The proposed project is estimated to generate an average of 887,450 kilowatt-hours annually.

m. Due to the project works already existing and the limited scope of proposed rehabilitation of the project site described above, the applicant’s close coordination with Federal and state agencies during the preparation of the application, and completed studies during pre-filing consultation, we intend to waive scoping, shorten the notice filing period, and expedite the review process. Based on a review of the application, resource agency comments filed to date, Commission staff intends to prepare a single environmental assessment (EA). Commission staff determined that the issues that need to be addressed in its EA have been adequately identified during the pre-filing period, which included a public meeting and site visit, and no new issues are likely to be identified through additional scoping. The EA will consider assessing the potential effects of project construction and operation on geology and soils, aquatic, terrestrial, threatened and endangered species, recreation and land use, aesthetic, and cultural and historic resources.
