SUPPLEMENTARY INFORMATION:

I. Abstract

Under the American Restoration and Recovery Act (ARRA) (Pub. L. 111-5) and via U.S. Department of the Interior (DOI) and U.S. Department of Agriculture (USDA) management agencies, restoration projects to mitigate environmental damages and to improve the health and resiliency of terrestrial, freshwater and marine ecosystems are currently in progress. Federal investments in ecosystem restoration and monitoring protect Federal trusts, ensure public health and safety, and preserve and enhance essential ecosystem services; furthermore, these investments create jobs. An emphasis on quantifying the relationship between job creation and investments in ecological restoration is evident in the goals of the ARRA, Agriculture Secretary Vilsack's emphasis on tying management actions to rural jobs (Farm Service Agency Office of Communications, 2010), and Interior Secretary Salazar's annual report on the Department's economic contribution to the Nation's economy (Department of the Interior, 2009). The need to better understand the connection between restoring the health and productivity of ecosystems and the resulting economic benefits to local communities is also illustrated in a recent report by the President's Council of Advisors on Science and Technology, which calls on the federal government to better prioritize the approximately \$10 billion it spends each year on ecological restoration and biodiversity preservation. Though a few small, localized studies have been carried out to measure jobs created or supported by investments in certain types of ecosystem restoration, they are not useful at a national scale due to regional variations and variations in study methods and objectives. Without data on the proportion of restoration costs typically spent on labor, equipment, supplies and other expenditures, the economic contribution generated by federal investments in restoration cannot be estimated.

The USGS plans to conduct a nationwide telephone survey to elicit expenditure pattern information from contractors that conduct restoration

work for the DOI and the USDA. The objective of this survey is to estimate the economic job and income contribution current and proposed restoration activities generate in surrounding communities. Collection of these data is necessary to improve agency decision making on individual restoration projects, to prioritize spending across restoration projects, and to meet internal guidelines for credible economic analysis. This notice will cover the development and pretesting of the final survey instrument.
