The immediate work of the AC21 is to address the following two questions: (1) What types of compensation mechanisms, if any, would be appropriate to address economic losses by farmers in which the value of their

crops is reduced by the unintended presence of GE material(s)? and (2) What would be necessary to implement such mechanisms? That is, what would be the eligibility standard for a loss and what tools and triggers (e.g., tolerances, testing protocols, etc.) would be needed to verify and measure such losses and determine if claims are compensable?

The purpose of the two meetings is to provide background information in a Webinar format to AC21 members on existing USDA programs that may serve as examples to help in the development of potential compensation mechanisms for the committee to consider, should it deem compensation mechanisms appropriate to recommend. During the November 14, 2011, conference call, AC21 members will be briefed on, and have the opportunity to discuss, background information on USDA's crop insurance programs under the Risk Management Agency. During the November 15, 2011, conference call members will be briefed on, and have the opportunity to discuss, background information on the indemnification programs for perishable agricultural commodities under the Agricultural Marketing Service and for diseased livestock under the Animal and Plant Health Inspection Service.
