SUPPLEMENTARY INFORMATION:

Change in Standard Procedure

GSA's annual privately owned vehicle (POV) mileage reimbursement rate review has resulted in no rate changes

when employees use their privately owned automobile (POA), their POA when Government owned automobiles (GOA) are authorized, their privately owned airplane, and/or their privately owned motorcycle for official purposes. Historically, GSA has determined these rates by reviewing the annual standard automobile study conducted by the Internal Revenue Service, as well as conducting independent automobile, motorcycle, and aircraft studies, and/or by applying consumer price index data. GSA will continue to monitor these costs on a monthly basis and will adjust the rate if warranted. Any adjustments will be posted in the **Federal Register** and posted as a bulletin on GSA's Web site (www.gsa.gov/ftrbulletins) and on our POV Mileage Reimbursement Rate Web site (www.gsa.gov/mileage).

GSA posts the POV mileage reimbursement rates, formerly published in 41 CFR Chapter 301, solely on the Internet at www.gsa.gov/ftr. This process, implemented in FTR Amendment 2010-07 (75 FR 72965, Nov. 29, 2010), ensures more timely updates in mileage reimbursement rates by GSA for Federal employees on official travel.

Notices published periodically in the **Federal Register**, such as this one, and the changes posted on the GSA Web site, now constitute the only notification of revisions to privately owned vehicle reimbursement rates for Federal agencies.

Dated: January 6, 2012.

Janet Dobbs,

Deputy Associate Administrator.

Proposed Project: Evaluation of the effectiveness of an educational interactive video on research integrity—OMB No. 0990-New—Office of Research Integrity.

Abstract: The Office of Research Integrity (ORI) proposes to conduct a nine-month evaluation study of the effectiveness of an educational interactive video on research integrity.

The study seeks to answer two questions: (a) Objectively, is the Educational Interactive Video for Research Integrity (EIVRI) effective in achieving learning outcomes? (b) Subjectively, do learners and teachers perceive the video simulation as effective in helping them learn and teach research integrity? To answer the first question, a pretest-posttest control group experimental design is used to assess the effectiveness of individual learning of research integrity principles and concepts through the use of the video simulation. The video simulation instruction will be incorporated into an existing syllabus for a research integrity or research ethics course for the treatment group. The control group will use the existing syllabus with no video simulation in class. Participants will be graduate students enrolled in these ethics courses to learn and apply the responsible conduct of research at educational institutions. Participants will fill out a demographics form to discern if they have had prior training experience in research integrity. Those who have prior training experience and those who do not have prior training experience will be randomly assigned to either the treatment group or the control group. The random assignment will be done by picking the last digit of each individual's social security number for
