**Abstract:** The primary objective of the National Agricultural Statistics Service (NASS) is to conduct surveys in order to prepare national, State, and county estimates of crop and livestock production, disposition, prices, and collect information on related environmental and economic factors. The Postharvest Chemical Use Survey is a part of the NASS chemical use program. This survey is used to collect and publish data on pesticide usage on selected crops after harvesting has been completed. The surveys contain questions relating to the types of pesticides that are applied to selected crops after harvesting, how the chemicals are applied, when they are applied and how much was applied. Additional pest management practices are also studied. This information can be used when making decisions on food and worker safety issues.
