SUPPLEMENTARY INFORMATION: On July 11, 2011 and August 19, 2011, notices were published in the **Federal Register** (76 FR 51945 and 76 FR 40699) that requests for enhancement permits to take shortnose sturgeon had been submitted by the above-named organizations. The requested permits have been issued under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222-226).

The North Carolina Zoo and the Springfield Science Museum have been issued permits to continue enhancement activities previously authorized under Permit Nos. 1545 and 1555, respectively. Activities include the continued maintenance, transport and educational display of captive-bred, non-releaseable adult shortnose sturgeon. The permits do not authorize any takes from the wild, nor do they authorize any release of captive sturgeon into the wild. These permits are valid for a duration of 5 years.

Issuance of the permits, as required by the ESA, was based on a finding that such permits (1) were applied for in good faith, (2) will not operate to the disadvantage of such endangered or threatened species, and (3) are consistent with the purposes and policies set forth in section 2 of the ESA.

SUPPLEMENTARY INFORMATION: On July 25, 2011, notice was published in the **Federal Register** (76 FR 44306) that a request for a scientific research permit to take loggerhead, green, and hawksbill sea turtles had been submitted by the above-named individual. The requested permit has been issued under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222-226).

Dr. Hart is authorized to study green, hawksbill, and loggerhead sea turtles at Buck Island Reef National Monument, U.S. Virgin Islands. The purposes of the research are to determine species-specific habitat-use patterns over time,

increase understanding of genetic stock structure, and estimate vital rates and local population abundance of sea turtles. Researchers may visually count sea turtles during vessel surveys or capture animals by hand, rodeo, dip net, tangle net or cast net for sampling and tagging. Captured sea turtles may have the following procedures performed: epibiota removal, lavage, temporary carapace marking, flipper and passive integrated transponder tagging, measuring, photograph, recapture, blood sampling, fecal sampling, tissue biopsy, and weighing. A subset of animals also may be tagged with satellite tags and data loggers (epoxy attachments) and/or acoustic transmitters (epoxy or drill carapace and attach with wire). The permit is valid for five years.
