effective before the 2013 allocations can be recorded and the allowances are available for trading. In order to ensure that EPA review and approval (which must include public notice and opportunity for comment) can be completed in time, the final rule necessarily limits the allowed scope of the SIP revisions for 2013 allocations, as set forth in the requirements discussed below, and thereby limits the issues that must be considered and addressed in the review and approval process. Further, the final rule prescribes the form in which the state allocations for 2013 must be provided to EPA in order to facilitate rapid recordation of the allocations upon their approval.

States, along with their sources, will need to weigh the trade-offs of a relatively short period of recording before the control period for which the allocation is made (about 6 months) with the desire to have state allocations in 2013, when deciding whether to pursue a SIP revision for 2013 allocations. States may choose to submit a SIP revision for one or more of the trading programs. In other words, state allocations for 2013 could apply in one trading program while 2013 FIP allocations apply in another.

States can make 2013 allowance allocations provided the state meets certain requirements.

- By the date 70 days after publication of the final rule in the **Federal Register**, a state must provide notification to EPA if the state intends to submit state allocations for 2013. The notification must be in a format prescribed by the Administrator and submitted electronically.
- By April 1, 2012, the state must submit a SIP revision to EPA that:
  - Allocates to existing units [122] only, provides a list of the units and their state allocations to EPA electronically and in a format prescribed by EPA, and does not provide for any change in the units and allocations on the list and in any allocation previously determined and recorded by the Administrator;
  - Allocates a total amount of allowances for 2013 that does not exceed the applicable amount in Tables X–1 through X–3 for each trading program that applies in that particular state; and
  - Provides for no set-asides and does not alter the new unit set-asides, the Indian country new unit set-asides, and any aspect of the FIP rules other than the existing-unit allocations for 2013.

If EPA does not receive notification from a state by the date 70 days after publication of the final rule in the **Federal Register**, EPA will record FIP allocations for 2012 and 2013 as scheduled (by the date 90 days after publication of the final rule). If EPA receives timely notification from a state, EPA will record FIP allocations for 2012 only and wait to record 2013 allocations. If the state provides a timely (not later than April 1, 2012) SIP revision meeting all the above-described requirements and EPA approves the SIP revision by October 1, 2012, EPA will record state-determined allocations for 2013 by October 1, 2012. Otherwise, EPA will record the EPA-determined allocations for 2013.

BILLING CODE 6560–50–P

[122] Existing unit means a unit that commenced commercial operation before January 1, 2010.

BILLING CODE 6560–50–C

EPA will work with states that wish to submit full SIPs or abbreviated SIPs to ensure a smooth integration with the relevant Transport Rule trading programs. The Agency intends to provide information and tools to assist states in their rulemaking efforts, including electronic versions of the Transport Rule trading rules and EPA will work with states that wish to submit full SIPs or abbreviated SIPs to ensure a smooth integration with the relevant Transport Rule trading programs. The Agency intends to provide information and tools to assist states in their rulemaking efforts, including electronic versions of the Transport Rule trading rules and other products states feel may be helpful.

States that submit approvable full SIPs or abbreviated SIPs to implement one or all of the Transport Rule trading programs are not required to include an additional technical demonstration relating to elimination of emissions that contribute significantly to nonattainment or contribute to maintenance in downwind areas.

XI. Structure and Key Elements of Transport Rule Air Quality-Assured Trading Program Rules

In order to make the final FIP trading program rules as simple and consistent as possible, EPA designed them so that the final rules (like the proposed rules) for each of the trading programs (*i.e.,* the ''TR NO_X Annual Trading Program'', ''TR NO_X Ozone Season Trading Program'', ''TR SO_2 Group 1 Trading Program'', and ''TR SO_2 Group 2 Trading Program'') are parallel in structure and contain the same basic elements. For example, the rules for the Transport Rule annual NO_X, ozone-season NO_X, SO_2 Group 1, and SO_2 Group 2 trading programs are located, respectively, in subparts AAAAA (§§ 97.401, *et seq.*), BBBBB (§§ 97.501, *et seq.*), CCCCC (§§ 97.601, *et seq.*), and DDDDD (§§ 97.701, *et seq.*) of Part 97 in Title 40 of the Code of Federal Regulations. Moreover, the order of the specific provisions for each trading program is the same, and the provisions have parallel numbering. The key elements of the final Transport Rule trading program rules are as follows.

(1) General Provisions

(i) §§ 97.402 and 97.403, 97.502 and 97.503, 97.602 and 97.603, and 97.702 and 97.703—Definitions and Abbreviations

Most of the definitions in the final Transport Rule trading program rules are essentially the same as in the proposed rules and for each of the Transport Rule trading programs (except where necessary to reflect the different pollutants (NO_X and SO_2), control periods (for annual and ozone-season NO_X, and for annual SO_2), and geographic coverage involved in the trading programs). Moreover, many of the definitions in the final rules that are essentially the same as in the proposed rule are also essentially the same as in prior EPA-administered trading programs. However, as discussed in more detail below, some of the definitions in the final rules clarify, or differ from, the definitions in the proposed rule.

As noted, several definitions in the final rules are essentially the same as those both in the proposed rules and in prior EPA-administered trading programs. Examples include the definitions of ''source,'' ''allowance transfer deadline,'' ''owner,'' ''operator'', ''Allowance Management System'' (used instead of the term ''Allowance Tracking System''), and ''continuous emission monitoring system.''

One example of a definition in the final rules that is the same as in the proposed rule, but that clarifies the definition used in prior trading programs is the definition of ''fossil fuel.'' In the final rule, the term ''fossil fuel'' is defined in general as including natural gas, petroleum, coal, or any form of fuel derived from such material, regardless of the purpose for which such material is derived. For example, with regard to consumer products that are made of materials derived from natural gas, petroleum, or coal, are used by consumers, and then are used as fuel, these materials in the consumer products qualify as fossil fuel. The definition in the final rules also includes language establishing a narrower meaning of ''fossil fuel'' that is not generally applicable, but rather is applicable only for purposes of applying the limitation on fossil-fuel use under the solid waste incineration unit exemption (which is discussed elsewhere in this preamble). This latter portion of the ''fossil fuel'' definition makes explicit an interpretation that EPA adopted in CAIR that—solely for purposes of applying the fossil-fuel use limitation in that exemption—the term ''fossil fuel'' is limited to natural gas, petroleum, coal, or any form of fuel derived from such material ''for the purpose of creating useful heat.'' For example, applying this narrower meaning, consumer products made from natural gas, petroleum, or coal are not fossil fuel, for purposes of determining qualification under the fossil-fuel use limitation, because the products (*e.g.*, tires) were derived from natural gas, petroleum, or coal in order to meet certain consumer needs (*e.g.*, to meet transportation needs), not in order to create fuel (*i.e.*, material that would be combusted to produce useful heat).

As noted above, some of definitions in the final rules clarify definitions in the proposed rules. The definitions of ''allowable NO_X emission rate'' and ''allowable SO_2 emission rate'' are clarified by explaining that such a rate is the most stringent state or federal emission rate limitation, expressed in lb/MWhr or, if originally expressed in lb/mmBtu, converted to lb/MWhr by multiplying it by the unit's heat rate in mmBtu/MWhr. This clarification ensures consistency from unit to unit in determining a unit's allowable rate.

By further example, while the proposed rules used the same definition of ''commence commercial operation'' as in prior EPA-administered trading programs, the final rules clarify the definition. Under the definition in the proposed rules, a unit that is physically changed is treated as the same unit. However, the proposed rules were unclear about the treatment of a unit that is replaced and whether moving a unit to a different location or source constitutes a physical change. The definition of ''commence commercial operation'' in the final rules clarifies that a unit that is physically changed (which includes a unit that is replaced) continues to be treated, for purposes of this final rule, as the same unit with the same commence-commercial-operation date. The definition also clarifies that moving a unit to a different location or source is treated the same as a physical change, and so the unit continues to be treated as the same unit. The definition also clarifies that a unit (the replaced unit) that is replaced, whether at the same source or a different source, is treated as the same unit, while the unit (the replacement unit) that replaces the unit is treated as a separate unit with a new commence-commercial-operation date. (The definition of ''commence operation'' is removed in the final rules because they do not use this term.)

By further example, while the proposed rules used the same definition of ''unit'' as in prior EPA-administered trading programs, the final rules clarify the definition. The ''unit'' definition is clarified by expanding it to incorporate explicitly the concepts—set forth in the definition in the final rules of ''commence commercial operation'' and thus already applicable to all units—that a unit that is physically changed, moved to a different location or source, or replaced at the same or a different source continues to be treated as the same unit and that a replacement unit at the same source is treated as a separate unit. EPA believes that it is preferable to provide a comprehensive definition of ''unit'' in one place because the term is used so frequently in the final rules.

By further example, the definition of ''nameplate capacity'' is clarified in the final rules by explaining that it is expressed in MWe rounded to the nearest tenth. This is the same rounding convention that is used in the reporting of nameplate capacity to the Energy Information Administration.

As noted above, some of the definitions in the final rules are similar to those in the proposed rules but have some substantive differences. For example, in the proposed rules, the definitions of ''cogeneration unit'' and ''fossil-fuel-fired'' are similar to those in prior trading programs but with changes to minimize the need for data concerning individual units or combustion devices for periods before 1990. In order to qualify as fossil-fuel-fired, a unit would have to combust any amount of fossil fuel in 1990 or thereafter. In order to qualify as a cogeneration unit, a unit would have to meet certain efficiency and operating standards during the later of: the 12-month period starting when the unit begins producing electricity, or 1990. For a topping-cycle unit, useful power plus one-half of useful thermal energy output of the unit must equal no less than a certain percentage of the total energy input and useful thermal energy must be no less than a certain percentage of total energy output, and, for a bottoming-cycle unit, useful power must be no less than a certain percentage of total energy input. EPA proposed to limit to 1990 or later the historical period for which information on fuel consumption and on cogeneration unit efficiency and operations would be required to apply the ''fossil-fuel-fired'' and ''cogeneration unit'' definitions. This limitation was proposed because EPA was concerned that some owners and operators could have difficulty obtaining pre-1990 information about older units, particularly for units whose ownership has changed over time.

While EPA proposed to use 1990 as the earliest year for which information

would be required under these definitions, EPA requested comment on whether a more recent year should be used. As discussed elsewhere in this preamble, the final rules use 2005 (about 5 years before this rule's promulgation), rather than 1990, as the reference year. Further, because the language describing the historical time period used (including the reference year), appeared in the proposal both in the ''cogeneration unit'' definition and the provisions concerning cogeneration units in the applicability provisions, the final rules removed any language about the historical time period from the ''cogeneration unit'' definition and revised the language in the applicability provisions to use the 2005 reference year for the requirements for meeting the exemption for cogeneration units from the Transport Rule trading programs. Further, consistent with this use of 2005 as the reference year, the ''fossil-fuel-fired'' definition in the final rule specifically references 2005, rather than 1990, and as discussed elsewhere in this preamble, the final rules also use January 1, 2005 (rather than November 15, 1990) as the reference date throughout the applicability provisions.

With this change in the reference date for the requirement to meet the operating and efficiency standards under the ''cogeneration unit'' definition, a unit would have to meet these standards throughout the later of 2005 or the 12-month period starting when the unit begins producing electricity and continuing thereafter. EPA requested comment on whether these standards should be applied to a calendar year when the unit involved did not combust any fuel, *i.e.,* did not operate at all. As discussed elsewhere in this preamble, the final rules expressly provide that the operating and efficiency standards do not have to be met for a calendar year throughout which a unit did not operate at all.

In addition, under the proposed rules, if a group of cogeneration units operating as an integrated cogeneration system met the efficiency standards, a topping-cycle unit in that system would be deemed to meet those standards. EPA requested comment on whether this provision should also apply to a bottoming-cycle unit. As discussed elsewhere in this preamble, this provision in the final rules is not limited to topping-cycle units.

By further example of definitions in the final rules that have substantive differences from the definitions in the proposed rules, the proposed definitions of ''TR NO_X Annual allowance,'' ''TR NO_X Ozone Season allowance,'' ''TR SO_2 Group 1 allowance,'' ''TR SO_2 Group 1 allowance,'' ''TR NO_X Annual Trading Program,'' ''TR NO_X Ozone Season Trading Program,'' ''TR SO_2 Group 1 Trading Program,'' and ''TR SO_2 Group 1 Trading Program'' are changed in the final rules. Language is added to the definitions in order to reference comparable allowances and trading programs established through SIP revisions submitted by states and approved by the Administrator. As discussed elsewhere in this preamble, the final Transport Rule provides that, if a state submits SIP revisions meeting certain specified requirements, the state or permitting authority (rather than the Administrator) will allocate allowances, and the covered sources in the state will participate—along with covered sources in states remaining subject to the Transport Rule FIPs—in an integrated, region-wide air quality-assured trading program under which both any allowance allocated by the Administrator and any allowance allocated by the state or permitting authority will each authorize one ton of emissions of the relevant pollutant and will be usable by any source for compliance with the requirement to hold allowances covering emissions.

As noted above, the final rules include some definitions that were not used in prior EPA-administered trading programs and that reflect unique provisions of the Transport Rule trading programs. For example, the terms, ''assurance account,'' ''TR NO_X Annual unit,'' ''TR NO_X Ozone Season unit,'' ''TR SO_2 Group 1 unit,'' ''TR SO_2 Group 2 unit,'' ''common designated representative,'' ''common designated representative's assurance level,'' and ''common designated representative's share'' are used and defined in the final rule.

While the proposed rules included definitions for the terms, ''owner's assurance level'' and ''owner's share,'' the final rules replace these terms and instead define the terms, ''common designated representative,'' ''common designated representative's assurance level,'' and ''common designated representative's share.'' This is because, as discussed elsewhere in this preamble, the final rules include assurance provisions similar to those in the proposed rules but that are implemented based on groups of units having a common designated representative, instead of being implemented on an owner-by-owner basis. The definition of ''common designated representative'' in the final rules reflects that the determination of what groups of units and sources in a State have a common designated representative is made based on the identity of units' and sources' designated representatives as of April 1 of the year after the year of the control period when a state triggers the assurance provisions. EPA believes that the use of this reference date will give owners and operators greater flexibility to select common designated representatives after information about total state control period emissions is available and after the allowance transfer deadline when owners and operators may prefer to have a designated representative for their specific source (rather than a common designated representative for a larger group) who is focused on ensuring that sufficient allowances are held in or transferred to the source's account to cover the sources' emissions. EPA notes that the definition of ''common designated representative's share'' is simpler than the definition of ''owner's share'' because implementing the assurance provisions at the designated representative level means it is no longer necessary to address, in the definition, owner- and unit-level issues that may arise when a unit has multiple owners or where two or more units emit through the same stack.

Finally, some definitions are added to the final rules that are not in the proposed rules. For example, because the term, ''business day,'' was used, but not defined, in the proposed rule, its meaning was unclear. Specifically, it was unclear whether a day that was uniquely a state holiday, and not a federal holiday, was a business day for purposes of the federally administered Transport Rule trading programs, *e.g.,* whether the allowance transfer deadline applicable to all sources in all states in a Transport Rule trading program could fall on a day that was a unique state holiday in one or a few states or whether the allowance transfer deadline would be advanced to the next business day for all sources in all states or perhaps only for sources in the state with the state holiday. EPA believes that, for a federally administered trading program covering sources in multiple states, the deadlines should be clear and uniform for all sources, regardless of the state in which the sources are located, and should not be affected by unique state holidays of which owners and operators of sources in other states may not even be aware. Consequently, the ''business day'' definition is added in the final rules and means a day that does not fall on a weekend or a federal holiday.

By further example, a definition for ''natural gas'' was added in the final rules. That definition, as well as the definition for ''coal,'' incorporate the

corresponding definitions in Part 72 of the Acid Rain Program regulations. The Part 72 definitions are incorporated because they are also used in the Part 75 monitoring, reporting, and recordkeeping provisions, which provisions are already incorporated in the final Transport Rule Trading Program rules. (ii) §§ 97.404 and 97.405, 97.504 and 97.505, 97.604 and 97.605, and 97.704 and 97.705—Applicability and Retired Units

The applicability provisions in the final rules are, except as discussed herein, essentially the same as in the proposed rules and for each of the Transport Rule trading programs. Of course, for each trading program, the definition of ''State'' reflects differences in the specific states whose electric generating units are covered by the respective trading program.

Under the general applicability provisions of the proposed rules, the Transport Rule trading programs would cover fossil-fuel-fired boilers and combustion turbines serving—at any time starting November 15, 1990 or later—an electrical generator with a nameplate capacity exceeding 25 MWe and producing power for sale, with the exception of certain cogeneration units and solid waste incineration units. As discussed elsewhere in this preamble, the general applicability provisions in the final rules reference January 1, 2005 (about 5 years before this rule's promulgation), rather than November 15, 1990.

Cogeneration unit exemption. Under the final rules (as well as the proposed rules) certain cogeneration units or solid waste incinerators otherwise covered by the general category of covered units are exempt from the FIP requirements. In particular, the final rules include an exemption for a unit that qualifies as a cogeneration unit throughout the later of 2005 or the first 12 months during which the unit first produces electricity and continues to qualify throughout each calendar year ending after the later of 2005 or such 12-month period and that meets the limitation on electricity sales to the grid. In order to qualify as a cogeneration unit (*i.e.,* meet the definition of ''cogeneration unit'') in the final rules, a unit (*i.e.,* a boiler or combustion turbine) must operate as part of a ''cogeneration system,'' which is defined as an integrated group of equipment at a source (including a boiler or combustion turbine, and a steam turbine generator) designed to produce useful thermal energy for industrial, commercial, heating, or cooling purposes and electricity through the sequential use of energy. In addition, in order to qualify, a unit must be a topping-cycle unit or a bottoming cycle unit because units that produce useful thermal energy and useful power through sequential use of energy either produce useful power first (*i.e.,* are topping-cycle units) or produce thermal energy first (*i.e.,* are bottom-cycle units).

Further, in order to qualify as a cogeneration unit, a unit also must meet, on a 12-month or annual basis, the above described efficiency and operating standards. As discussed elsewhere in this preamble, EPA clarifies that the electricity sales limitation under the exemption is applied in the same way whether a unit serves only one generator or serves more than one generator. In both cases, the total amount of electricity produced annually by a unit and sold to the grid cannot exceed the greater of one-third of the unit's potential electric output capacity or 219,000 MWhr.

The final rules also clarify when a unit that meets the requirements for the cogeneration unit exemption and subsequently fails to meet all these requirements loses the exemption and becomes a covered unit. Such a unit loses the exemption starting the earlier of January 1 (or May 1 for the NO_X ozone season trading program) after the first year during which the unit no longer meets the ''cogeneration unit'' definition or January 1 (or May 1) of the first year during which the unit no longer meets the electricity sales limitation.

Solid waste incineration unit exemption. The final rules also include an exemption for a unit that qualifies as a solid waste incineration unit during the later of 2005 or the first 12 months during which the unit first produces electricity, that continues to qualify throughout each calendar year ending after the later of 2005 or such 12-month period, and that meets the limitation on fossil-fuel use. In contrast, the exemption for solid waste incineration units in the proposed rules distinguished between units commencing operation before January 1, 1985 and those commencing operation on or after that date and established somewhat different criteria for these two categories of units. As discussed elsewhere in this preamble, the final rules remove the distinction based on whether a solid waste incineration unit commences operation before January 1, 1985 or on or after January 1, 1985. In order to be exempt, the unit must qualify as a solid waste incineration units during the later of 2005 or the first 12 months during which the unit first produces electricity, must continue to qualify throughout each calendar year ending after the later of 2005 or such 12-month period, and must meet the limitation on fossil-fuel use on a three-year average basis during the first 3 years of operation starting no earlier than 2005 and every 3 years of operation thereafter.

Retired unit exemption. The final rule provisions exempting permanently retired units from most of the requirements of the Transport Rule trading programs are essentially the same as in the proposed rules and for each of the Transport Rule trading programs. The retired unit provisions exempt these units from the requirements for emission monitoring, recordkeeping, and reporting and for holding allowances, as of the allowance transfer deadline, sufficient to cover their emissions. However, the permanently retired units in a state must be included in determining whether owners and operators must surrender allowances, and, if so, how many, to comply with the assurance provisions (which are discussed elsewhere in this preamble) if the state's total covered-unit emissions exceed the state assurance level.

Specifically, a common designated representative must include these units in determining whether his or her share of total emissions of covered units in a state exceed his or her share (generally based on the allowances allocated to the units that he or she represents) of the state trading budget with the variability limit and thus whether the owners and operators of the units that he or she represents have to surrender allowances under the assurance provisions.

(iii) §§ 97.406, 97.506, 97.606, and 97.706—Standard Requirements

The basic requirements applicable to owners and operators of units and sources covered by the Transport Rule trading programs and presented as standard requirements in the final rules are, except as discussed herein, essentially the same as in proposed rules and for each of the Transport Rule trading programs. These basic requirements include: designated representative requirements; emissions monitoring, reporting, and recordkeeping requirements; emissions requirements comprising emissions limitations and assurance provisions; permit requirements; additional recordkeeping and reporting requirements; liability provisions; and provisions describing the effect of the Transport Rule trading program requirements on other CAA provisions.

In particular, the paragraphs addressing emissions requirements for owners and operators describe these requirements in detail and reference

other sections of the final rules that set forth the procedures for determining compliance with the emissions limitations and assurance provisions. The paragraphs in the final rules concerning compliance with the emissions limitations clarify that owners and operators of a source and each covered unit at the source must hold allowances at least equaling the total control period emissions of all covered units at the source. Further, the paragraphs in the final rules concerning compliance with the assurance provisions differ from those in the proposed rules in that, as discussed elsewhere in this preamble, the final rules implement the assurance provisions based on groups of units with a common designated representative, instead of being implemented on an owner-by-owner basis, as proposed. Under the final rules, the assurance provisions are triggered when total control period emissions by covered units in a state (starting in 2012) exceed the state trading budget plus variability limit. If the assurance provisions are triggered for a state for a control period in a given year, owners' and operators' responsibility for the resulting penalty (*i.e.,* the surrender of allowances for deduction through the transfer of such allowances to the assurance account created by the Administrator for such owners and operators) is determined on a common designated representative basis.

For purposes of implementing the assurance provisions, covered units in a state are in effect grouped by common designated representative (which is defined as an individual (*i.e.,* a natural person) who is the designated representative, as distinguished from the alternate designated representative, for a group of one or more units and sources as of April 1 after the control period for which the state exceeds the state assurance level). The control period emissions of all covered units with a common designated representative are compared with the allowance allocations of such units plus their share of the state variability limit. The owners and operators of the units and sources in each group that has emissions in excess of allocations plus share of variability are subject to the assurance provisions penalty. The owners and operators of the units and sources in each group must transfer to the assurance account created for such owners and operators a total amount of allowances equal to two times such owners' and operators' proportionate share of the state's excess of covered-unit emissions over the state trading budget plus variability.

The group's proportionate share is the percentage resulting from division of the amount of the group's excess of emissions over allocations plus share of variability by the sum of these excess amounts for all groups of units with a common designated representative in the state. The final rule makes it clear that this percentage is not rounded to the nearest whole number, but rather that the calculated amount of allowances resulting from application of this percentage is rounded to the nearest whole number because, in the Transport Rule trading programs, only whole (not fractional) allowances are used. If instead this percentage were rounded before its application, each group's share would be either 100 percent or 0 percent, which would be contrary to the intent of the assurance provisions in both the final rules and the proposed rules.

The provisions addressing the assurance requirements in the final rules reflect this common-designated-representative-based approach. For example, as discussed elsewhere in this preamble, these provisions use the terms, ''common designated representative's share'' and ''common designated representative's assurance level,'' in lieu of the terms, ''owner's share'' and ''owner's assurance level,'' used in the proposed rules. By further example, these final rule provisions refer to both ''common designated representatives'' and ''owners and operators,'' rather than simply ''owners.''

The final rules also explain what vintage year (*i.e.,* allocation year) of allowances can be used in order to comply with the requirement to cover emissions and with the requirements of the assurance provisions. With regard to emissions during a control period in a given year, only allowances allocated for that year or any prior year can be used to cover such emissions. Further, only allowances of the following vintage can be used to meet excess emissions penalties and assurance penalties concerning emissions during a control period in a given year: allowances allocated for that year, any year before that year, or the year immediately after that year. This approach makes the vintage years usable for excess emissions and assurance penalties consistent and helps ensure that allowances will be available to meet these obligations.

The final rules also clarify the standard emission requirements by explaining further what is meant by the provision that an allowance is a limited authorization to emit. The final rules clarify that an allowance provides authorization to emit during the control period in one year and is limited in both its use and its duration. For example, each Transport Rule trading program's final rules state that an allowance provides an emission authorization that can only be used in accordance with the requirements of the respective trading program, such as the requirements specifying what allowances are available for use, and how such allowances must be held or transferred, in order to cover emissions or meet the assurance provisions. By further example, under the final rules, an allowance continues to provide an authorization to emit one ton of the relevant pollutant until the allowance is deducted, *e.g.,* in order to be used for compliance with the requirement to cover emissions or the requirements of the assurance provisions. Moreover, under the final rules, the Administrator has the express authority to terminate or limit the authorization to emit, and thereby change the use and duration of the authorization, described in the final rules, to the extent he or she determines to be necessary or appropriate to implement any provision of the CAA.

The remaining paragraphs in the standard requirements section address permitting, recordkeeping and reporting, liability provisions, and the effect on other CAA provisions. For example, the paragraphs concerning permitting requirements are limited to stating that no title V permit revisions are necessary to account for allowance allocation, holding, deduction, or transfer and that the minor permit modification procedures can be used to add or change general descriptions in the title V permits of the monitoring and reporting approach used by the units covered by each title V permit. These provisions remain essentially the same in the final rules as in the proposed rules.

(iv) §§ 96.407, 97.507, 97.607, and 97.707—Computation of Time

These sections address how to determine the deadlines referenced in the Transport Rule trading program rules and are, except as discussed herein, essentially the same as in the proposed rules and for each of the Transport Rule trading programs. The final rules revise the proposed rule provisions concerning the treatment of the final date in any time period in order to make the provision consistent with the approach discussed above with regard to the new definition of ''business day.'' The revised provision states that, if the final date is not a

''business day'', then the time period is extended to the next ''business day.''

(v) §§ 97.408, 97.508, 97.608, 97.708 and Part 78—Administrative Appeal Procedures

Under the final Transport Rule, final decisions of the Administrator under the Transport Rule trading programs are appealable to EPA's Environmental Appeals Board under the regulations set forth in Part 78 (40 CFR part 78), which are revised by the final Transport Rule to accommodate such appeals. The provisions in the final Transport Rule concerning appeals are, except as discussed herein, essentially the same as in the proposed Transport Rule. The proposed Transport Rule would add a provision in Part 78 explaining who is an ''interested person'' with regard to a decision, *i.e.,* a person who submitted comments, testimony, or objections as part of the process of making the decision or a person who submitted his or her name to the Administrator to be placed to an interested persons list. The final Transport Rule includes that provision, but with additional language that clarifies the process for submitting a name to be placed on such a list.

(2) Allowance Allocations

Sections 97.410 through 97.412, 97.510 through 97.512, 97.610 through 97.612, and 97.710 through 97.712 set forth: certain information related to allowance allocation and for implementation of the assurance provisions; the timing for allocation of allowances to existing and new units; and the procedures for new unit allocations. In particular, these sections include tables providing, for each state covered by the particular Transport Rule trading program and for each year, the state trading budget (without the variability limit), new unit set-aside, Indian country new unit set-aside (where applicable), and variability limit. These provisions in the final rules differ in several ways, from the proposed rules and are essentially the same for each of the Transport Rule trading programs.

With regard to the tables in the final rules for the state trading budgets (without the variability limits), new unit set-asides, and variability limits, the identity of the specific states involved and the values for each state differ from the tables in the proposed rules. The final rule values reflect the determinations and modeling underlying the final rules and discussed elsewhere in this preamble. Further, as discussed elsewhere in this preamble, the variability limits are only those based on one-year variability and not those proposed to be based on three-year variability, and Indian country set-asides are shown for states with Indian country within their borders.

With regard to existing unit allocations, the final rules provide that these allocations will be set forth in a notice of data availability to be issued by the Administrator. In contrast, the proposed rules stated that existing unit allocations would be set forth in an appendix to the rules for each Transport Rule trading program. EPA believes that including these allocations in a notice of data availability referencing the EPA Web site (rather than publishing them in tables requiring a large number of pages in the **Federal Register** for each Transport Rule trading program) is a more efficient method of making these allocations public, particularly since these allocations may be changed for 2013 and thereafter by states through SIP revisions. In addition, under the final rules the allocations for an existing unit can change if the unit does not operate (*i.e.,* has no heat input) for 2 consecutive years starting in 2012. In that case, the unit continues to receive its existing unit allocation for those years plus only 2 more years. As explained elsewhere in this preamble, this is a modification of the proposed rules, under which a unit that did not operate for 3 consecutive years would continue to receive its existing unit allocation for those years plus 3 more years.

Under the final rule provisions for new units, the Administrator allocates allowances from the new unit set-aside for the state where the respective unit is located and for each year when the unit first becomes eligible for an allocation and each year thereafter. The units eligible for new unit set-aside allocations include units commencing commercial operation on or after January 1, 2010, as well as several other categories of units, such as, for example, existing units that were not initially but then become covered units, existing units whose allocations are lost due to lack of unit operation and that subsequently begin operating again, and units that lost their allocations because they changed location from one state to another. The approach in the final rules differs from the proposed rules, which required that owners and operators initially request allowances from the new unit set-aside when the unit first became eligible for an allocation. As discussed elsewhere in this preamble, under the final rules, EPA identifies which units become eligible and when they become eligible, based on information provided in other submissions (*e.g.,* certificates of representation, monitoring system certifications, and quarterly emissions reports) that such units must make to EPA, and the requirement that owners and operators submit requests for new unit set-aside allocations is removed in the final rules.

The final rules also provide for two rounds of allocations from the new unit set-aside, in contrast with the proposed rules that provided for only one round. In the first round in the final rules (as in the single round in the proposed rules), a unit's new unit set-aside allocation initially equals that unit's emissions—as determined in accordance with §§ 97.430–97.435, 97.530–97.535, 97.630–97.635, and 97.730–97.735 of the final rules and Part 75 (40 CFR part 75)—for the control period (annual or ozone season, depending on the Transport Rule trading program involved) in the preceding year. If the new unit set-aside lacks sufficient allowances to provide this initial allocation for all of the new units, then each new unit is allocated its proportionate share (based on its initial allocation amount) of the allowances in the new unit set-aside. The Administrator issues a notice of data availability informing the public of the specific new unit allocations and provides an opportunity for submission of objections on the grounds that the allocations are not consistent with the requirements of the relevant final rule provisions. A second notice of data availability is subsequently issued in order to make any necessary corrections in the specific new unit allocations. As discussed elsewhere in this preamble, the final rules establish a somewhat different schedule for issuance of these notices of data availability than the proposed rules. In particular, a single set of dates (*i.e.,* for the first notice, June 1 of the year for which the new unit allocations are described in the notice and, for the second notice, August 1 of that year) is established for all of the Transport Rule trading programs. For the reasons discussed elsewhere in this preamble, the final rules provide for a second round of allocations to the extent that any allowances remain in the new unit set-aside after the allocations are made to new units in the first round. (In the proposed rules, remaining allowances were immediately allocated to existing units.) The units eligible for allocations in the second round are new units that commenced commercial operation during the control period for which allocations are being made and during the prior control period. The second round allocation for each such unit initially equals the positive difference (if any) between the unit's

first round allocation (if any) and the unit's emissions during the control period for which allocations are being made. If the amount of allowances remaining in the new unit set-aside after the first round is insufficient to provide this initial allocation for all of the second round new units, then each such new unit is allocated its proportionate share of the allowances remaining in the new unit set-aside. The Administrator uses notices of data availability (which are issued by December 15 (for the annual trading programs) and September 15 (for the ozone season trading program) of the control period involved and February 15 (for the annual trading programs) and November 15 (for the ozone season trading program) before the allowance transfer deadline for the control period involved, in a manner analogous to the use of such notices in the first round, to inform the public about the identification of the new units in the second round allocations and obtain and consider any objections. The February 15 and November 15 notices also inform the public about the amounts of the second round allocations. If, after both rounds of allocations, any allowances remain in the new unit set-aside, those allowances are allocated to existing units in proportion to such units' allocations.

The final rules also establish a separate Indian country new unit set-aside in each state where Indian country is located (*i.e.,* in Florida, Iowa, Kansas, Louisiana, Michigan, Minnesota, Mississippi, Nebraska, New York, North Carolina, South Carolina, Texas, and Wisconsin). As discussed elsewhere in this preamble, the Administrator operates the Indian country new unit set-aside in essentially the same manner as state new unit set-aside, except that unallocated allowances remaining in the Indian country new unit set-aside after the two rounds of new unit set-aside allocations are first placed in the new unit set-aside in the state where the Indian country involved is located and then, if still unallocated, are allocated to existing units in the state. As with the state new unit set-aside, EPA will identify the new units qualifying for the Indian country new unit set-aside, calculate the allocations, and issue notices of data availability using the same schedules as notices for the state new unit set-aside.

Under the final rules (like under the proposed rules), if a unit in certain specified categories is allocated allowances that should not have received them, the Administrator applies procedures under which the allocation is not recorded or the amount of the recorded allocations is deducted as an incorrect allocation, with one exception. The exception is where the determination of compliance with the emissions limitation (*i.e.,* requirement to hold allowances covering emissions, as distinguished from the assurance provisions) for the source that includes the unit has already been completed, in which case no action is taken to account for the erroneous allocation for the control period involved.

While this procedure concerning recordation or deduction of allocations is the same as under the proposed rules, the final rules change the description of the circumstances under which this procedure concerning recordation or deduction of allocations is applied. Under both the final rules and the proposed rules, this procedure is applied to a unit (whether an existing unit or a new unit) that receives an allocation but is not actually a covered unit. However, under the final rules, another category of units—*i.e.,* any existing unit that is not located—as of January 1 of the control period for which the allocation is received—in the state from whose trading budget the allocation was made is also subject to this procedure. Although relatively few units are moved from one state to another, EPA believes that it is important to address what happens to such units' allocations, both because each state has a limited trading budget out of which all allocations for a year to existing and new units in that state must be made and because, under the assurance provisions, determinations are made about owners' and operators' surrender of allowances based on, among other things, the allocations for units in a specific state. Because, under the final rules, a unit that is moved from one state to another may lose its existing unit allocation in the first state under the above-described procedure, the final rules also makes such a unit eligible for allocations from the new-unit set-aside of the second state.

Finally, the final rules remove, as no longer necessary, one category of units that the proposed rules included as subject to this procedure. The proposed rules, treated, as existing units, some units that had not yet operated but were projected to operate by January 1, 2012, and so the proposed rules made these units subject to the procedure for not recording or for deducting allocations if they actually were not required to certify their monitoring systems and hold allowances covering emissions starting January 1, 2012. The final rule does not treat projected units as existing units and so this category of units no longer needs to be made subject to this procedure.

(3) Designated Representatives and Alternate Designated Representatives

Sections 97.413 through 97.418, 97.513 through 97.518, 97.613 through 97.618, and 97.713 through 97.718 establish the procedures for certifying and authorizing the designated representative, and alternate designated representative, of the owners and operators of a source and the units at the source, and for changing the designated representative and alternate designated representative. These sections also describe the designated representative's and alternate designated representative's responsibilities and the process through which he or she can delegate to an agent the authority to make electronic submissions to the Administrator. Except as discussed herein, the provisions in the final rules are essentially the same as in the proposed rules and for each of the Transport Rule trading programs.

The designated representative is the individual (*i.e.,* the natural person) authorized to represent the owners and operators of each covered source and covered unit at the source in matters pertaining to all Transport Rule trading programs to which the source and units were subject. One alternate designated representative (also an individual) can be selected to act on behalf of, and legally bind, the designated representative and thus the owners and operators. Because the actions of the designated representative and alternate legally bind the owners and operators, the designated representative and alternate must submit a certificate of representation certifying that each was selected by an agreement binding on all such owners and operators and is authorized to act on their behalf.

In the final rules (like in the proposed rules), the certificate of representation must contain: Specified identifying information for the covered source (including location) and the covered units at the source and for the designated representative and alternate; the name of every owner and operator of the source and units; and certification language and signatures of the designated representative and alternate. The final rules require an additional piece of identifying information, *i.e.,* whether the unit is located in Indian country. This is necessary in order for the Administrator to implement the above-described Indian country new unit set-aside. All submissions (*e.g.,* monitoring plans, monitoring system certifications, and allowance transfers) under the final rules for a covered

source or covered unit must be submitted, signed, and certified by the designated representative or alternate, except that electronic submission may be delegated.

In order to change the designated representative or alternate, a new certificate of representation must be received by the Administrator. A new certificate of representation must also be submitted to reflect changes in the owners and operators of the source and units involved. The new certificate must be submitted within 30 days of such changes.

The final rules make explicit an implied requirement of the proposed rules, *i.e.,* that, if a unit is added to a source or is moved from one source to a second source, a certificate of representation needs to be submitted to reflect the change. This requirement is implicit in the proposed rules when a unit is added to a source because the designated representative would not be authorized to make submissions concerning the added unit unless that unit were included on the certificate of representation. Similarly, where a unit is moved to another source, new certificates of representation would need to be submitted in order for the correct designated representative to be authorized to make submissions concerning the moved unit. Moreover, because compliance accounts in the Allowance Management System would cover all units at a given source and would be based on the information in the certificate of representation submitted by the designated representative for the source, when a unit is moved from a source to a second source, the designated representative of the second source would need to submit a certificate of representation removing the moved unit from the list of units.

The final rules explicitly require that a new certificate of representation be submitted to reflect changes (whether caused by the addition or removal of units) in which units are located at a source. In addition, the final rules impose a deadline on the submission requirement of 30 days from the date of the change in the units. This is analogous to the maximum time period between a change in a unit's owner or operator and the deadline for submission of a new certificate of representative reflecting to the change. Long before any actual move of a unit to a new location, owners and operators will need to make decisions about, and plan the implementation of, such a move. Consequently, EPA believes that a 30-day deadline after any move for reflecting the move in the certificate of representation is reasonable. In the event the change involves the addition of a unit that operated before being located at the source, the final Transport Rule also requires that the designated representative provide in the certificate of representation information on the entity from which the unit was obtained, the date on which the unit was obtained, and the date on which the unit became located at the source. In the event of a change involving the removal of a unit, the designated representative must provide in the certificate of representation information on the entity that obtained the unit, the date on which that entity obtained the unit, and the date on which the unit became no longer located at the source. This information will enable the Administrator to determine what actions are necessary to reflect the change in units located at the sources involved. For example, if a covered unit is moved from one source to second source, the Administrator will have the information necessary to determine whether the unit's allocation should be changed to reflect movement of the unit from one state to another.

(4) Allowance Management System

Sections 97.420 through 97.428, 97.520 through 97.528, 97.620 through 97.628, and 97.720 through 97.728 establish the procedures and requirements for using and operating the Allowance Management System (which is the electronic data system through which the Administrator handles allowance allocation, holding, transfer, and deduction), and for determining compliance with the emissions limitations and assurance provisions, in an efficient and transparent manner. The Allowance Management System also provides the allowance markets with a record of ownership of allowances, dates of allowance transfers, buyer and seller information, and the serial numbers of allowances transferred. Except as discussed herein, these sections of the final rules are essentially the same as in the proposed rules and for each of the Transport Rule trading programs.

(i) §§ 97.420, 97.520, 97.620, and 97.720—Compliance, Assurance, and General Accounts

Under the final rules, the Allowance Management System contains three types of accounts. One type comprises compliance accounts, one of which the Administrator establishes for each covered source upon receipt of the certificate of representation for the source. A compliance account is the account in which all allowance allocations must be recorded and in which any allowances used by the covered source for compliance with the emission limitations must be held. The designated representative and alternate for the source are also the authorized account representative and alternate for the compliance account.

A second type comprises general accounts, which can be established by any entity upon receipt by the Administrator of an application for a general account. General accounts can be used by any person or group for holding or trading allowances. To open a general account, a person or group must submit an application for a general account, which is similar in many ways to a certificate of representation. The provisions for changing the authorized account representative and alternate, for submitting a superseding application to take account of changes in the persons having an ownership interest with respect to allowances, and for delegating authority to make electronic submissions are analogous to those applicable to comparable matters for designated representatives and alternates.

A third type comprises assurance accounts. The Administrator establishes one assurance account for each group of units having a common designated representative and located in a state where the assurance provisions are triggered by total emissions exceeding the state trading budget plus variability.

(ii) §§ 97.421 Through 97.423, 97.521 Through 97.523, 97.621 Through 97.623, and 97.721 Through 97.723—Recordation of Allowance Allocations and Transfers

Under the final rules, by November 7, 2011, the Administrator must record allowance allocations for existing units, as set forth in a required notice of data availability, for the Transport Rule annual NO_X, ozone-season NO_X, and SO_2 trading programs for 2012 and 2013, unless, as discussed elsewhere in this preamble, a state notifies the Administrator that the state will submit a SIP revision with existing-unit allocations for 2013 by May 1, 2012. If the Administrator approves that SIP revision by October 1, 2012, the Administrator will record the state-determined existing-unit allocations for 2013, and, in the absence of such approval by that date, the Administrator will record the EPA-determined existing-unit allocations for 2013. By July 1, 2013, the Administrator must record existing-unit allowance allocations (whether EPA- or state-determined) for each Transport Rule trading program for 2014 and 2015. By July 1, 2014, the Administrator must

record existing-unit allowance allocations for each Transport Rule trading program for 2016 and 2017. By July 1, 2015, the Administrator must record existing-unit allowance allocations for each Transport Rule trading program for 2018 and 2019. By July 1, 2016 and July 1 of each year thereafter, the Administrator must record existing-unit allowance allocations for each Transport Rule trading program for the control period in the fourth year after the year of the applicable recordation deadline. By August 1, 2012 and August 1 of each year thereafter, the Administrator must record new-unit allowance allocations for each Transport Rule trading program for that year. These recordation deadlines differ from those in the proposed rules for two reasons. First, as discussed elsewhere in this preamble, EPA is adopting provisions that allow states to submit, and EPA to approve, SIP revisions (abbreviated or full SIPs) under which the state, rather than the Administrator, determines the distribution of allowances under one or more of the Transport Rule trading programs applicable in the state. In selecting allocation recordation deadlines, EPA took into account and balanced certain countervailing factors. On one hand, EPA considered the need to provide a reasonable time for a state to develop, propose, and finalize, and for EPA to review and propose and finalize approval of, the SIP revision and the desirability of providing a reasonable opportunity for state distributions to become effective for a year relatively soon after the 2012 commencement of the Transport Rule trading programs. EPA's experience with prior trading programs has shown that the process for development and submission of SIP revisions by states and approval by EPA in many cases is about 18 months and in some cases even longer. On the other hand, EPA considered the desirability of owners and operators having allocations in their compliance accounts a reasonable time before the year for which the allocations are made (*i.e.,* the vintage year). Having the allocations recorded, to the extent possible, before the vintage year facilitates compliance decisions and use of the allowance market in implementing such decisions. EPA believes that optimally allocations would be recorded at least 3 years in advance of the vintage year.

In balancing these countervailing factors, EPA is adopting an allocation recordation schedule that provides initially for recordation ranging from 6 months to 18 months before the beginning of the control period in the first 2 years (*i.e.,* 2012 and 2013) for which allocations are made and that, as allocations for control periods in subsequent years are recorded, gradually increases the amount of time between recordation and the beginning of the year of the control period involved until allocations are recorded about three and one-half years in advance. With regard to the need to facilitate states' distribution of allowances, this approach gives states multiple opportunities to develop, submit, and obtain EPA approval for SIPs under which the states (rather than EPA) will distribute allowances under the Transport Rule trading programs for control periods relatively early in the programs. Because of time (which has in the past ranged from about 6 months to about 2 years) it may take for a state to develop and submit such a SIP and because of the time (which has in the past been at least 6 months) it will likely take EPA to review and approve such a SIP, EPA believes that 2013 is the first year for which a state can determine allowance distributions and have them recorded some minimal time before the control period involved. With regard to the need to record allowances in advance, this approach achieves recordation at least 6 months in advance and eventually achieves recordation by what EPA believes is an optimal amount of time (greater than 3 years) before the control period for which recorded allowances are issued.

As discussed elsewhere in this preamble, the approach to allowance recordation in the final rules results in following schedule for submission of abbreviated or full SIPs under the final Transport Rule. SIP revisions with existing-unit allocations for 2013 control periods must be submitted to the Administrator by April 1, 2012. Complete abbreviated and full SIPs must be submitted to the Administrator by: December 1, 2012 in order to govern allowance allocation and auction for control periods in 2014 and 2015; December 1, 2013 in order to govern control periods in 2016 and 2017; December 1, 2014 in order to govern allowance allocation and auction for control periods in 2018 and 2019; and December 1, 2015 and by January 1 of any year thereafter in order to govern allowance allocation and auction for control periods in the fifth year after the year of such submission deadline.

The second reason for the differences in the recordation deadlines in the final rules, as compared to the proposed rules, is that, in order to simplify the recordation schedule for owners and operators and EPA, EPA set uniform recordation deadlines for all of the Transport Rule trading programs. EPA believes that these deadlines provide the Agency sufficient time, after receipt of any information necessary to determine allocations (*e.g.,* for new unit set-aside allocations, the emission data from the control period in the prior year), to complete the recordation of allocations and, as discussed above, makes the allocations available to owners and operators before the year for which the allocations are made. EPA notes that these are deadlines and that the Administrator has the discretion, where feasible and appropriate, to record allocations before such deadlines.

Under the final rules (as under the proposed rules), the process for transferring allowances from one account to another is quite simple. A transfer is submitted providing, in a format prescribed by the Administrator, the account numbers of the accounts involved, the serial numbers of the allowances involved, and the name and signature of the transferring authorized account representative or alternate. If the transfer form containing all the required information is submitted to the Administrator and, when the Administrator attempts to record the transfer, the transferor account includes the allowances identified in the form, the Administrator records the transfer by moving the allowances from the transferor account to the transferee account within 5 business days of the receipt of the transfer form.

(iii) §§ 97.424, 97.524, 97.624, and 97.724—Compliance With Emissions Limitations

Under the final rules (as under the proposed rules), once a control period has ended (*i.e.,* December 31 for the Transport Rule NO_X and SO_2 annual trading programs and September 30 for the ozone-season NO_X trading program), covered sources have a window of opportunity—until the allowance transfer deadline of midnight on March 1 or December 1 following the control period for the annual and ozone season trading programs respectively—to evaluate their reported emissions and obtain any allowances that they need to cover their emissions during that control period. Each allowance issued in each Transport Rule trading program authorizes emission of one ton of the pollutant involved, and so is usable for compliance in that trading program, for a control period in the year for which the allowance was allocated or a later year. Consequently, each source needs—as of the allowance transfer deadline—to have in its compliance account, or

properly submit a transfer that moves into its compliance account, enough allowances usable for compliance to authorize the source's total emissions for the control period.

If a source fails to hold sufficient allowances for compliance to cover the emissions, then the owners and operators must provide, for deduction by the Administrator, two allowances allocated for the control period, in the year of when the emissions occurred, any prior year, or the year immediately after the year of the emissions, for every allowance that the owners and operators failed to hold as required to cover emissions. In addition, the owners and operators are subject to discretionary civil penalties for each violation.

(iv) §§ 97.425, 97.525, 97.625, and 97.725—Compliance With Assurance Provisions

Under the final rules (as under the proposed rules), the assurance provisions ensure that each state will eliminate its significant contribution to nonattainment and interference with maintenance that EPA identifies in this action. A requirement that owners and operators surrender allowances under the assurance provisions is triggered only for certain owners and operators of sources and units in a state where the total state covered-unit emissions for a control period exceed the applicable state trading budget with the variability limit. Moreover, the surrender requirement is implemented based on groups of sources and units with a common designated representative. For each group of sources and units with a common designated representative, the owners and operators of such sources and units must surrender allowances only if the units' emissions (referred to as the common designated representative's share of emissions) during the control period involved exceed the units' allocations plus share of the state variability limit (referred to as the common designated representative's share of the state trading budget with variability).

As discussed elsewhere in this preamble, EPA decided to implement the assurance provisions on a common designated representative basis, rather than on an owner basis. The final rules implement in a series of steps the process of determining which states have total covered-unit emissions sufficient to trigger the allowance surrender requirement for a given control period and determining, using the approach based on common designated representatives, which owners and operators are subject to the allowance surrender and whether those owners and operators are in compliance. This common-designated-representative-based process is more streamlined than the owner-based process in the proposed rules.

First, the Administrator performs the calculations necessary to determine whether any state has total covered-unit emissions for a control period greater than the state trading budget with the 1-year variability limit. As discussed elsewhere in this preamble, EPA decided not to use a 3-year variability limit because, among other things, such a limit seems unnecessary to ensuring elimination of significant contribution to nonattainment and interference with maintenance and would make compliance planning extremely difficult for owners and operators. By June 1, 2013 and June 1 of each year thereafter, the Administrator promulgates a notice of data availability of the results of these calculations.

Second, by July 1, for states identified in the June 1 notice of data availability as having emissions exceeding the state trading budget with variability, the designated representative of each new unit in the state that operated during but did not receive an allocation for the year involved must submit a statement to the Administrator with certain information about the unit. This information—*i.e.,* the unit's allowable emission rate for the pollutant involved (NO_X or SO_2) and heat rate—is used to calculate a surrogate allocation for the unit to be used solely for the purposes of determining whether the group of units with a common designated representative that includes the unit had emissions exceeding allocations plus share of the state's variability limit.

Third, the Administrator calculates, for each state identified in the June 1 notice of data availability and for each common designated representative of a group of units (which groups can include one or more units and sources) in the state, the common designated representative's share of emissions, the common designated representative's share of the state trading budget with the variability limit, and the amount (if any) that the groups of owners and operators of units represented by the common designated representative (which groups can include one or more owners and operators) in the state must surrender under the assurance provisions (*i.e.,* the common designated representative's proportionate share of the excess of state emissions over the state trading budget with the variability limit). The Administrator promulgates by August 1 a notice of data availability of the results of these calculations, provides an opportunity for submission of objections, and promulgates by October 1 a second notice of data availability of any necessary adjustments to the calculations. In contrast with the proposed rules, objections may be submitted concerning information in the August 1 notice, whether or not that information was also provided in the June 1 notice. In short, the process of issuing notices is shortened in the final rules by providing one, comprehensive opportunity to submit objections to the June 1 and August 1 notices, rather than two separate opportunities, one for each notice.

Also in contrast with the proposed rules, the deadlines for issuance of notices of data availability for implementation of the assurance provisions are made uniform under the final rules for all of the Transport Rule trading programs. EPA is taking this approach for the same reasons that the deadlines for issuance of notices of data availability for new unit set-aside allocations are made uniform for all of these trading programs.

Fourth, the owners and operators identified in the October 1 notice of data availability as being required to surrender allowances under the assurance provisions must transfer, by November 1, to the assurance account created by the Administrator for such owners and operators the amount of allowances (usable for compliance) that the Administrator determined in the October 1 notice of data availability. Where the October 1 notice indicates that a specified surrender amount is owed by a group of two or more owners and operators, all the group members are liable for the surrender amount, and it is up to the owners and operators in the group to decide who will actually surrender allowances. This is analogous to the situation where a group of two or more owners and operators of covered units at a source is required to hold allowances covering the unit's emissions and therefore the group of owners and operators is liable. *See* 58 FR 3590, 3599 (January 11, 1993) (discussing liability of owners and operators under allowance-holding requirements of the Acid Rain Program).

EPA believes that the approach of making the owners and operators responsible for deciding which of them will actually surrender the necessary allowances under the assurance provisions is reasonable because the identity of who is an owner or operator (particularly who is an owner) of a unit or source and the percentage of an owner's share can change during the year and this information is available to the owners and operators on an ongoing

basis, and not to EPA unless EPA were to impose new requirements for reporting this information. Further, EPA believes that it is reasonable to leave to private agreements the establishment of procedures for determining when, and under what conditions, specific owners and operators will provide the allowances for surrender. Owners and operators already make these types of determinations with regard to the surrender requirements in meeting the emissions limitations and any excess emission penalties.

As part of implementing the common-designated-representative-based approach of the assurance provisions in the final Transport Rule, the final rules provide that the Administrator (instead of the owners, as in the proposed rules) will create an assurance account for each group of the owners and operators of units and sources with a common designated representative in each state where the assurance provisions are triggered. Because the final rules require owners and operators to transfer surrendered allowances to the appropriate assurance account (rather than requiring the Administrator to deduct from accounts established by the owners), there is no need for the proposed rule provisions concerning identification of which allowances are to be deducted and first-in, first-out deduction in the absence of such identification.

The final rules provide that, in general, the surrender amounts specified in the October 1 notice for owners and operators are final and will not be revised even if the underlying data (*e.g.,* emission data) used in the calculations underlying the October 1 notice are subsequently revised. However, the final rules set forth limited exceptions to this: Where such data are revised as a result of a decision in or settlement of litigation concerning the data on appeal. EPA believes that the limitation on revisions of the surrender amounts specified in the October 1 notice are necessary to provide some certainty to owners and operators and avoid the potential for multiple changes in owners' and operators' required surrender amounts. Because the surrender amount for each group of owners and operators of units and sources with a common designated representative in a state is calculated using emission data from all of the covered units in that state, each change in one or a few units' emission data that might occur after issuance of the October 1 notice could otherwise change the calculated surrender amounts for all or many groups in the state. For the limited exceptions where the final rules provide that the surrender amounts specified in the August 1 notice may be revised, the final rules require the Administrator to set a new surrender deadline for any additional surrender required and to transfer allowances back out of the assurance account involved for any reduced surrender requirement, as appropriate.

Under the final rules (as under the proposed rules), it is not a violation of the CAA for total state covered-unit emissions to exceed the state trading budget with the variability limit or for a group of owners and operators to become subject to the allowance surrender requirement under the assurance provisions. However, the failure of any group of owners and operators to surrender the required amount of allowances in the assurance account created for such owners and operators violates the CAA and is subject to discretionary penalties, with each required allowance that was not surrendered and each day of the control period involved constituting a violation.

(v) §§ 97.426 Through 97.428, 97.526 Through 97.528, 97.626 Through 97.628, and 97.726 Through 97.728—Miscellaneous Provisions

These sections in the final rules (as in the proposed rules) include provisions allowing banking of the allowances issued in the Transport Rule trading programs, *i.e.,* the retention of unused Transport Rule allowances allocated for a given control period for use or trading in a later control period. While this can potentially cause emissions from sources in some states in some control periods to be greater than the allowances allocated for those control periods, the assurance provisions limit such emissions in a way that ensures that each state's significant contribution to nonattainment and interference with maintenance that EPA has identified in this action will be eliminated.

These sections also include provisions stating that the Administrator can, at his or her discretion and on his or her own motion, correct any type of error that he or she finds in an account in the Allowance Management System. In addition, the Administrator can review any submission under the Transport Rule trading programs, make adjustments to the information in the submission, and deduct or transfer allowances based on such adjusted information.

(5) Emissions Monitoring, Recordkeeping, and Reporting

Sections 97.430 through 97.435, 97.530 through 97.535, 97.630 through 97.635, and 97.730 through 97.735 establish emissions monitoring, recordkeeping, and reporting requirements for Transport Rule units. These provisions reference the relevant sections of Part 75 (40 CFR part 75), where the specific procedures and requirements for monitoring and reporting NO_X and SO_2 mass emissions are set forth. The provisions in the final rules are virtually the same as the monitoring, recordkeeping, and reporting requirements in the proposed rules and under previous EPA-administered trading programs, *e.g.,* the Acid Rain Program and NO_X Budget and CAIR trading programs. The final rule provisions are also essentially the same for each of the Transport Rule trading programs, except for differences reflecting the different pollutants and control periods involved.

Under the provisions of the final rules and under Part 75, a unit has several options for monitoring and reporting. A unit's options are to use: a CEMS; an excepted monitoring methodology (NO_X mass monitoring for certain peaking units and SO_2 mass monitoring for certain oil- and gas-fired units); low mass emissions monitoring for certain, non-coal-fired, low emitting units; or an alternative monitoring system approved by the Administrator through a petition process. In addition, unit owners and operators may submit, and the Administrator can approve, petitions for alternatives to Transport Rule and Part 75 monitoring, recordkeeping, and reporting requirements.

As discussed elsewhere in this preamble, the final rules and Part 75 specify that each CEMS must undergo rigorous initial certification testing and periodic quality assurance testing thereafter. In addition, when a monitoring system is not operating properly, standard substitute data procedures are applied and result in a conservative estimate of emissions for the period involved. Further, the final rules and Part 75 require electronic submission, to the Administrator and in a format prescribed by the Administrator, of a quarterly emissions report.

The final rules include revised language in §§ 97.430(b)(3), 97.530(b)(3), 97.630(b)(3), and 97.730(b)(3) that incorporates by reference, and thereby applies to units in the Transport Rule trading programs, clarification that EPA recently adopted in § 75.4(e) of Part 75 (for Acid Rain Program units)

concerning the requirements for certification, recertification, and diagnostic testing of emission monitoring systems when a unit adds a new stack or new add-on SO_2 or NO_X emission control device. *See* 76 FR 17288, 17298–300 (March 28, 2011). The revised language is adopted for the reasons set forth in the preamble of that Acid Rain Program final rule and in order to continue the approach, in the Transport Rule trading program rules, of adopting monitoring, recordkeeping, and reporting requirements that are generally consistent with those in the Acid Rain Program, which covers many units in the Transport Rule trading programs.

XII. Statutory and Executive Order Reviews

The projected impacts of this final rule as presented throughout the preamble do not reflect minor technical corrections to SO_2 budgets in three states (KY, MI, and NY) made after the impact analyses were conducted. These projections also assumed preliminary variability limits that were smaller than the variability limits finalized in this rule. EPA conducted sensitivity analysis confirming that these differences do not meaningfully alter any of the Agency's findings or conclusions based on the projected cost, benefit, and air quality impacts presented for the final Transport Rule. The results of this sensitivity analysis are presented in Appendix F in the final Transport Rule RIA.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

Under EO 12866 (58 FR 51735, October 4, 1993), this action is an ''economically significant regulatory action'' because it is likely to have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities.

Accordingly, EPA submitted this action to the OMB for review under EO 12866 and EO 13563 (76 FR 3821, January 21, 2011) and any changes in response to OMB recommendations have been documented in the docket for this action. In addition, EPA prepared an analysis of the potential costs and benefits for this action. This analysis is contained in the Regulatory Impact Analysis (RIA) for this action. For more information on the costs and benefits for this rule, please refer to Table VIII.C–3 of this preamble.

When estimating the human health benefits and compliance costs in Table VIII.C–3 of this preamble, EPA applied methods and assumptions consistent with the state-of-the-science for human health impact assessment, economics, and air quality analysis. EPA applied its best professional judgment in performing this analysis and believes that these estimates provide a reasonable indication of the expected benefits and costs to the nation of this rulemaking. The RIA available in the docket describes in detail the empirical basis for EPA's assumptions and characterizes the various sources of uncertainties affecting the estimates below. In doing what is laid out above in this paragraph, EPA adheres to EO 13563, ''Improving Regulation and Regulatory Review,'' (76 FR 3,821, January 21, 2011), which is a supplement to EO 12866.

In addition to estimating costs and benefits, EO 13563 focuses on the importance of a ''regulatory system [that] * * * promote[s] predictability and reduce[s] uncertainty'' and that ''identify[ies] and use[s] the best, most innovative, and least burdensome tools for achieving regulatory ends.'' EO 13563 also states that ''[i]n developing regulatory actions and identifying appropriate approaches, each agency shall attempt to promote such coordination, simplification, and harmonization. Each agency shall also seek to identify, as appropriate, means to achieve regulatory goals that are designed to promote innovation.'' We recognize that the utility sector has compliance obligations related to multiple environmental statutes authorizing regulatory action, including this rule's requirements to reduce interstate transport of harmful ozone and fine particles and their precursors, as well as other rules' requirements to reduce air toxic emissions, to reduce greenhouse gas emissions, to safely manage coal combustion wastes, and to protect aquatic wildlife from water intake procedures. In the wake of promulgating this final rule, EPA recognizes that moving forward the agency needs to approach these rulemakings in ways that allow the industry to make practical investment decisions that minimize costs in complying with all of the final rules, while still securing the fundamentally important environmental and public health benefits that led Congress to enact those authorities in the first place. At the same time, EPA notes that the flexibility inherent in the allowance-trading mechanism included in this rule affords utilities themselves a degree of latitude to determine how best to integrate compliance with the emission reduction requirements of this rule and those of the other rules.

The final rule will also reduce emissions of directly emitted PM and ozone precursors, and estimates of the $PM_{2.5}$-related benefits of these air quality improvements may be found in Tables VIII.C–1 and VIII.C–2 of this preamble. When characterizing uncertainty in the PM-mortality relationship, EPA has historically presented a sensitivity analysis applying alternate assumed thresholds in the PM concentration-response relationship. In its synthesis of the current state of the PM science, EPA's 2009 Integrated Science Assessment for Particulate Matter concluded that a no-threshold log-linear model most adequately portrays the PM-mortality concentration-response relationship. In the RIA accompanying this rulemaking, rather than segmenting out impacts predicted to be associated levels above and below a ''bright line'' threshold, EPA includes a ''lowest measured level'' (LML) analysis that illustrates the increasing uncertainty that characterizes exposure attributed to levels of $PM_{2.5}$ below the LML of each epidemiological study used to estimate $PM_{2.5}$-related premature death. Figures provided in the RIA show the distribution of baseline exposure to $PM_{2.5}$, as well as the lowest air quality levels measured in each of the epidemiology cohort studies. This information provides a context for considering the likely portion of PM-related mortality benefits occurring above or below the LML of each study; in general, our confidence in the size of the estimated reduction $PM_{2.5}$-related premature mortality diminishes as baseline concentrations of $PM_{2.5}$ are lowered. Approximately 69 percent of the avoided impacts occur at or above an annual mean $PM_{2.5}$ level of 10 $\mu g/m^3$ (the LML of the Laden et al. 2006 study); about 96 percent occur at or above an annual mean $PM_{2.5}$ level of 7.5 $\mu g/m^3$ (the LML of the Pope et al. 2002 study). Although the LML analysis provides some insight into the level of uncertainty in the estimated PM mortality benefits, EPA does not view the LML as a threshold and continues to quantify PM-related mortality impacts using a full range of modeled air quality concentrations. It is important to note that the monetized benefits include many but not all health effects associated with $PM_{2.5}$ exposure. Benefits are shown as a range from Pope, et al., (2002) to Laden, et al., (2006). These models assume that all fine particles,

regardless of their chemical composition, are equally potent in causing premature mortality because there is no clear scientific evidence that would support the development of differential effects estimates by particle type.

The cost analysis is also subject to uncertainties. Estimating the cost conversion from one process to another is more difficult than estimating the cost of adding control equipment because it is more dependent on plant specific information. More information on the cost uncertainties can be found in the RIA.

A summary of the monetized benefits and net benefits for the final rule at discount rates of 3 percent and 7 percent is in Table VIII.C–3 of this preamble. For more information on the benefits analysis, please refer to the RIA for this rulemaking, which is available in the docket.

B. Paperwork Reduction Act

EPA is required to document the information collection burden imposed by the Transport Rule on industry, states, and EPA in an information collection request (ICR). The ICR describes the information collection requirements associated with the Transport Rule and estimates the incremental costs of compliance with all such requirements, such as the requirement for industry to monitor, record, and report emission data to EPA.

The ICR for the final Transport Rule has been submitted for approval by OMB under the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*, and the information collection requirements it documents are not enforceable until such approval has been granted. An ICR was also submitted to OMB in support of the proposed Transport Rule; no adverse comment was received by EPA on either the information collection requirements or their associated cost estimates as described in that document.

The costs associated with the information collection requirements of the Transport Rule include start-up and capital costs for units newly affected by an emission trading program, or whose reporting status has changed (*e.g.*, from ozone-season-only to annual reporting), as well as the additional operation and maintenance costs for Transport Rule-affected units already participating in an EPA-administered cap and trade program. More information on the ICR analysis is included in the final Transport Rule docket.

The records and reports generated by these activities will be used by EPA and states to ensure that affected facilities comply with emission limits and other requirements. Such records and reports are also helpful to EPA and states in both identifying affected facilities that may not be in compliance with applicable requirements and in discerning which units and what records or processes should be inspected.

The incremental capital and operating costs associated with the recordkeeping and reporting burden to Transport Rule-affected sources in states participating in the Transport Rule trading programs are approximately $26 million annually in 2010 dollars. The total number of burden hours associated with the recordkeeping and reporting burden to Transport Rule-affected sources in states participating in the Transport Rule trading programs is approximately 185,000 hours annually. These estimates include the annualized cost of installing and operating appropriate SO_2 and NO_X emission monitoring equipment to measure and report the total emissions of these pollutants from affected EGUs (serving generators greater than 25 MW). The burden to state and local air agencies, as documented in the ICR, includes any necessary SIP revisions, performance of monitor certifications, and fulfillment of audit responsibilities. Burden is defined at 5 CFR 1320.3(b).

The amendments do not require any notifications or reports beyond those required by the General Provisions. The recordkeeping requirements require only the specific information needed to determine compliance, which is specifically authorized by CAA section 114 (42 U.S.C. 7414). All information submitted to EPA for which a claim of confidentiality is made will be safeguarded according to EPA policies in 40 CFR part 2, subpart B, Confidentiality of Business Information. An Agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in 40 CFR are listed in 40 CFR part 9. When this ICR is approved by OMB, the Agency will publish a technical amendment to 40 CFR part 9 in the **Federal Register** to display the OMB control number for the approved information collection requirements contained in this final rule.

C. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) generally requires an agency to prepare a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements under the Administrative Procedure Act or any other statute unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small organizations, and small governmental jurisdictions.

For purposes of assessing the impacts of this final rule on small entities, small entity is defined as:

(1) A small business as defined by the Small Business Administration's (SBA) regulations at 13 CFR 121.201. For the electric power generation industry, the small business size standard is an ultimate parent entity defined as having a total electric output of 4 million megawatt-hours (MWh) or less in the previous fiscal year.

(2) A small governmental jurisdiction that is a government of a city, county, town, school district or special district with a population of less than 50,000; and

(3) A small organization that is any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.

TABLE XII.C–1—POTENTIALLY REGULATED CATEGORIES AND ENTITIES [a]

Category	NAICS code [b]	Examples of potentially regulated entities
Industry	221112	Fossil-fuel-fired electric utility steam generating units.
Federal Government	[c] 221112	Fossil-fuel-fired electric utility steam generating units owned by the federal government.
State/Local Government	2[c] 21112	Fossil-fuel-fired electric utility steam generating units owned by municipalities.
Tribal Government	921150	Fossil-fuel-fired electric utility steam generating units in Indian Country.

[a] Include NAICS categories for source categories that own and operate electric generating units only.
[b] North American Industry Classification System.
[c] Federal, state, or local government-owned and operated establishments are classified according to the activity in which they are engaged.

EPA used Velocity Suite's Ventyx data as a basis for identifying plant ownership and compiling the list of potentially affected small entities. For plants burning fossil fuel as the primary fuel, plant-level boiler and generator capacity, heat input, generation, and emission data were aggregated by owner and then parent company. For cooperatives, investor-owned utilities, and subdivisions that generate less than 4 billion kWh of electricity annually but may be part of a large entity, additional research on power sales, operating revenues, and other business activities was performed to make a final determination regarding size.

After considering the economic impacts of this final rule on small entities, EPA certifies that this action will not have a significant economic impact on a substantial number of small entities (No SISNOSE). This certification is based on the economic impact of this final rule to all affected small entities across all industries affected. EPA assessed the potential impact of this action on small entities and found that there are about 660 potentially affected small units (*i.e.*, greater than 25 MW and generating less than 4 million MWh) out of 3,625 existing units in the Transport Rule states. The majority of these EGUs are owned by entities that do not meet the small entity definition. The remaining 271 of the 660 EGUs are owned by 108 potentially affected small entities and are likely to be affected by this rule. EPA estimates that 24 of the 108 identified small entities will have annualized costs greater than 1 percent of their revenues, and the other 84 are projected to incur costs less than 1 percent of revenues. Eleven small entities out of 108—approximately 10 percent—are estimated to have annualized costs greater than 3 percent of their revenues. EPA has lessened the impacts for small entities by excluding all units smaller than 25 MWe. This exclusion, in addition to the exemptions for cogeneration units and solid waste incineration units, eliminates the burden of higher costs for a substantial number of small entities located in the Transport Rule states.

While the total number of small entities has increased compared to the proposal as a result of updated modeling and changes in geographic coverage, the number with compliance costs greater than 1 percent of revenues has fallen, and both the number and percentage of significantly impacted small entities (costs greater than 3 percent of revenues) are lower—now 10 percent compared to 17 percent in the proposal. The share of significantly impacted small entities has fallen because of updated modeling and the change in the allowance allocation methodology (see section VII.D for more information about allowance allocations).

Although this final rule will not have a significant economic impact on a substantial number of small entities, EPA nonetheless has tried to reduce the impact of this rule on small entities. In EPA's modeling, most of the cost impacts for these small entities and their associated units are driven by lower electricity generation relative to the base case. Specifically, two small units reduce their generation by significant amounts, driving the bulk of the costs for all small entities. Excluding these two units, one of the main drivers of small entity impacts is higher fuel costs, which the affected units would incur irrespective of whether they had to comply with this rule. In addition, EPA's decision to exclude units smaller than 25 MWe has already significantly reduced the burden on approximately 390 small entities.

For more information on the small entity impacts associated with the final rule, refer to the Regulatory Impact Analysis for this final rule, which can be found in the docket for this rule and on the Web site *http://www.epa.gov/airtransport*.

D. Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), 2 U.S.C. 1531–1538, requires federal agencies, unless otherwise prohibited by law, to assess the effects of their regulatory actions on state, local, and tribal governments, and the private sector. This rule contains a federal mandate that may result in expenditures of $100 million or more for state, local, and tribal governments, in the aggregate, or the private sector in any 1 year. Accordingly, EPA has prepared, under section 202 of the UMRA, a written statement which is summarized later.

Consistent with the intergovernmental consultation provisions of section 204 of the UMRA, EPA held consultations with the governmental entities affected by this rule during the proposal phase. Subsequently, EPA sent a letter to the ten Representative National Organizations to draw their attention to the Transport Rule Notice of Data Availability (NODA) on allowance allocations and other related matters and to invite their comments. During the NODA comment period, EPA participated in informational calls with the Environmental Council of the States (ECOS) and the National Governors Association to provide information about the NODA directly to state and local officials. There were no new concerns raised during these informational calls. In addition, EPA also conducted consultations with federally recognized tribes prior to finalizing this rule and invited them to comment on the allowance allocation NODA. EPA has added a new unit set-aside provision to this final rule specifically for EGUs constructed in Indian country to ensure allowances are available to tribes and tribal sovereignty is respected.

Consistent with section 205, EPA identified and considered a reasonable number of regulatory alternatives. In the proposal, EPA included three remedy options that it considered when developing this final rule: (1) The preferred remedy trading programs, (2) State Budgets/Intrastate Trading, and (3) Direct Controls. Moreover, section 205 allows EPA to adopt an alternative other than the least costly, most cost-effective, or least burdensome alternative if the Administrator publishes with the final rule an explanation why that alternative was not adopted.

EPA examined the potential economic impacts on state- and municipality-owned entities associated with this rulemaking based on assumptions of how the affected states will implement control measures to meet program requirements. Although EPA does not conclude that the requirements of the UMRA apply to the Transport Rule, these impacts have been calculated to provide additional understanding of the nature of potential impacts and additional information.

EPA has determined that this rule contains a federal mandate that may result in expenditures of $100 million or more in 1 year. EPA has determined that this rule contains no regulatory requirements that might significantly or uniquely affect small governments and that development of a small government plan under section 203 of the Act is not required. The costs of compliance will be borne predominately by sources in the private sector although a small number of sources owned by state and local governments may also be impacted. The requirements in this action do not distinguish EGUs based on ownership, either for those units that are included within the scope of the rule or for those units that are exempted by the generating capacity cut-off. Therefore, this rule is not subject to the requirements of section 203 of UMRA because it contains no regulatory requirements that might significantly or uniquely affect small governments.

E. Executive Order 13132: Federalism

This final rule does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132. The final rule primarily affects private industry, and does not impose significant economic costs on state or local governments. Thus, Executive Order 13132 does not apply to the final rule.

Although section 6 of Executive Order 13132 does not apply to the final rule, EPA did provide information to state and local officials during development of both the proposal and final rule. EPA sent a letter to the ten Representative National Organizations to draw their attention to the Transport Rule NODA on allowance allocations and other related matters and to invite their comments. Following that letter in early 2011, EPA participated in informational calls with the Environmental Council of the States (ECOS) and the National Governors Association to provide information about the NODA directly to state and local officials. There were no new concerns raised during these informational calls.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

Under Executive Order 13175 (65 FR 67249, November 9, 2000), EPA may not issue a regulation that has tribal implications, that imposes substantial direct compliance costs, and that is not required by statute, unless the federal government provides the funds necessary to pay the direct compliance costs incurred by tribal governments, or EPA consults with tribal officials early in the process of developing the proposed regulation and develops a tribal summary impact statement.

EPA has concluded that this action may have tribal implications if a new unit covered by the rule is built in Indian country. Additionally, tribes have a vested interest in how this final rule affects their air quality. However, it will neither impose substantial direct compliance costs on tribal governments, nor preempt tribal law. EPA consulted with tribal officials during the process of finalizing this regulation to permit them to have meaningful and timely input into its development.

EPA received comments on the proposed Transport Rule that the Agency did not properly conduct consultation during the proposal phase of the rulemaking process. In response to these comments, EPA sent a letter to all federally-recognized tribes in the country offering consultation. In addition, several commenters also noted that the Agency did not adequately consider opportunities for tribes to enter into any of the trading programs and, in particular, did not consider sovereignty issues when addressing how to distribute allowances to potential new units in Indian country. On January 7, 2011, EPA issued a NODA requesting comment on allocations for new units in Indian country, among other topics.

The Agency held a consultation call with three tribes on January 21, 2011. A follow-up call was held on February 4, 2011 with two of the three original tribes plus 13 additional tribes, as well as representatives from the National Tribal Air Association. In all ten tribes participated in these calls as consultation and six participated as information-sharing. EPA considered the additional input from these consultation and information calls, in conjunction with the public comments, in the development of the final rule. Accordingly, EPA created an Indian country new unit set-aside to specifically address tribes' concerns regarding the protection of tribal sovereignty in the distribution of allowances for new units in Indian country. *See* section VII.D.2 of this preamble for details on the Indian country set-aside for new units constructed in Indian country within states covered by the Transport Rule.

As required by section 7(a) of the Executive Order, EPA's Tribal Consultation Official has certified that the requirements of the Executive Order have been met in a meaningful and timely manner. A copy of the certification is included in the docket for this action.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

Executive Order 13045 (62 FR 19,885, April 23, 1997) applies to any rule that: (1) Is determined to be ''economically significant'' as defined under EO 12866, and (2) concerns an environmental health or safety risk that EPA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of this planned rule on children, and explain why this planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

This action is not subject to Executive Order 13045 because it does not involve decisions on environmental health or safety risks that may disproportionately affect children. EPA believes that the emission reductions from the strategies in this rule will further improve air quality and will further improve children's health. Analyses by EPA that show how the emission reductions from the strategies in this rule will further improve air quality and children's health can be found in the RIA for this rule.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

Executive Order 13211 (66 FR 28355, May 22, 2001) provides that agencies shall prepare and submit to the Administrator of the Office of Regulatory Affairs, OMB, a Statement of Energy Effects for certain actions identified as ''significant energy actions.'' Section 4(b) of Executive Order 13211 defines ''significant energy action'' as ''any action by an agency (normally published in the **Federal Register**) that promulgates or is expected to lead to the promulgation of a final rule or regulation, including notices of inquiry, advance notices of proposed rulemaking, and notices of proposed rulemaking: (1)(i) That is a significant regulatory action under Executive Order 12866 or any successor order, and (ii) is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (2) that is designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action.'' This rule is a significant regulatory action under Executive Order 12866, and this rule is likely to have a significant adverse effect on the supply, distribution, or use of energy. EPA prepared a Statement of Energy Effects for this action as follows.

Under the provisions of this rule, EPA projects that approximately 4.8 GW of additional coal-fired generation may be removed from operation by 2014. In practice, however, the units projected to be uneconomic to maintain may be ''mothballed,'' retired, or kept in service to ensure transmission reliability in certain parts of the grid. These units are predominantly small and infrequently-used generating units dispersed throughout the area affected by the rule. If current forecasts of either natural gas prices or electricity demand were revised in the future to be higher, that would create a greater incentive to keep these units operational.

EPA estimates that average retail electricity prices could increase in the

contiguous U.S. by about 1.7 percent in 2012 and 0.8 percent in 2014. This is generally less of an increase than often occurs with fluctuating fuel prices and other market factors. Related to this, EPA projects limited impacts on coal and gas prices. The average delivered coal price decreases by about 1.4 percent in 2012 and 0.9 percent in 2014 relative to the base case as a result of decreased coal demand and shifts in the type of coal demanded. EPA also projects that the electric power sector-delivered natural gas price will increase by about 0.3 percent over the 2012–2030 timeframe and that natural gas use for electricity generation will increase by approximately 200 billion cubic feet (BCF) by 2014. These impacts are well within the range of price variability that is regularly experienced in natural gas markets. Finally, under the Transport Rule, EPA projects that coal production for use by the power sector will increase above 2009 levels by 21 million tons in 2012 and a further 14 million tons in 2014, as opposed to 30 million tons in 2012 and a further 26 million tons in 2014 without the Transport Rule in place. The Transport Rule is not projected to impact production of coal for uses outside the power sector (*e.g.,* export, industrial sources), which represent approximately 6 percent of total coal production in 2009. EPA does not believe that this rule will have any other impacts (*e.g.,* on oil markets) that exceed the significance criteria.

EPA believes that a number of features of the rulemaking serve to reduce its impact on energy supply. First, the trading component of the Transport Rule provides flexibility to the power sector and enables industry to comply with the emission reduction requirements in the most cost-effective manner compared to the alternative remedy approaches on which EPA took comment in the proposal, thus minimizing overall costs and the ultimate impact on energy supply. Second, the more stringent budgets for SO_2 are set in two phases, providing adequate time for EGUs to install pollution controls. In addition, both the operational flexibility of trading and the ability to bank allowances for future years helps industry plan for and ensure reliability in the electrical system.

For more details concerning energy impacts, *see* the RIA for the Transport Rule.

I. National Technology Transfer Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law 104–113, 12(d) (15 U.S.C. 272 note) directs EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (*e.g.,* materials specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies. NTTAA directs EPA to provide Congress, through OMB, explanations when the Agency decides not to use available and applicable voluntary consensus standards. This rule will require all sources to meet the applicable monitoring requirements of 40 CFR part 75. Part 75 already incorporates a number of voluntary consensus standards. Consistent with the Agency's Performance Based Measurement System (PBMS), Part 75 sets forth performance criteria that allow the use of alternative methods to the ones set forth in Part 75. The PBMS approach is intended to be more flexible and cost effective for the regulated community; it is also intended to encourage innovation in analytical technology and improved data quality. At this time, EPA is not recommending any revisions to Part 75; however, EPA periodically revises the test procedures set forth in Part 75. When EPA revises the test procedures set forth in Part 75 in the future, EPA will address the use of any new voluntary consensus standards that are equivalent. Currently, even if a test procedure is not set forth in Part 75, EPA is not precluding the use of any method, whether it constitutes a voluntary consensus standard or not, as long as it meets the performance criteria specified; however, any alternative methods must be approved through the petition process under 40 CFR 75.66 before they are used.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order (EO) 12898 (59 FR 7629 (Feb. 16, 1994)) establishes federal executive policy on environmental justice. Its main provision directs federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority, low-income, and Tribal populations in the United States. During development of this final Transport Rule, EPA considered its impacts on low-income, minority, and tribal communities in several ways and provided multiple opportunities for these communities to meaningfully participate in the rulemaking process. The proposed Transport Rule included an analysis of its effects on these populations; this section describes additional analysis conducted since proposal, EPA's responses to key comments on environmental justice issues raised during the comment period, and the public outreach and comment opportunities for this rule.

A summary of the history, statutory authority, and key components of this final Transport Rule are described in the Executive Summary (section III) of this preamble. That section also summarizes a supplemental notice of proposed rulemaking (SNPR) that EPA is publishing to correct a procedural flaw by providing an opportunity for public comment on issues that arose from new analyses with updated inventories and modeling platforms.

Briefly, this final Transport Rule will reduce emissions of SO_2 and NO_X in 23 eastern and central states in 2012 and 2014 that contribute to annual and/or 24-hour $PM_{2.5}$ nonattainment or interfere with maintenance in downwind states. It will also reduce emissions of ozone-season NO_X in 20 eastern and central states in 2012 and 2014 that contribute to the 1997 ozone nonattainment or interfere with maintenance in downwind states. This rule is replacing an earlier rule (the 2005 Clean Air Interstate Rule (CAIR)) that was first vacated and then remanded to EPA by the U.S. Court of Appeals for the District of Columbia Circuit in 2008.

1. Consideration of Environmental Justice in the Transport Rule Development Process and Response to Comments

The effects of this final Transport Rule on the most highly exposed populations were integral in its development. This rule uses EPA's authority in CAA section 110(a)(2)(d) to reduce sulfur dioxide (SO_2) and (nitrogen oxides) NO_X pollution that significantly contributes to downwind $PM_{2.5}$ and ozone nonattainment or maintenance areas. As a result, the rule will reduce exposures to ozone and $PM_{2.5}$ in the most-contaminated areas (*i.e.,* areas that are not meeting the 1997 ozone and 1997 and 2006 $PM_{2.5}$ National Ambient Air Quality Standards (NAAQS)). In addition, the rule separately identifies both nonattainment areas and maintenance areas (maintenance areas are those that are projected to meet the NAAQS but that, based on past data, are in danger of

exceeding the standards in the future). This requirement reduces the likelihood that any areas close to the level of the standard will exceed the current health-based standards in the future.

This final Transport Rule implements these emission reductions using an emission trading mechanism with assurance provisions for power plants. EPA recognizes that many environmental justice communities have voiced concerns in the past about emission trading and the potential for any emission increases in any location. EPA also received several comments on this issue during the comment period for the proposed Transport Rule. As described below, we believe this final rule addresses the concerns raised on this issue during the comment period.

$PM_{2.5}$ and ozone pollution from power plants have both local and regional components: Part of the pollution in a given location—even in locations near emission sources—is due to emissions from nearby sources and part is due to emissions that travel hundreds of miles and mix with emissions from other sources. Therefore, in many instances the exact location of the upwind reductions does not affect the levels of air pollution downwind.

It is important to note that the section of the Clean Air Act providing authority for this rule, section 110(a)(2)(D), unlike some other provisions, does not dictate levels of control for particular facilities. As at least one commenter noted, none of the alternatives put forward by EPA in the proposed rule could have ensured no emission increases at any facility. Under the direct control alternative, the emission rate for each facility would have been limited but each facility could emit more by increasing their power output in order to meet electricity reliability or other goals. Under the intrastate trading option, sources could not trade allowances with sources in other states but individual facilities within each state could have increased their emissions as long as another facility in the state had decreased theirs at some time.

The final Transport Rule allows sources to trade allowances with other sources in the same or different states while firmly constraining any emissions shifting that may occur by requiring a strict emission ceiling in each state (the budget plus variability limit). In addition, assurance provisions in the rule outline the allowance surrender penalties for failing to meet the budget plus variability limits; there are additional allowance penalties as well as financial penalties for failing to hold an adequate number of allowances to cover emissions. This approach eliminates emissions in each state that significantly contribute to downwind nonattainment or maintenance areas, while allowing power companies to adjust generation as needed and ensure that the country's electricity needs will continue to be met. EPA maintains that the existence of these assurance provisions, including the penalties imposed when triggered, will ensure that state emissions will stay below the level of the budget plus variability limit.

In addition, all sources must hold enough allowances to cover their emissions. Therefore, if a source emits more than its allocation in a given year, either another source must have used less than its allocation and be willing to sell some of its excess allowances, or the source itself had emitted less than its allocation in one or more previous years (*i.e.,* banked allowances for future use).

In summary, the final remedy addresses commenter concerns about localized hot spots and reduces ambient concentrations of pollution where they are most needed by sensitive and vulnerable populations by: Considering the science of ozone and $PM_{2.5}$ transport to set strict state budgets to eliminate significant contributions to ozone and $PM_{2.5}$ nonattainment and maintenance (*i.e.,* the most polluted) areas; implementing air quality-assured trading; requiring any emissions above the level of the allocations to be offset by emission decreases; and imposing strict penalties for sources that contribute to a state's exceedance of its budget plus variability limit. In addition, it is important to note that nothing in this final rule allows sources to violate their title V permit or any other federal, state, or local emissions or air quality requirements.

EPA received comments from several tribal commenters regarding the lack of allocations in the proposal to new units in Indian Country. EPA responded to these comments by changing the allocation approach in the final rule to create Indian country new unit set-asides. In order to protect tribal sovereignty, these set-asides will be managed and distributed by the federal government regardless of whether the Transport Rule in the adjoining or surrounding state is implemented through a FIP or SIP. While there are no existing power plants in Indian country covered by this Transport Rule, the Indian country set-asides will ensure that any future new units built in Indian country will be able to get the necessary allowances. A full discussion of the Indian country new unit set-asides can be found in section VII.D.2.

EPA also received several comments during the comment period from individuals and groups requesting additional emission reductions to further protect sensitive and vulnerable communities. While EPA has adjusted the emission requirements somewhat in the final rule to accommodate revised data and updated modeling results, we are finalizing emission reductions very similar to the level in the proposal. This is because EPA believes that the emission reductions required by this final rule are appropriate to meet the statutory requirements of CAA section 110(a)(2)(d) and respond to the concerns raised by the Court's opinion in *North Carolina* that remanded CAIR to the Agency in 2008.

In addition, it is important to note that CAA section 110(a)(2)(d), which addresses transport of criteria pollutants between states, is only one of many provisions of the CAA that provide EPA, states, and local governments with authorities to reduce exposure to ozone and $PM_{2.5}$ in communities. These legal authorities work together to reduce exposure to these pollutants in communities, including for minority, low-income, and tribal populations, and provide substantial health benefits to both the general public and sensitive sub-populations.

For example, the recently-proposed Mercury and Air Toxics Standards (MATS) would also result in significant reductions in SO_2 emissions and provide significant health and environmental benefits nationwide. This and other actions described in section III will have substantial and long-term effects on both the U.S. power industry and on communities currently breathing dirty air. Therefore, we anticipate significant interest in many, if not most, of these actions from environmental justice communities, among many others. EPA will continue to provide multiple opportunities for comment on these actions, similar to the opportunities provided during the comment process for this rule, detailed at the end of this section. We encourage environmental justice communities to review and comment on these actions.

2. Potential Environmental and Public Health Impacts Among Populations Susceptible or Vulnerable to Air Pollution

EPA expects that this final rule will provide significant health and environmental benefits to, among others, people with asthma, people with heart disease, and people living in ozone or $PM_{2.5}$ nonattainment areas. EPA's analysis of the effects of this rule, including information on air quality changes and the resulting health benefits, is presented both in section

VIII of this preamble and in the Regulatory Impact Analysis (RIA) for this rule. These documents can be accessed through the rule docket No. EPA–HQ–OAR–2009–0491 and from the main EPA webpage for the rule at *http://www.epa.gov/airtransport.*

EPA considered several aspects of the effects of the Transport Rule on minority, low-income, and tribal populations. These included: amount of emission reductions and where they take place (including any potential for areas of increased emissions); the changes in ambient concentrations across the affected area; the estimated health benefits; and how the estimated health benefits are distributed among different populations, including those susceptible and vulnerable to air pollution health impacts.

a. Emission Reductions

EPA's emission modeling data indicate that implementation of the Transport Rule will substantially reduce SO_2 emissions from electric generating units (EGUs). As noted in section III, emissions in states covered by the Transport Rule will decrease by 6.4 million tons (73 percent) in 2014 compared to 2005 (the year the Clean Air Interstate Rule was finalized). Emissions are also projected to decrease when compared to the base case (the base case estimates emissions in 2014 in the absence of this rule or the Clean Air Interstate Rule it is replacing). EPA estimates that SO_2 emissions in 2014 in covered states will be 3.9 million tons lower (62 percent lower) compared to the base case.

EPA also assessed emission changes in states not covered by the Transport Rule. Emissions in the states not covered by the Transport Rule are also projected to decrease substantially compared to 2005 levels; in 2014 SO_2 emissions are projected to be approximately 430,000 tons lower (30 percent lower) than in 2005.

As described in section VI.C, EPA's modeling does project that some states not covered by any of the fine particle control programs in the final Transport Rule may experience increases of SO_2 emissions greater than 5,000 tons compared to the base case. These states are Arkansas, Colorado, Louisiana, Montana, and Wyoming. These emission increases are the result of forecasted changes in operation of power plant units outside of the Transport Rule states due to the interconnected nature of the utility grid (*i.e.,* shifts in generation of electricity to sources outside the Transport Rule states) or influence of the rule on the market for lower sulfur coal. For example, EPA projects that the rule will raise demand for lower sulfur coal in the states covered by the Transport Rule for $PM_{2.5}$ (thereby raising its price), which may lead sources in states not covered for $PM_{2.5}$ to choose higher-sulfur coals that increase SO_2 emissions in those states.

EPA is not requiring SO_2 emission reductions in these states under this rule because our modeling indicates none of these states' contributions would increase enough to cause them to meet or exceed the thresholds described in section V.D for either of the $PM_{2.5}$ standards. EPA's authority under CAA section 110(a)(2)(d) is limited to addressing this significant contribution to nonattainment and interference with maintenance. However, as noted above, EPA has recently proposed the Mercury and Air Toxics Standards that will apply nationwide and result in substantial additional SO_2 emission reductions, including in states not covered by the Transport Rule.

EPA's emission modeling data indicates that ozone-season NO_X emissions from EGUs in states covered by the Transport Rule will be approximately 340,000 tons lower (36 percent lower) in 2014 than they were in 2005. Emissions in states not covered by the Transport Rule are also expected to decrease somewhat (approximately 82,000 tons or 25 percent). EPA's modeling does project that two states (California and Pennsylvania) may experience increases of NO_X emissions greater than 5,000 tons in 2014 compared to 2005 levels. California is not covered by the Transport Rule; in Pennsylvania, 2005 was an unusually low-emitting year and sources are projected to increase their heat input slightly (usually meaning they are generating more power) after the rule takes effect.

EPA also assessed the expected changes in seasonal NO_X emissions with implementation of the Transport Rule compared to the base case (*i.e.,* without the rule) in 2014. The modeling indicates ozone-season NO_X emissions from EGUs in both covered states and non-Transport Rule states under this rule will be lower than they would have been in 2014 in the base case. Ozone-season NO_X emissions in covered states are projected to decrease by approximately 74,000 tons (11 percent); ozone-season NO_X emissions in non-Transport Rule states are projected to decrease by approximately 10,000 tons (4 percent). Both California and Pennsylvania are projected to have lower NO_X emissions in 2014 under the Transport Rule as compared to the base case. In addition, EPA anticipates that additional upcoming actions, including likely additional interstate transport reductions to help states attain the upcoming new ozone NAAQS, will result in significant additional NO_X reductions in the future.

b. Air Quality Improvements

EPA assessed the air quality metrics (called ''design values'') for each NAAQS addressed in this rule: 24-hour $PM_{2.5}$, annual $PM_{2.5}$, and ozone. We then compared these metrics for the final rule to the same metrics in the recent past (2003–2007 average ambient air quality) and for the 2014 base case to assess improvements in air quality.

EPA's modeling indicates that there will be significant improvements in air quality as measured by the 24-hour $PM_{2.5}$ standard. Throughout much of the eastern half of the U.S., 24-hour $PM_{2.5}$ design values are projected to improve more than 10 $\mu g/m^3$ compared to the 2003–2007 average levels. In addition, compared to the 2014 base case levels, we project the Transport Rule will result in improvements of 8–10 $\mu g/m^3$ in a broad swath of states stretching from far southwestern New York through Pennsylvania, Ohio, West Virginia, Maryland, Indiana, southern Illinois, eastern Missouri, eastern Arkansas, Kentucky, Tennessee, northern Alabama, and northern Mississippi. Isolated areas of Virginia and northern New Jersey are also expected to see this level of improvement. Improvements of 2–6 $\mu g/m^3$ are projected in surrounding states stretching from New England and New York to Minnesota, Iowa, the far eastern edge of Nebraska, Missouri, eastern Kansas, Oklahoma, Texas, the Gulf of Mexico states, and the states bordering the Atlantic Ocean from Florida to New Hampshire.

EPA modeling indicates that air quality as measured by the annual $PM_{2.5}$ design value will also improve. Improvements range from 2 to over 4 $\mu g/m^3$ compared to the 2003–2007 average levels throughout the eastern half of the U.S. Annual $PM_{2.5}$ air quality with the Transport Rule is also projected to improve compared to the 2014 base case levels. The largest improvements of up to 4 $\mu g/m^3$ are projected to occur in northern West Virginia and a small area in northwestern Tennessee. Improvements of up to 3 $\mu g/m^3$ are projected for portions of the Ohio River valley areas of southwestern Pennsylvania, Ohio, West Virginia, Kentucky, central Tennessee, and southern Indiana. Improvements of up to 2 $\mu g/m^3$ are projected to take place in a ring of surrounding states including all or most of New York, Michigan, Indiana,

Illinois, Missouri, Arkansas, the far eastern edge of Oklahoma, the northeastern edge of Texas, Louisiana, Mississippi, Alabama, Georgia, South Carolina, North Carolina, Virginia, Maryland, Delaware, Pennsylvania, and New Jersey. Smaller improvements are projected in New England, Wisconsin, the Plains states, southeastern New Mexico, and Florida.

EPA modeling indicates that ozone air quality will improve greatly (10–12 ppb or more) across much of the eastern U.S. between the average levels seen in 2003–2007 and implementation of the Transport Rule. Most of the improvements take place in the base case; that is, they are the result of federal and state programs other than the Transport Rule. However, ozone air quality is projected to improve somewhat as a direct result of the Transport Rule. Improvements in ozone design values compared to the base case of more than 1 ppb are projected for portions of Florida, eastern Oklahoma, and areas along the upper reaches of the Ohio River. In addition, improvements in ozone design values of up to 1 ppb are projected over a wide area across the eastern U.S. from New England to Texas and north to Minnesota. Improvements are also projected in north-central Colorado.

EPA's modeling does indicate small increases in annual $PM_{2.5}$ air quality design values in the final rule compared to the 2014 base case in two counties outside of the Transport Rule states: one county in northern Colorado and one county in eastern Montana. As noted above in the section on emissions, these increases are likely the result of forecasted changes in electricity generation due to the interconnected nature of both the utility grid and the national low-sulfur coal market. It should be noted that 2003–2007 average air quality levels in these counties are well below the level of the NAAQS. In addition, other actions, including federal rules such as the recently proposed Mercury and Air Toxics Standards, state, or local actions may also improve air quality in these areas over the next few years.

As described in section VIII.B, EPA anticipates that this final rule will reduce, but not eliminate, the number of nonattainment and maintenance areas for the 1997 ozone and $PM_{2.5}$ and 2006 $PM_{2.5}$ NAAQS. As noted above, ozone and $PM_{2.5}$ concentrations are the result of both local emissions and long-range transport of pollution. Even when the significant contributions of upwind states are fully eliminated, additional emission reductions within the nonattainment area and/or the downwind state will be needed for some areas to attain and maintain the NAAQS.

c. Estimated Health Benefits

This rule reduces concentrations of $PM_{2.5}$ and ozone pollution. Exposure to these pollutants can cause, or contribute to, adverse health effects that affect many minority, low-income, and tribal individuals and communities. $PM_{2.5}$ and ozone are particularly (but not exclusively) harmful to children, the elderly, and people with existing heart and lung diseases, including asthma. Exposure to these pollutants can cause premature death and trigger heart attacks, asthma attacks in those with asthma, chronic and acute bronchitis, emergency room visits and hospitalizations, as well as milder illnesses that keep children home from school and adults home from work. High rates of heart disease (*e.g.,* high blood pressure) [123] and asthma [124] exist in many environmental justice communities, making these populations more susceptible to air pollution health impacts. In addition, many individuals in these communities lack access to high quality health care to treat these illnesses.[125]

We estimate that in 2014 the PM-related annual benefits of the final rule include approximately 13,000 to 34,000 fewer premature mortalities, 8,700 fewer cases of chronic bronchitis, 15,000 fewer non-fatal heart attacks, 8,500 fewer hospitalizations (for respiratory and cardiovascular disease combined), 10 million fewer days of restricted activity due to respiratory illness, and approximately 1.7 million fewer lost work days. We also estimate substantial health improvements for children in the form of fewer cases of upper and lower respiratory illness, acute bronchitis, and asthma attacks.

Ozone health-related benefits are expected to occur during the summer ozone season (usually ranging from May to September in the eastern U.S.). Based upon modeling for 2014, annual ozone related health benefits are expected to include (in addition to the PM-related benefits above) between 27–120 fewer premature mortalities, 240 fewer hospital admissions for respiratory illnesses in children and older adults, 86 fewer emergency room admissions for asthma, 160,000 fewer days with restricted activity levels, and 51,000 fewer ''school absence'' days when children are absent from school due to illnesses. When adding the PM and ozone-related mortalities together, we find that the final rule will yield between 13,000 and 34,000 fewer premature mortalities.

It should be noted that, as discussed in the RIA, there are other benefits to the emission reductions discussed here, including many other health benefits beyond reducing the risk of premature mortality. Additional benefits of reducing emissions of SO_2 include improved visibility, reduced acidification of lakes and streams, and reduced mercury methylation in contaminated waters; additional benefits of NO_X reductions include improved visibility, reduced acidification of lakes and streams, and reduced coastal eutrophication.

d. Distribution of Health Benefits Among Different Populations

EPA also estimated the $PM_{2.5}$ mortality risks according to race, income, and educational attainment before and after implementation of this Transport Rule. We used premature mortality for this analysis for several reasons: It is the most serious health effect of exposure to $PM_{2.5}$, and EPA has access to nationwide incidence and demographic data at an appropriate scale to conduct this type of analysis. EPA included educational attainment in this assessment because research on the effects of $PM_{2.5}$ has found that educational attainment is inversely related to the risk of all-cause mortality. That is, populations with lower levels of education (in particular, less than grade 12) experience higher rates of $PM_{2.5}$ mortality. Krewski and colleagues [126] note in their analysis of this relationship that the level of education attainment is likely to be a surrogate for the effects of complex socioeconomic processes (including factors such as race and income) on mortality.

In the first step of the analysis, we estimated baseline (2005) $PM_{2.5}$ mortality risk by race (White, Black, Asian, Native American) among people living in the counties with the highest (top 5 percent) $PM_{2.5}$ mortality risk. We

Extended follow-up and spatial analysis of the American Cancer Society study linking particulate air pollution and mortality. HEI Research Report, 140, 2009; Health Effects Institute, Boston, MA.

also estimated baseline $PM_{2.5}$ mortality risk by race among people living in the counties with both the highest (top 5 percent) poverty rate and the highest (top 5 percent) $PM_{2.5}$ mortality risk in 2005. And, we estimated the baseline (2005) $PM_{2.5}$ mortality risk by educational attainment for people living in the highest $PM_{2.5}$ mortality risk counties. In the second step, we estimated the changes in risk for different races among the people living in these ''high-risk'' and ''high risk and high-poverty'' counties resulting from implementation of other existing rules in 2014 and from implementation of just the Transport Rule in 2014. Finally, in the third step, we compared the effects of the Transport Rule by race in the high-risk and high risk/high-poverty counties with the effects on people (by race) living in all other counties.

In 2005, people living in the highest-risk counties and in the high risk/high poverty counties had substantially greater risks of $PM_{2.5}$-related death than people living in the other 95 percent of counties. This was true regardless of race: The difference among races in both groups of counties was very small and dwarfed by the large difference between the two groups of counties for all races. For educational attainment, in contrast, our analysis found that people with less than high school education had significantly greater risks from $PM_{2.5}$ mortality than people with a greater than high school education. This was especially true for people living in the highest-risk counties, but also held true for people living in all other counties. In summary, in 2005, having less than a high school or high school education, living in one of the poorest counties, and living in a high air pollution risk county are associated with higher $PM_{2.5}$ mortality risk; race is not.

Our analysis of the effects of the Transport Rule on this underlying exposure pattern finds that the rule will significantly reduce the $PM_{2.5}$ mortality among all populations of different races living throughout the U.S. compared to both 2005 and 2014 pre-rule (*i.e.,* base case) levels. No group will experience any increases in $PM_{2.5}$ related deaths as a result of implementing the Transport Rule.

The analysis indicates that the populations with the largest improvement (*i.e.,* largest decline) in $PM_{2.5}$ mortality risk as a result of the Transport Rule in 2014 (compared to the base case in 2014) are people living in the highest-risk counties. Among these counties, the largest improvements are for people with less than high school or high school education. These reductions in risk within the highest-risk counties, as well as the reductions in risk within the other 95 percent of counties, are distributed among populations of different races fairly evenly. Therefore, there is no indication that people of particular race receive a greater benefit (or smaller benefit) than others.

The analysis indicates that people living in the high risk/high poverty counties will experience larger improvements in risk from the Transport Rule compared to their counterparts in the other counties. This result suggests that the Transport Rule is providing the greatest risk reduction improvements among counties containing the poorest, and highest risk, populations. There is also little difference in the improvement in risk among races; in other words, people in the high risk/high poverty counties experience the same improvement in risk regardless of race.

The analysis also indicates that this rule, in conjunction with the implementation of existing or proposed rules (*e.g.,* the proposed Mercury and Air Toxics Standards), will reduce the disparity in risk between the highest-risk counties and the other 95 percent of counties for all races and educational levels. In addition, implementation of this Transport Rule and other rules will, together, reduce risks in the poorest and highest risk counties to the approximate level of risk for the rest of the counties before implementation. This analysis is presented in more detail in the RIA for this rule which is available in the rule docket No. EPA–HQ–OAR–2009–0491 and from the main EPA webpage for the rule at *http://www.epa.gov/airtransport.*

3. Meaningful Public Participation

EPA defines ''Environmental Justice'' to include meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies. To promote meaningful involvement, EPA developed a communication and outreach strategy to ensure that interested communities had access to the proposed Transport Rule, were aware of its content, and had an opportunity to comment during the comment period. These efforts are summarized below.

As EPA began considering approaches to address the court remand of the 2005 Clean Air Interstate Rule, long before the rule was proposed, the agency also began gathering input from a large range of stakeholders. In the spring of 2009, EPA held a series of listening sessions to gather information and perspectives from stakeholders prior to the formal start of the rulemaking process. These stakeholders included a number of environmental groups who requested that EPA consider several potential environmental justice issues during development of this rule. In addition, many environmental justice organizations were represented at a November 2009 EPA-Health and Human Services White House Stakeholder Briefing titled, ''The Public Health Benefits of Energy Reform'' in which EPA discussed our intention to propose this rule in the spring of 2010 and participants had the opportunity to respond. Finally, EPA notified Indian Tribes of our intent to propose this rule in the fall of 2009 during a regularly scheduled meeting to update the National Tribal Air Association members of upcoming EPA policies and regulations and to receive input from them on the effects of these efforts in Indian country. These were not opportunities for stakeholders to comment on the specifics of the proposal, as they took place prior to its development, but they provided valuable information that EPA used in developing the proposal.

Just after the rule was proposed in July 2010, EPA presented a summary of information related to the proposed Transport Rule at the National Environmental Justice Advisory Council (NEJAC) meeting in Washington, DC, and responded to questions from NEJAC members regarding the proposed rule. EPA also solicited suggestions for how to engage environmental justice communities during the rule comment period.

During the public comment period, EPA held public hearings in Chicago, Philadelphia, and Atlanta. Each hearing was advertised by EPA through a variety of products targeted to general audiences (*e.g.,* fact sheets, press release, slide presentation, etc.); on EPA's environmental justice listserve; and by non-profit organizations (*e.g.,* American Lung Association). The public hearings were held in public buildings (*i.e.,* no formal identification required to enter or to speak) and were open for 11 hours (9 a.m.–8 p.m.) to accommodate commenters with various work schedules. All three hearings were well-attended by members of the general public. During hearing breaks, EPA staff spent time talking with individuals, including those representing environmental justice organizations or communities, to understand their perspectives in greater detail. As noted above, several commenters at each hearing made comments related to the need to protect communities living near power plants and the most vulnerable

individuals. Some of these commenters specifically mentioned environmental justice; others mentioned issues often of concern to environmental justice communities, such as hot spots, interest in additional emission reductions and greater environmental protection, and concern over the effects of the rule on the most sensitive and vulnerable populations.

In September 2010, during the comment period, EPA held a webinar for EJ communities on the proposed Transport Rule. A presentation tailored for an audience of environmental justice, community, and tribal representatives was specifically designed for this webinar. It was sent to registered participants beforehand and put on the Transport Rule webpage, where it remains posted. The presentation included both information on the context of the rule, plain language information describing the rule itself, and directions on how to comment on the rule.

EPA staff made a short presentation and answered questions about the Transport Rule on a standing bi-monthly community conference call targeted to environmental justice and tribal representatives and organizations. In addition, at the fall 2010 NEJAC meeting in Kansas City, Missouri, EPA provided details of the proposed Transport Rule as part of a larger discussion of a sector-based approach to utility regulation.

Regarding tribal consultation, EPA sent letters to all 565 federally-recognized Tribes in the country offering consultation on the proposed Transport Rule. In addition, the January 7 NODA on allowance allocation methodologies specifically requested comment on allocating allowances to new units in Indian Country. EPA held two consultation and information-sharing calls with 16 interested Tribes in late January and early February 2011. Tribes participating on these consultation and information calls provided comments on the proposed rule and the allowance allocation NODA. As noted above, this additional input from the consultation process was taken into account in the development of the final rule. *See* Section XII.F for more information on tribal consultation.

4. Summary

EPA believes that the vast majority of communities and individuals in areas covered by this rule, including numerous low-income, minority, and tribal individuals and communities in both rural areas and inner cities in the eastern and central U.S., will see significant improvements in air quality and resulting improvements in health. EPA's assessment of the effects of the proposed and final Transport Rules on these communities included: (a) The structure of the rule and responses to comments received on issues specific to these communities; (b) expected SO_2 and NO_X emission reductions; (c) expected $PM_{2.5}$ and ozone air quality improvements; (d) expected health benefits, including asthma and other health effects of particular concern for environmental justice communities; and (e) a quantitative assessment of the expected socioeconomic distribution of a key health benefit (reduction in premature mortality). All of these analyses indicate large health and environmental benefits for these communities; none shows evidence of adverse effects. As a result, EPA concludes that we do not expect disproportionately high and adverse human health or environmental effects on minority, low-income, or tribal populations in the United States as a result of implementing this final Transport Rule.

K. Congressional Review Act

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is a ''major rule'' as defined by 5 U.S.C. 804(2). This rule will be effective October 7, 2011.

L. Judicial Review

Petitions for judicial review of this action must be filed in the United States Court of Appeals for the District of Columbia Circuit by October 7, 2011. Section 307(b)(1) of the CAA indicates which Federal Courts of Appeal have venue for petitions of review of final actions by EPA. This section provides, in part, that petitions for review must be filed in the Court of Appeals for the District of Columbia Circuit if (i) the agency action consists of ''nationally applicable regulations promulgated, or final action taken, by the Administrator,'' or (ii) such action is locally or regionally applicable, if ''such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination.''

Any final action related to the Transport Rule is ''nationally applicable'' within the meaning of section 307(b)(1). Through this rule, EPA interprets section 110 of the CAA, a provision which has nationwide applicability. In addition, the Transport Rule applies to 27 States. The Transport Rule is also based on a common core of factual findings and analyses concerning the transport of pollutants between the different states subject to it. For these reasons, the Administrator also is determining that any final action regarding the Transport Rule is of nationwide scope and effect for purposes of section 307(b)(1). Thus, pursuant to section 307(b) any petitions for review of final actions regarding the Transport Rule must be filed in the Court of Appeals for the District of Columbia Circuit within 60 days from the date final action is published in the **Federal Register**.

Filing a petition for reconsideration of this action does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed and shall not postpone the effectiveness of such rule or action. In addition, pursuant to CAA section 307(b)(2) this action may not be challenged later in proceedings to enforce its requirements.

In addition, this action is subject to the provisions of section 307(d). CAA section 307(d)(1)(B) provides that section 307(d) applies to, among other things, to ''the promulgation or revision of an implementation plan by the Administrator under CAA section 110(c)'' (42 U.S.C. 7407(d)(1)(B)). The Agency has complied with procedural requirements of CAA section 307(d) during the course of this rulemaking.

List of Subjects

40 CFR Part 51

Administrative practice and procedure, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen oxides, Ozone, Particulate matter, Regional haze, Reporting and recordkeeping requirements, Sulfur dioxide.

40 CFR Part 52

Administrative practice and procedure, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen

oxides, Ozone, Particulate matter, Regional haze, Reporting and recordkeeping requirements, Sulfur dioxide.

40 CFR Part 72

Acid rain, Administrative practice and procedure, Air pollution control, Electric utilities, Incorporation by reference, Intergovernmental relations, Nitrogen oxides, Reporting and recordkeeping requirements, Sulfur dioxide.

40 CFR Part 78

Acid rain, Administrative practice and procedure, Air pollution control, Electric utilities, Intergovernmental relations, Nitrogen oxides, Reporting and recordkeeping requirements, Sulfur dioxide.

40 CFR Part 97

Administrative practice and procedure, Air pollution control, Electric utilities, Nitrogen oxides, Reporting and recordkeeping requirements, Sulfur dioxide.

Dated: July 6, 2011.

Lisa P. Jackson,

Administrator.

For the reasons set forth in the preamble, parts 51, 52, 72, 78, and 97 of chapter I of title 40 of the Code of Federal Regulations are amended as follows:

PART 51—[AMENDED]

■ 1. The authority citation for part 51 continues to read as follows:

Authority: 23 U.S.C. 101; 42 U.S.C. 7401–7671q.

§ 51.121 [Amended]

■ 2. In § 51.121 paragraph (r)(2) is amended by removing the words ''§ 51.123(bb)'' and adding, in their place, the words ''§ 51.123(bb) with regard to an ozone season that occurs before January 1, 2012''.

■ 3. Section 51.123 is amended by adding a new paragraph (ff) to read as follows:

§ 51.123 Findings and requirements for submission of State implementation plan revisions relating to emissions of oxides of nitrogen pursuant to the Clean Air Interstate Rule.

* * * * *

(ff) Notwithstanding any provisions of paragraphs (a) through (ee) of this section, subparts AA through II and AAAA through IIII of part 96 of this chapter, subparts AA through II and AAAA through IIII of part 97 of this chapter, and any State's SIP to the contrary:

(1) With regard to any control period that begins after December 31, 2011, the Administrator:

(i) Rescinds the determination in paragraph (a) of this section that the States identified in paragraph (c) of this section must submit a SIP revision with respect to the fine particles ($PM_{2.5}$) NAAQS and the 8-hour ozone NAAQS meeting the requirements of paragraphs (b) through (ee) of this section; and

(ii) Will not carry out any of the functions set forth for the Administrator in subparts AA through II and AAAA through IIII of part 96 of this chapter, subparts AA through II and AAAA through IIII of part 97 of this chapter, or in any emissions trading program provisions in a State's SIP approved under this section;

(2) The Administrator will not deduct for excess emissions any CAIR NO_X allowances or CAIR NO_X Ozone Season allowances allocated for 2012 or any year thereafter;

(3) By November 7, 2011, the Administrator will remove from the CAIR NO_X Allowance Tracking System accounts all CAIR NO_X allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X allowances will be required with regard to emissions or excess emissions for such control periods; and

(4) By November 7, 2011, the Administrator will remove from the CAIR NO_X Ozone Season Allowance Tracking System accounts all CAIR NO_X Ozone Season allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X Ozone Season allowances will be required with regard to emissions or excess emissions for such control periods.

■ 4. Section 51.124 is amended by adding a new paragraph (s) to read as follows:

§ 51.124 Findings and requirements for submission of State implementation plan revisions relating to emissions of sulfur dioxide pursuant to the Clean Air Interstate Rule.

* * * * *

(s) Notwithstanding any provisions of paragraphs (a) through (r) of this section, subparts AAA through III of part 96 of this chapter, subparts AAA through III of part 97 of this chapter, and any State's SIP to the contrary:

(1) With regard to any control period that begins after December 31, 2011, the Administrator:

(i) Rescinds the determination in paragraph (a) of this section that the States identified in paragraph (c) of this section must submit a SIP revision with respect to the fine particles ($PM_{2.5}$) NAAQS meeting the requirements of paragraphs (b) through (r) of this section; and

(ii) Will not carry out any of the functions set forth for the Administrator in subparts AAA through III of part 96 of this chapter, subparts AAA through III of part 97 of this chapter, or in any emissions trading program in a State's SIP approved under this section; and

(2) The Administrator will not deduct for excess emissions any CAIR SO_2 allowances allocated for 2012 or any year thereafter.

§ 51.125 [Reserved]

■ 5. Section 51.125 is removed and reserved.

PART 52—[AMENDED]

■ 6. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401, *et seq.*

Subpart A—General Provisions

■ 7. Section 52.35 is amended by adding a new paragraph (f) to read as follows:

§ 52.35 What are the requirements of the Federal Implementation Plans (FIPs) for the Clean Air Interstate Rule (CAIR) relating to emissions of nitrogen oxides?

* * * * *

(f) Notwithstanding any provisions of paragraphs (a) through (d) of this section, subparts AA through II and AAAA through IIII of part 97 of this chapter, and any State's SIP to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions in paragraphs (a) through (d) of this section relating to NO_X annual or ozone season emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AA through II and AAAA through IIII of part 97 of this chapter;

(2) The Administrator will not deduct for excess emissions any CAIR NO_X allowances or CAIR NO_X Ozone Season allowances allocated for 2012 or any year thereafter;

(3) By November 7, 2011, the Administrator will remove from the CAIR NO_X Allowance Tracking System accounts all CAIR NO_X allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X allowances will be required with regard to emissions or excess emissions for such control periods; and

(4) By November 7, 2011, the Administrator will remove from the CAIR NO_X Ozone Season Allowance Tracking System accounts all CAIR NO_X Ozone Season allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X allowances will be required with regard to emissions or excess emissions for such control periods.

■ 8. Section 52.36 is amended by adding a new paragraph (e) to read as follows:

§ 52.36 What are the requirements of the Federal Implementation Plans (FIPs) for the Clean Air Interstate Rule (CAIR) relating to emissions of sulfur dioxide?

* * * * *

(e) Notwithstanding any provisions of paragraphs (a) through (c) of this section, subparts AAA through III of part 97 of this chapter and any State's SIP to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions of paragraphs (a) through (e) of this section relating to SO_2 emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AAA through III of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR SO_2 allowances allocated for 2012 or any year thereafter.

■ 9. Sections §§ 52.38 and 52.39 are added to subpart A to read as follows:

§ 52.38 What are the requirements of the Federal Implementation Plans (FIPs) under the Transport Rule (TR) relating to emissions of nitrogen oxides?

(a)(1) The TR NO_X Annual Trading Program provisions set forth in subpart AAAAA of part 97 of this chapter constitute the TR Federal Implementation Plan provisions that relate to annual emissions of nitrogen oxides (NO_X).

(2) The provisions of subpart AAAAA of part 97 of this chapter apply to the sources in the following States and Indian country located within the borders of such States: Alabama, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, West Virginia, and Wisconsin.

(3) Notwithstanding the provisions of paragraph (a)(1) of this section, a State listed in paragraph (a)(2) of this section may adopt and include in a SIP revision, and the Administrator will approve, as TR NO_X Annual allowance allocation provisions replacing the provisions in § 97.411(a) of this chapter with regard to the State and the control period in 2013, a list of TR NO_X Annual units and the amount of TR NO_X Annual allowances allocated to each unit on such list, provided that the list of units and allocations meets the following requirements:

(i) All of the units on the list must be units that are in the State and commenced commercial operation before January 1, 2010;

(ii) The total amount of TR NO_X Annual allowance allocations on the list must not exceed the amount, under § 97.410(a) of this chapter for the State and the control period in 2013, of TR NO_X Annual trading budget minus the sum of the new unit set-aside and Indian country new unit set-aside;

(iii) The list must be submitted electronically in a format specified by the Administrator; and

(iv) The SIP revision must not provide for any change in the units and allocations on the list after approval of the SIP revision by the Administrator and must not provide for any change in any allocation determined and recorded by the Administrator under subpart AAAAA of part 97 of this chapter;

(v) Provided that:

(A) By October 17, 2011, the State must notify the Administrator electronically in a format specified by the Administrator of the State's intent to submit to the Administrator a complete SIP revision meeting the requirements of paragraph (a)(3)(i) through (iv) of this section by April 1, 2012; and

(B) The State must submit to the Administrator a complete SIP revision described in paragraph (a)(3)(v)(A) of this section by April 1, 2012.

(4) Notwithstanding the provisions of paragraph (a)(1) of this section, a State listed in paragraph (a)(2) of this section may adopt and include in a SIP revision, and the Administrator will approve, regulations revising subpart AAAAA of part 97 of this chapter as follows and not making any other substantive revisions of that subpart:

(i) The State may adopt, as TR NO_X Annual allowance allocation or auction provisions replacing the provisions in §§ 97.411(a) and (b)(1) and 97.412(a) of this chapter with regard to the State and the control period in 2014 or any subsequent year, any methodology under which the State or the permitting authority allocates or auctions TR NO_X Annual allowances, and may adopt, in addition to the definitions in § 97.402 of this chapter, one or more definitions that shall apply only to terms as used in the adopted TR NO_X Annual allowance allocation or auction provisions, if such methodology—

(A) Requires the State or the permitting authority to allocate and, if applicable, auction a total amount of TR NO_X Annual allowances for any such control period not exceeding the amount, under §§ 97.410(a) and 97.421 of this chapter for the State and such control period, of the TR NO_X Annual trading budget minus the sum of the Indian country new unit set-aside and the amount of any TR NO_X Annual allowances already allocated and recorded by the Administrator.

(B) Requires, to the extent the State adopts provisions for allocations or auctions of TR NO_X Annual allowances for any such control period to any TR NO_X Annual units covered by § 97.411(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions for such control period (except allocations or results of auctions to such units of TR NO_X Annual allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator no later than the following dates:

Year of the control period for which TR NO_X annual allowances are allocated or auctioned	Deadline for submission of allocations or auction results to administrator
2014	June 1, 2013.
2015	June 1, 2013.
2016	June 1, 2014.
2017	June 1, 2014.
2018	June 1, 2015.
2019	June 1, 2015.
2020 and any year thereafter.	June 1 of the fourth year before the year of the control period.

(C) Requires, to the extent the State adopts provisions for allocations or auctions of TR NO_X Annual allowances for any such control period to any TR NO_X Annual units covered by §§ 97.411(b)(1) and 97.412(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions (except allocations or results of auctions to such units of TR NO_X Annual allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator by July 1 of the year of such control period.

(D) Does not provide for any change, after the submission deadlines in paragraphs (a)(4)(i)(B) and (C) of this section, in the allocations submitted to the Administrator by such deadlines and does not provide for any change in

any allocation determined and recorded by the Administrator under subpart AAAAA of part 97 of this chapter;

(ii) Provided that the State must submit a complete SIP revision meeting the requirements of paragraph (a)(4)(i) of this section by December 1 of the year before the year of the deadlines for submission of allocations or auction results under paragraphs (a)(4)(i)(B) and (C) of this section for the first control period for which the State wants to make allocations or hold an auction under paragraph (a)(4)(i) of this section.

(5) Notwithstanding the provisions of paragraph (a)(1) of this section, a State listed in paragraph (a)(2) of this section may adopt and include in a SIP revision, and the Administrator will approve, as correcting in whole or in part, as appropriate, the deficiency in the SIP that is the basis for the TR Federal Implementation Plan set forth in paragraphs (a)(1) through (4) of this section, regulations that are substantively identical to the provisions of the TR NO_X Annual Trading Program set forth in §§ 97.402 through 97.435 of this chapter, except that the SIP revision:

(i) May adopt, as TR NO_X Annual allowance allocation or auction provisions replacing the provisions in §§ 97.411(a) and (b)(1) and 97.412(a) of this chapter with regard to the State and the control period in 2014 or any subsequent year, any methodology under which the State or the permitting authority allocates or auctions TR NO_X Annual allowances and that—

(A) Requires the State or the permitting authority to allocate and, if applicable, auction a total amount of TR NO_X Annual allowances for any such control period not exceeding the amount, under §§ 97.410(a) and 97.421 of this chapter for the State and such control period, of the TR NO_X Annual trading budget minus the sum of the Indian country new unit set-aside and the amount of any TR NO_X Annual allowances already allocated and recorded by the Administrator.

(B) Requires, to the extent the State adopts provisions for allocations or auctions of TR NO_X Annual allowances for any such control period to any TR NO_X Annual units covered by § 97.411(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions for such control period (except allocations or results of auctions to such units of TR NO_X Annual allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator no later than the following dates:

Year of the control period for which TR NO_X annual allowances are allocated or auctioned	Deadline for submission of allocations or auction results to administrator
2014	June 1, 2013.
2015	June 1, 2013.
2016	June 1, 2014.
2017	June 1, 2014.
2018	June 1, 2015.
2019	June 1, 2015.
2020 and any year thereafter.	June 1 of the fourth year before the year of the control period.

(C) Requires, to the extent the State adopts provisions for allocations or auctions of TR NO_X Annual allowances for any such control period to any TR NO_X Annual units covered by §§ 97.411(b)(1) and 97.412(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions (except allocations or results of auctions to such units of TR NO_X Annual allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator by July 1 of the year of such control period.

(D) Does not provide for any change, after the submission deadlines in paragraphs (a)(5)(i)(B) and (C) of this section, in the allocations submitted to the Administrator by such deadlines and does not provide for any change in any allocation determined and recorded by the Administrator under subpart AAAAA of part 97 of this chapter;

(ii) May adopt, in addition to the definitions in § 97.402 of this chapter, one or more definitions that shall apply only to terms as used in the TR NO_X Annual allowance allocation or auction provisions adopted under paragraph (a)(5)(i) of this section;

(iii) May substitute the name of the State for the term ''State'' as used in subpart AAAAA of part 97 of this chapter, to the extent the Administrator determines that such substitutions do not make substantive changes in the provisions in §§ 97.402 through 97.435 of this chapter; and

(iv) Must not include any of the references to, or requirements imposed on, any unit in Indian country within the borders of the State in the provisions in §§ 97.402 through 97.435 of this chapter and must not include the provisions in §§ 97.411(b)(2) and 97.412(b), all of which provisions will continue to apply under the portion of the TR Federal Implementation Plan that is not replaced by the SIP revision;

(v) Provided that, if and when any covered unit is located in Indian country within the borders of the State, the Administrator may modify his or her approval of the SIP revision to exclude the provisions in §§ 97.402 (definitions of ''common designated representative'', ''common designated representative's assurance level'', and ''common designated representative's share''), 97.406(c)(2), 97.425, and the portions of other provisions referencing these sections and may modify the portion of the TR Federal Implementation Plan that is not replaced by the SIP revision to include these provisions;

(vi) Provided that the State must submit a complete SIP revision meeting the requirements of paragraphs (a)(5)(i) through (iv) of this section by December 1 of the year before the year of the deadlines for submission of allocations or auction results under paragraphs (a)(5)(i)(B) and (C) of this section applicable to the first control period for which the State wants to make allocations or hold an auction under paragraphs (a)(5)(i) and (ii) of this section.

(6) Following promulgation of an approval by the Administrator of a State's SIP revision as correcting in whole or in part, as appropriate, the SIP's deficiency that is the basis for the TR Federal Implementation Plan described in paragraphs (a)(1) through (5) of this section, the provisions of paragraph (a)(2) of this section will no longer apply to the sources in the State, unless the Administrator's approval of the SIP revision is partial or conditional, and will continue to apply to sources in any Indian country within the borders of the State.

(7) Notwithstanding the provisions of paragraph (a)(6) of this section, if, at the time of such approval of the State's SIP revision, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in a State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The TR NO_X Ozone Season Trading Program provisions set forth in part 97 of this chapter constitute the TR Federal Implementation Plan provisions that relate to emissions of NO_X during the ozone season, defined as May 1 through September 30 of a calendar year.

(2) The provisions of subpart BBBBB of part 97 of this chapter apply to

sources in each of the following States and Indian country located within the borders of such States: Alabama, Arkansas, Florida, Georgia, Illinois, Indiana, Kentucky, Louisiana, Maryland, Mississippi, New Jersey, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

(3) Notwithstanding the provisions of paragraph (b)(1) of this section, a State listed in paragraph (b)(2) of this section may adopt and include in a SIP revision, and the Administrator will approve, as TR NO_X Ozone Season allowance allocation provisions replacing the provisions in § 97.511(a) of this chapter with regard to the State and the control period in 2013, a list of TR NO_X Ozone Season units and the amount of TR NO_X Ozone Season allowances allocated to each unit on such list, provided that the list of units and allocations meets the following requirements:

(i) All of the units on the list must be units that are in the State and commenced commercial operation before January 1, 2010;

(ii) The total amount of TR NO_X Ozone Season allowance allocations on the list must not exceed the amount, under § 97.510(a) of this chapter for the State and the control period in 2013, of TR NO_X Ozone Season trading budget minus the sum of the new unit set-aside and Indian country new unit set-aside;

(iii) The list must be submitted electronically in a format specified by the Administrator; and

(iv) The SIP revision must not provide for any change in the units and allocations on the list after approval of the SIP revision by the Administrator and must not provide for any change in any allocation determined and recorded by the Administrator under subpart BBBBB of part 97 of this chapter;

(v) Provided that:

(A) By October 17, 2011, the State must notify the Administrator electronically in a format specified by the Administrator of the State's intent to submit to the Administrator a complete SIP revision meeting the requirements of paragraph (b)(3)(i) through (iv) of this section by April 1, 2012; and

(B) The State must submit to the Administrator a complete SIP revision described in paragraph (b)(3)(v)(A) of this section by April 1, 2012.

(4) Notwithstanding the provisions of paragraph (b)(1) of this section, a State listed in paragraph (b)(2) of this section may adopt and include in a SIP revision, and the Administrator will approve, regulations revising subpart BBBBB of part 97 of this chapter as follows and not making any other substantive revisions of that subpart:

(i) The State may adopt, as applicability provisions replacing the provisions in §§ 97.504(a)(1) and (2) of this chapter, provisions substantively identical to those provisions, except that the words ''more than 25 MWe'' are replaced, whenever such words appear, by words specifying a uniform lower limit on the amount of megawatts that is not greater than the amount specified by the words ''more than 25 MWe'' and is not less than the amount specified by the words ''15 MWe or more''; or

(ii) The State may adopt, as TR NO_X Ozone Season allowance allocation or auction provisions replacing the provisions in §§ 97.511(a) and (b)(1) and 97.512(a) of this chapter with regard to the control period in 2014 or any subsequent year, any methodology under which the State or the permitting authority allocates or auctions TR NO_X Ozone Season allowances, and may adopt, in addition to the definitions in § 97.502 of this chapter, one or more definitions that shall apply only to terms as used in the adopted TR NO_X Ozone Season allowance allocation or auction provisions, if such methodology—

(A) Requires the State or the permitting authority to allocate and, if applicable, auction a total amount of TR NO_X Ozone Season allowances for any such control period not exceeding the amount, under §§ 97.510(a) and 97.521 of this chapter for the State and such control period, of the TR NO_X Ozone Season trading budget minus the sum of the Indian country new unit set-aside and the amount of any TR NO_X Ozone Season allowances already allocated and recorded by the Administrator.

(B) Requires, to the extent the State adopts provisions for allocations or auctions of TR NO_X Ozone Season allowances for any such control period to any TR NO_X Ozone Season units covered by § 97.511(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions for such control period (except allocations or results of auctions to such units of TR NO_X Ozone Season allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator no later than the following dates:

Year of the control period for which TR NO_X Ozone Season allowances are allocated or auctioned	Deadline for submission of allocations or auction results to administrator
2014	June 1, 2013.
2015	June 1, 2013.
2016	June 1, 2014.
2017	June 1, 2014.
2018	June 1, 2015.
2019	June 1, 2015.
2020 and any year thereafter.	June 1 of the fourth year before the year of the control period.

(C) Requires, to the extent the State adopts provisions for allocations or auctions of TR NO_X Ozone Season allowances for any such control period to any TR NO_X Ozone Season units covered by §§ 97.511(b)(1) and 97.512(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions (except allocations or results of auctions to such units of TR NO_X Ozone Season allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator by July 1 of the year of such control period.

(D) Does not provide for any change, after the submission deadlines in paragraphs (b)(4)(ii)(B) and (C) of this section, in the allocations submitted to the Administrator by such deadlines and does not provide for any change in any allocation determined and recorded by the Administrator under subpart BBBBB of part 97 of this chapter;

(iii) Provided that the State must submit a complete SIP revision meeting the requirements of paragraph (b)(4)(i) or (ii) of this section by December 1 of the year before the year of the deadlines for submission of allocations or auction results under paragraphs (b)(4)(ii)(B) and (C) of this section applicable to the first control period for which the State wants to replace the applicability provisions, make allocations, or hold an auction under paragraph (b)(4)(i) or (ii) of this section.

(5) Notwithstanding the provisions of paragraph (b)(1) of this section, a State listed in paragraph (b)(2) of this section may adopt and include in a SIP revision, and the Administrator will approve, as correcting in whole or in part, as appropriate, the deficiency in the SIP that is the basis for the TR Federal Implementation Plan set forth in paragraphs (b)(1) through (4) of this section, regulations that are substantively identical to the provisions of the TR NO_X Ozone Season Trading Program set forth in §§ 97.502 through 97.535 of this chapter, except that the SIP revision:

(i) May adopt, as applicability provisions replacing the provisions in §§ 97.504(a)(1) and (2) of this chapter, provisions substantively identical to those provisions, except that the words ''more than 25 MWe'' are replaced, whenever such words appear, by words specifying a uniform lower limit on the amount of megawatts that is not greater than the amount specified by the words ''more than 25 MWe'' and is not less than the amount specified by the words ''15 MWe or more''; or

(ii) May adopt, as TR NO_X Ozone Season allowance allocation provisions replacing the provisions in §§ 97.511(a) and (b)(1) and 97.512(a) of this chapter with regard to the control period in 2014 and any subsequent year, any methodology under which the State or the permitting authority allocates auctions TR NO_X Ozone Season allowances and that—

(A) Requires the State or the permitting authority to allocate and, if applicable, auction a total amount of TR NO_X Ozone Season allowances for any such control period not exceeding the amount, under §§ 97.510(a) and 97.521 of this chapter for the State and such control period, of the TR NO_X Ozone Season trading budget minus the sum of the Indian country new unit set-aside and the amount of any TR NO_X Ozone Season allowances already allocated and recorded by the Administrator.

(B) Requires, to the extent the State adopts provisions for allocations or auction of TR NO_X Ozone Season allowances for any such control period to any TR NO_X Ozone Season units covered by § 97.511(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions for such control period (except allocations or results of auctions to such units of TR NO_X Ozone Season allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator no later than the following dates:

Year of the control period for which TR NO_X Ozone Season allowances are allocated or auctioned	Deadline for submission of allocations or auction results to administrator
2014	June 1, 2013.
2015	June 1, 2013.
2016	June 1, 2014.
2017	June 1, 2014.
2018	June 1, 2015.
2019	June 1, 2015.
2020 and any year thereafter.	June 1 of the fourth year before the year of the control period.

(C) Requires, to the extent the State adopts provisions for allocations or auctions of TR NO_X Ozone Season allowances for any control period to any TR NO_X Ozone Season units covered by §§ 97.511(b)(1) and 97.512(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions (except allocations or results of auctions to such units of TR NO_X Ozone Season allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator by July 1 of the year of such control period.

(D) Does not provide for any change, after the submission deadlines in paragraphs (b)(5)(ii)(B) and (C) of this section, in the allocations submitted to the Administrator by such deadlines and does not provide for any change in any allocation determined and recorded by the Administrator under subpart BBBBB of part 97 of this chapter;

(iii) May adopt in addition to the definitions in § 97.502 of this chapter, one or more definitions that shall apply only to terms as used in the TR NO_X Ozone Season allowance allocation or auction provisions adopted under paragraph (b)(5)(ii) of this section;

(iv) May substitute the name of the State for the term ''State'' as used in subpart BBBBB of part 97 of this chapter, to the extent the Administrator determines that such substitutions do not make substantive changes in the provisions in §§ 97.502 through 97.535 of this chapter; and

(v) Must not include any of the references to, or requirements imposed on, any unit in Indian country within the borders of the State in the provisions in §§ 97.502 through 97.535 of this chapter and must not include the provisions in §§ 97.511(b)(2) and 97.512(b), all of which provisions will continue to apply under the portion of the TR Federal Implementation Plan that is not replaced by the SIP revision;

(vi) Provided that, if and when any covered unit is located in Indian country within the borders of the State, the Administrator may modify his or her approval of the SIP revision to exclude the provisions in §§ 97.502 (definitions of ''common designated representative'', ''common designated representative's assurance level'', and ''common designated representative's share''), 97.506(c)(2), 97.525, and the portions of other provisions referencing these sections and may modify the portion of the TR Federal Implementation Plan that is not replaced by the SIP revision to include these provisions;

(vii) Provided that the State must submit a complete SIP revision meeting the requirements of paragraph (b)(5)(i) through (v) of this section by December 1 of the year before the year of the deadlines for submission of allocations or auction results under paragraphs (5)(ii)(B) and (C) of this section applicable to the first control period for which the State wants to replace the applicability provisions, make allocations, or hold an auction under paragraphs (b)(5)(ii) and (iii) of this section.

(6) Following promulgation of an approval by the Administrator of a State's SIP revision as correcting in whole or in part, as appropriate, the SIP's deficiency that is the basis for the TR Federal Implementation Plan set forth in paragraphs (b)(1) through (5) of this section, the provisions of paragraph (b)(2) of this section will no longer apply to sources in the State, unless the Administrator's approval of the SIP revision is partial or conditional, and will continue to apply to sources in any Indian country within the borders of the State.

(7) Notwithstanding the provisions of paragraph (b)(6) of this section, if, at the time of such approval of the State's SIP revision, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in a State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

§ 52.39 What are the requirements of the Federal Implementation Plans (FIPs) for the Transport Rule (TR) relating to emissions of sulfur dioxide?

(a) The TR SO_2 Group 1 Trading Program provisions and the TR SO_2 Group 2 Trading Program provisions set forth respectively in subparts CCCCC and DDDDD of part 97 of this chapter constitute the TR Federal Implementation Plan provisions that relate to emissions of sulfur dioxide (SO_2).

(b) The provisions of subpart CCCCC of part 97 of this chapter apply to sources in each of the following States and Indian country located within the borders of such States: Illinois, Indiana, Iowa, Kentucky, Maryland, Michigan, Missouri, New Jersey, New York, North Carolina, Ohio, Pennsylvania, Tennessee, Virginia, West Virginia, and Wisconsin.

(c) The provisions of subpart DDDDD of part 97 of this chapter apply to sources in each of the following States and Indian country located within the borders of such States: Alabama, Georgia, Kansas, Minnesota, Nebraska, South Carolina, and Texas.

(d) Notwithstanding the provisions of paragraph (a) of this section, a State listed in paragraph (b) of this section may adopt and include in a SIP revision, and the Administrator will approve, as TR SO_2 Group 1 allowance allocation provisions replacing the provisions in § 97.611(a) of this chapter with regard to the State and the control period in 2013, a list of TR SO_2 Group 1 units and the amount of TR SO_2 Group 1 allowances allocated to each unit on such list, provided that the list of units and allocations meets the following requirements:

(1) All of the units on the list must be units that are in the State and commenced commercial operation before January 1, 2010;

(2) The total amount of TR SO_2 Group 1 allowance allocations on the list must not exceed the amount, under § 97.610(a) of this chapter for the State and the control period in 2013, of TR SO_2 Group 1 trading budget minus the sum of the new unit set-aside and Indian country new unit set-aside;

(3) The list must be submitted electronically in a format specified by the Administrator; and

(4) The SIP revision must not provide for any change in the units and allocations on the list after approval of the SIP revision by the Administrator and must not provide for any change in any allocation determined and recorded by the Administrator under subpart CCCCC of part 97 of this chapter;

(5) Provided that:

(i) By October 17, 2011, the State must notify the Administrator electronically in a format specified by the Administrator of the State's intent to submit to the Administrator a complete SIP revision meeting the requirements of paragraph (d)(1) through (4) of this section by April 1, 2012; and

(ii) The State must submit to the Administrator a complete SIP revision described in paragraph (d)(5)(i) of this section by April 1, 2012.

(e) Notwithstanding the provisions of paragraph (a) of this section, a State listed in paragraph (b) of this section may adopt and include in a SIP revision, and the Administrator will approve, regulations revising subpart CCCCC of part 97 of this chapter as follows and not making any other substantive revisions of that subpart:

(1) The State may adopt, as TR SO_2 Group 1 allowance allocation or auction provisions replacing the provisions in §§ 97.611(a) and (b)(1) and 97.612(a) of this chapter with regard to the control period in 2014 or any subsequent year, any methodology under which the State or the permitting authority allocates or auctions TR SO_2 Group 1 allowances and may adopt, in addition to the definitions in § 97.602 of this chapter, one or more definitions that shall apply only to terms as used in the adopted TR SO_2 Group 1 allowance allocation or auction provisions, if such methodology—

(i) Requires the State or the permitting authority to allocate and, if applicable, auction a total amount of TR SO_2 Group 1 allowances for any such control period not exceeding the amount, under §§ 97.610(a) and 97.621 of this chapter for the State and such control period, of the TR SO_2 Group 1 trading budget minus the sum of the Indian country new unit set-aside and the amount of any TR SO_2 Group 1 allowances already allocated and recorded by the Administrator.

(ii) Requires, to the extent the State adopts provisions for allocations or auction of TR SO_2 Group 1 allowances for any such control period to any TR SO_2 Group 1 units covered by § 97.611(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions for such control period (except allocations or results of auctions to such units of TR SO_2 Group 1 allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator no later than the following dates:

Year of the control period for which TR SO_2 Group 1 allowances are allocated or auctioned	Deadline for submission of allocations or auction results to administrator
2014	June 1, 2013.
2015	June 1, 2013.
2016	June 1, 2014.
2017	June 1, 2014.
2018	June 1, 2015.
2019	June 1, 2015.
2020 and any year thereafter.	June 1 of the fourth year before the year of the control period.

(iii) Requires, to the extent the State adopts provisions for allocations or auctions of TR SO_2 Group 1 allowances for any such control period to any TR SO_2 Group 1 units covered by §§ 97.611(b)(1) and 97.612(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions (except allocations or results of auctions to such units of TR SO_2 Group 1 allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator by July 1 of the year of such control period.

(iv) Does not provide for any change, after the submission deadlines in paragraphs (e)(1)(ii) and (iii) of this section, in the allocations submitted to the Administrator by such deadlines and does not provide for any change in any allocation determined and recorded by the Administrator under subpart CCCCC of part 97 of this chapter;

(2) Provided that the State must submit a complete SIP revision meeting the requirements of paragraph (e)(1) of this section by December 1 of the year before the year of the deadlines for submission of allocations or auction results under paragraphs (e)(1)(ii) and (iii) of this section applicable to the first control period for which the State wants to make allocations or hold an auction under paragraph (e)(1) of this section.

(f) Notwithstanding the provisions of paragraph (a) of this section, a State listed in paragraph (b) of this section may adopt and include in a SIP revision, and the Administrator will approve, as correcting in whole or in part, as appropriate, the deficiency in the SIP that is the basis for the TR Federal Implementation Plan set forth in paragraphs (a), (b), (d), and (e) of this section, regulations that are substantively identical to the provisions of the TR SO_2 Group 1 Trading Program set forth in §§ 97.602 through 97.635 of this chapter, except that the SIP revision:

(1) May adopt, as TR SO_2 Group 1 allowance allocation or auction provisions replacing the provisions in §§ 97.611(a) and (b)(1) and 97.612(a) of this chapter with regard to the control period in 2014 and any subsequent year, any methodology under which the State or the permitting authority allocates or auctions TR SO_2 Group 1 allowances and that—

(i) Requires the State or the permitting authority to allocate and, if applicable, auction a total amount of TR SO_2 Group 1 allowances for such control period not exceeding the amount, under §§ 97.610(a) and 97.621 of this chapter for the State and such control period, of the TR SO_2 Group 1 trading budget minus the sum of the Indian country new unit set-aside and the amount of any TR SO_2 Group 1 allowances already allocated and recorded by the Administrator.

(ii) Requires, to the extent the State adopts provisions for allocations or auction of TR SO_2 Group 1 allowances for any such control period to any TR

SO_2 Group 1 units covered by § 97.611(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions for such control period (except allocations or results of auctions to such units of TR SO_2 Group 1 allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator no later than the following dates:

Year of the control period for which TR SO_2 Group 1 allowances are allocated or auctioned	Deadline for submission of allocations or auction results to administrator
2014	June 1, 2013.
2015	June 1, 2013.
2016	June 1, 2014.
2017	June 1, 2014.
2018	June 1, 2015.
2019	June 1, 2015.
2020 and any year thereafter.	June 1 of the fourth year before the year of the control period.

(iii) Requires, to the extent the State adopts provisions for allocations or auctions of TR SO_2 Group 1 allowances for any such control period to any TR SO_2 Group 1 units covered by §§ 97.611(b)(1) and 97.612(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions (except allocations or results of auctions to such units of TR SO_2 Group 1 allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator by July 1 of the year of such control period.

(iv) Does not provide for any change, after the submission deadlines in paragraphs (f)(2)(ii) and (iii) of this section, in the allocations submitted to the Administrator by such deadlines and does not provide for any change in any allocation determined and recorded by the Administrator under subpart CCCCC of part 97 of this chapter;

(2) May adopt, in addition to the definitions in § 97.602 of this chapter, one or more definitions that shall apply only to terms as used in the TR SO_2 Group 1 allowance allocation or auction provisions adopted under paragraph (f)(1) of this section;

(3) May substitute the name of the State for the term ''State'' as used in subpart CCCCC of part 97 of this chapter, to the extent the Administrator determines that such substitutions do not make substantive changes in the provisions in §§ 97.602 through 97.635 of this chapter; and

(4) Must not include any of the references to, or requirements imposed on, any unit in Indian country within the borders of the State in the provisions in §§ 97.602 through 97.635 of this chapter and must not include the provisions in §§ 97.611(b)(2) and 97.612(b), all of which provisions will continue to apply under the portion of the TR Federal Implementation Plan that is not replaced by the SIP revision;

(5) Provided that, if and when any covered unit is located in Indian country within the borders of the State, the Administrator may modify his or her approval of the SIP revision to exclude the provisions in §§ 97.602 (definitions of ''common designated representative'', ''common designated representative's assurance level'', and ''common designated representative's share''), 97.606(c)(2), 97.625, and the portions of other provisions referencing these sections and may modify the portion of the TR Federal Implementation Plan that is not replaced by the SIP revision to include these provisions;

(6) Provided that the State must submit a complete SIP revision meeting the requirements of paragraphs (f)(1) through (4) of this section by December 1 of the year before the year of the deadlines for submission of allocations or auction results under paragraphs (f)(1)(ii) and (iii) of this section applicable to the first control period for which the State wants to make allocations or hold an auction under paragraph (f)(1)(ii) and (iii) of this section.

(g) Notwithstanding the provisions of paragraph (a) of this section, a State listed in paragraph (c) of this section may adopt and include in a SIP revision, and the Administrator will approve, as TR SO_2 Group 2 allowance allocation provisions replacing the provisions in § 97.711(a) of this chapter with regard to the control period in 2013, a list of TR SO_2 Group 2 units and the amount of TR SO_2 Group 2 allowances allocated to each unit on such list, provided that the list of units and allocations meets the following requirements:

(1) All of the units on the list must be units that are in the State and commenced commercial operation before January 1, 2010;

(2) The total amount of TR SO_2 Group 2 allowance allocations on the list must not exceed the amount, under § 97.710(a) of this chapter for the State and the control period in 2013, of TR SO_2 Group 2 trading budget minus the sum of the new unit set-aside and Indian country new unit set-aside;

(3) The list must be submitted electronically in a format specified by the Administrator; and

(4) The SIP revision must not provide for any change in the units and allocations on the list after approval of the SIP revision by the Administrator and must not provide for any change in any allocation determined and recorded by the Administrator under subpart DDDDD of part 97 of this chapter;

(5) Provided that:

(i) By October 17, 2011, the State must notify the Administrator electronically in a format specified by the Administrator of the State's intent to submit to the Administrator a complete SIP revision meeting the requirements of paragraph (g)(1) through (4) of this section by April 1, 2012; and

(ii) The State must submit to the Administrator a complete SIP revision described in paragraph (g)(5)(i) of this section by April 1, 2012.

(h) Notwithstanding the provisions of paragraph (a) of this section, a State listed in paragraph (c) of this section may adopt and include in a SIP revision, and the Administrator will approve, regulations revising subpart DDDDD of part 97 of this chapter as follows and not making any other substantive revisions of that subpart:

(1) The State may adopt, as TR SO_2 Group 2 allowance allocation or auction provisions replacing the provisions in §§ 97.711(a) and (b)(1) and 97.712(a) of this chapter with regard to the control period in 2014 and any subsequent year, any methodology under which the State or the permitting authority allocates or auctions TR SO_2 Group 2 allowances and may adopt, in addition to the definitions in § 97.702 of this chapter, one or more definitions that shall apply only to terms as used in the adopted TR SO_2 Group 2 allowance allocation or auction provisions, if such methodology—

(i) Requires the State or the permitting authority to allocate and, if applicable, auction a total amount of TR SO_2 Group 2 allowances for any such control period not exceeding the amount, under §§ 97.710(a) and 97.721 of this chapter for the State and such control period, of the TR SO_2 Group 2 trading budget minus the sum of the Indian country new unit set-aside and the amount of any TR SO_2 Group 2 allowances already allocated and recorded by the Administrator.

(ii) Requires, to the extent the State adopts provisions for allocations or auction of TR SO_2 Group 2 allowances for any such control period to any TR SO_2 Group 2 units covered by § 97.711(a) of this chapter, that the State or the permitting authority submit such

allocations or the results of such auctions for such control period (except allocations or results of auctions to such units of TR SO_2 Group 2 allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator no later than the following dates:

Year of the control period for which TR SO_2 Group 2 allowances are allocated or auctioned	Deadline for submission of allocations or auction results to administrator
2014	June 1, 2013.
2015	June 1, 2013.
2016	June 1, 2014.
2017	June 1, 2014.
2018	June 1, 2015.
2019	June 1, 2015.
2020 and any year thereafter.	June 1 of the fourth year before the year of the control period.

(iii) Requires, to the extent the State adopts provisions for allocations or auctions of TR SO_2 Group 2 allowances for any such control period to any TR SO_2 Group 2 units covered by §§ 97.711(b)(1) and 97.712(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions (except allocations or results of auctions to such units of TR SO_2 Group 2 allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator by July 1 of the year of such control period.

(iv) Does not provide for any change, after the submission deadlines in paragraphs (h)(1)(ii) and (iii) of this section, in the allocations submitted to the Administrator by such deadlines and does not provide for any change in any allocation determined and recorded by the Administrator under subpart DDDDD of part 97 of this chapter;

(2) Provided that the State must submit a complete SIP revision meeting the requirements of paragraph (h)(1) of this section by December 1 of the year before the year of the deadlines for submission of allocations or auction results under paragraphs (h)(1)(ii) and (iii) of this section applicable to the first control period for which the State wants to make allocations or hold an auction under paragraph (h)(1)(ii) and (iii) of this section.

(i) Notwithstanding the provisions of paragraph (a) of this section, a State listed in paragraph (c) of this section may adopt and include in a SIP revision, and the Administrator will approve, as correcting in whole or in part, as appropriate, the deficiency in the SIP that is the basis for the TR Federal Implementation Plan set forth in paragraphs (a), (c), (g), and (h) of this section, regulations that are substantively identical to the provisions of the TR SO_2 Group 2 Trading Program set forth in §§ 97.702 through 97.735 of this chapter, except that the SIP revision:

(1) May adopt, as TR SO_2 Group 2 allowance allocation or auction provisions replacing the provisions in §§ 97.711(a) and (b)(1) and 97.712(a) of this chapter with regard to the control period in 2014 and any subsequent year, any methodology under which the State or the permitting authority allocates or auctions TR SO_2 Group 2 allowances and that—

(i) Requires the State or the permitting authority to allocate and, if applicable, auction a total amount of TR SO_2 Group 2 allowances for any such control period not exceeding the amount, under §§ 97.710(a) and 97.721 of this chapter for the State and such control period, of the TR SO_2 Group 2 trading budget minus the sum of the Indian country new unit set-aside and the amount of any TR SO_2 Group 2 allowances already allocated and recorded by the Administrator.

(ii) Requires, to the extent the State adopts provisions for allocations or auction of TR SO_2 Group 2 allowances for any such control period to any TR SO_2 Group 2 units covered by § 97.711(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions for such control period (except allocations or results of auctions to such units of TR SO_2 Group 1 allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator no later than the following dates:

Year of the control period for which TR SO_2 Group 2 allowances are allocated or auctioned	Deadline for submission of allocations or auction results to administrator
2014	June 1, 2013.
2015	June 1, 2013.
2016	June 1, 2014.
2017	June 1, 2014.
2018	June 1, 2015.
2019	June 1, 2015.
2020 and any year thereafter.	June 1 of the fourth year before the year of the control period.

(iii) Requires, to the extent the State adopts provisions for allocations or auctions of TR SO_2 Group 2 allowances for any such control period to any TR SO_2 Group 2 units covered by §§ 97.711(b)(1) and 97.712(a) of this chapter, that the State or the permitting authority submit such allocations or the results of such auctions (except allocations or results of auctions to such units of TR SO_2 Group 2 allowances remaining in a set-aside after completion of the allocations or auctions for which the set-aside was created) to the Administrator by July 1 of the year of such control period.

(iv) Does not provide for any change, after the submission deadlines in paragraphs (i)(1)(ii) and (iii) of this section, in the allocations submitted to the Administrator by such deadlines and does not provide for any change in any allocation determined and recorded by the Administrator under subpart DDDDD of part 97 of this chapter;

(2) May adopt, in addition to the definitions in § 97.702 of this chapter, one or more definitions that shall apply only to terms as used in the TR SO_2 Group 2 allowance allocation or auction provisions adopted under paragraph (i)(1) of this section;

(3) May substitute the name of the State for the term ''State'' as used in subpart DDDDD of part 97 of this chapter, to the extent the Administrator determines that such substitutions do not make substantive changes in the provisions in §§ 97.702 through 97.735 of this chapter; and

(4) Must not include any of the references to, or requirements imposed on, any unit in Indian country within the borders of the State in the provisions in §§ 97.702 through 97.735 of this chapter and must not include the provisions in §§ 97.711(b)(2) and 97.712(b), all of which provisions will continue to apply under the portion of the TR Federal Implementation Plan that is not replaced by the SIP revision;

(5) Provided that, if and when any covered unit is located in Indian country within the borders of the State, the Administrator may modify his or her approval of the SIP revision to exclude the provisions in §§ 97.702 (definitions of ''common designated representative'', ''common designated representative's assurance level'', and ''common designated representative's share''), 97.706(c)(2), 97.725, and the portions of other provisions referencing these sections and may modify the portion of the TR Federal Implementation Plan that is not replaced by the SIP revision to include these provisions;

(6) Provided that the State must submit a complete SIP revision meeting the requirements of paragraphs (i)(1) through (4) of this section by December 1 of the year before the year of the deadlines for submission of allocations or auction results under paragraphs

(i)(1)(ii) and (iii) of this section applicable to the first control period for which the State wants to make allocations or hold an auction under paragraphs (i)(1)(ii) and (iii) of this section.

(j) Following promulgation of an approval by the Administrator of a State's SIP revision as correcting in whole or in part, as appropriate, the SIP's deficiency that is the basis for the TR Federal Implementation Plan, the provisions of paragraph (b) and (c) of this section, as applicable, will no longer apply to sources in the State, unless the Administrator's approval of the SIP revision is partial or conditional, and will continue to apply to sources in any Indian country within the borders of the State.

(k) Notwithstanding the provisions of paragraph (j) of this section, if, at the time of such approval of the State's SIP revision, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter, or allocations of TR SO_2 Group 2 allowances under subpart DDDDD of part 97 of this chapter, to units in a State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances, or of subpart DDDDD of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 2 allowances, as applicable, to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart B—Alabama

■ 10. Section 52.54 is added to read as follows:

§ 52.54 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Alabama and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Alabama's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Alabama's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of Alabama and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Alabama's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of the Alabama's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 11. Section 52.55 is added to read as follows:

§ 52.55 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Alabama and for which requirements are set forth under the TR SO_2 Group 2 Trading Program in subpart DDDDD of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Alabama's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Alabama's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 2 allowances under subpart DDDDD of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart DDDDD of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 2 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart E—Arkansas

■ 12. Section 52.184 is added to read as follows:

§ 52.184 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a) The owner and operator of each source and each unit located in the State of Arkansas and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Arkansas' State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Arkansas' SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to

units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart I—Delaware

■ 13. Section 52.440 is amended by adding a new paragraph (c) to read as follows:

§ 52.440 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

* * * * *

(c) Notwithstanding any provisions of paragraphs (a) and (b) of this section and subparts AA through II and AAAA through IIII of part 97 of this chapter to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions in paragraphs (a) and (b) of this section relating to NO_X annual or ozone season emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AA through II and AAAA through IIII of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR NO_X allowances or CAIR NO_X Ozone Season allowances allocated for 2012 or any year thereafter;

(3) By November 7, 2011, the Administrator will remove from the CAIR NO_X Allowance Tracking System accounts all CAIR NO_X allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X allowances will be required with regard to emissions or excess emissions for such control periods; and

(4) By November 7, 2011, the Administrator will remove from the CAIR NO_X Ozone Season Allowance Tracking System accounts all CAIR NO_X Ozone Season allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X Ozone Season allowances will be required with regard to emissions or excess emissions for such control periods.

■ 14. Section 52.441 is amended by designating the existing text as paragraph (a) and adding a new paragraph (b) to read as follows:

§ 52.441 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

* * * * *

(b) Notwithstanding any provisions of paragraph (a) of this section and subparts AAA through III of part 97 of this chapter and any State's SIP to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions of paragraph (a) of this section relating to SO_2 emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AAA through III of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR SO_2 allowances allocated for 2012 or any year thereafter.

Subpart J—District of Columbia

■ 15. Section 52.484 is amended by adding a new paragraph (c) to read as follows:

§ 52.484 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

* * * * *

(c) Notwithstanding any provisions of paragraphs (a) and (b) of this section and subparts AA through II and AAAA through IIII of part 97 of this chapter to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions in paragraphs (a) and (b) of this section relating to NO_X annual or ozone season emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AA through II and AAAA through IIII of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR NO_X allowances or CAIR NO_X Ozone Season allowances allocated for 2012 or any year thereafter;

(3) By November 7, 2011, the Administrator will remove from the CAIR NO_X Allowance Tracking System accounts all CAIR NO_X allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X allowances will be required with regard to emissions or excess emissions for such control periods; and

(4) By November 7, 2011, the Administrator will remove from the CAIR NO_X Ozone Season Allowance Tracking System accounts all CAIR NO_X Ozone Season allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X Ozone Season allowances will be required with regard to emissions or excess emissions for such control periods.

■ 16. Section 52.485 is amended by designating the existing text as paragraph (a) and adding a new paragraph (b) to read as follows:

§ 52.485 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

* * * * *

(b) Notwithstanding any provisions of paragraph (a) of this section and subparts AAA through III of part 97 of this chapter and any State's SIP to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions of paragraph (a) of this section relating to SO_2 emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AAA through III of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR SO_2 allowances allocated for 2012 or any year thereafter.

Subpart K—Florida

■ 17. Section 52.540 is added to read as follows:

§ 52.540 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a) The owner and operator of each source and each unit located in the State of Florida and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units located in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Florida's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Florida's SIP.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the

time of the approval of Florida's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart L—Georgia

■ 18. Section 52.584 is added to read as follows:

§ 52.584 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Georgia and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Georgia's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Georgia's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of Georgia and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Georgia's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of Georgia's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 19. Section 52.585 is added to read as follows:

§ 52.585 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Georgia and for which requirements are set forth under the TR SO_2 Group 2 Trading Program in subpart DDDDD of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Georgia's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Georgia's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 2 allowances under subpart DDDDD of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart DDDDD of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 2 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart O—Illinois

■ 20. Section 52.745 is added to read as follows:

§ 52.745 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Illinois and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Illinois' State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Illinois' SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of Illinois and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Illinois' State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of Illinois' SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this

chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 21. Section 52.746 is added to read as follows:

§ 52.746 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Illinois and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Illinois' State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Illinois' SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart P—Indiana

■ 22. Section 52.789 is added to read as follows:

§ 52.789 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Indiana and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Indiana's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Indiana's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of Indiana and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Indiana's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of Indiana's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 23. Section 52.790 is added to read as follows:

§ 52.790 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Indiana and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Indiana's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39 except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Indiana's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart Q—Iowa

■ 24. Section 52.840 is added to read as follows:

§ 52.840 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Iowa and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Iowa's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to

sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Iowa's SIP.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Iowa's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b) [Reserved]

■ 25. Section 52.841 is added to read as follows:

§ 52.841 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Iowa and Indian country within the borders of the State and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Iowa's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Iowa's SIP.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Iowa's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart R—Kansas

■ 26. Section 52.882 is added to read as follows:

§ 52.882 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Kansas and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Kansas' State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Kansas' SIP.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Kansas' SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b) [Reserved]

■ 27. Section 52.883 is added to read as follows:

§ 52.883 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Kansas and Indian country within the borders of the State and for which requirements are set forth under the TR SO_2 Group 2 Trading Program in subpart DDDDD of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated with regard to sources and units in the State by the promulgation of an approval by the Administrator of a revision to Kansas' State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Kansas' SIP.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Kansas' SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 2 allowances under subpart DDDDD of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart DDDDD of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 2 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart S—Kentucky

■ 28. Section 52.940 is added to read as follows:

§ 52.940 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Kentucky and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Kentucky's State

Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Kentucky's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of Kentucky and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Kentucky's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of Kentucky's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 29. Section 52.941 is added to read as follows:

§ 52.941 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Kentucky and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Kentucky's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Kentucky's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart T—Louisiana

■ 30. Section 52.984 is amended by adding new paragraphs (c) and (d) to read as follows:

§ 52.984 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

* * * * *

(c) Notwithstanding any provisions of paragraphs (a) and (b) of this section and subparts AA through II and AAAA through IIII of part 97 of this chapter to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions in paragraphs (a) and (b) of this section relating to NO_X annual or ozone season emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AA through II and AAAA through IIII of part 97 of this chapter;

(2) The Administrator will not deduct for excess emissions any CAIR NO_X allowances or CAIR NO_X Ozone Season allowances allocated for 2012 or any year thereafter;

(3) By November 7, 2011, the Administrator will remove from the CAIR NO_X Allowance Tracking System accounts all CAIR NO_X allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X allowances will be required with regard to emissions or excess emissions for such control periods; and

(4) By November 7, 2011, the Administrator will remove from the CAIR NO_X Ozone Season Allowance Tracking System accounts all CAIR NO_X Ozone Season allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X Ozone Season allowances will be required with regard to emissions or excess emissions for such control periods.

(d)(1) The owner and operator of each source and each unit located in the State of Louisiana and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Louisiana's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Louisiana's SIP.

(2) Notwithstanding the provisions of paragraph (d)(1) of this section, if, at the time of the approval of Louisiana's SIP revision described in paragraph (d)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart V—Maryland

■ 31. Section 52.1084 is added to read as follows:

§ 52.1084 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Maryland and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Maryland's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Maryland's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of Maryland and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Maryland's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of Maryland's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 32. Section 52.1085 is added to read as follows:

§ 52.1085 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Maryland and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Maryland's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Maryland's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart X—Michigan

■ 33. Section 52.1186 is amended by adding new paragraphs (c) and (d) to read as follows:

§ 52.1186 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

* * * * *

(c) Notwithstanding any provisions of paragraphs (a) and (b) of this section and subparts AA through II and AAAA through IIII of part 97 of this chapter to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions in paragraphs (a) and (b) of this section relating to NO_X annual or ozone season emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AA through II and AAAA through IIII of part 97 of this chapter;

(2) The Administrator will not deduct for excess emissions any CAIR NO_X allowances or CAIR NO_X Ozone Season allowances allocated for 2012 or any year thereafter;

(3) By November 7, 2011, the Administrator will remove from the CAIR NO_X Allowance Tracking System accounts all CAIR NO_X allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X allowances will be required with regard to emissions or excess emissions for such control periods; and

(4) By November 7, 2011, the Administrator will remove from the CAIR NO_X Ozone Season Allowance Tracking System accounts all CAIR NO_X Ozone Season allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X Ozone Season allowances will be required with regard to emissions or excess emissions for such control periods.

(d)(1) The owner and operator of each source and each unit located in the State of Michigan and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Michigan's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Michigan's SIP.

(2) Notwithstanding the provisions of paragraph (d)(1) of this section, if, at the time of the approval of Michigan's SIP revision described in paragraph (d)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of

subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(e) [Reserved]

■ 34. Section 52.1187 is amended by designating the existing text as paragraph (a) and adding new paragraphs (b) and (c) to read as follows:

§ 52.1187 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

* * * * *

(b) Notwithstanding any provisions of paragraph (a) of this section and subparts AAA through III of part 97 of this chapter and any State's SIP to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions of paragraph (a) of this section relating to SO_2 emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AAA through III of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR SO_2 allowances allocated for 2012 or any year thereafter.

(c)(1) The owner and operator of each source and each unit located in the State of Michigan and Indian country within the borders of the State and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Michigan's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Michigan's SIP.

(2) Notwithstanding the provisions of paragraph (c)(1) of this section, if, at the time of the approval of Maryland's SIP revision described in paragraph (c)(1) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart Y—Minnesota

■ 35. Section 52.1240 is amended by adding paragraph (c) to read as follows:

§ 52.1240 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

* * * * *

(c)(1) The owner and operator of each source and each unit located in the State of Minnesota and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Minnesota's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Minnesota's SIP.

(2) Notwithstanding the provisions of paragraph (c)(1) of this section, if, at the time of the approval of Minnesota's SIP revision described in paragraph (c)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 36. Section 52.1241 is amended by adding paragraph (c) to read as follows:

§ 52.1241 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

* * * * *

(c)(1) The owner and operator of each source and each unit located in the State of Minnesota and Indian country within the borders of the State and for which requirements are set forth under the TR SO_2 Group 2 Trading Program in subpart DDDDD of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Minnesota's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Minnesota's SIP.

(2) Notwithstanding the provisions of paragraph (c)(1) of this section, if, at the time of the approval of Minnesota's SIP revision described in paragraph (c)(1) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 2 allowances under subpart DDDDD of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart DDDDD of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 2 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart Z—Mississippi

■ 37. Section 52.1284 is added to read as follows:

§ 52.1284 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a) The owner and operator of each source and each unit located in the State of Mississippi and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of

this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Mississippi's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Mississippi's SIP.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Mississippi's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart AA—Missouri

■ 38. Section 52.1326 is added to read as follows:

§ 52.1326 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Missouri and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Missouri's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Missouri's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b) [Reserved]

■ 39. Section 52.1327 is added to read as follows:

§ 52.1327 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Missouri and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Missouri's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Missouri's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart CC—Nebraska

■ 40. Section 52.1428 is added to read as follows:

§ 52.1428 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a) The owner and operator of each source and each unit located in the State of Nebraska and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Nebraska's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Nebraska's SIP.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Nebraska's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 41. Section 52.1429 is added to read as follows:

§ 52.1429 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Nebraska and Indian country within the borders of the State and for which requirements are set forth under the TR SO_2 Group 2 Trading Program in subpart DDDDD of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Nebraska's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to

sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Nebraska's SIP.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Nebraska's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 2 allowances under subpart DDDDD of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart DDDDD of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 2 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart FF—New Jersey

■ 42. Section 52.1584 is amended by adding new paragraphs (c), (d), and (e) to read as follows:

§ 52.1584 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

* * * * *

(c) Notwithstanding any provisions of paragraphs (a) and (b) of this section and subparts AA through II and AAAA through IIII of part 97 of this chapter to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions in paragraphs (a) and (b) of this section relating to NO_X annual or ozone season emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AA through II and AAAA through IIII of part 97 of this chapter;

(2) The Administrator will not deduct for excess emissions any CAIR NO_X allowances or CAIR NO_X Ozone Season allowances allocated for 2012 or any year thereafter;

(3) By November 7, 2011, the Administrator will remove from the CAIR NO_X Allowance Tracking System accounts all CAIR NO_X allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X allowances will be required with regard to emissions or excess emissions for such control periods; and

(4) By November 7, 2011, the Administrator will remove from the CAIR NO_X Ozone Season Allowance Tracking System accounts all CAIR NO_X Ozone Season allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X Ozone Season allowances will be required with regard to emissions or excess emissions for such control periods.

(d)(1) The owner and operator of each source and each unit located in the State of New Jersey and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to New Jersey's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (d)(1) of this section, if, at the time of the approval of New Jersey's SIP revision described in paragraph (d)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(e)(1) The owner and operator of each source and each unit located in the State of New Jersey and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to New Jersey's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (e)(1) of this section, if, at the time of the approval of New Jersey's SIP revision described in paragraph (e)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 43. Section 52.1585 is amended by designating the existing text as paragraph (a) and adding new paragraphs (b) and (c) to read as follows:

§ 52.1585 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

* * * * *

(b) Notwithstanding any provisions of paragraph (a) of this section and subparts AAA through III of part 97 of this chapter and any State's SIP to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions of paragraph (a) of this section relating to SO_2 emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AAA through III of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR SO_2 allowances allocated for 2012 or any year thereafter.

(c)(1) The owner and operator of each source and each unit located in the State of New Jersey and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to New Jersey's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (c)(1) of this section, if, at the time of the approval of New Jersey's SIP revision described in paragraph (c)(1) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation

of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart HH—New York

■ 44. Section 52.1684 is revised to read as follows:

§ 52.1684 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of New York and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to New York's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to New York's SIP.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of New York's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of New York and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to New York's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to New York's SIP.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of New York's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 45. Section 52.1685 is added to read as follows:

§ 52.1685 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of New York and Indian country within the borders of the State and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to New York's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to New York's SIP.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of New York's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart II—North Carolina

■ 46. Section 52.1784 is revised to read as follows:

§ 52.1784 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of North Carolina and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to North Carolina's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to North Carolina's SIP.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of North Carolina's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall

continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of North Carolina and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to North Carolina's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to North Carolina's SIP.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of North Carolina's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 47. Section 52.1785 is revised to read as follows:

§ 52.1785 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of North Carolina and Indian country within the borders of the State and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to North Carolina's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to North Carolina's SIP.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of North Carolina's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart KK—Ohio

■ 48. Section 52.1882 is added to read as follows:

§ 52.1882 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Ohio and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Ohio's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Ohio's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of Ohio and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Ohio's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of Ohio's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 49. Section 52.1883 is added to read as follows:

§ 52.1883 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Ohio and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Ohio's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Ohio's SIP

revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart NN—Pennsylvania

■ 50. Section 52.2040 is added to read as follows:

§ 52.2040 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Pennsylvania and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Pennsylvania's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Pennsylvania's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of Pennsylvania and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Pennsylvania's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of Pennsylvania's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 51. Section 52.2041 is added to read as follows:

§ 52.2041 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Pennsylvania and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Pennsylvania's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Pennsylvania's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart PP—South Carolina

■ 52. Section 52.2140 is revised to read as follows:

§ 52.2140 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of South Carolina and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to South Carolina's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to South Carolina's SIP.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of South Carolina's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of South Carolina and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be

eliminated by the promulgation of an approval by the Administrator of a revision to South Carolina's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to South Carolina's SIP.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of South Carolina's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 53. Section 52.2141 is revised to read as follows:

§ 52.2141 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of South Carolina and Indian country within the borders of the State and for which requirements are set forth under the TR SO_2 Group 2 Trading Program in subpart DDDDD of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to South Carolina's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to South Carolina's SIP.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of South Carolina's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart RR—Tennessee

■ 54. Section 52.2240 is amended by adding new paragraphs (c), (d), and (e) to read as follows:

§ 52.2240 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

* * * * *

(c) Notwithstanding any provisions of paragraphs (a) and (b) of this section and subparts AA through II and AAAA through IIII of part 97 of this chapter to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions in paragraphs (a) and (b) of this section relating to NO_X annual or ozone season emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AA through II and AAAA through IIII of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR NO_X allowances or CAIR NO_X Ozone Season allowances allocated for 2012 or any year thereafter;

(3) By November 7, 2011, the Administrator will remove from the CAIR NO_X Allowance Tracking System accounts all CAIR NO_X allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X allowances will be required with regard to emissions or excess emissions for such control periods; and

(4) By November 7, 2011, the Administrator will remove from the CAIR NO_X Ozone Season Allowance Tracking System accounts all CAIR NO_X Ozone Season allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X Ozone Season allowances will be required with regard to emissions or excess emissions for such control periods.

(d)(1) The owner and operator of each source and each unit located in the State of Tennessee and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Tennessee's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Tennessee's SIP.

(2) Notwithstanding the provisions of paragraph (d)(1) of this section, if, at the time of the approval of Tennessee's SIP revision described in paragraph (d)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(e)(1) The owner and operator of each source and each unit located in the State of Tennessee and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Tennessee's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an

approval by the Administrator of a revision to Tennessee's SIP.

(2) Notwithstanding the provisions of paragraph (e)(1) of this section, if, at the time of the approval of Tennessee's SIP revision described in paragraph (e)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 55. Section 52.2241 is amended by designating the existing text as paragraph (a) and adding new paragraphs (b) and (c) to read as follows:

§ 52.2241 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

* * * * *

(b) Notwithstanding any provisions of paragraph (a) of this section and subparts AAA through III of part 97 of this chapter and any State's SIP to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions of paragraph (a) of this section relating to SO_2 emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AAA through III of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR SO_2 allowances allocated for 2012 or any year thereafter.

(c)(1) The owner and operator of each source and each unit located in the State of Tennessee and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Tennessee's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Tennessee's SIP.

(2) Notwithstanding the provisions of paragraph (c)(1) of this section, if, at the time of the approval of Tennessee's SIP revision described in paragraph (c)(1) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart SS—Texas

■ 56. Section 52.2283 is amended by adding new paragraphs (b), (c) and (d) to read as follows:

§ 52.2283 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

* * * * *

(b) Notwithstanding any provisions of paragraph (a) of this section and subparts AA through II of part 97 of this chapter to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions in paragraph (a) of this section relating to NO_X annual emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AA through II of part 97 of this chapter;

(2) The Administrator will not deduct for excess emissions any CAIR NO_X allowances allocated for 2012 or any year thereafter;

(3) By November 7, 2011, the Administrator will remove from the CAIR NO_X Allowance Tracking System accounts all CAIR NO_X allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X allowances will be required with regard to emissions or excess emissions for such control periods.

(c)(1) The owner and operator of each source and each unit located in the State of Texas and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Texas' State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Texas' SIP.

(2) Notwithstanding the provisions of paragraph (c)(1) of this section, if, at the time of the approval of Texas' SIP revision described in paragraph (c)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(d)(1) The owner and operator of each source and each unit located in the State of Texas and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Texas' State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Texas' SIP.

(2) Notwithstanding the provisions of paragraph (d)(1) of this section, if, at the time of the approval of Texas' SIP revision described in paragraph (d)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this

chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 57. Section 52.2284 is amended by designating the existing text as paragraph (a) and adding new paragraphs (b) and (c) to read as follows:

§ 52.2284 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

* * * * *

(b) Notwithstanding any provisions of paragraph (a) of this section and subparts AAA through III of part 97 of this chapter and any State's SIP to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions of paragraph (a) of this section relating to SO_2 emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AAA through III of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR SO_2 allowances allocated for 2012 or any year thereafter.

(c)(1) The owner and operator of each source and each unit located in the State of Texas and Indian country within the borders of the State and for which requirements are set forth under the TR SO_2 Group 2 Trading Program in subpart DDDDD of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Texas' State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Texas' SIP.

(2) Notwithstanding the provisions of paragraph (c)(1) of this section, if, at the time of the approval of Texas' SIP revision described in paragraph (c)(1) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 2 allowances under subpart DDDDD of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart DDDDD of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 2 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart VV—Virginia

■ 58. Section 52.2440 is added to read as follows:

§ 52.2440 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of Virginia and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Virginia's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of Virginia's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of Virginia and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Virginia's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of Virginia's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 59. Section 52.2241 is added to read as follows:

§ 52.2241 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of Virginia and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to Virginia's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of Virginia's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart XX—West Virginia

■ 60. Section 52.2540 is added to read as follows:

§ 52.2540 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

(a)(1) The owner and operator of each source and each unit located in the State of West Virginia and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to West Virginia's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (a)(1) of this section, if, at the time of the approval of West Virginia's SIP revision described in paragraph (a)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

(b)(1) The owner and operator of each source and each unit located in the State of West Virginia and for which requirements are set forth under the TR NO_X Ozone Season Trading Program in subpart BBBBB of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to West Virginia's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(b), except to the extent the Administrator's approval is partial or conditional.

(2) Notwithstanding the provisions of paragraph (b)(1) of this section, if, at the time of the approval of West Virginia's SIP revision described in paragraph (b)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Ozone Season allowances under subpart BBBBB of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart BBBBB of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Ozone Season allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 61. Section 52.2541 is added to read as follows:

§ 52.2541 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

(a) The owner and operator of each source and each unit located in the State of West Virginia and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements will be eliminated by the promulgation of an approval by the Administrator of a revision to West Virginia's State Implementation Plan (SIP) as correcting the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional.

(b) Notwithstanding the provisions of paragraph (a) of this section, if, at the time of the approval of West Virginia's SIP revision described in paragraph (a) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

Subpart YY—Wisconsin

■ 62. Section 52.2587 is amended by adding new paragraphs (c) and (d) to read as follows:

§ 52.2587 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of nitrogen oxides?

* * * * *

(c) Notwithstanding any provisions of paragraphs (a) and (b) of this section and subparts AA through II and AAAA through IIII of part 97 of this chapter to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions in paragraphs (a) and (b) of this section relating to NO_X annual or ozone season emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AA through II and AAAA through IIII of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR NO_X allowances or CAIR NO_X Ozone Season allowances allocated for 2012 or any year thereafter;

(3) By November 7, 2011, the Administrator will remove from the CAIR NO_X Allowance Tracking System accounts all CAIR NO_X allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X allowances will be required with regard to emissions or excess emissions for such control periods; and

(4) By November 7, 2011, the Administrator will remove from the CAIR NO_X Ozone Season Allowance Tracking System accounts all CAIR NO_X Ozone Season allowances allocated for a control period in 2012 and any subsequent year, and, thereafter, no holding or surrender of CAIR NO_X Ozone Season allowances will be required with regard to emissions or excess emissions for such control periods.

(d)(1) The owner and operator of each source and each unit located in the State of Wisconsin and Indian country within the borders of the State and for which requirements are set forth under the TR NO_X Annual Trading Program in subpart AAAAA of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Wisconsin's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.38(a), except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Wisconsin's SIP.

(2) Notwithstanding the provisions of paragraph (d)(1) of this section, if, at the

time of the approval of Wisconsin's SIP revision described in paragraph (d)(1) of this section, the Administrator has already started recording any allocations of TR NO_X Annual allowances under subpart AAAAA of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart AAAAA of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR NO_X Annual allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

■ 63. Section 52.2588 is amended by designating the existing text as paragraph (a) and adding new paragraphs (b) and (c) to read as follows:

§ 52.2588 Interstate pollutant transport provisions; What are the FIP requirements for decreases in emissions of sulfur dioxide?

* * * * *

(b) Notwithstanding any provisions of paragraph (a) of this section and subparts AAA through III of part 97 of this chapter and any State's SIP to the contrary:

(1) With regard to any control period that begins after December 31, 2011,

(i) The provisions of paragraph (a) of this section relating to SO_2 emissions shall not be applicable; and

(ii) The Administrator will not carry out any of the functions set forth for the Administrator in subparts AAA through III of part 97 of this chapter; and

(2) The Administrator will not deduct for excess emissions any CAIR SO_2 allowances allocated for 2012 or any year thereafter.

(c)(1) The owner and operator of each source and each unit located in the State of Wisconsin and Indian country within the borders of the State and for which requirements are set forth under the TR SO_2 Group 1 Trading Program in subpart CCCCC of part 97 of this chapter must comply with such requirements. The obligation to comply with such requirements with regard to sources and units in the State will be eliminated by the promulgation of an approval by the Administrator of a revision to Wisconsin's State Implementation Plan (SIP) as correcting in part the SIP's deficiency that is the basis for the TR Federal Implementation Plan under § 52.39, except to the extent the Administrator's approval is partial or conditional. The obligation to comply with such requirements with regard to sources and units located in Indian country within the borders of the State will not be eliminated by the promulgation of an approval by the Administrator of a revision to Wisconsin's SIP.

(2) Notwithstanding the provisions of paragraph (c)(1) of this section, if, at the time of the approval of Wisconsin's SIP revision described in paragraph (c)(1) of this section, the Administrator has already started recording any allocations of TR SO_2 Group 1 allowances under subpart CCCCC of part 97 of this chapter to units in the State for a control period in any year, the provisions of subpart CCCCC of part 97 of this chapter authorizing the Administrator to complete the allocation and recordation of TR SO_2 Group 1 allowances to units in the State for each such control period shall continue to apply, unless provided otherwise by such approval of the State's SIP revision.

PART 72—[AMENDED]

■ 64. The authority citation for part 72 is revised to read as follows:

Authority: 42 U.S.C. 7401, 7403, 7410, 7411, 7426, 7601, *et seq.*

§ 72.2 [Amended]

■ 65. Section 72.2 is amended by removing the definition of ''Interested person''.

PART 78—[AMENDED]

■ 66. The authority citation for part 78 continues to read as follows:

Authority: 42 U.S.C. 7401, 7403, 7410, 7411, 7426, 7601, *et seq.*

■ 67. Section 78.1 is amended by adding paragraphs (b)(13) through (b)(16) to read as follows:

§ 78.1 Purpose and scope.

* * * * *

(b) * * *

(13) Under subpart AAAAA of part 97 of this chapter,

(i) The decision on allocation of TR NO_X Annual allowances under § 97.411(a)(2) and (b) of this chapter.

(ii) The decision on the transfer of TR NO_X Annual allowances under § 97.423 of this chapter.

(iii) The decision on the deduction of TR NO_X Annual allowances under §§ 97.424 and 97.425 of this chapter.

(iv) The correction of an error in an Allowance Management System account under § 97.427 of this chapter.

(v) The adjustment of information in a submission and the decision on the deduction and transfer of TR NO_X Annual allowances based on the information as adjusted under § 97.428 of this chapter.

(vi) The finalization of control period emissions data, including retroactive adjustment based on audit.

(vii) The approval or disapproval of a petition under § 97.435 of this chapter.

(14) Under subpart BBBBB of part 97 of this chapter,

(i) The decision on allocation of TR NO_X Ozone Season allowances under § 97.511(a)(2) and (b) of this chapter.

(ii) The decision on the transfer of TR NO_X Ozone Season allowances under § 97.523 of this chapter.

(iii) The decision on the deduction of TR NO_X Ozone Season allowances under §§ 97.524 and 97.525 of this chapter.

(iv) The correction of an error in an Allowance Management System account under § 97.527 of this chapter.

(v) The adjustment of information in a submission and the decision on the deduction and transfer of TR NO_X Ozone Season allowances based on the information as adjusted under § 97.528 of this chapter.

(vi) The finalization of control period emissions data, including retroactive adjustment based on audit.

(vii) The approval or disapproval of a petition under § 97.535 of this chapter.

(15) Under subpart CCCCC of part 97 of this chapter,

(i) The decision on allocation of TR SO_2 Group 1 allowances under § 97.611(a)(2) and (b) of this chapter.

(ii) The decision on the transfer of TR SO_2 Group 1 allowances under § 97.623 of this chapter.

(iii) The decision on the deduction of TR SO_2 Group 1 allowances under §§ 97.624 and 97.625 of this chapter.

(iv) The correction of an error in an Allowance Management System account under § 97.627 of this chapter.

(v) The adjustment of information in a submission and the decision on the deduction and transfer of TR SO_2 Group 1 allowances based on the information as adjusted under § 97.628 of this chapter.

(vi) The finalization of control period emissions data, including retroactive adjustment based on audit.

(vii) The approval or disapproval of a petition under § 97.635 of this chapter.

(16) Under subpart DDDDD of part 97 of this chapter,

(i) The decision on allocation of TR SO_2 Group 2 allowances under § 97.711(a)(2) and (b) of this chapter.

(ii) The decision on the transfer of TR SO_2 Group 1 allowances under § 97.723 of this chapter.

(iii) The decision on the deduction of TR SO_2 Group 1 allowances under §§ 97.724 and 97.725 of this chapter.

(iv) The correction of an error in an Allowance Management System account under § 97.727 of this chapter.

(v) The adjustment of information in a submission and the decision on the

deduction and transfer of TR SO_2 Group 1 allowances based on the information as adjusted under § 97.728 of this chapter.

(vi) The finalization of control period emissions data, including retroactive adjustment based on audit.

(vii) The approval or disapproval of a petition under § 97.735 of this chapter.

* * * * *

■ 68. Section 78.2 is revised to read as follows:

§ 78.2 General.

(a) *Definitions.* (1) The terms used in this subpart with regard to a decision of the Administrator that is appealed under this section shall have the meaning as set forth in the regulations under which the Administrator made such decision and as set forth in paragraph (a)(2) of this section.

(2) *Interested person* means, with regard to a decision of the Administrator:

(i) Any person who submitted comments, or testified at a public hearing, pursuant to an opportunity for comment provided by the Administrator as part of the process of making such decision;

(ii) Who submitted objections pursuant to an opportunity for objections provided by the Administrator as part of the process of making such decision; or

(iii) Who submitted, to the Administrator and in a format prescribed by the Administrator, his or her name, service address, telephone number, and facsimile number and identified such decision in order to be placed on a list of persons interested in such decision;

(iv) Provided that the Administrator may update the list of interested persons from time to time by requesting additional written indication of continued interest from the persons listed and may delete from the list the name of any person failing to respond as requested.

(b) *Availability of information.* The availability to the public of information provided to, or otherwise obtained by, the Administrator under this subpart shall be governed by part 2 of this chapter.

(c) *Computation of time.* (1) In computing any period of time prescribed or allowed under this part, except as otherwise provided, the day of the event from which the period begins to run shall not be included, and Saturdays, Sundays, and federal holidays shall be included. When the period ends on a Saturday, Sunday, or federal holiday, the stated period shall be extended to include the next business day.

(2) Where a document is served by first class mail or commercial delivery service, but not by overnight or same-day delivery, 5 days shall be added to the time prescribed or allowed under this part for the filing of a responsive document or for otherwise responding.

■ 69. Section 78.3 is amended by:

■ a. In paragraphs (a)(1)(iii), (a)(3)(ii), (a)(4)(ii), (a)(5)(ii), (a)(6)(ii), (a)(7)(ii), (a)(8)(ii), and (a)(9)(ii), adding, after the word ''person'', the words ''with regard to the decision''.

■ b. Adding paragraph (a)(10);

■ c. In paragraph (b)(3)(i), removing the words ''paragraph (a)(1) and (2)'' and adding, in their place, the words ''paragraph (a)(1), (2), and (10)''; and

■ d. Adding paragraph (d)(11) to read as follows:

§ 78.3 Petition for administrative review and request or evidentiary hearing.

(a) * * *

(10) The following persons may petition for administrative review of a decision of the Administrator that is made under subparts AAAAA, BBBBB, CCCCC, and DDDDD of part 97 of this chapter:

(i) The designated representative for a unit or source, or the authorized account representative for any Allowance Management System account, covered by the decision; or

(ii) Any interested person with regard to the decision.

* * * * *

(d) * * *

(11) Any provision or requirement of subparts AAAAA, BBBBB, CCCCC, or DDDDD of part 97 of this chapter, including the standard requirements under § 97.406, § 97.506, § 97.606, or § 97.706 of this chapter and any emission monitoring or reporting requirements.

* * * * *

■ 70. Section 78.4 is amended by:

■ a. Revising paragraph (a) by:

■ i. Removing the first, second, third, fourth, fifth, and last sentences;

■ ii. In the sixth and seventh sentences, removing the words ''interest in'' and adding, in their place, the words ''ownership interest with respect to'';

■ iii. Redesignating the paragraph as paragraph (a)(1)(iii); and

■ b. Adding paragraphs (a)(1) introductory text, (a)(1)(i), and (a)(1)(ii); and

■ c. Revising paragraph (a)(2) to read as follows:

§ 78.4 Filings.

(a)(1) All original filings made under this part shall be signed by the person making the filing or by an attorney or authorized representative, in accordance with the following requirements:

(i) Any filings on behalf of owners and operators of a affected unit or affected source, TR NO_X Annual unit or TR NO_X Annual source, TR NO_X Ozone Season unit or TR NO_X Ozone Season source, TR SO_2 Group 1 unit or TR SO_2 Group 1 source, TR SO_2 Group 2 unit or TR SO_2 Group 2 source, or a unit for which a TR opt-in application is submitted and not withdrawn shall be signed by the designated representative. Any filing on behalf of persons with an ownership interest with respect to allowances, TR NO_X Annual allowances, TR NO_X Ozone Season allowances, TR SO_2 Group 1 allowances, or TR SO_2 Group 2 allowances in a general account shall be signed by the authorized account representative.

(ii) Any filings on behalf of owners and operators of a NO_X Budget unit or NO_X Budget source shall be signed by the NO_X authorized account representative. Any filing on behalf of persons with an ownership interest with respect to NO_X allowances in a general account shall be signed by the NO_X authorized account representative.

* * * * *

(2) The name, address, e-mail address (if any), telephone number, and facsimile number (if any) of the person making the filing shall be provided with the filing.

* * * * *

§ 78.5 [Amended]

■ 71. Section 78.5 is amended by, in paragraph (a):

■ a. Removing the words ''public comment prior to'' and adding, in their place, the words ''submission of public comments or objections prior to'';

■ b. Removing the words ''public comment period'' whenever they appear and adding, in their place, the words ''period for submission of public comments or objections''.

§ 78.12 [Amended]

■ 72. Section 78.12 is amended by, in paragraph (a), removing the words ''public comment'' and adding, in their place, the words ''submission of public comments or objections''.

PART 97—[AMENDED]

■ 73. The authority citation for part 97 continues to read as follows:

Authority: 42 U.S.C. 7401, 7403, 7410, 7426, 7601, and 7651, *et seq.*

■ 74. Part 97 is amended by adding subpart AAAAA to read as follows:

Subpart AAAAA—TR NO_X Annual Trading Program

97.401 Purpose.
97.402 Definitions.
97.403 Measurements, abbreviations, and acronyms.
97.404 Applicability.
97.405 Retired unit exemption.
97.406 Standard requirements.
97.407 Computation of time.
97.408 Administrative appeal procedures.
97.409 [Reserved]
97.410 State NO_X Annual trading budgets, new unit set-asides, Indian country new unit set-asides and variability limits.
97.411 Timing requirements for TR NO_X Annual allowance allocations.
97.412 TR NO_X Annual allowance allocations to new units.
97.413 Authorization of designated representative and alternate designated representative.
97.414 Responsibilities of designated representative and alternate designated representative.
97.415 Changing designated representative and alternate designated representative; changes in owners and operators.
97.416 Certificate of representation.
97.417 Objections concerning designated representative and alternate designated representative.
97.418 Delegation by designated representative and alternate designated representative.
97.419 [Reserved]
97.420 Establishment of compliance accounts and general accounts.
97.421 Recordation of TR NO_X Annual allowance allocations.
97.422 Submission of TR NO_X Annual allowance transfers.
97.423 Recordation of TR NO_X Annual allowance transfers.
97.424 Compliance with TR NO_X Annual emissions limitation.
97.425 Compliance with TR NO_X Annual assurance provisions.
97.426 Banking.
97.427 Account error.
97.428 Administrator's action on submissions.
97.429 [RESERVED]
97.430 General monitoring, recordkeeping, and reporting requirements.
97.431 Initial monitoring system certification and recertification procedures.
97.432 Monitoring system out-of-control periods.
97.433 Notifications concerning monitoring.
97.434 Recordkeeping and reporting.
97.435 Petitions for alternatives to monitoring, recordkeeping, or reporting requirements.

Subpart AAAAA—TR NO_X Annual Trading Program

§ 97.401 Purpose.

This subpart sets forth the general, designated representative, allowance, and monitoring provisions for the Transport Rule (TR) NO_X Annual Trading Program, under section 110 of the Clean Air Act and § 52.38 of this chapter, as a means of mitigating interstate transport of fine particulates and nitrogen oxides.

§ 97.402 Definitions.

The terms used in this subpart shall have the meanings set forth in this section as follows:

Acid Rain Program means a multi-state SO_2 and NO_X air pollution control and emission reduction program established by the Administrator under title IV of the Clean Air Act and parts 72 through 78 of this chapter.

Administrator means the Administrator of the United States Environmental Protection Agency or the Director of the Clean Air Markets Division (or its successor determined by the Administrator) of the United States Environmental Protection Agency, the Administrator's duly authorized representative under this subpart.

Allocate or *allocation* means, with regard to TR NO_X Annual allowances, the determination by the Administrator, State, or permitting authority, in accordance with this subpart and any SIP revision submitted by the State and approved by the Administrator under § 52.38(a)(3), (4), or (5) of this chapter, of the amount of such TR NO_X Annual allowances to be initially credited, at no cost to the recipient, to:

(1) A TR NO_X Annual unit;

(2) A new unit set-aside;

(3) An Indian country new unit set-aside; or

(4) An entity not listed in paragraphs (1) through (3) of this definition;

(5) Provided that, if the Administrator, State, or permitting authority initially credits, to a TR NO_X Annual unit qualifying for an initial credit, a credit in the amount of zero TR NO_X Annual allowances, the TR NO_X Annual unit will be treated as being allocated an amount (*i.e.,* zero) of TR NO_X Annual allowances.

Allowable NO_X *emission rate* means, for a unit, the most stringent State or federal NO_X emission rate limit (in lb/MWhr or, if in lb/mmBtu, converted to lb/MWhr by multiplying it by the unit's heat rate in mmBtu/MWhr) that is applicable to the unit and covers the longest averaging period not exceeding one year.

Allowance Management System means the system by which the Administrator records allocations, deductions, and transfers of TR NO_X Annual allowances under the TR NO_X Annual Trading Program. Such allowances are allocated, recorded, held, deducted, or transferred only as whole allowances.

Allowance Management System account means an account in the Allowance Management System established by the Administrator for purposes of recording the allocation, holding, transfer, or deduction of TR NO_X Annual allowances.

Allowance transfer deadline means, for a control period in a given year, midnight of March 1 (if it is a business day), or midnight of the first business day thereafter (if March 1 is not a business day), immediately after such control period and is the deadline by which a TR NO_X Annual allowance transfer must be submitted for recordation in a TR NO_X Annual source's compliance account in order to be available for use in complying with the source's TR NO_X Annual emissions limitation for such control period in accordance with §§ 97.406 and 97.424.

Alternate designated representative means, for a TR NO_X Annual source and each TR NO_X Annual unit at the source, the natural person who is authorized by the owners and operators of the source and all such units at the source, in accordance with this subpart, to act on behalf of the designated representative in matters pertaining to the TR NO_X Annual Trading Program. If the TR NO_X Annual source is also subject to the Acid Rain Program, TR NO_X Ozone Season Trading Program, TR SO_2 Group 1 Trading Program, or TR SO_2 Group 2 Trading Program, then this natural person shall be the same natural person as the alternate designated representative, as defined in the respective program.

Assurance account means an Allowance Management System account, established by the Administrator under § 97.425(b)(3) for certain owners and operators of a group of one or more TR NO_X Annual sources and units in a given State (and Indian country within the borders of such State), in which are held TR NO_X Annual allowances available for use for a control period in a given year in complying with the TR NO_X Annual assurance provisions in accordance with §§ 97.406 and 97.425.

Authorized account representative means, for a general account, the natural person who is authorized, in accordance with this subpart, to transfer and otherwise dispose of TR NO_X Annual allowances held in the general account and, for a TR NO_X Annual source's compliance account, the designated representative of the source.

Automated data acquisition and handling system or *DAHS* means the component of the continuous emission monitoring system, or other emissions monitoring system approved for use

under this subpart, designed to interpret and convert individual output signals from pollutant concentration monitors, flow monitors, diluent gas monitors, and other component parts of the monitoring system to produce a continuous record of the measured parameters in the measurement units required by this subpart.

Biomass means—

(1) Any organic material grown for the purpose of being converted to energy;

(2) Any organic byproduct of agriculture that can be converted into energy; or

(3) Any material that can be converted into energy and is nonmerchantable for other purposes, that is segregated from other material that is nonmerchantable for other purposes, and that is;

(i) A forest-related organic resource, including mill residues, precommercial thinnings, slash, brush, or byproduct from conversion of trees to merchantable material; or

(ii) A wood material, including pallets, crates, dunnage, manufacturing and construction materials (other than pressure-treated, chemically-treated, or painted wood products), and landscape or right-of-way tree trimmings.

Boiler means an enclosed fossil- or other-fuel-fired combustion device used to produce heat and to transfer heat to recirculating water, steam, or other medium.

Bottoming-cycle unit means a unit in which the energy input to the unit is first used to produce useful thermal energy, where at least some of the reject heat from the useful thermal energy application or process is then used for electricity production.

Business day means a day that does not fall on a weekend or a federal holiday.

Certifying official means a natural person who is:

(1) For a corporation, a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function or any other person who performs similar policy- or decision-making functions for the corporation;

(2) For a partnership or sole proprietorship, a general partner or the proprietor respectively; or

(3) For a local government entity or State, federal, or other public agency, a principal executive officer or ranking elected official.

Clean Air Act means the Clean Air Act, 42 U.S.C. 7401, *et seq.*

Coal means ''coal'' as defined in § 72.2 of this chapter.

Coal-derived fuel means any fuel (whether in a solid, liquid, or gaseous state) produced by the mechanical, thermal, or chemical processing of coal.

Cogeneration system means an integrated group, at a source, of equipment (including a boiler, or combustion turbine, and a steam turbine generator) designed to produce useful thermal energy for industrial, commercial, heating, or cooling purposes and electricity through the sequential use of energy.

Cogeneration unit means a stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine that is a topping-cycle unit or a bottoming-cycle unit:

(1) Operating as part of a cogeneration system; and

(2) Producing on an annual average basis—

(i) For a topping-cycle unit,

(A) Useful thermal energy not less than 5 percent of total energy output; and

(B) Useful power that, when added to one-half of useful thermal energy produced, is not less than 42.5 percent of total energy input, if useful thermal energy produced is 15 percent or more of total energy output, or not less than 45 percent of total energy input, if useful thermal energy produced is less than 15 percent of total energy output.

(ii) For a bottoming-cycle unit, useful power not less than 45 percent of total energy input;

(3) Provided that the requirements in paragraph (2) of this definition shall not apply to a calendar year referenced in paragraph (2) of this definition during which the unit did not operate at all;

(4) Provided that the total energy input under paragraphs (2)(i)(B) and (2)(ii) of this definition shall equal the unit's total energy input from all fuel, except biomass if the unit is a boiler; and

(5) Provided that, if, throughout its operation during the 12-month period or a calendar year referenced in paragraph (2) of this definition, a unit is operated as part of a cogeneration system and the cogeneration system meets on a system-wide basis the requirement in paragraph (2)(i)(B) or (2)(ii) of this definition, the unit shall be deemed to meet such requirement during that 12-month period or calendar year.

Combustion turbine means an enclosed device comprising:

(1) If the device is simple cycle, a compressor, a combustor, and a turbine and in which the flue gas resulting from the combustion of fuel in the combustor passes through the turbine, rotating the turbine; and

(2) If the device is combined cycle, the equipment described in paragraph (1) of this definition and any associated duct burner, heat recovery steam generator, and steam turbine.

Commence commercial operation means, with regard to a unit:

(1) To have begun to produce steam, gas, or other heated medium used to generate electricity for sale or use, including test generation, except as provided in § 97.405.

(i) For a unit that is a TR NO_X Annual unit under § 97.404 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in the introductory text of paragraph (1) of this definition and that subsequently undergoes a physical change or is moved to a new location or source, such date shall remain the date of commencement of commercial operation of the unit, which shall continue to be treated as the same unit.

(ii) For a unit that is a TR NO_X Annual unit under § 97.404 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in the introductory text of paragraph (1) of this definition and that is subsequently replaced by a unit at the same or a different source, such date shall remain the replaced unit's date of commencement of commercial operation, and the replacement unit shall be treated as a separate unit with a separate date for commencement of commercial operation as defined in paragraph (1) or (2) of this definition as appropriate.

(2) Notwithstanding paragraph (1) of this definition and except as provided in § 97.405, for a unit that is not a TR NO_X Annual unit under § 97.404 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in introductory text of paragraph (1) of this definition, the unit's date for commencement of commercial operation shall be the date on which the unit becomes a TR NO_X Annual unit under § 97.404.

(i) For a unit with a date for commencement of commercial operation as defined in the introductory text of paragraph (2) of this definition and that subsequently undergoes a physical change or is moved to a different location or source, such date shall remain the date of commencement of commercial operation of the unit, which shall continue to be treated as the same unit.

(ii) For a unit with a date for commencement of commercial operation as defined in the introductory text of paragraph (2) of this definition and that is subsequently replaced by a unit at the same or a different source, such date shall remain the replaced unit's date of commencement of commercial operation, and the replacement unit shall be treated as a separate unit with a separate date for

commencement of commercial operation as defined in paragraph (1) or (2) of this definition as appropriate.

Common designated representative means, with regard to a control period in a given year, a designated representative where, as of April 1 immediately after the allowance transfer deadline for such control period, the same natural person is authorized under §§ 97.413(a) and 97.415(a) as the designated representative for a group of one or more TR NO_X Annual sources and units located in a State (and Indian country within the borders of such State).

Common designated representative's assurance level means, with regard to a specific common designated representative and a State (and Indian country within the borders of such State) and control period in a given year for which the State assurance level is exceeded as described in § 97.406(c)(2)(iii), the common designated representative's share of the State NO_X Annual trading budget with the variability limit for the State for such control period.

Common designated representative's share means, with regard to a specific common designated representative for a control period in a given year:

(1) With regard to a total amount of NO_X emissions from all TR NO_X Annual units in a State (and Indian country within the borders of such State) during such control period, the total tonnage of NO_X emissions during such control period from a group of one or more TR NO_X Annual units located in such State (and such Indian country) and having the common designated representative for such control period;

(2) With regard to a State NO_X Annual trading budget with the variability limit for such control period, the amount (rounded to the nearest allowance) equal to the sum of the total amount of TR NO_X Annual allowances allocated for such control period to a group of one or more TR NO_X Annual units located in the State (and Indian country within the borders of such State) and having the common designated representative for such control period and of the total amount of TR NO_X Annual allowances purchased by an owner or operator of such TR NO_X Annual units in an auction for such control period and submitted by the State or the permitting authority to the Administrator for recordation in the compliance accounts for such TR NO_X Annual units in accordance with the TR NO_X Annual allowance auction provisions in a SIP revision approved by the Administrator under § 52.38(a)(4) or (5) of this chapter, multiplied by the sum of the State NO_X Annual trading budget under § 97.410(a) and the State's variability limit under § 97.410(b) for such control period and divided by such State NO_X Annual trading budget;

(3) Provided that, in the case of a unit that operates during, but has no amount of TR NO_X Annual allowances allocated under §§ 97.411 and 97.412 for, such control period, the unit shall be treated, solely for purposes of this definition, as being allocated an amount (rounded to the nearest allowance) of TR NO_X Annual allowances for such control period equal to the unit's allowable NO_X emission rate applicable to such control period, multiplied by a capacity factor of 0.85 (if the unit is a boiler combusting any amount of coal or coal-derived fuel during such control period), 0.24 (if the unit is a simple combustion turbine during such control period), 0.67 (if the unit is a combined cycle turbine during such control period), 0.74 (if the unit is an integrated coal gasification combined cycle unit during such control period), or 0.36 (for any other unit), multiplied by the unit's maximum hourly load as reported in accordance with this subpart and by 8,760 hours/control period, and divided by 2,000 lb/ton.

Common stack means a single flue through which emissions from 2 or more units are exhausted.

Compliance account means an Allowance Management System account, established by the Administrator for a TR NO_X Annual source under this subpart, in which any TR NO_X Annual allowance allocations to the TR NO_X Annual units at the source are recorded and in which are held any TR NO_X Annual allowances available for use for a control period in a given year in complying with the source's TR NO_X Annual emissions limitation in accordance with §§ 97.406 and 97.424.

Continuous emission monitoring system or *CEMS* means the equipment required under this subpart to sample, analyze, measure, and provide, by means of readings recorded at least once every 15 minutes and using an automated data acquisition and handling system (DAHS), a permanent record of NO_X emissions, stack gas volumetric flow rate, stack gas moisture content, and O_2 or CO_2 concentration (as applicable), in a manner consistent with part 75 of this chapter and §§ 97.430 through 97.435. The following systems are the principal types of continuous emission monitoring systems:

(1) A flow monitoring system, consisting of a stack flow rate monitor and an automated data acquisition and handling system and providing a permanent, continuous record of stack gas volumetric flow rate, in standard cubic feet per hour (scfh);

(2) A NO_X concentration monitoring system, consisting of a NO_X pollutant concentration monitor and an automated data acquisition and handling system and providing a permanent, continuous record of NO_X emissions, in parts per million (ppm);

(3) A NO_X emission rate (or NO_X-diluent) monitoring system, consisting of a NO_X pollutant concentration monitor, a diluent gas (CO_2 or O_2) monitor, and an automated data acquisition and handling system and providing a permanent, continuous record of NO_X concentration, in parts per million (ppm), diluent gas concentration, in percent CO_2 or O_2, and NO_X emission rate, in pounds per million British thermal units (lb/mmBtu);

(4) A moisture monitoring system, as defined in § 75.11(b)(2) of this chapter and providing a permanent, continuous record of the stack gas moisture content, in percent H_2O;

(5) A CO_2 monitoring system, consisting of a CO_2 pollutant concentration monitor (or an O_2 monitor plus suitable mathematical equations from which the CO_2 concentration is derived) and an automated data acquisition and handling system and providing a permanent, continuous record of CO_2 emissions, in percent CO_2; and

(6) An O_2 monitoring system, consisting of an O_2 concentration monitor and an automated data acquisition and handling system and providing a permanent, continuous record of O_2, in percent O_2.

Control period means the period starting January 1 of a calendar year, except as provided in § 97.406(c)(3), and ending on December 31 of the same year, inclusive.

Designated representative means, for a TR NO_X Annual source and each TR NO_X Annual unit at the source, the natural person who is authorized by the owners and operators of the source and all such units at the source, in accordance with this subpart, to represent and legally bind each owner and operator in matters pertaining to the TR NO_X Annual Trading Program. If the TR NO_X Annual source is also subject to the Acid Rain Program, TR NO_X Ozone Season Trading Program, TR SO_2 Group 1 Trading Program, or TR SO_2 Group 2 Trading Program, then this natural person shall be the same natural person as the designated representative, as defined in the respective program.

Emissions means air pollutants exhausted from a unit or source into the atmosphere, as measured, recorded, and

reported to the Administrator by the designated representative, and as modified by the Administrator:

(1) In accordance with this subpart; and

(2) With regard to a period before the unit or source is required to measure, record, and report such air pollutants in accordance with this subpart, in accordance with part 75 of this chapter.

Excess emissions means any ton of emissions from the TR NO_X Annual units at a TR NO_X Annual source during a control period in a given year that exceeds the TR NO_X Annual emissions limitation for the source for such control period.

Fossil fuel means—

(1) Natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material; or

(2) For purposes of applying the limitation on ''average annual fuel consumption of fossil fuel'' in §§ 97.404(b)(2)(i)(B) and (ii), natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material for the purpose of creating useful heat.

Fossil-fuel-fired means, with regard to a unit, combusting any amount of fossil fuel in 2005 or any calendar year thereafter.

General account means an Allowance Management System account, established under this subpart, that is not a compliance account or an assurance account.

Generator means a device that produces electricity.

Gross electrical output means, for a unit, electricity made available for use, including any such electricity used in the power production process (which process includes, but is not limited to, any on-site processing or treatment of fuel combusted at the unit and any on-site emission controls).

Heat input means, for a unit for a specified period of time, the product (in mmBtu/time) of the gross calorific value of the fuel (in mmBtu/lb) fed into the unit multiplied by the fuel feed rate (in lb of fuel/time), as measured, recorded, and reported to the Administrator by the designated representative and as modified by the Administrator in accordance with this subpart and excluding the heat derived from preheated combustion air, recirculated flue gases, or exhaust.

Heat input rate means, for a unit, the amount of heat input (in mmBtu) divided by unit operating time (in hr) or, for a unit and a specific fuel, the amount of heat input attributed to the fuel (in mmBtu) divided by the unit operating time (in hr) during which the unit combusts the fuel.

Heat rate means, for a unit, the unit's maximum design heat input (in Btu/hr), divided by the product of 1,000,000 Btu/mmBtu and the unit's maximum hourly load.

Indian country means ''Indian country'' as defined in 18 U.S.C. 1151.

Life-of-the-unit, firm power contractual arrangement means a unit participation power sales agreement under which a utility or industrial customer reserves, or is entitled to receive, a specified amount or percentage of nameplate capacity and associated energy generated by any specified unit and pays its proportional amount of such unit's total costs, pursuant to a contract:

(1) For the life of the unit;

(2) For a cumulative term of no less than 30 years, including contracts that permit an election for early termination; or

(3) For a period no less than 25 years or 70 percent of the economic useful life of the unit determined as of the time the unit is built, with option rights to purchase or release some portion of the nameplate capacity and associated energy generated by the unit at the end of the period.

Maximum design heat input means, for a unit, the maximum amount of fuel per hour (in Btu/hr) that the unit is capable of combusting on a steady state basis as of the initial installation of the unit as specified by the manufacturer of the unit.

Monitoring system means any monitoring system that meets the requirements of this subpart, including a continuous emission monitoring system, an alternative monitoring system, or an excepted monitoring system under part 75 of this chapter.

Nameplate capacity means, starting from the initial installation of a generator, the maximum electrical generating output (in MWe, rounded to the nearest tenth) that the generator is capable of producing on a steady state basis and during continuous operation (when not restricted by seasonal or other deratings) as of such installation as specified by the manufacturer of the generator or, starting from the completion of any subsequent physical change in the generator resulting in an increase in the maximum electrical generating output that the generator is capable of producing on a steady state basis and during continuous operation (when not restricted by seasonal or other deratings), such increased maximum amount (in MWe, rounded to the nearest tenth) as of such completion as specified by the person conducting the physical change.

Natural gas means ''natural gas'' as defined in § 72.2 of this chapter.

Newly affected TR NO_X Annual unit means a unit that was not a TR NO_X Annual unit when it began operating but that thereafter becomes a TR NO_X Annual unit.

Operate or *operation* means, with regard to a unit, to combust fuel.

Operator means, for a TR NO_X Annual source or a TR NO_X Annual unit at a source respectively, any person who operates, controls, or supervises a TR NO_X Annual unit at the source or the TR NO_X Annual unit and shall include, but not be limited to, any holding company, utility system, or plant manager of such source or unit.

Owner means, for a TR NO_X Annual source or a TR NO_X Annual unit at a source respectively, any of the following persons:

(1) Any holder of any portion of the legal or equitable title in a TR NO_X Annual unit at the source or the TR NO_X Annual unit;

(2) Any holder of a leasehold interest in a TR NO_X Annual unit at the source or the TR NO_X Annual unit, provided that, unless expressly provided for in a leasehold agreement, ''owner'' shall not include a passive lessor, or a person who has an equitable interest through such lessor, whose rental payments are not based (either directly or indirectly) on the revenues or income from such TR NO_X Annual unit; and 3) Any purchaser of power from a TR NO_X Annual unit at the source or the TR NO_X Annual unit under a life-of-the-unit, firm power contractual arrangement.

Permanently retired means, with regard to a unit, a unit that is unavailable for service and that the unit's owners and operators do not expect to return to service in the future.

Permitting authority means ''permitting authority'' as defined in §§ 70.2 and 71.2 of this chapter.

Potential electrical output capacity means, for a unit, 33 percent of the unit's maximum design heat input, divided by 3,413 Btu/kWh, divided by 1,000 kWh/MWh, and multiplied by 8,760 hr/yr.

Receive or *receipt of* means, when referring to the Administrator, to come into possession of a document, information, or correspondence (whether sent in hard copy or by authorized electronic transmission), as indicated in an official log, or by a notation made on the document, information, or correspondence, by the Administrator in the regular course of business.

Recordation, record, or *recorded* means, with regard to TR NO_X Annual allowances, the moving of TR NO_X

Annual allowances by the Administrator into, out of, or between Allowance Management System accounts, for purposes of allocation, auction, transfer, or deduction.

Reference method means any direct test method of sampling and analyzing for an air pollutant as specified in § 75.22 of this chapter.

Replacement, replace, or *replaced* means, with regard to a unit, the demolishing of a unit, or the permanent retirement and permanent disabling of a unit, and the construction of another unit (the replacement unit) to be used instead of the demolished or retired unit (the replaced unit).

Sequential use of energy means:

(1) The use of reject heat from electricity production in a useful thermal energy application or process; or

(2) The use of reject heat from useful thermal energy application or process in electricity production.

Serial number means, for a TR NO_X Annual allowance, the unique identification number assigned to each TR NO_X Annual allowance by the Administrator.

Solid waste incineration unit means a stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine that is a ''solid waste incineration unit'' as defined in section 129(g)(1) of the Clean Air Act.

Source means all buildings, structures, or installations located in one or more contiguous or adjacent properties under common control of the same person or persons. This definition does not change or otherwise affect the definition of ''major source'', ''stationary source'', or ''source'' as set forth and implemented in a title V operating permit program or any other program under the Clean Air Act.

State means one of the States that is subject to the TR NO_X Annual Trading Program pursuant to § 52.38(a) of this chapter.

Submit or *serve* means to send or transmit a document, information, or correspondence to the person specified in accordance with the applicable regulation:

(1) In person;

(2) By United States Postal Service; or

(3) By other means of dispatch or transmission and delivery;

(4) Provided that compliance with any ''submission'' or ''service'' deadline shall be determined by the date of dispatch, transmission, or mailing and not the date of receipt.

Topping-cycle unit means a unit in which the energy input to the unit is first used to produce useful power, including electricity, where at least some of the reject heat from the electricity production is then used to provide useful thermal energy.

Total energy input means, for a unit, total energy of all forms supplied to the unit, excluding energy produced by the unit. Each form of energy supplied shall be measured by the lower heating value of that form of energy calculated as follows:

$$LHV = HHV - 10.55(W + 9H)$$

Where:

LHV = lower heating value of the form of energy in Btu/lb,

HHV = higher heating value of the form of energy in Btu/lb,

W = weight % of moisture in the form of energy, and

H = weight % of hydrogen in the form of energy.

Total energy output means, for a unit, the sum of useful power and useful thermal energy produced by the unit.

TR NO_X Annual allowance means a limited authorization issued and allocated or auctioned by the Administrator under this subpart, or by a State or permitting authority under a SIP revision approved by the Administrator under § 52.38(a)(3), (4), or (5) of this chapter, to emit one ton of NO_X during a control period of the specified calendar year for which the authorization is allocated or auctioned or of any calendar year thereafter under the TR NO_X Annual Trading Program.

TR NO_X Annual allowance deduction or *deduct TR NO_X Annual allowances* means the permanent withdrawal of TR NO_X Annual allowances by the Administrator from a compliance account (*e.g.*, in order to account for compliance with the TR NO_X Annual emissions limitation) or from an assurance account (*e.g.*, in order to account for compliance with the assurance provisions under §§ 97.406 and 97.425).

TR NO_X Annual allowances held or *hold TR NO_4 Annual allowances* means the TR NO_X Annual allowances treated as included in an Allowance Management System account as of a specified point in time because at that time they:

(1) Have been recorded by the Administrator in the account or transferred into the account by a correctly submitted, but not yet recorded, TR NO_X Annual allowance transfer in accordance with this subpart; and

(2) Have not been transferred out of the account by a correctly submitted, but not yet recorded, TR NO_X Annual allowance transfer in accordance with this subpart.

TR NO_X Annual emissions limitation means, for a TR NO_X Annual source, the tonnage of NO_X emissions authorized in a control period in a given year by the TR NO_X Annual allowances available for deduction for the source under § 97.424(a) for such control period.

TR NO_X Annual source means a source that includes one or more TR NO_X Annual units.

TR NO_X Annual Trading Program means a multi-state NO_X air pollution control and emission reduction program established in accordance with this subpart and § 52.38(a) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.38(a)(3) or (4) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.38(a)(5) of this chapter), as a means of mitigating interstate transport of fine particulates and NO_X.

TR NO_X Annual unit means a unit that is subject to the TR NO_X Annual Trading Program.

TR NO_X Ozone Season Trading Program means a multi-state NO_X air pollution control and emission reduction program established in accordance with subpart BBBBB of this part and § 52.38(b) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.38(b)(3) or (4) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.38(b)(5) of this chapter), as a means of mitigating interstate transport of ozone and NO_X.

TR SO_2 Group 1 Trading Program means a multi-state SO_2 air pollution control and emission reduction program established in accordance with subpart CCCCC of this part and § 52.39(a), (b), (d) through (f), (j), and (k) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.39(d) or (e) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.39(f) of this chapter), as a means of mitigating interstate transport of fine particulates and SO_2.

TR SO_2 Group 2 Trading Program means a multi-state SO_2 air pollution control and emission reduction program established in accordance with subpart DDDDD of this part and 52.39(a), (c), and (g) through (k) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.39(g) or (h) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.39(i) of this chapter), as a means of mitigating interstate transport of fine particulates and SO_2.

Unit means a stationary, fossil-fuel-fired boiler, stationary, fossil-fuel-fired combustion turbine, or other stationary, fossil-fuel-fired combustion device. A unit that undergoes a physical change or is moved to a different location or source shall continue to be treated as the same unit. A unit (the replaced unit) that is replaced by another unit (the replacement unit) at the same or a different source shall continue to be treated as the same unit, and the replacement unit shall be treated as a separate unit.

Unit operating day means, with regard to a unit, a calendar day in which the unit combusts any fuel.

Unit operating hour or hour of unit operation means, with regard to a unit, an hour in which the unit combusts any fuel.

Useful power means, with regard to a unit, electricity or mechanical energy that the unit makes available for use, excluding any such energy used in the power production process (which process includes, but is not limited to, any on-site processing or treatment of fuel combusted at the unit and any on-site emission controls).

Useful thermal energy means thermal energy that is:

(1) Made available to an industrial or commercial process (not a power production process), excluding any heat contained in condensate return or makeup water;

(2) Used in a heating application (*e.g.,* space heating or domestic hot water heating); or

(3) Used in a space cooling application (*i.e.,* in an absorption chiller).

Utility power distribution system means the portion of an electricity grid owned or operated by a utility and dedicated to delivering electricity to customers.

§ 97.403 Measurements, abbreviations, and acronyms.

Measurements, abbreviations, and acronyms used in this subpart are defined as follows:

Btu—British thermal unit
CO_2—carbon dioxide
H_2O—water
hr—hour
kW—kilowatt electrical
kWh—kilowatt hour
lb—pound
mmBtu—million Btu
MWe—megawatt electrical
MWh—megawatt hour
NO_X—nitrogen oxides
O_2—oxygen
ppm—parts per million
scfh—standard cubic feet per hour
SO_2—sulfur dioxide
yr—year

§ 97.404 Applicability.

(a) Except as provided in paragraph (b) of this section:

(1) The following units in a State (and Indian country within the borders of such State) shall be TR NO_X Annual units, and any source that includes one or more such units shall be a TR NO_X Annual source, subject to the requirements of this subpart: any stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine serving at any time, on or after January 1, 2005, a generator with nameplate capacity of more than 25 MWe producing electricity for sale.

(2) If a stationary boiler or stationary combustion turbine that, under paragraph (a)(1) of this section, is not a TR NO_X Annual unit begins to combust fossil fuel or to serve a generator with nameplate capacity of more than 25 MWe producing electricity for sale, the unit shall become a TR NO_X Annual unit as provided in paragraph (a)(1) of this section on the first date on which it both combusts fossil fuel and serves such generator.

(b) Any unit in a State (and Indian country within the borders of such State) that otherwise is a TR NO_X Annual unit under paragraph (a) of this section and that meets the requirements set forth in paragraph (b)(1)(i) or (2)(i) of this section shall not be a TR NO_X Annual unit:

(1)(i) Any unit:

(A) Qualifying as a cogeneration unit throughout the later of 2005 or the 12-month period starting on the date the unit first produces electricity and continuing to qualify as a cogeneration unit throughout each calendar year ending after the later of 2005 or such 12-month period; and

(B) Not supplying in 2005 or any calendar year thereafter more than one-third of the unit's potential electric output capacity or 219,000 MWh, whichever is greater, to any utility power distribution system for sale.

(ii) If, after qualifying under paragraph (b)(1)(i) of this section as not being a TR NO_X Annual unit, a unit subsequently no longer meets all the requirements of paragraph (b)(1)(i) of this section, the unit shall become a TR NO_X Annual unit starting on the earlier of January 1 after the first calendar year during which the unit first no longer qualifies as a cogeneration unit or January 1 after the first calendar year during which the unit no longer meets the requirements of paragraph (b)(1)(i)(B) of this section. The unit shall thereafter continue to be a TR NO_X Annual unit.

(2)(i) Any unit:

(A) Qualifying as a solid waste incineration unit throughout the later of 2005 or the 12-month period starting on the date the unit first produces electricity and continuing to qualify as a solid waste incineration unit throughout each calendar year ending after the later of 2005 or such 12-month period; and

(B) With an average annual fuel consumption of fossil fuel for the first 3 consecutive calendar years of operation starting no earlier than 2005 of less than 20 percent (on a Btu basis) and an average annual fuel consumption of fossil fuel for any 3 consecutive calendar years thereafter of less than 20 percent (on a Btu basis).

(ii) If, after qualifying under paragraph (b)(2)(i) of this section as not being a TR NO_X Annual unit, a unit subsequently no longer meets all the requirements of paragraph (b)(1)(i) of this section, the unit shall become a TR NO_X Annual unit starting on the earlier of January 1 after the first calendar year during which the unit first no longer qualifies as a solid waste incineration unit or January 1 after the first 3 consecutive calendar years after 2005 for which the unit has an average annual fuel consumption of fossil fuel of 20 percent or more. The unit shall thereafter continue to be a TR NO_X Annual unit.

(c) A certifying official of an owner or operator of any unit or other equipment may submit a petition (including any supporting documents) to the Administrator at any time for a determination concerning the applicability, under paragraphs (a) and (b) of this section or a SIP revision approved under § 52.38(a)(4) or (5) of this chapter, of the TR NO_X Annual Trading Program to the unit or other equipment.

(1) Petition content. The petition shall be in writing and include the identification of the unit or other equipment and the relevant facts about the unit or other equipment. The petition and any other documents provided to the Administrator in connection with the petition shall include the following certification statement, signed by the certifying official: ''I am authorized to make this submission on behalf of the owners and operators of the unit or other equipment for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements

and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(2) Response. The Administrator will issue a written response to the petition and may request supplemental information determined by the Administrator to be relevant to such petition. The Administrator's determination concerning the applicability, under paragraphs (a) and (b) of this section, of the TR NO_X Annual Trading Program to the unit or other equipment shall be binding on any State or permitting authority unless the Administrator determines that the petition or other documents or information provided in connection with the petition contained significant, relevant errors or omissions.

§ 97.405 Retired unit exemption.

(a)(1) Any TR NO_X Annual unit that is permanently retired shall be exempt from § 97.406(b) and (c)(1), § 97.424, and §§ 97.430 through 97.435.

(2) The exemption under paragraph (a)(1) of this section shall become effective the day on which the TR NO_X Annual unit is permanently retired. Within 30 days of the unit's permanent retirement, the designated representative shall submit a statement to the Administrator. The statement shall state, in a format prescribed by the Administrator, that the unit was permanently retired on a specified date and will comply with the requirements of paragraph (b) of this section.

(b) Special provisions. (1) A unit exempt under paragraph (a) of this section shall not emit any NO_X, starting on the date that the exemption takes effect.

(2) For a period of 5 years from the date the records are created, the owners and operators of a unit exempt under paragraph (a) of this section shall retain, at the source that includes the unit, records demonstrating that the unit is permanently retired. The 5-year period for keeping records may be extended for cause, at any time before the end of the period, in writing by the Administrator. The owners and operators bear the burden of proof that the unit is permanently retired.

(3) The owners and operators and, to the extent applicable, the designated representative of a unit exempt under paragraph (a) of this section shall comply with the requirements of the TR NO_X Annual Trading Program concerning all periods for which the exemption is not in effect, even if such requirements arise, or must be complied with, after the exemption takes effect.

(4) A unit exempt under paragraph (a) of this section shall lose its exemption on the first date on which the unit resumes operation. Such unit shall be treated, for purposes of applying allocation, monitoring, reporting, and recordkeeping requirements under this subpart, as a unit that commences commercial operation on the first date on which the unit resumes operation.

§ 97.406 Standard requirements.

(a) *Designated representative requirements.* The owners and operators shall comply with the requirement to have a designated representative, and may have an alternate designated representative, in accordance with §§ 97.413 through 97.418.

(b) *Emissions monitoring, reporting, and recordkeeping requirements.*

(1) The owners and operators, and the designated representative, of each TR NO_X Annual source and each TR NO_X Annual unit at the source shall comply with the monitoring, reporting, and recordkeeping requirements of §§ 97.430 through 97.435.

(2) The emissions data determined in accordance with §§ 97.430 through 97.435 shall be used to calculate allocations of TR NO_X Annual allowances under §§ 97.411(a)(2) and (b) and 97.412 and to determine compliance with the TR NO_X Annual emissions limitation and assurance provisions under paragraph (c) of this section, provided that, for each monitoring location from which mass emissions are reported, the mass emissions amount used in calculating such allocations and determining such compliance shall be the mass emissions amount for the monitoring location determined in accordance with §§ 97.430 through 97.435 and rounded to the nearest ton, with any fraction of a ton less than 0.50 being deemed to be zero.

(c) *NO_X emissions requirements.* (1) TR NO_X Annual emissions limitation. (i) As of the allowance transfer deadline for a control period in a given year, the owners and operators of each TR NO_X Annual source and each TR NO_X Annual unit at the source shall hold, in the source's compliance account, TR NO_X Annual allowances available for deduction for such control period under § 97.424(a) in an amount not less than the tons of total NO_X emissions for such control period from all TR NO_X Annual units at the source.

(ii) If total NO_X emissions during a control period in a given year from the TR NO_X Annual units at a TR NO_X Annual source are in excess of the TR NO_X Annual emissions limitation set forth in paragraph (c)(1)(i) of this section, then:

(A) The owners and operators of the source and each TR NO_X Annual unit at the source shall hold the TR NO_X Annual allowances required for deduction under § 97.424(d); and

(B) The owners and operators of the source and each TR NO_X Annual unit at the source shall pay any fine, penalty, or assessment or comply with any other remedy imposed, for the same violations, under the Clean Air Act, and each ton of such excess emissions and each day of such control period shall constitute a separate violation of this subpart and the Clean Air Act.

(2) TR NO_X Annual assurance provisions. (i) If total NO_X emissions during a control period in a given year from all TR NO_X Annual units at TR NO_X Annual sources in a State (and Indian country within the borders of such State) exceed the State assurance level, then the owners and operators of such sources and units in each group of one or more sources and units having a common designated representative for such control period, where the common designated representative's share of such NO_X emissions during such control period exceeds the common designated representative's assurance level for the State and such control period, shall hold (in the assurance account established for the owners and operators of such group) TR NO_X Annual allowances available for deduction for such control period under § 97.425(a) in an amount equal to two times the product (rounded to the nearest whole number), as determined by the Administrator in accordance with § 97.425(b), of multiplying—

(A) The quotient of the amount by which the common designated representative's share of such NO_X emissions exceeds the common designated representative's assurance level divided by the sum of the amounts, determined for all common designated representatives for such sources and units in the State (and Indian country within the borders of such State) for such control period, by which each common designated representative's share of such NO_X emissions exceeds the respective common designated representative's assurance level; and

(B) The amount by which total NO_X emissions from all TR NO_X Annual units at TR NO_X Annual sources in the State (and Indian country within the borders of such State) for such control period exceed the State assurance level.

(ii) The owners and operators shall hold the TR NO_X Annual allowances required under paragraph (c)(2)(i) of this section, as of midnight of November 1 (if it is a business day), or midnight of the first business day thereafter (if November 1 is not a business day), immediately after such control period.

(iii) Total NO_X emissions from all TR NO_X Annual units at TR NO_X Annual sources in a State (and Indian country within the borders of such State) during a control period in a given year exceed the State assurance level if such total NO_X emissions exceed the sum, for such control period, of the State NO_X Annual trading budget under § 97.410(a) and the State's variability limit under § 97.410(b).

(iv) It shall not be a violation of this subpart or of the Clean Air Act if total NO_X emissions from all TR NO_X Annual units at TR NO_X Annual sources in a State (and Indian country within the borders of such State) during a control period exceed the State assurance level or if a common designated representative's share of total NO_X emissions from the TR NO_X Annual units at TR NO_X Annual sources in a State (and Indian country within the borders of such State) during a control period exceeds the common designated representative's assurance level.

(v) To the extent the owners and operators fail to hold TR NO_X Annual allowances for a control period in a given year in accordance with paragraphs (c)(2)(i) through (iii) of this section,

(A) The owners and operators shall pay any fine, penalty, or assessment or comply with any other remedy imposed under the Clean Air Act; and

(B) Each TR NO_X Annual allowance that the owners and operators fail to hold for such control period in accordance with paragraphs (c)(2)(i) through (iii) of this section and each day of such control period shall constitute a separate violation of this subpart and the Clean Air Act.

(3) Compliance periods. A TR NO_X Annual unit shall be subject to the requirements under paragraphs (c)(1) and (c)(2) of this section for the control period starting on the later of January 1, 2012 or the deadline for meeting the unit's monitor certification requirements under § 97.430(b) and for each control period thereafter.

(4) Vintage of allowances held for compliance. (i) A TR NO_X Annual allowance held for compliance with the requirements under paragraph (c)(1)(i) of this section for a control period in a given year must be a TR NO_X Annual allowance that was allocated for such control period or a control period in a prior year.

(ii) A TR NO_X Annual allowance held for compliance with the requirements under paragraphs (c)(1)(ii)(A) and (2)(i) through (iii) of this section for a control period in a given year must be a TR NO_X Annual allowance that was allocated for a control period in a prior year or the control period in the given year or in the immediately following year.

(5) Allowance Management System requirements. Each TR NO_X Annual allowance shall be held in, deducted from, or transferred into, out of, or between Allowance Management System accounts in accordance with this subpart.

(6) Limited authorization. A TR NO_X Annual allowance is a limited authorization to emit one ton of NO_X during the control period in one year. Such authorization is limited in its use and duration as follows:

(i) Such authorization shall only be used in accordance with the TR NO_X Annual Trading Program; and

(ii) Notwithstanding any other provision of this subpart, the Administrator has the authority to terminate or limit the use and duration of such authorization to the extent the Administrator determines is necessary or appropriate to implement any provision of the Clean Air Act.

(7) Property right. A TR NO_X Annual allowance does not constitute a property right.

(d) *Title V permit requirements.* (1) No title V permit revision shall be required for any allocation, holding, deduction, or transfer of TR NO_X Annual allowances in accordance with this subpart.

(2) A description of whether a unit is required to monitor and report NO_X emissions using a continuous emission monitoring system (under subpart H of part 75 of this chapter), an excepted monitoring system (under appendices D and E to part 75 of this chapter), a low mass emissions excepted monitoring methodology (under § 75.19 of this chapter), or an alternative monitoring system (under subpart E of part 75 of this chapter) in accordance with §§ 97.430 through 97.435 may be added to, or changed in, a title V permit using minor permit modification procedures in accordance with §§ 70.7(e)(2) and 71.7(e)(1) of this chapter, provided that the requirements applicable to the described monitoring and reporting (as added or changed, respectively) are already incorporated in such permit. This paragraph explicitly provides that the addition of, or change to, a unit's description as described in the prior sentence is eligible for minor permit modification procedures in accordance with §§ 70.7(e)(2)(i)(B) and 71.7(e)(1)(i)(B) of this chapter.

(e) *Additional recordkeeping and reporting requirements.* (1) Unless otherwise provided, the owners and operators of each TR NO_X Annual source and each TR NO_X Annual unit at the source shall keep on site at the source each of the following documents (in hardcopy or electronic format) for a period of 5 years from the date the document is created. This period may be extended for cause, at any time before the end of 5 years, in writing by the Administrator.

(i) The certificate of representation under § 97.416 for the designated representative for the source and each TR NO_X Annual unit at the source and all documents that demonstrate the truth of the statements in the certificate of representation; provided that the certificate and documents shall be retained on site at the source beyond such 5-year period until such certificate of representation and documents are superseded because of the submission of a new certificate of representation under § 97.416 changing the designated representative.

(ii) All emissions monitoring information, in accordance with this subpart.

(iii) Copies of all reports, compliance certifications, and other submissions and all records made or required under, or to demonstrate compliance with the requirements of, the TR NO_X Annual Trading Program.

(2) The designated representative of a TR NO_X Annual source and each TR NO_X Annual unit at the source shall make all submissions required under the TR NO_X Annual Trading Program, except as provided in § 97.418. This requirement does not change, create an exemption from, or or otherwise affect the responsible official submission requirements under a title V operating permit program in parts 70 and 71 of this chapter.

(f) *Liability.* (1) Any provision of the TR NO_X Annual Trading Program that applies to a TR NO_X Annual source or the designated representative of a TR NO_X Annual source shall also apply to the owners and operators of such source and of the TR NO_X Annual units at the source.

(2) Any provision of the TR NO_X Annual Trading Program that applies to a TR NO_X Annual unit or the designated representative of a TR NO_X Annual unit shall also apply to the owners and operators of such unit.

(g) *Effect on other authorities.* No provision of the TR NO_X Annual Trading Program or exemption under

§ 97.405 shall be construed as exempting or excluding the owners and operators, and the designated representative, of a TR NO_X Annual source or TR NO_X Annual unit from compliance with any other provision of the applicable, approved State implementation plan, a federally enforceable permit, or the Clean Air Act.

§ 97.407 Computation of time.

(a) Unless otherwise stated, any time period scheduled, under the TR NO_X Annual Trading Program, to begin on the occurrence of an act or event shall begin on the day the act or event occurs.

(b) Unless otherwise stated, any time period scheduled, under the TR NO_X Annual Trading Program, to begin before the occurrence of an act or event shall be computed so that the period ends the day before the act or event occurs.

(c) Unless otherwise stated, if the final day of any time period, under the TR NO_X Annual Trading Program, is not a business day, the time period shall be extended to the next business day.

§ 97.408 Administrative appeal procedures.

The administrative appeal procedures for decisions of the Administrator under the TR NO_X Annual Trading Program are set forth in part 78 of this chapter.

§ 97.409 [Reserved]

§ 97.410 State NO_X Annual trading budgets, new unit set-asides, Indian country new unit set-aside, and variability limits.

(a) The State NO_X Annual trading budgets, new unit set-asides, and Indian country new unit set-asides for allocations of TR NO_X Annual allowances for the control periods in 2012 and thereafter are as follows:

State	NO_X Annual trading budget (tons)* for 2012 and 2013	New unit set-aside (tons) for 2012 and 2013	Indian country new unit set-aside (tons) for 2012 and 2013
Alabama	72,691	1,454	.....
Georgia	62,010	1,240	.....
Illinois	47,872	3,830	.....
Indiana	109,726	3,292	.....
Iowa	38,335	729	38
Kansas	30,714	583	31
Kentucky	85,086	3,403	.....
Maryland	16,633	333	.....
Michigan	60,193	1,144	60
Minnesota	29,572	561	30

South Carolina	32,498	617	33
Tennessee	19,337	387	.....

State	NO_X Annual trading budget (tons)* for 2014 and thereafter	New unit set-aside (tons) for 2014 and thereafter	Indian country new unit set-aside (tons) for 2014 and thereafter
Texas	133,595	3,874	134
Virginia	33,242	1,662	.....
West Virginia	54,582	2,729	.....
Wisconsin	30,398	1,794	30

* Each trading budget includes the new unit set-aside and, where applicable, the Indian country new unit set-aside and does not include the variability limit.

(b) The States' variability limits for the State NO_X Annual trading budgets for the control periods in 2012 and thereafter are as follows:

State	Variability limits for 2012 and 2013	Variability limits for 2014 and thereafter
Alabama	13,084	12,953
Georgia	11,162	7,297
Illinois	8,617	8,617
Indiana	19,751	19,516
Iowa	6,900	6,750
Kansas	5,529	4,601
Kentucky	15,315	13,903
Maryland	2,994	2,983
Michigan	10,835	10,406
Minnesota	5,323	5,323
Missouri	9,427	8,769
Nebraska	4,759	4,759
New Jersey	1,308	1,308
New York	3,158	3,158
North Carolina	9,106	7,480
Ohio	16,687	15,749
Pennsylvania	21,597	21,455
South Carolina	5,850	5,850
Tennessee	6,427	3,481
Texas	24,047	24,047
Virginia	5,984	5,984
West Virginia	10,705	9,825
Wisconsin	5,693	5,472

§ 97.411 Timing requirements for TR NO_X Annual allowance allocations.

(a) *Existing units.* (1) TR NO_X Annual allowances are allocated, for the control periods in 2012 and each year thereafter, as provided in a notice of data availability issued by the Administrator. Providing an allocation to a unit in such notice does not constitute a determination that the unit is a TR NO_X Annual unit, and not providing an allocation to a unit in such notice does not constitute a determination that the unit is not a TR NO_X Annual unit.

(2) Notwithstanding paragraph (a)(1) of this section, if a unit provided an allocation in the notice of data availability issued under paragraph (a)(1) of this section does not operate, starting after 2011, during the control period in two consecutive years, such unit will not be allocated the TR NO_X Annual allowances provided in such notice for the unit for the control periods in the fifth year after the first such year and in each year after that fifth year. All TR NO_X Annual allowances that would otherwise have been allocated to such unit will be allocated to the new unit set-aside for the State where such unit is located and for the respective years involved. If such unit resumes operation, the Administrator will allocate TR NO_X Annual allowances to the unit in accordance with paragraph (b) of this section.

(b) *New units.* (1) New unit set-asides. (i) By June 1, 2012 and June 1 of each year thereafter, the Administrator will calculate the TR NO_X Annual allowance allocation to each TR NO_X Annual unit in a State, in accordance with § 97.412(a)(2) through (7) and (12), for the control period in the year of the applicable calculation deadline under this paragraph and will promulgate a notice of data availability of the results of the calculations.

(ii) For each notice of data availability required in paragraph (b)(1)(i) of this section, the Administrator will provide an opportunity for submission of objections to the calculations referenced in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(1)(i) of this section and shall be limited to addressing whether the calculations (including the identification of the TR NO_X Annual units) are in accordance with § 97.412(a)(2) through (7) and (12) and §§ 97.406(b)(2) and 97.430 through 97.435.

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(1)(ii)(A) of this section. By August 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(1)(i) of this section, the

Administrator will promulgate a notice of data availability of any adjustments that the Administrator determines to be necessary with regard to allocations under § 97.412(a)(2) through (7) and (12) and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(1)(ii)(A) of this section.

(iii) If the new unit set-aside for such control period contains any TR NO_X Annual allowances that have not been allocated in the applicable notice of data availability required in paragraph (b)(1)(ii) of this section, the Administrator will promulgate, by December 15 immediately after such notice, a notice of data availability that identifies any TR NO_X Annual units that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period.

(iv) For each notice of data availability required in paragraph (b)(1)(iii) of this section, the Administrator will provide an opportunity for submission of objections to the identification of TR NO_X annual units in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(1)(iii) of this section and shall be limited to addressing whether the identification of TR NO_X annual units in such notice is in accordance with paragraph (b)(1)(iii) of this section.

(B) The Administrator will adjust the identification of TR NO_X Annual units in the each notice of data availability required in paragraph (b)(1)(iii) of this section to the extent necessary to ensure that it is in accordance with paragraph (b)(1)(iii) of this section and will calculate the TR NO_X Annual allowance allocation to each TR NO_X Annual unit in accordance with § 97.412(a)(9), (10), and (12) and §§ 97.406(b)(2) and 97.430 through 97.435. By February 15 immediately after the promulgation of each notice of data availability required in paragraph (b)(1)(iii) of this section, the Administrator will promulgate a notice of data availability of any adjustments of the identification of TR NO_X Annual units that the Administrator determines to be necessary, the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(1)(iv)(A) of this section, and the results of such calculations.

(v) To the extent any TR NO_X Annual allowances are added to the new unit set-aside after promulgation of each notice of data availability required in paragraph (b)(1)(iv) of this section, the Administrator will promulgate additional notices of data availability, as deemed appropriate, of the allocation of such TR NO_X Annual allowances in accordance with § 97.412(a)(10).

(2) Indian country new unit set-asides. (i) By June 1, 2012 and June 1 of each year thereafter, the Administrator will calculate the TR NO_X Annual allowance allocation to each TR NO_X Annual unit in Indian country within the borders of a State, in accordance with § 97.412(b)(2) through (7) and (12), for the control period in the year of the applicable calculation deadline under this paragraph and will promulgate a notice of data availability of the results of the calculations.

(ii) For each notice of data availability required in paragraph (b)(2)(i) of this section, the Administrator will provide an opportunity for submission of objections to the calculations referenced in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(2)(i) of this section and shall be limited to addressing whether the calculations (including the identification of the TR NO_X Annual units) are in accordance with § 97.412(b)(2) through (7) and (12) and §§ 97.406(b)(2) and 97.430 through 97.435.

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(2)(ii)(A) of this section. By August 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(i) of this section, the Administrator will promulgate a notice of data availability of any adjustments that the Administrator determines to be necessary with regard to allocations under § 97.412(b)(2) through (7) and (12) and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(ii)(A) of this section.

(iii) If the Indian country new unit set-aside for such control period contains any TR NO_X Annual allowances that have not been allocated in the applicable notice of data availability required in paragraph (b)(2)(ii) of this section, the Administrator will promulgate, by December 15 immediately after such notice, a notice of data availability that identifies any TR NO_X Annual units that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period.

(iv) For each notice of data availability required in paragraph (b)(2)(iii) of this section, the Administrator will provide an opportunity for submission of objections to the identification of TR NO_X annual units in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(2)(iii) of this section and shall be limited to addressing whether the identification of TR NO_X annual units in such notice is in accordance with paragraph (b)(2)(iii) of this section.

(B) The Administrator will adjust the identification of TR NO_X Annual units in the each notice of data availability required in paragraph (b)(2)(iii) of this section to the extent necessary to ensure that it is in accordance with paragraph (b)(2)(iii) of this section and will calculate the TR NO_X Annual allowance allocation to each TR NO_X Annual unit in accordance with § 97.412(b)(9), (10), and (12) and §§ 97.406(b)(2) and 97.430 through 97.435. By February 15 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii) of this section, the Administrator will promulgate a notice of data availability of any adjustments of the identification of TR NO_X Annual units that the Administrator determines to be necessary, the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(iv)(A) of this section, and the results of such calculations.

(v) To the extent any TR NO_X Annual allowances are added to the Indian country new unit set-aside after promulgation of each notice of data availability required in paragraph (b)(2)(iv) of this section, the Administrator will promulgate additional notices of data availability, as deemed appropriate, of the allocation of such TR NO_X Annual allowances in accordance with § 97.412(b)(10).

(c) *Units incorrectly allocated* TR NO_X *Annual allowances.* (1) For each control period in 2012 and thereafter, if the Administrator determines that TR NO_X Annual allowances were allocated under paragraph (a) of this section, or under a provision of a SIP revision approved under § 52.38(a)(3), (4), or (5) of this chapter, where such control period and the recipient are covered by the provisions of paragraph (c)(1)(i) of this section or were allocated under § 97.412(a)(2) through (7), (9), and (12) and (b)(2) through (7), (9), and (12), or under a provision of a SIP revision approved under § 52.38(a)(4) or (5) of this chapter, where such control period and the recipient are covered by the

provisions of paragraph (c)(1)(ii) of this section, then the Administrator will notify the designated representative of the recipient and will act in accordance with the procedures set forth in paragraphs (c)(2) through (5) of this section:

(i)(A) The recipient is not actually a TR NO_X Annual unit under § 97.404 as of January 1, 2012 and is allocated TR NO_X Annual allowances for such control period or, in the case of an allocation under a provision of a SIP revision approved under § 52.38(a)(3), (4), or (5) of this chapter, the recipient is not actually a TR NO_X Annual unit as of January 1, 2012 and is allocated TR NO_X Annual allowances for such control period that the SIP revision provides should be allocated only to recipients that are TR NO_X Annual units as of January 1, 2012; or

(B) The recipient is not located as of January 1 of the control period in the State from whose NO_X Annual trading budget the TR NO_X Annual allowances allocated under paragraph (a) of this section, or under a provision of a SIP revision approved under § 52.38(a)(3), (4), or (5) of this chapter, were allocated for such control period.

(ii) The recipient is not actually a TR NO_X Annual unit under § 97.404 as of January 1 of such control period and is allocated TR NO_X Annual allowances for such control period or, in the case of an allocation under a provision of a SIP revision approved under § 52.38(a)(3), (4), or (5) of this chapter, the recipient is not actually a TR NO_X Annual unit as of January 1 of such control period and is allocated TR NO_X Annual allowances for such control period that the SIP revision provides should be allocated only to recipients that are TR NO_X Annual units as of January 1 of such control period.

(2) Except as provided in paragraph (c)(3) or (4) of this section, the Administrator will not record such TR NO_X Annual allowances under § 97.421.

(3) If the Administrator already recorded such TR NO_X Annual allowances under § 97.421 and if the Administrator makes the determination under paragraph (c)(1) of this section before making deductions for the source that includes such recipient under § 97.424(b) for such control period, then the Administrator will deduct from the account in which such TR NO_X Annual allowances were recorded an amount of TR NO_X Annual allowances allocated for the same or a prior control period equal to the amount of such already recorded TR NO_X Annual allowances. The authorized account representative shall ensure that there are sufficient TR NO_X Annual allowances in such account for completion of the deduction.

(4) If the Administrator already recorded such TR NO_X Annual allowances under § 97.421 and if the Administrator makes the determination under paragraph (c)(1) of this section after making deductions for the source that includes such recipient under § 97.424(b) for such control period, then the Administrator will not make any deduction to take account of such already recorded TR NO_X Annual allowances.

(5)(i) With regard to the TR NO_X Annual allowances that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(i) of this section, the Administrator will:

(A) Transfer such TR NO_X Annual allowances to the new unit set-aside for such control period for the State from whose NO_X Annual trading budget the TR NO_X Annual allowances were allocated; or

(B) If the State has a SIP revision approved under § 52.38(a)(4) or (5) covering such control period, include such TR NO_X Annual allowances in the portion of the State NO_X Annual trading budget that may be allocated for such control period in accordance with such SIP revision.

(ii) With regard to the TR NO_X Annual allowances that were not allocated from the Indian country new unit set-aside for such control period and that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(ii) of this paragraph, the Administrator will:

(A) Transfer such TR NO_X Annual allowances to the new unit set-aside for such control period; or

(B) If the State has a SIP revision approved under § 52.38(a)(4) or (5) covering such control period, include such TR NO_X Annual allowances in the portion of the State NO_X Annual trading budget that may be allocated for such control period in accordance with such SIP revision.

(iii) With regard to the TR NO_X Annual allowances that were allocated from the Indian country new unit set-aside for such control period and that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(ii) of this paragraph, the Administrator will transfer such TR NO_X Annual allowances to the Indian country new unit set-aside for such control period.

§ 97.412 TR NO_X Annual allowance allocations to new units.

(a) For each control period in 2012 and thereafter and for the TR NO_X Annual units in each State, the Administrator will allocate TR NO_X Annual allowances to the TR NO_X Annual units as follows:

(1) The TR NO_X Annual allowances will be allocated to the following TR NO_X Annual units, except as provided in paragraph (a)(10) of this section:

(i) TR NO_X Annual units that are not allocated an amount of TR NO_X Annual allowances in the notice of data availability issued under § 97.411(a)(1);

(ii) TR NO_X Annual units whose allocation of an amount of TR NO_X Annual allowances for such control period in the notice of data availability issued under § 97.411(a)(1) is covered by § 97.411(c)(2) or (3);

(iii) TR NO_X Annual units that are allocated an amount of TR NO_X Annual allowances for such control period in the notice of data availability issued under § 97.411(a)(1), which allocation is terminated for such control period pursuant to § 97.411(a)(2), and that operate during the control period immediately preceding such control period; or

(iv) For purposes of paragraph (a)(9) of this section, TR NO_X Annual units under § 97.411(c)(1)(ii) whose allocation of an amount of TR NO_X Annual allowances for such control period in the notice of data availability issued under § 97.411(b)(1)(ii)(B) is covered by § 97.411(c)(2) or (3).

(2) The Administrator will establish a separate new unit set-aside for the State for each such control period. Each such new unit set-aside will be allocated TR NO_X Annual allowances in an amount equal to the applicable amount of tons of NO_X emissions as set forth in § 97.410(a) and will be allocated additional TR NO_X Annual allowances (if any) in accordance with §§ 97.411(a)(2) and (c)(5) and paragraph (b)(10) of this section.

(3) The Administrator will determine, for each TR NO_X Annual unit described in paragraph (a)(1) of this section, an allocation of TR NO_X Annual allowances for the later of the following control periods and for each subsequent control period:

(i) The control period in 2012;

(ii) The first control period after the control period in which the TR NO_X Annual unit commences commercial operation;

(iii) For a unit described in paragraph (a)(1)(ii) of this section, the first control period in which the TR NO_X Annual unit operates in the State after operating in another jurisdiction and for which

the unit is not already allocated one or more TR NO_X Annual allowances; and

(iv) For a unit described in paragraph (a)(1)(iii) of this section, the first control period after the control period in which the unit resumes operation.

(4)(i) The allocation to each TR NO_X annual unit described in paragraph (a)(1)(i) through (iii) of this section and for each control period described in paragraph (a)(3) of this section will be an amount equal to the unit's total tons of NO_X emissions during the immediately preceding control period.

(ii) The Administrator will adjust the allocation amount in paragraph (a)(4)(i) in accordance with paragraphs (a)(5) through (7) and (12) of this section.

(5) The Administrator will calculate the sum of the TR NO_X Annual allowances determined for all such TR NO_X Annual units under paragraph (a)(4)(i) of this section in the State for such control period.

(6) If the amount of TR NO_X Annual allowances in the new unit set-aside for the State for such control period is greater than or equal to the sum under paragraph (a)(5) of this section, then the Administrator will allocate the amount of TR NO_X Annual allowances determined for each such TR NO_X Annual unit under paragraph (a)(4)(i) of this section.

(7) If the amount of TR NO_X Annual allowances in the new unit set-aside for the State for such control period is less than the sum under paragraph (a)(5) of this section, then the Administrator will allocate to each such TR NO_X Annual unit the amount of the TR NO_X Annual allowances determined under paragraph (a)(4)(i) of this section for the unit, multiplied by the amount of TR NO_X Annual allowances in the new unit set-aside for such control period, divided by the sum under paragraph (a)(5) of this section, and rounded to the nearest allowance.

(8) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.411(b)(1)(i) and (ii), of the amount of TR NO_X Annual allowances allocated under paragraphs (a)(2) through (7) and (12) of this section for such control period to each TR NO_X Annual unit eligible for such allocation.

(9) If, after completion of the procedures under paragraphs (a)(5) through (8) of this section for such control period, any unallocated TR NO_X Annual allowances remain in the new unit set-aside for the State for such control period, the Administrator will allocate such TR NO_X Annual allowances as follows—

(i) The Administrator will determine, for each unit described in paragraph (a)(1) of this section that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period, the positive difference (if any) between the unit's emissions during such control period and the amount of TR NO_X Annual allowances referenced in the notice of data availability required under § 97.411(b)(1)(ii) for the unit for such control period;

(ii) The Administrator will determine the sum of the positive differences determined under paragraph (a)(9)(i) of this section;

(iii) If the amount of unallocated TR NO_X Annual allowances remaining in the new unit set-aside for the State for such control period is greater than or equal to the sum determined under paragraph (a)(9)(ii) of this section, then the Administrator will allocate the amount of TR NO_X Annual allowances determined for each such TR NO_X Annual unit under paragraph (a)(9)(i) of this section; and

(iv) If the amount of unallocated TR NO_X Annual allowances remaining in the new unit set-aside for the State for such control period is less than the sum under paragraph (a)(9)(ii) of this section, then the Administrator will allocate to each such TR NO_X Annual unit the amount of the TR NO_X Annual allowances determined under paragraph (a)(9)(i) of this section for the unit, multiplied by the amount of unallocated TR NO_X Annual allowances remaining in the new unit set-aside for such control period, divided by the sum under paragraph (a)(9)(ii) of this section, and rounded to the nearest allowance.

(10) If, after completion of the procedures under paragraphs (a)(9) and (12) of this section for such control period, any unallocated TR NO_X Annual allowances remain in the new unit set-aside for the State for such control period, the Administrator will allocate to each TR NO_X Annual unit that is in the State, is allocated an amount of TR NO_X Annual allowances in the notice of data availability issued under § 97.411(a)(1), and continues to be allocated TR NO_X Annual allowances for such control period in accordance with § 97.411(a)(2), an amount of TR NO_X Annual allowances equal to the following: the total amount of such remaining unallocated TR NO_X Annual allowances in such new unit set-aside, multiplied by the unit's allocation under § 97.411(a) for such control period, divided by the remainder of the amount of tons in the applicable State NO_X Annual trading budget minus the sum of the amounts of tons in such new unit set-aside and the Indian country new unit set-aside for the State for such control period, and rounded to the nearest allowance.

(11) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.411(b)(1)(iii), (iv), and (v), of the amount of TR NO_X Annual allowances allocated under paragraphs (a)(9), (10), and (12) of this section for such control period to each TR NO_X Annual unit eligible for such allocation.

(12)(i) Notwithstanding the requirements of paragraphs (a)(2) through (11) of this section, if the calculations of allocations of a new unit set-aside for a control period in a given year under paragraph (a)(7) of this section, paragraphs (a)(6) and (9)(iv) of this section, or paragraphs (a)(6), (9)(iii), and (10) of this section would otherwise result in total allocations of such new unit set-aside exceeding the total amount of such new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, as follows. The Administrator will list the TR NO_X Annual units in descending order based on the amount of such units' allocations under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will reduce each unit's allocation under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, by one TR NO_X Annual allowance (but not below zero) in the order in which the units are listed and will repeat this reduction process as necessary, until the total allocations of such new unit set-aside equal the total amount of such new unit set-aside.

(ii) Notwithstanding the requirements of paragraphs (a)(10) and (11) of this section, if the calculations of allocations of a new unit set-aside for a control period in a given year under paragraphs (a)(6), (9)(iii), and (10) of this section would otherwise result in a total allocations of such new unit set-aside less than the total amount of such new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (a)(10) of this section, as follows. The Administrator will list the TR NO_X Annual units in descending order based on the amount of such units' allocations under paragraph (a)(10) of this section and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will increase each unit's

allocation under paragraph (a)(10) of this section by one TR NO_X Annual allowance in the order in which the units are listed and will repeat this increase process as necessary, until the total allocations of such new unit set-aside equal the total amount of such new unit set-aside.

(b) For each control period in 2012 and thereafter and for the TR NO_X Annual units located in Indian country within the borders of each State, the Administrator will allocate TR NO_X Annual allowances to the TR NO_X Annual units as follows:

(1) The TR NO_X Annual allowances will be allocated to the following TR NO_X Annual units, except as provided in paragraph (b)(10) of this section:

(i) TR NO_X Annual units that are not allocated an amount of TR NO_X Annual allowances in the notice of data availability issued under § 97.411(a)(1); or

(ii) For purposes of paragraph (b)(9) of this section, TR NO_X Annual units under § 97.411(c)(1)(ii) whose allocation of an amount of TR NO_X Annual allowances for such control period in the notice of data availability issued under § 97.411(b)(2)(ii)(B) is covered by § 97.411(c)(2) or (3).

(2) The Administrator will establish a separate Indian country new unit set-aside for the State for each such control period. Each such Indian country new unit set-aside will be allocated TR NO_X Annual allowances in an amount equal to the applicable amount of tons of NO_X emissions as set forth in § 97.410(a) and will be allocated additional TR NO_X Annual allowances (if any) in accordance with § 97.411(c)(5).

(3) The Administrator will determine, for each TR NO_X Annual unit described in paragraph (b)(1) of this section, an allocation of TR NO_X Annual allowances for the later of the following control periods and for each subsequent control period:

(i) The control period in 2012; and

(ii) The first control period after the control period in which the TR NO_X Annual unit commences commercial operation.

(4)(i) The allocation to each TR NO_X annual unit described in paragraph (b)(1)(i) of this section and for each control period described in paragraph (b)(3) of this section will be an amount equal to the unit's total tons of NO_X emissions during the immediately preceding control period.

(ii) The Administrator will adjust the allocation amount in paragraph (b)(4)(i) in accordance with paragraphs (b)(5) through (7) and (12) of this section.

(5) The Administrator will calculate the sum of the TR NO_X Annual allowances determined for all such TR NO_X Annual units under paragraph (b)(4)(i) of this section in Indian country within the borders of the State for such control period.

(6) If the amount of TR NO_X Annual allowances in the Indian country new unit set-aside for the State for such control period is greater than or equal to the sum under paragraph (b)(5) of this section, then the Administrator will allocate the amount of TR NO_X Annual allowances determined for each such TR NO_X Annual unit under paragraph (b)(4)(i) of this section.

(7) If the amount of TR NO_X Annual allowances in the Indian country new unit set-aside for the State for such control period is less than the sum under paragraph (b)(5) of this section, then the Administrator will allocate to each such TR NO_X Annual unit the amount of the TR NO_X Annual allowances determined under paragraph (b)(4)(i) of this section for the unit, multiplied by the amount of TR NO_X Annual allowances in the Indian country new unit set-aside for such control period, divided by the sum under paragraph (b)(5) of this section, and rounded to the nearest allowance.

(8) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.411(b)(2)(i) and (ii), of the amount of TR NO_X Annual allowances allocated under paragraphs (b)(2) through (7) and (12) of this section for such control period to each TR NO_X Annual unit eligible for such allocation.

(9) If, after completion of the procedures under paragraphs (b)(5) through (8) of this section for such control period, any unallocated TR NO_X Annual allowances remain in the Indian country new unit set-aside for the State for such control period, the Administrator will allocate such TR NO_X Annual allowances as follows—

(i) The Administrator will determine, for each unit described in paragraph (b)(1) of this section that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period, the positive difference (if any) between the unit's emissions during such control period and the amount of TR NO_X Annual allowances referenced in the notice of data availability required under § 97.411(b)(2)(ii) for the unit for such control period;

(ii) The Administrator will determine the sum of the positive differences determined under paragraph (b)(9)(i) of this section;

(iii) If the amount of unallocated TR NO_X Annual allowances remaining in the Indian country new unit set-aside for the State for such control period is greater than or equal to the sum determined under paragraph (b)(9)(ii) of this section, then the Administrator will allocate the amount of TR NO_X Annual allowances determined for each such TR NO_X Annual unit under paragraph (b)(9)(i) of this section; and

(iv) If the amount of unallocated TR NO_X Annual allowances remaining in the Indian country new unit set-aside for the State for such control period is less than the sum under paragraph (b)(9)(ii) of this section, then the Administrator will allocate to each such TR NO_X Annual unit the amount of the TR NO_X Annual allowances determined under paragraph (b)(9)(i) of this section for the unit, multiplied by the amount of unallocated TR NO_X Annual allowances remaining in the Indian country new unit set-aside for such control period, divided by the sum under paragraph (b)(9)(ii) of this section, and rounded to the nearest allowance.

(10) If, after completion of the procedures under paragraphs (b)(9) and (12) of this section for such control period, any unallocated TR NO_X Annual allowances remain in the Indian country new unit set-aside for the State for such control period, the Administrator will:

(i) Transfer such unallocated TR NO_X Annual allowances to the new unit set-aside for the State for such control period; or

(ii) If the State has a SIP revision approved under § 52.38(a)(4) or (5) covering such control period, include such unallocated TR NO_X Annual allowances in the portion of the State NO_X Annual trading budget that may be allocated for such control period in accordance with such SIP revision.

(11) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.411(b)(2)(iii), (iv), and (v), of the amount of TR NO_X Annual allowances allocated under paragraphs (b)(9), (10), and (12) of this section for such control period to each TR NO_X Annual unit eligible for such allocation.

(12)(i) Notwithstanding the requirements of paragraphs (b)(2) through (11) of this section, if the calculations of allocations of an Indian country new unit set-aside for a control period in a given year under paragraph (b)(7) of this section, paragraphs (b)(6) and (9)(iv) of this section, or paragraphs (b)(6), (9)(iii), and (10) of this section would otherwise result in total allocations of such Indian country new unit set-aside exceeding the total amount of such Indian country new unit set-aside, then the Administrator will adjust the results of the calculations

under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, as follows. The Administrator will list the TR NO_X Annual units in descending order based on the amount of such units' allocations under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will reduce each unit's allocation under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, by one TR NO_X Annual allowance (but not below zero) in the order in which the units are listed and will repeat this reduction process as necessary, until the total allocations of such Indian country new unit set-aside equal the total amount of such Indian country new unit set-aside.

(ii) Notwithstanding the requirements of paragraphs (b)(10) and (11) of this section, if the calculations of allocations of an Indian country new unit set-aside for a control period in a given year under paragraphs (b)(6), (9)(iii), and (10) of this section would otherwise result in a total allocations of such Indian country new unit set-aside less than the total amount of such Indian country new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (b)(10) of this section, as follows. The Administrator will list the TR NO_X Annual units in descending order based on the amount of such units' allocations under paragraph (b)(10) of this section and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will increase each unit's allocation under paragraph (b)(10) of this section by one TR NO_X Annual allowance in the order in which the units are listed and will repeat this increase process as necessary, until the total allocations of such Indian country new unit set-aside equal the total amount of such Indian country new unit set-aside.

§ 97.413 Authorization of designated representative and alternate designated representative.

(a) Except as provided under § 97.415, each TR NO_X Annual source, including all TR NO_X Annual units at the source, shall have one and only one designated representative, with regard to all matters under the TR NO_X Annual Trading Program.

(1) The designated representative shall be selected by an agreement binding on the owners and operators of the source and all TR NO_X Annual units at the source and shall act in accordance with the certification statement in § 97.416(a)(4)(iii).

(2) Upon and after receipt by the Administrator of a complete certificate of representation under § 97.416:

(i) The designated representative shall be authorized and shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each owner and operator of the source and each TR NO_X Annual unit at the source in all matters pertaining to the TR NO_X Annual Trading Program, notwithstanding any agreement between the designated representative and such owners and operators; and

(ii) The owners and operators of the source and each TR NO_X Annual unit at the source shall be bound by any decision or order issued to the designated representative by the Administrator regarding the source or any such unit.

(b) Except as provided under § 97.415, each TR NO_X Annual source may have one and only one alternate designated representative, who may act on behalf of the designated representative. The agreement by which the alternate designated representative is selected shall include a procedure for authorizing the alternate designated representative to act in lieu of the designated representative.

(1) The alternate designated representative shall be selected by an agreement binding on the owners and operators of the source and all TR NO_X Annual units at the source and shall act in accordance with the certification statement in § 97.416(a)(4)(iii).

(2) Upon and after receipt by the Administrator of a complete certificate of representation under § 97.416,

(i) The alternate designated representative shall be authorized;

(ii) Any representation, action, inaction, or submission by the alternate designated representative shall be deemed to be a representation, action, inaction, or submission by the designated representative; and

(iii) The owners and operators of the source and each TR NO_X Annual unit at the source shall be bound by any decision or order issued to the alternate designated representative by the Administrator regarding the source or any such unit.

(c) Except in this section, § 97.402, and §§ 97.414 through 97.418, whenever the term ''designated representative'' (as distinguished from the term ''common designated representative'') is used in this subpart, the term shall be construed to include the designated representative or any alternate designated representative.

§ 97.414 Responsibilities of designated representative and alternate designated representative.

(a) Except as provided under § 97.418 concerning delegation of authority to make submissions, each submission under the TR NO_X Annual Trading Program shall be made, signed, and certified by the designated representative or alternate designated representative for each TR NO_X Annual source and TR NO_X Annual unit for which the submission is made. Each such submission shall include the following certification statement by the designated representative or alternate designated representative: ''I am authorized to make this submission on behalf of the owners and operators of the source or units for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(b) The Administrator will accept or act on a submission made for a TR NO_X Annual source or a TR NO_X Annual unit only if the submission has been made, signed, and certified in accordance with paragraph (a) of this section and § 97.418.

§ 97.415 Changing designated representative and alternate designated representative; changes in owners and operators; changes in units at the source.

(a) *Changing designated representative.* The designated representative may be changed at any time upon receipt by the Administrator of a superseding complete certificate of representation under § 97.416. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous designated representative before the time and date when the Administrator receives the superseding certificate of representation shall be binding on the new designated representative and the owners and operators of the TR NO_X Annual source and the TR NO_X Annual units at the source.

(b) *Changing alternate designated representative.* The alternate designated representative may be changed at any

time upon receipt by the Administrator of a superseding complete certificate of representation under § 97.416. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous alternate designated representative before the time and date when the Administrator receives the superseding certificate of representation shall be binding on the new alternate designated representative, the designated representative, and the owners and operators of the TR NO_X Annual source and the TR NO_X Annual units at the source.

(c) *Changes in owners and operators.* (1) In the event an owner or operator of a TR NO_X Annual source or a TR NO_X Annual unit at the source is not included in the list of owners and operators in the certificate of representation under § 97.416, such owner or operator shall be deemed to be subject to and bound by the certificate of representation, the representations, actions, inactions, and submissions of the designated representative and any alternate designated representative of the source or unit, and the decisions and orders of the Administrator, as if the owner or operator were included in such list.

(2) Within 30 days after any change in the owners and operators of a TR NO_X Annual source or a TR NO_X Annual unit at the source, including the addition or removal of an owner or operator, the designated representative or any alternate designated representative shall submit a revision to the certificate of representation under § 97.416 amending the list of owners and operators to reflect the change.

(d) *Changes in units at the source.* Within 30 days of any change in which units are located at a TR NO_X Annual source (including the addition or removal of a unit), the designated representative or any alternate designated representative shall submit a certificate of representation under § 97.416 amending the list of units to reflect the change.

(1) If the change is the addition of a unit that operated (other than for purposes of testing by the manufacturer before initial installation) before being located at the source, then the certificate of representation shall identify, in a format prescribed by the Administrator, the entity from whom the unit was purchased or otherwise obtained (including name, address, telephone number, and facsimile number (if any)), the date on which the unit was purchased or otherwise obtained, and the date on which the unit became located at the source.

(2) If the change is the removal of a unit, then the certificate of representation shall identify, in a format prescribed by the Administrator, the entity to which the unit was sold or that otherwise obtained the unit (including name, address, telephone number, and facsimile number (if any)), the date on which the unit was sold or otherwise obtained, and the date on which the unit became no longer located at the source.

§ 97.416 Certificate of representation.

(a) A complete certificate of representation for a designated representative or an alternate designated representative shall include the following elements in a format prescribed by the Administrator:

(1) Identification of the TR NO_X Annual source, and each TR NO_X Annual unit at the source, for which the certificate of representation is submitted, including source name, source category and NAICS code (or, in the absence of a NAICS code, an equivalent code), State, plant code, county, latitude and longitude, unit identification number and type, identification number and nameplate capacity (in MWe, rounded to the nearest tenth) of each generator served by each such unit, actual or projected date of commencement of commercial operation, and a statement of whether such source is located in Indian Country. If a projected date of commencement of commercial operation is provided, the actual date of commencement of commercial operation shall be provided when such information becomes available.

(2) The name, address, e-mail address (if any), telephone number, and facsimile transmission number (if any) of the designated representative and any alternate designated representative.

(3) A list of the owners and operators of the TR NO_X Annual source and of each TR NO_X Annual unit at the source.

(4) The following certification statements by the designated representative and any alternate designated representative—

(i) ''I certify that I was selected as the designated representative or alternate designated representative, as applicable, by an agreement binding on the owners and operators of the source and each TR NO_X Annual unit at the source.''

(ii) ''I certify that I have all the necessary authority to carry out my duties and responsibilities under the TR NO_X Annual Trading Program on behalf of the owners and operators of the source and of each TR NO_X Annual unit at the source and that each such owner and operator shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the Administrator regarding the source or unit.''

(iii) ''Where there are multiple holders of a legal or equitable title to, or a leasehold interest in, a TR NO_X Annual unit, or where a utility or industrial customer purchases power from a TR NO_X Annual unit under a life-of-the-unit, firm power contractual arrangement, I certify that: I have given a written notice of my selection as the 'designated representative' or 'alternate designated representative', as applicable, and of the agreement by which I was selected to each owner and operator of the source and of each TR NO_X Annual unit at the source; and TR NO_X Annual allowances and proceeds of transactions involving TR NO_X Annual allowances will be deemed to be held or distributed in proportion to each holder's legal, equitable, leasehold, or contractual reservation or entitlement, except that, if such multiple holders have expressly provided for a different distribution of TR NO_X Annual allowances by contract, TR NO_X Annual allowances and proceeds of transactions involving TR NO_X Annual allowances will be deemed to be held or distributed in accordance with the contract.''

(5) The signature of the designated representative and any alternate designated representative and the dates signed.

(b) Unless otherwise required by the Administrator, documents of agreement referred to in the certificate of representation shall not be submitted to the Administrator. The Administrator shall not be under any obligation to review or evaluate the sufficiency of such documents, if submitted.

§ 97.417 Objections concerning designated representative and alternate designated representative.

(a) Once a complete certificate of representation under § 97.416 has been submitted and received, the Administrator will rely on the certificate of representation unless and until a superseding complete certificate of representation under § 97.416 is received by the Administrator.

(b) Except as provided in paragraph (a) of this section, no objection or other communication submitted to the Administrator concerning the authorization, or any representation, action, inaction, or submission, of a designated representative or alternate designated representative shall affect any representation, action, inaction, or submission of the designated representative or alternate designated representative or the finality of any

decision or order by the Administrator under the TR NO_X Annual Trading Program.

(c) The Administrator will not adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of any designated representative or alternate designated representative, including private legal disputes concerning the proceeds of TR NO_X Annual allowance transfers.

§ 97.418 Delegation by designated representative and alternate designated representative.

(a) A designated representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(b) An alternate designated representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(c) In order to delegate authority to a natural person to make an electronic submission to the Administrator in accordance with paragraph (a) or (b) of this section, the designated representative or alternate designated representative, as appropriate, must submit to the Administrator a notice of delegation, in a format prescribed by the Administrator, that includes the following elements:

(1) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of such designated representative or alternate designated representative;

(2) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of each such natural person (referred to in this section as an ''agent'');

(3) For each such natural person, a list of the type or types of electronic submissions under paragraph (a) or (b) of this section for which authority is delegated to him or her; and

(4) The following certification statements by such designated representative or alternate designated representative:

(i) ''I agree that any electronic submission to the Administrator that is made by an agent identified in this notice of delegation and of a type listed for such agent in this notice of delegation and that is made when I am a designated representative or alternate designated representative, as appropriate, and before this notice of delegation is superseded by another notice of delegation under 40 CFR 97.418(d) shall be deemed to be an electronic submission by me.''

(ii) ''Until this notice of delegation is superseded by another notice of delegation under 40 CFR 97.418(d), I agree to maintain an e-mail account and to notify the Administrator immediately of any change in my e-mail address unless all delegation of authority by me under 40 CFR 97.418 is terminated.''.

(d) A notice of delegation submitted under paragraph (c) of this section shall be effective, with regard to the designated representative or alternate designated representative identified in such notice, upon receipt of such notice by the Administrator and until receipt by the Administrator of a superseding notice of delegation submitted by such designated representative or alternate designated representative, as appropriate. The superseding notice of delegation may replace any previously identified agent, add a new agent, or eliminate entirely any delegation of authority.

(e) Any electronic submission covered by the certification in paragraph (c)(4)(i) of this section and made in accordance with a notice of delegation effective under paragraph (d) of this section shall be deemed to be an electronic submission by the designated representative or alternate designated representative submitting such notice of delegation.

§ 97.419 [Reserved]

§ 97.420 Establishment of compliance accounts, assurance accounts, and general accounts.

(a) *Compliance accounts.* Upon receipt of a complete certificate of representation under § 97.416, the Administrator will establish a compliance account for the TR NO_X Annual source for which the certificate of representation was submitted, unless the source already has a compliance account. The designated representative and any alternate designated representative of the source shall be the authorized account representative and the alternate authorized account representative respectively of the compliance account.

(b) *Assurance accounts.* The Administrator will establish assurance accounts for certain owners and operators and States in accordance with § 97.425(b)(3).

(c) *General accounts.* (1) Application for general account. (i) Any person may apply to open a general account, for the purpose of holding and transferring TR NO_X Annual allowances, by submitting to the Administrator a complete application for a general account. Such application shall designate one and only one authorized account representative and may designate one and only one alternate authorized account representative who may act on behalf of the authorized account representative.

(A) The authorized account representative and alternate authorized account representative shall be selected by an agreement binding on the persons who have an ownership interest with respect to TR NO_X Annual allowances held in the general account.

(B) The agreement by which the alternate authorized account representative is selected shall include a procedure for authorizing the alternate authorized account representative to act in lieu of the authorized account representative.

(ii) A complete application for a general account shall include the following elements in a format prescribed by the Administrator:

(A) Name, mailing address, e-mail address (if any), telephone number, and facsimile transmission number (if any) of the authorized account representative and any alternate authorized account representative;

(B) An identifying name for the general account;

(C) A list of all persons subject to a binding agreement for the authorized account representative and any alternate authorized account representative to represent their ownership interest with respect to the TR NO_X Annual allowances held in the general account;

(D) The following certification statement by the authorized account representative and any alternate authorized account representative: ''I certify that I was selected as the authorized account representative or the alternate authorized account representative, as applicable, by an agreement that is binding on all persons who have an ownership interest with respect to TR NO_X Annual allowances held in the general account. I certify that I have all the necessary authority to carry out my duties and responsibilities under the TR NO_X Annual Trading Program on behalf of such persons and that each such person shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the Administrator regarding the general account.''

(E) The signature of the authorized account representative and any alternate authorized account representative and the dates signed.

(iii) Unless otherwise required by the Administrator, documents of agreement referred to in the application for a

general account shall not be submitted to the Administrator. The Administrator shall not be under any obligation to review or evaluate the sufficiency of such documents, if submitted.

(2) Authorization of authorized account representative and alternate authorized account representative. (i) Upon receipt by the Administrator of a complete application for a general account under paragraph (b)(1) of this section, the Administrator will establish a general account for the person or persons for whom the application is submitted, and upon and after such receipt by the Administrator:

(A) The authorized account representative of the general account shall be authorized and shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each person who has an ownership interest with respect to TR NO_X Annual allowances held in the general account in all matters pertaining to the TR NO_X Annual Trading Program, notwithstanding any agreement between the authorized account representative and such person.

(B) Any alternate authorized account representative shall be authorized, and any representation, action, inaction, or submission by any alternate authorized account representative shall be deemed to be a representation, action, inaction, or submission by the authorized account representative.

(C) Each person who has an ownership interest with respect to TR NO_X Annual allowances held in the general account shall be bound by any decision or order issued to the authorized account representative or alternate authorized account representative by the Administrator regarding the general account.

(ii) Except as provided in paragraph (c)(5) of this section concerning delegation of authority to make submissions, each submission concerning the general account shall be made, signed, and certified by the authorized account representative or any alternate authorized account representative for the persons having an ownership interest with respect to TR NO_X Annual allowances held in the general account. Each such submission shall include the following certification statement by the authorized account representative or any alternate authorized account representative: ''I am authorized to make this submission on behalf of the persons having an ownership interest with respect to the TR NO_X Annual allowances held in the general account. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(iii) Except in this section, whenever the term ''authorized account representative'' is used in this subpart, the term shall be construed to include the authorized account representative or any alternate authorized account representative.

(3) Changing authorized account representative and alternate authorized account representative; changes in persons with ownership interest. (i) The authorized account representative of a general account may be changed at any time upon receipt by the Administrator of a superseding complete application for a general account under paragraph (c)(1) of this section. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous authorized account representative before the time and date when the Administrator receives the superseding application for a general account shall be binding on the new authorized account representative and the persons with an ownership interest with respect to the TR NO_X Annual allowances in the general account.

(ii) The alternate authorized account representative of a general account may be changed at any time upon receipt by the Administrator of a superseding complete application for a general account under paragraph (c)(1) of this section. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous alternate authorized account representative before the time and date when the Administrator receives the superseding application for a general account shall be binding on the new alternate authorized account representative, the authorized account representative, and the persons with an ownership interest with respect to the TR NO_X Annual allowances in the general account.

(iii)(A) In the event a person having an ownership interest with respect to TR NO_X Annual allowances in the general account is not included in the list of such persons in the application for a general account, such person shall be deemed to be subject to and bound by the application for a general account, the representation, actions, inactions, and submissions of the authorized account representative and any alternate authorized account representative of the account, and the decisions and orders of the Administrator, as if the person were included in such list.

(B) Within 30 days after any change in the persons having an ownership interest with respect to NO_X Annual allowances in the general account, including the addition or removal of a person, the authorized account representative or any alternate authorized account representative shall submit a revision to the application for a general account amending the list of persons having an ownership interest with respect to the TR NO_X Annual allowances in the general account to include the change.

(4) Objections concerning authorized account representative and alternate authorized account representative. (i) Once a complete application for a general account under paragraph (c)(1) of this section has been submitted and received, the Administrator will rely on the application unless and until a superseding complete application for a general account under paragraph (b)(1) of this section is received by the Administrator.

(ii) Except as provided in paragraph (c)(4)(i) of this section, no objection or other communication submitted to the Administrator concerning the authorization, or any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative of a general account shall affect any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative or the finality of any decision or order by the Administrator under the TR NO_X Annual Trading Program.

(iii) The Administrator will not adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative of a general account, including private legal disputes concerning the proceeds of TR NO_X Annual allowance transfers.

(5) Delegation by authorized account representative and alternate authorized account representative. (i) An authorized account representative of a general account may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator

provided for or required under this subpart.

(ii) An alternate authorized account representative of a general account may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(iii) In order to delegate authority to a natural person to make an electronic submission to the Administrator in accordance with paragraph (c)(5)(i) or (ii) of this section, the authorized account representative or alternate authorized account representative, as appropriate, must submit to the Administrator a notice of delegation, in a format prescribed by the Administrator, that includes the following elements:

(A) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of such authorized account representative or alternate authorized account representative;

(B) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of each such natural person (referred to in this section as an ''agent'');

(C) For each such natural person, a list of the type or types of electronic submissions under paragraph (c)(5)(i) or (ii) of this section for which authority is delegated to him or her;

(D) The following certification statement by such authorized account representative or alternate authorized account representative: ''I agree that any electronic submission to the Administrator that is made by an agent identified in this notice of delegation and of a type listed for such agent in this notice of delegation and that is made when I am an authorized account representative or alternate authorized representative, as appropriate, and before this notice of delegation is superseded by another notice of delegation under 40 CFR 97.420(c)(5)(iv) shall be deemed to be an electronic submission by me.''; and

(E) The following certification statement by such authorized account representative or alternate authorized account representative: ''Until this notice of delegation is superseded by another notice of delegation under 40 CFR 97.420(c)(5)(iv), I agree to maintain an e-mail account and to notify the Administrator immediately of any change in my e-mail address unless all delegation of authority by me under 40 CFR 97.420(c)(5) is terminated.''.

(iv) A notice of delegation submitted under paragraph (c)(5)(iii) of this section shall be effective, with regard to the authorized account representative or alternate authorized account representative identified in such notice, upon receipt of such notice by the Administrator and until receipt by the Administrator of a superseding notice of delegation submitted by such authorized account representative or alternate authorized account representative, as appropriate. The superseding notice of delegation may replace any previously identified agent, add a new agent, or eliminate entirely any delegation of authority.

(v) Any electronic submission covered by the certification in paragraph (c)(5)(iii)(D) of this section and made in accordance with a notice of delegation effective under paragraph (c)(5)(iv) of this section shall be deemed to be an electronic submission by the designated representative or alternate designated representative submitting such notice of delegation.

(6) Closing a general account. (i) The authorized account representative or alternate authorized account representative of a general account may submit to the Administrator a request to close the account. Such request shall include a correctly submitted TR NO_X Annual allowance transfer under § 97.422 for any TR NO_X Annual allowances in the account to one or more other Allowance Management System accounts.

(ii) If a general account has no TR NO_X Annual allowance transfers to or from the account for a 12-month period or longer and does not contain any TR NO_X Annual allowances, the Administrator may notify the authorized account representative for the account that the account will be closed after 30 days after the notice is sent. The account will be closed after the 30-day period unless, before the end of the 30-day period, the Administrator receives a correctly submitted TR NO_X Annual allowance transfer under § 97.422 to the account or a statement submitted by the authorized account representative or alternate authorized account representative demonstrating to the satisfaction of the Administrator good cause as to why the account should not be closed.

(d) *Account identification.* The Administrator will assign a unique identifying number to each account established under paragraph (a), (b), or (c) of this section.

(e) *Responsibilities of authorized account representative and alternate authorized account representative.* After the establishment of a compliance account or general account, the Administrator will accept or act on a submission pertaining to the account, including, but not limited to, submissions concerning the deduction or transfer of TR NO_X Annual allowances in the account, only if the submission has been made, signed, and certified in accordance with §§ 97.414(a) and 97.418 or paragraphs (c)(2)(ii) and (c)(5) of this section.

§ 97.421 Recordation of TR NO_X Annual allowance allocations and auction results.

(a) By November 7, 2011, the Administrator will record in each TR NO_X Annual source's compliance account the TR NO_X Annual allowances allocated to the TR NO_X Annual units at the source in accordance with § 97.411(a) for the control period in 2012.

(b) By November 7, 2011, the Administrator will record in each TR NO_X Annual source's compliance account the TR NO_X Annual allowances allocated to the TR NO_X Annual units at the source in accordance with § 97.411(a) for the control period in 2013, unless the State in which the source is located notifies the Administrator in writing by October 17, 2011 of the State's intent to submit to the Administrator a complete SIP revision by April 1, 2012 meeting the requirements of § 52.38(a)(3)(i) through (iv) of this chapter.

(1) If, by April 1, 2012, the State does not submit to the Administrator such complete SIP revision, the Administrator will record by April 15, 2012 in each TR NO_X Annual source's compliance account the TR NO_X Annual allowances allocated to the TR NO_X Annual units at the source in accordance with § 97.411(a) for the control period in 2013.

(2) If the State submits to the Administrator by April 1, 2012, and the Administrator approves by October 1, 2012, such complete SIP revision, the Administrator will record by October 1, 2012 in each TR NO_X Annual source's compliance account the TR NO_X Annual allowances allocated to the TR NO_X Annual units at the source as provided in such approved, complete SIP revision for the control period in 2013.

(3) If the State submits to the Administrator by April 1, 2012, and the Administrator does not approve by October 1, 2012, such complete SIP revision, the Administrator will record by October 1, 2012 in each TR NO_X Annual source's compliance account the TR NO_X Annual allowances allocated to the TR NO_X Annual units at the source in accordance with § 97.411(a) for the control period in 2013.

(c) By July 1, 2013, the Administrator will record in each TR NO_X Annual source's compliance account the TR

NO_X Annual allowances allocated to the TR NO_X Annual units at the source, or in each appropriate Allowance Management System account the TR NO_X Annual allowances auctioned to TR NO_X Annual units, in accordance with § 97.411(a), or with a SIP revision approved under § 52.38(a)(4) or (5) of this chapter, for the control period in 2014 and 2015.

(d) By July 1, 2014, the Administrator will record in each TR NO_X Annual source's compliance account the TR NO_X Annual allowances allocated to the TR NO_X Annual units at the source, or in each appropriate Allowance Management System account the TR NO_X Annual allowances auctioned to TR NO_X Annual units, in accordance with § 97.411(a), or with a SIP revision approved under § 52.38(a)(4) or (5) of this chapter, for the control period in 2016 and 2017.

(e) By July 1, 2015, the Administrator will record in each TR NO_X Annual source's compliance account the TR NO_X Annual allowances allocated to the TR NO_X Annual units at the source, or in each appropriate Allowance Management System account the TR NO_X Annual allowances auctioned to TR NO_X Annual units, in accordance with § 97.411(a), or with a SIP revision approved under § 52.38(a)(4) or (5) of this chapter, for the control period in 2018 and 2019.

(f) By July 1, 2016 and July 1 of each year thereafter, the Administrator will record in each TR NO_X Annual source's compliance account the TR NO_X Annual allowances allocated to the TR NO_X Annual units at the source, or in each appropriate Allowance Management System account the TR NO_X Annual allowances auctioned to TR NO_X Annual units, in accordance with § 97.411(a), or with a SIP revision approved under § 52.38(a)(4) or (5) of this chapter, for the control period in the fourth year after the year of the applicable recordation deadline under this paragraph.

(g) By August 1, 2012 and August 1 of each year thereafter, the Administrator will record in each TR NO_X Annual source's compliance account the TR NO_X Annual allowances allocated to the TR NO_X Annual units at the source, or in each appropriate Allowance Management System account the TR NO_X Annual allowances auctioned to TR NO_X Annual units, in accordance with § 97.412(a)(2) through (8) and (12), or with a SIP revision approved under § 52.38(a)(4) or (5) of this chapter, for the control period in the year of the applicable recordation deadline under this paragraph.

(h) By August 1, 2012 and August 1 of each year thereafter, the Administrator will record in each TR NO_X Annual source's compliance account the TR NO_X Annual allowances allocated to the TR NO_X Annual units at the source in accordance with § 97.412(b)(2) through (8) and (12) for the control period in the year of the applicable recordation deadline under this paragraph.

(i) By February 15, 2013 and February 15 of each year thereafter, the Administrator will record in each TR NO_X Annual source's compliance account the TR NO_X Annual allowances allocated to the TR NO_X Annual units at the source in accordance with § 97.412(a)(9) through (12), for the control period in the year before the year of the applicable recordation deadline under this paragraph.

(j) By the date on which any allocation or auction results, other than an allocation or auction results described in paragraphs (a) through (i) of this section, of TR NO_X Annual allowances to a recipient is made by or are submitted to the Administrator in accordance with § 97.411 or § 97.412 or with a SIP revision approved under § 52.38(a)(4) or (5) of this chapter, the Administrator will record such allocation or auction results in the appropriate Allowance Management System account.

(k) When recording the allocation or auction of TR NO_X Annual allowances to a TR NO_X Annual unit or other entity in an Allowance Management System account, the Administrator will assign each TR NO_X Annual allowance a unique identification number that will include digits identifying the year of the control period for which the TR NO_X Annual allowance is allocated or auctioned.

§ 97.422 Submission of TR NO_X Annual allowance transfers.

(a) An authorized account representative seeking recordation of a TR NO_X Annual allowance transfer shall submit the transfer to the Administrator.

(b) A TR NO_X Annual allowance transfer shall be correctly submitted if:

(1) The transfer includes the following elements, in a format prescribed by the Administrator:

(i) The account numbers established by the Administrator for both the transferor and transferee accounts;

(ii) The serial number of each TR NO_X Annual allowance that is in the transferor account and is to be transferred; and

(iii) The name and signature of the authorized account representative of the transferor account and the date signed; and

(2) When the Administrator attempts to record the transfer, the transferor account includes each TR NO_X Annual allowance identified by serial number in the transfer.

§ 97.423 Recordation of TR NO_X Annual allowance transfers.

(a) Within 5 business days (except as provided in paragraph (b) of this section) of receiving a TR NO_X Annual allowance transfer that is correctly submitted under § 97.422, the Administrator will record a TR NO_X Annual allowance transfer by moving each TR NO_X Annual allowance from the transferor account to the transferee account as specified in the transfer.

(b) A TR NO_X Annual allowance transfer to or from a compliance account that is submitted for recordation after the allowance transfer deadline for a control period and that includes any TR NO_X Annual allowances allocated for any control period before such allowance transfer deadline will not be recorded until after the Administrator completes the deductions from such compliance account under § 97.424 for the control period immediately before such allowance transfer deadline.

(c) Where a TR NO_X Annual allowance transfer is not correctly submitted under § 97.422, the Administrator will not record such transfer.

(d) Within 5 business days of recordation of a TR NO_X Annual allowance transfer under paragraphs (a) and (b) of the section, the Administrator will notify the authorized account representatives of both the transferor and transferee accounts.

(e) Within 10 business days of receipt of a TR NO_X Annual allowance transfer that is not correctly submitted under § 97.422, the Administrator will notify the authorized account representatives of both accounts subject to the transfer of:

(1) A decision not to record the transfer, and

(2) The reasons for such non-recordation.

§ 97.424 Compliance with TR NO_X Annual emissions limitation.

(a) *Availability for deduction for compliance.* TR NO_X Annual allowances are available to be deducted for compliance with a source's TR NO_X Annual emissions limitation for a control period in a given year only if the TR NO_X Annual allowances:

(1) Were allocated for such control period or a control period in a prior year; and

(2) Are held in the source's compliance account as of the allowance transfer deadline for such control period.

(b) *Deductions for compliance.* After the recordation, in accordance with § 97.423, of TR NO_X Annual allowance transfers submitted by the allowance transfer deadline for a control period in a given year, the Administrator will deduct from each source's compliance account TR NO_X Annual allowances available under paragraph (a) of this section in order to determine whether the source meets the TR NO_X Annual emissions limitation for such control period, as follows:

(1) Until the amount of TR NO_X Annual allowances deducted equals the number of tons of total NO_X emissions from all TR NO_X Annual units at the source for such control period; or

(2) If there are insufficient TR NO_X Annual allowances to complete the deductions in paragraph (b)(1) of this section, until no more TR NO_X Annual allowances available under paragraph (a) of this section remain in the compliance account.

(c)(1) *Identification of TR NO_X Annual allowances by serial number.* The authorized account representative for a source's compliance account may request that specific TR NO_X Annual allowances, identified by serial number, in the compliance account be deducted for emissions or excess emissions for a control period in a given year in accordance with paragraph (b) or (d) of this section. In order to be complete, such request shall be submitted to the Administrator by the allowance transfer deadline for such control period and include, in a format prescribed by the Administrator, the identification of the TR NO_X Annual source and the appropriate serial numbers.

(2) *First-in, first-out.* The Administrator will deduct TR NO_X Annual allowances under paragraph (b) or (d) of this section from the source's compliance account in accordance with a complete request under paragraph (c)(1) of this section or, in the absence of such request or in the case of identification of an insufficient amount of TR NO_X Annual allowances in such request, on a first-in, first-out accounting basis in the following order:

(i) Any TR NO_X Annual allowances that were allocated to the units at the source and not transferred out of the compliance account, in the order of recordation; and then

(ii) Any TR NO_X Annual allowances that were allocated to any unit and transferred to and recorded in the compliance account pursuant to this subpart, in the order of recordation.

(d) *Deductions for excess emissions.* After making the deductions for compliance under paragraph (b) of this section for a control period in a year in which the TR NO_X Annual source has excess emissions, the Administrator will deduct from the source's compliance account an amount of TR NO_X Annual allowances, allocated for a control period in a prior year or the control period in the year of the excess emissions or in the immediately following year, equal to two times the number of tons of the source's excess emissions.

(e) *Recordation of deductions.* The Administrator will record in the appropriate compliance account all deductions from such an account under paragraphs (b) and (d) of this section.

§ 97.425 Compliance with TR NO_X Annual assurance provisions.

(a) *Availability for deduction.* TR NO_X Annual allowances are available to be deducted for compliance with the TR NO_X Annual assurance provisions for a control period in a given year by the owners and operators of a group of one or more TR NO_X Annual sources and units in a State (and Indian country within the borders of such State) only if the TR NO_X Annual allowances:

(1) Were allocated for a control period in a prior year or the control period in the given year or in the immediately following year; and

(2) Are held in the assurance account, established by the Administrator for such owners and operators of such group of TR NO_X Annual sources and units in such State (and Indian country within the borders of such State) under paragraph (b)(3) of this section, as of the deadline established in paragraph (b)(4) of this section.

(b) *Deductions for compliance.* The Administrator will deduct TR NO_X Annual allowances available under paragraph (a) of this section for compliance with the TR NO_X Annual assurance provisions for a State for a control period in a given year in accordance with the following procedures:

(1) By June 1, 2013 and June 1 of each year thereafter, the Administrator will:

(i) Calculate, for each State (and Indian country within the borders of such State), the total NO_X emissions from all TR NO_X Annual units at TR NO_X Annual sources in the State (and Indian country within the borders of such State) during the control period in the year before the year of this calculation deadline and the amount, if any, by which such total NO_X emissions exceed the State assurance level as described in § 97.406(c)(2)(iii); and

(ii) Promulgate a notice of data availability of the results of the calculations required in paragraph (b)(1)(i) of this section, including separate calculations of the NO_X emissions from each TR NO_X Annual source.

(2) For each notice of data availability required in paragraph (b)(1)(ii) of this section and for any State (and Indian country within the borders of such State) identified in such notice as having TR NO_X Annual units with total NO_X emissions exceeding the State assurance level for a control period in a given year, as described in § 97.406(c)(2)(iii):

(i) By July 1 immediately after the promulgation of such notice, the designated representative of each TR NO_X Annual source in each such State (and Indian country within the borders of such State) shall submit a statement, in a format prescribed by the Administrator, providing for each TR NO_X Annual unit (if any) at the source that operates during, but is not allocated an amount of TR NO_X Annual allowances for, such control period, the unit's allowable NO_X emission rate for such control period and, if such rate is expressed in lb per mmBtu, the unit's heat rate.

(ii) By August 1 immediately after the promulgation of such notice, the Administrator will calculate, for each such State (and Indian country within the borders of such State) and such control period and each common designated representative for such control period for a group of one or more TR NO_X Annual sources and units in the State (and Indian country within the borders of such State), the common designated representative's share of the total NO_X emissions from all TR NO_X Annual units at TR NO_X Annual sources in the State (and Indian country within the borders of such State), the common designated representative's assurance level, and the amount (if any) of TR NO_X Annual allowances that the owners and operators of such group of sources and units must hold in accordance with the calculation formula in § 97.406(c)(2)(i) and will promulgate a notice of data availability of the results of these calculations.

(iii) The Administrator will provide an opportunity for submission of objections to the calculations referenced by the notice of data availability required in paragraph (b)(2)(ii) of this section and the calculations referenced by the relevant notice of data availability required in paragraph (b)(1)(i) of this section.

(A) Objections shall be submitted by the deadline specified in such notice

and shall be limited to addressing whether the calculations referenced in the relevant notice required under paragraph (b)(1)(ii) of this section and referenced in the notice required under paragraph (b)(2)(ii) of this section are in accordance with § 97.406(c)(2)(iii), §§ 97.406(b) and 97.430 through 97.435, the definitions of ''common designated representative'', ''common designated representative's assurance level'', and ''common designated representative's share'' in § 97.402, and the calculation formula in § 97.406(c)(2)(i).

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(2)(iii)(A) of this section. By October 1 immediately after the promulgation of such notice, the Administrator will promulgate a notice of data availability of any adjustments that the Administrator determines to be necessary and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(iii)(A) of this section.

(3) For any State (and Indian country within the borders of such State) referenced in each notice of data availability required in paragraph (b)(2)(iii)(B) of this section as having TR NO_X Annual units with total NO_X emissions exceeding the State assurance level for a control period in a given year, the Administrator will establish one assurance account for each set of owners and operators referenced, in the notice of data availability required under paragraph (b)(2)(iii)(B) of this section, as all of the owners and operators of a group of TR NO_X Annual sources and units in the State (and Indian country within the borders of such State) having a common designated representative for such control period and as being required to hold TR NO_X Annual allowances.

(4)(i) As of midnight of November 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii)(B) of this section, the owners and operators described in paragraph (b)(3) of this section shall hold in the assurance account established for the them and for the appropriate TR NO_X Annual sources, TR NO_X Annual units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section a total amount of TR NO_X Annual allowances, available for deduction under paragraph (a) of this section, equal to the amount such owners and operators are required to hold with regard to such sources, units and State (and Indian country within the borders of such State) as calculated by the Administrator and referenced in such notice.

(ii) Notwithstanding the allowance-holding deadline specified in paragraph (b)(4)(i) of this section, if November 1 is not a business day, then such allowance-holding deadline shall be midnight of the first business day thereafter.

(5) After November 1 (or the date described in paragraph (b)(4)(ii) of this section) immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii)(B) of this section and after the recordation, in accordance with § 97.423, of TR NO_X Annual allowance transfers submitted by midnight of such date, the Administrator will determine whether the owners and operators described in paragraph (b)(3) of this section hold, in the assurance account for the appropriate TR NO_X Annual sources, TR NO_X Annual units, and State (and Indian country within the borders of such State) established under paragraph (b)(3) of this section, the amount of TR NO_X Annual allowances available under paragraph (a) of this section that the owners and operators are required to hold with regard to such sources, units, and State (and Indian country within the borders of such State) as calculated by the Administrator and referenced in the notice required in paragraph (b)(2)(iii)(B) of this section.

(6) Notwithstanding any other provision of this subpart and any revision, made by or submitted to the Administrator after the promulgation of the notice of data availability required in paragraph (b)(2)(iii)(B) of this section for a control period in a given year, of any data used in making the calculations referenced in such notice, the amounts of TR NO_X Annual allowances that the owners and operators are required to hold in accordance with § 97.406(c)(2)(i) for such control period shall continue to be such amounts as calculated by the Administrator and referenced in such notice required in paragraph (b)(2)(iii)(B) of this section, except as follows:

(i) If any such data are revised by the Administrator as a result of a decision in or settlement of litigation concerning such data on appeal under part 78 of this chapter of such notice, or on appeal under section 307 of the Clean Air Act of a decision rendered under part 78 of this chapter on appeal of such notice, then the Administrator will use the data as so revised to recalculate the amounts of TR NO_X Annual allowances that owners and operators are required to hold in accordance with the calculation formula in § 97.406(c)(2)(i) for such control period with regard to the TR NO_X Annual sources, TR NO_X Annual units, and State (and Indian country within the borders of such State) involved, provided that such litigation under part 78 of this chapter, or the proceeding under part 78 of this chapter that resulted in the decision appealed in such litigation under section 307 of the Clean Air Act, was initiated no later than 30 days after promulgation of such notice required in paragraph (b)(2)(iii)(B) of this section.

(ii) If any such data are revised by the owners and operators of a TR NO_X Annual source and TR NO_X Annual unit whose designated representative submitted such data under paragraph (b)(2)(i) of this section, as a result of a decision in or settlement of litigation concerning such submission, then the Administrator will use the data as so revised to recalculate the amounts of TR NO_X Annual allowances that owners and operators are required to hold in accordance with the calculation formula in § 97.406(c)(2)(i) for such control period with regard to the TR NO_X Annual sources, TR NO_X Annual units, and State (and Indian country within the borders of such State) involved, provided that such litigation was initiated no later than 30 days after promulgation of such notice required in paragraph (b)(2)(iii)(B) of this section.

(iii) If the revised data are used to recalculate, in accordance with paragraphs (b)(6)(i) and (ii) of this section, the amount of TR NO_X Annual allowances that the owners and operators are required to hold for such control period with regard to the TR NO_X Annual sources, TR NO_X Annual units, and State (and Indian country within the borders of such State) involved—

(A) Where the amount of TR NO_X Annual allowances that the owners and operators are required to hold increases as a result of the use of all such revised data, the Administrator will establish a new, reasonable deadline on which the owners and operators shall hold the additional amount of TR NO_X Annual allowances in the assurance account established by the Administrator for the appropriate TR NO_X Annual sources, TR NO_X Annual units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section. The owners' and operators' failure to hold such additional amount, as required, before the new deadline shall not be a violation of the Clean Air Act. The owners' and operators' failure to hold such additional amount, as required, as of the new deadline shall be a violation of the Clean Air Act. Each

TR NO_X Annual allowance that the owners and operators fail to hold as required as of the new deadline, and each day in such control period, shall be a separate violation of the Clean Air Act.

(B) For the owners and operators for which the amount of TR NO_X Annual allowances required to be held decreases as a result of the use of all such revised data, the Administrator will record, in all accounts from which TR NO_X Annual allowances were transferred by such owners and operators for such control period to the assurance account established by the Administrator for the appropriate at TR NO_X Annual sources, TR NO_X Annual units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section, a total amount of the TR NO_X Annual allowances held in such assurance account equal to the amount of the decrease. If TR NO_X Annual allowances were transferred to such assurance account from more than one account, the amount of TR NO_X Annual allowances recorded in each such transferor account will be in proportion to the percentage of the total amount of TR NO_X Annual allowances transferred to such assurance account for such control period from such transferor account.

(C) Each TR NO_X Annual allowance held under paragraph (b)(6)(iii)(A) of this section as a result of recalculation of requirements under the TR NO_X Annual assurance provisions for such control period must be a TR NO_X Annual allowance allocated for a control period in a year before or the year immediately following, or in the same year as, the year of such control period.

§ 97.426 Banking.

(a) A TR NO_X Annual allowance may be banked for future use or transfer in a compliance account or a general account in accordance with paragraph (b) of this section.

(b) Any TR NO_X Annual allowance that is held in a compliance account or a general account will remain in such account unless and until the TR NO_X Annual allowance is deducted or transferred under § 97.411(c), § 97.423, § 97.424, § 97.425, 97.427, or 97.428.

§ 97.427 Account error.

The Administrator may, at his or her sole discretion and on his or her own motion, correct any error in any Allowance Management System account. Within 10 business days of making such correction, the Administrator will notify the authorized account representative for the account.

§ 97.428 Administrator's action on submissions.

(a) The Administrator may review and conduct independent audits concerning any submission under the TR NO_X Annual Trading Program and make appropriate adjustments of the information in the submission.

(b) The Administrator may deduct TR NO_X Annual allowances from or transfer TR NO_X Annual allowances to a compliance account or an assurance account, based on the information in a submission, as adjusted under paragraph (a)(1) of this section, and record such deductions and transfers.

§ 97.429 [Reserved]

§ 97.430 General monitoring, recordkeeping, and reporting requirements.

The owners and operators, and to the extent applicable, the designated representative, of a TR NO_X Annual unit, shall comply with the monitoring, recordkeeping, and reporting requirements as provided in this subpart and subpart H of part 75 of this chapter. For purposes of applying such requirements, the definitions in § 97.402 and in § 72.2 of this chapter shall apply, the terms ''affected unit,'' ''designated representative,'' and ''continuous emission monitoring system'' (or ''CEMS'') in part 75 of this chapter shall be deemed to refer to the terms ''TR NO_X Annual unit,'' ''designated representative,'' and ''continuous emission monitoring system'' (or ''CEMS'') respectively as defined in § 97.402, and the term ''newly affected unit'' shall be deemed to mean ''newly affected TR NO_X Annual unit''. The owner or operator of a unit that is not a TR NO_X Annual unit but that is monitored under § 75.72(b)(2)(ii) of this chapter shall comply with the same monitoring, recordkeeping, and reporting requirements as a TR NO_X Annual unit.

(a) *Requirements for installation, certification, and data accounting.* The owner or operator of each TR NO_X Annual unit shall:

(1) Install all monitoring systems required under this subpart for monitoring NO_X mass emissions and individual unit heat input (including all systems required to monitor NO_X emission rate, NO_X concentration, stack gas moisture content, stack gas flow rate, CO_2 or O_2 concentration, and fuel flow rate, as applicable, in accordance with §§ 75.71 and 75.72 of this chapter);

(2) Successfully complete all certification tests required under § 97.431 and meet all other requirements of this subpart and part 75 of this chapter applicable to the monitoring systems under paragraph (a)(1) of this section; and

(3) Record, report, and quality-assure the data from the monitoring systems under paragraph (a)(1) of this section.

(b) *Compliance deadlines.* Except as provided in paragraph (e) of this section, the owner or operator shall meet the monitoring system certification and other requirements of paragraphs (a)(1) and (2) of this section on or before the following dates and shall record, report, and quality-assure the data from the monitoring systems under paragraph (a)(1) of this section on and after the following dates.

(1) For the owner or operator of a TR NO_X Annual unit that commences commercial operation before July 1, 2011, January 1, 2012;

(2) For the owner or operator of a TR NO_X Annual unit that commences commercial operation on or after July 1, 2011, the later of the following:

(i) January 1, 2012; or

(ii) 180 calendar days after the date on which the unit commences commercial operation;

(3) The owner or operator of a TR NO_X Annual unit for which construction of a new stack or flue or installation of add-on NO_X emission controls is completed after the applicable deadline under paragraph (b)(1) or (2) of this section shall meet the requirements of §§ 75.4(e)(1) through (e)(4) of this chapter, except that:

(i) Such requirements shall apply to the monitoring systems required under § 97.430 through § 97.435, rather than the monitoring systems required under part 75 of this chapter;

(ii) NO_X emission rate, NO_X concentration, stack gas moisture content, stack gas volumetric flow rate, and O_2 or CO_2 concentration data shall be determined and reported, rather than the data listed in § 75.4(e)(2) of this chapter; and

(iii) Any petition for another procedure under § 75.4(e)(2) of this chapter shall be submitted under § 97.435, rather than § 75.66.

(c) *Reporting data.* The owner or operator of a TR NO_X Annual unit that does not meet the applicable compliance date set forth in paragraph (b) of this section for any monitoring system under paragraph (a)(1) of this section shall, for each such monitoring system, determine, record, and report maximum potential (or, as appropriate, minimum potential) values for NO_X concentration, NO_X emission rate, stack gas flow rate, stack gas moisture content, fuel flow rate, and any other parameters required to determine NO_X mass emissions and heat input in accordance with § 75.31(b)(2) or (c)(3) of

this chapter, section 2.4 of appendix D to part 75 of this chapter, or section 2.5 of appendix E to part 75 of this chapter, as applicable.

(d) *Prohibitions.* (1) No owner or operator of a TR NO_X Annual unit shall use any alternative monitoring system, alternative reference method, or any other alternative to any requirement of this subpart without having obtained prior written approval in accordance with § 97.435.

(2) No owner or operator of a TR NO_X Annual unit shall operate the unit so as to discharge, or allow to be discharged, NO_X to the atmosphere without accounting for all such NO_X in accordance with the applicable provisions of this subpart and part 75 of this chapter.

(3) No owner or operator of a TR NO_X Annual unit shall disrupt the continuous emission monitoring system, any portion thereof, or any other approved emission monitoring method, and thereby avoid monitoring and recording NO_X mass discharged into the atmosphere or heat input, except for periods of recertification or periods when calibration, quality assurance testing, or maintenance is performed in accordance with the applicable provisions of this subpart and part 75 of this chapter.

(4) No owner or operator of a TR NO_X Annual unit shall retire or permanently discontinue use of the continuous emission monitoring system, any component thereof, or any other approved monitoring system under this subpart, except under any one of the following circumstances:

(i) During the period that the unit is covered by an exemption under § 97.405 that is in effect;

(ii) The owner or operator is monitoring emissions from the unit with another certified monitoring system approved, in accordance with the applicable provisions of this subpart and part 75 of this chapter, by the Administrator for use at that unit that provides emission data for the same pollutant or parameter as the retired or discontinued monitoring system; or

(iii) The designated representative submits notification of the date of certification testing of a replacement monitoring system for the retired or discontinued monitoring system in accordance with § 97.431(d)(3)(i).

(e) *Long-term cold storage.* The owner or operator of a TR NO_X Annual unit is subject to the applicable provisions of § 75.4(d) of this chapter concerning units in long-term cold storage.

§ 97.431 Initial monitoring system certification and recertification procedures.

(a) The owner or operator of a TR NO_X Annual unit shall be exempt from the initial certification requirements of this section for a monitoring system under § 97.430(a)(1) if the following conditions are met:

(1) The monitoring system has been previously certified in accordance with part 75 of this chapter; and

(2) The applicable quality-assurance and quality-control requirements of § 75.21 of this chapter and appendices B, D, and E to part 75 of this chapter are fully met for the certified monitoring system described in paragraph (a)(1) of this section.

(b) The recertification provisions of this section shall apply to a monitoring system under § 97.430(a)(1) that is exempt from initial certification requirements under paragraph (a) of this section.

(c) If the Administrator has previously approved a petition under § 75.17(a) or (b) of this chapter for apportioning the NO_X emission rate measured in a common stack or a petition under § 75.66 of this chapter for an alternative to a requirement in § 75.12 or § 75.17 of this chapter, the designated representative shall resubmit the petition to the Administrator under § 97.435 to determine whether the approval applies under the TR NO_X Annual Trading Program.

(d) Except as provided in paragraph (a) of this section, the owner or operator of a TR NO_X Annual unit shall comply with the following initial certification and recertification procedures for a continuous monitoring system (*i.e.,* a continuous emission monitoring system and an excepted monitoring system under appendices D and E to part 75 of this chapter) under § 97.430(a)(1). The owner or operator of a unit that qualifies to use the low mass emissions excepted monitoring methodology under § 75.19 of this chapter or that qualifies to use an alternative monitoring system under subpart E of part 75 of this chapter shall comply with the procedures in paragraph (e) or (f) of this section respectively.

(1) Requirements for initial certification. The owner or operator shall ensure that each continuous monitoring system under § 97.430(a)(1) (including the automated data acquisition and handling system) successfully completes all of the initial certification testing required under § 75.20 of this chapter by the applicable deadline in § 97.430(b). In addition, whenever the owner or operator installs a monitoring system to meet the requirements of this subpart in a location where no such monitoring system was previously installed, initial certification in accordance with § 75.20 of this chapter is required.

(2) Requirements for recertification. Whenever the owner or operator makes a replacement, modification, or change in any certified continuous emission monitoring system under § 97.430(a)(1) that may significantly affect the ability of the system to accurately measure or record NO_X mass emissions or heat input rate or to meet the quality-assurance and quality-control requirements of § 75.21 of this chapter or appendix B to part 75 of this chapter, the owner or operator shall recertify the monitoring system in accordance with § 75.20(b) of this chapter. Furthermore, whenever the owner or operator makes a replacement, modification, or change to the flue gas handling system or the unit's operation that may significantly change the stack flow or concentration profile, the owner or operator shall recertify each continuous emission monitoring system whose accuracy is potentially affected by the change, in accordance with § 75.20(b) of this chapter. Examples of changes to a continuous emission monitoring system that require recertification include replacement of the analyzer, complete replacement of an existing continuous emission monitoring system, or change in location or orientation of the sampling probe or site. Any fuel flowmeter system, and any excepted NO_X monitoring system under appendix E to part 75 of this chapter, under § 97.430(a)(1) are subject to the recertification requirements in § 75.20(g)(6) of this chapter.

(3) Approval process for initial certification and recertification. For initial certification of a continuous monitoring system under § 97.430(a)(1), paragraphs (d)(3)(i) through (v) of this section apply. For recertifications of such monitoring systems, paragraphs (d)(3)(i) through (iv) of this section and the procedures in §§ 75.20(b)(5) and (g)(7) of this chapter (in lieu of the procedures in paragraph (d)(3)(v) of this section) apply, provided that in applying paragraphs (d)(3)(i) through (iv) of this section, the words ''certification'' and ''initial certification'' are replaced by the word ''recertification'' and the word ''certified'' is replaced by with the word ''recertified''.

(i) Notification of certification. The designated representative shall submit to the appropriate EPA Regional Office and the Administrator written notice of the dates of certification testing, in accordance with § 97.433.

(ii) Certification application. The designated representative shall submit to the Administrator a certification application for each monitoring system. A complete certification application shall include the information specified in § 75.63 of this chapter.

(iii) Provisional certification date. The provisional certification date for a monitoring system shall be determined in accordance with § 75.20(a)(3) of this chapter. A provisionally certified monitoring system may be used under the TR NO_X Annual Trading Program for a period not to exceed 120 days after receipt by the Administrator of the complete certification application for the monitoring system under paragraph (d)(3)(ii) of this section. Data measured and recorded by the provisionally certified monitoring system, in accordance with the requirements of part 75 of this chapter, will be considered valid quality-assured data (retroactive to the date and time of provisional certification), provided that the Administrator does not invalidate the provisional certification by issuing a notice of disapproval within 120 days of the date of receipt of the complete certification application by the Administrator.

(iv) Certification application approval process. The Administrator will issue a written notice of approval or disapproval of the certification application to the owner or operator within 120 days of receipt of the complete certification application under paragraph (d)(3)(ii) of this section. In the event the Administrator does not issue such a notice within such 120-day period, each monitoring system that meets the applicable performance requirements of part 75 of this chapter and is included in the certification application will be deemed certified for use under the TR NO_X Annual Trading Program.

(A) Approval notice. If the certification application is complete and shows that each monitoring system meets the applicable performance requirements of part 75 of this chapter, then the Administrator will issue a written notice of approval of the certification application within 120 days of receipt.

(B) Incomplete application notice. If the certification application is not complete, then the Administrator will issue a written notice of incompleteness that sets a reasonable date by which the designated representative must submit the additional information required to complete the certification application. If the designated representative does not comply with the notice of incompleteness by the specified date, then the Administrator may issue a notice of disapproval under paragraph (d)(3)(iv)(C) of this section.

(C) Disapproval notice. If the certification application shows that any monitoring system does not meet the performance requirements of part 75 of this chapter or if the certification application is incomplete and the requirement for disapproval under paragraph (d)(3)(iv)(B) of this section is met, then the Administrator will issue a written notice of disapproval of the certification application. Upon issuance of such notice of disapproval, the provisional certification is invalidated by the Administrator and the data measured and recorded by each uncertified monitoring system shall not be considered valid quality-assured data beginning with the date and hour of provisional certification (as defined under § 75.20(a)(3) of this chapter).

(D) Audit decertification. The Administrator may issue a notice of disapproval of the certification status of a monitor in accordance with § 97.432(b).

(v) Procedures for loss of certification. If the Administrator issues a notice of disapproval of a certification application under paragraph (d)(3)(iv)(C) of this section or a notice of disapproval of certification status under paragraph (d)(3)(iv)(D) of this section, then:

(A) The owner or operator shall substitute the following values, for each disapproved monitoring system, for each hour of unit operation during the period of invalid data specified under § 75.20(a)(4)(iii), § 75.20(g)(7), or § 75.21(e) of this chapter and continuing until the applicable date and hour specified under § 75.20(a)(5)(i) or (g)(7) of this chapter:

(*1*) For a disapproved NO_X emission rate (*i.e.,* NO_X-diluent) system, the maximum potential NO_X emission rate, as defined in § 72.2 of this chapter.

(*2*) For a disapproved NO_X pollutant concentration monitor and disapproved flow monitor, respectively, the maximum potential concentration of NO_X and the maximum potential flow rate, as defined in sections 2.1.2.1 and 2.1.4.1 of appendix A to part 75 of this chapter.

(*3*) For a disapproved moisture monitoring system and disapproved diluent gas monitoring system, respectively, the minimum potential moisture percentage and either the maximum potential CO_2 concentration or the minimum potential O_2 concentration (as applicable), as defined in sections 2.1.5, 2.1.3.1, and 2.1.3.2 of appendix A to part 75 of this chapter.

(*4*) For a disapproved fuel flowmeter system, the maximum potential fuel flow rate, as defined in section 2.4.2.1 of appendix D to part 75 of this chapter.

(*5*) For a disapproved excepted NO_X monitoring system under appendix E to part 75 of this chapter, the fuel-specific maximum potential NO_X emission rate, as defined in § 72.2 of this chapter.

(B) The designated representative shall submit a notification of certification retest dates and a new certification application in accordance with paragraphs (d)(3)(i) and (ii) of this section.

(C) The owner or operator shall repeat all certification tests or other requirements that were failed by the monitoring system, as indicated in the Administrator's notice of disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval.

(e) The owner or operator of a unit qualified to use the low mass emissions (LME) excepted methodology under § 75.19 of this chapter shall meet the applicable certification and recertification requirements in §§ 75.19(a)(2) and 75.20(h) of this chapter. If the owner or operator of such a unit elects to certify a fuel flowmeter system for heat input determination, the owner or operator shall also meet the certification and recertification requirements in § 75.20(g) of this chapter.

(f) The designated representative of each unit for which the owner or operator intends to use an alternative monitoring system approved by the Administrator under subpart E of part 75 of this chapter shall comply with the applicable notification and application procedures of § 75.20(f) of this chapter.

§ 97.432 Monitoring system out-of-control periods.

(a) *General provisions.* Whenever any monitoring system fails to meet the quality-assurance and quality-control requirements or data validation requirements of part 75 of this chapter, data shall be substituted using the applicable missing data procedures in subpart D or subpart H of, or appendix D or appendix E to, part 75 of this chapter.

(b) *Audit decertification.* Whenever both an audit of a monitoring system and a review of the initial certification or recertification application reveal that any monitoring system should not have been certified or recertified because it did not meet a particular performance specification or other requirement under § 97.431 or the applicable provisions of part 75 of this chapter, both at the time of the initial certification or

recertification application submission and at the time of the audit, the Administrator will issue a notice of disapproval of the certification status of such monitoring system. For the purposes of this paragraph, an audit shall be either a field audit or an audit of any information submitted to the Administrator or any State or permitting authority. By issuing the notice of disapproval, the Administrator revokes prospectively the certification status of the monitoring system. The data measured and recorded by the monitoring system shall not be considered valid quality-assured data from the date of issuance of the notification of the revoked certification status until the date and time that the owner or operator completes subsequently approved initial certification or recertification tests for the monitoring system. The owner or operator shall follow the applicable initial certification or recertification procedures in § 97.431 for each disapproved monitoring system.

§ 97.433 Notifications concerning monitoring.

The designated representative of a TR NO_X Annual unit shall submit written notice to the Administrator in accordance with § 75.61 of this chapter.

§ 97.434 Recordkeeping and reporting.

(a) *General provisions.* The designated representative shall comply with all recordkeeping and reporting requirements in paragraphs (b) through (e) of this section, the applicable recordkeeping and reporting requirements under § 75.73 of this chapter, and the requirements of § 97.414(a).

(b) *Monitoring plans.* The owner or operator of a TR NO_X Annual unit shall comply with requirements of § 75.73(c) and (e) of this chapter.

(c) *Certification applications.* The designated representative shall submit an application to the Administrator within 45 days after completing all initial certification or recertification tests required under § 97.431, including the information required under § 75.63 of this chapter.

(d) *Quarterly reports.* The designated representative shall submit quarterly reports, as follows:

(1) The designated representative shall report the NO_X mass emissions data and heat input data for the TR NO_X Annual unit, in an electronic quarterly report in a format prescribed by the Administrator, for each calendar quarter beginning with:

(i) For a unit that commences commercial operation before July 1, 2011, the calendar quarter covering January 1, 2012 through March 31, 2012; or

(ii) For a unit that commences commercial operation on or after July 1, 2011, the calendar quarter corresponding to the earlier of the date of provisional certification or the applicable deadline for initial certification under § 97.430(b), unless that quarter is the third or fourth quarter of 2011, in which case reporting shall commence in the quarter covering January 1, 2012 through March 31, 2012.

(2) The designated representative shall submit each quarterly report to the Administrator within 30 days after the end of the calendar quarter covered by the report. Quarterly reports shall be submitted in the manner specified in § 75.73(f) of this chapter.

(3) For TR NO_X Annual units that are also subject to the Acid Rain Program, TR NO_X Ozone Season Trading Program, TR SO_2 Group 1 Trading Program, or TR SO_2 Group 2 Trading Program, quarterly reports shall include the applicable data and information required by subparts F through H of part 75 of this chapter as applicable, in addition to the NO_X mass emission data, heat input data, and other information required by this subpart.

(4) The Administrator may review and conduct independent audits of any quarterly report in order to determine whether the quarterly report meets the requirements of this subpart and part 75 of this chapter, including the requirement to use substitute data.

(i) The Administrator will notify the designated representative of any determination that the quarterly report fails to meet any such requirements and specify in such notification any corrections that the Administrator believes are necessary to make through resubmission of the quarterly report and a reasonable time period within which the designated representative must respond. Upon request by the designated representative, the Administrator may specify reasonable extensions of such time period. Within the time period (including any such extensions) specified by the Administrator, the designated representative shall resubmit the quarterly report with the corrections specified by the Administrator, except to the extent the designated representative provides information demonstrating that a specified correction is not necessary because the quarterly report already meets the requirements of this subpart and part 75 of this chapter that are relevant to the specified correction.

(ii) Any resubmission of a quarterly report shall meet the requirements applicable to the submission of a quarterly report under this subpart and part 75 of this chapter, except for the deadline set forth in paragraph (d)(2) of this section.

(e) *Compliance certification.* The designated representative shall submit to the Administrator a compliance certification (in a format prescribed by the Administrator) in support of each quarterly report based on reasonable inquiry of those persons with primary responsibility for ensuring that all of the unit's emissions are correctly and fully monitored. The certification shall state that:

(1) The monitoring data submitted were recorded in accordance with the applicable requirements of this subpart and part 75 of this chapter, including the quality assurance procedures and specifications; and

(2) For a unit with add-on NO_X emission controls and for all hours where NO_X data are substituted in accordance with § 75.34(a)(1) of this chapter, the add-on emission controls were operating within the range of parameters listed in the quality assurance/quality control program under appendix B to part 75 of this chapter and the substitute data values do not systematically underestimate NO_X emissions.

§ 97.435 Petitions for alternatives to monitoring, recordkeeping, or reporting requirements.

(a) The designated representative of a TR NO_X Annual unit may submit a petition under § 75.66 of this chapter to the Administrator, requesting approval to apply an alternative to any requirement of §§ 97.430 through 97.434.

(b) A petition submitted under paragraph (a) of this section shall include sufficient information for the evaluation of the petition, including, at a minimum, the following information:

(i) Identification of each unit and source covered by the petition;

(ii) A detailed explanation of why the proposed alternative is being suggested in lieu of the requirement;

(iii) A description and diagram of any equipment and procedures used in the proposed alternative;

(iv) A demonstration that the proposed alternative is consistent with the purposes of the requirement for which the alternative is proposed and with the purposes of this subpart and part 75 of this chapter and that any adverse effect of approving the alternative will be *de minimis;* and

(v) Any other relevant information that the Administrator may require.

(c) Use of an alternative to any requirement referenced in paragraph (a) of this section is in accordance with this subpart only to the extent that the petition is approved in writing by the Administrator and that such use is in accordance with such approval.

■ 75. Part 97 is amended by adding subpart BBBBB to read as follows:

Subpart BBBBB—TR NO_X Ozone Season Trading Program

97.501 Purpose.
97.502 Definitions.
97.503 Measurements, abbreviations, and acronyms.
97.504 Applicability.
97.505 Retired unit exemption.
97.506 Standard requirements.
97.507 Computation of time.
97.508 Administrative appeal procedures.
97.509 [Reserved]
97.510 State NO_X Ozone Season trading budgets, new unit set-asides, Indian country new unit set-asides and variability limits.
97.511 Timing requirements for TR NO_X Ozone Season allowance allocations.
97.512 TR NO_X Ozone Season allowance allocations to new units.
97.513 Authorization of designated representative and alternate designated representative.
97.514 Responsibilities of designated representative and alternate designated representative.
97.515 Changing designated representative and alternate designated representative; changes in owners and operators.
97.516 Certificate of representation.
97.517 Objections concerning designated representative and alternate designated representative.
97.518 Delegation by designated representative and alternate designated representative.
97.519 [Reserved]
97.520 Establishment of compliance accounts and general accounts.
97.521 Recordation of TR NO_X Ozone Season allowance allocations.
97.522 Submission of TR NO_X Ozone Season allowance transfers.
97.523 Recordation of TR NO_X Ozone Season allowance transfers.
97.524 Compliance with TR NO_X Ozone Season emissions limitation.
97.525 Compliance with TR NO_X Ozone Season assurance provisions.
97.526 Banking.
97.527 Account error.
97.528 Administrator's action on submissions.
97.529 [RESERVED]
97.530 General monitoring, recordkeeping, and reporting requirements.
97.531 Initial monitoring system certification and recertification procedures.
97.532 Monitoring system out-of-control periods.
97.533 Notifications concerning monitoring.
97.534 Recordkeeping and reporting.
97.535 Petitions for alternatives to monitoring, recordkeeping, or reporting requirements.

Subpart BBBBB—TR NO_X Ozone Season Trading Program

§ 97.501 Purpose.

This subpart sets forth the general, designated representative, allowance, and monitoring provisions for the Transport Rule (TR) NO_X Ozone Season Trading Program, under section 110 of the Clean Air Act and § 52.38 of this chapter, as a means of mitigating interstate transport of ozone and nitrogen oxides.

§ 97.502 Definitions.

The terms used in this subpart shall have the meanings set forth in this section as follows:

Acid Rain Program means a multi-state SO_2 and NO_X air pollution control and emission reduction program established by the Administrator under title IV of the Clean Air Act and parts 72 through 78 of this chapter.

Administrator means the Administrator of the United States Environmental Protection Agency or the Director of the Clean Air Markets Division (or its successor determined by the Administrator) of the United States Environmental Protection Agency, the Administrator's duly authorized representative under this subpart.

Allocate or *allocation* means, with regard to TR NO_X Ozone Season allowances, the determination by the Administrator, State, or permitting authority, in accordance with this subpart and any SIP revision submitted by the State and approved by the Administrator under § 52.38(b)(3), (4), or (5) of this chapter, of the amount of such TR NO_X Ozone Season allowances to be initially credited, at no cost to the recipient, to:

(1) A TR NO_X Ozone Season unit;

(2) A new unit set-aside;

(3) An Indian country new unit set-aside; or

(4) An entity not listed in paragraphs (1) through (3) of this definition;

(5) Provided that, if the Administrator, State, or permitting authority initially credits, to a TR NO_X Ozone Season unit qualifying for an initial credit, a credit in the amount of zero TR NO_X Ozone Season allowances, the TR NO_X Ozone Season unit will be treated as being allocated an amount (*i.e.,* zero) of TR NO_X Ozone Season allowances.

Allowable NO_X emission rate means, for a unit, the most stringent State or federal NO_X emission rate limit (in lb/MWhr or, if in lb/mmBtu, converted to lb/MWhr by multiplying it by the unit's heat rate in mmBtu/MWhr) that is applicable to the unit and covers the longest averaging period not exceeding one year.

Allowance Management System means the system by which the Administrator records allocations, deductions, and transfers of TR NO_X Ozone Season allowances under the TR NO_X Ozone Season Trading Program. Such allowances are allocated, recorded, held, deducted, or transferred only as whole allowances.

Allowance Management System account means an account in the Allowance Management System established by the Administrator for purposes of recording the allocation, holding, transfer, or deduction of TR NO_X Ozone Season allowances.

Allowance transfer deadline means, for a control period in a given year, midnight of December 1 (if it is a business day), or midnight of the first business day thereafter (if December 1 is not a business day), immediately after such control period and is the deadline by which a TR NO_X Ozone Season allowance transfer must be submitted for recordation in a TR NO_X Ozone Season source's compliance account in order to be available for use in complying with the source's TR NO_X Ozone Season emissions limitation for such control period in accordance with §§ 97.506 and 97.524.

Alternate designated representative means, for a TR NO_X Ozone Season source and each TR NO_X Ozone Season unit at the source, the natural person who is authorized by the owners and operators of the source and all such units at the source, in accordance with this subpart, to act on behalf of the designated representative in matters pertaining to the TR NO_X Ozone Season Trading Program. If the TR NO_X Ozone Season source is also subject to the Acid Rain Program, TR NO_X Annual Trading Program, TR SO_2 Group 1 Trading Program, or TR SO_2 Group 2 Trading Program, then this natural person shall be the same natural person as the alternate designated representative, as defined in the respective program.

Assurance account means an Allowance Management System account, established by the Administrator under § 97.525(b)(3) for certain owners and operators of a group of one or more TR NO_X Ozone Season sources and units in a given State (and Indian country within the borders of such State), in which are held TR NO_X Ozone Season allowances available for use for a control period in a given year in complying with the TR NO_X Ozone

Season assurance provisions in accordance with §§ 97.506 and 97.525.

Authorized account representative means, for a general account, the natural person who is authorized, in accordance with this subpart, to transfer and otherwise dispose of TR NO_X Ozone Season allowances held in the general account and, for a TR NO_X Ozone Season source's compliance account, the designated representative of the source.

Automated data acquisition and handling system or *DAHS* means the component of the continuous emission monitoring system, or other emissions monitoring system approved for use under this subpart, designed to interpret and convert individual output signals from pollutant concentration monitors, flow monitors, diluent gas monitors, and other component parts of the monitoring system to produce a continuous record of the measured parameters in the measurement units required by this subpart.

Biomass means—

(1) Any organic material grown for the purpose of being converted to energy;

(2) Any organic byproduct of agriculture that can be converted into energy; or

(3) Any material that can be converted into energy and is nonmerchantable for other purposes, that is segregated from other material that is nonmerchantable for other purposes, and that is;

(i) A forest-related organic resource, including mill residues, precommercial thinnings, slash, brush, or byproduct from conversion of trees to merchantable material; or

(ii) A wood material, including pallets, crates, dunnage, manufacturing and construction materials (other than pressure-treated, chemically-treated, or painted wood products), and landscape or right-of-way tree trimmings.

Boiler means an enclosed fossil- or other-fuel-fired combustion device used to produce heat and to transfer heat to recirculating water, steam, or other medium.

Bottoming-cycle unit means a unit in which the energy input to the unit is first used to produce useful thermal energy, where at least some of the reject heat from the useful thermal energy application or process is then used for electricity production.

Business day means a day that does not fall on a weekend or a federal holiday.

Certifying official means a natural person who is:

(1) For a corporation, a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function or any other person who performs similar policy- or decision-making functions for the corporation;

(2) For a partnership or sole proprietorship, a general partner or the proprietor respectively; or

(3) For a local government entity or State, federal, or other public agency, a principal executive officer or ranking elected official.

Clean Air Act means the Clean Air Act, 42 U.S.C. 7401, *et seq.*

Coal means ''coal'' as defined in § 72.2 of this chapter.

Coal-derived fuel means any fuel (whether in a solid, liquid, or gaseous state) produced by the mechanical, thermal, or chemical processing of coal.

Cogeneration system means an integrated group, at a source, of equipment (including a boiler, or combustion turbine, and a steam turbine generator) designed to produce useful thermal energy for industrial, commercial, heating, or cooling purposes and electricity through the sequential use of energy.

Cogeneration unit means a stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine that is a topping-cycle unit or a bottoming-cycle unit:

(1) Operating as part of a cogeneration system; and

(2) Producing on an annual average basis—

(i) For a topping-cycle unit,

(A) Useful thermal energy not less than 5 percent of total energy output; and

(B) Useful power that, when added to one-half of useful thermal energy produced, is not less than 42.5 percent of total energy input, if useful thermal energy produced is 15 percent or more of total energy output, or not less than 45 percent of total energy input, if useful thermal energy produced is less than 15 percent of total energy output.

(ii) For a bottoming-cycle unit, useful power not less than 45 percent of total energy input;

(3) Provided that the requirements in paragraph (2) of this definition shall not apply to a calendar year referenced in paragraph (2) of this definition during which the unit did not operate at all;

(4) Provided that the total energy input under paragraphs (2)(i)(B) and (2)(ii) of this definition shall equal the unit's total energy input from all fuel, except biomass if the unit is a boiler; and

(5) Provided that, if, throughout its operation during the 12-month period or a calendar year referenced in paragraph (2) of this definition, a unit is operated as part of a cogeneration system and the cogeneration system meets on a system-wide basis the requirement in paragraph (2)(i)(B) or (2)(ii) of this definition, the unit shall be deemed to meet such requirement during that 12-month period or calendar year.

Combustion turbine means an enclosed device comprising:

(1) If the device is simple cycle, a compressor, a combustor, and a turbine and in which the flue gas resulting from the combustion of fuel in the combustor passes through the turbine, rotating the turbine; and

(2) If the device is combined cycle, the equipment described in paragraph (1) of this definition and any associated duct burner, heat recovery steam generator, and steam turbine.

Commence commercial operation means, with regard to a unit:

(1) To have begun to produce steam, gas, or other heated medium used to generate electricity for sale or use, including test generation, except as provided in § 97.505.

(i) For a unit that is a TR NO_X Ozone Season unit under § 97.504 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in the introductory text of paragraph (1) of this definition and that subsequently undergoes a physical change or is moved to a new location or source, such date shall remain the date of commencement of commercial operation of the unit, which shall continue to be treated as the same unit.

(ii) For a unit that is a TR NO_X Ozone Season unit under § 97.504 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in the introductory text of paragraph (1) of this definition and that is subsequently replaced by a unit at the same or a different source, such date shall remain the replaced unit's date of commencement of commercial operation, and the replacement unit shall be treated as a separate unit with a separate date for commencement of commercial operation as defined in paragraph (1) or (2) of this definition as appropriate.

(2) Notwithstanding paragraph (1) of this definition and except as provided in § 97.505, for a unit that is not a TR NO_X Ozone Season unit under § 97.504 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in introductory text of paragraph (1) of this definition, the unit's date for commencement of commercial operation shall be the date on which the unit becomes a TR NO_X Ozone Season unit under § 97.504.

(i) For a unit with a date for commencement of commercial operation as defined in the introductory text of paragraph (2) of this definition

and that subsequently undergoes a physical change or is moved to a different location or source, such date shall remain the date of commencement of commercial operation of the unit, which shall continue to be treated as the same unit.

(ii) For a unit with a date for commencement of commercial operation as defined in the introductory text of paragraph (2) of this definition and that is subsequently replaced by a unit at the same or a different source, such date shall remain the replaced unit's date of commencement of commercial operation, and the replacement unit shall be treated as a separate unit with a separate date for commencement of commercial operation as defined in paragraph (1) or (2) of this definition as appropriate.

Common designated representative means, with regard to a control period in a given year, a designated representative where, as of April 1 immediately after the allowance transfer deadline for such control period, the same natural person is authorized under §§ 97.513(a) and 97.515(a) as the designated representative for a group of one or more TR NO_X Ozone Season sources and units located in a State (and Indian country within the borders of such State).

Common designated representative's assurance level means, with regard to a specific common designated representative and a State (and Indian country within the borders of such State) and control period in a given year for which the State assurance level is exceeded as described in § 97.506(c)(2)(iii), the common designated representative's share of the State NO_X Ozone Season trading budget with the variability limit for the State for such control period.

Common designated representative's share means, with regard to a specific common designated representative for a control period in a given year:

(1) With regard to a total amount of NO_X emissions from all TR NO_X Ozone Season units in a State (and Indian country within the borders of such State) during such control period, the total tonnage of NO_X emissions during such control period from a group of one or more TR NO_X Ozone Season units located in such State (and such Indian country) and having the common designated representative for such control period;

(2) With regard to a State NO_X Ozone Season trading budget with the variability limit for such control period, the amount (rounded to the nearest allowance) equal to the sum of the total amount of TR NO_X Ozone Season allowances allocated for such control period to a group of one or more TR NO_X Ozone Season units located in the State (and Indian country within the borders of such State) and having the common designated representative for such control period and of the total amount of TR NO_X Ozone Season allowances purchased by an owner or operator of such TR NO_X Ozone Season units in an auction for such control period and submitted by the State or the permitting authority to the Administrator for recordation in the compliance accounts for such TR NO_X Ozone Season units in accordance with the TR NO_X Ozone Season allowance auction provisions in a SIP revision approved by the Administrator under § 52.38(b)(4) or (5) of this chapter, multiplied by the sum of the State NO_X Ozone Season trading budget under § 97.510(a) and the State's variability limit under § 97.510(b) for such control period and divided by such State NO_X Ozone Season trading budget;

(3) Provided that, in the case of a unit that operates during, but has no amount of TR NO_X Ozone Season allowances allocated under §§ 97.511 and 97.512 for, such control period, the unit shall be treated, solely for purposes of this definition, as being allocated an amount (rounded to the nearest allowance) of TR NO_X Ozone Season allowances for such control period equal to the unit's allowable NO_X emission rate applicable to such control period, multiplied by a capacity factor of 0.92 (if the unit is a boiler combusting any amount of coal or coal-derived fuel during such control period), 0.32 (if the unit is a simple combustion turbine during such control period), 0.71 (if the unit is a combined cycle turbine during such control period), 0.73 (if the unit is an integrated coal gasification combined cycle unit during such control period), or 0.44 (for any other unit), multiplied by the unit's maximum hourly load as reported in accordance with this subpart and by 3,672 hours/control period, and divided by 2,000 lb/ton.

Common stack means a single flue through which emissions from 2 or more units are exhausted.

Compliance account means an Allowance Management System account, established by the Administrator for a TR NO_X Ozone Season source under this subpart, in which any TR NO_X Ozone Season allowance allocations to the TR NO_X Ozone Season units at the source are recorded and in which are held any TR NO_X Ozone Season allowances available for use for a control period in a given year in complying with the source's TR NO_X Ozone Season emissions limitation in accordance with §§ 97.506 and 97.524.

Continuous emission monitoring system or *CEMS* means the equipment required under this subpart to sample, analyze, measure, and provide, by means of readings recorded at least once every 15 minutes and using an automated data acquisition and handling system (DAHS), a permanent record of NO_X emissions, stack gas volumetric flow rate, stack gas moisture content, and O_2 or CO_2 concentration (as applicable), in a manner consistent with part 75 of this chapter and §§ 97.530 through 97.535. The following systems are the principal types of continuous emission monitoring systems:

(1) A flow monitoring system, consisting of a stack flow rate monitor and an automated data acquisition and handling system and providing a permanent, continuous record of stack gas volumetric flow rate, in standard cubic feet per hour (scfh);

(2) A NO_X concentration monitoring system, consisting of a NO_X pollutant concentration monitor and an automated data acquisition and handling system and providing a permanent, continuous record of NO_X emissions, in parts per million (ppm);

(3) A NO_X emission rate (or NO_X-diluent) monitoring system, consisting of a NO_X pollutant concentration monitor, a diluent gas (CO_2 or O_2) monitor, and an automated data acquisition and handling system and providing a permanent, continuous record of NO_X concentration, in parts per million (ppm), diluent gas concentration, in percent CO_2 or O_2, and NO_X emission rate, in pounds per million British thermal units (lb/mmBtu);

(4) A moisture monitoring system, as defined in § 75.11(b)(2) of this chapter and providing a permanent, continuous record of the stack gas moisture content, in percent H_2O;

(5) A CO_2 monitoring system, consisting of a CO_2 pollutant concentration monitor (or an O_2 monitor plus suitable mathematical equations from which the CO_2 concentration is derived) and an automated data acquisition and handling system and providing a permanent, continuous record of CO_2 emissions, in percent CO_2; and

(6) An O_2 monitoring system, consisting of an O_2 concentration monitor and an automated data acquisition and handling system and providing a permanent, continuous record of O_2, in percent O_2.

Control period means the period starting May 1 of a calendar year, except as provided in § 97.506(c)(3), and

ending on September 30 of the same year, inclusive.

Designated representative means, for a TR NO_X Ozone Season source and each TR NO_X Ozone Season unit at the source, the natural person who is authorized by the owners and operators of the source and all such units at the source, in accordance with this subpart, to represent and legally bind each owner and operator in matters pertaining to the TR NO_X Ozone Season Trading Program. If the TR NO_X Ozone Season source is also subject to the Acid Rain Program, TR NO_X Annual Trading Program, TR SO_2 Group 1 Trading Program, or TR SO_2 Group 2 Trading Program, then this natural person shall be the same natural person as the designated representative, as defined in the respective program.

Emissions means air pollutants exhausted from a unit or source into the atmosphere, as measured, recorded, and reported to the Administrator by the designated representative, and as modified by the Administrator:

(1) In accordance with this subpart; and

(2) With regard to a period before the unit or source is required to measure, record, and report such air pollutants in accordance with this subpart, in accordance with part 75 of this chapter.

Excess emissions means any ton of emissions from the TR NO_X Ozone Season units at a TR NO_X Ozone Season source during a control period in a given year that exceeds the TR NO_X Ozone Season emissions limitation for the source for such control period.

Fossil fuel means—

(1) Natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material; or

(2) For purposes of applying the limitation on ''average annual fuel consumption of fossil fuel'' in §§ 97.504(b)(2)(i)(B) and (ii), natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material for the purpose of creating useful heat.

Fossil-fuel-fired means, with regard to a unit, combusting any amount of fossil fuel in 2005 or any calendar year thereafter.

General account means an Allowance Management System account, established under this subpart, that is not a compliance account or an assurance account.

Generator means a device that produces electricity.

Gross electrical output means, for a unit, electricity made available for use, including any such electricity used in the power production process (which process includes, but is not limited to, any on-site processing or treatment of fuel combusted at the unit and any on-site emission controls).

Heat input means, for a unit for a specified period of time, the product (in mmBtu/time) of the gross calorific value of the fuel (in mmBtu/lb) fed into the unit multiplied by the fuel feed rate (in lb of fuel/time), as measured, recorded, and reported to the Administrator by the designated representative and as modified by the Administrator in accordance with this subpart and excluding the heat derived from preheated combustion air, recirculated flue gases, or exhaust.

Heat input rate means, for a unit, the amount of heat input (in mmBtu) divided by unit operating time (in hr) or, for a unit and a specific fuel, the amount of heat input attributed to the fuel (in mmBtu) divided by the unit operating time (in hr) during which the unit combusts the fuel.

Heat rate means, for a unit, the unit's maximum design heat input (in Btu/hr), divided by the product of 1,000,000 Btu/mmBtu and the unit's maximum hourly load.

Indian country means ''Indian country'' as defined in 18 U.S.C. 1151.

Life-of-the-unit, firm power contractual arrangement means a unit participation power sales agreement under which a utility or industrial customer reserves, or is entitled to receive, a specified amount or percentage of nameplate capacity and associated energy generated by any specified unit and pays its proportional amount of such unit's total costs, pursuant to a contract:

(1) For the life of the unit;

(2) For a cumulative term of no less than 30 years, including contracts that permit an election for early termination; or

(3) For a period no less than 25 years or 70 percent of the economic useful life of the unit determined as of the time the unit is built, with option rights to purchase or release some portion of the nameplate capacity and associated energy generated by the unit at the end of the period.

Maximum design heat input means, for a unit, the maximum amount of fuel per hour (in Btu/hr) that the unit is capable of combusting on a steady state basis as of the initial installation of the unit as specified by the manufacturer of the unit.

Monitoring system means any monitoring system that meets the requirements of this subpart, including a continuous emission monitoring system, an alternative monitoring system, or an excepted monitoring system under part 75 of this chapter.

Nameplate capacity means, starting from the initial installation of a generator, the maximum electrical generating output (in MWe, rounded to the nearest tenth) that the generator is capable of producing on a steady state basis and during continuous operation (when not restricted by seasonal or other deratings) as of such installation as specified by the manufacturer of the generator or, starting from the completion of any subsequent physical change in the generator resulting in an increase in the maximum electrical generating output that the generator is capable of producing on a steady state basis and during continuous operation (when not restricted by seasonal or other deratings), such increased maximum amount (in MWe, rounded to the nearest tenth) as of such completion as specified by the person conducting the physical change.

Natural gas means ''natural gas'' as defined in § 72.2 of this chapter.

Newly affected TR NO_X Ozone Season unit means a unit that was not a TR NO_X Ozone Season unit when it began operating but that thereafter becomes a TR NO_X Ozone Season unit.

Operate or *operation* means, with regard to a unit, to combust fuel.

Operator means, for a TR NO_X Ozone Season source or a TR NO_X Ozone Season unit at a source respectively, any person who operates, controls, or supervises a TR NO_X Ozone Season unit at the source or the TR NO_X Ozone Season unit and shall include, but not be limited to, any holding company, utility system, or plant manager of such source or unit.

Owner means, for a TR NO_X Ozone Season source or a TR NO_X Ozone Season unit at a source respectively, any of the following persons:

(1) Any holder of any portion of the legal or equitable title in a TR NO_X Ozone Season unit at the source or the TR NO_X Ozone Season unit;

(2) Any holder of a leasehold interest in a TR NO_X Ozone Season unit at the source or the TR NO_X Ozone Season unit, provided that, unless expressly provided for in a leasehold agreement, ''owner'' shall not include a passive lessor, or a person who has an equitable interest through such lessor, whose rental payments are not based (either directly or indirectly) on the revenues or income from such TR NO_X Ozone Season unit; and

(3) Any purchaser of power from a TR NO_X Ozone Season unit at the source or the TR NO_X Ozone Season unit under a life-of-the-unit, firm power contractual arrangement.

Permanently retired means, with regard to a unit, a unit that is

unavailable for service and that the unit's owners and operators do not expect to return to service in the future.

Permitting authority means ''permitting authority'' as defined in §§ 70.2 and 71.2 of this chapter.

Potential electrical output capacity means, for a unit, 33 percent of the unit's maximum design heat input, divided by 3,413 Btu/kWh, divided by 1,000 kWh/MWh, and multiplied by 8,760 hr/yr.

Receive or *receipt of* means, when referring to the Administrator, to come into possession of a document, information, or correspondence (whether sent in hard copy or by authorized electronic transmission), as indicated in an official log, or by a notation made on the document, information, or correspondence, by the Administrator in the regular course of business.

Recordation, record, or *recorded* means, with regard to TR NO_X Ozone Season allowances, the moving of TR NO_X Ozone Season allowances by the Administrator into, out of, or between Allowance Management System accounts, for purposes of allocation, auction, transfer, or deduction.

Reference method means any direct test method of sampling and analyzing for an air pollutant as specified in § 75.22 of this chapter.

Replacement, replace, or *replaced* means, with regard to a unit, the demolishing of a unit, or the permanent retirement and permanent disabling of a unit, and the construction of another unit (the replacement unit) to be used instead of the demolished or retired unit (the replaced unit).

Sequential use of energy means:

(1) The use of reject heat from electricity production in a useful thermal energy application or process; or

(2) The use of reject heat from useful thermal energy application or process in electricity production.

Serial number means, for a TR NO_X Ozone Season allowance, the unique identification number assigned to each TR NO_X Ozone Season allowance by the Administrator.

Solid waste incineration unit means a stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine that is a ''solid waste incineration unit'' as defined in section 129(g)(1) of the Clean Air Act.

Source means all buildings, structures, or installations located in one or more contiguous or adjacent properties under common control of the same person or persons. This definition does not change or otherwise affect the definition of ''major source'', ''stationary source'', or ''source'' as set forth and implemented in a title V operating permit program or any other program under the Clean Air Act.

State means one of the States that is subject to the TR NO_X Ozone Season Trading Program pursuant to § 52.38(b) of this chapter.

Submit or *serve* means to send or transmit a document, information, or correspondence to the person specified in accordance with the applicable regulation:

(1) In person;

(2) By United States Postal Service; or

(3) By other means of dispatch or transmission and delivery;

(4) Provided that compliance with any ''submission'' or ''service'' deadline shall be determined by the date of dispatch, transmission, or mailing and not the date of receipt.

Topping-cycle unit means a unit in which the energy input to the unit is first used to produce useful power, including electricity, where at least some of the reject heat from the electricity production is then used to provide useful thermal energy.

Total energy input means, for a unit, total energy of all forms supplied to the unit, excluding energy produced by the unit. Each form of energy supplied shall be measured by the lower heating value of that form of energy calculated as follows:

$$LHV = HHV - 10.55 (W + 9H)$$

Where:

LHV = lower heating value of the form of energy in Btu/lb,

HHV = higher heating value of the form of energy in Btu/lb,

W = weight % of moisture in the form of energy, and

H = weight % of hydrogen in the form of energy.

Total energy output means, for a unit, the sum of useful power and useful thermal energy produced by the unit.

TR NO_X Annual Trading Program means a multi-state NO_X air pollution control and emission reduction program established in accordance with subpart AAAAA of this part and § 52.38(a) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.38(a)(3) or (4) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.38(a)(5) of this chapter), as a means of mitigating interstate transport of fine particulates and NO_X.

TR NO_X Ozone Season allowance means a limited authorization issued and allocated or auctioned by the Administrator under this subpart, or by a State or permitting authority under a SIP revision approved by the Administrator under § 52.38(b)(3), (4), or (5) of this chapter, to emit one ton of NO_X during a control period of the specified calendar year for which the authorization is allocated or auctioned or of any calendar year thereafter under the TR NO_X Ozone Season Trading Program.

TR NO_X Ozone Season allowance deduction or deduct TR NO_X Ozone Season allowances means the permanent withdrawal of TR NO_X Ozone Season allowances by the Administrator from a compliance account (*e.g.*, in order to account for compliance with the TR NO_X Ozone Season emissions limitation) or from an assurance account (*e.g.*, in order to account for compliance with the assurance provisions under §§ 97.506 and 97.525).

TR NO_X Ozone Season allowances held or hold TR NO_X Ozone Season allowances means the TR NO_X Ozone Season allowances treated as included in an Allowance Management System account as of a specified point in time because at that time they:

(1) Have been recorded by the Administrator in the account or transferred into the account by a correctly submitted, but not yet recorded, TR NO_X Ozone Season allowance transfer in accordance with this subpart; and

(2) Have not been transferred out of the account by a correctly submitted, but not yet recorded, TR NO_X Ozone Season allowance transfer in accordance with this subpart.

TR NO_X Ozone Season emissions limitation means, for a TR NO_X Ozone Season source, the tonnage of NO_X emissions authorized in a control period in a given year by the TR NO_X Ozone Season allowances available for deduction for the source under § 97.524(a) for such control period.

TR NO_X Ozone Season source means a source that includes one or more TR NO_X Ozone Season units.

TR NO_X Ozone Season Trading Program means a multi-state NO_X air pollution control and emission reduction program established in accordance with this subpart and § 52.38(b) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.38(b)(3) or (4) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.38(b)(5) of this chapter), as a means of mitigating interstate transport of ozone and NO_X.

TR NO_X Ozone Season unit means a unit that is subject to the TR NO_X Ozone Season Trading Program.

TR SO_2 Group 1 Trading Program means a multi-state SO_2 air pollution control and emission reduction program established in accordance with subpart CCCCC of this part and 52.39(a), (b), (d) through (f), (j), and (k) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.39(d) or (e) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.39(f) of this chapter), as a means of mitigating interstate transport of fine particulates and SO_2.

TR SO_2 Group 2 Trading Program means a multi-state SO_2 air pollution control and emission reduction program established in accordance with subpart DDDDD of this part and 52.39(a), (c), and (g) through (k) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.39(g) or (h) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.39(i) of this chapter), as a means of mitigating interstate transport of fine particulates and SO_2.

Unit means a stationary, fossil-fuel-fired boiler, stationary, fossil-fuel-fired combustion turbine, or other stationary, fossil-fuel-fired combustion device. A unit that undergoes a physical change or is moved to a different location or source shall continue to be treated as the same unit. A unit (the replaced unit) that is replaced by another unit (the replacement unit) at the same or a different source shall continue to be treated as the same unit, and the replacement unit shall be treated as a separate unit.

Unit operating day means, with regard to a unit, a calendar day in which the unit combusts any fuel.

Unit operating hour or *hour of unit operation* means, with regard to a unit, an hour in which the unit combusts any fuel.

Useful power means, with regard to a unit, electricity or mechanical energy that the unit makes available for use, excluding any such energy used in the power production process (which process includes, but is not limited to, any on-site processing or treatment of fuel combusted at the unit and any on-site emission controls).

Useful thermal energy means thermal energy that is:

(1) Made available to an industrial or commercial process (not a power production process), excluding any heat contained in condensate return or makeup water;

(2) Used in a heating application (*e.g.*, space heating or domestic hot water heating); or

(3) Used in a space cooling application (*i.e.*, in an absorption chiller).

Utility power distribution system means the portion of an electricity grid owned or operated by a utility and dedicated to delivering electricity to customers.

§ 97.503 Measurements, abbreviations, and acronyms.

Measurements, abbreviations, and acronyms used in this subpart are defined as follows:

Btu—British thermal unit
CO_2—carbon dioxide
H_2O—water
hr—hour
kW—kilowatt electrical
kWh—kilowatt hour
lb—pound
mmBtu—million Btu
MWe—megawatt electrical
MWh—megawatt hour
NO_X—nitrogen oxides
O_2—oxygen
ppm—parts per million
scfh—standard cubic feet per hour
SO_2—sulfur dioxide
yr—year

§ 97.504 Applicability.

(a) Except as provided in paragraph (b) of this section:

(1) The following units in a State (and Indian country within the borders of such State) shall be TR NO_X Ozone Season units, and any source that includes one or more such units shall be a TR NO_X Ozone Season source, subject to the requirements of this subpart: any stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine serving at any time, on or after January 1, 2005, a generator with nameplate capacity of more than 25 MWe producing electricity for sale.

(2) If a stationary boiler or stationary combustion turbine that, under paragraph (a)(1) of this section, is not a TR NO_X Ozone Season unit begins to combust fossil fuel or to serve a generator with nameplate capacity of more than 25 MWe producing electricity for sale, the unit shall become a TR NO_X Ozone Season unit as provided in paragraph (a)(1) of this section on the first date on which it both combusts fossil fuel and serves such generator.

(b) Any unit in a State (and Indian country within the borders of such State) that otherwise is a TR NO_X Ozone Season unit under paragraph (a) of this section and that meets the requirements set forth in paragraph (b)(1)(i) or (2)(i) of this section shall not be a TR NO_X Ozone Season unit:

(1)(i) Any unit:

(A) Qualifying as a cogeneration unit throughout the later of 2005 or the 12-month period starting on the date the unit first produces electricity and continuing to qualify as a cogeneration unit throughout each calendar year ending after the later of 2005 or such 12-month period; and

(B) Not supplying in 2005 or any calendar year thereafter more than one-third of the unit's potential electric output capacity or 219,000 MWh, whichever is greater, to any utility power distribution system for sale.

(ii) If, after qualifying under paragraph (b)(1)(i) of this section as not being a TR NO_X Ozone Season unit, a unit subsequently no longer meets all the requirements of paragraph (b)(1)(i) of this section, the unit shall become a TR NO_X Ozone Season unit starting on the earlier of January 1 after the first calendar year during which the unit first no longer qualifies as a cogeneration unit or January 1 after the first calendar year during which the unit no longer meets the requirements of paragraph (b)(1)(i)(B) of this section. The unit shall thereafter continue to be a TR NO_X Ozone Season unit.

(2)(i) Any unit:

(A) Qualifying as a solid waste incineration unit throughout the later of 2005 or the 12-month period starting on the date the unit first produces electricity and continuing to qualify as a solid waste incineration unit throughout each calendar year ending after the later of 2005 or such 12-month period; and

(B) With an average annual fuel consumption of fossil fuel for the first 3 consecutive calendar years of operation starting no earlier than 2005 of less than 20 percent (on a Btu basis) and an average annual fuel consumption of fossil fuel for any 3 consecutive calendar years thereafter of less than 20 percent (on a Btu basis).

(ii) If, after qualifying under paragraph (b)(2)(i) of this section as not being a TR NO_X Ozone Season unit, a unit subsequently no longer meets all the requirements of paragraph (b)(1)(i) of this section, the unit shall become a TR NO_X Ozone Season unit starting on the earlier of January 1 after the first calendar year during which the unit first no longer qualifies as a solid waste incineration unit or January 1 after the first 3 consecutive calendar years after 2005 for which the unit has an average annual fuel consumption of fossil fuel of 20 percent or more. The unit shall thereafter continue to be a TR NOX Ozone Season unit.

(c) A certifying official of an owner or operator of any unit or other equipment

may submit a petition (including any supporting documents) to the Administrator at any time for a determination concerning the applicability, under paragraphs (a) and (b) of this section or a SIP revision approved under § 52.38(b)(4) or (5) of this chapter, of the TR NO_X Ozone Season Trading Program to the unit or other equipment.

(1) Petition content. The petition shall be in writing and include the identification of the unit or other equipment and the relevant facts about the unit or other equipment. The petition and any other documents provided to the Administrator in connection with the petition shall include the following certification statement, signed by the certifying official: ''I am authorized to make this submission on behalf of the owners and operators of the unit or other equipment for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(2) Response. The Administrator will issue a written response to the petition and may request supplemental information determined by the Administrator to be relevant to such petition. The Administrator's determination concerning the applicability, under paragraphs (a) and (b) of this section, of the TR NO_X Ozone Season Trading Program to the unit or other equipment shall be binding on any State or permitting authority unless the Administrator determines that the petition or other documents or information provided in connection with the petition contained significant, relevant errors or omissions.

§ 97.505 Retired unit exemption.

(a)(1) Any TR NO_X Ozone Season unit that is permanently retired shall be exempt from § 97.506(b) and (c)(1), § 97.524, and §§ 97.530 through 97.535.

(2) The exemption under paragraph (a)(1) of this section shall become effective the day on which the TR NO_X Ozone Season unit is permanently retired. Within 30 days of the unit's permanent retirement, the designated representative shall submit a statement to the Administrator. The statement shall state, in a format prescribed by the Administrator, that the unit was permanently retired on a specified date and will comply with the requirements of paragraph (b) of this section.

(b) Special provisions. (1) A unit exempt under paragraph (a) of this section shall not emit any NO_X, starting on the date that the exemption takes effect.

(2) For a period of 5 years from the date the records are created, the owners and operators of a unit exempt under paragraph (a) of this section shall retain, at the source that includes the unit, records demonstrating that the unit is permanently retired. The 5-year period for keeping records may be extended for cause, at any time before the end of the period, in writing by the Administrator. The owners and operators bear the burden of proof that the unit is permanently retired.

(3) The owners and operators and, to the extent applicable, the designated representative of a unit exempt under paragraph (a) of this section shall comply with the requirements of the TR NO_X Ozone Season Trading Program concerning all periods for which the exemption is not in effect, even if such requirements arise, or must be complied with, after the exemption takes effect.

(4) A unit exempt under paragraph (a) of this section shall lose its exemption on the first date on which the unit resumes operation. Such unit shall be treated, for purposes of applying allocation, monitoring, reporting, and recordkeeping requirements under this subpart, as a unit that commences commercial operation on the first date on which the unit resumes operation.

§ 97.506 Standard requirements.

(a) *Designated representative requirements.* The owners and operators shall comply with the requirement to have a designated representative, and may have an alternate designated representative, in accordance with §§ 97.513 through 97.518.

(b) *Emissions monitoring, reporting, and recordkeeping requirements.* (1) The owners and operators, and the designated representative, of each TR NO_X Ozone Season source and each TR NO_X Ozone Season unit at the source shall comply with the monitoring, reporting, and recordkeeping requirements of §§ 97.530 through 97.535.

(2) The emissions data determined in accordance with §§ 97.530 through 97.535 shall be used to calculate allocations of TR NO_X Ozone Season allowances under §§ 97.511(a)(2) and (b) and 97.512 and to determine compliance with the TR NO_X Ozone Season emissions limitation and assurance provisions under paragraph (c) of this section, provided that, for each monitoring location from which mass emissions are reported, the mass emissions amount used in calculating such allocations and determining such compliance shall be the mass emissions amount for the monitoring location determined in accordance with §§ 97.530 through 97.535 and rounded to the nearest ton, with any fraction of a ton less than 0.50 being deemed to be zero.

(c) NO_X emissions requirements. (1) TR NO_X Ozone Season emissions limitation. (i) As of the allowance transfer deadline for a control period in a given year, the owners and operators of each TR NO_X Ozone Season source and each TR NO_X Ozone Season unit at the source shall hold, in the source's compliance account, TR NO_X Ozone Season allowances available for deduction for such control period under § 97.524(a) in an amount not less than the tons of total NO_X emissions for such control period from all TR NO_X Ozone Season units at the source.

(ii) If total NO_X emissions during a control period in a given year from the TR NO_X Ozone Season units at a TR NO_X Ozone Season source are in excess of the TR NO_X Ozone Season emissions limitation set forth in paragraph (c)(1)(i) of this section, then:

(A) The owners and operators of the source and each TR NO_X Ozone Season unit at the source shall hold the TR NO_X Ozone Season allowances required for deduction under § 97.524(d); and

(B) The owners and operators of the source and each TR NO_X Ozone Season unit at the source shall pay any fine, penalty, or assessment or comply with any other remedy imposed, for the same violations, under the Clean Air Act, and each ton of such excess emissions and each day of such control period shall constitute a separate violation of this subpart and the Clean Air Act.

(2) TR NO_X Ozone Season assurance provisions. (i) If total NO_X emissions during a control period in a given year from all TR NO_X Ozone Season units at TR NO_X Ozone Season sources in a State (and Indian country within the borders of such State) exceed the State assurance level, then the owners and operators of such sources and units in each group of one or more sources and units having a common designated representative for such control period, where the common designated representative's share of such NO_X emissions during such control period exceeds the common designated

representative's assurance level for the State and such control period, shall hold (in the assurance account established for the owners and operators of such group) TR NO_X Ozone Season allowances available for deduction for such control period under § 97.525(a) in an amount equal to two times the product (rounded to the nearest whole number), as determined by the Administrator in accordance with § 97.525(b), of multiplying—

(A) The quotient of the amount by which the common designated representative's share of such NO_X emissions exceeds the common designated representative's assurance level divided by the sum of the amounts, determined for all common designated representatives for such sources and units in the State (and Indian country within the borders of such State) for such control period, by which each common designated representative's share of such NO_X emissions exceeds the respective common designated representative's assurance level; and

(B) The amount by which total NO_X emissions from all TR NO_X Ozone Season units at TR NO_X Ozone Season sources in the State (and Indian country within the borders of such State) for such control period exceed the State assurance level.

(ii) The owners and operators shall hold the TR NO_X Ozone Season allowances required under paragraph (c)(2)(i) of this section, as of midnight of November 1 (if it is a business day), or midnight of the first business day thereafter (if November 1 is not a business day), immediately after such control period.

(iii) Total NO_X emissions from all TR NO_X Ozone Season units at TR NO_X Ozone Season sources in a State (and Indian country within the borders of such State) during a control period in a given year exceed the State assurance level if such total NO_X emissions exceed the sum, for such control period, of the State NO_X Ozone Season trading budget under § 97.510(a) and the State's variability limit under § 97.510(b).

(iv) It shall not be a violation of this subpart or of the Clean Air Act if total NO_X emissions from all TR NO_X Ozone Season units at TR NO_X Ozone Season sources in a State (and Indian country within the borders of such State) during a control period exceed the State assurance level or if a common designated representative's share of total NO_X emissions from the TR NO_X Ozone Season units at TR NO_X Ozone Season sources in a State (and Indian country within the borders of such State) during a control period exceeds the common designated representative's assurance level.

(v) To the extent the owners and operators fail to hold TR NO_X Ozone Season allowances for a control period in a given year in accordance with paragraphs (c)(2)(i) through (iii) of this section,

(A) The owners and operators shall pay any fine, penalty, or assessment or comply with any other remedy imposed under the Clean Air Act; and

(B) Each TR NO_X Ozone Season allowance that the owners and operators fail to hold for such control period in accordance with paragraphs (c)(2)(i) through (iii) of this section and each day of such control period shall constitute a separate violation of this subpart and the Clean Air Act.

(3) Compliance periods. A TR NO_X Ozone Season unit shall be subject to the requirements under paragraphs (c)(1) and (c)(2) of this section for the control period starting on the later of May 1, 2012 or the deadline for meeting the unit's monitor certification requirements under § 97.530(b) and for each control period thereafter.

(4) Vintage of allowances held for compliance. (i) A TR NO_X Ozone Season allowance held for compliance with the requirements under paragraph (c)(1)(i) of this section for a control period in a given year must be a TR NO_X Ozone Season allowance that was allocated for such control period or a control period in a prior year.

(ii) A TR NO_X Ozone Season allowance held for compliance with the requirements under paragraphs (c)(1)(ii)(A) and (2)(i) through (iii) of this section for a control period in a given year must be a TR NO_X Ozone Season allowance that was allocated for a control period in a prior year or the control period in the given year or in the immediately following year.

(5) Allowance Management System requirements. Each TR NO_X Ozone Season allowance shall be held in, deducted from, or transferred into, out of, or between Allowance Management System accounts in accordance with this subpart.

(6) Limited authorization. A TR NO_X Ozone Season allowance is a limited authorization to emit one ton of NO_X during the control period in one year. Such authorization is limited in its use and duration as follows:

(i) Such authorization shall only be used in accordance with the TR NO_X Ozone Season Trading Program; and

(ii) Notwithstanding any other provision of this subpart, the Administrator has the authority to terminate or limit the use and duration of such authorization to the extent the Administrator determines is necessary or appropriate to implement any provision of the Clean Air Act.

(7) Property right. A TR NO_X Ozone Season allowance does not constitute a property right.

(d) *Title V permit requirements.* (1) No title V permit revision shall be required for any allocation, holding, deduction, or transfer of TR NO_X Ozone Season allowances in accordance with this subpart.

(2) A description of whether a unit is required to monitor and report NO_X emissions using a continuous emission monitoring system (under subpart H of part 75 of this chapter), an excepted monitoring system (under appendices D and E to part 75 of this chapter), a low mass emissions excepted monitoring methodology (under § 75.19 of this chapter), or an alternative monitoring system (under subpart E of part 75 of this chapter) in accordance with §§ 97.530 through 97.535 may be added to, or changed in, a title V permit using minor permit modification procedures in accordance with §§ 70.7(e)(2) and 71.7(e)(1) of this chapter, provided that the requirements applicable to the described monitoring and reporting (as added or changed, respectively) are already incorporated in such permit. This paragraph explicitly provides that the addition of, or change to, a unit's description as described in the prior sentence is eligible for minor permit modification procedures in accordance with §§ 70.7(e)(2)(i)(B) and 71.7(e)(1)(i)(B) of this chapter.

(e) *Additional recordkeeping and reporting requirements.* (1) Unless otherwise provided, the owners and operators of each TR NO_X Ozone Season source and each TR NO_X Ozone Season unit at the source shall keep on site at the source each of the following documents (in hardcopy or electronic format) for a period of 5 years from the date the document is created. This period may be extended for cause, at any time before the end of 5 years, in writing by the Administrator.

(i) The certificate of representation under § 97.516 for the designated representative for the source and each TR NO_X Ozone Season unit at the source and all documents that demonstrate the truth of the statements in the certificate of representation; provided that the certificate and documents shall be retained on site at the source beyond such 5-year period until such certificate of representation and documents are superseded because of the submission of a new certificate of representation under § 97.516 changing the designated representative.

(ii) All emissions monitoring information, in accordance with this subpart.

(iii) Copies of all reports, compliance certifications, and other submissions and all records made or required under, or to demonstrate compliance with the requirements of, the TR NO_X Ozone Season Trading Program.

(2) The designated representative of a TR NO_X Ozone Season source and each TR NO_X Ozone Season unit at the source shall make all submissions required under the TR NO_X Ozone Season Trading Program, except as provided in § 97.518. This requirement does not change, create an exemption from, or otherwise affect the responsible official submission requirements under a title V operating permit program in parts 70 and 71 of this chapter.

(f) *Liability.* (1) Any provision of the TR NO_X Ozone Season Trading Program that applies to a TR NO_X Ozone Season source or the designated representative of a TR NO_X Ozone Season source shall also apply to the owners and operators of such source and of the TR NO_X Ozone Season units at the source.

(2) Any provision of the TR NO_X Ozone Season Trading Program that applies to a TR NO_X Ozone Season unit or the designated representative of a TR NO_X Ozone Season unit shall also apply to the owners and operators of such unit.

(g) *Effect on other authorities.* No provision of the TR NO_X Ozone Season Trading Program or exemption under § 97.505 shall be construed as exempting or excluding the owners and operators, and the designated representative, of a TR NO_X Ozone Season source or TR NO_X Ozone Season unit from compliance with any other provision of the applicable, approved State implementation plan, a federally enforceable permit, or the Clean Air Act.

§ 97.507 Computation of time.

(a) Unless otherwise stated, any time period scheduled, under the TR NO_X Ozone Season Trading Program, to begin on the occurrence of an act or event shall begin on the day the act or event occurs.

(b) Unless otherwise stated, any time period scheduled, under the TR NO_X Ozone Season Trading Program, to begin before the occurrence of an act or event shall be computed so that the period ends the day before the act or event occurs.

(c) Unless otherwise stated, if the final day of any time period, under the TR NO_X Ozone Season Trading Program, is not a business day, the time period shall be extended to the next business day.

§ 97.508 Administrative appeal procedures.

The administrative appeal procedures for decisions of the Administrator under the TR NO_X Ozone Season Trading Program are set forth in part 78 of this chapter.

§ 97.509 [Reserved]

§ 97.510 State NO_X Ozone Season trading budgets, new unit set-asides, Indian country new unit set-aside, and variability limits.

(a) The State NO_X Ozone Season trading budgets, new unit set-asides, and Indian country new unit set-asides for allocations of TR NO_X Ozone Season allowances for the control periods in 2012 and thereafter are as follows:

State	NO_X Ozone Season trading budget (tons) * for 2012 and 2013	New unit set-aside (tons) for 2012 and 2013	Indian country new unit set-aside (tons) for 2012 and 2013
Alabama	31,746	635	.....
Arkansas	15,037	301	.....
Florida	27,825	529	28
Georgia	27,944	559	.....
Illinois	21,208	1,697	.....
Indiana	46,876	1,406	.....
Kentucky	36,167	1,447	.....
Louisiana	13,432	390	13
Maryland	7,179	144	.....
Mississippi	10,160	193	10
New Jersey	3,382	68	.....
New York	8,331	242	8
North Carolina	22,168	1,308	22
Ohio	40,063	801	.....
Pennsylvania	52,201	1,044	.....
South Carolina	13,909	264	14
Tennessee	14,908	298	.....
Texas	63,043	1,828	63
Virginia	14,452	723	.....
West Virginia	25,283	1,264	.....

State	NO_X Ozone Season trading budget (tons) * for 2014 and thereafter	New unit set-aside (tons) for 2014 and thereafter	Indian country new unit set-aside (tons) for 2014 and thereafter
Alabama	31,499	630	.....
Arkansas	15,037	301	.....
Florida	27,825	529	28
Georgia	18,279	366	.....
Illinois	21,208	1,697	.....
Indiana	46,175	1,385	.....
Kentucky	32,674	1,307	.....
Louisiana	13,432	390	13
Maryland	7,179	144	.....
Mississippi	10,160	193	10
New Jersey	3,382	68	.....

State	NO_X Ozone Season trading budget (tons) * for 2014 and thereafter	New unit set-aside (tons) for 2014 and thereafter	Indian country new unit set-aside (tons) for 2014 and thereafter
New York	8,331	242	8
North Carolina	18,455	1,089	18
Ohio	37,792	756	.....
Pennsylvania	51,912	1,038	.....
South Carolina	13,909	264	14
Tennessee	8,016	160	.....
Texas	63,043	1,828	63
Virginia	14,452	723	.....
West Virginia	23,291	1,165	.....

* Each trading budget includes the new unit set-aside and, where applicable, the Indian country new unit set-aside and does not include the variability limit.

(b) The States' variability limits for the State NO_X Ozone Season trading budgets for the control periods in 2012 and thereafter are as follows:

State	Variability limits for 2012 and 2013	Variability limits for 2014 and thereafter
Alabama	6,667	6,615
Arkansas	3,158	3,158
Florida	5,843	5,843
Georgia	5,868	3,839
Illinois	4,454	4,454
Indiana	9,844	9,697
Kentucky	7,595	6,862
Louisiana	2,821	2,821
Maryland	1,508	1,508
Mississippi	2,134	2,134
New Jersey	710	710
New York	1,750	1,750
North Carolina	4,655	3,876
Ohio	8,413	7,936
Pennsylvania	10,962	10,902
South Carolina	2,921	2,921
Tennessee	3,131	1,683
Texas	13,239	13,239
Virginia	3,035	3,035
West Virginia	5,309	4,891

§ 97.511 Timing requirements for TR NO_X Ozone Season allowance allocations.

(a) *Existing units.* (1) TR NO_X Ozone Season allowances are allocated, for the control periods in 2012 and each year thereafter, as provided in a notice of data availability issued by the Administrator. Providing an allocation to a unit in such notice does not constitute a determination that the unit is a TR NO_X Ozone Season unit, and not providing an allocation to a unit in such notice does not constitute a determination that the unit is not a TR NO_X Ozone Season unit.

(2) Notwithstanding paragraph (a)(1) of this section, if a unit provided an allocation in the notice of data availability issued under paragraph (a)(1) of this section does not operate, starting after 2011, during the control period in two consecutive years, such unit will not be allocated the TR NO_X Ozone Season allowances provided in such notice for the unit for the control periods in the fifth year after the first such year and in each year after that fifth year. All TR NO_X Ozone Season allowances that would otherwise have been allocated to such unit will be allocated to the new unit set-aside for the State where such unit is located and for the respective years involved. If such unit resumes operation, the Administrator will allocate TR NO_X Ozone Season allowances to the unit in accordance with paragraph (b) of this section.

(b) *New units.*—(1) New unit set-asides. (i) By June 1, 2012 and June 1 of each year thereafter, the Administrator will calculate the TR NO_X Ozone Season allowance allocation to each TR NO_X Ozone Season unit in a State, in accordance with § 97.512(a)(2) through (7) and (12), for the control period in the year of the applicable calculation deadline under this paragraph and will promulgate a notice of data availability of the results of the calculations.

(ii) For each notice of data availability required in paragraph (b)(1)(i) of this section, the Administrator will provide an opportunity for submission of objections to the calculations referenced in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(1)(i) of this section and shall be limited to addressing whether the calculations (including the identification of the TR NO_X Ozone Season units) are in accordance with § 97.512(a)(2) through (7) and (12) and §§ 97.506(b)(2) and 97.530 through 97.535.

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(1)(ii)(A) of this section. By August 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(1)(i) of this section, the Administrator will promulgate a notice

of data availability of any adjustments that the Administrator determines to be necessary with regard to allocations under § 97.512(a)(2) through (7) and (12) and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(1)(ii)(A) of this section.

(iii) If the new unit set-aside for such control period contains any TR NO_X Ozone Season allowances that have not been allocated in the applicable notice of data availability required in paragraph (b)(1)(ii) of this section, the Administrator will promulgate, by September 15 immediately after such notice, a notice of data availability that identifies any TR NO_X Ozone Season units that commenced commercial operation during the period starting May 1 of the year before the year of such control period and ending August 31 of year of such control period.

(iv) For each notice of data availability required in paragraph (b)(1)(iii) of this section, the Administrator will provide an opportunity for submission of objections to the identification of TR NO_X Ozone Season units in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(1)(iii) of this section and shall be limited to addressing whether the identification of TR NO_X Ozone Season units in such notice is in accordance with paragraph (b)(1)(iii) of this section.

(B) The Administrator will adjust the identification of TR NO_X Ozone Season units in the each notice of data availability required in paragraph (b)(1)(iii) of this section to the extent necessary to ensure that it is in accordance with paragraph (b)(1)(iii) of this section and will calculate the TR NO_X Ozone Season allowance allocation to each TR NO_X Ozone Season unit in accordance with § 97.512(a)(9), (10), and (12) and §§ 97.506(b)(2) and 97.530 through 97.535. By November 15 immediately after the promulgation of each notice of data availability required in paragraph (b)(1)(iii) of this section, the Administrator will promulgate a notice of data availability of any adjustments of the identification of TR NO_X Ozone Season units that the Administrator determines to be necessary, the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(1)(iv)(A) of this section, and the results of such calculations.

(v) To the extent any TR NO_X Ozone Season allowances are added to the new unit set-aside after promulgation of each notice of data availability required in paragraph (b)(1)(iv) of this section, the Administrator will promulgate additional notices of data availability, as deemed appropriate, of the allocation of such TR NO_X Ozone Season allowances in accordance with § 97.512(a)(10).

(2) Indian country new unit set-asides. (i) By June 1, 2012 and June 1 of each year thereafter, the Administrator will calculate the TR NO_X Ozone Season allowance allocation to each TR NO_X Ozone Season unit in Indian country within the borders of a State, in accordance with § 97.512(b)(2) through (7) and (12), for the control period in the year of the applicable calculation deadline under this paragraph and will promulgate a notice of data availability of the results of the calculations.

(ii) For each notice of data availability required in paragraph (b)(2)(i) of this section, the Administrator will provide an opportunity for submission of objections to the calculations referenced in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(2)(i) of this section and shall be limited to addressing whether the calculations (including the identification of the TR NO_X Ozone Season units) are in accordance with § 97.512(b)(2) through (7) and (12) and §§ 97.506(b)(2) and 97.530 through 97.535.

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(2)(ii)(A) of this section. By August 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(i) of this section, the Administrator will promulgate a notice of data availability of any adjustments that the Administrator determines to be necessary with regard to allocations under § 97.512(b)(2) through (7) and (12) and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(ii)(A) of this section.

(iii) If the Indian country new unit set-aside for such control period contains any TR NO_X Ozone Season allowances that have not been allocated in the applicable notice of data availability required in paragraph (b)(2)(ii) of this section, the Administrator will promulgate, by September 15 immediately after such notice, a notice of data availability that identifies any TR NO_X Ozone Season units that commenced commercial operation during the period starting May 1 of the year before the year of such control period and ending August 31 of year of such control period.

(iv) For each notice of data availability required in paragraph (b)(2)(iii) of this section, the Administrator will provide an opportunity for submission of objections to the identification of TR NO_X Ozone Season units in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(2)(iii) of this section and shall be limited to addressing whether the identification of TR NO_X Ozone Season units in such notice is in accordance with paragraph (b)(2)(iii) of this section.

(B) The Administrator will adjust the identification of TR NO_X Ozone Season units in the each notice of data availability required in paragraph (b)(2)(iii) of this section to the extent necessary to ensure that it is in accordance with paragraph (b)(2)(iii) of this section and will calculate the TR NO_X Ozone Season allowance allocation to each TR NO_X Ozone Season unit in accordance with § 97.512(b)(9), (10), and (12) and §§ 97.506(b)(2) and 97.530 through 97.535. By November 15 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii) of this section, the Administrator will promulgate a notice of data availability of any adjustments of the identification of TR NO_X Ozone Season units that the Administrator determines to be necessary, the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(iv)(A) of this section, and the results of such calculations. (v) To the extent any TR NO_X Ozone Season allowances are added to the Indian country new unit set-aside after promulgation of each notice of data availability required in paragraph (b)(2)(iv) of this section, the Administrator will promulgate additional notices of data availability, as deemed appropriate, of the allocation of such TR NO_X Ozone Season allowances in accordance with § 97.512(b)(10).

(c) *Units incorrectly allocated TR NO_X Ozone Season allowances.* (1) For each control period in 2012 and thereafter, if the Administrator determines that TR NO_X Ozone Season allowances were allocated under paragraph (a) of this section, or under a provision of a SIP revision approved under § 52.38(b)(3), (4), or (5) of this chapter, where such control period and the recipient are covered by the provisions of paragraph (c)(1)(i) of this section or were allocated under § 97.512(a)(2) through (7), (9), and (12) and (b)(2) through (7), (9), and (12), or under a provision of a SIP revision approved under § 52.38(b)(4) or (5) of this chapter, where such control period and the recipient are covered by the

provisions of paragraph (c)(1)(ii) of this section, then the Administrator will notify the designated representative of the recipient and will act in accordance with the procedures set forth in paragraphs (c)(2) through (5) of this section:

(i)(A) The recipient is not actually a TR NO_X Ozone Season unit under § 97.504 as of May 1, 2012 and is allocated TR NO_X Ozone Season allowances for such control period or, in the case of an allocation under a provision of a SIP revision approved under § 52.38(b)(3), (4), or (5) of this chapter, the recipient is not actually a TR NO_X Ozone Season unit as of May 1, 2012 and is allocated TR NO_X Ozone Season allowances for such control period that the SIP revision provides should be allocated only to recipients that are TR NO_X Ozone Season units as of May 1, 2012; or

(B) The recipient is not located as of May 1 of the control period in the State from whose NO_X Ozone Season trading budget the TR NO_X Ozone Season allowances allocated under paragraph (a) of this section, or under a provision of a SIP revision approved under § 52.38(b)(3), (4), or (5) of this chapter, were allocated for such control period.

(ii) The recipient is not actually a TR NO_X Ozone Season unit under § 97.504 as of May 1 of such control period and is allocated TR NO_X Ozone Season allowances for such control period or, in the case of an allocation under a provision of a SIP revision approved under § 52.38(b)(3), (4), or (5) of this chapter, the recipient is not actually a TR NO_X Ozone Season unit as of January 1 of such control period and is allocated TR NO_X Ozone Season allowances for such control period that the SIP revision provides should be allocated only to recipients that are TR NO_X Ozone Season units as of May 1 of such control period.

(2) Except as provided in paragraph (c)(3) or (4) of this section, the Administrator will not record such TR NO_X Ozone Season allowances under § 97.521.

(3) If the Administrator already recorded such TR NO_X Ozone Season allowances under § 97.521 and if the Administrator makes the determination under paragraph (c)(1) of this section before making deductions for the source that includes such recipient under § 97.524(b) for such control period, then the Administrator will deduct from the account in which such TR NO_X Ozone Season allowances were recorded an amount of TR NO_X Ozone Season allowances allocated for the same or a prior control period equal to the amount of such already recorded TR NO_X Ozone Season allowances. The authorized account representative shall ensure that there are sufficient TR NO_X Ozone Season allowances in such account for completion of the deduction.

(4) If the Administrator already recorded such TR NO_X Ozone Season allowances under § 97.521 and if the Administrator makes the determination under paragraph (c)(1) of this section after making deductions for the source that includes such recipient under § 97.524(b) for such control period, then the Administrator will not make any deduction to take account of such already recorded TR NO_X Ozone Season allowances.

(5)(i) With regard to the TR NO_X Ozone Season allowances that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(i) of this section, the Administrator will:

(A) Transfer such TR NO_X Ozone Season allowances to the new unit set-aside for such control period for the State from whose NO_X Ozone Season trading budget the TR NO_X Ozone Season allowances were allocated; or

(B) If the State has a SIP revision approved under § 52.38(b)(4) or (5) covering such control period, include such TR NO_X Annual allowances in the portion of the State NO_X Ozone Season trading budget that may be allocated for such control period in accordance with such SIP revision.

(ii) With regard to the TR NO_X Ozone Season allowances that were not allocated from the Indian country new unit set-aside for such control period and that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(ii) of this paragraph, the Administrator will:

(A) Transfer such TR NO_X Ozone Season allowances to the new unit set-aside for such control period; or

(B) If the State has a SIP revision approved under § 52.38(b)(4) or (5) covering such control period, include such TR NO_X Ozone Season allowances in the portion of the State NO_X Ozone Season trading budget that may be allocated for such control period in accordance with such SIP revision.

(iii) With regard to the TR NO_X Ozone Season allowances that were allocated from the Indian country new unit set-aside for such control period and that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(ii) of this paragraph, the Administrator will transfer such TR NO_X Ozone Season allowances to the Indian country new unit set-aside for such control period.

§ 97.512 TR NO_X Ozone Season allowance allocations to new units.

(a) For each control period in 2012 and thereafter and for the TR NO_X Ozone Season units in each State, the Administrator will allocate TR NO_X Ozone Season allowances to the TR NO_X Ozone Season units as follows:

(1) The TR NO_X Ozone Season allowances will be allocated to the following TR NO_X Ozone Season units, except as provided in paragraph (a)(10) of this section:

(i) TR NO_X Ozone Season units that are not allocated an amount of TR NO_X Ozone Season allowances in the notice of data availability issued under § 97.511(a)(1);

(ii) TR NO_X Ozone Season units whose allocation of an amount of TR NO_X Ozone Season allowances for such control period in the notice of data availability issued under § 97.511(a)(1) is covered by § 97.511(c)(2) or (3);

(iii) TR NO_X Ozone Season units that are allocated an amount of TR NO_X Ozone Season allowances for such control period in the notice of data availability issued under § 97.511(a)(1), which allocation is terminated for such control period pursuant to § 97.511(a)(2), and that operate during the control period immediately preceding such control period; or

(iv) For purposes of paragraph (a)(9) of this section, TR NO_X Ozone Season units under § 97.511(c)(1)(ii) whose allocation of an amount of TR NO_X Ozone Season allowances for such control period in the notice of data availability issued under § 97.511(b)(1)(ii)(B) is covered by § 97.511(c)(2) or (3).

(2) The Administrator will establish a separate new unit set-aside for the State for each such control period. Each such new unit set-aside will be allocated TR NO_X Ozone Season allowances in an amount equal to the applicable amount of tons of NO_X emissions as set forth in § 97.510(a) and will be allocated additional TR NO_X Ozone Season allowances (if any) in accordance with §§ 97.511(a)(2) and (c)(5) and paragraph (b)(10) of this section.

(3) The Administrator will determine, for each TR NO_X Ozone Season unit described in paragraph (a)(1) of this section, an allocation of TR NO_X Ozone Season allowances for the later of the following control periods and for each subsequent control period:

(i) The control period in 2012;

(ii) The first control period after the control period in which the TR NO_X

Ozone Season unit commences commercial operation;

(iii) For a unit described in paragraph (a)(1)(ii) of this section, the first control period in which the TR NO_X Ozone Season unit operates in the State after operating in another jurisdiction and for which the unit is not already allocated one or more TR NO_X Ozone Season allowances; and

(iv) For a unit described in paragraph (a)(1)(iii) of this section, the first control period after the control period in which the unit resumes operation.

(4)(i) The allocation to each TR NO_X Ozone Season unit described in paragraph (a)(1)(i) through (iii) of this section and for each control period described in paragraph (a)(3) of this section will be an amount equal to the unit's total tons of NO_X emissions during the immediately preceding control period.

(ii) The Administrator will adjust the allocation amount in paragraph (a)(4)(i) in accordance with paragraphs (a)(5) through (7) and (12) of this section.

(5) The Administrator will calculate the sum of the TR NO_X Ozone Season allowances determined for all such TR NO_X Ozone Season units under paragraph (a)(4)(i) of this section in the State for such control period.

(6) If the amount of TR NO_X Ozone Season allowances in the new unit set-aside for the State for such control period is greater than or equal to the sum under paragraph (a)(5) of this section, then the Administrator will allocate the amount of TR NO_X Ozone Season allowances determined for each such TR NO_X Ozone Season unit under paragraph (a)(4)(i) of this section.

(7) If the amount of TR NO_X Ozone Season allowances in the new unit set-aside for the State for such control period is less than the sum under paragraph (a)(5) of this section, then the Administrator will allocate to each such TR NO_X Ozone Season unit the amount of the TR NO_X Ozone Season allowances determined under paragraph (a)(4)(i) of this section for the unit, multiplied by the amount of TR NO_X Ozone Season allowances in the new unit set-aside for such control period, divided by the sum under paragraph (a)(5) of this section, and rounded to the nearest allowance.

(8) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.511(b)(1)(i) and (ii), of the amount of TR NO_X Ozone Season allowances allocated under paragraphs (a)(2) through (7) and (12) of this section for such control period to each TR NO_X Ozone Season unit eligible for such allocation.

(9) If, after completion of the procedures under paragraphs (a)(5) through (8) of this section for such control period, any unallocated TR NO_X Ozone Season allowances remain in the new unit set-aside for the State for such control period, the Administrator will allocate such TR NO_X Ozone Season allowances as follows—

(i) The Administrator will determine, for each unit described in paragraph (a)(1) of this section that commenced commercial operation during the period starting May 1 of the year before the year of such control period and ending August 31 of year of such control period, the positive difference (if any) between the unit's emissions during such control period and the amount of TR NO_X Ozone Season allowances referenced in the notice of data availability required under § 97.511(b)(1)(ii) for the unit for such control period;

(ii) The Administrator will determine the sum of the positive differences determined under paragraph (a)(9)(i) of this section;

(iii) If the amount of unallocated TR NO_X Ozone Season allowances remaining in the new unit set-aside for the State for such control period is greater than or equal to the sum determined under paragraph (a)(9)(ii) of this section, then the Administrator will allocate the amount of TR NO_X Ozone Season allowances determined for each such TR NO_X Ozone Season unit under paragraph (a)(9)(i) of this section; and

(iv) If the amount of unallocated TR NO_X Ozone Season allowances remaining in the new unit set-aside for the State for such control period is less than the sum under paragraph (a)(9)(ii) of this section, then the Administrator will allocate to each such TR NO_X Ozone Season unit the amount of the TR NO_X Ozone Season allowances determined under paragraph (a)(9)(i) of this section for the unit, multiplied by the amount of unallocated TR NO_X Ozone Season allowances remaining in the new unit set-aside for such control period, divided by the sum under paragraph (a)(9)(ii) of this section, and rounded to the nearest allowance.

(10) If, after completion of the procedures under paragraphs (a)(9) and (12) of this section for such control period, any unallocated TR NO_X Ozone Season allowances remain in the new unit set-aside for the State for such control period, the Administrator will allocate to each TR NO_X Ozone Season unit that is in the State, is allocated an amount of TR NO_X Ozone Season allowances in the notice of data availability issued under § 97.511(a)(1), and continues to be allocated TR NO_X Ozone Season allowances for such control period in accordance with § 97.511(a)(2), an amount of TR NO_X Ozone Season allowances equal to the following: the total amount of such remaining unallocated TR NO_X Ozone Season allowances in such new unit set-aside, multiplied by the unit's allocation under § 97.511(a) for such control period, divided by the remainder of the amount of tons in the applicable State NO_X Ozone Season trading budget minus the sum of the amounts of tons in such new unit set-aside and the Indian country new unit set-aside for the State for such control period, and rounded to the nearest allowance.

(11) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.511(b)(1)(iii), (iv), and (v), of the amount of TR NO_X Ozone Season allowances allocated under paragraphs (a)(9), (10), and (12) of this section for such control period to each TR NO_X Ozone Season unit eligible for such allocation.

(12)(i) Notwithstanding the requirements of paragraphs (a)(2) through (11) of this section, if the calculations of allocations of a new unit set-aside for a control period in a given year under paragraph (a)(7) of this section, paragraphs (a)(6) and (9)(iv) of this section, or paragraphs (a)(6), (9)(iii), and (10) of this section would otherwise result in total allocations of such new unit set-aside exceeding the total amount of such new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, as follows. The Administrator will list the TR NO_X Ozone Season units in descending order based on the amount of such units' allocations under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will reduce each unit's allocation under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, by one TR NO_X Ozone Season allowance (but not below zero) in the order in which the units are listed and will repeat this reduction process as necessary, until the total allocations of such new unit set-aside equal the total amount of such new unit set-aside.

(ii) Notwithstanding the requirements of paragraphs (a)(10) and (11) of this section, if the calculations of allocations of a new unit set-aside for a control period in a given year under paragraphs (a)(6), (9)(iii), and (10) of this section would otherwise result in a total

allocations of such new unit set-aside less than the total amount of such new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (a)(10) of this section, as follows. The Administrator will list the TR NO_X Ozone Season units in descending order based on the amount of such units' allocations under paragraph (a)(10) of this section and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will increase each unit's allocation under paragraph (a)(10) of this section by one TR NO_X Ozone Season allowance in the order in which the units are listed and will repeat this increase process as necessary, until the total allocations of such new unit set-aside equal the total amount of such new unit set-aside.

(b) For each control period in 2012 and thereafter and for the TR NO_X Ozone Season units located in Indian country within the borders of each State, the Administrator will allocate TR NO_X Ozone Season allowances to the TR NO_X Ozone Season units as follows:

(1) The TR NO_X Ozone Season allowances will be allocated to the following TR NO_X Ozone Season units, except as provided in paragraph (b)(10) of this section:

(i) TR NO_X Ozone Season units that are not allocated an amount of TR NO_X Ozone Season allowances in the notice of data availability issued under § 97.511(a)(1); or

(ii) For purposes of paragraph (b)(9) of this section, TR NO_X Ozone Season units under § 97.511(c)(1)(ii) whose allocation of an amount of TR NO_X Ozone Season allowances for such control period in the notice of data availability issued under § 97.511(b)(2)(ii)(B) is covered by § 97.511(c)(2) or (3).

(2) The Administrator will establish a separate Indian country new unit set-aside for the State for each such control period. Each such Indian country new unit set-aside will be allocated TR NO_X Ozone Season allowances in an amount equal to the applicable amount of tons of NO_X emissions as set forth in § 97.510(a) and will be allocated additional TR NO_X Ozone Season allowances (if any) in accordance with § 97.511(c)(5).

(3) The Administrator will determine, for each TR NO_X Ozone Season unit described in paragraph (b)(1) of this section, an allocation of TR NO_X Ozone Season allowances for the later of the following control periods and for each subsequent control period:

(i) The control period in 2012; and

(ii) The first control period after the control period in which the TR NO_X Ozone Season unit commences commercial operation.

(4)(i) The allocation to each TR NO_X Ozone Season unit described in paragraph (b)(1)(i) of this section and for each control period described in paragraph (b)(3) of this section will be an amount equal to the unit's total tons of NO_X emissions during the immediately preceding control period.

(ii) The Administrator will adjust the allocation amount in paragraph (b)(4)(i) in accordance with paragraphs (b)(5) through (7) and (12) of this section.

(5) The Administrator will calculate the sum of the TR NO_X Ozone Season allowances determined for all such TR NO_X Ozone Season units under paragraph (b)(4)(i) of this section in Indian country within the borders of the State for such control period.

(6) If the amount of TR NO_X Ozone Season allowances in the Indian country new unit set-aside for the State for such control period is greater than or equal to the sum under paragraph (b)(5) of this section, then the Administrator will allocate the amount of TR NO_X Ozone Season allowances determined for each such TR NO_X Ozone Season unit under paragraph (b)(4)(i) of this section.

(7) If the amount of TR NO_X Ozone Season allowances in the Indian country new unit set-aside for the State for such control period is less than the sum under paragraph (b)(5) of this section, then the Administrator will allocate to each such TR NO_X Ozone Season unit the amount of the TR NO_X Ozone Season allowances determined under paragraph (b)(4)(i) of this section for the unit, multiplied by the amount of TR NO_X Ozone Season allowances in the Indian country new unit set-aside for such control period, divided by the sum under paragraph (b)(5) of this section, and rounded to the nearest allowance.

(8) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.511(b)(2)(i) and (ii), of the amount of TR NO_X Ozone Season allowances allocated under paragraphs (b)(2) through (7) and (12) of this section for such control period to each TR NO_X Ozone Season unit eligible for such allocation.

(9) If, after completion of the procedures under paragraphs (b)(5) through (8) of this section for such control period, any unallocated TR NO_X Ozone Season allowances remain in the Indian country new unit set-aside for the State for such control period, the Administrator will allocate such TR NO_X Ozone Season allowances as follows—

(i) The Administrator will determine, for each unit described in paragraph (b)(1) of this section that commenced commercial operation during the period starting May 1 of the year before the year of such control period and ending August 31 of year of such control period, the positive difference (if any) between the unit's emissions during such control period and the amount of TR NO_X Ozone Season allowances referenced in the notice of data availability required under § 97.511(b)(2)(ii) for the unit for such control period;

(ii) The Administrator will determine the sum of the positive differences determined under paragraph (b)(9)(i) of this section;

(iii) If the amount of unallocated TR NO_X Ozone Season allowances remaining in the Indian country new unit set-aside for the State for such control period is greater than or equal to the sum determined under paragraph (b)(9)(ii) of this section, then the Administrator will allocate the amount of TR NO_X Ozone Season allowances determined for each such TR NO_X Ozone Season unit under paragraph (b)(9)(i) of this section; and

(iv) If the amount of unallocated TR NO_X Ozone Season allowances remaining in the Indian country new unit set-aside for the State for such control period is less than the sum under paragraph (b)(9)(ii) of this section, then the Administrator will allocate to each such TR NO_X Ozone Season unit the amount of the TR NO_X Ozone Season allowances determined under paragraph (b)(9)(i) of this section for the unit, multiplied by the amount of unallocated TR NO_X Ozone Season allowances remaining in the Indian country new unit set-aside for such control period, divided by the sum under paragraph (b)(9)(ii) of this section, and rounded to the nearest allowance.

(10) If, after completion of the procedures under paragraphs (b)(9) and (12) of this section for such control period, any unallocated TR NO_X Ozone Season allowances remain in the Indian country new unit set-aside for the State for such control period, the Administrator will:

(i) Transfer such unallocated TR NO_X Ozone Season allowances to the new unit set-aside for the State for such control period; or

(ii) If the State has a SIP revision approved under § 52.38(b)(4) or (5) covering such control period, include such unallocated TR NO_X Ozone Season allowances in the portion of the State NO_X Ozone Season trading budget that may be allocated for such control period in accordance with such SIP revision.

(11) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.511(b)(2)(iii), (iv), and (v), of the amount of TR NO_X Ozone Season allowances allocated under paragraphs (b)(9), (10), and (12) of this section for such control period to each TR NO_X Ozone Season unit eligible for such allocation.

(12)(i) Notwithstanding the requirements of paragraphs (b)(2) through (11) of this section, if the calculations of allocations of an Indian country new unit set-aside for a control period in a given year under paragraph (b)(7) of this section, paragraphs (b)(6) and (9)(iv) of this section, or paragraphs (b)(6), (9)(iii), and (10) of this section would otherwise result in total allocations of such Indian country new unit set-aside exceeding the total amount of such Indian country new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, as follows. The Administrator will list the TR NO_X Ozone Season units in descending order based on the amount of such units' allocations under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will reduce each unit's allocation under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, by one TR NO_X Ozone Season allowance (but not below zero) in the order in which the units are listed and will repeat this reduction process as necessary, until the total allocations of such Indian country new unit set-aside equal the total amount of such Indian country new unit set-aside.

(ii) Notwithstanding the requirements of paragraphs (b)(10) and (11) of this section, if the calculations of allocations of an Indian country new unit set-aside for a control period in a given year under paragraphs (b)(6), (9)(iii), and (10) of this section would otherwise result in a total allocations of such Indian country new unit set-aside less than the total amount of such Indian country new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (b)(10) of this section, as follows. The Administrator will list the TR NO_X Ozone Season units in descending order based on the amount of such units' allocations under paragraph (b)(10) of this section and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will increase each unit's allocation under paragraph (b)(10) of this section by one TR NO_X Ozone Season allowance in the order in which the units are listed and will repeat this increase process as necessary, until the total allocations of such Indian country new unit set-aside equal the total amount of such Indian country new unit set-aside.

§ 97.513 Authorization of designated representative and alternate designated representative.

(a) Except as provided under § 97.515, each TR NO_X Ozone Season source, including all TR NO_X Ozone Season units at the source, shall have one and only one designated representative, with regard to all matters under the TR NO_X Ozone Season Trading Program.

(1) The designated representative shall be selected by an agreement binding on the owners and operators of the source and all TR NO_X Ozone Season units at the source and shall act in accordance with the certification statement in § 97.516(a)(4)(iii).

(2) Upon and after receipt by the Administrator of a complete certificate of representation under § 97.516:

(i) The designated representative shall be authorized and shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each owner and operator of the source and each TR NO_X Ozone Season unit at the source in all matters pertaining to the TR NO_X Ozone Season Trading Program, notwithstanding any agreement between the designated representative and such owners and operators; and

(ii) The owners and operators of the source and each TR NO_X Ozone Season unit at the source shall be bound by any decision or order issued to the designated representative by the Administrator regarding the source or any such unit.

(b) Except as provided under § 97.515, each TR NO_X Ozone Season source may have one and only one alternate designated representative, who may act on behalf of the designated representative. The agreement by which the alternate designated representative is selected shall include a procedure for authorizing the alternate designated representative to act in lieu of the designated representative.

(1) The alternate designated representative shall be selected by an agreement binding on the owners and operators of the source and all TR NO_X Ozone Season units at the source and shall act in accordance with the certification statement in § 97.516(a)(4)(iii).

(2) Upon and after receipt by the Administrator of a complete certificate of representation under § 97.516,

(i) The alternate designated representative shall be authorized;

(ii) Any representation, action, inaction, or submission by the alternate designated representative shall be deemed to be a representation, action, inaction, or submission by the designated representative; and

(iii) The owners and operators of the source and each TR NO_X Ozone Season unit at the source shall be bound by any decision or order issued to the alternate designated representative by the Administrator regarding the source or any such unit.

(c) Except in this section, § 97.502, and §§ 97.514 through 97.518, whenever the term ''designated representative'' (as distinguished from the term ''common designated representative'') is used in this subpart, the term shall be construed to include the designated representative or any alternate designated representative.

§ 97.514 Responsibilities of designated representative and alternate designated representative.

(a) Except as provided under § 97.518 concerning delegation of authority to make submissions, each submission under the TR NO_X Ozone Season Trading Program shall be made, signed, and certified by the designated representative or alternate designated representative for each TR NO_X Ozone Season source and TR NO_X Ozone Season unit for which the submission is made. Each such submission shall include the following certification statement by the designated representative or alternate designated representative: ''I am authorized to make this submission on behalf of the owners and operators of the source or units for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(b) The Administrator will accept or act on a submission made for a TR NO_X Ozone Season source or a TR NO_X Ozone Season unit only if the

submission has been made, signed, and certified in accordance with paragraph (a) of this section and § 97.518.

§ 97.515 Changing designated representative and alternate designated representative; changes in owners and operators; changes in units at the source.

(a) *Changing designated representative.* The designated representative may be changed at any time upon receipt by the Administrator of a superseding complete certificate of representation under § 97.516. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous designated representative before the time and date when the Administrator receives the superseding certificate of representation shall be binding on the new designated representative and the owners and operators of the TR NO_X Ozone Season source and the TR NO_X Ozone Season units at the source.

(b) *Changing alternate designated representative.* The alternate designated representative may be changed at any time upon receipt by the Administrator of a superseding complete certificate of representation under § 97.516. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous alternate designated representative before the time and date when the Administrator receives the superseding certificate of representation shall be binding on the new alternate designated representative, the designated representative, and the owners and operators of the TR NO_X Ozone Season source and the TR NO_X Ozone Season units at the source.

(c) *Changes in owners and operators.* (1) In the event an owner or operator of a TR NO_X Ozone Season source or a TR NO_X Ozone Season unit at the source is not included in the list of owners and operators in the certificate of representation under § 97.516, such owner or operator shall be deemed to be subject to and bound by the certificate of representation, the representations, actions, inactions, and submissions of the designated representative and any alternate designated representative of the source or unit, and the decisions and orders of the Administrator, as if the owner or operator were included in such list.

(2) Within 30 days after any change in the owners and operators of a TR NO_X Ozone Season source or a TR NO_X Ozone Season unit at the source, including the addition or removal of an owner or operator, the designated representative or any alternate designated representative shall submit a revision to the certificate of representation under § 97.516 amending the list of owners and operators to reflect the change.

(d) *Changes in units at the source.* Within 30 days of any change in which units are located at a TR NO_X Ozone Season source (including the addition or removal of a unit), the designated representative or any alternate designated representative shall submit a certificate of representation under § 97.516 amending the list of units to reflect the change.

(1) If the change is the addition of a unit that operated (other than for purposes of testing by the manufacturer before initial installation) before being located at the source, then the certificate of representation shall identify, in a format prescribed by the Administrator, the entity from whom the unit was purchased or otherwise obtained (including name, address, telephone number, and facsimile number (if any)), the date on which the unit was purchased or otherwise obtained, and the date on which the unit became located at the source.

(2) If the change is the removal of a unit, then the certificate of representation shall identify, in a format prescribed by the Administrator, the entity to which the unit was sold or that otherwise obtained the unit (including name, address, telephone number, and facsimile number (if any)), the date on which the unit was sold or otherwise obtained, and the date on which the unit became no longer located at the source.

§ 97.516 Certificate of representation.

(a) A complete certificate of representation for a designated representative or an alternate designated representative shall include the following elements in a format prescribed by the Administrator:

(1) Identification of the TR NO_X Ozone Season source, and each TR NO_X Ozone Season unit at the source, for which the certificate of representation is submitted, including source name, source category and NAICS code (or, in the absence of a NAICS code, an equivalent code), State, plant code, county, latitude and longitude, unit identification number and type, identification number and nameplate capacity (in MWe, rounded to the nearest tenth) of each generator served by each such unit, actual or projected date of commencement of commercial operation, and a statement of whether such source is located in Indian Country. If a projected date of commencement of commercial operation is provided, the actual date of commencement of commercial operation shall be provided when such information becomes available.

(2) The name, address, e-mail address (if any), telephone number, and facsimile transmission number (if any) of the designated representative and any alternate designated representative.

(3) A list of the owners and operators of the TR NO_X Ozone Season source and of each TR NO_X Ozone Season unit at the source.

(4) The following certification statements by the designated representative and any alternate designated representative—

(i) ''I certify that I was selected as the designated representative or alternate designated representative, as applicable, by an agreement binding on the owners and operators of the source and each TR NO_X Ozone Season unit at the source.''

(ii) ''I certify that I have all the necessary authority to carry out my duties and responsibilities under the TR NO_X Ozone Season Trading Program on behalf of the owners and operators of the source and of each TR NO_X Ozone Season unit at the source and that each such owner and operator shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the Administrator regarding the source or unit.''

(iii) ''Where there are multiple holders of a legal or equitable title to, or a leasehold interest in, a TR NO_X Ozone Season unit, or where a utility or industrial customer purchases power from a TR NO_X Ozone Season unit under a life-of-the-unit, firm power contractual arrangement, I certify that: I have given a written notice of my selection as the 'designated representative' or 'alternate designated representative', as applicable, and of the agreement by which I was selected to each owner and operator of the source and of each TR NO_X Ozone Season unit at the source; and TR NO_X Ozone Season allowances and proceeds of transactions involving TR NO_X Ozone Season allowances will be deemed to be held or distributed in proportion to each holder's legal, equitable, leasehold, or contractual reservation or entitlement, except that, if such multiple holders have expressly provided for a different distribution of TR NO_X Ozone Season allowances by contract, TR NO_X Ozone Season allowances and proceeds of transactions involving TR NO_X Ozone Season allowances will be deemed to be held or distributed in accordance with the contract.''

(5) The signature of the designated representative and any alternate designated representative and the dates signed.

(b) Unless otherwise required by the Administrator, documents of agreement referred to in the certificate of representation shall not be submitted to the Administrator. The Administrator shall not be under any obligation to review or evaluate the sufficiency of such documents, if submitted.

§ 97.517 Objections concerning designated representative and alternate designated representative.

(a) Once a complete certificate of representation under § 97.516 has been submitted and received, the Administrator will rely on the certificate of representation unless and until a superseding complete certificate of representation under § 97.516 is received by the Administrator.

(b) Except as provided in paragraph (a) of this section, no objection or other communication submitted to the Administrator concerning the authorization, or any representation, action, inaction, or submission, of a designated representative or alternate designated representative shall affect any representation, action, inaction, or submission of the designated representative or alternate designated representative or the finality of any decision or order by the Administrator under the TR NO_X Ozone Season Trading Program.

(c) The Administrator will not adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of any designated representative or alternate designated representative, including private legal disputes concerning the proceeds of TR NO_X Ozone Season allowance transfers.

§ 97.518 Delegation by designated representative and alternate designated representative.

(a) A designated representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(b) An alternate designated representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(c) In order to delegate authority to a natural person to make an electronic submission to the Administrator in accordance with paragraph (a) or (b) of this section, the designated representative or alternate designated representative, as appropriate, must submit to the Administrator a notice of delegation, in a format prescribed by the Administrator, that includes the following elements:

(1) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of such designated representative or alternate designated representative;

(2) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of each such natural person (referred to in this section as an ''agent'');

(3) For each such natural person, a list of the type or types of electronic submissions under paragraph (a) or (b) of this section for which authority is delegated to him or her; and

(4) The following certification statements by such designated representative or alternate designated representative:

(i) ''I agree that any electronic submission to the Administrator that is made by an agent identified in this notice of delegation and of a type listed for such agent in this notice of delegation and that is made when I am a designated representative or alternate designated representative, as appropriate, and before this notice of delegation is superseded by another notice of delegation under 40 CFR 97.518(d) shall be deemed to be an electronic submission by me.''

(ii) ''Until this notice of delegation is superseded by another notice of delegation under 40 CFR 97.518(d), I agree to maintain an e-mail account and to notify the Administrator immediately of any change in my e-mail address unless all delegation of authority by me under 40 CFR 97.518 is terminated.''.

(d) A notice of delegation submitted under paragraph (c) of this section shall be effective, with regard to the designated representative or alternate designated representative identified in such notice, upon receipt of such notice by the Administrator and until receipt by the Administrator of a superseding notice of delegation submitted by such designated representative or alternate designated representative, as appropriate. The superseding notice of delegation may replace any previously identified agent, add a new agent, or eliminate entirely any delegation of authority.

(e) Any electronic submission covered by the certification in paragraph (c)(4)(i) of this section and made in accordance with a notice of delegation effective under paragraph (d) of this section shall be deemed to be an electronic submission by the designated representative or alternate designated representative submitting such notice of delegation.

§ 97.519 [Reserved]

§ 97.520 Establishment of compliance accounts, assurance accounts, and general accounts.

(a) *Compliance accounts.* Upon receipt of a complete certificate of representation under § 97.516, the Administrator will establish a compliance account for the TR NO_X Ozone Season source for which the certificate of representation was submitted, unless the source already has a compliance account. The designated representative and any alternate designated representative of the source shall be the authorized account representative and the alternate authorized account representative respectively of the compliance account.

(b) *Assurance accounts.* The Administrator will establish assurance accounts for certain owners and operators and States in accordance with § 97.525(b)(3).

(c) *General accounts.* (1) Application for general account. (i) Any person may apply to open a general account, for the purpose of holding and transferring TR NO_X Ozone Season allowances, by submitting to the Administrator a complete application for a general account. Such application shall designate one and only one authorized account representative and may designate one and only one alternate authorized account representative who may act on behalf of the authorized account representative.

(A) The authorized account representative and alternate authorized account representative shall be selected by an agreement binding on the persons who have an ownership interest with respect to TR NO_X Ozone Season allowances held in the general account.

(B) The agreement by which the alternate authorized account representative is selected shall include a procedure for authorizing the alternate authorized account representative to act in lieu of the authorized account representative.

(ii) A complete application for a general account shall include the following elements in a format prescribed by the Administrator:

(A) Name, mailing address, e-mail address (if any), telephone number, and facsimile transmission number (if any) of the authorized account representative and any alternate authorized account representative;

(B) An identifying name for the general account;

(C) A list of all persons subject to a binding agreement for the authorized account representative and any alternate authorized account representative to

represent their ownership interest with respect to the TR NO_X Ozone Season allowances held in the general account;

(D) The following certification statement by the authorized account representative and any alternate authorized account representative: ''I certify that I was selected as the authorized account representative or the alternate authorized account representative, as applicable, by an agreement that is binding on all persons who have an ownership interest with respect to TR NO_X Ozone Season allowances held in the general account. I certify that I have all the necessary authority to carry out my duties and responsibilities under the TR NO_X Ozone Season Trading Program on behalf of such persons and that each such person shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the Administrator regarding the general account.''

(E) The signature of the authorized account representative and any alternate authorized account representative and the dates signed.

(iii) Unless otherwise required by the Administrator, documents of agreement referred to in the application for a general account shall not be submitted to the Administrator. The Administrator shall not be under any obligation to review or evaluate the sufficiency of such documents, if submitted.

(2) Authorization of authorized account representative and alternate authorized account representative. (i) Upon receipt by the Administrator of a complete application for a general account under paragraph (b)(1) of this section, the Administrator will establish a general account for the person or persons for whom the application is submitted, and upon and after such receipt by the Administrator:

(A) The authorized account representative of the general account shall be authorized and shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each person who has an ownership interest with respect to TR NO_X Ozone Season allowances held in the general account in all matters pertaining to the TR NO_X Ozone Season Trading Program, notwithstanding any agreement between the authorized account representative and such person.

(B) Any alternate authorized account representative shall be authorized, and any representation, action, inaction, or submission by any alternate authorized account representative shall be deemed to be a representation, action, inaction, or submission by the authorized account representative.

(C) Each person who has an ownership interest with respect to TR NO_X Ozone Season allowances held in the general account shall be bound by any decision or order issued to the authorized account representative or alternate authorized account representative by the Administrator regarding the general account.

(ii) Except as provided in paragraph (c)(5) of this section concerning delegation of authority to make submissions, each submission concerning the general account shall be made, signed, and certified by the authorized account representative or any alternate authorized account representative for the persons having an ownership interest with respect to TR NO_X Ozone Season allowances held in the general account. Each such submission shall include the following certification statement by the authorized account representative or any alternate authorized account representative: ''I am authorized to make this submission on behalf of the persons having an ownership interest with respect to the TR NO_X Ozone Season allowances held in the general account. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(iii) Except in this section, whenever the term ''authorized account representative'' is used in this subpart, the term shall be construed to include the authorized account representative or any alternate authorized account representative.

(3) Changing authorized account representative and alternate authorized account representative; changes in persons with ownership interest. (i) The authorized account representative of a general account may be changed at any time upon receipt by the Administrator of a superseding complete application for a general account under paragraph (c)(1) of this section. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous authorized account representative before the time and date when the Administrator receives the superseding application for a general account shall be binding on the new authorized account representative and the persons with an ownership interest with respect to the TR NO_X Ozone Season allowances in the general account.

(ii) The alternate authorized account representative of a general account may be changed at any time upon receipt by the Administrator of a superseding complete application for a general account under paragraph (c)(1) of this section. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous alternate authorized account representative before the time and date when the Administrator receives the superseding application for a general account shall be binding on the new alternate authorized account representative, the authorized account representative, and the persons with an ownership interest with respect to the TR NO_X Ozone Season allowances in the general account.

(iii)(A) In the event a person having an ownership interest with respect to TR NO_X Ozone Season allowances in the general account is not included in the list of such persons in the application for a general account, such person shall be deemed to be subject to and bound by the application for a general account, the representation, actions, inactions, and submissions of the authorized account representative and any alternate authorized account representative of the account, and the decisions and orders of the Administrator, as if the person were included in such list.

(B) Within 30 days after any change in the persons having an ownership interest with respect to NO_X Ozone Season allowances in the general account, including the addition or removal of a person, the authorized account representative or any alternate authorized account representative shall submit a revision to the application for a general account amending the list of persons having an ownership interest with respect to the TR NO_X Ozone Season allowances in the general account to include the change.

(4) Objections concerning authorized account representative and alternate authorized account representative. (i) Once a complete application for a general account under paragraph (c)(1) of this section has been submitted and received, the Administrator will rely on the application unless and until a superseding complete application for a general account under paragraph (b)(1) of this section is received by the Administrator.

(ii) Except as provided in paragraph (c)(4)(i) of this section, no objection or other communication submitted to the Administrator concerning the authorization, or any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative of a general account shall affect any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative or the finality of any decision or order by the Administrator under the TR NO_X Ozone Season Trading Program.

(iii) The Administrator will not adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative of a general account, including private legal disputes concerning the proceeds of TR NO_X Ozone Season allowance transfers.

(5) Delegation by authorized account representative and alternate authorized account representative. (i) An authorized account representative of a general account may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(ii) An alternate authorized account representative of a general account may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(iii) In order to delegate authority to a natural person to make an electronic submission to the Administrator in accordance with paragraph (c)(5)(i) or (ii) of this section, the authorized account representative or alternate authorized account representative, as appropriate, must submit to the Administrator a notice of delegation, in a format prescribed by the Administrator, that includes the following elements:

(A) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of such authorized account representative or alternate authorized account representative;

(B) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of each such natural person (referred to in this section as an ''agent'');

(C) For each such natural person, a list of the type or types of electronic submissions under paragraph (c)(5)(i) or (ii) of this section for which authority is delegated to him or her;

(D) The following certification statement by such authorized account representative or alternate authorized account representative: ''I agree that any electronic submission to the Administrator that is made by an agent identified in this notice of delegation and of a type listed for such agent in this notice of delegation and that is made when I am an authorized account representative or alternate authorized representative, as appropriate, and before this notice of delegation is superseded by another notice of delegation under 40 CFR 97.520(c)(5)(iv) shall be deemed to be an electronic submission by me.''; and

(E) The following certification statement by such authorized account representative or alternate authorized account representative: ''Until this notice of delegation is superseded by another notice of delegation under 40 CFR 97.520(c)(5)(iv), I agree to maintain an e-mail account and to notify the Administrator immediately of any change in my e-mail address unless all delegation of authority by me under 40 CFR 97.520(c)(5) is terminated.''.

(iv) A notice of delegation submitted under paragraph (c)(5)(iii) of this section shall be effective, with regard to the authorized account representative or alternate authorized account representative identified in such notice, upon receipt of such notice by the Administrator and until receipt by the Administrator of a superseding notice of delegation submitted by such authorized account representative or alternate authorized account representative, as appropriate. The superseding notice of delegation may replace any previously identified agent, add a new agent, or eliminate entirely any delegation of authority.

(v) Any electronic submission covered by the certification in paragraph (c)(5)(iii)(D) of this section and made in accordance with a notice of delegation effective under paragraph (c)(5)(iv) of this section shall be deemed to be an electronic submission by the designated representative or alternate designated representative submitting such notice of delegation.

(6) Closing a general account. (i) The authorized account representative or alternate authorized account representative of a general account may submit to the Administrator a request to close the account. Such request shall include a correctly submitted TR NO_X Ozone Season allowance transfer under § 97.522 for any TR NO_X Ozone Season allowances in the account to one or more other Allowance Management System accounts.

(ii) If a general account has no TR NO_X Ozone Season allowance transfers to or from the account for a 12-month period or longer and does not contain any TR NO_X Ozone Season allowances, the Administrator may notify the authorized account representative for the account that the account will be closed after 30 days after the notice is sent. The account will be closed after the 30-day period unless, before the end of the 30-day period, the Administrator receives a correctly submitted TR NO_X Ozone Season allowance transfer under § 97.522 to the account or a statement submitted by the authorized account representative or alternate authorized account representative demonstrating to the satisfaction of the Administrator good cause as to why the account should not be closed.

(d) *Account identification.* The Administrator will assign a unique identifying number to each account established under paragraph (a), (b), or (c) of this section.

(e) *Responsibilities of authorized account representative and alternate authorized account representative.* After the establishment of a compliance account or general account, the Administrator will accept or act on a submission pertaining to the account, including, but not limited to, submissions concerning the deduction or transfer of TR NO_X Ozone Season allowances in the account, only if the submission has been made, signed, and certified in accordance with §§ 97.514(a) and 97.518 or paragraphs (c)(2)(ii) and (c)(5) of this section.

§ 97.521 Recordation of TR NO_X Ozone Season allowance allocations and auction results.

(a) By November 7, 2011, the Administrator will record in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source in accordance with § 97.511(a) for the control period in 2012.

(b) By November 7, 2011, the Administrator will record in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source in accordance with § 97.511(a) for the control period in 2013, unless the State in which the source is located notifies the Administrator in writing by October 17, 2011 of the State's intent to submit to the Administrator a complete SIP revision by April 1, 2012 meeting the

requirements of § 52.38(b)(3)(i) through (iv) of this chapter.

(1) If, by April 1, 2012, the State does not submit to the Administrator such complete SIP revision, the Administrator will record by April 15, 2012 in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source in accordance with § 97.511(a) for the control period in 2013.

(2) If the State submits to the Administrator by April 1, 2012, and the Administrator approves by October 1, 2012, such complete SIP revision, the Administrator will record by October 1, 2012 in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source as provided in such approved, complete SIP revision for the control period in 2013.

(3) If the State submits to the Administrator by April 1, 2012, and the Administrator does not approve by October 1, 2012, such complete SIP revision, the Administrator will record by October 1, 2012 in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source in accordance with § 97.511(a) for the control period in 2013.

(c) By July 1, 2013, the Administrator will record in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source, or in each appropriate Allowance Management System account the TR NO_X Ozone Season allowances auctioned to TR NO_X Ozone Season units, in accordance with § 97.511(a), or with a SIP revision approved under § 52.38(b)(4) or (5) of this chapter, for the control period in 2014 and 2015.

(d) By July 1, 2014, the Administrator will record in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source, or in each appropriate Allowance Management System account the TR NO_X Ozone Season allowances auctioned to TR NO_X Ozone Season units, in accordance with § 97.511(a), or with a SIP revision approved under § 52.38(b)(4) or (5) of this chapter, for the control period in 2016 and 2017.

(e) By July 1, 2015, the Administrator will record in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source, or in each appropriate Allowance Management System account the TR NO_X Ozone Season allowances auctioned to TR NO_X Ozone Season units, in accordance with § 97.511(a), or with a SIP revision approved under § 52.38(b)(4) or (5) of this chapter, for the control period in 2018 and 2019.

(f) By July 1, 2016 and July 1 of each year thereafter, the Administrator will record in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source, or in each appropriate Allowance Management System account the TR NO_X Ozone Season allowances auctioned to TR NO_X Ozone Season units, in accordance with § 97.511(a), or with a SIP revision approved under § 52.38(b)(4) or (5) of this chapter, for the control period in the fourth year after the year of the applicable recordation deadline under this paragraph.

(g) By August 1, 2012 and August 1 of each year thereafter, the Administrator will record in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source, or in each appropriate Allowance Management System account the TR NO_X Ozone Season allowances auctioned to TR NO_X Ozone Season units, in accordance with § 97.512(a)(2) through (8) and (12), or with a SIP revision approved under § 52.38(b)(4) or (5) of this chapter, for the control period in the year of the applicable recordation deadline under this paragraph.

(h) By August 1, 2012 and August 1 of each year thereafter, the Administrator will record in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source in accordance with § 97.512(b)(2) through (8) and (12) for the control period in the year of the applicable recordation deadline under this paragraph.

(i) By November 15, 2012 and November 15 of each year thereafter, the Administrator will record in each TR NO_X Ozone Season source's compliance account the TR NO_X Ozone Season allowances allocated to the TR NO_X Ozone Season units at the source in accordance with § 97.512(a)(9) through (12), for the control period in the year of the applicable recordation deadline under this paragraph.

(j) By the date on which any allocation or auction results, other than an allocation or auction results described in paragraphs (a) through (i) of this section, of TR NO_X Ozone Season allowances to a recipient is made by or are submitted to the Administrator in accordance with § 97.511 or § 97.512 or with a SIP revision approved under § 52.38(b)(4) or (5) of this chapter, the Administrator will record such allocation or auction results in the appropriate Allowance Management System account.

(k) When recording the allocation or auction of TR NO_X Ozone Season allowances to a TR NO_X Ozone Season unit or other entity in an Allowance Management System account, the Administrator will assign each TR NO_X Ozone Season allowance a unique identification number that will include digits identifying the year of the control period for which the TR NO_X Ozone Season allowance is allocated or auctioned.

§ 97.522 Submission of TR NO_X Ozone Season allowance transfers.

(a) An authorized account representative seeking recordation of a TR NO_X Ozone Season allowance transfer shall submit the transfer to the Administrator.

(b) A TR NO_X Ozone Season allowance transfer shall be correctly submitted if:

(1) The transfer includes the following elements, in a format prescribed by the Administrator:

(i) The account numbers established by the Administrator for both the transferor and transferee accounts;

(ii) The serial number of each TR NO_X Ozone Season allowance that is in the transferor account and is to be transferred; and

(iii) The name and signature of the authorized account representative of the transferor account and the date signed; and

(2) When the Administrator attempts to record the transfer, the transferor account includes each TR NO_X Ozone Season allowance identified by serial number in the transfer.

§ 97.523 Recordation of TR NO_X Ozone Season allowance transfers.

(a) Within 5 business days (except as provided in paragraph (b) of this section) of receiving a TR NO_X Ozone Season allowance transfer that is correctly submitted under § 97.522, the Administrator will record a TR NO_X Ozone Season allowance transfer by moving each TR NO_X Ozone Season allowance from the transferor account to the transferee account as specified in the transfer.

(b) A TR NO_X Ozone Season allowance transfer to or from a

compliance account that is submitted for recordation after the allowance transfer deadline for a control period and that includes any TR NO_X Ozone Season allowances allocated for any control period before such allowance transfer deadline will not be recorded until after the Administrator completes the deductions from such compliance account under § 97.524 for the control period immediately before such allowance transfer deadline.

(c) Where a TR NO_X Ozone Season allowance transfer is not correctly submitted under § 97.522, the Administrator will not record such transfer.

(d) Within 5 business days of recordation of a TR NO_X Ozone Season allowance transfer under paragraphs (a) and (b) of the section, the Administrator will notify the authorized account representatives of both the transferor and transferee accounts.

(e) Within 10 business days of receipt of a TR NO_X Ozone Season allowance transfer that is not correctly submitted under § 97.522, the Administrator will notify the authorized account representatives of both accounts subject to the transfer of:

(1) A decision not to record the transfer, and

(2) The reasons for such non-recordation.

§ 97.524 Compliance with TR NO_X Ozone Season emissions limitation.

(a) *Availability for deduction for compliance.* TR NO_X Ozone Season allowances are available to be deducted for compliance with a source's TR NO_X Ozone Season emissions limitation for a control period in a given year only if the TR NO_X Ozone Season allowances:

(1) Were allocated for such control period or a control period in a prior year; and

(2) Are held in the source's compliance account as of the allowance transfer deadline for such control period.

(b) *Deductions for compliance.* After the recordation, in accordance with § 97.523, of TR NO_X Ozone Season allowance transfers submitted by the allowance transfer deadline for a control period in a given year, the Administrator will deduct from each source's compliance account TR NO_X Ozone Season allowances available under paragraph (a) of this section in order to determine whether the source meets the TR NO_X Ozone Season emissions limitation for such control period, as follows:

(1) Until the amount of TR NO_X Ozone Season allowances deducted equals the number of tons of total NO_X emissions from all TR NO_X Ozone Season units at the source for such control period; or

(2) If there are insufficient TR NO_X Ozone Season allowances to complete the deductions in paragraph (b)(1) of this section, until no more TR NO_X Ozone Season allowances available under paragraph (a) of this section remain in the compliance account.

(c)(1) *Identification of TR NO_X Ozone Season allowances by serial number.* The authorized account representative for a source's compliance account may request that specific TR NO_X Ozone Season allowances, identified by serial number, in the compliance account be deducted for emissions or excess emissions for a control period in a given year in accordance with paragraph (b) or (d) of this section. In order to be complete, such request shall be submitted to the Administrator by the allowance transfer deadline for such control period and include, in a format prescribed by the Administrator, the identification of the TR NO_X Ozone Season source and the appropriate serial numbers.

(2) *First-in, first-out.* The Administrator will deduct TR NO_X Ozone Season allowances under paragraph (b) or (d) of this section from the source's compliance account in accordance with a complete request under paragraph (c)(1) of this section or, in the absence of such request or in the case of identification of an insufficient amount of TR NO_X Ozone Season allowances in such request, on a first-in, first-out accounting basis in the following order:

(i) Any TR NO_X Ozone Season allowances that were allocated to the units at the source and not transferred out of the compliance account, in the order of recordation; and then

(ii) Any TR NO_X Ozone Season allowances that were allocated to any unit and transferred to and recorded in the compliance account pursuant to this subpart, in the order of recordation.

(d) *Deductions for excess emissions.* After making the deductions for compliance under paragraph (b) of this section for a control period in a year in which the TR NO_X Ozone Season source has excess emissions, the Administrator will deduct from the source's compliance account an amount of TR NO_X Ozone Season allowances, allocated for a control period in a prior year or the control period in the year of the excess emissions or in the immediately following year, equal to two times the number of tons of the source's excess emissions.

(e) *Recordation of deductions.* The Administrator will record in the appropriate compliance account all deductions from such an account under paragraphs (b) and (d) of this section.

§ 97.525 Compliance with TR NO_X Ozone Season assurance provisions.

(a) *Availability for deduction.* TR NO_X Ozone Season allowances are available to be deducted for compliance with the TR NO_X Ozone Season assurance provisions for a control period in a given year by the owners and operators of a group of one or more TR NO_X Ozone Season sources and units in a State (and Indian country within the borders of such State) only if the TR NO_X Ozone Season allowances:

(1) Were allocated for a control period in a prior year or the control period in the given year or in the immediately following year; and

(2) Are held in the assurance account, established by the Administrator for such owners and operators of such group of TR NO_X Ozone Season sources and units in such State (and Indian country within the borders of such State) under paragraph (b)(3) of this section, as of the deadline established in paragraph (b)(4) of this section.

(b) *Deductions for compliance.* The Administrator will deduct TR NO_X Ozone Season allowances available under paragraph (a) of this section for compliance with the TR NO_X Ozone Season assurance provisions for a State for a control period in a given year in accordance with the following procedures:

(1) By June 1, 2013 and June 1 of each year thereafter, the Administrator will:

(i) Calculate, for each State (and Indian country within the borders of such State), the total NO_X emissions from all TR NO_X Ozone Season units at TR NO_X Ozone Season sources in the State (and Indian country within the borders of such State) during the control period in the year before the year of this calculation deadline and the amount, if any, by which such total NO_X emissions exceed the State assurance level as described in § 97.506(c)(2)(iii); and

(ii) Promulgate a notice of data availability of the results of the calculations required in paragraph (b)(1)(i) of this section, including separate calculations of the NO_X emissions from each TR NO_X Ozone Season source.

(2) For each notice of data availability required in paragraph (b)(1)(ii) of this section and for any State (and Indian country within the borders of such State) identified in such notice as having TR NO_X Ozone Season units with total NO_X emissions exceeding the State assurance level for a control

period in a given year, as described in § 97.506(c)(2)(iii):

(i) By July 1 immediately after the promulgation of such notice, the designated representative of each TR NO_X Ozone Season source in each such State (and Indian country within the borders of such State) shall submit a statement, in a format prescribed by the Administrator, providing for each TR NO_X Ozone Season unit (if any) at the source that operates during, but is not allocated an amount of TR NO_X Ozone Season allowances for, such control period, the unit's allowable NO_X emission rate for such control period and, if such rate is expressed in lb per mmBtu, the unit's heat rate.

(ii) By August 1 immediately after the promulgation of such notice, the Administrator will calculate, for each such State (and Indian country within the borders of such State) and such control period and each common designated representative for such control period for a group of one or more TR NO_X Ozone Season sources and units in the State (and Indian country within the borders of such State), the common designated representative's share of the total NO_X emissions from all TR NO_X Ozone Season units at TR NO_X Ozone Season sources in the State (and Indian country within the borders of such State), the common designated representative's assurance level, and the amount (if any) of TR NO_X Ozone Season allowances that the owners and operators of such group of sources and units must hold in accordance with the calculation formula in § 97.506(c)(2)(i) and will promulgate a notice of data availability of the results of these calculations.

(iii) The Administrator will provide an opportunity for submission of objections to the calculations referenced by the notice of data availability required in paragraph (b)(2)(ii) of this section and the calculations referenced by the relevant notice of data availability required in paragraph (b)(1)(i) of this section.

(A) Objections shall be submitted by the deadline specified in such notice and shall be limited to addressing whether the calculations referenced in the relevant notice required under paragraph (b)(1)(ii) of this section and referenced in the notice required under paragraph (b)(2)(ii) of this section are in accordance with § 97.506(c)(2)(iii), §§ 97.506(b) and 97.530 through 97.535, the definitions of ''common designated representative'', ''common designated representative's assurance level'', and ''common designated representative's share'' in § 97.502, and the calculation formula in § 97.506(c)(2)(i).

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(2)(iii)(A) of this section. By October 1 immediately after the promulgation of such notice, the Administrator will promulgate a notice of data availability of any adjustments that the Administrator determines to be necessary and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(iii)(A) of this section.

(3) For any State (and Indian country within the borders of such State) referenced in each notice of data availability required in paragraph (b)(2)(iii)(B) of this section as having TR NO_X Ozone Season units with total NO_X emissions exceeding the State assurance level for a control period in a given year, the Administrator will establish one assurance account for each set of owners and operators referenced, in the notice of data availability required under paragraph (b)(2)(iii)(B) of this section, as all of the owners and operators of a group of TR NO_X Ozone Season sources and units in the State (and Indian country within the borders of such State) having a common designated representative for such control period and as being required to hold TR NO_X Ozone Season allowances.

(4)(i) As of midnight of November 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii)(B) of this section, the owners and operators described in paragraph (b)(3) of this section shall hold in the assurance account established for the them and for the appropriate TR NO_X Ozone Season sources, TR NO_X Ozone Season units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section a total amount of TR NO_X Ozone Season allowances, available for deduction under paragraph (a) of this section, equal to the amount such owners and operators are required to hold with regard to such sources, units and State (and Indian country within the borders of such State) as calculated by the Administrator and referenced in such notice.

(ii) Notwithstanding the allowance-holding deadline specified in paragraph (b)(4)(i) of this section, if November 1 is not a business day, then such allowance-holding deadline shall be midnight of the first business day thereafter.

(5) After November 1 (or the date described in paragraph (b)(4)(ii) of this section) immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii)(B) of this section and after the recordation, in accordance with § 97.523, of TR NO_X Ozone Season allowance transfers submitted by midnight of such date, the Administrator will determine whether the owners and operators described in paragraph (b)(3) of this section hold, in the assurance account for the appropriate TR NO_X Ozone Season sources, TR NO_X Ozone Season units, and State (and Indian country within the borders of such State) established under paragraph (b)(3) of this section, the amount of TR NO_X Ozone Season allowances available under paragraph (a) of this section that the owners and operators are required to hold with regard to such sources, units, and State (and Indian country within the borders of such State) as calculated by the Administrator and referenced in the notice required in paragraph (b)(2)(iii)(B) of this section.

(6) Notwithstanding any other provision of this subpart and any revision, made by or submitted to the Administrator after the promulgation of the notice of data availability required in paragraph (b)(2)(iii)(B) of this section for a control period in a given year, of any data used in making the calculations referenced in such notice, the amounts of TR NO_X Ozone Season allowances that the owners and operators are required to hold in accordance with § 97.506(c)(2)(i) for such control period shall continue to be such amounts as calculated by the Administrator and referenced in such notice required in paragraph (b)(2)(iii)(B) of this section, except as follows:

(i) If any such data are revised by the Administrator as a result of a decision in or settlement of litigation concerning such data on appeal under part 78 of this chapter of such notice, or on appeal under section 307 of the Clean Air Act of a decision rendered under part 78 of this chapter on appeal of such notice, then the Administrator will use the data as so revised to recalculate the amounts of TR NO_X Ozone Season allowances that owners and operators are required to hold in accordance with the calculation formula in § 97.506(c)(2)(i) for such control period with regard to the TR NO_X Ozone Season sources, TR NO_X Ozone Season units, and State (and Indian country within the borders of such State) involved, provided that such litigation under part 78 of this chapter, or the proceeding under part 78 of this chapter that resulted in the decision appealed in such litigation under section 307 of the Clean Air Act, was initiated no later than 30 days after

promulgation of such notice required in paragraph (b)(2)(iii)(B) of this section.

(ii) If any such data are revised by the owners and operators of a TR NO_X Ozone Season source and TR NO_X Ozone Season unit whose designated representative submitted such data under paragraph (b)(2)(i) of this section, as a result of a decision in or settlement of litigation concerning such submission, then the Administrator will use the data as so revised to recalculate the amounts of TR NO_X Ozone Season allowances that owners and operators are required to hold in accordance with the calculation formula in § 97.506(c)(2)(i) for such control period with regard to the TR NO_X Ozone Season sources, TR NO_X Ozone Season units, and State (and Indian country within the borders of such State) involved, provided that such litigation was initiated no later than 30 days after promulgation of such notice required in paragraph (b)(2)(iii)(B) of this section.

(iii) If the revised data are used to recalculate, in accordance with paragraphs (b)(6)(i) and (ii) of this section, the amount of TR NO_X Ozone Season allowances that the owners and operators are required to hold for such control period with regard to the TR NO_X Ozone Season sources, TR NO_X Ozone Season units, and State (and Indian country within the borders of such State) involved—

(A) Where the amount of TR NO_X Ozone Season allowances that the owners and operators are required to hold increases as a result of the use of all such revised data, the Administrator will establish a new, reasonable deadline on which the owners and operators shall hold the additional amount of TR NO_X Ozone Season allowances in the assurance account established by the Administrator for the appropriate TR NO_X Ozone Season sources, TR NO_X Ozone Season units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section. The owners' and operators' failure to hold such additional amount, as required, before the new deadline shall not be a violation of the Clean Air Act. The owners' and operators' failure to hold such additional amount, as required, as of the new deadline shall be a violation of the Clean Air Act. Each TR NO_X Ozone Season allowance that the owners and operators fail to hold as required as of the new deadline, and each day in such control period, shall be a separate violation of the Clean Air Act.

(B) For the owners and operators for which the amount of TR NO_X Ozone Season allowances required to be held decreases as a result of the use of all such revised data, the Administrator will record, in all accounts from which TR NO_X Ozone Season allowances were transferred by such owners and operators for such control period to the assurance account established by the Administrator for the appropriate at TR NO_X Ozone Season sources, TR NO_X Ozone Season units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section, a total amount of the TR NO_X Ozone Season allowances held in such assurance account equal to the amount of the decrease. If TR NO_X Ozone Season allowances were transferred to such assurance account from more than one account, the amount of TR NO_X Ozone Season allowances recorded in each such transferor account will be in proportion to the percentage of the total amount of TR NO_X Ozone Season allowances transferred to such assurance account for such control period from such transferor account.

(C) Each TR NO_X Ozone Season allowance held under paragraph (b)(6)(iii)(A) of this section as a result of recalculation of requirements under the TR NO_X Ozone Season assurance provisions for such control period must be a TR NO_X Ozone Season allowance allocated for a control period in a year before or the year immediately following, or in the same year as, the year of such control period.

§ 97.526 Banking.

(a) A TR NO_X Ozone Season allowance may be banked for future use or transfer in a compliance account or a general account in accordance with paragraph (b) of this section.

(b) Any TR NO_X Ozone Season allowance that is held in a compliance account or a general account will remain in such account unless and until the TR NO_X Ozone Season allowance is deducted or transferred under § 97.511(c), § 97.523, § 97.524, § 97.525, § 97.527, or § 97.528.

§ 97.527 Account error.

The Administrator may, at his or her sole discretion and on his or her own motion, correct any error in any Allowance Management System account. Within 10 business days of making such correction, the Administrator will notify the authorized account representative for the account.

§ 97.528 Administrator's action on submissions.

(a) The Administrator may review and conduct independent audits concerning any submission under the TR NO_X Ozone Season Trading Program and make appropriate adjustments of the information in the submission.

(b) The Administrator may deduct TR NO_X Ozone Season allowances from or transfer TR NO_X Ozone Season allowances to a compliance account or an assurance account, based on the information in a submission, as adjusted under paragraph (a)(1) of this section, and record such deductions and transfers.

§ 97.529 [Reserved]

§ 97.530 General monitoring, recordkeeping, and reporting requirements.

The owners and operators, and to the extent applicable, the designated representative, of a TR NO_X Ozone Season unit, shall comply with the monitoring, recordkeeping, and reporting requirements as provided in this subpart and subpart H of part 75 of this chapter. For purposes of applying such requirements, the definitions in § 97.502 and in § 72.2 of this chapter shall apply, the terms ''affected unit,'' ''designated representative,'' and ''continuous emission monitoring system'' (or ''CEMS'') in part 75 of this chapter shall be deemed to refer to the terms ''TR NO_X Ozone Season unit,'' ''designated representative,'' and ''continuous emission monitoring system'' (or ''CEMS'') respectively as defined in § 97.502, and the term ''newly affected unit'' shall be deemed to mean ''newly affected TR NO_X Ozone Season unit''. The owner or operator of a unit that is not a TR NO_X Ozone Season unit but that is monitored under § 75.72(b)(2)(ii) of this chapter shall comply with the same monitoring, recordkeeping, and reporting requirements as a TR NO_X Ozone Season unit.

(a) *Requirements for installation, certification, and data accounting.* The owner or operator of each TR NO_X Ozone Season unit shall:

(1) Install all monitoring systems required under this subpart for monitoring NO_X mass emissions and individual unit heat input (including all systems required to monitor NO_X emission rate, NO_X concentration, stack gas moisture content, stack gas flow rate, CO_2 or O_2 concentration, and fuel flow rate, as applicable, in accordance with §§ 75.71 and 75.72 of this chapter);

(2) Successfully complete all certification tests required under § 97.531 and meet all other requirements of this subpart and part 75 of this chapter applicable to the monitoring systems under paragraph (a)(1) of this section; and

(3) Record, report, and quality-assure the data from the monitoring systems under paragraph (a)(1) of this section.

(b) *Compliance deadlines.* Except as provided in paragraph (e) of this section, the owner or operator shall meet the monitoring system certification and other requirements of paragraphs (a)(1) and (2) of this section on or before the following dates and shall record, report, and quality-assure the data from the monitoring systems under paragraph (a)(1) of this section on and after the following dates.

(1) For the owner or operator of a TR NO_X Ozone Season unit that commences commercial operation before July 1, 2011, May 1, 2012.

(2) For the owner or operator of a TR NO_X Ozone Season unit that commences commercial operation on or after July 1, 2011 and that reports on an annual basis under § 97.534(d), by the later of the following:

(i) 180 calendar days after the date on which the unit commences commercial operation; or

(ii) May 1, 2012.

(3) For the owner or operator of a TR NO_X Ozone Season unit that commences commercial operation on or after July 1, 2011 and that reports on a control period basis under § 97.534(d)(2)(ii), by the following date:

(i) 180 calendar days after the date on which the unit commences commercial operation; or

(ii) If the compliance date under paragraph (b)(3)(i) of this section is not during a control period, May 1 immediately after the compliance date under paragraph (b)(3)(i) of this section.

(4) The owner or operator of a TR NO_X Ozone Season unit for which construction of a new stack or flue or installation of add-on NO_X emission controls is completed after the applicable deadline under paragraph (b)(1), (2), or (3) of this section shall meet the requirements of §§ 75.4(e)(1) through (e)(4) of this chapter, except that:

(i) Such requirements shall apply to the monitoring systems required under § 97.530 through § 97.535, rather than the monitoring systems required under part 75 of this chapter;

(ii) NO_X emission rate, NO_X concentration, stack gas moisture content, stack gas volumetric flow rate, and O_2 or CO_2 concentration data shall be determined and reported, rather than the data listed in § 75.4(e)(2) of this chapter; and

(iii) Any petition for another procedure under § 75.4(e)(2) of this chapter shall be submitted under § 97.535, rather than § 75.66.

(c) *Reporting data.* The owner or operator of a TR NO_X Ozone Season unit that does not meet the applicable compliance date set forth in paragraph (b) of this section for any monitoring system under paragraph (a)(1) of this section shall, for each such monitoring system, determine, record, and report maximum potential (or, as appropriate, minimum potential) values for NO_X concentration, NO_X emission rate, stack gas flow rate, stack gas moisture content, fuel flow rate, and any other parameters required to determine NO_X mass emissions and heat input in accordance with § 75.31(b)(2) or (c)(3) of this chapter, section 2.4 of appendix D to part 75 of this chapter, or section 2.5 of appendix E to part 75 of this chapter, as applicable.

(d) *Prohibitions.* (1) No owner or operator of a TR NO_X Ozone Season unit shall use any alternative monitoring system, alternative reference method, or any other alternative to any requirement of this subpart without having obtained prior written approval in accordance with § 97.535.

(2) No owner or operator of a TR NO_X Ozone Season unit shall operate the unit so as to discharge, or allow to be discharged, NO_X to the atmosphere without accounting for all such NO_X in accordance with the applicable provisions of this subpart and part 75 of this chapter.

(3) No owner or operator of a TR NO_X Ozone Season unit shall disrupt the continuous emission monitoring system, any portion thereof, or any other approved emission monitoring method, and thereby avoid monitoring and recording NO_X mass discharged into the atmosphere or heat input, except for periods of recertification or periods when calibration, quality assurance testing, or maintenance is performed in accordance with the applicable provisions of this subpart and part 75 of this chapter.

(4) No owner or operator of a TR NO_X Ozone Season unit shall retire or permanently discontinue use of the continuous emission monitoring system, any component thereof, or any other approved monitoring system under this subpart, except under any one of the following circumstances:

(i) During the period that the unit is covered by an exemption under § 97.505 that is in effect;

(ii) The owner or operator is monitoring emissions from the unit with another certified monitoring system approved, in accordance with the applicable provisions of this subpart and part 75 of this chapter, by the Administrator for use at that unit that provides emission data for the same pollutant or parameter as the retired or discontinued monitoring system; or

(iii) The designated representative submits notification of the date of certification testing of a replacement monitoring system for the retired or discontinued monitoring system in accordance with § 97.531(d)(3)(i).

(e) *Long-term cold storage.* The owner or operator of a TR NO_X Ozone Season unit is subject to the applicable provisions of § 75.4(d) of this chapter concerning units in long-term cold storage.

§ 97.531 Initial monitoring system certification and recertification procedures.

(a) The owner or operator of a TR NO_X Ozone Season unit shall be exempt from the initial certification requirements of this section for a monitoring system under § 97.530(a)(1) if the following conditions are met:

(1) The monitoring system has been previously certified in accordance with part 75 of this chapter; and

(2) The applicable quality-assurance and quality-control requirements of § 75.21 of this chapter and appendices B, D, and E to part 75 of this chapter are fully met for the certified monitoring system described in paragraph (a)(1) of this section.

(b) The recertification provisions of this section shall apply to a monitoring system under § 97.530(a)(1) that is exempt from initial certification requirements under paragraph (a) of this section.

(c) If the Administrator has previously approved a petition under § 75.17(a) or (b) of this chapter for apportioning the NO_X emission rate measured in a common stack or a petition under § 75.66 of this chapter for an alternative to a requirement in § 75.12 or § 75.17 of this chapter, the designated representative shall resubmit the petition to the Administrator under § 97.535 to determine whether the approval applies under the TR NO_X Ozone Season Trading Program.

(d) Except as provided in paragraph (a) of this section, the owner or operator of a TR NO_X Ozone Season unit shall comply with the following initial certification and recertification procedures for a continuous monitoring system (*i.e.,* a continuous emission monitoring system and an excepted monitoring system under appendices D and E to part 75 of this chapter) under § 97.530(a)(1). The owner or operator of a unit that qualifies to use the low mass emissions excepted monitoring methodology under § 75.19 of this chapter or that qualifies to use an alternative monitoring system under subpart E of part 75 of this chapter shall comply with the procedures in paragraph (e) or (f) of this section respectively.

(1) Requirements for initial certification. The owner or operator shall ensure that each continuous monitoring system under § 97.530(a)(1) (including the automated data acquisition and handling system) successfully completes all of the initial certification testing required under § 75.20 of this chapter by the applicable deadline in § 97.530(b). In addition, whenever the owner or operator installs a monitoring system to meet the requirements of this subpart in a location where no such monitoring system was previously installed, initial certification in accordance with § 75.20 of this chapter is required.

(2) Requirements for recertification. Whenever the owner or operator makes a replacement, modification, or change in any certified continuous emission monitoring system under § 97.530(a)(1) that may significantly affect the ability of the system to accurately measure or record NO_X mass emissions or heat input rate or to meet the quality-assurance and quality-control requirements of § 75.21 of this chapter or appendix B to part 75 of this chapter, the owner or operator shall recertify the monitoring system in accordance with § 75.20(b) of this chapter. Furthermore, whenever the owner or operator makes a replacement, modification, or change to the flue gas handling system or the unit's operation that may significantly change the stack flow or concentration profile, the owner or operator shall recertify each continuous emission monitoring system whose accuracy is potentially affected by the change, in accordance with § 75.20(b) of this chapter. Examples of changes to a continuous emission monitoring system that require recertification include: replacement of the analyzer, complete replacement of an existing continuous emission monitoring system, or change in location or orientation of the sampling probe or site. Any fuel flowmeter system, and any excepted NO_X monitoring system under appendix E to part 75 of this chapter, under § 97.530(a)(1) are subject to the recertification requirements in § 75.20(g)(6) of this chapter.

(3) Approval process for initial certification and recertification. For initial certification of a continuous monitoring system under § 97.530(a)(1), paragraphs (d)(3)(i) through (v) of this section apply. For recertifications of such monitoring systems, paragraphs (d)(3)(i) through (iv) of this section and the procedures in §§ 75.20(b)(5) and (g)(7) of this chapter (in lieu of the procedures in paragraph (d)(3)(v) of this section) apply, provided that in applying paragraphs (d)(3)(i) through (iv) of this section, the words ''certification'' and ''initial certification'' are replaced by the word ''recertification'' and the word ''certified'' is replaced by with the word ''recertified''.

(i) Notification of certification. The designated representative shall submit to the appropriate EPA Regional Office and the Administrator written notice of the dates of certification testing, in accordance with § 97.533.

(ii) Certification application. The designated representative shall submit to the Administrator a certification application for each monitoring system. A complete certification application shall include the information specified in § 75.63 of this chapter.

(iii) Provisional certification date. The provisional certification date for a monitoring system shall be determined in accordance with § 75.20(a)(3) of this chapter. A provisionally certified monitoring system may be used under the TR NO_X Ozone Season Trading Program for a period not to exceed 120 days after receipt by the Administrator of the complete certification application for the monitoring system under paragraph (d)(3)(ii) of this section. Data measured and recorded by the provisionally certified monitoring system, in accordance with the requirements of part 75 of this chapter, will be considered valid quality-assured data (retroactive to the date and time of provisional certification), provided that the Administrator does not invalidate the provisional certification by issuing a notice of disapproval within 120 days of the date of receipt of the complete certification application by the Administrator.

(iv) Certification application approval process. The Administrator will issue a written notice of approval or disapproval of the certification application to the owner or operator within 120 days of receipt of the complete certification application under paragraph (d)(3)(ii) of this section. In the event the Administrator does not issue such a notice within such 120-day period, each monitoring system that meets the applicable performance requirements of part 75 of this chapter and is included in the certification application will be deemed certified for use under the TR NO_X Ozone Season Trading Program.

(A) Approval notice. If the certification application is complete and shows that each monitoring system meets the applicable performance requirements of part 75 of this chapter, then the Administrator will issue a written notice of approval of the certification application within 120 days of receipt.

(B) Incomplete application notice. If the certification application is not complete, then the Administrator will issue a written notice of incompleteness that sets a reasonable date by which the designated representative must submit the additional information required to complete the certification application. If the designated representative does not comply with the notice of incompleteness by the specified date, then the Administrator may issue a notice of disapproval under paragraph (d)(3)(iv)(C) of this section.

(C) Disapproval notice. If the certification application shows that any monitoring system does not meet the performance requirements of part 75 of this chapter or if the certification application is incomplete and the requirement for disapproval under paragraph (d)(3)(iv)(B) of this section is met, then the Administrator will issue a written notice of disapproval of the certification application. Upon issuance of such notice of disapproval, the provisional certification is invalidated by the Administrator and the data measured and recorded by each uncertified monitoring system shall not be considered valid quality-assured data beginning with the date and hour of provisional certification (as defined under § 75.20(a)(3) of this chapter).

(D) Audit decertification. The Administrator may issue a notice of disapproval of the certification status of a monitor in accordance with § 97.532(b).

(v) Procedures for loss of certification. If the Administrator issues a notice of disapproval of a certification application under paragraph (d)(3)(iv)(C) of this section or a notice of disapproval of certification status under paragraph (d)(3)(iv)(D) of this section, then:

(A) The owner or operator shall substitute the following values, for each disapproved monitoring system, for each hour of unit operation during the period of invalid data specified under § 75.20(a)(4)(iii), § 75.20(g)(7), or § 75.21(e) of this chapter and continuing until the applicable date and hour specified under § 75.20(a)(5)(i) or (g)(7) of this chapter:

(1) For a disapproved NO_X emission rate (*i.e.,* NO_X-diluent) system, the maximum potential NO_X emission rate, as defined in § 72.2 of this chapter.

(2) For a disapproved NO_X pollutant concentration monitor and disapproved flow monitor, respectively, the maximum potential concentration of NO_X and the maximum potential flow rate, as defined in sections 2.1.2.1 and

2.1.4.1 of appendix A to part 75 of this chapter.

(3) For a disapproved moisture monitoring system and disapproved diluent gas monitoring system, respectively, the minimum potential moisture percentage and either the maximum potential CO_2 concentration or the minimum potential O_2 concentration (as applicable), as defined in sections 2.1.5, 2.1.3.1, and 2.1.3.2 of appendix A to part 75 of this chapter.

(4) For a disapproved fuel flowmeter system, the maximum potential fuel flow rate, as defined in section 2.4.2.1 of appendix D to part 75 of this chapter.

(5) For a disapproved excepted NO_X monitoring system under appendix E to part 75 of this chapter, the fuel-specific maximum potential NO_X emission rate, as defined in § 72.2 of this chapter.

(B) The designated representative shall submit a notification of certification retest dates and a new certification application in accordance with paragraphs (d)(3)(i) and (ii) of this section.

(C) The owner or operator shall repeat all certification tests or other requirements that were failed by the monitoring system, as indicated in the Administrator's notice of disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval.

(e) The owner or operator of a unit qualified to use the low mass emissions (LME) excepted methodology under § 75.19 of this chapter shall meet the applicable certification and recertification requirements in §§ 75.19(a)(2) and 75.20(h) of this chapter. If the owner or operator of such a unit elects to certify a fuel flowmeter system for heat input determination, the owner or operator shall also meet the certification and recertification requirements in § 75.20(g) of this chapter.

(f) The designated representative of each unit for which the owner or operator intends to use an alternative monitoring system approved by the Administrator under subpart E of part 75 of this chapter shall comply with the applicable notification and application procedures of § 75.20(f) of this chapter.

§ 97.532 Monitoring system out-of-control periods.

(a) *General provisions.* Whenever any monitoring system fails to meet the quality-assurance and quality-control requirements or data validation requirements of part 75 of this chapter, data shall be substituted using the applicable missing data procedures in subpart D or subpart H of, or appendix D or appendix E to, part 75 of this chapter.

(b) *Audit decertification.* Whenever both an audit of a monitoring system and a review of the initial certification or recertification application reveal that any monitoring system should not have been certified or recertified because it did not meet a particular performance specification or other requirement under § 97.531 or the applicable provisions of part 75 of this chapter, both at the time of the initial certification or recertification application submission and at the time of the audit, the Administrator will issue a notice of disapproval of the certification status of such monitoring system. For the purposes of this paragraph, an audit shall be either a field audit or an audit of any information submitted to the Administrator or any State or permitting authority. By issuing the notice of disapproval, the Administrator revokes prospectively the certification status of the monitoring system. The data measured and recorded by the monitoring system shall not be considered valid quality-assured data from the date of issuance of the notification of the revoked certification status until the date and time that the owner or operator completes subsequently approved initial certification or recertification tests for the monitoring system. The owner or operator shall follow the applicable initial certification or recertification procedures in § 97.531 for each disapproved monitoring system.

§ 97.533 Notifications concerning monitoring.

The designated representative of a TR NO_X Ozone Season unit shall submit written notice to the Administrator in accordance with § 75.61 of this chapter.

§ 97.534 Recordkeeping and reporting.

(a) *General provisions.* The designated representative shall comply with all recordkeeping and reporting requirements in paragraphs (b) through (e) of this section, the applicable recordkeeping and reporting requirements under § 75.73 of this chapter, and the requirements of § 97.514(a).

(b) *Monitoring plans.* The owner or operator of a TR NO_X Ozone Season unit shall comply with requirements of § 75.73(c) and (e) of this chapter.

(c) *Certification applications.* The designated representative shall submit an application to the Administrator within 45 days after completing all initial certification or recertification tests required under § 97.531, including the information required under § 75.63 of this chapter.

(d) *Quarterly reports.* The designated representative shall submit quarterly reports, as follows:

(1) If the TR NO_X Ozone Season unit is subject to the Acid Rain Program or a TR NO_X Annual emissions limitation or if the owner or operator of such unit chooses to report on an annual basis under this subpart, the designated representative shall meet the requirements of subpart H of part 75 of this chapter (concerning monitoring of NO_X mass emissions) for such unit for the entire year and shall report the NO_X mass emissions data and heat input data for such unit, in an electronic quarterly report in a format prescribed by the Administrator, for each calendar quarter beginning with:

(i) For a unit that commences commercial operation before July 1, 2011, the calendar quarter covering May 1, 2012 through June 30, 2012; or

(ii) For a unit that commences commercial operation on or after July 1, 2011, the calendar quarter corresponding to the earlier of the date of provisional certification or the applicable deadline for initial certification under § 97.530(b), unless that quarter is the third or fourth quarter of 2011 or the first quarter of 2012, in which case reporting shall commence in the quarter covering May 1, 2012 through June 30, 2012.

(2) If the TR NO_X Ozone Season unit is not subject to the Acid Rain Program or a TR NO_X Annual emissions limitation, then the designated representative shall either:

(i) Meet the requirements of subpart H of part 75 (concerning monitoring of NO_X mass emissions) for such unit for the entire year and report the NO_X mass emissions data and heat input data for such unit in accordance with paragraph (d)(1) of this section; or

(ii) Meet the requirements of subpart H of part 75 for the control period (including the requirements in § 75.74(c) of this chapter) and report NO_X mass emissions data and heat input data (including the data described in § 75.74(c)(6) of this chapter) for such unit only for the control period of each year and report, in an electronic quarterly report in a format prescribed by the Administrator, for each calendar quarter beginning with:

(A) For a unit that commences commercial operation before July 1, 2011, the calendar quarter covering May 1, 2012 through June 30, 2012; or

(B) For a unit that commences commercial operation on or after July 1, 2011, the calendar quarter corresponding to the earlier of the date

of provisional certification or the applicable deadline for initial certification under § 97.530(b), unless that date is not during a control period, in which case reporting shall commence in the quarter that includes May 1 through June 30 of the first control period after such date.

(3) The designated representative shall submit each quarterly report to the Administrator within 30 days after the end of the calendar quarter covered by the report. Quarterly reports shall be submitted in the manner specified in § 75.73(f) of this chapter.

(4) For TR NO_X Ozone Season units that are also subject to the Acid Rain Program, TR NO_X Annual Trading Program, TR SO_2 Group 1 Trading Program, or TR SO_2 Group 2 Trading Program, quarterly reports shall include the applicable data and information required by subparts F through H of part 75 of this chapter as applicable, in addition to the NO_X mass emission data, heat input data, and other information required by this subpart.

(5) The Administrator may review and conduct independent audits of any quarterly report in order to determine whether the quarterly report meets the requirements of this subpart and part 75 of this chapter, including the requirement to use substitute data.

(i) The Administrator will notify the designated representative of any determination that the quarterly report fails to meet any such requirements and specify in such notification any corrections that the Administrator believes are necessary to make through resubmission of the quarterly report and a reasonable time period within which the designated representative must respond. Upon request by the designated representative, the Administrator may specify reasonable extensions of such time period. Within the time period (including any such extensions) specified by the Administrator, the designated representative shall resubmit the quarterly report with the corrections specified by the Administrator, except to the extent the designated representative provides information demonstrating that a specified correction is not necessary because the quarterly report already meets the requirements of this subpart and part 75 of this chapter that are relevant to the specified correction.

(6) Any resubmission of a quarterly report shall meet the requirements applicable to the submission of a quarterly report under this subpart and part 75 of this chapter, except for the deadline set forth in paragraph (d)(3) of this section.

(e) *Compliance certification.* The designated representative shall submit to the Administrator a compliance certification (in a format prescribed by the Administrator) in support of each quarterly report based on reasonable inquiry of those persons with primary responsibility for ensuring that all of the unit's emissions are correctly and fully monitored. The certification shall state that:

(1) The monitoring data submitted were recorded in accordance with the applicable requirements of this subpart and part 75 of this chapter, including the quality assurance procedures and specifications;

(2) For a unit with add-on NO_X emission controls and for all hours where NO_X data are substituted in accordance with § 75.34(a)(1) of this chapter, the add-on emission controls were operating within the range of parameters listed in the quality assurance/quality control program under appendix B to part 75 of this chapter and the substitute data values do not systematically underestimate NO_X emissions; and

(3) For a unit that is reporting on a control period basis under paragraph (d)(2)(ii) of this section, the NO_X emission rate and NO_X concentration values substituted for missing data under subpart D of part 75 of this chapter are calculated using only values from a control period and do not systematically underestimate NO_X emissions.

§ 97.535 Petitions for alternatives to monitoring, recordkeeping, or reporting requirements.

(a) The designated representative of a TR NO_X Ozone Season unit may submit a petition under § 75.66 of this chapter to the Administrator, requesting approval to apply an alternative to any requirement of §§ 97.530 through 97.534.

(b) A petition submitted under paragraph (a) of this section shall include sufficient information for the evaluation of the petition, including, at a minimum, the following information:

(i) Identification of each unit and source covered by the petition;

(ii) A detailed explanation of why the proposed alternative is being suggested in lieu of the requirement;

(iii) A description and diagram of any equipment and procedures used in the proposed alternative;

(iv) A demonstration that the proposed alternative is consistent with the purposes of the requirement for which the alternative is proposed and with the purposes of this subpart and part 75 of this chapter and that any adverse effect of approving the alternative will be *de minimis*: and

(v) Any other relevant information that the Administrator may require.

(c) Use of an alternative to any requirement referenced in paragraph (a) of this section is in accordance with this subpart only to the extent that the petition is approved in writing by the Administrator and that such use is in accordance with such approval.

76. Part 97 is amended by adding subpart CCCCC to read as follows:

Subpart CCCCC—TR SO_2 Group 1 Trading Program

Sec.

97.601 Purpose.
97.602 Definitions.
97.603 Measurements, abbreviations, and acronyms.
97.604 Applicability.
97.605 Retired unit exemption.
97.606 Standard requirements.
97.607 Computation of time.
97.608 Administrative appeal procedures.
97.609 [Reserved]
97.610 State SO_2 Group 1 trading budgets, new unit set-asides, Indian country new unit set-asides and variability limits.
97.611 Timing requirements for TR SO_2 Group 1 allowance allocations.
97.612 TR SO_2 Group 1 allowance allocations to new units.
97.613 Authorization of designated representative and alternate designated representative.
97.614 Responsibilities of designated representative and alternate designated representative.
97.615 Changing designated representative and alternate designated representative; changes in owners and operators.
97.616 Certificate of representation.
97.617 Objections concerning designated representative and alternate designated representative.
97.618 Delegation by designated representative and alternate designated representative.
97.619 [Reserved]
97.620 Establishment of compliance accounts and general accounts.
97.621 Recordation of TR SO_2 Group 1 allowance allocations.
97.622 Submission of TR SO_2 Group 1 allowance transfers.
97.623 Recordation of TR SO_2 Group 1 allowance transfers.
97.624 Compliance with TR SO_2 Group 1 emissions limitation.
97.625 Compliance with TR SO_2 Group 1 assurance provisions.
97.626 Banking.
97.627 Account error.
97.628 Administrator's action on submissions.
97.629 [Reserved]
97.630 General monitoring, recordkeeping, and reporting requirements.
97.631 Initial monitoring system certification and recertification procedures.
97.632 Monitoring system out-of-control periods.

97.633 Notifications concerning monitoring.
97.634 Recordkeeping and reporting.
97.635 Petitions for alternatives to monitoring, recordkeeping, or reporting requirements.

Subpart CCCCC—TR SO_2 Group 1 Trading Program

§ 97.601 Purpose.

This subpart sets forth the general, designated representative, allowance, and monitoring provisions for the Transport Rule (TR) SO_2 Group 1 Trading Program, under section 110 of the Clean Air Act and § 52.39 of this chapter, as a means of mitigating interstate transport of fine particulates and sulfur dioxide.

§ 97.602 Definitions.

The terms used in this subpart shall have the meanings set forth in this section as follows:

Acid Rain Program means a multi-state SO_2 and NO_X air pollution control and emission reduction program established by the Administrator under title IV of the Clean Air Act and parts 72 through 78 of this chapter.

Administrator means the Administrator of the United States Environmental Protection Agency or the Director of the Clean Air Markets Division (or its successor determined by the Administrator) of the United States Environmental Protection Agency, the Administrator's duly authorized representative under this subpart.

Allocate or *allocation* means, with regard to TR SO_2 Group 1 allowances, the determination by the Administrator, State, or permitting authority, in accordance with this subpart and any SIP revision submitted by the State and approved by the Administrator under § 52.39(d), (e), or (f) of this chapter, of the amount of such TR SO_2 Group 1 allowances to be initially credited, at no cost to the recipient, to:

(1) A TR SO_2 Group 1 unit;

(2) A new unit set-aside;

(3) An Indian country new unit set-aside; or

(4) An entity not listed in paragraphs (1) through (3) of this definition;

(5) Provided that, if the Administrator, State, or permitting authority initially credits, to a TR SO_2 Group 1 unit qualifying for an initial credit, a credit in the amount of zero TR SO_2 Group 1 allowances, the TR SO_2 Group 1 unit will be treated as being allocated an amount (*i.e.,* zero) of TR SO_2 Group 1 allowances.

Allowable SO_2 emission rate means, for a unit, the most stringent State or federal SO_2 emission rate limit (in lb/MWhr or, if in lb/mmBtu, converted to lb/MWhr by multiplying it by the unit's heat rate in mmBtu/MWhr) that is applicable to the unit and covers the longest averaging period not exceeding one year.

Allowance Management System means the system by which the Administrator records allocations, deductions, and transfers of TR SO_2 Group 1 allowances under the TR SO_2 Group 1 Trading Program. Such allowances are allocated, recorded, held, deducted, or transferred only as whole allowances.

Allowance Management System account means an account in the Allowance Management System established by the Administrator for purposes of recording the allocation, holding, transfer, or deduction of TR SO_2 Group 1 allowances.

Allowance transfer deadline means, for a control period in a given year, midnight of March 1 (if it is a business day), or midnight of the first business day thereafter (if March 1 is not a business day), immediately after such control period and is the deadline by which a TR SO_2 Group 1 allowance transfer must be submitted for recordation in a TR SO_2 Group 1 source's compliance account in order to be available for use in complying with the source's TR SO_2 Group 1 emissions limitation for such control period in accordance with §§ 97.606 and 97.624.

Alternate designated representative means, for a TR SO_2 Group 1 source and each TR SO_2 Group 1 unit at the source, the natural person who is authorized by the owners and operators of the source and all such units at the source, in accordance with this subpart, to act on behalf of the designated representative in matters pertaining to the TR SO_2 Group 1 Trading Program. If the TR SO_2 Group 1 source is also subject to the Acid Rain Program, TR NO_X Annual Trading Program, or TR NO_X Ozone Season Trading Program, then this natural person shall be the same natural person as the alternate designated representative, as defined in the respective program.

Assurance account means an Allowance Management System account, established by the Administrator under § 97.625(b)(3) for certain owners and operators of a group of one or more TR SO_2 Group 1 sources and units in a given State (and Indian country within the borders of such State), in which are held TR SO_2 Group 1 allowances available for use for a control period in a given year in complying with the TR SO_2 Group 1 assurance provisions in accordance with §§ 97.606 and 97.625.

Authorized account representative means, for a general account, the natural person who is authorized, in accordance with this subpart, to transfer and otherwise dispose of TR SO_2 Group 1 allowances held in the general account and, for a TR SO_2 Group 1 source's compliance account, the designated representative of the source.

Automated data acquisition and handling system or *DAHS* means the component of the continuous emission monitoring system, or other emissions monitoring system approved for use under this subpart, designed to interpret and convert individual output signals from pollutant concentration monitors, flow monitors, diluent gas monitors, and other component parts of the monitoring system to produce a continuous record of the measured parameters in the measurement units required by this subpart.

Biomass means—

(1) Any organic material grown for the purpose of being converted to energy;

(2) Any organic byproduct of agriculture that can be converted into energy; or

(3) Any material that can be converted into energy and is nonmerchantable for other purposes, that is segregated from other material that is nonmerchantable for other purposes, and that is;

(i) A forest-related organic resource, including mill residues, precommercial thinnings, slash, brush, or byproduct from conversion of trees to merchantable material; or

(ii) A wood material, including pallets, crates, dunnage, manufacturing and construction materials (other than pressure-treated, chemically-treated, or painted wood products), and landscape or right-of-way tree trimmings.

Boiler means an enclosed fossil- or other-fuel-fired combustion device used to produce heat and to transfer heat to recirculating water, steam, or other medium.

Bottoming-cycle unit means a unit in which the energy input to the unit is first used to produce useful thermal energy, where at least some of the reject heat from the useful thermal energy application or process is then used for electricity production.

Business day means a day that does not fall on a weekend or a federal holiday.

Certifying official means a natural person who is:

(1) For a corporation, a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function or any other person who performs similar policy- or decision-making functions for the corporation;

(2) For a partnership or sole proprietorship, a general partner or the proprietor respectively; or

(3) For a local government entity or State, federal, or other public agency, a principal executive officer or ranking elected official.

Clean Air Act means the Clean Air Act, 42 U.S.C. 7401, *et seq.*

Coal means ''coal'' as defined in § 72.2 of this chapter.

Coal-derived fuel means any fuel (whether in a solid, liquid, or gaseous state) produced by the mechanical, thermal, or chemical processing of coal.

Cogeneration system means an integrated group, at a source, of equipment (including a boiler, or combustion turbine, and a steam turbine generator) designed to produce useful thermal energy for industrial, commercial, heating, or cooling purposes and electricity through the sequential use of energy.

Cogeneration unit means a stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine that is a topping-cycle unit or a bottoming-cycle unit:

(1) Operating as part of a cogeneration system; and

(2) Producing on an annual average basis—

(i) For a topping-cycle unit,

(A) Useful thermal energy not less than 5 percent of total energy output; and

(B) Useful power that, when added to one-half of useful thermal energy produced, is not less than 42.5 percent of total energy input, if useful thermal energy produced is 15 percent or more of total energy output, or not less than 45 percent of total energy input, if useful thermal energy produced is less than 15 percent of total energy output.

(ii) For a bottoming-cycle unit, useful power not less than 45 percent of total energy input;

(3) Provided that the requirements in paragraph (2) of this definition shall not apply to a calendar year referenced in paragraph (2) of this definition during which the unit did not operate at all;

(4) Provided that the total energy input under paragraphs (2)(i)(B) and (2)(ii) of this definition shall equal the unit's total energy input from all fuel, except biomass if the unit is a boiler; and

(5) Provided that, if, throughout its operation during the 12-month period or a calendar year referenced in paragraph (2) of this definition, a unit is operated as part of a cogeneration system and the cogeneration system meets on a system-wide basis the requirement in paragraph (2)(i)(B) or (2)(ii) of this definition, the unit shall be deemed to meet such requirement during that 12-month period or calendar year.

Combustion turbine means an enclosed device comprising:

(1) If the device is simple cycle, a compressor, a combustor, and a turbine and in which the flue gas resulting from the combustion of fuel in the combustor passes through the turbine, rotating the turbine; and

(2) If the device is combined cycle, the equipment described in paragraph (1) of this definition and any associated duct burner, heat recovery steam generator, and steam turbine.

Commence commercial operation means, with regard to a unit:

(1) To have begun to produce steam, gas, or other heated medium used to generate electricity for sale or use, including test generation, except as provided in § 97.605.

(i) For a unit that is a TR SO_2 Group 1 unit under § 97.604 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in the introductory text of paragraph (1) of this definition and that subsequently undergoes a physical change or is moved to a new location or source, such date shall remain the date of commencement of commercial operation of the unit, which shall continue to be treated as the same unit.

(ii) For a unit that is a TR SO_2 Group 1 unit under § 97.604 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in the introductory text of paragraph (1) of this definition and that is subsequently replaced by a unit at the same or a different source, such date shall remain the replaced unit's date of commencement of commercial operation, and the replacement unit shall be treated as a separate unit with a separate date for commencement of commercial operation as defined in paragraph (1) or (2) of this definition as appropriate.

(2) Notwithstanding paragraph (1) of this definition and except as provided in § 97.605, for a unit that is not a TR SO_2 Group 1 unit under § 97.604 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in introductory text of paragraph (1) of this definition, the unit's date for commencement of commercial operation shall be the date on which the unit becomes a TR SO_2 Group 1 unit under § 97.604.

(i) For a unit with a date for commencement of commercial operation as defined in the introductory text of paragraph (2) of this definition and that subsequently undergoes a physical change or is moved to a different location or source, such date shall remain the date of commencement of commercial operation of the unit, which shall continue to be treated as the same unit.

(ii) For a unit with a date for commencement of commercial operation as defined in the introductory text of paragraph (2) of this definition and that is subsequently replaced by a unit at the same or a different source, such date shall remain the replaced unit's date of commencement of commercial operation, and the replacement unit shall be treated as a separate unit with a separate date for commencement of commercial operation as defined in paragraph (1) or (2) of this definition as appropriate.

Common designated representative means, with regard to a control period in a given year, a designated representative where, as of April 1 immediately after the allowance transfer deadline for such control period, the same natural person is authorized under §§ 97.613(a) and 97.615(a) as the designated representative for a group of one or more TR SO_2 Group 1 sources and units located in a State (and Indian country within the borders of such State).

Common designated representative's assurance level means, with regard to a specific common designated representative and a State (and Indian country within the borders of such State) and control period in a given year for which the State assurance level is exceeded as described in § 97.606(c)(2)(iii), the common designated representative's share of the State SO_2 Group 1 trading budget with the variability limit for the State for such control period.

Common designated representative's share means, with regard to a specific common designated representative for a control period in a given year:

(1) With regard to a total amount of SO_2 emissions from all TR SO_2 Group 1 units in a State (and Indian country within the borders of such State) during such control period, the total tonnage of SO_2 emissions during such control period from a group of one or more TR SO_2 Group 1 units located in such State (and such Indian country) and having the common designated representative for such control period;

(2) With regard to a State SO_2 Group 1 trading budget with the variability limit for such control period, the amount (rounded to the nearest allowance) equal to the sum of the total amount of TR SO_2 Group 1 allowances allocated for such control period to a group of one or more TR SO_2 Group 1 units located in the State (and Indian country within the borders of such

State) and having the common designated representative for such control period and of the total amount of TR SO_2 Group 1 allowances purchased by an owner or operator of such TR SO_2 Group 1 units in an auction for such control period and submitted by the State or the permitting authority to the Administrator for recordation in the compliance accounts for such TR SO_2 Group 1 units in accordance with the TR SO_2 Group 1 allowance auction provisions in a SIP revision approved by the Administrator under § 52.39(e) or (f) of this chapter, multiplied by the sum of the State SO_2 Group 1 trading budget under § 97.610(a) and the State's variability limit under § 97.610(b) for such control period and divided by such State SO_2 Group 1 trading budget;

(3) Provided that, in the case of a unit that operates during, but has no amount of TR SO_2 Group 1 allowances allocated under §§ 97.611 and 97.612 for, such control period, the unit shall be treated, solely for purposes of this definition, as being allocated an amount (rounded to the nearest allowance) of TR SO_2 Group 1 allowances for such control period equal to the unit's allowable SO_2 emission rate applicable to such control period, multiplied by a capacity factor of 0.85 (if the unit is a boiler combusting any amount of coal or coal-derived fuel during such control period), 0.24 (if the unit is a simple combustion turbine during such control period), 0.67 (if the unit is a combined cycle turbine during such control period), 0.74 (if the unit is an integrated coal gasification combined cycle unit during such control period), or 0.36 (for any other unit), multiplied by the unit's maximum hourly load as reported in accordance with this subpart and by 8,760 hours/control period, and divided by 2,000 lb/ton.

Common stack means a single flue through which emissions from 2 or more units are exhausted.

Compliance account means an Allowance Management System account, established by the Administrator for a TR SO_2 Group 1 source under this subpart, in which any TR SO_2 Group 1 allowance allocations to the TR SO_2 Group 1 units at the source are recorded and in which are held any TR SO_2 Group 1 allowances available for use for a control period in a given year in complying with the source's TR SO_2 Group 1 emissions limitation in accordance with §§ 97.606 and 97.624.

Continuous emission monitoring system or *CEMS* means the equipment required under this subpart to sample, analyze, measure, and provide, by means of readings recorded at least once every 15 minutes and using an automated data acquisition and handling system (DAHS), a permanent record of SO_2 emissions, stack gas volumetric flow rate, stack gas moisture content, and O_2 or CO_2 concentration (as applicable), in a manner consistent with part 75 of this chapter and §§ 97.630 through 97.635. The following systems are the principal types of continuous emission monitoring systems:

(1) A flow monitoring system, consisting of a stack flow rate monitor and an automated data acquisition and handling system and providing a permanent, continuous record of stack gas volumetric flow rate, in standard cubic feet per hour (scfh);

(2) A SO_2 monitoring system, consisting of a SO_2 pollutant concentration monitor and an automated data acquisition and handling system and providing a permanent, continuous record of SO_2 emissions, in parts per million (ppm);

(3) A moisture monitoring system, as defined in § 75.11(b)(2) of this chapter and providing a permanent, continuous record of the stack gas moisture content, in percent H_2O;

(4) A CO_2 monitoring system, consisting of a CO_2 pollutant concentration monitor (or an O_2 monitor plus suitable mathematical equations from which the CO_2 concentration is derived) and an automated data acquisition and handling system and providing a permanent, continuous record of CO_2 emissions, in percent CO_2; and

(5) An O_2 monitoring system, consisting of an O_2 concentration monitor and an automated data acquisition and handling system and providing a permanent, continuous record of O_2, in percent O_2.

Control period means the period starting January 1 of a calendar year, except as provided in § 97.606(c)(3), and ending on December 31 of the same year, inclusive.

Designated representative means, for a TR SO_2 Group 1 source and each TR SO_2 Group 1 unit at the source, the natural person who is authorized by the owners and operators of the source and all such units at the source, in accordance with this subpart, to represent and legally bind each owner and operator in matters pertaining to the TR SO_2 Group 1 Trading Program. If the TR SO_2 Group 1 source is also subject to the Acid Rain Program, TR NO_X Annual Trading Program, or TR NO_X Ozone Season Trading Program, then this natural person shall be the same natural person as the designated representative, as defined in the respective program.

Emissions means air pollutants exhausted from a unit or source into the atmosphere, as measured, recorded, and reported to the Administrator by the designated representative, and as modified by the Administrator:

(1) In accordance with this subpart; and

(2) With regard to a period before the unit or source is required to measure, record, and report such air pollutants in accordance with this subpart, in accordance with part 75 of this chapter.

Excess emissions means any ton of emissions from the TR SO_2 Group 1 units at a TR SO_2 Group 1 source during a control period in a given year that exceeds the TR SO_2 Group 1 emissions limitation for the source for such control period.

Fossil fuel means—

(1) Natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material; or

(2) For purposes of applying the limitation on ''average annual fuel consumption of fossil fuel'' in §§ 97.604(b)(2)(i)(B) and (ii), natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material for the purpose of creating useful heat.

Fossil-fuel-fired means, with regard to a unit, combusting any amount of fossil fuel in 2005 or any calendar year thereafter.

General account means an Allowance Management System account, established under this subpart, that is not a compliance account or an assurance account.

Generator means a device that produces electricity.

Gross electrical output means, for a unit, electricity made available for use, including any such electricity used in the power production process (which process includes, but is not limited to, any on-site processing or treatment of fuel combusted at the unit and any on-site emission controls).

Heat input means, for a unit for a specified period of time, the product (in mmBtu/time) of the gross calorific value of the fuel (in mmBtu/lb) fed into the unit multiplied by the fuel feed rate (in lb of fuel/time), as measured, recorded, and reported to the Administrator by the designated representative and as modified by the Administrator in accordance with this subpart and excluding the heat derived from preheated combustion air, recirculated flue gases, or exhaust.

Heat input rate means, for a unit, the amount of heat input (in mmBtu) divided by unit operating time (in hr) or, for a unit and a specific fuel, the amount of heat input attributed to the

fuel (in mmBtu) divided by the unit operating time (in hr) during which the unit combusts the fuel.

Heat rate means, for a unit, the unit's maximum design heat input (in Btu/hr), divided by the product of 1,000,000 Btu/mmBtu and the unit's maximum hourly load.

Indian country means ''Indian country'' as defined in 18 U.S.C. 1151.

Life-of-the-unit, firm power contractual arrangement means a unit participation power sales agreement under which a utility or industrial customer reserves, or is entitled to receive, a specified amount or percentage of nameplate capacity and associated energy generated by any specified unit and pays its proportional amount of such unit's total costs, pursuant to a contract:

(1) For the life of the unit;

(2) For a cumulative term of no less than 30 years, including contracts that permit an election for early termination; or

(3) For a period no less than 25 years or 70 percent of the economic useful life of the unit determined as of the time the unit is built, with option rights to purchase or release some portion of the nameplate capacity and associated energy generated by the unit at the end of the period.

Maximum design heat input means, for a unit, the maximum amount of fuel per hour (in Btu/hr) that the unit is capable of combusting on a steady state basis as of the initial installation of the unit as specified by the manufacturer of the unit.

Monitoring system means any monitoring system that meets the requirements of this subpart, including a continuous emission monitoring system, an alternative monitoring system, or an excepted monitoring system under part 75 of this chapter.

Nameplate capacity means, starting from the initial installation of a generator, the maximum electrical generating output (in MWe, rounded to the nearest tenth) that the generator is capable of producing on a steady state basis and during continuous operation (when not restricted by seasonal or other deratings) as of such installation as specified by the manufacturer of the generator or, starting from the completion of any subsequent physical change in the generator resulting in an increase in the maximum electrical generating output that the generator is capable of producing on a steady state basis and during continuous operation (when not restricted by seasonal or other deratings), such increased maximum amount (in MWe, rounded to the nearest tenth) as of such completion as specified by the person conducting the physical change.

Natural gas means ''natural gas'' as defined in § 72.2 of this chapter.

Newly affected TR SO_2 Group 1 unit means a unit that was not a TR SO_2 Group 1 unit when it began operating but that thereafter becomes a TR SO_2 Group 1 unit.

Operate or *operation* means, with regard to a unit, to combust fuel.

Operator means, for a TR SO_2 Group 1 source or a TR SO_2 Group 1 unit at a source respectively, any person who operates, controls, or supervises a TR SO_2 Group 1 unit at the source or the TR SO_2 Group 1 unit and shall include, but not be limited to, any holding company, utility system, or plant manager of such source or unit.

Owner means, for a TR SO_2 Group 1 source or a TR SO_2 Group 1 unit at a source respectively, any of the following persons:

(1) Any holder of any portion of the legal or equitable title in a TR SO_2 Group 1 unit at the source or the TR SO_2 Group 1 unit;

(2) Any holder of a leasehold interest in a TR SO_2 Group 1 unit at the source or the TR SO_2 Group 1 unit, provided that, unless expressly provided for in a leasehold agreement, ''owner'' shall not include a passive lessor, or a person who has an equitable interest through such lessor, whose rental payments are not based (either directly or indirectly) on the revenues or income from such TR SO_2 Group 1 unit; and

(3) Any purchaser of power from a TR SO_2 Group 1 unit at the source or the TR SO_2 Group 1 unit under a life-of-the-unit, firm power contractual arrangement.

Permanently retired means, with regard to a unit, a unit that is unavailable for service and that the unit's owners and operators do not expect to return to service in the future.

Permitting authority means ''permitting authority'' as defined in §§ 70.2 and 71.2 of this chapter.

Potential electrical output capacity means, for a unit, 33 percent of the unit's maximum design heat input, divided by 3,413 Btu/kWh, divided by 1,000 kWh/MWh, and multiplied by 8,760 hr/yr.

Receive or *receipt of* means, when referring to the Administrator, to come into possession of a document, information, or correspondence (whether sent in hard copy or by authorized electronic transmission), as indicated in an official log, or by a notation made on the document, information, or correspondence, by the Administrator in the regular course of business.

Recordation, record, or *recorded* means, with regard to TR SO_2 Group 1 allowances, the moving of TR SO_2 Group 1 allowances by the Administrator into, out of, or between Allowance Management System accounts, for purposes of allocation, auction, transfer, or deduction.

Reference method means any direct test method of sampling and analyzing for an air pollutant as specified in § 75.22 of this chapter.

Replacement, replace, or *replaced* means, with regard to a unit, the demolishing of a unit, or the permanent retirement and permanent disabling of a unit, and the construction of another unit (the replacement unit) to be used instead of the demolished or retired unit (the replaced unit).

Sequential use of energy means:

(1) The use of reject heat from electricity production in a useful thermal energy application or process; or

(2) The use of reject heat from useful thermal energy application or process in electricity production.

Serial number means, for a TR SO_2 Group 1 allowance, the unique identification number assigned to each TR SO_2 Group 1 allowance by the Administrator.

Solid waste incineration unit means a stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine that is a ''solid waste incineration unit'' as defined in section 129(g)(1) of the Clean Air Act.

Source means all buildings, structures, or installations located in one or more contiguous or adjacent properties under common control of the same person or persons. This definition does not change or otherwise affect the definition of ''major source'', ''stationary source'', or ''source'' as set forth and implemented in a title V operating permit program or any other program under the Clean Air Act.

State means one of the States that is subject to the TR SO_2 Group 1 Trading Program pursuant to § 52.39(a), (b), (d), (e), and (f) of this chapter.

Submit or *serve* means to send or transmit a document, information, or correspondence to the person specified in accordance with the applicable regulation:

(1) In person;

(2) By United States Postal Service; or

(3) By other means of dispatch or transmission and delivery;

(4) Provided that compliance with any ''submission'' or ''service'' deadline shall be determined by the date of dispatch, transmission, or mailing and not the date of receipt.

Topping-cycle unit means a unit in which the energy input to the unit is first used to produce useful power, including electricity, where at least some of the reject heat from the electricity production is then used to provide useful thermal energy.

Total energy input means, for a unit, total energy of all forms supplied to the unit, excluding energy produced by the unit. Each form of energy supplied shall be measured by the lower heating value of that form of energy calculated as follows:

$$LHV = HHV - 10.55(W + 9H)$$

Where:

LHV = lower heating value of the form of energy in Btu/lb,
HHV = higher heating value of the form of energy in Btu/lb,
W = weight % of moisture in the form of energy, and
H = weight % of hydrogen in the form of energy.

Total energy output means, for a unit, the sum of useful power and useful thermal energy produced by the unit.

TR NO_X Annual Trading Program means a multi-state NO_X air pollution control and emission reduction program established in accordance with subpart AAAAA of this part and § 52.38(a) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.38(a)(3) or (4) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.38(a)(5) of this chapter), as a means of mitigating interstate transport of fine particulates and NO_X.

TR NO_X Ozone Season Trading Program means a multi-state NO_X air pollution control and emission reduction program established in accordance with subpart BBBBB of this part and § 52.38(b) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.38(b)(3) or (4) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.38(b)(5) of this chapter), as a means of mitigating interstate transport of ozone and NO_X.

TR SO_2 Group 1 allowance means a limited authorization issued and allocated or auctioned by the Administrator under this subpart, or by a State or permitting authority under a SIP revision approved by the Administrator under § 52.39(d), (e), or (f) of this chapter, to emit one ton of SO_2 during a control period of the specified calendar year for which the authorization is allocated or auctioned or of any calendar year thereafter under the TR SO_2 Group 1 Trading Program.

TR SO_2 Group 1 allowance deduction or *deduct TR SO_2 Group 1 allowances* means the permanent withdrawal of TR SO_2 Group 1 allowances by the Administrator from a compliance account (*e.g.,* in order to account for compliance with the TR SO_2 Group 1 emissions limitation) or from an assurance account (*e.g.,* in order to account for compliance with the assurance provisions under §§ 97.606 and 97.625).

TR SO_2 Group 1 allowances held or *hold TR SO_2 Group 1 allowances* means the TR SO_2 Group 1 allowances treated as included in an Allowance Management System account as of a specified point in time because at that time they:

(1) Have been recorded by the Administrator in the account or transferred into the account by a correctly submitted, but not yet recorded, TR SO_2 Group 1 allowance transfer in accordance with this subpart; and

(2) Have not been transferred out of the account by a correctly submitted, but not yet recorded, TR SO_2 Group 1 allowance transfer in accordance with this subpart.

TR SO_2 Group 1 emissions limitation means, for a TR SO_2 Group 1 source, the tonnage of SO_2 emissions authorized in a control period by the TR SO_2 Group 1 allowances available for deduction for the source under § 97.624(a) for such control period.

TR SO_2 Group 1 source means a source that includes one or more TR SO_2 Group 1 units.

TR SO_2 Group 1 Trading Program means a multi-state SO_2 air pollution control and emission reduction program established in accordance with this subpart and § 52.39(a), (b), (d) through (f), (j), and (k) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.39(d) or (e) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.39(f) of this chapter), as a means of mitigating interstate transport of fine particulates and SO_2.

TR SO_2 Group 1 unit means a unit that is subject to the TR SO_2 Group 1 Trading Program under § 97.604.

Unit means a stationary, fossil-fuel-fired boiler, stationary, fossil-fuel-fired combustion turbine, or other stationary, fossil-fuel-fired combustion device. A unit that undergoes a physical change or is moved to a different location or source shall continue to be treated as the same unit. A unit (the replaced unit) that is replaced by another unit (the replacement unit) at the same or a different source shall continue to be treated as the same unit, and the replacement unit shall be treated as a separate unit.

Unit operating day means, with regard to a unit, a calendar day in which the unit combusts any fuel.

Unit operating hour or hour of unit operation means, with regard to a unit, an hour in which the unit combusts any fuel.

Useful power means, with regard to a unit, electricity or mechanical energy that the unit makes available for use, excluding any such energy used in the power production process (which process includes, but is not limited to, any on-site processing or treatment of fuel combusted at the unit and any on-site emission controls).

Useful thermal energy means thermal energy that is:

(1) Made available to an industrial or commercial process (not a power production process), excluding any heat contained in condensate return or makeup water;

(2) Used in a heating application (*e.g.,* space heating or domestic hot water heating); or

(3) Used in a space cooling application (*i.e.,* in an absorption chiller).

Utility power distribution system means the portion of an electricity grid owned or operated by a utility and dedicated to delivering electricity to customers.

§ 97.603 Measurements, abbreviations, and acronyms.

Measurements, abbreviations, and acronyms used in this subpart are defined as follows:

Btu—British thermal unit
CO_2—carbon dioxide
H_2O—water
hr—hour
kW—kilowatt electrical
kWh—kilowatt hour
lb—pound
mmBtu—million Btu
MWe—megawatt electrical
MWh—megawatt hour
NO_X—nitrogen oxides
O_2—oxygen
ppm—parts per million
scfh—standard cubic feet per hour
SO_2—sulfur dioxide
yr—year

§ 97.604 Applicability.

(a) Except as provided in paragraph (b) of this section:

(1) The following units in a State (and Indian country within the borders of such State) shall be TR SO_2 Group 1 units, and any source that includes one or more such units shall be a TR SO_2 Group 1 source, subject to the requirements of this subpart: any stationary, fossil-fuel-fired boiler or

stationary, fossil-fuel-fired combustion turbine serving at any time, on or after January 1, 2005, a generator with nameplate capacity of more than 25 MWe producing electricity for sale.

(2) If a stationary boiler or stationary combustion turbine that, under paragraph (a)(1) of this section, is not a TR SO_2 Group 1 unit begins to combust fossil fuel or to serve a generator with nameplate capacity of more than 25 MWe producing electricity for sale, the unit shall become a TR SO_2 Group 1 unit as provided in paragraph (a)(1) of this section on the first date on which it both combusts fossil fuel and serves such generator.

(b) Any unit in a State (and Indian country within the borders of such State) that otherwise is a TR SO_2 Group 1 unit under paragraph (a) of this section and that meets the requirements set forth in paragraph (b)(1)(i) or (2)(i) of this section shall not be a TR SO_2 Group 1 unit:

(1)(i) Any unit:

(A) Qualifying as a cogeneration unit throughout the later of 2005 or the 12-month period starting on the date the unit first produces electricity and continuing to qualify as a cogeneration unit throughout each calendar year ending after the later of 2005 or such 12-month period; and

(B) Not supplying in 2005 or any calendar year thereafter more than one-third of the unit's potential electric output capacity or 219,000 MWh, whichever is greater, to any utility power distribution system for sale.

(ii) If, after qualifying under paragraph (b)(1)(i) of this section as not being a TR SO_2 Group 1 unit, a unit subsequently no longer meets all the requirements of paragraph (b)(1)(i) of this section, the unit shall become a TR SO_2 Group 1 unit starting on the earlier of January 1 after the first calendar year during which the unit first no longer qualifies as a cogeneration unit or January 1 after the first calendar year during which the unit no longer meets the requirements of paragraph (b)(1)(i)(B) of this section. The unit shall thereafter continue to be a TR SO_2 Group 1 unit.

(2)(i) Any unit:

(A) Qualifying as a solid waste incineration unit throughout the later of 2005 or the 12-month period starting on the date the unit first produces electricity and continuing to qualify as a solid waste incineration unit throughout each calendar year ending after the later of 2005 or such 12-month period; and

(B) With an average annual fuel consumption of fossil fuel for the first 3 consecutive calendar years of operation starting no earlier than 2005 of less than 20 percent (on a Btu basis) and an average annual fuel consumption of fossil fuel for any 3 consecutive calendar years thereafter of less than 20 percent (on a Btu basis).

(ii) If, after qualifying under paragraph (b)(2)(i) of this section as not being a TR SO_2 Group 1 unit, a unit subsequently no longer meets all the requirements of paragraph (b)(1)(i) of this section, the unit shall become a TR SO_2 Group 1 unit starting on the earlier of January 1 after the first calendar year during which the unit first no longer qualifies as a solid waste incineration unit or January 1 after the first 3 consecutive calendar years after 2005 for which the unit has an average annual fuel consumption of fossil fuel of 20 percent or more. The unit shall thereafter continue to be a TR SO_2 Group 1 unit.

(c) A certifying official of an owner or operator of any unit or other equipment may submit a petition (including any supporting documents) to the Administrator at any time for a determination concerning the applicability, under paragraphs (a) and (b) of this section or a SIP revision approved under § 52.39(e) or (f) of this chapter, of the TR SO_2 Group 1 Trading Program to the unit or other equipment.

(1) Petition content. The petition shall be in writing and include the identification of the unit or other equipment and the relevant facts about the unit or other equipment. The petition and any other documents provided to the Administrator in connection with the petition shall include the following certification statement, signed by the certifying official: ''I am authorized to make this submission on behalf of the owners and operators of the unit or other equipment for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(2) Response. The Administrator will issue a written response to the petition and may request supplemental information determined by the Administrator to be relevant to such petition. The Administrator's determination concerning the applicability, under paragraphs (a) and (b) of this section, of the TR SO_2 Group 1 Trading Program to the unit or other equipment shall be binding on any State or permitting authority unless the Administrator determines that the petition or other documents or information provided in connection with the petition contained significant, relevant errors or omissions.

§ 97.605 Retired unit exemption.

(a)(1) Any TR SO_2 Group 1 unit that is permanently retired shall be exempt from § 97.606(b) and (c)(1), § 97.624, and §§ 97.630 through 97.635.

(2) The exemption under paragraph (a)(1) of this section shall become effective the day on which the TR SO_2 Group 1 unit is permanently retired. Within 30 days of the unit's permanent retirement, the designated representative shall submit a statement to the Administrator. The statement shall state, in a format prescribed by the Administrator, that the unit was permanently retired on a specified date and will comply with the requirements of paragraph (b) of this section.

(b) Special provisions. (1) A unit exempt under paragraph (a) of this section shall not emit any SO_2, starting on the date that the exemption takes effect.

(2) For a period of 5 years from the date the records are created, the owners and operators of a unit exempt under paragraph (a) of this section shall retain, at the source that includes the unit, records demonstrating that the unit is permanently retired. The 5-year period for keeping records may be extended for cause, at any time before the end of the period, in writing by the Administrator. The owners and operators bear the burden of proof that the unit is permanently retired.

(3) The owners and operators and, to the extent applicable, the designated representative of a unit exempt under paragraph (a) of this section shall comply with the requirements of the TR SO_2 Group 1 Trading Program concerning all periods for which the exemption is not in effect, even if such requirements arise, or must be complied with, after the exemption takes effect.

(4) A unit exempt under paragraph (a) of this section shall lose its exemption on the first date on which the unit resumes operation. Such unit shall be treated, for purposes of applying allocation, monitoring, reporting, and recordkeeping requirements under this subpart, as a unit that commences commercial operation on the first date on which the unit resumes operation.

§ 97.606 Standard requirements.

(a) *Designated representative requirements.* The owners and operators shall comply with the requirement to have a designated representative, and may have an alternate designated representative, in accordance with §§ 97.613 through 97.618.

(b) *Emissions monitoring, reporting, and recordkeeping requirements.* (1) The owners and operators, and the designated representative, of each TR SO_2 Group 1 source and each TR SO_2 Group 1 unit at the source shall comply with the monitoring, reporting, and recordkeeping requirements of §§ 97.630 through 97.635.

(2) The emissions data determined in accordance with §§ 97.630 through 97.635 shall be used to calculate allocations of TR SO_2 Group 1 allowances under §§ 97.611(a)(2) and (b) and 97.612 and to determine compliance with the TR SO_2 Group 1 emissions limitation and assurance provisions under paragraph (c) of this section, provided that, for each monitoring location from which mass emissions are reported, the mass emissions amount used in calculating such allocations and determining such compliance shall be the mass emissions amount for the monitoring location determined in accordance with §§ 97.630 through 97.635 and rounded to the nearest ton, with any fraction of a ton less than 0.50 being deemed to be zero.

(c) *SO_2 emissions requirements.* (1) TR SO_2 Group 1 emissions limitation. (i) As of the allowance transfer deadline for a control period in a given year, the owners and operators of each TR SO_2 Group 1 source and each TR SO_2 Group 1 unit at the source shall hold, in the source's compliance account, TR SO_2 Group 1 allowances available for deduction for such control period under § 97.624(a) in an amount not less than the tons of total SO_2 emissions for such control period from all TR SO_2 Group 1 units at the source.

(ii) If total SO_2 emissions during a control period in a given year from the TR SO_2 Group 1 units at a TR SO_2 Group 1 source are in excess of the TR SO_2 Group 1 emissions limitation set forth in paragraph (c)(1)(i) of this section, then:

(A) The owners and operators of the source and each TR SO_2 Group 1 unit at the source shall hold the TR SO_2 Group 1 allowances required for deduction under § 97.624(d); and

(B) The owners and operators of the source and each TR SO_2 Group 1 unit at the source shall pay any fine, penalty, or assessment or comply with any other remedy imposed, for the same violations, under the Clean Air Act, and each ton of such excess emissions and each day of such control period shall constitute a separate violation of this subpart and the Clean Air Act.

(2) TR SO_2 Group 1 assurance provisions. (i) If total SO_2 emissions during a control period in a given year from all TR SO_2 Group 1 units at TR SO_2 Group 1 sources in a State (and Indian country within the borders of such State) exceed the State assurance level, then the owners and operators of such sources and units in each group of one or more sources and units having a common designated representative for such control period, where the common designated representative's share of such SO_2 emissions during such control period exceeds the common designated representative's assurance level for the State and such control period, shall hold (in the assurance account established for the owners and operators of such group) TR SO_2 Group 1 allowances available for deduction for such control period under § 97.625(a) in an amount equal to two times the product (rounded to the nearest whole number), as determined by the Administrator in accordance with § 97.625(b), of multiplying—

(A) The quotient of the amount by which the common designated representative's share of such SO_2 emissions exceeds the common designated representative's assurance level divided by the sum of the amounts, determined for all common designated representatives for such sources and units in the State (and Indian country within the borders of such State) for such control period, by which each common designated representative's share of such SO_2 emissions exceeds the respective common designated representative's assurance level; and

(B) The amount by which total SO_2 emissions from all TR SO_2 Group 1 units at TR SO_2 Group 1 sources in the State (and Indian country within the borders of such State) for such control period exceed the State assurance level.

(ii) The owners and operators shall hold the TR SO_2 Group 1 allowances required under paragraph (c)(2)(i) of this section, as of midnight of November 1 (if it is a business day), or midnight of the first business day thereafter (if November 1 is not a business day), immediately after such control period.

(iii) Total SO_2 emissions from all TR SO_2 Group 1 units at TR SO_2 Group 1 sources in a State (and Indian country within the borders of such State) during a control period in a given year exceed the State assurance level if such total SO_2 emissions exceed the sum, for such control period, of the State SO_2 Group 1 trading budget under § 97.610(a) and the State's variability limit under § 97.610(b).

(iv) It shall not be a violation of this subpart or of the Clean Air Act if total SO_2 emissions from all TR SO_2 Group 1 units at TR SO_2 Group 1 sources in a State (and Indian country within the borders of such State) during a control period exceed the State assurance level or if a common designated representative's share of total SO_2 emissions from the TR SO_2 Group 1 units at TR SO_2 Group 1 sources in a State (and Indian country within the borders of such State) during a control period exceeds the common designated representative's assurance level.

(v) To the extent the owners and operators fail to hold TR SO_2 Group 1 allowances for a control period in a given year in accordance with paragraphs (c)(2)(i) through (iii) of this section,

(A) The owners and operators shall pay any fine, penalty, or assessment or comply with any other remedy imposed under the Clean Air Act; and

(B) Each TR SO_2 Group 1 allowance that the owners and operators fail to hold for such control period in accordance with paragraphs (c)(2)(i) through (iii) of this section and each day of such control period shall constitute a separate violation of this subpart and the Clean Air Act.

(3) Compliance periods. A TR SO_2 Group 1 unit shall be subject to the requirements under paragraphs (c)(1) and (c)(2) of this section for the control period starting on the later of January 1, 2012 or the deadline for meeting the unit's monitor certification requirements under § 97.630(b) and for each control period thereafter.

(4) Vintage of allowances held for compliance. (i) A TR SO_2 Group 1 allowance held for compliance with the requirements under paragraph (c)(1)(i) of this section for a control period in a given year must be a TR SO_2 Group 1 allowance that was allocated for such control period or a control period in a prior year.

(ii) A TR SO_2 Group 1 allowance held for compliance with the requirements under paragraphs (c)(1)(ii)(A) and (2)(i) through (iii) of this section for a control period in a given year must be a TR SO_2 Group 1 allowance that was allocated for a control period in a prior year or the control period in the given year or in the immediately following year.

(5) Allowance Management System requirements. Each TR SO_2 Group 1 allowance shall be held in, deducted from, or transferred into, out of, or between Allowance Management

System accounts in accordance with this subpart.

(6) Limited authorization. A TR SO_2 Group 1 allowance is a limited authorization to emit one ton of SO_2 during the control period in one year. Such authorization is limited in its use and duration as follows:

(i) Such authorization shall only be used in accordance with the TR SO_2 Group 1 Trading Program; and

(ii) Notwithstanding any other provision of this subpart, the Administrator has the authority to terminate or limit the use and duration of such authorization to the extent the Administrator determines is necessary or appropriate to implement any provision of the Clean Air Act.

(7) Property right. A TR SO_2 Group 1 allowance does not constitute a property right.

(d) *Title V permit requirements.* (1) No title V permit revision shall be required for any allocation, holding, deduction, or transfer of TR SO_2 Group 1 allowances in accordance with this subpart.

(2) A description of whether a unit is required to monitor and report SO_2 emissions using a continuous emission monitoring system (under subpart H of part 75 of this chapter), an excepted monitoring system (under appendices D and E to part 75 of this chapter), a low mass emissions excepted monitoring methodology (under § 75.19 of this chapter), or an alternative monitoring system (under subpart E of part 75 of this chapter) in accordance with §§ 97.630 through 97.635 may be added to, or changed in, a title V permit using minor permit modification procedures in accordance with §§ 70.7(e)(2) and 71.7(e)(1) of this chapter, provided that the requirements applicable to the described monitoring and reporting (as added or changed, respectively) are already incorporated in such permit. This paragraph explicitly provides that the addition of, or change to, a unit's description as described in the prior sentence is eligible for minor permit modification procedures in accordance with §§ 70.7(e)(2)(i)(B) and 71.7(e)(1)(i)(B) of this chapter.

(e) *Additional recordkeeping and reporting requirements.* (1) Unless otherwise provided, the owners and operators of each TR SO_2 Group 1 source and each TR SO_2 Group 1 unit at the source shall keep on site at the source each of the following documents (in hardcopy or electronic format) for a period of 5 years from the date the document is created. This period may be extended for cause, at any time before the end of 5 years, in writing by the Administrator.

(i) The certificate of representation under § 97.616 for the designated representative for the source and each TR SO_2 Group 1 unit at the source and all documents that demonstrate the truth of the statements in the certificate of representation; provided that the certificate and documents shall be retained on site at the source beyond such 5-year period until such certificate of representation and documents are superseded because of the submission of a new certificate of representation under § 97.616 changing the designated representative.

(ii) All emissions monitoring information, in accordance with this subpart.

(iii) Copies of all reports, compliance certifications, and other submissions and all records made or required under, or to demonstrate compliance with the requirements of, the TR SO_2 Group 1 Trading Program.

(2) The designated representative of a TR SO_2 Group 1 source and each TR SO_2 Group 1 unit at the source shall make all submissions required under the TR SO_2 Group 1 Trading Program, except as provided in § 97.618. This requirement does not change, create an exemption from, or or otherwise affect the responsible official submission requirements under a title V operating permit program in parts 70 and 71 of this chapter.

(f) *Liability.* (1) Any provision of the TR SO_2 Group 1 Trading Program that applies to a TR SO_2 Group 1 source or the designated representative of a TR SO_2 Group 1 source shall also apply to the owners and operators of such source and of the TR SO_2 Group 1 units at the source.

(2) Any provision of the TR SO_2 Group 1 Trading Program that applies to a TR SO_2 Group 1 unit or the designated representative of a TR SO_2 Group 1 unit shall also apply to the owners and operators of such unit.

(g) *Effect on other authorities.* No provision of the TR SO_2 Group 1 Trading Program or exemption under § 97.605 shall be construed as exempting or excluding the owners and operators, and the designated representative, of a TR SO_2 Group 1 source or TR SO_2 Group 1 unit from compliance with any other provision of the applicable, approved State implementation plan, a federally enforceable permit, or the Clean Air Act.

§ 97.607 Computation of time.

(a) Unless otherwise stated, any time period scheduled, under the TR SO_2 Group 1 Trading Program, to begin on the occurrence of an act or event shall begin on the day the act or event occurs.

(b) Unless otherwise stated, any time period scheduled, under the TR SO_2 Group 1 Trading Program, to begin before the occurrence of an act or event shall be computed so that the period ends the day before the act or event occurs.

(c) Unless otherwise stated, if the final day of any time period, under the TR SO_2 Group 1 Trading Program, is not a business day, the time period shall be extended to the next business day.

§ 97.608 Administrative appeal procedures.

The administrative appeal procedures for decisions of the Administrator under the TR SO_2 Group 1 Trading Program are set forth in part 78 of this chapter.

§ 97.609 [Reserved]

§ 97.610 State SO_2 Group 1 trading budgets, new unit set-asides, Indian country new unit set-aside, and variability limits.

(a) The State SO_2 Group 1 trading budgets, new unit set-asides, and Indian country new unit set-asides for allocations of TR SO_2 Group 1 allowances for the control periods in 2012 and thereafter are as follows:

State	SO_2 Group 1 trading budget (tons) * for 2012 and 2013	New unit set-aside (tons) for 2012 and 2013	Indian country new unit set-aside (tons) for 2012 and 2013
Illinois	234,889	11,744	.....
Indiana	285,424	8,563	.....
Iowa	107,085	2,035	107
Kentucky	232,662	13,960	.....
Maryland	30,120	602	.....
Michigan	229,303	4,357	229
Missouri	207,466	4,149	.....
New Jersey	5,574	111	.....

State	SO_2 Group 1 trading budget (tons) * for 2012 and 2013	New unit set-aside (tons) for 2012 and 2013	Indian country new unit set-aside (tons) for 2012 and 2013
New York	27,325	520	27
North Carolina	136,881	10,813	137
Ohio	310,230	6,205	.....
Pennsylvania	278,651	5,573	.....
Tennessee	148,150	2,963	.....
Virginia	70,820	2,833	.....
West Virginia	146,174	10,232	.....
Wisconsin	79,480	3,894	80

State	SO_2 Group 1 trading budget (tons) * for 2014 and thereafter	New unit set-aside (tons) for 2014 and thereafter	Indian country new unit set-aside (tons) for 2014 and thereafter
Illinois	124,123	6,206	.....
Indiana	161,111	4,833	.....
Iowa	75,184	1,429	75
Kentucky	106,284	6,377	.....
Maryland	28,203	564	.....
Michigan	143,995	2,736	144
Missouri	165,941	3,319	.....
New Jersey	5,574	111	.....
New York	18,585	353	19
North Carolina	57,620	4,552	58
Ohio	137,077	2,742	.....
Pennsylvania	112,021	2,240	.....
Tennessee	58,833	1,177	.....
Virginia	35,057	1,402	.....
West Virginia	75,668	5,297	.....
Wisconsin	40,126	1,966	40

* Each trading budget includes the new unit set-aside and, where applicable, the Indian country new unit set-aside and does not include the variability limit.

(b) The States' variability limits for the State SO_2 Group 1 trading budgets for the control periods in 2012 and thereafter are as follows:

State	Variability limits for 2012 and 2013	Variability limits for 2014 and thereafter
Illinois	42,280	22,342
Indiana	51,376	29,000
Iowa	19,275	13,533
Kentucky	41,879	19,131
Maryland	5,422	5,077
Michigan	41,275	25,919
Missouri	37,344	29,869
New Jersey	1,003	1,003
New York	4,919	3,345
North Carolina	24,639	10,372
Ohio	55,841	24,674
Pennsylvania	50,157	20,164
Tennessee	26,667	10,590
Virginia	12,748	6,310
West Virginia	26,311	13,620
Wisconsin	14,306	7,223

§ 97.611 Timing requirements for TR SO_2 Group 1 allowance allocations.

(a) *Existing units.* (1) TR SO_2 Group 1 allowances are allocated, for the control periods in 2012 and each year thereafter, as provided in a notice of data availability issued by the Administrator. Providing an allocation to a unit in such notice does not constitute a determination that the unit is a TR SO_2 Group 1 unit, and not providing an allocation to a unit in such notice does not constitute a determination that the unit is not a TR SO_2 Group 1 unit.

(2) Notwithstanding paragraph (a)(1) of this section, if a unit provided an allocation in the notice of data availability issued under paragraph (a)(1) of this section does not operate, starting after 2011, during the control period in two consecutive years, such unit will not be allocated the TR SO_2 Group 1 allowances provided in such notice for the unit for the control periods in the fifth year after the first such year and in each year after that fifth year. All TR SO_2 Group 1 allowances that would otherwise have been allocated to such unit will be

allocated to the new unit set-aside for the State where such unit is located and for the respective years involved. If such unit resumes operation, the Administrator will allocate TR SO_2 Group 1 allowances to the unit in accordance with paragraph (b) of this section.

(b) *New units.* (1) New unit set-asides. (i) By June 1, 2012 and June 1 of each year thereafter, the Administrator will calculate the TR SO_2 Group 1 allowance allocation to each TR SO_2 Group 1 unit in a State, in accordance with § 97.612(a)(2) through (7) and (12), for the control period in the year of the applicable calculation deadline under this paragraph and will promulgate a notice of data availability of the results of the calculations.

(ii) For each notice of data availability required in paragraph (b)(1)(i) of this section, the Administrator will provide an opportunity for submission of objections to the calculations referenced in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(1)(i) of this section and shall be limited to addressing whether the calculations (including the identification of the TR SO_2 Group 1 units) are in accordance with § 97.612(a)(2) through (7) and (12) and §§ 97.606(b)(2) and 97.630 through 97.635.

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(1)(ii)(A) of this section. By August 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(1)(i) of this section, the Administrator will promulgate a notice of data availability of any adjustments that the Administrator determines to be necessary with regard to allocations under § 97.612(a)(2) through (7) and (12) and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(1)(ii)(A) of this section.

(iii) If the new unit set-aside for such control period contains any TR SO_2 Group 1 allowances that have not been allocated in the applicable notice of data availability required in paragraph (b)(1)(ii) of this section, the Administrator will promulgate, by December 15 immediately after such notice, a notice of data availability that identifies any TR SO_2 Group 1 units that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period.

(iv) For each notice of data availability required in paragraph (b)(1)(iii) of this section, the Administrator will provide an opportunity for submission of objections to the identification of TR SO_2 annual units in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(1)(iii) of this section and shall be limited to addressing whether the identification of TR SO_2 annual units in such notice is in accordance with paragraph (b)(1)(iii) of this section.

(B) The Administrator will adjust the identification of TR SO_2 Group 1 units in each notice of data availability required in paragraph (b)(1)(iii) of this section to the extent necessary to ensure that it is in accordance with paragraph (b)(1)(iii) of this section and will calculate the TR SO_2 Group 1 allowance allocation to each TR SO_2 Group 1 unit in accordance with § 97.612(a)(9), (10), and (12) and §§ 97.606(b)(2) and 97.630 through 97.635. By February 15 immediately after the promulgation of each notice of data availability required in paragraph (b)(1)(iii) of this section, the Administrator will promulgate a notice of data availability of any adjustments of the identification of TR SO_2 Group 1 units that the Administrator determines to be necessary, the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(1)(iv)(A) of this section, and the results of such calculations.

(v) To the extent any TR SO_2 Group 1 allowances are added to the new unit set-aside after promulgation of each notice of data availability required in paragraph (b)(1)(iv) of this section, the Administrator will promulgate additional notices of data availability, as deemed appropriate, of the allocation of such TR SO_2 Group 1 allowances in accordance with § 97.612(a)(10).

(2) Indian country new unit set-asides. (i) By June 1, 2012 and June 1 of each year thereafter, the Administrator will calculate the TR SO_2 Group 1 allowance allocation to each TR SO_2 Group 1 unit in Indian country within the borders of a State, in accordance with § 97.612(b)(2) through (7) and (12), for the control period in the year of the applicable calculation deadline under this paragraph and will promulgate a notice of data availability of the results of the calculations.

(ii) For each notice of data availability required in paragraph (b)(2)(i) of this section, the Administrator will provide an opportunity for submission of objections to the calculations referenced in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(2)(i) of this section and shall be limited to addressing whether the calculations (including the identification of the TR SO_2 Group 1 units) are in accordance with § 97.612(b)(2) through (7) and (12) and §§ 97.606(b)(2) and 97.630 through 97.635.

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(2)(ii)(A) of this section. By August 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(i) of this section, the Administrator will promulgate a notice of data availability of any adjustments that the Administrator determines to be necessary with regard to allocations under § 97.612(b)(2) through (7) and (12) and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(ii)(A) of this section.

(iii) If the Indian country new unit set-aside for such control period contains any TR SO_2 Group 1 allowances that have not been allocated in the applicable notice of data availability required in paragraph (b)(2)(ii) of this section, the Administrator will promulgate, by December 15 immediately after such notice, a notice of data availability that identifies any TR SO_2 Group 1 units that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period.

(iv) For each notice of data availability required in paragraph (b)(2)(iii) of this section, the Administrator will provide an opportunity for submission of objections to the identification of TR SO_2 annual units in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(2)(iii) of this section and shall be limited to addressing whether the identification of TR SO_2 annual units in such notice is in accordance with paragraph (b)(2)(iii) of this section.

(B) The Administrator will adjust the identification of TR SO_2 Group 1 units in each notice of data availability required in paragraph (b)(2)(iii) of this section to the extent necessary to ensure that it is in accordance with paragraph (b)(2)(iii) of this section and will calculate the TR SO_2 Group 1 allowance allocation to each TR SO_2 Group 1 unit in accordance with § 97.612(b)(9), (10),

and (12) and §§ 97.606(b)(2) and 97.630 through 97.635. By February 15 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii) of this section, the Administrator will promulgate a notice of data availability of any adjustments of the identification of TR SO_2 Group 1 units that the Administrator determines to be necessary, the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(iv)(A) of this section, and the results of such calculations.

(v) To the extent any TR SO_2 Group 1 allowances are added to the Indian country new unit set-aside after promulgation of each notice of data availability required in paragraph (b)(2)(iv) of this section, the Administrator will promulgate additional notices of data availability, as deemed appropriate, of the allocation of such TR NO_X Annual allowances in accordance with § 97.612(b)(10).

(c) *Units incorrectly allocated TR SO_2* Group 1 allowances. (1) For each control period in 2012 and thereafter, if the Administrator determines that TR SO_2 Group 1 allowances were allocated under paragraph (a) of this section, or under a provision of a SIP revision approved under § 52.39(d), (e), or (f) of this chapter, where such control period and the recipient are covered by the provisions of paragraph (c)(1)(i) of this section or were allocated under § 97.612(a)(2) through (7), (9), and (12) and (b)(2) through (7), (9), and (12), or under a provision of a SIP revision approved under § 52.39(e) or (f) of this chapter, where such control period and the recipient are covered by the provisions of paragraph (c)(1)(ii) of this section, then the Administrator will notify the designated representative of the recipient and will act in accordance with the procedures set forth in paragraphs (c)(2) through (5) of this section:

(i)(A) The recipient is not actually a TR SO_2 Group 1 unit under § 97.604 as of January 1, 2012 and is allocated TR SO_2 Group 1 allowances for such control period or, in the case of an allocation under a provision of a SIP revision approved under § 52.39(d), (e), or (f) of this chapter, the recipient is not actually a TR SO_2 Group 1 unit as of January 1, 2012 and is allocated TR SO_2 Group 1 allowances for such control period that the SIP revision provides should be allocated only to recipients that are TR SO_2 Group 1 units as of January 1, 2012; or

(B) The recipient is not located as of January 1 of the control period in the State from whose SO_2 Group 1 trading budget the TR SO_2 Group 1 allowances allocated under paragraph (a) of this section, or under a provision of a SIP revision approved under § 52.39(d), (e), or (f) of this chapter, were allocated for such control period.

(ii) The recipient is not actually a TR SO_2 Group 1 unit under § 97.604 as of January 1 of such control period and is allocated TR SO_2 Group 1 allowances for such control period or, in the case of an allocation under a provision of a SIP revision approved under § 52.39(d), (e), or (f) of this chapter, the recipient is not actually a TR SO_2 Group 1 unit as of January 1 of such control period and is allocated TR SO_2 Group 1 allowances for such control period that the SIP revision provides should be allocated only to recipients that are TR SO_2 Group 1 units as of January 1 of such control period.

(2) Except as provided in paragraph (c)(3) or (4) of this section, the Administrator will not record such TR SO_2 Group 1 allowances under § 97.621.

(3) If the Administrator already recorded such TR SO_2 Group 1 allowances under § 97.621 and if the Administrator makes the determination under paragraph (c)(1) of this section before making deductions for the source that includes such recipient under § 97.624(b) for such control period, then the Administrator will deduct from the account in which such TR SO_2 Group 1 allowances were recorded an amount of TR SO_2 Group 1 allowances allocated for the same or a prior control period equal to the amount of such already recorded TR SO_2 Group 1 allowances. The authorized account representative shall ensure that there are sufficient TR SO_2 Group 1 allowances in such account for completion of the deduction.

(4) If the Administrator already recorded such TR SO_2 Group 1 allowances under § 97.621 and if the Administrator makes the determination under paragraph (c)(1) of this section after making deductions for the source that includes such recipient under § 97.624(b) for such control period, then the Administrator will not make any deduction to take account of such already recorded TR SO_2 Group 1 allowances.

(5)(i) With regard to the TR SO_2 Group 1 allowances that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(i) of this section, the Administrator will:

(A) Transfer such TR SO_2 Group 1 allowances to the new unit set-aside for such control period for the State from whose SO_2 Group 1 trading budget the TR SO_2 Group 1 allowances were allocated; or

(B) If the State has a SIP revision approved under § 52.39(e) or (f) covering such control period, include such TR SO_2 Group 1 allowances in the portion of the State SO_2 Group 1 trading budget that may be allocated for such control period in accordance with such SIP revision.

(ii) With regard to the TR SO_2 Group 1 allowances that were not allocated from the Indian country new unit set-aside for such control period and that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(ii) of this paragraph, the Administrator will:

(A) Transfer such TR SO_2 Group 1 allowances to the new unit set-aside for such control period; or

(B) If the State has a SIP revision approved under § 52.39(e) or (f) covering such control period, include such TR SO_2 Group 1 allowances in the portion of the State SO_2 Group 1 trading budget that may be allocated for such control period in accordance with such SIP revision.

(iii) With regard to the TR SO_2 Group 1 allowances that were allocated from the Indian country new unit set-aside for such control period and that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(ii) of this paragraph, the Administrator will transfer such TR SO_2 Group 1 allowances to the Indian country new unit set-aside for such control period.

§ 97.612 TR SO_2 Group 1 allowance allocations to new units.

(a) For each control period in 2012 and thereafter and for the TR SO_2 Group 1 units in each State, the Administrator will allocate TR SO_2 Group 1 allowances to the TR SO_2 Group 1 units as follows:

(1) The TR SO_2 Group 1 allowances will be allocated to the following TR SO_2 Group 1 units, except as provided in paragraph (a)(10) of this section:

(i) TR SO_2 Group 1 units that are not allocated an amount of TR SO_2 Group 1 allowances in the notice of data availability issued under § 97.611(a)(1);

(ii) TR SO_2 Group 1 units whose allocation of an amount of TR SO_2 Group 1 allowances for such control period in the notice of data availability issued under § 97.611(a)(1) is covered by § 97.611(c)(2) or (3);

(iii) TR SO_2 Group 1 units that are allocated an amount of TR SO_2 Group 1 allowances for such control period in

the notice of data availability issued under § 97.611(a)(1), which allocation is terminated for such control period pursuant to § 97.611(a)(2), and that operate during the control period immediately preceding such control period; or

(iv) For purposes of paragraph (a)(9) of this section, TR SO_2 Group 1 units under § 97.611(c)(1)(ii) whose allocation of an amount of TR SO_2 Group 1 allowances for such control period in the notice of data availability issued under § 97.611(b)(1)(ii)(B) is covered by § 97.611(c)(2) or (3).

(2) The Administrator will establish a separate new unit set-aside for the State for each such control period. Each such new unit set-aside will be allocated TR SO_2 Group 1 allowances in an amount equal to the applicable amount of tons of SO_2 emissions as set forth in § 97.610(a) and will be allocated additional TR SO_2 Group 1 allowances (if any) in accordance with §§ 97.611(a)(2) and (c)(5) and paragraph (b)(10) of this section.

(3) The Administrator will determine, for each TR SO_2 Group 1 unit described in paragraph (a)(1) of this section, an allocation of TR SO_2 Group 1 allowances for the later of the following control periods and for each subsequent control period:

(i) The control period in 2012;

(ii) The first control period after the control period in which the TR SO_2 Group 1 unit commences commercial operation;

(iii) For a unit described in paragraph (a)(1)(ii) of this section, the first control period in which the TR SO_2 Group 1 unit operates in the State after operating in another jurisdiction and for which the unit is not already allocated one or more TR SO_2 Group 1 allowances; and

(iv) For a unit described in paragraph (a)(1)(iii) of this section, the first control period after the control period in which the unit resumes operation.

(4)(i) The allocation to each TR SO_2 annual unit described in paragraph (a)(1)(i) through (iii) of this section and for each control period described in paragraph (a)(3) of this section will be an amount equal to the unit's total tons of SO_2 emissions during the immediately preceding control period.

(ii) The Administrator will adjust the allocation amount in paragraph (a)(4)(i) in accordance with paragraphs (a)(5) through (7) and (12) of this section.

(5) The Administrator will calculate the sum of the TR SO_2 Group 1 allowances determined for all such TR SO_2 Group 1 units under paragraph (a)(4)(i) of this section in the State for such control period.

(6) If the amount of TR SO_2 Group 1 allowances in the new unit set-aside for the State for such control period is greater than or equal to the sum under paragraph (a)(5) of this section, then the Administrator will allocate the amount of TR SO_2 Group 1 allowances determined for each such TR SO_2 Group 1 unit under paragraph (a)(4)(i) of this section.

(7) If the amount of TR SO_2 Group 1 allowances in the new unit set-aside for the State for such control period is less than the sum under paragraph (a)(5) of this section, then the Administrator will allocate to each such TR SO_2 Group 1 unit the amount of the TR SO_2 Group 1 allowances determined under paragraph (a)(4)(i) of this section for the unit, multiplied by the amount of TR SO_2 Group 1 allowances in the new unit set-aside for such control period, divided by the sum under paragraph (a)(5) of this section, and rounded to the nearest allowance.

(8) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.611(b)(1)(i) and (ii), of the amount of TR SO_2 Group 1 allowances allocated under paragraphs (a)(2) through (7) and (12) of this section for such control period to each TR SO_2 Group 1 unit eligible for such allocation.

(9) If, after completion of the procedures under paragraphs (a)(5) through (8) of this section for such control period, any unallocated TR SO_2 Group 1 allowances remain in the new unit set-aside for the State for such control period, the Administrator will allocate such TR SO_2 Group 1 allowances as follows—

(i) The Administrator will determine, for each unit described in paragraph (a)(1) of this section that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period, the positive difference (if any) between the unit's emissions during such control period and the amount of TR SO_2 Group 1 allowances referenced in the notice of data availability required under § 97.611(b)(1)(ii) for the unit for such control period;

(ii) The Administrator will determine the sum of the positive differences determined under paragraph (a)(9)(i) of this section;

(iii) If the amount of unallocated TR SO_2 Group 1 allowances remaining in the new unit set-aside for the State for such control period is greater than or equal to the sum determined under paragraph (a)(9)(ii) of this section, then the Administrator will allocate the amount of TR SO_2 Group 1 allowances determined for each such TR SO_2 Group 1 unit under paragraph (a)(9)(i) of this section; and

(iv) If the amount of unallocated TR SO_2 Group 1 allowances remaining in the new unit set-aside for the State for such control period is less than the sum under paragraph (a)(9)(ii) of this section, then the Administrator will allocate to each such TR SO_2 Group 1 unit the amount of the TR SO_2 Group 1 allowances determined under paragraph (a)(9)(i) of this section for the unit, multiplied by the amount of unallocated TR SO_2 Group 1 allowances remaining in the new unit set-aside for such control period, divided by the sum under paragraph (a)(9)(ii) of this section, and rounded to the nearest allowance.

(10) If, after completion of the procedures under paragraphs (a)(9) and (12) of this section for such control period, any unallocated TR SO_2 Group 1 allowances remain in the new unit set-aside for the State for such control period, the Administrator will allocate to each TR SO_2 Group 1 unit that is in the State, is allocated an amount of TR SO_2 Group 1 allowances in the notice of data availability issued under § 97.611(a)(1), and continues to be allocated TR SO_2 Group 1 allowances for such control period in accordance with § 97.611(a)(2), an amount of TR SO_2 Group 1 allowances equal to the following: The total amount of such remaining unallocated TR SO_2 Group 1 allowances in such new unit set-aside, multiplied by the unit's allocation under § 97.611(a) for such control period, divided by the remainder of the amount of tons in the applicable State SO_2 Group 1 trading budget minus the sum of the amounts of tons in such new unit set-aside and the Indian country new unit set-aside for the State for such control period, and rounded to the nearest allowance.

(11) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.611(b)(1)(iii), (iv), and (v), of the amount of TR SO_2 Group 1 allowances allocated under paragraphs (a)(9), (10), and (12) of this section for such control period to each TR SO_2 Group 1 unit eligible for such allocation.

(12)(i) Notwithstanding the requirements of paragraphs (a)(2) through (11) of this section, if the calculations of allocations of a new unit set-aside for a control period in a given year under paragraph (a)(7) of this section, paragraphs (a)(6) and (9)(iv) of this section, or paragraphs (a)(6), (9)(iii), and (10) of this section would otherwise result in total allocations of such new unit set-aside exceeding the total amount of such new unit set-aside, then

the Administrator will adjust the results of the calculations under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, as follows. The Administrator will list the TR SO_2 Group 1 units in descending order based on the amount of such units' allocations under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will reduce each unit's allocation under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, by one TR SO_2 Group 1 allowance (but not below zero) in the order in which the units are listed and will repeat this reduction process as necessary, until the total allocations of such new unit set-aside equal the total amount of such new unit set-aside.

(ii) Notwithstanding the requirements of paragraphs (a)(10) and (11) of this section, if the calculations of allocations of a new unit set-aside for a control period in a given year under paragraphs (a)(6), (9)(iii), and (10) of this section would otherwise result in a total allocations of such new unit set-aside less than the total amount of such new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (a)(10) of this section, as follows. The Administrator will list the TR SO_2 Group 1 units in descending order based on the amount of such units' allocations under paragraph (a)(10) of this section and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will increase each unit's allocation under paragraph (a)(10) of this section by one TR SO_2 Group 1 allowance in the order in which the units are listed and will repeat this increase process as necessary, until the total allocations of such new unit set-aside equal the total amount of such new unit set-aside.

(b) For each control period in 2012 and thereafter and for the TR SO_2 Group 1 units located in Indian country within the borders of each State, the Administrator will allocate TR SO_2 Group 1 allowances to the TR SO_2 Group 1 units as follows:

(1) The TR SO_2 Group 1 allowances will be allocated to the following TR SO_2 Group 1 units, except as provided in paragraph (b)(10) of this section:

(i) TR SO_2 Group 1 units that are not allocated an amount of TR SO_2 Group 1 allowances in the notice of data availability issued under § 97.611(a)(1); or

(ii) For purposes of paragraph (b)(9) of this section, TR SO_2 Group 1 units under § 97.611(c)(1)(ii) whose allocation of an amount of TR SO_2 Group 1 allowances for such control period in the notice of data availability issued under § 97.611(b)(2)(ii)(B) is covered by § 97.611(c)(2) or (3).

(2) The Administrator will establish a separate Indian country new unit set-aside for the State for each such control period. Each such Indian country new unit set-aside will be allocated TR SO_2 Group 1 allowances in an amount equal to the applicable amount of tons of SO_2 emissions as set forth in § 97.610(a) and will be allocated additional TR SO_2 Group 1 allowances (if any) in accordance with § 97.611(c)(5).

(3) The Administrator will determine, for each TR SO_2 Group 1 unit described in paragraph (b)(1) of this section, an allocation of TR SO_2 Group 1 allowances for the later of the following control periods and for each subsequent control period:

(i) The control period in 2012; and

(ii) The first control period after the control period in which the TR SO_2 Group 1 unit commences commercial operation.

(4)(i) The allocation to each TR SO_2 annual unit described in paragraph (b)(1)(i) of this section and for each control period described in paragraph (b)(3) of this section will be an amount equal to the unit's total tons of SO_2 emissions during the immediately preceding control period.

(ii) The Administrator will adjust the allocation amount in paragraph (b)(4)(i) in accordance with paragraphs (b)(5) through (7) and (12) of this section.

(5) The Administrator will calculate the sum of the TR SO_2 Group 1 allowances determined for all such TR SO_2 Group 1 units under paragraph (b)(4)(i) of this section in Indian country within the borders of the State for such control period.

(6) If the amount of TR SO_2 Group 1 allowances in the Indian country new unit set-aside for the State for such control period is greater than or equal to the sum under paragraph (b)(5) of this section, then the Administrator will allocate the amount of TR SO_2 Group 1 allowances determined for each such TR SO_2 Group 1 unit under paragraph (b)(4)(i) of this section.

(7) If the amount of TR SO_2 Group 1 allowances in the Indian country new unit set-aside for the State for such control period is less than the sum under paragraph (b)(5) of this section, then the Administrator will allocate to each such TR SO_2 Group 1 unit the amount of the TR SO_2 Group 1 allowances determined under paragraph (b)(4)(i) of this section for the unit, multiplied by the amount of TR SO_2 Group 1 allowances in the Indian country new unit set-aside for such control period, divided by the sum under paragraph (b)(5) of this section, and rounded to the nearest allowance.

(8) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.611(b)(2)(i) and (ii), of the amount of TR SO_2 Group 1 allowances allocated under paragraphs (b)(2) through (7) and (12) of this section for such control period to each TR SO_2 Group 1 unit eligible for such allocation.

(9) If, after completion of the procedures under paragraphs (b)(5) through (8) of this section for such control period, any unallocated TR SO_2 Group 1 allowances remain in the Indian country new unit set-aside for the State for such control period, the Administrator will allocate such TR SO_2 Group 1 allowances as follows—

(i) The Administrator will determine, for each unit described in paragraph (b)(1) of this section that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period, the positive difference (if any) between the unit's emissions during such control period and the amount of TR SO_2 Group 1 allowances referenced in the notice of data availability required under § 97.611(b)(2)(ii) for the unit for such control period;

(ii) The Administrator will determine the sum of the positive differences determined under paragraph (b)(9)(i) of this section;

(iii) If the amount of unallocated TR SO_2 Group 1 allowances remaining in the Indian country new unit set-aside for the State for such control period is greater than or equal to the sum determined under paragraph (b)(9)(ii) of this section, then the Administrator will allocate the amount of TR SO_2 Group 1 allowances determined for each such TR SO_2 Group 1 unit under paragraph (b)(9)(i) of this section; and

(iv) If the amount of unallocated TR SO_2 Group 1 allowances remaining in the Indian country new unit set-aside for the State for such control period is less than the sum under paragraph (b)(9)(ii) of this section, then the Administrator will allocate to each such TR SO_2 Group 1 unit the amount of the TR SO_2 Group 1 allowances determined under paragraph (b)(9)(i) of this section for the unit, multiplied by the amount of unallocated TR SO_2 Group 1 allowances remaining in the Indian country new unit set-aside for such control period, divided by the sum

under paragraph (b)(9)(ii) of this section, and rounded to the nearest allowance.

(10) If, after completion of the procedures under paragraphs (b)(9) and (12) of this section for such control period, any unallocated TR SO_2 Group 1 allowances remain in the Indian country new unit set-aside for the State for such control period, the Administrator will:

(i) Transfer such unallocated TR SO_2 Group 1 allowances to the new unit set-aside for the State for such control period; or

(ii) If the State has a SIP revision approved under § 52.39(d), (e), or (f) of this chapter covering such control period, include such unallocated TR SO_2 Group 1 allowances in the portion of the State SO_2 Group 1 trading budget that may be allocated for such control period in accordance with such SIP revision.

(11) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.611(b)(2)(iii), (iv), and (v), of the amount of TR SO_2 Group 1 allowances allocated under paragraphs (b)(9), (10), and (12) for such control period to each TR SO_2 Group 1 unit eligible for such allocation.

(12)(i) Notwithstanding the requirements of paragraphs (b)(2) through (11) of this section, if the calculations of allocations of an Indian country new unit set-aside for a control period in a given year under paragraph (b)(7) of this section, paragraphs (b)(6) and (9)(iv) of this section, or paragraphs (b)(6), (9)(iii), and (10) of this section would otherwise result in total allocations of such Indian country new unit set-aside exceeding the total amount of such Indian country new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, as follows. The Administrator will list the TR SO_2 Group 1 units in descending order based on the amount of such units' allocations under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will reduce each unit's allocation under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, by one TR SO_2 Group 1 allowance (but not below zero) in the order in which the units are listed and will repeat this reduction process as necessary, until the total allocations of such Indian country new unit set-aside equal the total amount of such Indian country new unit set-aside.

(ii) Notwithstanding the requirements of paragraphs (b)(10) and (11) of this section, if the calculations of allocations of an Indian country new unit set-aside for a control period in a given year under paragraphs (b)(6), (9)(iii), and (10) of this section would otherwise result in a total allocations of such Indian country new unit set-aside less than the total amount of such Indian country new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (b)(10) of this section, as follows. The Administrator will list the TR SO_2 Group 1 units in descending order based on the amount of such units' allocations under paragraph (b)(10) of this section and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will increase each unit's allocation under paragraph (b)(10) of this section by one TR SO_2 Group 1 allowance in the order in which the units are listed and will repeat this increase process as necessary, until the total allocations of such Indian country new unit set-aside equal the total amount of such Indian country new unit set-aside.

§ 97.613 Authorization of designated representative and alternate designated representative.

(a) Except as provided under § 97.615, each TR SO_2 Group 1 source, including all TR SO_2 Group 1 units at the source, shall have one and only one designated representative, with regard to all matters under the TR SO_2 Group 1 Trading Program.

(1) The designated representative shall be selected by an agreement binding on the owners and operators of the source and all TR SO_2 Group 1 units at the source and shall act in accordance with the certification statement in § 97.616(a)(4)(iii).

(2) Upon and after receipt by the Administrator of a complete certificate of representation under § 97.616:

(i) The designated representative shall be authorized and shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each owner and operator of the source and each TR SO_2 Group 1 unit at the source in all matters pertaining to the TR SO_2 Group 1 Trading Program, notwithstanding any agreement between the designated representative and such owners and operators; and

(ii) The owners and operators of the source and each TR SO_2 Group 1 unit at the source shall be bound by any decision or order issued to the designated representative by the Administrator regarding the source or any such unit.

(b) Except as provided under § 97.615, each TR SO_2 Group 1 source may have one and only one alternate designated representative, who may act on behalf of the designated representative. The agreement by which the alternate designated representative is selected shall include a procedure for authorizing the alternate designated representative to act in lieu of the designated representative.

(1) The alternate designated representative shall be selected by an agreement binding on the owners and operators of the source and all TR SO_2 Group 1 units at the source and shall act in accordance with the certification statement in § 97.616(a)(4)(iii).

(2) Upon and after receipt by the Administrator of a complete certificate of representation under § 97.616,

(i) The alternate designated representative shall be authorized;

(ii) Any representation, action, inaction, or submission by the alternate designated representative shall be deemed to be a representation, action, inaction, or submission by the designated representative; and

(iii) The owners and operators of the source and each TR SO_2 Group 1 unit at the source shall be bound by any decision or order issued to the alternate designated representative by the Administrator regarding the source or any such unit.

(c) Except in this section, § 97.602, and §§ 97.614 through 97.618, whenever the term ''designated representative'' (as distinguished from the term ''common designated representative'') is used in this subpart, the term shall be construed to include the designated representative or any alternate designated representative.

§ 97.614 Responsibilities of designated representative and alternate designated representative.

(a) Except as provided under § 97.618 concerning delegation of authority to make submissions, each submission under the TR SO_2 Group 1 Trading Program shall be made, signed, and certified by the designated representative or alternate designated representative for each TR SO_2 Group 1 source and TR SO_2 Group 1 unit for which the submission is made. Each such submission shall include the following certification statement by the designated representative or alternate designated representative: ''I am authorized to make this submission on behalf of the owners and operators of the source or units for which the submission is made. I certify under

penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(b) The Administrator will accept or act on a submission made for a TR SO_2 Group 1 source or a TR SO_2 Group 1 unit only if the submission has been made, signed, and certified in accordance with paragraph (a) of this section and § 97.618.

§ 97.615 Changing designated representative and alternate designated representative; changes in owners and operators; changes in units at the source.

(a) *Changing designated representative.* The designated representative may be changed at any time upon receipt by the Administrator of a superseding complete certificate of representation under § 97.616. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous designated representative before the time and date when the Administrator receives the superseding certificate of representation shall be binding on the new designated representative and the owners and operators of the TR SO_2 Group 1 source and the TR SO_2 Group 1 units at the source.

(b) *Changing alternate designated representative.* The alternate designated representative may be changed at any time upon receipt by the Administrator of a superseding complete certificate of representation under § 97.616. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous alternate designated representative before the time and date when the Administrator receives the superseding certificate of representation shall be binding on the new alternate designated representative, the designated representative, and the owners and operators of the TR SO_2 Group 1 source and the TR SO_2 Group 1 units at the source.

(c) *Changes in owners and operators.* (1) In the event an owner or operator of a TR SO_2 Group 1 source or a TR SO_2 Group 1 unit at the source is not included in the list of owners and operators in the certificate of representation under § 97.616, such owner or operator shall be deemed to be subject to and bound by the certificate of representation, the representations, actions, inactions, and submissions of the designated representative and any alternate designated representative of the source or unit, and the decisions and orders of the Administrator, as if the owner or operator were included in such list.

(2) Within 30 days after any change in the owners and operators of a TR SO_2 Group 1 source or a TR SO_2 Group 1 unit at the source, including the addition or removal of an owner or operator, the designated representative or any alternate designated representative shall submit a revision to the certificate of representation under § 97.616 amending the list of owners and operators to reflect the change.

(d) *Changes in units at the source.* Within 30 days of any change in which units are located at a TR SO_2 Group 1 source (including the addition or removal of a unit), the designated representative or any alternate designated representative shall submit a certificate of representation under § 97.616 amending the list of units to reflect the change.

(1) If the change is the addition of a unit that operated (other than for purposes of testing by the manufacturer before initial installation) before being located at the source, then the certificate of representation shall identify, in a format prescribed by the Administrator, the entity from whom the unit was purchased or otherwise obtained (including name, address, telephone number, and facsimile number (if any)), the date on which the unit was purchased or otherwise obtained, and the date on which the unit became located at the source.

(2) If the change is the removal of a unit, then the certificate of representation shall identify, in a format prescribed by the Administrator, the entity to which the unit was sold or that otherwise obtained the unit (including name, address, telephone number, and facsimile number (if any)), the date on which the unit was sold or otherwise obtained, and the date on which the unit became no longer located at the source.

§ 97.616 Certificate of representation.

(a) A complete certificate of representation for a designated representative or an alternate designated representative shall include the following elements in a format prescribed by the Administrator:

(1) Identification of the TR SO_2 Group 1 source, and each TR SO_2 Group 1 unit at the source, for which the certificate of representation is submitted, including source name, source category and NAICS code (or, in the absence of a NAICS code, an equivalent code), State, plant code, county, latitude and longitude, unit identification number and type, identification number and nameplate capacity (in MWe, rounded to the nearest tenth) of each generator served by each such unit, actual or projected date of commencement of commercial operation, and a statement of whether such source is located in Indian Country. If a projected date of commencement of commercial operation is provided, the actual date of commencement of commercial operation shall be provided when such information becomes available.

(2) The name, address, e-mail address (if any), telephone number, and facsimile transmission number (if any) of the designated representative and any alternate designated representative.

(3) A list of the owners and operators of the TR SO_2 Group 1 source and of each TR SO_2 Group 1 unit at the source.

(4) The following certification statements by the designated representative and any alternate designated representative—

(i) ''I certify that I was selected as the designated representative or alternate designated representative, as applicable, by an agreement binding on the owners and operators of the source and each TR SO_2 Group 1 unit at the source.''

(ii) ''I certify that I have all the necessary authority to carry out my duties and responsibilities under the TR SO_2 Group 1 Trading Program on behalf of the owners and operators of the source and of each TR SO_2 Group 1 unit at the source and that each such owner and operator shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the Administrator regarding the source or unit.''

(iii) ''Where there are multiple holders of a legal or equitable title to, or a leasehold interest in, a TR SO_2 Group 1 unit, or where a utility or industrial customer purchases power from a TR SO_2 Group 1 unit under a life-of-the-unit, firm power contractual arrangement, I certify that: I have given a written notice of my selection as the 'designated representative' or 'alternate designated representative', as applicable, and of the agreement by which I was selected to each owner and operator of the source and of each TR SO_2 Group 1 unit at the source; and TR SO_2 Group 1 allowances and proceeds of transactions involving TR SO_2 Group 1 allowances will be deemed to be held or distributed in proportion to each

holder's legal, equitable, leasehold, or contractual reservation or entitlement, except that, if such multiple holders have expressly provided for a different distribution of TR SO_2 Group 1 allowances by contract, TR SO_2 Group 1 allowances and proceeds of transactions involving TR SO_2 Group 1 allowances will be deemed to be held or distributed in accordance with the contract.''

(5) The signature of the designated representative and any alternate designated representative and the dates signed.

(b) Unless otherwise required by the Administrator, documents of agreement referred to in the certificate of representation shall not be submitted to the Administrator. The Administrator shall not be under any obligation to review or evaluate the sufficiency of such documents, if submitted.

§ 97.617 Objections concerning designated representative and alternate designated representative.

(a) Once a complete certificate of representation under § 97.616 has been submitted and received, the Administrator will rely on the certificate of representation unless and until a superseding complete certificate of representation under § 97.616 is received by the Administrator.

(b) Except as provided in paragraph (a) of this section, no objection or other communication submitted to the Administrator concerning the authorization, or any representation, action, inaction, or submission, of a designated representative or alternate designated representative shall affect any representation, action, inaction, or submission of the designated representative or alternate designated representative or the finality of any decision or order by the Administrator under the TR SO_2 Group 1 Trading Program.

(c) The Administrator will not adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of any designated representative or alternate designated representative, including private legal disputes concerning the proceeds of TR SO_2 Group 1 allowance transfers.

§ 97.618 Delegation by designated representative and alternate designated representative.

(a) A designated representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(b) An alternate designated representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(c) In order to delegate authority to a natural person to make an electronic submission to the Administrator in accordance with paragraph (a) or (b) of this section, the designated representative or alternate designated representative, as appropriate, must submit to the Administrator a notice of delegation, in a format prescribed by the Administrator, that includes the following elements:

(1) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of such designated representative or alternate designated representative;

(2) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of each such natural person (referred to in this section as an ''agent'');

(3) For each such natural person, a list of the type or types of electronic submissions under paragraph (a) or (b) of this section for which authority is delegated to him or her; and

(4) The following certification statements by such designated representative or alternate designated representative:

(i) ''I agree that any electronic submission to the Administrator that is made by an agent identified in this notice of delegation and of a type listed for such agent in this notice of delegation and that is made when I am a designated representative or alternate designated representative, as appropriate, and before this notice of delegation is superseded by another notice of delegation under 40 CFR 97.618(d) shall be deemed to be an electronic submission by me.''

(ii) ''Until this notice of delegation is superseded by another notice of delegation under 40 CFR 97.618(d), I agree to maintain an e-mail account and to notify the Administrator immediately of any change in my e-mail address unless all delegation of authority by me under 40 CFR 97.618 is terminated.''.

(d) A notice of delegation submitted under paragraph (c) of this section shall be effective, with regard to the designated representative or alternate designated representative identified in such notice, upon receipt of such notice by the Administrator and until receipt by the Administrator of a superseding notice of delegation submitted by such designated representative or alternate designated representative, as appropriate. The superseding notice of delegation may replace any previously identified agent, add a new agent, or eliminate entirely any delegation of authority.

(e) Any electronic submission covered by the certification in paragraph (c)(4)(i) of this section and made in accordance with a notice of delegation effective under paragraph (d) of this section shall be deemed to be an electronic submission by the designated representative or alternate designated representative submitting such notice of delegation.

§ 97.619 [Reserved]

§ 97.620 Establishment of compliance accounts, assurance accounts, and general accounts.

(a) *Compliance accounts.* Upon receipt of a complete certificate of representation under § 97.616, the Administrator will establish a compliance account for the TR SO_2 Group 1 source for which the certificate of representation was submitted, unless the source already has a compliance account. The designated representative and any alternate designated representative of the source shall be the authorized account representative and the alternate authorized account representative respectively of the compliance account.

(b) *Assurance accounts.* The Administrator will establish assurance accounts for certain owners and operators and States in accordance with § 97.625(b)(3).

(c) *General accounts.* (1) Application for general account. (i) Any person may apply to open a general account, for the purpose of holding and transferring TR SO_2 Group 1 allowances, by submitting to the Administrator a complete application for a general account. Such application shall designate one and only one authorized account representative and may designate one and only one alternate authorized account representative who may act on behalf of the authorized account representative.

(A) The authorized account representative and alternate authorized account representative shall be selected by an agreement binding on the persons who have an ownership interest with respect to TR SO_2 Group 1 allowances held in the general account.

(B) The agreement by which the alternate authorized account representative is selected shall include a procedure for authorizing the alternate authorized account representative to act in lieu of the authorized account representative.

(ii) A complete application for a general account shall include the

following elements in a format prescribed by the Administrator:

(A) Name, mailing address, e-mail address (if any), telephone number, and facsimile transmission number (if any) of the authorized account representative and any alternate authorized account representative;

(B) An identifying name for the general account;

(C) A list of all persons subject to a binding agreement for the authorized account representative and any alternate authorized account representative to represent their ownership interest with respect to the TR SO_2 Group 1 allowances held in the general account;

(D) The following certification statement by the authorized account representative and any alternate authorized account representative: ''I certify that I was selected as the authorized account representative or the alternate authorized account representative, as applicable, by an agreement that is binding on all persons who have an ownership interest with respect to TR SO_2 Group 1 allowances held in the general account. I certify that I have all the necessary authority to carry out my duties and responsibilities under the TR SO_2 Group 1 Trading Program on behalf of such persons and that each such person shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the Administrator regarding the general account.''

(E) The signature of the authorized account representative and any alternate authorized account representative and the dates signed.

(iii) Unless otherwise required by the Administrator, documents of agreement referred to in the application for a general account shall not be submitted to the Administrator. The Administrator shall not be under any obligation to review or evaluate the sufficiency of such documents, if submitted.

(2) Authorization of authorized account representative and alternate authorized account representative. (i) Upon receipt by the Administrator of a complete application for a general account under paragraph (b)(1) of this section, the Administrator will establish a general account for the person or persons for whom the application is submitted, and upon and after such receipt by the Administrator:

(A) The authorized account representative of the general account shall be authorized and shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each person who has an ownership interest with respect to TR SO_2 Group 1 allowances held in the general account in all matters pertaining to the TR SO_2 Group 1 Trading Program, notwithstanding any agreement between the authorized account representative and such person.

(B) Any alternate authorized account representative shall be authorized, and any representation, action, inaction, or submission by any alternate authorized account representative shall be deemed to be a representation, action, inaction, or submission by the authorized account representative.

(C) Each person who has an ownership interest with respect to TR SO_2 Group 1 allowances held in the general account shall be bound by any decision or order issued to the authorized account representative or alternate authorized account representative by the Administrator regarding the general account.

(ii) Except as provided in paragraph (c)(5) of this section concerning delegation of authority to make submissions, each submission concerning the general account shall be made, signed, and certified by the authorized account representative or any alternate authorized account representative for the persons having an ownership interest with respect to TR SO_2 Group 1 allowances held in the general account. Each such submission shall include the following certification statement by the authorized account representative or any alternate authorized account representative: ''I am authorized to make this submission on behalf of the persons having an ownership interest with respect to the TR SO_2 Group 1 allowances held in the general account. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(iii) Except in this section, whenever the term ''authorized account representative'' is used in this subpart, the term shall be construed to include the authorized account representative or any alternate authorized account representative.

(3) Changing authorized account representative and alternate authorized account representative; changes in persons with ownership interest. (i) The authorized account representative of a general account may be changed at any time upon receipt by the Administrator of a superseding complete application for a general account under paragraph (c)(1) of this section. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous authorized account representative before the time and date when the Administrator receives the superseding application for a general account shall be binding on the new authorized account representative and the persons with an ownership interest with respect to the TR SO_2 Group 1 allowances in the general account.

(ii) The alternate authorized account representative of a general account may be changed at any time upon receipt by the Administrator of a superseding complete application for a general account under paragraph (c)(1) of this section. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous alternate authorized account representative before the time and date when the Administrator receives the superseding application for a general account shall be binding on the new alternate authorized account representative, the authorized account representative, and the persons with an ownership interest with respect to the TR SO_2 Group 1 allowances in the general account.

(iii)(A) In the event a person having an ownership interest with respect to TR SO_2 Group 1 allowances in the general account is not included in the list of such persons in the application for a general account, such person shall be deemed to be subject to and bound by the application for a general account, the representation, actions, inactions, and submissions of the authorized account representative and any alternate authorized account representative of the account, and the decisions and orders of the Administrator, as if the person were included in such list.

(B) Within 30 days after any change in the persons having an ownership interest with respect to SO_2 Group 1 allowances in the general account, including the addition or removal of a person, the authorized account representative or any alternate authorized account representative shall submit a revision to the application for a general account amending the list of persons having an ownership interest with respect to the TR SO_2 Group 1 allowances in the general account to include the change.

(4) Objections concerning authorized account representative and alternate

authorized account representative. (i) Once a complete application for a general account under paragraph (c)(1) of this section has been submitted and received, the Administrator will rely on the application unless and until a superseding complete application for a general account under paragraph (b)(1) of this section is received by the Administrator.

(ii) Except as provided in paragraph (c)(4)(i) of this section, no objection or other communication submitted to the Administrator concerning the authorization, or any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative of a general account shall affect any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative or the finality of any decision or order by the Administrator under the TR SO_2 Group 1 Trading Program.

(iii) The Administrator will not adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative of a general account, including private legal disputes concerning the proceeds of TR SO_2 Group 1 allowance transfers.

(5) Delegation by authorized account representative and alternate authorized account representative. (i) An authorized account representative of a general account may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(ii) An alternate authorized account representative of a general account may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(iii) In order to delegate authority to a natural person to make an electronic submission to the Administrator in accordance with paragraph (c)(5)(i) or (ii) of this section, the authorized account representative or alternate authorized account representative, as appropriate, must submit to the Administrator a notice of delegation, in a format prescribed by the Administrator, that includes the following elements:

(A) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of such authorized account representative or alternate authorized account representative;

(B) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of each such natural person (referred to in this section as an ''agent'');

(C) For each such natural person, a list of the type or types of electronic submissions under paragraph (c)(5)(i) or (ii) of this section for which authority is delegated to him or her;

(D) The following certification statement by such authorized account representative or alternate authorized account representative: ''I agree that any electronic submission to the Administrator that is made by an agent identified in this notice of delegation and of a type listed for such agent in this notice of delegation and that is made when I am an authorized account representative or alternate authorized representative, as appropriate, and before this notice of delegation is superseded by another notice of delegation under 40 CFR 97.620(c)(5)(iv) shall be deemed to be an electronic submission by me.''; and

(E) The following certification statement by such authorized account representative or alternate authorized account representative: ''Until this notice of delegation is superseded by another notice of delegation under 40 CFR 97.620(c)(5)(iv), I agree to maintain an e-mail account and to notify the Administrator immediately of any change in my e-mail address unless all delegation of authority by me under 40 CFR 97.620(c)(5) is terminated.''.

(iv) A notice of delegation submitted under paragraph (c)(5)(iii) of this section shall be effective, with regard to the authorized account representative or alternate authorized account representative identified in such notice, upon receipt of such notice by the Administrator and until receipt by the Administrator of a superseding notice of delegation submitted by such authorized account representative or alternate authorized account representative, as appropriate. The superseding notice of delegation may replace any previously identified agent, add a new agent, or eliminate entirely any delegation of authority.

(v) Any electronic submission covered by the certification in paragraph (c)(5)(iii)(D) of this section and made in accordance with a notice of delegation effective under paragraph (c)(5)(iv) of this section shall be deemed to be an electronic submission by the designated representative or alternate designated representative submitting such notice of delegation.

(6) Closing a general account. (i) The authorized account representative or alternate authorized account representative of a general account may submit to the Administrator a request to close the account. Such request shall include a correctly submitted TR SO_2 Group 1 allowance transfer under § 97.622 for any TR SO_2 Group 1 allowances in the account to one or more other Allowance Management System accounts.

(ii) If a general account has no TR SO_2 Group 1 allowance transfers to or from the account for a 12-month period or longer and does not contain any TR SO_2 Group 1 allowances, the Administrator may notify the authorized account representative for the account that the account will be closed after 30 days after the notice is sent. The account will be closed after the 30-day period unless, before the end of the 30-day period, the Administrator receives a correctly submitted TR SO_2 Group 1 allowance transfer under § 97.622 to the account or a statement submitted by the authorized account representative or alternate authorized account representative demonstrating to the satisfaction of the Administrator good cause as to why the account should not be closed.

(d) *Account identification.* The Administrator will assign a unique identifying number to each account established under paragraph (a), (b), or (c) of this section.

(e) *Responsibilities of authorized account representative and alternate authorized account representative.* After the establishment of a compliance account or general account, the Administrator will accept or act on a submission pertaining to the account, including, but not limited to, submissions concerning the deduction or transfer of TR SO_2 Group 1 allowances in the account, only if the submission has been made, signed, and certified in accordance with §§ 97.614(a) and 97.618 or paragraphs (c)(2)(ii) and (c)(5) of this section.

§ 97.621 Recordation of TR SO_2 Group 1 allowance allocations and auction results.

(a) By November 7, 2011, the Administrator will record in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source in accordance with § 97.611(a) for the control period in 2012.

(b) By November 7, 2011, the Administrator will record in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source in accordance with

§ 97.611(a) for the control period in 2013, unless the State in which the source is located notifies the Administrator in writing by October 17, 2011 of the State's intent to submit to the Administrator a complete SIP revision by April 1, 2012 meeting the requirements of § 52.39(d)(1) through (4) of this chapter.

(1) If, by April 1, 2012, the State does not submit to the Administrator such complete SIP revision, the Administrator will record by April 15, 2012 in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source in accordance with § 97.611(a) for the control period in 2013.

(2) If the State submits to the Administrator by April 1, 2012, and the Administrator approves by October 1, 2012, such complete SIP revision, the Administrator will record by October 1, 2012 in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source as provided in such approved, complete SIP revision for the control period in 2013.

(3) If the State submits to the Administrator by April 1, 2012, and the Administrator does not approve by October 1, 2012, such complete SIP revision, the Administrator will record by October 1, 2012 in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source in accordance with § 97.611(a) for the control period in 2013.

(c) By July 1, 2013, the Administrator will record in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source, or in each appropriate Allowance Management System account the TR SO_2 Group 1 allowances auctioned to TR SO_2 Group 1 units, in accordance with § 97.611(a), or with a SIP revision approved under § 52.39(e) or (f) of this chapter, for the control period in 2014 and 2015.

(d) By July 1, 2014, the Administrator will record in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source, or in each appropriate Allowance Management System account the TR SO_2 Group 1 allowances auctioned to TR SO_2 Group 1 units, in accordance with § 97.611(a), or with a SIP revision approved under § 52.39(e) or (f) of this chapter, for the control period in 2016 and 2017.

(e) By July 1, 2015, the Administrator will record in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source, or in each appropriate Allowance Management System account the TR SO_2 Group 1 allowances auctioned to TR SO_2 Group 1 units, in accordance with § 97.611(a), or with a SIP revision approved under § 52.39(e) or (f) of this chapter, for the control period in 2018 and 2019.

(f) By July 1, 2016 and July 1 of each year thereafter, the Administrator will record in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source, or in each appropriate Allowance Management System account the TR SO_2 Group 1 allowances auctioned to TR SO_2 Group 1 units, in accordance with § 97.611(a), or with a SIP revision approved under § 52.39(e) and (f) of this chapter, for the control period in the fourth year after the year of the applicable recordation deadline under this paragraph.

(g) By August 1, 2012 and August 1 of each year thereafter, the Administrator will record in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source, or in each appropriate Allowance Management System account the TR SO_2 Group 1 allowances auctioned to TR SO_2 Group 1 units, in accordance with § 97.612(a)(2) through (8) and (12), or with a SIP revision approved under § 52.39(e) and (f) of this chapter, for the control period in the year of the applicable recordation deadline under this paragraph.

(h) By August 1, 2012 and August 1 of each year thereafter, the Administrator will record in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source in accordance with § 97.612(b)(2) through (8) and (12) for the control period in the year of the applicable recordation deadline under this paragraph.

(i) By February 15, 2013 and February 15 of each year thereafter, the Administrator will record in each TR SO_2 Group 1 source's compliance account the TR SO_2 Group 1 allowances allocated to the TR SO_2 Group 1 units at the source in accordance with § 97.612(a)(9) through (12), for the control period in the year before the year of the applicable recordation deadline under this paragraph.

(j) By the date on which any allocation or auction results, other than an allocation or auction results described in paragraphs (a) through (i) of this section, of TR SO_2 Group 1 allowances to a recipient is made by or are submitted to the Administrator in accordance with § 97.611 or § 97.612 or with a SIP revision approved under § 52.39(e) or (f) of this chapter, the Administrator will record such allocation or auction results in the appropriate Allowance Management System account.

(k) When recording the allocation or auction of TR SO_2 Group 1 allowances to a TR SO_2 Group 1 unit or other entity in an Allowance Management System account, the Administrator will assign each TR SO_2 Group 1 allowance a unique identification number that will include digits identifying the year of the control period for which the TR SO_2 Group 1 allowance is allocated or auctioned.

§ 97.622 Submission of TR SO_2 Group 1 allowance transfers.

(a) An authorized account representative seeking recordation of a TR SO_2 Group 1 allowance transfer shall submit the transfer to the Administrator.

(b) A TR SO_2 Group 1 allowance transfer shall be correctly submitted if:

(1) The transfer includes the following elements, in a format prescribed by the Administrator:

(i) The account numbers established by the Administrator for both the transferor and transferee accounts;

(ii) The serial number of each TR SO_2 Group 1 allowance that is in the transferor account and is to be transferred; and

(iii) The name and signature of the authorized account representative of the transferor account and the date signed; and

(2) When the Administrator attempts to record the transfer, the transferor account includes each TR SO_2 Group 1 allowance identified by serial number in the transfer.

§ 97.623 Recordation of TR SO_2 Group 1 allowance transfers.

(a) Within 5 business days (except as provided in paragraph (b) of this section) of receiving a TR SO_2 Group 1 allowance transfer that is correctly submitted under § 97.622, the Administrator will record a TR SO_2 Group 1 allowance transfer by moving each TR SO_2 Group 1 allowance from the transferor account to the transferee account as specified in the transfer.

(b) A TR SO_2 Group 1 allowance transfer to or from a compliance account that is submitted for recordation after the allowance transfer deadline for a control period and that includes any TR SO_2 Group 1 allowances allocated for

any control period before such allowance transfer deadline will not be recorded until after the Administrator completes the deductions from such compliance account under § 97.624 for the control period immediately before such allowance transfer deadline.

(c) Where a TR SO_2 Group 1 allowance transfer is not correctly submitted under § 97.622, the Administrator will not record such transfer.

(d) Within 5 business days of recordation of a TR SO_2 Group 1 allowance transfer under paragraphs (a) and (b) of the section, the Administrator will notify the authorized account representatives of both the transferor and transferee accounts.

(e) Within 10 business days of receipt of a TR SO_2 Group 1 allowance transfer that is not correctly submitted under § 97.622, the Administrator will notify the authorized account representatives of both accounts subject to the transfer of:

(1) A decision not to record the transfer, and

(2) The reasons for such non-recordation.

§ 97.624 Compliance with TR SO_2 Group 1 emissions limitation.

(a) *Availability for deduction for compliance.* TR SO_2 Group 1 allowances are available to be deducted for compliance with a source's TR SO_2 Group 1 emissions limitation for a control period in a given year only if the TR SO_2 Group 1 allowances:

(1) Were allocated for such control period or a control period in a prior year; and

(2) Are held in the source's compliance account as of the allowance transfer deadline for such control period.

(b) *Deductions for compliance.* After the recordation, in accordance with § 97.623, of TR SO_2 Group 1 allowance transfers submitted by the allowance transfer deadline for a control period in a given year, the Administrator will deduct from each source's compliance account TR SO_2 Group 1 allowances available under paragraph (a) of this section in order to determine whether the source meets the TR SO_2 Group 1 emissions limitation for such control period, as follows:

(1) Until the amount of TR SO_2 Group 1 allowances deducted equals the number of tons of total SO_2 emissions from all TR SO_2 Group 1 units at the source for such control period; or

(2) If there are insufficient TR SO_2 Group 1 allowances to complete the deductions in paragraph (b)(1) of this section, until no more TR SO_2 Group 1 allowances available under paragraph (a) of this section remain in the compliance account.

(c)(1) *Identification of TR SO_2 Group 1 allowances by serial number.* The authorized account representative for a source's compliance account may request that specific TR SO_2 Group 1 allowances, identified by serial number, in the compliance account be deducted for emissions or excess emissions for a control period in a given year in accordance with paragraph (b) or (d) of this section. In order to be complete, such request shall be submitted to the Administrator by the allowance transfer deadline for such control period and include, in a format prescribed by the Administrator, the identification of the TR SO_2 Group 1 source and the appropriate serial numbers.

(2) *First-in, first-out.* The Administrator will deduct TR SO_2 Group 1 allowances under paragraph (b) or (d) of this section from the source's compliance account in accordance with a complete request under paragraph (c)(1) of this section or, in the absence of such request or in the case of identification of an insufficient amount of TR SO_2 Group 1 allowances in such request, on a first-in, first-out accounting basis in the following order:

(i) Any TR SO_2 Group 1 allowances that were allocated to the units at the source and not transferred out of the compliance account, in the order of recordation; and then

(ii) Any TR SO_2 Group 1 allowances that were allocated to any unit and transferred to and recorded in the compliance account pursuant to this subpart, in the order of recordation.

(d) *Deductions for excess emissions.* After making the deductions for compliance under paragraph (b) of this section for a control period in a year in which the TR SO_2 Group 1 source has excess emissions, the Administrator will deduct from the source's compliance account an amount of TR SO_2 Group 1 allowances, allocated for a control period in a prior year or the control period in the year of the excess emissions or in the immediately following year, equal to two times the number of tons of the source's excess emissions.

(e) *Recordation of deductions.* The Administrator will record in the appropriate compliance account all deductions from such an account under paragraphs (b) and (d) of this section.

§ 97.625 Compliance with TR SO_2 Group 1 assurance provisions.

(a) *Availability for deduction.* TR SO_2 Group 1 allowances are available to be deducted for compliance with the TR SO_2 Group 1 assurance provisions for a control period in a given year by the owners and operators of a group of one or more TR SO_2 Group 1 sources and units in a State (and Indian country within the borders of such State) only if the TR SO_2 Group 1 allowances:

(1) Were allocated for a control period in a prior year or the control period in the given year or in the immediately following year; and

(2) Are held in the assurance account, established by the Administrator for such owners and operators of such group of TR SO_2 Group 1 sources and units in such State (and Indian country within the borders of such State) under paragraph (b)(3) of this section, as of the deadline established in paragraph (b)(4) of this section.

(b) *Deductions for compliance.* The Administrator will deduct TR SO_2 Group 1 allowances available under paragraph (a) of this section for compliance with the TR SO_2 Group 1 assurance provisions for a State for a control period in a given year in accordance with the following procedures:

(1) By June 1, 2013 and June 1 of each year thereafter, the Administrator will:

(i) Calculate, for each State (and Indian country within the borders of such State), the total SO_2 emissions from all TR SO_2 Group 1 units at TR SO_2 Group 1 sources in the State (and Indian country within the borders of such State) during the control period in the year before the year of this calculation deadline and the amount, if any, by which such total SO_2 emissions exceed the State assurance level as described in § 97.606(c)(2)(iii); and

(ii) Promulgate a notice of data availability of the results of the calculations required in paragraph (b)(1)(i) of this section, including separate calculations of the SO_2 emissions from each TR SO_2 Group 1 source.

(2) For each notice of data availability required in paragraph (b)(1)(ii) of this section and for any State (and Indian country within the borders of such State) identified in such notice as having TR SO_2 Group 1 units with total SO_2 emissions exceeding the State assurance level for a control period in a given year, as described in § 97.606(c)(2)(iii):

(i) By July 1 immediately after the promulgation of such notice, the designated representative of each TR SO_2 Group 1 source in each such State (and Indian country within the borders of such State) shall submit a statement, in a format prescribed by the Administrator, providing for each TR SO_2 Group 1 unit (if any) at the source

that operates during, but is not allocated an amount of TR SO_2 Group 1 allowances for, such control period, the unit's allowable SO_2 emission rate for such control period and, if such rate is expressed in lb per mmBtu, the unit's heat rate.

(ii) By August 1 immediately after the promulgation of such notice, the Administrator will calculate, for each such State (and Indian country within the borders of such State) and such control period and each common designated representative for such control period for a group of one or more TR SO_2 Group 1 sources and units in the State (and Indian country within the borders of such State), the common designated representative's share of the total SO_2 emissions from all TR SO_2 Group 1 units at TR SO_2 Group 1 sources in the State (and Indian country within the borders of such State), the common designated representative's assurance level, and the amount (if any) of TR SO_2 Group 1 allowances that the owners and operators of such group of sources and units must hold in accordance with the calculation formula in § 97.606(c)(2)(i) and will promulgate a notice of data availability of the results of these calculations.

(iii) The Administrator will provide an opportunity for submission of objections to the calculations referenced by the notice of data availability required in paragraph (b)(2)(ii) of this section and the calculations referenced by the relevant notice of data availability required in paragraph (b)(1)(i) of this section.

(A) Objections shall be submitted by the deadline specified in such notice and shall be limited to addressing whether the calculations referenced in the relevant notice required under paragraph (b)(1)(ii) of this section and referenced in the notice required under paragraph (b)(2)(ii) of this section are in accordance with § 97.606(c)(2)(iii), §§ 97.606(b) and 97.630 through 97.635, the definitions of ''common designated representative'', ''common designated representative's assurance level'', and ''common designated representative's share'' in § 97.602, and the calculation formula in § 97.606(c)(2)(i).

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(2)(iii)(A) of this section. By October 1 immediately after the promulgation of such notice, the Administrator will promulgate a notice of data availability of any adjustments that the Administrator determines to be necessary and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(iii)(A) of this section.

(3) For any State (and Indian country within the borders of such State) referenced in each notice of data availability required in paragraph (b)(2)(iii)(B) of this section as having TR SO_2 Group 1 units with total SO_2 emissions exceeding the State assurance level for a control period in a given year, the Administrator will establish one assurance account for each set of owners and operators referenced, in the notice of data availability required under paragraph (b)(2)(iii)(B) of this section, as all of the owners and operators of a group of TR SO_2 Group 1 sources and units in the State (and Indian country within the borders of such State) having a common designated representative for such control period and as being required to hold TR SO_2 Group 1 allowances.

(4)(i) As of midnight of November 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii)(B) of this section, the owners and operators described in paragraph (b)(3) of this section shall hold in the assurance account established for them and for the appropriate TR SO_2 Group 1 sources, TR SO_2 Group 1 units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section a total amount of TR SO_2 Group 1 allowances, available for deduction under paragraph (a) of this section, equal to the amount such owners and operators are required to hold with regard to such sources, units and State (and Indian country within the borders of such State) as calculated by the Administrator and referenced in such notice.

(ii) Notwithstanding the allowance-holding deadline specified in paragraph (b)(4)(i) of this section, if November 1 is not a business day, then such allowance-holding deadline shall be midnight of the first business day thereafter.

(5) After November 1 (or the date described in paragraph (b)(4)(ii) of this section) immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii)(B) of this section and after the recordation, in accordance with § 97.623, of TR SO_2 Group 1 allowance transfers submitted by midnight of such date, the Administrator will determine whether the owners and operators described in paragraph (b)(3) of this section hold, in the assurance account for the appropriate TR SO_2 Group 1 sources, TR SO_2 Group 1 units, and State (and Indian country within the borders of such State) established under paragraph (b)(3) of this section, the amount of TR SO_2 Group 1 allowances available under paragraph (a) of this section that the owners and operators are required to hold with regard to such sources, units, and State (and Indian country within the borders of such State) as calculated by the Administrator and referenced in the notice required in paragraph (b)(2)(iii)(B) of this section.

(6) Notwithstanding any other provision of this subpart and any revision, made by or submitted to the Administrator after the promulgation of the notice of data availability required in paragraph (b)(2)(iii)(B) of this section for a control period in a given year, of any data used in making the calculations referenced in such notice, the amounts of TR SO_2 Group 1 allowances that the owners and operators are required to hold in accordance with § 97.606(c)(2)(i) for such control period shall continue to be such amounts as calculated by the Administrator and referenced in such notice required in paragraph (b)(2)(iii)(B) of this section, except as follows:

(i) If any such data are revised by the Administrator as a result of a decision in or settlement of litigation concerning such data on appeal under part 78 of this chapter of such notice, or on appeal under section 307 of the Clean Air Act of a decision rendered under part 78 of this chapter on appeal of such notice, then the Administrator will use the data as so revised to recalculate the amounts of TR SO_2 Group 1 allowances that owners and operators are required to hold in accordance with the calculation formula in § 97.606(c)(2)(i) for such control period with regard to the TR SO_2 Group 1 sources, TR SO_2 Group 1 units, and State (and Indian country within the borders of such State) involved, provided that such litigation under part 78 of this chapter, or the proceeding under part 78 of this chapter that resulted in the decision appealed in such litigation under section 307 of the Clean Air Act, was initiated no later than 30 days after promulgation of such notice required in paragraph (b)(2)(iii)(B) of this section.

(ii) If any such data are revised by the owners and operators of a TR SO_2 Group 1 source and TR SO_2 Group 1 unit whose designated representative submitted such data under paragraph (b)(2)(i) of this section, as a result of a decision in or settlement of litigation concerning such submission, then the Administrator will use the data as so revised to recalculate the amounts of TR SO_2 Group 1 allowances that owners and operators are required to hold in

accordance with the calculation formula in § 97.606(c)(2)(i) for such control period with regard to the TR SO_2 Group 1 sources, TR SO_2 Group 1 units, and State (and Indian country within the borders of such State) involved, provided that such litigation was initiated no later than 30 days after promulgation of such notice required in paragraph (b)(2)(iii)(B) of this section.

(iii) If the revised data are used to recalculate, in accordance with paragraphs (b)(6)(i) and (ii) of this section, the amount of TR SO_2 Group 1 allowances that the owners and operators are required to hold for such control period with regard to the TR SO_2 Group 1 sources, TR SO_2 Group 1 units, and State (and Indian country within the borders of such State) involved—

(A) Where the amount of TR SO_2 Group 1 allowances that the owners and operators are required to hold increases as a result of the use of all such revised data, the Administrator will establish a new, reasonable deadline on which the owners and operators shall hold the additional amount of TR SO_2 Group 1 allowances in the assurance account established by the Administrator for the appropriate TR SO_2 Group 1 sources, TR SO_2 Group 1 units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section. The owners' and operators' failure to hold such additional amount, as required, before the new deadline shall not be a violation of the Clean Air Act. The owners' and operators' failure to hold such additional amount, as required, as of the new deadline shall be a violation of the Clean Air Act. Each TR SO_2 Group 1 allowance that the owners and operators fail to hold as required as of the new deadline, and each day in such control period, shall be a separate violation of the Clean Air Act.

(B) For the owners and operators for which the amount of TR SO_2 Group 1 allowances required to be held decreases as a result of the use of all such revised data, the Administrator will record, in all accounts from which TR SO_2 Group 1 allowances were transferred by such owners and operators for such control period to the assurance account established by the Administrator for the appropriate TR SO_2 Group 1 sources, TR SO_2 Group 1 units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section, a total amount of the TR SO_2 Group 1 allowances held in such assurance account equal to the amount of the decrease. If TR SO_2 Group 1 allowances were transferred to such assurance account from more than one account, the amount of TR SO_2 Group 1 allowances recorded in each such transferor account will be in proportion to the percentage of the total amount of TR SO_2 Group 1 allowances transferred to such assurance account for such control period from such transferor account.

(C) Each TR SO_2 Group 1 allowance held under paragraph (b)(6)(iii)(A) of this section as a result of recalculation of requirements under the TR SO_2 Group 1 assurance provisions for such control period must be a TR SO_2 Group 1 allowance allocated for a control period in a year before or the year immediately following, or in the same year as, the year of such control period.

§ 97.626 Banking.

(a) A TR SO_2 Group 1 allowance may be banked for future use or transfer in a compliance account or a general account in accordance with paragraph (b) of this section.

(b) Any TR SO_2 Group 1 allowance that is held in a compliance account or a general account will remain in such account unless and until the TR SO_2 Group 1 allowance is deducted or transferred under § 97.611(c), § 97.623, § 97.624, § 97.625, § 97.627, or § 97.628.

§ 97.627 Account error.

The Administrator may, at his or her sole discretion and on his or her own motion, correct any error in any Allowance Management System account. Within 10 business days of making such correction, the Administrator will notify the authorized account representative for the account.

§ 97.628 Administrator's action on submissions.

(a) The Administrator may review and conduct independent audits concerning any submission under the TR SO_2 Group 1 Trading Program and make appropriate adjustments of the information in the submission.

(b) The Administrator may deduct TR SO_2 Group 1 allowances from or transfer TR SO_2 Group 1 allowances to a compliance account or an assurance account, based on the information in a submission, as adjusted under paragraph (a)(1) of this section, and record such deductions and transfers.

§ 97.629 [Reserved]

§ 97.630 General monitoring, recordkeeping, and reporting requirements.

The owners and operators, and to the extent applicable, the designated representative, of a TR SO_2 Group 1 unit, shall comply with the monitoring, recordkeeping, and reporting requirements as provided in this subpart and subparts F and G of part 75 of this chapter. For purposes of applying such requirements, the definitions in § 97.602 and in § 72.2 of this chapter shall apply, the terms ''affected unit,'' ''designated representative,'' and ''continuous emission monitoring system'' (or ''CEMS'') in part 75 of this chapter shall be deemed to refer to the terms ''TR SO_2 Group 1 unit,'' ''designated representative,'' and ''continuous emission monitoring system'' (or ''CEMS'') respectively as defined in § 97.602, and the term ''newly affected unit'' shall be deemed to mean ''newly affected TR SO_2 Group 1 unit''. The owner or operator of a unit that is not a TR SO_2 Group 1 unit but that is monitored under § 75.16(b)(2) of this chapter shall comply with the same monitoring, recordkeeping, and reporting requirements as a TR SO_2 Group 1 unit.

(a) *Requirements for installation, certification, and data accounting.* The owner or operator of each TR SO_2 Group 1 unit shall:

(1) Install all monitoring systems required under this subpart for monitoring SO_2 mass emissions and individual unit heat input (including all systems required to monitor SO_2 concentration, stack gas moisture content, stack gas flow rate, CO_2 or O_2 concentration, and fuel flow rate, as applicable, in accordance with §§ 75.11 and 75.16 of this chapter);

(2) Successfully complete all certification tests required under § 97.631 and meet all other requirements of this subpart and part 75 of this chapter applicable to the monitoring systems under paragraph (a)(1) of this section; and

(3) Record, report, and quality-assure the data from the monitoring systems under paragraph (a)(1) of this section.

(b) *Compliance deadlines.* Except as provided in paragraph (e) of this section, the owner or operator shall meet the monitoring system certification and other requirements of paragraphs (a)(1) and (2) of this section on or before the following dates and shall record, report, and quality-assure the data from the monitoring systems under paragraph (a)(1) of this section on and after the following dates.

(1) For the owner or operator of a TR SO_2 Group 1 unit that commences commercial operation before July 1, 2011, January 1, 2012.

(2) For the owner or operator of a TR SO_2 Group 1 unit that commences commercial operation on or after July 1, 2011, by the later of the following:

(i) January 1, 2012; or

(ii) 180 calendar days after the date on which the unit commences commercial operation.

(3) The owner or operator of a TR SO_2 Group 1 unit for which construction of a new stack or flue or installation of add-on SO_2 emission controls is completed after the applicable deadline under paragraph (b)(1) or (2) of this section shall meet the requirements of §§ 75.4(e)(1) through (e)(4) of this chapter, except that:

(i) Such requirements shall apply to the monitoring systems required under § 97.630 through § 97.635, rather than the monitoring systems required under part 75 of this chapter;

(ii) SO_2 concentration, stack gas moisture content, stack gas volumetric flow rate, and O_2 or CO_2 concentration data shall be determined and reported, rather than the data listed in § 75.4(e)(2) of this chapter; and

(iii) Any petition for another procedure under § 75.4(e)(2) of this chapter shall be submitted under § 97.635, rather than § 75.66.

(c) *Reporting data.* The owner or operator of a TR SO_2 Group 1 unit that does not meet the applicable compliance date set forth in paragraph (b) of this section for any monitoring system under paragraph (a)(1) of this section shall, for each such monitoring system, determine, record, and report maximum potential (or, as appropriate, minimum potential) values for SO_2 concentration, stack gas flow rate, stack gas moisture content, fuel flow rate, and any other parameters required to determine SO_2 mass emissions and heat input in accordance with § 75.31(b)(2) or (c)(3) of this chapter or section 2.4 of appendix D to part 75 of this chapter, as applicable.

(d) *Prohibitions.* (1) No owner or operator of a TR SO_2 Group 1 unit shall use any alternative monitoring system, alternative reference method, or any other alternative to any requirement of this subpart without having obtained prior written approval in accordance with § 97.635.

(2) No owner or operator of a TR SO_2 Group 1 unit shall operate the unit so as to discharge, or allow to be discharged, SO_2 to the atmosphere without accounting for all such SO_2 in accordance with the applicable provisions of this subpart and part 75 of this chapter.

(3) No owner or operator of a TR SO_2 Group 1 unit shall disrupt the continuous emission monitoring system, any portion thereof, or any other approved emission monitoring method, and thereby avoid monitoring and recording SO_2 mass discharged into the atmosphere or heat input, except for periods of recertification or periods when calibration, quality assurance testing, or maintenance is performed in accordance with the applicable provisions of this subpart and part 75 of this chapter.

(4) No owner or operator of a TR SO_2 Group 1 unit shall retire or permanently discontinue use of the continuous emission monitoring system, any component thereof, or any other approved monitoring system under this subpart, except under any one of the following circumstances:

(i) During the period that the unit is covered by an exemption under § 97.605 that is in effect;

(ii) The owner or operator is monitoring emissions from the unit with another certified monitoring system approved, in accordance with the applicable provisions of this subpart and part 75 of this chapter, by the Administrator for use at that unit that provides emission data for the same pollutant or parameter as the retired or discontinued monitoring system; or

(iii) The designated representative submits notification of the date of certification testing of a replacement monitoring system for the retired or discontinued monitoring system in accordance with § 97.631(d)(3)(i).

(e) *Long-term cold storage.* The owner or operator of a TR SO_2 Group 1 unit is subject to the applicable provisions of § 75.4(d) of this chapter concerning units in long-term cold storage.

§ 97.631 Initial monitoring system certification and recertification procedures.

(a) The owner or operator of a TR SO_2 Group 1 unit shall be exempt from the initial certification requirements of this section for a monitoring system under § 97.630(a)(1) if the following conditions are met:

(1) The monitoring system has been previously certified in accordance with part 75 of this chapter; and

(2) The applicable quality-assurance and quality-control requirements of § 75.21 of this chapter and appendices B and D to part 75 of this chapter are fully met for the certified monitoring system described in paragraph (a)(1) of this section.

(b) The recertification provisions of this section shall apply to a monitoring system under § 97.630(a)(1) that is exempt from initial certification requirements under paragraph (a) of this section.

(c) [Reserved]

(d) Except as provided in paragraph (a) of this section, the owner or operator of a TR SO_2 Group 1 unit shall comply with the following initial certification and recertification procedures, for a continuous monitoring system (*i.e.,* a continuous emission monitoring system and an excepted monitoring system under appendix D to part 75 of this chapter) under § 97.630(a)(1). The owner or operator of a unit that qualifies to use the low mass emissions excepted monitoring methodology under § 75.19 of this chapter or that qualifies to use an alternative monitoring system under subpart E of part 75 of this chapter shall comply with the procedures in paragraph (e) or (f) of this section respectively.

(1) Requirements for initial certification. The owner or operator shall ensure that each continuous monitoring system under § 97.630(a)(1) (including the automated data acquisition and handling system) successfully completes all of the initial certification testing required under § 75.20 of this chapter by the applicable deadline in § 97.630(b). In addition, whenever the owner or operator installs a monitoring system to meet the requirements of this subpart in a location where no such monitoring system was previously installed, initial certification in accordance with § 75.20 of this chapter is required.

(2) Requirements for recertification. Whenever the owner or operator makes a replacement, modification, or change in any certified continuous emission monitoring system under § 97.630(a)(1) that may significantly affect the ability of the system to accurately measure or record SO_2 mass emissions or heat input rate or to meet the quality-assurance and quality-control requirements of § 75.21 of this chapter or appendix B to part 75 of this chapter, the owner or operator shall recertify the monitoring system in accordance with § 75.20(b) of this chapter. Furthermore, whenever the owner or operator makes a replacement, modification, or change to the flue gas handling system or the unit's operation that may significantly change the stack flow or concentration profile, the owner or operator shall recertify each continuous emission monitoring system whose accuracy is potentially affected by the change, in accordance with § 75.20(b) of this chapter. Examples of changes to a continuous emission monitoring system that require recertification include: Replacement of the analyzer, complete replacement of an existing continuous emission monitoring system, or change in location or orientation of the sampling probe or site. Any fuel flowmeter system under § 97.630(a)(1) is subject to the recertification requirements in § 75.20(g)(6) of this chapter.

(3) Approval process for initial certification and recertification. For initial certification of a continuous monitoring system under § 97.630(a)(1), paragraphs (d)(3)(i) through (v) of this

section apply. For recertifications of such monitoring systems, paragraphs (d)(3)(i) through (iv) of this section and the procedures in §§ 75.20(b)(5) and (g)(7) of this chapter (in lieu of the procedures in paragraph (d)(3)(v) of this section) apply, provided that in applying paragraphs (d)(3)(i) through (iv) of this section, the words ''certification'' and ''initial certification'' are replaced by the word ''recertification'' and the word ''certified'' is replaced by the word ''recertified''.

(i) Notification of certification. The designated representative shall submit to the appropriate EPA Regional Office and the Administrator written notice of the dates of certification testing, in accordance with § 97.633.

(ii) Certification application. The designated representative shall submit to the Administrator a certification application for each monitoring system. A complete certification application shall include the information specified in § 75.63 of this chapter.

(iii) Provisional certification date. The provisional certification date for a monitoring system shall be determined in accordance with § 75.20(a)(3) of this chapter. A provisionally certified monitoring system may be used under the TR SO_2 Group 1 Trading Program for a period not to exceed 120 days after receipt by the Administrator of the complete certification application for the monitoring system under paragraph (d)(3)(ii) of this section. Data measured and recorded by the provisionally certified monitoring system, in accordance with the requirements of part 75 of this chapter, will be considered valid quality-assured data (retroactive to the date and time of provisional certification), provided that the Administrator does not invalidate the provisional certification by issuing a notice of disapproval within 120 days of the date of receipt of the complete certification application by the Administrator.

(iv) Certification application approval process. The Administrator will issue a written notice of approval or disapproval of the certification application to the owner or operator within 120 days of receipt of the complete certification application under paragraph (d)(3)(ii) of this section. In the event the Administrator does not issue such a notice within such 120-day period, each monitoring system that meets the applicable performance requirements of part 75 of this chapter and is included in the certification application will be deemed certified for use under the TR SO_2 Group 1 Trading Program.

(A) Approval notice. If the certification application is complete and shows that each monitoring system meets the applicable performance requirements of part 75 of this chapter, then the Administrator will issue a written notice of approval of the certification application within 120 days of receipt.

(B) Incomplete application notice. If the certification application is not complete, then the Administrator will issue a written notice of incompleteness that sets a reasonable date by which the designated representative must submit the additional information required to complete the certification application. If the designated representative does not comply with the notice of incompleteness by the specified date, then the Administrator may issue a notice of disapproval under paragraph (d)(3)(iv)(C) of this section.

(C) Disapproval notice. If the certification application shows that any monitoring system does not meet the performance requirements of part 75 of this chapter or if the certification application is incomplete and the requirement for disapproval under paragraph (d)(3)(iv)(B) of this section is met, then the Administrator will issue a written notice of disapproval of the certification application. Upon issuance of such notice of disapproval, the provisional certification is invalidated by the Administrator and the data measured and recorded by each uncertified monitoring system shall not be considered valid quality-assured data beginning with the date and hour of provisional certification (as defined under § 75.20(a)(3) of this chapter).

(D) Audit decertification. The Administrator may issue a notice of disapproval of the certification status of a monitor in accordance with § 97.632(b).

(v) Procedures for loss of certification. If the Administrator issues a notice of disapproval of a certification application under paragraph (d)(3)(iv)(C) of this section or a notice of disapproval of certification status under paragraph (d)(3)(iv)(D) of this section, then:

(A) The owner or operator shall substitute the following values, for each disapproved monitoring system, for each hour of unit operation during the period of invalid data specified under § 75.20(a)(4)(iii), § 75.20(g)(7), or § 75.21(e) of this chapter and continuing until the applicable date and hour specified under § 75.20(a)(5)(i) or (g)(7) of this chapter:

(1) For a disapproved SO_2 pollutant concentration monitor and disapproved flow monitor, respectively, the maximum potential concentration of SO_2 and the maximum potential flow rate, as defined in sections 2.1.1.1 and 2.1.4.1 of appendix A to part 75 of this chapter.

(2) For a disapproved moisture monitoring system and disapproved diluent gas monitoring system, respectively, the minimum potential moisture percentage and either the maximum potential CO_2 concentration or the minimum potential O_2 concentration (as applicable), as defined in sections 2.1.5, 2.1.3.1, and 2.1.3.2 of appendix A to part 75 of this chapter.

(3) For a disapproved fuel flowmeter system, the maximum potential fuel flow rate, as defined in section 2.4.2.1 of appendix D to part 75 of this chapter.

(B) The designated representative shall submit a notification of certification retest dates and a new certification application in accordance with paragraphs (d)(3)(i) and (ii) of this section.

(C) The owner or operator shall repeat all certification tests or other requirements that were failed by the monitoring system, as indicated in the Administrator's notice of disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval.

(e) The owner or operator of a unit qualified to use the low mass emissions (LME) excepted methodology under § 75.19 of this chapter shall meet the applicable certification and recertification requirements in §§ 75.19(a)(2) and 75.20(h) of this chapter. If the owner or operator of such a unit elects to certify a fuel flowmeter system for heat input determination, the owner or operator shall also meet the certification and recertification requirements in § 75.20(g) of this chapter.

(f) The designated representative of each unit for which the owner or operator intends to use an alternative monitoring system approved by the Administrator under subpart E of part 75 of this chapter shall comply with the applicable notification and application procedures of § 75.20(f) of this chapter.

§ 97.632 Monitoring system out-of-control periods.

(a) *General provisions.* Whenever any monitoring system fails to meet the quality-assurance and quality-control requirements or data validation requirements of part 75 of this chapter, data shall be substituted using the applicable missing data procedures in subpart D or appendix D to part 75 of this chapter.

(b) *Audit decertification.* Whenever both an audit of a monitoring system

and a review of the initial certification or recertification application reveal that any monitoring system should not have been certified or recertified because it did not meet a particular performance specification or other requirement under § 97.631 or the applicable provisions of part 75 of this chapter, both at the time of the initial certification or recertification application submission and at the time of the audit, the Administrator will issue a notice of disapproval of the certification status of such monitoring system. For the purposes of this paragraph, an audit shall be either a field audit or an audit of any information submitted to the Administrator or any State or permitting authority. By issuing the notice of disapproval, the Administrator revokes prospectively the certification status of the monitoring system. The data measured and recorded by the monitoring system shall not be considered valid quality-assured data from the date of issuance of the notification of the revoked certification status until the date and time that the owner or operator completes subsequently approved initial certification or recertification tests for the monitoring system. The owner or operator shall follow the applicable initial certification or recertification procedures in § 97.631 for each disapproved monitoring system.

§ 97.633 Notifications concerning monitoring.

The designated representative of a TR SO_2 Group 1 unit shall submit written notice to the Administrator in accordance with § 75.61 of this chapter.

§ 97.634 Recordkeeping and reporting.

(a) *General provisions.* The designated representative shall comply with all recordkeeping and reporting requirements in paragraphs (b) through (e) of this section, the applicable recordkeeping and reporting requirements in subparts F and G of part 75 of this chapter, and the requirements of § 97.614(a).

(b) *Monitoring plans.* The owner or operator of a TR SO_2 Group 1 unit shall comply with requirements of § 75.62 of this chapter.

(c) *Certification applications.* The designated representative shall submit an application to the Administrator within 45 days after completing all initial certification or recertification tests required under § 97.631, including the information required under § 75.63 of this chapter.

(d) *Quarterly reports.* The designated representative shall submit quarterly reports, as follows:

(1) The designated representative shall report the SO_2 mass emissions data and heat input data for the TR SO_2 Group 1 unit, in an electronic quarterly report in a format prescribed by the Administrator, for each calendar quarter beginning with:

(i) For a unit that commences commercial operation before July 1, 2011, the calendar quarter covering January 1, 2012 through March 31, 2012; or

(ii) For a unit that commences commercial operation on or after July 1, 2011, the calendar quarter corresponding to the earlier of the date of provisional certification or the applicable deadline for initial certification under § 97.630(b), unless that quarter is the third or fourth quarter of 2011, in which case reporting shall commence in the quarter covering January 1, 2012 through March 31, 2012.

(2) The designated representative shall submit each quarterly report to the Administrator within 30 days after the end of the calendar quarter covered by the report. Quarterly reports shall be submitted in the manner specified in § 75.64 of this chapter.

(3) For TR SO_2 Group 1 units that are also subject to the Acid Rain Program, TR NO_X Annual Trading Program, or TR NO_X Ozone Season Trading Program, quarterly reports shall include the applicable data and information required by subparts F through H of part 75 of this chapter as applicable, in addition to the SO_2 mass emission data, heat input data, and other information required by this subpart.

(4) The Administrator may review and conduct independent audits of any quarterly report in order to determine whether the quarterly report meets the requirements of this subpart and part 75 of this chapter, including the requirement to use substitute data.

(i) The Administrator will notify the designated representative of any determination that the quarterly report fails to meet any such requirements and specify in such notification any corrections that the Administrator believes are necessary to make through resubmission of the quarterly report and a reasonable time period within which the designated representative must respond. Upon request by the designated representative, the Administrator may specify reasonable extensions of such time period. Within the time period (including any such extensions) specified by the Administrator, the designated representative shall resubmit the quarterly report with the corrections specified by the Administrator, except to the extent the designated representative provides information demonstrating that a specified correction is not necessary because the quarterly report already meets the requirements of this subpart and part 75 of this chapter that are relevant to the specified correction.

(ii) Any resubmission of a quarterly report shall meet the requirements applicable to the submission of a quarterly report under this subpart and part 75 of this chapter, except for the deadline set forth in paragraph (d)(2) of this section.

(e) *Compliance certification.* The designated representative shall submit to the Administrator a compliance certification (in a format prescribed by the Administrator) in support of each quarterly report based on reasonable inquiry of those persons with primary responsibility for ensuring that all of the unit's emissions are correctly and fully monitored. The certification shall state that:

(1) The monitoring data submitted were recorded in accordance with the applicable requirements of this subpart and part 75 of this chapter, including the quality assurance procedures and specifications; and

(2) For a unit with add-on SO_2 emission controls and for all hours where SO_2 data are substituted in accordance with § 75.34(a)(1) of this chapter, the add-on emission controls were operating within the range of parameters listed in the quality assurance/quality control program under appendix B to part 75 of this chapter and the substitute data values do not systematically underestimate SO_2 emissions.

§ 97.635 Petitions for alternatives to monitoring, recordkeeping, or reporting requirements.

(a) The designated representative of a TR SO_2 Group 1 unit may submit a petition under § 75.66 of this chapter to the Administrator, requesting approval to apply an alternative to any requirement of §§ 97.630 through 97.634.

(b) A petition submitted under paragraph (a) of this section shall include sufficient information for the evaluation of the petition, including, at a minimum, the following information:

(i) Identification of each unit and source covered by the petition;

(ii) A detailed explanation of why the proposed alternative is being suggested in lieu of the requirement;

(iii) A description and diagram of any equipment and procedures used in the proposed alternative;

(iv) A demonstration that the proposed alternative is consistent with

the purposes of the requirement for which the alternative is proposed and with the purposes of this subpart and part 75 of this chapter and that any adverse effect of approving the alternative will be *de minimis;* and

(v) Any other relevant information that the Administrator may require.

(c) Use of an alternative to any requirement referenced in paragraph (a) of this section is in accordance with this subpart only to the extent that the petition is approved in writing by the Administrator and that such use is in accordance with such approval.

77. Part 97 is amended by adding subpart DDDDD to read as follows:

Subpart DDDDD—TR SO_2 Group 2 Trading Program

Sec.

97.701 Purpose.
97.702 Definitions.
97.703 Measurements, abbreviations, and acronyms.
97.704 Applicability.
97.705 Retired unit exemption.
97.706 Standard requirements.
97.707 Computation of time.
97.708 Administrative appeal procedures.
97.709 [Reserved]
97.710 State SO_2 Group 2 trading budgets, new unit set-asides, Indian country new unit set-asides and variability limits.
97.711 Timing requirements for TR SO_2 Group 2 allowance allocations.
97.712 TR SO_2 Group 2 allowance allocations to new units.
97.713 Authorization of designated representative and alternate designated representative.
97.714 Responsibilities of designated representative and alternate designated representative.
97.715 Changing designated representative and alternate designated representative; changes in owners and operators.
97.716 Certificate of representation.
97.717 Objections concerning designated representative and alternate designated representative.
97.718 Delegation by designated representative and alternate designated representative.
97.719 [Reserved]
97.720 Establishment of compliance accounts and general accounts.
97.721 Recordation of TR SO_2 Group 2 allowance allocations.
97.722 Submission of TR SO_2 Group 2 allowance transfers.
97.723 Recordation of TR SO_2 Group 2 allowance transfers.
97.724 Compliance with TR SO_2 Group 2 emissions limitation.
97.725 Compliance with TR SO_2 Group 2 assurance provisions.
97.726 Banking.
97.727 Account error.
97.728 Administrator's action on submissions.
97.729 [Reserved]
97.730 General monitoring, recordkeeping, and reporting requirements.
97.731 Initial monitoring system certification and recertification procedures.
97.732 Monitoring system out-of-control periods.
97.733 Notifications concerning monitoring.
97.734 Recordkeeping and reporting.
97.735 Petitions for alternatives to monitoring, recordkeeping, or reporting requirements.

Subpart DDDDD—TR SO_2 Group 2 Trading Program

§ 97.701 Purpose.

This subpart sets forth the general, designated representative, allowance, and monitoring provisions for the Transport Rule (TR) SO_2 Group 2 Trading Program, under section 110 of the Clean Air Act and § 52.39 of this chapter, as a means of mitigating interstate transport of fine particulates and sulfur dioxide.

§ 97.702 Definitions.

The terms used in this subpart shall have the meanings set forth in this section as follows:

Acid Rain Program means a multi-state SO_2 and NO_X air pollution control and emission reduction program established by the Administrator under title IV of the Clean Air Act and parts 72 through 78 of this chapter.

Administrator means the Administrator of the United States Environmental Protection Agency or the Director of the Clean Air Markets Division (or its successor determined by the Administrator) of the United States Environmental Protection Agency, the Administrator's duly authorized representative under this subpart.

Allocate or *allocation* means, with regard to TR SO_2 Group 2 allowances, the determination by the Administrator, State, or permitting authority, in accordance with this subpart and any SIP revision submitted by the State and approved by the Administrator under § 52.39(g), (h), or (i) of this chapter, of the amount of such TR SO_2 Group 2 allowances to be initially credited, at no cost to the recipient, to:

(1) A TR SO_2 Group 2 unit;

(2) A new unit set-aside;

(3) An Indian country new unit set-aside; or

(4) An entity not listed in paragraphs (1) through (3) of this definition;

(5) Provided that, if the Administrator, State, or permitting authority initially credits, to a TR SO_2 Group 2 unit qualifying for an initial credit, a credit in the amount of zero TR SO_2 Group 2 allowances, the TR SO_2 Group 2 unit will be treated as being allocated an amount (*i.e.*, zero) of TR SO_2 Group 2 allowances.

Allowable SO_2 emission rate means, for a unit, the most stringent State or federal SO_2 emission rate limit (in lb/MWhr or, if in lb/mmBtu, converted to lb/MWhr by multiplying it by the unit's heat rate in mmBtu/MWhr) that is applicable to the unit and covers the longest averaging period not exceeding one year.

Allowance Management System means the system by which the Administrator records allocations, deductions, and transfers of TR SO_2 Group 2 allowances under the TR SO_2 Group 2 Trading Program. Such allowances are allocated, recorded, held, deducted, or transferred only as whole allowances.

Allowance Management System account means an account in the Allowance Management System established by the Administrator for purposes of recording the allocation, holding, transfer, or deduction of TR SO_2 Group 2 allowances.

Allowance transfer deadline means, for a control period in a given year, midnight of March 1 (if it is a business day), or midnight of the first business day thereafter (if March 1 is not a business day), immediately after such control period and is the deadline by which a TR SO_2 Group 2 allowance transfer must be submitted for recordation in a TR SO_2 Group 2 source's compliance account in order to be available for use in complying with the source's TR SO_2 Group 2 emissions limitation for such control period in accordance with §§ 97.706 and 97.724.

Alternate designated representative means, for a TR SO_2 Group 2 source and each TR SO_2 Group 2 unit at the source, the natural person who is authorized by the owners and operators of the source and all such units at the source, in accordance with this subpart, to act on behalf of the designated representative in matters pertaining to the TR SO_2 Group 2 Trading Program. If the TR SO_2 Group 2 source is also subject to the Acid Rain Program, TR NO_X Annual Trading Program, or TR NO_X Ozone Season Trading Program, then this natural person shall be the same natural person as the alternate designated representative, as defined in the respective program.

Assurance account means an Allowance Management System account, established by the Administrator under § 97.725(b)(3) for certain owners and operators of a group of one or more TR SO_2 Group 2 sources and units in a given State (and Indian country within the borders of such State), in which are held TR SO_2 Group 2 allowances available for use for a control period in a given year in

complying with the TR SO_2 Group 2 assurance provisions in accordance with §§ 97.706 and 97.725.

Authorized account representative means, for a general account, the natural person who is authorized, in accordance with this subpart, to transfer and otherwise dispose of TR SO_2 Group 2 allowances held in the general account and, for a TR SO_2 Group 2 source's compliance account, the designated representative of the source.

Automated data acquisition and handling system or *DAHS* means the component of the continuous emission monitoring system, or other emissions monitoring system approved for use under this subpart, designed to interpret and convert individual output signals from pollutant concentration monitors, flow monitors, diluent gas monitors, and other component parts of the monitoring system to produce a continuous record of the measured parameters in the measurement units required by this subpart.

Biomass means—

(1) Any organic material grown for the purpose of being converted to energy;

(2) Any organic byproduct of agriculture that can be converted into energy; or

(3) Any material that can be converted into energy and is nonmerchantable for other purposes, that is segregated from other material that is nonmerchantable for other purposes, and that is;

(i) A forest-related organic resource, including mill residues, precommercial thinnings, slash, brush, or byproduct from conversion of trees to merchantable material; or

(ii) A wood material, including pallets, crates, dunnage, manufacturing and construction materials (other than pressure-treated, chemically-treated, or painted wood products), and landscape or right-of-way tree trimmings.

Boiler means an enclosed fossil- or other-fuel-fired combustion device used to produce heat and to transfer heat to recirculating water, steam, or other medium.

Bottoming-cycle unit means a unit in which the energy input to the unit is first used to produce useful thermal energy, where at least some of the reject heat from the useful thermal energy application or process is then used for electricity production.

Business day means a day that does not fall on a weekend or a federal holiday.

Certifying official means a natural person who is:

(1) For a corporation, a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function or any other person who performs similar policy- or decision-making functions for the corporation;

(2) For a partnership or sole proprietorship, a general partner or the proprietor respectively; or

(3) For a local government entity or State, federal, or other public agency, a principal executive officer or ranking elected official.

Clean Air Act means the Clean Air Act, 42 U.S.C. 7401, *et seq.*

Coal means ''coal'' as defined in § 72.2 of this chapter.

Coal-derived fuel means any fuel (whether in a solid, liquid, or gaseous state) produced by the mechanical, thermal, or chemical processing of coal.

Cogeneration system means an integrated group, at a source, of equipment (including a boiler, or combustion turbine, and a steam turbine generator) designed to produce useful thermal energy for industrial, commercial, heating, or cooling purposes and electricity through the sequential use of energy.

Cogeneration unit means a stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine that is a topping-cycle unit or a bottoming-cycle unit:

(1) Operating as part of a cogeneration system; and

(2) Producing on an annual average basis—

(i) For a topping-cycle unit,

(A) Useful thermal energy not less than 5 percent of total energy output; and

(B) Useful power that, when added to one-half of useful thermal energy produced, is not less than 42.5 percent of total energy input, if useful thermal energy produced is 15 percent or more of total energy output, or not less than 45 percent of total energy input, if useful thermal energy produced is less than 15 percent of total energy output.

(ii) For a bottoming-cycle unit, useful power not less than 45 percent of total energy input;

(3) Provided that the requirements in paragraph (2) of this definition shall not apply to a calendar year referenced in paragraph (2) of this definition during which the unit did not operate at all;

(4) Provided that the total energy input under paragraphs (2)(i)(B) and (2)(ii) of this definition shall equal the unit's total energy input from all fuel, except biomass if the unit is a boiler; and

(5) Provided that, if, throughout its operation during the 12-month period or a calendar year referenced in paragraph (2) of this definition, a unit is operated as part of a cogeneration system and the cogeneration system meets on a system-wide basis the requirement in paragraph (2)(i)(B) or (2)(ii) of this definition, the unit shall be deemed to meet such requirement during that 12-month period or calendar year.

Combustion turbine means an enclosed device comprising:

(1) If the device is simple cycle, a compressor, a combustor, and a turbine and in which the flue gas resulting from the combustion of fuel in the combustor passes through the turbine, rotating the turbine; and

(2) If the device is combined cycle, the equipment described in paragraph (1) of this definition and any associated duct burner, heat recovery steam generator, and steam turbine.

Commence commercial operation means, with regard to a unit:

(1) To have begun to produce steam, gas, or other heated medium used to generate electricity for sale or use, including test generation, except as provided in § 97.705.

(i) For a unit that is a TR SO_2 Group 2 unit under § 97.704 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in the introductory text of paragraph (1) of this definition and that subsequently undergoes a physical change or is moved to a new location or source, such date shall remain the date of commencement of commercial operation of the unit, which shall continue to be treated as the same unit.

(ii) For a unit that is a TR SO_2 Group 2 unit under § 97.704 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in the introductory text of paragraph (1) of this definition and that is subsequently replaced by a unit at the same or a different source, such date shall remain the replaced unit's date of commencement of commercial operation, and the replacement unit shall be treated as a separate unit with a separate date for commencement of commercial operation as defined in paragraph (1) or (2) of this definition as appropriate.

(2) Notwithstanding paragraph (1) of this definition and except as provided in § 97.705, for a unit that is not a TR SO_2 Group 2 unit under § 97.704 on the later of January 1, 2005 or the date the unit commences commercial operation as defined in introductory text of paragraph (1) of this definition, the unit's date for commencement of commercial operation shall be the date on which the unit becomes a TR SO_2 Group 2 unit under § 97.704.

(i) For a unit with a date for commencement of commercial operation as defined in the introductory text of paragraph (2) of this definition

and that subsequently undergoes a physical change or is moved to a different location or source, such date shall remain the date of commencement of commercial operation of the unit, which shall continue to be treated as the same unit.

(ii) For a unit with a date for commencement of commercial operation as defined in the introductory text of paragraph (2) of this definition and that is subsequently replaced by a unit at the same or a different source, such date shall remain the replaced unit's date of commencement of commercial operation, and the replacement unit shall be treated as a separate unit with a separate date for commencement of commercial operation as defined in paragraph (1) or (2) of this definition as appropriate.

Common designated representative means, with regard to a control period in a given year, a designated representative where, as of April 1 immediately after the allowance transfer deadline for such control period, the same natural person is authorized under §§ 97.713(a) and 97.715(a) as the designated representative for a group of one or more TR SO_2 Group 2 sources and units located in a State (and Indian country within the borders of such State).

Common designated representative's assurance level means, with regard to a specific common designated representative and a State (and Indian country within the borders of such State) and control period in a given year for which the State assurance level is exceeded as described in § 97.706(c)(2)(iii), the common designated representative's share of the State SO_2 Group 2 trading budget with the variability limit for the State for such control period.

Common designated representative's share means, with regard to a specific common designated representative for a control period in a given year:

(1) With regard to a total amount of SO_2 emissions from all TR SO_2 Group 2 units in a State (and Indian country within the borders of such State) during such control period, the total tonnage of SO_2 emissions during such control period from a group of one or more TR SO_2 Group 2 units located in such State (and such Indian country) and having the common designated representative for such control period;

(2) With regard to a State SO_2 Group 2 trading budget with the variability limit for such control period, the amount (rounded to the nearest allowance) equal to the sum of the total amount of TR SO_2 Group 2 allowances allocated for such control period to a group of one or more TR SO_2 Group 2 units located in the State (and Indian country within the borders of such State) and having the common designated representative for such control period and of the total amount of TR SO_2 Group 2 allowances purchased by an owner or operator of such TR SO_2 Group 2 units in an auction for such control period and submitted by the State or the permitting authority to the Administrator for recordation in the compliance accounts for such TR SO_2 Group 2 units in accordance with the TR SO_2 Group 2 allowance auction provisions in a SIP revision approved by the Administrator under § 52.39(h) or (i) of this chapter, multiplied by the sum of the State SO_2 Group 2 trading budget under § 97.710(a) and the State's variability limit under § 97.710(b) for such control period and divided by such State SO_2 Group 2 trading budget;

(3) Provided that, in the case of a unit that operates during, but has no amount of TR SO_2 Group 2 allowances allocated under §§ 97.711 and 97.712 for, such control period, the unit shall be treated, solely for purposes of this definition, as being allocated an amount (rounded to the nearest allowance) of TR SO_2 Group 2 allowances for such control period equal to the unit's allowable SO_2 emission rate applicable to such control period, multiplied by a capacity factor of 0.85 (if the unit is a boiler combusting any amount of coal or coal-derived fuel during such control period), 0.24 (if the unit is a simple combustion turbine during such control period), 0.67 (if the unit is a combined cycle turbine during such control period), 0.74 (if the unit is an integrated coal gasification combined cycle unit during such control period), or 0.36 (for any other unit), multiplied by the unit's maximum hourly load as reported in accordance with this subpart and by 8,760 hours/control period, and divided by 2,000 lb/ton.

Common stack means a single flue through which emissions from 2 or more units are exhausted.

Compliance account means an Allowance Management System account, established by the Administrator for a TR SO_2 Group 2 source under this subpart, in which any TR SO_2 Group 2 allowance allocations to the TR SO_2 Group 2 units at the source are recorded and in which are held any TR SO_2 Group 2 allowances available for use for a control period in a given year in complying with the source's TR SO_2 Group 2 emissions limitation in accordance with §§ 97.706 and 97.724.

Continuous emission monitoring system or *CEMS* means the equipment required under this subpart to sample, analyze, measure, and provide, by means of readings recorded at least once every 15 minutes and using an automated data acquisition and handling system (DAHS), a permanent record of SO_2 emissions, stack gas volumetric flow rate, stack gas moisture content, and O_2 or CO_2 concentration (as applicable), in a manner consistent with part 75 of this chapter and §§ 97.730 through 97.735. The following systems are the principal types of continuous emission monitoring systems:

(1) A flow monitoring system, consisting of a stack flow rate monitor and an automated data acquisition and handling system and providing a permanent, continuous record of stack gas volumetric flow rate, in standard cubic feet per hour (scfh);

(2) A SO_2 monitoring system, consisting of a SO_2 pollutant concentration monitor and an automated data acquisition and handling system and providing a permanent, continuous record of SO_2 emissions, in parts per million (ppm);

(3) A moisture monitoring system, as defined in § 75.11(b)(2) of this chapter and providing a permanent, continuous record of the stack gas moisture content, in percent H_2O;

(4) A CO_2 monitoring system, consisting of a CO_2 pollutant concentration monitor (or an O_2 monitor plus suitable mathematical equations from which the CO_2 concentration is derived) and an automated data acquisition and handling system and providing a permanent, continuous record of CO_2 emissions, in percent CO_2; and

(5) An O_2 monitoring system, consisting of an O_2 concentration monitor and an automated data acquisition and handling system and providing a permanent, continuous record of O_2, in percent O_2.

Control period means the period starting January 1 of a calendar year, except as provided in § 97.706(c)(3), and ending on December 31 of the same year, inclusive.

Designated representative means, for a TR SO_2 Group 2 source and each TR SO_2 Group 2 unit at the source, the natural person who is authorized by the owners and operators of the source and all such units at the source, in accordance with this subpart, to represent and legally bind each owner and operator in matters pertaining to the TR SO_2 Group 2 Trading Program. If the TR SO_2 Group 2 source is also subject to the Acid Rain Program, TR NO_X Annual Trading Program, or TR NO_X Ozone Season Trading Program, then this natural person shall be the same

natural person as the designated representative, as defined in the respective program.

Emissions means air pollutants exhausted from a unit or source into the atmosphere, as measured, recorded, and reported to the Administrator by the designated representative, and as modified by the Administrator:

(1) In accordance with this subpart; and

(2) With regard to a period before the unit or source is required to measure, record, and report such air pollutants in accordance with this subpart, in accordance with part 75 of this chapter.

Excess emissions means any ton of emissions from the TR SO_2 Group 2 units at a TR SO_2 Group 2 source during a control period in a given year that exceeds the TR SO_2 Group 2 emissions limitation for the source for such control period.

Fossil fuel means—

(1) Natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material; or

(2) For purposes of applying the limitation on ''average annual fuel consumption of fossil fuel'' in §§ 97.704(b)(2)(i)(B) and (ii), natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material for the purpose of creating useful heat.

Fossil-fuel-fired means, with regard to a unit, combusting any amount of fossil fuel in 2005 or any calendar year thereafter.

General account means an Allowance Management System account, established under this subpart, that is not a compliance account or an assurance account.

Generator means a device that produces electricity.

Gross electrical output means, for a unit, electricity made available for use, including any such electricity used in the power production process (which process includes, but is not limited to, any on-site processing or treatment of fuel combusted at the unit and any on-site emission controls).

Heat input means, for a unit for a specified period of time, the product (in mmBtu/time) of the gross calorific value of the fuel (in mmBtu/lb) fed into the unit multiplied by the fuel feed rate (in lb of fuel/time), as measured, recorded, and reported to the Administrator by the designated representative and as modified by the Administrator in accordance with this subpart and excluding the heat derived from preheated combustion air, recirculated flue gases, or exhaust.

Heat input rate means, for a unit, the amount of heat input (in mmBtu) divided by unit operating time (in hr) or, for a unit and a specific fuel, the amount of heat input attributed to the fuel (in mmBtu) divided by the unit operating time (in hr) during which the unit combusts the fuel.

Heat rate means, for a unit, the unit's maximum design heat input (in Btu/hr), divided by the product of 1,000,000 Btu/mmBtu and the unit's maximum hourly load.

Indian country means ''Indian country'' as defined in 18 U.S.C. 1151.

Life-of-the-unit, firm power contractual arrangement means a unit participation power sales agreement under which a utility or industrial customer reserves, or is entitled to receive, a specified amount or percentage of nameplate capacity and associated energy generated by any specified unit and pays its proportional amount of such unit's total costs, pursuant to a contract:

(1) For the life of the unit;

(2) For a cumulative term of no less than 30 years, including contracts that permit an election for early termination; or

(3) For a period no less than 25 years or 70 percent of the economic useful life of the unit determined as of the time the unit is built, with option rights to purchase or release some portion of the nameplate capacity and associated energy generated by the unit at the end of the period.

Maximum design heat input means, for a unit, the maximum amount of fuel per hour (in Btu/hr) that the unit is capable of combusting on a steady state basis as of the initial installation of the unit as specified by the manufacturer of the unit.

Monitoring system means any monitoring system that meets the requirements of this subpart, including a continuous emission monitoring system, an alternative monitoring system, or an excepted monitoring system under part 75 of this chapter.

Nameplate capacity means, starting from the initial installation of a generator, the maximum electrical generating output (in MWe, rounded to the nearest tenth) that the generator is capable of producing on a steady state basis and during continuous operation (when not restricted by seasonal or other deratings) as of such installation as specified by the manufacturer of the generator or, starting from the completion of any subsequent physical change in the generator resulting in an increase in the maximum electrical generating output that the generator is capable of producing on a steady state basis and during continuous operation (when not restricted by seasonal or other deratings), such increased maximum amount (in MWe, rounded to the nearest tenth) as of such completion as specified by the person conducting the physical change.

Natural gas means ''natural gas'' as defined in § 72.2 of this chapter.

Newly affected TR SO_2 Group 2 unit means a unit that was not a TR SO_2 Group 2 unit when it began operating but that thereafter becomes a TR SO_2 Group 2 unit.

Operate or *operation* means, with regard to a unit, to combust fuel.

Operator means, for a TR SO_2 Group 2 source or a TR SO_2 Group 2 unit at a source respectively, any person who operates, controls, or supervises a TR SO_2 Group 2 unit at the source or the TR SO_2 Group 2 unit and shall include, but not be limited to, any holding company, utility system, or plant manager of such source or unit.

Owner means, for a TR SO_2 Group 2 source or a TR SO_2 Group 2 unit at a source respectively, any of the following persons:

(1) Any holder of any portion of the legal or equitable title in a TR SO_2 Group 2 unit at the source or the TR SO_2 Group 2 unit;

(2) Any holder of a leasehold interest in a TR SO_2 Group 2 unit at the source or the TR SO_2 Group 2 unit, provided that, unless expressly provided for in a leasehold agreement, ''owner'' shall not include a passive lessor, or a person who has an equitable interest through such lessor, whose rental payments are not based (either directly or indirectly) on the revenues or income from such TR SO_2 Group 2 unit; and

(3) Any purchaser of power from a TR SO_2 Group 2 unit at the source or the TR SO_2 Group 2 unit under a life-of-the-unit, firm power contractual arrangement.

Permanently retired means, with regard to a unit, a unit that is unavailable for service and that the unit's owners and operators do not expect to return to service in the future.

Permitting authority means ''permitting authority'' as defined in §§ 70.2 and 71.2 of this chapter.

Potential electrical output capacity means, for a unit, 33 percent of the unit's maximum design heat input, divided by 3,413 Btu/kWh, divided by 1,000 kWh/MWh, and multiplied by 8,760 hr/yr.

Receive or *receipt of* means, when referring to the Administrator, to come into possession of a document, information, or correspondence (whether sent in hard copy or by authorized electronic transmission), as indicated in an official log, or by a notation made on the document,

information, or correspondence, by the Administrator in the regular course of business.

Recordation, record, or *recorded* means, with regard to TR SO_2 Group 2 allowances, the moving of TR SO_2 Group 2 allowances by the Administrator into, out of, or between Allowance Management System accounts, for purposes of allocation, auction, transfer, or deduction.

Reference method means any direct test method of sampling and analyzing for an air pollutant as specified in § 75.22 of this chapter.

Replacement, replace, or *replaced* means, with regard to a unit, the demolishing of a unit, or the permanent retirement and permanent disabling of a unit, and the construction of another unit (the replacement unit) to be used instead of the demolished or retired unit (the replaced unit).

Sequential use of energy means:

(1) The use of reject heat from electricity production in a useful thermal energy application or process; or

(2) The use of reject heat from useful thermal energy application or process in electricity production.

Serial number means, for a TR SO_2 Group 2 allowance, the unique identification number assigned to each TR SO_2 Group 2 allowance by the Administrator.

Solid waste incineration unit means a stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine that is a ''solid waste incineration unit'' as defined in section 129(g)(1) of the Clean Air Act.

Source means all buildings, structures, or installations located in one or more contiguous or adjacent properties under common control of the same person or persons. This definition does not change or otherwise affect the definition of ''major source'', ''stationary source'', or ''source'' as set forth and implemented in a title V operating permit program or any other program under the Clean Air Act.

State means one of the States that is subject to the TR SO_2 Group 2 Trading Program pursuant to § 52.39(a), (c), (g), (h), and (i) of this chapter.

Submit or *serve* means to send or transmit a document, information, or correspondence to the person specified in accordance with the applicable regulation:

(1) In person;

(2) By United States Postal Service; or

(3) By other means of dispatch or transmission and delivery;

(4) Provided that compliance with any ''submission'' or ''service'' deadline shall be determined by the date of dispatch, transmission, or mailing and not the date of receipt.

Topping-cycle unit means a unit in which the energy input to the unit is first used to produce useful power, including electricity, where at least some of the reject heat from the electricity production is then used to provide useful thermal energy.

Total energy input means, for a unit, total energy of all forms supplied to the unit, excluding energy produced by the unit. Each form of energy supplied shall be measured by the lower heating value of that form of energy calculated as follows:

$$LHV = HHV - 10.55(W + 9H)$$

Where:

LHV = lower heating value of the form of energy in Btu/lb,

HHV = higher heating value of the form of energy in Btu/lb,

W = weight % of moisture in the form of energy, and

H = weight % of hydrogen in the form of energy.

Total energy output means, for a unit, the sum of useful power and useful thermal energy produced by the unit.

TR NO_X Annual Trading Program means a multi-state NO_X air pollution control and emission reduction program established in accordance with subpart AAAAA of this part and § 52.38(a) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.38(a)(3) or (4) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.38(a)(5) of this chapter), as a means of mitigating interstate transport of fine particulates and NO_X.

TR NO_X Ozone Season Trading Program means a multi-state NO_X air pollution control and emission reduction program established in accordance with subpart BBBBB of this part and § 52.38(b) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.38(b)(3) or (4) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.38(b)(5) of this chapter), as a means of mitigating interstate transport of ozone and NO_X.

TR SO_2 Group 2 allowance means a limited authorization issued and allocated or auctioned by the Administrator under this subpart, or by a State or permitting authority under a SIP revision approved by the Administrator under § 52.39(g), (h), or (i) of this chapter, to emit one ton of SO_2 during a control period of the specified calendar year for which the authorization is allocated or auctioned or of any calendar year thereafter under the TR SO_2 Group 2 Trading Program.

TR SO_2 Group 2 allowance deduction or *deduct TR SO_2* Group 2 allowances means the permanent withdrawal of TR SO_2 Group 2 allowances by the Administrator from a compliance account (*e.g.,* in order to account for compliance with the TR SO_2 Group 2 emissions limitation) or from an assurance account (*e.g.,* in order to account for compliance with the assurance provisions under §§ 97.706 and 97.725).

TR SO_2 Group 2 allowances held or *hold TR SO_2* Group 2 allowances means the TR SO_2 Group 2 allowances treated as included in an Allowance Management System account as of a specified point in time because at that time they:

(1) Have been recorded by the Administrator in the account or transferred into the account by a correctly submitted, but not yet recorded, TR SO_2 Group 2 allowance transfer in accordance with this subpart; and

(2) Have not been transferred out of the account by a correctly submitted, but not yet recorded, TR SO_2 Group 2 allowance transfer in accordance with this subpart.

TR SO_2 Group 2 emissions limitation means, for a TR SO_2 Group 2 source, the tonnage of SO_2 emissions authorized in a control period by the TR SO_2 Group 2 allowances available for deduction for the source under § 97.724(a) for such control period.

TR SO_2 Group 2 source means a source that includes one or more TR SO_2 Group 2 units.

TR SO_2 Group 2 Trading Program means a multi-state SO_2 air pollution control and emission reduction program established in accordance with this subpart and § 52.39(a), (c), and (g) through (k) of this chapter (including such a program that is revised in a SIP revision approved by the Administrator under § 52.39(g) or (h) of this chapter or that is established in a SIP revision approved by the Administrator under § 52.39(i) of this chapter), as a means of mitigating interstate transport of fine particulates and SO_2.

TR SO_2 Group 2 unit means a unit that is subject to the TR SO_2 Group 2 Trading Program under § 97.704.

Unit means a stationary, fossil-fuel-fired boiler, stationary, fossil-fuel-fired combustion turbine, or other stationary, fossil-fuel-fired combustion device. A unit that undergoes a physical change or is moved to a different location or source shall continue to be treated as the same unit. A unit (the replaced unit) that is replaced by another unit (the

replacement unit) at the same or a different source shall continue to be treated as the same unit, and the replacement unit shall be treated as a separate unit.

Unit operating day means, with regard to a unit, a calendar day in which the unit combusts any fuel.

Unit operating hour or hour of unit operation means, with regard to a unit, an hour in which the unit combusts any fuel.

Useful power means, with regard to a unit, electricity or mechanical energy that the unit makes available for use, excluding any such energy used in the power production process (which process includes, but is not limited to, any on-site processing or treatment of fuel combusted at the unit and any on-site emission controls).

Useful thermal energy means thermal energy that is:

(1) Made available to an industrial or commercial process (not a power production process), excluding any heat contained in condensate return or makeup water;

(2) Used in a heating application (*e.g.,* space heating or domestic hot water heating); or

(3) Used in a space cooling application (*i.e.,* in an absorption chiller).

Utility power distribution system means the portion of an electricity grid owned or operated by a utility and dedicated to delivering electricity to customers.

§ 97.703 Measurements, abbreviations, and acronyms.

Measurements, abbreviations, and acronyms used in this subpart are defined as follows:

Btu—British thermal unit
CO_2—carbon dioxide
H_2O—water
hr—hour
kW—kilowatt electrical
kWh—kilowatt hour
lb—pound
mmBtu—million Btu
MWe—megawatt electrical
MWh—megawatt hour
NO_X—nitrogen oxides
O_2—oxygen
ppm—parts per million
scfh—standard cubic feet per hour
SO_2—sulfur dioxide
yr—year

§ 97.704 Applicability.

(a) Except as provided in paragraph (b) of this section:

(1) The following units in a State (and Indian country within the borders of such State) shall be TR SO_2 Group 2 units, and any source that includes one or more such units shall be a TR SO_2 Group 2 source, subject to the requirements of this subpart: Any stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine serving at any time, on or after January 1, 2005, a generator with nameplate capacity of more than 25 MWe producing electricity for sale.

(2) If a stationary boiler or stationary combustion turbine that, under paragraph (a)(1) of this section, is not a TR SO_2 Group 2 unit begins to combust fossil fuel or to serve a generator with nameplate capacity of more than 25 MWe producing electricity for sale, the unit shall become a TR SO_2 Group 2 unit as provided in paragraph (a)(1) of this section on the first date on which it both combusts fossil fuel and serves such generator.

(b) Any unit in a State (and Indian country within the borders of such State) that otherwise is a TR SO_2 Group 2 unit under paragraph (a) of this section and that meets the requirements set forth in paragraph (b)(1)(i) or (2)(i) of this section shall not be a TR SO_2 Group 2 unit:

(1)(i) Any unit:

(A) Qualifying as a cogeneration unit throughout the later of 2005 or the 12-month period starting on the date the unit first produces electricity and continuing to qualify as a cogeneration unit throughout each calendar year ending after the later of 2005 or such 12-month period; and

(B) Not supplying in 2005 or any calendar year thereafter more than one-third of the unit's potential electric output capacity or 219,000 MWh, whichever is greater, to any utility power distribution system for sale.

(ii) If, after qualifying under paragraph (b)(1)(i) of this section as not being a TR SO_2 Group 2 unit, a unit subsequently no longer meets all the requirements of paragraph (b)(1)(i) of this section, the unit shall become a TR SO_2 Group 2 unit starting on the earlier of January 1 after the first calendar year during which the unit first no longer qualifies as a cogeneration unit or January 1 after the first calendar year during which the unit no longer meets the requirements of paragraph (b)(1)(i)(B) of this section. The unit shall thereafter continue to be a TR SO_2 Group 2 unit.

(2)(i) Any unit:

(A) Qualifying as a solid waste incineration unit throughout the later of 2005 or the 12-month period starting on the date the unit first produces electricity and continuing to qualify as a solid waste incineration unit throughout each calendar year ending after the later of 2005 or such 12-month period; and

(B) With an average annual fuel consumption of fossil fuel for the first 3 consecutive calendar years of operation starting no earlier than 2005 of less than 20 percent (on a Btu basis) and an average annual fuel consumption of fossil fuel for any 3 consecutive calendar years thereafter of less than 20 percent (on a Btu basis).

(ii) If, after qualifying under paragraph (b)(2)(i) of this section as not being a TR SO_2 Group 2 unit, a unit subsequently no longer meets all the requirements of paragraph (b)(1)(i) of this section, the unit shall become a TR SO_2 Group 2 unit starting on the earlier of January 1 after the first calendar year during which the unit first no longer qualifies as a solid waste incineration unit or January 1 after the first 3 consecutive calendar years after 2005 for which the unit has an average annual fuel consumption of fossil fuel of 20 percent or more. The unit shall thereafter continue to be a TR SO_2 Group 2 unit.

(c) A certifying official of an owner or operator of any unit or other equipment may submit a petition (including any supporting documents) to the Administrator at any time for a determination concerning the applicability, under paragraphs (a) and (b) of this section or a SIP revision approved under § 52.39(h) or (i) of this chapter, of the TR SO_2 Group 2 Trading Program to the unit or other equipment.

(1) Petition content. The petition shall be in writing and include the identification of the unit or other equipment and the relevant facts about the unit or other equipment. The petition and any other documents provided to the Administrator in connection with the petition shall include the following certification statement, signed by the certifying official: ''I am authorized to make this submission on behalf of the owners and operators of the unit or other equipment for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(2) Response. The Administrator will issue a written response to the petition

and may request supplemental information determined by the Administrator to be relevant to such petition. The Administrator's determination concerning the applicability, under paragraphs (a) and (b) of this section, of the TR SO_2 Group 2 Trading Program to the unit or other equipment shall be binding on any State or permitting authority unless the Administrator determines that the petition or other documents or information provided in connection with the petition contained significant, relevant errors or omissions.

§ 97.705 Retired unit exemption.

(a)(1) Any TR SO_2 Group 2 unit that is permanently retired shall be exempt from § 97.706(b) and (c)(1), § 97.724, and §§ 97.730 through 97.735.

(2) The exemption under paragraph (a)(1) of this section shall become effective the day on which the TR SO_2 Group 2 unit is permanently retired. Within 30 days of the unit's permanent retirement, the designated representative shall submit a statement to the Administrator. The statement shall state, in a format prescribed by the Administrator, that the unit was permanently retired on a specified date and will comply with the requirements of paragraph (b) of this section.

(b) Special provisions. (1) A unit exempt under paragraph (a) of this section shall not emit any SO_2, starting on the date that the exemption takes effect.

(2) For a period of 5 years from the date the records are created, the owners and operators of a unit exempt under paragraph (a) of this section shall retain, at the source that includes the unit, records demonstrating that the unit is permanently retired. The 5-year period for keeping records may be extended for cause, at any time before the end of the period, in writing by the Administrator. The owners and operators bear the burden of proof that the unit is permanently retired.

(3) The owners and operators and, to the extent applicable, the designated representative of a unit exempt under paragraph (a) of this section shall comply with the requirements of the TR SO_2 Group 2 Trading Program concerning all periods for which the exemption is not in effect, even if such requirements arise, or must be complied with, after the exemption takes effect.

(4) A unit exempt under paragraph (a) of this section shall lose its exemption on the first date on which the unit resumes operation. Such unit shall be treated, for purposes of applying allocation, monitoring, reporting, and recordkeeping requirements under this subpart, as a unit that commences commercial operation on the first date on which the unit resumes operation.

§ 97.706 Standard requirements.

(a) *Designated representative requirements.* The owners and operators shall comply with the requirement to have a designated representative, and may have an alternate designated representative, in accordance with §§ 97.713 through 97.718.

(b) *Emissions monitoring, reporting, and recordkeeping requirements.* (1) The owners and operators, and the designated representative, of each TR SO_2 Group 2 source and each TR SO_2 Group 2 unit at the source shall comply with the monitoring, reporting, and recordkeeping requirements of §§ 97.730 through 97.735.

(2) The emissions data determined in accordance with §§ 97.730 through 97.735 shall be used to calculate allocations of TR SO_2 Group 2 allowances under §§ 97.711(a)(2) and (b) and 97.712 and to determine compliance with the TR SO_2 Group 2 emissions limitation and assurance provisions under paragraph (c) of this section, provided that, for each monitoring location from which mass emissions are reported, the mass emissions amount used in calculating such allocations and determining such compliance shall be the mass emissions amount for the monitoring location determined in accordance with §§ 97.730 through 97.735 and rounded to the nearest ton, with any fraction of a ton less than 0.50 being deemed to be zero.

(c) *SO_2 emissions requirements.* (1) TR SO_2 Group 2 emissions limitation. (i) As of the allowance transfer deadline for a control period in a given year, the owners and operators of each TR SO_2 Group 2 source and each TR SO_2 Group 2 unit at the source shall hold, in the source's compliance account, TR SO_2 Group 2 allowances available for deduction for such control period under § 97.724(a) in an amount not less than the tons of total SO_2 emissions for such control period from all TR SO_2 Group 2 units at the source.

(ii) If total SO_2 emissions during a control period in a given year from the TR SO_2 Group 2 units at a TR SO_2 Group 2 source are in excess of the TR SO_2 Group 2 emissions limitation set forth in paragraph (c)(1)(i) of this section, then:

(A) The owners and operators of the source and each TR SO_2 Group 2 unit at the source shall hold the TR SO_2 Group 2 allowances required for deduction under § 97.724(d); and

(B) The owners and operators of the source and each TR SO_2 Group 2 unit at the source shall pay any fine, penalty, or assessment or comply with any other remedy imposed, for the same violations, under the Clean Air Act, and each ton of such excess emissions and each day of such control period shall constitute a separate violation of this subpart and the Clean Air Act.

(2) TR SO_2 Group 2 assurance provisions. (i) If total SO_2 emissions during a control period in a given year from all TR SO_2 Group 2 units at TR SO_2 Group 2 sources in a State (and Indian country within the borders of such State) exceed the State assurance level, then the owners and operators of such sources and units in each group of one or more sources and units having a common designated representative for such control period, where the common designated representative's share of such SO_2 emissions during such control period exceeds the common designated representative's assurance level for the State and such control period, shall hold (in the assurance account established for the owners and operators of such group) TR SO_2 Group 2 allowances available for deduction for such control period under § 97.725(a) in an amount equal to two times the product (rounded to the nearest whole number), as determined by the Administrator in accordance with § 97.725(b), of multiplying—

(A) The quotient of the amount by which the common designated representative's share of such SO_2 emissions exceeds the common designated representative's assurance level divided by the sum of the amounts, determined for all common designated representatives for such sources and units in the State (and Indian country within the borders of such State) for such control period, by which each common designated representative's share of such SO_2 emissions exceeds the respective common designated representative's assurance level; and

(B) The amount by which total SO_2 emissions from all TR SO_2 Group 2 units at TR SO_2 Group 2 sources in the State (and Indian country within the borders of such State) for such control period exceed the State assurance level.

(ii) The owners and operators shall hold the TR SO_2 Group 2 allowances required under paragraph (c)(2)(i) of this section, as of midnight of November 1 (if it is a business day), or midnight of the first business day thereafter (if November 1 is not a business day), immediately after such control period.

(iii) Total SO_2 emissions from all TR SO_2 Group 2 units at TR SO_2 Group 2

sources in a State (and Indian country within the borders of such State) during a control period in a given year exceed the State assurance level if such total SO_2 emissions exceed the sum, for such control period, of the State SO_2 Group 2 trading budget under § 97.710(a) and the State's variability limit under § 97.710(b).

(iv) It shall not be a violation of this subpart or of the Clean Air Act if total SO_2 emissions from all TR SO_2 Group 2 units at TR SO_2 Group 2 sources in a State (and Indian country within the borders of such State) during a control period exceed the State assurance level or if a common designated representative's share of total SO_2 emissions from the TR SO_2 Group 2 units at TR SO_2 Group 2 sources in a State (and Indian country within the borders of such State) during a control period exceeds the common designated representative's assurance level.

(v) To the extent the owners and operators fail to hold TR SO_2 Group 2 allowances for a control period in a given year in accordance with paragraphs (c)(2)(i) through (iii) of this section,

(A) The owners and operators shall pay any fine, penalty, or assessment or comply with any other remedy imposed under the Clean Air Act; and

(B) Each TR SO_2 Group 2 allowance that the owners and operators fail to hold for such control period in accordance with paragraphs (c)(2)(i) through (iii) of this section and each day of such control period shall constitute a separate violation of this subpart and the Clean Air Act.

(3) Compliance periods. A TR SO_2 Group 2 unit shall be subject to the requirements under paragraphs (c)(1) and (c)(2) of this section for the control period starting on the later of January 1, 2012 or the deadline for meeting the unit's monitor certification requirements under § 97.730(b) and for each control period thereafter.

(4) Vintage of allowances held for compliance. (i) A TR SO_2 Group 2 allowance held for compliance with the requirements under paragraph (c)(1)(i) of this section for a control period in a given year must be a TR SO_2 Group 2 allowance that was allocated for such control period or a control period in a prior year.

(ii) A TR SO_2 Group 2 allowance held for compliance with the requirements under paragraphs (c)(1)(ii)(A) and (2)(i) through (iii) of this section for a control period in a given year must be a TR SO_2 Group 2 allowance that was allocated for a control period in a prior year or the control period in the given year or in the immediately following year.

(5) Allowance Management System requirements. Each TR SO_2 Group 2 allowance shall be held in, deducted from, or transferred into, out of, or between Allowance Management System accounts in accordance with this subpart.

(6) Limited authorization. A TR SO_2 Group 2 allowance is a limited authorization to emit one ton of SO_2 during the control period in one year. Such authorization is limited in its use and duration as follows:

(i) Such authorization shall only be used in accordance with the TR SO_2 Group 2 Trading Program; and

(ii) Notwithstanding any other provision of this subpart, the Administrator has the authority to terminate or limit the use and duration of such authorization to the extent the Administrator determines is necessary or appropriate to implement any provision of the Clean Air Act.

(7) Property right. A TR SO_2 Group 2 allowance does not constitute a property right.

(d) *Title V permit requirements.* (1) No title V permit revision shall be required for any allocation, holding, deduction, or transfer of TR SO_2 Group 2 allowances in accordance with this subpart.

(2) A description of whether a unit is required to monitor and report SO_2 emissions using a continuous emission monitoring system (under subpart H of part 75 of this chapter), an excepted monitoring system (under appendices D and E to part 75 of this chapter), a low mass emissions excepted monitoring methodology (under § 75.19 of this chapter), or an alternative monitoring system (under subpart E of part 75 of this chapter) in accordance with §§ 97.730 through 97.735 may be added to, or changed in, a title V permit using minor permit modification procedures in accordance with §§ 70.7(e)(2) and 71.7(e)(1) of this chapter, provided that the requirements applicable to the described monitoring and reporting (as added or changed, respectively) are already incorporated in such permit. This paragraph explicitly provides that the addition of, or change to, a unit's description as described in the prior sentence is eligible for minor permit modification procedures in accordance with §§ 70.7(e)(2)(i)(B) and 71.7(e)(1)(i)(B) of this chapter.

(e) *Additional recordkeeping and reporting requirements.* (1) Unless otherwise provided, the owners and operators of each TR SO_2 Group 2 source and each TR SO_2 Group 2 unit at the source shall keep on site at the source each of the following documents (in hardcopy or electronic format) for a period of 5 years from the date the document is created. This period may be extended for cause, at any time before the end of 5 years, in writing by the Administrator.

(i) The certificate of representation under § 97.716 for the designated representative for the source and each TR SO_2 Group 2 unit at the source and all documents that demonstrate the truth of the statements in the certificate of representation; provided that the certificate and documents shall be retained on site at the source beyond such 5-year period until such certificate of representation and documents are superseded because of the submission of a new certificate of representation under § 97.716 changing the designated representative.

(ii) All emissions monitoring information, in accordance with this subpart.

(iii) Copies of all reports, compliance certifications, and other submissions and all records made or required under, or to demonstrate compliance with the requirements of, the TR SO_2 Group 2 Trading Program.

(2) The designated representative of a TR SO_2 Group 2 source and each TR SO_2 Group 2 unit at the source shall make all submissions required under the TR SO_2 Group 2 Trading Program, except as provided in § 97.718. This requirement does not change, create an exemption from, or or otherwise affect the responsible official submission requirements under a title V operating permit program in parts 70 and 71 of this chapter.

(f) *Liability.* (1) Any provision of the TR SO_2 Group 2 Trading Program that applies to a TR SO_2 Group 2 source or the designated representative of a TR SO_2 Group 2 source shall also apply to the owners and operators of such source and of the TR SO_2 Group 2 units at the source.

(2) Any provision of the TR SO_2 Group 2 Trading Program that applies to a TR SO_2 Group 2 unit or the designated representative of a TR SO_2 Group 2 unit shall also apply to the owners and operators of such unit.

(g) *Effect on other authorities.* No provision of the TR SO_2 Group 2 Trading Program or exemption under § 97.705 shall be construed as exempting or excluding the owners and operators, and the designated representative, of a TR SO_2 Group 2 source or TR SO_2 Group 2 unit from compliance with any other provision of the applicable, approved State implementation plan, a federally enforceable permit, or the Clean Air Act.

§ 97.707 Computation of time.

(a) Unless otherwise stated, any time period scheduled, under the TR SO_2 Group 2 Trading Program, to begin on the occurrence of an act or event shall begin on the day the act or event occurs.

(b) Unless otherwise stated, any time period scheduled, under the TR SO_2 Group 2 Trading Program, to begin before the occurrence of an act or event shall be computed so that the period ends the day before the act or event occurs.

(c) Unless otherwise stated, if the final day of any time period, under the TR SO_2 Group 2 Trading Program, is not a business day, the time period shall be extended to the next business day.

§ 97.708 Administrative appeal procedures.

The administrative appeal procedures for decisions of the Administrator under the TR SO_2 Group 2 Trading Program are set forth in part 78 of this chapter.

§ 97.709 [Reserved]

§ 97.710 State SO_2 Group 2 trading budgets, new unit set-asides, Indian country new unit set-aside, and variability limits.

(a) The State SO_2 Group 2 trading budgets, new unit set-asides, and Indian country new unit set-asides for allocations of TR SO_2 Group 2 allowances for the control periods in 2012 and thereafter are as follows:

State	SO_2 Group 2 trading budget (tons) * for 2012 and 2013	New unit set-aside (tons) for 2012 and 2013	Indian country new unit set-aside (tons) for 2012 and 2013
Alabama	216,033	4,321	.....
Georgia	158,527	3,171	.....
Kansas	41,528	789	42
Minnesota	41,981	798	42
Nebraska	65,052	2,537	65
South Carolina	88,620	1,683	89
Texas	243,954	11,954	244

State	SO_2 Group 2 trading budget (tons) * for 2014 and thereafter	New unit set-aside (tons) for 2014 and thereafter	Indian country new unit set-aside (tons) for 2014 and thereafter
Alabama	213,258	4,265	.....
Georgia	95,231	1,905	.....
Kansas	41,528	789	42
Minnesota	41,981	798	42
Nebraska	65,052	2,537	65
South Carolina	88,620	1,683	89
Texas	243,954	11,954	244

* Each trading budget includes the new unit set-aside and, where applicable, the Indian country new unit set-aside and does not include the variability limit.

(b) The States' variability limits for the State SO_2 Group 2 trading budgets for the control periods in 2012 and thereafter are as follows:

State	Variability limits for 2012 and 2013	Variability limits for 2014 and thereafter
Alabama	38,886	38,386
Georgia	28,535	17,142
Kansas	7,475	7,475
Minnesota	7,557	7,557
Nebraska	11,709	11,709
South Carolina	15,952	15,952
Texas	43,912	43,912

§ 97.711 Timing requirements for TR SO_2 Group 2 allowance allocations.

(a) *Existing units.* (1) TR SO_2 Group 2 allowances are allocated, for the control periods in 2012 and each year thereafter, as provided in a notice of data availability issued by the Administrator. Providing an allocation to a unit in such notice does not constitute a determination that the unit is a TR SO_2 Group 2 unit, and not providing an allocation to a unit in such notice does not constitute a determination that the unit is not a TR SO_2 Group 2 unit.

(2) Notwithstanding paragraph (a)(1) of this section, if a unit provided an allocation in the notice of data availability issued under paragraph (a)(1) of this section does not operate, starting after 2011, during the control period in two consecutive years, such unit will not be allocated the TR SO_2 Group 2 allowances provided in such notice for the unit for the control periods in the fifth year after the first such year and in each year after that fifth year. All TR SO_2 Group 2 allowances that would otherwise have been allocated to such unit will be allocated to the new unit set-aside for the State where such unit is located and for the respective years involved. If such unit resumes operation, the Administrator will allocate TR SO_2 Group 2 allowances to the unit in accordance with paragraph (b) of this section.

(b) *New units.* (1) New unit set-asides. (i) By June 1, 2012 and June 1 of each year thereafter, the Administrator will calculate the TR SO_2 Group 2 allowance allocation to each TR SO_2 Group 2 unit in a State, in accordance with § 97.712(a)(2) through (7) and (12), for the control period in the year of the applicable calculation deadline under this paragraph and will promulgate a notice of data availability of the results of the calculations.

(ii) For each notice of data availability required in paragraph (b)(1)(i) of this section, the Administrator will provide an opportunity for submission of objections to the calculations referenced in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(1)(i) of this section and shall be limited to addressing whether the calculations (including the identification of the TR SO_2 Group 2 units) are in accordance with § 97.712(a)(2) through (7) and (12) and §§ 97.706(b)(2) and 97.730 through 97.735.

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(1)(ii)(A) of this section. By August 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(1)(i) of this section, the Administrator will promulgate a notice of data availability of any adjustments that the Administrator determines to be necessary with regard to allocations under § 97.712(a)(2) through (7) and (12) and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(1)(ii)(A) of this section.

(iii) If the new unit set-aside for such control period contains any TR SO_2 Group 2 allowances that have not been allocated in the applicable notice of data availability required in paragraph (b)(1)(ii) of this section, the Administrator will promulgate, by December 15 immediately after such notice, a notice of data availability that identifies any TR SO_2 Group 2 units that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period.

(iv) For each notice of data availability required in paragraph (b)(1)(iii) of this section, the Administrator will provide an opportunity for submission of objections to the identification of TR SO_2 annual units in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(1)(iii) of this section and shall be limited to addressing whether the identification of TR SO_2 annual units in such notice is in accordance with paragraph (b)(1)(iii) of this section.

(B) The Administrator will adjust the identification of TR SO_2 Group 2 units in the each notice of data availability required in paragraph (b)(1)(iii) of this section to the extent necessary to ensure that it is in accordance with paragraph (b)(1)(iii) of this section and will calculate the TR SO_2 Group 2 allowance allocation to each TR SO_2 Group 2 unit in accordance with § 97.712(a)(9), (10), and (12) and §§ 97.706(b)(2) and 97.730 through 97.735. By February 15 immediately after the promulgation of each notice of data availability required in paragraph (b)(1)(iii) of this section, the Administrator will promulgate a notice of data availability of any adjustments of the identification of TR SO_2 Group 2 units that the Administrator determines to be necessary, the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(1)(iv)(A) of this section, and the results of such calculations.

(v) To the extent any TR SO_2 Group 2 allowances are added to the new unit set-aside after promulgation of each notice of data availability required in paragraph (b)(1)(iv) of this section, the Administrator will promulgate additional notices of data availability, as deemed appropriate, of the allocation of such TR SO_2 Group 2 allowances in accordance with § 97.712(a)(10).

(2) Indian country new unit set-asides. (i) By June 1, 2012 and June 1 of each year thereafter, the Administrator will calculate the TR SO_2 Group 2 allowance allocation to each TR SO_2 Group 2 unit in Indian country within the borders of a State, in accordance with § 97.712(b)(2) through (7) and (12), for the control period in the year of the applicable calculation deadline under this paragraph and will promulgate a notice of data availability of the results of the calculations.

(ii) For each notice of data availability required in paragraph (b)(2)(i) of this section, the Administrator will provide an opportunity for submission of objections to the calculations referenced in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(2)(i) of this section and shall be limited to addressing whether the calculations (including the identification of the TR SO_2 Group 2 units) are in accordance with § 97.712(b)(2) through (7) and (12) and §§ 97.706(b)(2) and 97.730 through 97.735.

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(2)(ii)(A) of this section. By August 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(i) of this section, the Administrator will promulgate a notice of data availability of any adjustments that the Administrator determines to be necessary with regard to allocations under § 97.712(b)(2) through (7) and (12) and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(ii)(A) of this section.

(iii) If the Indian country new unit set-aside for such control period contains any TR SO_2 Group 2 allowances that have not been allocated in the applicable notice of data availability required in paragraph (b)(2)(ii) of this section, the Administrator will promulgate, by December 15 immediately after such notice, a notice of data availability that identifies any TR SO_2 Group 2 units that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period.

(iv) For each notice of data availability required in paragraph (b)(2)(iii) of this section, the Administrator will provide an opportunity for submission of objections to the identification of TR SO_2 annual units in such notice.

(A) Objections shall be submitted by the deadline specified in each notice of data availability required in paragraph (b)(2)(iii) of this section and shall be limited to addressing whether the identification of TR SO_2 annual units in such notice is in accordance with paragraph (b)(2)(iii) of this section.

(B) The Administrator will adjust the identification of TR SO_2 Group 2 units in the each notice of data availability required in paragraph (b)(2)(iii) of this section to the extent necessary to ensure that it is in accordance with paragraph (b)(2)(iii) of this section and will calculate the TR SO_2 Group 2 allowance allocation to each TR SO_2 Group 2 unit in accordance with § 97.712(b)(9), (10), and (12) and §§ 97.706(b)(2) and 97.730 through 97.735. By February 15 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii) of this section, the Administrator will promulgate a notice of data availability of any

adjustments of the identification of TR SO_2 Group 2 units that the Administrator determines to be necessary, the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(iv)(A) of this section, and the results of such calculations.

(v) To the extent any TR SO_2 Group 2 allowances are added to the Indian country new unit set-aside after promulgation of each notice of data availability required in paragraph (b)(2)(iv) of this section, the Administrator will promulgate additional notices of data availability, as deemed appropriate, of the allocation of such TR SO_2 Group 2 allowances in accordance with § 97.712(b)(10).

(c) *Units incorrectly allocated TR SO_2 Group 2 allowances.* (1) For each control period in 2012 and thereafter, if the Administrator determines that TR SO_2 Group 2 allowances were allocated under paragraph (a) of this section, or under a provision of a SIP revision approved § 52.39(g), (h), or (i) of this chapter, where such control period and the recipient are covered by the provisions of paragraph (c)(1)(i) of this section or were allocated under § 97.712(a)(2) through (7), (9), and (12) and (b)(2) through (7), (9), and (12), or under a provision of a SIP revision approved § 52.39(h) or (i) of this chapter, where such control period and the recipient are covered by the provisions of paragraph (c)(1)(ii) of this section, then the Administrator will notify the designated representative of the recipient and will act in accordance with the procedures set forth in paragraphs (c)(2) through (5) of this section:

(i)(A) The recipient is not actually a TR SO_2 Group 2 unit under § 97.704 as of January 1, 2012 and is allocated TR SO_2 Group 2 allowances for such control period or, in the case of an allocation under a provision of a SIP revision approved under § 52.39(g), (h), or (i) of this chapter, the recipient is not actually a TR SO_2 Group 2 unit as of January 1, 2012 and is allocated TR SO_2 Group 2 allowances for such control period that the SIP revision provides should be allocated only to recipients that are TR SO_2 Group 2 units as of January 1, 2012; or

(B) The recipient is not located as of January 1 of the control period in the State from whose SO_2 Group 2 trading budget the TR SO_2 Group 2 allowances allocated under paragraph (a) of this section, or under a provision of a SIP revision approved under § 52.39(g), (h), or (i) of this chapter, were allocated for such control period.

(ii) The recipient is not actually a TR SO_2 Group 2 unit under § 97.704 as of January 1 of such control period and is allocated TR SO_2 Group 2 allowances for such control period or, in the case of an allocation under a provision of a SIP revision approved under § 52.39(g), (h), or (i) of this chapter, the recipient is not actually a TR SO_2 Group 2 unit as of January 1 of such control period and is allocated TR SO_2 Group 2 allowances for such control period that the SIP revision provides should be allocated only to recipients that are TR SO_2 Group 2 units as of January 1 of such control period.

(2) Except as provided in paragraph (c)(3) or (4) of this section, the Administrator will not record such TR SO_2 Group 2 allowances under § 97.721.

(3) If the Administrator already recorded such TR SO_2 Group 2 allowances under § 97.721 and if the Administrator makes the determination under paragraph (c)(1) of this section before making deductions for the source that includes such recipient under § 97.724(b) for such control period, then the Administrator will deduct from the account in which such TR SO_2 Group 2 allowances were recorded an amount of TR SO_2 Group 2 allowances allocated for the same or a prior control period equal to the amount of such already recorded TR SO_2 Group 2 allowances. The authorized account representative shall ensure that there are sufficient TR SO_2 Group 2 allowances in such account for completion of the deduction.

(4) If the Administrator already recorded such TR SO_2 Group 2 allowances under § 97.721 and if the Administrator makes the determination under paragraph (c)(1) of this section after making deductions for the source that includes such recipient under § 97.724(b) for such control period, then the Administrator will not make any deduction to take account of such already recorded TR SO_2 Group 2 allowances.

(5)(i) With regard to the TR SO_2 Group 2 allowances that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(i) of this section, the Administrator will:

(A) Transfer such TR SO_2 Group 2 allowances to the new unit set-aside for such control period for the State from whose SO_2 Group 2 trading budget the TR SO_2 Group 2 allowances were allocated; or

(B) If the State has a SIP revision approved under § 52.39(h) or (i) covering such control period, include such TR SO_2 Group 2 allowances in the portion of the State SO_2 Group 2 trading budget that may be allocated for such control period in accordance with such SIP revision.

(ii) With regard to the TR SO_2 Group 2 allowances that were not allocated from the Indian country new unit set-aside for such control period and that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(ii) of this paragraph, the Administrator will:

(A) Transfer such TR SO_2 Group 2 allowances to the new unit set-aside for such control period; or

(B) If the State has a SIP revision approved under § 52.39(h) or (i) covering such control period, include such TR SO_2 Group 2 allowances in the portion of the State SO_2 Group 2 trading budget that may be allocated for such control period in accordance with such SIP revision.

(iii) With regard to the TR SO_2 Group 2 allowances that were allocated from the Indian country new unit set-aside for such control period and that are not recorded, or that are deducted as an incorrect allocation, in accordance with paragraphs (c)(2) and (3) of this section for a recipient under paragraph (c)(1)(ii) of this paragraph, the Administrator will transfer such TR SO_2 Group 2 allowances to the Indian country new unit set-aside for such control period.

§ 97.712 TR SO_2 Group 2 allowance allocations to new units.

(a) For each control period in 2012 and thereafter and for the TR SO_2 Group 2 units in each State, the Administrator will allocate TR SO_2 Group 2 allowances to the TR SO_2 Group 2 units as follows:

(1) The TR SO_2 Group 2 allowances will be allocated to the following TR SO_2 Group 2 units, except as provided in paragraph (a)(10) of this section:

(i) TR SO_2 Group 2 units that are not allocated an amount of TR SO_2 Group 2 allowances in the notice of data availability issued under § 97.711(a)(1);

(ii) TR SO_2 Group 2 units whose allocation of an amount of TR SO_2 Group 2 allowances for such control period in the notice of data availability issued under § 97.711(a)(1) is covered by § 97.711(c)(2) or (3);

(iii) TR SO_2 Group 2 units that are allocated an amount of TR SO_2 Group 2 allowances for such control period in the notice of data availability issued under § 97.711(a)(1), which allocation is terminated for such control period pursuant to § 97.711(a)(2), and that operate during the control period

immediately preceding such control period; or

(iv) For purposes of paragraph (a)(9) of this section, TR SO_2 Group 2 units under § 97.711(c)(1)(ii) whose allocation of an amount of TR SO_2 Group 2 allowances for such control period in the notice of data availability issued under § 97.711(b)(1)(ii)(B) is covered by § 97.711(c)(2) or (3).

(2) The Administrator will establish a separate new unit set-aside for the State for each such control period. Each such new unit set-aside will be allocated TR SO_2 Group 2 allowances in an amount equal to the applicable amount of tons of SO_2 emissions as set forth in § 97.710(a) and will be allocated additional TR SO_2 Group 2 allowances (if any) in accordance with §§ 97.711(a)(2) and (c)(5) and paragraph (b)(10) of this section.

(3) The Administrator will determine, for each TR SO_2 Group 2 unit described in paragraph (a)(1) of this section, an allocation of TR SO_2 Group 2 allowances for the later of the following control periods and for each subsequent control period:

(i) The control period in 2012;

(ii) The first control period after the control period in which the TR SO_2 Group 2 unit commences commercial operation;

(iii) For a unit described in paragraph (a)(1)(ii) of this section, the first control period in which the TR SO_2 Group 2 unit operates in the State after operating in another jurisdiction and for which the unit is not already allocated one or more TR SO_2 Group 2 allowances; and

(iv) For a unit described in paragraph (a)(1)(iii) of this section, the first control period after the control period in which the unit resumes operation.

(4)(i) The allocation to each TR SO_2 annual unit described in paragraph (a)(1)(i) through (iii) of this section and for each control period described in paragraph (a)(3) of this section will be an amount equal to the unit's total tons of SO_2 emissions during the immediately preceding control period.

(ii) The Administrator will adjust the allocation amount in paragraph (a)(4)(i) in accordance with paragraphs (a)(5) through (7) and (12) of this section.

(5) The Administrator will calculate the sum of the TR SO_2 Group 2 allowances determined for all such TR SO_2 Group 2 units under paragraph (a)(4)(i) of this section in the State for such control period.

(6) If the amount of TR SO_2 Group 2 allowances in the new unit set-aside for the State for such control period is greater than or equal to the sum under paragraph (a)(5) of this section, then the Administrator will allocate the amount of TR SO_2 Group 2 allowances determined for each such TR SO_2 Group 2 unit under paragraph (a)(4)(i) of this section.

(7) If the amount of TR SO_2 Group 2 allowances in the new unit set-aside for the State for such control period is less than the sum under paragraph (a)(5) of this section, then the Administrator will allocate to each such TR SO_2 Group 2 unit the amount of the TR SO_2 Group 2 allowances determined under paragraph (a)(4)(i) of this section for the unit, multiplied by the amount of TR SO_2 Group 2 allowances in the new unit set-aside for such control period, divided by the sum under paragraph (a)(5) of this section, and rounded to the nearest allowance.

(8) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.711(b)(1)(i) and (ii), of the amount of TR SO_2 Group 2 allowances allocated under paragraphs (a)(2) through (7) and (12) of this section for such control period to each TR SO_2 Group 2 unit eligible for such allocation.

(9) If, after completion of the procedures under paragraphs (a)(5) through (8) of this section for such control period, any unallocated TR SO_2 Group 2 allowances remain in the new unit set-aside for the State for such control period, the Administrator will allocate such TR SO_2 Group 2 allowances as follows—

(i) The Administrator will determine, for each unit described in paragraph (a)(1) of this section that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period, the positive difference (if any) between the unit's emissions during such control period and the amount of TR SO_2 Group 2 allowances referenced in the notice of data availability required under § 97.711(b)(1)(ii) for the unit for such control period;

(ii) The Administrator will determine the sum of the positive differences determined under paragraph (a)(9)(i) of this section;

(iii) If the amount of unallocated TR SO_2 Group 2 allowances remaining in the new unit set-aside for the State for such control period is greater than or equal to the sum determined under paragraph (a)(9)(ii) of this section, then the Administrator will allocate the amount of TR SO_2 Group 2 allowances determined for each such TR SO_2 Group 2 unit under paragraph (a)(9)(i) of this section; and

(iv) If the amount of unallocated TR SO_2 Group 2 allowances remaining in the new unit set-aside for the State for such control period is less than the sum under paragraph (a)(9)(ii) of this section, then the Administrator will allocate to each such TR SO_2 Group 2 unit the amount of the TR SO_2 Group 2 allowances determined under paragraph (a)(9)(i) of this section for the unit, multiplied by the amount of unallocated TR SO_2 Group 2 allowances remaining in the new unit set-aside for such control period, divided by the sum under paragraph (a)(9)(ii) of this section, and rounded to the nearest allowance.

(10) If, after completion of the procedures under paragraphs (a)(9) and (12) of this section for such control period, any unallocated TR SO_2 Group 2 allowances remain in the new unit set-aside for the State for such control period, the Administrator will allocate to each TR SO_2 Group 2 unit that is in the State, is allocated an amount of TR SO_2 Group 2 allowances in the notice of data availability issued under § 97.711(a)(1), and continues to be allocated TR SO_2 Group 2 allowances for such control period in accordance with § 97.711(a)(2), an amount of TR SO_2 Group 2 allowances equal to the following: The total amount of such remaining unallocated TR SO_2 Group 2 allowances in such new unit set-aside, multiplied by the unit's allocation under § 97.711(a) for such control period, divided by the remainder of the amount of tons in the applicable State SO_2 Group 2 trading budget minus the sum of the amounts of tons in such new unit set-aside and the Indian country new unit set-aside for the State for such control period, and rounded to the nearest allowance.

(11) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.711(b)(1)(iii), (iv), and (v), of the amount of TR SO_2 Group 2 allowances allocated under paragraphs (a)(9), (10), and (12) of this section for such control period to each TR SO_2 Group 2 unit eligible for such allocation.

(12)(i) Notwithstanding the requirements of paragraphs (a)(2) through (11) of this section, if the calculations of allocations of a new unit set-aside for a control period in a given year under paragraph (a)(7) of this section, paragraphs (a)(6) and (9)(iv) of this section, or paragraphs (a)(6), (9)(iii), and (10) of this section would otherwise result in total allocations of such new unit set-aside exceeding the total amount of such new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, as follows. The Administrator will list the TR SO_2 Group 2 units in descending order based

on the amount of such units' allocations under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will reduce each unit's allocation under paragraph (a)(7), (9)(iv), or (10) of this section, as applicable, by one TR SO_2 Group 2 allowance (but not below zero) in the order in which the units are listed and will repeat this reduction process as necessary, until the total allocations of such new unit set-aside equal the total amount of such new unit set-aside.

(ii) Notwithstanding the requirements of paragraphs (a)(10) and (11) of this section, if the calculations of allocations of a new unit set-aside for a control period in a given year under paragraphs (a)(6), (9)(iii), and (10) of this section would otherwise result in a total allocations of such new unit set-aside less than the total amount of such new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (a)(10) of this section, as follows. The Administrator will list the TR SO_2 Group 2 units in descending order based on the amount of such units' allocations under paragraph (a)(10) of this section and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will increase each unit's allocation under paragraph (a)(10) of this section by one TR SO_2 Group 2 allowance in the order in which the units are listed and will repeat this increase process as necessary, until the total allocations of such new unit set-aside equal the total amount of such new unit set-aside.

(b) For each control period in 2012 and thereafter and for the TR SO_2 Group 2 units located in Indian country within the borders of each State, the Administrator will allocate TR SO_2 Group 2 allowances to the TR SO_2 Group 2 units as follows:

(1) The TR SO_2 Group 2 allowances will be allocated to the following TR SO_2 Group 2 units, except as provided in paragraph (b)(10) of this section:

(i) TR SO_2 Group 2 units that are not allocated an amount of TR SO_2 Group 2 allowances in the notice of data availability issued under § 97.711(a)(1); or

(ii) For purposes of paragraph (b)(9) of this section, TR SO_2 Group 2 units under § 97.711(c)(1)(ii) whose allocation of an amount of TR SO_2 Group 2 allowances for such control period in the notice of data availability issued under § 97.711(b)(2)(ii)(B) is covered by § 97.711(c)(2) or (3).

(2) The Administrator will establish a separate Indian country new unit set-aside for the State for each such control period. Each such Indian country new unit set-aside will be allocated TR SO_2 Group 2 allowances in an amount equal to the applicable amount of tons of SO_2 emissions as set forth in § 97.710(a) and will be allocated additional TR SO_2 Group 2 allowances (if any) in accordance with § 97.711(c)(5).

(3) The Administrator will determine, for each TR SO_2 Group 2 unit described in paragraph (b)(1) of this section, an allocation of TR SO_2 Group 2 allowances for the later of the following control periods and for each subsequent control period:

(i) The control period in 2012; and

(ii) The first control period after the control period in which the TR SO_2 Group 2 unit commences commercial operation.

(4)(i) The allocation to each TR SO_2 annual unit described in paragraph (b)(1)(i) of this section and for each control period described in paragraph (b)(3) of this section will be an amount equal to the unit's total tons of SO_2 emissions during the immediately preceding control period.

(ii) The Administrator will adjust the allocation amount in paragraph (b)(4)(i) in accordance with paragraphs (b)(5) through (7) and (12) of this section.

(5) The Administrator will calculate the sum of the TR SO_2 Group 2 allowances determined for all such TR SO_2 Group 2 units under paragraph (b)(4)(i) of this section in Indian country within the borders of the State for such control period.

(6) If the amount of TR SO_2 Group 2 allowances in the Indian country new unit set-aside for the State for such control period is greater than or equal to the sum under paragraph (b)(5) of this section, then the Administrator will allocate the amount of TR SO_2 Group 2 allowances determined for each such TR SO_2 Group 2 unit under paragraph (b)(4)(i) of this section.

(7) If the amount of TR SO_2 Group 2 allowances in the Indian country new unit set-aside for the State for such control period is less than the sum under paragraph (b)(5) of this section, then the Administrator will allocate to each such TR SO_2 Group 2 unit the amount of the TR SO_2 Group 2 allowances determined under paragraph (b)(4)(i) of this section for the unit, multiplied by the amount of TR SO_2 Group 2 allowances in the Indian country new unit set-aside for such control period, divided by the sum under paragraph (b)(5) of this section, and rounded to the nearest allowance.

(8) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.711(b)(2)(i) and (ii), of the amount of TR SO_2 Group 2 allowances allocated under paragraphs (b)(2) through (7) and (12) of this section for such control period to each TR SO_2 Group 2 unit eligible for such allocation.

(9) If, after completion of the procedures under paragraphs (b)(5) through (8) of this section for such control period, any unallocated TR SO_2 Group 2 allowances remain in the Indian country new unit set-aside for the State for such control period, the Administrator will allocate such TR SO_2 Group 2 allowances as follows—

(i) The Administrator will determine, for each unit described in paragraph (b)(1) of this section that commenced commercial operation during the period starting January 1 of the year before the year of such control period and ending November 30 of year of such control period, the positive difference (if any) between the unit's emissions during such control period and the amount of TR SO_2 Group 2 allowances referenced in the notice of data availability required under § 97.711(b)(2)(ii) for the unit for such control period;

(ii) The Administrator will determine the sum of the positive differences determined under paragraph (b)(9)(i) of this section;

(iii) If the amount of unallocated TR SO_2 Group 2 allowances remaining in the Indian country new unit set-aside for the State for such control period is greater than or equal to the sum determined under paragraph (b)(9)(ii) of this section, then the Administrator will allocate the amount of TR SO_2 Group 2 allowances determined for each such TR SO_2 Group 2 unit under paragraph (b)(9)(i) of this section; and

(iv) If the amount of unallocated TR SO_2 Group 2 allowances remaining in the Indian country new unit set-aside for the State for such control period is less than the sum under paragraph (b)(9)(ii) of this section, then the Administrator will allocate to each such TR SO_2 Group 2 unit the amount of the TR SO_2 Group 2 allowances determined under paragraph (b)(9)(i) of this section for the unit, multiplied by the amount of unallocated TR SO_2 Group 2 allowances remaining in the Indian country new unit set-aside for such control period, divided by the sum under paragraph (b)(9)(ii) of this section, and rounded to the nearest allowance.

(10) If, after completion of the procedures under paragraphs (b)(9) and (12) of this section for such control

period, any unallocated TR SO_2 Group 2 allowances remain in the Indian country new unit set-aside for the State for such control period, the Administrator will:

(i) Transfer such unallocated TR SO_2 Group 2 allowances to the new unit set-aside for the State for such control period; or

(ii) If the State has a SIP revision approved under § 52.39(g), (h), or (i) of this chapter covering such control period, include such unallocated TR SO_2 Group 2 allowances in the portion of the State SO_2 Group 2 trading budget that may be allocated for such control period in accordance with such SIP revision.

(11) The Administrator will notify the public, through the promulgation of the notices of data availability described in § 97.711(b)(2)(iii), (iv), and (v), of the amount of TR SO_2 Group 2 allowances allocated under paragraphs (b)(9), (10), and (12) of this section for such control period to each TR SO_2 Group 2 unit eligible for such allocation.

(12)(i) Notwithstanding the requirements of paragraphs (b)(2) through (11) of this section, if the calculations of allocations of an Indian country new unit set-aside for a control period in a given year under paragraph (b)(7) of this section, paragraphs (b)(6) and (9)(iv) of this section, or paragraphs (b)(6), (9)(iii), and (10) of this section would otherwise result in total allocations of such Indian country new unit set-aside exceeding the total amount of such Indian country new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, as follows. The Administrator will list the TR SO_2 Group 2 units in descending order based on the amount of such units' allocations under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will reduce each unit's allocation under paragraph (b)(7), (9)(iv), or (10) of this section, as applicable, by one TR SO_2 Group 2 allowance (but not below zero) in the order in which the units are listed and will repeat this reduction process as necessary, until the total allocations of such Indian country new unit set-aside equal the total amount of such Indian country new unit set-aside.

(ii) Notwithstanding the requirements of paragraphs (b)(10) and (11) of this section, if the calculations of allocations of an Indian country new unit set-aside for a control period in a given year under paragraphs (b)(6), (9)(iii), and (10) of this section would otherwise result in a total allocations of such Indian country new unit set-aside less than the total amount of such Indian country new unit set-aside, then the Administrator will adjust the results of the calculations under paragraph (b)(10) of this section, as follows. The Administrator will list the TR SO_2 Group 2 units in descending order based on the amount of such units' allocations under paragraph (b)(10) of this section and, in cases of equal allocation amounts, in alphabetical order of the relevant source's name and numerical order of the relevant unit's identification number, and will increase each unit's allocation under paragraph (b)(10) of this section by one TR SO_2 Group 2 allowance in the order in which the units are listed and will repeat this increase process as necessary, until the total allocations of such Indian country new unit set-aside equal the total amount of such Indian country new unit set-aside.

§ 97.713 Authorization of designated representative and alternate designated representative.

(a) Except as provided under § 97.715, each TR SO_2 Group 2 source, including all TR SO_2 Group 2 units at the source, shall have one and only one designated representative, with regard to all matters under the TR SO_2 Group 2 Trading Program.

(1) The designated representative shall be selected by an agreement binding on the owners and operators of the source and all TR SO_2 Group 2 units at the source and shall act in accordance with the certification statement in § 97.716(a)(4)(iii).

(2) Upon and after receipt by the Administrator of a complete certificate of representation under § 97.716:

(i) The designated representative shall be authorized and shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each owner and operator of the source and each TR SO_2 Group 2 unit at the source in all matters pertaining to the TR SO_2 Group 2 Trading Program, notwithstanding any agreement between the designated representative and such owners and operators; and

(ii) The owners and operators of the source and each TR SO_2 Group 2 unit at the source shall be bound by any decision or order issued to the designated representative by the Administrator regarding the source or any such unit.

(b) Except as provided under § 97.715, each TR SO_2 Group 2 source may have one and only one alternate designated representative, who may act on behalf of the designated representative. The agreement by which the alternate designated representative is selected shall include a procedure for authorizing the alternate designated representative to act in lieu of the designated representative.

(1) The alternate designated representative shall be selected by an agreement binding on the owners and operators of the source and all TR SO_2 Group 2 units at the source and shall act in accordance with the certification statement in § 97.716(a)(4)(iii).

(2) Upon and after receipt by the Administrator of a complete certificate of representation under § 97.716,

(i) The alternate designated representative shall be authorized;

(ii) Any representation, action, inaction, or submission by the alternate designated representative shall be deemed to be a representation, action, inaction, or submission by the designated representative; and

(iii) The owners and operators of the source and each TR SO_2 Group 2 unit at the source shall be bound by any decision or order issued to the alternate designated representative by the Administrator regarding the source or any such unit.

(c) Except in this section, § 97.702, and §§ 97.714 through 97.718, whenever the term ''designated representative'' (as distinguished from the term ''common designated representative'') is used in this subpart, the term shall be construed to include the designated representative or any alternate designated representative.

§ 97.714 Responsibilities of designated representative and alternate designated representative.

(a) Except as provided under § 97.718 concerning delegation of authority to make submissions, each submission under the TR SO_2 Group 2 Trading Program shall be made, signed, and certified by the designated representative or alternate designated representative for each TR SO_2 Group 2 source and TR SO_2 Group 2 unit for which the submission is made. Each such submission shall include the following certification statement by the designated representative or alternate designated representative: ''I am authorized to make this submission on behalf of the owners and operators of the source or units for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of

those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(b) The Administrator will accept or act on a submission made for a TR SO_2 Group 2 source or a TR SO_2 Group 2 unit only if the submission has been made, signed, and certified in accordance with paragraph (a) of this section and § 97.718.

§ 97.715 Changing designated representative and alternate designated representative; changes in owners and operators; changes in units at the source.

(a) *Changing designated representative.* The designated representative may be changed at any time upon receipt by the Administrator of a superseding complete certificate of representation under § 97.716. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous designated representative before the time and date when the Administrator receives the superseding certificate of representation shall be binding on the new designated representative and the owners and operators of the TR SO_2 Group 2 source and the TR SO_2 Group 2 units at the source.

(b) *Changing alternate designated representative.* The alternate designated representative may be changed at any time upon receipt by the Administrator of a superseding complete certificate of representation under § 97.716. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous alternate designated representative before the time and date when the Administrator receives the superseding certificate of representation shall be binding on the new alternate designated representative, the designated representative, and the owners and operators of the TR SO_2 Group 2 source and the TR SO_2 Group 2 units at the source.

(c) *Changes in owners and operators.* (1) In the event an owner or operator of a TR SO_2 Group 2 source or a TR SO_2 Group 2 unit at the source is not included in the list of owners and operators in the certificate of representation under § 97.716, such owner or operator shall be deemed to be subject to and bound by the certificate of representation, the representations, actions, inactions, and submissions of the designated representative and any alternate designated representative of the source or unit, and the decisions and orders of the Administrator, as if the owner or operator were included in such list.

(2) Within 30 days after any change in the owners and operators of a TR SO_2 Group 2 source or a TR SO_2 Group 2 unit at the source, including the addition or removal of an owner or operator, the designated representative or any alternate designated representative shall submit a revision to the certificate of representation under § 97.716 amending the list of owners and operators to reflect the change.

(d) *Changes in units at the source.* Within 30 days of any change in which units are located at a TR SO_2 Group 2 source (including the addition or removal of a unit), the designated representative or any alternate designated representative shall submit a certificate of representation under § 97.716 amending the list of units to reflect the change.

(1) If the change is the addition of a unit that operated (other than for purposes of testing by the manufacturer before initial installation) before being located at the source, then the certificate of representation shall identify, in a format prescribed by the Administrator, the entity from whom the unit was purchased or otherwise obtained (including name, address, telephone number, and facsimile number (if any)), the date on which the unit was purchased or otherwise obtained, and the date on which the unit became located at the source.

(2) If the change is the removal of a unit, then the certificate of representation shall identify, in a format prescribed by the Administrator, the entity to which the unit was sold or that otherwise obtained the unit (including name, address, telephone number, and facsimile number (if any)), the date on which the unit was sold or otherwise obtained, and the date on which the unit became no longer located at the source.

§ 97.716 Certificate of representation.

(a) A complete certificate of representation for a designated representative or an alternate designated representative shall include the following elements in a format prescribed by the Administrator:

(1) Identification of the TR SO_2 Group 2 source, and each TR SO_2 Group 2 unit at the source, for which the certificate of representation is submitted, including source name, source category and NAICS code (or, in the absence of a NAICS code, an equivalent code), State, plant code, county, latitude and longitude, unit identification number and type, identification number and nameplate capacity (in MWe, rounded to the nearest tenth) of each generator served by each such unit, actual or projected date of commencement of commercial operation, and a statement of whether such source is located in Indian Country. If a projected date of commencement of commercial operation is provided, the actual date of commencement of commercial operation shall be provided when such information becomes available.

(2) The name, address, e-mail address (if any), telephone number, and facsimile transmission number (if any) of the designated representative and any alternate designated representative.

(3) A list of the owners and operators of the TR SO_2 Group 2 source and of each TR SO_2 Group 2 unit at the source.

(4) The following certification statements by the designated representative and any alternate designated representative—

(i) ''I certify that I was selected as the designated representative or alternate designated representative, as applicable, by an agreement binding on the owners and operators of the source and each TR SO_2 Group 2 unit at the source.''

(ii) ''I certify that I have all the necessary authority to carry out my duties and responsibilities under the TR SO_2 Group 2 Trading Program on behalf of the owners and operators of the source and of each TR SO_2 Group 2 unit at the source and that each such owner and operator shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the Administrator regarding the source or unit.''

(iii) ''Where there are multiple holders of a legal or equitable title to, or a leasehold interest in, a TR SO_2 Group 2 unit, or where a utility or industrial customer purchases power from a TR SO_2 Group 2 unit under a life-of-the-unit, firm power contractual arrangement, I certify that: I have given a written notice of my selection as the 'designated representative' or 'alternate designated representative', as applicable, and of the agreement by which I was selected to each owner and operator of the source and of each TR SO_2 Group 2 unit at the source; and TR SO_2 Group 2 allowances and proceeds of transactions involving TR SO_2 Group 2 allowances will be deemed to be held or distributed in proportion to each holder's legal, equitable, leasehold, or contractual reservation or entitlement, except that, if such multiple holders have expressly provided for a different distribution of TR SO_2 Group 2

allowances by contract, TR SO_2 Group 2 allowances and proceeds of transactions involving TR SO_2 Group 2 allowances will be deemed to be held or distributed in accordance with the contract.''

(5) The signature of the designated representative and any alternate designated representative and the dates signed.

(b) Unless otherwise required by the Administrator, documents of agreement referred to in the certificate of representation shall not be submitted to the Administrator. The Administrator shall not be under any obligation to review or evaluate the sufficiency of such documents, if submitted.

§ 97.717 Objections concerning designated representative and alternate designated representative.

(a) Once a complete certificate of representation under § 97.716 has been submitted and received, the Administrator will rely on the certificate of representation unless and until a superseding complete certificate of representation under § 97.716 is received by the Administrator.

(b) Except as provided in paragraph (a) of this section, no objection or other communication submitted to the Administrator concerning the authorization, or any representation, action, inaction, or submission, of a designated representative or alternate designated representative shall affect any representation, action, inaction, or submission of the designated representative or alternate designated representative or the finality of any decision or order by the Administrator under the TR SO_2 Group 2 Trading Program.

(c) The Administrator will not adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of any designated representative or alternate designated representative, including private legal disputes concerning the proceeds of TR SO_2 Group 2 allowance transfers.

§ 97.718 Delegation by designated representative and alternate designated representative.

(a) A designated representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(b) An alternate designated representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(c) In order to delegate authority to a natural person to make an electronic submission to the Administrator in accordance with paragraph (a) or (b) of this section, the designated representative or alternate designated representative, as appropriate, must submit to the Administrator a notice of delegation, in a format prescribed by the Administrator, that includes the following elements:

(1) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of such designated representative or alternate designated representative;

(2) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of each such natural person (referred to in this section as an ''agent'');

(3) For each such natural person, a list of the type or types of electronic submissions under paragraph (a) or (b) of this section for which authority is delegated to him or her; and

(4) The following certification statements by such designated representative or alternate designated representative:

(i) ''I agree that any electronic submission to the Administrator that is made by an agent identified in this notice of delegation and of a type listed for such agent in this notice of delegation and that is made when I am a designated representative or alternate designated representative, as appropriate, and before this notice of delegation is superseded by another notice of delegation under 40 CFR 97.718(d) shall be deemed to be an electronic submission by me.''

(ii) ''Until this notice of delegation is superseded by another notice of delegation under 40 CFR 97.718(d), I agree to maintain an e-mail account and to notify the Administrator immediately of any change in my e-mail address unless all delegation of authority by me under 40 CFR 97.718 is terminated.''.

(d) A notice of delegation submitted under paragraph (c) of this section shall be effective, with regard to the designated representative or alternate designated representative identified in such notice, upon receipt of such notice by the Administrator and until receipt by the Administrator of a superseding notice of delegation submitted by such designated representative or alternate designated representative, as appropriate. The superseding notice of delegation may replace any previously identified agent, add a new agent, or eliminate entirely any delegation of authority.

(e) Any electronic submission covered by the certification in paragraph (c)(4)(i) of this section and made in accordance with a notice of delegation effective under paragraph (d) of this section shall be deemed to be an electronic submission by the designated representative or alternate designated representative submitting such notice of delegation.

§ 97.719 [Reserved]

§ 97.720 Establishment of compliance accounts, assurance accounts, and general accounts.

(a) *Compliance accounts.* Upon receipt of a complete certificate of representation under § 97.716, the Administrator will establish a compliance account for the TR SO_2 Group 2 source for which the certificate of representation was submitted, unless the source already has a compliance account. The designated representative and any alternate designated representative of the source shall be the authorized account representative and the alternate authorized account representative respectively of the compliance account.

(b) *Assurance accounts.* The Administrator will establish assurance accounts for certain owners and operators and States in accordance with § 97.725(b)(3).

(c) *General accounts.* (1) Application for general account. (i) Any person may apply to open a general account, for the purpose of holding and transferring TR SO_2 Group 2 allowances, by submitting to the Administrator a complete application for a general account. Such application shall designate one and only one authorized account representative and may designate one and only one alternate authorized account representative who may act on behalf of the authorized account representative.

(A) The authorized account representative and alternate authorized account representative shall be selected by an agreement binding on the persons who have an ownership interest with respect to TR SO_2 Group 2 allowances held in the general account.

(B) The agreement by which the alternate authorized account representative is selected shall include a procedure for authorizing the alternate authorized account representative to act in lieu of the authorized account representative.

(ii) A complete application for a general account shall include the following elements in a format prescribed by the Administrator:

(A) Name, mailing address, e-mail address (if any), telephone number, and

facsimile transmission number (if any) of the authorized account representative and any alternate authorized account representative;

(B) An identifying name for the general account;

(C) A list of all persons subject to a binding agreement for the authorized account representative and any alternate authorized account representative to represent their ownership interest with respect to the TR SO_2 Group 2 allowances held in the general account;

(D) The following certification statement by the authorized account representative and any alternate authorized account representative: ''I certify that I was selected as the authorized account representative or the alternate authorized account representative, as applicable, by an agreement that is binding on all persons who have an ownership interest with respect to TR SO_2 Group 2 allowances held in the general account. I certify that I have all the necessary authority to carry out my duties and responsibilities under the TR SO_2 Group 2 Trading Program on behalf of such persons and that each such person shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the Administrator regarding the general account.''

(E) The signature of the authorized account representative and any alternate authorized account representative and the dates signed.

(iii) Unless otherwise required by the Administrator, documents of agreement referred to in the application for a general account shall not be submitted to the Administrator. The Administrator shall not be under any obligation to review or evaluate the sufficiency of such documents, if submitted.

(2) Authorization of authorized account representative and alternate authorized account representative. (i) Upon receipt by the Administrator of a complete application for a general account under paragraph (b)(1) of this section, the Administrator will establish a general account for the person or persons for whom the application is submitted, and upon and after such receipt by the Administrator:

(A) The authorized account representative of the general account shall be authorized and shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each person who has an ownership interest with respect to TR SO_2 Group 2 allowances held in the general account in all matters pertaining to the TR SO_2 Group 2 Trading Program, notwithstanding any agreement between the authorized account representative and such person.

(B) Any alternate authorized account representative shall be authorized, and any representation, action, inaction, or submission by any alternate authorized account representative shall be deemed to be a representation, action, inaction, or submission by the authorized account representative.

(C) Each person who has an ownership interest with respect to TR SO_2 Group 2 allowances held in the general account shall be bound by any decision or order issued to the authorized account representative or alternate authorized account representative by the Administrator regarding the general account.

(ii) Except as provided in paragraph (c)(5) of this section concerning delegation of authority to make submissions, each submission concerning the general account shall be made, signed, and certified by the authorized account representative or any alternate authorized account representative for the persons having an ownership interest with respect to TR SO_2 Group 2 allowances held in the general account. Each such submission shall include the following certification statement by the authorized account representative or any alternate authorized account representative: ''I am authorized to make this submission on behalf of the persons having an ownership interest with respect to the TR SO_2 Group 2 allowances held in the general account. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.''

(iii) Except in this section, whenever the term ''authorized account representative'' is used in this subpart, the term shall be construed to include the authorized account representative or any alternate authorized account representative.

(3) Changing authorized account representative and alternate authorized account representative; changes in persons with ownership interest. (i) The authorized account representative of a general account may be changed at any time upon receipt by the Administrator of a superseding complete application for a general account under paragraph (c)(1) of this section. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous authorized account representative before the time and date when the Administrator receives the superseding application for a general account shall be binding on the new authorized account representative and the persons with an ownership interest with respect to the TR SO_2 Group 2 allowances in the general account.

(ii) The alternate authorized account representative of a general account may be changed at any time upon receipt by the Administrator of a superseding complete application for a general account under paragraph (c)(1) of this section. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous alternate authorized account representative before the time and date when the Administrator receives the superseding application for a general account shall be binding on the new alternate authorized account representative, the authorized account representative, and the persons with an ownership interest with respect to the TR SO_2 Group 2 allowances in the general account.

(iii)(A) In the event a person having an ownership interest with respect to TR SO_2 Group 2 allowances in the general account is not included in the list of such persons in the application for a general account, such person shall be deemed to be subject to and bound by the application for a general account, the representation, actions, inactions, and submissions of the authorized account representative and any alternate authorized account representative of the account, and the decisions and orders of the Administrator, as if the person were included in such list.

(B) Within 30 days after any change in the persons having an ownership interest with respect to SO_2 Group 2 allowances in the general account, including the addition or removal of a person, the authorized account representative or any alternate authorized account representative shall submit a revision to the application for a general account amending the list of persons having an ownership interest with respect to the TR SO_2 Group 2 allowances in the general account to include the change.

(4) Objections concerning authorized account representative and alternate authorized account representative. (i) Once a complete application for a general account under paragraph (c)(1) of this section has been submitted and

received, the Administrator will rely on the application unless and until a superseding complete application for a general account under paragraph (b)(1) of this section is received by the Administrator.

(ii) Except as provided in paragraph (c)(4)(i) of this section, no objection or other communication submitted to the Administrator concerning the authorization, or any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative of a general account shall affect any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative or the finality of any decision or order by the Administrator under the TR SO_2 Group 2 Trading Program.

(iii) The Administrator will not adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of the authorized account representative or any alternate authorized account representative of a general account, including private legal disputes concerning the proceeds of TR SO_2 Group 2 allowance transfers.

(5) Delegation by authorized account representative and alternate authorized account representative. (i) An authorized account representative of a general account may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(ii) An alternate authorized account representative of a general account may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Administrator provided for or required under this subpart.

(iii) In order to delegate authority to a natural person to make an electronic submission to the Administrator in accordance with paragraph (c)(5)(i) or (ii) of this section, the authorized account representative or alternate authorized account representative, as appropriate, must submit to the Administrator a notice of delegation, in a format prescribed by the Administrator, that includes the following elements:

(A) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of such authorized account representative or alternate authorized account representative;

(B) The name, address, e-mail address, telephone number, and facsimile transmission number (if any) of each such natural person (referred to in this section as an ''agent'');

(C) For each such natural person, a list of the type or types of electronic submissions under paragraph (c)(5)(i) or (ii) of this section for which authority is delegated to him or her;

(D) The following certification statement by such authorized account representative or alternate authorized account representative: ''I agree that any electronic submission to the Administrator that is made by an agent identified in this notice of delegation and of a type listed for such agent in this notice of delegation and that is made when I am an authorized account representative or alternate authorized representative, as appropriate, and before this notice of delegation is superseded by another notice of delegation under 40 CFR 97.720(c)(5)(iv) shall be deemed to be an electronic submission by me.''; and

(E) The following certification statement by such authorized account representative or alternate authorized account representative: ''Until this notice of delegation is superseded by another notice of delegation under 40 CFR 97.720(c)(5)(iv), I agree to maintain an e-mail account and to notify the Administrator immediately of any change in my e-mail address unless all delegation of authority by me under 40 CFR 97.720(c)(5) is terminated.''.

(iv) A notice of delegation submitted under paragraph (c)(5)(iii) of this section shall be effective, with regard to the authorized account representative or alternate authorized account representative identified in such notice, upon receipt of such notice by the Administrator and until receipt by the Administrator of a superseding notice of delegation submitted by such authorized account representative or alternate authorized account representative, as appropriate. The superseding notice of delegation may replace any previously identified agent, add a new agent, or eliminate entirely any delegation of authority.

(v) Any electronic submission covered by the certification in paragraph (c)(5)(iii)(D) of this section and made in accordance with a notice of delegation effective under paragraph (c)(5)(iv) of this section shall be deemed to be an electronic submission by the designated representative or alternate designated representative submitting such notice of delegation.

(6) Closing a general account. (i) The authorized account representative or alternate authorized account representative of a general account may submit to the Administrator a request to close the account. Such request shall include a correctly submitted TR SO_2 Group 2 allowance transfer under § 97.722 for any TR SO_2 Group 2 allowances in the account to one or more other Allowance Management System accounts.

(ii) If a general account has no TR SO_2 Group 2 allowance transfers to or from the account for a 12-month period or longer and does not contain any TR SO_2 Group 2 allowances, the Administrator may notify the authorized account representative for the account that the account will be closed after 30 days after the notice is sent. The account will be closed after the 30-day period unless, before the end of the 30-day period, the Administrator receives a correctly submitted TR SO_2 Group 2 allowance transfer under § 97.722 to the account or a statement submitted by the authorized account representative or alternate authorized account representative demonstrating to the satisfaction of the Administrator good cause as to why the account should not be closed.

(d) *Account identification.* The Administrator will assign a unique identifying number to each account established under paragraph (a), (b), or (c) of this section.

(e) *Responsibilities of authorized account representative and alternate authorized account representative.* After the establishment of a compliance account or general account, the Administrator will accept or act on a submission pertaining to the account, including, but not limited to, submissions concerning the deduction or transfer of TR SO_2 Group 2 allowances in the account, only if the submission has been made, signed, and certified in accordance with §§ 97.714(a) and 97.718 or paragraphs (c)(2)(ii) and (c)(5) of this section.

§ 97.721 Recordation of TR SO_2 Group 2 allowance allocations and auction results.

(a) By November 7, 2011, the Administrator will record in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source in accordance with § 97.711(a) for the control period in 2012.

(b) By November 7, 2011, the Administrator will record in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source in accordance with § 97.711(a) for the control period in 2013, unless the State in which the source is located notifies the

Administrator in writing by October 17, 2011 of the State's intent to submit to the Administrator a complete SIP revision by April 1, 2012 meeting the requirements of § 52.39(g)(1) through (4) of this chapter.

(1) If, by April 1, 2012, the State does not submit to the Administrator such complete SIP revision, the Administrator will record by April 15, 2012 in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source in accordance with § 97.711(a) for the control period in 2013.

(2) If the State submits to the Administrator by April 1, 2012, and the Administrator approves by October 1, 2012, such complete SIP revision, the Administrator will record by October 1, 2012 in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source as provided in such approved, complete SIP revision for the control period in 2013.

(3) If the State submits to the Administrator by April 1, 2012, and the Administrator does not approve by October 1, 2012, such complete SIP revision, the Administrator will record by October 1, 2012 in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source in accordance with § 97.711(a) for the control period in 2013.

(c) By July 1, 2013, the Administrator will record in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source, or in each appropriate Allowance Management System account the TR SO_2 Group 2 allowances auctioned to TR SO_2 Group 2 units, in accordance with § 97.711(a), or with a SIP revision approved under § 52.39(h) or (i) of this chapter, for the control period in 2014 and 2015.

(d) By July 1, 2014, the Administrator will record in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source, or in each appropriate Allowance Management System account the TR SO_2 Group 2 allowances auctioned to TR SO_2 Group 2 units, in accordance with § 97.711(a), or with a SIP revision approved under § 52.39(h) or (i) of this chapter, for the control period in 2016 and 2017.

(e) By July 1, 2015, the Administrator will record in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source, or in each appropriate Allowance Management System account the TR SO_2 Group 2 allowances auctioned to TR SO_2 Group 2 units, in accordance with § 97.711(a), or with a SIP revision approved under § 52.39(h) or (i) of this chapter, for the control period in 2018 and 2019.

(f) By July 1, 2016 and July 1 of each year thereafter, the Administrator will record in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source, or in each appropriate Allowance Management System account the TR SO_2 Group 2 allowances auctioned to TR SO_2 Group 2 units, in accordance with § 97.711(a), or with a SIP revision approved under § 52.39(h) and (i) of this chapter, for the control period in the fourth year after the year of the applicable recordation deadline under this paragraph.

(g) By August 1, 2012 and August 1 of each year thereafter, the Administrator will record in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source, or in each appropriate Allowance Management System account the TR SO_2 Group 2 allowances auctioned to TR SO_2 Group 2 units, in accordance with § 97.712(a)(2) through (8) and (12), or with a SIP revision approved under § 52.39(h) and (i) of this chapter, for the control period in the year of the applicable recordation deadline under this paragraph.

(h) By August 1, 2012 and August 1 of each year thereafter, the Administrator will record in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source in accordance with § 97.712(b)(2) through (8) and (12) for the control period in the year of the applicable recordation deadline under this paragraph.

(i) By February 15, 2013 and February 15 of each year thereafter, the Administrator will record in each TR SO_2 Group 2 source's compliance account the TR SO_2 Group 2 allowances allocated to the TR SO_2 Group 2 units at the source in accordance with § 97.712(a)(9) through (12), for the control period in the year before the year of the applicable recordation deadline under this paragraph.

(j) By the date on which any allocation or auction results, other than an allocation or auction results, described in paragraphs (a) through (i) of this section, of TR SO_2 Group 2 allowances to a recipient is made by or are submitted to the Administrator in accordance with § 97.711 or § 97.712 or with a SIP revision approved under § 52.39(h) or (i) of this chapter, the Administrator will record such allocation or auction results in the appropriate Allowance Management System account.

(k) When recording the allocation or auction of TR SO_2 Group 2 allowances to a TR SO_2 Group 2 unit or other entity in an Allowance Management System account, the Administrator will assign each TR SO_2 Group 2 allowance a unique identification number that will include digits identifying the year of the control period for which the TR SO_2 Group 2 allowance is allocated or auctioned.

§ 97.722 Submission of TR SO_2 Group 2 allowance transfers.

(a) An authorized account representative seeking recordation of a TR SO_2 Group 2 allowance transfer shall submit the transfer to the Administrator.

(b) A TR SO_2 Group 2 allowance transfer shall be correctly submitted if:

(1) The transfer includes the following elements, in a format prescribed by the Administrator:

(i) The account numbers established by the Administrator for both the transferor and transferee accounts;

(ii) The serial number of each TR SO_2 Group 2 allowance that is in the transferor account and is to be transferred; and

(iii) The name and signature of the authorized account representative of the transferor account and the date signed; and

(2) When the Administrator attempts to record the transfer, the transferor account includes each TR SO_2 Group 2 allowance identified by serial number in the transfer.

§ 97.723 Recordation of TR SO_2 Group 2 allowance transfers.

(a) Within 5 business days (except as provided in paragraph (b) of this section) of receiving a TR SO_2 Group 2 allowance transfer that is correctly submitted under § 97.722, the Administrator will record a TR SO_2 Group 2 allowance transfer by moving each TR SO_2 Group 2 allowance from the transferor account to the transferee account as specified in the transfer.

(b) A TR SO_2 Group 2 allowance transfer to or from a compliance account that is submitted for recordation after the allowance transfer deadline for a control period and that includes any TR SO_2 Group 2 allowances allocated for any control period before such allowance transfer deadline will not be recorded until after the Administrator completes the deductions from such

compliance account under § 97.724 for the control period immediately before such allowance transfer deadline.

(c) Where a TR SO_2 Group 2 allowance transfer is not correctly submitted under § 97.722, the Administrator will not record such transfer.

(d) Within 5 business days of recordation of a TR SO_2 Group 2 allowance transfer under paragraphs (a) and (b) of the section, the Administrator will notify the authorized account representatives of both the transferor and transferee accounts.

(e) Within 10 business days of receipt of a TR SO_2 Group 2 allowance transfer that is not correctly submitted under § 97.722, the Administrator will notify the authorized account representatives of both accounts subject to the transfer of:

(1) A decision not to record the transfer, and

(2) The reasons for such non-recordation.

§ 97.724 Compliance with TR SO_2 Group 2 emissions limitation.

(a) *Availability for deduction for compliance.* TR SO_2 Group 2 allowances are available to be deducted for compliance with a source's TR SO_2 Group 2 emissions limitation for a control period in a given year only if the TR SO_2 Group 2 allowances:

(1) Were allocated for such control period or a control period in a prior year; and

(2) Are held in the source's compliance account as of the allowance transfer deadline for such control period.

(b) *Deductions for compliance.* After the recordation, in accordance with § 97.723, of TR SO_2 Group 2 allowance transfers submitted by the allowance transfer deadline for a control period in a given year, the Administrator will deduct from each source's compliance account TR SO_2 Group 2 allowances available under paragraph (a) of this section in order to determine whether the source meets the TR SO_2 Group 2 emissions limitation for such control period, as follows:

(1) Until the amount of TR SO_2 Group 2 allowances deducted equals the number of tons of total SO_2 emissions from all TR SO_2 Group 2 units at the source for such control period; or

(2) If there are insufficient TR SO_2 Group 2 allowances to complete the deductions in paragraph (b)(1) of this section, until no more TR SO_2 Group 2 allowances available under paragraph (a) of this section remain in the compliance account.

(c)(1) *Identification of TR SO_2 Group 2 allowances by serial number.* The authorized account representative for a source's compliance account may request that specific TR SO_2 Group 2 allowances, identified by serial number, in the compliance account be deducted for emissions or excess emissions for a control period in a given year in accordance with paragraph (b) or (d) of this section. In order to be complete, such request shall be submitted to the Administrator by the allowance transfer deadline for such control period and include, in a format prescribed by the Administrator, the identification of the TR SO_2 Group 2 source and the appropriate serial numbers.

(2) *First-in, first-out.* The Administrator will deduct TR SO_2 Group 2 allowances under paragraph (b) or (d) of this section from the source's compliance account in accordance with a complete request under paragraph (c)(1) of this section or, in the absence of such request or in the case of identification of an insufficient amount of TR SO_2 Group 2 allowances in such request, on a first-in, first-out accounting basis in the following order:

(i) Any TR SO_2 Group 2 allowances that were allocated to the units at the source and not transferred out of the compliance account, in the order of recordation; and then

(ii) Any TR SO_2 Group 2 allowances that were allocated to any unit and transferred to and recorded in the compliance account pursuant to this subpart, in the order of recordation.

(d) *Deductions for excess emissions.* After making the deductions for compliance under paragraph (b) of this section for a control period in a year in which the TR SO_2 Group 2 source has excess emissions, the Administrator will deduct from the source's compliance account an amount of TR SO_2 Group 2 allowances, allocated for a control period in a prior year or the control period in the year of the excess emissions or in the immediately following year, equal to two times the number of tons of the source's excess emissions.

(e) *Recordation of deductions.* The Administrator will record in the appropriate compliance account all deductions from such an account under paragraphs (b) and (d) of this section.

§ 97.725 Compliance with TR SO_2 Group 2 assurance provisions.

(a) *Availability for deduction.* TR SO_2 Group 2 allowances are available to be deducted for compliance with the TR SO_2 Group 2 assurance provisions for a control period in a given year by the owners and operators of a group of one or more TR SO_2 Group 2 sources and units in a State (and Indian country within the borders of such State) only if the TR SO_2 Group 2 allowances:

(1) Were allocated for a control period in a prior year or the control period in the given year or in the immediately following year; and

(2) Are held in the assurance account, established by the Administrator for such owners and operators of such group of TR SO_2 Group 2 sources and units in such State (and Indian country within the borders of such State) under paragraph (b)(3) of this section, as of the deadline established in paragraph (b)(4) of this section.

(b) *Deductions for compliance.* The Administrator will deduct TR SO_2 Group 2 allowances available under paragraph (a) of this section for compliance with the TR SO_2 Group 2 assurance provisions for a State for a control period in a given year in accordance with the following procedures:

(1) By June 1, 2013 and June 1 of each year thereafter, the Administrator will:

(i) Calculate, for each State (and Indian country within the borders of such State), the total SO_2 emissions from all TR SO_2 Group 2 units at TR SO_2 Group 2 sources in the State (and Indian country within the borders of such State) during the control period in the year before the year of this calculation deadline and the amount, if any, by which such total SO_2 emissions exceed the State assurance level as described in § 97.706(c)(2)(iii); and

(ii) Promulgate a notice of data availability of the results of the calculations required in paragraph (b)(1)(i) of this section, including separate calculations of the SO_2 emissions from each TR SO_2 Group 2 source.

(2) For each notice of data availability required in paragraph (b)(1)(ii) of this section and for any State (and Indian country within the borders of such State) identified in such notice as having TR SO_2 Group 2 units with total SO_2 emissions exceeding the State assurance level for a control period in a given year, as described in § 97.706(c)(2)(iii):

(i) By July 1 immediately after the promulgation of such notice, the designated representative of each TR SO_2 Group 2 source in each such State (and Indian country within the borders of such State) shall submit a statement, in a format prescribed by the Administrator, providing for each TR SO_2 Group 2 unit (if any) at the source that operates during, but is not allocated an amount of TR SO_2 Group 2 allowances for, such control period, the unit's allowable SO_2 emission rate for such control period and, if such rate is

expressed in lb per mmBtu, the unit's heat rate.

(ii) By August 1 immediately after the promulgation of such notice, the Administrator will calculate, for each such State (and Indian country within the borders of such State) and such control period and each common designated representative for such control period for a group of one or more TR SO_2 Group 2 sources and units in the State (and Indian country within the borders of such State), the common designated representative's share of the total SO_2 emissions from all TR SO_2 Group 2 units at TR SO_2 Group 2 sources in the State (and Indian country within the borders of such State), the common designated representative's assurance level, and the amount (if any) of TR SO_2 Group 2 allowances that the owners and operators of such group of sources and units must hold in accordance with the calculation formula in § 97.706(c)(2)(i) and will promulgate a notice of data availability of the results of these calculations.

(iii) The Administrator will provide an opportunity for submission of objections to the calculations referenced by the notice of data availability required in paragraph (b)(2)(ii) of this section and the calculations referenced by the relevant notice of data availability required in paragraph (b)(1)(i) of this section.

(A) Objections shall be submitted by the deadline specified in such notice and shall be limited to addressing whether the calculations referenced in the relevant notice required under paragraph (b)(1)(ii) of this section and referenced in the notice required under paragraph (b)(2)(ii) of this section are in accordance with § 97.706(c)(2)(iii), §§ 97.706(b) and 97.730 through 97.735, the definitions of ''common designated representative'', ''common designated representative's assurance level'', and ''common designated representative's share'' in § 97.702, and the calculation formula in § 97.706(c)(2)(i).

(B) The Administrator will adjust the calculations to the extent necessary to ensure that they are in accordance with the provisions referenced in paragraph (b)(2)(iii)(A) of this section. By October 1 immediately after the promulgation of such notice, the Administrator will promulgate a notice of data availability of any adjustments that the Administrator determines to be necessary and the reasons for accepting or rejecting any objections submitted in accordance with paragraph (b)(2)(iii)(A) of this section.

(3) For any State (and Indian country within the borders of such State) referenced in each notice of data availability required in paragraph (b)(2)(iii)(B) of this section as having TR SO_2 Group 2 units with total SO_2 emissions exceeding the State assurance level for a control period in a given year, the Administrator will establish one assurance account for each set of owners and operators referenced, in the notice of data availability required under paragraph (b)(2)(iii)(B) of this section, as all of the owners and operators of a group of TR SO_2 Group 2 sources and units in the State (and Indian country within the borders of such State) having a common designated representative for such control period and as being required to hold TR SO_2 Group 2 allowances.

(4)(i) As of midnight of November 1 immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii)(B) of this section, the owners and operators described in paragraph (b)(3) of this section shall hold in the assurance account established for them and for the appropriate TR SO_2 Group 2 sources, TR SO_2 Group 2 units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section a total amount of TR SO_2 Group 2 allowances, available for deduction under paragraph (a) of this section, equal to the amount such owners and operators are required to hold with regard to such sources, units and State (and Indian country within the borders of such State) as calculated by the Administrator and referenced in such notice.

(ii) Notwithstanding the allowance-holding deadline specified in paragraph (b)(4)(i) of this section, if November 1 is not a business day, then such allowance-holding deadline shall be midnight of the first business day thereafter.

(5) After November 1 (or the date described in paragraph (b)(4)(ii) of this section) immediately after the promulgation of each notice of data availability required in paragraph (b)(2)(iii)(B) of this section and after the recordation, in accordance with § 97.723, of TR SO_2 Group 2 allowance transfers submitted by midnight of such date, the Administrator will determine whether the owners and operators described in paragraph (b)(3) of this section hold, in the assurance account for the appropriate TR SO_2 Group 2 sources, TR SO_2 Group 2 units, and State (and Indian country within the borders of such State) established under paragraph (b)(3) of this section, the amount of TR SO_2 Group 2 allowances available under paragraph (a) of this section that the owners and operators are required to hold with regard to such sources, units, and State (and Indian country within the borders of such State) as calculated by the Administrator and referenced in the notice required in paragraph (b)(2)(iii)(B) of this section.

(6) Notwithstanding any other provision of this subpart and any revision, made by or submitted to the Administrator after the promulgation of the notice of data availability required in paragraph (b)(2)(iii)(B) of this section for a control period in a given year, of any data used in making the calculations referenced in such notice, the amounts of TR SO_2 Group 2 allowances that the owners and operators are required to hold in accordance with § 97.706(c)(2)(i) for such control period shall continue to be such amounts as calculated by the Administrator and referenced in such notice required in paragraph (b)(2)(iii)(B) of this section, except as follows:

(i) If any such data are revised by the Administrator as a result of a decision in or settlement of litigation concerning such data on appeal under part 78 of this chapter of such notice, or on appeal under section 307 of the Clean Air Act of a decision rendered under part 78 of this chapter on appeal of such notice, then the Administrator will use the data as so revised to recalculate the amounts of TR SO_2 Group 2 allowances that owners and operators are required to hold in accordance with the calculation formula in § 97.706(c)(2)(i) for such control period with regard to the TR SO_2 Group 2 sources, TR SO_2 Group 2 units, and State (and Indian country within the borders of such State) involved, provided that such litigation under part 78 of this chapter, or the proceeding under part 78 of this chapter that resulted in the decision appealed in such litigation under section 307 of the Clean Air Act, was initiated no later than 30 days after promulgation of such notice required in paragraph (b)(2)(iii)(B) of this section.

(ii) If any such data are revised by the owners and operators of a TR SO_2 Group 2 source and TR SO_2 Group 2 unit whose designated representative submitted such data under paragraph (b)(2)(i) of this section, as a result of a decision in or settlement of litigation concerning such submission, then the Administrator will use the data as so revised to recalculate the amounts of TR SO_2 Group 2 allowances that owners and operators are required to hold in accordance with the calculation formula in § 97.706(c)(2)(i) for such control period with regard to the TR SO_2 Group 2 sources, TR SO_2 Group 2 units, and State (and Indian country within the

borders of such State) involved, provided that such litigation was initiated no later than 30 days after promulgation of such notice required in paragraph (b)(2)(iii)(B) of this section.

(iii) If the revised data are used to recalculate, in accordance with paragraphs (b)(6)(i) and (ii) of this section, the amount of TR SO_2 Group 2 allowances that the owners and operators are required to hold for such control period with regard to the TR SO_2 Group 2 sources, TR SO_2 Group 2 units, and State (and Indian country within the borders of such State) involved—

(A) Where the amount of TR SO_2 Group 2 allowances that the owners and operators are required to hold increases as a result of the use of all such revised data, the Administrator will establish a new, reasonable deadline on which the owners and operators shall hold the additional amount of TR SO_2 Group 2 allowances in the assurance account established by the Administrator for the appropriate TR SO_2 Group 2 sources, TR SO_2 Group 2 units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section. The owners' and operators' failure to hold such additional amount, as required, before the new deadline shall not be a violation of the Clean Air Act. The owners' and operators' failure to hold such additional amount, as required, as of the new deadline shall be a violation of the Clean Air Act. Each TR SO_2 Group 2 allowance that the owners and operators fail to hold as required as of the new deadline, and each day in such control period, shall be a separate violation of the Clean Air Act.

(B) For the owners and operators for which the amount of TR SO_2 Group 2 allowances required to be held decreases as a result of the use of all such revised data, the Administrator will record, in all accounts from which TR SO_2 Group 2 allowances were transferred by such owners and operators for such control period to the assurance account established by the Administrator for the appropriate at TR SO_2 Group 2 sources, TR SO_2 Group 2 units, and State (and Indian country within the borders of such State) under paragraph (b)(3) of this section, a total amount of the TR SO_2 Group 2 allowances held in such assurance account equal to the amount of the decrease. If TR SO_2 Group 2 allowances were transferred to such assurance account from more than one account, the amount of TR SO_2 Group 2 allowances recorded in each such transferor account will be in proportion to the percentage of the total amount of TR SO_2 Group 2 allowances transferred to such assurance account for such control period from such transferor account.

(C) Each TR SO_2 Group 2 allowance held under paragraph (b)(6)(iii)(A) of this section as a result of recalculation of requirements under the TR SO_2 Group 2 assurance provisions for such control period must be a TR SO_2 Group 2 allowance allocated for a control period in a year before or the year immediately following, or in the same year as, the year of such control period.

§ 97.726 Banking.

(a) A TR SO_2 Group 2 allowance may be banked for future use or transfer in a compliance account or a general account in accordance with paragraph (b) of this section.

(b) Any TR SO_2 Group 2 allowance that is held in a compliance account or a general account will remain in such account unless and until the TR SO_2 Group 2 allowance is deducted or transferred under § 97.711(c), § 97.723, § 97.724, § 97.725, § 97.727, or § 97.728.

§ 97.727 Account error.

The Administrator may, at his or her sole discretion and on his or her own motion, correct any error in any Allowance Management System account. Within 10 business days of making such correction, the Administrator will notify the authorized account representative for the account.

§ 97.728 Administrator's action on submissions.

(a) The Administrator may review and conduct independent audits concerning any submission under the TR SO_2 Group 2 Trading Program and make appropriate adjustments of the information in the submission.

(b) The Administrator may deduct TR SO_2 Group 2 allowances from or transfer TR SO_2 Group 2 allowances to a compliance account or an assurance account, based on the information in a submission, as adjusted under paragraph (a)(1) of this section, and record such deductions and transfers.

§ 97.729 [Reserved]

§ 97.730 General monitoring, recordkeeping, and reporting requirements.

The owners and operators, and to the extent applicable, the designated representative, of a TR SO_2 Group 2 unit, shall comply with the monitoring, recordkeeping, and reporting requirements as provided in this subpart and subparts F and G of part 75 of this chapter. For purposes of applying such requirements, the definitions in § 97.702 and in § 72.2 of this chapter shall apply, the terms ''affected unit,'' ''designated representative,'' and ''continuous emission monitoring system'' (or ''CEMS'') in part 75 of this chapter shall be deemed to refer to the terms ''TR SO_2 Group 2 unit,'' ''designated representative,'' and ''continuous emission monitoring system'' (or ''CEMS'') respectively as defined in § 97.702, and the term ''newly affected unit'' shall be deemed to mean ''newly affected TR SO_2 Group 2 unit''. The owner or operator of a unit that is not a TR SO_2 Group 2 unit but that is monitored under § 75.16(b)(2) of this chapter shall comply with the same monitoring, recordkeeping, and reporting requirements as a TR SO_2 Group 2 unit.

(a) Requirements for installation, certification, and data accounting. The owner or operator of each TR SO_2 Group 2 unit shall:

(1) Install all monitoring systems required under this subpart for monitoring SO_2 mass emissions and individual unit heat input (including all systems required to monitor SO_2 concentration, stack gas moisture content, stack gas flow rate, CO_2 or O_2 concentration, and fuel flow rate, as applicable, in accordance with §§ 75.11 and 75.16 of this chapter);

(2) Successfully complete all certification tests required under § 97.731 and meet all other requirements of this subpart and part 75 of this chapter applicable to the monitoring systems under paragraph (a)(1) of this section; and

(3) Record, report, and quality-assure the data from the monitoring systems under paragraph (a)(1) of this section.

(b) *Compliance deadlines.* Except as provided in paragraph (e) of this section, the owner or operator shall meet the monitoring system certification and other requirements of paragraphs (a)(1) and (2) of this section on or before the following dates and shall record, report, and quality-assure the data from the monitoring systems under paragraph (a)(1) of this section on and after the following dates.

(1) For the owner or operator of a TR SO_2 Group 2 unit that commences commercial operation before July 1, 2011, January 1, 2012.

(2) For the owner or operator of a TR SO_2 Group 2 unit that commences commercial operation on or after July 1, 2011, by the later of the following:

(i) January 1, 2012; or

(ii) 180 calendar days after the date on which the unit commences commercial operation.

(3) The owner or operator of a TR SO_2 Group 2 unit for which construction of a new stack or flue or installation of add-on SO_2 emission controls is completed after the applicable deadline

under paragraph (b)(1) or (2) of this section shall meet the requirements of §§ 75.4(e)(1) through (e)(4) of this chapter, except that:

(i) Such requirements shall apply to the monitoring systems required under § 97.730 through § 97.735, rather than the monitoring systems required under part 75 of this chapter;

(ii) SO_2 concentration, stack gas moisture content, stack gas volumetric flow rate, and O_2 or CO_2 concentration data shall be determined and reported, rather than the data listed in § 75.4(e)(2) of this chapter; and

(iii) Any petition for another procedure under § 75.4(e)(2) of this chapter shall be submitted under § 97.735, rather than § 75.66.

(c) *Reporting data.* The owner or operator of a TR SO_2 Group 2 unit that does not meet the applicable compliance date set forth in paragraph (b) of this section for any monitoring system under paragraph (a)(1) of this section shall, for each such monitoring system, determine, record, and report maximum potential (or, as appropriate, minimum potential) values for SO_2 concentration, stack gas flow rate, stack gas moisture content, fuel flow rate, and any other parameters required to determine SO_2 mass emissions and heat input in accordance with § 75.31(b)(2) or (c)(3) of this chapter or section 2.4 of appendix D to part 75 of this chapter, as applicable.

(d) *Prohibitions.* (1) No owner or operator of a TR SO_2 Group 2 unit shall use any alternative monitoring system, alternative reference method, or any other alternative to any requirement of this subpart without having obtained prior written approval in accordance with § 97.735.

(2) No owner or operator of a TR SO_2 Group 2 unit shall operate the unit so as to discharge, or allow to be discharged, SO_2 to the atmosphere without accounting for all such SO_2 in accordance with the applicable provisions of this subpart and part 75 of this chapter.

(3) No owner or operator of a TR SO_2 Group 2 unit shall disrupt the continuous emission monitoring system, any portion thereof, or any other approved emission monitoring method, and thereby avoid monitoring and recording SO_2 mass discharged into the atmosphere or heat input, except for periods of recertification or periods when calibration, quality assurance testing, or maintenance is performed in accordance with the applicable provisions of this subpart and part 75 of this chapter.

(4) No owner or operator of a TR SO_2 Group 2 unit shall retire or permanently discontinue use of the continuous emission monitoring system, any component thereof, or any other approved monitoring system under this subpart, except under any one of the following circumstances:

(i) During the period that the unit is covered by an exemption under § 97.705 that is in effect;

(ii) The owner or operator is monitoring emissions from the unit with another certified monitoring system approved, in accordance with the applicable provisions of this subpart and part 75 of this chapter, by the Administrator for use at that unit that provides emission data for the same pollutant or parameter as the retired or discontinued monitoring system; or

(iii) The designated representative submits notification of the date of certification testing of a replacement monitoring system for the retired or discontinued monitoring system in accordance with § 97.731(d)(3)(i).

(e) *Long-term cold storage.* The owner or operator of a TR SO_2 Group 2 unit is subject to the applicable provisions of § 75.4(d) of this chapter concerning units in long-term cold storage.

§ 97.731 Initial monitoring system certification and recertification procedures.

(a) The owner or operator of a TR SO_2 Group 2 unit shall be exempt from the initial certification requirements of this section for a monitoring system under § 97.730(a)(1) if the following conditions are met:

(1) The monitoring system has been previously certified in accordance with part 75 of this chapter; and

(2) The applicable quality-assurance and quality-control requirements of § 75.21 of this chapter and appendices B and D to part 75 of this chapter are fully met for the certified monitoring system described in paragraph (a)(1) of this section.

(b) The recertification provisions of this section shall apply to a monitoring system under § 97.730(a)(1) that is exempt from initial certification requirements under paragraph (a) of this section.

(c) [Reserved]

(d) Except as provided in paragraph (a) of this section, the owner or operator of a TR SO_2 Group 2 unit shall comply with the following initial certification and recertification procedures, for a continuous monitoring system (*i.e.,* a continuous emission monitoring system and an excepted monitoring system under appendix D to part 75 of this chapter) under § 97.730(a)(1). The owner or operator of a unit that qualifies to use the low mass emissions excepted monitoring methodology under § 75.19 of this chapter or that qualifies to use an alternative monitoring system under subpart E of part 75 of this chapter shall comply with the procedures in paragraph (e) or (f) of this section respectively.

(1) Requirements for initial certification. The owner or operator shall ensure that each continuous monitoring system under § 97.730(a)(1) (including the automated data acquisition and handling system) successfully completes all of the initial certification testing required under § 75.20 of this chapter by the applicable deadline in § 97.730(b). In addition, whenever the owner or operator installs a monitoring system to meet the requirements of this subpart in a location where no such monitoring system was previously installed, initial certification in accordance with § 75.20 of this chapter is required.

(2) Requirements for recertification. Whenever the owner or operator makes a replacement, modification, or change in any certified continuous emission monitoring system under § 97.730(a)(1) that may significantly affect the ability of the system to accurately measure or record SO_2 mass emissions or heat input rate or to meet the quality-assurance and quality-control requirements of § 75.21 of this chapter or appendix B to part 75 of this chapter, the owner or operator shall recertify the monitoring system in accordance with § 75.20(b) of this chapter. Furthermore, whenever the owner or operator makes a replacement, modification, or change to the flue gas handling system or the unit's operation that may significantly change the stack flow or concentration profile, the owner or operator shall recertify each continuous emission monitoring system whose accuracy is potentially affected by the change, in accordance with § 75.20(b) of this chapter. Examples of changes to a continuous emission monitoring system that require recertification include: Replacement of the analyzer, complete replacement of an existing continuous emission monitoring system, or change in location or orientation of the sampling probe or site. Any fuel flowmeter system under § 97.730(a)(1) is subject to the recertification requirements in § 75.20(g)(6) of this chapter.

(3) Approval process for initial certification and recertification. For initial certification of a continuous monitoring system under § 97.730(a)(1), paragraphs (d)(3)(i) through (v) of this section apply. For recertifications of such monitoring systems, paragraphs (d)(3)(i) through (iv) of this section and the procedures in §§ 75.20(b)(5) and (g)(7) of this chapter (in lieu of the

procedures in paragraph (d)(3)(v) of this section) apply, provided that in applying paragraphs (d)(3)(i) through (iv) of this section, the words ''certification'' and ''initial certification'' are replaced by the word ''recertification'' and the word ''certified'' is replaced by with the word ''recertified''.

(i) Notification of certification. The designated representative shall submit to the appropriate EPA Regional Office and the Administrator written notice of the dates of certification testing, in accordance with § 97.733.

(ii) Certification application. The designated representative shall submit to the Administrator a certification application for each monitoring system. A complete certification application shall include the information specified in § 75.63 of this chapter.

(iii) Provisional certification date. The provisional certification date for a monitoring system shall be determined in accordance with § 75.20(a)(3) of this chapter. A provisionally certified monitoring system may be used under the TR SO_2 Group 2 Trading Program for a period not to exceed 120 days after receipt by the Administrator of the complete certification application for the monitoring system under paragraph (d)(3)(ii) of this section. Data measured and recorded by the provisionally certified monitoring system, in accordance with the requirements of part 75 of this chapter, will be considered valid quality-assured data (retroactive to the date and time of provisional certification), provided that the Administrator does not invalidate the provisional certification by issuing a notice of disapproval within 120 days of the date of receipt of the complete certification application by the Administrator.

(iv) Certification application approval process. The Administrator will issue a written notice of approval or disapproval of the certification application to the owner or operator within 120 days of receipt of the complete certification application under paragraph (d)(3)(ii) of this section. In the event the Administrator does not issue such a notice within such 120-day period, each monitoring system that meets the applicable performance requirements of part 75 of this chapter and is included in the certification application will be deemed certified for use under the TR SO_2 Group 2 Trading Program.

(A) Approval notice. If the certification application is complete and shows that each monitoring system meets the applicable performance requirements of part 75 of this chapter, then the Administrator will issue a written notice of approval of the certification application within 120 days of receipt.

(B) Incomplete application notice. If the certification application is not complete, then the Administrator will issue a written notice of incompleteness that sets a reasonable date by which the designated representative must submit the additional information required to complete the certification application. If the designated representative does not comply with the notice of incompleteness by the specified date, then the Administrator may issue a notice of disapproval under paragraph (d)(3)(iv)(C) of this section.

(C) Disapproval notice. If the certification application shows that any monitoring system does not meet the performance requirements of part 75 of this chapter or if the certification application is incomplete and the requirement for disapproval under paragraph (d)(3)(iv)(B) of this section is met, then the Administrator will issue a written notice of disapproval of the certification application. Upon issuance of such notice of disapproval, the provisional certification is invalidated by the Administrator and the data measured and recorded by each uncertified monitoring system shall not be considered valid quality-assured data beginning with the date and hour of provisional certification (as defined under § 75.20(a)(3) of this chapter).

(D) Audit decertification. The Administrator may issue a notice of disapproval of the certification status of a monitor in accordance with § 97.732(b).

(v) Procedures for loss of certification. If the Administrator issues a notice of disapproval of a certification application under paragraph (d)(3)(iv)(C) of this section or a notice of disapproval of certification status under paragraph (d)(3)(iv)(D) of this section, then:

(A) The owner or operator shall substitute the following values, for each disapproved monitoring system, for each hour of unit operation during the period of invalid data specified under § 75.20(a)(4)(iii), § 75.20(g)(7), or § 75.21(e) of this chapter and continuing until the applicable date and hour specified under § 75.20(a)(5)(i) or (g)(7) of this chapter:

(1) For a disapproved SO_2 pollutant concentration monitor and disapproved flow monitor, respectively, the maximum potential concentration of SO_2 and the maximum potential flow rate, as defined in sections 2.1.1.1 and 2.1.4.1 of appendix A to part 75 of this chapter.

(2) For a disapproved moisture monitoring system and disapproved diluent gas monitoring system, respectively, the minimum potential moisture percentage and either the maximum potential CO_2 concentration or the minimum potential O_2 concentration (as applicable), as defined in sections 2.1.5, 2.1.3.1, and 2.1.3.2 of appendix A to part 75 of this chapter.

(3) For a disapproved fuel flowmeter system, the maximum potential fuel flow rate, as defined in section 2.4.2.1 of appendix D to part 75 of this chapter.

(B) The designated representative shall submit a notification of certification retest dates and a new certification application in accordance with paragraphs (d)(3)(i) and (ii) of this section.

(C) The owner or operator shall repeat all certification tests or other requirements that were failed by the monitoring system, as indicated in the Administrator's notice of disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval.

(e) The owner or operator of a unit qualified to use the low mass emissions (LME) excepted methodology under § 75.19 of this chapter shall meet the applicable certification and recertification requirements in §§ 75.19(a)(2) and 75.20(h) of this chapter. If the owner or operator of such a unit elects to certify a fuel flowmeter system for heat input determination, the owner or operator shall also meet the certification and recertification requirements in § 75.20(g) of this chapter.

(f) The designated representative of each unit for which the owner or operator intends to use an alternative monitoring system approved by the Administrator under subpart E of part 75 of this chapter shall comply with the applicable notification and application procedures of § 75.20(f) of this chapter.

§ 97.732 Monitoring system out-of-control periods.

(a) *General provisions.* Whenever any monitoring system fails to meet the quality-assurance and quality-control requirements or data validation requirements of part 75 of this chapter, data shall be substituted using the applicable missing data procedures in subpart D or appendix D to part 75 of this chapter.

(b) *Audit decertification.* Whenever both an audit of a monitoring system and a review of the initial certification or recertification application reveal that any monitoring system should not have been certified or recertified because it did not meet a particular performance

specification or other requirement under § 97.731 or the applicable provisions of part 75 of this chapter, both at the time of the initial certification or recertification application submission and at the time of the audit, the Administrator will issue a notice of disapproval of the certification status of such monitoring system. For the purposes of this paragraph, an audit shall be either a field audit or an audit of any information submitted to the Administrator or any State or permitting authority. By issuing the notice of disapproval, the Administrator revokes prospectively the certification status of the monitoring system. The data measured and recorded by the monitoring system shall not be considered valid quality-assured data from the date of issuance of the notification of the revoked certification status until the date and time that the owner or operator completes subsequently approved initial certification or recertification tests for the monitoring system. The owner or operator shall follow the applicable initial certification or recertification procedures in § 97.731 for each disapproved monitoring system.

§ 97.733 Notifications concerning monitoring.

The designated representative of a TR SO_2 Group 2 unit shall submit written notice to the Administrator in accordance with § 75.61 of this chapter.

§ 97.734 Recordkeeping and reporting.

(a) *General provisions.* The designated representative shall comply with all recordkeeping and reporting requirements in paragraphs (b) through (e) of this section, the applicable recordkeeping and reporting requirements in subparts F and G of part 75 of this chapter, and the requirements of § 97.714(a).

(b) *Monitoring plans.* The owner or operator of a TR SO_2 Group 2 unit shall comply with requirements of § 75.62 of this chapter.

(c) *Certification applications.* The designated representative shall submit an application to the Administrator within 45 days after completing all initial certification or recertification tests required under § 97.731, including the information required under § 75.63 of this chapter.

(d) *Quarterly reports.* The designated representative shall submit quarterly reports, as follows:

(1) The designated representative shall report the SO_2 mass emissions data and heat input data for the TR SO_2 Group 2 unit, in an electronic quarterly report in a format prescribed by the Administrator, for each calendar quarter beginning with:

(i) For a unit that commences commercial operation before July 1, 2011, the calendar quarter covering January 1, 2012 through March 31, 2012; or

(ii) For a unit that commences commercial operation on or after July 1, 2011, the calendar quarter corresponding to the earlier of the date of provisional certification or the applicable deadline for initial certification under § 97.730(b), unless that quarter is the third or fourth quarter of 2011, in which case reporting shall commence in the quarter covering January 1, 2012 through March 31, 2012.

(2) The designated representative shall submit each quarterly report to the Administrator within 30 days after the end of the calendar quarter covered by the report. Quarterly reports shall be submitted in the manner specified in § 75.64 of this chapter.

(3) For TR SO_2 Group 2 units that are also subject to the Acid Rain Program, TR NO_X Annual Trading Program, or TR NO_X Ozone Season Trading Program, quarterly reports shall include the applicable data and information required by subparts F through H of part 75 of this chapter as applicable, in addition to the SO_2 mass emission data, heat input data, and other information required by this subpart.

(4) The Administrator may review and conduct independent audits of any quarterly report in order to determine whether the quarterly report meets the requirements of this subpart and part 75 of this chapter, including the requirement to use substitute data.

(i) The Administrator will notify the designated representative of any determination that the quarterly report fails to meet any such requirements and specify in such notification any corrections that the Administrator believes are necessary to make through resubmission of the quarterly report and a reasonable time period within which the designated representative must respond. Upon request by the designated representative, the Administrator may specify reasonable extensions of such time period. Within the time period (including any such extensions) specified by the Administrator, the designated representative shall resubmit the quarterly report with the corrections specified by the Administrator, except to the extent the designated representative provides information demonstrating that a specified correction is not necessary because the quarterly report already meets the requirements of this subpart and part 75 of this chapter that are relevant to the specified correction.

(ii) Any resubmission of a quarterly report shall meet the requirements applicable to the submission of a quarterly report under this subpart and part 75 of this chapter, except for the deadline set forth in paragraph (d)(2) of this section.

(e) *Compliance certification.* The designated representative shall submit to the Administrator a compliance certification (in a format prescribed by the Administrator) in support of each quarterly report based on reasonable inquiry of those persons with primary responsibility for ensuring that all of the unit's emissions are correctly and fully monitored. The certification shall state that:

(1) The monitoring data submitted were recorded in accordance with the applicable requirements of this subpart and part 75 of this chapter, including the quality assurance procedures and specifications; and

(2) For a unit with add-on SO_2 emission controls and for all hours where SO_2 data are substituted in accordance with § 75.34(a)(1) of this chapter, the add-on emission controls were operating within the range of parameters listed in the quality assurance/quality control program under appendix B to part 75 of this chapter and the substitute data values do not systematically underestimate SO_2 emissions.

§ 97.735 Petitions for alternatives to monitoring, recordkeeping, or reporting requirements.

(a) The designated representative of a TR SO_2 Group 2 unit may submit a petition under § 75.66 of this chapter to the Administrator, requesting approval to apply an alternative to any requirement of §§ 97.730 through 97.734.

(b) A petition submitted under paragraph (a) of this section shall include sufficient information for the evaluation of the petition, including, at a minimum, the following information:

(i) Identification of each unit and source covered by the petition;

(ii) A detailed explanation of why the proposed alternative is being suggested in lieu of the requirement;

(iii) A description and diagram of any equipment and procedures used in the proposed alternative;

(iv) A demonstration that the proposed alternative is consistent with the purposes of the requirement for which the alternative is proposed and with the purposes of this subpart and part 75 of this chapter and that any

adverse effect of approving the alternative will be *de minimis;* and

(v) Any other relevant information that the Administrator may require.

(c) Use of an alternative to any requirement referenced in paragraph (a) of this section is in accordance with this subpart only to the extent that the petition is approved in writing by the Administrator and that such use is in accordance with such approval.

[CMS–1351–F]

RIN 0938–AQ29

Medicare Program; Prospective Payment System and Consolidated Billing for Skilled Nursing Facilities for FY 2012

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: This final rule updates the payment rates used under the prospective payment system for skilled nursing facilities (SNFs) for fiscal year 2012. In addition, it recalibrates the case-mix indexes so that they more accurately reflect parity in expenditures between RUG–IV and the previous case-mix classification system. It also includes a discussion of a Non-Therapy Ancillary component currently under development within CMS. In addition, this final rule discusses the impact of certain provisions of the Affordable Care Act, and reduces the SNF market basket percentage by the multi-factor productivity adjustment. This rule also implements certain changes relating to the payment of group therapy services and implements new resident assessment policies. Finally, this rule announces that the proposed provisions regarding the ownership disclosure requirements set forth in section 6101 of the Affordable Care Act will be finalized at a later date.

DATES: *Effective Date:* This final rule is effective on October 1, 2011.

I. Background

In the May 6, 2011 **Federal Register**, we published a proposed rule (76 FR 26364) (hereafter referred to as the FY 2012 proposed rule), setting forth potential updates to the payment rates used under the prospective payment system (PPS) for skilled nursing facilities (SNFs), for fiscal year (FY) 2012. Annual updates to the PPS rates for (SNFs) are required by section 1888(e) of the Social Security Act (the Act), as added by section 4432 of the Balanced Budget Act of 1997 (BBA, Pub. L. 105–33, enacted on August 5, 1997), and amended by subsequent legislation as discussed elsewhere in this preamble. Our most recent annual update occurred in an update notice with comment period (75 FR 42886, July 22, 2010) that set forth updates to the SNF PPS payment rates for fiscal year (FY) 2011. We subsequently published a correction notice (75 FR 55801, September 14, 2010) for those payment rate updates. We respond to public comments which relate to the FY 2011 update notice, along with those relating to the FY 2012 proposed rule, in this final rule.

A. Current System for Payment of Skilled Nursing Facility Services Under Part A of the Medicare Program

Section 4432 of the BBA amended section 1888 of the Act to provide for the implementation of a per diem PPS for SNFs, covering all costs (routine, ancillary, and capital-related) of covered SNF services furnished to beneficiaries under Part A of the Medicare program, effective for cost reporting periods beginning on or after July 1, 1998. In this final rule, we are updating the per diem payment rates for SNFs for FY 2012. Major elements of the SNF PPS include:

• *Rates.* As discussed in section I.G.1. of this final rule, we established per diem Federal rates for urban and rural areas using allowable costs from FY 1995 cost reports. These rates also included a ''Part B add-on'' (an estimate of the cost of those services that, before July 1, 1998, were paid under Part B but furnished to Medicare beneficiaries in a SNF during a Part A covered stay). We adjust the rates annually using a SNF market basket index, and we adjust them by the hospital inpatient wage index to account for geographic variation in wages. We also apply a case-mix adjustment to account for the relative resource utilization of different patient types. As further discussed in section I.G.1. of this final rule, for FY 2012 this adjustment will utilize the Resource Utilization Groups, version 4 (RUG–IV) case-mix classification, and will use information obtained from the required resident assessments using version 3.0 of the Minimum Data Set (MDS 3.0). (The information collection burden associated with the resident assessment is approved under OMB Control Number 0938–0739.) Additionally, as noted elsewhere in this preamble, the payment rates at various times have also reflected specific legislative provisions for certain temporary adjustments.

• *Transition.* Under sections 1888(e)(1)(A) and (e)(11) of the Act, the SNF PPS included an initial, three-phase transition that blended a facility-specific rate (reflecting the individual facility's historical cost experience) with the Federal case-mix adjusted rate. The transition extended through the facility's first three cost reporting periods under the PPS, up to and including the one that began in FY 2001. Thus, the SNF PPS is no longer operating under the transition, as all facilities have been paid at the full Federal rate effective with cost reporting periods beginning in FY 2002. As we now base payments entirely on the adjusted Federal per diem rates, we no longer include adjustment factors related to facility-specific rates for the coming fiscal year.

• *Coverage.* The establishment of the SNF PPS did not change Medicare's fundamental requirements for SNF coverage. However, because the case-mix classification is based, in part, on the beneficiary's need for skilled nursing care and therapy, we have attempted, where possible, to coordinate claims review procedures with the existing resident assessment process and case-mix classification system. As further discussed in section III.B.5. of this final rule, this approach includes an administrative presumption that utilizes a beneficiary's initial classification in one of the upper 52 RUGs of the 66-group RUG–IV case-mix classification system to assist in making certain SNF level of care determinations. In the July 30, 1999 final rule (64 FR 41670), we indicated that we would announce any changes to the guidelines for Medicare level of care determinations related to modifications in the case-mix classification structure (see section III.B.5. of this final rule for a more detailed discussion of the relationship between the case-mix classification system and SNF level of care determinations).

• *Consolidated Billing.* The SNF PPS includes a consolidated billing provision that requires a SNF to submit consolidated Medicare bills to its fiscal intermediary or Medicare Administrative Contractor for almost all of the services that its residents receive during the course of a covered Part A stay. In addition, this provision places with the SNF the Medicare billing responsibility for physical therapy, occupational therapy, and speech-language pathology services that the resident receives during a noncovered stay. The statute excludes a small list of services from the consolidated billing provision (primarily those of physicians and certain other types of practitioners), which remain separately billable under Part B when furnished to a SNF's Part A resident. A more detailed discussion of this provision appears in section III.G of this final rule.

• *Application of the SNF PPS to SNF services furnished by swing-bed hospitals.* Section 1883 of the Act permits certain small, rural hospitals to enter into a Medicare swing-bed agreement, under which the hospital can use its beds to provide either acute or SNF care, as needed. For critical

access hospitals (CAHs), Part A pays on a reasonable cost basis for SNF services furnished under a swing-bed agreement. However, in accordance with section 1888(e)(7) of the Act, these services furnished by non-CAH rural hospitals are paid under the SNF PPS, effective with cost reporting periods beginning on or after July 1, 2002. A more detailed discussion of this provision appears in section III.H. of this final rule.

B. Requirements of the Balanced Budget Act of 1997 (BBA) for Updating the Prospective Payment System for Skilled Nursing Facilities

Section 1888(e)(4)(H) of the Act requires that we provide for publication annually in the **Federal Register**:

(1) The unadjusted Federal per diem rates to be applied to days of covered SNF services furnished during the upcoming FY.

(2) The case-mix classification system to be applied for these services during the upcoming FY.

(3) The factors to be applied in making the area wage adjustment for these services.

Along with other revisions discussed later in this preamble, this final rule provides these required annual updates to the Federal rates.

C. The Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act of 1999 (BBRA)

There were several provisions in the BBRA (Pub. L. 106–113, enacted on November 29, 1999) that resulted in adjustments to the SNF PPS. We described these provisions in detail in the SNF PPS final rule for FY 2001 (65 FR 46770, July 31, 2000). In particular, section 101(a) of the BBRA provided for a temporary 20 percent increase in the per diem adjusted payment rates for 15 specified groups in the original, 44-group Resource Utilization Groups, version 3 (RUG–III) case-mix classification system. In accordance with section 101(c)(2) of the BBRA, this temporary payment adjustment expired on January 1, 2006, upon the implementation of a refined, 53-group version of the RUG–III system, RUG–53 (see section I.G.1. of this final rule). We included further information on BBRA provisions that affected the SNF PPS in Program Memoranda A–99–53 and A–99–61 (December 1999).

Also, section 103 of the BBRA designated certain additional services for exclusion from the consolidated billing requirement, as discussed in section III.G. of this final rule. Further, for swing-bed hospitals with more than 49 (but less than 100) beds, section 408 of the BBRA provided for the repeal of certain statutory restrictions on length of stay and aggregate payment for patient days, effective with the end of the SNF PPS transition period described in section 1888(e)(2)(E) of the Act. In the final rule for FY 2002 (66 FR 39562, July 31, 2001), we made conforming changes to the regulations at § 413.114(d), effective for services furnished in cost reporting periods beginning on or after July 1, 2002, to reflect section 408 of the BBRA.

D. The Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA)

The BIPA (Pub. L. 106–554, enacted December 21, 2000) also included several provisions that resulted in adjustments to the SNF PPS. We described these provisions in detail in the final rule for FY 2002 (66 FR 39562, July 31, 2001). In particular:

- Section 203 of the BIPA exempted CAH swing beds from the SNF PPS. We included further information on this provision in Program Memorandum A–01–09 (Change Request #1509), issued January 16, 2001, which is available online at *http://www.cms.gov/transmittals/downloads/a0109.pdf*.
- Section 311 of the BIPA revised the statutory update formula for the SNF market basket, and also directed us to conduct a study of alternative case-mix classification systems for the SNF PPS. In 2006, we submitted a report to the Congress on this study, which is available online at *http://www.cms.gov/SNFPPS/Downloads/RC_2006_PC-PPSSNF.pdf*.
- Section 312 of the BIPA provided for a temporary increase of 16.66 percent in the nursing component of the case-mix adjusted Federal rate for services furnished on or after April 1, 2001, and before October 1, 2002; accordingly, this add-on is no longer in effect. This section also directed the Government Accountability Office (GAO) to conduct an audit of SNF nursing staff ratios and submit a report to the Congress on whether the temporary increase in the nursing component should be continued. The report (GAO–03–176), which GAO issued in November 2002, is available online at *http://www.gao.gov/new.items/d03176.pdf*.
- Section 313 of the BIPA repealed the consolidated billing requirement for services (other than physical therapy, occupational therapy, and speech-language pathology services) furnished to SNF residents during noncovered stays, effective January 1, 2001. (A more detailed discussion of this provision appears in section VII. of this final rule.)
- Section 314 of the BIPA corrected an anomaly involving three of the RUGs that section 101(a) of the BBRA had designated to receive the temporary payment adjustment discussed above in section I.C. of this final rule. (As noted previously, in accordance with section 101(c)(2) of the BBRA, this temporary payment adjustment expired upon the implementation of case-mix refinements on January 1, 2006.)
- Section 315 of the BIPA authorized us to establish a geographic reclassification procedure that is specific to SNFs, but only after collecting the data necessary to establish a SNF wage index that is based on wage data from nursing homes. To date, this has proven to be unfeasible due to the volatility of existing SNF wage data and the significant amount of resources that would be required to improve the quality of that data.

We included further information on several of the BIPA provisions in Program Memorandum A–01–08 (Change Request #1510), issued January 16, 2001, which is available online at *http://www.cms.gov/transmittals/downloads/a0108.pdf*.

E. The Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA)

The MMA (Pub. L. 108–173, enacted on December 8, 2003) included a provision that resulted in a further adjustment to the SNF PPS. Specifically, section 511 of the MMA amended section 1888(e)(12) of the Act, to provide for a temporary increase of 128 percent in the PPS per diem payment for any SNF residents with Acquired Immune Deficiency Syndrome (AIDS), effective with services furnished on or after October 1, 2004. This special AIDS add-on was to remain in effect until ''* * * the Secretary certifies that there is an appropriate adjustment in the case mix * * * to compensate for the increased costs associated with [such] residents. * * *'' The AIDS add-on is also discussed in Program Transmittal #160 (Change Request #3291), issued on April 30, 2004, which is available online at *http://www.cms.gov/transmittals/downloads/r160cp.pdf*. In the SNF PPS final rule for FY 2010 (74 FR 40288, August 11, 2009), we did not address the certification of the AIDS add-on in that final rule's implementation of the case-mix refinements for RUG–IV, thus allowing the temporary add-on payment created by section 511 of the MMA to remain in effect.

For the limited number of SNF residents that qualify for the AIDS add-on, implementation of this provision

results in a significant increase in payment. For example, using FY 2009 data, we identified less than 3,500 SNF residents with a diagnosis code of 042 (Human Immunodeficiency Virus (HIV) Infection). For FY 2012, an urban facility with a resident with AIDS in RUG–IV group ''HC2'' would have a case-mix adjusted payment of $401.48 (see Table 5) before the application of the MMA adjustment. After an increase of 128 percent, this urban facility would receive a case-mix adjusted payment of approximately $915.37.

In addition, section 410 of the MMA contained a provision that excluded from consolidated billing certain services furnished to SNF residents by rural health clinics (RHCs) and Federally Qualified Health Centers (FQHCs). (Further information on this provision appears in section III.G. of this final rule.)

F. The Affordable Care Act

On March 23, 2010, the Patient Protection and Affordable Care Act, Public Law 111–148, was enacted. Following the enactment of Public Law 111–148, the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152, enacted on March 30, 2010) amended certain provisions of Public Law 111–148 and certain sections of the Social Security Act and, in certain instances, included ''freestanding'' provisions (Pub. L. 111–148 and Pub. L. 111–152 are collectively referred to in this final rule as ''the Affordable Care Act''). Section 10325 of the Affordable Care Act included a provision involving the SNF PPS. Section 10325 postponed the implementation of the RUG–IV case-mix classification system published in the FY 2010 SNF PPS final rule (74 FR 40288, August 11, 2009), requiring that the Secretary not implement the RUG–IV case-mix classification system before October 1, 2011. Notwithstanding this postponement of overall RUG–IV implementation, section 10325 further specified that the Secretary implement, effective October 1 2010, the changes related to concurrent therapy and the look-back period that were finalized as components of RUG–IV (see 74 FR 40315–19, 40322–24, August 11, 2009). As we noted in the FY 2011 SNF PPS Notice with Comment Period (75 FR 42889), implementing the particular combination of RUG–III and RUG–IV features specified in section 10325 of the Affordable Care Act would require developing a revised grouper, something that could not be accomplished by that provision's effective date (October 1, 2010) without risking serious disruption to providers, suppliers, and State agencies. Accordingly, in the FY 2011 Notice with Comment Period (75 FR 42889), we announced our intention to proceed on an interim basis with implementation of the full RUG–IV case-mix classification system as of October 1, 2010, followed by a retroactive claims adjustment, using a hybrid RUG–III (HR–III) system reflecting the Affordable Care Act configuration, once we had developed a revised grouper that could accommodate it. In that Notice with Comment period, we also invited public comment specifically on our plans for implementing section 10325 of the Affordable Care Act in this manner.

However, section 202 of the Medicare and Medicaid Extenders Act of 2010 (Pub. L. 111–309, enacted December 15, 2010) repealed section 10325 of the Affordable Care Act. Therefore, we leave in place the implementation of the full RUG–IV system as of FY 2011, as finalized in the FY 2010 SNF PPS final rule (74 FR 40288). Moreover, as the repeal of section 10325 of the Affordable Care Act eliminates the need for a subsequent transition to the HR–III system, this renders moot any further discussion of public comments that we had invited on our planned implementation of that transition. In addition, we note that implementation of version 3.0 of the Minimum Data Set (MDS 3.0) has proceeded as originally scheduled, with an effective date of October 1, 2010. The MDS 3.0 RAI Manual and MDS 3.0 Item Set are published on the MDS 3.0 Training Materials Web site, at *http://www.cms.gov/NursingHomeQualityInits/45_NHQIMDS30TrainingMaterials.asp.*

We note that a parity adjustment was applied to the RUG–53 nursing case-mix weights when the RUG–III system was initially refined in 2006, to ensure that the implementation of the refinements would not cause any change in overall payment levels (70 FR 45031, August 4, 2005). A detailed discussion of the parity adjustment in the specific context of the RUG–IV payment rates appears in the FY 2010 SNF PPS proposed rule (74 FR 22236–38, May 12, 2009) and final rule (74 FR 40338–40339, August 11, 2009), in the FY 2011 Notice with Comment Period (75 FR 42892–42893), and in the FY 2012 proposed rule (76 FR 26370 through 26377).

Accordingly, as discussed above, effective October 1, 2010, we implemented and paid claims under the RUG–IV system that was finalized in the FY 2010 SNF PPS final rule. In section III.D. of this final rule, we discuss certain ongoing Affordable Care Act initiatives that relate to SNFs, and in section III.E.1, we discuss proposed revisions involving section 6101 of the Affordable Care Act, regarding required disclosure of ownership and additional disclosable parties information.

G. Skilled Nursing Facility Prospective Payment—General Overview

We implemented the Medicare SNF PPS effective with cost reporting periods beginning on or after July 1, 1998. This methodology uses prospective, case-mix adjusted per diem payment rates applicable to all covered SNF services. These payment rates cover all costs of furnishing covered skilled nursing services (routine, ancillary, and capital-related costs) other than costs associated with approved educational activities and bad debts. Covered SNF services include post-hospital services for which benefits are provided under Part A, as well as those items and services (other than physician and certain other services specifically excluded under the BBA) which, before July 1, 1998, had been paid under Part B but furnished to Medicare beneficiaries in a SNF during a covered Part A stay. A comprehensive discussion of these provisions appears in the May 12, 1998 interim final rule (63 FR 26252).

1. Payment Provisions—Federal Rate

The PPS uses per diem Federal payment rates based on mean SNF costs in a base year (FY 1995) updated for inflation to the first effective period of the PPS. We developed the Federal payment rates using allowable costs from hospital-based and freestanding SNF cost reports for reporting periods beginning in FY 1995. The data used in developing the Federal rates also incorporated an estimate of the amounts that would be payable under Part B for covered SNF services furnished to individuals during the course of a covered Part A stay in a SNF.

In developing the rates for the initial period, we updated costs to the first effective year of the PPS (the 15-month period beginning July 1, 1998) using a SNF market basket index, and then standardized for the costs of facility differences in case mix and for geographic variations in wages. In compiling the database used to compute the Federal payment rates, we excluded those providers that received new provider exemptions from the routine cost limits, as well as costs related to payments for exceptions to the routine cost limits. Using the formula that the BBA prescribed, we set the Federal rates at a level equal to the weighted mean of freestanding costs plus 50 percent of the difference between the freestanding mean and weighted mean of all SNF

costs (hospital-based and freestanding) combined. We computed and applied separately the payment rates for facilities located in urban and rural areas. In addition, we adjusted the portion of the Federal rate attributable to wage-related costs by a wage index.

The Federal rate also incorporates adjustments to account for facility case-mix, using a classification system that accounts for the relative resource utilization of different patient types. The RUG–IV classification system uses beneficiary assessment data from the MDS 3.0 completed by SNFs to assign beneficiaries to one of 66 RUG–IV groups. The original RUG–III case-mix classification system used beneficiary assessment data from the MDS, version 2.0 (MDS 2.0) completed by SNFs to assign beneficiaries to one of 44 RUG–III groups. Then, under incremental refinements that became effective on January 1, 2006, we added nine new groups—comprising a new Rehabilitation plus Extensive Services category—at the top of the RUG–III hierarchy. The May 12, 1998 interim final rule (63 FR 26252) included a detailed description of the original 44-group RUG–III case-mix classification system. A comprehensive description of the refined RUG–53 system appeared in the proposed and final rules for FY 2006 (70 FR 29070, May 19, 2005, and 70 FR 45026, August 4, 2005), and a detailed description of the current 66-group RUG–IV system appeared in the proposed and final rules for FY 2010 (74 FR 22208, May 12, 2009, and 74 FR 40288, August 11, 2009).

Further, in accordance with sections 1888(e)(4)(E)(ii)(IV) and (e)(5) of the Act, the Federal rates in this final rule reflect an update to the rates that we published in the notice with comment period for FY 2011 (75 FR 42886, July 22, 2010) and the associated correction notice (75 FR 55801, September 14, 2010), equal to the full change in the SNF market basket index, adjusted by the forecast error correction, if applicable, and the Multifactor Productivity (MFP) adjustment for FY 2012. A more detailed discussion of the SNF market basket index and related issues appears in sections I.G.2. and III.F. of this final rule.

2. FY 2012 Rate Updates Using the Skilled Nursing Facility Market Basket Index

Section 1888(e)(5) of the Act requires us to establish a SNF market basket index that reflects changes over time in the prices of an appropriate mix of goods and services included in covered SNF services. We use the SNF market basket index, adjusted in the manner described below, to update the Federal rates on an annual basis. In the SNF PPS final rule for FY 2008 (72 FR 43425 through 43430, August 3, 2007), we revised and rebased the market basket, which included updating the base year from FY 1997 to FY 2004. The FY 2012 market basket increase is 2.7 percent, which is based on IHS Global Insight, Inc. (IGI) second quarter 2011 forecast with historical data through first quarter 2011.

In addition, as explained in the final rule for FY 2004 (66 FR 46058, August 4, 2003) and in section III.F.2. of this final rule, the annual update of the payment rates includes, as appropriate, an adjustment to account for market basket forecast error. As described in the final rule for FY 2008, the threshold percentage that serves to trigger an adjustment to account for market basket forecast error is 0.5 percentage point effective for FY 2008 and subsequent years. This adjustment takes into account the forecast error from the most recently available FY for which there is final data, and applies whenever the difference between the forecasted and actual change in the market basket exceeds a 0.5 percentage point threshold. For FY 2010 (the most recently available FY for which there is final data), the estimated increase in the market basket index was 2.2 percentage points, while the actual increase was 2.0 percentage points, resulting in the actual increase being 0.2 percentage point lower than the estimated increase. Accordingly, as the difference between the estimated and actual amount of change does not exceed the 0.5 percentage point threshold, the payment rates for FY 2012 do not include a forecast error adjustment. As we stated in the final rule for FY 2004 that first promulgated the forecast error adjustment (68 FR 46058, August 4, 2003), the adjustment will ''* * * reflect both upward and downward adjustments, as appropriate.'' Table 1 shows the forecasted and actual market basket amounts for FY 2010.

TABLE 1—DIFFERENCE BETWEEN THE FORECASTED AND ACTUAL MARKET BASKET INCREASES FOR FY 2010

Index	Forecasted FY 2010 increase *	Actual FY 2010 increase **	FY 2010 difference
SNF	2.2	2.0	−0.2

* Published in **Federal Register**; based on second quarter 2009 IHS Global Insight Inc. forecast (2004-based index).
** Based on the second quarter 2011 IHS Global Insight forecast, with historical data through the first quarter 2011 (2004-based index).

Furthermore, effective FY 2012, as required by section 3401(b) of the Affordable Care Act, the market basket percentage is reduced by a productivity adjustment equal to ''the 10-year moving average of changes in annual economy-wide private nonfarm business multi-factor productivity (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost-reporting period or other annual period)'' (the MFP adjustment). As discussed in greater detail in section III.F.3 of this final rule, the MFP adjustment for FY 2012 is 1.0 percent.

II. Summary of the Provisions of the FY 2012 Proposed Rule

In the FY 2012 proposed rule (76 FR 26364), we presented two options for updating the payment rates used under the prospective payment system for skilled nursing facilities (SNFs), for fiscal year 2012. In this context, we examined recent changes in provider behavior relating to the implementation of the Resource Utilization Groups, version 4 (RUG–IV) case-mix classification system and considered a possible recalibration of the case-mix indexes so that they more accurately reflect parity in expenditures between RUG–IV and the previous case-mix classification system. We also included a discussion of a Non-Therapy Ancillary component and outlier research currently under development within CMS. In addition, the proposed rule discussed the impact of certain provisions of the Affordable Care Act. We proposed to require for fiscal year 2012 and subsequent fiscal years that the SNF market basket percentage change be reduced by the multi-factor productivity adjustment. We also proposed to require Medicare SNFs and Medicaid nursing facilities to disclose certain information to the Secretary of

the United States Department of Health and Human Services (the Secretary) and other entities regarding the ownership and organizational structure of their facilities. Finally, we proposed certain changes relating to the payment of group therapy services and proposed new resident assessment policies.

III. Analysis of and Responses to Public Comments on the FY 2012 Proposed Rule

In response to the publication of the FY 2012 proposed rule, we received over 170 timely public comments from individual providers, corporations, government agencies, private citizens, trade associations, and major organizations. The following are brief summaries of each proposed provision, a summary of the public comments that we received related to that proposal, and our responses to the comments.

A. General Comments on the FY 2012 Proposed Rule

In addition to the comments we received on the proposed rule's discussion of specific aspects of the SNF PPS (which we address later in this final rule), commenters also submitted the following, more general observations on the payment system. We received many comments expressing concern about the SNF PPS system as a whole and the MDS 3.0 and RUG–IV system.

Comment: We received a number of comments raising concerns about the complexity of the MDS 3.0 that included several new assessment types, the need to clarify the RAI manual, and the time required to become trained on the new MDS 3.0 requirements.

Response: We appreciate these concerns and we recognize that the transition to the MDS 3.0 was complex and labor-intensive. We provided extensive training and opportunities to assist with questions about the MDS 3.0 and RUG–IV models both prior to and after its October 1, 2010 implementation on audio conferences, at national training conferences, in the form of the RAI Manual and subsequent clarification updates, and postings to the MDS 3.0 and SNF PPS Web sites. We have also provided support in response to oral and written inquiries, and issued clarification during Open Door Forums, RAI Manual updates, and through online and telephone technical assistance. We are committed to continuing training on both the MDS 3.0 and RUG–IV systems. In fact, we are developing training programs to assist providers to adapt to any new policy changes introduced on and after October 1, 2011. Additionally, as we receive provider input through these efforts, we will continue to update and clarify the RAI manual to ensure that it continues to provide accurate information and guidance on CMS policies.

Comment: One commenter recommended that we address the need for stricter requirements for training and certification of food services directors and staff. The commenter states that stricter guidelines will improve patient health and safety.

Response: We appreciate this comment, but note that the specific issues the commenter raised about the requirements for food services staff relate to the certification standards for long-term care facilities and, therefore, are beyond the scope of this final rule. We have, however, shared these comments with CMS survey and certification staff so that they can consider these suggestions as part of their ongoing review and refinement of our policies.

B. FY 2012 Annual Update of Payment Rates Under the Prospective Payment System for Skilled Nursing Facilities

1. Federal Prospective Payment System

This final rule sets forth a schedule of Federal prospective payment rates applicable to Medicare Part A SNF services beginning October 1, 2011. The schedule incorporates per diem Federal rates that provide Part A payment for almost all costs of services furnished to a beneficiary in a SNF during a Medicare-covered stay.

a. Costs and Services Covered by the Federal Rates

In accordance with section 1888(e)(2)(B) of the Act, the Federal rates apply to all costs (routine, ancillary, and capital-related) of covered SNF services other than costs associated with approved educational activities as defined in § 413.85. Under section 1888(e)(2)(A)(i) of the Act, covered SNF services include post-hospital SNF services for which benefits are provided under Part A (the hospital insurance program), as well as items and services (other than those services excluded by statute) that, before July 1, 1998, were paid under Part B (the supplementary medical insurance program) but furnished to Medicare beneficiaries in a SNF during a Part A covered stay. (These excluded service categories are discussed in greater detail in section V.B.2 of the May 12, 1998 interim final rule (63 FR 26295 through 26297)).

b. Methodology Used for the Calculation of the Federal Rates

The FY 2012 rates reflect an update using the full amount of the latest market basket index reduced by the MFP adjustment. The FY 2012 market basket increase factor is 2.7 percent which, as discussed in section VI.C of this final rule, is reduced by a 1.0 percent MFP adjustment, resulting in an MFP-adjusted market basket percentage of 1.7 percent. A complete description of the multi-step process used to calculate Federal rates initially appeared in the May 12, 1998 interim final rule (63 FR 26252), as further revised in subsequent rules. We note that the temporary increase of 128 percent in the per diem adjusted payment rates for SNF residents with AIDS, enacted by section 511 of the MMA (and discussed previously in section I.E of this final rule), remains in effect.

We used the SNF update factor to adjust each per diem component of the Federal rates forward to reflect cost increases occurring between the midpoint of the Federal FY beginning October 1, 2010, and ending September 30, 2011 (FY 2011), and the midpoint of the Federal FY beginning October 1, 2011, and ending September 30, 2012 (FY 2012), to which the payment rates apply. In accordance with section 1888(e)(4)(E)(ii)(IV) of the Act, we update the payment rates for FY 2012 by a factor equal to the full market basket index percentage increase. As further explained in sections I.G.2 and III.F.2 of this final rule, as applicable, we adjust the market basket index by the forecast error from the most recently available FY for which there is final data and apply this adjustment whenever the difference between the forecasted and actual change in the market basket exceeds a 0.5 percentage point threshold. In addition, as further explained in sections I.G.2 and III.F.3 of this final rule, effective FY 2012 and each subsequent fiscal year, we are required to reduce the market basket percentage by the MFP adjustment. We further adjust the rates by a wage index budget neutrality factor, described later in this section. Tables 2 and 3 reflect the updated components of the unadjusted Federal rates for FY 2012, prior to adjustment for case-mix.

TABLE 2—FY 2012 UNADJUSTED FEDERAL RATE PER DIEM URBAN

Rate component	Nursing—case-mix	Therapy—case-mix	Therapy—non-case-mix	Non-case-mix
Per Diem Amount	$160.62	$120.99	$15.94	$81.97

TABLE 3—FY 2012 UNADJUSTED FEDERAL RATE PER DIEM RURAL

Rate component	Nursing—case-mix	Therapy—case-mix	Therapy—non-case-mix	Non-case-mix
Per Diem Amount	$153.46	$139.51	$17.02	$83.49

2. Case-Mix Adjustments

a. Background

Section 1888(e)(4)(G)(i) of the Act requires the Secretary to make an adjustment to account for case-mix. The statute specifies that the adjustment is to reflect both a resident classification system that the Secretary establishes to account for the relative resource use of different patient types, as well as resident assessment and other data that the Secretary considers appropriate. In first implementing the SNF PPS (63 FR 26252, May 12, 1998), we developed the RUG–III case-mix classification system, which tied the amount of payment to resident resource use in combination with resident characteristic information. Staff time measurement (STM) studies conducted in 1990, 1995, and 1997 provided information on resource use (time spent by staff members on residents) and resident characteristics that enabled us not only to establish RUG–III, but also to create case-mix indexes (CMIs).

Although the establishment of the SNF PPS did not change Medicare's fundamental requirements for SNF coverage, payment levels under the PPS vary based on the patient's anticipated care needs and resource utilization. One of the elements affecting the SNF PPS per diem rates is the case-mix adjustment derived from a classification system based on comprehensive resident assessments using the MDS. Case-mix classification is based, in part, on the beneficiary's need for skilled nursing care and therapy. The case-mix classification system uses clinical data from the MDS, and wage-adjusted staff time measurement data, to assign a case-mix group to each patient record that is then used to calculate a per diem payment under the SNF PPS. Because the MDS is used as the basis for payment as well as a clinical document, we have provided extensive training on proper coding and the time frames for MDS completion in our Resident Assessment Instrument (RAI) Manual. For an MDS to be considered valid for use in determining payment, the MDS assessment must be completed in compliance with the instructions in the RAI Manual in effect at the time the assessment is completed. For payment and quality monitoring purposes, the RAI Manual consists of both the Manual instructions and the interpretive guidance and policy clarifications posted on the appropriate MDS Web site at *http://www.cms.gov/NursingHomeQualityInits/25_NHQIMDS30.asp*.

The original RUG–III grouper logic was based on clinical data collected in 1990, 1995, and 1997. As discussed in the SNF PPS proposed rule for FY 2010 (74 FR 22208, May 12, 2009), we subsequently conducted a multi-year data collection and analysis under the Staff Time and Resource Intensity Verification (STRIVE) project to update the case-mix classification system for FY 2011. The resulting RUG–IV case-mix classification system reflected the data collected in 2006–2007 during the STRIVE project, and was finalized in the FY 2010 SNF PPS final rule (74 FR 40288, August 11, 2009) to take effect in FY 2011 concurrently with an updated new resident assessment instrument, the MDS 3.0, which collects the clinical data used for case-mix classification under RUG–IV.

Under the BBA, each update of the SNF PPS payment rates must include the case-mix classification methodology applicable for the coming Federal FY. As indicated in section I.G of this final rule, the payment rates set forth herein reflect the use of the RUG–IV case-mix classification system from October 1, 2011, through September 30, 2012.

b. Development of Case-Mix Indexes

In the FY 2012 proposed rule (76 FR 26370 through 36377), we discussed the implementation of the RUG–IV classification system, effective October 1, 2010. We also discussed the accompanying parity adjustment that was intended to ensure that estimated total payments under the RUG–IV model would be equal to those payments that would have been made under the 53-group RUG–III model that it replaced. We then explained that actual utilization patterns under the refined case-mix system differed significantly from the initial projections, and as a consequence, rather than achieving parity as intended, this adjustment to the new RUG–IV system triggered a significant increase in overall payment levels under the RUG–IV model, representing substantial overpayments to SNFs.

Accordingly, the FY 2012 proposed rule included a discussion of two options for updating the rates for FY 2012. The first option was to recalibrate the parity adjustment (using the methodology discussed in the FY 2012 proposed rule) to ensure that the adjustment actually achieves its intended purpose, to make the transition from RUG–53 to RUG–IV in a budget neutral manner, as discussed further below. Under the second option, CMS reserved the option not to implement a recalibration of the parity adjustment in FY 2012 if, as additional FY 2011 claims data became available, they indicated that utilization patterns are more consistent with our projections and expenditures are more in parity with those under the RUG–53 model. Under this second option, we stated we would simply update the payment rates for FY 2012 by the FY 2012 market basket adjustment of 2.7 percent, reduced by the MFP adjustment of 1.0 percent, for a net market basket increase factor of 1.7 percent.

As discussed in the FY 2012 proposed rule, the recalibration of the FY 2011 parity adjustment, which formed the basis of the first option discussed above, was initially determined through an analysis of utilization data from the first quarter of FY 2011. The methodology for determining the parity adjustment necessary given utilization patterns observed in the first quarter of FY 2011 is described in the FY 2012 proposed rule (76 FR 26370 through 26377) and follows the same basic methodology described in the FY 2006 SNF PPS

proposed rule (70 FR 29077 through 29079), the FY 2009 SNF PPS proposed rule (73 FR 25923) and the FY 2009 SNF PPS final rule (73 FR 46421–23).

In the FY 2012 proposed rule, we stated that this adjustment was based on a set of data derived from first quarter FY 2011 claims and MDS assessments. We further stated that we would continue to monitor claims data and utilization patterns in FY 2011 to confirm our preliminary assessment of the recalibration that would be necessary to achieve parity between the RUG–53 and RUG–IV models, and would update the parity adjustment accordingly. For this final rule, as further discussed below, we have been able to update the recalibration of the FY 2011 parity adjustment with a data set which includes claims and MDS 3.0 assessments for the first 8 months of FY 2011.

Using the same methodology for determining the recalibration discussed in the FY 2012 proposed rule and approximately 2.2 million claims matched to the MDS 3.0 assessment, representing 8 months (or nearly 3 full quarters) of FY 2011 (from October 1, 2011 through May 31, 2011), we determined that the utilization patterns identified in our analysis of the first quarter FY 2011 data continued throughout the entire 8-month period (these data are available at *http://www.cms.gov/SNFPPS/02_Spotlight.asp*). We then repeated our recalibration calculation using the full 8-month data set, which is available at *http://www.cms.gov/SNFPPS/02_Spotlight.asp*. We found that, while retaining the original 61 percent adjustment to the CMIs assigned to each of the RUG–IV non-therapy groups, the necessary adjustment to the nursing CMIs of the RUG–IV therapy groups would be 19.84 percent, a difference of only .03 percent from the 19.81 percent adjustment discussed in the proposed rule. We believe that this updated analysis confirms our preliminary analysis, and demonstrates effectively that the utilization patterns observed in the first quarter of FY 2011 were not temporary aberrations or the result of a learning curve with respect to the RUG–IV and MDS 3.0 transition, but instead represent a new pattern of provider behavior that differs significantly from expected utilization patterns that were the basis for the original parity adjustment, and which resulted in significant increases in overall payment levels under RUG–IV.

In addition, the increased expenditure levels due to the implementation of the RUG–IV system have been validated by the Office of the Inspector General (OIG) in a separate review of SNF payments during the first 6 months of FY 2011. According to a preliminary analysis by OIG, the utilization trends related to the shifts in the modes of therapy and the classification of high percentages of SNF beneficiaries into the highest-paying RUG–IV groups were even more pronounced in the FY 2011 second quarter (January through April 2011) than in the first quarter (October through December 2010) that was used for the analyses included in the FY 2012 proposed rule (This OIG report is available at *http://oig.hhs.gov/oei/reports/oei-02-09-00204.asp*.)

As we stated in the proposed rule (76 FR 26371), given that the most notable differences between expected and actual utilization patterns occurred within the therapy RUG categories, we believe that rather than applying the new parity adjustment percentage to all nursing CMIs, it is more appropriate to maintain the 61 percent adjustment to the nursing CMIS for the RUG–IV non-therapy groups, and reduce the 61 percent parity adjustment as it applied to the nursing CMIs for the RUG–IV therapy groups.

In the proposed rule, we invited comments on the two options discussed above. A discussion of these comments, including our responses, appears below.

Comment: We received a variety of comments regarding the two options presented in the proposed rule for updating the payment rates for FY 2012. Most commenters were opposed to the option to recalibrate the FY 2011 parity adjustment. Many of these commenters expressed their belief that the recalibration considered in the proposed rule will have a significantly negative impact on facilities and beneficiaries. These commenters believed that the recalibration discussed in the proposed rule should be either withdrawn or significantly reduced.

Response: In light of the previous recalibration of the SNF PPS case-mix indexes in FY 2010, which addressed excess payments associated with the RUG–53 implementation in FY 2006 but only after those excess payments had persisted for several years, we believe it is imperative that we act in a well-considered but expedient manner once excess payments such as those in FY 2011 are identified. Allowing these significant anomalies to persist and failing to take timely action to correct the situation creates instability under the RUG–IV system, in the SNF PPS, and the Medicare program generally, which ultimately affects Medicare beneficiary access and quality of care. As we explained in the FY 2012 proposed rule (76 FR 26370–26373), in recalibrating the CMIs under the RUG–IV model, we expect to restore payments to their appropriate level by correcting an inadvertent increase in overall payments. Because the recalibration is removing an unintended excess payment rather than decreasing an otherwise appropriate payment amount, we do not believe that the recalibration should negatively affect facilities, beneficiaries, or quality of care, or create an undue hardship on providers.

Further, in its March 2011 report to the Congress (available at *http://www.medpac.gov/documents/Mar11_EntireReport.pdf*), MedPAC reports that average Medicare margins have increased for freestanding SNFs since 2005. In 2009, the aggregate Medicare margin for freestanding SNFs, which represent more than 90 percent of all SNF facilities, was 18.1 percent, up from 16.6 percent in 2008 and representing the ninth consecutive year where the aggregate Medicare margin for freestanding SNFs was greater than 10 percent. For these reasons, we believe that the parity adjustment should not be withdrawn or reduced.

Comment: Several commenters asserted that the higher payments observed in FY 2011 were, at least partially, the result of real acuity changes which should be accounted for in the calculation of the parity adjustment. These commenters stated that, as an alternative approach, CMS should consider comparing data from FY 2010 and FY 2011 when calculating the recalibration factor, to account for changes in patient acuity.

Response: We disagree with this comment on the basis that, as described in the FY 2012 proposed rule (76 FR 26371), the same FY 2011 claims and MDS information were used to determine both RUG–III payments and RUG–IV payments. Using the same population for the same timeframe serves to control for acuity level changes, as well as other factors, such as patient volume, across the RUG–III and RUG–IV systems and provide an appropriate comparison for our financial analysis.

We would also note, as discussed further below, that we did a comparison of data from all of FY 2010 and from the first eight months of FY 2011 that did not control for changes in patient acuity, and found that it did not result in a significant difference in the recalibration factor necessary to equalize RUG–IV payments and RUG–III payments. In testing this alternative methodology, we did control for volume by calculating the percentage of FY 2010 days of service for each of the RUG–III groups, broken down by urban and rural days, and then multiplied each

percentage by the total number of urban or rural FY 2011 days of service, as appropriate, to determine the number of days of service for each RUG–III group, relative to the total volume for the first eight months of FY 2011. Therefore, even though the recalibration methodology discussed in the proposed rule (76 FR 26370–73) controls for changes in patient acuity, we note that the alternative approach above which was suggested by commenters would not change the recalibration factor.

Comment: Some commenters asserted that CMS failed to provide sufficient information for a third party to reproduce CMS's conclusions with regard to the parity adjustment. A few commenters stated that the lack of access to data, or the timeframe for when certain data were released, limited the ability of stakeholders to develop substantive comments on the recalibration considered in the proposed rule. Additionally, a few commenters referred to specific requests that were made by a few of the major nursing home trade associations for access to claims and MDS data for the fourth quarter of FY 2010 and the first quarter of FY 2011. They noted that we had declined to fulfill those data requests, due to certain data disclosure requirements in the privacy regulations that were promulgated under the Health Insurance Portability and Accountability Act of 1996 (Pub. L. 104–191, enacted on August 21, 1996) (HIPAA). These commenters asserted that CMS should reconsider its data security policies in light of the use of more ''real–time'' data.

Response: We do not agree with assertions that CMS provided inadequate data to evaluate and comment upon the proposals described in our proposed rule. The methodology used to establish the case-mix adjustments is the same as that described in detail in the FY 2006 SNF PPS proposed rule (70 FR 29077 through 29079), the FY 2009 SNF PPS proposed rule (73 FR 25923), and the FY 2009 SNF PPS final rule (73 FR 46421 through 46422), as updated in the FY 2012 proposed rule (76 FR 26370 through 26377). In addition, the data used to calculate the adjustments are publicly available on the CMS Web site, as explained below. We tested the ability to reproduce the parity adjustment calculation using only information available on the CMS Web site as of May 3, 2011, and in the proposed rule and were able to do so. We used the first quarter FY 2011 days of service for the RUG–IV system and a distribution of what those days would have looked like under RUG–III (available in the Downloads section of our Web site at *http://www.cms.gov/SNFPPS/02_Spotlight.asp*). We multiplied the RUG–IV and RUG–III days of service by the FY 2012 unadjusted Federal per diem payment rate components, multiplied by the unadjusted case-mix indexes (the unadjusted RUG–IV case-mix indexes can be calculated by dividing the adjusted case-mix indexes, provided in the proposed rule in Tables 5A or 6A, by the adjustment factor of 1.1981) to establish expenditures under the RUG–III and RUG–IV systems. The parity adjustment was determined as the percentage increase necessary for the nursing CMIs of the RUG–IV therapy groups to generate estimated expenditure levels under the RUG–IV system that were equal to estimated expenditure levels under the RUG–III system.

While this data alone would have been sufficient for a third party to reproduce our results, in an effort to respond to data requests from stakeholders and give the public as much information as possible to evaluate the two parity adjustment options considered in the proposed rule, we also made available on our Web site, as of June 16, 2011, a distribution of paid days by provider number and by month for the fourth quarter of FY 2010 under RUG–III and the first quarter of FY 2011 under RUG–III and RUG–IV. This data could be used to allow stakeholders to analyze acuity trends and further evaluate the adequacy of the data used to determine the appropriate recalibration. Finally, we posted on our Web site a detailed memo which outlined how stakeholders could use MDS 3.0 data to determine the appropriate RUG–III group for a given RUG–IV patient, even though this information was also already available to facilities on their final validation reports. Thus, we provided stakeholders and their trade associations with extensive data described earlier, so that they had multiple avenues for analyzing the underlying data and verifying CMS's results. We believe the additional information provided was beyond the information necessary to replicate our calculation. In this way, we provided even greater transparency of our methods and data analysis while fulfilling our data security responsibilities under HIPAA.

Furthermore, with regard to the ability of stakeholders to provide substantive comments, we do not agree with the commenter's statement that the necessary data were released too late to allow for analyses that would generate substantive comment on the proposed rule. As illustrated above, the data provided on the CMS Web site and in the proposed rule were more than sufficient for stakeholders to reproduce, evaluate, and critique the recalibration methodology and results. This is evident in the notable breadth and detail of the commenters' critiques of our supporting data, methodology, and results, which we view as at least in part a reflection of the extensive amount of data that we have made available to the public throughout this process, and of the ability of commenters to provide both timely and substantive comments on the proposed rule. Even after the issuance of the FY 2012 proposed rule, we continued to respond to requests for technical assistance and posted additional technical materials on our Web site so that all stakeholders could have access to the responses to the technical questions that we received.

Certain data, such as specific MDS and claims data requested by certain trade associations, could not be made available upon the request of stakeholders. CMS' data security policy, which derives from our responsibilities under HIPAA, does not allow CMS to release patient identifiable data when such data are not necessary to accomplish the purpose of the disclosure (here, analyzing our proposals). As noted above, these data were not necessary to provide substantive and timely comments on the proposals contained in the proposed rule, as evidenced by the ability of internal staff to replicate and verify the results of our calculation using data available on our Web site well before the end of the comment period. Accordingly, as the non-patient identifiable information was itself adequate for purposes of assessing our proposals, we were not able to release the requested patient identifiable information.

That said, CMS does make certain information available from the claims and MDS files. CMS has an established timeline for the release of such information, which normally allows for up to a year after the data have been finalized in order to screen and cleanse the data properly of anything that would permit patient identification. Any attempt to speed up this process would result in the assumption of unacceptable risks that patient-identifiable information would be released by mistake, which would threaten the basic privacy protections that beneficiaries must be afforded. Finally, as discussed above, some commenters suggested that, given our increased use of more real-time data (that is, data from the current fiscal year as opposed to claims data

from a prior year) for our recalibration analyses, we should consider updates to our data security policies to ensure that stakeholders have adequate access to data and that the rulemaking process is as transparent as possible. We agree that the process should remain transparent, but we also note that the data security policies that cover the patient-level claims and MDS data used as the basis of the parity adjustment recalibration implemented in this final rule are required by the HIPAA privacy regulations and exist first and foremost to protect Medicare beneficiaries. While commenters requested certain claims and MDS data in order to evaluate our recalibration results, assumptions, and methodology, as discussed above, the data requested were not necessary to provide substantive and timely comments on the proposals contained in the proposed rule so we were unable to provide such data under the HIPAA privacy rule's ''minimum necessary'' provisions. As we stated above, we believe the data we provided on the CMS Web site and in the proposed rule were more than sufficient for stakeholders to reproduce, evaluate, and critique the recalibration methodology and results. We will continue to make data available to stakeholders within the limits of the law. Finally, we have updated the data on our Web site to reflect the use of the eight months of data used to finalize this rule.

Comment: Many commenters raised general concerns over the data used to determine the appropriate recalibration of the FY 2011 parity adjustment. Many of these commenters believed that one fiscal quarter of data was insufficient to justify a recalibration of the magnitude discussed in the proposed rule and that CMS should wait until it has a greater set of data from which to draw conclusions about utilization patterns in FY 2011. Several commenters were concerned that, given the increased burden associated with transitioning both to RUG–IV and MDS 3.0 simultaneously, it is possible that the first quarter of FY 2011 may represent facilities working to transition properly rather than accurately representing evolving provider behavior. One commenter specifically stated that using one quarter of data would not adequately control for the possibility of ''seasonality'' in SNF PPS claims submission, payments, and acuity levels, and provided a detailed analysis of previous fiscal quarters to demonstrate the possibility of a difference between the first fiscal quarter of a given year and the remainder of that year. One commenter also raised concerns related to the provider-level data that CMS made available to stakeholders upon their request, specifically that the data provided for a certain set of providers did not match the data that this commenter acquired independently for this provider. A few commenters highlighted potential calculation errors in the analysis and data presented in the proposed rule, with one commenter specifically highlighting an error in the calculation of the nursing CMI for a certain non-therapy RUG–IV group.

Response: We acknowledge the commenters' concerns about relying solely on one fiscal quarter of data to finalize a recalibration of the magnitude discussed here. However, as noted in the proposed rule, the first quarter of data served only as the basis for our preliminary analysis of FY 2011 utilization. In the proposed rule, we committed to monitoring FY 2011 utilization data continually to confirm the results of our preliminary analysis regarding the need to recalibrate the parity adjustment. The stated purpose of the discussion of this first quarter FY 2011 data in the proposed rule was to ''provide the public with information on the potential scope and impact of the recalibration'' we considered in the proposed rule (76 FR 26371). Given that we have updated the data file with claims and MDS assessments ranging over 8 months of FY 2011 and for the reasons outlined below, we believe that the utilization patterns observed as part of our preliminary analysis do, in fact, represent an accurate reflection of utilization for the whole of FY 2011.

Additionally, as stated above, we have now updated the recalibration based on 8 months of FY 2011 data, and utilization patterns are virtually identical to FY 2011 first quarter findings (Data available at *http://www.cms.gov/SNFPPS/02_Spotlight.asp*). Therefore, we believe that observed utilization patterns are more likely the result of evolving provider behavior rather than errors and adjustments made during the early transition period to RUG–IV and MDS 3.0. Moreover, since facilities were given more than one year to prepare for the implementation of both RUG–IV and MDS 3.0, we believe that facilities were given ample time for education and preparation for the transition and that any confusion or mistakes due to transition issues would have been addressed prior to, or in the very early stages of, the RUG–IV and MDS transition.

With regard to commenters' claims related to ''seasonality'' of the first quarter FY 2011 data, our own analysis of FY 2010 claims data demonstrated that the first quarter of a given fiscal year does appear to provide a reasonable approximation of patient acuity levels and payments for the whole of that fiscal year. We reviewed the FY 2010 claims by RUG classification and by month for each month of FY 2010. Ultimately, we found that the distribution of RUG groups remained stable over the year and no particular quarter, or even month, stood out as demonstrating a different RUG distribution from the rest of that year (these data are available at *http://www.cms.gov/SNFPPS/02_Spotlight.asp*). In fact, the only real difference in SNF payment levels occurs in the transition between one fiscal year and another, where this difference is attributable to the annual payment update and market basket adjustment rather than to any ''seasonality'' existing between the fourth quarter of a given fiscal year and the first quarter of the following fiscal year.

Finally, with regard to the comment related to the provider-level data, we were unable to verify this commenter's claim as we were not provided with any details as to the location or type of provider in question. After a review of the data used to support the recalibration, we found the underlying data to be accurate, and sufficient to perform the proper calculation of the recalibration. We did identify one RUG category (LB2) where we incorrectly stated the nursing CMI as 1.46 in the proposed rule, when it should be 1.45. This correction, while it would have a very small effect on the per diem payment for that RUG group, did not have any impact on our calculation of the parity adjustment. This error has since been corrected and tables 5 and 6 in this final rule reflect the correct nursing CMI for LB2.

Comment: Many commenters expressed concern over the possibility of a reduction to Medicare payment rates in light of other reductions in areas such as Medicaid. Some commenters stated that Medicare should maintain SNF payment levels to cross-subsidize what they characterized as inadequate payment rates for nursing facilities under the Medicaid program. Other commenters urged CMS to reconsider the recalibration in light of the potential impact on the weak national economy. A few commenters discussed the importance of the health care industry, specifically SNFs, as representing a significant sector of job growth during the recent economic recession. Finally, a few commenters asserted that the recalibration would drive providers into bankruptcy, as they assert happened

when the SNF PPS was initially implemented in the late 1990s.

Response: We wish to clarify that it is not the appropriate role of the Medicare SNF benefit to cross-subsidize nursing home payments made under the Medicaid program. As noted by several commenters, the primary purpose of the Medicare SNF benefit is to provide accurate payment for Medicare Part A services provided in a SNF setting. Further, we note that MedPAC has also indicated that it is inappropriate for the Medicare program's SNF payments to be used to account for Medicaid shortfalls. Specifically, on page 159 of its March 2011 Report to Congress on Medicare Payment Policy (which is available online at *http://www.medpac.gov/documents/Mar11_EntireReport.pdf*), MedPAC stated:

* * * the Commission believes such cross-subsidization is not advisable for several reasons. First, on average, Medicare payments account for less than a quarter of revenues to freestanding skilled nursing facilities. A cross-subsidization policy would use a minority share of Medicare payments to underwrite a majority share of states' Medicaid payments. Second, raising Medicare rates to supplement low Medicaid payments would result in poorly targeted subsidies. Facilities with high shares of Medicare payments—presumably the facilities that need revenues the least—would receive the most in subsidies from the higher Medicare payments, while facilities with low Medicare shares—presumably the facilities with the greatest need—would receive the smallest subsidies. Third, increased Medicare payment rates could encourage states to further reduce their Medicaid payments and, in turn, create pressure to raise Medicare rates. In addition, a Medicare subsidy would have an uneven impact on payments, given the variation across states in the level and method of paying for nursing home care. In States where Medicaid payments were adequate, the subsidy would add to excessive payments. Last, higher Medicare payments could further encourage providers to select patients based on payer source or to rehospitalize dual-eligible patients to qualify them for a Medicare-covered, higher payment stay.

We agree with MedPAC, and therefore, do not agree with the commenters that cited cross-subsidizing Medicaid as a justification for maintaining Medicare SNF payments at any specific level.

We are also aware of the concerns that reductions in payment levels can have a negative impact on SNFs and the quality of care furnished to nursing home patients across the country. However, in this particular case, the recalibration discussed in the proposed rule and finalized in this final rule corrects, on a prospective basis only, the unintended excess payment that we observed for FY 2011. In addition, even with the recalibration, FY 2012 rates will still be 3.4 percent higher than FY 2010 rates, the period immediately preceding the introduction of RUG–IV and the unintended spike in payments. Also, FY 2010 expenditures increased by 4.8 percent over FY 2009, a period where both MedPAC and CMS have calculated margins for free-standing SNFs to average 18.1 percent. Moreover, we have not proposed any action to recoup retroactively the excess expenditures already made to SNFs during FY 2011. Instead, we are limiting the scope of the recalibration to restoring the intended SNF PPS payment levels on a prospective basis only effective October 1, 2011.

We have also considered the concerns raised by commenters that restoring the intended payment levels will result in job losses and add significant burden to health care workers and States. CMS cost report and Online Survey Certification and Reporting System (OSCAR) data show that, for the majority of freestanding SNFs and SNFs that operate as part of chains, there has been little change in staffing with the implementation of RUG–IV. Therefore, as data do not indicate that facilities increased staffing with the implementation of RUG–IV and aggregate payments will return to a level commensurate with those made under RUG–III, we do not believe that restoring payments to their intended and appropriate levels should necessarily result in job losses or add significant burden to health care workers or States.

As regards the comment that CMS should reconsider the recalibration in light of the potential impact on a weak economy, we do not believe that potential economic effects justify perpetuating observed and acknowledged excessive and inaccurate payments. Again, we note that MedPAC found in 2009 that the aggregate Medicare margin for freestanding SNFs, which represent more than 90 percent of all SNF facilities, was 18.1 percent, up from 16.6 percent in 2008 and representing the ninth consecutive year where the aggregate Medicare margin for freestanding SNFs was greater than 10 percent.

Finally, with regard to those comments which asserted that the recalibration would trigger bankruptcies similar to those that they attributed to the implementation of the SNF PPS in the late 1990s, studies have indicated multiple factors for nursing home closures during that time, such as chain membership, investment decisions in an uncertain market, and market competition. A more detailed analysis of the research in this area appears in the FY 2010 final rule (74 FR 40297 through 40298). Ultimately, the existing body of research fails to indicate that case-mix reimbursement is a significant contributor to nursing home bankruptcy, particularly considering the small percentage of facility revenues which derive from Medicare payments. Thus, we do not agree with those commenters who asserted that the recalibration, in and of itself, could lead to the bankruptcy of SNF providers or that it could create the degree of fiscal pressure that could impact negatively on facility staffing or the quality of care in SNFs.

Comment: Many commenters, while conceding that overpayments in FY 2011 do exist, questioned the magnitude of the recalibration deemed appropriate by CMS. Several commenters expressed concern with the distribution of RUG–III payment days used by CMS to calculate the parity adjustment. These commenters stated that the RUG–III distribution of days posted by CMS appeared to show incorrectly a decline in patient acuity (particularly in the case of Rehabilitation plus Extensive Services RUG groups) and that this apparent decline in patient acuity may have been due to flaws in the crosswalk methodology. These commenters believed that this led to an underestimation of RUG–III payments, thereby causing an overestimation of the necessary parity adjustment. A few commenters identified the methodology used by CMS to crosswalk between MDS 3.0 data and RUG–III group classification as potentially introducing certain biases and errors into the parity adjustment calculation. One commenter specifically referred to a potential inaccuracy in the crosswalk methodology as it related to ADL conversions, the depression scale used under MDS 2.0 and MDS 3.0, and certain MDS items (such as IV medications) which required facilities to ''look-back'' to services received during the patient's qualifying hospital stay.

Response: As stated above, several commenters suggested that the distribution of RUG–III payment days (which were derived from MDS 3.0 assessments submitted in FY 2011 or through review of final validation reports available to stakeholders) which appeared to reflect an apparent drop in patient acuity between FY 2010 and FY 2011, actually reflected a flaw in the crosswalk methodology used by CMS. In response to this comment and in response to the comments suggesting a potential inaccuracy in the RUG–III crosswalk, we conducted a detailed

analysis of this potential issue. We first confirmed that the physical programming for the crosswalk file was correct and found no errors in the programming. We then turned our attention to policy and assessment differences between the RUG–III and RUG–IV systems that could be affected by the simultaneous transition to MDS 3.0.

We identified a few areas where using the MDS 3.0 could possibly affect the determination of a patient's case-mix classification under RUG–III or RUG–IV. The first area was a difference on the depression scale used under MDS 2.0 and MDS 3.0 where we found, through an analysis of MDS data from July 2010 through April 2011, that the number of depression cases triggered under MDS 2.0 was greater than the number of depression cases triggered under MDS 3.0 by approximately 6.6 percent. However, since depression plays a small role in the determination of a patient's RUG classification (using either the MDS 2.0 FY 2010 data or the MDS 3.0 FY 2011 data, approximately 2 percent of all Medicare beneficiaries classified into RUG–III groups where depression was a qualifying factor), this difference would not have a significant impact on the RUG–III distribution or parity adjustment recalibration. We also examined the ADL scale used under MDS 2.0 and MDS 3.0 for the same period described above and found that the mean ADL scale score between the two assessments was virtually identical; that is, patients classified into the same ADL categories under both models. Therefore, the ADL scale could not be a source of differences in classification due to using the crosswalk.

Next, we examined the use of OMRAs, particularly the End of Therapy (EOT) OMRA and its accompanying policies. Specifically, under MDS 2.0, facilities could be paid at a therapy rate for 8 to 10 days after the discontinuation of all therapies before the EOT OMRA would be necessary. Under MDS 3.0, the ARD for the EOT OMRA must be set for 1 to 3 days after the discontinuation of all therapies, and the relevant non-therapy RUG rate is paid from the date that therapy was discontinued. We agree that the program used to estimate RUG–III payments did not adjust for the change in the EOT policy. Instead, any change from a therapy RUG group to a non-therapy RUG group that would normally result from the completion of an EOT OMRA, specifically under MDS 2.0, would only be picked up on the next scheduled MDS 2.0 assessment. As a result, the crosswalk in this case may have led to an overestimation of RUG–III payments, which would mean that we actually could have underestimated the parity adjustment necessary to bring RUG–IV payments in line with RUG–III payments.

Finally, one commenter specifically referred to a potential issue with the RUG–III crosswalk related to capturing IV services provided to SNF residents during the resident's qualifying hospital stay. The commenter stated that the crosswalk did not accurately account for these services, leading to an underestimation of RUG–III payments. Based on comments we received, we reviewed MDS assessment data related to the coding of IV medications received by the patient prior to admission to the SNF. After a review of MDS data from July 2010 through April 2011, we did find a significant drop in coding for IV services received prior to the resident's admission to the SNF between FY 2010 and FY 2011. However, given the lack of data, it would be very difficult to ascertain if this drop is the result of facilities admitting a lower volume of beneficiaries who had an IV while in the qualifying hospital stay or, as one commenter suggested, that it stemmed from the elimination of a payment incentive for collecting data from the prior hospital stay and failure to report this item accurately on the MDS 3.0. While this item would not affect the patient's RUG–IV classification, it would be necessary to provide an accurate classification of that patient into a RUG–III category, which is an essential aspect of the recalibration calculation. We note that many commenters believed that patient acuity likely did not drop from FY 2010 to FY 2011. Thus, it is possible that, as one commenter posited, some facilities failed to report accurately on the MDS 3.0 if the patient had received an IV prior to admission to the SNF, due to the elimination of the payment incentive for reporting this item. However, we do not have the data to confirm the basis for the drop in coding IV services.

We considered the potential impact of inaccurate reporting of IVs and other potential crosswalk issues, as described above. However, as stated above, it is impossible to ascertain the cause and extent of any observed reporting differences or to quantify the impact of the reporting change on aggregate expenditure levels. However, in order to approximate the impact of these coding changes, we compared the actual RUG–IV payments from first quarter FY 2011 with a data set from the fourth quarter of FY 2010 that included payments that were actually calculated under the RUG–III system. We found that the necessary recalibration using this much less precise methodology was remarkably similar to the recalibration results discussed in section III.B.2 of this final rule. In fact, these results were within 1.5 percent of the recalibration calculation performed using the FY 2011 data. It should be noted that by using different data sets for the comparisons, we could not control for acuity changes or any other factors, such as patient volume, but the difference in the final result was very minor. Therefore, we believe that any actual issues with the RUG–III crosswalk would have a negligible effect on the recalibration calculation. Moreover, because we cannot determine reliably whether the difference in observed versus historically predicted use of IVs during a patient's qualifying hospital stay reflects actual provider behavior and patient acuity changes, or merely a failure on the part of facilities to complete certain items on the MDS, we believe that an adjustment for any such potential factors would be inappropriate given its limited impact. We expect that facilities will report all necessary items on the MDS to capture accurately the patient's clinical and medical needs, rather than only coding those items relevant to the patient's payment level. Finally, we note that, as we discussed previously, we believe using FY 2011 data to determine the necessary recalibration factor controls for patient acuity, as the recalibration of the parity adjustment compares payments under the two case-mix systems using data from the same time period (FY 2011).

Comment: Many commenters questioned the appropriateness of the recalibration based on the potential impact of other proposed changes discussed in the proposed rule, such as the allocation of group therapy and other changes to the MDS 3.0. These commenters stated that reducing payments through a recalibration of the CMIs without accounting for the potential impact of other changes to the MDS will constitute a ''double hit'' on facilities. Some commenters requested that the recalibration be withdrawn until the impact of these other changes proposed for FY 2012 is better known.

Response: As illustrated by OACT baseline expenditure data from 2006 through 2011 (which can be ascertained by dividing the aggregate dollar impact of a rule for a given year by the aggregate percent impact listed in the impact table for the same rule), the SNF baseline has increased by over 40 percent between 2006 and 2011. Additionally, for 3 of the past 6 years, specifically in FY 2006, FY 2010, and FY 2011, we have attempted to restore budget neutrality in the transition to a

new case-mix classification system by applying a parity adjustment. In both case-mix transitions (from RUG–44 to RUG–53 and from RUG–53 to RUG–IV), we found that, rather than achieving budget neutrality, application of the parity adjustment to the new case-mix system resulted in excess payments to providers, because actual utilization patterns under the new case-mix system were different than we originally projected, thus necessitating a recalibration of the adjustment. After reviewing the effect of the FY 2011 RUG–IV policies, we have found that despite the adoption of clinical policies and coding changes, utilization patterns (as evidenced by the distribution of RUG groups) have not changed significantly in response to these policy revisions in ways that could be expected based on past operational and reporting practices. For example, while we anticipated certain changes in the case-mix distribution in response to the implementation of RUG–IV and the allocation of concurrent therapy along with several other policy and reporting changes, the percentage of residents classified into a rehab category between FY 2010 and FY 2011 remained stable at approximately 92 percent; moreover, the percentage of patients classified into the highest paying rehabilitation RUG category, Ultra High Rehabilitation, actually increased from 43 percent to 45 percent over the same period.

This analysis revealed that it can be difficult to predict provider behavior in response to any given policy changes. As a result, given the ability of facilities and stakeholders to adapt quickly to the changes in the SNF system in ways that maintain payments and consistent utilization patterns, from a practical and policy perspective, we do not believe it would be appropriate to attempt to consider the potential impact of other policy changes for FY 2012 as part of the FY 2011 recalibration calculation. Accordingly, given that it is unclear whether the FY 2012 changes to the MDS will have an effect on utilization patterns and the extent of any such effect, we do not agree that recalibrating the CMIs without accounting for such changes would necessarily result in a ''double hit.''

Further, consistent with past practice during a major case-mix system transition (that is, the transition from RUG–44 to RUG–53 in FY 2006 and the transition from RUG–53 to RUG–IV in FY 2011), aggregate payments under the new system have been adjusted to ensure parity with payments under the previous system. In the case of the transition from RUG–44 to RUG–53, the data used to recalibrate the parity adjustment were based on data from CY 2006 (the year the transition was first implemented), even though the recalibration was not made until FY 2010. As such, major changes in the SNF PPS case-mix classification system have been historically accompanied by a parity adjustment recalibration which uses data from the year in which the transition took place. In this case, consistent with past practice, the most appropriate data for recalibrating the FY 2011 parity adjustment are data from FY 2011, the year in which RUG–IV was implemented. If we were to use data from other years (including projected data for a future year such as FY 2012), this could skew the results due to changes in patient acuity, volume, or provider behavior, or other changes in SNF PPS policy.

Accordingly, because the policy refinements contained in this final rule (such as those related to the MDS 3.0) would apply starting in FY 2012, we believe that these changes should not be factored into the FY 2011 recalibration. As discussed above, we believe that it would be inappropriate to try to manipulate the FY 2011 recalibration to account for potential and unpredictable changes in payments resulting from policies to be implemented in FY 2012. As in prior years, policy refinements that do not constitute changes to the case-mix classification system as a whole are not necessarily made in a budget-neutral manner. Consistent with our past practice when implementing new policies, we will monitor utilization patterns and provider behaviors in response to the changes discussed in this final rule.

Comment: Several commenters suggested that CMS consider the possibility of phasing-in a recalibration over the course of several years. A few commenters further suggested that such a phase-in should also take into account the effects of any finalized FY 2012 policies.

Response: As discussed in section XII.A.5 of the proposed rule, we considered how the recalibration might be implemented so as to mitigate the economic impact of the recalibration on facilities. Specifically, we considered mitigating the impact of the recalibration by phasing in the negative adjustments prospectively over multiple years until parity was achieved. However, as noted in the proposed rule (76 FR 26404), phasing-in the recalibration would continue to reimburse facilities at levels that significantly exceed intended SNF payments. Further, as discussed in response to a preceding comment and elsewhere in this preamble, MedPAC found in 2009 that the aggregate Medicare margin for freestanding SNFs, which represent more than 90 percent of all SNF facilities, was 18.1 percent, up from 16.6 percent in 2008. Given these high Medicare margins, we do not believe that a phase-in approach is justified. It is also important to note that this recalibration would serve to remove an unintended spike in payments rather than decreasing an otherwise appropriate payment amount. Thus, we do not believe that the recalibration should negatively affect facilities, beneficiaries, or quality of care, or create an undue hardship on providers. In fact, notwithstanding the recalibration, the FY 2012 payment rates will actually be higher than the rates established for FY 2010, the period immediately preceding the unintended spike in payment levels. We continue to believe that in implementing RUG–IV, it is essential that we stabilize the baseline as quickly as possible without creating a significant adverse effect on the industry or to beneficiaries.

Furthermore, in response to the comment suggesting that a phase-in should take into account the effects of other policies finalized in FY 2012, as discussed in response to the previous comment, we do not believe it would be appropriate to take into account in the recalibration calculation, potential and unpredictable changes in payments resulting from policies to be implemented in FY 2012.

Comment: Several commenters stated that a shift in patients from Inpatient Rehabilitation Facilities (IRFs) to SNFs results in savings to the Medicare Trust Fund and that the current SNF spending levels are needed to treat higher-acuity patients that are now being treated in SNFs rather than in IRFs. Also, several commenters claimed that that providing increased levels of therapy has led to shorter lengths of stay for SNF residents, decreased the rate of hospital readmissions and increased discharges to the community, thereby creating significant savings for the Medicare program.

Response: We note that, in the absence of supporting evidence, and given the significant excess payments identified in FY 2011 and the Medicare profit margins for facilities identified by various sources, such as MedPAC, it is difficult to see how evolving utilization patterns have created savings for the Medicare program. In fact, MedPAC's analysis of recent quality measure data related to rehospitalizations, for example, which appears in their March 2011 Report to Congress (available at *http://www.medpac.gov/documents/Mar11_EntireReport.pdf*), suggests that

quality of care within SNFs has not been improving. On the topic of rehospitalizations, in its March 2011 report, MedPAC states:

''The quality of care furnished to patients during a Medicare-covered SNF stay continued to show mixed results. * * * Since 2000, one outcome measure * * * (the risk-adjusted rate of rehospitalization for any of five care-sensitive conditions) exhibited almost no change.''

Moreover, a basic principle of the SNF PPS is to pay appropriately for the services provided. CMS data are consistent with the commenters' statements that some patients formerly treated within IRFs are now being treated in SNFs. In fact, our data show that a portion of patients needing rehabilitation have always been treated at SNFs and other non-IRF post-acute care settings. The FY 2011 utilization data used to recalibrate the case-mix adjustments reflect an increase in rehabilitation patients, and likely includes patients who alternatively might have been admitted to IRFs prior to CMS enforcement of the IRF coverage criteria and more intensive medical review of IRF claims. However, we do not agree with the commenters' statement that these patients represent a higher level of acuity than the type of patients historically treated in SNFs. For some time, utilization data have demonstrated that nearly 90 percent of all SNF payment days are for rehabilitation services, with over 40 percent of those days falling into the Ultra High Rehabilitation category. For the former IRF patients who are appropriate for SNF care, we must pay the appropriate rate for the SNF services provided and cannot use a reduction in IRF payments as a reason to increase payments to SNFs arbitrarily. It is important to note that, as discussed above, recalibrating the case-mix system does not change the basic SNF PPS structure which provides higher payments for patients using more staff resources and services.

Finally, as one commenter highlighted, shifting IRF patients toward SNF care does not necessarily improve the quality of care provided to the beneficiaries. A March 2005 report in the Archives of Physical Medicine and Rehabilitation (available at *http://www.archives-pmr.org/article/PIIS0003999304012493/abstract*) found that 81.1 percent of IRF patients were discharged to home, compared to 45.5 percent of SNF residents. Additionally, IRF patients appeared to have shorter lengths of stay, averaging approximately a 13-day stay, compared to the average 36-day stay for a SNF resident. Finally, when patients discharged from each setting were reviewed 24 weeks after discharge, IRF patients had consistently better outcomes and displayed a faster rate of recovery. Given these findings, we do not agree with those commenters who would assume that shifting patients from the IRF setting to a SNF setting is necessarily more beneficial to the patient or the Medicare Trust Fund. We do, however, intend to conduct additional research to update these findings with more recent data. Any changes in utilization patterns, length of stay, and/or care outcomes will be addressed during future rule-making.

Comment: We received a number of comments related to our decision to apply the parity adjustment to only the nursing CMIs for therapy RUG–IV groups. Some commenters focused on reasons the parity adjustment should be applied to both the nursing and therapy indexes, while other suggested that the adjustment should be applied to the nursing CMIs for all RUG groups, as it has been applied in the past.

Response: We considered a variety of alternative applications of the parity adjustment, such as applying the adjustment to both the nursing and therapy CMIs, to all the nursing CMIs, or to the therapy CMIs only. However, we still believe it is most appropriate to apply the adjustment to the nursing CMIs within the therapy groups only. Even for RUG–IV therapy groups, the nursing component is a much larger portion of the associated per diem payment. When we tested adjusting only the therapy CMIs, we found that the reduction necessary to achieve parity was so significant as to reduce some of the recalibrated therapy CMIs to nearly a zero index, while reducing the relative differences between therapy groups significantly. To maintain the appropriate relative difference between each therapy group CMI, we found it best to apply the adjustment to the nursing CMIs for those therapy groups. Additionally, as the original parity adjustment discussed in the FY 2011 notice with comment period (75 FR 42886) was applied to the nursing CMIs, we considered it most appropriate to apply a recalibration of that adjustment to the nursing CMIs, albeit of select RUG–IV groups, rather than to apply the recalibration to the therapy CMIs or some combination of the nursing and therapy CMIs.

As discussed in the FY 2012 proposed rule (76 FR 26371), given that the most notable differences between expected and actual utilization patterns occurred within the therapy RUG categories, we believe it most appropriate to recalibrate the parity adjustment only as it applied to the RUG–IV therapy groups. As discussed in the proposed rule (76 FR 26372), we did evaluate the impact of applying a recalibration to all of the nursing CMIs, but found that rates for the complex medical groups were disproportionately affected negatively, in comparison to the therapy groups that represent 90 percent of SNF payment days. Since the vast majority of SNF residents are classified into a RUG–IV therapy group, and because the greatest differences between expected and actual utilization patterns could be found among the RUG–IV therapy groups, we believe that the most appropriate method for applying the recalibration is to apply it only to the RUG–IV therapy groups.

Comment: A few commenters discussed alternative parity adjustment methodologies, and recommended that instead of applying a fixed percentage increase to the nursing CMI (as is done in the case of the parity adjustment discussed in this final rule), we should apply a fixed percentage increase, or decrease presumably, to the final payment rates for each RUG group under the new classification system. CMS would then recalculate the appropriate nursing CMI necessary to reach the new total RUG payment. According to these commenters, this methodology would ensure that the relative difference in payments for each RUG group would remain the same.

Response: We agree that such a methodology would maintain the relative difference in the payments for each RUG category. However, the basic principle of the SNF PPS is to pay accurately for services based on the relative differences in resource and staff costs. The data underlying the RUG–IV CMIs, primarily the STRIVE study, are used to determine the relative difference between RUG groups with regard to their resource use. By applying the parity adjustment to the nursing CMIs, we are able to maintain the relative difference in resource use among the RUG–IV groups, rather than focusing on differences in payment. Ultimately, the prospective nature of the program demands that we focus more on predicting costs through relative utilization of resources, which are represented in the CMIs, rather than focusing solely on maintaining relative differences in the total payments for each RUG group.

Comment: A few commenters recommended that in lieu of or in addition to pursuing a recalibration, CMS should consider greater fraud and abuse monitoring, with one commenter suggesting that CMS consider medical review and audits of FY 2011 claims

and MDS data. One commenter pointed to the lack of program monitoring activities as an indication that there are no problems with the current parity adjustment.

Response: We appreciate these commenters' suggestions regarding the need for greater fraud and abuse monitoring and the need for audits of SNF records. We have increased our fraud and abuse monitoring efforts for SNFs and for the Medicare program in general. In fact, the Office of the Inspector General (OIG) has started a review of the increased frequency with which patients are assigned to the highest therapy groups. As discussed previously, OIG's initial research results also corroborate changes in SNF patterns of care that may have resulted in an inappropriate number of beneficiaries being classified into the highest-paying therapy groups. We will continue to work with OIG and with CMS contractors to provide greater monitoring of SNF utilization and reporting trends. (This research is available at *http://oig.hhs.gov/oei/reports/oei-02-09-00204.asp*.) Nevertheless, while we believe this monitoring activity is necessary, we also believe that it is necessary to implement the recalibration of the parity adjustment in FY 2012 to prevent continued reimbursement in amounts that significantly exceed our intended policy.

Accordingly, for the reasons specified in the FY 2012 proposed rule (76 FR 26370 through 26377) and the reasons discussed in this final rule, we are implementing the option discussed in the proposed rule to recalibrate the parity adjustment to the RUG–IV case-mix indexes to restore the intended parity in overall payments between the RUG–53 model and the RUG–IV model, using the methodology discussed in the proposed rule. As discussed previously, the parity adjustment finalized in this final rule is based on 8 months of FY 2011 claims and MDS 3.0 data. Thus, for FY 2012, the aggregate impact of this recalibration would be the difference between payments calculated using the original FY 2011 total nursing CMI increase for all RUG–IV groups of 61 percent, and payments calculated using the recalibrated total nursing CMI increase for all therapy RUG–IV groups of 19.84 percent, while maintaining the original 61 percent total nursing CMI increase for all non-therapy RUG–IV groups. The total difference is a decrease in payments of $4.47 billion (on an incurred basis) for FY 2012. We also note that the $4.47 billion reduction would be partly offset by the FY 2012 MFP-adjusted market basket update of 1.7 percent, or $600 million, with a net result of a 11.1 percent reduction, or $3.87 billion, in overall payments for FY 2012. As discussed previously, we are implementing the recalibration on a prospective basis beginning October 1, 2011, to restore payments to their intended levels and to end the current outflow of excess dollars. While the original FY 2011 system calibration had to be based on estimated data, this recalibration uses actual FY 2011 RUG–IV claims data, which we believe provide the best picture of the actual resources used under RUG–IV and result in more accurate payment. Consistent with past policy, we will continue to monitor utilization for the rest of FY 2011, but we do not anticipate that the remaining four months of FY 2011 will present a significantly different picture of SNF utilization patterns than using the first 8 months of data.

We list the case-mix adjusted payment rates separately for urban and rural SNFs in Tables 4 and 5, with the corresponding case-mix values. These tables do not reflect the AIDS add-on enacted by section 511 of the MMA, which we apply only after making all other adjustments, such as wage and case-mix.

3. Wage Index Adjustment to Federal Rates

Section 1888(e)(4)(G)(ii) of the Act requires that we adjust the Federal rates to account for differences in area wage levels, using a wage index that we find appropriate. Since the inception of a PPS for SNFs, we have used hospital wage data in developing a wage index to be applied to SNFs.

In the FY 2012 proposed rule, we proposed to continue that practice as we continue to believe that in the absence of SNF-specific wage data, using the hospital inpatient wage index is appropriate and reasonable for the SNF PPS. As explained in the update notice for FY 2005 (69 FR 45786, July 30, 2004), the SNF PPS does not use the hospital area wage index's occupational mix adjustment, as this adjustment serves specifically to define the occupational categories more clearly in a hospital setting; moreover, the collection of the occupational wage data also excludes any wage data related to SNFs. Therefore, we believe that using the updated wage data exclusive of the occupational mix adjustment continues to be appropriate for SNF payments.

In the FY 2012 proposed rule, we also proposed to continue using the same methodology discussed in the SNF PPS final rule for FY 2008 (72 FR 43423) to address those geographic areas in which there are no hospitals and, thus, no hospital wage index data on which to base the calculation of the FY 2012 SNF PPS wage index. For rural geographic areas that do not have hospitals and, therefore, lack hospital wage data on which to base an area wage adjustment, we proposed to use the average wage index from all contiguous CBSAs as a reasonable proxy. This methodology was used to construct the wage index for rural Massachusetts for FY 2011. However, as indicated in the FY 2012 proposed rule (76 FR 26378), there is now a rural hospital with wage data upon which to base an area wage index for rural Massachusetts. Therefore, it is not necessary to apply this methodology to rural Massachusetts for FY 2012. Furthermore, we indicated that we would not apply this methodology to rural Puerto Rico due to the distinct economic circumstances that exist there, but instead would continue using the most recent wage index previously available for that area. For urban areas without specific hospital wage index data, we proposed to use the average wage indexes of all of the urban areas within the State to serve as a reasonable proxy for the wage index of that urban CBSA. At the time of the proposed rule, both CBSA 49700, Yuba City, CA, and CBSA 25980, Hinesville-Fort Stewart, GA, did not have wage index data. However, for this final rule, Yuba City, CA now has wage index data. Therefore, the only urban area without wage index data available is CBSA 25980, Hinesville-Fort Stewart, GA.

The comments that we received on the wage index adjustment to the Federal rates, and our responses to those comments, appear below.

Comment: A commenter recommended that CMS improve its area wage index methodology, and recommended that any design, development, or implementation of a revised hospital wage index must consider other post-acute care settings. The commenter noted research by the Medicare Payment Advisory Commission (MedPAC) and Acumen, LLC (Acumen) to support its concern regarding areas such as reclassification, SNF-specific wage index, the use of U.S. Bureau of Labor Statistics (BLS), and commuting patterns of health care workers employed by SNFs.

Response: As several commenters noted, we have research currently under way to examine alternatives to the wage index methodology, including the issues the commenters mentioned about ensuring that the wage index minimizes fluctuations, matches the costs of labor in the market, and provides for a single wage index policy. Section 3137 of the Affordable Care Act provides that the Secretary of Health and Human Services shall submit a report to Congress by December 31, 2011, that includes a plan to reform the hospital wage index system. Section 3137 of the Affordable Care Act further instructs the Secretary to take into account MedPAC's recommendations on the Medicare wage index classification system, and to include one or more proposals to revise the wage index adjustment applied under section 1886(d)(3)(E) of the Act for purposes of the IPPS. The proposal(s) are to consider each of the following:

- The use of Bureau of Labor Statistics data or other data or methodologies to calculate relative wages for each geographic area.
- Minimizing variations in wage index adjustments between and within MSAs and statewide rural areas.
- Methods to minimize the volatility of wage index adjustments while maintaining the principle of budget neutrality.
- The effect that the implementation of the proposal would have on health care providers in each region of the country.
- Issues relating to occupational mix, such as staffing practices and any evidence on quality of care and patient safety, including any recommendations for alternative calculations to the occupational mix.
- Provide for a transition.

To assist us in meeting the requirements of section 106(b)(2) of the Tax Relief and Health Care Act of 2006 (Pub. L. 109–432, enacted on December 20, 2006) (TRHCA), in February 2008, we awarded a Task Order under our Expedited Research and Demonstration Contract to Acumen, LLC. Acumen, LLC conducted a study of both the current methodology used to construct the Medicare wage index and the recommendations reported to Congress by MedPAC. Parts 1 and 2 of Acumen's final report, which analyzes the strengths and weaknesses of the data sources used to construct the CMS and MedPAC indexes, is available online at *http://www.acumenllc.com/reports/cms.*

MedPAC's recommendations were presented in the FY 2009 IPPS final rule (available online at *http://edocket.access.gpo.gov/2008/pdf/E8-17914.pdf*). We plan to monitor these efforts closely, and to determine what impact or influence they may have on the SNF PPS wage index. At this time, we will continue to use the wage index policies and methodologies described in this final rule to adjust the SNF PPS Federal rates for differences in area wage levels. However, we will continue to monitor MedPAC and Acumen's progress on any revisions to the IPPS wage index to identify any policy changes that may be appropriate for SNFs and potential changes may be presented in a future proposed rule. We discuss the Federal rates by labor-related and non-labor related components for FY 2012 below.

To calculate the SNF PPS wage index adjustment, we apply the wage index adjustment to the labor-related portion of the Federal rate, which is 68.693 percent of the total rate. This percentage reflects the labor-related relative importance for FY 2012, using the revised and rebased FY 2004-based market basket. The labor-related relative importance for FY 2011 was 69.311, as shown in Table 9. We calculate the labor-related relative importance from the SNF market basket, and it approximates the labor-related portion of the total costs after taking into account historical and projected price changes between the base year and FY 2012. The price proxies that move the different cost categories in the market basket do not necessarily change at the same rate, and the relative importance captures these changes. Accordingly,

the relative importance figure more closely reflects the cost-share weights for FY 2012 than the base-year weights from the SNF market basket.

We calculate the labor-related relative importance for FY 2012 in four steps. First, we compute the FY 2012 price index level for the total market basket and each cost category of the market basket. Second, we calculate a ratio for each cost category by dividing the FY 2012 price index level for that cost category by the total market basket price index level. Third, we determine the FY 2012 relative importance for each cost category by multiplying this ratio by the base year (FY 2004) weight. Finally, we add the FY 2012 relative importance for each of the labor-related cost categories (wages and salaries, employee benefits, non-medical professional fees, labor-intensive services, and a portion of capital-related expenses) to produce the FY 2012 labor-related relative importance. Tables 6 and 7 show the case-mix adjusted RUG–IV Federal rates by labor-related and non-labor-related components.

PA1	183.38	$125.97	$57.41

BILLING CODE 4120–01–C

Section 1888(e)(4)(G)(ii) of the Act also requires that we apply this wage index in a manner that does not result in aggregate payments that are greater or

less than would otherwise be made in the absence of the wage adjustment. For FY 2012 (Federal rates effective October 1, 2011), we apply an adjustment to fulfill the budget neutrality requirement. We meet this requirement by multiplying each of the components of the unadjusted Federal rates by a budget neutrality factor equal to the ratio of the weighted average wage adjustment factor for FY 2011 to the weighted average wage adjustment factor for FY 2012. For this calculation, we use the same 2010 claims utilization data for both the numerator and denominator of this ratio. We define the wage adjustment factor used in this calculation as the labor share of the rate component multiplied by the wage index plus the non-labor share of the rate component. The budget neutrality factor for this year is 1.0007. The wage index applicable to FY 2012 is set forth in Tables A and B, which appear in the Addendum of this final rule, and is also available on the CMS Web site at *http://www.cms.gov/SNFPPS/04_WageIndex.asp*.

Comment: One commenter estimated SNF reimbursements using both the FY 2012 SNF wage index in the proposed rule and in the absence of a wage index using simulation. The commenter found that SNF reimbursement was about $400 million lower with the wage index adjustment than without it. The commenter believes that CMS is incorrectly adjusting for the wage index and that payments during the 2002 to 2011 timeframe are nearly $3 billion too low.

Response: As previously stated in the final rule for FY 2010 (74 FR 40303), the intent of the wage index budget neutrality factor is to make sure that aggregate payments using the updated wage index are not greater or less than aggregate payments would be using the previous year's wage index. Because the wage index is based on the pre-floor, pre-reclassified, no occupational mix hospital wage index, the weighted average wage index would be equal to 1.0000 for hospitals. However, there are often multiple SNFs within a wage area with varying utilization levels. The weighted average wage index across all SNF providers may not be equal to 1.0000 for any given fiscal year, so payments could go up or down as a result of their application. Estimation of payments relies on the combination of the geographic wage index value for providers along with their distribution of service days. The change in the wage index values along with the utilization within each urban or rural area determines the change in aggregate payments related to the previous year, and therefore, the budget neutrality factor. The application of the budget neutrality factor ensures that aggregate payments will not increase or decrease due to the year-to-year change in the wage index. Therefore, we do not agree with the methodology used by the commenter, and believe that the 1.0007 budget neutrality factor will ensure equal payments after updating to the FY 2012 SNF PPS wage index, prior to any other policy changes.

In the SNF PPS final rule for FY 2006 (70 FR 45026, August 4, 2005), we adopted the changes discussed in the Office of Management and Budget (OMB) Bulletin No. 03–04 (June 6, 2003), available online at *http://www.whitehouse.gov/omb/bulletins_b03–04,* which announced revised definitions for Metropolitan Statistical Areas (MSAs), and the creation of Micropolitan Statistical Areas and Combined Statistical Areas. In addition, OMB published subsequent bulletins regarding CBSA changes, including changes in CBSA numbers and titles. As indicated in the FY 2008 SNF PPS final rule (72 FR 43423, August 3, 2007), this and all subsequent SNF PPS rules and notices are considered to incorporate the CBSA changes published in the most recent OMB bulletin that applies to the hospital wage data used to determine the current SNF PPS wage index. The OMB bulletins may be accessed online at *http://www.whitehouse.gov/omb/bulletins/index.html.*

In adopting the OMB Core-Based Statistical Area (CBSA) geographic designations, we provided for a 1-year transition with a blended wage index for all providers. For FY 2006, the wage index for each provider consisted of a blend of 50 percent of the FY 2006 MSA-based wage index and 50 percent of the FY 2006 CBSA-based wage index (both using FY 2002 hospital data). We referred to the blended wage index as the FY 2006 SNF PPS transition wage index. As discussed in the SNF PPS final rule for FY 2006 (70 FR 45041), subsequent to the expiration of this 1-year transition on September 30, 2006, we used the full CBSA-based wage index values, as now presented in Tables A and B in the Addendum of this final rule.

4. Updates to Federal Rates

In accordance with section 1888(e)(4)(E) of the Act, as amended by section 311 of the BIPA, and section 1888(e)(5)(B) of the Act, as amended by section 3401(b) of the Affordable Care Act, the payment rates in this final rule reflect an update equal to the full market basket, estimated at 2.7 percentage points, reduced by the MFP adjustment. As discussed in sections I.G.2 and VI.C of the FY 2012 proposed rule (76 FR 26368 through 26369 and 26394 through 26396), the annual update includes a reduction to account for the MFP adjustment described in the latter section. As discussed in section III.F.3 of this final rule, the final MFP adjustment is 1.0 percent, for a net update of 1.7 percent for FY 2012.

5. Relationship of RUG–IV Case-Mix Classification System to Existing Skilled Nursing Facility Level-of-Care Criteria

As discussed in § 413.345, we include in each update of the Federal payment rates in the **Federal Register** the designation of those specific RUGs under the classification system that represent the required SNF level of care, as provided in § 409.30. As set forth in the FY 2011 SNF PPS notice with comment period (75 FR 42910, July 22, 2010), this designation reflects an administrative presumption under the 66-group RUG–IV system that beneficiaries who are correctly assigned to one of the upper 52 RUG–IV groups on the initial 5-day, Medicare-required assessment are automatically classified as meeting the SNF level of care definition up to and including the assessment reference date on the 5-day Medicare-required assessment.

A beneficiary assigned to any of the lower 14 RUG–IV groups is not automatically classified as either meeting or not meeting the definition, but instead receives an individual level of care determination using the existing administrative criteria. This presumption recognizes the strong likelihood that beneficiaries assigned to one of the upper 52 RUG–IV groups during the immediate post-hospital period require a covered level of care, which would be less likely for those beneficiaries assigned to one of the lower 14 RUG–IV groups.

In this final rule, we are continuing the designation of the upper 52 RUG–IV groups for purposes of this administrative presumption, consisting of all groups encompassed by the following RUG–IV categories:

- Rehabilitation plus Extensive Services;
- Ultra High Rehabilitation;
- Very High Rehabilitation;
- High Rehabilitation;
- Medium Rehabilitation;
- Low Rehabilitation;
- Extensive Services;
- Special Care High;
- Special Care Low; and,
- Clinically Complex.

However, we note that this administrative presumption policy does

not supersede the SNF's responsibility to ensure that its decisions relating to level of care are appropriate and timely, including a review to confirm that the services prompting the beneficiary's assignment to one of the upper 52 RUG–IV groups (which, in turn, serves to trigger the administrative presumption) are themselves medically necessary. As we explained in the FY 2000 SNF PPS final rule (64 FR 41667, July 30, 1999), the administrative presumption

* * * is itself rebuttable in those individual cases in which the services actually received by the resident do not meet the basic statutory criterion of being reasonable and necessary to diagnose or treat a beneficiary's condition (according to section 1862(a)(1) of the Act). Accordingly, the presumption would not apply, for example, in those situations in which a resident's assignment to one of the upper * * * groups is itself based on the receipt of services that are subsequently determined to be not reasonable and necessary.

Moreover, we want to stress the importance of careful monitoring for changes in each patient's condition to determine the continuing need for Part A SNF benefits after the assessment reference date of the 5-day assessment, after which the administrative presumption no longer applies.

Comment: One commenter stated that certain instructions contained in version 3.0 of the Long-Term Care Facility Resident Assessment Instrument (RAI) User's Manual (available online at *https://www.cms.gov/NursingHomeQualityInits/45_NHQIMDS30TrainingMaterials.asp*) are inconsistent with the SNF level of care presumption. Specifically, the commenter cited instructions in Chapter 3 (''Overview to the Item-by-Item Guide to the MDS 3.0''), Section O (''Special Treatments, Procedures, and Programs (V1.05)''), which provide that tracheostomy care may be coded on the assessment when performed by residents themselves. Similarly, these instructions provide for coding oxygen therapy when a resident places or removes his or her own oxygen mask/cannula, as well as when a resident performs his or her own dialysis. The commenter stated that allowing these items to be coded under such circumstances compromises not only the definition of ''skilled services'' but the entire RUG–IV case-mix classification system.

Response: We believe that the commenter errs in assuming that all of the ''special procedures'' described in this section of the manual necessarily equate directly to skilled services. For example, even though dialysis is a critically important, life-sustaining procedure, its various component tasks simply do not generally require the involvement of *skilled* personnel—as evidenced by the many instances in which beneficiaries can be successfully trained to self-dialyze (or where a friend or family member with no prior caregiving experience or training can readily be taught to perform the dialysis for them). Moreover, while it is true that dialysis is one of the discrete indicators for assignment to a RUG within the Special Care Low category—a category to which the level of care presumption applies for a short period of time at the start of a SNF stay—it is the *totality* of items and services included within a given RUG, not any one specific coded service, that actually serves to justify the presumption. As explained in the FY 2000 SNF PPS final rule (64 FR 41667, July 30, 1999), it is this entire cluster of services, when combined with the ''tendency * * * for the initial portion of an SNF stay to be the most intensive and unstable'' that provides the basis for making the level of care presumption, as triggered by a resident's assignment to one of the designated upper RUGs on the initial 5-day, Medicare-required assessment.

6. Example of Computation of Adjusted PPS Rates and SNF Payment

Using the hypothetical SNF XYZ described in Table 8, the following shows the adjustments made to the Federal per diem rate to compute the provider's actual per diem PPS payment. SNF XYZ's 12-month cost reporting period begins October 1, 2011. As illustrated in Table 8, SNF XYZ's total PPS payment would equal $40,053.06. We derive the Labor and Non-labor columns from Table 6 of this final rule.

TABLE 8—RUG–IV SNF XYZ: LOCATED IN CEDAR RAPIDS, IA (URBAN CBSA 16300)

[Wage index: 0.8831]

RUG–IV group	Labor	Wage index	Adjusted labor	Non-labor	Adjusted rate	Percent adjustment	Medicare days	Payment
RVX	$450.67	$0.8831	$397.99	$205.39	$603.38	$603.38	14	$8,447.32
ES2	361.85	0.8831	319.55	164.92	484.47	484.47	30	14,534.10
RHA	227.35	0.8831	200.77	103.62	304.39	304.39	16	4,870.24
CC2*	209.59	0.8831	185.09	95.52	280.61	639.79	10	6,397.90
BA2	144.49	0.8831	127.60	65.85	193.45	193.45	30	5,803.50
							100	40,053.06

* Reflects a 128 percent adjustment from section 511 of the MMA.

C. Resource Utilization Groups, Version 4 (RUG–IV)

1. Prospective Payment for SNF Non-Therapy Ancillary Costs

The FY 2012 proposed rule discussed the issue of payment for NTA costs under the SNF PPS (76 FR 26381 through 26384). This discussion described the previous research that has been conducted in this area, as well as current policy and analysis. Specifically, this discussion referenced the ongoing development of a two-part NTA component payment, as well as the conceptual analysis for the types of conditions and MDS-driven variables which may be used to predict and pay for patient NTA costs accurately. Finally, this discussion included reference to the impact of an NTA component payment as it relates to the temporary AIDS add-on payment established by section 511 of the MMA (as discussed in section I.E of this final rule). The comments that we received on this topic both this year and in response to the FY 2011 notice with comment period, and our responses, appear below.

Comment: All of the comments we received in response to this discussion supported CMS's broad objective to develop a new method for paying for NTAs received in the SNF, as well as the basic structure described in the proposed rule for a potential NTA rate component. The commenters also expressed their interest in working with CMS to develop an appropriate NTA rate component that is properly tailored to capture facility NTA costs accurately. Similarly, in response to the FY 2011 notice with comment period, several commenters also expressed their

support for development of a separate NTA component in line with CMS's current research.

Response: We appreciate the broad support that we received for the objective and overall model for designing a separate NTA rate component. The comments we received provided a number of interesting and creative ideas which will be considered during the research and development process. We look forward to working with providers and stakeholders in the future as we continue to develop this refinement to the SNF PPS.

Comment: A few commenters stated that the NTA rate component research should be updated to reflect data gathered on the MDS 3.0. One commenter asked that CMS consider the potential interplay between an NTA component and those drugs and services which may be subject to, or excluded from, consolidated billing. Several commenters also said that, given CMS's discussion related to reallocating some portion of the nursing component to fund the NTA component, CMS should ensure that the nursing component still reflects resource cost and utilization after the carve-out is done. Finally, one commenter, in response to the FY 2011 notice with comment period, requested that CMS pay special attention to NTA costs associated with providing ventilator services within the SNF.

Response: We agree with the commenters that our research must be aligned with continuous improvements made to the SNF PPS, particularly the MDS 3.0. We expect that, as more MDS 3.0 data become available, our NTA researchers will be able to incorporate these data into our analysis. Similarly, we are cognizant of the potential relationship between the NTA research and services and drugs which fall under consolidated billing. As we continue our analysis, we expect that such relationships will be considered in determining the appropriateness of the NTA component.

With regard to ensuring the adequacy of the nursing component after carving out a separate NTA component, we intend to ensure that the introduction of a new rate component for NTAs does not undermine the adequacy of payments for nursing services, and we will continue to monitor the adequacy of payments after any new rate component is implemented. It should be noted that any new carved-out NTA component would, in effect, remove from the nursing component only the costs of the NTA services themselves, which we would then adjust separately from nursing costs based on information that may better predict NTA costs.

Finally, as discussed in the FY 2010 final rule (74 FR 40341), ventilator patients are addressed to some extent within the RUG–IV system (through payments under the Extensive Services group), and we are continuing to monitor the adequacy of payments for this subset of SNF residents. Currently, payments for these services are still integrated into the nursing costs paid for the relevant case-mix group, but in our NTA research, we are considering a variety of special NTA subsets, including ventilator use, which might deserve special attention as part of the highest-tiered payment within the non-routine NTA tier system.

Comment: One commenter believed that the Post Acute Care Payment Reform Demonstration (PAC–PRD) and data collected as part of the research on the CARE tool would not serve as an appropriate source of data for the NTA research we are conducting. This commenter stated that it would be premature for CMS to make use of such data before it has been subject to both agency and Congressional review.

Response: We appreciate the commenter's concern regarding the use of these data and will certainly consider it as the research moves forward. We would note that data sources, such as the PAC–PRD, are being considered for their potential utility as part of developing an NTA component which would more accurately reimburse facilities for incurred NTA costs, though no final decision has been made as to what are the most appropriate sources. In the end, we will ensure that all data sources have been thoroughly reviewed for their accuracy and applicability within the SNF setting.

Comment: Several commenters discussed the possibility of including a cost pass-through for high-cost drugs and services as part of the outlier development.

Response: While we appreciate comments on the development of an SNF outlier policy, we would note that we do not have statutory authority to implement an outlier payment for certain NTA services.

D. Ongoing Initiatives Under the Affordable Care Act

1. Value-Based Purchasing (Section 3006)

In the FY 2012 proposed rule (76 FR 26384), we noted that section 3006(a) of the Affordable Care Act directs the Secretary to develop a plan to implement a value-based purchasing (VBP) program for SNFs, and submit a Report to Congress by October 1, 2011. As stated in the proposed rule, VBP is designed to tie payment to performance in such a way as to reduce inappropriate or poorly provided care and identify and reward those who provide effective and efficient patient care. We also stated that, in accordance with section 3006(a) of the Affordable Care Act, we would consult with stakeholders in developing the implementation plan, and consider the outcomes of any recent demonstration projects related to VBP which we believe might be relevant to the SNF setting. The comments we received on this topic, along with our responses, appear below.

Comment: We received some comments in response to our description of the requirements of section 3006(a) of the Affordable Care Act to develop a plan to implement a VBP program for SNFs, and to submit to Congress a report by October 1, 2011. Commenters supported our efforts to consider a VBP program for SNFs, and made suggestions for the content and timing of the Report to Congress.

Response: Between December 2010 and January 2011, we held discussions with key stakeholders representing consumers, providers, and research organizations about the development of a plan to implement a VBP program for SNFs and the Report to Congress. We also held an Open Door Forum on March 10, 2011, in which more than 700 stakeholders participated in the call. A number of organizations submitted follow-up written comments, which we will share with the VBP project team.

We are in the process of developing the SNF VBP plan to address areas required by the statute. As required by the statute, in developing the plan, we will consider, among other things, measures of quality and efficiency in SNFs, reporting, collection, and validation of quality data, the structure of VBP adjustments, including the determination of thresholds or improvements in quality that would substantiate a payment adjustment, the size of such payments, and the sources of funding for bonus payments. We plan to submit the Report to Congress by the statutory deadline of October 1, 2011.

2. Payment Adjustment for Hospital-Acquired Conditions (Section 3008)

One of the ongoing Affordable Care Act initiatives that we discussed in the FY 2012 SNF PPS proposed rule (76 FR 26384) is the payment adjustment added by section 3008(a) of the Affordable Care Act, which is intended to provide an incentive to reduce the occurrence of certain preventable hospital-acquired conditions. While this hospital provision is itself beyond the scope of the SNF PPS, in the proposed rule, we

additionally mentioned a study required under section 3008(b) of the Affordable Care Act, which directs the Secretary to evaluate possibly expanding the HAC policy from acute care hospitals to a variety of other settings, including SNFs, and to submit a report to Congress containing the results of the study by January 1, 2012.

Comment: We received a number of comments regarding the study referenced in the proposed rule that is required by section 3008(b) of the Affordable Care Act, which directs the Secretary to undertake a study and send a Report to Congress considering the feasibility of extending the Hospital Acquired Conditions-Present on Admission (HAC–POA) program to the other types of facilities. The commenters urged CMS to evaluate carefully the types of facility-acquired conditions that would be relevant to SNFs, and to avoid simply applying all of the hospital-acquired conditions to the postacute setting.

Response: We appreciate the comments we received on the issues that we should consider in the study and Report to Congress required by section 3008(b) of the Affordable Care Act. We are considering a broad range of issues related to extending the HAC–POA program to the other types of facilities specified in the Affordable Care Act. The required study and Report to Congress are currently in progress, and we intend to issue the report by the statutory deadline.

3. Nursing Home Transparency and Improvement (Section 6104)

In the FY 2011 proposed rule (76 FR 26385), we discussed section 6104 of the Affordable Care Act, which requires SNFs to report expenditures separately for direct care staff wages and benefits on the Medicare cost report, for cost reporting periods beginning on or after 2 years after enactment, and also requires the Secretary to perform certain related activities. We received no comments on this provision.

E. Other Issues

1. Required Disclosure of Ownership and Additional Disclosable Parties Information (Section 6101)

In the SNF PPS proposed rule for FY 2012 (76 FR 26364), we proposed to revise the reporting requirements that Medicare SNFs and Medicaid nursing facilities must disclose at the time of enrollment and when any change in ownership occurs, in accordance with section 6101 of the Affordable Care Act.

In certain regulations that apply to Medicare SNFs and Medicaid nursing facilities, we proposed to add a definition for ''additional disclosable party'' and ''organizational structure'' and to revise the definition for ''managing employee.'' These proposed definitions were consistent with the requirements set forth in section 6101 of Affordable Care Act. Given the arguably broad nature of the term ''additional disclosable parties,'' we solicited comments on how best to narrow the scope of the definition for this term. We also proposed to revise § 424.516 to implement certain new disclosure requirements that pertain to Medicare SNFs and to amend § 455.104 to implement certain new disclosure requirements that pertain to Medicaid nursing facilities. Furthermore, we requested comments on a potential alternative approach in which we would collect certain information from Medicare SNFs only upon revalidation consistent with the requirements set forth in § 424.515. In accordance with § 424.515, Medicare SNFs generally would be subject to revalidation requirements every 5 years. Section 424.515(d), however, provides for off-cycle revalidations. We received a number of comments on this potential alternative approach.

To respond properly to all of the comments received related to the disclosure of information requirements, we will publish a separate final rule specifically addressing these provisions at a later date. In accordance with the statutory requirements of section 6101 of the Affordable Care Act, we intend to publish that final rule early in CY 2012. Accordingly, we are not implementing these provisions in this SNF PPS final rule.

2. Therapy Student Supervision

In the FY 2012 proposed rule (76 FR 26385 through 26386), we proposed to revise a policy that had appeared previously in the preamble to the FY 2000 final rule, which had specified that a therapy student in the SNF setting must ''* * * be under the 'line-of-sight' level of supervision of the professional therapist'' (64 FR 41661, July 30, 1999). We proposed that line-of-sight supervision should no longer be required in the SNF setting. We proposed that, instead, each SNF would determine for itself the appropriate manner of supervision of therapy students consistent with applicable State and local laws and practice standards. We advanced this proposal in the interest of promoting greater conformity with the other inpatient settings under Part A (for example, acute care hospitals and IRFs), which already permit each provider to determine for itself the most appropriate manner of supervision in this context, consistent with applicable State and local laws and practice standards. The comments we received on this topic, along with our responses, may be found below.

Comment: The great majority of commenters were supportive of this revision, with some criticizing the existing policy as creating difficulty in securing therapy students in the SNF setting. One commenter expressed the belief that supervising therapists will now be able to offer an increased quality of care in the SNF setting, and that students will experience an elevated quality of learning that will prepare future clinicians to work in the SNF setting. Many commenters were concerned with how the time spent by therapy students with SNF patients could be billed, if at all. Several of the therapy trade associations offered detailed guidelines on therapy student supervision, with some of those also indicating that once a supervising therapist deems the student capable of treating a patient without line-of-sight supervision, the student's time should then be separately counted as skilled therapy minutes, over and above the therapist's own time. By contrast, another commenter stressed the importance of making clear that only the line-of-sight supervision requirement itself is being changed, to avoid triggering an inordinate increase in therapy student minutes that would create another distortion in the payment system. Several commenters suggested that CMS publish specific criteria that facilities should use to determine whether a student is capable to treat patients without line-of-sight supervision. Others suggested that beyond the specific criteria, CMS should specifically state that the supervising therapist, rather than the facility, should be the only entity to determine whether a student is capable of treating patients without line-of-sight supervision. However, two commenters were completely opposed to rescinding the line-of-sight requirement: One stated that eliminating this requirement would be inconsistent with existing Part B therapy instructions appearing in § 230 of the Medicare Benefit Policy Manual (MBPM), Chapter 15, while the other expressed concern that it could result in SNFs inappropriately misclassifying therapy time to increase reimbursement.

Response: Regarding the Part B instructions that one of the commenters cited in the MBPM, we note that these particular instructions do not actually mandate line-of-sight supervision for therapy students, but merely specify

that the services ''* * * performed by a student are not reimbursed *even if* provided under 'line of sight' supervision of the therapist'' (emphasis added). Further, with regard to the concerns over potential distortions in reimbursement, we wish to clarify that the change we have proposed would solely address the *specific manner* of supervision for a therapy student in this setting, but would in no way alter that individual's basic status as a student operating under the therapist's supervision. Thus, this policy change would not change the manner in which therapy minutes currently are recorded on the MDS or cause the student's time to become separately reimbursable.

In response to those commenters concerned with how to bill therapy student time spent with SNF patients, consistent with our existing policy as set forth in the RAI Manual, Chapter 3, Section O (pages O–20 through O–22), as the therapy student is under the direction of the supervising therapist (even if no longer required to be under line-of-sight supervision), the time the student spends with a patient will continue to be billed as if it were the supervising therapist alone providing the therapy. In other words, the therapy student, for the purpose of billing, is treated as simply an extension of the supervising therapist rather than being counted as an additional practitioner. It should be noted that all policies and definitions related to the type of therapy provided (individual, concurrent, and group) apply to the supervising therapist and therapy student as set forth in the RAI manual, Chapter 3, Section O (pages O–20 through O–22) even if the student is no longer required to be under line-of-sight supervision.

Finally, we agree that students who treat SNF residents without line-of-sight supervision should be qualified based on specific guidelines. As we stated in the proposed rule, ''* * * each SNF would determine for itself the appropriate manner of supervision of therapy students, consistent with applicable State and local laws and practice standards'' (76 FR 26835). We expect that professional associations, State and local licensing boards, and facilities should have very specific guidelines related to student clinicians' level of education and experience. Additionally, we expect that every student clinician should meet these standards and guidelines and that once met, the supervising therapist should have ultimate authority to determine whether a student clinician is adequately prepared to treat patients without line-of-sight supervision. In this context, we appreciate the detailed supervision guidelines that several of the trade associations have developed, which we recognize as playing a significant role in helping to define the applicable standards of practice on which providers rely in this context. However, we believe that the question of counting the student's time is actually a separate issue apart from providing guidance on appropriate supervisory practices themselves. As noted previously, a therapy student's time was not separately reimbursable prior to the elimination of the requirement for line-of-sight supervision, nor does it become so now as a result of this change.

Therefore, for the reasons outlined in this final rule and in the FY 2012 proposed rule (76 FR 26385 through 26386), we are finalizing our proposed revision to the line-of-sight supervision requirements as they pertain to students in a SNF setting. Accordingly, in this final rule, we are hereby discontinuing the policy announced in the FY 2000 final rule's preamble requiring line-of-sight supervision of therapy students in SNFs, as set forth in the FY 2012 proposed rule. Instead, effective October 1, 2011, as with other inpatient settings, each SNF will determine for itself the appropriate manner of supervision of therapy students consistent with State and local laws and practice standards. We will be monitoring student participation in SNFs and expect that facilities will ensure that students, though no longer required to be under line-of-sight supervision, will still be properly supervised for both the student's and patient's benefit.

3. Group Therapy and Therapy Documentation

Under our current policy, group therapy is the practice of one professional therapist treating multiple patients (up to a maximum of four) at the same time while the patients are performing either the same or similar activities, consistent with the policies first set forth in the FY 2000 SNF PPS final rule (64 FR 41662). In the FY 2012 proposed rule (76 FR 26386 through 26388), we proposed to make certain changes relating to the definition of group therapy and payment of group therapy services.

We noted that, using our STRIVE data as a baseline, we identified two significant changes in provider behavior related to the provision of therapy services to Medicare beneficiaries in SNFs under RUG–IV. First, we saw a major decrease in the amount of concurrent therapy performed in SNFs, the minutes for which are divided between the two concurrent therapy participants when determining the patient's appropriate RUG classification. At the same time, we found a significant increase in the amount of group therapy services, which are currently not subject to the allocation requirement. Given this increase in group therapy services, we expressed concern that the current method for reporting group therapy on the MDS creates an inappropriate payment incentive to perform the group therapy in place of individual therapy, because the current method of reporting group therapy time does not require allocation among patients, as noted by several commenters. In addition, the allocation of concurrent therapy minutes effective FY 2011 may have created an incentive to perform group therapy in place of concurrent therapy in situations where concurrent therapy otherwise may have been appropriate. In the proposed rule, we proposed to change our policies relating to group therapy as further discussed below.

First, we proposed to establish a standard that defines group therapy as therapy provided simultaneously to four patients who are performing the same or similar therapy activities (76 FR 26386 through 26387). As we stated in the proposed rule (76 FR 26386), because in group therapy patients are performing similar activities, in contrast to concurrent therapy, group therapy gives patients the opportunity to benefit from each other's therapy regimen by observing and interacting with one another, and applying the lessons learned from others to one's own therapy program in order to progress. Large groups, such as those of five or more participants, can make it difficult for the participants to engage with one another over the course of the session. In addition, we have long believed that individual therapists could not adequately supervise large groups, and since the inception of the SNF PPS in July 1998, we have capped the number of residents at four.

Furthermore, we believe that groups of fewer than four participants do not maximize the group therapy benefit for the participants. As we stated in the FY 2012 proposed rule (76 FR 26386), we believe that in groups of 2 or 3 participants, the opportunities for patients in the group to interact and learn from each other are significantly diminished given the small size of the group. Thus, we believe that groups of two or three participants, given their small size, significantly limit the ability of patients to derive the unique benefits associated with group therapy. In such small groups, these limitations become even more accentuated whenever one or two patients are absent from the therapy

session (in fact, with groups of two participants, if one patient is absent from the session, there are no longer any patients with whom the remaining participant can interact, thereby eliminating any benefit that could be derived from participation in a group). Thus, for the reasons discussed above and in the FY 2012 proposed rule (76 FR 26386 through 26387), we believe that the most appropriate group therapy size for the SNF setting is four, which we believe is the size that permits the therapy participants to derive the maximum benefit from the group therapy setting. Accordingly, we proposed to define group therapy as therapy provided simultaneously to four patients who are performing similar therapy activities (76 FR 26387).

In addition, we proposed to allocate group therapy among the four group therapy participants. As we stated in the FY 2012 proposed rule (76 FR 26387), the SNF PPS is based on resource utilization and costs. We believe that when a therapist treats four patients in a group for an hour, it does not cost the SNF four times the amount (or four hours of a therapist's salary) to provide those services. The therapist would appropriately receive one hour's salary for the hour of therapy provided. Accordingly, we believe that allocating group therapy minutes among the four group therapy participants would best capture the resource utilization and cost. For therapists treating patients in a group setting, the full time spent by the therapist with these patients would be divided by 4 (the number of patients that comprise a group). As we stated in the FY 2012 proposed rule (76 FR 26387), as is currently the procedure, the SNF would report the total unallocated group therapy minutes on the MDS 3.0 for each patient. In terms of RUG–IV classification, this total time would be allocated (that is, divided) among the four group therapy participants to determine the appropriate number of RTM and, therefore, the appropriate RUG–IV therapy group and payment level, for each participant. We stated in the FY 2012 proposed rule that the 25 percent cap on group therapy minutes, as defined in the July 30, 1999 final rule (64 FR 41662) will remain in effect, as we continue to believe that group therapy should serve only as an adjunct to individual therapy. The 25 percent cap would be applied to the patient's reimbursable group therapy minutes. In addition, consistent with our current policy (64 FR 41662), the supervising therapist may not be supervising any individuals other than the four individuals who are in the group at the time of the therapy session.

Additionally, we made a number of clarifications with regard to clinical documentation requirements related to a patient's plan of care (76 FR 26387 through 26388). In the proposed rule, we discussed these requirements and clarified a number of regulatory provisions related to documentation within the SNF setting (see 76 FR 26387 through 26388 for a full discussion). Specifically, we noted (76 FR 26387) that SNFs are currently required to follow a prescribed plan of care for the therapy provided to a SNF resident (§ 409.23) and that the plan must meet the requirements of the regulations in § 409.17(b) through (d). We further clarified that supporting medical record documentation is needed so that SNFs can verify that the plan of care is being followed, and can identify when significant changes in a patient's medical condition occur. In addition, we stated that such supporting medical record documentation has always been required so that contractors can verify medical necessity when they review SNF claims (76 FR 26387). One example of appropriate documentation would be to use time stamps to indicate the exact start and ending time of a therapy session. These time stamps could be tracked on a beneficiary's record to determine what discipline and mode of therapy they received. If necessary, these time stamps could be compared with a therapist's log in order to streamline the medical review process. We also clarified that providers should ensure that skilled therapy services are appropriate to the goals of a patient's individualized plan of care, and that it should be clear, based on the patient's medical record, therapy notes, and/or other related documentation, how the prescribed skilled therapy services contribute to the patient's anticipated progress toward the prescribed goals (76 FR 26388). We discussed the relationship between this documentation and the use of group therapy, clarifying that group therapy is not appropriate for every patient or for all conditions. Accordingly, SNFs should include justification for using group therapy as part of the patient's plan of care, to permit verification of the medical necessity and the appropriateness of the prescribed therapy plan (76 FR 26388). Finally, we discussed the need to update the patient's plan of care when changes occur that would affect the prescribed therapy plan or patient's condition, and clarified that any such changes in the therapy plan must be justified by changes in the beneficiary's underlying health condition, and that the provider is expected to describe in the plan of care the reasons for deviating from the original plan (76 FR 26388). We received a number of comments on these proposals and clarifications which, along with our responses, appear below.

Comment: Several commenters expressed support for the proposed change to allocate the group therapy minutes. Many others had general concerns about the allocation of group therapy. One commenter believed that during a group therapy session, every patient benefits for the full time of the session, rather than only one quarter of the session as the allocation of group time would suggest. Additionally, several commenters have expressed that there are psychosocial and functional benefits of group therapy and are concerned that residents will be negatively affected by the allocation of group therapy. We have received multiple comments claiming that the allocation of group therapy minutes will disincentivize therapists from performing group therapy in cases where group therapy may be the preferred mode of treatment, since their payments will decrease if they continue to provide the same volume of group therapy. Several commenters stated that planning and implementing group therapy tasks is a very time-consuming and challenging process, and that to allocate the group therapy minutes would mean that payment would not accurately reflect the time spent preparing for these therapy sessions and the additional costs of providing group therapy. One commenter stated it is more expensive to provide group therapy than individual or concurrent therapy.

Response: As we noted in the proposed rule (76 FR 26387), the allocation of group therapy time is based on accurately paying for the therapist's time, not the resident's time. During a one-hour group therapy session with four patients, while all four patients may receive a full hour of benefit from the therapy session, this still only constitutes one hour of the therapist's time. Given that the SNF PPS is based on resource utilization and cost, the payment for these services should reflect the amount of the therapist's time that was utilized as part of the therapy session.

As stated in our proposal, we agree with the commenters that there are unique benefits to group therapy. We do not believe that the allocation of group therapy minutes should be considered a deterrent to having group therapy

sessions or should negatively affect beneficiaries. Instead, allocation of group therapy brings Medicare payments in line with resource utilization and cost for these services and is intended to ensure that the therapist's time is being appropriately counted and reimbursed. We would expect therapists to continue to provide the mode of therapy that is most clinically appropriate for each patient.

Regarding the statement that the preparation for group therapy is a high-cost, time-consuming, and challenging process requiring careful evaluation of each patient, we agree that special care should be taken to plan for the most appropriate group therapy program for the designated patients. However, we expect that therapists will utilize high-quality standards of practice that require careful planning and documentation for all modes of therapy.

Moreover, these costs were included in the establishment of the per diem base rate, and are already being reimbursed as part of the SNF PPS. Additionally, while some commenters did maintain that group therapy costs more to provide than individual or concurrent therapy, other commenters believed the opposite, with one commenter stating the following regarding the allocation policy, ''The policy would undercut efficiency, while pushing patients into higher cost modes of care.'' We note that in allocating group therapy minutes, we are not dictating the mode of therapy that a SNF should provide to its patients. Instead, as discussed above, this policy brings Medicare payments more in line with resource utilization and cost for these services. Determinations regarding the appropriate mode of therapy should be made by the therapist based on the clinical needs of each patient.

Comment: Several commenters raised concerns regarding the strict allocation of group therapy minutes by four. The most common question we received from commenters was for clarification of why four was chosen to be the divisor, regardless of the number of participants in the group. Some commenters stated that using a hard divisor of four for group therapy minutes, rather than proposing to have facilities report the number of participants in the group and divide accordingly, contradicts CMS's reasoning that the allocation of group therapy is based on resource cost and utilization. These commenters also inquired as to how the facility should report the therapy time if four residents were scheduled for a group therapy session and one of the participants fell ill and was unable to participate. Several commenters asserted that we created a financial incentive to provide group therapy when we allocated concurrent therapy and did not address group therapy.

One commenter stated that as a rural provider, it is very rare ever to have a 4-person group. Another commenter discussed the ability of therapists to transition patients from a concurrent therapy environment to a group environment, and indicated that dividing by four makes it more difficult for providers to transition patients properly between concurrent and group therapy. Several commenters encouraged CMS to consult with clinical experts and professional therapy associations to determine the most appropriate number of group therapy participants based on clinical standards.

Response: Contrary to commenters' assertions, we did not propose to divide group therapy minutes by four regardless of the number of participants in the group. We proposed to divide by four in allocating group therapy minutes because we had proposed a definition of group therapy which requires four participants. In the FY 2012 proposed rule, we proposed to define group therapy as therapy provided simultaneously to four patients who are performing the same or similar activities. (76 FR 26387) Thus, based on our proposed definition of group therapy (which we are finalizing in this rule), we expect group therapy to be a structured, planned program with four participants for whom group therapy has been determined appropriate. As we stated in the proposed rule, we proposed ''allocating group therapy minutes among the *four* group therapy participants'' (76 FR 26387, emphasis added). Thus, given this definition of group therapy, dividing group therapy minutes by four captures resource utilization and cost associated with providing this mode of therapy, as under our proposed policy, groups would be required to have four participants. We note that, in situations where the definition of group therapy is not met, those minutes may not be coded on the MDS as group therapy.

We recognize that in some situations, one or more of the scheduled group therapy participants may not be able to attend a group session due to illness or otherwise, or may be unable to finish participating in the entire group session. Based on our definition of group therapy as finalized in this rule, we expect group therapy to be a structured, planned program with four participants. However, if one or more of the four participants are unexpectedly absent from a session or cannot finish participating in the entire session, rather than discontinuing payment or requiring the session to be rescheduled, we will continue to deem the therapy session as meeting the definition of group therapy as long as the therapy program originally had been planned for four patients. In this situation, we will continue to assume that there are four patients and, therefore, will divide the therapy minutes by four in allocating group therapy minutes among the group therapy participants. As discussed above, we believe the most appropriate size for group therapy in a SNF setting is four participants and, thus, we believe dividing by four reflects the resource utilization and cost associated with group therapy as we have defined it in this rule and as we expect it to be structured based on this definition.

Commenters have suggested that we recognize an alternative to allocating group therapy by four and, instead, divide the therapy minutes by the number of patients in the group. However, one commenter stated, ''Such an approach does not recognize the additional burdens and costs associated with the provision of group services, however, nor the difficulty providers and therapists would have in tracking the number of people in a group at all times and accurately counting minutes when patients are dropping in and dropping out throughout the session.'' As we stated above and in the FY 2012 proposed rule (76 FR 26387), we believe that most appropriate group therapy size in a SNF setting is four participants and, thus, we have defined group therapy accordingly. Given this definition, we believe that it is appropriate to allocate group therapy minutes among the participants by dividing by four. We note that the apparent lack of structure and discontinuity of the group interventions, as noted by the commenter, suggests that facilities may need to reassess their methods of providing group therapy services. In addition, we agree with many commenters that the implementation of RUG–IV created a payment incentive to provide group therapy and that the increase in group therapy may have been due to payment rather than clinical considerations. We note that by allocating group therapy among the four group therapy participants, we are also equalizing the reimbursement incentive across the modes of therapy. We believe this will once again encourage clinicians to choose the mode of therapy based on clinical rather than financial reasons. Several commenters agreed with this concept and one stated that ''Payments for different modalities of

therapy (concurrent, group, and individual) should reflect the different costs to provide the services. Otherwise providers will have financial incentives to furnish one modality over another, regardless of whether the modality is the most clinically appropriate for the patient.'' It is also important to keep in mind that every payment system has multiple incentives, both positive and negative. The management in each facility is faced with making cost/benefit choices on an almost daily basis. However, these choices must keep patient needs at the forefront of the decision-making process, and the existence of a payment incentive does not in itself justify the provision of a lower or less appropriate level of care merely in order to reduce facility costs.

We continue to believe that the provision of group therapy should be initiated only after determining that group therapy services are appropriate for each patient who receives them and that the group therapy provided is appropriate to the individual plans of care. As we noted in the proposed rule (76 FR 26388),

> It is incumbent upon providers to ensure that skilled therapy services provided to a given SNF resident are appropriate to the goals of the patient's individualized plan of care * * * Because group therapy is not appropriate for either all patients or all conditions, and in order to verify that group therapy is medically necessary and appropriate to the needs of the beneficiary, SNFs should include justification for the use of group, rather than individual or concurrent therapy. This description should include, but need not be limited to, the specific benefits to that particular patient of including the documented type and amount of group therapy; that is, how the prescribed type and amount of group therapy will meet the patient's needs and assist the patient in reaching the documented goals.

Therefore, we believe that to every extent possible, group therapy sessions should not fluctuate in size and membership. As we stated above, we believe the most appropriate group therapy size in a SNF setting is four participants, and thus we are defining group therapy accordingly. Thus, as we are defining group therapy as consisting of four participants, we believe that allocating the minutes among the four participants best captures resource utilization and cost.

As discussed above, one commenter discussed the ability of therapists to transition patients from a concurrent therapy environment to a group environment, and indicated that dividing by four makes it more difficult for providers to transition patients properly between concurrent and group therapy. Historically, prior to the implementation of the RUG–IV system, SNFs reported a low utilization of group therapy. The limited use of group therapy programs may well be related to the logistical difficulties mentioned by this commenter, such as transitioning the patients properly between concurrent and group therapy. However, we do not see how allocating group therapy minutes would make it more difficult to transition patients from one therapy mode to another, as such transitions should be based on clinical determinations. The purpose of our allocation policy is to provide payment that better reflects resource utilization and cost, and we do not believe this policy should affect clinical determinations regarding the appropriate mode of therapy provided to a patient. We recognize the unique challenges that rural facilities face, but as we discussed above and in the FY 2012 proposed rule, we believe that the most appropriate group therapy size for a SNF setting is four. We believe that group therapy should be used to supplement individual therapy when suitable. In facilities where fewer than four patients are consistently being treated with the same or similar therapeutic interventions, group therapy programs may not always be appropriate. We expect all facilities to make the best clinical decisions when providing group therapy.

For the reasons discussed above and in the FY 2012 proposed rule (76 FR 26386 through 26388), as proposed, effective October 1, 2011, group therapy will be defined as therapy provided simultaneously to four patients who are performing the same or similar activities, and group therapy time will be divided by four in determining the reimbursable therapy minutes for each group therapy participant and, therefore, the appropriate RUG–IV group.

As discussed above and in the FY 2012 proposed rule, we believe it is appropriate to define group therapy as consisting of four participants. However, we will continue to monitor group therapy utilization and will continue to consult with clinical experts, professional therapy associations, and other stakeholders on this issue.

Comment: Many commenters questioned our choice of four as the most appropriate number of participants in a therapy group. Several commenters disagreed that the optimal number for patients in a group is four and stated that there is no research data to support this notion. Additionally, commenters stated that there are many instances when 2 or 3-person groups are more effective than 4-person groups and that in some specific instances, a 4-person group might pose serious patient risks. Many commenters stated that the choice of four as the optimal number for group therapy undermines the clinical judgment of therapists, and that CMS does not have the authority to dictate the practice of therapy and, therefore, cannot instruct therapists to allocate group therapy.

Response: For the reasons discussed above and in the FY 2012 proposed rule (76 FR 26386 through 26387), we believe the most appropriate size for group therapy in a SNF setting is four participants, which we believe is the size that permits the therapy participants to derive the maximum benefit from the group therapy setting. Although we conducted a literature search and were unable to find research data to support any prescribed number of participants in a therapy group, for the reasons stated above and in the FY 2012 proposed rule, we continue to believe it is appropriate to establish a standard that defines group therapy as therapy provided simultaneously to four participants performing the same or similar therapy activities.

In defining group therapy as therapy provided to four patients simultaneously who are performing the same or similar activities, we are not attempting to dictate clinical practice. Each therapist should use his or her best clinical judgment in determining the mode and manner in which to provide therapy services to patients. We understand that at times the therapist may decide in his or her clinical judgment to treat 2 or 3 patients simultaneously, and we are not prohibiting therapists from making this clinical decision. However, for purposes of Medicare payment policy, for the reasons discussed above and in the FY 2012 proposed rule, we are defining group therapy as therapy provided simultaneously to four patients who are performing the same or similar therapy activities. Further, we are allocating group therapy minutes by dividing the total minutes by four, the number of participants in a group therapy session as defined above. Our goal in allocating group therapy is to pay appropriately based on resource utilization and cost, not to dictate the practice of therapy.

Regarding the concept that groups of 4 may pose serious patient risks, we conducted a literature review and did not find any evidence that a group of 4 would pose any more of a patient risk than treating any other specific number of patients at a time. As discussed above, we expect therapists to use their best clinical judgment when choosing

which mode of therapy to use. If they believe that a particular mode of therapy would pose an increased degree of risk to a patient, we would expect them not to use that mode of therapy.

Comment: Several commenters stated that with the implementation of RUG–IV and its related policies, such as the allocation of concurrent therapy, we created a financial incentive for facilities to shift patients receiving concurrent therapy into group therapy, as long as the patient's therapy needs were still being met. These commenters stated that CMS should have expected some shift in the modes of therapy services provided. Additionally, these commenters believed that the data we used were inconclusive, since no data were collected on the modality of therapy delivered under MDS 2.0 and RUG–III. Others have stated that CMS' decision to use data from the STRIVE study is unsound because the STRIVE study was flawed. One commenter suggested that CMS should not allocate group therapy minutes until we have a full year's worth of data under the RUG–IV and MDS 3.0 system.

Response: We agree that the decision to allocate concurrent therapy inadvertently created an inappropriate financial incentive for facilities to emphasize more group therapy and that these incentives have resulted in excess Medicare expenditures. Accordingly, to fulfill our responsibilities to ensure appropriate payment based on resource utilization and cost, we proposed the allocation of group therapy minutes, which equalizes the reimbursement incentives across modes of therapy.

The statement that no data were collected to address the modality of therapy delivered under MDS 2.0 and RUG–III is incorrect. STRIVE collected data from the MDS 2.0 and RUG–III to examine the different modes of therapy delivery. Regarding the statement that the STRIVE study was flawed, we addressed this general concern in the FY 2010 final rule (74 FR 40304).

One commenter suggested that we defer allocating group therapy minutes until we have received more data. However, we believe we do not need a full year's worth of data before making changes to allocate group therapy. Regardless of whether the initial trends for utilization of group therapy continue, we believe that the group therapy allocation policy finalized in this final rule will increase the accuracy of our payments by more closely basing payments on actual resource utilization and cost and, thus, we believe that it is appropriate to finalize our policy regarding allocation of group therapy minutes effective October 1, 2011, as proposed.

Comment: Many commenters recognized the need to make changes to group therapy but suggested alternatives to the allocation of group therapy. Several commenters recommended that to reduce the incentive to overutilize group therapy, we should examine the current 25 percent cap on group therapy and make the necessary adjustments. One commenter suggested that we limit patients to one group therapy session per week.

Response: We appreciate the suggested alternatives to our proposal. We should note that the 25 percent cap for group therapy was designed to ensure that group therapy is utilized as an adjunct to individual (and concurrent) therapy. Conversely, the allocation of therapy minutes will be used to pay accurately for the therapy provided in a group therapy session based on resource utilization and cost. We also appreciate the suggestion to limit patients to one group therapy session per week and may explore this alternative or similar alternatives in the future in assessing the amounts of group therapy that may be beneficial to SNF patients.

Comment: Several commenters stated that the allocation of group therapy will cause operational inefficiencies in SNFs and will cause SNFs to need to hire more therapists in a field that currently has a significant shortage of professionals.

Response: We do not believe that the allocation of group therapy would cause operational inefficiencies or cause SNFs to hire more therapists. We note that the personnel decisions of SNFs are essentially private business arrangements that are outside the scope of this rule. Moreover, the allocation of group therapy does not require a change in MDS reporting procedures. As we stated in the FY 2012 proposed rule (76 FR 26387), as is currently the procedure, the SNF would report the total unallocated group therapy minutes on the MDS 3.0 for each patient. Then this total time would be automatically divided among the four group therapy participants to determine the appropriate number of RTM, and thus the RUG–IV classification and payment level for each patient. Thus, the allocation of group therapy will not require extra work on the part of SNF staff. Accordingly, we do not believe that allocation of group therapy minutes will cause operational inefficiencies in SNFs.

Comment: In the proposed rule, we solicited comments on types of patients for whom group therapy might be appropriate. We received several comments in response to this solicitation, which included different diagnoses (for example, aphasia) and treatment types (for example, a functional communication group). One commenter stated that while there are specific conditions that might prompt the consideration for group therapy, it is important for group therapy to be part of an integrated plan of care established under medical direction. Commenters noted that not all patients would benefit from group therapy, nor would all conditions be appropriate to incorporate into a group therapy program.

Response: We appreciate the comments which suggested various diagnoses and treatment types that might benefit from group therapy. As we stated in the proposed rule (76 FR 26387), group therapy is not appropriate for either all patients or all conditions and is primarily effective as a supplement to individual therapy. We agree with the comment noting that while there are specific conditions that might prompt the consideration of group therapy, it is important for group therapy to be part of an integrated plan of care established under medical direction. Additionally, we believe that diagnoses and treatment techniques (such as communication or feeding groups) should not be the sole basis for choosing to initiate group therapy. Therapists should determine for each resident, regardless of diagnosis or condition, whether the resident is a good candidate for group therapy based on functional level and treatment potential, and whether this particular form of treatment is in the patient's best interest and within the goals of the overall plan of care. We will take the commenters' suggestions under consideration in assessing the appropriate use of group therapy in SNFs and may address this further in future rulemaking.

Comment: One commenter requested clarification of a sentence in the proposed rule, which stated that ''As is currently the procedure, the SNF would report the total unallocated group therapy minutes on the MDS 3.0 (60 minutes in the scenario above) for each patient'' (76 FR 26387). The commenter believed that the number of group therapy minutes stated in the parentheses of the above sentence, given the scenario referred to in that sentence, should be 120.

Response: After reviewing the sentence quoted above from the proposed rule (76 FR 26387), we agree with this commenter and wish to clarify that there is an error in this sentence. In the above-quoted sentence from the FY

2012 proposed rule, the minutes referred to in the parentheses should read 120 minutes rather than 60 minutes, given the immediately preceding scenario to which it refers. Thus, this sentence should have stated, ''As is currently the procedure, the SNFs would report the total unallocated group therapy minutes on the MDS 3.0 (120 minutes in the scenario above) for each patient.''.

Comment: One commenter suggested that an inconsistency of CMS's definition of group therapy between the FY 2010 final rule (74 FR 40315) and the MDS RAI Manual (Chapter 3, Section O) may have led to the increase in group therapy utilization. The commenter specifically references the words ''same'' versus ''similar'' as regards to type of group therapy services/activities. This commenter recommended that CMS make the definitions of group therapy consistent between the regulations and the RAI Manual.

Response: In the FY 2010 final rule (76 FR 40315), we stated that group therapy is therapy where a ''therapist provides the same services to everyone in the group.'' We note that later in the preamble of the FY 2010 final rule (74 FR 40317), we define group therapy as ''consisting of 2 to 4 patients (regardless of payer source) who are performing similar activities * * *'' In the RAI Manual (Chapter 3, Section O)], group therapy is also defined as ''the treatment of 2 to 4 residents, regardless of payer source, who are performing similar activities, * * *.'' We do not believe that this inconsistency in the definition may have led to the increase in group therapy utilization as we are not aware of evidence to support this claim. Additionally, we provided extensive training to providers both prior to and after the implementation of MDS 3.0. At the time of training, we did not receive questions on this issue, suggesting that there was not a significant amount of confusion on this point. To clarify, from this point forward, the definition of group therapy will be consistent in regulation and in the RAI manual. For the purposes of coding group therapy for Medicare Part A SNF payment, the existing definition of group therapy has been: 2–4 patients (regardless of payer source) who are simultaneously performing the same or similar activities and are supervised by a therapist (or assistant) who is not supervising any other individuals. However, as discussed in this final rule, beginning October 1, 2011, this definition will be: 4 patients (regardless of payer source) who are simultaneously performing the same or similar activities and are supervised by a therapist (or assistant) who is not supervising any other individuals. For purposes of coding concurrent therapy for Medicare Part A SNF payment, the definition of concurrent therapy will remain: therapy consisting of 2 patients who are not performing the same or similar activity (regardless of payer source), both of whom must be in line-of-sight of the treating therapist (or assistant).

Comment: Several commenters supported the clarification of our expectations for documenting group therapy services. Some commenters stated that rehabilitation professionals need to support the work they do through documentation, and that the documentation should reflect the need for skilled care as well as demonstrate how the therapy provision will support patients' needs and goals. Further, professional therapy associations commented on the documentation clarifications, stating that the requirement for adequate documentation to justify the use of each mode of therapy is necessary and that there should be no additional burden to provide this documentation, as it should be a standard part of any documentation. Others expressed concern that we proposed new and stricter guidelines for documenting group therapy. Some commenters stated that requiring a therapist to document why a specific mode of therapy was chosen for a patient would create an undue burden on the therapist. One commenter stated that requiring an additional, separate plan of care for group therapy would not improve the quality or efficacy of this mode of therapy delivery, and that it would be a disincentive for clinicians to perform group therapy due to the increased paperwork.

Response: We would like to clarify that we did not propose new documentation requirements for group therapy provision. In fact, these documentation requirements have been in place all along, and the intent of the discussion in the proposed rule was to clarify our expectations. Contrary to the commenter's statement, we are not requiring an additional, separate plan of care for group therapy. The regulations at § 409.17(c) and § 409.23(c) require that, in order for Medicare to pay for therapy in a SNF, a therapy plan of care must be in place and that it must include certain information. In the FY 2012 proposed rule (76 FR 26387 through 26388), and as discussed previously, we simply clarified what we expect to be included in the plan of care and supporting medical record documentation in cases where group therapy is provided.

Therefore, as this discussion in the proposed rule simply clarified existing expectations, we do not agree that these documentation guidelines will increase or create undue burden on therapists, or that these guidelines create a disincentive for clinicians to perform group therapy due to increased paperwork. As the commenters above suggested, there should be no additional burden to provide this documentation, as it should be a standard part of any documentation. We agree with those commenters who stated that rehabilitation professionals need to support the work they do through documentation, and that the documentation should reflect the need for skilled care and the mode of therapy provided, as well as demonstrate how the therapy provision will support patients' needs and goals.

Comment: One commenter stated that the clarification of CMS coverage and documentation expectations included in the proposed rule inappropriately broadens the documentation requirements of group therapy by applying standards beyond those found in the current law and regulations for SNF care. Specifically, the commenter indicated that the clarification incorrectly applies hospital regulations and inaccurately characterizes guidelines set forth in program manuals as binding for SNFs. This commenter recommended that CMS clarify therapy documentation requirements using only SNF law and regulations.

Response: We do not agree with the claim that the requirement to establish structured and well-documented group therapy programs applies to hospitals but not to SNFs. We would note that while it is the regulations themselves from which legal authority derives, the program manuals and other interpretive guidelines can serve to clarify or interpret the regulations set forth in the Code of Federal Regulations (CFR). The clarifications set forth in the FY 2012 proposed rule (76 FR 26387 through 26388) are based on regulations at § 409.17 and § 409.23, and interpretive guidance in the RAI Manual, all of which are applicable to SNFs. While the cited regulations in the proposed rule, specifically § 409.17(b) through (d), fall within Part 409, Subpart B (Inpatient Hospital Services and Inpatient Critical Access Hospital Services), these particular regulations also apply to SNFs with regard to their patients' plans of care and for guidance on specific documentation requirements. Specifically, § 409.23, which is located in Part 409, Subpart C (Posthospital SNF

Care), states that Medicare pays for SNF therapy services if they are furnished, among other things, in accordance with a plan of care that meets the requirements of § 409.17(b) through (d), thereby making § 409.17(b) through (d) applicable to SNFs. When we initially revised the SNF therapy regulations at § 409.23(c) to incorporate these plan of care requirements in the Medicare Physician Fee Schedule final rule for Calendar Year (CY) 2008 (72 FR 66331, November 27, 2007), we noted our belief that ''* * * therapy services should be provided according to the same standards and policies in all settings, to the extent possible and consistent with statute.'' Moreover, in the Medicare Physician Fee Schedule final rule for CY 2011 (75 FR 73583, November 29, 2010), we revised the hospital regulations at § 409.17(d) on therapy treatment plans—to which the corresponding SNF therapy regulations cross-refer—specifically to clarify that those particular hospital regulations also apply to SNFs. Thus, our clarifications do not exceed the current law and regulations applicable to SNFs.

Further, we do not agree with the commenter's implicit assumption that program guidelines are not relevant to this process. We note that such guidelines are based on the provisions of the regulations, and are made available to each provider to advise it of those provisions as well as of CMS's or the surveyor's expectations. While these guidelines are disseminated to providers, all providers are nevertheless expected to comply fully with the regulations on which the guidelines are based.

For the reasons discussed in section V.C of the FY 2012 proposed rule (76 FR 26386 through 26388), and for the reasons discussed in this final rule above, we are finalizing our proposed policies related to group therapy effective October 1, 2011. First, we are defining group therapy as therapy provided simultaneously to four patients (regardless of payer source) who are performing the same or similar activities and are supervised by a therapist (or assistant) who is not supervising any other individuals (76 FR 26386 through 26387). In addition, we are finalizing our proposed policies related to the reporting and allocation of group therapy minutes as discussed above and in the FY 2012 proposed rule (76 FR 26387). As is currently the procedure, the SNF will report the total unallocated group therapy minutes on the MDS 3.0. In terms of RUG–IV classification, this total time will be allocated (that is, divided) among the four group therapy participants to determine the appropriate number of RTM and, therefore, the appropriate RUG–IV therapy group and payment level, for each participant. In addition, as discussed above, if one or more of the four group therapy participants are unexpectedly absent from a session or cannot finish participating in the entire group session, rather than discontinuing payment or requiring the session to be rescheduled, we will continue to deem the therapy session as meeting the definition of group therapy as long as the therapy program originally had been planned for four patients. In this situation, we will continue to assume that there are four patients, and therefore will divide the therapy minutes by four in allocating group therapy minutes among the group therapy participants.

4. Proposed Changes to the MDS 3.0 Assessment Schedule and Other Medicare-Required Assessments

In the FY 2012 proposed rule (76 FR 26388 through 26393), we proposed to make certain modifications to the MDS assessment schedule and to the types of assessments to be completed. To receive proper payment for services provided during Part A Medicare SNF stays, SNFs must complete patient assessments in accordance with the assessment schedule established by CMS at § 413.343(b) and in the RAI Manual, version 3.0, Chapter 2. As we explained in the FY 2012 proposed rule (76 FR 26388 through 26389), we proposed to modify the current Medicare-required assessment schedule to incorporate new assessment windows and grace days to capture more appropriately the changes in patients' status and in services and treatments provided over the course of a stay, and to reduce the possibility that information from the same days of the patient's stay may be used on different scheduled MDS assessments. The current MDS assessment schedule and the proposed MDS assessment schedule may be found in Tables 10A and 10B in the proposed rule (76 FR 26389).

Additionally, regarding the completion of unscheduled PPS assessments, in the proposed rule (76 FR 26389 through 26390), we clarified the End of Therapy (EOT) OMRA policy (which first appeared in the FY 2010 final rule (74 FR 40347 through 40348)) by stating that the ARD for an EOT–OMRA must be set for 1 to 3 days after the discontinuation of all therapies, regardless of the reason for the discontinuation. Further, in determining the ARD for the EOT OMRA, we clarified that, as finalized in the FY 2010 final rule (74 FR 40348), currently days are counted differently for facilities that regularly provide therapy services 5 days per week as compared to facilities that regularly provide therapy services 7 days a week. Following the publication of the FY 2010 final rule, some SNFs expressed concern over the use of the phrase ''discontinuation of therapy services,'' as well as the distinction between 5- and 7-day-a-week facilities in determining the ARD for the EOT OMRA. In the FY 2012 proposed rule (76 FR 26389), we clarified that the term ''discontinuation of therapy services'' referred to both temporary, unplanned and planned discontinuations of therapy services. Accordingly, in the FY 2012 proposed rule (76 FR 26389 through 26390), we clarified that providers must complete an EOT OMRA for a patient classified in a RUG–IV therapy group if the patient goes 3 consecutive days without therapy, regardless of the reason for the discontinuation. Moreover, to mitigate confusion related to the distinction between 5-day and 7-day-a-week facilities, we proposed to eliminate the distinction altogether. We proposed that, effective October 1, 2011, an EOT OMRA would be required for a patient classified in a RUG–IV therapy group if that patient is not furnished any therapy services for 3 consecutive calendar days, regardless of whether the facility is a 5-day or 7-day facility. As we stated in the FY 2012 proposed rule (76 FR 26390), we believe that this policy appropriately reflects that the frail and vulnerable populations within SNFs require consistent therapy without significant breaks in services, and is consistent with § 409.34(b) (which states that a break of one or two days would not necessarily result in a provider having to complete an EOT OMRA).

In addition, in the proposed rule (76 FR 26390 through 26391), we addressed suggestions that the completion of an EOT OMRA and a subsequent Start-of-Therapy (SOT) OMRA may not be necessary for all patients, particularly in cases where therapy services resume at the same mode and intensity as the patient was receiving before the discontinuation of therapy. Therefore, for the reasons discussed in the proposed rule (76 FR 26390 through 26391), we proposed that, effective for services provided on or after October 1, 2011, when an EOT OMRA has been completed and therapy subsequently resumes, SNFs may complete an End-of-Therapy-Resumption (EOT–R) OMRA rather than an SOT OMRA, in cases where the resumption of therapy date is no more than 5 consecutive calendar days after the last day of therapy provided, and the therapy services have

resumed at the same RUG–IV classification level that had been in effect prior to the EOT OMRA. In the FY 2012 proposed rule, we stated that in the situation where therapy services have resumed within such a short period of time at the same RUG–IV classification level, we do not believe that a new therapy evaluation and SOT OMRA would be necessary to reclassify the patient back into a RUG–IV therapy group because, given that the therapy resumed at the same RUG–IV classification level, it is likely that the patient's clinical condition has not changed.

In addition, as discussed in the proposed rule (76 FR 26391), we have found some cases where therapy services recorded on a given PPS assessment did not provide an accurate account of the therapy provided to a given resident outside the observation window used for the most recent assessment. We believe that when service levels change, whether inside or outside the observation period, such changes should be based on medical evidence. However, we believe that the current range of PPS assessments may not permit SNFs adequate flexibility to report such changes in therapy services outside the observation window. As discussed in the FY 2012 proposed rule (76 FR 26392), we believe that such changes in resident status outside the observation window do not always generate an unscheduled assessment because the changes, while significant for payment, do not always rise to the level of a significant change in clinical status under § 483.20(b)(2)(ii). Accordingly, we proposed (76 FR 26392) that, effective for services provided on or after October 1, 2011, SNFs would be required to complete a Change of Therapy (COT) OMRA, for patients classified into a RUG–IV therapy group, whenever the intensity of therapy (that is, the total reimbursable therapy minutes, or RTM delivered) changes to such a degree that it would no longer reflect the RUG–IV classification and payment assigned for a given SNF resident based on that resident's most recent assessment used for Medicare payment. The COT OMRA would be a new type of required PPS assessment. The ARD of the COT OMRA would be set for Day 7 of a COT observation period, which is a successive 7-day window beginning on the day following the ARD set for the most recent scheduled or unscheduled PPS assessment (or beginning the day therapy resumes in cases where an EOT–R OMRA is completed), and ending every 7 calendar days thereafter. We proposed that SNFs would be required to complete a COT OMRA only if a patient's total RTM changes to such an extent that the patient's RUG classification, based on their last PPS assessment, is no longer an accurate representation of their current level of therapy.

We received a number of comments on these proposals and clarifications which, along with our responses, appear below.

Comment: Many commenters supported the changes to the MDS assessment schedule and agreed that the current assessment schedule does allow providers to use information from the same days of the patient's stay on different scheduled MDS assessments intended to capture changes in the patient's condition over time.

Others suggested that CMS conduct a detailed analysis to determine the efficacy of the proposed changes prior to implementation. These commenters opposed changes to the assessment schedule based on their belief that the changes would not reduce the frequency with which information from the same days of the patient's stay is used on different scheduled MDS assessments. Other commenters raised concerns that the proposed changes to the assessment schedule would limit flexibility in scheduling assessments and would be burdensome because the shorter window for providers to set the ARD for a scheduled PPS assessment would reduce the SNF staff's ability to stagger MDS due dates among residents.

One commenter stated that the proposed changes to the MDS schedule and assessments will take the clinical judgment away from licensed therapists. This commenter stated that the use of clinical judgment is crucial in ensuring that the patients receive needed services for which they qualify and that produce a positive clinical outcome. One commenter expressed concern that the proposed changes to the MDS assessments and schedules would impose an additional burden on software vendors, billing offices, and medical records personnel. Furthermore, the commenter stated that the proposed changes would affect MDS scheduling tools, calendars, billing effective dates, budget, and billing reports.

Response: We are pleased with the comments received in support of the proposed changes. Prior to proposing changes to the assessment schedule, we did conduct a detailed analysis on the likely effect of the updated policies. For this reason, we do not agree that the proposed changes to the MDS assessment schedule should be withdrawn until another study is completed. However, as with all new and revised policies, we will monitor the effects of the changes, and make any necessary modifications through future rulemaking. We recognize that, while the proposed changes eliminated most of the overlap in setting the observation periods for Medicare-required scheduled assessments, it is impossible to eliminate totally the potential for information from the same days of the patient's stay to be used on different scheduled MDS assessments, since changes in a beneficiary's condition can also require completion of several different types of unscheduled assessments (such as OMRAs, discharge assessments, significant change assessments, *etc.*) within short periods of time. However, as discussed in the proposed rule (76 FR 26388 through 26389), we believe by making the proposed changes to the assessment schedule (that is, by narrowing the assessment and grace day windows), we reduce the amount of information from the same days of the patient's stay that may be used on different scheduled MDS assessments while still allowing providers some flexibility in setting the ARD.

In terms of regular scheduled PPS assessments, the 5-day and 14-day scheduled Medicare assessments are used to determine payment for the first 30 days of a SNF stay. Under the current policy, it is possible that the clinical characteristics of a resident on days 5 through 8 of the resident's stay could be used on both the 5-day and 14-day assessments. In such a case, this effectively reduces the number of days that clinical information is collected and used to observe changes in the patient's condition over time. In cases where this overlap is used, payment is established for the first 30 days of the patient's stay based on only 10 days of service, with 4 days overlapping between observation windows, rather than the intended 14 days of service with little to no overlap between observation periods. We are confident that the proposed changes allow sufficient time to perform all required assessments, allow for flexibility in scheduling the assessments, and provide a more accurate method for determining payment across the entire 30-day period. As discussed above, we believe that these changes are necessary to reduce the possibility that information from the same days of the patient's stay may be used on different scheduled MDS assessments and to allow us to capture more appropriately the changes to patients' status and in

services and treatments provided over the course of a SNF stay and, as such, these changes will allow us to reimburse more accurately for SNF services.

Additionally, we do not agree that our proposed changes to the MDS schedule and assessments would take away clinical judgment from therapists. As discussed in the FY 2010 final rule, we are responsible for determining Medicare coverage and payment policy, that is, ''the scope of services that will be paid for by the Medicare program under the SNF PPS and the manner in which those services will be reported and paid'' (74 FR 40316). It is true that our proposed changes to the MDS assessments and schedules will affect the reporting and reimbursement of SNF services, including therapy services; however, we have not mandated the manner of providing these services. We agree that the licensed therapists are to use their clinical judgment to treat the patients in the most appropriate manner, and to maintain professional standards while providing all necessary services.

With regard to commenters' concern related to the burden arising from changes in the MDS assessment schedule and assessments, we would note that we gave draft specifications to vendors as soon as possible after we published the proposed rule. We acknowledge that the proposed changes to the MDS schedule and assessments may affect items listed by the commenter (scheduling tools, calendars, billing effective dates, budget, and billing reports), but believe that, for the reasons outlined here and in the proposed rule, such changes are nevertheless necessary to provide appropriate payment for services provided to residents, to enhance the reliability of the MDS, and to ensure the stability of the SNF PPS.

Comment: One commenter stated that in practice, by reducing the length of the assessment windows, we have minimized the usefulness of grace days to providers, and suggested that we officially eliminate the concept of grace days. Other commenters requested that we remove the grace days from the assessment schedule completely, and combine them with the ARD days. On the other hand, several commenters recommended expanding the assessment window to allow providers more flexibility in using grace days when determining the observation period. These commenters were concerned that, as CMS has stated that grace days should be used sparingly, any claim which makes use of an assessment where grace days are used might be considered as potentially inappropriate and subject to medical audit.

Response: Grace days are a longstanding part of the SNF PPS in order to allow clinical flexibility when setting the ARD dates of scheduled PPS assessments. We agree that in practice, there is no difference between regular ARD windows and grace days and we encourage the use of grace days if their use will allow a facility more clinical flexibility or will more accurately capture therapy and other treatments. Thus, we do not intend to penalize any facility that chooses to use the grace days for assessment scheduling or to audit facilities based solely on their regular use of grace days. We may explore the option of incorporating the grace days into the regular ARD window in the future; nevertheless, we will retain them as part of the assessment schedule at the present time consistent with the current policy and the new assessment schedule proposed in the proposed rule.

Comment: Many commenters supported the proposed change to consider all facilities 7-day facilities for purposes of setting the ARD for the EOT OMRA and the clarification that facilities are required to complete an EOT OMRA to classify residents into non-therapy RUG categories when therapy has been missed for 3 consecutive days. Others believed that an EOT OMRA should only be required if three scheduled days of therapy are missed, rather than unscheduled days, since it may be possible for a patient to receive the required amount of weekly therapy while still not being provided with any therapy for 3 consecutive days. Many commenters stated that it would not be unusual for patients to have 3-day lapses in therapy, especially if a weekend were involved. The commenters explained that it is common for patients in the SNF population to have brief episodes of illness or refusals, doctor appointments, or religious holidays that may cause a missed therapy day on a Friday or Monday, and that requiring an EOT OMRA following 3 consecutive calendar days of missed therapy is not logical, as it will entail a provider burden of additional paperwork.

Response: We are pleased that some commenters supported the proposal to eliminate the distinction between 5–day and 7-day facilities and to apply a uniform policy in setting the ARD for the EOT OMRA. However, we do not agree with comments that an EOT OMRA should only be required if 3 scheduled days of therapy are missed, rather than any three consecutive day periods. As stated in § 409.31(b)(1), to meet the skilled level of care requirement for coverage of post-hospital SNF care, ''the beneficiary must require skilled nursing or skilled rehabilitation services, or both, on a daily basis.'' Additionally, the criteria for ''daily basis'' under § 409.34(a)(2) state, '' As an exception, if skilled rehabilitation services are not available 7 days a week those services must be needed and provided at least 5 days a week.'' Therefore, according to these regulations, while a facility may determine that it does not have adequate resources to provide therapy 7 days a week, the facility is still required to ensure that therapy is provided for at least five days a week. In addition, the policy requiring an EOT OMRA to be completed when therapy has been discontinued for 3 consecutive calendar days is consistent with our discussion of § 409.34(b) in the FY 2010 final rule (74 FR 40348), in which we stated that a break of 1 or 2 days would not necessarily result in a provider having to complete an EOT OMRA. As we stated in the FY 2012 proposed rule (76 FR 26390), we believe that the policy of requiring all SNFs to set the ARD for the EOT OMRA by the third consecutive calendar day after the last day of therapy was provided appropriately reflects that the frail and vulnerable populations within SNFs require consistent therapy without significant breaks in service. Accordingly, we believe that regardless of whether the missed therapy day was scheduled, and no matter what the reason was for the missed therapy, if the resident missed 3 consecutive calendar days of therapy, we believe an EOT OMRA should be completed.

Commenters cited several specific examples of situations that would cause a resident to miss therapy. We realize that there may be a variety of reasons that therapy would be missed, whether the reason for the missed therapy was planned or unplanned. At the same time, it is the facility's responsibility to ensure that patients receive ongoing, rather than sporadic, care to promote each patient reaching his or her full potential. Thus, we emphasize that the EOT OMRA should be completed if therapy was missed for 3 consecutive calendar days for *any* reason, planned or unplanned. Additionally, the idea that a resident can receive the required amount of weekly therapy while still not being provided therapy for 3 consecutive days, as suggested by the commenter, assumes that there is a prescribed ''Medicare therapy week''. It should be noted, however, that there is no prescribed ''Medicare therapy week''

that spans across any specific days. Therapy utilization is measured across a rolling 7-day period as reported on the MDS assessments. Thus, for the reasons discussed above, the EOT OMRA should always be completed when a resident misses 3 consecutive calendar days of therapy.

Comment: One commenter recommended that CMS recalibrate the therapy thresholds, specifically in the Ultra High and Very High Rehabilitation RUG categories to distribute minutes more accurately and to establish more realistic sub-categories.

Response: We appreciate the commenter's recommendation. We intend to monitor these policies as well as provider behavior and we may consider such approaches in the future.

Comment: Several commenters requested additional guidance and clarification on the requirements for providing a SNF Advance Beneficiary Notice of Noncoverage (SNF ABN) or an expedited determination notice, also known as the Notice of Medicare Non-Coverage (NOMNC) when a beneficiary misses 3 consecutive days of skilled therapy and will enter into a noncovered stay because they will no longer be receiving skilled services. One commenter thought that CMS required a SNF ABN to be issued 48 hours prior to the delivery of noncovered care. The commenter was concerned that this 48-hour SNF ABN delivery ''requirement'' could not be met when a beneficiary receives no therapy on a weekend and refuses therapy on Monday.

Response: The SNF ABN is issued prior to delivering services for which Medicare might not pay because they are not medically reasonable and necessary and/or constitute custodial care, and the beneficiary is expected to receive these services and possibly incur financial liability. The policy for issuance of the SNF ABN has not changed in light of the policies being finalized in this rule. Please see the current manual instructions for the SNF ABN in the Medicare Claims Processing Manual, IOM 100–04, Chapter 30, Section 70, which can be accessed via this link: *http://www.cms.gov/Manuals/IOM/list.asp*.

There is no ''48-hour notice'' requirement associated with the SNF ABN. However, the SNF ABN should be given in a timely manner to provide the beneficiary or the representative sufficient time to make an informed decision about whether to receive care that may not be covered by Medicare, and/or make other arrangements for care. SNF providers should issue the SNF ABN as soon as it is clear that the beneficiary may enter into a non-covered stay.

We appreciate the commenters' concerns regarding understanding the requirements for the issuance of the SNF ABN in light of this rule; however, as noted previously, our policies related to issuance of the SNF ABN remain unchanged. Specifically, the timing of SNF ABN delivery remains unchanged, and as per current policy and as discussed above, it should be given prior to delivery of care for which Medicare might not pay, allowing the beneficiary or the representative a reasonable amount of time to make an informed decision about whether to receive the care and/or make other arrangements for care. Finally, we note that where the beneficiary misses 3 consecutive days of skilled therapy and will enter into a noncovered stay, either because therapy is not offered on those days or the beneficiary refuses or declines therapy, or any combination of the preceding, it is unlikely that a provider will need to issue the NOMNC. The NOMNC is a notice issued prior to the termination of Medicare-covered services, when the provider determines that such services are no longer covered based on Medicare coverage policies (see 42 CFR §§ 405.1200 and 405.1202). The NOMNC informs the beneficiary of the right to appeal the discontinuation of covered services. Our policies regarding issuance of an NOMNC have not changed in light of this rule. Consistent with current policy, if SNF covered services end solely because a beneficiary fails to meet the consecutive days of therapy requirement for the reasons set forth above, the NOMNC would not be issued. The NOMNC is a provider notice of termination of services and is not issued when a beneficiary initiates the end of care. The NOMNC is also not issued when care ends for provider business reasons, such as when a SNF does not offer therapy on certain days. We intend to publish guidance on NOMNC delivery in the Medicare Claims Processing Manual in the near future. We will also include further clarification on NOMNC delivery in other vehicles, such as CMS Open Door Forums, as deemed necessary.

Comment: Several commenters have stated that the requirement of the EOT OMRA after discontinuation of therapy for 3 consecutive days inhibits facilities from gradually reducing therapy services as residents approach the end of their SNF stay. The commenters explained that it is common to reduce the frequency and intensity of treatment prior to facility discharge to assure the resident will maintain their current level of function without the need for daily therapy.

Response: We do not agree that the requirements to complete an EOT OMRA following discontinuation of therapy for three consecutive calendar days discourages facilities from gradually reducing therapy services prior to discharge. The EOT OMRA would only need to be completed if 3 consecutive calendar days of all three therapy disciplines were missed. We believe that it is likely to be inconsistent with good clinical judgment for practitioners to purposely not provide any rehabilitation services in a 3-day period prior to an imminent discharge, especially given the frail and vulnerable nature of SNF populations.

Comment: Several commenters remarked that the requirement to complete an EOT OMRA after 3 consecutive days of missed therapy will negatively affect residents who are classified into Low Rehabilitation RUG groups. They stated that facilities might be required to complete an EOT OMRA on a weekly basis if these residents do not receive therapy on a Monday or Friday.

Response: Residents who fall into the Rehabilitation Low RUG groups continue to benefit from skilled therapy. Even though their conditions indicate that they only need to receive therapy for a minimum of 45 minutes per week over at least 3 days to be classified into these RUG groups, we believe that a significant break in therapy services may still be detrimental to their therapy goals and recovery. For example, if a facility treats one of these residents on a Monday, Tuesday, and Wednesday and they do not have another treatment session until the following Monday or Tuesday, this resident will go for 4 or 5 consecutive calendar days without therapy services. We believe that this significant break in therapy may cause this resident to regress from functional gains made during therapy thus far. For this reason, we require that an EOT OMRA also be completed for residents who are in the Rehabilitation Low RUG groups, when therapy services have been discontinued for 3 consecutive calendar days.

Comment: We have received numerous comments stating that providing 7-day-a-week therapy for rural facilities is very difficult. The commenters stated that it is quite possible that the EOT OMRA would be triggered frequently by 3 missed days of therapy over the weekend plus the adjoining days. The commenters suggested that the policy that requires an EOT OMRA in the event of 3 missed

days of therapy should be revised to at least 4 missed days.

Response: We recognize the concern of the rural facilities. However, our primary concern is that the SNF residents receive daily skilled rehabilitation as required under §§ 409.31 and 409.34. We expect that rural facilities and SNFs that cannot meet the ''daily basis'' requirement under § 409.34 will revisit their hiring and staffing practices as well as recruitment and retention options to assure they have the appropriate amount of staff to ensure that daily skilled care can be provided. Additionally, if facilities are having difficulty meeting the daily skilled needs of the residents in their care, they should also revisit their admissions policies and determine if they are accepting patients for whom they have the resources to provide the necessary daily skilled therapy services.

We do not agree with the suggestion to allow SNFs to discontinue therapy for 4 consecutive days prior to completing the EOT OMRA. As stated above, § 409.34 requires skilled nursing and/or rehabilitation services on a daily basis. We have made limited allowances for facilities that are unable to provide therapy services 7 days a week based on logistical constraints; however, we still expect SNFs to provide an adequate amount of skilled rehabilitation services to meet the patient's clinical needs. Allowing 4 missed days of therapy prior to completion of the EOT OMRA would undermine this concept. As we stated previously, the EOT OMRA policy we proposed and are finalizing in this final rule reflects that the frail and vulnerable populations in SNFs require consistent therapy without significant breaks in service.

Comment: One commenter asked if it is possible for computer software to calculate the appropriate RUG when therapy ends without another MDS being completed.

Response: The information needed to calculate a non-therapy RUG–IV group when therapy is discontinued is only reported on the MDS. The only option for automating the recalculation of the RUG–IV group would be to use a previously-submitted MDS. Since that assessment would reflect the beneficiary's condition in a prior period rather than the patient's condition when therapy ended, there would be no way to determine the most appropriate non-therapy RUG category for the patient from that assessment.

Comment: Many commenters stated that the proposed COT OMRA could accommodate for the missed 3-day treatment scenarios that necessitate EOT OMRA completion.

Response: We do not agree that the COT OMRA could address both changes in therapy provision and missed therapy days. The intent of the EOT OMRA is to pay SNFs the per diem medical RUG rate for the consecutive days that the resident did not receive therapy services. The COT OMRA addresses changes in minutes of therapy provided, not missed days.

Comment: Several commenters asked us to define the term ''treatment day'' for purposes of the EOT OMRA. These commenters asked us if a resident received less than 15 minutes of therapy a day, whether this time could still count toward the definition of a ''treatment day'' rather than as a missed therapy day.

Response: For purposes of determining when an EOT OMRA must be completed, a treatment day is defined exactly the same way as in the RAI Manual in Chapter 3, Section O, page O–16: 15 minutes of therapy a day. If a resident receives less than 15 minutes of therapy in a day, it is not coded on the MDS and it cannot be considered a day of therapy.

Comment: Several commenters expressed confusion about the process of re-starting therapy after an EOT OMRA was completed. Some were unsure about when to complete an SOT OMRA or an EOT–R OMRA. Others asked whether a new therapy evaluation is necessary in all cases of resumption. Additionally, although many commenters supported the proposal to implement the optional EOT–R OMRA, and approved of this option to lessen the burden of SNFs when the need to complete the EOT OMRA arose, many others expressed confusion and/or requested clarification as to whether the EOT–R OMRA is a new assessment type or a modification of an old assessment.

Response: As explained in the proposed rule (76 FR 26389 through 26390), the ARD for the EOT OMRA must be set 1 to 3 consecutive calendar days following the last day of therapy. Under current policy, if the patient was discharged from therapy with no expectation for it to continue or restart, then the EOT OMRA would classify the resident into a non-therapy RUG group which would be the basis of payment until the next PPS assessment. However, even if the resident was not discharged from therapy services and missed 3 or more consecutive days of therapy, an EOT OMRA still would have to be completed to classify the resident into a non-therapy RUG group for those days of missed therapy.

As explained in the FY 2012 proposed rule (76 FR 26390 through 26391), we recognize that the completion of an EOT OMRA and subsequent SOT OMRA may not be necessary for all patients. This may be the case where therapy was discontinued (for example, due to non-clinical reasons such as scheduling conflicts), and resumes shortly thereafter at the same RUG classification level. Therefore, we proposed the option to complete an EOT with Resumption or an EOT–R OMRA, rather than an SOT OMRA, in cases where the therapy resumption date is no more than 5 consecutive calendar days following the last day of therapy provided and the therapy services have resumed at the same RUG–IV classification level that had been in effect prior to the discontinuation of therapy services. As we stated in the FY 2012 proposed rule (76 FR 26390), in the situation where therapy services have resumed within such a short period of time at the same RUG–IV classification level, we do not believe that a new therapy evaluation and SOT OMRA would be necessary to reclassify the patient back into a RUG–IV therapy group because, given that the therapy resumed at the same RUG–IV classification level, it is likely that the patient's clinical condition has not changed. We appreciate the support for the proposal of the EOT–R OMRA.

We would like to clarify that the EOT–R OMRA is not a new assessment type. As explained in the FY 2012 proposed rule (76 FR 26390), it is an EOT OMRA with two additional items (O0450A and O0450B) to indicate whether therapy is expected to resume and the date of resumption of therapy. As stated above, an EOT–R OMRA may be used when therapy has been missed for at least 3 consecutive calendar days and is expected to resume (and actually does resume) within 5 calendar days following the last day of therapy. For example: Mr. A. received therapy every day Monday through Friday. He missed therapy on Saturday and Sunday because the SNF he was in did not provide therapy during the weekend. On Monday, Mr. A.'s family came to visit and he refused therapy. At this point, Mr. A. missed three days of therapy and an EOT OMRA would be required. He also missed therapy on Tuesday, due to a scheduled doctor's appointment. The interdisciplinary team made the determination that Mr. A.'s missed therapy did not result in a change in clinical condition that would make him tolerate less therapy and change his RUG–IV classification. Therefore, the facility completed an EOT OMRA on Monday indicating that

therapy had not occurred for at least three days. Then, on Wednesday, the EOT is modified into an EOT–R by reporting the actual date of resumption, which was Wednesday. In this case, a new therapy evaluation was not required and Mr. A resumed therapy on Wednesday at the same RUG–IV classification level.

If the reason for missed therapy was clinical in nature (meaning there was a possibility that the resident's clinical therapy status was affected by the missed therapy), it may not be appropriate for the facility to complete an EOT–R OMRA. In cases where the patient resumes therapy more than 5 consecutive calendar days after discontinuation of therapy services or where the patient resumes therapy at a different RUG classification level (even if it is no more than 5 consecutive calendar days after the date the last therapy service was furnished), an EOT–R OMRA cannot be used. In this case, the facility could either complete an optional SOT–OMRA and new therapy evaluation if therapy resumes, or wait until the completion of the next scheduled PPS assessment to classify the resident into a RUG–IV group. If the facility chooses not to complete an SOT OMRA and if the next scheduled PPS assessment is used to classify the patient into a therapy RUG group, a new therapy evaluation would also be required. Thus, in situations where an EOT OMRA was completed and therapy subsequently resumes, a new therapy evaluation is required when either an SOT OMRA or a scheduled PPS assessment is used to classify the resident into a RUG–IV therapy group. For example: Mr. B. received therapy every day Wednesday through Monday. On Tuesday, he felt ill and missed therapy that day and Wednesday. He then went to dialysis on Thursday and missed therapy that day as well. He missed a total of 3 days of therapy. Due to his illness and dialysis, he could not immediately resume therapy at the same level he was receiving prior to the three missed days. However, on Friday he felt well enough to start therapy again. The facility completed an EOT OMRA on Thursday to classify Mr. B. into a non-rehabilitation RUG group and to get paid the non-rehabilitation RUG rate for Tuesday, Wednesday, and Thursday. As Mr. B. could not resume therapy at the same RUG–IV classification level, a new therapy evaluation was completed by each discipline (physical therapy, occupational therapy, and/or speech therapy) treating Mr. B. and then an SOT OMRA was completed, and he was placed back into a rehabilitation RUG group. The facility was paid at the rehabilitation RUG rate from the day therapy restarted until the next PPS assessment was completed.

Comment: One commenter highlighted a potential error in an example we provided on page 26392 of the proposed rule, where we stated that ''* * * paid for Days 36 through 39 at the corresponding non-therapy rate, based on the patient's clinical condition reported on the 30-day assessment (because therapy services were discontinued on Day 36 and an EOT OMRA was completed) * * *'' (76 FR 26392). According to this commenter, the phrase ''30-day assessment'' should be replaced by ''EOT OMRA'' because the non-therapy RUG on the EOT OMRA is used to establish the payment for services during the period where no therapy services are provided.

Response: After careful review of the example in the proposed rule cited by the commenter, we agree with the commenter that we misstated the relevant assessment that would determine payment for Days 36 through 39 in the example provided. The text quoted above on page 26392 of the proposed rule should read ''* * * paid for Days 36 through 39 at the corresponding non-therapy rate, based on the patient's clinical condition reported on the EOT OMRA (because therapy services were discontinued on Day 36 and an EOT OMRA was completed) * * *'', as this accurately reflects how the payment for this resident would be calculated. We have reviewed the remainder of the example and found no additional errors.

Comment: Several commenters questioned whether therapy service changes outside of the MDS observation window are a significant issue. One commenter requested evidence that there is a widespread instance of misreporting therapy services. One commenter suggested that if this were such a major threat to the Medicare program, they would assume CMS would have involved the Recovery Audit Contractors (RACs), the Medicare Administrative Contractors (MACs), and CMS surveyors in the medical review process to address this issue.

Response: As we stated in the FY 2012 proposed rule (76 FR 26391), we have found some cases where therapy services recorded on a given PPS assessment did not provide an accurate account of the therapy provided to a given SNF resident outside the observation window for the most recent assessment. While in some of these cases, a patient's clinical status may have changed outside of the observation window requiring an adjustment to the intensity of therapy during that time, we have also been presented with a multitude of anecdotal evidence claiming the misreporting of therapy services. In addition, the Office of the Inspector General (OIG) of the Department of Health and Human Services conducted an independent study into questionable billing practices in SNFs. Report No: OEI–02–09–00204 (available online at *http://oig.hhs.gov/oei/reports/oei-02-09-00204.asp*) demonstrates that the OIG concurs with our statements in the FY 2012 proposed rule and supports the changes we have proposed to curb these practices. As cited in the OIG Report (page 11), ''Lastly, the data highlight the need for further changes to make RUGs and Medicare payments more consistent with beneficiaries' care and resource needs. These changes could include requiring SNFs to recalculate a beneficiary's RUG whenever his or her level of therapy changes substantially, as well as reducing the overlap that occurs in assessment periods.'' We agree with the commenter that we should utilize all of our available tools to identify and correct abusive practices. These issues have been referred to the appropriate entities for more intensive monitoring.

Comment: We received several comments supporting the addition of the COT OMRA. These commenters agreed that the COT OMRA would improve the accuracy of reimbursement for therapy services and quality of care to SNF patients. The commenters also believed that the implementation of the COT OMRA would help ensure that Medicare payments more accurately reflect the differences in resources utilized for patient care. However, many commenters stated that the COT OMRA would create an undue burden for facilities. Several commenters stated that the COT OMRA would increase supply costs associated with completing the actual form and that the additional paperwork required would affect the ''green'' efforts of many facilities. Some commenters stated that the additional assessments would reduce actual patient care due to the amount of time spent regulating and monitoring these assessments during the SNF stay. Some commenters expressed concern that the COT OMRA would require facilities to add new evaluation processes to monitor RTM. One commenter stated that the COT OMRA would increase confusion about the MDS process. One comment expressed concern that when the COT OMRA causes a resident to classify into a lower RUG category, this would cause facility workloads to

increase without an increase in personnel reimbursement.

Response: We would like to stress that SNFs would be required to complete a COT OMRA only if the intensity of therapy changes to such an extent that the patient's RUG classification, based on their last PPS assessment, is no longer an accurate representation of the patient's current clinical condition. Regarding the need for a new evaluation process to monitor and count RTM, we believe that facilities currently have processes in place that monitor the total amount of therapy minutes provided over any given period of time. Therefore, we do not agree that the process of evaluating RTM will add a significant time burden to facilities or reduce actual patient care. We would like to stress that if facilities tailor treatment time to the needs of each individual patient and continue to provide that therapy outside of the assessment window, facilities will be less likely to be required to complete as many COT OMRAs.

We cannot assess the accuracy of the statement that the COT OMRA will increase supply costs for form completion and affect the green efforts of facilities, as it depends on the facility management and environmental efforts of each specific facility. Nevertheless, we believe the COT OMRA is an appropriate measure to enhance the accuracy of payments and patient care. As we stated in the proposed rule (76 FR 26392), we believe the COT OMRA will allow us to track changes in the patient's condition and in the provision of therapy services more accurately, allowing reimbursement to reflect resource use more accurately, thereby improving the accuracy of reimbursement. Also, we believe that the ability to track changes in the patient's condition and in the provision of service more accurately will enhance a SNF's ability to provide quality care to residents.

We do not believe that the COT OMRA will increase confusion about the MDS process. As we have done in the past, we will update the RAI Manual to incorporate the changes and instructions for assessments and we will provide training opportunities prior to the October 1, 2011 implementation. Finally, we do not agree with the commenter who stated that when a COT OMRA causes a resident to classify into a lower RUG category, this will cause facility workload to increase without an increase in personnel reimbursement. We note that RUG–IV classification is based on resource utilization and cost. If a patient is classified into a lower therapy RUG category based on a change to the therapy delivered during the COT observation period, then the SNF would appropriately be paid the lower rate associated with that RUG category. The SNF PPS rates are designed to cover the costs of providing care, including related administrative costs.

Comment: Several commenters have asked whether the COT OMRA should be completed in cases of an increase in RTM to classify a resident into a higher RUG category in addition to cases where the resident would be classified into a lower RUG category based on the provision of RTM in the COT look-back period. One commenter asked if a COT OMRA would be required if there were a scheduled decrease in therapy provision (such as one that was caused by the discontinuation of one therapy discipline) or if the COT OMRA would be required for any reason that would cause a decrease in therapy. Additionally, commenters have questioned whether a resident's ADL score should be taken into account when determining whether a COT OMRA is required. One commenter asked whether COT OMRA requirements, including the COT observation period requirement, would apply if a resident was receiving therapy but was classified into a nursing RUG because of index maximization.

Response: As we stated in the FY 2012 proposed rule (76 FR 26392), a COT OMRA would be completed for a patient in a therapy RUG, if a patient's RTM has changed during the COT observation period to such a degree that the patient's current RUG classification, based on their last PPS assessment, is no longer an accurate representation of the patient's clinical condition (and the patient should be placed in a different RUG category). This applies whether the change in RTM is a scheduled change or an unscheduled or unplanned change, and whether the different RUG category is higher or lower than the RUG category in which the resident is currently placed. In addition, in response to the comment regarding whether other therapy changes such as the discontinuation of a particular therapy discipline would be sufficient to require a COT OMRA, upon further consideration, we believe that a COT OMRA should be required in any case where there is a change in the provision of therapy such that the patient's current RUG classification based on their last PPS assessment, is no longer an accurate representation of the patient's clinical condition and the patient should be placed in a different RUG–IV category. As we stated in the proposed rule (76 FR 26392) and in this final rule above, the purpose of the COT OMRA is to track changes in a patient's condition and in the provision of therapy services more accurately to ensure that the patient is placed in the appropriate RUG category, thereby improving the accuracy of reimbursement. Based on comments received in response to the proposed rule, we will require that the COT OMRA be completed where the provision of therapy services has changed in any manner as observed during the COT observation period such that the patient should be placed in a different RUG category (not just in cases where the RTM has changed). Therefore, if a therapy discipline is discontinued and this results in a patient no longer meeting the required number of therapy disciplines for the patient's current RUG category then a COT OMRA would be required. In addition, if a patient fails to receive the requisite number of days of therapy required for classification into the RUG category, then a COT OMRA would be required to change the patients' RUG category as appropriate. As discussed previously, the purpose of the COT OMRA is to ensure that the patient is placed in the appropriate therapy RUG category based on therapy services needed and received and to ensure more accurate payment. For example, a facility is evaluating whether a COT OMRA is required for a resident who was placed in a Very-High Rehabilitation RUG group after the last PPS assessment. Upon informal evaluation at the end of the COT observation period, the facility determines that the resident has had 720 minutes of therapy during the COT look-back period and meets all of the other criteria for classification in an Ultra-High Rehabilitation RUG group. A COT OMRA would be completed to place that resident into an Ultra High Rehabilitation RUG group. In response to the commenter's question regarding whether a resident's ADL score should be taken into account when determining whether a COT OMRA is required, ADL scores are not considered when deciding whether a COT OMRA needs to be completed as they are a refined grouping within the RUG category. However, when the COT OMRA is completed, the ADL score will be used in determining the appropriate RUG group in the grouper.

Additionally, one commenter asked whether a SNF would be required to comply with the COT OMRA requirements, including the COT observation period requirement, in cases where a resident is receiving therapy but is classified into a nursing RUG because of index maximization. Upon

consideration of this comment, we believe that the COT OMRA requirements, including the COT observation period requirement, should also apply in cases where a resident is receiving therapy but is classified into a nursing RUG because of index maximization. While this type of index maximization will affect only a small subset of beneficiaries receiving therapy, because such patients are receiving therapy services sufficient for classification into a therapy RUG and would be classified into a therapy RUG if index maximization had not been applied, we believe that it is appropriate to apply the COT OMRA policy as finalized in this rule to these patients as well, so that any changes in the intensity of therapy services delivered to the patient may be captured. For example, the evaluation performed at the end of the COT observation period for such a patient may indicate an increase in RTM delivered, which may necessitate placing the patient into a rehabilitation RUG category. Therefore, the COT OMRA policy, as finalized in this rule, will also apply to patients who are receiving a level of therapy sufficient for classification into a therapy RUG category, but are classified into a nursing RUG because of index maximization.

Comment: Many comments requested clarification about the COT OMRA. Specifically, several commenters asked whether the COT OMRA could replace or be combined with other scheduled PPS assessments. Also, one commenter asked us to clarify whether, if the ARD for the COT OMRA were not set for Day 7, a missed or late assessment penalty would be applied.

Response: As specified in Chapter 6, Section 30.3 of the Medicare Claims Processing Manual (CMS Pub. 100–04, which is available online at *http://www.cms.gov/manuals/downloads/clm104c06.pdf*), special billing requirements apply when there are multiple assessments within one Medicare-required assessment window. Consistent with our current policy, if an unscheduled PPS assessment (OMRA, Significant Change in Status Assessment (SCSA), or Significant Correction of a Prior Assessment (SCPA)) is required while in the assessment window of a scheduled PPS assessment that has not yet been completed, then facilities must combine the scheduled and unscheduled assessments by setting the ARD of the scheduled assessment for the same day that the unscheduled assessment is required. In such cases, facilities should provide the proper response to A0310 items to indicate which assessments are being combined, as completion of the combined assessment will be taken to fulfill the requirements for both the scheduled and unscheduled assessments. The purpose of this policy is to minimize the number of assessments required for SNF PPS payment purposes and to ensure that the assessments used for payment provide the most accurate picture of the patient's clinical condition and service needs. In practice, in cases where the COT OMRA is combined with a regularly scheduled assessment, the facility would complete the scheduled assessment, rather than the COT OMRA, since the COT OMRA only includes a subset of the required MDS data. This single full MDS assessment is then used to determine payment for both the COT OMRA observation period and the regular payment window for the scheduled assessment. Thus, for example, in cases where Day 7 of the COT observation period falls within the ARD window of the 30-day PPS assessment, a provider would set the ARD for the 30-day assessment on day 7 of the COT OMRA observation period, and code the reasons for assessment as both the 30-day and the COT OMRA assessment (MDS items A0310(B) and A0310(C)). Consistent with the COT OMRA policy we proposed in the FY 2012 proposed rule (76 FR 26392), the HIPPS code derived from the combined COT OMRA and scheduled PPS assessment would be effective starting the first day of the COT observation period (for example, for the first COT observation period after the previous assessment used for Medicare payment, the first day of the COT observation period is the day after the ARD of the previous assessment used for Medicare payment) and would remain in effect until the end of the payment window for the 30-day assessment (that is, day 60) or until a new unscheduled assessment (an OMRA, SCSA, or SCPA) is completed.

The ARD for the COT OMRA is Day 7 following the last scheduled or unscheduled PPS assessment or Day 7 following the end of the last COT observation period (in cases where therapy had not changed sufficiently to require a COT OMRA assessment to be performed for the previous COT observation period). If a COT OMRA is required but is completed late, the facility is still required to submit the late COT OMRA to CMS. The facility will be paid at the default rate for any days not in compliance with the ARD requirement. The ARD of the late COT OMRA restarts the 7-day review period for the next COT OMRA. Since SNFs are only permitted to bill after the appropriate assessment has been accepted into the CMS data base, failure to submit a required assessment while continuing to bill for services that would be covered by the assessment, would subject the claim to denial.

Comment: Many commenters offered suggestions and alternatives to the COT OMRA. Several commenters offered the general suggestion that CMS should seek alternate, less burdensome options to address the issue of therapy service level changes outside of the MDS observation windows. More specifically, commenters recommended that if we move forward with this proposal, we should allow flexibility in the choice of the ARD of the COT OMRA. One commenter suggested that we do this by allowing for grace days either at the beginning or end of the 7-day window for the COT observation period. Similarly, one commenter suggested that we incorporate the concept of ''grace minutes'' to offer facilities the flexibility to allow for an unexpected decrease in therapy minutes outside of the assessment window. Additionally, we received suggestions that the COT OMRA should be required only after the first 30 days of a patient's SNF stay.

Response: We appreciate the suggestions and alternatives offered. However, we believe that allowing flexibility in the choice of ARD by adding grace days and by allowing grace minutes, as suggested by the commenter, would defeat the purpose and intent of the COT OMRA, which is to determine whether the therapy provided during a successive 7-day window of therapy following the ARD of a scheduled or unscheduled PPS assessment (the COT observation period) corresponds to the resident's RUG–IV classification as reflected on the most recent PPS assessment. Adding grace days would allow facilities to provide a count of therapy minutes that may not be an accurate reflection of the actual therapy minutes provided during the successive 7-day period discussed above, contrary to the intent of the COT OMRA. Furthermore, we believe that allowing grace minutes would allow the facility to provide less therapy than anticipated with the expectation that CMS will reimburse the facility at a higher rate than appropriate. Additionally, the concept of ''grace minutes'' would indicate that providers are targeting a minimum threshold of minutes to qualify for a specific RUG category. We stress that there are not ''minimum minutes'' that should be met when determining how much therapy a resident will receive. We expect that facilities are determining the therapy minutes provided based on the needs of

each individual resident. Furthermore, we do not agree that we should require the COT OMRA only after the first 30 days of the SNF stay; instead, accurate payment should occur throughout the SNF stay. The majority of Medicare A Part stays are an average of 30 days in length, and thus, a COT OMRA that was only completed after day 30 would not adequately monitor for changes in therapy services during the Medicare Part A stay, which is the purpose of the COT OMRA.

Comment: Several commenters stated that the implementation of the COT OMRA implies that SNF payment is no longer prospective in nature. One commenter suggested that the retrospective nature of the COT OMRA undermines the principles of risk sharing inherent in a prospective payment system. One commenter suggested that rather than changing the nature of the PPS, we should modify the case-mix indexes (CMIs) and payment rates associated with the Rehabilitation RUG categories.

Response: As noted previously, we believe that the SNF PPS payments should reflect, as accurately as possible, resource utilization and cost. Classification of patients into therapy RUGs and payment for therapy services have always been based on the therapy services provided and reported on the MDS, and we do not view the COT OMRA as changing this. In implementing the COT OMRA, we are attempting to ensure that the therapy reported on the MDS and the therapy regimen chosen for the patient are a better reflection of the therapy needs of the patient, thereby ensuring more accurate payment. We appreciate the suggestion regarding modifying the CMIs and payment rates associated with the Rehabilitation RUG categories, and may consider this in the future to the extent appropriate. As stated in the proposed rule, CMS is considering a number of possible future initiatives that may help to ensure the long-term stability of the SNF PPS and further improve the accuracy of the rate-setting process. A discussion of these possible future initiatives is included in section III.E.5 below.

Comment: Several commenters raised concerns regarding the inability of the COT OMRA to account for the natural progression in a patient's therapy regimen. One commenter stated that as patients approach the end of their skilled therapy program, it is common practice to taper therapy down to prepare for discharge. Another commenter alleged that the requirement for the ARD of the COT OMRA to be set on Day 7 is arbitrary and that during any given payment period, clinical changes occur daily, especially at the beginning and end of the SNF stay. Other commenters were concerned that adhering to a strict 7-day evaluation schedule could prompt a patient's RUG category to change for as little as one lost minute of therapy.

Response: We believe that the COT OMRA, while based on changes in a therapy regimen, is primarily intended to capture the patient's appropriate RUG classification and, therefore, the payment level. Therapists should exercise their professional discretion with regard to the appropriate amount and modality of the therapy provided to a resident during a given SNF stay. We acknowledge the natural progression of a patient's therapy needs throughout a stay, and do not believe that the COT OMRA precludes therapists from having the freedom to tailor their provision of therapy services to the individual patient.

We do not agree that setting the ARD of the COT OMRA on Day 7 following the last PPS assessment or Day 7 of any succeeding COT observation period is arbitrary. The resident is placed in a Rehabilitation or Rehabilitation Plus Extensive Services RUG category partially based the amount of therapy that was received during a 7-day look-back period. One of the basic principles underlying the SNF PPS is that an assessment completed in one time period can be used in accurately calculating reimbursement for a future period. While we realize that there will be changes based on individual needs, it is expected that, on average, residents will receive approximately the same amount of therapy within the next 7-day period after a PPS assessment. The COT OMRA is an instrument that will better align payment with the amount of therapy that a resident actually needs and receives. Our analysis of therapy utilization across Medicare Part A stays indicates that patients tend to remain in the same therapy groups for the first 30 days of care; that is, as reported on the 5-day and 14-day assessments. Since the average length of stay is approximately 30 days, facilities that maintain a stable therapy schedule should not see a large volume of COT OMRAs. While it is more common to see changes in therapy and RUG–IV groups during longer stays, the volume of patients receiving Medicare Part A SNF care for stays exceeding 30 days is much lower.

In response to the comment that a strict 7-day evaluation schedule could prompt a patient's RUG category to change for as little as one lost minute of therapy, this is theoretically possible if the plan of care is designed to provide only the minimum number of minutes that qualify the patient for a specific therapy category. As noted above, the purpose of the COT OMRA is to determine whether the therapy provided during the 7 days of therapy following the ARD of a scheduled or unscheduled PPS assessment (and any succeeding COT observation period) correspond to the resident's RUG–IV classification, as reflected on the most recent PPS assessment. Slight variations during the 7-day period are expected, and it is up to the therapist to ensure that the patient receives the amount of therapy appropriate to his/her condition.

Accordingly, for the reasons discussed in this final rule and in the FY 2012 proposed rule (76 FR 26388 through 26393), we are finalizing our proposed policies related to the MDS Assessment Schedule, the EOT–OMRA, the EOT–R OMRA, and the COT OMRA. Specifically, effective October 1, 2011, as discussed in the proposed rule and in the final rule above, we are revising the Medicare-required assessment schedule in the manner set forth in Table 10B of the proposed rule (76 FR 26389); removing the distinction between 5-day and 7-day facilities for purposes of setting the ARD for the EOT OMRA, and requiring all facilities to set the ARD for the EOT ORMA by the third consecutive calendar day after a patient's therapy services have been discontinued (76 FR 26390); and permitting providers the option to complete an EOT–R OMRA rather than the optional SOT OMRA, in cases where the therapy resumption date is no more than 5 consecutive calendar days following the last day of therapy provided, and therapy services have resumed at the same RUG–IV classification level that had been in effect prior to the EOT OMRA (76 FR 26390 through 26391). In addition, effective October 1, 2011, we are requiring facilities to complete a COT OMRA for patients classified into a RUG–IV therapy category, whenever the intensity of therapy (that is, the total RTM delivered or other therapy category qualifiers, such as the number of days the patient received therapy during the week or the number of therapy disciplines) changes to such a degree that it would no longer reflect the RUG–IV classification and payment assigned for a given SNF resident based on the most recent assessment used for Medicare payment (as proposed, the need for a COT OMRA will be based on therapy services delivered during the COT observation period) (76 FR 26391 through 26393). In addition, as proposed, the new RUG–IV group resulting from the COT OMRA would be

billed starting the first day of the COT observation period for which the COT OMRA was completed, and would remain at this level until a new assessment is completed which changes the patient's RUG–IV classification. Finally, as discussed above, the COT OMRA policy, as finalized in this rule, will also apply to patients who are receiving a level of therapy sufficient for classification into a therapy RUG, but are classified into a nursing RUG because of index maximization.

5. Discussion of Possible Future Initiatives

In the FY 2012 proposed rule (76 FR 26393), we discussed some possible future initiatives that may help to ensure the long-term stability of the SNF PPS and further improve the accuracy of the rate-setting process. Specifically, we discussed three possible future initiatives. First, we discussed the possibility of evolving the manner in which we pay for therapy services toward a model that has previously been advocated by MedPAC, which would base payments for therapy services on the patient's characteristics. Similarly, we discussed the possibility of making partial prospective payments for therapy services, based on patient characteristics, and then reconciling payments after the services have been verified. Lastly, we discussed the possibility of annual recalibrations of the CMIs to account for fluctuations in provider practices, and MedPAC's analysis regarding the possibility of rebasing the system. As we stated in the FY 2012 proposed rule, we were not proposing any new Medicare policy in this discussion, as we recognized that depending on how such modifications are ultimately formulated, their implementation may require new statutory authority.

The comments we received related to this discussion, along with our responses, appear below.

Comment: We received a few general comments related to this discussion, the majority of which stated their support for working with CMS in the future on any future initiatives. We did not receive any comments about any specific initiatives discussed.

Response: We appreciate the support we received from commenters for considering these future initiatives and will continue to work with stakeholders on developing policies and programs that we consider necessary and appropriate to improve the SNF PPS.

F. The Skilled Nursing Facility Market Basket Index

Section 1888(e)(5)(A) of the Act requires us to establish a SNF market basket index (input price index), that reflects changes over time in the prices of an appropriate mix of goods and services included in the SNF PPS. In the FY 2012 proposed rule, we stated that the proposed rule incorporates the latest available projections of the SNF market basket. In this final rule, we are updating projections based on the latest available projections of the SNF market basket index at the time of publication. Accordingly, we have developed a SNF market basket index that encompasses the most commonly used cost categories for SNF routine services, ancillary services, and capital-related expenses.

Each year, we calculate a revised labor-related share based on the relative importance of labor-related cost categories in the input price index. Table 9 summarizes the updated labor-related share for FY 2012.

TABLE 9—LABOR-RELATED RELATIVE IMPORTANCE, FY 2011 AND FY 2012

	Relative importance, labor-related, FY 2011 10:2 forecast *	Relative importance, labor-related, FY 2012 11:2 forecast **
Wages and salaries	50.654	50.129
Employee benefits	11.511	11.502
Nonmedical professional fees	1.32	1.31
Labor-intensive services	3.427	3.394
Capital-related (.391)	2.399	2.358
Total	69.311	68.693

* Published in **Federal Register**; based on second quarter 2010 IHS Global Insight Inc. forecast.
** Based on the second quarter 2011 IHS Global Insight forecast, with historical data through the first quarter 2011.

1. Use of the Skilled Nursing Facility Market Basket Percentage

Section 1888(e)(5)(B) of the Act defines the SNF market basket percentage as the percentage change in the SNF market basket index from the average of the previous FY to the average of the current FY. For the Federal rates established in this final rule, we use the percentage increase in the SNF market basket index to compute the update factor for FY 2012. This is based on the IGI (formerly DRI–WEFA) second quarter 2011 forecast (with historical data through the first quarter 2011) of the FY 2012 percentage increase in the FY 2004-based SNF market basket index for routine, ancillary, and capital-related expenses, which is used to compute the update factor in this final rule. As discussed in section III.F.3 of this final rule, this market basket percentage change is reduced by the MFP adjustment as required by section 1888(e)(5)(B)(ii) of the Act. Finally, as discussed in section I.A of this final rule, we no longer compute update factors to adjust a facility-specific portion of the SNF PPS rates, because the initial three-phase transition period from facility-specific to full Federal rates that started with cost reporting periods beginning in July 1998 has expired.

2. Market Basket Forecast Error Adjustment

As discussed in the June 10, 2003, supplemental proposed rule (68 FR 34768) and finalized in the August 4, 2003, final rule (68 FR 46057 through 46059), the regulations at § 413.337(d)(2) provide for an adjustment to account for market basket forecast error. The initial adjustment applied to the update of the FY 2003 rate for FY 2004, and took into account the cumulative forecast error for the period from FY 2000 through FY 2002, resulting in an increase of 3.26 percent. Subsequent adjustments in succeeding FYs take into account the forecast error from the most recently available FY for which there is final data, and apply whenever the difference between the forecasted and actual change in the market basket exceeds a specified threshold. We originally used a 0.25 percentage point threshold for this purpose; however, for the reasons

specified in the FY 2008 SNF PPS final rule (72 FR 43425, August 3, 2007), we adopted a 0.5 percentage point threshold effective with FY 2008. As discussed previously in section I.G.2 of this final rule, as the difference between the estimated and actual amounts of increase in the market basket index for FY 2010 (the most recently available FY for which there is final data) does not exceed the 0.5 percentage point threshold, the payment rates for FY 2012 do not include a forecast error adjustment.

Comment: Several commenters suggested that CMS apply a cumulative forecast error adjustment to account for all of the variations in the market basket forecasts since FY 2004. These commenters stated that while the industry has accepted the adjustment process, the lack of any cumulative adjustment in recent years violates the precedent set by CMS in 2003 when the last cumulative adjustment was made and that the cumulative adjustment in 2003 demonstrated recognition by CMS of the cumulatively erosive effect of multi-year forecasting errors. The commenters recommended that CMS adopt a policy which recognizes the cumulative effect of multi-year market basket forecast errors and that adjustment be made to account for the cumulative errors, estimated at 0.7 percent, thus far.

Response: For FY 2004, we applied a one-time, cumulative forecast error correction of 3.26 percent (68 FR 46036, 46058). Since that time, the forecast errors have been relatively small and clustered near zero. As we stated in the FY 2004 final rule, we believe the forecast error correction should be applied only when the degree of forecast error in any given year is such that the SNF base payment rate does not adequately reflect the historical price changes faced by SNFs. Accordingly, we continue to believe that the forecast error adjustment mechanism should appropriately be reserved for the type of major, unexpected change that initially gave rise to this policy, rather than the minor variances that are a routine and inherent aspect of this type of statistical measurement. Further, we note that all of the Medicare prospective systems use an annual market basket adjustment factor to update rates to reflect inflation in the prices of goods and services used by providers.

3. Multifactor Productivity Adjustment

Section 3401(b) of the Affordable Care Act requires that, in FY 2012 (and in subsequent FYs), the market basket percentage under the SNF payment system as described in section 1888(e)(5)(B)(i) is to be reduced annually by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act. As explained in the Senate Finance Committee report that accompanied S. 1796 (''America's Healthy Future Act of 2009,'' the Senate's initial version of the health care reform legislation), the purpose of this type of productivity adjustment is to help ensure that the market basket update, in accounting for changes in the costs of goods and services used to provide patient care, also reflects ''* * * increases in provider productivity that could reduce the actual cost of providing services (such as through new technology, fewer inputs, *etc.*)'' (S. Rep. No. 111–89 at 261). Specifically, section 3401(a) of the Affordable Care Act amends section 1886(b)(3)(B) of the Act to add clause (xi)(II), which sets forth the definition of this productivity adjustment. The statute defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multi-factor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period) (the ''MFP adjustment''). The Bureau of Labor Statistics (BLS) is the agency that publishes the official measure of private nonfarm business MFP. Please see *http://www.bls.gov/mfp* to obtain the BLS historical published MFP data. The projection of MFP is currently produced by IGI, an economic forecasting firm. To generate a forecast of MFP, IGI replicated the MFP measure calculated by the BLS, using a series of proxy variables derived from IGI's U.S. macroeconomic models. These models take into account a very broad range of factors that influence the total U.S. economy. IGI forecasts the underlying proxy components, such as Gross Domestic Product (GDP), capital, and labor inputs required to estimate MFP, and then combines those projections according to the BLS methodology. In Table 10, we identify each of the major MFP component series employed by the BLS to measure MFP. We also provide the corresponding concepts forecasted by IGI and determined to be the best available proxies for the BLS series.

TABLE 10—MULTIFACTOR PRODUCTIVITY COMPONENT SERIES EMPLOYED BY THE BUREAU OF LABOR STATISTICS AND IHS GLOBAL INSIGHT

BLS series	IGI series
Real value-added output, constant 2005 dollars	Non-housing non-government non-farm real GDP, Billions of chained 2005 dollars—annual rate.
Private non-farm business sector labor input; 2005 = 100.00	Hours of all persons in private nonfarm establishments, 2005 = 100.00, adjusted for labor composition effects.
Aggregate capital inputs; 2005 = 100.00	Real effective capital stock used for full employment GDP, Billions of chained 2005 dollars.

IGI found that the historical growth rates of the BLS components used to calculate MFP and the IGI components identified are consistent across all series and, therefore, suitable proxies for calculating MFP. We have included below a more detailed description of the methodology used by IGI to construct a forecast of MFP, which is aligned closely with the methodology employed by the BLS. For more information regarding the BLS method for estimating productivity, please see the following link: *http://www.bls.gov/mfp/mprtech.pdf.*

At the time of this final rule, the BLS has published a historical time series of private nonfarm business MFP for 1987 through 2010, with 2010 being a preliminary value. Using this historical MFP series and the IGI forecasted series, IGI developed a forecast of MFP for 2011 through 2021, as described below.

To create a forecast of BLS' MFP index, the forecasted annual growth rates of the ''non-housing, nongovernment, non-farm, real GDP,'' ''hours of all persons in private nonfarm establishments adjusted for labor composition,'' and ''real effective capital stock'' series (ranging from 2011 to 2021) are used to ''grow'' the levels of the ''real value-added output,'' ''private non-farm business sector labor input,''

and ''aggregate capital input'' series published by the BLS. Projections of the ''hours of all persons'' measure are calculated using the difference between the projected growth rates of real output per hour and real GDP. This difference is then adjusted to account for changes in labor composition in the forecast interval. Using these three key concepts, MFP is derived by subtracting the contribution of labor and capital inputs from output growth. However, to estimate MFP, we need to understand the relative contributions of labor and capital to total output growth. Therefore, two additional measures are needed to operationalize the estimation of the IGI MFP projection: Labor compensation and capital income. The sum of labor compensation and capital income represents total income. The BLS calculates labor compensation and capital income (in current dollar terms) to derive the nominal values of labor and capital inputs. IGI uses the ''nongovernment total compensation'' and ''flow of capital services from the total private non-residential capital stock'' series as proxies for the BLS's income measures. These two proxy measures for income are divided by total income to obtain the shares of labor compensation and capital income to total income. To estimate labor's contribution and capital's contribution to the growth in total output, the growth rates of the proxy variables for labor and capital inputs are multiplied by their respective shares of total income. These contributions of labor and capital to output growth are subtracted from total output growth to calculate the ''change in the growth rates of multifactor productivity'' using the following formula:

*MFP = Total output growth − ; ((labor input growth*labor compensation share) + (capital input growth * capital income share))*

The change in the growth rates (also referred to as the compound growth rates) of the IGI MFP are multiplied by 100 to calculate the percent change in growth rates (the percent change in growth rates is published by the BLS for its historical MFP measure). Finally, the growth rates of the IGI MFP are converted to index levels based to 2005 to be consistent with the BLS' methodology. For benchmarking purposes, the historical growth rates of IGI's proxy variables were used to estimate a historical measure of MFP, which was compared to the historical MFP estimate published by the BLS. The comparison revealed that the growth rates of the components were consistent across all series and, therefore, validated the use of the proxy variables in generating the IGI MFP projections. The resulting MFP index was then interpolated to a quarterly frequency using the Bassie method for temporal disaggregation. The Bassie technique utilizes an indicator (pattern) series for its calculations. IGI uses the index of output per hour (published by the BLS) as an indicator when interpolating the MFP index.

a. Incorporating the Multifactor Productivity Adjustment Into the Market Basket Update

According to section 1888(e)(5)(A) of the Act, the Secretary ''shall establish a skilled nursing facility market basket index that reflects changes over time in the prices of an appropriate mix of goods and services included in covered skilled nursing facility services.'' As described in section I.G.2 of this final rule, we estimate the SNF PPS market basket percentage for FY 2012 under section 1888(e)(5)(B)(i) of the Act based on the FY 2004-based SNF market basket. Section 3401(b) of the Affordable Care Act amends section 1888(e)(5)(B) of the Act, in part, by adding a new clause (ii), which requires that for FY 2012 and each subsequent FY, after determining the market basket percentage described in section 1888(e)(5)(B)(i) of the Act, ''the Secretary shall reduce such percentage by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II)'' (which we refer to as the MFP adjustment). Section 1888(e)(5)(B)(ii) of the Act further states that the reduction of the market basket percentage by the MFP adjustment may result in the market basket percentage being less than zero for a FY, and may result in payment rates under section 1888(e) of the Act for a FY being less than such payment rates for the preceding FY. Thus, if the application of the MFP adjustment to the market basket percentage calculated under section 1888(e)(5)(B)(i) results in an MFP-adjusted market basket percentage that is less than zero, then the annual update to the unadjusted Federal per diem rates under section 1888(e)(4)(E)(ii) would be negative, and such rates would decrease relative to the prior FY.

We received the following comment on the incorporation of the MFP adjustment into the SNF market basket which, along with our response, appears below.

Comment: One commenter proposed to remove the statutory language requiring a multi-factor productivity adjustment to the SNF market basket increase and recommended an alternative approach to measuring productivity. The commenter recommended that CMS achieve productivity gains by implementing a mechanism that recognizes that the average length of stay in SNFs can be reduced, potentially resulting in aggregate savings.

Response: The commenter's proposal would require a change to the existing statute governing the SNF PPS and, therefore, the request is outside the scope of rulemaking. As stated previously, section 3401(b) of the Affordable Care Act requires that, in FY 2012 (and in subsequent FYs), the market basket percentage under the SNF payment system as described in section 1888(e)(5)(B)(i) of the Act is to be reduced annually by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act.

Accordingly, we are finalizing the methodology for calculating the MFP adjustment, and the incorporation of the MFP adjustment into the SNF market basket as discussed in this section of the final rule, and in section VI.C of the FY 2012 proposed rule (76 FR 26394 through 26396).

To calculate the MFP-adjusted update for the SNF PPS, we subtract the MFP percentage adjustment from the FY 2012 market basket percentage calculated using the FY 2004-based SNF market basket. In the FY 2012 proposed rule (76 FR 26395), we proposed that the end of the 10-year moving average of changes in the MFP would coincide with the end of the appropriate FY update period. Since the market basket percentage is reduced by the MFP adjustment to determine the annual update for the SNF PPS, we believe it is appropriate for the numbers associated with both components of the calculation (the market basket percentage and the productivity adjustment) to be projected as of the same end date so that changes in market conditions are aligned. Therefore, for the FY 2012 update, the MFP adjustment is calculated as the 10-year moving average of changes in MFP for the period ending September 30, 2012. We round the final annual adjustment to the one-tenth of one percentage point level up or down as applicable according to conventional rounding rules (that is, if the number we are rounding is followed by 5, 6, 7, 8, or 9, we round the number up; if the number we are rounding is followed by 0, 1, 2, 3, or 4, we round the number down).

In accordance with section 1888(e)(5)(B)(i) of the Act, the market basket percentage for FY 2012 for the SNF PPS is based on the 2nd quarter 2011 forecast of the FY 2004-based SNF

market basket update, which is estimated to be 2.7 percent. In accordance with section 1888(e)(5)(B)(ii) of the Act (as added by section 3401(b) of the Affordable Care Act), this market basket percentage is then reduced by the MFP adjustment (the 10-year moving average of changes in MFP for the period ending September 30, 2012) of 1.0 percent, which is calculated as described above and based on IGI's 2nd quarter 2011 forecast. The resulting MFP-adjusted market basket increase factor is equal to 1.7 percent, or 2.7 percent less 1.0 percentage points.

Furthermore, we proposed that in fiscal years where a forecast error adjustment is applicable, we would first apply the forecast error adjustment to the market basket percentage, before applying the MFP adjustment. As discussed previously, in determining whether a forecast error adjustment should be applied, CMS compares the forecasted market basket percentage computed under section 1888(e)(5)(B)(i) of the Act for the most recently available fiscal year for which there is final data to the actual market basket percentage for that fiscal year. Because the forecast error adjustment is intended to address errors in the forecast of the market basket percentage, we believe that this adjustment is part of the establishment of the appropriate market basket percentage under section 1888(e)(5)(B)(i) of the Act. Section 1888(e)(5)(B)(ii) of the Act (as added by section 3401(b) of the Affordable Care Act) requires the MFP adjustment to be applied ''after determining the percentage described in clause (i)''. Thus, we will apply the forecast error adjustment (when applicable) to the market basket percentage prior to applying the MFP adjustment, to determine the update to the unadjusted Federal per diem rates for a fiscal year.

As discussed in the FY 2012 proposed rule (76 FR 26396), we proposed to revise § 413.337 to reflect the policies discussed above and to conform the regulations to the corresponding statutory requirements at section 1888(e)(4)(E) of the Act. As we did not receive any comments on our proposed changes to § 413.337, we are finalizing these changes as proposed in the FY 2012 proposed rule, subject to the technical correction noted below. Accordingly, as we proposed in the FY 2012 proposed rule, we are revising § 413.337 by adding a new paragraph (d)(3) to require, for FY 2012 and each subsequent FY, that the market basket index percentage change (as modified by any applicable forecast error adjustment) be reduced by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act in determining the annual update of the unadjusted Federal per diem rates. Consistent with section 1888(e)(5)(B)(ii) of the Act (as added by section 3401(b) of the Affordable Care Act), as we proposed, we are further revising § 413.337(d)(3) to state that the reduction of the market basket index percentage change by the MFP adjustment may result in the market basket index percentage change being less than zero for a fiscal year, and may result in the unadjusted Federal payment rates for a fiscal year being less than such payment rates for the preceding fiscal year. We note that we have made a technical correction to the language we proposed for § 413.337(d)(3). In the last sentence, we are replacing the term ''market basket percentage change'' with ''market basket index percentage change'' to be consistent with the terminology used in the first sentence of § 413.337(d)(3) and in § 413.337(d)(1).

In addition, as we proposed, we are revising existing paragraphs (d)(1) and (d)(2) of § 413.337, as discussed below. First, we are revising § 413.337(d)(1) so that the text more accurately tracks the corresponding statutory requirements at section 1888(e)(4)(E) of the Act. As we stated in the FY 2012 proposed rule (76 FR 26396), currently, § 413.337(d)(1) does not reflect the amendments made to section 1888(e)(4)(E)(ii) by section 311 of the BIPA (see section I.D of this final rule). While we have always updated the unadjusted Federal per diem rates in accordance with the requirements set forth in section 1888(e)(4)(E)(ii) of the Act as amended by section 311 of the BIPA, we inadvertently failed to update the regulation text to conform with the BIPA requirements. Therefore, we are now revising § 413.337(d)(1) to conform with the current statutory language in section 1888(e)(4)(E) as amended by section 311 of the BIPA. Second, as we proposed, we are revising § 413.337(d)(2) to specify the existing thresholds we employ in determining whether a forecast error adjustment is applicable.

b. Federal Rate Update Factor

Section 1888(e)(4)(E)(ii)(IV) of the Act requires that the update factor used to establish the FY 2012 unadjusted Federal rates be at a level equal to the market basket percentage change. Accordingly, to establish the update factor, we determined the total growth from the average market basket level for the period of October 1, 2010 through September 30, 2011 to the average market basket level for the period of October 1, 2011 through September 30, 2012. Using this process, the market basket update factor for FY 2012 SNF PPS unadjusted Federal rates is 2.7 percent. As required by section 1888(e)(5)(B) of the Act, this market basket percentage is then reduced by the MFP adjustment (the 10-year moving average of changes in MFP for the period ending September 30, 2012) of 1.0 percent as described in section III.F.3. The resulting MFP-adjusted market basket increase factor is equal to 1.7 percent, or 2.7 percent less 1.0 percentage point. We used this MFP-adjusted market basket update factor to compute the SNF PPS rate shown in Tables 2 and 3.

G. Consolidated Billing

Section 4432(b) of the BBA established a consolidated billing requirement that places the Medicare billing responsibility for virtually all of the services that the SNF's residents receive with the SNF, except for a small number of services that the statute specifically identifies as being excluded from this provision. As noted previously in section I. of this final rule, subsequent legislation enacted a number of modifications in the consolidated billing provision.

Specifically, section 103 of the BBRA amended this provision by further excluding a number of individual ''high-cost, low probability'' services, identified by the Healthcare Common Procedure Coding System (HCPCS) codes, within several broader categories (chemotherapy and its administration, radioisotope services, and customized prosthetic devices) that otherwise remained subject to the provision. We discuss this BBRA amendment in greater detail in the proposed and final rules for FY 2001 (65 FR 19231 through 19232, April 10, 2000, and 65 FR 46790 through 46795, July 31, 2000), as well as in Program Memorandum AB–00–18 (Change Request #1070), issued March 2000, which is available online at *http://www.cms.hhs.gov/transmittals/downloads/ab001860.pdf.*

Section 313 of the BIPA further amended this provision by repealing its Part B aspect; that is, its applicability to services furnished to a resident during a SNF stay that Medicare Part A does not cover. (However, physical, occupational, and speech-language therapy remain subject to consolidated billing, regardless of whether the resident who receives these services is in a covered Part A stay.) We discuss this BIPA amendment in greater detail in the proposed and final rules for FY 2002 (66 FR 24020 through 24021, May

10, 2001, and 66 FR 39587 through 39588, July 31, 2001).

In addition, section 410 of the MMA amended this provision by excluding certain practitioner and other services furnished to SNF residents by RHCs and FQHCs. We discuss this MMA amendment in greater detail in the update notice for FY 2005 (69 FR 45818–45819, July 30, 2004), as well as in Medicare Learning Network (MLN) Matters article MM3575, issued December 10, 2004, which is available online at *http://www.cms.gov/MLNMattersArticles/downloads/MM3575.pdf.*

Further, while not substantively revising the consolidated billing requirement itself, a related provision was enacted in the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) (Pub. L. 110–275, enacted July 15, 2008). Specifically, section 149 of MIPPA amended section 1834(m)(4)(C)(ii) of the Act to create a new subclause (VII), which adds SNFs (as defined in section 1819(a) of the Act) to the list of entities that can serve as a telehealth ''originating site'' (that is, the location at which an eligible individual can receive, through the use of a telecommunications system, services furnished by a physician or other practitioner who is located elsewhere at a ''distant site'').

As explained in the Medicare Physician Fee Schedule (PFS) final rule for CY 2009 (73 FR 69726, 69879, November 19, 2008), a telehealth originating site receives a facility fee which is always separately payable under Part B outside of any other payment methodology. Section 149(b) of MIPPA amended section 1888(e)(2)(A)(ii) of the Act to exclude telehealth services furnished under section 1834(m)(4)(C)(ii)(VII) of the Act from the definition of ''covered skilled nursing facility services'' that are paid under the SNF PPS. Thus, a SNF ''* * * can receive separate payment for a telehealth originating site facility fee even in those instances where it also receives a bundled per diem payment under the SNF PPS for a resident's covered Part A stay'' (73 FR 69881). By contrast, under section 1834(m)(2)(A) of the Act, a telehealth distant site service is payable under Part B to an eligible physician or practitioner only to the same extent that it would have been so payable if furnished *without* the use of a telecommunications system. Thus, as explained in the CY 2009 PFS final rule, eligible distant site physicians or practitioners can receive payment for a telehealth service that they furnish

* * * only if the service is separately payable under the PFS when furnished in a face-to-face encounter at that location. For example, we pay distant site physicians or practitioners for furnishing services via telehealth only if such services are not included in a bundled payment to the facility that serves as the originating site (73 FR 69880).

This means that in those situations where a SNF serves as the telehealth originating site, the distant site professional services would be separately payable under Part B only to the extent that they are not already included in the SNF PPS bundled per diem payment and subject to consolidated billing. Thus, for a type of practitioner whose services are not otherwise excluded from consolidated billing when furnished during a face-to-face encounter, the use of a telehealth distant site would not serve to unbundle those services. In fact, consolidated billing does exclude the professional services of physicians, along with those of most of the other types of telehealth practitioners that the law specifies at section 1842(b)(18)(C) of the Act, that is, physician assistants, nurse practitioners, clinical nurse specialists, certified registered nurse anesthetists, certified nurse midwives, and clinical psychologists (see section 1888(e)(2)(A)(ii) of the Act and § 411.15(p)(2)). However, the services of clinical social workers, registered dietitians and nutrition professionals remain subject to consolidated billing when furnished to a SNF's Part A resident and, thus, cannot qualify for separate Part B payment as telehealth distant site services in this situation. Additional information on this provision appears in Program Transmittal #1635 (Change Request #6215), issued November 14, 2008, which is available online at *http://www.cms.hhs.gov/transmittals/downloads/R1635CP.pdf.*

To date, the Congress has enacted no further legislation affecting the consolidated billing provision. However, as noted above and explained in the proposed rule for FY 2001 (65 FR 19232, April 10, 2000), the amendments enacted in section 103 of the BBRA not only identified for exclusion from this provision a number of particular service codes within four specified categories (that is, chemotherapy items, chemotherapy administration services, radioisotope services, and customized prosthetic devices), but also gave the Secretary ''* * * the authority to designate additional, individual services for exclusion within each of the specified service categories.'' In the proposed rule for FY 2001, we also noted that the BBRA Conference Report (H.R. Rep. No. 106–479 at 854 (1999) (Conf. Rep.)) characterizes the individual services that this legislation targets for exclusion as ''* * * high-cost, low probability events that could have devastating financial impacts because their costs far exceed the payment [SNFs] receive under the prospective payment system * * *''. According to the conferees, section 103(a) ''is an attempt to exclude from the PPS certain services and costly items that are provided infrequently in SNFs. For example * * * specific chemotherapy drugs * * * not typically administered in a SNF, or * * * requiring special staff expertise to administer * * *.'' By contrast, the remaining services within those four categories are not excluded (thus leaving all of those services subject to SNF consolidated billing), because they are relatively inexpensive and are furnished routinely in SNFs.

As we further explained in the final rule for FY 2001 (65 FR 46790, July 31, 2000), and as our longstanding policy, any additional service codes that we might designate for exclusion under our discretionary authority must meet the same statutory criteria used in identifying the original codes excluded from consolidated billing under section 103(a) of the BBRA: They must fall within one of the four service categories specified in the BBRA, and they also must meet the same standards of high cost and low probability in the SNF setting, as discussed in the BBRA Conference report. Accordingly, we characterized this statutory authority to identify additional service codes for exclusion ''* * * as essentially affording the flexibility to revise the list of excluded codes in response to changes of major significance that may occur over time (for example, the development of new medical technologies or other advances in the state of medical practice)'' (65 FR 46791). In the FY 2012 proposed rule, we specifically invited public comments identifying codes in any of these four service categories (chemotherapy items, chemotherapy administration services, radioisotope services, and customized prosthetic devices) representing recent medical advances that might meet our criteria for exclusion from SNF consolidated billing (76 FR 26397). The comments that we received on this subject, and our responses, appear below.

Comment: A review of the particular codes that commenters submitted in response to the proposed rule's solicitation for comment revealed that a significant number were identical to

codes that had already been submitted for consideration during the public comment period on the FY 2010 SNF PPS proposed rule or in earlier years, and which we had already decided previously not to exclude. These included items such as hyperbaric oxygen treatments, total parenteral nutrition, wound care devices, blood products, and ''chemotherapy'' drugs that are actually used in treating diseases other than cancer. Other codes that commenters submitted did fall within the particular service categories that the BBRA authorizes for exclusion; however, these were codes that were already in existence as of the BBRA's enactment, but did not fall within the specific statutory code ranges that the BBRA designated for exclusion. Examples would include customized prosthetic device codes L5010 (''partial foot, molded socket, ankle height, with toe filler''), L5020 (''partial foot, molded socket, tibial tubercle height, with toe filler''), and L5987 (''all lower extremity prosthesis, shank foot system with vertical loading pylon'').

Response: As discussed in the applicable prior final rules, we decline to add to the exclusion list those services submitted by commenters that have already been considered and not excluded in previous years based on their being outside the particular service categories that the statute authorizes for exclusion. These services include hyperbaric oxygen treatments as discussed previously in the SNF PPS final rules for FY 2001 (65 FR 46790–91, July 31, 2000), FY 2002 (66 FR 39588, July 31, 2001), FY 2004 (68 FR 46060–62, August 4, 2003), FY 2006 (70 FR 45048–50, August 4, 2005), FY 2008 (72 FR 43430–32, August 3, 2007), FY 2009 (73 FR 46435–37, August 8, 2008), and FY 2010 (74 FR 40353–56, August 11, 2009); total parenteral nutrition as discussed previously in the SNF PPS final rules for FY 2002, FY 2004, and FY 2006; and wound care devices as discussed previously in the SNF PPS final rules for FY 2004 and FY 2006. For the same reason—that is, being outside the particular service categories that the statute authorizes for exclusion—we decline to adopt the suggestion to exclude certain blood products, hemophilia clotting factor and intravenous infusion of immunoglobulin (IVIG). With respect to the reiteration of previous requests to exclude as chemotherapy drugs certain medications that are actually used to treat diseases other than cancer, we note that as indicated previously in the FY 2010 SNF PPS final rule (74 FR 40354, August 11, 2009), such medications do not fall within the scope of ''chemotherapy'' drugs for purposes of this exclusion. In addition, regarding those particular codes (such as the three L codes specified above) that were already in existence as of the BBRA's enactment, we explained previously in the FY 2010 SNF PPS final rule (74 FR 40354, August 11, 2009) that our position has always been that the BBRA's discretionary authority to exclude codes within certain designated service categories applies solely to codes that were created subsequent to the BBRA's enactment, and not to those codes that were already in existence as of July 1, 1999 (the date that the legislation itself uses as the reference point for identifying the codes that it designates for exclusion). As we explained in the FY 2010 final rule (74 FR 40354), this position reflects the assumption that if a particular code was already in existence as of that date but not designated for exclusion, this meant that it was intended to remain within the SNF PPS bundle, subject to the BBRA Conference Report's provision for a GAO review of the code set that was conducted the following year (H.R. Rep. No. 106–479 at 854 (1999) (Conf. Rep.)). Accordingly, we decline to add these codes to the exclusion list.

Comment: One commenter requested us to consider a particular chemotherapy drug, TREANDA® (HCPCS code J9033), that the commenter recommended as meeting the BBRA's ''high-cost, low probability'' criteria for exclusion.

Response: We note that in one respect, this drug would appear to be similar to the three L codes discussed in the preceding comment, in that it falls within one of the particular service categories (that is, chemotherapy items) that the BBRA authorizes for exclusion, but the excluded code ranges specified in the BBRA skip over the particular code number to which it was assigned. However, in contrast to those L codes, code J9033 was not in use at the time of the BBRA's enactment; in fact, this drug did not actually come into existence until almost a decade later. Accordingly, as there is no basis for assuming at the outset that this particular code's omission from the excluded ranges indicated an intent for it to remain bundled, it then becomes appropriate for us to consider the possibility of excluding the drug from consolidated billing. We have determined that this drug does, in fact, qualify for exclusion in that its cost is comparable to other excluded chemotherapy drugs and it is rarely administered to SNF inpatients. Thus, it meets the ''high-cost, low probability'' standard in the SNF setting, as discussed in the BBRA Conference Report. Accordingly, this new exclusion will appear in a forthcoming consolidated billing update, with an effective date of October 1, 2011.

Comment: Some commenters suggested that we consider the exclusion of PROVENGE® (Sipuleucel-T, HCPCS code Q2043), which is used in treating certain cases of metastatic prostate cancer. PROVENGE® is made by selectively removing leukocytes (white blood cells) from the patient's blood and sending them to a factory, which adds a protein commonly found in prostate cancer and an immune stimulating agent to the leukocytes. All three are mixed with lactated ringers and then sent back to the physician to administer to the patient. The commenters cited this drug as meeting the applicable standards for exclusion of high cost and low probability.

Response: We note that in accordance with the National Coverage Determination that was released on June 30, 2011 (available online at *http://www.cms.gov/medicare-coverage-database/details/nca-decision-memo.aspx?NCAId=247&fromdb=true*), PROVENGE® is not classified as a drug for purposes of this particular coverage, but rather, as a service that is furnished as an incident to the physician's professional services. As such, it remains subject to SNF consolidated billing, consistent with the longstanding policy that we first enunciated in the May 12, 1998 interim final rule (63 FR 26297):

> * * * while the SNF Consolidated Billing provision does not apply to the professional services that a physician or other exempt practitioner performs personally, it does apply to those services that are furnished to an SNF resident by someone other than the practitioner, as an incident to the practitioner's professional service. This position is consistent with the approach that has long been taken under the hospital bundling requirement, as well as with section 1888(e)(2)(A)(ii) of the Act, which specifically identifies ''physicians' services'' themselves as the service category that is excluded from SNF Consolidated Billing. Physicians' services, in turn, are covered by Part B under section 1861(s)(1) of the Act and are defined in section 1861(q) as being performed by a physician, while ''incident to'' services are covered under a separate statutory authority (section 1861(s)(2)(A) of the Act) and are, by definition, not performed by a physician * * * We believe that to do otherwise with regard to these ''incident to'' services would effectively create a loophole through which a potentially broad and diverse array of services could be unbundled, merely by virtue of being furnished under the general auspices of such practitioners. This, in turn, would ultimately defeat the very

purpose of the SNF Consolidated Billing provision—that is, to make the SNF itself responsible for billing Medicare for essentially all of its residents' services, other than those identified in a small number of narrow and specifically delimited exclusions. Further, as noted above, both the Consolidated Billing and SNF PPS provisions employ the same statutory list of excluded services. Thus, the approach we are adopting with regard to the limited range of services that qualify for exclusion is essential not only to safeguard the integrity of the Consolidated Billing requirement, but also that of the SNF PPS itself.

Comment: Some commenters reiterated previous suggestions on expanding the existing chemotherapy exclusion to encompass related drugs that are commonly administered in conjunction with chemotherapy to ameliorate the side effects of the chemotherapy drugs, such as anti-emetics (anti-nausea drugs).

Response: As we have noted previously in this final rule and in response to comments on this issue in the past (most recently, in the August 11, 2009 SNF PPS final rule for FY 2010 (74 FR 40354)), the BBRA authorizes us to identify additional service codes for exclusion only within those particular service categories—chemotherapy items; chemotherapy administration services; radioisotope services; and, customized prosthetic devices—that it has designated for this purpose, and does not give us the authority to exclude other services which, though they may be related, fall outside of the specified service categories themselves. Thus, while anti-emetics, for example, are commonly administered in conjunction with chemotherapy, they are not inherently chemotherapeutic in nature (that is, they are not themselves oncolytic drugs that actively destroy cancer cells) and, consequently, do not fall within the excluded chemotherapy category designated in the BBRA.

Comment: One commenter repeated calls from previous years to expand the existing exclusion for certain high-intensity outpatient hospital services to encompass services furnished in other, nonhospital settings, stating that such nonhospital services may be cheaper and more accessible in certain localities (such as rural settings) than those furnished by hospitals. In urging us to expand the administrative exclusion in this manner, the commenter also advanced the view that the test of service intensity under this exclusion was intended to be applied independently, regardless of whether the service in question is actually being furnished in the hospital setting.

Response: We have included in a number of previous rules an explanation of the setting-specific nature of the exclusion for certain high-intensity outpatient hospital services—most recently, in the FY 2010 SNF PPS final rule (74 FR 40355, August 11, 2009):

> We believe the comments that reflect previous suggestions for expanding this administrative exclusion to encompass services furnished in non-hospital settings indicate a continued misunderstanding of the underlying purpose of this provision. As we have consistently noted in response to comments on this issue in previous years * * * and as also explained in Medicare Learning Network (MLN) Matters article SE0432 (available online at *www.cms.hhs.gov/MLNMattersArticles/downloads/SE0432.pdf*), the rationale for establishing this exclusion was to address those types of services that are so far beyond the normal scope of SNF care that they require the intensity of the hospital setting in order to be furnished safely and effectively.
>
> Moreover, we note that when the Congress enacted the consolidated billing exclusion for certain RHC and FQHC services in section 410 of the MMA, the accompanying legislative history's description of present law acknowledged that the existing exclusions for exceptionally intensive outpatient services are specifically limited to ''* * * certain outpatient services from a Medicare-participating hospital or critical access hospital * * *'' (emphasis added). (See the House Ways and Means Committee Report (H. Rep. No. 108–178, Part 2 at 209), and the Conference Report (H. Conf. Rep. No. 108–391 at 641).) Therefore, these services are excluded from SNF consolidated billing only when furnished in the outpatient hospital or CAH setting, and not when furnished in other, freestanding (non-hospital or non-CAH) settings.

Further, the authority for us to establish a categorical exclusion for these services that would apply irrespective of the setting in which they are furnished does not exist in current law.

Finally, we do not agree with the commenter's analysis regarding the applicable standard for determining service intensity under this exclusion. Contrary to that commenter's statement, when we originally established the administrative exclusion for certain designated categories of high-intensity outpatient services, we did not envision creating a separate standard of service intensity that would exist independently from the service's performance in the hospital setting. In fact, the applicable discussion in the May 12, 1998 interim final rule (63 FR 26298) clearly indicates that this exclusion was created within the specific context of the concurrent development of a new PPS specifically for outpatient hospital services, reflecting the need ''* * * to delineate the respective areas of responsibility for the SNF under the Consolidated Billing provision, and for the *hospital* under the outpatient bundling provision, with regard to these services'' (emphasis added). This point was further reinforced in the subsequent SNF PPS final rule for FY 2000 (64 FR 41676, July 30, 1999), where we noted that

> * * * a key concern underlying the development of the consolidated billing exclusion of certain outpatient hospital services specifically involves the need to distinguish those services that comprise the SNF bundle from those that will become part of the outpatient hospital bundle that is currently being developed in connection with the outpatient hospital PPS. Accordingly, we are not extending the outpatient hospital exclusion from consolidated billing to encompass any other, freestanding settings.

Comment: One commenter noted that the administrative exclusion from consolidated billing for certain designated, highly intensive outpatient hospital services (such as emergency services) also serves to encompass an associated, medically necessary ambulance roundtrip from the SNF. The commenter requested clarification on whether this exclusion would still apply to an ambulance trip returning to the SNF following the receipt of emergency services, even though the emergency condition itself would have already been stabilized by that point.

Response: The return ambulance trip would still be excluded from consolidated billing in this scenario. As explained on page 3 of Medicare Learning Network (MLN) Matters Special Edition article #SE0433 (available online at *http://www.cms.gov/MLNMattersArticles/downloads/SE0433.pdf*),

> Since a beneficiary's departure from the SNF to receive one of these excluded types of outpatient hospital services is considered to end the beneficiary's status as an SNF resident for CB [consolidated billing] purposes with respect to those services, any associated ambulance trips are, themselves, excluded from CB as well. Therefore, an ambulance trip from the SNF to the hospital for the receipt of such services should be billed separately under Part B by the outside supplier. *Moreover, once the beneficiary's SNF resident status has ended in this situation, it does not resume until the point at which the beneficiary actually arrives back at the SNF; accordingly, the return ambulance trip from the hospital to the SNF would also be excluded from CB* (emphasis added).

Comment: One commenter requested that all chemotherapy drugs and customized prosthetic devices be excluded from consolidated billing, as well as transportation relating to the receipt of excluded radiation therapy services.

Response: As indicated previously in this final rule, in creating a statutory

carve-out for several designated types of services, the BBRA did not categorically exclude all such services from SNF consolidated billing. Instead, the legislation specifically identified individual excluded services within designated categories, by Healthcare Common Procedure Coding System (HCPCS) code. The BBRA's Conference Report explained that this legislation specifically targeted those ''high-cost, low probability'' items and services that ''* * * are not typically administered in a SNF, or are exceptionally expensive, or are given as infusions, thus requiring special staff expertise to administer'' (H.R. Conf. Rep. No. 106–479 at 854). By contrast, other types of services within those categories that ''* * * are relatively inexpensive and are administered routinely in SNFs'' remain subject to SNF consolidated billing under this legislation.

Regarding the comment concerning transports related to radiation therapy, we note that radiation therapy is one of the administratively excluded categories of high-intensity outpatient hospital services. As indicated in the preceding comment, this exclusion already encompasses not only the service itself, but also any associated, medically necessary ambulance transportation between the SNF and the hospital.

H. Application of the SNF PPS to SNF Services Furnished by Swing-Bed Hospitals

In accordance with section 1888(e)(7) of the Act, as amended by section 203 of the BIPA, Part A pays critical access hospitals (CAHs) on a reasonable cost basis for SNF services furnished under a swing-bed agreement. However, effective with cost reporting periods beginning on or after July 1, 2002, the swing-bed services of non-CAH rural hospitals are paid under the SNF PPS. As explained in the final rule for FY 2002 (66 FR 39562, July 31, 2001), we selected this effective date consistent with the statutory provision to integrate swing-bed rural hospitals into the SNF PPS by the end of the SNF transition period, June 30, 2002.

Accordingly, all non-CAH swing-bed rural hospitals have come under the SNF PPS as of June 30, 2003. Therefore, all rates and wage indexes outlined in earlier sections of this final rule for the SNF PPS also apply to all non-CAH swing-bed rural hospitals. A complete discussion of assessment schedules, the MDS and the transmission software (RAVEN–SB for Swing Beds) appears in the final rule for FY 2002 (66 FR 39562, July 31, 2001) and in the final rule for FY 2010 (74 FR 40288, August 11, 2009). As finalized in the FY 2010 SNF PPS final rule (74 FR 40356–57), effective October 1, 2010, non-CAH swing-bed rural hospitals are required to complete an MDS 3.0 swing-bed assessment which is limited to the required demographic, payment, and quality items. The latest changes in the MDS for swing-bed rural hospitals appear on the SNF PPS Web site, *http://www.cms.gov/snfpps.* We received no comments on this aspect of the proposed rule.

IV. Analysis of and Responses to Public Comments on the FY 2011 Update Notice With Comment

In addition to responding to comments received on the FY 2012 proposed rule, we are also taking the opportunity to respond in this section to those comments not addressed elsewhere in this final rule that were received on the FY 2011 notice with comment period, as discussed in the FY 2012 proposed rule (76 FR 26368).

Comment: We received a number of comments related to the delayed implementation of RUG–IV, the implementation of HR–III, and the transition from RUG–IV to HR–III. Many commenters asked for details on how the transition would be done and how claims would be reprocessed upon successful implementation of HR–III. One commenter requested further detail on educational materials that would be made available to providers to ease the system transition once the HR–III grouper has been developed. Some commenters asked that CMS be as transparent as possible in its management of the transition to HR–III.

Response: As discussed in section I.F of this final rule, section 202 of the ''Medicare and Medicaid Extenders Act of 2010'' (Pub. L. 111–309), enacted December 15, 2010, repealed section 10325 of the Affordable Care Act, effectively leaving in place the RUG–IV system as implemented on October 1, 2010. Therefore, HR–III is no longer necessary and there will be no reprocessing of claims related to HR–III. Moreover, as we also noted previously in the FY 2012 SNF PPS proposed rule (76 FR 26368), the repeal of this provision ''* * * effectively renders moot any further discussion of public comments that we had invited on our planned implementation'' of the transition to the HR–III system.

V. Provisions of the Final Rule

In this final rule, in addition to accomplishing the required annual update of the SNF PPS payment rates, we are also finalizing the following revisions to the regulation text:

As discussed previously in section III.F.3.a of this final rule, we are implementing section 3401(b) of the Affordable Care Act by revising § 413.337. We are adding a new paragraph (d)(3) to that section to require that, for FY 2012 and each subsequent FY, the market basket index percentage change (as modified by any applicable forecast error adjustment) be reduced by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act in determining the annual update of the unadjusted Federal per diem rates. In addition, consistent with section 1888(e)(5)(B)(ii) of the Act (as added by section 3401(b) of the Affordable Care Act), revised § 413.337(d)(3) also states that the reduction of the market basket index percentage change by the MFP adjustment may result in the market basket index percentage change being less than zero for a fiscal year, and may result in the unadjusted Federal payment rates for a fiscal year being less than such payment rates for the preceding fiscal year.

Further, as discussed in section III.F.3, we are also revising existing paragraphs (d)(1) and (d)(2) of § 413.337 so that the text more accurately tracks the corresponding statutory requirements at section 1888(e)(4)(E) of the Act (§ 413.337(d)(1)), and to specify the existing thresholds that we apply in determining whether a forecast error adjustment is appropriate (§ 413.337(d)(2)).

VI. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA), we are required to provide 30-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the OMB for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

- Need for the information collection and its usefulness in carrying out the proper functions of our agency.
- Accuracy of our estimate of the information collection burden.
- Quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

The information collection requirements referenced in this final rule with regard to resident assessment information used to determine facility

payments are currently approved under OMB control number (OCN): 0938–0739, which relates to the Medicare PPS Assessment Form (MPAF) information collection, and OCN: 0938–0872, which relates to the Minimum Data Set for Swing-Bed Hospitals. We note that this final rule will not affect the burden associated with either of those collections.

Section III.E.4 of this final rule contains a discussion of information collections related to a new required resident assessment, the COT OMRA. The following is a discussion of this new required PPS assessment.

As discussed previously in section III.E.4 of this final rule, we are making certain modifications in the existing requirements for completing OMRAs. We introduced a new COT OMRA, to be completed whenever the intensity of therapy changes to such an extent that it would no longer reflect the RUG–IV classification and payment assigned for a given SNF resident, based on the resident's most recent assessment used for Medicare payment. This will help to ensure that the SNF's payments accurately reflect the amount of therapy actually being provided.

SNFs are required to complete a COT OMRA only when the intensity of therapy actually being furnished changes to such a degree that it would no longer reflect the RUG–IV classification and payment assigned for a given SNF resident based on the most recent assessment used for Medicare payment. The burden associated with this requirement is the time and effort necessary to complete the COT OMRA, coding the appropriate responses, and data reporting timeframes. Because providers currently are not required to report therapy changes that occur outside the observation window of a given PPS assessment, we do not have the relevant data to predict with certainty the number of COT OMRAs that may be required per year. However, we have attempted to use the administrative data currently available as a reasonable proxy to determine estimates of provider burden. We estimate that, based on average burden associated with the EOT OMRA, which uses the same basic item set as the COT OMRA, it will take 50 minutes (0.83 hours) to collect the information necessary for coding a COT OMRA, 10 minutes (0.17 hours) to code the responses, and 2 minutes (0.03 hours) to transmit the results, or a total of 62 minutes (1.03 hours) to complete a single COT OMRA. The estimated cost per COT OMRA is $33.84, as discussed below.

Based on information from the Bureau of Labor Statistics of May, 2009, and a 30 percent benefits rate, we estimated hourly wage rates for a Registered Nurse (RN), and for a data operator. MDS preparation costs were estimated using RN hourly wage rates based on $56,060 per year, which amounts to $0.45 per minute without consideration of employee benefits, and $0.58 per minute after increasing the rate by 30 percent to account for employee benefit compensation. For coding functions, we used a blended rate of $41,090; this was the average for RNs ($56,060/year) and data operators ($26,120/year). The blended rate calculates to $0.33 per minute without consideration of employee benefits, and $0.43 per minute after increasing the rate by 30 percent to account for employee benefit compensation. The blended rate of RN and data operator wages reflects that SNF providers historically have used both RN and support staff for the data entry function. For transmission personnel, we used data operator wages of $26,120 per year, or $0.21 per minute without consideration of employee benefits, and $0.27 per minute after increasing the rate by 30 percent to account for employee benefit compensation. The total amount of time for a single COT OMRA is 62 minutes (1.03 hours), consisting of 50 minutes (0.8333 hours) of RN time for preparation, 10 minutes (0.1667 hours) of blended RN/data operator time for coding, and 2 minutes (0.0333 hours) of data operator time for transmission. This results in an average estimated cost per COT OMRA of $33.84.

The number of stays for 2009 was approximately 2.26 million. Based on a 30-day average length of stay for RUG–IV, we believe the average number of times that a COT OMRA would need to be completed due to a decrease in therapy is once per stay. Based on our review of the first eight months of FY 2011 data, we found that approximately 40 percent of the claims resulted in assignment to a higher-than-projected Rehabilitation RUG. A possible reason for the difference between projected and actual FY 2011 RUG–IV case-mix utilization could involve instances where the intensity of therapy actually being furnished changed (that is, decreased) within the payment period to such a degree that it no longer reflected the RUG–IV classification and payment assigned for a given SNF resident based on the most recent assessment used for Medicare payment. As discussed previously, if such changes or decreases in therapy utilization occur outside the observation window of a given PPS assessment, such changes currently are not captured on a resident assessment, and the provider would continue to be reimbursed under a higher-paying Rehabilitation RUG until the next PPS assessment.

For FY 2012, providers will be required to complete a COT OMRA in these situations. Although we believe that only some of the 40 percent difference is likely attributable to these instances, the 40 percent would provide a quantifiable maximum burden estimate for these cases. At this time, we are unable to determine other quantifiable estimates for decreases in therapy utilization necessitating a COT OMRA. Using the percentage of claims resulting in a higher-than-projected Rehabilitation RUG as a way to estimate the maximum number of times that a therapy decrease could result in the need for a COT OMRA, 40 percent or 813,074 stays could be affected. The total number of estimated COT OMRAs per SNF for FY 2011 would be 57.

In addition, the COT OMRA will also be used when providers find that the therapy provided a given resident warrants the resident being classified into a higher therapy RUG category. As stated above, providers currently are not required to report therapy changes that occur outside the observation window of a given PPS assessment; therefore, we do not have the relevant data to predict with certainty the number of COT OMRAs that may be required per year due to an increase in therapy. We have used the historical data available at this time to quantify situations where an increase in therapy occurs. The Start-of-Therapy (SOT) OMRA represents situations where therapy has increased to a level significant enough to change the RUG to a therapy RUG. The estimate for the possible number of times that a COT OMRA would be required due to an increase in therapy uses the number of SOT OMRAs as a proxy. Using the number of SOT OMRAs completed in the first eight months of FY 2011 projected for the entire year, we estimate that the total COT OMRAs required due to an increase in therapy would be 71,330, or 5 times per facility per year. Therefore, the estimated total number of COT OMRAs per facility per year is 62. The total annual hour burden for completing COT OMRAs is estimated to be 737,003 hours for reporting, 147,401 hours for coding, and 29,480 hours for transmission, for a total burden of 913,884 hours for all 14,266 SNFs. Based on an average estimated cost per COT OMRA of $33.84, we estimate that the additional annual cost across all SNFs would be approximately $29.93 million, or $2,097.87 per facility.

Further, we note that the completion of an EOT–R OMRA, as discussed in section III.E.4, would be entirely voluntary on the part of the facility and, thus, would not represent the imposition of a mandatory burden.

VII. Economic Analyses

A. Regulatory Impact Analysis

1. Introduction

We have examined the impacts of this final rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA, March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has been designated an economically significant rule, under section 3(f)(1) of Executive Order 12866. Accordingly, we have prepared a regulatory impact analysis (RIA) as further discussed below. Also, the rule has been reviewed by the Office of Management and Budget.

2. Statement of Need

This final rule updates the SNF prospective payment rates for fiscal year 2012 as required under section 1888(e)(4)(E) of the Act. It also responds to section 1888(e)(4)(H) of the Act, which requires the Secretary to ''provide for publication in the **Federal Register**'' before the August 1 that precedes the start of each fiscal year, the unadjusted Federal per diem rates, the case-mix classification system, and the factors to be applied in making the area wage adjustment. As these statutory provisions prescribe a detailed methodology for calculating and disseminating payment rates under the SNF PPS, we do not have the discretion to adopt an alternative approach.

3. Overall Impacts

We estimate the aggregate impact of the FY 2012 final rule would be a net decrease of $3.87 billion in payments to SNFs, resulting from a $600 million increase from the update to the payment rates and a $4.47 billion reduction from the recalibration of the case-mix adjustment. Accordingly, we have prepared a RIA that, to the best of our ability, presents the costs and benefits of the rulemaking.

The update set forth in this final rule applies to payments in FY 2012. Accordingly, the analysis that follows only describes the impact of this single year. In accordance with the requirements of the Act, we will publish a notice for each subsequent FY that will provide for an update to the payment rates and include an associated impact analysis.

4. Detailed Economic Analysis

This final rule sets forth updates of the SNF PPS rates contained in the update notice for FY 2011 (75 FR 42886, July 22, 2010) and the associated correction notice (75 FR 55801, September 14, 2010). Based on the above, we estimate that the FY 2012 aggregate impact would be a net decrease of $3.87 billion in payments to SNFs, resulting from a $600 million increase from the update to the payment rates and a $4.47 billion reduction from the recalibration of the case-mix adjustment. The impact analysis of this final rule represents the projected effects of the changes in the SNF PPS from FY 2011 to FY 2012. We assess the effects by estimating payments while holding all other payment-related variables constant. Although the best data available are utilized, there is no attempt to predict behavioral responses to these changes, or to make adjustments for future changes in such variables as days or case-mix.

Certain events may occur to limit the scope or accuracy of our impact analysis, as this analysis is future-oriented and, thus, very susceptible to forecasting errors due to certain events that may occur within the assessed impact time period. Some examples of possible events may include newly legislated general Medicare program funding changes by the Congress, or changes specifically related to SNFs. In addition, changes to the Medicare program may continue to be made as a result of previously enacted legislation, or new statutory provisions. Although these changes may not be specific to the SNF PPS, the nature of the Medicare program is that the changes may interact and, thus, the complexity of the interaction of these changes could make it difficult to predict accurately the full scope of the impact upon SNFs.

In accordance with section 1888(e)(4)(E) and (e)(5) of the Act, we update the FY 2011 payment rates by a factor equal to the market basket index percentage increase adjusted by the FY 2010 forecast error adjustment (if applicable) and the MFP adjustment to determine the payment rates for FY 2012. As discussed previously, for FY 2012 and each subsequent FY, as required by section 1888(e)(5)(B) of the Act as amended by section 3401(b) of the Affordable Care Act, the market basket percentage is reduced by the MFP adjustment. The special AIDS add-on established by section 511 of the MMA remains in effect until ''* * * such date as the Secretary certifies that there is an appropriate adjustment in the case mix. * * *'' We have not provided a separate impact analysis for the MMA provision. Our latest estimates indicate that there are fewer than 3,500 beneficiaries who qualify for the AIDS add-on payment. The impact to Medicare is included in the ''total'' column of Table 11. In updating the rates for FY 2012, we made a number of standard annual revisions and clarifications mentioned elsewhere in this final rule (for example, the update to the wage and market basket indexes used for adjusting the Federal rates).

We estimate that the aggregate impact for the FY 2012 updates discussed in this final rule would be a net decrease of $3.87 billion in payments to SNFs, resulting from a $600 million increase from the update to the payment rates and a $4.47 billion reduction from the recalibration of the case-mix adjustment. The FY 2012 impacts are presented in Table 11.

The breakdown of the various categories of data in Table 11 is as follows.

The first column shows the breakdown of all SNFs by urban or rural status, hospital-based or freestanding status, and census region.

The ''total'' row shows the estimated effects of the various changes on all facilities. The next six rows show the effects on facilities split by hospital-based, freestanding, urban, and rural categories. The urban and rural designations are based on the location of the facility under the CBSA designation. The next 19 rows show the effects on urban versus rural status by census region. The last 3 rows show the effects on ownership by government, profit and non-profit status.

The second column in Table 11 shows the number of facilities in the impact database.

The third column in Table 11 shows the effects of recalibrating the nursing CMIs of the RUG–IV therapy groups. As explained previously in section III.B.2 of this final rule, we are implementing the recalibration so that the CMIs more accurately reflect parity in expenditures under the RUG–IV system introduced in FY 2011 relative to payments under the previous RUG–53 system, based on our review of the initial eight months of FY 2011 claims and MDS data. The total impact of this change is a decrease of 12.6 percent. We note that some individual providers may experience larger or smaller decreases in payment than others due to case-mix utilization.

The fourth column of Table 11 shows the effect of the annual update to the wage index. This represents the effect of using the most recent wage data available. The total impact of this change is zero percent; however, there are distributional effects of the change.

The fifth column of Table 11 shows the effect of all of the changes on the FY 2012 payments. The update of 1.7 percent, consisting of the market basket increase of 2.7 percentage points, reduced by the 1.0 percentage point MFP adjustment is constant for all providers and, though not shown individually, is included in the total column. It is projected that aggregate payments will decrease by 11.1 percent, assuming that facilities do not change their care delivery and billing practices in response.

As shown in Table 11, the combined effects of all of the changes vary by specific types of providers and by location.

TABLE 11—RUG–IV PROJECTED IMPACT TO THE SNF PPS FOR FY 2012

	Number of facilities	Revised CMIs percent	Update wage data	Total FY 2012 change (percent)
Group:				
Total	14,706	−12.6	0.0	−11.1
Urban	10,321	−12.8	0.0	−11.3
Rural	4,385	−11.9	0.1	−10.3
Hospital based urban	454	−12.4	0.1	−10.8
Freestanding urban	9,867	−12.8	0.0	−11.3
Hospital based rural	341	−11.3	0.0	−9.8

Note: The Total column includes the 2.7 percent market basket increase, reduced by the 1.0 percentage point MFP adjustment. Additionally, we found no SNFs in rural outlying areas.

5. Alternatives Considered

As described above, the aggregate impact for FY 2012 of the updates discussed in this final rule would be a net decrease of $3.87 billion in payments to SNFs, resulting from a $600 million increase from the update to the payment rates and a $4.47 billion reduction from the recalibration of the case-mix adjustment. In view of the potential economic impact, we considered the alternatives described below.

Section 1888(e) of the Act establishes the SNF PPS for the payment of Medicare SNF services for cost reporting periods beginning on or after July 1, 1998. This section of the statute prescribes a detailed formula for calculating payment rates under the SNF PPS, and does not provide for the use of any alternative methodology. It specifies that the base year cost data to be used for computing the SNF PPS payment rates must be from FY 1995 (October 1, 1994, through September 30, 1995). In accordance with the statute, we also incorporated a number of elements into the SNF PPS (for example, case-mix classification methodology, market basket index, a wage index, and the urban and rural distinction used in the development or adjustment of the Federal rates). Further, section 1888(e)(4)(H) of the Act specifically requires us to disseminate the payment rates for each new FY through the **Federal Register**, and to do so before the August 1 that precedes the start of the new fiscal year. Accordingly, we are not

pursuing alternatives for the payment methodology as discussed above.

Using our authority to establish an appropriate adjustment for case mix under section 1888(e)(4)(G)(i) of the Act, this final rule finalizes a recalibration of the adjustment to the nursing case-mix indexes based on actual FY 2011 data. In the FY 2010 SNF PPS final rule (74 FR 40339), we committed to monitoring the accuracy and effectiveness of the parity adjustment to maintain budget neutrality. We believe that using actual FY 2011 claims data to perform the recalibration analysis results in case-mix weights that better reflect the resources used, produces more accurate payment, and represents an appropriate case-mix adjustment. Using FY 2011 data is consistent with our intent to make the change from the RUG–53 model to the RUG–IV model in a budget neutral manner.

In reviewing our initial projections, we found that the disparity between projected RUG–IV utilization for FY 2011 and actual RUG–IV utilization in FY 2011, which formed the basis for our considering a recalibration of the nursing case-mix indexes, was at least partially the result of a shift in the mode of therapy provided to beneficiaries in a Part A stay under RUG–IV. The amount of concurrent therapy decreased significantly from historical levels, with a significant portion of the SNFs reporting 0 minutes of concurrent therapy for all MDS 3.0 assessments submitted for FY 2011. Many of these facilities reported large increases in the amount of group therapy provided during the same time period.

For the proposed rule, we used 3 months of data (first quarter FY 2011) to calculate the initial parity adjustment and stated that we would observe utilization trends for a greater period of FY 2011 to confirm our preliminary assessment. We have now used 8 months of FY 2011 data as the basis for the recalibration discussed in section III.B.2 above and the data have confirmed our preliminary assessment. Therefore, as discussed in section III.B.2 of this final rule, we are implementing a recalibration of the nursing CMIs of the RUG–IV therapy groups based on eight months of FY 2011 MDS and claims data.

Both during development of the proposed rule (76 FR 26372, 26404) and in response to comments we received on the proposed rule, as discussed in section III.B.2 above, we considered various alternatives for implementing a recalibrated case-mix adjustment. Most notably, as discussed in section III.B.2 of this final rule, we considered applying the recalibration to all of the nursing CMIs, rather than just the nursing CMIs for the RUG–IV therapy groups as we have finalized in this final rule.

However, as noted in the proposed rule (76 FR 26372, 26404), we found that an across-the-board recalibration of the nursing CMIs that included the complex medical groups (approximately 8 percent of the total SNF Part A population), would affect patients in these complex medical groups disproportionately and negatively. Moreover, we are concerned that reducing payment rates for both the therapy and the complex medical patients could inadvertently create an access problem for beneficiaries with complex medical care needs. The increasing volume of therapy patients during the past several years, in combination with the increasing SNF Medicare profit margins, suggests that the care needs for therapy patients may be more predictable and less costly than those for beneficiaries with severe medical conditions. In reviewing FY 2011 MDS assessment data, we found that approximately 30 percent of the SNF Part A patients did not have a medical need that would qualify them for coverage under the SNF PPS. Reducing the rates paid for beneficiaries with complex medical conditions at the same time therapy rates are being adjusted may create access problems for patients with complex medical and rehabilitation needs. Thus, while we considered an across-the-board recalibration of the nursing CMIs, we decided it would be more prudent to keep the payment levels for the low-volume complex medical services at their present levels for 2012. We plan to reassess the adequacy of the complex medical payment rates as part of the development of the NTA component discussed in section III.C.1 of this final rule. We believe that applying the recalibration to only the nursing CMIs of the RUG–IV therapy groups will restore the system to the intended budget neutrality and ensure adequate access to quality SNF care for the important subset of Medicare beneficiaries needing complex medical care.

As described in section III.B.2 of this final rule and in sections XII.A.5 and II.B.2 of the proposed rule, we also considered how the recalibration might be implemented so as to mitigate the economic impact of the recalibration on facilities. Specifically, we considered mitigating the impact of the recalibration by phasing in the negative adjustments prospectively over multiple years until parity was achieved. However, as discussed elsewhere in this preamble, we believe that in implementing RUG–IV, it is essential that we stabilize the baseline as quickly as possible without creating a significant adverse effect on the industry or to beneficiaries. For the reasons discussed in section II.B.2 of this final rule, we do not believe that implementation of the full recalibration in FY 2012 should negatively impact facilities, beneficiaries or quality of care. Moreover, implementing the recalibration over a multi-year period would continue the significant overpayments observed in FY 2011 and could further destabilize the SNF PPS.

We received a number of comments on the impact analysis contained in the proposed rule which, along with our responses, appear below.

Comment: Several commenters believed that CMS did not consider adequately possible alternative methodologies for applying or implementing the recalibration of the case-mix indexes. Specifically, commenters believed that CMS should consider a phase-in approach for the recalibration, if it were to be finalized.

Response: We believe that the discussion of alternatives in this section above, in section III.B.2 above, as well as in the FY 2012 proposed rule (76 FR 26372, 26403 through 26404) provides sufficient consideration of alternatives as well as appropriate justification for our finalized changes. Regarding a phase-in approach, we noted in section III.B.2 above our belief that the 18.1 percent SNF profit margins for Medicare even before the FY 2011 overpayments occurred would justify a full recalibration in FY 2012. It is also important to note that this recalibration would serve to remove an unintended spike in payments rather than decreasing an otherwise appropriate payment amount; thus, we do not believe that the recalibration should negatively affect facilities, beneficiaries, or quality of care, or create an undue hardship on providers. In fact, notwithstanding the recalibration, the FY 2012 payment rates will actually be 3.4 percent higher than the rates established for FY 2010, the last period prior to the unintended spike in payment levels. We continue to believe that in implementing RUG–IV, it is essential that we stabilize the baseline as quickly as possible without creating a significant adverse effect on the industry or to beneficiaries. Utilizing a phase-in approach would only add to, rather than reduce, the cumulative excess payments.

Comment: Several commenters expressed concern that the impact analysis presented in the proposed rule did not account adequately for the total

economic impact of the policy changes discussed in the FY 2012 proposed rule. One commenter stated specifically that the implementation of the proposed changes could lead the U.S. economy back into a deep recession.

Response: As indicated in Table 11 above, the changes due to the recalibration of the CMIs (which is arguably the only proposed change which would have a definitive negative impact on current facility payments) are expected to result in a decrease in Medicare payments to SNFs of 12.6 percent. We note that the recalibration is only intended to restore budget neutrality between the RUG–53 and RUG–IV case-mix systems, which effectively will align overall payments under RUG–IV in FY 2012 with those under RUG–III, not accounting for subsequent increases associated with the annual market basket increase.

Based on a comparative analysis of the actual payment amounts reflected on claims paid in FY 2010 and in FY 2011, payments to facilities increased in FY 2011 by an average of approximately $66 per day per resident for all providers. Furthermore, as noted in section III.B.2 of this final rule, the aggregate Medicare margin for freestanding SNFs in FY 2009, prior to the implementation of the parity adjustment in FY 2011 and the resulting overpayments, was 18.1 percent, up from 16.6 percent in 2008. Therefore, given these high Medicare margins coupled with the fact that Medicare payments represent a small percentage of aggregate facility revenues (considering all payers), we do not believe it can be concluded that a return to the intended payment levels after the FY 2011 short-term spike in payments will result in a direct and significant negative macroeconomic effect on the U.S. economy. For these reasons, we believe that the regulatory impact analysis both in this final rule and in the proposed rule adequately assesses the economic impact of the changes to the RUG–IV system.

6. Accounting Statement

As required by OMB Circular A–4 (available online at *http://www.whitehouse.gov/sites/default/files/omb/assets/regulatory_matters_pdf/a-4.pdf*), in Table 12, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule. Tables 12 provides our best estimate of the possible changes in Medicare payments under the SNF PPS as a result of the policies in this final rule, based on the data for 14,706 SNFs in our database. All expenditures are classified as transfers to Medicare providers (that is, SNFs).

TABLE 12—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES, FROM THE 2011 SNF PPS FISCAL YEAR TO THE 2012 SNF PPS FISCAL YEAR

Category	Transfers
Annualized Monetized Transfers	−$3.87 billion.*
From Whom To Whom?	Federal Government to SNF Medicare Providers.

*The net decrease of $3.87 billion in transfer payments is a result of the decrease of $4.47 billion due to the recalibration of the case mix adjustment, together with the increase of $600 million due to the MFP-adjusted market basket update.

7. Conclusion

The overall estimated payments for SNFs in FY 2012 are projected to decrease by $3.87 billion, or 11.1 percent, compared with those in FY 2011. We estimate that under RUG–IV, SNFs in urban and rural areas would experience, on average, an 11.3 and 10.3 percent decrease, respectively, in estimated payments compared with FY 2011. Providers in the urban East North Central region would experience the largest estimated decrease in payments of approximately 11.8 percent. In order to have achieved parity between the RUG–53 and RUG–IV case-mix systems in FY 2011, aggregated payments would have had to have been 11.1 percent lower. It should also be noted that the FY 2012 payment rates, which remove the unanticipated excess payments resulting from the FY 2011 parity adjustment, are still 3.4 percent higher than the FY 2010 rates, the last fiscal year before the introduction of RUG–IV.

B. Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (RFA) requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, non-profit organizations, and small governmental jurisdictions. Most SNFs and most other providers and suppliers are small entities, either by their non-profit status or by having revenues of $13.5 million or less in any 1 year. For purposes of the RFA, approximately 91 percent of SNFs are considered small businesses according to the Small Business Administration's latest size standards, with total revenues of $13.5 million or less in any 1 year. (For details, see the Small Business Administration's Web site at *http://ecfr.gpoaccess.gov/cgi/t/text/text-idx?c=ecfr&sid=2465b064ba6965cc1fbd2eae60854b11&rgn=div8&view=text&node=13:1.0.1.1.16.1.266.9&idno=13*). Individuals and States are not included in the definition of a small entity. In addition, approximately 21 percent of SNFs classified as small entities are non-profit organizations. Finally, the estimated number of small business entities does not distinguish provider establishments that are within a single firm and, therefore, the number of SNFs classified as small entities may be higher than the estimate above.

This final rule updates the SNF PPS rates published in the update notice for FY 2011 (75 FR 42886, July 22, 2010) and the associated correction notice (75 FR 55801, September 14, 2010). We estimate that implementing the recalibration discussed in section II.B.2 above would result in a net decrease of $3.87 billion in payments to SNFs for FY 2012. This reflects a $600 million increase from the update to the payment rates and a $4.47 billion reduction from the recalibration of the case-mix adjustment. As indicated in Table 11, the estimated effect of the recalibration on facilities for FY 2012 would be an aggregate negative impact of 11.1 percent. While it is projected in Table 11 that all providers would experience a net decrease in payments, we note that some individual providers may experience larger decreases in payments than others due to the distributional impact of the FY 2012 wage indexes and the degree of Medicare utilization.

Guidance issued by the Department of Health and Human Services on the proper assessment of the impact on small entities in rulemakings, utilizes a cost or revenue impact of 3 to 5 percent as a significance threshold under the RFA. According to MedPAC, Medicare covers approximately 12 percent of total patient days in freestanding facilities and 23 percent of facility revenue (March 2011). However, it is worth

noting that the distribution of days and payments is highly variable. That is, the majority of SNFs have significantly lower Medicare utilization. As a result, for most facilities, when all payers are included in the revenue stream, the overall impact effect to total revenues should be substantially less than those presented in Table 11. Therefore, the Secretary has determined that this final rule may have a significant impact on a substantial number of small entities.

We offer an analysis of the alternatives considered in section VII.A.4 of this final rule. The analysis above, together with the remainder of this preamble, constitutes the final regulatory flexibility analysis.

In addition, section 1102(b) of the Social Security Act requires us to prepare a regulatory impact analysis (RIA) if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 100 beds. This final rule will affect small rural hospitals that (a) furnish SNF services under a swing-bed agreement or (b) have a hospital-based SNF. We anticipate that the impact on small rural hospitals would be similar to the impact on SNF providers overall. Therefore, the Secretary has determined that this final rule may have a significant impact on the operations of a substantial number of small rural hospitals.

Comment: One commenter believed that the RFA analysis and RIA discussed in the proposed rule did not sufficiently account for the impact of the proposed changes, specifically the recalibration of the case-mix indexes, on small entities. Also, the commenter pointed out that the portion of SNFs which may be characterized properly as small entities may, in fact, be higher than our estimates. The commenter asserted that in evaluating the effect of the proposed changes on small entities ''as a whole,'' the analysis must necessarily consider their effect on the entity's overall margins. This commenter also asserted that CMS failed to provide sufficient discussion of possible alternatives. The commenter further suggested that the RIA cannot also serve to meet the requirements of the RFA.

Response: We do not agree with the commenter's assertion that the RFA or RIA discussions in the proposed rule were insufficient. First, we would note that, as discussed above, approximately 91 percent of all SNFs may be classified as small entities. As the commenter pointed out, the portion of SNFs which may be characterized properly as small entities may, in fact, be higher than our estimates. Therefore, any discussion of impacts throughout the proposed rule, as well as in this final rule, may be directly characterized as an analysis of the impact of the FY 2012 changes to the SNF PPS on small entities. Moreover, the focus on small entities in this instance (a category that would include the small rural hospitals that are the subject of a RIA) also means that the analyses required under the RIA and the RFA are, in fact, directly interlinked in this situation, as essentially the same factors are being examined in both contexts. Also, guidance issued by the Department of Health and Human Services on the proper assessment of the impact on small entities in rulemakings, utilizes a total cost or revenue impact of 3 to 5 percent as a significance threshold under the RFA analysis and not overall margins. As a result, the addition of other (non-Medicare) revenue streams effectively dilutes the impact of any Medicare changes, as we noted previously in this discussion as well as in the proposed rule: ''* * * for most facilities, when all payers are included in the revenue stream, the overall impact effect [of the Medicare changes] to total revenues should be substantially less * * *'' (76 FR 26405).

Furthermore, we would note that we provided additional data on our Web site on therapy utilization trends for the different types of SNF providers (profit, non-profit, and government), which are available online at *http://www.cms.gov/SNFPPS/02_Spotlight.asp.* This additional data, as well as our impact analysis in the proposed rule, illustrated that all SNFs, including small entities and non-profits, have experienced a significant increase in payments in FY 2011. We do not believe that the recalibration constitutes a rate cut but instead represents a return to the appropriate level of SNF payments, which have been found to be more than adequate for SNFs and small entities within the SNF industry. This information, as well as the discussion of alternatives in section XII.A.5 of the proposed rule, is sufficient to fulfill our obligations under the RFA.

Finally, given our discussion of alternatives in section VIII.D of this final rule and elsewhere in this preamble, and our analysis of the potential impacts on the SNF industry as a whole, we believe that the requirements under the RFA for providing this final RFA analysis have been properly addressed.

C. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2011, that threshold is approximately $136 million. This final rule would not impose spending costs on State, local, or Tribal governments in the aggregate, or by the private sector, of $136 million.

D. Federalism Analysis

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that impose substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This final rule would have no substantial direct effect on State and local governments, preempt State law, or otherwise have Federalism implications.

List of Subjects in 42 CFR Part 413

Health facilities, Kidney diseases, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES

■ 1. The authority citation for part 413 continues to read as follows:

Authority: Secs. 1102, 1812(d), 1814(b), 1815, 1833(a), (i), and (n), 1861(v), 1871, 1881, 1883, and 1886 of the Social Security Act (42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww); and sec. 124 of Public Law 106–133 (113 Stat. 1501A–332).

Subpart J—Prospective Payment for Skilled Nursing Facilities

■ 2. Section 413.337 is amended by—

■ A. Revising paragraphs (d)(1) and (d)(2).

■ B. Adding paragraph (d)(3).

The revisions and addition read as follows:

§ 413.337 Methodology for calculating the prospective payment rates.

* * * * *

(d) * * *

(1) *Update formula.* The unadjusted Federal payment rate shall be updated as follows:

(i) For the initial period beginning on July 1, 1998, and ending on September 30, 1999, the unadjusted Federal payment rate is equal to the rate computed under paragraph (b)(5)(iii) of this section increased by a factor equal to the SNF market basket index percentage change for such period minus 1.0 percentage point.

(ii) For fiscal year 2000, the unadjusted Federal payment rate is equal to the rate computed for the initial period described in paragraph (d)(1)(i) of this section increased by a factor equal to the SNF market basket index percentage change for that period minus 1.0 percentage point.

(iii) For fiscal year 2001, the unadjusted Federal payment rate is equal to the rate computed for the previous fiscal year increased by a factor equal to the SNF market basket index percentage change for the fiscal year.

(iv) For fiscal years 2002 and 2003, the unadjusted Federal payment rate is equal to the rate computed for the previous fiscal year increased by a factor equal to the SNF market basket index percentage change for the fiscal year involved minus 0.5 percentage points.

(v) For each subsequent fiscal year, the unadjusted Federal payment rate is equal to the rate computed for the previous fiscal year increased by a factor equal to the SNF market basket index percentage change for the fiscal year involved.

(2) *Forecast error adjustment.* Beginning with fiscal year 2004, an adjustment to the annual update of the previous fiscal year's rate will be computed to account for forecast error. The initial adjustment (in fiscal year 2004) to the update of the previous fiscal year's rate will take into account the cumulative forecast error between fiscal years 2000 and 2002. Subsequent adjustments in succeeding fiscal years will take into account the forecast error from the most recently available fiscal year for which there is final data. The forecast error adjustment applies whenever the difference between the forecasted and actual percentage change in the SNF market basket index exceeds the following threshold:

(i) 0.25 percentage points for fiscal years 2004 through 2007; and

(ii) 0.5 percentage points for fiscal year 2008 and subsequent fiscal years.

(3) *Multifactor productivity (MFP) adjustment.* For fiscal year 2012 and each subsequent fiscal year, the SNF market basket index percentage change for the fiscal year (as modified by any applicable forecast error adjustment under paragraph (d)(2) of this section) shall be reduced by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act. The reduction of the market basket index percentage change by the MFP adjustment may result in the market basket index percentage change being less than zero for a fiscal year, and may result in the unadjusted Federal payment rates for a fiscal year being less than such payment rates for the preceding fiscal year.

FEDERAL REGISTER

Vol. 76 Monday,
No. 152 August 8, 2011

Part IV

Department of Health and Human Services

Centers for Medicare and Medicaid Services

Medicare and Medicaid Programs; Quarterly Listing of Program Issuances–January Through March 2011 and Proposal for Future Notices; Notice

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[CMS–9066–NC]

Medicare and Medicaid Programs; Quarterly Listing of Program Issuances—January Through March 2011 and Proposal for Future Notices

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice with comment period.

SUMMARY: This quarterly notice lists CMS manual instructions, substantive and interpretive regulations, and other **Federal Register** notices that were published from January through March 2011, relating to the Medicare and Medicaid programs and other programs administered by CMS. It also solicits comments on a process that CMS is considering to provide current up-to-date information in a Web friendly format. We are soliciting feedback on options that would improve accessibility and be less burdensome to beneficiaries, providers, and suppliers.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on September 7, 2011.

ADDRESSES: In commenting, please refer to file code CMS–9066–NC. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov.* Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address only: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–9066–NC, P.O. Box 8012, Baltimore, MD 21244–1850.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address only: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–9066–NC, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

4. *By hand or courier.* Alternatively, you may deliver (by hand or courier) your written comments only to the following address prior to the close of the comment period: Centers for Medicare & Medicaid Services, Department of Health and Human Services, 7500 Security Boulevard, Baltimore, MD 21244–1850.

If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786–7195 in advance to schedule your arrival with one of our staff members.

Comments erroneously mailed to the address indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have been received: *http://www.regulations.gov.* Follow the search instructions on that Web site to view public comments.

Comments received timely will also be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1–800–743–3951.

FOR FURTHER INFORMATION CONTACT: It is possible that an interested party may need specific information and not be able to determine from the listed information whether the issuance or regulation would fulfill that need. Consequently, we are providing contact persons to answer general questions concerning each of the addenda.

Background

Among other things, the Centers for Medicare & Medicaid Services (CMS) is responsible for administering the Medicare and Medicaid programs and coordination and oversight of private health insurance. Administration and oversight of these programs involves the following: (1) Furnishing information to Medicare and Medicaid beneficiaries, health care providers, and the public; and (2) maintaining effective communications with CMS regional offices, State governments, State Medicaid agencies, State survey

agencies, various providers of health care, all Medicare contractors that process claims and pay bills, National Association of Insurance Commissioners (NAIC), health insurers, and other stakeholders. To implement the various statutes on which the programs are based, we issue regulations under the authority granted to the Secretary of the Department of Health and Human Services under sections 1102, 1871, 1902, and related provisions of the Social Security Act (the Act) and Public Health Service Act. We also issue various manuals, memoranda, and statements necessary to administer and oversee the programs efficiently.

Section 1871(c) of the Act requires that we publish a list of all Medicare manual instructions, interpretive rules, statements of policy, and guidelines of general applicability not issued as regulations at least every 3 months in the **Federal Register**. We have been announcing each quarter the most current and relevant information; however, many of the quarterly notices simply duplicate the information that was previously published, since there often are no new relevant updates in some categories for the quarter. While we plan to publish the quarterly notice required by section 1871(c) of the Act, we are proposing steps to avoid republishing duplicative information that is available to the public elsewhere. Moreover, we plan to use our Web site to provide complete and timely information with respect to certain types of Medicare providers for specific services. We believe that the Web site offers a more convenient tool for the public to find the full list of qualified providers for these specific services and offers more flexibility and ''real time''accessibility to the public.

Since the publication of our first notice on June 9, 1988, technology has advanced, and the information provided in this notice is now available in more efficient, economical, and accessible ways to meet the requirement for publication set forth in the statute. Starting with the next quarterly notice, which will publish in September 2011, we propose to provide only the specific updates that have occurred in the 3-month period along with a hyperlink to the full listing that is available on the CMS Web site or the appropriate data registries that are used as our resources. This information is the most current up-to-date information, and will be available earlier than we publish our quarterly notice. Currently, there is a 3-month lapse between the information available on the Web site and information covered by this quarterly notice. The Web site list provides more timely access for beneficiaries, providers, and suppliers. Also, many of the Web sites have listservs; that is, the public can subscribe and receive immediate notification of any updates to the Web site. These listservs avoid the need to check the Web site, as notification of updates is automatic and sent to the subscriber as they occur.

If assessing a Web site proves to be difficult, the contact person listed can provide information. We are soliciting comments as to whether this approach poses a problem to those who access the information set out in this notice. In addition, we are soliciting comments on alternative formats to provide this information to the public. For example, we could publish a notice that only provides Web links to these addenda, or we could create a CMS Quarterly Issuance Web page that provides all of the addenda. We welcome comments and any additional information as to whether these alternative processes would improve accessibility to information or pose an unintended burden to beneficiaries, providers, and suppliers.

We believe this approach is in alignment with CMS' commitment to the general principles of the President's Executive Order 13563 released January 2011entitled ''Improving Regulation and Regulatory Review,'' which promotes modifying and streamlining an agency's regulatory program to be more effective in achieving regulatory objectives. Section 6 of Executive Order 13563 requires agencies to identify regulations that may be ''outmoded, ineffective, insufficient, or excessively burdensome, and to modify, streamline, expand or repeal them in accordance with what has been learned.'' This approach is also in alignment with the President's Open Government and Transparency Initiative that establishes a system of transparency, public participation, and collaboration.

How to Use the Notice

This notice is organized so that a reader may access the subjects published during the quarter covered by the notice to determine whether any are of particular interest. We expect this notice to be used in concert with previously published notices. Those unfamiliar with a description of our Medicare manuals should view the manuals at *http://www.cms.gov/manuals.*

To aid the reader, we have organized and divided this current listing into 15 addenda.

Addendum I: Medicare and Medicaid Manual Instructions,
Addendum II: Regulation Documents Published in the **Federal Register**,
Addendum III: CMS Rulings,
Addendum IV: National Coverage Determinations,
Addendum V: FDA-Approved Category B IDEs,
Addendum VI: Approval Numbers for the Collections of Information,
Addendum VII: Medicare-Approved Carotid Stent Facilities,
Addendum VIII: American College of Cardiology's National Cardiovascular Data Registry Sites,
Addendum IX: Active CMS Coverage-Related Guidance Documents,
Addendum X: Special One-Time Notices Regarding National Coverage Provisions,
Addendum XI: National Oncologic Positron Emission Tomography Registry (NOPR) Sites,
Addendum XII: Medicare-Approved Ventricular Assist Device (Destination Therapy) Facilities,
Addendum XIII: Lung Volume Reduction Surgery,
Addendum XIV: Medicare-Approved Bariatric Surgery Facilities,
Addendum XV: FDG–PET for Dementia and Neurodegenerative Diseases Clinical Trials.

Authority: (Catalog of Federal Domestic Assistance Program No. 93.773, Medicare—Hospital Insurance, Program No. 93.774, Medicare—Supplementary Medical Insurance Program, and Program No. 93.714, Medical Assistance Program)

Dated: August 2, 2011.

Jacquelyn Y. White,

Director, Office of Strategic Operations and Regulatory Affairs.

Publication Dates for the Previous Four Quarterly Notices

We publish this notice at the end of each quarter reflecting information released by CMS during the previous quarter. The publication dates of the previous four Quarterly Listing of Program Issuances notices are: June 28, 2010 (75 FR 36786), September 24, 2010 (75 FR 58790), December 17, 2010 (75 FR 79174), and March 31, 2011 (76 FR 17873).

For the purposes of this quarterly notice, we are providing a complete listing in each addendum for the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would provide only the specific updates that have occurred in the three-month period along with a hyperlink to the Web site to access this information and a contact person for questions or additional information.

Addendum I: Medicare and Medicaid Manual Instructions (January Through March 2011)

The CMS Manual System is used by CMS program components, partners, providers, contractors, Medicare

Advantage organizations, and State Survey Agencies to administer CMS programs. It offers day-to-day operating instructions, policies, and procedures based on statutes and regulations, guidelines, models, and directives. In 2003, we transformed the CMS Program Manuals into a Web user-friendly presentation and renamed it the CMS Online Manual System.

How To Obtain Manuals

The Internet-only Manuals (IOMs) are a replica of the Agency's official record copy. Paper-based manuals are CMS manuals that were officially released in hardcopy. The majority of these manuals were transferred into the Internet-only manual (IOM) or retired. Pub 15–1, Pub 15–2 and Pub 45 are exceptions to this rule and are still active paper-based manuals. The remaining paper-based manuals are for reference purposes only. If you notice policy contained in the paper-based manuals that was not transferred to the IOM, send a message via the CMS Feedback tool.

Those wishing to subscribe to old versions of CMS manuals should contact the National Technical Information Service, Department of Commerce, 5301 Shawnee Road, Alexandria, VA 22312 Telephone (703–605–6050). You can download copies of the listed material free of charge at: *http://cms.gov/manuals.*

How To Review Transmittals or Program Memoranda

Those wishing to review transmittals and program memoranda can access this information at a local Federal Depository Library (FDL). Under the FDL program, government publications are sent to approximately 1,400 designated libraries throughout the United States. Some FDLs may have arrangements to transfer material to a local library not designated as an FDL. Contact any library to locate the nearest FDL. This information is available at *http://www.gpo.gov/libraries/.*

In addition, individuals may contact regional depository libraries that receive and retain at least one copy of most Federal government publications, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are not sales outlets. Individuals may obtain information about the location of the nearest regional depository library from any library.

CMS publication and transmittal numbers are shown in the listing entitled Medicare and Medicaid Manual Instructions. To help FDLs locate the materials, use the CMS publication and transmittal numbers. For example, to find the Medicare National Coverage Determination publication titled Screening for the Human Immunodeficiency Virus (HIV) Infection Screening for the Human Immunodeficiency Virus (HIV) Infection—use CMS–Pub. 100–03, Transmittal No. 131.

Addendum I lists a unique CMS transmittal number for each instruction in our manuals or program memoranda and its subject number. A transmittal may consist of a single or multiple instruction(s). Often, it is necessary to use information in a transmittal in conjunction with information currently in the manual.

For the purposes of this quarterly notice, we list below all the manuals, subjects, publication numbers, and the corresponding transmittal numbers for the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would continue to provide only the specific updates to the list of manual instructions that have occurred in the three-month period along with a hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available on our Web site at *http://www.cms.gov/Manuals.* For questions or additional information, contact Ismael Torres (410–786–1864).

Addendum II: Regulation Documents Published in the Federal Register (January through March 2011)

Regulations and Notices

Regulations and notices are published in the daily **Federal Register**. Interested individuals may purchase individual copies or subscribe to the **Federal Register** by contacting GPO at *http://www.gpo.gov/fdsys.* When ordering individual copies, it is necessary to cite either the date of publication or the volume number and page number.

The **Federal Register** is available as an online database through *GPO Access.* The online database is updated by 6 a.m. each day the **Federal Register** is published. The database includes both text and graphics from Volume 59, Number 1 (January 2, 1994) through the present date and can be accessed at *http://www.gpoaccess.gov/fr/index.html.* The following Web site *http://www.archives.gov/federal-register/* provides information on how to access electronic editions, printed editions, and reference copies.

Addendum II lists all substantive and interpretive Medicare and Medicaid regulations and general notices published in the **Federal Register** during the quarter covered by this notice.

BILLING CODE 4120–01–P

Publication Date	FR Vol. 76 Page Number	42 CFR Parts Affected	File Code	Title of Regulation
January 3, 2011	148	----------	CMS-2321-N	Medicaid: Final FY 2009 and 2010 and Preliminary FY 2011 disproportionate share Hospital (DSH) Payment Allotments and Institutions for Mental Disease DSH Limits

March 31, 2011	17870	----------	CMS-9063-N	Medicare and Medicaid Programs; Quarterly Listing of Program Issuances—October Through December 2010

BILLING CODE 4120–01–C

For the purposes of this quarterly notice, we list dates published, the **Federal Register** citations, parts of the Code of Federal Regulations (CFR) that have changed (if applicable), agency file codes, and titles of the regulations for the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would discontinue publishing the list of all substantive and interpretive Medicare and Medicaid regulations and general notices published in the **Federal Register.** We would continue to provide the hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available on our Web site at: *http://www.cms.gov/quarterlyproviderupdates/downloads/Regs-1Q11QPU.pdf.*

For questions or additional information, contact Terri Plumb (410–786–4481).

Addendum III: CMS Rulings

CMS Rulings are decisions of the Administrator that serve as precedent final opinions and orders and statements of policy and interpretation. They provide clarification and interpretation of complex or ambiguous provisions of the law or regulations relating to Medicare, Medicaid, Utilization and Quality Control Peer Review, private health insurance, and related matters.

The rulings can be accessed at *http://www.cms.gov/Rulings/CMSR/list.asp#TopOfPage.*

For questions or additional information, contact Tiffany Lafferty (410–786–7548).

Addendum IV: Medicare National Coverage Determinations (January through March 2011)

Addendum IV includes completed national coverage determinations (NCDs), or reconsiderations of completed NCDs, from the quarter covered by this notice. Completed decisions are identified by the section of the National Coverage Determination Manual (NCDM) in which the decision appears, the title, the date the publication was issued, and the effective date of the decision.

A national coverage determination (NCD) is a determination by the Secretary with respect to whether or not a particular item or service is covered nationally under the Medicare Program (title XVIII of the Act), but does not include a determination of the code, if any, that is assigned to a particular covered item or service, or payment determination for a particular covered item or service. The entries below include information concerning completed decisions as well as sections on program and decision memoranda, which also announce decisions or, in some cases, explain why it was not appropriate to issue an NCD. Information on completed decisions as well as pending decisions has also been posted on the CMS Web site.

Title	NCDM Section	Transmittal Number	Issue Date	Effective Date
Home Oxygen Use to Treat Cluster Headache (CH)	240.2	TR130NCD	01/14/2011	01/04/2011
Magnetic Resonance Imaging (MRI) in Medicare Beneficiaries with Implanted (PMs) or ICDs	220.1	TR132NCD	03/04/2011	02/24/2011
Changes to the NCD Edit Software for April 2011	190	TR2133CP	01/14/2011	04/01/2011

Based on our proposal for future quarterly notices, we would continue to provide only the specific updates that have occurred in the three-month period along with a hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available on our Web site at: *http://www.cms.gov/medicare-coverage-database/.*

For questions or additional information, contact Wanda Belle (410–786–7491).

Addendum V: FDA-Approved Category B Investigational Device Exemptions (IDEs) (January through March 2011)

Addendum V includes listings of the FDA-approved investigational device exemption (IDE) numbers that the FDA assigns. The listings are organized according to the categories to which the devices are assigned (that is, Category A or Category B), and identified by the IDE number.

For the purposes of this quarterly notice, we list the Category B IDEs as of the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would continue to provide only the specific updates that have occurred in the three-month period along with a hyperlink to the Web site to access this information and a contact person for questions or additional information.

For questions or additional information, contact John Manlove (410–786–6877).

Under the Food, Drug, and Cosmetic Act (21 U.S.C. 360c) devices fall into one of three classes. To assist CMS under this categorization process, the FDA assigns one of two categories to each FDA-approved investigational device exemption (IDE). Category A refers to experimental IDEs, and Category B refers to non-experimental IDEs. To obtain more information about the classes or categories, please refer to the notice published in the April 21, 1997 **Federal Register** (62 FR 19328).

Addendum VI: Approval Numbers for Collections of Information (January through March 2011)

Addendum VI includes listings of all approval numbers from the Office of Management and Budget (OMB) for collections of information in CMS regulations in title 42; title 45, subchapter C; and title 20 of the CFR.

All approval numbers are available to the public at Reginfo.gov, through a computer system that supports the information collection review process. Under the review process, approved information collection requests are assigned OMB control numbers. A single control number may apply to several related information collections.

BILLING CODE 4120–01–P

BILLING CODE 4120–01–C

For the purposes of this quarterly notice, we list all active approval numbers as of the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would discontinue publishing the listing of all approval numbers from the Office of Management and Budget (OMB) for collections of information in CMS regulations in title 42; title 45, subchapter C; and title 20 of the CFR. We would continue to provide the hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available at *http://www.reginfo.gov/public/do/PRAMain.*

For questions or additional information, contact Mitch Bryman (410–786–5258).

Addendum VII: Medicare-Approved Carotid Stent Facilities, (January Through March 2011)

Addendum VII includes listings of Medicare-approved carotid stent facilities. All facilities listed meet CMS standards for performing carotid artery stenting for high risk patients.

On March 17, 2005, we issued our decision memorandum on carotid artery stenting. We determined that carotid artery stenting with embolic protection is reasonable and necessary only if performed in facilities that have been determined to be competent in performing the evaluation, procedure, and follow-up necessary to ensure optimal patient outcomes. We have created a list of minimum standards for facilities modeled in part on professional society satements on competency. All facilities must at least meet our standards in order to receive coverage for carotid artery stenting for high risk patients.

For the purposes of this quarterly notice, we list all Medicare-approved carotid stent facilities that meet the CMS standards as of the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would provide only the specific updates that have occurred in the three-month period along with a hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available on our Web site at: *http://www.cms.gov/MedicareApprovedFacilitie/CASF/list.asp#TopOfPage.* For questions or additional information, contact Sarah J. McClain (410–786–2294).

Addendum VIII: American College of Cardiology's National Cardiovascular Data Registry Sites (January Through March 2011)

Addendum VIII includes a list of the American College of Cardiology's National Cardiovascular Data Registry Sites. We cover implantable cardioverter defibrillators (ICDs) for certain clinical indications, as long as information about the procedures is reported to a central registry. Detailed descriptions of the covered indications are available in the National Coverage Determination (NCD).

In January 2005, CMS established the ICD Abstraction Tool through the Quality Network Exchange (QNet) as a temporary data collecton mechanism. On October 27, 2005, CMS announced that the American College of Cardiology's National Cardiovascular Data Registry (ACC–NCDR) ICD Registry satisfies the data reporting requirements in the NCD. Hospitals needed to transition to the ACC–NCDR ICD Registry by April 2006.

In order to obtain reimbursement, Medicare national coverage policy requires that providers implanting ICDs for primary prevention clinical indications (that is, patients without a history of cardiac arrest or spontaneous arrhythmia) report data on each primary prevention ICD procedure. This policy became effective January 27, 2005. Details of the clinical indications that are covered by Medicare and their respective data reporting requirements are available in the Medicare National Coverage Determination (NCD) Manual, which is on the Centers for Medicare & Medicaid Services (CMS) Web site at *http://www.cms.hhs.gov/Manuals/IOM/itemdetail.asp?filterType=none&filterByDID=99&sortByDID=1&sortOrder=ascending&itemID=CMS014961.*

A provider can use either of two mechanisms to satisfy the data reporting requirement. Patients may be enrolled either in an Investigational Device Exemption trial studying ICDs as identified by the FDA or in the American College of Cardiology's National Cardiovascular Data Registry (ACC–NCDR) ICD registry. Therefore, in order for a beneficiary to receive a Medicare-covered ICD implantation for primary prevention, the beneficiary must receive the scan in a facility that participates in the ACC–NCDR ICD registry. We maintain a list of facilities that have been enrolled in this registry. The facilities that have been designated in the quarter covered by this notice are listed. The entire list of facilities that participate in the ACC–NCDR ICD registry can be found at *http://www.ncdr.com/webncdr/common.*

For the purposes of this quarterly notice, we list the Medicare-approved ICD facilities as of the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would provide only the specific updates that have occurred in the three-month period along with a hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available by accessing our Web site and clicking on the link for the American College of Cardiology's National Cardiovascular Data Registry at: *http://www.ncdr.com/webncdr/common.*

For questions or additional information, contact Joanna Baldwin, MS (410–786–7205).

Addendum IX: Active CMS Coverage-Related Guidance Documents (January Through March 2011)

Addendum IX includes a list of active CMS guidance documents. As required by section 731 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173, enacted on December 8, 2003), we began listing the current versions of our guidance documents in each quarterly listings notice.

In the September 24, 2004 **Federal Register** (69 FR 57325), we published a notice in which we explained how we would develop coverage-related guidance documents. These guidance documents are issued pursuant to section 1862(l)(1) of the Social Security. In our notice, we committed to the public that, ''At regular intervals, we will update a list of all guidance documents in the **Federal Register**.''

Addendum IX includes a list of active CMS guidance documents as of the ending date of the period covered by this notice.

Document Name: Factors CMS Considers in Commissioning External Technology Assessments.

Date of Issuance: April 11, 2006.

Document Name: Factors CMS Considers in Opening a National Coverage Determination.

Date of Issuance: April 11, 2006.

Document Name: Factors CMS Considers in Referring Topics to the Medicare Coverage Advisory Committee.

Date of Issuance: December 12, 2006.

Document Name: National Coverage Determinations with Data Collection as a Condition of Coverage: Coverage With Evidence Development.

Date of Issuance: July 12, 2006.

For the purposes of this quarterly notice, we list the active coverage-related guidance documents as of the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would discontinue publishing this addendum unless there was an update to the list of guidance documents. We would continue to provide the hyperlink to the Web site to access this information and a contact person for questions or additional information.

To obtain full-text copies of these documents, visit the CMS Coverage Web site at *http://www.cms.gov/mcd/index_list.asp?list_type=mcd_1* and click on the archives link.

For questions or additional information, contact Lori Ashby (410–786–6322).

Addendum X: List of Special One-Time Notices Regarding National Coverage Provisions (January Through March 2011)

Addendum X includes a list of special one-time notices regarding national coverage provisions. We publish a list of issues that require public notification, such as a particular clinical trial or research study that qualifies for Medicare coverage.

As medical technologies, the contexts under which they are delivered, and the health needs of Medicare beneficiaries grow increasingly complex, our national coverage determination (NCD) process must adapt to accommodate these complexities. As part of this adaptation, our national coverage decisions often include multi-faceted coverage determinations, which may place conditions on the patient populations eligible for coverage of a particular item or service, the providers who deliver a particular service, or the methods in which data are collected to supplement the delivery of the item or service (such as participation in a clinical trial).

We outline these conditions as we release new or revised NCDs. Details surrounding these conditions, however, may need to be shared with the public as ''one-time notices'' in the **Federal Register**. For example, we may require that a particular medical service may be delivered only in the context of a CMS-recognized clinical research study, which was not named in the NCD itself. We would then use Addendum X of this notice, along with our coverage Web site at *http://www.cms.hhs.gov/coverage,* to provide the public with information about the clinical research study that it ultimately recognizes.

There were no special one-time notices regarding national coverage provisions published in the January through March 2011 quarter.

For the purposes of this quarterly notice, we provide the information that there are no special one-time notices as of the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would discontinue publishing this addendum unless there was a circumstance requiring publication of a special one-time notice. We would continue to provide the hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available at *http://www.cms.hhs.gov/coverage.*

For questions or additional information, contact Lori Ashby (410–786–6322).

Addendum XI: National Oncologic PET Registry (NOPR) (January Through March 2011)

Addendum XI includes a listing of National Oncologic Positron Emission Tomography Registry (NOPR) sites. We cover positron emission tomography (PET) scans for particular oncologic indications when they are performed in a facility that participates in the NOPR.

In January 2005, we issued our decision memorandum on positron emission tomography (PET) scans, which stated that CMS would cover PET scans for particular oncologic indications, as long as they were performed in the context of a clinical study. We have since recognized the National Oncologic PET Registry as one of these clinical studies. Therefore, in order for a beneficiary to receive a Medicare-covered PET scan, the beneficiary must receive the scan in a facility that participates in the registry.

For the purposes of this quarterly notice, we provide the list of facilities that meet CMS's requirements for performing PET scans under National Coverage Determination CAG–00181N as of the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would provide only the specific updates that have occurred in the three-month period along with a hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available at *http://www.cms.gov/MedicareApprovedFacilitie/NOPR/list.asp#TopOfPage.*

For questions or additional information, contact Stuart Caplan, RN, MAS (410–786–8564).

Addendum XII: Medicare-Approved Ventricular Assist Device (Destination Therapy) Facilities (January Through March 2011)

Addendum XII includes a listing of Medicare-approved facilities that receive coverage for ventricular assist devices used as destination therapy. All facilities were required to meet our standards in order to receive coverage for ventricular assist devices implanted as destination therapy.

On October 1, 2003, we issued our decision memorandum on ventricular assist devices (VADs) for the clinical indication of destination therapy. We determined that VADs used as destination therapy are reasonable and necessary only if performed in facilities that have been determined to have the experience and infrastructure to ensure optimal patient outcomes. We established facility standards and an application process. All facilities were required to meet our standards in order to receive coverage for VADs implanted as destination therapy.

For the purposes of this quarterly notice, we list all Medicare-approved facilities that meet our standards as of the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would provide only the specific updates that have occurred in the three-month period along with a hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available on our Web site at *http://www.cms.gov/MedicareApprovedFacilitie/VAD/list.asp#TopOfPage.*

For questions or additional information, contact JoAnna Baldwin, MS (410–786–7205).

Addendum XIII: Lung Volume Reduction Surgery (LVRS) (January Through March 2011)

Addendum XIII includes a listing of Medicare-approved facilities that are eligible to receive coverage for lung volume reduction surgery. Until May 17, 2007, facilities that participated in the National Emphysema Treatment Trial were also eligible to receive coverage.

The following three types of facilities are eligible for reimbursement for Lung Volume Reduction Surgery (LVRS):

- National Emphysema Treatment Trial (NETT) approved (Beginning 05/07/2007, these will no longer automatically qualify and can qualify only with the other programs);
- Credentialed by the Joint Commission (formerly, the Joint Commission on Accreditation of Healthcare Organizations (JCAHO)) under their Disease Specific Certification Program for LVRS; and
- Medicare approved for lung transplants.

Only the first two types are in the list.

LVRS Facilities				
Facility name	**Provider Number**	**Date Approved**	**State**	**Type of Certification**

For the purposes of this quarterly notice, we list all Medicare-approved facilities that meet the CMS standards as of the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would provide only the specific updates that have occurred in the three-month period along with a hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available on our Web site at *http://www.cms.gov/MedicareApprovedFacilitie/LVRS/list.asp#TopOfPage.*

For questions or additional information, contact JoAnna Baldwin, MS (410–786–7205).

Addendum XIV Medicare-Approved Bariatric Surgery Facilities (January Through March 2011)

Addendum XIV includes a listing of Medicare-approved facilities that meet minimum standards for facilities modeled in part on professional society statements on competency. All facilities must meet our standards in order to receive coverage for bariatric surgery procedures.

On February 21, 2006, we issued our decision memorandum on bariatric surgery procedures. We determined that bariatric surgical procedures are reasonable and necessary for Medicare beneficiaries who have a body-mass index (BMI) greater than or equal to 35, have at least one co-morbidity related to obesity and have been previously unsuccessful with medical treatment for obesity.

This decision also stipulated that covered bariatric surgery procedures are reasonable and necessary only when performed at facilities that are:

(1) Certified by the American College of Surgeons (ACS) as a Level 1 Bariatric Surgery Center (program standards and requirements in effect on February 15, 2006); or

(2) Certified by the American Society for Bariatric Surgery (ASBS) as a Bariatric Surgery Center of Excellence (BSCOE) (program standards and requirements in effect on February 15, 2006).

For the purposes of this quarterly notice, we list all Medicare-approved facilities that meet CMS's minimum facility standards for bariatric surgery and have been certified by ACS and/or ASMBS as of the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would provide only the specific updates that have occurred in the three-month period along with a hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available on our Web site at *http://www.cms.gov/MedicareApprovedFacilitie/BSF/list.asp#TopOfPage.*

For questions or additional information, contact Kate Tillman, RN, MAS (410–786–9252).

BILLING CODE 4120–01–C

Addendum XV FDG–PET for Dementia and Neurodegenerative Diseases Clinical Trials (January Through March 2011)

Addendum XV includes a listing of Medicare-approved clinical trials for fluorodeoxyglucose positron emission tomography (FDG–PET) for dementia and neurodegenerative diseases.

In a National Coverage Determination for fluorodeoxyglucose positron emission tomography (FDG–PET) for dementia and neurodegenerative diseases (220.6.13), we indicated that an FDG–PET scan is considered reasonable and necessary in patients with mild cognitive impairment or early dementia only in the context of an approved clinical trial that contains patient safeguards and protections to ensure proper administration, use, and evaluation of the FDG–PET scan.

For the purposes of this quarterly notice, we list all Medicare-approved clinical trials as of the ending date of the period covered by this notice. Based on our proposal for future quarterly notices, we would discontinue publishing this addendum unless there were additional Medicare-approved clinical trials for fluorodeoxyglucose positron emission tomography (FDG–PET) for dementia and neurodegenerative diseases. We would continue to provide the hyperlink to the Web site to access this information and a contact person for questions or additional information.

This information is available on our Web site at *http://www.cms.gov/MedicareApprovedFacilitie/PETDT/list.asp#TopOfPage*.

For questions or additional information, contact Stuart Caplan, RN, MAS (410–786–8564).

RIN 1018–AX34

Migratory Bird Hunting; Proposed Migratory Bird Hunting Regulations on Certain Federal Indian Reservations and Ceded Lands for the 2011–12 Season

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: The U.S. Fish and Wildlife Service (hereinafter, Service or we) proposes special migratory bird hunting regulations for certain Tribes on Federal Indian reservations, off-reservation trust lands, and ceded lands for the 2011–12 migratory bird hunting season. This proposed rule responds to Tribal requests for Service recognition of Tribal authority to regulate hunting under established guidelines. This proposed rule would allow the establishment of season bag limits and, thus, harvest, at levels compatible with populations and habitat conditions.

DATES: We will accept all comments on the proposed regulations that are postmarked or received in our office by August 18, 2011.

ADDRESSES: You may submit comments on the proposals by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments on Docket No. FWS–R9–MB–2011–0014.
- *U.S. mail or hand-delivery:* Public Comments Processing, Attn: FWS–R9–MB–2011–0014; Division of Policy and Directives Management; U.S. Fish and Wildlife Service; 4401 N. Fairfax Drive, MS 2042–PDM; Arlington, VA 22203.

We will not accept e-mailed or faxed comments. We will post all comments on *http://www.regulations.gov*. This generally means that we will post any personal information you provide us (see the Public Comments section below for more information).

FOR FURTHER INFORMATION CONTACT: Ron W. Kokel, at: Division of Migratory Bird Management, U.S. Fish and Wildlife Service, Department of the Interior, MS MBSP–4107–ARLSQ, 1849 C Street, NW., Washington, DC 20240; (703) 358–1714.

SUPPLEMENTARY INFORMATION: In the April 8, 2011, **Federal Register** (76 FR 19376), we requested proposals from Indian Tribes wishing to establish special migratory bird hunting regulations for the 2011–12 hunting season, under the guidelines described in the June 4, 1985, **Federal Register** (50 FR 23467). In this supplemental proposed rule, we propose special migratory bird hunting regulations for 30 Indian Tribes, based on the input we received in response to the April 8, 2011, proposed rule, and our previous rules. As described in that proposed rule, the promulgation of annual migratory bird hunting regulations involves a series of rulemaking actions each year. This proposed rule is part of that series.

We developed the guidelines for establishing special migratory bird hunting regulations for Indian Tribes in response to tribal requests for recognition of their reserved hunting rights and, for some Tribes, recognition of their authority to regulate hunting by both tribal and nontribal hunters on their reservations. The guidelines include possibilities for:

(1) On-reservation hunting by both tribal and nontribal hunters, with hunting by nontribal hunters on some reservations to take place within Federal frameworks but on dates different from those selected by the surrounding State(s);

(2) On-reservation hunting by tribal members only, outside of the usual Federal frameworks for season dates and length, and for daily bag and possession limits; and

(3) Off-reservation hunting by tribal members on ceded lands, outside of usual framework dates and season length, with some added flexibility in daily bag and possession limits.

In all cases, the regulations established under the guidelines must be consistent with the March 10 to September 1 closed season mandated by the 1916 Convention between the United States and Great Britain (for Canada) for the Protection of Migratory Birds (Treaty). The guidelines apply to those Tribes having recognized reserved hunting rights on Federal Indian reservations (including off-reservation trust lands) and on ceded lands. They also apply to establishing migratory bird hunting regulations for nontribal hunters on all lands within the exterior boundaries of reservations where Tribes have full wildlife management authority over such hunting or where the Tribes and affected States otherwise have reached agreement over hunting by nontribal hunters on lands owned by non-Indians within the reservation.

Tribes usually have the authority to regulate migratory bird hunting by nonmembers on Indian-owned reservation lands, subject to Service approval. The question of jurisdiction is more complex on reservations that include lands owned by non-Indians, especially when the surrounding States have established or intend to establish regulations governing hunting by non-Indians on these lands. In such cases, we encourage the Tribes and States to reach agreement on regulations that would apply throughout the reservations. When appropriate, we will consult with a Tribe and State with the aim of facilitating an accord. We also will consult jointly with tribal and State officials in the affected States where Tribes wish to establish special hunting regulations for tribal members on ceded lands. Because of past questions regarding interpretation of what events trigger the consultation process, as well as who initiates it, we provide the following clarification. We routinely provide copies of **Federal Register** publications pertaining to migratory bird management to all State Directors, Tribes, and other interested parties. It is the responsibility of the States, Tribes, and others to notify us of any concern regarding any feature(s) of any regulations. When we receive such notification, we will initiate consultation.

Our guidelines provide for the continued harvest of waterfowl and other migratory game birds by tribal members on reservations where such harvest has been a customary practice. We do not oppose this harvest, provided it does not take place during the closed season defined by the Treaty, and does not adversely affect the status of the migratory bird resource. Before developing the guidelines, we reviewed available information on the current status of migratory bird populations, reviewed the current status of migratory bird hunting on Federal Indian reservations, and evaluated the potential impact of such guidelines on migratory birds. We concluded that the impact of migratory bird harvest by tribal members hunting on their reservations is minimal.

One area of interest in Indian migratory bird hunting regulations relates to hunting seasons for nontribal hunters on dates that are within Federal frameworks, but which are different from those established by the State(s) where the reservation is located. A large influx of nontribal hunters onto a reservation at a time when the season is closed in the surrounding State(s) could result in adverse population impacts on one or more migratory bird species. The guidelines make this unlikely, however, because tribal proposals must include:

(a) Harvest anticipated under the requested regulations;

(b) Methods that will be employed to measure or monitor harvest (such as bag checks, mail questionnaires, etc.);

(c) Steps that will be taken to limit level of harvest, where it could be shown that failure to limit such harvest would adversely impact the migratory bird resource; and

(d) Tribal capabilities to establish and enforce migratory bird hunting regulations.

We may modify regulations or establish experimental special hunts, after evaluation and confirmation of harvest information obtained by the Tribes.

We believe the guidelines provide appropriate opportunity to accommodate the reserved hunting rights and management authority of Indian Tribes while ensuring that the migratory bird resource receives necessary protection. The conservation of this important international resource is paramount. The guidelines should not be viewed as inflexible. In this regard, we note that they have been employed successfully since 1985. We believe they have been tested adequately and, therefore, we made them final beginning with the 1988–89 hunting season. We should stress here, however, that use of the guidelines is not mandatory and no action is required if a Tribe wishes to observe the hunting regulations established by the State(s) in which the reservation is located.

Service Migratory Bird Regulations Committee Meetings

Participants at the June 22–23, 2011, meetings reviewed information on the current status of migratory shore and upland game birds and developed 2011–12 migratory game bird regulations recommendations for these species plus regulations for migratory game birds in Alaska, Puerto Rico, and the U.S. Virgin Islands; special September waterfowl seasons in designated States; special sea duck seasons in the Atlantic Flyway; and extended falconry seasons. In addition, we reviewed and discussed preliminary information on the status of waterfowl.

Participants at the previously announced July 27–28, 2011, meetings will review information on the current status of waterfowl and develop recommendations for the 2011–12 regulations pertaining to regular waterfowl seasons and other species and seasons not previously discussed at the early-season meetings. In accordance with Department of the Interior policy, these meetings are open to public observation and you may submit comments on the matters discussed.

Population Status and Harvest

The following paragraphs provide preliminary information on the status of waterfowl and information on the status and harvest of migratory shore and upland game birds excerpted from various reports. For more detailed information on methodologies and results, you may obtain complete copies of the various reports at the address indicated under **FOR FURTHER INFORMATION CONTACT** or from our Web site at *http://www.fws.gov/migratorybirds/NewsPublicationsReports.html.*

Waterfowl Breeding and Habitat Survey

Federal, provincial, and State agencies conduct surveys each spring to estimate the size of breeding populations and to evaluate the conditions of the habitats. These surveys are conducted using fixed-wing aircraft, helicopters, and ground crews and encompass principal breeding areas of North America, covering an area over 2.0 million square miles. The traditional survey area comprises Alaska, Canada, and the north-central United States, and includes approximately 1.3 million square miles. The eastern survey area includes parts of Ontario, Quebec, Labrador, Newfoundland, Nova Scotia, Prince Edward Island, New Brunswick, New York, and Maine, an area of approximately 0.7 million square miles.

Overall, habitat conditions during the 2011 Waterfowl Breeding Population and Habitat Survey were characterized by average to above-average moisture and a normal winter and spring across the entire traditional and eastern survey areas. The exception was a portion of the west-central traditional survey area that had received below-average moisture. The total pond estimate (Prairie Canada and United States combined) was 8.1 ± 0.2 million. This was 22 percent above the 2010 estimate of 6.7 ± 0.2 million ponds, and 62 percent above the long-term average of 5.0 ± 0.03 million ponds.

Traditional Survey Area (U.S. and Canadian Prairies and Parklands)

Conditions across the Canadian Prairies were greatly improved relative to last year. Building on excellent conditions from 2010 in portions of southern Alberta, Saskatchewan, and Manitoba, the area of excellent conditions in the prairies expanded in 2011, including a region along the Alberta and Saskatchewan border that had been poor for the last 2 years. The 2011 estimate of ponds in Prairie Canada was 4.9 ± 0.2 million. This was 31 percent above last year's estimate (3.7 ± 0.2 million) and 43 percent above the 1955–2010 average (3.4 ± 0.03 million). As expected, residual water from summer 2010 precipitation remained in the Parklands and the majority of the area was classified as good. Fair to poor conditions, however, were observed in the Parklands of Alberta.

Wetland numbers and conditions were excellent in the U.S. prairies. The 2011 pond estimate for the north-central United States was 3.2 ± 0.1 million, which was similar to last year's estimate (2.9 ± 0.1 million) and 102 percent above the 1974–2010 average (1.6 ± 0.02 million). The eastern U.S. prairies benefitted from abundant moisture in 2010, and the entire U.S. prairies experienced above-average winter and spring precipitation in 2010 and 2011, resulting in good to excellent conditions across nearly the entire region. The western Dakotas and eastern Montana, which were extremely dry in 2010, improved from fair to poor in 2010 to good to excellent in 2011. Further, the abundant moisture and delayed farming operations in the north-central U.S. and southern Canadian prairies likely benefitted early-nesting waterfowl species.

Bush (Alaska, Northern Manitoba, Northern Saskatchewan, Northwest Territories, Yukon Territory, Western Ontario)

In the bush regions of the traditional survey area (Northwest Territories, northern Manitoba, northern Saskatchewan, and western Ontario), spring breakup was late in 2011. However, a period of warm, fair weather just prior to the survey, greatly accelerated ice-out. Habitats improved from 2010 across most of northern Saskatchewan and Manitoba as a result of average to above-average summer and fall precipitation in 2010. Habitat conditions in the Northwest Territories and Alaska were classified as good in 2011. Dry conditions in the boreal forest of Alberta in 2010 persisted into 2011 as habitat conditions were again rated as fair to poor. The dry conditions in this region contributed to numerous forest fires during the 2011 survey.

Eastern Survey Area

In the eastern survey area, winter temperatures were above average and precipitation was below average over most of the region, with the exception of the Maritimes and Maine, which had colder than normal temperatures and above-average precipitation. Despite regional differences in winter

conditions, above-average spring precipitation recharged deficient wetlands, subsequently providing good to excellent production habitat across the region. The boreal forest and Canadian Maritimes of the eastern survey area continued to have good to excellent habitat conditions in 2011. Habitat conditions in Ontario and southern Quebec improved from poor to fair in 2010 to good to excellent in 2011. Northern sections of the eastern survey area continued to remain in good to excellent conditions in 2011.

Status of Teal

The estimate of blue-winged teal from the traditional survey area is 8.9 million. This record-high count represents a 41.0 percent increase from 2010, and is 91 percent above the 1955–2010 average.

Sandhill Cranes

Compared to increases recorded in the 1970s, annual indices to abundance of the Mid-Continent Population (MCP) of sandhill cranes have been relatively stable since the early 1980s. The spring 2011 index for sandhill cranes in the Central Platte River Valley, Nebraska, uncorrected for visibility bias, was 363,356 birds. The photo-corrected, 3-year average for 2008–10 was 600,892, which is above the established population-objective range of 349,000–472,000 cranes.

All Central Flyway States, except Nebraska, allowed crane hunting in portions of their States during 2010–11. An estimated 8,738 hunters participated in these seasons, which was 10 percent higher than the number that participated in the previous season. Hunters harvested 18,727 MCP cranes in the U.S. portion of the Central Flyway during the 2010–11 seasons, which was 23 percent higher than the estimated harvest for the previous year and 29 percent higher than the long-term average. The retrieved harvest of MCP cranes in hunt areas outside of the Central Flyway (Arizona, Pacific Flyway portion of New Mexico, Minnesota, Alaska, Canada, and Mexico combined) was 15,025 during 2010–11. The preliminary estimate for the North American MCP sport harvest, including crippling losses, was 38,561 birds, which was a 51 percent increase from the previous year's estimate. The long-term (1982–2008) trends for the MCP indicate that harvest has been increasing at a higher rate than population growth.

The fall 2010 pre-migration survey for the Rocky Mountain Population (RMP) resulted in a count of 21,064 cranes. The 3-year average was 20,847 sandhill cranes, which is within the established population objective of 17,000–21,000 for the RMP. Hunting seasons during 2010–11 in portions of Arizona, Idaho, Montana, New Mexico, Utah, and Wyoming resulted in a harvest of 1,336 RMP cranes, a 4 percent decrease from the record-high harvest of 1,392 in 2009–10.

The Lower Colorado River Valley Population (LCRVP) survey results indicate a slight increase from 2,264 birds in 2010 to 2,415 birds in 2011. However, despite this slight increase, the 3-year average fell to 2,360 LCRVP cranes, which is below the population objective of 2,500.

The Eastern Population (EP) rebounded from near extirpation in the late 1800s to almost 30,000 cranes by 1996. In the fall of 2010, the estimate of EP cranes was approximately 50,000 birds. As a result of this increase and their range expansion, the Atlantic and Mississippi Flyway Councils developed a cooperative management plan for this population, and criteria have been developed describing when hunting seasons can be opened. The State of Kentucky has proposed to initiate the first hunting season on this population in the 2011–12 season. Specifics of the proposal are discussed in the proposed frameworks for early-season regulations (76 FR 44730; July 26, 2011). A draft EA on the hunting of EP sandhill cranes, as allowed under the management plan, was prepared and can be found on our Web site at *http://www.fws.gov/migratorybirds*, or at *http://www.regulations.gov*.

Woodcock

Singing-ground and Wing-collection surveys were conducted to assess the population status of the American woodcock (*Scolopax minor*). The Singing-ground Survey is intended to measure long-term changes in woodcock population levels. Singing-ground Survey data for 2011 indicate that the number of singing male woodcock in the Eastern and Central Management Regions were unchanged from 2010. There were no significant 10-year trends in woodcock heard in the Eastern or Central Management Regions during 2001–2011, which marks the eighth consecutive year that the 10-year trend estimate for the Eastern Region was stable, while the trend in the Central Region returned to being not statistically significant after being negative last year. There were long-term (1968–2011) declines of 1.0 percent per year in both management regions. The Wing-collection Survey provides an index to recruitment. Wing-collection Survey data indicate that the 2010 recruitment index for the U.S. portion of the Eastern Region (1.5 immatures per adult female) was 1.2 percent lower than the 2009 index, and 10.2 percent lower than the long-term (1963–2009) average. The recruitment index for the U.S. portion of the Central Region (1.6 immatures per adult female) was 30.2 percent above the 2009 index and 2.1 percent below the long-term (1963–2009) average.

Band-Tailed Pigeons

Two subspecies of band-tailed pigeon occur north of Mexico, and they are managed as two separate populations in the United States: the Interior Population and the Pacific Coast Population. Information on the abundance and harvest of band-tailed pigeons is collected annually in the United States and British Columbia. Abundance information comes from the Breeding Bird Survey (BBS) and, for the Pacific Coast Population, the BBS and the Mineral Site Survey (MSS). Annual counts of Interior band-tailed pigeons seen and heard per route have declined since implementation of the BBS in 1968. No statistically significant trends in abundance are evident during the recent 5- and 10-year periods. The 2010 harvest of Interior band-tailed pigeons was estimated to be 5,000 birds. BBS counts of Pacific Coast band-tailed pigeons seen and heard per route also have declined since 1968, but trends in abundance during the recent 5- and 10-year periods were not significant. The MSS, however, provided evidence that abundance decreased during the recent 5- (–8.4 percent) and 7-year (–8.1 percent) (since survey implementation) periods. The 2010 estimate of harvest for Pacific Coast band-tailed pigeons was 18,400 birds.

Mourning Doves

The Mourning Dove Call-count Survey (CCS) data is analyzed within a Bayesian hierarchical modeling framework, consistent with analysis methods for other long-term point count surveys such as the American Woodcock Singing-ground Survey and the North American Breeding Bird Survey. According to the analysis of the CCS, there was no trend in counts of mourning doves heard over the most recent 10 years (2002–11) in the Eastern Management Unit. There was a negative trend in mourning doves heard for the Central and Western Management Units. Over the 46-year period, 1966–2011, the number of mourning doves heard per route decreased in all three dove management units. The number of doves seen per route was also collected during the CCS. For the past 10 years, there was no trend in doves seen for the Central and Western Management Units;

however, there was evidence of an increasing trend in the Eastern Management Unit. Over 46 years, there was a positive trend in doves seen in the Eastern Management Unit, and declining trends were indicated for the Central and Western Management Units. The preliminary 2010 harvest estimate for the United States was 17,230,400 mourning doves.

White-Winged Doves

Two States harbor substantial populations of white-winged doves: Arizona and Texas. California and New Mexico have much smaller populations. The Arizona Game and Fish Department monitors white-winged dove populations by means of a CCS to provide an annual index to population size. It runs concurrently with the Service's Mourning Dove CCS. The index of mean number of white-winged doves heard per route from this survey peaked at 52.3 in 1968, but then declined until about 2000. The index has stabilized at around 25 doves per route in the last few years; in 2011, the mean number of doves heard per route was 24.4. Arizona Game and Fish also historically monitored white-winged dove harvest. Harvest of white-winged doves in Arizona peaked in the late 1960s at approximately 740,000 birds, and has since declined and stabilized at around 100,000 birds; the preliminary 2010 Migratory Bird Harvest Information Program (HIP) estimate of harvest was 84,900 birds.

In Texas, white-winged doves continue to expand their breeding range. Nesting by white-winged doves has been recorded in most counties, with new colonies recently found in east Texas. Nesting is essentially confined to urban areas, but appears to be expanding to exurban areas. Concomitant with this range expansion has been a continuing increase in white-winged dove abundance. A new distance-based sampling protocol was implemented for Central and South Texas in 2007, and has been expanded each year. In 2010, officials surveyed 4,650 points statewide and estimated the urban population of breeding white-winged doves at 4.6 million. Current year's survey data are being analyzed and abundance estimates will be available later this summer. Additionally, the Texas Parks and Wildlife Department has an operational white-winged dove banding program and has banded 52,001 white-winged doves from 2006 to 2010. The estimated harvest of white-wings in Texas in the 2010 season was 1,436,800 birds. The Texas Parks and Wildlife Department continues to work to improve the scientific basis for management of white-winged doves.

In California, Florida, Louisiana, and New Mexico available BBS data indicate an increasing trend in the population indices between 1966 and 2010. According to HIP surveys, the preliminary harvest estimates were 78,200 white-winged doves in California, 6,200 in Florida, 4,600 in Louisiana, and 29,500 in New Mexico.

White-Tipped Doves

White-tipped doves occur primarily south of the United States–Mexico border; however, the species does occur in Texas. Monitoring information is presently limited. White-tipped doves are believed to be maintaining a relatively stable population in the Lower Rio Grande Valley of Texas. Distance-based sampling procedures implemented in Texas are also providing limited information on white-tipped dove abundance. Texas is working to improve the sampling frame to include the rural Rio Grande corridor in order to improve the utility of population indices. Annual estimates for white-tipped dove harvest in Texas average between 3,000 and 4,000 birds.

Hunting Season Proposals From Indian Tribes and Organizations

For the 2011–12 hunting season, we received requests from 25 Tribes and Indian organizations. In this proposed rule, we respond to these requests and also evaluate anticipated requests for 5 Tribes from whom we usually hear but from whom we have not yet received proposals. We actively solicit regulatory proposals from other tribal groups that are interested in working cooperatively for the benefit of waterfowl and other migratory game birds. We encourage Tribes to work with us to develop agreements for management of migratory bird resources on tribal lands.

It should be noted that this proposed rule includes generalized regulations for both early- and late-season hunting. A final rule will be published in a late-August 2011 **Federal Register** that will include tribal regulations for the early-hunting season. Early seasons generally begin around September 1 each year and most commonly include such species as American woodcock, sandhill cranes, mourning doves, and white-winged doves. Late seasons generally begin on or around September 24 and most commonly include waterfowl species.

In this current rulemaking, because of the compressed timeframe for establishing regulations for Indian Tribes and because final frameworks dates and other specific information are not available, the regulations for many tribal hunting seasons are described in relation to the season dates, season length, and limits that will be permitted when final Federal frameworks are announced for early- and late-season regulations. For example, daily bag and possession limits for ducks on some areas are shown as the same as permitted in Pacific Flyway States under final Federal frameworks, and limits for geese will be shown as the same permitted by the State(s) in which the tribal hunting area is located.

The proposed frameworks for early-season regulations were published in the **Federal Register** on July 26, 2011 (76 FR 44730); early-season final frameworks will be published in late August. Proposed late-season frameworks for waterfowl and coots will be published in mid-August, and the final frameworks for the late seasons will be published in mid-September. We will notify affected Tribes of season dates, bag limits, etc., as soon as final frameworks are established. As previously discussed, no action is required by Tribes wishing to observe migratory bird hunting regulations established by the State(s) where they are located. The proposed regulations for the 30 Tribes that meet the established criteria are shown below.

(a) Colorado River Indian Tribes, Colorado River Indian Reservation, Parker, Arizona (Tribal Members and Nontribal Hunters)

The Colorado River Indian Reservation is located in Arizona and California. The Tribes own almost all lands on the reservation, and have full wildlife management authority.

In their 2011–12 proposal, the Colorado River Indian Tribes requested split dove seasons. They propose that their early season begin September 1 and end September 15, 2011. Daily bag limits would be 10 mourning or white-winged doves in the aggregate. The late season for doves is proposed to open November 12, 2011, and close December 26, 2011. The daily bag limit would be 10 mourning doves. The possession limit would be twice the daily bag limit after the first day of the season. Shooting hours would be from one-half hour before sunrise to noon in the early season and until sunset in the late season. Other special tribally set regulations would apply.

The Tribes also propose duck hunting seasons. The season would open October 8, 2011, and run until January 22, 2012. The Tribes propose the same season dates for mergansers, coots, and common moorhens. The daily bag limit for ducks, including mergansers, would be seven, except that the daily bag limits

could contain no more than two hen mallards, two redheads, two Mexican ducks, two goldeneye, three scaup, one pintail, and two cinnamon teal. The season on canvasback is closed. The possession limit would be twice the daily bag limit after the first day of the season. The daily bag and possession limit for coots and common moorhens would be 25, singly or in the aggregate.

For geese, the Colorado River Indian Tribes propose a season of October 15, 2011, through January 22, 2012. The daily bag limit for geese would be three light geese and three dark geese. The possession limit would be six light geese and six dark geese after opening day.

In 1996, the Tribes conducted a detailed assessment of dove hunting. Results showed approximately 16,100 mourning doves and 13,600 white-winged doves were harvested by approximately 2,660 hunters who averaged 1.45 hunter-days. Field observations and permit sales indicate that fewer than 200 hunters participate in waterfowl seasons. Under the proposed regulations described here and based upon past seasons, we and the Tribes estimate harvest will be similar.

Hunters must have a valid Colorado River Indian Reservation hunting permit and a Federal Migratory Bird Stamp in their possession while hunting. Other special tribally set regulations would apply. As in the past, the regulations would apply both to tribal and nontribal hunters, and nontoxic shot is required for waterfowl hunting.

We propose to approve the Colorado River Indian Tribes regulations for the 2011–12 hunting season, given the seasons' dates fall within final flyway frameworks (applies to nontribal hunters only).

(b) Confederated Salish and Kootenai Tribes, Flathead Indian Reservation, Pablo, Montana (Tribal and Nontribal Hunters)

For the past several years, the Confederated Salish and Kootenai Tribes and the State of Montana have entered into cooperative agreements for the regulation of hunting on the Flathead Indian Reservation. The State and the Tribes are currently operating under a cooperative agreement signed in 1990 that addresses fishing and hunting management and regulation issues of mutual concern. This agreement enables all hunters to utilize waterfowl hunting opportunities on the reservation.

As in the past, tribal regulations for nontribal hunters would be at least as restrictive as those established for the Pacific Flyway portion of Montana. Goose season dates would also be at least as restrictive as those established for the Pacific Flyway portion of Montana. Shooting hours for waterfowl hunting on the Flathead Reservation are sunrise to sunset. Steel shot or other federally approved nontoxic shots are the only legal shotgun loads on the reservation for waterfowl or other game birds.

For tribal members, the Tribe proposes outside frameworks for ducks and geese of September 1, 2011, through March 9, 2012. Daily bag and possession limits were not proposed for tribal members.

The requested season dates and bag limits are similar to past regulations. Harvest levels are not expected to change significantly. Standardized check station data from the 1993–94 and 1994–95 hunting seasons indicated no significant changes in harvest levels and that the large majority of the harvest is by nontribal hunters.

We propose to approve the Tribes' request for special migratory bird regulations for the 2011–12 hunting season.

(c) Fond du Lac Band of Lake Superior Chippewa Indians, Cloquet, Minnesota (Tribal Members Only)

Since 1996, the Service and the Fond du Lac Band of Lake Superior Chippewa Indians have cooperated to establish special migratory bird hunting regulations for tribal members. The Fond du Lac's May 26, 2011, proposal covers land set apart for the band under the Treaties of 1837 and 1854 in northeastern and east-central Minnesota and the Band's Reservation near Duluth.

The band's proposal for 2011–12 is essentially the same as that approved last year except for a proposed sandhill crane season with separate regulations for the 1854 and 1837 ceded territories and reservation lands. The proposed 2011–12 waterfowl hunting season regulations for Fond du Lac are as follows:

Ducks

A. 1854 and 1837 Ceded Territories:

Season Dates: Begin September 17 and end November 27, 2011.

Daily Bag Limit: 18 ducks, including no more than 12 mallards (only 3 of which may be hens), 9 black ducks, 9 scaup, 9 wood ducks, 9 redheads, 9 pintails, and 9 canvasbacks.

B. Reservation:

Season Dates: Begin September 3 and end November 27, 2011.

Daily Bag Limit: 12 ducks, including no more than 8 mallards (only 2 of which may be hens), 6 black ducks, 6 scaup, 6 redheads, 6 pintails, 6 wood ducks, and 6 canvasbacks.

Mergansers

A. 1854 and 1837 Ceded Territories:

Season Dates: Begin September 17 and end November 27, 2011.

Daily Bag Limit: 15 mergansers, including no more than 6 hooded mergansers.

B. Reservation:

Season Dates: Begin September 3 and end November 27, 2011.

Daily Bag Limit: 10 mergansers, including no more than 4 hooded mergansers.

Canada Geese

All Areas:

Season Dates: Begin September 1 and end November 27, 2011.

Daily Bag Limit: 20 geese.

Sandhill Cranes

1854 Ceded Territory only:

Season Dates: Begin September 1 and end November 27, 2011.

Daily Bag Limit: One sandhill crane. A crane carcass tag is required prior to hunting.

Coots and Common Moorhens (Common Gallinules)

A. 1854 and 1837 Ceded Territories:

Season Dates: Begin September 17 and end November 27, 2011.

Daily Bag Limit: 20 coots and common moorhens, singly or in the aggregate.

B. Reservation:

Season Dates: Begin September 3 and end November 27, 2011.

Daily Bag Limit: 20 coots and common moorhens, singly or in the aggregate.

Sora and Virginia Rails

All Areas:

Season Dates: Begin September 1 and end November 27, 2011.

Daily Bag Limit: 25 sora and Virginia rails, singly or in the aggregate.

Common Snipe

All Areas:

Season Dates: Begin September 1 and end November 27, 2011.

Daily Bag Limit: Eight common snipe.

Woodcock

All Areas:

Season Dates: Begin September 1 and end November 27, 2011.

Daily Bag Limit: Three woodcock.

Mourning Dove

All Areas:

Season Dates: Begin September 1 and end October 30, 2011.

Daily Bag Limit: 30 mourning doves.

The following general conditions apply:

1. While hunting waterfowl, a tribal member must carry on his/her person a valid Ceded Territory License.

2. Shooting hours for migratory birds are one-half hour before sunrise to one-half hour after sunset.

3. Except as otherwise noted, tribal members will be required to comply with tribal codes that will be no less restrictive than the provisions of Chapter 10 of the Model Off-Reservation Code. Except as modified by the Service rules adopted in response to this proposal, these amended regulations parallel Federal requirements in 50 CFR part 20 as to hunting methods, transportation, sale, exportation, and other conditions generally applicable to migratory bird hunting.

4. Band members in each zone will comply with State regulations providing for closed and restricted waterfowl hunting areas.

5. There are no possession limits on any species, unless otherwise noted above. For purposes of enforcing bag limits, all migratory birds in the possession or custody of band members on ceded lands will be considered to have been taken on those lands unless tagged by a tribal or State conservation warden as having been taken on-reservation. All migratory birds that fall on reservation lands will not count as part of any off-reservation bag or possession limit.

The band anticipates harvest will be fewer than 500 ducks and geese.

We propose to approve the request for special migratory bird hunting regulations for the Fond du Lac Band of Lake Superior Chippewa Indians.

(d) Grand Traverse Band of Ottawa and Chippewa Indians, Suttons Bay, Michigan (Tribal Members Only)

In the 1995–96 migratory bird seasons, the Grand Traverse Band of Ottawa and Chippewa Indians and the Service first cooperated to establish special regulations for waterfowl. The Grand Traverse Band is a self-governing, federally recognized Tribe located on the west arm of Grand Traverse Bay in Leelanau County, Michigan. The Grand Traverse Band is a signatory Tribe of the Treaty of 1836. We have approved special regulations for tribal members of the 1836 treaty's signatory Tribes on ceded lands in Michigan since the 1986–87 hunting season.

For the 2011–12 season, the Tribe requests that the tribal member duck season run from September 18, 2011, through January 18, 2012. A daily bag limit of 20 would include no more than 5 pintail, 3 canvasback, 1 hooded merganser, 5 black ducks, 5 wood ducks, 3 redheads, and 9 mallards (only 4 of which may be hens).

For Canada and snow geese, the Tribe proposes a September 1 through November 30, 2011, and a January 1 through February 8, 2012, season. For white-fronted geese and brant, the Tribe proposes a September 20 through November 30, 2011, season. The daily bag limit for Canada and snow geese would be 10, and the daily bag limit for white-fronted geese and including brant would be 5 birds. We further note that based on available data (of major goose migration routes), it is unlikely that any Canada geese from the Southern James Bay Population will be harvested by the Tribe.

For woodcock, the Tribe proposes a September 1 through November 14, 2011, season. The daily bag limit will not exceed five birds. For mourning doves, snipe, and rails, the Tribe proposes a September 1 through November 14, 2011, season. The daily bag limit would be 10 per species.

All other Federal regulations contained in 50 CFR part 20 would apply. The Tribe proposes to monitor harvest closely through game bag checks, patrols, and mail surveys. Harvest surveys from the 2006–07 hunting season indicated that approximately 15 tribal hunters harvested an estimated 112 ducks and 50 Canada geese.

We propose to approve the Grand Traverse Band of Ottawa and Chippewa Indians requested 2011–12 special migratory bird hunting regulations.

(e) Great Lakes Indian Fish and Wildlife Commission, Odanah, Wisconsin (Tribal Members Only)

Since 1985, various bands of the Lake Superior Tribe of Chippewa Indians have exercised judicially recognized off-reservation hunting rights for migratory birds in Wisconsin. The specific regulations were established by the Service in consultation with the Wisconsin Department of Natural Resources and the Great Lakes Indian Fish and Wildlife Commission. (GLIFWC is an intertribal agency exercising delegated natural resource management and regulatory authority from its member Tribes in portions of Wisconsin, Michigan, and Minnesota.) Beginning in 1986, a Tribal season on ceded lands in the western portion of the Michigan Upper Peninsula was developed in coordination with the Michigan Department of Natural Resources. We have approved regulations for Tribal members in both Michigan and Wisconsin since the 1986–87 hunting season. In 1987, GLIFWC requested, and we approved, regulations to permit Tribal members to hunt on ceded lands in Minnesota, as well as in Michigan and Wisconsin. The States of Michigan and Wisconsin originally concurred with the regulations, although both Wisconsin and Michigan have raised various concerns over the years. Minnesota did not concur with the original regulations, stressing that the State would not recognize Chippewa Indian hunting rights in Minnesota's treaty area until a court with jurisdiction over the State acknowledges and defines the extent of these rights. In 1999, the U.S. Supreme Court upheld the existence of the tribes' treaty reserved rights in *Minnesota* v. *Mille Lacs Band,* 199 S.Ct. 1187 (1999).

We acknowledge all of the States' concerns, but point out that the U.S. Government has recognized the Indian treaty reserved rights, and that acceptable hunting regulations have been successfully implemented in Minnesota, Michigan, and Wisconsin. Consequently, in view of the above, we have approved regulations since the 1987–88 hunting season on ceded lands in all three States. In fact, this recognition of the principle of treaty reserved rights for band members to hunt and fish was pivotal in our decision to approve a 1991–92 season for the 1836 ceded area in Michigan. Since then, in the 2007 Consent Decree the 1836 Treaty Tribes' and Michigan Department of Natural Resources and Environment established court-approved regulations pertaining to off-reservation hunting rights for migratory birds.

For 2011, the GLIFWC proposed off-reservation special migratory bird hunting regulations on behalf of the member Tribes of the Voigt Intertribal Task Force of the GLIFWC (for the 1837 and 1842 Treaty areas) and the Bay Mills Indian Community (for the 1836 Treaty area). Member Tribes of the Task Force are: the Bad River Band of the Lake Superior Tribe of Chippewa Indians, the Lac Courte Oreilles Band of Lake Superior Chippewa Indians, the Lac du Flambeau Band of Lake Superior Chippewa Indians, the Red Cliff Band of Lake Superior Chippewa Indians, the St. Croix Chippewa Indians of Wisconsin, the Sokaogon Chippewa Community (Mole Lake Band), all in Wisconsin; the Mille Lacs Band of Chippewa Indians in Minnesota; the Lac Vieux Desert Band of Chippewa Indians, and the Keweenaw Bay Indian Community in Michigan.

The GLIFWC 2011 proposal is generally similar to last year's regulations, except for several significant changes. Specifically, the GLIFWC proposal allows the use of

electronic calls in the 1837 and 1842 Treaty Areas; extends shooting hours by 45 minutes to 1 hour after sunset in the 1837 and 1842 Treaty Areas and by 15 minutes to 30 minutes after sunset in the 1836 Treaty Area; eliminates possession limits in the 1837 and 1842 Treaty Areas; allows the use of unattended decoys in Michigan; increases the daily bag limits for ducks in the 1837 and 1842 Treaty Areas from 30 to 40 ducks; and eliminates all species restrictions within the bag limit for ducks in the 1837 and 1842 Treaty Areas.

GLIFWC states that the proposed regulatory changes are intended to increase tribal subsistence harvest opportunities, while protecting migratory bird populations. Under the GLIFWC proposed regulations, GLIFWC expects total ceded territory harvest to be approximately 1,575 ducks and 300 geese and 150 geese, which is roughly similar to anticipated levels in previous years. GLIWFC further anticipates that tribal harvest will remain low given the small number of tribal hunters and the limited opportunity to harvest more than a small number of birds on most hunting trips.

Recent GLIFWC harvest surveys (1996–98, 2001, 2004, and 2007–08) indicate that tribal off-reservation waterfowl harvest has averaged less than 1,050 ducks and 200 geese annually. In the latest survey year for which we have specific results (2004), an estimated 53 hunters took an estimated 421 trips and harvested 645 ducks (1.5 ducks per trip) and 84 geese (0.2 geese per trip). Analysis of hunter survey data over 1996–2004 indicates a general downward trend in both harvest and hunter participation.

While we acknowledge that tribal harvest and participation has declined in recent years, we do not believe that the GLIFWC's proposal for tribal waterfowl seasons on ceded lands in Wisconsin, Michigan, and Minnesota for the 2011 season is the best plan for increasing tribal participation or for the conservation of migratory birds. More specific discussion follows below.

Allowing Electronic Calls

The issue of allowing electronic calls and other electronic devices for migratory game bird hunting has been highly debated and highly controversial over the last 40 years, similar to other prohibited hunting methods such as baiting. Electronic calls, *i.e.,* the use or aid of recorded or electronic amplified bird calls or sounds, or recorded or electrically amplified imitations of bird calls or sounds to lure or attract migratory game birds to hunters, was Federally prohibited in 1957 because of its effectiveness in aiding the harvest of migratory birds and is generally not considered a legitimate component of hunting. In 1999, after much debate, the migratory bird regulations were revised to allow the use of electronic calls for the take of light geese (lesser snow geese and Ross geese) during a light-goose-only season when all other waterfowl and crane hunting seasons, excluding falconry, were closed (64 FR 7507, February 16, 1999; 64 FR 71236, December 20, 1999; and 73 FR 65926, November 5, 2008). The regulations were subsequently changed also in 2006 to allow the use of electronic calls for the take of resident Canada geese during Canada-goose-only September seasons when all other waterfowl and crane seasons, excluding falconry, were closed (71 FR 45964, August 10, 2006). In both instances, these changes were made in order to significantly increase the harvest of these species due to either serious population overabundance, or depredation issues, or public health and safety issues, or both.

Available information from the use of additional hunting methods, such as electronic calls, during the special light-goose seasons indicate that total harvest increased approximately 50–69 percent. On specific days when light-goose special regulations were in effect, the mean light goose harvest increased 244 percent. One research study found that lesser snow goose flocks were 5.0 times more likely to fly within gun range (≤50 meters) in response to electronic calls than to traditional calls and the mean number of snow geese killed per hour per hunter averaged 9.1 times greater for electronic calls than for traditional calls. We believe these results are applicable to most waterfowl species.

Removal of the electronic call prohibition would be inconsistent with our conservation concerns. Given available evidence on the effectiveness of electronic calls, we believe the potential for overharvest in localized areas could contribute to long-term population declines. Further, it is possible that hunter participation could increase beyond GLIFWC's estimates (50 percent) and could result in additional conservation impacts, particularly on locally breeding populations. Thus, we do not support allowing the use of electronic calls in the 1837 and 1842 Treaty Areas.

Additionally, given the fact that tribal waterfowl hunting covered by this proposal would occur on ceded lands that are not in the ownership of the Tribes, we believe the use of electronic calls to take waterfowl would lead to confusion and frustration on the part of the public, hunters, wildlife-management agencies, and law enforcement officials due to the inherent difficulties of different sets of hunting regulations for different areas and groups of hunters. Moreover, the allowance of electronic calls for tribal hunting on ceded lands would make those lands and other adjacent areas off-limits to waterfowl hunting anytime tribal hunters were hunting with electronic calls (due to the influence of electronic calls on birds).

Expanded Shooting Hours

Normally, shooting hours for migratory game birds are one-half hour before sunrise to sunset. A number of reasons and concerns have been cited for extending shooting hours past sunset. Potential impacts to some locally breeding populations (*e.g.,* wood ducks), hunter safety, difficulty of identifying birds, retrieval of downed birds, and impacts on law enforcement are some of the normal concerns raised when discussing potential expansions of shooting hours. However, despite these concerns, in 2007, we supported the expansion of shooting hours by 15 minutes after sunset in the 1837, 1842, and 1836 Treaty Areas (72 FR 58452, October 15, 2007). We had previously supported this expansion in other tribal areas and have not been made aware of any wide-scale problems. Further, at that time, we believed that the continuation of a specific species restriction within the daily bag limit for mallards, and the implementation of a species restriction within the daily bag limit for wood ducks, would allay potential conservation concerns for these species. We supported the increase with the understanding that we would need to closely monitor tribal harvest through either GLIFWC's own increased harvest surveys or GLIFWC's assisting the Service to survey tribal hunters.

At this time, however, we cannot support increasing the shooting hours by 45 minutes in the 1837 and 1842 Treaty Areas (to 60 minutes after sunset) and by 15 minutes in the 1836 Treaty Area (to 30 minutes after sunset). Significantly extending the shooting hours by 45 minutes only heightens our previously identified concerns regarding species identification, species conservation of locally breeding populations, retrieval of downed birds, hunter safety, and law enforcement impacts. Generally, it is widely considered dark 30 minutes after sunset, and we see no viable remedies to allay our concerns.

Increasing the Overall Daily Bag Limit for Ducks

Based on the increased bag limits, GLIFWC is estimating a relatively small additional duck harvest (1,050 to 1,575). However, it is possible that hunter participation could increase beyond their estimates (50 percent) and could result in a conservation impact, particularly on locally breeding populations. Further, based on the GLIFWC's own harvest data, present daily bag limits do not appear to be a hindrance or limiting factor for Tribal harvest, and increasing the daily bag limit to 40 ducks would be far in excess (more than double) of anything we currently have experience with regarding tribal migratory bird hunting regulations (except for GLIFWC's present 30-duck daily bag limit). Until we have additional information on which we could assess potential impacts, we do not favor increasing daily bag limits for ducks to the extent GLIFWC has proposed. We note that in 2007, in an effort to obtain the necessary information, we implemented a pilot expansion of the daily bag limit to 30 birds per day in the 1837 and 1842 Treaty Areas. We supported this with the understanding that we would need to closely monitor tribal harvest through either GLIFWC's own increased harvest surveys or GLIFWC's assisting the Service to survey tribal hunters. We again reiterate our request for GLIFWC to continue their current harvest survey based on our implementation of a pilot bag limit increase for ducks in the 1837 and 1842 Treaty Areas in 2007, particularly for species such as mallards which were subsequently significantly increased in 2008 (from 10 to 30 per day). We believe the pilot bag limits implemented then, and changed in 2008, should warrant at least several years of data evaluation using GLIFWC's current harvest survey. To date, we have not been presented with adequate data on which to base an informed decision.

Eliminating the Possession Limit

We believe GLIFWC's proposal to eliminate all possession limits in the 1837 and 1842 Treaty Areas could have potential resource conservation impacts. Possession limits are normally two times the daily bag limit and together with daily bag limits have been an integral part of the harvest management of migratory game birds when regulating take during sport hunting seasons since the signing of the Migratory Bird Treaty Act (1918). Back then, daily bag limits for most species of migratory game birds were relatively large and there were no possession limits. As daily bag limits were reduced due to concern over migratory game bird status, and concomitant with improved and more commonplace food preservation equipment (particularly home freezers), a possession limit of twice the daily bag limit was adopted in 1930.

Currently, definitions of possession limit are regulations contained in the U.S. Code of Federal Regulations (CFR) in 50 CFR part 20. Further, the increment of the possession limit for sport hunting seasons relative to the daily bag limit is an annual regulation and is published in the frameworks for early and late seasons.

While daily bag limits have proven to be an effective tool in regulating harvests, the degree to which possession limits have been able to regulate harvests is more equivocal. Many assert that migratory bird population management is not affected by reasonable changes in possession limits and would have a minimal, if any, effect on harvest (and therefore population status) of most migratory bird stocks. Others that believe that possession limits of twice the daily bag limit that we have had in place since 1930 are no longer appropriate for today's more mobile society with hunters traveling more often and longer distances to hunt migratory birds. Further, possession limits in Canada have recently been changed, and possession limits are no longer consistent between our respective Treaty nations. However, from a law enforcement aspect, the possession limit has been an important tool for the determination of hunting violations both in the field and when stored, such as in a person's home freezer.

In 2010, several Flyway Councils forwarded recommendations to the Service for a change to the possession limits for certain migratory birds, beginning in 2011. As such, we began a review of possession limits and their use (75 FR 58250, September 23, 2010). We plan to make some formal recommendations and proposals regarding possession limits and their use in the near future. Until then, however, we do not support wide-scale changes in the current regulations regarding possession limits.

Allowing the Use of Unattended Decoys in Michigan

In Michigan, State law requires that unattended decoys may not be left out overnight. While we believe that there may be safety concerns with elimination of such a restriction, we take no position on the relative need or lack of need for such a restriction. Other than regulations on National Wildlife Refuges and other Federal lands, there are no Federal restrictions requiring the removal of unattended decoys.

Additionally, given the fact that tribal waterfowl hunting covered by this proposal would occur on ceded lands that are not in the ownership of the Tribes, we believe the use of unattended decoys to ''reserve'' hunting areas in public waters (*i.e.,* those lands in the ceded territories outside of lands directly controlled by the Tribes) could lead to confusion and frustration on the part of the public, hunters, wildlife-management agencies, and law enforcement officials due to the inherent difficulties of different sets of hunting regulations for different areas and groups of hunters. We also believe the allowance of unattended decoys for tribal hunting on ceded lands would likely lead to increased acrimony and debate regarding issues of fairness from non-tribal hunters.

Removal of Species Restrictions

We have several concerns with GLIFWC's proposal to remove all species restrictions within the overall duck daily bag limits in the 1837 and 1842 Treaty Areas. We have a number of duck species that are either showing long-term downward population trends (pintails and black ducks), or other species for which an increased daily bag limit of 40 birds per day could potentially have conservation impacts (canvasbacks), particularly on locally breeding ducks (mallards and wood ducks). Overharvest of these species in localized areas due to removal of species restrictions could contribute to long-term declines. Removal of species restrictions on these species would be inconsistent with our current conservation concerns. Thus, we continue to support the following species restrictions within the overall daily bag limit in all three of the Treaty Areas: 5 black ducks, 5 pintails, and 5 canvasbacks. We believe these species restrictions are commensurate with each individual species' population status.

Further, we remind GLIFWC that in 2008, we removed mallards from the internal daily bag limit restrictions (73 FR 51704, September 4, 2008). At that time, while we had expressed concerns in the past (72 FR 58452, October 15, 2007; 73 FR 48098, August 15, 2008) with GLIFWC's proposal for removal of mallard restrictions within the overall duck daily bag limits in the 1837, 1842, and 1836 Treaty Areas, we believed that an increase in the daily bag limit of mallards (by removal of the internal bag limit restriction) from 10 mallards per day to 30 mallards per day in the 1837 and 1842 Treaty Areas and 20 mallards

per day in the 1836 Treaty Area would have no significant conservation impacts on locally breeding mallards. We reached this conclusion based largely on the fact that the tribal harvest, both past and anticipated, is relatively minuscule—around 600 mallards—and widely distributed. However, we reiterated our request for GLIFWC to continue with their current harvest survey based on our implementation of a pilot bag limit increase for ducks in the 1837 and 1842 Treaty Areas in 2007. We believed the pilot bag limits implemented in 2007 should warrant at least several years of data evaluation using GLIFWC's current harvest survey. We reiterate those same concerns today and continue to stress the importance of several years of data evaluation in order to make well-informed decisions.

Summary

In summary, given the above information, we believe that the regulations advanced by the GLIFWC for the 2011–12 hunting season are not in the best interests of the migratory bird resource. As we have previously stated (71 FR 55076, September 20, 2006; and 72 FR 58452, October 15, 2007), we are willing to meet with the GLIFWC to explore possible ways to increase tribal participation in migratory bird hunting opportunities. We appreciated the opportunity we had to meet with the Tribes in 2008 to discuss the mutual concerns we have for the migratory bird resource and future hunting opportunities.

The proposed 2011–12 waterfowl hunting season regulations apply to all treaty areas (except where noted) for GLIFWC as follows:

Ducks:

Season Dates: Begin September 15 and end December 31, 2011.

Daily Bag Limit: 30 ducks, including no more than 5 black ducks, 5 pintails, and 5 canvasbacks.

Mergansers:

Season Dates: Begin September 15 and end December 31, 2011.

Daily Bag Limit: 10 mergansers.

Geese:

Season Dates: Begin September 1 and end December 31, 2011. In addition, any portion of the ceded territory that is open to State-licensed hunters for goose hunting outside of these dates will also be open concurrently for tribal members.

Daily Bag Limit: 20 geese in aggregate.

Other Migratory Birds:

A. Coots and Common Moorhens (Common Gallinules):

Season Dates: Begin September 15 and end December 31, 2011.

Daily Bag Limit: 20 coots and common moorhens (common gallinules), singly or in the aggregate.

B. Sora and Virginia Rails:

Season Dates: Begin September 15 and end December 31, 2011.

Daily Bag and Possession Limits: 20, singly or in the aggregate, 25.

C. Common Snipe:

Season Dates: Begin September 15 and end December 31, 2011.

Daily Bag Limit: 16 common snipe.

D. Woodcock:

Season Dates: Begin September 6 and end December 1, 2011.

Daily Bag Limit: 10 woodcock.

E. Mourning Dove: 1837 and 1842 Ceded Territories only.

Season Dates: Begin September 1 and end November 9, 2011.

Daily Bag Limit: 15 mourning doves.

General Conditions

A. All tribal members will be required to obtain a valid tribal waterfowl hunting permit.

B. Except as otherwise noted, tribal members will be required to comply with tribal codes that will be no less restrictive than the model ceded territory conservation codes approved by Federal courts in the *Lac Courte Oreilles* v. *State of Wisconsin (Voigt)* and *Mille Lacs Band* v. *State of Minnesota* cases. Chapter 10 in each of these model codes regulates ceded territory migratory bird hunting. Both versions of Chapter 10 parallel Federal requirements as to hunting methods, transportation, sale, exportation, and other conditions generally applicable to migratory bird hunting. They also automatically incorporate by reference the Federal migratory bird regulations adopted in response to this proposal.

C. Particular regulations of note include:

1. Nontoxic shot will be required for all waterfowl hunting by tribal members.

2. Tribal members in each zone will comply with tribal regulations providing for closed and restricted waterfowl hunting areas. These regulations generally incorporate the same restrictions contained in parallel State regulations.

3. Possession limits for each species are double the daily bag limit, except on the opening day of the season, when the possession limit equals the daily bag limit, unless otherwise noted above. Possession limits are applicable only to transportation and do not include birds that are cleaned, dressed, and at a member's primary residence. For purposes of enforcing bag and possession limits, all migratory birds in the possession and custody of tribal members on ceded lands will be considered to have been taken on those lands unless tagged by a tribal or State conservation warden as taken on reservation lands. All migratory birds that fall on reservation lands will not count as part of any off-reservation bag or possession limit.

4. The baiting restrictions included in the respective section 10.05(2)(h) of the model ceded territory conservation codes will be amended to include language which parallels that in place for nontribal members as published at 64 FR 29799, June 3, 1999.

5. The shell limit restrictions included in the respective section 10.05(2)(b) of the model ceded territory conservation codes will be removed.

6. Hunting hours shall be from a half hour before sunrise to 15 minutes after sunset.

D. Michigan—Duck Blinds and Decoys. Tribal members hunting in Michigan will comply with duck blind and decoy regulations contained in tribal conservation codes listed under Item B of the General Conditions, except that unattended decoys can be kept out overnight in the Michigan portion of the 1842 ceded territory.

We propose to approve the above GLIFWC regulations for the 2011–12 hunting season.

(f) Jicarilla Apache Tribe, Jicarilla Indian Reservation, Dulce, New Mexico (Tribal Members and Nontribal Hunters)

The Jicarilla Apache Tribe has had special migratory bird hunting regulations for tribal members and nonmembers since the 1986–87 hunting season. The Tribe owns all lands on the reservation and has recognized full wildlife management authority. In general, the proposed seasons would be more conservative than allowed by the Federal frameworks of last season and by States in the Pacific Flyway.

The Tribe proposed a 2011–12 waterfowl and Canada goose season beginning October 8, 2011, and a closing date of November 30, 2011. Daily bag and possession limits for waterfowl would be the same as Pacific Flyway States. The Tribe proposes a daily bag limit for Canada geese of two. Other regulations specific to the Pacific Flyway guidelines for New Mexico would be in effect.

During the Jicarilla Game and Fish Department's 2010–11 season, estimated duck harvest was 551, which is within the historical harvest range. The species composition in the past has included mainly mallards, gadwall, wigeon, and teal. Northern pintail comprised less than one percent of the total harvest in

2010. The estimated harvest of geese was 16 birds.

The proposed regulations are essentially the same as were established last year. The Tribe anticipates the maximum 2011–12 waterfowl harvest would be around 500 ducks and 15–20 geese.

We propose to approve the Tribe's requested 2011–12 hunting seasons.

(g) Kalispel Tribe, Kalispel Reservation, Usk, Washington (Tribal Members and Nontribal Hunters)

The Kalispel Reservation was established by Executive Order in 1914, and currently comprises approximately 4,600 acres. The Tribe owns all Reservation land and has full management authority. The Kalispel Tribe has a fully developed wildlife program with hunting and fishing codes. The Tribe enjoys excellent wildlife management relations with the State. The Tribe and the State have an operational Memorandum of Understanding with emphasis on fisheries but also for wildlife.

The nontribal member seasons described below pertain to a 176-acre waterfowl management unit and 800 acres of reservation land with a guide for waterfowl hunting. The Tribe is utilizing this opportunity to rehabilitate an area that needs protection because of past land use practices, as well as to provide additional waterfowl hunting in the area. Beginning in 1996, the requested regulations also included a proposal for Kalispel-member-only migratory bird hunting on Kalispel-ceded lands within Washington, Montana, and Idaho.

For the 2011–12 migratory bird hunting seasons, the Kalispel Tribe proposed tribal and nontribal member waterfowl seasons. The Tribe requests that both duck and goose seasons open at the earliest possible date and close on the latest date under Federal frameworks.

For nontribal hunters on reservation, the Tribe requests the seasons open at the earliest possible date and remain open, for the maximum amount of open days. Specifically, the Tribe requests that the season for ducks begin September 23, 2011, and end January 31, 2012. In that period, nontribal hunters would be allowed to hunt approximately 102 days. Hunters should obtain further information on specific hunt days from the Kalispel Tribe.

The Tribe also requests the season for geese run from September 2 to September 16, 2011, and from October 1, 2011, to January 31, 2012. Total number of days should not exceed 107. Nontribal hunters should obtain further information on specific hunt days from the Tribe. Daily bag and possession limits would be the same as those for the State of Washington.

The Tribe reports a 2010–11 nontribal harvest of 100 ducks. Under the proposal, the Tribe expects harvest to be similar to last year and less than 100 geese and 200 ducks.

All other State and Federal regulations contained in 50 CFR part 20, such as use of nontoxic shot and possession of a signed migratory bird hunting stamp, would be required.

For tribal members on Kalispel-ceded lands, the Kalispel Tribe proposes season dates consistent with Federal flyway frameworks. Specifically, the Tribe requests outside frameworks for ducks of October 1, 2011, through January 31, 2012, and for geese of September 1, 2011, through January 31, 2012. The Tribe requests that both duck and goose seasons open at the earliest possible date and close on the latest date under Federal frameworks. During that period, the Tribe proposes that the season run continuously. Daily bag and possession limits would be concurrent with the Federal rule.

The Tribe reports that there was no tribal harvest. Under the proposal, the Tribe expects harvest to be less than 200 birds for the season with less than 100 geese. Tribal members would be required to possess a signed Federal migratory bird stamp and a tribal ceded lands permit.

We propose to approve the regulations requested by the Kalispel Tribe, provided that the nontribal seasons conform to Treaty limitations and final Federal frameworks for the Pacific Flyway.

(h) Klamath Tribe, Chiloquin, Oregon (Tribal Members Only)

The Klamath Tribe currently has no reservation, per se. However, the Klamath Tribe has reserved hunting, fishing, and gathering rights within its former reservation boundary. This area of former reservation, granted to the Klamaths by the Treaty of 1864, is over 1 million acres. Tribal natural resource management authority is derived from the Treaty of 1864, and carried out cooperatively under the judicially enforced Consent Decree of 1981. The parties to this Consent Decree are the Federal Government, the State of Oregon, and the Klamath Tribe. The Klamath Indian Game Commission sets the seasons. The tribal biological staff and tribal regulatory enforcement officers monitor tribal harvest by frequent bag checks and hunter interviews.

For the 2011–12 season, the Tribe requests proposed season dates of October 1, 2011, through January 31, 2012. Daily bag limits would be 9 for ducks, 9 for geese, and 9 for coot, with possession limits twice the daily bag limit. Shooting hours would be one-half hour before sunrise to one-half hour after sunset. Steel shot is required.

Based on the number of birds produced in the Klamath Basin, this year's harvest would be similar to last year's. Information on tribal harvest suggests that more than 70 percent of the annual goose harvest is local birds produced in the Klamath Basin.

We propose to approve the Klamath Tribe's requested 2011–12 special migratory bird hunting regulations.

(i) Leech Lake Band of Ojibwe, Cass Lake, Minnesota (Tribal Members Only)

The Leech Lake Band of Ojibwe is a federally recognized Tribe located in Cass Lake, Minnesota. The reservation employs conservation officers to enforce conservation regulations. The Service and the Tribe have cooperatively established migratory bird hunting regulations since 2000.

For the 2011–12 season, the Tribe requests a duck season starting on September 17 and ending December 31, 2011, and a goose season to run from September 1 through December 31, 2011. Daily bag limits for ducks would be 10, including no more than 5 pintail, 5 canvasback, and 5 black ducks. Daily bag limits for geese would be 10. Possession limits would be twice the daily bag limit. Shooting hours are one-half hour before sunrise to one-half hour after sunset.

The annual harvest by tribal members on the Leech Lake Reservation is estimated at 500–1,000 birds.

We propose to approve the Leech Lake Band of Ojibwe's special migratory bird hunting season.

(j) Little River Band of Ottawa Indians, Manistee, Michigan (Tribal Members Only)

The Little River Band of Ottawa Indians is a self-governing, federally recognized Tribe located in Manistee, Michigan, and a signatory Tribe of the Treaty of 1836. We have approved special regulations for tribal members of the 1836 treaty's signatory Tribes on ceded lands in Michigan since the 1986–87 hunting season. Ceded lands are located in Lake, Mason, Manistee, and Wexford Counties. The Band normally proposes regulations to govern the hunting of migratory birds by Tribal members within the 1836 Ceded Territory as well as on the Band's Reservation.

For the 2011–12 season, we assume the Little River Band of Ottawa Indians would propose a duck and merganser season from September 15, 2011, through January 20, 2012. A daily bag limit of 12 ducks would include no more than 2 pintail, 2 canvasback, 3 black duck, 3 wood ducks, 3 redheads, 6 mallards (only 2 of which may be a hen), and 1 hooded merganser. Possession limits would be twice the daily bag limit.

For white-fronted geese, snow geese, and brant, the Tribe usually proposes a September 20 through November 30, 2011, season. Daily bag limits would be five geese.

For Canada geese only, the Tribe usually proposes a September 1, 2011, through February 8, 2012, season with a daily bag limit of five Canada geese. The possession limit would be twice the daily bag limit.

For snipe, woodcock, rails, and mourning doves, the Tribe usually proposes a September 1 to November 14, 2011, season. The daily bag limit would be 10 common snipe, 5 woodcock, 10 rails, and 10 mourning doves. Possession limits for all species would be twice the daily bag limit.

The Tribe monitored harvest through mail surveys. General conditions were as follows:

A. All tribal members will be required to obtain a valid tribal resource card and 2011–12 hunting license.

B. Except as modified by the Service rules adopted in response to this proposal, these amended regulations parallel all Federal regulations contained in 50 CFR part 20.

C. Particular regulations of note include:

(1) Nontoxic shot will be required for all waterfowl hunting by tribal members.

(2) Tribal members in each zone will comply with tribal regulations providing for closed and restricted waterfowl hunting areas. These regulations generally incorporate the same restrictions contained in parallel State regulations.

D. Tribal members hunting in Michigan will comply with tribal codes that contain provisions parallel to Michigan law regarding duck blinds and decoys.

We plan to approve Little River Band of Ottawa Indians' special migratory bird hunting seasons upon receipt of their proposal based on the provisions described above.

(k) The Little Traverse Bay Bands of Odawa Indians, Petoskey, Michigan (Tribal Members Only)

The Little Traverse Bay Bands of Odawa Indians (LTBB) is a self-governing, federally recognized Tribe located in Petoskey, Michigan, and a signatory Tribe of the Treaty of 1836. We have approved special regulations for tribal members of the 1836 treaty's signatory Tribes on ceded lands in Michigan since the 1986–87 hunting season.

For the 2011–12 season, the Little Traverse Bay Bands of Odawa Indians propose regulations similar to those of other Tribes in the 1836 treaty area. LTBB proposes the regulations to govern the hunting of migratory birds by tribal members on the LTBB reservation and within the 1836 Treaty Ceded Territory. The tribal member duck and merganser season would run from September 15, 2011, through January 31, 2012. A daily bag limit of 20 ducks and 10 mergansers would include no more than 5 hen mallards, 5 pintail, 5 canvasback, 5 scaup, 5 hooded merganser, 5 black ducks, 5 wood ducks, and 5 redheads.

For Canada geese, the Tribe proposes a September 1, 2011, through February 8, 2012, season. The daily bag limit for Canada geese would be 20 birds. We further note that based on available data (of major goose migration routes), it is unlikely that any Canada geese from the Southern James Bay Population would be harvested by the Tribe. Possession limits are twice the daily bag limit.

For woodcock, the Tribe proposes a September 1, 2011, to December 1, 2011, season. The daily bag limit will not exceed 10 birds. For snipe, the Tribe proposes a September 1 to December 31, 2011, season. The daily bag limit will not exceed 16 birds. For mourning doves, the Tribe proposes a September 1 to November 14, 2011, season. The daily bag limit will not exceed 15 birds. For Virginia and sora rails, the Tribe proposes a September 1 to December 31, 2011, season. The daily bag limit will not exceed 20 birds per species. For coots and gallinules, the Tribe proposes a September 15 to December 31, 2011, season. The daily bag limit will not exceed 20 birds per species. The possession limit will not exceed 2 days' bag limit for all birds.

All other Federal regulations contained in 50 CFR part 20 would apply.

The Tribe proposes to monitor harvest closely through game bag checks, patrols, and mail surveys. In particular, the Tribe proposes monitoring the harvest of Southern James Bay Canada geese to assess any impacts of tribal hunting on the population.

We propose to approve the Little Traverse Bay Bands of Odawa Indians' requested 2011–12 special migratory bird hunting regulations.

(l) Lower Brule Sioux Tribe, Lower Brule Reservation, Lower Brule, South Dakota (Tribal Members and Nontribal Hunters)

The Lower Brule Sioux Tribe first established tribal migratory bird hunting regulations for the Lower Brule Reservation in 1994. The Lower Brule Reservation is about 214,000 acres in size and is located on and adjacent to the Missouri River, south of Pierre. Land ownership on the reservation is mixed, and until recently, the Lower Brule Tribe had full management authority over fish and wildlife via an MOA with the State of South Dakota. The MOA provided the Tribe jurisdiction over fish and wildlife on reservation lands, including deeded and Corps of Engineers-taken lands. For the 2011–12 season, the two parties have come to an agreement that provides the public a clear understanding of the Lower Brule Sioux Wildlife Department license requirements and hunting season regulations. The Lower Brule Reservation waterfowl season is open to tribal and nontribal hunters.

For the 2011–12 migratory bird hunting season, the Lower Brule Sioux Tribe proposes a nontribal member duck, merganser, and coot season length of 97 days, or the maximum number of days allowed by Federal frameworks in the High Plains Management Unit for this season. The Tribe proposes a duck season from September 27, 2011, through January 1, 2012. The daily bag limit would be six birds, including no more than one hen mallard, one pintail, two redheads, one canvasback, two wood ducks, two scaup, and one mottled duck. The daily bag limit for mergansers would be five, only two of which could be a hooded merganser. The daily bag limit for coots would be 15. Possession limits would be twice the daily bag limits.

The Tribe's proposed nontribal-member Canada goose season would run from October 29, 2011, through February 12, 2012 (107-day season length), with a daily bag limit of three Canada geese. The Tribe's proposed nontribal member white-fronted goose season would run from October 29, 2011, through January 6, 2012, and January 28 through February 12, 2012, with a daily bag limit of one white-fronted geese. The Tribe's proposed nontribal-member light goose season would run from October 29, 2011, through January 12, 2012, and February

4 through March 10, 2012. The light goose daily bag limit would be 20. Possession limits would be twice the daily bag limits.

For tribal members, the Lower Brule Sioux Tribe proposes a duck, merganser, and coot season from September 24, 2011, through March 10, 2012. The daily bag limit would be six ducks, including no more than one hen mallard, one pintail, two redheads, one canvasback, two wood ducks, two scaup, and one mottled duck. The daily bag limit for mergansers would be five, only two of which could be hooded mergansers. The daily bag limit for coots would be 15. Possession limits would be twice the daily bag limits.

The Tribe's proposed Canada goose season for tribal members would run from September 24, 2011, through March 10, 2012, with a daily bag limit of three Canada geese. The Tribe's proposed white-fronted goose tribal season would run from September 24, 2011, through March 10, 2012, with a daily bag limit of two white-fronted geese. The Tribe's proposed light goose tribal season would run from September 24, 2011, through March 10, 2012. The light goose daily bag limit would be 20. Possession limits would be twice the daily bag limits.

In the 2010–11 season, hunters harvested 793 geese and 462 ducks. In the 2010–11 season, duck harvest species composition was primarily mallard (64 percent), gadwall (9 percent), green-winged teal (9 percent), wigeon (7 percent), and other species (11 percent).

Goose harvest species composition in 2010–11 at Mni Sho Sho was approximately 50 percent Canada geese, 48 percent snow geese, and 2 percent white-fronted geese.

The Tribe anticipates a duck harvest similar to those of the previous 3 years and a goose harvest below the target harvest level of 3,000 to 4,000 geese. All basic Federal regulations contained in 50 CFR part 20, including the use of nontoxic shot, Migratory Waterfowl Hunting and Conservation Stamps, etc., would be observed by the Tribe's proposed regulations. In addition, the Lower Brule Sioux Tribe has an official Conservation Code that was established by Tribal Council Resolution in June 1982 and updated in 1996.

We plan to approve the Tribe's requested regulations for the Lower Brule Reservation given that the seasons' dates fall within final Federal flyway frameworks (applies to nontribal hunters only).

(m) Lower Elwha Klallam Tribe, Port Angeles, Washington (Tribal Members Only)

Since 1996, the Service and the Point No Point Treaty Tribes, of which Lower Elwha was one, have cooperated to establish special regulations for migratory bird hunting. The Tribes are now acting independently and the Lower Elwha Klallam Tribe would like to establish migratory bird hunting regulations for tribal members for the 2011–12 season. The Tribe has a reservation on the Olympic Peninsula in Washington State and is a successor to the signatories of the Treaty of Point No Point of 1855.

For the 2011–12 season, the Lower Elwha Klallam Tribe requests a duck and coot season from September 17, 2011, to January 2, 2012. The daily bag limit will be seven ducks including no more than two hen mallards, one pintail, one canvasback, and two redheads. The daily bag and possession limit on harlequin duck will be one per season. The coot daily bag limit will be 25. The possession limit will be twice the daily bag limit, except as noted above.

For geese, the Tribe requests a season from September 17, 2011, to January 2, 2012. The daily bag limit will be four, including no more than three light geese. The season on Aleutian Canada geese will be closed.

For brant, the Tribe proposes to close the season.

For mourning doves, band-tailed pigeon, and snipe, the Tribe requests a season from September 17, 2011, to January 2, 2012, with a daily bag limit of 10, 2, and 8, respectively. The possession limit will be twice the daily bag limit.

All Tribal hunters authorized to hunt migratory birds are required to obtain a tribal hunting permit from the Lower Elwha Klallam Tribe pursuant to tribal law. Hunting hours would be from one-half hour before sunrise to sunset. Only steel, tungsten-iron, tungsten-polymer, tungsten-matrix, and tin shot are allowed for hunting waterfowl. It is unlawful to use or possess lead shot while hunting waterfowl.

The Tribe typically anticipates harvest to be fewer than 20 birds. Tribal reservation police and Tribal fisheries enforcement officers have the authority to enforce these migratory bird hunting regulations.

The Service proposes to approve the request for special migratory bird hunting regulations for the Lower Elwha Klallam Tribe.

(n) Makah Indian Tribe, Neah Bay, Washington (Tribal Members Only)

The Makah Indian Tribe and the Service have been cooperating to establish special regulations for migratory game birds on the Makah Reservation and traditional hunting land off the Makah Reservation since the 2001–02 hunting season. Lands off the Makah Reservation are those contained within the boundaries of the State of Washington Game Management Units 601–603.

The Makah Indian Tribe proposes a duck and coot hunting season from September 24, 2011, to January 29, 2012. The daily bag limit is seven ducks, including no more than five mallards (only two hen mallard), one canvasback, one pintail, three scaup, and one redhead. The daily bag limit for coots is 25. The Tribe has a year-round closure on wood ducks and harlequin ducks. Shooting hours for all species of waterfowl are one-half hour before sunrise to sunset.

For geese, the Tribe proposes that the season open on September 24, 2011, and close January 29, 2012. The daily bag limit for geese is four and one brant. The Tribe notes that there is a year-round closure on Aleutian and Dusky Canada geese.

For band-tailed pigeons, the Tribe proposes that the season open September 17, 2011, and close October 30, 2011. The daily bag limit for band-tailed pigeons is two.

The Tribe anticipates that harvest under this regulation will be relatively low since there are no known dedicated waterfowl hunters and any harvest of waterfowl or band-tailed pigeons is usually incidental to hunting for other species, such as deer, elk, and bear. The Tribe expects fewer than 50 ducks and 10 geese to be harvested during the 2011–12 migratory bird hunting season.

All other Federal regulations contained in 50 CFR part 20 would apply. The following restrictions are also usually proposed by the Tribe:

(1) As per Makah Ordinance 44, only shotguns may be used to hunt any species of waterfowl. Additionally, shotguns must not be discharged within 0.25 miles of an occupied area.

(2) Hunters must be eligible, enrolled Makah tribal members and must carry their Indian Treaty Fishing and Hunting Identification Card while hunting. No tags or permits are required to hunt waterfowl.

(3) The Cape Flattery area is open to waterfowl hunting, except in designated wilderness areas, or within 1 mile of Cape Flattery Trail, or in any area that is closed to hunting by another ordinance or regulation.

(4) The use of live decoys and/or baiting to pursue any species of waterfowl is prohibited.

(5) Steel or bismuth shot only for waterfowl is allowed; the use of lead shot is prohibited.

(6) The use of dogs is permitted to hunt waterfowl.

We plan to approve the Makah Indian Tribe's requested 2011–12 special migratory bird hunting regulations.

(o) Navajo Nation, Navajo Indian Reservation, Window Rock, Arizona (Tribal Members and Nontribal Hunters)

Since 1985, we have established uniform migratory bird hunting regulations for tribal members and nonmembers on the Navajo Indian Reservation (in parts of Arizona, New Mexico, and Utah). The Navajo Nation owns almost all lands on the reservation and has full wildlife management authority.

For the 2011–12 season, the Navajo Nation requests special migratory bird hunting regulations on the reservation for both tribal and nontribal hunters for ducks (including mergansers), Canada geese, coots, band-tailed pigeons, and mourning doves. For ducks, mergansers, Canada geese, and coots, the Tribe requests the earliest opening dates and longest seasons, and the same daily bag and possession limits allowed to Pacific Flyway States under final Federal frameworks.

For both mourning dove and band-tailed pigeons, the Navajo Nation proposes seasons of September 1 through September 30, 2011, with daily bag limits of 10 and 5, respectively. Possession limits would be twice the daily bag limits.

The Nation requires tribal members and nonmembers to comply with all basic Federal migratory bird hunting regulations in 50 CFR part 20 pertaining to shooting hours and manner of taking. In addition, each waterfowl hunter 16 years of age or over must carry on his/her person a valid Migratory Bird Hunting and Conservation Stamp (Duck Stamp), which must be signed in ink across the face. Special regulations established by the Navajo Nation also apply on the reservation.

The Tribe anticipates a total harvest of fewer than 500 mourning doves; fewer than 10 band-tailed pigeons; fewer than 1,000 ducks, coots, and mergansers; and fewer than 1,000 Canada geese for the 2011–12 season. The Tribe will measure harvest by mail survey forms. Through the established Navajo Nation Code, Title 17, 18, and 23 U.S.C. 1165, the Tribe will take action to close the season, reduce bag limits, or take other appropriate actions if the harvest is detrimental to the migratory bird resource.

We propose to approve the Navajo Nation's special migratory bird season.

(p) Oneida Tribe of Indians of Wisconsin, Oneida, Wisconsin (Tribal Members Only)

Since 1991–92, the Oneida Tribe of Indians of Wisconsin and the Service have cooperated to establish uniform regulations for migratory bird hunting by tribal and nontribal hunters within the original Oneida Reservation boundaries. Since 1985, the Oneida Tribe's Conservation Department has enforced the Tribe's hunting regulations within those original reservation limits. The Oneida Tribe also has a good working relationship with the State of Wisconsin and the majority of the seasons and limits are the same for the Tribe and Wisconsin.

In a May 12, 2011, letter, the Tribe proposed special migratory bird hunting regulations. For ducks, the Tribe described the general outside dates as being September 18 through December 4, 2011, with a closed segment of November 19 to 27, 2011. The Tribe proposes a daily bag limit of six birds, which could include no more than six mallards (three hen mallards), six wood duck, one redhead, two pintail, and one hooded merganser.

For geese, the Tribe requests a season between September 1 and January 1, 2012, with a daily bag limit of five Canada geese from September 1 through 18, 2011, and three from September 19, 2011, through January 1, 2012. The Tribe will close the season November 19 to 27, 2011. If a quota of 300 geese is attained before the season concludes, the Tribe will recommend closing the season early.

For woodcock, the Tribe proposes a season between September 3 and November 6, 2011, with a daily bag and possession limit of 5 and 10, respectively.

For mourning dove, the Tribe proposes a season between September 1 and November 6, 2011, with a daily bag and possession limit of 10 and 20, respectively.

The Tribe proposes shooting hours be one-half hour before sunrise to one-half hour after sunset. Nontribal hunters hunting on the Reservation or on lands under the jurisdiction of the Tribe must comply with all State of Wisconsin regulations, including shooting hours of one-half hour before sunrise to sunset, season dates, and daily bag limits. Tribal members and nontribal hunters hunting on the Reservation or on lands under the jurisdiction of the Tribe must observe all basic Federal migratory bird hunting regulations found in 50 CFR part 20, with the following exceptions: Oneida members would be exempt from the purchase of the Migratory Waterfowl Hunting and Conservation Stamp (Duck Stamp); and shotgun capacity is not limited to three shells.

The Service proposes to approve the request for special migratory bird hunting regulations for the Oneida Tribe of Indians of Wisconsin.

(q) Point No Point Treaty Council Tribes, Kingston, Washington (Tribal Members Only)

We are establishing uniform migratory bird hunting regulations for tribal members on behalf of the Point No Point Treaty Council Tribes, consisting of the Port Gamble S'Klallam and Jamestown S'Klallam Tribes. The two tribes have reservations and ceded areas in northwestern Washington State and are the successors to the signatories of the Treaty of Point No Point of 1855. These proposed regulations will apply to tribal members both on and off reservations within the Point No Point Treaty Areas; however, the Port Gamble S'Klallam and Jamestown S'Klallam Tribal season dates differ only where indicated below.

For the 2011–12 season, the Point No Point Treaty Council requests special migratory bird hunting regulations for the 2011–12 hunting season for both the Jamestown S'Klallam and Port Gamble S'Klallam Tribes. For ducks and coots hunting season, the Jamestown S'Klallam Tribe proposes the season open September 15, 2011, and close February 1, 2012. The Port Gamble S'Klallam Tribes proposes the season open from September 1, 2011, to February 1, 2012. The daily bag limit is seven ducks, including no more than two hen mallards, one canvasback, one pintail, two redhead, and four scoters. The daily bag limit for coots is 25. The daily bag limit and possession limit on harlequin ducks is one per season. The daily possession limits are double the daily bag limits except where noted.

For geese, the Point No Point Treaty Council proposes the season open on September 15, 2011, and close March 10, 2012. The daily bag limit for geese is four, not to include more than three light geese. The Council notes that there is a year-round closure on Aleutian and Cackling Canada geese. For brant, the Council proposes the season open on November 13, 2011, and close January 31, 2012. The daily bag limit for brant is two.

For band-tailed pigeons and snipe, the Port Gamble S'Klallam Tribe proposes the season open September 1, 2011, and close March 10, 2012. The Jamestown S'Klallam Tribe proposes the season

open September 15, 2011, and close March 10, 2012. The daily bag limit for band-tailed pigeons is two and for snipe is eight. For mourning dove, the Port Gamble S'Klallam Tribe proposes the season open September 1, 2011, and close January 31, 2012. The Jamestown S'Klallam Tribe proposes the season open September 15, 2011, and close January 14, 2012. The daily bag limit for mourning dove is 10.

The Tribe anticipates a total harvest of fewer than 200 birds for the 2011–12 season. The Tribal Fish and Wildlife enforcement officers have the authority to enforce these tribal regulations.

We propose to approve the Point No Point Treaty Council Tribe's special migratory bird seasons.

(r) Sault Ste. Marie Tribe of Chippewa Indians, Sault Ste. Marie, Michigan (Tribal Members Only)

The Sault Ste. Marie Tribe of Chippewa Indians is a federally recognized self-governing Indian Tribe, distributed throughout the eastern Upper Peninsula and northern Lower Peninsula of Michigan. The Tribe has retained the right to hunt, fish, trap, and gather on the lands ceded in the Treaty of Washington (1836).

In a May 31, 2011, letter, the Tribe proposed special migratory bird hunting regulations. For ducks, mergansers, and common snipe, the Tribe proposes outside dates as September 15 through December 31, 2011. The Tribe proposes a daily bag limit of 20 ducks, which could include no more than 10 mallards (5 hen mallards), 5 wood duck, 5 black duck, and 5 canvasback. The merganser daily bag limit is 10 in the aggregate and 16 for common snipe.

For geese, coot, gallinule, sora, and Virginia rail, the Tribe requests a season from September 1 to December 31, 2011. The daily bag limit for geese is 20, in the aggregate. The daily bag limit for coot, gallinule, sora, and Virginia rail is 20 in the aggregate.

For woodcock, the Tribe proposes a season between September 2 and December 1, 2011, with a daily bag and possession limit of 10 and 20, respectively.

For mourning dove, the Tribe proposes a season between September 1 and November 14, 2011, with a daily bag and possession limit of 10 and 20, respectively.

All Sault Tribe members exercising hunting treaty rights within the 1836 Ceded Territory are required to submit annual harvest reports including date of harvest, number and species harvested, and location of harvest. Hunting hours would be from one-half hour before sunrise to one-half hour after sunset. All other regulations in 50 CFR part 20 apply including the use of only nontoxic shot for hunting waterfowl.

The Service proposes to approve the request for special migratory bird hunting regulations for the Sault Ste. Marie Tribe of Chippewa Indians.

(s) Shoshone–Bannock Tribes, Fort Hall Indian Reservation, Fort Hall, Idaho (Nontribal Hunters)

Almost all of the Fort Hall Indian Reservation is tribally owned. The Tribes claim full wildlife management authority throughout the reservation, but the Idaho Fish and Game Department has disputed tribal jurisdiction, especially for hunting by nontribal members on reservation lands owned by non-Indians. As a compromise, since 1985, we have established the same waterfowl hunting regulations on the reservation and in a surrounding off-reservation State zone. The regulations were requested by the Tribes and provided for different season dates than in the remainder of the State. We agreed to the season dates because they would provide additional protection to mallards and pintails. The State of Idaho concurred with the zoning arrangement. We have no objection to the State's use of this zone again in the 2011–12 hunting season, provided the duck and goose hunting season dates are the same as on the reservation.

In a proposal for the 2011–12 hunting season, the Shoshone–Bannock Tribes requested a continuous duck (including mergansers) season, with the maximum number of days and the same daily bag and possession limits permitted for Pacific Flyway States under the final Federal frameworks. The Tribes propose a duck and coot season with, if the same number of hunting days is permitted as last year, an opening date of October 1, 2011, and a closing date of January 13, 2012. The Tribes anticipate harvest will be between 2,000 and 5,000 ducks.

The Tribes also requested a continuous goose season with the maximum number of days and the same daily bag and possession limits permitted in Idaho under Federal frameworks. The Tribes propose that, if the same number of hunting days is permitted as in previous years, the season would have an opening date of October 1, 2011, and a closing date of January 13, 2012. The Tribes anticipate harvest will be between 4,000 and 6,000 geese.

The Tribe requests a common snipe season with the maximum number of days and the same daily bag and possession limits permitted in Idaho under Federal frameworks. The Tribes propose that, if the same number of hunting days is permitted as in previous years, the season would have an opening date of October 1, 2011, and a closing date of January 13, 2012.

Nontribal hunters must comply with all basic Federal migratory bird hunting regulations in 50 CFR part 20 pertaining to shooting hours, use of steel shot, and manner of taking. Special regulations established by the Shoshone–Bannock Tribes also apply on the reservation.

We note that the requested regulations are nearly identical to those of last year, and we propose to approve them for the 2011–12 hunting season given that the seasons' dates fall within the final Federal flyway frameworks (applies to nontribal hunters only).

(t) Skokomish Tribe, Shelton, Washington (Tribal Members Only)

Since 1996, the Service and the Point No Point Treaty Tribes, of which the Skokomish Tribe was one, have cooperated to establish special regulations for migratory bird hunting. The Tribes have been acting independently since 2005, and the Skokomish Tribe would like to establish migratory bird hunting regulations for tribal members for the 2011–12 season. The Tribe has a reservation on the Olympic Peninsula in Washington State and is a successor to the signatories of the Treaty of Point No Point of 1855.

The Skokomish Tribe requests a duck and coot season from September 16, 2011, to February 28, 2012. The daily bag limit is seven ducks, including no more than two hen mallards, one pintail, one canvasback, and two redheads. The daily bag and possession limit on harlequin duck is one per season. The coot daily bag limit is 25. The possession limit is twice the daily bag limit except as noted above.

For geese, the Tribe requests a season from September 16, 2011, to February 28, 2012. The daily bag limit is four, including no more than three light geese. The season on Aleutian Canada geese is closed. For brant, the Tribe proposes a season from November 1, 2011, to February 15, 2012, with a daily bag limit of two. The possession limit is twice the daily bag limit.

For mourning doves, band-tailed pigeon, and snipe, the Tribe requests a season from September 16, 2011, to February 28, 2012, with a daily bag limit of 10, 2, and 8, respectively. The possession limit is twice the daily bag limit.

All Tribal hunters authorized to hunt migratory birds are required to obtain a tribal hunting permit from the Skokomish Tribe pursuant to tribal law. Hunting hours would be from one-half

hour before sunrise to sunset. Only steel, tungsten-iron, tungsten-polymer, tungsten-matrix, and tin shot are allowed for hunting waterfowl. It is unlawful to use or possess lead shot while hunting waterfowl.

The Tribe anticipates harvest to be fewer than 150 birds. The Skokomish Public Safety Office enforcement officers have the authority to enforce these migratory bird hunting regulations.

We propose to approve the Skokomish Tribe's requested migratory bird hunting season.

(u) Spokane Tribe of Indians, Spokane Indian Reservation, Wellpinit, Washington (Tribal Members Only)

The Spokane Tribe of Indians wishes to establish waterfowl seasons on their reservation for its membership to access as an additional resource. An established waterfowl season on the reservation will allow access to a resource for members to continue practicing a subsistence lifestyle.

The Spokane Indian Reservation is located in northeastern Washington State. The reservation comprises approximately 157,000 acres. The boundaries of the Reservation are the Columbia River to the west, the Spokane River to the south (now Lake Roosevelt), Tshimikn Creek to the east, and the 48th Parallel as the north boundary. Tribal membership comprises approximately 2,300 enrolled Spokane Tribal Members. Prior to 1939, the Spokane Tribe was primarily a salmon people; upon completion of Grand Coulee Dam creating Lake Roosevelt, the development of hydroelectricity without passage ultimately removed salmon access from historical fishing areas for the Spokane Tribe for the past 70 years.

These proposed regulations would allow Tribal Members, spouses of Spokane Tribal Members, and first-generation descendants of a Spokane Tribal Member with a tribal permit and Federal Waterfowl stamp an opportunity to utilize the reservation and ceded lands. It will also benefit tribal membership through access to this resource throughout Spokane Tribal ceded lands in eastern Washington. By Spokane Tribal Referendum, spouses of Spokane Tribal Members and children of Spokane Tribal Members not enrolled are allowed to harvest game animals within the Spokane Indian Reservation with the issuance of hunting permits.

For the 2011–12 season, the Tribe requests to establish duck seasons that would run from September 2, 2011, through January 31, 2012. The tribe is requesting the daily bag limit for ducks to be consistent with final Federal frameworks. The possession limit is twice the daily bag limit.

The Tribe proposes a season on geese starting September 2, 2011, and ending on January 31, 2012. The tribe is requesting the daily bag limit for geese to be consistent with final Federal frameworks. The possession limit is twice the daily bag limit.

Based on the quantity of requests the Spokane Tribe of Indians has received, the tribe anticipates harvest levels for the 2011–12 season for both ducks and geese to be below 100 total birds with goose harvest at fewer than 50. Hunter success will be monitored through mandatory harvest reports returned within 30 days of the season closure.

We propose to approve the Spokane Tribe's requested 2011–12 special migratory bird hunting regulations.

(v) Squaxin Island Tribe, Squaxin Island Reservation, Shelton, Washington (Tribal Members Only)

The Squaxin Island Tribe of Washington and the Service have cooperated since 1995 to establish special tribal migratory bird hunting regulations. These special regulations apply to tribal members on the Squaxin Island Reservation, located in western Washington near Olympia, and all lands within the traditional hunting grounds of the Squaxin Island Tribe.

For the 2011–12 season, the Tribe requests to establish duck and coot seasons that would run from September 1, 2011, through January 15, 2012. The daily bag limit for ducks is five per day and could include only one canvasback. The season on harlequin ducks is closed. For coots, the daily bag limit is 25. For snipe, the Tribe proposes that the season start on September 15, 2011, and end on January 15, 2012. The daily bag limit for snipe is eight. For band-tailed pigeon, the Tribe proposes that the season start on September 1, 2011, and end on December 31, 2011. The daily bag limit is five. The possession limit is twice the daily bag limit.

The Tribe proposes a season on geese starting September 15, 2011, and ending on January 15, 2012. The daily bag limit for geese is four, including no more than two snow geese. The season on Aleutian and cackling Canada geese is closed. For brant, the Tribe proposes that the season start on September 1, 2011, and end on December 31, 2011. The daily bag limit for brant is two. The possession limit is twice the daily bag limit.

We propose to approve the Tribe's requested 2011–12 special migratory bird hunting regulations.

(w) Stillaguamish Tribe of Indians, Arlington, Washington (Tribal Members Only)

The Stillaguamish Tribe of Indians and the Service have cooperated to establish special regulations for migratory game birds since 2001. We expect that the Tribe will request regulations to hunt all open and unclaimed lands under the Treaty of Point Elliott of January 22, 1855, including their main hunting grounds around Camano Island, Skagit Flats, and Port Susan to the border of the Tulalip Tribes Reservation. Ceded lands are located in Whatcom, Skagit, Snohomish, and Kings Counties, and a portion of Pierce County, Washington. The Stillaguamish Tribe of Indians is a federally recognized Tribe and reserves the Treaty Right to hunt (*U.S.* v. *Washington*).

The Tribe usually proposes that duck (including mergansers) and goose seasons run from October 1, 2011, to February 15, 2012. The daily bag limit on ducks (including sea ducks and mergansers) is 10 and must include no more than 7 mallards (only 3 of which can be hens), 3 pintails, 3 redheads, 3 scaup, and 3 canvasbacks. For geese, the daily bag limit is six. Possession limits are totals of these two daily bag limits.

The Tribe usually proposes that coot, brant, and snipe seasons run from October 1, 2011, to January 31, 2012. The daily bag limit for coot is 25. The daily bag limit on brant is three. The daily bag limit for snipe is 10. Possession limits are twice the daily bag limit.

The Tribe usually proposes that band-tailed pigeon and dove seasons run from September 1, 2011, to October 31, 2011. The daily bag limit for band-tailed pigeon is four. The daily bag limit on dove is 10. Possession limits are twice the daily bag limit.

Harvest is regulated by a punch card system. Tribal members hunting on lands under this proposal will observe all basic Federal migratory bird hunting regulations found in 50 CFR part 20, which will be enforced by the Stillaguamish Tribal law enforcement. Tribal members are required to use steel shot or a nontoxic shot as required by Federal regulations.

The Tribe anticipates a total harvest of 200 ducks, 100 geese, 50 mergansers, 100 coots, and 100 snipe. Anticipated harvest needs include subsistence and ceremonial needs. Certain species may be closed to hunting for conservation purposes, and consideration for the needs of certain species will be addressed.

Upon receipt of the 2011–12 Stillaguamish Tribe's hunting proposal, the Service proposes to approve the request for special migratory bird hunting regulations for the Stillaguamish Tribe of Indians.

(x) Swinomish Indian Tribal Community, LaConner, Washington (Tribal Members Only)

In 1996, the Service and the Swinomish Indian Tribal Community began cooperating to establish special regulations for migratory bird hunting. The Swinomish Indian Tribal Community is a federally recognized Indian Tribe consisting of the Swinomish, Lower Skagit, Samish, and Kikialous. The Swinomish Reservation was established by the Treaty of Point Elliott of January 22, 1855, and lies in the Puget Sound area north of Seattle, Washington.

For the 2011–12 season, we anticipate that the Tribal Community will request to establish a migratory bird hunting season on all areas that are open and unclaimed and consistent with the meaning of the treaty. The Tribal Community usually requests to establish duck, merganser, Canada goose, brant, and coot seasons opening on the earliest possible date allowed by the final Federal frameworks for the Pacific Flyway and closing 30 days after the State of Washington closes its season. The Swinomish Indian Tribal Community requests an additional three birds of each species over the numbers allowed by the State for daily bag and possession limits.

The Community normally anticipates that the regulations will result in the harvest of approximately 300 ducks, 50 Canada geese, 75 mergansers, 100 brant, and 50 coot. The Swinomish utilize a report card and permit system to monitor harvest and will implement steps to limit harvest where conservation is needed. All tribal regulations will be enforced by tribal fish and game officers.

On reservation, the Tribal Community usually proposes a hunting season for the above-mentioned species beginning on the earliest possible opening date and closing March 9, 2012. The Swinomish manage harvest by a report card and permit system, and we anticipate harvest will be similar to that expected off reservation.

We believe the estimated harvest by the Swinomish will be minimal and will not adversely affect migratory bird populations. Upon receipt of the 2011–12 Swinomish hunting proposal, we propose to approve the Tribe's requested 2011–12 special migratory bird hunting regulations.

(y) The Tulalip Tribes of Washington, Tulalip Indian Reservation, Marysville, Washington (Tribal Members and Nontribal Hunters)

The Tulalip Tribes are the successors in interest to the Tribes and bands signatory to the Treaty of Point Elliott of January 22, 1855. The Tulalip Tribes' government is located on the Tulalip Indian Reservation just north of the City of Everett in Snohomish County, Washington. The Tribes or individual tribal members own all of the land on the reservation, and they have full wildlife management authority. All lands within the boundaries of the Tulalip Tribes Reservation are closed to nonmember hunting unless opened by Tulalip Tribal regulations.

We expect the Tribe to propose tribal and nontribal hunting regulations for the 2011–12 season. Migratory waterfowl hunting by Tulalip Tribal members is authorized by Tulalip Tribal Ordinance No. 67. For ducks, mergansers, coot, and snipe, the proposed season for tribal members usually would be from September 8, 2011, through February 28, 2012. In the case of nontribal hunters hunting on the reservation, the season would be the latest closing date and the longest period of time allowed under the final Pacific Flyway Federal frameworks. Daily bag and possession limits for Tulalip Tribal members would be 7 and 14 ducks, respectively, except that for blue-winged teal, canvasback, harlequin, pintail, and wood duck, the bag and possession limits would be the same as those established in accordance with final Federal frameworks. For nontribal hunters, bag and possession limits would be the same as those permitted under final Federal frameworks. For coot, daily bag and possession limits are 25 and 50, respectively, and for snipe 8 and 18, respectively. Nontribal hunters should check with the Tulalip tribal authorities regarding additional conservation measures that may apply to specific species managed within the region. Ceremonial hunting may be authorized by the Department of Natural Resources at any time upon application of a qualified tribal member. Such a hunt must have a bag limit designed to limit harvest only to those birds necessary to provide for the ceremony.

For geese, tribal members usually propose a season from September 8, 2011, through February 28, 2012. Nontribal hunters would be allowed the longest season and the latest closing date permitted by the Pacific Flyway Federal frameworks. For tribal hunters, the goose daily bag and possession limits would be 7 and 14, respectively, except that the bag limits for brant, cackling Canada geese, and dusky Canada geese would be those established in accordance with final Federal frameworks. For nontribal hunters hunting on reservation lands, the daily bag and possession limits would be those established in accordance with final Federal frameworks for the Pacific Flyway. The Tulalip Tribes also set a maximum annual bag limit for those tribal members who engage in subsistence hunting of 365 ducks and 365 geese.

All hunters on Tulalip Tribal lands are required to adhere to shooting hour regulations set at one-half hour before sunrise to sunset, special tribal permit requirements, and a number of other tribal regulations enforced by the Tribe. Each nontribal hunter 16 years of age and older hunting pursuant to Tulalip Tribes' Ordinance No. 67 must possess a valid Federal Migratory Bird Hunting and Conservation Stamp and a valid State of Washington Migratory Waterfowl Stamp. Each hunter must validate stamps by signing across the face.

Although the season length requested by the Tulalip Tribes appears to be quite liberal, harvest information indicates a total take by tribal and nontribal hunters of fewer than 1,000 ducks and 500 geese annually.

Upon receipt of the 2011–12 Squaxin Island Tribe's hunting proposal, we propose to approve the Tulalip Tribe's request to have a special season.

(z) Upper Skagit Indian Tribe, Sedro Woolley, Washington (Tribal members only)

The Upper Skagit Indian Tribe and the Service have cooperated to establish special regulations for migratory game birds since 2001. The Tribe has jurisdiction over lands within Skagit, Island, and Whatcom Counties, Washington. The Tribe issues tribal hunters a harvest report card that will be shared with the State of Washington.

For the 2011–12 season, the Tribe requests a duck season starting October 1, 2011, and ending February 28, 2012. The Tribe proposes a daily bag limit of 15 with a possession limit of 20. The Tribe requests a coot season starting October 15, 2011, and ending February 15, 2012. The coot daily bag limit is 20 with a possession limit of 30.

The Tribe proposes a goose season from October 15, 2011, to February 28, 2012, with a daily bag limit of seven geese and a possession limit of 10. For brant, the Tribe proposes a season from November 1 to November 10, 2011, with a daily bag and possession limit of 2.

The Tribe proposes a mourning dove season between September 1 and December 31, 2011, with a daily bag limit of 12 and possession limit of 15.

The anticipated migratory bird harvest under this proposal would be 100 ducks, 5 geese, 2 brant, and 10 coots. Tribal members must have the tribal identification and tribal harvest report card on their person to hunt. Tribal members hunting on the Reservation will observe all basic Federal migratory bird hunting regulations found in 50 CFR part 20, except shooting hours would be 15 minutes before official sunrise to 15 minutes after official sunset.

The Service proposes to approve the request for special migratory bird hunting regulations for the Upper Skagit Indian Tribe.

(aa) Wampanoag Tribe of Gay Head, Aquinnah, Massachusetts (Tribal Members Only)

The Wampanoag Tribe of Gay Head is a federally recognized Tribe located on the island of Martha's Vineyard in Massachusetts. The Tribe has approximately 560 acres of land, which it manages for wildlife through its natural resources department. The Tribe also enforces its own wildlife laws and regulations through the natural resources department.

For the 2011–12 season, the Tribe proposes a duck season of October 15, 2011, through October 23, 2011, and November 1, 2011, through February 25, 2012. The Tribe proposes a daily bag limit of six birds, which could include no more than four hen mallards, four mottled ducks, one fulvous whistling duck, four mergansers, three scaup, two hooded mergansers, three wood ducks, one canvasback, two redheads, two pintail, and four of all other species not listed. The season for harlequin ducks is closed. The Tribe proposes a teal (green-winged and blue) season of October 13, 2011, through February 25, 2012. A daily bag limit of 10 teal would be in addition to the daily bag limit for ducks.

For sea ducks, the Tribe usually proposes a season between October 8, 2011, and February 25, 2012, with a daily bag limit of seven, which could include no more than one hen eider and four of any one species unless otherwise noted above.

For Canada geese, the Tribe usually requests a season between September 7 and September 24, 2011, and October 31, 2011, and February 25, 2012, with a daily bag limit of 8 Canada geese. For snow geese, the tribe requests a season between September 7 to September 24, 2011, and November 25, 2011, to February 25, 2012, with a daily bag limit of 15 snow geese.

For woodcock, the Tribe proposes a season between October 13 and November 26, 2011, with a daily bag limit of three. For sora and Virginia rails, the Tribe requests a season of September 1, 2011, through November 9, 2011, with a daily bag limit of 5 sora and 10 Virginia rails. For snipe, the Tribe requests a season of September 1, 2011, through December 16, 2011, with a daily bag limit of 8.

Prior to 2011, the Tribe had 22 registered tribal hunters and estimates harvest to be no more than 15 geese, 25 mallards, 25 teal, 50 black ducks, and 50 of all other species combined. Tribal members hunting on the Reservation will observe all basic Federal migratory bird hunting regulations found in 50 CFR part 20. The Tribe requires hunters to register with the Harvest Information Program.

We propose to approve the Wampanoag Tribe of Gay Head's requested 2011–12 special migratory bird hunting regulations.

(bb) White Earth Band of Ojibwe, White Earth, Minnesota (Tribal Members Only)

The White Earth Band of Ojibwe is a federally recognized tribe located in northwest Minnesota and encompasses all of Mahnomen County and parts of Becker and Clearwater Counties. The reservation employs conservation officers to enforce migratory bird regulations. The Tribe and the Service first cooperated to establish special tribal regulations in 1999.

For the 2011–12 migratory bird hunting season, the White Earth Band of Ojibwe requests a duck season to start September 17 and end December 11, 2011. For ducks, they request a daily bag limit of 10, including no more than 2 mallards, 1 pintail, and 1 canvasback. For mergansers, the Tribe proposes the season to start September 17 and end December 18, 2011. The merganser daily bag limit would be five with no more than two hooded mergansers. For geese, the Tribe proposes an early season from September 1 through September 25, 2011, and a late season from September 26, 2011, through December 19, 2011. The early season daily bag limit is eight geese, and the late season daily bag limit is five geese.

For coots, dove, rail, woodcock, and snipe, the Tribe proposes a September 1 through November 30, 2011, season with daily bag limits of 20 coots, 25 doves, 25 rails, 10 woodcock, and 10 snipe. Shooting hours are one-half hour before sunrise to one-half hour after sunset. Nontoxic shot is required.

Based on past harvest surveys, the Tribe anticipates harvest of 1,000 to 2,000 Canada geese and 1,000 to 1,500 ducks. The White Earth Reservation Tribal Council employs four full-time conservation officers to enforce migratory bird regulations.

We propose to approve the White Earth Band of Ojibwe's request to have a special season.

(cc) White Mountain Apache Tribe, Fort Apache Indian Reservation, Whiteriver, Arizona (Tribal Members and Nontribal Hunters)

The White Mountain Apache Tribe owns all reservation lands, and the Tribe has recognized full wildlife management authority. In past years, the White Mountain Apache Tribe has requested regulations that are essentially unchanged from those agreed to since the 1997–98 hunting year.

The hunting zone for waterfowl is restricted and is described as: the length of the Black River west of the Bonito Creek and Black River confluence and the entire length of the Salt River forming the southern boundary of the reservation; the White River, extending from the Canyon Day Stockman Station to the Salt River; and all stock ponds located within Wildlife Management Units 4, 5, 6, and 7. Tanks located below the Mogollon Rim, within Wildlife Management Units 2 and 3, will be open to waterfowl hunting during the 2011–12 season. The length of the Black River east of the Black River/Bonito Creek confluence is closed to waterfowl hunting. All other waters of the reservation would be closed to waterfowl hunting for the 2011–12 season.

For nontribal and tribal hunters, the Tribe usually proposes a continuous duck, coot, merganser, gallinule, and moorhen hunting season, with an opening date of October 10, 2011, and a closing date of January 24, 2012. The Tribe usually proposes a separate scaup season, with an opening date of October 10, 2011, and a closing date of December 6, 2011. The Tribe proposes a daily duck (including mergansers) bag limit of seven, which may include no more than two redheads, one pintail, and seven mallards (including no more than two hen mallards). The season on canvasback is closed. The daily bag limit for coots, gallinules, and moorhens would be 25, singly or in the aggregate. For geese, the Tribe usually proposes a season from October 10, 2011, through January 31, 2012. Hunting would be limited to Canada geese, and the daily bag limit would be three.

Season dates for band-tailed pigeons and mourning doves would usually run

concurrently from September 1 through September 15, 2011, in Wildlife Management Unit 10 and all areas south of Y–70 and Y–10 in Wildlife Management Unit 7, only. Proposed daily bag limits for band-tailed pigeons and mourning doves would be 3 and 10, respectively.

Possession limits for the above species are twice the daily bag limits. Shooting hours would be from one-half hour before sunrise to sunset. There would be no open season for sandhill cranes, rails, and snipe on the White Mountain Apache lands under this proposal. A number of special regulations apply to tribal and nontribal hunters, which may be obtained from the White Mountain Apache Tribe Game and Fish Department.

Upon receipt of the 2011–12 hunting proposal, we propose to approve the White Mountain Apache Tribe's requested 2011–12 special migratory bird hunting regulations.

(dd) Yankton Sioux Tribe, Marty, South Dakota (Tribal Members and Nontribal Hunters)

The Yankton Sioux Tribe has yet to submit a waterfowl hunting proposal for the 2011–12 season. The Yankton Sioux tribal waterfowl hunting season usually would be open to both tribal members and nontribal hunters. The waterfowl hunting regulations would apply to tribal and trust lands within the external boundaries of the reservation.

For ducks (including mergansers) and coots, the Yankton Sioux Tribe usually proposes a season starting October 9, 2011, and running for the maximum amount of days allowed under the final Federal frameworks. Daily bag and possession limits would be six ducks, which may include no more than five mallards (no more than two hens), one canvasback (when the season is open), two redheads, three scaup, one pintail, or two wood ducks. The bag limit for mergansers is five, which would include no more than one hooded merganser. The coot daily bag limit is 15.

For geese, the Tribe usually requests a dark goose (Canada geese, brant, white-fronted geese) season starting October 29, 2011, and closing January 31, 2012. The daily bag limit would be three geese (including no more than one white-fronted goose or brant). Possession limits would be twice the daily bag limit. For white geese, the proposed hunting season would start October 29, 2011, and run for the maximum amount of days allowed under the final Federal frameworks for the State of South Dakota. Daily bag and possession limits would equal the maximum allowed under Federal frameworks.

All hunters would have to be in possession of a valid tribal license while hunting on Yankton Sioux trust lands. Tribal and nontribal hunters must comply with all basic Federal migratory bird hunting regulations in 50 CFR part 20 pertaining to shooting hours and the manner of taking. Special regulations established by the Yankton Sioux Tribe also apply on the reservation.

During the 2005–06 hunting season, the Tribe reported that 90 nontribal hunters took 400 Canada geese, 75 light geese, and 90 ducks. Forty-five tribal members harvested fewer than 50 geese and 50 ducks.

We plan to approve the Yankton Sioux 2011–12 hunting seasons upon receipt of their proposal based on the provisions described above.

Public Comments

The Department of the Interior's policy is, whenever possible, to afford the public an opportunity to participate in the rulemaking process. Accordingly, we invite interested persons to submit written comments, suggestions, or recommendations regarding the proposed regulations. Before promulgating final migratory game bird hunting regulations, we will consider all comments we receive. These comments, and any additional information we receive, may lead to final regulations that differ from these proposals.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in the **ADDRESSES**. We will not accept comments sent by e-mail or fax. We will not consider hand-delivered comments that we do not receive, or mailed comments that are not postmarked, by the date specified in **DATES**.

We will post all comments in their entirety—including your personal identifying information—on *http://www.regulations.gov.* Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on *http://www.regulations.gov,* or by appointment, during normal business hours, at the U.S. Fish and Wildlife Service, Division of Migratory Bird Management, Room 4107, 4501 North Fairfax Drive, Arlington, VA 22203.

For each series of proposed rulemakings, we will establish specific comment periods. As we previously noted in our April 8, 2011 proposed rule (76 FR 19877), because of the lateness when certain data becomes available, special circumstances limit the amount of time we can allow for public comment for this regulation and so we determine that a longer comment period in this case is impractical. We will consider, but possibly may not respond in detail to, each comment. As in the past, we will summarize all comments we receive during the comment period and respond to them after the closing date in the preambles of any final rules.

Required Determinations

Based on our most current data, we are affirming our required determinations made in the proposed rule; for descriptions of our actions to ensure compliance with the following statutes and Executive Orders, see our April 8, 2011, proposed rule (76 FR 19876):

- National Environmental Policy Act;
- Endangered Species Act;
- Regulatory Flexibility Act;
- Small Business Regulatory Enforcement Fairness Act;
- Paperwork Reduction Act;
- Unfunded Mandates Reform Act;
- Executive Orders 12630, 12866, 12988, 13132, 13175, and 13211.

List of Subjects in 50 CFR Part 20

Exports, Hunting, Imports, Reporting and recordkeeping requirements, Transportation, Wildlife.

Based on the results of migratory game bird studies, and having due consideration for any data or views submitted by interested parties, this proposed rulemaking may result in the adoption of special hunting regulations for migratory birds beginning as early as September 1, 2011, on certain Federal Indian reservations, off-reservation trust lands, and ceded lands. Taking into account both reserved hunting rights and the degree to which tribes have full wildlife management authority, the regulations only for tribal members or for both tribal and nontribal hunters may differ from those established by States in which the reservations, off-reservation trust lands, and ceded lands are located. The regulations will specify open seasons, shooting hours, and bag and possession limits for rails, coot, gallinules, woodcock, common snipe, band-tailed pigeons, mourning doves,

white-winged doves, ducks, mergansers, and geese.

The rules that eventually will be promulgated for the 2011–12 hunting season are authorized under the Migratory Bird Treaty Act (MBTA) of July 3, 1918 (40 Stat. 755; 16 U.S.C. 703 *et seq.*), as amended. The MBTA authorizes and directs the Secretary of the Interior, having due regard for the zones of temperature and for the distribution, abundance, economic value, breeding habits, and times and lines of flight of migratory game birds, to determine when, to what extent, and by what means such birds or any part, nest, or egg thereof may be taken, hunted, captured, killed, possessed, sold, purchased, shipped, carried, exported, or transported.

Dated: August 1, 2011.

Rachel Jacobson,

Acting Assistant Secretary for Fish and Wildlife and Parks.

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It may be used in conjunction with ''P L U S'' (Public Laws Update Service) on 202–741–6043. This list is also available online at *http://www.archives.gov/federal-register/laws*.

The text of laws is not published in the **Federal Register** but may be ordered in ''slip law'' (individual pamphlet) form from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone, 202–512–1808). The text will also be made available on the Internet from GPO's Federal Digital System (FDsys) at *http://www.gpo.gov/fdsys*. Some laws may not yet be available.

H.R. 1383/P.L. 112–26

Restoring GI Bill Fairness Act of 2011 (Aug. 3, 2011; 125 Stat. 268)

Last List August 4, 2011

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to *http://listserv.gsa.gov/archives/publaws-l.html*

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
