

voluntary options and will not collect information that is required or regulated. No assurances of confidentiality will be given. However, it will be completely optional for survey participants to provide their name or affiliation information if they wish to provide comments for which they elect to receive a response.

II. Method of Collection

NIST will collect this information by electronic means, as well as by mail, fax, telephone, and person-to-person interaction.

III. Data

OMB Control Number: 0693-0031.

Form Number: None.

Type of Review: Regular submission (extension of a currently approved information collection).

Affected Public: Business or for-profit organizations, individuals or households, not-for-profit institutions.

Estimated Number of Respondents: 6,000.

Estimated Time per Response: Less than 2 minutes for a response card, 2 hours for focus group participation. The average estimated response time is expected to be less than 30 minutes.

Estimated Total Annual Burden Hours: 3,500.

Estimated Total Annual Cost to Public: \$0.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: September 14, 2011.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

National Oceanic and Atmospheric Administration

RIN 0648-XA668

Notice of Availability of Proposed Low Effect Habitat Conservation Plan for Tumalo Irrigation District's Tumalo Conservation Project

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of availability; receipt of application.

SUMMARY: NMFS advises interested parties of Tumalo Irrigation District's (TID) application for an incidental take permit, pursuant to the Endangered Species Act of 1973, (ESA). The requested 50-year permit would authorize the incidental take of Middle Columbia River Steelhead in the Deschutes River basin that may occur from irrigation activities and construction of water conservation projects implemented by TID. NMFS is requesting comments on the permit application and on Tumalo Irrigation District's low effect Habitat Conservation Plan (HCP). The application and HCP are available for public review.

DATES: Written comments must be received no later than 5 p.m. Pacific Standard Time on October 20, 2011.

ADDRESSES: All comments concerning the proposed issuance of an incidental take permit and the HCP should be addressed to: Scott Carlon, National Marine Fisheries Service, 1201 NE Lloyd Blvd., Suite 1100, Portland, OR 97232, facsimile number 503-231-2318. Comments may be submitted by e-mail to the following address: TumaloHCP.nwr@noaa.gov. In the subject line of the e-mail, include the document identifier: Tumalo Irrigation District HCP.

FOR FURTHER INFORMATION CONTACT: Scott Carlon, NMFS (503) 231-2379.

SUPPLEMENTARY INFORMATION:

Availability of Documents

Individuals seeking copies of the proposed HCP should contact NMFS by telephone (see **FOR FURTHER INFORMATION CONTACT**) or by letter (see **ADDRESSES**). Copies of the subject documents also are available for public inspection during regular business hours at NMFS' Hydropower Division Office (see **ADDRESSES**) and are available at the following Web site: <http://www.nwr.noaa.gov>.

Statutory Authority

Section 9 of the ESA prohibits the taking of any listed species. The definition of "take" under the ESA (16 U.S.C. 1532(19)) includes to harass, harm, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in any such conduct. NMFS' definition of "harm" includes significant habitat modification or degradation where it actually kills or injures fish or wildlife by significantly impairing essential behavioral patterns, including breeding, feeding, spawning, migrating, rearing, and sheltering (64 FR 60727, November 8, 1999).

Section 10 of the ESA and implementing regulations specify requirements for the issuance of incidental take permits (ITP) to non-Federal entities for the incidental take of endangered and threatened species. NMFS's regulations governing permits for incidental taking of threatened and endangered species are at 50 CFR 222.307. Any proposed take must be incidental to otherwise lawful activities, not appreciably reduce the likelihood of the survival and recovery of the species in the wild, and minimize and mitigate the impacts of such take to the maximum extent practicable. In addition, the applicant must prepare and submit an HCP describing the impact that will likely result from such taking, the conservation measures to minimize and mitigate the take, the funding available to implement such steps, alternatives to such taking, and the reason such alternatives are not being implemented.

Background

The Tumalo Irrigation District (TID) is an 8,200-acre irrigation project located northwest of Bend in Deschutes County, Oregon. TID is seeking a permit from NMFS for the incidental take of ESA-listed Middle Columbia River (MCR) steelhead (*Oncorhynchus mykiss*) that are being reintroduced into historic habitat downstream of TID. The ITP would provide ESA regulatory certainty for TID's existing operations and proposed water conservation projects providing that TID meets the permit conditions. Existing operations included in the HCP as covered activities include the diversion of flow from Tumalo Creek and the Deschutes River, maintenance activities associated with diversion structures and conveyance systems, and water conservation projects including piping portions of the irrigation canals.

TID has a total water right of 211.25 cubic feet per second (cfs) and diverts water from two locations: Tumalo Creek

at river mile 3 (river km 4.8) and the Deschutes River at river mile 165 (river km 265.5). TID's water rights consist of 201.75 cfs from Tumalo Creek and 9.5 cfs of natural flow from the Deschutes River. TID also has rights to stored water in Crescent Lake Reservoir. The irrigation season usually runs from April through October. Peak diversions normally reach about 190 cfs during the months of May, June and July but begin to decrease in late July. Flow diverted from Tumalo Creek is conveyed via the Tumalo Feed Canal. Diversion rates from Tumalo Creek range between 40 and 70 cfs in April and increase steadily through May with peak diversion between 130 and 150 cfs during the months of May and June, diminishing to about 50 cfs by September.

Flow diverted by TID from the Deschutes River is conveyed via the Bend Feed Canal. Diversion rates are at or near 10 cfs in April and gradually increase May through July. Starting in about mid-July and running through September, the majority of TID diversions (about 60 percent) are taken from the Deschutes River, reaching roughly 120 cfs. During the off-season (November through March), diversions into TID are eliminated except for occasional stock runs of about 50 to 60 cfs to fill stock ponds.

TID conducts all maintenance activities during the off-season with the exception of year round removal of debris and the need for emergency repairs. Maintenance actions include repair and improvements to diversion structures and canals, occasional (every few years) dredging behind diversion dams, removing vegetation from canals and ditches, and inspection of flow measurement instrumentation. Both the Tumalo Creek and Deschutes River diversions are fitted with fish screens, so all maintenance on these structures occur during the off-season.

TID has installed pipe in a portion of the Tumalo Feed Canal and proposes to complete piping the remaining open sections (about 6 miles (9.65 km) of canal) by October 31, 2015. Once completed, TID estimates that approximately 20 cfs of water will be conserved that is now lost through evaporation and seepage. Upon completion of piping, the conserved water will be transferred to the State of Oregon for permanent instream water use in the form of senior water rights. This will increase flow in Tumalo Creek and the Deschutes River below Tumalo Creek by about 11.8 cfs during the irrigation season and is expected to cool water in the Deschutes by roughly 1 degree Fahrenheit (0.56 degrees C). The remaining 8.2 cfs will be in the form of

stored water rights in Crescent Lake Reservoir and will be used by the State of Oregon to supplement flows in Crescent Creek and the Deschutes River.

To improve monitoring of its diversion rates, TID will replace an existing flow and temperature measurement structure located in Tumalo Creek downstream of the Tumalo Feed Canal diversion. The existing structure does not give accurate measurements when flows are high. TID will also install a meter in the Tumalo Feed Canal downstream of its confluence with the Bend Feed Canal to measure the combined diversion rate. TID will submit yearly progress reports to NMFS and the Oregon Department of Fish and Wildlife.

Historically, MCR steelhead did not occur in Tumalo Creek or the reach of the Deschutes River where TID diverts water. The upstream limit for anadromous fish, including MCR steelhead, in the Deschutes River was Big Falls at about river mile 132 (river km 212.4). Tumalo Creek enters the Deschutes River roughly 28 river miles (45.1 km) upstream of Big Falls and the Deschutes River diversion is about 33 river miles (53.1 km) above Big Falls. MCR steelhead are not being reintroduced above this natural barrier.

NMFS may approve the HCP as a low effect HCP, as provided in the Habitat Conservation Planning Handbook (NMFS and USFWS 1996).

Determination of low effect HCPs is based upon the plan having: Minor or negligible effects on Federally-listed, proposed, or candidate species and their habitats; minor or negligible effects on other environmental values or resources; and, impacts that considered together with the impacts of other past, present, and reasonably foreseeable similarly situated projects would not result, over time, in cumulative effects to the environmental values or resources which would be considered significant. If the plan qualifies as a low-effect HCP, the NEPA consideration would be covered by a categorical exclusion, and NMFS would not need to conduct further analysis.

Request for Comments

If you wish to comment on the permit application or the HCP, you may submit your comments to the address listed in the **ADDRESSES** section of this document. We will evaluate this permit application, associated documents, and comments submitted to determine whether to issue the permit. All comments received are a part of the public record and will generally be posted to <http://www.regulations.gov> without change. All personal identifying

information (e.g., name, address, etc.) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information. We will accept anonymous comments (enter N/A in the required fields if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word, Excel, WordPerfect, or Adobe PDF file formats only.

If we determine that the legal criteria are met, we will issue an incidental take permit under section 10(a)(1)(B) of the ESA to the TID for take of the proposed covered species, incidental to otherwise lawful activities in accordance with the terms of the permit. We will not make our final decision until after the end of the 30-day comment period, and will fully consider all comments received during the comment period. NMFS provides this notice pursuant to section 10(c) of the ESA and pursuant to implementing regulations for NEPA (40 CFR 1506.6).

Dated: September 15, 2011.

Therese Conant,

*Acting Chief, Endangered Species Division,
Office of Protected Resources, National
Marine Fisheries Service.*

BILLING CODE 3510-22-P

DEPARTMENT OF EDUCATION

Notice of Submission for OMB Review

AGENCY: Department of Education.

ACTION: Comment request.

SUMMARY: The Director, Information Collection Clearance Division, Privacy, Information and Records Management Services, Office of Management, invites comments on the submission for OMB review as required by the Paperwork Reduction Act of 1995 (Pub. L. 104-13).

DATES: Interested persons are invited to submit comments on or before October 20, 2011.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs, Attention: Education Desk Officer, Office of Management and Budget, 725 17th Street, NW., Room 10222, New Executive Office Building, Washington, DC 20503, be faxed to (202) 395-5806 or e-mailed to oir_submission@omb.eop.gov with a cc: to ICDocketMgr@ed.gov. Please note that written comments received in response to this notice will be considered public records.
