Vulnerability Assessments in Support of the Climate Ready Estuaries Program: A Novel Approach Using Expert Judgment, Volume I: Results for the San Francisco Estuary Partnership and Volume II: Results for the Massachusetts Bays Program

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of Public Comment Period and Letter Peer-Review.

SUMMARY: EPA is announcing a 30-day public comment period for the draft documents titled, *Vulnerability Assessments in Support of the Climate Ready Estuaries Program: A Novel Approach Using Expert Judgment, Volume I: Results for the San Francisco Estuary Partnership* (EPA/600/R-11/

058a) and *Vulnerability Assessments in Support of the Climate Ready Estuaries Program: A Novel Approach Using Expert Judgment, Volume II: Results for the Massachusetts Bays Program* (EPA/600/R-11/058b). The EPA also is announcing that Eastern Research Group, an EPA contractor for external scientific peer review, will select two independent groups of experts to conduct a letter peer-review of the same draft documents. The documents were prepared by the National Center for Environmental Assessment within EPA's Office of Research and Development, in collaboration with the San Francisco Estuary Partnership (SFEP), the San Francisco Bay Conservation and Development Commission, and the Massachusetts Bays Program (MBP). The reports are pilot ecological vulnerability assessments using a novel methodology, based on expert judgment, to inform adaptation planning under EPA's

Climate Ready Estuaries Program. To demonstrate the novel methodology, two ecosystem processes were selected for each assessment: sediment retention in salt marshes (for both SFEP and MBP) and community interactions (of wading shorebirds and their mudflat prey for SFEP, and of the saltmarsh sharp-tailed sparrow and key species of nesting habitat grasses for MBP). This study assesses (1) Relationships among key physical and ecological variables that regulate each process, (2) relative sensitivities of these relationships under current and future climate change scenarios, (3) degree of confidence about these relationships, and (4) implications for management. The results of this study are designed to support the SFEP's and MBP's adaptation planning efforts as well as those of other estuary managers.

EPA intends to forward the public comments that are submitted in accordance with this notice to the external peer-reviewers for their consideration during the letter review. When finalizing the draft document, EPA intends to consider any public comments received in accordance with this notice. EPA is releasing these draft documents for the purpose of pre-dissemination peer review under applicable information quality guidelines. These documents have not been formally disseminated by EPA. They do not represent and should not be construed to represent any Agency policy or determination.

The draft documents are available via the Internet on the NCEA home page under the Recent Additions and the Data and Publications menus at <http://www.epa.gov/ncea>.

DATES: The 30-day public comment period begins September 8, 2011, and ends October 11, 2011. Technical comments should be in writing and must be received by EPA by October 11, 2011.

ADDRESSES: The two draft documents, *Vulnerability Assessments in Support of the Climate Ready Estuaries Program: A Novel Approach Using Expert Judgment, Volume I: Results for the San Francisco Estuary Partnership and Vulnerability Assessments in Support of the Climate Ready Estuaries Program: A Novel Approach Using Expert Judgment, Volume II: Results for the Massachusetts Bays Program*, are available primarily via the Internet on the National Center for Environmental Assessment's home page under the Recent Additions and the Data and Publications menus at <http://www.epa.gov/ncea>. SUPPLEMENTARY INFORMATION:

I. Information About the Project/ Document

For this project, an exercise was designed to elicit judgments from experts in a workshop setting, regarding climate change effects on two ecosystem processes for each pilot assessment: sediment retention and community interactions. This method is based on a novel application of expert elicitation (a process for obtaining the judgments of groups of experts to characterize each expert's beliefs about relationships of interest) for use in a two-day workshop using two groups of seven expert participants each. EPA has investigated the utility of expert elicitation and provides recommendations for "best practices" through an Expert Elicitation Task Force White Paper (see <http://www.epa.gov/spc/expertelicitation/index.htm>).

The exercise involved elicitation of qualitative judgments about the sensitivity of ecosystem processes to physical and ecological variables, using "influence diagrams" to depict the relationships among variables. For each ecosystem process, an influence diagram was developed that identified the key process variables and their interrelationships (influences). Using a

coding scheme, each expert characterized the type and sensitivity of each influence under both current and future climate change scenarios.

The experts also discussed the high impact of certain influences on sediment retention and community interactions, relative to other influences in the diagram, and the potential for threshold changes.

These reports show how climate-sensitive pathways can be identified and linked to management options in the context of planning documents in order to support adaptation to climate change.
