Procedural Background

This rule is limited to the changes contained in Amendment No. 8 to CoC No. 1014 and does not include other aspects of the HI–STORM 100 dry storage cask system. Because the NRC considers this action noncontroversial and routine, the NRC is publishing this proposed rule concurrently as a direct final rule in the Rules and Regulations section of this issue of the Federal Register.

Adverse comments on the direct final rule will be considered if received by March 19, 2012, and will become effective on May 2, 2012. However, if the NRC receives significant adverse comments on the direct final rule by March 19, 2012, then the NRC will publish a document that withdraws the direct final rule. If the direct final rule is withdrawn, the NRC will address the comments received in response to
the proposed revisions in a subsequent final rule. Absent significant modifications to the proposed revisions requiring republication, the NRC will not initiate a second comment period on this action in the event the direct final rule is withdrawn.

A significant adverse comment is a comment where the commenter explains why the rule would be inappropriate, including challenges to the rule’s underlying premise or approach, or would be ineffective or unacceptable without a change. A comment is adverse and significant if:

(1) The comment opposes the rule and provides a reason sufficient to require a substantive response in a notice-and-comment process. For example, a substantive response is required when:
   (a) The comment causes the NRC staff to reevaluate (or reconsider) its position or conduct additional analysis;
   (b) The comment raises an issue serious enough to warrant a substantive response to clarify or complete the record; or
   (c) The comment raises a relevant issue that was not previously addressed or considered by the NRC staff.

(2) The comment proposes a change or an addition to the rule, and it is apparent that the rule would be ineffective or unacceptable without incorporation of the change or addition.

(3) The comment causes the NRC staff to make a change (other than editorial) to the rule, CoC, or Technical Specifications (TSs).

For additional procedural information and the regulatory analysis, see the direct final rule published in the Rules and Regulations section of this Federal Register.

Background

On November 28, 2009, and as supplemented on November 4 and December 14, 2010, and February 25 and July 8, 2011, Holtec International, the holder of CoC No. 1014, submitted a certificate amendment request to the NRC requesting an amendment to CoC No. 1014. Specifically, Holtec International requested changes to add a new multipurpose canister (MPC–68M to the approved models currently included in CoC No. 1014 with two new boiling water reactor fuel assembly/ array classes, and a new pressurized water reactor fuel assembly/class to CoC No. 1014 for loading into the MPC–32. In addition, the amendment would change (1) Condition 5 of CoC No. 1014 to add “if applicable” after the reference to Section 3.5 of Appendix B, “Cask Transfer Facility (CTF)” to clarify that the CTF is an optional facility; (2) Appendix A, TS 1.1, to modify the CTF definition to clarify that it could be used in lieu of Title 10 of the Code of Federal Regulations (10 CFR) part 50 controlled structures for cask transfer evolutions; and (3) Table 3–1, MPC Cavity Drying Limits, to include the previously approved, but omitted table to eliminate inconsistencies between Table 3–1 and TS 3.1.1, Limiting Condition for Operation.
