

of the Scootney Inlet Drop Hydroelectric Project (Scootney Inlet Project or project) to be located on the Potholes East Canal, which is an inlet structure to the Scootney Reservoir, near Othello, Franklin County, Washington. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would consist of the following: (1) An approximately 200-foot-long, 100-foot-wide canal leading to a 100-foot-wide, 15-foot-high intake structure installed on the Potholes East Canal to divert flow from the canal to the penstock; (2) an 80-foot-long, 12-foot-diameter penstock from the intake structure to the powerhouse; (3) an approximately 20-foot-long, 50-foot-wide powerhouse containing a single S-turbine/generator unit rated at 1.7 megawatts at an average head of 14 feet; (4) a 150-foot-long tailrace returning flows from the powerhouse to the Potholes East Canal; (5) a substation at the powerhouse; (6) a 2,500-foot-long, 13.8-kilovolt transmission line which will connect with an existing distribution line; and (7) appurtenant facilities. The project will be located on federal lands, and would operate as run-of-release using irrigation flows provided by the U.S. Bureau of Reclamation and the South Columbia Basin Irrigation District. The estimated annual generation of the Scootney Inlet Project would be 5.2 gigawatt-hours.
