Bacteria/Biofilm Resistant Implantable Medical Device

Description of Technology: Available for licensing and commercial development is a medical device resistant to a biological barrier such as a bacterial biofilm, fibrin sheath, and/or clot formation. An electric current is introduced through an electrically conductive surface of the device (e.g., a catheter) on which a biofilm, fibrin sheath, or clot may form to inhibit formation. The electrically conductive surface can extend along an entire surface of the device (for example extending entirely from the proximal to distal end of a catheter), or a portion thereof such as at the tip.

Potential Commercial Applications:

- Biofilm resistant medical devices
- Antimicrobial methods
- Antimicrobial protection of implanted medical device
- Vascular access devices

Competitive Advantages: Non-degradable antimicrobial methods.
