Endocrine Disruptor Screening Program; Weight-of-Evidence Guidance Document; Notice of Availability

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA's Endocrine Disruptor Screening Program (EDSP) is announcing the availability of a final guidance document titled, "Weight-of-Evidence: Evaluating Results of EDSP Tier 1 Screening to Identify the Need for Tier 2 Testing." This weight-of-evidence (WoE) guidance document was revised based on public and peer review comments and existing peer-reviewed EPA guidelines. This guidance document provides basic principles and criteria for application of a WoE approach to evaluate results from the battery of Tier 1 screening assays along with other scientific and technical information relevant to Tier 1 screening to determine whether or not a chemical has the potential to interact with the estrogen, androgen, or thyroid (E, A, or T) hormonal pathways of the endocrine system. The combined results and information will also be used to identify which tests and information may be needed for Tier 2 testing.

II. Overview of Revision Process

The Agency submitted a draft WoE guidance document for evaluating the results of EDSP Tier 1 screening for public review and comment as described in a **Federal Register** notice issued November 4, 2010 (75 FR 67963) (FRL-8849-8). Initially the commenting period was for 60 days, but was extended for an additional 30 days following a request from the chemical industry. Public comments were compiled and grouped according to the commonality among individual submissions so that they could be more readily and fully considered by EPA during revision of the WoE document. Comments were provided to the Agency from 13 different affiliations that mostly included the chemical industry as well as research organizations, and environmental and animal welfare advocates. In general, there were four main categories of comments considered relevant to the WoE guidance document that requested additional detail and clarification of the following:

1. Tier 1 battery of assays.
2. Assay endpoints.
3. Other scientifically relevant information.
4. WoE analysis.

The Agency considered specific comments within these categories and revised respective sections in the document. The Agency also considered peer review comments received from senior scientists across EPA with expertise in toxicology, reproductive physiology, and endocrinology encompassing health and ecological effects and made revisions. Also incorporated into the revised document are the fundamental principles and criteria for weighing and integrating different lines of evidence in a WoE evaluation articulated in existing peer-reviewed EPA guidelines. The Agency acknowledges the contribution that public and peer review comments have had in helping to expand the quantity and enhance the quality of guidance provided in this final version of the WoE document that will assist in evaluating the results of EDSP Tier 1 screening to identify the need for Tier 2 testing.
