FEDERAL REGISTER

Vol. 77 Monday,
No. 58 March 26, 2012

Book 1 of 2 Books
Pages 17321–17896

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.ofr.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.fdsys.gov*, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Printing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpo@custhelp.com.*

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 77 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WHEN: Tuesday, April 10, 2012
9 a.m.–12:30 p.m.

WHERE: Office of the Federal Register
Conference Room, Suite 700
800 North Capitol Street, NW.
Washington, DC 20002

RESERVATIONS: (202) 741–6008

Printed on recycled paper.

Title 3—

The President

Proclamation 8780 of March 1, 2012

Women's History Month, 2012

By the President of the United States of America

A Proclamation

[**Editorial Note:** Proclamation 8780, originally published on pages 13185–13186 in the **Federal Register** of Tuesday, March 6, 2012, is being reprinted with a White House correction.]

As Americans, ours is a legacy of bold independence and passionate belief in fairness and justice for all. For generations, this intrepid spirit has driven women pioneers to challenge injustices and shatter ceilings in pursuit of full and enduring equality. During Women's History Month, we commemorate their struggles, celebrate centuries of progress, and reaffirm our steadfast commitment to the rights, security, and dignity of women in America and around the world.

We see the arc of the American story in the dynamic women who shaped our present and the groundbreaking girls who will steer our future. Fifty-one years ago, when former First Lady Eleanor Roosevelt confronted President John F. Kennedy about the lack of women in government, he appointed her the head of a commission to address the status of women in America and the discrimination they routinely faced. Though the former First Lady passed away before the commission finished its work, its report would spur action across our country and galvanize a movement toward true gender parity. Our Nation stands stronger for that righteous struggle, and last March my Administration was proud to release the first comprehensive Federal report on the status of American women since President Kennedy's commission in 1963. Today, women serve as leaders throughout industry, civil society, and government, and their outstanding achievements affirm to our daughters and sons that no dream is beyond their reach.

While we have made great strides toward equality, we cannot rest until our mothers, sisters, and daughters assume their rightful place as full participants in a secure, prosperous, and just society. With the leadership of the White House Council on Women and Girls, my Administration is advancing gender equality by promoting workplace flexibility, striving to bring more women into math and science professions, and fighting for equal pay for equal work. We are combating violence against women by revising an antiquated definition of rape and harnessing the latest technology to prevent dating violence, domestic violence, and sexual assault. From securing women's health and safety to leveling the playing field and ensuring women have full and fair access to opportunity in the 21st century, we are making deep and lasting investments in the future of all Americans.

Because the peace and security of nations around the globe depend upon the education and advancement of women and girls, my Administration has placed their perspectives and needs at the heart of our foreign policy. Last December, I released the first United States National Action Plan on Women, Peace, and Security to help ensure women play an equal role in peace-building worldwide. By fully integrating women's voices into peace processes and our work to prevent conflict, protect civilians, and deliver humanitarian assistance, the United States is bringing effective support to women in areas of conflict and improving the chances for lasting peace. In the months ahead, my Administration will continue to collaborate with

domestic and international partners on new initiatives to bring economic and political opportunity to women at home and abroad.

During Women's History Month, we recall that the pioneering legacy of our grandmothers and great-grandmothers is revealed not only in our museums and history books, but also in the fierce determination and limitless potential of our daughters and granddaughters. As we make headway on the crucial issues of our time, let the courageous vision championed by women of past generations inspire us to defend the dreams and opportunities of those to come.

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim March 2012 as Women's History Month. I call upon all Americans to observe this month and to celebrate International Women's Day on March 8, 2012, with appropriate programs, ceremonies, and activities that honor the history, accomplishments, and contributions of American women. I also invite all Americans to visit www.WomensHistoryMonth.gov to learn more about the generations of women who have shaped our history.

IN WITNESS WHEREOF, I have hereunto set my hand this first day of March, in the year of our Lord two thousand twelve, and of the Independence of the United States of America the two hundred and thirty-sixth.

Rules and Regulations

Federal Register
Vol. 77, No. 58
Monday, March 26, 2012

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 23

[Docket No. FAA–2011–1387; Special Conditions No. 23–256–SC]

Special Conditions: XtremeAir GmbH, XA42; Acrobatic Category Aerodynamic Stability

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions.

SUMMARY: These special conditions are issued for the XtremeAir GmbH XA42 airplane. The XA42 airplane has a novel or unusual design feature associated with its static stability. This airplane can perform at the highest level of aerobatic competition. To be competitive, the aircraft was designed with positive and, at some points, neutral stability within its flight envelope. Its lateral and directional axes are also decoupled from each other providing more precise maneuvering. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for these design features. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards. These special conditions are only applicable to aircraft certified solely in the acrobatic category.

DATES: *Effective Date:* April 25, 2012.

FOR FURTHER INFORMATION CONTACT: Mr. Ross Schaller, Federal Aviation Administration, Small Airplane Directorate, Aircraft Certification Service, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone (816) 329–4162; facsimile (816) 329–4090.

SUPPLEMENTARY INFORMATION:

Background

On May 3, 2011, XtremeAir GmbH applied for a type certificate for their new model XA42. The XA42 is certified under EASA authority as a dual category (acrobatic/utility) airplane. It has a two-place tandem canopy cockpit and a single-engine. It also features a conventional landing gear, conventional low-wing planform and is of composite construction. The engine is a Lycoming AEIO–580–B1A with a rated power of 315 Hp at 2,700 rpm. The airplane is proposed to be approved for Day-VFR operations with no icing approval.

The maximum takeoff weight is 2,200 pounds in utility category, 1,874 pounds in acrobatic category. V_{NE} is 225 knots, V_{NO} is 185 knots and V_A is 174 knots, indicated airspeed. Maximum altitude is 15,000 feet.

Acrobatic airplanes previously type certificated by the FAA did comply with the stability provisions of Subpart B of 14 CFR part 23. However, airplanes like the XA42 are considered as ''unlimited'' acrobatic aircraft because they can perform at the highest level of aerobatic competition and can perform any of the maneuvers listed in the Aresti Catalog. Generally, the evolution of the ''unlimited'' types of acrobatic airplanes, with very low mass, exceptional roll rates and very high G capabilities, in addition to power to mass ratios that are unique to this type of airplane, have led to airplanes that cannot comply with the stability provisions of the regulations. These airplanes can still be type-certificated, but in the acrobatic category only and with an appropriate set of special conditions and associated limitations.

The FAA will only consider certifying the XA42 in the acrobatic category. XtremeAir GmbH will not be able to offer a utility category operating envelope to accommodate the increased fuel load designed for cross-country operations. The FAA does recognize that fuel exhaustion is one of the top accident causes associated with this class of aircraft. For this reason, the FAA allows XtremeAir to seek certification of a limited acrobatic envelope at a higher weight that will still meet the minimum load requirements of +6/-3 g associated with 14 CFR, part 23, § 23.337. The XA42 airplane would be approved for unlimited maneuvers at or below its designed unlimited acrobatic weight. The airplane would also be approved at some higher weight (for fuel) that would still meet the requirements of § 23.337 for acrobatic category and may have restrictions on the maneuvers allowed.

Type Certification Basis

Under the provisions of 14 CFR, part 21, § 21.17, XtremeAir GmbH must show that the XA42 meets the applicable provisions of part 23, as amended by Amendments 23–1 through 23–59 thereto.

Part 36 of Title 14 of the Code of Federal Regulations, effective December 1, 1969, as amended by Amendments 36–1 through 36–28.

Not approved for ditching; compliance with provisions for ditching equipment in accordance with 14 CFR 23.1415(a)(b) has not been demonstrated.

Approved for VFR-day only. Flight in known icing prohibited.

If the Administrator finds that the applicable airworthiness regulations (i.e., 14 CFR part 23) do not contain adequate or appropriate safety standards for the XA42 because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

In addition to the applicable airworthiness regulations and special conditions, the XA42 must comply with the fuel vent and exhaust emission requirements of 14 CFR part 34 and the noise certification requirements of 14 CFR part 36 and the FAA must issue a finding of regulatory adequacy pursuant to section 611 of Public Law 92–574, the ''Noise Control Act of 1972.''

Special conditions, as defined in § 11.19, are issued in accordance with § 11.38 and become part of the type certification basis in accordance with § 21.17(a)(2).

Special conditions are initially applicable to the model for which they are issued. Should the type certificate for that model be amended later to include any other model that incorporates the same novel or unusual design feature, the special conditions would also apply to the other model under the provisions of § 21.101.

Novel or Unusual Design Features

The XtremeAir GmbH XA42 will incorporate the following novel or unusual design features:

For acrobatic category airplanes with unlimited acrobatic capability:

Neutral longitudinal and lateral static stability characteristics.

Discussion

The Code of Federal Regulations states static stability criteria for longitudinal, lateral, and directional axes of an airplane. However, none of these criteria are adequate to address the specific issues raised in the flight characteristics of an unlimited aerobatic airplane. Therefore, the FAA has determined after a flight test evaluation that, in addition to the requirements of part 21 and part 23, special conditions are needed to address these static stability characteristics.

Accordingly, these special conditions are for the XtremeAir GmbH XA42 static stability characteristics to be certified solely as an acrobatic category airplane. Other conditions may be developed, as needed, based on further FAA review and discussions with the manufacturer and civil aviation authorities.

Discussion of Comments

A notice of proposed special conditions No. 23–11–02–SC for the XtremeAir GmbH XA42 airplanes was published in the **Federal Register** on December 27, 2011 (76 FR 80829). One comment was received; however, it appeared to be made in error. It discussed new hire training through approved 142 training centers, which is not relevant to the acrobatic category aerodynamic stability special conditions being imposed on XtremeAir GmbH's XA42 airplane. For this reason, no further action will be taken and the special conditions are adopted as proposed.

Applicability

As discussed above, these special conditions are applicable to the XA42. Should XtremeAir GmbH apply at a later date for a change to the type certificate to include another model on the same type certificate incorporating the same novel or unusual design feature, the special conditions would apply to that model as well.

Conclusion

This action affects only certain novel or unusual design features on one model of airplane. It is not a rule of general applicability and it affects only the applicant who applied to the FAA for approval of these features on the airplane.

List of Subjects in 14 CFR Part 23

Aircraft, Aviation safety, Signs and symbols.

Citation

■ The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113 and 44701; 14 CFR 21.16 and 21.17; and 14 CFR 11.38 and 11.19.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis for XtremeAir GmbH XA42 airplanes.

1. Unlimited Acrobatic-Only Category Static Stability Requirements

For unlimited, acrobatic-only category aircraft, XtremeAir GmbH XA42 will comply with the following stability special conditions in lieu of the existing §§ 23.171, 23.173, 23.175, and 23.177:

(A) In place of 14 CFR part 23, § 23.171 Flight—General (stability) requirement, comply with the following:

SC23.171 Flight—General: The airplane must be neutrally or positively stable in the longitudinal, directional, and lateral axes under sections SC23.173 through SC23.181. In addition, the airplane must show suitable stability and control ''feel'' (static stability) in any condition normally encountered in service, if flight tests show it is necessary for safe operation.

(B) In place of 14 CFR part 23, § 23.173, Static longitudinal stability requirement, comply with the following:

SC23.173 Static longitudinal stability: Under the conditions specified in SC23.175 and with the airplane trimmed as indicated, the characteristics of the elevator control forces and the friction within the control system must be as follows:

(a) A pull must be required to obtain and maintain speeds below the specified trim speed and a push required to obtain and maintain speeds above the specified trim speed. This must be shown at any speed that can be obtained, except that speeds requiring a control force in excess of 40 pounds or speeds above the maximum allowable speed or below the minimum speed for steady unstalled flight need not be considered.

(b) The stick force or position must vary with speed so that any substantial speed change results in a stick force or position clearly perceptible to the pilot.

(C) In place of 14 CFR part 23, § 23.175, Demonstration of static longitudinal stability requirement, comply with the following:

SC23.175 Demonstration of static longitudinal stability:

(a) Climb. The stick force curve must have, at a minimum, a neutrally stable to stable slope at speeds between 85 and 115 percent of the trim speed, with—

(1) Maximum continuous power; and

(2) The airplane trimmed at the speed used in determining the climb performance required by section 23.69(a).

(b) Cruise. With the airplane in trim with power for level flight at representative cruising speeds at high and low altitudes, including speeds up to V_{NO}, except that the speed need not exceed V_H—

(1) The stick force curve must, at a minimum, have a neutrally stable to stable slope at all speeds within a range that is the greater of 15 percent of the trim speed plus the resulting free return speed range, or 40 knots plus the resulting free return speed range, above and below the trim speed, except that the slope need not be stable—

(i) At speeds less than 1.3 V_{S1}; or

(ii) For airplanes with V_{NE} established under section 23.1505(a), at speeds greater than V_{NE}.

(c) Landing. The stick force curve must, at a minimum, have a neutrally stable to stable slope at speeds between 1.1 V_{S1} and 1.8 V_{S1} with—

(1) Landing gear extended; and

(2) The airplane trimmed at—

(i) V_{REF}, or the minimum trim speed if higher, with power off; and

(ii) V_{REF} with enough power to maintain a 3 degree angle of descent.

(D) In place of 14 CFR part 23, § 23.177, Static directional and lateral stability requirement, comply with the following:

SC23.177 Static directional and lateral stability:

(a) The static directional stability, as shown by the tendency to recover from a wings level sideslip with the rudder free, must be positive for any landing gear and flap position appropriate to the takeoff, climb, cruise, approach, and landing configurations. This must be shown with symmetrical power up to maximum continuous power, and at speeds from 1.2 V_{S1} up to the maximum allowable speed for the condition being investigated. The angle of sideslip for these tests must be appropriate to the type of airplane. At larger angles of sideslip, up to that at which full rudder is used or a control force limit in section 23.143 is reached, whichever occurs first, and at speeds from 1.2 V_{S1} to V_O, the rudder pedal force must not reverse.

(b) In straight, steady slips at 1.2 V_{S1} for any landing gear and flap positions, and for any symmetrical power conditions up to 50 percent of maximum continuous power, the rudder control movements and forces must

increase steadily, but not necessarily in constant proportion, as the angle of sideslip is increased up to the maximum appropriate to the type of airplane. The aileron control movements and forces may increase steadily, but not necessarily in constant proportion, as the angle of sideslip is increased up to the maximum appropriate to the type of airplane. At larger slip angles, up to the angle at which the full rudder or aileron control is used or a control force limit contained in section 23.143 is reached, the aileron and rudder control movements and forces must not reverse as the angle of sideslip is increased. Rapid entry into, and recovery from, a maximum sideslip considered appropriate for the airplane must not result in uncontrollable flight characteristics.

Issued in Kansas City, Missouri, on March 1, 2012.

John R. Colomy,

Acting Manager, Small Airplane Directorate, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 25

[Docket No. FAA–2012–0325; Notice No. 25–459–SC]

Special Conditions: Airbus, A350–900 Series Airplane; Passenger Seats With Non-Traditional, Large, Non-Metallic Panels

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions, request for comments.

SUMMARY: These special conditions are issued for the Airbus A350–900 series airplane. These airplanes will have a novel or unusual design feature(s) associated with seats that include non-traditional, large, non-metallic panels that would affect survivability during a post-crash fire event. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: The effective date of these special conditions is March 14, 2012. We must receive your comments by May 10, 2012.

ADDRESSES: Send comments identified by docket number [FAA–2012–0325] using any of the following methods:

- *Federal eRegulations Portal:* Go to *http://www.regulations.gov/and* follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M–30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE., Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.
- *Hand Delivery or of Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC between 8 a.m., and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at 202–493–2251.

Privacy: The FAA will post all comments it receives, without change, to *http://www.regulations.gov/,* including any personal information the commenter provides. Using the search function of the docket Web site, anyone can find and read the electronic form of all comments received into any FAA docket, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). DOT's complete Privacy Act Statement can be found in the **Federal Register** published on April 11, 2000 (65 FR 19477–19478), as well as at *http://DocketsInfo.dot.gov/.*

Docket: Background documents or comments received may be read at *http://www.regulations.gov/at* any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room @W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m., and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Jeff Gardlin, FAA, Airframe/Cabin Safety, ANM–115, Transport Airplane Directorate, Aircraft Certification Service, 1601 Lind Avenue SW., Renton, Washington, 98057–3356; telephone (425) 227–2136; facsimile (425) 227–1320.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data.

We will consider all comments we receive by the closing date for comments. We will consider comments filed late if it is possible to do so without incurring expense or delay. We may change these special conditions based on the comments we receive.

Background

On August 25, 2008, Airbus applied for a type certificate for their new A350–900 series airplane. Later, Airbus requested and the FAA approved an extension to the application for FAA type certification to June 28, 2009. The A350–900 series has a conventional layout with twin wing-mounted Rolls Royce Trent engines. It features a twin aisle 9-abreast economy class layout, and accommodates side-by-side placement of LD–3 containers in the cargo compartment. The basic A350–900 series configuration accommodates 315 passengers in a standard two-class arrangement. The design cruise speed is Mach 0.85 with a Maximum Take-Off Weight of 591,000 lbs. Airbus proposes the A350–900 series to be certified for extended operations (ETOPS) beyond 180 minutes at entry into service for up to a 420-minute maximum diversion time.

The applicable airplane regulations, Title 14, Code of Federal Regulations (14 CFR) part 25, do not require seats to meet the more-stringent flammability standards required of large, non-metallic panels in the cabin interior. At the time the applicable rules were written, seats were designed with a metal frame covered by fabric, not with large, non-metallic panels. Seats also met the then-recently adopted standards for flammability of seat cushions. With the seat design being mostly fabric and metal, the contribution to a fire in the cabin had been minimized and was not considered a threat. For these reasons, seats did not need to be tested to heat-release and smoke-emission requirements.

Seat designs have now evolved to occasionally include non-traditional, large, non-metallic panels. Taken in total, the surface area of these panels is on the same order as the sidewall and overhead stowage bin interior panels. To provide the level of passenger protection intended by the airworthiness standards, these non-traditional, large, non-metallic panels in the cabin must meet the standards of part 25, Appendix F, parts IV and V, heat-release and smoke-emission requirements.

Type Certification Basis

Under Title 14, Code of Federal Regulations (14 CFR) 21.17, Airbus must

show that the A350–900 series meets the applicable provisions of 14 CFR part 25, as amended by Amendments 25–1 through 25–128.

The FAA has determined that Airbus A350–900 series airplanes must comply with the following sections: § 25.853(a) and § 25.853(c), and Amendment 25–61 and Amendment 25–66.

If the Administrator finds that the applicable airworthiness regulations (i.e., 14 CFR part 25) do not contain adequate or appropriate safety standards for the A350–900 series because of a novel or unusual design feature, special conditions are prescribed under § 21.16.

Special conditions are initially applicable to the model or series for which they are issued. Should the type certificate for that model be amended later to include any other model that incorporates the same or similar novel or unusual design feature, the special conditions would also apply to the other model under § 21.101.

In addition to the applicable airworthiness regulations and special conditions, the A350–900 series must comply with the fuel vent and exhaust emission requirements of 14 CFR part 34, the noise certification requirements of 14 CFR part 36, and the FAA must issue a finding of regulatory adequacy under § 611 of Public Law 92–574, the ''Noise Control Act of 1972.''

The FAA issues special conditions, as defined in § 11.19, under § 11.38, and they become part of the type-certification basis under § 21.17(a)(2).

Novel or Unusual Design Features

The A350–900 series will incorporate the following novel or unusual design features: Passenger seats that incorporate non-traditional, large, non-metallic panels in lieu of the traditional metal frame covered by fabric. The flammability properties of these panels have been shown to significantly affect the survivability of occupants of the cabin in the case of fire. These seats are considered a novel design for transport category airplanes that include Amendment 25–61 and Amendment 25–66 in the certification basis, and were not considered when those airworthiness standards were established.

The existing regulations do not provide adequate or appropriate safety standards for seat designs that incorporate non-traditional, large, non-metallic panels. In order to provide a level of safety that is equivalent to that provided by the balance of the cabin, additional airworthiness standards, in the form of special conditions, are necessary. These special conditions supplement § 25.853. The requirements contained in these special conditions consist of applying the identical test conditions required of all other large panels in the cabin, to seats with non-traditional, large, non-metallic panels.

Definition of ''Non-Traditional, Large, Non-Metallic Panel''

A non-traditional, large, non-metallic panel, in this case, is defined as a panel with exposed-surface areas greater than 1.5 square feet installed per seat place. The panel may consist of either a single component or multiple components in a concentrated area. Examples of parts of the seat where these non-traditional panels are installed include, but are not limited to: Seat backs, bottoms and leg/foot rests, kick panels, back shells, credenzas and associated furniture. Examples of traditional exempted parts of the seat include: Arm caps, armrest close-outs such as end bays and armrest-styled center consoles, food trays, video monitors and shrouds.

Clarification of ''Exposed''

''Exposed'' includes those panels directly exposed to the passenger cabin in the traditional sense, plus those panels enveloped such as by a dress cover. Traditional fabrics or leathers currently used on seats are excluded from these special conditions. These materials must still comply with § 25.853(a) and § 25.853(c) if used as a covering for a seat cushion, or § 25.853(a) if installed elsewhere on the seat. Non-traditional, large, non-metallic panels covered with traditional fabrics or leathers will be tested without their coverings or covering attachments.

Discussion

In the early 1980s the FAA conducted extensive research on the effects of post-crash flammability in the passenger cabin. As a result of this research and service experience, the FAA adopted new standards for interior surfaces associated with large surface area parts. Specifically, the rules require measurement of heat release and smoke emission (part 25, Appendix F, parts IV and V) for the affected parts. Heat release has been shown to have a direct correlation with post- crash fire survival time. Materials that comply with the standards (i.e., Sec. 25.853 entitled ''Compartment interiors'' as amended by Amendment 25–61 and Amendment 25–66) extend survival time by approximately 2 minutes over materials that do not comply.

At the time these standards were written the potential application of the requirements of heat release and smoke emission to seats was explored. The seat frame itself was not a concern because it was primarily made of aluminum and there were only small amounts of non-metallic materials. It was determined that the overall effect on survivability was negligible, whether or not the food trays met the heat release and smoke requirements. The requirements therefore did not address seats. The preambles to both the Notice of Proposed Rule Making (NPRM), Notice No. 85–10 (50 FR 15038, April 16, 1985) and the Final Rule at Amendment 25–61 (51 FR 26206, July 21, 1986), specifically note that seats were excluded ''because the recently-adopted standards for flammability of seat cushions will greatly inhibit involvement of the seats.''

Subsequently, the Final Rule at Amendment 25–83 (60 FR 6615, March 6, 1995) clarified the definition of minimum panel size: ''It is not possible to cite a specific size that will apply in all installations; however, as a general rule, components with exposed-surface areas of one square foot or less may be considered small enough that they do not have to meet the new standards. Components with exposed-surface areas greater than two square feet may be considered large enough that they do have to meet the new standards. Those with exposed-surface areas greater than one square foot, but less than two square feet, must be considered in conjunction with the areas of the cabin in which they are installed before a determination could be made.''

In the late 1990s, the FAA issued Policy Memorandum 97–112–39, Guidance for Flammability Testing of Seat/Console Installations, October 17, 1997 *(http://rgl.faa.gov)*. That memo was issued when it became clear that seat designs were evolving to include large, non-metallic panels with surface areas that would impact survivability during a cabin fire event, comparable to partitions or galleys. The memo noted that large surface area panels must comply with heat release and smoke emission requirements, even if they were attached to a seat. If the FAA had not issued such policy, seat designs could have been viewed as a loophole to the airworthiness standards that would result in an unacceptable decrease in survivability during a cabin fire event.

In October of 2004, an issue was raised regarding the appropriate flammability standards for passenger seats that incorporated non-traditional, large, non-metallic panels in lieu of the traditional metal covered by fabric. The Seattle Aircraft Certification Office and Transport Standards Staff reviewed this design and determined that it represented the kind and quantity of

material that should be required to pass the heat release and smoke emissions requirements. We have determined that special conditions would be promulgated to apply the standards defined in 14 CFR 25.853(d) to seats with large, non-metallic panels in their design.

Applicability

As discussed above, these special conditions apply to Airbus A350–900 series airplanes. Should Airbus apply later for a change to the type certificate to include another model incorporating the same novel or unusual design feature, the special conditions would apply to that model as well.

Conclusion

This action affects only certain novel or unusual design features on Airbus A350–900 series airplanes. It is not a rule of general applicability.

List of Subjects in 14 CFR Part 25

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

■ The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

So, by the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis for Airbus A350–900 series airplanes with passenger seats that have non-traditional, large, non-metallic panels.

1. Compliance with 14 CFR part 25 Appendix F, parts IV and V, heat release and smoke emission, is required for seats that incorporate non-traditional, large nonmetallic panels that may either be a single component or multiple components in a concentrated area in their design.

2. The applicant may designate up to and including 1.5 square feet of non-traditional, nonmetallic panel material per seat place that does not have to comply with No. 1. A triple seat assembly may have a total of 4.5 square feet excluded on any portion of the assembly (e.g., outboard seat place 1 sq. ft., middle 1 sq. ft., and inboard 2.5 sq. ft.).

3. Seats need not meet the test requirements of 14 CFR part 25 Appendix F, parts IV and V when installed in compartments that are not otherwise required to meet these requirements. Examples include:

a. Airplanes with passenger capacities of 19 or less,

b. Airplanes exempted from smoke and heat release requirements.

Issued in Renton, Washington, on March 14, 2012.

John Piccola,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[Docket No. FAA–2011–0499; Airspace Docket No. 11–ACE–10]

Amendment of Class E Airspace; Hastings, NE

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends Class E airspace at Hastings, NE. Additional controlled airspace is necessary to accommodate new Area Navigation (RNAV) Standard Instrument Approach Procedures at Hastings Municipal Airport. The FAA is taking this action to enhance the safety and management of Instrument Flight Rule (IFR) operations at the airport.

DATES: Effective date: 0901 UTC, May 31, 2012. The Director of the **Federal Register** approves this incorporation by reference action under 1 CFR part 51 subject to the annual revision of FAA Order 7400.9 and publication of conforming amendments.

FOR FURTHER INFORMATION CONTACT: Scott Enander, Central Service Center, Operations Support Group, Federal Aviation Administration, Southwest Region, 2601 Meacham Blvd., Fort Worth, TX 76137; telephone (817) 321–7716.

SUPPLEMENTARY INFORMATION:

History

On November 28, 2011, the FAA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to amend Class E airspace for the Hastings, NE., area, creating additional controlled airspace at Hastings Municipal Airport (76 FR 72867) Docket No. FAA–2011–0499. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received. Class E airspace designations are published in paragraph 6005 of FAA Order 7400.9V dated August 9, 2011, and effective September 15, 2011, which is incorporated by reference in 14 CFR Part 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

The Rule

This action amends Title 14 Code of Federal Regulations (14 CFR) Part 71 by amending Class E airspace extending upward from 700 feet above the surface to accommodate new RNAV standard instrument approach procedures at Hastings Municipal Airport, Hastings, NE. This action is necessary for the safety and management of IFR operations at the airport.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this regulation: (1) Is not a ''significant regulatory action''

under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the U.S. Code. Subtitle 1, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends controlled airspace in the Hastings, NE., area.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (Air)

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E. O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of the Federal Aviation Administration Order 7400.9V, Airspace Designations and Reporting Points, dated August 9, 2011, and effective September 15, 2011, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface.

* * * * *

ACE NE E5 Hastings, NE [Amended]

Hastings Municipal Airport, NE

(Lat. 40°36′19″ N., long. 98°25′40″ W.)

That airspace extending upward from 700 feet above the surface within a 7.2-mile radius of Hastings Municipal Airport, and within 2 miles each side of the 150° bearing from the airport extending from the 7.2-mile radius to 10.4 miles southeast of the airport.

Issued in Fort Worth, Texas, on March 14, 2012.

David P. Medina,

Manager, Operations Support Group, ATO Central Service Center.

Commodity Pool Operators and Commodity Trading Advisors: Compliance Obligations

Correction

Editorial Note: FR DOC 2012–3390 appearing on pages 11252–11344 in the issue of Friday, February 24, 2012 is being partially republished due to numerous errors.

1. On page 11252, in the first column, the **SUMMARY** section is being republished in its entirety.

SUMMARY: The Commodity Futures Trading Commission is adopting amendments to its existing part 4 regulations and promulgating one new regulation regarding Commodity Pool Operators and Commodity Trading Advisors. The Commission is also adopting new data collections for CPOs and CTAs that are consistent with a data collection required under the Dodd-Frank Act for entities registered with both the Commission and the Securities and Exchange Commission. The adopted amendments rescind an exemption from registration as a CPO; rescind relief from the certification requirement for annual reports provided to operators of certain pools offered only to qualified eligible persons (''QEPs''); modify the criteria for claiming exclusion from the definition of CPO; and require the annual filing of notices claiming exemptive relief under several sections of the Commision's regulations. Finally, the adopted amendments include new risk disclosure requirements for CPOs and CTAs regarding swap transactions.

2. In 17 CFR Part 4, beginning on page 11283, in the second column, in 31st line of text, amendatory instructions 1–8 and their corresponding amendments to the Code of Federal Regulations are being republished as follows:

PART 4—COMMODITY POOL OPERATORS AND COMMODITY TRADING ADVISORS

■ 1. The authority citation for part 4 continues to read as follows:

Authority: 7 U.S.C. 1a, 2, 4, 6(c), 6b, 6c, 6l, 6m, 6n, 6o, 12a, and 23.

■ 2. In § 4.5, add paragraphs (c)(2)(iii) and (c)(5) to read as follows:

§ 4.5 Exclusion from the definition of the term ''commodity pool operator.''

* * * * *

(c) * * *

(2) * * *

(iii) Furthermore, if the person claiming the exclusion is an investment company registered as such under the Investment Company Act of 1940, then the notice of eligibility must also contain representations that such person will operate the qualifying entity as described in Rule 4.5(b)(1) in a manner such that the qualifying entity:

(A) Will use commodity futures or commodity options contracts, or swaps solely for bona fide hedging purposes within the meaning and intent of Rules 1.3(z)(1) and 151.5 (17 CFR 1.3(z)(1) and 151.5); Provided however, That in addition, with respect to positions in commodity futures or commodity option contracts, or swaps which do not come within the meaning and intent of Rules 1.3(z)(1) and 151.5, a qualifying entity may represent that the aggregate initial margin and premiums required to establish such positions will not exceed five percent of the liquidation value of the qualifying entity's portfolio, after taking into account unrealized profits and unrealized losses on any such contracts it has entered into; and, Provided further, That in the case of an option that is in-the-money at the time of purchase, the in-the-money amount as defined in Rule 190.01(x) (17 CFR 190.01(x)) may be excluded in computing such five percent; or

(B) The aggregate net notional value of commodity futures, commodity options contracts, or swaps positions not used solely for bona fide hedging purposes within the meaning and intent of Rules 1.3(z)(1) and 151.5 (17 CFR 1.3(z)(1) and 151.5), determined at the time the most recent position was established, does not exceed 100 percent of the liquidation value of the pool's portfolio, after taking into account unrealized profits and unrealized losses on any such positions it has entered into. For the purpose of this paragraph:

(*1*) The term ''notional value'' shall be calculated for each futures position by multiplying the number of contracts by the size of the contract, in contract units

(taking into account any multiplier specified in the contract), by the current market price per unit, for each such option position by multiplying the number of contracts by the size of the contract, adjusted by its delta, in contract units (taking into account any multiplier specified in the contract), by the strike price per unit, for each such retail forex transaction, by calculating the value in U.S. Dollars for such transaction, at the time the transaction was established, excluding for this purpose the value in U.S. Dollars of offsetting long and short transactions, if any, and for any cleared swap by the value as determined consistent with the terms of 17 CFR part 45; and

(*2*) The person may net futures contracts with the same underlying commodity across designated contract markets and foreign boards of trade; and swaps cleared on the same designated clearing organization where appropriate; and (C) Will not be, and has not been, marketing participations to the public as or in a commodity pool or otherwise as or in a vehicle for trading in the commodity futures, commodity options, or swaps markets.

* * * * *

(5) *Annual notice.* Each person who has filed a notice of exclusion under this section must affirm on an annual basis the notice of exemption from registration, withdraw such exemption due to the cessation of activities requiring registration or exemption therefrom, or withdraw such exemption and apply for registration within 60 days of the calendar year end through National Futures Association's electronic exemption filing system.

* * * * *

■ 3. In § 4.7:

■ a. Revise paragraphs (a)(3)(ix), (a)(3)(x), and (b)(3) to read as follows:

§ 4.7 Exemption from certain part 4 requirements for commodity pool operators with respect to offerings to qualified eligible persons and for commodity trading advisors with respect to advising qualified eligible persons.

* * * * *

(a) * * *

(3) * * *

(ix) A natural person whose individual net worth, or joint net worth with that person's spouse at the time of either his purchase in the exempt pool or his opening of an exempt account would qualify him as an accredited investor as defined in § 230.501(a)(5) of this title;

(x) A natural person who would qualify as an accredited investor as defined in § 203.501(a)(6) of this title;

* * * * *

(b) * * *

(3) *Annual report relief.* (i) Exemption from the specific requirements of § 4.22(c) of this part; *Provided,* that within 90 calendar days after the end of the exempt pool's fiscal year or the permanent cessation of trading, whichever is earlier, the commodity pool operator electronically files with the National Futures Association and distributes to each participant in lieu of the financial information and statements specified by that section, an annual report for the exempt pool, affirmed in accordance with § 4.22(h) which contains, at a minimum:

(A) A Statement of Financial Condition as of the close of the exempt pool's fiscal year (elected in accordance with § 4.22(g));

(B) A Statement of Operations for that year;

(C) Appropriate footnote disclosure and such further material information as may be necessary to make the required statements not misleading. For a pool that invests in other funds, this information must include, but is not limited to, separately disclosing the amounts of income, management and incentive fees associated with each investment in an investee fund that exceeds five percent of the pool's net assets. The income, management and incentive fees associated with an investment in an investee fund that is less than five percent of the pool's net assets may be combined and reported in the aggregate with the income, management and incentive fees of other investee funds that, individually, represent an investment of less than five percent of the pool's net assets. If the commodity pool operator is not able to obtain the specific amounts of management and incentive fees charged by an investee fund, the commodity pool operator must disclose the percentage amounts and computational basis for each such fee and include a statement that the CPO is not able to obtain the specific fee amounts for this fund;

(D) Where the pool is comprised of more than one ownership class or series, information for the series or class on which the financial statements are reporting should be presented in addition to the information presented for the pool as a whole; except that, for a pool that is a series fund structured with a limitation on liability among the different series, the financial statements are not required to include consolidated information for all series.

(ii) *Legend.* If a claim for exemption has been made pursuant to this section, the commodity pool operator must make a statement to that effect on the cover page of each annual report.

* * * * *

■ 4. In § 4.13:

■ a. Revise paragraphs (a)(3)(ii)(B)(*1*) and (*2*);

■ b. Remove and reserve paragraph (a)(4);

■ c. Revise paragraph (b)(1)(ii);

■ d. Redesignate paragraph (b)(4) as paragraph (b)(5) and add new paragraph (b)(4); and

■ e. Revise paragraph (e)(2).

The revisions and additions read as follows:

§ 4.13 Exemption from registration as a commodity pool operator.

* * * * *

(a) * * *

(3) * * *

(ii) * * *

(B) * * *

(*1*) The term ''notional value'' shall be calculated for each futures position by multiplying the number of contracts by the size of the contract, in contract units (taking into account any multiplier specified in the contract), by the current market price per unit, for each such option position by multiplying the number of contracts by the size of the contract, adjusted by its delta, in contract units (taking into account any multiplier specified in the contract), by the strike price per unit, for each such retail forex transaction, by calculating the value in U.S. Dollars of such transaction, at the time the transaction was established, excluding for this purpose the value in U.S. Dollars of offsetting long and short transactions, if any, and for any cleared swap by the value as determined consistent with the terms of 17 CFR part 45; and

(*2*) The person may net futures contracts with the same underlying commodity across designated contract markets and foreign boards of trade; and swaps cleared on the same derivatives clearing organization where appropriate; and

* * * * *

(b) * * *

(2) * * *

(ii) Contain the section number pursuant to which the operator is filing the notice (*i.e.,* § 4.13(a)(1), (2), or (3)) and represent that the pool will be operated in accordance with the criteria of that paragraph; and

* * * * *

(4) *Annual Notice.* Each person who has filed a notice of exemption from registration under this section must

affirm on an annual basis the notice of exemption from registration, withdraw such exemption due to the cessation of activities requiring registration or exemption therefrom, or withdraw such exemption and apply for registration within 60 days of the calendar year end through National Futures Association's electronic exemption filing system.

* * * * *

(e) * * *

(2) If a person operates one or more commodity pools described in paragraph (a)(3) of this section, and one or more commodity pools for which it must be, and is, registered as a commodity pool operator, the person is exempt from the requirements applicable to a registered commodity pool operator with respect to the pool or pools described in paragraph (a)(3) of this section; *Provided,* That the person:

(i) Furnishes in written communication physically delivered or delivered through electronic transmission to each prospective participant in a pool described in paragraph (a)(3) of this section that it operates:

(A) A statement that it will operate the pool as if the person was exempt from registration as a commodity pool operator;

(B) A description of the criteria pursuant to which it will so operate the pool;

(ii) Complies with paragraph (c) of this section; and

(iii) Provides each existing participant in a pool that the person elects to operate as described in paragraph (a)(3) of this section a right to redeem the participant's interest in the pool, and informs each such participant of that right no later than the time the person commences to operate the pool as described in paragraph (a)(3) of this section.

* * * * *

■ 5. In § 4.14:

■ a. Revise paragraph (a)(8)(i)(D); and

■ b. Redesignate paragraph (a)(8)(iii)(D) as (a)(8)(iii)(E) and add a new paragraph (a)(8)(iii)(D).

The revision and addition read as follows:

§ 4.14 Exemption from registration as a commodity trading adviser.

* * * * *

(a) * * *

(8) * * *

(i) * * *

(D) A commodity pool operator who has claimed an exemption from registration under § 4.13(a)(3), or, if registered as a commodity pool operator, who may treat each pool it operates that meets the criteria of § 4.13(a)(3) as if it were not so registered; and

* * * * *

(iii) * * *

(D) *Annual notice.* Each person who has filed a notice of exemption from registration under this section must affirm on an annual basis the notice of exemption from registration, withdraw such exemption due to the cessation of activities requiring registration or exemption therefrom, or withdraw such exemption and apply for registration within 60 days of the calendar year end through National Futures Association's electronic exemption filing system.

* * * * *

■ 6. In § 4.24, add paragraph (b)(5) to read as follows:

§ 4.24 General disclosures required.

* * * * *

(b) * * *

(5) If the pool may engage in swaps, the Risk Disclosure Statement must further state:

SWAPS TRANSACTIONS, LIKE OTHER FINANCIAL TRANSACTIONS, INVOLVE A VARIETY OF SIGNIFICANT RISKS. THE SPECIFIC RISKS PRESENTED BY A PARTICULAR SWAP TRANSACTION NECESSARILY DEPEND UPON THE TERMS OF THE TRANSACTION AND YOUR CIRCUMSTANCES. IN GENERAL, HOWEVER, ALL SWAPS TRANSACTIONS INVOLVE SOME COMBINATION OF MARKET RISK, CREDIT RISK, COUNTERPARTY CREDIT RISK, FUNDING RISK, LIQUIDITY RISK, AND OPERATIONAL RISK.

HIGHLY CUSTOMIZED SWAPS TRANSACTIONS IN PARTICULAR MAY INCREASE LIQUIDITY RISK, WHICH MAY RESULT IN A SUSPENSION OF REDEMPTIONS. HIGHLY LEVERAGED TRANSACTIONS MAY EXPERIENCE SUBSTANTIAL GAINS OR LOSSES IN VALUE AS A RESULT OF RELATIVELY SMALL CHANGES IN THE VALUE OR LEVEL OF AN UNDERLYING OR RELATED MARKET FACTOR.

IN EVALUATING THE RISKS AND CONTRACTUAL OBLIGATIONS ASSOCIATED WITH A PARTICULAR SWAP TRANSACTION, IT IS IMPORTANT TO CONSIDER THAT A SWAP TRANSACTION MAY BE MODIFIED OR TERMINATED ONLY BY MUTUAL CONSENT OF THE ORIGINAL PARTIES AND SUBJECT TO AGREEMENT ON INDIVIDUALLY NEGOTIATED TERMS. THEREFORE, IT MAY NOT BE POSSIBLE FOR THE COMMODITY POOL OPERATOR TO MODIFY, TERMINATE, OR OFFSET THE POOL'S OBLIGATIONS OR THE POOL'S EXPOSURE TO THE RISKS ASSOCIATED WITH A TRANSACTION PRIOR TO ITS SCHEDULED TERMINATION DATE.

* * * * *

■ 7. In § 4.34, add paragraph (b)(4) to read as follows:

§ 4.34 General disclosures required.

* * * * *

(b) * * *

(4) If the commodity trading advisor may engage in swaps, the Risk Disclosure Statement must further state:

SWAPS TRANSACTIONS, LIKE OTHER FINANCIAL TRANSACTIONS, INVOLVE A VARIETY OF SIGNIFICANT RISKS. THE SPECIFIC RISKS PRESENTED BY A PARTICULAR SWAP TRANSACTION NECESSARILY DEPEND UPON THE TERMS OF THE TRANSACTION AND YOUR CIRCUMSTANCES. IN GENERAL, HOWEVER, ALL SWAPS TRANSACTIONS INVOLVE SOME COMBINATION OF MARKET RISK, CREDIT RISK, FUNDING RISK, AND OPERATIONAL RISK.

HIGHLY CUSTOMIZED SWAPS TRANSACTIONS IN PARTICULAR MAY INCREASE LIQUIDITY RISK, WHICH MAY RESULT IN YOUR ABILITY TO WITHDRAW YOUR FUNDS BEING LIMITED. HIGHLY LEVERAGED TRANSACTIONS MAY EXPERIENCE SUBSTANTIAL GAINS OR LOSSES IN VALUE AS A RESULT OF RELATIVELY SMALL CHANGES IN THE VALUE OR LEVEL OF AN UNDERLYING OR RELATED MARKET FACTOR.

IN EVALUATING THE RISKS AND CONTRACTUAL OBLIGATIONS ASSOCIATED WITH A PARTICULAR SWAP TRANSACTION, IT IS IMPORTANT TO CONSIDER THAT A SWAP TRANSACTION MAY BE MODIFIED OR TERMINATED ONLY BY MUTUAL CONSENT OF THE ORIGINAL PARTIES AND SUBJECT TO AGREEMENT ON INDIVIDUALLY NEGOTIATED TERMS. THEREFORE, IT MAY NOT BE POSSIBLE TO MODIFY, TERMINATE, OR OFFSET YOUR OBLIGATIONS OR YOUR EXPOSURE TO THE RISKS ASSOCIATED WITH A TRANSACTION PRIOR TO ITS SCHEDULED TERMINATION DATE.

* * * * *

■ 8. Effective July 2, 2012, revise § 4.27, as added November 16, 2011, at 76 FR 71114, and effective March 31, 2012 to read as follows:

§ 4.27 Additional reporting by advisors of certain large commodity pools.

(a) *General definitions.* For the purposes of this section:

(1) *Commodity pool operator* or *CPO* has the same meaning as commodity pool operator defined in section 1a(11) of the Commodity Exchange Act;

(2) *Commodity trading advisor* or *CTA* has the same meaning as defined in section 1a(12);

(3) *Direct* has the same meaning as defined in section 4.10(f);

(4) *Net asset value* or *NAV* has the same meaning as net asset value as defined in section 4.10(b);

(5) *Pool* has the same meaning as defined in section 1(a)(10) of the Commodity Exchange Act;

(6) *Reporting period* means the reporting period as defined in the forms promulgated hereunder;

(b) *Persons required to report.* A reporting person is:

(1) Any commodity pool operator that is registered or required to be registered under the Commodity Exchange Act and the Commission's regulations thereunder; or

(2) Any commodity trading advisor that is registered or required to be registered under the Commodity Exchange Act and the Commission's regulations thereunder.

(c) *Reporting.* (1) Except as provided in paragraph (c)(2) of this section, each reporting person shall file with the National Futures Association, a report with respect to the directed assets of each pool under the advisement of the commodity pool operator consistent with appendix A to this part or commodity trading advisor consistent with appendix C to this part.

(2) All financial information shall be reported in accordance with generally accepted accounting principles consistently applied.

(d) *Investment advisers to private funds.* Except as otherwise expressly provided in this section, CPOs and CTAs that are dually registered with the Securities and Exchange Commission and are required to file Form PF pursuant to the rules promulgated under the Investment Advisers Act of 1940, shall file Form PF with the Securities and Exchange Commission in lieu of filing such other reports with respect to private funds as may be required under this section. In addition, except as otherwise expressly provided in this section, CPOs and CTAs that are dually registered with the Securities and Exchange Commission and are required to file Form PF pursuant to the rules promulgated under the Investment Advisers Act of 1940, may file Form PF with the Securities and Exchange Commission in lieu of filing such other reports with respect to commodity pools that are not private funds as may be required under this section. Dually registered CPOs and CTAs that file Form PF with the Securities and Exchange Commission will be deemed to have filed Form PF with the Commission for purposes of any enforcement action regarding any false or misleading statement of a material fact in Form PF.

(e) *Filing requirements.* Each report required to be filed with the National Futures Association under this section shall:

(1)(i) Contain an oath and affirmation that, to the best of the knowledge and belief of the individual making the oath and affirmation, the information contained in the document is accurate and complete; *Provided, however,* That it shall be unlawful for the individual to make such oath or affirmation if the individual knows or should know that any of the information in the document is not accurate and complete and

(ii) Each oath or affirmation must be made by a representative duly authorized to bind the CPO or CTA.

(2) Be submitted consistent with the National Futures Association's electronic filing procedures.

(f) *Termination of reporting requirement.* All reporting persons shall continue to file such reports as are required under this section until the effective date of a Form 7W filed in accordance with the Commission's regulations.

(g) *Public records.* Reports filed pursuant to this section shall not be considered Public Records as defined in § 145.0 of this chapter.

RIN 1515–AD74

Interest on Untimely Paid Vessel Repair Duties

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security; Department of the Treasury.

ACTION: Final rule.

SUMMARY: This document adopts as a final rule, without change, the proposed amendments to the CBP regulations that provide that where an owner or master of a vessel documented under the laws of the United States fails to timely pay the duties determined to be due to CBP that are associated with the purchase of equipment for, or repair to, the vessel while it is outside the United States, interest will accrue on the amounts owed to CBP and that person will be liable for interest. The purpose of this document is to ensure that the CBP regulations reflect that CBP collects interest as part of its inherent revenue collection functions in situations where an owner or master of a vessel fails to pay the vessel repair duties determined to be due within 30 days of CBP issuing the bill.

DATES: *Effective Date:* April 25, 2012.

FOR FURTHER INFORMATION CONTACT: George F. McCray, Chief, Cargo Security, Carriers and Immigration Branch, Regulations and Rulings, Office of International Trade, (202) 325–0082.

SUPPLEMENTARY INFORMATION:

Background

On April 1, 2011, U.S. Customs and Border Protection (CBP) published in the **Federal Register** (76 FR 18132) a proposal to amend title 19 of the Code of Federal Regulations (19 CFR) regarding the payment of interest on untimely paid vessel repairs. Specifically, CBP proposed amendments to the regulations to provide that where an owner or master of a vessel documented under the laws of the United States fails to timely pay the duties determined to be due to CBP that are associated with the purchase of equipment for, or repair to, the vessel while it is outside the United States, interest will accrue on the amounts owed to CBP and that person will be liable for interest.

CBP solicited comments on the proposed rulemaking.

Discussion of Comment

One commenter responded to the solicitation of public comment in the proposed rule. The comment was favorable and recommended adoption of the proposed amendments as a final rule.

Conclusion

In light of the fact that a single favorable comment was submitted in response to CBP's solicitation of public comment, CBP has determined to adopt as final the proposed rule published in

the **Federal Register** (76 FR 18132) on April 1, 2011 without change.

The Regulatory Flexibility Act and Executive Order 12866

Because these amendments merely reflect the agency's revenue collection functions and rights, and impose no additional regulatory burden on the importing public, pursuant to the provisions of the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.,* it is certified that the amendments will not have a significant economic impact on a substantial number of small entities. Further, these amendments do not meet the criteria for a ''significant regulatory action'' as specified in Executive Order 12866.

Paperwork Reduction Act

As there are no new collections of information in this document, the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3507) are inapplicable.

Signing Authority

This rulemaking is being issued in accordance with 19 CFR 0.1(a)(1), pertaining to the authority of the Secretary of the Treasury (or his/her delegate) to approve regulations related to certain CBP revenue functions.

List of Subjects

19 CFR Part 4

Administrative practice and procedure, Cargo vessels, Customs duties and inspection, Entry, Passenger vessels, Penalties, Repairs, Reporting and recordkeeping requirements, Shipping, Vessels.

19 CFR Part 24

Accounting, Claims, Customs duties and inspection, Exports, Imports, Interest, Reporting and recordkeeping requirements, Taxes, User fees, Wages.

Amendments to the Regulations

For the reasons set forth in the preamble, parts 4 and 24 of title 19 of the CFR (19 CFR Parts 4 and 24) are amended as set forth below.

PART 4—VESSELS IN FOREIGN AND DOMESTIC TRADE

■ 1. The general authority citation for part 4 continues, and the specific authority citation for § 4.14 is revised, to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1431, 1433, 1434, 1624, 2071 note; 46 U.S.C. 501, 60105.

* * * * *

Section 4.14 also issued under 19 U.S.C. 1466, 1498; 31 U.S.C. 9701.

* * * * *

■ 2. In § 4.14:

■ a. The section heading is revised;

■ b. Paragraph (i)(3) is redesignated as paragraph (i)(4) and a new paragraph (i)(3) is added; and

■ c. Paragraph (j)(1) is amended by adding a new third sentence.

The revisions and additions read as follows:

§ 4.14 Equipment purchases for, and repairs to, American vessels.

* * * * *

(i) * * *

(3) *Application for Relief; failure to file or denial in whole or in part.* If no Application for Relief is filed, or if a timely filed Application for Relief is denied in whole or in part, the VRU will determine the amount of duty due and issue a bill to the party who filed the vessel repair entry. If the bill is not timely paid, interest will accrue as provided in § 24.3a(b)(1) of this chapter.

(j) * * *

(1) * * * The owner or master of the vessel who fails to timely pay the duty determined to be due is liable for interest as provided in § 24.3a(b)(1) of this chapter.

* * * * *

PART 24—CUSTOMS FINANCIAL AND ACCOUNTING PROCEDURE

■ 3. The general authority citation for part 24 is revised to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 58a–58c, 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States, 1505, 1520, 1624; 26 U.S.C. 4461, 4462; 31 U.S.C. 3717, 9701; Pub. L. 107–296, 116 Stat. 2135 (6 U.S.C. 1 *et seq.*).

* * * * *

■ 4. Section 24.3a is amended:

■ a. By revising the section heading;

■ b. In paragraph (a): by adding, after the parenthetical phrase that ends with the word ''reliquidation'', the language '', or vessel repair duties,''; and by removing the words ''shall be'' and adding in their place the word ''are'';

■ c. In the heading text to paragraph (b)(1), by adding after the word ''for'' the words ''vessel repair duties,'';

■ d. In paragraph (b)(2)(i) introductory text, by removing the word ''shall'' and adding in its place the word ''will'';

■ e. In paragraph (b)(2)(i)(A), by removing the word ''shall'' and adding in its place the word ''will'';

■ f. In paragraph (b)(2)(i)(B) introductory text, by removing the word ''shall'' and adding in its place the word ''will'';

■ g. In paragraph (b)(2)(i)(B)(*1*), by removing the word ''shall'' and adding in its place the word ''will'';

■ h. In paragraph (b)(2)(i)(B)(*2*), by removing the word ''shall'' and adding in its place the word ''will'';

■ i. In paragraph (b)(2)(i)(B)(*3*), by removing the word ''shall'' wherever it appears and adding in each place the word ''will'';

■ j. In paragraph (b)(2)(i)(B)(*4*), by removing the word ''shall'' and adding in its place the word ''will'';

■ k. In paragraph (b)(2)(i)(C), by removing the word ''shall'' and adding in its place the word ''will'';

■ l. In paragraph (b)(2)(ii), by removing the word ''shall'' wherever it appears and adding in each place the word ''will''; and

■ m. In paragraph (c)(1), by removing the words ''CBP Office of Finance, Indianapolis, Indiana'' and adding in their place the language ''CBP's Revenue Division, Office of Administration''.

The revision reads as follows:

§ 24.3a CBP bills; interest assessment on bills; delinquency; notice to principal and surety.

* * * * *

David V. Aguilar,

Acting Commissioner, U.S. Customs and Border Protection.

Approved: March 21, 2012.

Timothy E. Skud,

Deputy Assistant Secretary of the Treasury.

BILLING CODE 9111–14–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2012–0153]

Drawbridge Operation Regulations; Pequonnock River, Bridgeport, CT, Maintenance

AGENCY: Coast Guard, DHS.

ACTION: Notice of temporary deviation from regulations.

SUMMARY: The Commander, First Coast Guard District, has issued a temporary deviation from the regulation governing the operation of the Metro North (Peck) Bridge across the Pequonnock River, mile 0.3, at Bridgeport, Connecticut. The deviation allows the bridge to remain in the closed position to facilitate miter rail repair.

DATES: This deviation is effective from April 15, 2012 through June 30, 2012.

ADDRESSES: Documents mentioned in this preamble as being available in the docket are part of docket USCG–2012–0153 and are available online at *www.regulations.gov,* inserting USCG–2012–0153 in the ''Keyword'' and then clicking ''Search''. They are also available for inspection or copying at the Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Ms. Judy Leung-Yee, Project Officer, First Coast Guard District, telephone (212) 668–7165, email *judy.k.leung-yee@uscg.mil.* If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION: The Metro North (Peck) Bridge, across the Pequonnock River, mile 0.3, at Bridgeport, Connecticut, has a vertical clearance in the closed position of 26 feet at mean high water and 32 feet at mean low water. The drawbridge operation regulations are listed at 33 CFR 117.219(b).

The operator of the bridge, Metro North Railroad, requested a temporary deviation from the regulations to facilitate scheduled bridge maintenance, miter rail repair, at the bridge.

The waterway users are recreational vessels and commercial lobster boats. The Metro North (Peck) Bridge rarely opens for vessel traffic. The bridge has received no requests to open during the past three years except for bridge testing and repairs.

Under this temporary deviation the Metro North (Peck) Bridge may remain in the closed position from April 15, 2012 through June 30, 2012. Vessels that can pass under the bridge in the closed position may do so at all times.

The waterway users were advised of the requested bridge closure and offered no objection.

In accordance with 33 CFR 117.35(e), the bridge must return to its regular operating schedule immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: March 1, 2012.

Gary Kassof,

Bridge Program Manager, First Coast Guard District.

POSTAL SERVICE

39 CFR Parts 4, 6, and 7

Bylaws of the Board of Governors

AGENCY: Postal Service.

ACTION: Final rule.

SUMMARY: On March 24, 2010, the Board of Governors of the United States Postal Service adopted a number of amendments to the Board's Bylaws. These amendments revised and clarified the provisions concerning the election and terms of office of the Board Chairman and Vice-Chairman. The amendments also formalized the process for notation voting (voting by paper ballot) on routine or administrative matters. This final rule incorporates the changes adopted by the Board.

DATES: These amendments to the Code of Federal Regulations are effective March 26, 2012.

FOR FURTHER INFORMATION CONTACT: Julie S. Moore, Secretary of the Board, U.S. Postal Service, 475 L'Enfant Plaza SW., Washington, DC 20260–1000. Telephone: (202) 268–4800.

SUPPLEMENTARY INFORMATION: This document publishes amendments to 39 CFR Parts 4, 6, and 7, conforming to amendments to the Bylaws of the Board of Governors of the United States Postal Service. In part 4, the Board revised §§ 4.1 and 4.2 to establish December 1 as the regular commencement date of the terms of office of the newly-elected Board Chairman and Vice-Chairman. In part 6 (with a conforming amendment to part 7), the Board added a new § 6.7 to formalize the process for notation voting by paper ballot on routine, non-controversial, and administrative matters.

List of Subjects in 39 CFR Parts 4, 6, and 7

Administrative practice and procedure, Organization and functions (Government agencies), Postal Service.

Accordingly, for the reasons stated, 39 CFR Parts 4, 6, and 7 are amended as follows:

PART 4—OFFICIALS (ARTICLE IV)

■ 1. The authority citation for part 4 continues to read as follows:

Authority: 39 U.S.C. 202–205, 401(2), (10), 402, 1003, 3013, 3686.

■ 2. Section 4.1 is revised to read as follows:

§ 4.1 Chairman.

(a) The Chairman of the Board of Governors is elected by the Governors from among the members of the Board. The Chairman:

(1) Shall be elected at the Board's regularly scheduled November meeting for a term that commences on December 1 of the calendar year in which the election occurred, or upon the death, departure or resignation of the current Chairman, whichever occurs first, and expires upon the election and installation of a successor Chairman;

(2) Shall preside at all regular and special meetings of the Board, and shall set the agenda for such meetings;

(3) Shall select and appoint the chairman, vice chairman (if any), and members of any committee properly established by the Board.

(b) If the Postmaster General is elected Chairman of the Board, the Governors shall also elect one of their number to preside during proceedings dealing with matters upon which only the Governors may vote.

(c) In the event of the Chairman's death, departure or resignation prior to the election of a successor, the Board, as soon as practicable, shall elect a new Chairman who shall serve a term that commences immediately upon election and expires upon the election and installation of a successor Chairman.

(d)(1) Upon the election and installation of a new Chairman of the Board, the immediate past Chairman shall become Chairman Pro Tempore of the Board, to preside during the absence of the Chairman and Vice Chairman at any meeting of the Board during the year or years following the immediate past Chairman's tenure as Chairman and until another Chairman has been elected.

(2) The Chairman Pro Tempore shall, at the request of the Chairman or Vice Chairman, serve as the representative of the Board of Governors at conferences, trade shows, ceremonial functions and other meetings important to Postal Service business.

■ 3. Section 4.2 is revised to read as follows:

§ 4.2 Vice Chairman.

The Vice Chairman is elected by the Governors from among the members of the Board and shall perform the duties and exercise the powers of the Chairman during the Chairman's absence or disability. The Vice Chairman is elected at the Board's regularly scheduled November meeting for a term that commences on December 1 of the calendar year in which the election occurred or upon the death, departure or resignation of the current Vice Chairman, whichever occurs first, and expires upon the election and installation of a successor Vice

Chairman. In the event of the Vice Chairman's death, departure or resignation prior to the election of a successor, the Board, as soon as practicable, shall elect a new Vice Chairman who shall serve a term that commences immediately upon election and expires upon the election and installation of a successor Vice Chairman.

PART 6—MEETINGS (ARTICLE VI)

■ 4. The authority citation for part 6 continues to read as follows:

Authority: 39 U.S.C. 202, 205, 401(2), (10), 1003, 3622; 5 U.S.C. 552b(e), (g).

■ 5. Section 6.6 is amended by revising the introductory text to read as follows:

§ 6.6 Quorum and voting.

As provided by 39 U.S.C. 205(c), and except for routine, non-controversial, and administrative matters considered through the notation voting process described in § 6.7, the Board acts by resolution upon a majority vote of those members who attend a meeting in person or by teleconference. No proxies are allowed in any vote of the members of the Board. Any 6 members constitute a quorum for the transaction of business by the Board, except:

* * * * *

■ 6. Section 6.7 is added to read as follows:

§ 6.7 Notation voting.

(a) *General.* Notation voting consists of the circulation of written memoranda and voting sheets to each member of the Board simultaneously and the tabulation of submitted responses. Notation voting may be used only for routine, non-controversial, and administrative matters.

(b) *Administrative Responsibility.* The Secretary of the Board is responsible for:

(1) Distributing notation voting memoranda and voting sheets;

(2) Establishing deadlines for notation voting sheets to be completed and returned;

(3) Processing and tabulating all notation voting sheets; and

(4) Determining whether further action is required.

(c) *Veto of notation voting.* In view of the public policy for openness reflected in the Government in the Sunshine Act and in these bylaws, each Board member is authorized to veto the use of notation voting for the consideration of any matter. If a Board member vetoes the use of notation voting, the Secretary must notify all members of such action, and must promptly take action to place the particular matter on the agenda of the next regularly scheduled Board meeting following the date of the veto, or to schedule a teleconference to consider the matter, as appropriate.

(d) *Disclosure of result.* The Secretary shall maintain all records pertaining to Board actions taken pursuant to the notation voting process, and shall make such records available for public inspection, consistent with the Freedom of Information Act, 5 U.S.C. 552.

PART 7—PUBLIC OBSERVATION (ARTICLE VII)

■ 7. The authority citation for part 7 continues to read as follows:

Authority: 39 U.S.C. 410; 5 U.S.C. 552b(a)–(m).

■ 8. Section 7.1 is amended by revising the final sentence of paragraph (b) to read as follows:

§ 7.1 Definitions.

* * * * *

(b) * * * The term ''meeting'' does not include any procedural deliberations required or permitted by §§ 6.1, 6.2, 7.4, or 7.5 of the bylaws in this chapter, or the notation voting process described in § 6.7 of the bylaws in this chapter.

Stanley F. Mires,

Attorney, Legal Policy & Legislative Advice.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2011–0130, FRL–9612–7]

Approval and Promulgation of Air Quality Implementation Plans; State of Nevada; Regional Haze State Implementation Plan

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is finalizing its approval of most of the Nevada Regional Haze State Implementation Plan (SIP) that implements the Clean Air Act (CAA) Regional Haze Rule requiring states to prevent any future and remedy any existing man-made impairment of visibility in mandatory Class I areas through a regional haze program. EPA proposed to approve all parts of Nevada's SIP revisions on June 22, 2011 (76 FR 36450). This final approval applies to all aspects of Nevada's SIP except for that portion of Nevada's determination regarding the Best Available Retrofit Technology (BART) to reduce nitrogen oxide (NO_X) emissions at the Reid Gardner Generating Station (RGGS). We will take action on BART for NO_X at RGGS in a future notice.

DATES: *Effective Date:* This rule is effective on April 25, 2012.

ADDRESSES: EPA has established docket number EPA–R09–OAR–2011–0130 for this action. Generally, documents in the docket are available electronically at *http://www.regulations.gov* or in hard copy at EPA Region 9, 75 Hawthorne Street, San Francisco, California. Please note that while many of the documents in the docket are listed at *http://www.regulations.gov,* some information may not be specifically listed in the index to the docket and may be publicly available only at the hard copy location (e.g., copyrighted material, large maps, multi-volume reports or otherwise voluminous materials), and some may not be available at either locations (e.g., confidential business information). To inspect the hard copy materials, please schedule an appointment during normal business hours with the contact listed directly below.

FOR FURTHER INFORMATION CONTACT: Thomas Webb, U.S. EPA, Region 9, Planning Office, Air Division, Air-2, 75 Hawthorne Street, San Francisco, CA 94105. Thomas Webb can be reached at telephone number (415) 947–4139 and via electronic mail at *webb.thomas@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, wherever ''we,'' ''us,'' or ''our,'' is used, we mean the United States Environmental Protection Agency (EPA).

I. Background

A. Description of Regional Haze

Regional haze is the impairment of visibility across a broad geographic area produced by numerous sources and

activities that emit fine particles and their precursors, primarily sulfur dioxide (SO_2) and nitrogen oxide (NO_X), and in some cases, ammonia (NH_3) and volatile organic compounds (VOC). Fine particle precursors react in the atmosphere to form fine particulate matter ($PM_{2.5}$), primarily sulfates, nitrates, organic carbon, elemental carbon, and soil dust, which impair visibility by scattering and absorbing light. Visibility impairment reduces the clarity, color, and visible distance that one can see. $PM_{2.5}$ can also cause serious health effects and mortality in humans and contributes to environmental effects such as acid deposition and eutrophication of water bodies.

Data from existing visibility monitors, the ''Interagency Monitoring of Protected Visual Environments'' (IMPROVE) network, indicate that visibility impairment caused by air pollution occurs virtually all the time at most federally protected national parks and wilderness areas, known as Class I areas. The average visual range in many Class I areas in the western United States is 100 to 150 kilometers, or about one-half to two-thirds of the visual range that would exist without man-made air pollution.[1] In most of the eastern Class I areas of the United States, the average visual range is less than 30 kilometers, or about one-fifth of the visual range that would exist under estimated natural conditions. 64 FR 35715 (July 1, 1999).

B. History of Regional Haze Regulations

In section 169(A)(1) of the 1977 Amendments to the CAA, Congress established as a national goal the ''prevention of any future, and the remedying of any existing, impairment of visibility in mandatory class I Federal areas which impairment results from man-made air pollution.'' Visibility was determined by Congress to be an important value in 156 mandatory Class I Federal areas[2] as listed in 40 CFR 81.400–437. In the first phase of visibility protection, EPA promulgated regulations on December 2, 1980, to address visibility impairment in Class I areas that is ''reasonably attributable'' to a single source or small group of sources, i.e., ''reasonably attributable visibility impairment'' or RAVI. 45 FR 80084. EPA deferred action on regional haze that emanates from a variety of sources until monitoring, modeling and scientific knowledge about the relationship between pollutants and visibility impairment were improved.

Congress added section 169B to the CAA in 1990 to conduct scientific research on regional haze. This legislation established the Grand Canyon Visibility Transport Commission (GCVTC), which issued its report, ''Recommendations for Improving Western Vistas,'' on June 10, 1996. These recommendations informed the regulatory development of a regional haze program, and provided an option for certain western states to address visibility at 16 Class I areas on the Colorado Plateau under 40 CFR 51.309.

EPA promulgated a rule to address regional haze on July 1, 1999 known as the Regional Haze Rule (RHR). See 64 FR 35713 as amended at 70 FR 39156 (July 6, 2005) and 71 FR 60631 (October 13, 2006). The RHR revised the existing visibility regulations to include provisions addressing regional haze impairment and established a comprehensive visibility protection program for Class I areas. The requirements for regional haze, found at 40 CFR 51.308 and 51.309, are included in EPA's visibility protection regulations at 40 CFR 51.300–309.

The requirement to submit a regional haze SIP revision applies to all 50 states, the District of Columbia, and the Virgin Islands. States were required to submit the first SIP addressing regional haze visibility impairment no later than December 17, 2007. 40 CFR 51.308(b). Since most states, including Nevada, did not submit SIPs prior to the deadline, EPA made a Finding of Failure to Submit that under the Clean Air Act had the effect of creating a deadline of January 15, 2011, for EPA to approve a SIP or publish a Federal Implementation Plan (FIP). 74 FR 2392 (January 15, 2009). EPA is publishing this final action to meet this obligation in part.

For a more detailed discussion of the CAA and RHR requirements, please see sections II and III of our proposal dated June 22, 2011 (76 FR 36450). Our evaluation of the Nevada Regional Haze Plan is in section IV of the same proposal.

C. Our Proposed Action

On June 22, 2011, EPA proposed to approve all portions of Nevada's Regional Haze SIP as meeting the relevant requirements of CAA Section 169A and the Regional Haze Rule. We proposed to find that Nevada appropriately established baseline visibility conditions and a reasonable progress goal for its one Class I area; developed a long-term strategy with enforceable measures to ensure reasonable progress toward achieving the Reasonable Progress Goal in the first planning period ending in 2018; adequately applied Best Available Retrofit Technology to specific stationary sources, including RGGS; developed a regional haze monitoring strategy; provided for periodic progress reports and revisions; provided for consultation and coordination with federal land managers; and provided for the regional haze SIP's future review and revisions. We also proposed to find that emissions from Nevada do not interfere with other states' measures to protect visibility as required by CAA Section 110(a)(2)(D)(i)(II). Our proposed action provides more information about the relevant CAA requirements, EPA guidance, the State's submittals, and our review and evaluation of the SIP revisions.

II. BART Determination for NO_X at Reid Gardner

We are taking no action in today's rule on the portion of the Nevada SIP that contains the BART determination at RGGS for NO_X. Following our review of the public comments on this issue, we performed additional analysis of Nevada's NO_X BART determination for RGGS. As a result, we no longer consider the currently available information to be sufficient for us to take final action on the Nevada Division of Environmental Protection's (NDEP's) determination that rotating overfire air (ROFA) with Rotamix (a form of selective non-catalytic reduction or SNCR) is the NO_X control technology that represents BART. We intend to consider this determination in more detail at a future date.

A. Background

The RHR provides that a BART determination must take into account several factors, which are frequently referred to as the ''five-factor analysis.'' These factors are listed below (40 CFR 51.308(e)(1)(ii)(A)):

[1] Visual range is the greatest distance, in kilometers or miles, at which one can view a dark object against the sky.

[2] Areas designated as mandatory Class I Federal areas consist of national parks exceeding 6000 acres, wilderness areas and national memorial parks exceeding 5000 acres, and all international parks that were in existence on August 7, 1977. 42 U.S.C. 7472(a). In accordance with section 169A of the CAA, EPA, in consultation with the Department of Interior, promulgated a list of 156 areas where visibility is identified as an important value. 44 FR 69122 (November 30, 1979). Although states and tribes may designate as Class I additional areas which they consider to have visibility as an important value, the requirements of the visibility program set forth in section 169A of the CAA apply only to ''mandatory Class I Federal areas.'' Each mandatory Class I Federal area is the responsibility of a ''Federal Land Manager.'' 42 U.S.C. 7602(i). When we use the term ''Class I area'' in this action, we mean a ''mandatory Class I Federal area.''

- The cost of compliance for the technically feasible control technologies;
- The energy and non-air quality impacts of the control technologies;
- Any existing air pollution control technologies at the source;
- The remaining useful life of the source; and
- The degree of visibility improvement which may reasonably be anticipated to result from the various control technologies.

B. NDEP's Determination

RGGS consists of four coal-fired boilers, three of which are BART-eligible units with generating capacity of 100 megawatts (MW) each. A fourth unit (250 MW) is not BART-eligible. Nevada Energy, the owner of RGGS, performed a BART analysis for the three BART-eligible RGGS units and submitted the results of its analysis to NDEP.[3] In its BART analysis, Nevada Energy considered several NO_X control technologies and evaluated the cost of compliance and visibility improvement associated with each technology. In preparing the SIP, NDEP relied on certain aspects of Nevada Energy's analysis while performing updated analyses for other aspects. When considering the cost and cost effectiveness of compliance, NDEP developed its own set of emission reduction estimates for the various NO_X control technologies, but used Nevada Energy's estimates of total capital and annual costs.[4] When considering the degree of visibility improvement associated with various control technologies, NDEP relied upon the visibility impacts for each control option as modeled by Nevada Energy, rather than modeling the visibility impacts attributable to NDEP's own estimates of NO_X removal.

In its submittal to NDEP, Nevada Energy determined that low NO_X burners (LNB) with OFA (overfire air) were BART for NO_X. In preparing the SIP, NDEP determined that a more stringent control technology, ROFA with Rotamix, was BART for NO_X. NDEP eliminated even more stringent control options, such as Selective Catalytic Reduction (SCR) with LNB and OFA, on the grounds that ''the $/ton of NO_X removed increased significantly * * * without correspondingly significant improvements in visibility.'' [5]

C. Public Comments Relevant to NDEP's Determination

As noted in Section II.B above, NDEP's elimination of control options more stringent than ROFA with Rotamix was based on the incremental cost effectiveness ($/ton) and expected visibility improvement of the various options. EPA received several comments (see Docket Items 0054, 0057, 0061, 0062 and 0062 Attachment 6) alleging flaws in NDEP's analysis and response to comments, and stating that SCR should be BART for NO_X at RGGS. These commenters alleged certain flaws and submitted additional information in criticizing NDEP's development of the cost effectiveness values and expected visibility improvement attributable to the more stringent SCR-based control option.

Regarding cost effectiveness, several commenters (see Docket Items 0054, 0057, 0061, and 0062) alleged that the total capital and annual cost estimates relied upon by NDEP for the SCR-based control options were overestimated, included several costs not allowed by EPA's Control Cost Manual (CCM) such as owner's costs, surcharge, and allowance for funds used during construction (AFUDC), and used certain variables and values that were either inflated or unreasonable. One commenter (see docket item 0062 Attachment 6) performed a revised analysis of SCR cost effectiveness that adjusted for these alleged issues, and projected a 33 to 40 percent decrease in average and incremental cost effectiveness values as a result of these adjustments. In addition, commenters stated that total capital and annual cost estimates lacked evidentiary support in the administrative record due to the absence of detailed information such as equipment design parameters, equipment lists, and actual cost calculations. Finally, commenters also stated that the level of SCR performance relied upon by NDEP is not supported in the administrative record by site-specific information such as vendor quotes or specifications (see Docket Items 0054 and 0061 to 0063).

Regarding visibility improvement, commenters (see Docket Items 0054 and 0062) noted that while baseline visibility modeling indicated that RGGS currently causes or contributes to visibility impairment at multiple Class I areas, control scenario visibility modeling results were only provided for the single closest Class I area, Grand Canyon National Park. They asserted that the potential visibility benefit at all affected Class I areas should be accounted for when considering control technology options. In addition, as described in Section II.B above, NDEP estimated larger NO_X emission reductions than the emission reductions estimated by Nevada Energy. NDEP, however, continued to rely on the visibility modeling provided by Nevada Energy, and did not update the modeling to reflect NDEP's larger NO_X emission reduction estimates. As a result, the existing visibility modeling does not reflect the incremental visibility improvement attributable to NDEP's estimates of NO_X emission reductions. Finally, commenters noted that certain modeling files and documentation were missing from our docket and were unavailable from NDEP, such as the NO_X control scenario modeling result files and supporting information for NDEP's baseline emission scenarios.

D. EPA's Analysis

After reviewing the public comments, we performed additional analysis of the cost effectiveness and visibility improvement associated with the various NO_X control technologies considered by NDEP in determining BART at RGGS. Based upon this additional analysis, we no longer consider the currently available supporting information to be sufficiently detailed to allow us to perform a critical review of these issues. As a result, we are taking no action in this rule on NDEP's determination that ROFA with Rotamix is the NO_X control technology that represents BART.

Therefore, EPA is taking no action on the portion of the SIP containing the BART determination for NO_X at RGGS including the corresponding emission limits and schedules of compliance for NO_X at RGGS in the SIP's long-term strategy. Specifically, these are sections 5.5.3, 5.6.3 and 7.2 of Nevada's SIP that address the NO_X BART control analyses, visibility improvement, and implementation at RGGS. Since the emissions inventories used to develop the reasonable progress goal (RPG) did not include NO_X reductions from BART, the fact that we take no action in this rule regarding the RGGS BART

[3] Nevada Energy BART Analysis Reports, Reid_Gardner_1_10–03–08.pdf, Reid_Gardner_2_10–03–08.pdf, Reid_Gardner_3_10–03–08.pdf. Available in Docket Item No. EPA–R09–OAR–2011–0130–0007.

[4] Based on a comparison of emission reductions summarized in Table 1, NDEP Reid Gardner BART Determination, October 22, 2009 (Available as Docket Item No. EPA–R09–OAR–2011–0130–0005), and emission reductions summarized in Table 3–2 of the NVE BART Analysis Reports. Visibility impacts as summarized from Table 5–4 of the NVE BART Analysis Reports.

[5] Revised NDEP Reid Gardner BART Determination Review, page 6. Available as Docket Item No. EPA–R09–OAR–2011–0130–0005. See also Nevada Regional Haze SIP, Appendix D (Responses to Comments), pages D–32 to –42. Available in docket item No. EPA–R09–OAR–2011–0130–003.

determination for NO_X does not impact the RPG, and will not require adjustments to the long-term strategy (LTS) in the SIP.[6] EPA will propose further action on this particular portion of the SIP in the future.

III. EPA Responses to Public Comments Except BART for NO_X at RGGS

EPA's proposed approval published on June 22, 2011 (76 FR 36450) included a 30-day public comment period, which ended on July 22, 2011. We subsequently extended the comment period by 30 days until August 22, 2011 (76 FR 43963). We received comments from WildEarth Guardians, a consortium of environmental and conservation organizations[7] (''Consortium''), the Moapa Band of Paiutes, the Nevada Division of Environmental Protection (NDEP), the National Park Service, the U.S. Fish and Wildlife Service, and seven individuals. With the exception of NDEP's comments, which support EPA's proposed approval of its plan, most of the comments expressed opposition to EPA's full approval of the SIP. The majority of these comments criticized our proposed approval of NDEP's determination of BART controls to reduce emissions of NO_X at RGGS. In this final rule approving all other portions of Nevada's RH SIP, we are responding to all other major comments on our proposed SIP approval. We find that the SIP is approvable except BART for NO_X at RGGS on which EPA is taking no action.

A. Reasonable Progress Goal

Comments: The National Park Service and U.S. Fish and Wildlife Service expressed concern that the SIP's reasonable progress analysis was not consistent with Section 308(d)(1) of the Regional Haze Rule and EPA's *Guidance for Setting Reasonable Progress Goals under the Regional Haze Program* because NDEP ''did not consider what additional emissions reductions beyond those already being implemented might be reasonable to improve visibility.'' Similarly, WildEarth Guardians commented that the Clean Air Act requires EPA to base reasonable progress goals on the factors set forth under Section 169A(g), and not the bare minimum required to meet the uniform rate of progress. WildEarth Guardians expressed concern that ''EPA has overlooked opportunities to further reduce haze forming pollution from sources in Nevada.'' By contrast, NDEP asserted that its reasonable progress analysis considered the four factors required under the Regional Haze Rule (i.e., the costs of compliance, the time necessary for compliance, the energy and non-air quality environmental impacts of compliance, and the remaining useful life of any existing source subject to such requirements). Specifically, NDEP noted that ''[c]ost was considered first, * * * and the NDEP concluded it was not necessary to continue with an analysis of the remaining factors.''

Response: As explained in the proposed rule, in promulgating the SIP NDEP considered the four factors in setting the reasonable progress goal for the Jarbidge Wilderness Area, the only Class I area in Nevada. The RHR and EPA's guidance affords the State considerable flexibility in determining whether additional emission reduction measures are needed to achieve the RPG in the first planning period. The NDEP reasonably concluded that the cost of additional controls was not warranted given projected emissions reductions from anthropogenic sources and the fact that the majority of haze at Jarbidge is from natural and out-of-state sources. Moreover, NDEP noted in its comments that ''of the five proposed electrical generating units (EGUs) included in the State's 2018 emissions inventory, only two have moved forward and are now operational,'' which would further lower emissions projections for both NO_X and SO_2 by 2018. The comments do not demonstrate that the State failed to consider reasonably the four factors, but the comments question whether the State should have done a more robust analysis. EPA has considered the comments and the comments have not provided any further specific facts that should have been considered in the State's analysis beyond conclusory criticisms. Therefore, given the broad discretion the RHR affords the State, and the lack of specificity in the comments on this issue, EPA reaffirms its proposed decision to approve the State's reasonable progress goal for Jarbidge.

B. Long-Term Strategy

Comments: The Consortium argued that the SIP ''does not contain evidence showing full and effective consultation with other states, does not 'ensure that it has included all measures needed to achieve its apportionment of emission reduction obligations agreed upon' through that consultation process and further fails to 'document the technical basis, including modeling, monitoring and emissions information,' on which it relies to determine its apportionment of emission reduction obligations agreed upon through that process.'' Specifically, the Consortium noted that, ''[a]lthough the Proposed SIP implies that Nevada consulted with the Western Regional Air Partnership (''WRAP'') in determining its apportionment of visibility impacts to Class I areas outside of the State of Nevada, the administrative record does not support the legally-required level of consultation.'' They further argued that ''WRAP's failure to apportion Nevada's contribution does not save Nevada from its independent obligation to require adequate BART determinations and a long-term strategy to reduce haze-causing pollutants in out-of-state Class I areas from its pollution sources.''

Response: EPA disagrees with the assertions that Nevada did not consult with other states, did not meet its source apportionment obligations to Class I areas in other states, and did not document the technical basis for its apportionment as required in 40 CFR 51.308(d)(3)(i), (ii), and (iii). Although Nevada lacked formal membership in the WRAP, representatives from NDEP actively participated with other state representatives in the WRAP's committees and work groups, which jointly directed the development of the WRAP's technical analyses. Nevada and other western states relied on the WRAP's source apportionment modeling results to estimate the contribution of out-of-state emissions and relied on the WRAP's consultation process to ensure the compatibility of reasonable progress goals and long-term strategies.[8] Nevada used the WRAP's source apportionment modeling to demonstrate the minimal contribution of Nevada's emissions to sulfate and nitrate extinction at 25 Class I areas in five neighboring states.[9] Based on consultation through the WRAP, Nevada identified no major contributions that supported developing new interstate strategies, mitigation measures, or emissions reduction obligations. Nevada and neighboring states agreed that the implementation of BART and other existing measures in state regional haze plans were sufficient for the states to meet the reasonable progress goals for their respective Class I areas, and that future consultation would address any

[6] Per the Nevada RH SIP, page 6–5, the only BART emission reductions included in the 2018 emission inventory were SO_2 reductions resulting from presumptive BART limits.

[7] The Consortium's comment letter was signed by representatives of the Sierra Club, National Parks Conservation Association, Citizens for Dixie's Future, Defend Our Desert, Friends of Gold Butte, Grand Canyon Trust, and Western Resource Advocates.

[8] See 9.1.3 Past Consultation with other States in Nevada's SIP.

[9] See 4.3.3 Source Apportionment for Other Class I Areas in Nevada's SIP.

new strategies or measures needed. Moreover, Nevada did not receive any requests from other states to achieve even greater reductions in its emissions in order for other states to meet their RPGs. Therefore, EPA reaffirms its proposed determination that Nevada adequately consulted with other states, demonstrated that its SIP includes all measures necessary to obtain its share of emission reductions at other Class I areas, and provided the technical basis to document its analysis.

C. BART for SO_2 and PM_{10} at RGGS

In addition to extensive comments addressing NDEP's BART determination for NO_X at RGGS, we also received comments concerning the timing of implementation of BART at RGGS generally, as well as comments specifically addressing the SO_2 and PM_{10} BART determinations for RGGS. As noted above, we are not acting on NDEP's BART determination for NO_X at RGGS at this time. Therefore, our responses concerning RGGS are limited to comments related to the SO_2 and PM_{10} BART determinations.

1. BART for SO_2 at RGGS

Comments: Regarding NDEP's BART determination for SO_2 at RGGS, WildEarth Guardians expressed concern that ''SO_2 limits do not appear to represent the degree of reduction achievable through the application of the best system of continuous emission reduction.'' In particular, they asserted that ''it appears that Reid Gardner is already meeting emission limits that are less than half of this proposed limit'', and that ''even Nevada recognizes the SO_2 emissions increases will occur as a result of [NDEP's] proposed BART.'' By contrast, the National Park Service and the U.S. Fish and Wildlife Service praised ''NDEP's action to lower the SO_2 limit'' at RGGS.

Response: In setting the SO_2 BART limits for RGGS, NDEP took into account the existing controls at the facility, consistent with CAA Section 169A(g)(2) and 40 CFR 51.308(e)(1)(ii)(A). In particular, NDEP considered the effect of new fabric filter baghouses that were installed on all three BART units at RGGS in 2008 and 2009 pursuant to a consent decree between the facility's owner and NDEP and EPA.[10] The consent decree established an SO_2 emissions limit of 0.40 lbs/MMbtu (a million British thermal units), based on a 10-day rolling average period, for each of the three BART units.[11] In its draft regional haze SIP, NDEP proposed an SO_2 emissions limit of 0.25 lbs/MMbtu for each of the three BART units at RGGS. In response to comments from EPA and the National Park Service, NDEP subsequently lowered the BART limits to 0.15 lbs/MMbtu, based on a 24-hour averaging period.[12]

In arguing for further reductions in these BART limits, WildEarth Guardians notes that, ''according to Clean Air Markets data from the EPA, units 1–3 are meeting annual sulfur dioxide emission rates of between 0.054 and 0.064 lbs/MMbtu and have for at least the last two years.'' However, while the units' current annual average emission rates may be less than 0.15 lb/MMbtu, these figures are not directly comparable to the 24-hour rolling average emissions limits set by NDEP in its BART determination for RGGS. The more relevant points of comparison are the units' current Title V permit limits of 0.40 lbs/MMbtu, based on a 10-day rolling average period, which are more than twice the limit that NDEP has set for each of the three BART units in its Regional Haze SIP.

In response to commenters' concerns regarding potential increases in SO_2 emissions as a result of NDEP's BART determination at RGGS, EPA re-examined NDEP's estimates of emission reductions resulting from BART controls at RGGS. Nevada's SIP provides two sets of estimated emission reductions resulting from BART controls at RGGS, one based on the WRAP baseline (4,970 tons) and one based on NDEP's baseline (1,441 tons) for SO_2.[13] Although SO_2 emissions are estimated to increase by 838 tons from NDEP's baseline, they are expected to decrease by 2,696 tons from the WRAP's baseline. Under both scenarios, the emissions after BART Controls are held constant at 2,279 tons. Thus, the difference in estimated emissions reductions is a reflection of the large difference between the WRAP baseline and the NDEP baseline for SO_2.

NDEP's baseline emissions for SO_2 were calculated using acid rain data that omitted data deemed invalid due to monitoring problems that were addressed by the consent decree. According to NDEP, the omission of the invalid data effectively lowered the baseline emissions (measured in lbs/MMbtu) by nearly half.[14] Thus, the projected increase in SO_2 appears to be an artifact of NDEP's exceptionally low baseline that is attributable to the exclusion of invalid data.

From a broader perspective, NDEP's BART determination for SO_2 at RGGS will result in a lower emissions limit (0.15 lbs/MMbtu based on a 24-hour rolling average compared to the current Title V Permit limit of 0.40 lbs/MMbtu based on a 10-day rolling average period) related to the new fabric filter baghouses and existing wet soda ash with a dry flue gas desulfurization system. Since the BART determination lowers the short-term emissions limit, there is no valid reason to suspect that SO_2 emissions will increase as a result of BART controls. EPA will use the progress report due five years after the SIP's approval to evaluate actual SO_2 emissions at RGGS to ensure that NDEP's BART determination has not resulted in increased emissions and will encourage NDEP to take appropriate action, if necessary, at that time.

2. BART for PM_{10} at RGGS

Comments: Regarding the PM_{10} limit, WildEarth Guardians expressed concern that ''the proposed BART determination is unenforceable because there are no monitoring, recordkeeping, or reporting requirements proposed that would ensure compliance with the 24-hour limits. There are simply no monitoring requirements proposed that would actually ensure that the PM limit is met on a continuous basis. This is contrary to the Clean Air Act, which defines BART based on continuous emission reductions.''

Response: As explained in EPA's BART Guidelines, ''[m]onitoring requirements generally applicable to sources, including those that are subject to BART, are governed by other regulations. See, e.g., 40 CFR part 64 (compliance assurance monitoring); 40 CFR 70.6(a)(3) (periodic monitoring); 40 CFR 70.6(c)(1) (sufficiency monitoring).'' [15] The monitoring, recordkeeping and reporting requirements specifically applicable to RGGS are found in the existing Nevada SIP as well as the facility's Title V permit. In particular, the applicable SIP requires continuous monitoring of opacity and compliance with a 20 percent opacity limit.[16] Although opacity does not directly correlate with particulate concentrations, it is a good indicator of proper operation of the baghouse since almost any opacity from a baghouse-controlled coal-fired boiler

[10] See Nevada's RH SIP Sections 5.5 and 6.5.2.2.

[14] See Nevada's RH SIP Section 5.5.

[15] 40 CFR part 51 Appendix Y, Section V.

[16] See 40 CFR 52.1470(c); Nevada Administrative Code 445B.256–267, 22017.

is indicative of leaks in the baghouse. Under Part 64, such an excursion or exceedance must be addressed ''as expeditiously as practicable in accordance with good air pollution control practices for minimizing emissions.'' [17] For directly assuring compliance with existing PM_{10} limits, the Title V permit for RGGS contains an annual stack test requirement using Method 5 for PM and Method 201A/202 for $PM_{10.}$ Given the current opacity limit in the SIP and the compliance methods in RGGS's Title V permit, we are approving the BART determination for PM_{10} in Nevada's RH SIP. We will continue to work with Nevada to ensure that all appropriate compliance provisions are in the SIP.

3. Timing of Implementation

Comments: WildEarth Guardians expressed concern that ''EPA has not demonstrated that 'by January 1, 2015' is as expeditiously as practical for complying with BART at Reid Gardner, nor shown that it is reasonable to allow the facility a full five years to come into compliance with BART.''

Response: The Nevada BART regulation in the Regional Haze SIP requires that the BART control measures at RGGS must be installed and operating ''[o]n or before January 1, 2015; or (2) [n]ot later than 5 years after approval of Nevada's state implementation plan for regional haze by the United States Environmental Protection Agency Region 9, whichever occurs first.'' Given the date of our approval of Nevada's SIP, the BART implementation deadline for the RGGS is January 1, 2015, about three years from the date of this final rule. EPA considers Nevada's choice of the January 1, 2015, to be reasonable in this instance.

D. Corrections to EPA's Technical Analysis

Comments: NDEP noted a few corrections to EPA's analysis in the proposed rule at 76 FR 36450 (June 22, 2011), but stated that these minor corrections do not alter any of EPA's conclusions. The first correction was to note that the percentages of emissions by source category shown in section IV.C.2 of EPA's proposed rule are based on the 2018 emissions inventory. The proposal omitted the date of the inventory. Secondly, NDEP commented that the discussion of predominant sources of $PM_{2.5}$ was in error because ''the predominant source of PM fine emissions are windblown dust (43 percent) and fugitive dust (30 percent).'' EPA had mistakenly attributed PM fine emissions to natural fires (49 percent) and area sources (37 percent). Lastly, NDEP commented on the sources of visibility impairment, saying that soil in $PM_{2.5}$ is mostly from windblown dust, not natural fire. EPA had mistakenly attributed the source of $PM_{2.5}$ to natural fire.

Response: EPA is correcting the record as noted above.

IV. EPA Action

Under section 110(k)(3) of the CAA, EPA is fully approving most portions of the Nevada Regional Haze SIP as satisfying all of the relevant requirements of CAA Section 169A and the Regional Haze Rule. For the portions of the SIP establishing BART for NO_X at RGGS, EPA is taking no action at this time, and will take action on those portions of the SIP in a separate rulemaking.

We find that Nevada has met the following Regional Haze Rule requirements: The State established baseline visibility conditions and reasonable progress goals for each of its Class I areas; the State developed a long-term strategy with enforceable measures ensuring reasonable progress towards meeting the reasonable progress goals for the first ten-year planning period, through 2018; the State has adequately addressed the application of Best Available Retrofit Technology to specific stationary sources, except for NO_X at RGGS; the State has an adequate regional haze monitoring strategy; the State provided for consultation and coordination with federal land managers in producing its regional haze plan; and, the State provided for the regional haze plan's future revisions.

In addition, under section 110(k)(3) of the CAA, we are fully approving the Nevada Regional Haze SIP as satisfying the CAA Section 110(a)(2)(D)(i)(II) requirement to prohibit emissions that will interfere with measures to protect visibility in another state for the 1997 8-hour ozone and 1997 $PM_{2.5}$ NAAQS.[18]

V. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve State choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 et seq.);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- Does not interfere with Executive Order 12898 (59 FR 7629 (Feb. 16, 1994)) because EPA lacks the discretionary authority to address environmental justice in this rulemaking.

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the State, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law. However, the Moapa Band of Paiutes did raise issues in the context of the BART determination for RGGS, which will be addressed at a future date. Region 9 engaged in formal consultation with the Moapa Band of Paiutes on August 11, 2011, and heard these issues in person. We will continue to consult with Moapa on RGGS.

[17] 40 CFR 64.7(d)(1).

[18] As noted in our proposal, 76 FR 36465, we previously approved Nevada's SIP for Interstate Transport as meeting the other requirements of CAA section 110(a)(2)(D)(i) for the 1997 8-hour ozone and 1997 $PM_{2.5}$ NAAQS. See 70 FR 41629. We are now codifying this prior approval along with our current approval under a new section entitled ''Interstate Transport.''

The Congressional Review Act, 5 U.S.C. 801 et seq., as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by May 25, 2012. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements (see section 307(b)(2)).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen oxides, Sulfur dioxide, Particulate matter, Reporting and recordkeeping requirements, Visibility, Volatile organic compounds.

Dated: December 13, 2011.

Jared Blumenfeld,

Regional Administrator, Region 9.

Part 52, chapter I, title 40 of the Code of Federal Regulations is amended as follows:

PART 52—[AMENDED]

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart DD—Nevada

■ 2. In § 52.1470(c):

■ a. In paragraph (c), Table 1 is amended by adding an entry for ''445B.029'' after the entry for ''445B.022'', and adding entries for ''445B.22095,'' and ''445B.22096'' after the entry for ''445B.22093''.

■ 3. The table in paragraph (e) is amended by adding an entry for ''Nevada Regional Haze State Implementation Plan (October 2009)'' to the end of the table.

§ 52.1470 Identification of plan.

■ 3. Section 52.1488 is amended by adding paragraph (e) to read as follows:

§ 52.1488 Visibility protection.

* * * * *

(e) *Approval.* On November 18, 2009, the Nevada Division of Environmental Protection submitted the ''Nevada Regional Haze State Implementation Plan.'' With the exception of the BART determination and the associated emission limits for NO_X at Reid Gardner Generating Station in sections 5.5.3, 5.6.3 and 7.2, the Nevada Regional Haze State Implementation Plan, as supplemented and amended on February 18, 2010 and September 20, 2011, meets the applicable requirements of Clean Air Act sections 169A and 169B and the Regional Haze Rule in 40 CFR 51.308.

■ 4. Add a new § 52.1491 to read as follows:

§ 52.1491 Interstate transport.

(a) *Approval.* On February 7, 2007, the Nevada Division of Environmental Protection submitted the ''Nevada State Implementation Plan for Interstate Transport to Satisfy the Requirements of the Clean Air Act 110(a)(2)(D)(i) for the 8-hour Ozone and $PM_{2.5}$ NAAQS Promulgated in July 1997'' (''2007 Interstate Transport SIP''). The 2007 Interstate Transport SIP meets the requirements of Clean Air Act section 110(a)(2)(D)(i) for the 1997 8-hour ozone and 1997 $PM_{2.5}$ NAAQS other than the requirements of Clean Air Act section 110(a)(2)(D)(i)(II) regarding interference with other states' measures to protect visibility.

(b) *Approval.* The requirements of Clean Air Act section 110(a)(2)(D)(i)(II) regarding interference with other states' measures to protect visibility for the 1997 8-hour ozone and 1997 $PM_{2.5}$ NAAQS are met by the ''Nevada Regional Haze State Implementation Plan,'' as supplemented and amended on February 18, 2010 and September 20, 2011.

[FR Doc. 2012–7025 Filed 3–23–12; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R03–OAR–2011–0713; FRL–9652–6]

Approval and Promulgation of Air Quality Implementation Plans; Delaware, Maryland, New Jersey, and Pennsylvania; Determinations of Attainment of the 1997 8-Hour Ozone Standard for the Philadelphia-Wilmington-Atlantic City Moderate Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is making two determinations regarding the Philadelphia-Wilmington-Atlantic City, PA–NJ–MD–DE 8-hour ozone moderate nonattainment area (the Philadelphia Area). First, EPA is determining that the Philadelphia Area has attained the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS). This determination is based upon complete, quality assured, and certified ambient air monitoring data that show the area has monitored attainment of the 1997 8-hour ozone NAAQS for the 2008–2010 monitoring period. In accordance with EPA's applicable ozone implementation rule, this clean data determination suspends the requirement for the Philadelphia Area to submit an attainment demonstration, reasonably available control measures (RACM), a reasonable further progress (RFP) plan and contingency measures related to attainment of the 1997 8-hours ozone NAAQS. These requirements shall be suspended for so long as the area continues to attain the 1997 8-hour ozone NAAQS. Second, EPA is determining that the Philadelphia Area has attained the 1997 8-hour ozone NAAQS by its attainment date of June 15, 2011. These actions are being taken under the Clean Air Act (CAA).

DATES: *Effective Date:* This final rule is effective on April 25, 2012.

ADDRESSES: EPA has established a docket for this action under Docket ID Number EPA–R03–OAR–2011–0713. All documents in the docket are listed in the *www.regulations.gov* Web site. Although listed in the electronic docket, some information is not publicly available, i.e., confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through *www.regulations.gov* or in hard copy for public inspection during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103.

FOR FURTHER INFORMATION CONTACT: If you have questions concerning EPA's proposed action related to Delaware, Maryland or Pennsylvania, please contact Maria A. Pino (215) 814–2181, or by email at *pino.maria@epa.gov.* If you have questions concerning EPA's proposed action related to New Jersey, please contact Paul Truchan (212) 637–3711, or by email at *truchan.paul@epa.gov.*

SUPPLEMENTARY INFORMATION: The following outline is provided to aid in locating information in this action.

I. Background
II. Summary of Actions
III. Final Action
IV. Statutory and Executive Order Reviews

I. Background

EPA published a notice of proposed rulemaking (NPR) for the States of Delaware, Maryland, and New Jersey

and the Commonwealth of Pennsylvania (the States) on December 9, 2011 (76 FR 76929). Pursuant to section 181(b)(2)(A) [1] of the CAA, the December 9, 2011 NPR proposed to determine that the Philadelphia Area attained the 1997 8-hour ozone NAAQS by its attainment date, June 15, 2011. This proposed determination was based upon complete, quality assured, and certified ambient air monitoring data for the 2008–2010 monitoring period that show the Philadelphia Area has monitored attainment of the 1997 8-hour ozone NAAQS during this monitoring period. Preliminary ambient air monitoring data for the 2009–2011 monitoring period is consistent with continued attainment.

The December 9, 2011 NPR also proposed to make a clean data determination that the Philadelphia Area has attained the 1997 8-hour ozone NAAQS. This proposed clean data determination was based upon complete, quality assured, and certified ambient air monitoring data that show the Philadelphia Area has monitored attainment of the 1997 8-hour ozone NAAQS for the 2008–2010 monitoring period. As a result of this determination, the requirement for the Philadelphia Area to submit an attainment demonstration, a RACM analysis, an RFP plan, contingency measures, and other planning requirements related to attainment of the 1997 8-hours ozone NAAQS shall be suspended for so long as the area continues to attain the 1997 8-hour ozone NAAQS.

In that same December 9, 2011 rulemaking notice, EPA withdrew the May 8, 2009 proposed disapprovals of the attainment demonstrations for the Philadelphia Area, based on the ambient air quality monitoring data demonstrating attainment. The Docket ID Numbers for the proposed disapprovals are EPA–R03–OAR–2008–0930, EPA–R03–OAR–2008–0929, EPA–R02–OAR–2008–0497, and EPA–R03–OAR–2008–0928, respectively. *See* 74 FR 21599, 74 FR 21588, 74 FR 21578, and 74 FR 21604, respectively.

II. Summary of Actions

A. Determination of Attainment by the Attainment Date

Moderate areas are required to attain the 1997 8-hour ozone NAAQS by no later than six years after designation, or June 15, 2010. *See* 40 CFR 51.903. However, the Philadelphia Area qualified for a one-year extension of its attainment date, based on the complete, certified ambient air quality data for the 2009 ozone season. On January 21, 2011, EPA approved a one-year extension of the Philadelphia Area's attainment date, from June 15, 2010 to June 15, 2011. *See* 76 FR 3838 and 76 FR 3840.

EPA is making a determination that the Philadelphia Area has attained the 1997 ozone NAAQS by its applicable attainment date of June 15, 2011. As a result of this action, EPA has met its requirement pursuant to CAA section 181(b)(2)(A) to determine, based on the area's air quality as of the attainment date, whether the area attained the standard by that date. The effect of this final determination of attainment by the area's attainment date is to discharge EPA's obligation under CAA section 181(b)(2)(A) [2] to establish that, in accordance with CAA section 181(b)(2)(A), the area will not be reclassified for failure to attain by its applicable attainment date. This determination of attainment is not equivalent to a redesignation. The States must still meet the statutory requirements for redesignation in order to be redesignated to attainment.

B. Clean Data Determination

EPA is making a clean data determination, finding that the Philadelphia Area is attaining the 1997 8-hour ozone NAAQS. Under the provisions of EPA's ozone implementation rule (*See* 40 CFR 51.918), this clean data determination suspends the CAA requirement for the Philadelphia Area to submit certain planning requirements related to attainment of the 1997 8-hour ozone NAAQS for so long as the area continues to attain the 1997 8-hour ozone NAAQS. This clean data determination is not equivalent to a redesignation. The States must still meet the statutory requirements for redesignation in order to be redesignated to attainment.

The clean data determination suspends the requirements to submit an attainment demonstration, RACM, RFP, contingency measures, and other planning elements related to attainment of the 1997 8-hour ozone NAAQS. This suspension continues until such time, if any, that EPA (i) redesignates the area to attainment at which time those requirements no longer apply, or (ii) subsequently determines that the area has violated the 1997 8-hour ozone NAAQS. This clean data determination is separate from, and does not influence or otherwise affect, any future designation determination or requirements for the area based on any new or revised ozone NAAQS. This clean data determination remains in effect regardless of whether EPA designates the Philadelphia Area as a nonattainment area for purposes of any new or revised ozone NAAQS.

Although these requirements are suspended, EPA is not precluded from acting upon these elements. The States of Delaware and Maryland, and the Commonwealth of Pennsylvania submitted these SIP elements for their portions of the Philadelphia Area to EPA for review and approval in June 2007. The State of New Jersey submitted these SIP elements for its portion of the Philadelphia Area to EPA for review and approval in October 2007. EPA approved each state's RFP plans, RFP contingency measures, and RACM analyses for the Philadelphia Area in separate rulemaking actions. Therefore, these requirements have been fulfilled. EPA approved the RFP plans, RFP contingency measures, and RACM analyses from Delaware, Maryland, New Jersey, and Pennsylvania on April 8, 2010, June 11, 2010, May 15, 2009, and February 7, 2011, respectively. *See* 75 FR 17863, 75 FR 33172, 74 FR 22837, and 76 FR 6559.

C. Ambient Air Quality Monitoring Data

Complete, quality assured, certified 8-hour ozone air quality monitoring data for 2008 through 2010 show that the Philadelphia Area has attained the 1997 8-hour ozone NAAQS. Additional information on air quality data for the Philadelphia Area can be found in the Technical Support Document (TSD) prepared for this action. The TSD can be viewed at *http://www.regulations.gov*. The rationale for EPA's proposed action is explained in the NPR and will not be restated here. No public comments were received on the NPR.

III. Final Action

EPA is making two determinations regarding the Philadelphia Area. First, EPA is making a clean data determination, finding that the Philadelphia Area has attained the 1997 8-hour ozone NAAQS. This clean data determination is based upon complete, quality assured, and certified ambient air monitoring data that show the area has monitored attainment of the 1997 8-

[1] The NPR cited CAA sections 181(b)(2)(A) and 179(c) as giving EPA the statutory authority for determining whether the Philadelphia Area attained the 1997 8-hour ozone NAAQS by its attainment date. In this final notice, EPA is correcting that statement to clarify that here the appropriate statutory authority derives from section 181(b)(2)(A).

[2] In the NPR, EPA stated that its obligations to determine if an area attained the 1997 8-hour NAAQS by its attainment was found under CAA sections 181(b)(2)(A) and 179. EPA notes that for an area such as Philadelphia, which is designated moderate nonattainment for the 1997 8-hour ozone standard, the proper citation is CAA section 181(b)(2)(A).

hour ozone NAAQS for the 2008–2010 monitoring period. This clean data determination suspends the requirements for the Philadelphia Area to submit an attainment demonstration and associated RACM, RFP plan, contingency measures, and any other planning requirements related to attainment of the 1997 8-hours ozone NAAQS for so long as the area continues to attain the 1997 8-hour ozone NAAQS. Second, pursuant to section 181(b)(2)(A) of the CAA, EPA is making a determination that the Philadelphia Area has attained the 1997 8-hour ozone NAAQS by its attainment date, June 15, 2011.

IV. Statutory and Executive Order Reviews

A. General Requirements

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the state, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

B. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

C. Petitions for Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by May 25, 2012. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This determination that the Philadelphia Area has attained the 1997 8-hour ozone NAAQS may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Ozone, Reporting and recordkeeping requirements.

Dated: February 22, 2012.

W.C. Early,

Acting, Regional Administrator, Region III.

Dated: March 6, 2012.

Judith A. Enck,

Regional Administrator, Region II.

40 CFR part 52 is amended as follows:

PART 52—[AMENDED]

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart I—Delaware

■ 2. Section 52.425 is added to read as follows:

§ 52.425 Determinations of attainment.

Based upon EPA's review of the air quality data for the 3-year period 2008 to 2010, EPA determined that Philadelphia-Wilmington-Atlantic City, PA–NJ–MD–DE 8-hour ozone moderate nonattainment area (the Philadelphia Area) attained the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS) by the applicable attainment date of June 15, 2011. Therefore, EPA has met the requirement pursuant to CAA section 181(b)(2)(A) to determine, based on the area's air quality as of the attainment date, whether the area attained the standard. EPA also determined that the Philadelphia Area nonattainment area will not be reclassified for failure to attain by its applicable attainment date under section 181(b)(2)(A).

■ 3. Section 52.426 is amended by adding paragraph (i) to read as follows:

§ 52.426 Control strategy plans for attainment and rate-of-progress: ozone.

* * * * *

(i) *Determination of attainment.* EPA has determined, as of March 26, 2012, that based on 2008 to 2010 ambient air quality data, Philadelphia-Wilmington-Atlantic City, PA–NJ–MD–DE 8-hour ozone moderate nonattainment area has attained the 1997 8-hour ozone NAAQS. This determination, in accordance with 40 CFR 51.918, suspends the requirements for this area to submit an attainment demonstration, associated reasonably available control measures, a reasonable further progress plan, contingency measures, and other planning SIPs related to attainment of the standard for as long as this area continues to meet the 1997 annual 8-hour ozone NAAQS.

Subpart V—Maryland

■ 4. Section 52.1076 is amended by adding paragraph (x) to read as follows:

§ 52.1076 Control strategy plans for attainment and rate-of-progress: ozone.

* * * * *

(x) *Determination of attainment.* EPA has determined, as of March 26, 2012, that based on 2008 to 2010 ambient air quality data, Philadelphia-Wilmington-Atlantic City, PA–NJ–MD–DE 8-hour ozone moderate nonattainment area has attained the 1997 8-hour ozone NAAQS. This determination, in accordance with 40 CFR 51.918, suspends the requirements for this area to submit an attainment demonstration, associated reasonably available control measures, a reasonable further progress plan, contingency measures, and other planning SIPs related to attainment of the standard for as long as this area continues to meet the 1997 annual 8-hour ozone NAAQS.

■ 5. Section 52.1082 is amended by adding paragraph (d) to read as follows:

§ 52.1082 Determinations of attainment.

* * * * *

(d) Based upon EPA's review of the air quality data for the 3-year period 2008 to 2010, EPA determined that Philadelphia-Wilmington-Atlantic City, PA–NJ–MD–DE 8-hour ozone moderate nonattainment area (the Philadelphia Area) attained the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS) by the applicable attainment date of June 15, 2011. Therefore, EPA has met the requirement pursuant to CAA section 181(b)(2)(A) to determine, based on the area's air quality as of the attainment date, whether the area attained the standard. EPA also determined that the Philadelphia Area nonattainment area will not be reclassified for failure to attain by its applicable attainment date under section 181(b)(2)(A).

Subpart FF—New Jersey

■ 6. Section 52.1576 is added to read as follows:

§ 52.1576 Determinations of attainment.

Based upon EPA's review of the air quality data for the 3-year period 2008 to 2010, EPA determined that Philadelphia-Wilmington-Atlantic City, PA–NJ–MD–DE 8-hour ozone moderate nonattainment area (the Philadelphia Area) attained the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS) by the applicable attainment date of June 15, 2011. Therefore, EPA has met the requirement pursuant to CAA section 181(b)(2)(A) to determine, based on the area's air quality as of the attainment date, whether the area attained the standard. EPA also determined that the Philadelphia Area nonattainment area will not be reclassified for failure to attain by its applicable attainment date under section 181(b)(2)(A).

■ 7. Section 52.1582 is amended by adding paragraph (n) to read as follows:

§ 52.1582 Control strategy and regulations: Ozone.

* * * * *

(n) Attainment determination. EPA has determined, as of March 26, 2012, that based on 2008 to 2010 ambient air quality data, Philadelphia-Wilmington-Atlantic City, PA–NJ–MD–DE 8-hour ozone moderate nonattainment area has attained the 1997 8-hour ozone NAAQS. This determination, in accordance with 40 CFR 51.918, suspends the requirements for this area to submit an attainment demonstration, associated reasonably available control measures, a reasonable further progress plan, contingency measures, and other planning SIPs related to attainment of the standard for as long as this area continues to meet the 1997 annual 8-hour ozone NAAQS.

Subpart NN—Pennsylvania

■ 8. Section 52.2037 is amended by adding paragraph (r) to read as follows:

§ 52.2037 Control strategy plans for attainment and rate-of-progress: Ozone.

* * * * *

(r) *Determination of attainment.* EPA has determined, as of March 26, 2012, that based on 2008 to 2010 ambient air quality data, Philadelphia-Wilmington-Atlantic City, PA–NJ–MD–DE 8-hour ozone moderate nonattainment area has attained the 1997 8-hour ozone NAAQS. This determination, in accordance with 40 CFR 51.918, suspends the requirements for this area to submit an attainment demonstration, associated reasonably available control measures, a reasonable further progress plan, contingency measures, and other planning SIPs related to attainment of the standard for as long as this area continues to meet the 1997 annual 8-hour ozone NAAQS.

■ 9. Section 52.2056 is amended by adding paragraph (f) to read as follows:

§ 52.2056 Determinations of attainment.

* * * * *

(f) Based upon EPA's review of the air quality data for the 3-year period 2008 to 2010, EPA determined that Philadelphia-Wilmington-Atlantic City, PA–NJ–MD–DE 8-hour ozone moderate nonattainment area (the Philadelphia Area) attained the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS) by the applicable attainment date of June 15, 2011. Therefore, EPA has met the requirement pursuant to CAA section 181(b)(2)(A) to determine, based on the area's air quality as of the attainment date, whether the area attained the standard. EPA also determined that the Philadelphia Area nonattainment area will not be reclassified for failure to attain by its applicable attainment date under section 181(b)(2)(A).

Protection of Stratospheric Ozone: Amendment to HFO-1234yf SNAP Rule for Motor Vehicle Air Conditioning Sector

AGENCY: Environmental Protection Agency.

ACTION: Direct final rule.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is taking direct final action to revise one of the use conditions required for use of hydrofluoroolefin (HFO)-1234yf (2,3,3,3-tetrafluoroprop-1-ene), a substitute for ozone-depleting substances (ODSs) in the motor vehicle air conditioning end-use within the refrigeration and air conditioning sector, to be acceptable subject to use conditions under EPA's Significant New Alternatives Policy (SNAP) program. The revised use condition incorporates by reference a revised standard from SAE International.

DATES: This rule is effective on May 21, 2012 without further notice, unless EPA receives adverse comment or receives a request for a public hearing by April 23, 2012. If we receive adverse comment or a request for a public hearing, we will publish a timely withdrawal in the **Federal Register** informing the public that all or part of this rule will not take effect. The incorporation by reference of certain publications listed in the rule is approved by the Director of the Federal Register as of May 21, 2012.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA- HQ–OAR- 2011–0776 by one of the following methods:

- *www.regulations.gov:* Follow the on-line instructions for submitting comments.
- *Email:* Comments may be sent by electronic mail (email) to *a-and-r-*

docket@epa.gov, Attention EPA–HQ–OAR–2011–0776.

• *Mail:* OAR Docket and Information Center, U.S. Environmental Protection Agency, Mailcode 6102T, 1200 Pennsylvania Ave. NW., Washington, DC 20460. To expedite review, a second copy of the comments should be sent to Margaret Sheppard at the address listed below under **FOR FURTHER INFORMATION CONTACT**.

• *Hand Delivery:* Air and Radiation Docket, EPA/DC, EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC 20004. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–HQ–OAR–2011–0776. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *www.regulations.gov* or email. The *www.regulations.gov* Web site is an ''anonymous access'' system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through *www.regulations.gov* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket, visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm.*

Docket: All documents in the docket are listed in the *www.regulations.gov* index. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically through *www.regulations.gov* or in hard copy at the Air and Radiation Docket, EPA/DC, EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the Air and Radiation Docket is (202) 566–1742.

EPA has established a public docket for this action under Docket ID No. EPA–HQ–OAR–2011–0776. All documents in the docket are listed on the *www.regulations.gov* Web site. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through *www.regulations.gov* or in hard copy at the Air and Radiation Docket, EPA/DC, EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the Air and Radiation Docket is (202) 566–1742.

FOR FURTHER INFORMATION CONTACT: Margaret Sheppard, Stratospheric Protection Division, Office of Atmospheric Programs; Environmental Protection Agency, Mail Code 6205J, 1200 Pennsylvania Avenue NW., Washington DC 20460; telephone number (202) 343–9163, fax number, (202) 343–2338; email address at *sheppard.margaret@epa.gov.* The published versions of notices and rulemakings under the SNAP program are available on EPA's Stratospheric Ozone Web site at *http://www.epa.gov/ozone/snap/regs.* The full list of SNAP decisions in all industrial sectors is available at *http://www.epa.gov/ozone/snap.*

SUPPLEMENTARY INFORMATION: EPA is publishing this rule without a prior proposed rule because we view this as a noncontroversial action and anticipate no adverse comment. We are revising an existing use condition for hydrofluoroolefin (HFO)-1234yf (2,3,3,3-tetrafluoroprop-1-ene) in motor vehicle air conditioning (MVAC) by incorporating by reference an updated edition of a standard from SAE International and clarifying the scope of the use condition. EPA previously listed HFO-1234yf as acceptable, subject to use conditions, for use in MVAC systems in new passenger cars and light-duty trucks (March 29, 2011; 76 FR 17488). This action does not place any significant burden on the regulated community and ensures consistency with standard industry practices.

In the ''Proposed Rules'' section of today's **Federal Register**, we are publishing a separate document that will serve as the proposed rule to revise a use condition for HFO-1234yf in MVAC to incorporate by reference an updated standard and clarify the scope of the use condition, if adverse comments are received or a public hearing is requested on this direct final rule. We will not institute a second comment period on this action. Any parties interested in commenting must do so at this time. For further information about commenting on this rule, see the **ADDRESSES** section of this document. If EPA receives adverse comment or a request for a public hearing, we will publish a timely withdrawal in the **Federal Register** informing the public that this direct final rule will not take effect. We would address all public comments in any subsequent final rule based on the proposed rule.

You may claim that information in your comments is confidential business information (CBI), as allowed by 40 CFR Part 2. If you submit comments and include information that you claim as CBI, we request that you submit them directly to Margaret Sheppard at the address under **FOR FURTHER INFORMATION CONTACT** in two versions: One clearly marked ''Public'' to be filed in the Public Docket, and the other marked ''Confidential'' to be reviewed by authorized government personnel only. This information will remain confidential unless EPA determines, in accordance with 40 CFR part 2, subpart B, that the information is not subject to protection as CBI.

K. Congressional Review Act

I. Does this action apply to me?

This final rule regulates the use of the chemical HFO-1234yf (2,3,3,3-tetrafluoroprop-1-ene, Chemical Abstracts Service Registry Number [CAS Reg. No.] 754–12–1) as a refrigerant in new motor vehicle air conditioning (MVAC) systems in new passenger cars and light-duty trucks. Businesses in this end-use that might want to use HFO-1234yf in new MVAC systems in the future include:

- Automobile manufacturers
- Automobile repair shops

Regulated entities may include:

TABLE 1—POTENTIALLY REGULATED ENTITIES, BY NORTH AMERICAN INDUSTRIAL CLASSIFICATION SYSTEM (NAICS) CODE

Category	NAICS code	Description of regulated entities
Industry	336111	Automobile Manufacturing.
Services	811111	General Automotive Repair.

This table is not intended to be exhaustive, but rather a guide regarding entities likely to be regulated by this action. If you have any questions about whether this action applies to a particular entity, consult the person listed in the preceding section, **FOR FURTHER INFORMATION CONTACT**.

II. How and why is EPA revising a use condition for HFO-1234yf in MVAC?

EPA's Significant New Alternatives Policy (SNAP) program has a long-standing approach of requiring unique fittings for use with each refrigerant substitute for CFC-12 in MVAC systems. This is intended to prevent cross-contamination of different refrigerants, preserve the purity of recycled refrigerants, and ultimately to avoid venting of refrigerant. In the 1996 SNAP rule requiring the use of fittings on all refrigerants submitted for the use in MVAC systems, EPA urged industry to develop mechanisms to ensure that the refrigerant venting prohibition under Clean Air Act (CAA) Section 608 and 40 CFR 82.154 is observed (61 FR 54032; October 16, 1996). EPA has issued multiple rules codified in the Code of Federal Regulations (CFR) requiring the use of fittings unique to a refrigerant for use on ''containers of the refrigerant, on can taps, on recovery, recycling, and charging equipment, and on all [motor vehicle] air conditioning system service ports.'' (See, e.g., appendices C and D to subpart G of 40 CFR part 82)

On March 29, 2011, EPA listed HFO-1234yf as acceptable, subject to use conditions, for use in MVAC systems in new passenger cars and light-duty trucks (76 FR 17488). The use conditions contain two requirements for unique fittings to be used with the refrigerant containers for HFO-1234yf. First, the rule requires the use of the unique fittings, specified in SAE International [1] (herein after, SAE) standard J639 (February 2011 edition), for use on the MVAC high-side and low-side service ports. Second, the rule requires use of fittings consistent with SAE J2844 (February 2011 edition) for connections with refrigerant containers of 20 lbs (9L) or greater. The March 2011 final rule does not allow for use of HFO-1234yf with small can taps because the refrigerant manufacturer had not submitted such fittings for EPA's review and no industry standards address fittings appropriate for use with small cans or containers of refrigerant (i.e., less than 5 lbs). (76 FR 17494–17495)

In this direct final rule, we are revising the requirement for the unique fitting (also known as a connection or coupler) to be used with large refrigerant containers. The new requirement is that containers of HFO-1234yf for use in professional servicing [2] of MVAC systems must be used with fittings consistent with SAE J2844 (October 2011 edition). The fitting provided in the October 2011 edition of SAE J2844 is a left-handed screw valve with a diameter of 0.5 inches and Acme (trapezoidal) thread with 16 threads per inch. We are clarifying that this unique fitting requirement applies only to containers of HFO-1234yf for professional servicing of MVAC systems and does not apply to containers for industrial transfers, e.g., within a chemical manufacturing company or for delivery to automobile manufacturers, which use containers larger than 50 lbs or 23 L.

EPA recognizes that the fitting in the October 2011 edition of SAE J2844 is not ''unique'' in its direction and diameter, as per the criteria for uniqueness mentioned in appendix H to subpart G of 40 CFR part 82. However, the Acme thread has a trapezoidal shape that makes it impossible to cross-connect this fitting with others already identified with the same thread direction and diameter which use different shaped thread. Therefore, we find this fitting to be unique, and we are allowing its use on refrigerant containers of HFO-1234yf used for professional servicing.

A. Revised Standard SAE J2844

SAE International first established the standard SAE J2844, ''R-1234yf (HFO-1234yf) New Refrigerant Purity and Container Requirements for Use in Mobile Air-Conditioning Systems'' in February 2011. Shortly thereafter, the committee responsible for this standard decided that revisions to the standard were appropriate (June 13, 2011 Letter from K. Horen, Honeywell). In particular, the committee decided that the original ''quick-connect'' type fitting addressed in the February 2011 edition of SAE J2844 for refrigerant containers for servicing should be replaced by a screw-type valve. Quick-connect fittings are more likely to become dislodged and to release refrigerant without warning to the service technician. In contrast, if a screw-type valve is not properly

[1] Formerly, the Society of Automotive Engineers.

[2] Consistent with Subpart B to 40 CFR Part 82, professional servicing involves being paid to perform service, whether it is for cash, credit, goods or services.

connected and is releasing refrigerant, there is an audible hiss of released refrigerant that may give warning to a service technician. SAE revised the J2844 standard in October 2011 to specify a different, screw-type valve fitting for refrigerant containers to be used for MVAC servicing.

We believe that incorporating the revised industry standard is consistent with the Clean Air Act and, as described above, we believe that the fitting in the revised industry standard is unique even though it does not meet all of the criteria specified in appendix H to subpart G of 40 CFR part 82. Further, the new fittings adopted in the revised standard may have an environmental benefit by reducing the chance that an entire container of refrigerant could leak without detection. Therefore, we are revising the use condition to reference the October 2011 edition of the SAE J2844 standard for purposes of the fittings for large containers of HFO-1234yf for use in professional servicing.

B. Clarification of Scope of Requirement for Unique Fittings on Refrigerant Containers

During implementation of the March 2011 final rule, manufacturers of the refrigerant HFO-1234yf contacted EPA, asking for clarification of the fitting requirement for refrigerant containers. One manufacturer stated, based on its understanding, that this requirement was for containers for ''professional service or service for consideration'' and asked for clarification of this point (June 22, 2011 Letter from S. Bernhardt, Honeywell). Further, the manufacturer stated that, for cylinders greater than 50 lbs, it planned to use a specific fitting approved by the Cylinder Gas Association (CGA 670 fitting), and for cylinders greater than 450 lbs, industrial fittings would be used (June 13, 2011 Letter from K. Horen, Honeywell). Manufacturers expressed concerns that the quick-connect fitting in SAE standard J2844 (February 2011 edition) incorporated by reference in the final rule was not robust enough to use with large refrigerant containers, particularly containers used for industrial transfer or for bulk packing sent to automobile manufacturers for initial filling of MVAC systems.

In this direct final rule, we clarify that the requirement for the unique fittings on refrigerant containers of HFO-1234yf applies to containers for use for professional servicing. In the ''Further Information'' column of our decision, we state that, for HFO-1234yf, refrigerant containers for use in professional servicing are from 5 lbs to 50 lbs in size. Based on information from the refrigerant manufacturer, containers larger than 50 lbs would not be intended for use in professional servicing (June 13, 2011 Letter from K. Horen, Honeywell). We expect that refrigerant containers for HFO-1234yf larger than 50 lbs, with a volume larger than 23 liters, are used for transport and industrial transfer of refrigerant, rather than for servicing. Under section 4.1.1.2 of SAE J2844 (October 2011 edition), such cylinders are required to ''comply with the fitting requirements specified by applicable transportation rules and laws.''

EPA's concerns at the time it first established the requirement for unique fittings for MVAC substitutes were (1) the potential for cross-contamination of refrigerant due to mixing and (2) the need for purity of recycled refrigerant (61 FR 54033). We are also concerned about unintended incentives for intentional venting because contaminated refrigerant would no longer be of economic value and because separation or destruction of cross-contaminated refrigerant costs more than venting. These are concerns that primarily are implicated during servicing of the MVAC system. It is far more likely that a technician might intentionally or unintentionally try to charge equipment with a different refrigerant during servicing of an MVAC system than that someone would transfer a refrigerant to a very large container (i.e., larger than 50 lbs) containing a different refrigerant. Thus, we clarify that the requirement for a unique fitting for containers of HFO-1234yf applies to containers to be used for professional servicing (sizes of 5 to 50 lbs).

Finally, we note that our final rule listing HFO-1234yf as acceptable subject to use conditions did not apply to small containers. The refrigerant manufacturer would need to submit a unique fitting specifically for use with small can taps and small refrigerant containers before EPA could determine whether to find use of such small containers acceptable under SNAP. In addition, such containers could not be sold until a significant new use notice is submitted to EPA, consistent with EPA's final significant new use rule for HFO-1234yf under the Toxic Substances Control Act (October 27, 2010; 75 FR 65987).

III. How does the SNAP program work?

A. What are the statutory requirements and authority for the SNAP program?

CAA Section 612 requires EPA to develop a program for evaluating alternatives to ozone-depleting substances (ODS). EPA refers to this program as the SNAP program. The major provisions of Section 612 are:

1. Rulemaking

Section 612(c) requires EPA to promulgate rules making it unlawful to replace any class I substance (i.e., chlorofluorocarbon, halon, carbon tetrachloride, methyl chloroform, methyl bromide, and hydrobromofluorocarbon) or class II substance (i.e., hydrochlorofluorocarbon) with any substitute that the Administrator determines may present adverse effects to human health or the environment where the Administrator has identified an alternative that (1) reduces the overall risk to human health and the environment, and (2) is currently or potentially available.

2. Listing of Unacceptable/Acceptable Substitutes

Section 612(c) requires EPA to publish a list of the substitutes unacceptable for specific uses and to publish a corresponding list of acceptable alternatives for specific uses. The list of acceptable substitutes is found at *http://www.epa.gov/ozone/snap/lists/index.html* and the lists of substitutes that are ''unacceptable,'' ''acceptable subject to use conditions,'' and ''acceptable subject to narrowed use limits'' are in subpart G of 40 CFR part 82.

3. Petition Process

Section 612(d) grants the right to any person to petition EPA to add a substance to, or delete a substance from, the lists published in accordance with Section 612(c). The Agency has 90 days to grant or deny a petition. Where the Agency grants the petition, EPA must publish the revised lists within an additional six months.

4. 90-day Notification

Section 612(e) directs EPA to require any person who produces a chemical substitute for a class I substance to notify the Agency not less than 90 days before new or existing chemicals are introduced into interstate commerce for significant new uses as substitutes for a class I substance. The producer must also provide the Agency with the producer's unpublished health and safety studies on such substitutes.

5. Outreach

Section 612(b)(1) states that the Administrator shall seek to maximize the use of federal research facilities and resources to assist users of class I and II substances in identifying and developing alternatives to the use of

such substances in key commercial applications.

6. Clearinghouse

Section 612(b)(4) requires the Agency to set up a public clearinghouse of alternative chemicals, product substitutes, and alternative manufacturing processes that are available for products and manufacturing processes which use class I and II substances.

B. What are EPA's regulations implementing Section 612?

On March 18, 1994, EPA published the original rulemaking (59 FR 13044) which established the process for administering the SNAP program and issued EPA's first lists identifying acceptable and unacceptable substitutes in the major industrial use sectors (subpart G of 40 CFR part 82). These sectors—refrigeration and air conditioning; foam blowing; cleaning solvents; fire suppression and explosion protection; sterilants; aerosols; adhesives, coatings and inks; and tobacco expansion—are the principal industrial sectors that historically consumed the largest volumes of ODS.

CAA Section 612 requires EPA to ensure that substitutes found acceptable do not present a significantly greater risk to human health and the environment than other substitutes that are currently or potentially available.

C. How do the regulations for the SNAP program work?

Under the SNAP regulations, anyone who plans to market or produce a substitute to replace a class I substance or class II substance in one of the eight major industrial use sectors must provide notice to the Agency, including health and safety information on the substitute, at least 90 days before introducing it into interstate commerce for significant new use as an alternative. This requirement applies to the persons planning to introduce the substitute into interstate commerce,[3] which typically are chemical manufacturers, but may also include importers, formulators, equipment manufacturers, or end-users.[4] The regulations identify certain narrow exemptions from the notification requirement, such as research and development and test marketing (40 CFR 82.176(b)(4) and (5), respectively).

The Agency has identified four possible decision categories for substitutes that are submitted for evaluation: acceptable; acceptable subject to use conditions; acceptable subject to narrowed use limits; and unacceptable (40 CFR 82.180(b)). Use conditions and narrowed use limits are both considered ''use restrictions'' and are explained in the paragraphs below. Substitutes that are deemed acceptable with no use restrictions (no use conditions or narrowed use limits) can be used for all applications within the relevant end-uses within the sector.

After reviewing a substitute, the Agency may determine that a substitute is acceptable only if certain conditions in the way that the substitute is used are met to minimize risks to human health and the environment. EPA describes such substitutes as ''acceptable subject to use conditions.'' Entities that use these substitutes without meeting the associated use conditions are in violation of EPA's SNAP regulations.

For some substitutes, the Agency may permit a narrowed range of use within an end-use or sector. For example, the Agency may limit the use of a substitute to certain end-uses or specific applications within an industry sector. EPA describes these substitutes as ''acceptable subject to narrowed use limits.'' The Agency requires the user of a narrowed-use substitute to demonstrate that no other acceptable substitutes are available for the specific application by conducting comprehensive studies. A person using a substitute that is acceptable subject to narrowed use limits in applications and end-uses that are not consistent with the narrowed use limit is using the substitute in an unacceptable manner and is in violation of Section 612 of the CAA and EPA's SNAP regulations.

The Agency publishes its SNAP program decisions in the **Federal Register** (FR). EPA publishes decisions concerning substitutes that are deemed acceptable subject to use restrictions (use conditions and/or narrowed use limits), or for substitutes deemed unacceptable, as proposed rulemakings to provide the public with an opportunity to comment, before publishing final decisions.

In contrast, EPA publishes decisions concerning substitutes that are deemed acceptable with no restrictions in ''notices of acceptability,'' rather than as proposed and final rules. As described in the March 18, 1994, rule initially implementing the SNAP program, EPA does not believe that rulemaking procedures are necessary to list alternatives that are acceptable without restrictions because such listings neither impose any sanction nor prevent anyone from using a substitute (59 FR 13047).

Many SNAP listings include ''Comments'' or ''Further Information'' to provide additional information on substitutes. Since this additional information is not part of the regulatory decision, these statements are not binding for use of the substitute under the SNAP program. However, regulatory requirements so listed are binding under other regulatory programs (e.g., worker protection regulations promulgated by the Occupational Safety and Health Administration (OSHA)). The ''Further Information'' classification does not necessarily include all other legal obligations pertaining to the use of the substitute. While the items listed are not legally binding under the SNAP program, EPA encourages users of substitutes to apply all statements in the ''Further Information'' column in their use of these substitutes. In many instances, the information simply refers to sound operating practices that have already been identified in existing industry and/or building codes or standards. Thus many of the statements, if adopted, would not require the affected user to make significant changes in existing operating practices.

D. Where can I get additional information about the SNAP program?

For copies of the comprehensive SNAP lists of substitutes or additional information on SNAP, refer to EPA's Ozone Depletion Web site at: *www.epa.gov/ozone/snap/index.html.* For more information on the Agency's process for administering the SNAP program or criteria for evaluation of substitutes, refer to the SNAP final rulemaking published March 18, 1994 (59 FR 13044), codified at 40 CFR part 82, subpart G. A complete chronology of SNAP decisions and the appropriate citations is found at: *http://www.epa.gov/ozone/snap/chron.html.*

IV. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a ''significant regulatory action'' under the terms of

[3] As defined at 40 CFR 82.104, ''interstate commerce'' means the distribution or transportation of any product between one state, territory, possession or the District of Columbia, and another state, territory, possession or the District of Columbia, or the sale, use or manufacture of any product in more than one state, territory, possession or District of Columbia. The entry points for which a product is introduced into interstate commerce are the release of a product from the facility in which the product was manufactured, the entry into a warehouse from which the domestic manufacturer releases the product for sale or distribution, and at the site of United States Customs clearance.

[4] As defined at 40 CFR 82.172, ''end-use'' means processes or classes of specific applications within major industrial sectors where a substitute is used to replace an ODS.

Executive Order 12866 (58 FR 51735, October 4, 1993) and is therefore not subject to review under Executive Orders 12866 and 13563 (76 FR 3821, January 21, 2011).

B. Paperwork Reduction Act

This action does not impose any new information collection burden. It contains no new requirements for reporting. However, the Office of Management and Budget (OMB) has previously approved the information collection requirements contained in the existing regulations in subpart G of 40 CFR part 82 under the provisions of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* and has assigned OMB control numbers 2060–0226 (EPA ICR No. 1596.08). This Information Collection Request (ICR) included five types of respondent reporting and recordkeeping activities pursuant to SNAP regulations: submission of a SNAP petition, filing a SNAP/TSCA Addendum, notification for test marketing activity, recordkeeping for substitutes acceptable subject to use restrictions, and recordkeeping for small volume uses. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9.

C. Regulatory Flexibility Act (RFA)

The RFA generally requires an agency to prepare a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements under the Administrative Procedure Act or any other statutes unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small organizations, and small governmental jurisdictions.

For purposes of assessing the impacts of today's rule on small entities, small entity is defined as: (1) A small business as defined by the Small Business Administration's (SBA) regulations at 13 CFR 121.201; for NAICS code 336111 (Automobile manufacturing), a small business has <1000 employees; for NAICS code 336391 (Motor Vehicle Air-Conditioning Manufacturing), a small business has <750 employees; and for NAICS code 811111 (General Automotive Repair), a small business has annual receipts of less than $7.0 million (2) a small governmental jurisdiction that is a government of a city, county, town, school district or special district with a population of less than 50,000; and (3) a small organization that is any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.

After considering the economic impacts of today's final rule on small entities, I certify that this action will not have a significant economic impact on a substantial number of small entities. The small entities directly regulated by this final rule are small businesses involved in automotive repair. This final rule will not impose any requirements on small entities beyond current industry practices. Today's action effectively ensures consistency with current industry practices, whereas without these revisions, small businesses would need to reconcile differences between EPA regulations and industry standards.

It is not clear that there would be any cost differential between these new unique fittings, those used with the current automotive refrigerant, HFC-134a, or other fittings that the automotive industry could adopt instead. It is possible that the fittings required in the revised use condition will be less expensive than those required in the March 29, 2011 final rule because they are a standard shape and size easily produced in a metal-working shop. Thus, cost impacts of this final rule on small entities are expected to be small. This final rule is expected to relieve burden for some small entities, such as automotive repair shops, by avoiding confusion over which fittings to use and by using a more robust fitting that allows quick detection of any leaks from the valve.

Although this final rule will not have a significant economic impact on a substantial number of small entities, EPA nonetheless has tried to reduce the impact of this rule on small entities. EPA has worked together with SAE International and with groups representing professional service technicians such as the Mobile Air Conditioning Society Worldwide, which conducts regular outreach with technicians and owners of small businesses such as retail refrigerant suppliers and automobile repair shops.

D. Unfunded Mandates Reform Act

This rule does not contain a Federal mandate that may result in expenditures of $100 million or more for State, local, and tribal governments, in the aggregate, or the private sector in any one year. This final rule will not impose any requirements beyond current industry practices, and thus, compliance costs are expected to be small. Thus, this rule is not subject to the requirements of sections 202 or 205 of UMRA.

This rule is also not subject to the requirements of section 203 of UMRA because it contains no regulatory requirements that might significantly or uniquely affect small governments. The requirements of this rule apply to the servicing of motor vehicle air conditioning systems. The requirements of this rule for unique fittings are expected to be comparable in cost to those of current fittings. Requirements would be the same as those imposed on any other entity performing servicing on motor vehicle air conditioning systems.

E. Executive Order 13132: Federalism

This final rule does not have federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132. This regulation applies directly to facilities that use these substances and not to governmental entities. Thus, Executive Order 13132 does not apply to this rule.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications, as specified in Executive Order 13175 (65 FR 67249, November 9, 2000). It does not significantly or uniquely affect the communities of Indian tribal governments, because this regulation applies directly to facilities that use these substances and not to governmental entities. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to EO 13045 (62 FR 19885, April 23, 1997) because it is not economically significant as defined in EO 12866, and because the Agency does not believe the environmental health or safety risks addressed by this action present a disproportionate risk to children. This action only concerns allowing use of a specific fitting that may reduce technician's exposure in the course of professional servicing of MVAC systems. Therefore, we did not conduct further health or risk assessments beyond those in the original rulemaking (March 29, 2011; 76 FR 17488).

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 (66 FR 28355 (May 22, 2001)), because it is not a significant

regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law 104–113, Section 12(d) (15 U.S.C. 272 note) directs EPA to use voluntary consensus standards in regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., materials specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies. The NTTAA directs EPA to provide Congress, through OMB, explanations when the Agency decides not to use available and applicable voluntary consensus standards.

This rulemaking involves technical standards. EPA has decided to use SAE International's SAE J2844 standard, ''R-1234yf (HFO-1234yf) New Refrigerant Purity and Container Requirements for Use in Mobile Air-Conditioning Systems''. This standard can be obtained from *http://www.sae.org/technical/standards/*. This standard addresses, among other things, appropriate fittings and other requirements for refrigerant containers for use in professional servicing of MVAC systems using the alternative refrigerant HFO-1234yf.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order (EO) 12898 (59 FR 7629 (Feb. 16, 1994)) establishes federal executive policy on environmental justice. Its main provision directs federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations in the United States.

EPA has determined that this final rule will not have disproportionately high and adverse human health or environmental effects on minority or low-income populations because it does not affect the level of protection provided to human health or the environment. This final rule requires specific use conditions for unique fittings for use with refrigerant containers for professional servicing of MVAC systems, for those servicing MVAC systems using this low GWP refrigerant alternative. It does not directly affect the amount of exposure to or emissions of HFO-1234yf expected.

K. Congressional Review Act

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A Major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2). This rule will be effective May 21, 2012.

List of Subjects in 40 CFR Part 82

Environmental protection, Administrative practice and procedure, Air pollution control, Incorporation by reference, Reporting and recordkeeping requirements, Stratospheric ozone layer.

Dated: March 15, 2012.

Lisa P. Jackson,

Administrator.

For the reasons set out in the preamble, 40 CFR part 82 is amended as follows:

PART 82—PROTECTION OF STRATOSPHERIC OZONE

■ 1. The authority citation for Part 82 continues to read as follows:

Authority: 42 U.S.C. 7414, 7601, 7671–7671q.

Subpart G—Significant New Alternatives Policy Program

■ 2. Appendix B to subpart G of part 82 is amended by revising the entry for the substitute HFO–1234yf and by revising a note at the end of the first table to read as follows:

Appendix B to Subpart G of Part 82—Substitutes Subject to Use Restrictions and Unacceptable Substitutes

REFRIGERANTS—ACCEPTABLE SUBJECT TO USE CONDITIONS

Application	Substitute	Decision	Conditions	Comments
*	*	*	* *	* *
CFC-12 Automobile Motor Vehicle Air Conditioning (New equipment in passenger cars and light-duty trucks only).	HFO-1234yf as a substitute for CFC-12.	Acceptable subject to use conditions.	Manufacturers must adhere to all of the safety requirements listed in the Society of Automotive Engineers (SAE) Standard J639 (adopted 2011), including requirements for: unique fittings, flammable refrigerant warning label, high-pressure compressor cutoff switch and pressure relief devices. For connections with refrigerant containers for use in professional servicing (that is, service for consideration, consistent with subpart B to 40 CFR part 82), use fittings consistent with SAE J2844 (revised October 2011).	Additional training for service technicians recommended. Observe requirements of Significant New Use Rule at 40 CFR 721.10182. HFO-1234yf is also known as 2,3,3,3-tetrafluoro-prop-1-ene (CAS No 754–12–1). Refrigerant containers of HFO-1234yf for use in professional servicing are from 5 lbs (2.3 L) to 50 lbs (23 L) in size. Requirements for handling, storage, and transportation of compressed gases apply to this refrigerant, such as regulations of the Occupational Safety and Health Administration at 29 CFR 1910.101 and the Department of Transportation's requirements at 49 CFR 171–179.
			Manufacturers must conduct Failure Mode and Effect Analysis (FMEA) as provided in SAE J1739 (adopted 2009). Manufacturers must keep the FMEA on file for at least three years from the date of creation.	Requirements for handling, storage, and transportation of compressed gases apply to this refrigerant, such as regulations of the Occupational Safety and Health Administration at 29 CFR 1910.101 and the Department of Transportation's requirements at 49 CFR 171–179.
*	*	*	* *	* *

Note: The use conditions in this appendix contain references to certain standards from SAE International. The standards are incorporated by reference and the referenced sections are made part of the regulations in part 82:

1. SAE J639. Safety Standards for Motor Vehicle Refrigerant Vapor Compression Systems. Revised February 2011. SAE International.
2. SAE J1739 JAN2009. Potential Failure Mode and Effects Analysis in Design (Design FMEA), Potential Failure Mode and Effects Analysis in Manufacturing and Assembly Processes (Process FMEA). Revised January 2009. SAE International.
3. SAE J2844 OCT2011. R–1234yf (HFO–1234yf) New Refrigerant Purity and Container Requirements for Use in Mobile Air-Conditioning Systems. Revised October 2011. SAE International.

The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. You may obtain a copy from SAE Customer Service, 400 Commonwealth Drive, Warrendale, PA 15096–0001 USA; email: *CustomerService@sae.org;* Telephone: 1–877–606–7323 (U.S. and Canada only) or 1–724–776–4970 (outside the U.S. and Canada); Internet address: *http://store.sae.org/dlabout.htm*. You may inspect a copy at U.S. EPA's Air Docket; EPA West Building, Room 3334; 1301 Constitution Ave. NW.; Washington, DC or at the National Archives and Records Administration (NARA). For questions regarding access to these standards, the telephone number of EPA's Air Docket is 202–566–1742. For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_ locations.html*.

RIN 1018–AX55

Migratory Bird Subsistence Harvest in Alaska; Harvest Regulations for Migratory Birds in Alaska During the 2012 Season

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: The U.S. Fish and Wildlife Service (Service or we) establishes migratory bird subsistence harvest regulations in Alaska for the 2012 season. These regulations will enable the continuation of customary and traditional subsistence uses of migratory birds in Alaska and prescribe regional information on when and where the harvesting of birds may occur. These regulations were developed under a co-management process involving the Service, the Alaska Department of Fish and Game, and Alaska Native representatives. The rulemaking is necessary because the regulations governing the subsistence harvest of migratory birds in Alaska are subject to

annual review. This rulemaking establishes region-specific regulations that go into effect on April 2, 2012, and expire on August 31, 2012.

DATES: The amendments to subpart D of 50 CFR part 92 are effective April 2, 2012, through August 31, 2012.

FOR FURTHER INFORMATION CONTACT: Fred Armstrong, (907) 786–3887, or Donna Dewhurst, (907) 786–3499, U.S. Fish and Wildlife Service, 1011 E. Tudor Road, Mail Stop 201, Anchorage, AK 99503.

SUPPLEMENTARY INFORMATION: These regulations will take effect less than 30 days after publication. If there were a delay in the effective date of these regulations after this final rulemaking, subsistence hunters would not be able to take full advantage of their subsistence hunting opportunities. We therefore find that ''good cause'' exists justifying the earlier start date, within the terms of 5 U.S.C. 553(d)(3) of the Administrative Procedure Act, and, under authority of the Migratory Bird Treaty Act (July 3, 1918), as amended (16 U.S.C. 703–711).

Why is this rulemaking necessary?

This rulemaking is necessary because, by law, the migratory bird harvest season is closed unless opened by the Secretary of the Interior, and the regulations governing subsistence harvest of migratory birds in Alaska are subject to public review and annual approval. This rule establishes regulations for the taking of migratory birds for subsistence uses in Alaska during the spring and summer of 2012. This rule establishes a list of migratory bird season openings and closures in Alaska by region.

How do I find the history of these regulations?

Background information, including past events leading to this rulemaking, accomplishments since the Migratory Bird Treaties with Canada and Mexico were amended, and a history, was originally addressed in the **Federal Register** on August 16, 2002 (67 FR 53511) and most recently on March 29, 2011 (76 FR 17353). Recent **Federal Register** documents, which are all final rules setting forth the annual harvest regulations, are available at *http://alaska.fws.gov/ambcc/regulations.htm* or by contacting one of the people listed under **FOR FURTHER INFORMATION CONTACT.**

What is the process for issuing regulations for the Subsistence Harvest of Migratory Birds in Alaska?

The U.S. Fish and Wildlife Service (Service or we) are establishing migratory bird subsistence harvest regulations in Alaska for the 2012 season. These regulations enable the continuation of customary and traditional subsistence uses of migratory birds in Alaska and prescribe regional information on when and where the harvesting of birds may occur. These final regulations were developed under a co-management process involving the Service, the Alaska Department of Fish and Game, and Alaska Native representatives.

We opened the process to establish regulations for the 2012 spring and summer subsistence harvest of migratory birds in Alaska in a proposed rule published in the **Federal Register** on April 8, 2011 (76 FR 19876). While that proposed rule dealt primarily with the regulatory process for hunting migratory birds for all purposes throughout the United States, we also discussed the background and history of Alaska subsistence regulations, explained the annual process for their establishment, and requested proposals for the 2012 season. The rulemaking processes for both types of migratory bird harvest are related, and the April 8, 2011, proposed rule explained the connection between the two.

The Alaska Migratory Bird Co-management Council (Co-management Council) held a meeting in June 2011, to develop recommendations for changes that would take effect during the 2012 harvest season. These recommendations were presented first to the Flyway Councils and then to the Service Regulations Committee at the committee's meeting on July 27 and 28, 2011.

On November 3, 2011, we published in the **Federal Register** (76 FR 68264) a proposed rule that provided our proposed migratory bird subsistence harvest regulations in Alaska for the 2012 season. Regulations presented in that proposed rule were identical to those for the 2011 harvest season.

Who is eligible to hunt under these regulations?

Eligibility to harvest under the regulations established in 2003 was limited to permanent residents, regardless of race, in villages located within the Alaska Peninsula, Kodiak Archipelago, the Aleutian Islands, and in areas north and west of the Alaska Range (50 CFR 92.5). These geographical restrictions opened the initial migratory bird subsistence harvest to about 13 percent of Alaska residents. High populated areas such as Anchorage, the Matanuska-Susitna and Fairbanks North Star boroughs, the Kenai Peninsula roaded area, the Gulf of Alaska roaded area, and Southeast Alaska were excluded from eligible subsistence harvest areas.

Based on petitions requesting inclusion in the harvest, in 2004, we added 13 additional communities based on criteria set forth in 50 CFR 92.5(c). These communities were Gulkana, Gakona, Tazlina, Copper Center, Mentasta Lake, Chitina, Chistochina, Tatitlek, Chenega, Port Graham, Nanwalek, Tyonek, and Hoonah, with a combined population of 2,766. In 2005, we added three additional communities for glaucous-winged gull egg gathering only, based on petitions requesting inclusion. These southeastern communities were Craig, Hydaburg, and Yakutat, with a combined population of 2,459, based on the latest census information at that time.

In 2007, we enacted the Alaska Department of Fish and Game's request to expand the Fairbanks North Star Borough excluded area to include the Central Interior area. This action excluded the following communities from participation in this harvest: Big Delta/Fort Greely, Healy, McKinley Park/Village, and Ferry, with a combined population of 2,812.

What is different in the region-specific regulations for 2012?

Regulations finalized in this rule are identical to those for the 2011 harvest season. However, at the June 2, 2011, Co-Management Council meeting, the Yukon/Kuskokwim Delta and Kodiak Archipelago regional representatives requested to remove their respective regions from 2012 regulations by not approving the consent agenda. Annually, the migratory bird subsistence season in Alaska is closed until regulations are passed that open the upcoming season. If regulations do not change from year to year, the 11 Alaska regions opt to vote a consent agenda whereby regulations from the previous year (2011) are accepted for the following year (2012).

The justification provided at the Co-Management Council Meeting by the Yukon/Kuskokwim Delta representative was that the region could not support regulations that included the duck stamp requirement. The representative indicated that there was a conflict in the application of other federal requirements to the Alaska Migratory Bird Co-Management Council (AMBCC) regulations and that the Federal

Government does not take into consideration other Native laws that could apply to the regulatory program. The representative also indicated that there is widespread opposition to the Federal duck stamp requirement and that he does not support any regulation requiring the Federal duck stamp to hunt waterfowl.

The justification provided by the Kodiak Archipelago representative was that the Kodiak Island representative expressed concerns that he was not familiar with the AMBCC process and was not familiar with the history of the regional regulations. The Kodiak Archipelago representative indicated that, based on discussions with local elders, they are not supportive of the closure areas or dates and could not support them. He indicated that there is egg gathering in the Kodiak Island region and that was another reason why he could not support a closure that would stop that activity.

After the Co-Management Council meeting, the Alaska Regional Director and his staff contacted both regional representatives to inform them that the Service Regulations Committee would have to implement regulations to provide harvest opportunities for subsistence users who take migratory birds in those areas and elsewhere. The Service Regulations Committee met on July 28, 2011, and does not support the lack of subsistence regulations in the Yukon/Kuskokwim and Kodiak Archipelago Regions. Therefore, the Service is continuing the 2011 regulations for those two regions through the 2012 season without change. Justification to finalize these regulations is to provide a continuity of the regulations affecting subsistence harvesters in those areas.

How will the service ensure that the subsistence harvest will not raise overall migratory bird harvest or threaten the conservation of endangered and threatened species?

We have monitored subsistence harvest for the past 25 years through the use of annual household surveys in the most heavily used subsistence harvest areas, such as the Yukon–Kuskokwim Delta. In recent years, more intensive surveys combined with outreach efforts focused on species identification have been added to improve the accuracy of information gathered from regions still reporting some subsistence harvest of listed or candidate species.

Spectacled and Steller's Eiders

Spectacled eiders *(Somateria fischeri)* and the Alaska-breeding population of Steller's eiders *(Polysticta stelleri)* are listed as threatened species; their migration and breeding distribution overlap with areas where the spring and summer subsistence migratory bird hunt is open in Alaska. Both species are closed to hunting, although harvest surveys and Service documentation indicate both species have been taken in several regions of Alaska.

The Service has dual goals and responsibilities for authorizing a subsistence harvest while protecting migratory birds and threatened species. Although these goals continue to be challenging, they are not irreconcilable, providing sufficient recognition is given to the need to protect threatened species, measures to remedy documented threats are implemented, and the subsistence community and other conservation partners commit to working together. With these dual goals in mind, the Service, working with North Slope partners, developed measures in 2009 to further reduce the potential for shooting mortality or injury of closed species. These conservation measures included: (1) Increased waterfowl hunter outreach and community awareness through partnering with the North Slope Migratory Bird Task Force; (2) continued enforcement of the migratory bird regulations that are protective of listed eiders; and (3) in-season Service verification of the harvest to detect Steller's eider mortality.

This final rule continues to focus on the North Slope from Barrow through Point Hope because Steller's eiders from the listed Alaska breeding population are known to breed and migrate there. These regulations were designed to address several ongoing eider management needs by clarifying for subsistence users that (1) Service law enforcement personnel have authority to verify species of birds possessed by hunters, and (2) it is illegal to possess any bird closed to harvest. This rule also describes how the Service's existing authority of emergency closure will be implemented, if necessary, to protect Steller's eiders. We are always willing to discuss regulations with our partners on the North Slope to ensure these protect closed species as well as provide subsistence hunters an opportunity to harvest migratory birds in a way that maintains the culture and traditional harvest of the community. The regulations pertaining to bag checks and possession of illegal birds are deemed necessary to verify compliance with not harvesting protected eider species.

The Service is aware of and appreciates the considerable efforts by North Slope partners to raise awareness and educate hunters on Steller's eider conservation via the bird fair, meetings, radio shows, signs, school visits, and one-on-one contacts. We also recognize that no listed eiders have been documented shot in the last 3 years, even with the first significant breeding season in recent years for Steller's eiders occurring in the Barrow area this past summer. The Service acknowledges progress made with the other eider conservation measures including partnering with the North Slope Migratory Bird Task Force for increased waterfowl hunter awareness, continued enforcement of the regulations, and in-season verification of the harvest. Our primary strategy to reduce the threat of shooting mortality of threatened eiders is to continue working with North Slope partners to conduct education, outreach, and harvest monitoring. In addition, the emergency closure authority provides another level of assurance if an unexpected amount of Steller's eider shooting mortality occurs (50 CFR 92.21 and 50 CFR 92.32).

In-season harvest monitoring information will be used to evaluate the efficacy of regulations, conservation measures, and outreach efforts. During 2009 through 2011, no Steller's eiders were reported being taken on the North Slope, and no Steller's eiders were found shot during in-season verification of the subsistence harvest. Based on these successes, the 2011 conservation measures will also be continued, although there will be some modification of the amount of effort and emphasis each will receive. Specifically, local communities have continued to develop greater responsibility for taking actions to ensure Steller's and spectacled eider conservation and recovery, and based on last year's observations, local hunters have demonstrated greater compliance with hunting regulations.

The longstanding general emergency closure provision at 50 CFR 92.21 specifies that the harvest may be closed or temporarily suspended upon finding that a continuation of the regulation allowing the harvest would pose an imminent threat to the conservation of any migratory bird population. With regard to Steller's eiders, the regulation at 50 CFR 92.32, carried over from the past 2 years, would clarify that we will take action under 50 CFR 92.21 as is necessary to prevent further take of Steller's eiders, and that action could include temporary or long-term closures of the harvest in all or a portion of the geographic area open to harvest. If mortality of threatened eiders occurs, we will evaluate each mortality event by criteria such as cause, quantity, sex, age, location, and date. We will consult with

the Co-management Council when we are considering an emergency closure. If we determine that an emergency closure is necessary, we will design it to minimize its impact on the subsistence harvest.

Yellow-Billed Loon And Kittlitz's Murrelet

Yellow-billed loon (*Gavia adamsii*) and Kittlitz's murrelet (*Brachyramphus brevirostris)* are candidate species for listing under the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*). Their migration and breeding distribution overlaps with where the spring and summer migratory bird hunt is open in Alaska. Both species are closed to hunting, and there is no evidence Kittlitz's murrelets are harvested. On the other hand, harvest surveys have indicated that harvest of yellow-billed loons on the North Slope and St. Lawrence Island does occur. Most of the yellow-billed loons reported harvested on the North Slope were found to be entangled loons salvaged from subsistence fishing nets as described below. The Service will continue outreach efforts in both areas in 2012, engaging partners to improve harvest estimates and decrease take of yellow-billed loons.

Consistent with the request of the North Slope Borough Fish and Game Management Committee and the recommendation of the Co-management Council, this rule continues through 2012 the provisions originally established in 2005, to allow subsistence use of yellow-billed loons inadvertently entangled in subsistence fishing (gill) nets on the North Slope. Yellow-billed loons are culturally important to the Inupiat Eskimo of the North Slope for use in traditional dance regalia. A maximum of 20 yellow-billed loons may be kept if found entangled in fishing nets in 2012, under this provision. This provision does not authorize intentional harvest of yellow-billed loons, but allows use of those loons inadvertently entangled during normal subsistence fishing activities.

In 2010, the Service Regulations Committee's continued support of this provision was contingent on the North Slope Borough collaborating with the Service and the Co-Management Council to design and implement, in 2011, a scientifically defensible survey to estimate the number of yellow-billed loons entangled in subsistence fishing nets. During June 2011, the North Slope submitted a proposal entitled, ''Assessment of Yellow-Billed Loons Inadvertently Entangled in Subsistence Fishing Nets in the North Slope Borough'' that has been endorsed by the Alaska Department of Fish and Game and the Service. The Service Regulations Committee met on July 28, 2011, and appreciated the efforts by the North Slope Borough to develop a scientifically defensible yellow-billed loon entanglement survey and therefore supported continuation of the provision to allow subsistence use of up to 20 yellow-billed loons inadvertently caught in subsistence fishing nets.

Endangered Species Act Consideration

Section 7 of the Endangered Species Act (16 U.S.C. 1536) requires the Secretary of the Interior to ''review other programs administered by him and utilize such programs in furtherance of the purposes of the Act'' and to ''insure that any action authorized, funded, or carried out * * * is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of [critical] habitat * * *'' We conducted an intra-agency consultation with the Fairbanks Fish and Wildlife Field Office on this harvest as it will be managed in accordance with this final rule and the conservation measures. The consultation was completed with a March 14, 2012, biological opinion that concluded the final rule and conservation measures are not likely to jeopardize the continued existence of Steller's eider, spectacled eider, yellow-billed loon, or Kittlitz's murrelet, or result in the destruction or adverse modification of designated critical habitat for Steller's eider or spectacled eider.

Summary of Public Involvement

On November 3, 2011, we published in the **Federal Register** a proposed rule (76 FR 68264) to establish spring and summer migratory bird subsistence harvest regulations in Alaska for the 2012 subsistence season. The proposed rule provided for a public comment period of 60 days, ending January 3, 2012. We posted an announcement of the comment period dates for the proposed rule, as well as the rule itself and related historical documents, on the Co-management Council's Internet homepage. We issued a press release announcing our request for public comments and the pertinent deadlines for such comments, which was faxed to the media Statewide. Additionally, all documents were available on *http://www.regulations.gov*. The Service received two responses, one from an organization and the other from an individual.

Response to Public Comments

General Comments

Comment: We received one general comment on the overall regulations that expressed strong opposition to the concept of allowing any harvest of migratory birds in Alaska.

Service Response: For centuries, indigenous inhabitants of Alaska have harvested migratory birds for subsistence purposes during the spring and summer months. The Canada and Mexico migratory bird treaties were amended for the express purpose of allowing subsistence hunting for migratory birds during the spring and summer. The amendments indicate that the Service should issue regulations allowing such hunting as provided in the Migratory Bird Treaty Act; see 16 U.S.C. 712(1). See also Statutory Authority section, below, for more details.

Section 92.20 Methods and Means

Comment: We received one comment addressing an objection that the use of bowhunting for birds was not prohibited. Also the commenter was concerned that the use of dogs to retrieve harvested birds was not prohibited. The commenter opined that both forms of bird hunting are cruel and involve injuries to the birds, often resulting in slow and painful deaths.

Service Response: The amendments to Migratory Bird Treaty Act have two mandates: one is for the conservation of migratory birds, and the other is to continue the customary and traditional harvest of migratory birds during the spring and summer seasons. The use of bowhunting and the use of dogs for retrieving are both considered not to be customary and traditional practices in rural Alaska for harvesting migratory birds, and are rarely if ever practiced. Therefore, they are not considered to be issues of conservation concern.

Statutory Authority

We derive our authority to issue these regulations from the Migratory Bird Treaty Act of 1918, at 16 U.S.C. 712(1), which authorizes the Secretary of the Interior, in accordance with the treaties with Canada, Mexico, Japan, and Russia, to ''issue such regulations as may be necessary to assure that the taking of migratory birds and the collection of their eggs, by the indigenous inhabitants of the State of Alaska, shall be permitted for their own nutritional and other essential needs, as determined by the Secretary of the Interior, during seasons established so as to provide for the preservation and maintenance of stocks of migratory birds.''

Required Determinations

Regulatory Planning and Review (Executive Order 12866)

The Office of Management and Budget (OMB) has determined that this rule is not significant and has not reviewed this rule under Executive Order 12866 (E.O. 12866). OMB bases its determination upon the following four criteria:

(a) Whether the rule will have an annual effect of $100 million or more on the economy or adversely affect an economic sector, productivity, jobs, the environment, or other units of the government.

(b) Whether the rule will create inconsistencies with other Federal agencies' actions.

(c) Whether the rule will materially affect entitlements, grants, user fees, loan programs, or the rights and obligations of their recipients.

(d) Whether the rule raises novel legal or policy issues.

Regulatory Flexibility Act

The Department of the Interior certifies that this rule will not have a significant economic impact on a substantial number of small entities as defined under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). An initial regulatory flexibility analysis is not required. Accordingly, a Small Entity Compliance Guide is not required. This final rule legalizes a pre-existing subsistence activity, and the resources harvested will be consumed by the harvesters or persons within their local community.

Small Business Regulatory Enforcement Fairness Act

This rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This rule:

(a) Will not have an annual effect on the economy of $100 million or more. It legalizes and regulates a traditional subsistence activity. It will not result in a substantial increase in subsistence harvest or a significant change in harvesting patterns. The commodities being regulated under this final rule are migratory birds. This rule deals with legalizing the subsistence harvest of migratory birds and, as such, does not involve commodities traded in the marketplace. A small economic benefit from this final rule derives from the sale of equipment and ammunition to carry out subsistence hunting. Most, if not all, businesses that sell hunting equipment in rural Alaska qualify as small businesses. We have no reason to believe that this final rule will lead to a disproportionate distribution of benefits.

(b) Will not cause a major increase in costs or prices for consumers; individual industries; Federal, State, or local government agencies; or geographic regions. This final rule does not deal with traded commodities and, therefore, does not have an impact on prices for consumers.

(c) Does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises. This final rule deals with the harvesting of wildlife for personal consumption. It does not regulate the marketplace in any way to generate effects on the economy or the ability of businesses to compete.

Unfunded Mandates Reform Act

We have determined and certified under the Unfunded Mandates Reform Act (2 U.S.C. 1501 *et seq.*) that this final rule will not impose a cost of $100 million or more in any given year on local, State, or tribal governments or private entities. The final rule does not have a significant or unique effect on State, local, or tribal governments or the private sector. A statement containing the information required by the Unfunded Mandates Reform Act is not required. Participation on regional management bodies and the Co-management Council will require travel expenses for some Alaska Native organizations and local governments. In addition, they will assume some expenses related to coordinating involvement of village councils in the regulatory process. Total coordination and travel expenses for all Alaska Native organizations are estimated to be less than $300,000 per year. In a Notice of Decision (65 FR 16405; March 28, 2000), we identified 7 to 12 partner organizations (Alaska Native nonprofits and local governments) to administer the regional programs. The Alaska Department of Fish and Game will also incur expenses for travel to Co-management Council and regional management body meetings. In addition, the State of Alaska will be required to provide technical staff support to each of the regional management bodies and to the Co-management Council. Expenses for the State's involvement may exceed $100,000 per year, but should not exceed $150,000 per year. When funding permits, we make annual grant agreements available to the partner organizations and the Alaska Department of Fish and Game to help offset their expenses.

Takings (Executive Order 12630)

Under the criteria in Executive Order 12630, this final rule does not have significant takings implications. This final rule is not specific to particular land ownership, but applies to the harvesting of migratory bird resources throughout Alaska. A takings implication assessment is not required.

Federalism (Executive Order 13132)

Under the criteria in Executive Order 13132, this final rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement. We discuss effects of this final rule on the State of Alaska in the Unfunded Mandates Reform Act section above. We worked with the State of Alaska to develop these regulations. Therefore, a federalism summary impact statement is not required.

Civil Justice Reform (Executive Order 12988)

The Department, in promulgating this final rule, has determined that it will not unduly burden the judicial system and that it meets the requirements of sections 3(a) and 3(b)(2) of Executive Order 12988.

Government-to-Government Relations with Native American Tribal Governments

In keeping with the spirit of the President's memorandum of April 29, 1994, ''Government-to-Government Relations With Native American Tribal Governments'' (59 FR 22951), and Executive Order 13175 (65 FR 67249; November 6, 2000), concerning consultation and coordination with Indian Tribal Governments, we submitted over 413 letters to all tribes, tribal entities, and Native Corporations in Alaska soliciting their input as to whether or not they would like the Service to consult with them on the 2012 migratory bird subsistence harvest regulations. We received 5 responses, of which 3 requested consultation, and one indicated they were happy with the process and did not want consultation. We did follow up with a call to the latter tribe, and they were undecided as to what they wanted to do. We conducted 3 consultations with the tribes on December 4, 2012. All 3 tribes were happy with the information provided and did not have any comments on the regulations.

We implemented the amended treaty with Canada with a focus on local involvement. The treaty calls for the creation of management bodies to ensure an effective and meaningful role for Alaska's indigenous inhabitants in

the conservation of migratory birds. According to the Letter of Submittal, management bodies are to include Alaska Native, Federal, and State of Alaska representatives as equals. They will develop recommendations for among other things: seasons and bag limits, methods and means of take, law enforcement policies, population and harvest monitoring, education programs, research and use of traditional knowledge, and habitat protection. The management bodies will involve village councils to the maximum extent possible in all aspects of management. To ensure maximum input at the village level, we required each of the 11 participating regions to create regional management bodies consisting of at least one representative from the participating villages. The regional management bodies meet twice annually to review and/or submit proposals to the Statewide body.

Paperwork Reduction Act

This final rule has been examined under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) and does not contain any new collections of information that require Office of Management and Budget (OMB) approval. OMB has approved our collection of information associated with the voluntary annual household surveys used to determine levels of subsistence take. The OMB control number is 1018–0124, which expires April 30, 2013. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

National Environmental Policy Act (42 U.S.C. 4321 et seq.) Consideration

The annual regulations and options were considered in the environmental assessment, ''Managing Migratory Bird Subsistence Hunting in Alaska: Hunting Regulations for the 2012 Spring/Summer Harvest,'' October 25, 2011. Copies are available from either the person listed under **FOR FURTHER INFORMATION CONTACT** or at *http://www.regulations.gov.*

Energy Supply, Distribution, or Use (Executive Order 13211)

Executive Order 13211 requires agencies to prepare Statements of Energy Effects when undertaking certain actions. This is not a significant regulatory action under this Executive Order; it will allow only for traditional subsistence harvest and will improve conservation of migratory birds by allowing effective regulation of this harvest. Further, this final rule is not expected to significantly affect energy supplies, distribution, or use. Therefore, this action is not a significant energy action under Executive Order 13211, and no Statement of Energy Effects is required.

Hunting, Treaties, Wildlife.

Final Regulation Promulgation

For the reasons set out in the preamble, we amend title 50, chapter I, subchapter G, of the Code of Federal Regulations as follows:

PART 92—MIGRATORY BIRD SUBSISTENCE HARVEST IN ALASKA

■ 1. The authority citation for part 92 continues to read as follows:

Authority: 16 U.S.C. 703–712.

Subpart D—Annual Regulations Governing Subsistence Harvest

■ 2. Add § 92.31 to subpart D to read as follows:

§ 92.31 Region-specific regulations.

The 2012 season dates for the eligible subsistence harvest areas are as follows:

(a) *Aleutian/Pribilof Islands Region.*

(1) Northern Unit (Pribilof Islands):

(i) Season: April 2–June 30.

(ii) Closure: July 1–August 31.

(2) Central Unit (Aleut Region's eastern boundary on the Alaska Peninsula westward to and including Unalaska Island):

(i) Season: April 2–June 15 and July 16–August 31.

(ii) Closure: June 16–July 15.

(iii) Special Black Brant Season Closure: August 16–August 31, only in Izembek and Moffet lagoons.

(iv) Special Tundra Swan Closure: All hunting and egg gathering closed in units 9(D) and 10.

(3) Western Unit (Umnak Island west to and including Attu Island):

(i) Season: April 2–July 15 and August 16–August 31.

(ii) Closure: July 16–August 15.

(b) *Yukon/Kuskokwim Delta Region.*

(1) Season: April 2–August 31.

(2) Closure: 30-day closure dates to be announced by the Service's Alaska Regional Director or his designee, after consultation with field biologists and the Association of Village Council President's Waterfowl Conservation Committee. This 30-day period will occur between June 1 and August 15 of each year. A press release announcing the actual closure dates will be forwarded to regional newspapers and radio and television stations.

(3) Special Black Brant and Cackling Goose Season Hunting Closure: From the period when egg laying begins until young birds are fledged. Closure dates to be announced by the Service's Alaska Regional Director or his designee, after consultation with field biologists and the Association of Village Council President's Waterfowl Conservation Committee. A press release announcing the actual closure dates will be forwarded to regional newspapers and radio and television stations.

(c) *Bristol Bay Region.*

(1) Season: April 2–June 14 and July 16–August 31 (general season); April 2–July 15 for seabird egg gathering only.

(2) Closure: June 15–July 15 (general season); July 16–August 31 (seabird egg gathering).

(d) *Bering Strait/Norton Sound Region.*

(1) Stebbins/St. Michael Area (Point Romanof to Canal Point):

(i) Season: April 15–June 14 and July 16–August 31.

(ii) Closure: June 15–July 15.

(2) Remainder of the region:

(i) Season: April 2–June 14 and July 16–August 31 for waterfowl; April 2–July 19 and August 21–August 31 for all other birds.

(ii) Closure: June 15–July 15 for waterfowl; July 20–August 20 for all other birds.

(e) *Kodiak Archipelago Region,* except for the Kodiak Island roaded area, which is closed to the harvesting of migratory birds and their eggs. The closed area consists of all lands and waters (including exposed tidelands) east of a line extending from Crag Point in the north to the west end of Saltery Cove in the south and all lands and water south of a line extending from Termination Point along the north side of Cascade Lake extending to Anton Larson Bay. Waters adjacent to the closed area are closed to harvest within 500 feet from the water's edge. The offshore islands are open to harvest.

(1) Season: April 2–June 30 and July 31–August 31 for seabirds; April 2–June 20 and July 22–August 31 for all other birds.

(2) Closure: July 1–July 30 for seabirds; June 21–July 21 for all other birds.

(f) *Northwest Arctic Region.*

(1) Season: April 2–June 9 and August 15–August 31 (hunting in general); waterfowl egg gathering May 20–June 9 only; seabird egg gathering May 20–July 12 only; hunting molting/non-nesting waterfowl July 1–July 31 only.

(2) Closure: June 10–August 14, except for the taking of seabird eggs and molting/non-nesting waterfowl as provided in paragraph (f)(1) of this section.

(g) *North Slope Region.*

(1) Southern Unit (Southwestern North Slope regional boundary east to Peard Bay, everything west of the longitude line 158°30′ W and south of the latitude line 70°45′ N to the west bank of the Ikpikpuk River, and everything south of the latitude line 69°45′ N between the west bank of the Ikpikpuk River to the east bank of Sagavinirktok River):

(i) Season: April 2–June 29 and July 30–August 31 for seabirds; April 2–June 19 and July 20–August 31 for all other birds.

(ii) Closure: June 30–July 29 for seabirds; June 20–July 19 for all other birds.

(iii) Special Black Brant Hunting Opening: From June 20–July 5. The open area would consist of the coastline, from mean high water line outward to include open water, from Nokotlek Point east to longitude line 158°30′ W. This includes Peard Bay, Kugrua Bay, and Wainwright Inlet, but not the Kuk and Kugrua river drainages.

(2) Northern Unit (At Peard Bay, everything east of the longitude line 158°30′ W and north of the latitude line 70°45′ N to west bank of the Ikpikpuk River, and everything north of the latitude line 69°45′ N between the west bank of the Ikpikpuk River to the east bank of Sagavinirktok River):

(i) Season: April 6–June 6 and July 7–August 31 for king and common eiders; April 2–June 15 and July 16–August 31 for all other birds.

(ii) Closure: June 7–July 6 for king and common eiders; June 16–July 15 for all other birds.

(3) Eastern Unit (East of eastern bank of the Sagavanirktok River):

(i) Season: April 2–June 19 and July 20–August 31.

(ii) Closure: June 20–July 19.

(4) All Units: yellow-billed loons. Annually, up to 20 yellow-billed loons total for the region may be inadvertently entangled in subsistence fishing nets in the North Slope Region and kept for subsistence use.

(5) North Coastal Zone (Cape Thompson north to Point Hope and east along the Arctic Ocean coastline around Point Barrow to Ross Point, including Iko Bay, and 5 miles inland).

(i) No person may at any time, by any means, or in any manner, possess or have in custody any migratory bird or part thereof, taken in violation of subparts C and D of this part.

(ii) Upon request from a Service law enforcement officer, hunters taking, attempting to take, or transporting migratory birds taken during the subsistence harvest season must present them to the officer for species identification.

(h) *Interior Region.*

(1) Season: April 2–June 14 and July 16–August 31; egg gathering May 1–June 14 only.

(2) Closure: June 15–July 15.

(i) *Upper Copper River Region* (Harvest Area: Units 11 and 13) (Eligible communities: Gulkana, Chitina, Tazlina, Copper Center, Gakona, Mentasta Lake, Chistochina and Cantwell).

(1) Season: April 15–May 26 and June 27–August 31.

(2) Closure: May 27–June 26.

(3) The Copper River Basin communities listed above also documented traditional use harvesting birds in Unit 12, making them eligible to hunt in this unit using the seasons specified in paragraph (h) of this section.

(j) *Gulf of Alaska Region.*

(1) Prince William Sound Area (Harvest area: Unit 6[D]), (Eligible Chugach communities: Chenega Bay, Tatitlek):

(i) Season: April 2–May 31 and July 1–August 31.

(ii) Closure: June 1–30.

(2) Kachemak Bay Area (Harvest area: Unit 15[C] South of a line connecting the tip of Homer Spit to the mouth of Fox River) (Eligible Chugach Communities: Port Graham, Nanwalek):

(i) Season: April 2–May 31 and July 1–August 31.

(ii) Closure: June 1–30.

(k) *Cook Inlet* (Harvest area: portions of Unit 16[B] as specified below) (Eligible communities: Tyonek only):

(1) Season: April 2–May 31—That portion of Unit 16(B) south of the Skwentna River and west of the Yentna River, and August 1–31—That portion of Unit 16(B) south of the Beluga River, Beluga Lake, and the Triumvirate Glacier:

(2) Closure: June 1–July 31.

(l) *Southeast Alaska.*

(1) Community of Hoonah (Harvest area: National Forest lands in Icy Strait and Cross Sound, including Middle Pass Rock near the Inian Islands, Table Rock in Cross Sound, and other traditional locations on the coast of Yakobi Island. The land and waters of Glacier Bay National Park remain closed to all subsistence harvesting (50 CFR Part 100.3(a)):

(i) Season: glaucous-winged gull egg gathering only: May 15–June 30.

(ii) Closure: July 1–August 31.

(2) Communities of Craig and Hydaburg (Harvest area: small islands and adjacent shoreline of western Prince of Wales Island from Point Baker to Cape Chacon, but also including Coronation and Warren islands):

(i) Season: glaucous-winged gull egg gathering only: May 15–June 30.

(ii) Closure: July 1–August 31.

(3) Community of Yakutat (Harvest area: Icy Bay (Icy Cape to Point Riou), and coastal lands and islands bordering the Gulf of Alaska from Point Manby southeast to Dry Bay):

(i) Season: glaucous-winged gull egg gathering: May 15–June 30.

(ii) Closure: July 1–August 31.

■ 3. Add § 92.32 to subpart D to read as follows:

§ 92.32 Emergency regulations to protect Steller's eiders.

Upon finding that continuation of the subsistence regulations in this subpart would pose an imminent threat to the conservation of threatened Steller's eiders *(Polysticta stelleri),* the U.S. Fish and Wildlife Service Alaska Regional Director, in consultation with the Co-management Council, will immediately under § 92.21 take action as is necessary to prevent further take. Regulation changes implemented could range from a temporary closure of duck hunting in a small geographic area to large-scale regional or Statewide long-term closures of all subsistence migratory bird hunting. These closures or temporary suspensions will remain in effect until the Regional Director, in consultation with the Co-management Council, determines that the potential for additional Steller's eiders to be taken no longer exists.

Dated: March 12, 2012.

Rachel Jacobson,

Acting Assistant Secretary for Fish and Wildlife and Parks.

BILLING CODE 4310–55–P

Proposed Rules

Federal Register
Vol. 77, No. 58
Monday, March 26, 2012

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

OFFICE OF MANAGEMENT AND BUDGET

2 CFR Chapters I and II

Reform of Federal Policies Relating to Grants and Cooperative Agreements; Cost Principles And Administrative Requirements (Including Single Audit Act)

AGENCY: Executive Office of the President, Office of Management and Budget (OMB).

ACTION: Advance notice of proposed guidance; extension of comment period.

SUMMARY: The Office of Management and Budget (OMB) is extending the comment period for the Advance Notice of Proposed Guidance on Reform of Federal Policies Relating to Grants and Cooperative Agreements; cost principles and administrative requirements (including Single Audit Act). The original comment period was scheduled to end on March 29, 2012. With this document, OMB is extending the time period in which to provide public comments until April 30, 2012. This will allow interested parties additional time to analyze the issues and prepare their comments.

DATES: To be assured of consideration, comments must be received by OMB at one of the addresses provided below, no later than 5 p.m. Eastern Standard Time (E.S.T) on April 30, 2012.

ADDRESSES: In submitting commenting, please refer to file ''Grant Reform''. You may submit comments using one of the following three alternatives (please choose only one of these three alternatives):

1. Electronically. You may submit electronic comments on this regulation to *http://www.regulations.gov.* Follow the instructions for submitting comments.

2. By express or overnight mail. You may send written comments to the following address only: Office of Management and Budget, 725 17th St NW., Washington DC, 20025, Attention: Office of Federal Financial Management ''Grant Reform''.

3. By regular mail. You may mail written comments to the following address only: Office of Management and Budget, 725 17th St NW., Washington DC, 20025, Attention: Office of Federal Financial Management ''Grant Reform''. Due to potential delays in OMB's receipt and processing of mail sent through the U.S. Postal Service, we strongly encourage respondents to submit comments electronically to ensure timely receipt. We cannot guarantee that comments sent via surface mail will be received before the comment closing date.

Comments will be most useful if they are presented in the same sequence (and with the same heading) as the section of this notice to which they apply. Also, if you are submitting comments on behalf of an organization, please identify the organization. Finally, the public comments received by OMB will be posted on OMB's Web site and at *http://www.regulations.gov* (follow the search instructions on that Web site to view public comments). Accordingly, please do not include in your comments any confidential business information or information of a personal-privacy nature.

FOR FURTHER INFORMATION CONTACT: Victoria Collin at (202) 395–7791 for general information.

SUPPLEMENTARY INFORMATION: OMB is extending the comment period for its advance notice of proposed guidance, which published in the **Federal Register** on February 28, 2012, at 77 FR 11178. The original comment period was scheduled to end on March 29, 2012, and this document extends it to April 30, 2012.

Copies of the OMB Circulars that are discussed in this notice are available on OMB's Web site at *http://www.whitehouse.gov/omb/circulars_default/.* Circulars A–110, A–21, A–87, and A–122 are also available at 2 CFR at *http://ecfr.gpoaccess.gov/cgi/t/text/text-idx?c=ecfr&tpl=/ecfrbrowse/Title02/2cfrv1_02.tpl.* The Cost Principles for Hospitals are in the regulations of the Department of Health and Human Services at 45 CFR part 75, appendix E (*Principles for Determining Costs Applicable to Research and Development Under Grants and Contracts with Hospitals*), at *http://www.gpo.gov/fdsys/pkg/CFR–2011-title45-vol1/pdf/CFR–2011-title45-vol1.pdf.*

Daniel I. Werfel,

Controller.

BILLING CODE P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2011–1211; Airspace Docket No. 11–ASO–40]

Proposed Amendment of Class E Airspace; Memphis, TN

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend Class E Airspace at Memphis, TN, as the West Memphis Non-Directional Beacon (NDB) has been decommissioned and new Standard Instrument Approach Procedures have been developed at Memphis International Airport. This action also would remove West Memphis Municipal Airport, West Memphis, TN from the existing airspace surrounding Memphis International Airport, Memphis, TN. This action would enhance the safety and airspace management of Instrument Flight Rules (IFR) operations at the airport.

DATES: Effective 0901 UTC, Comments must be received on or before May 10, 2012. The Director of the Federal Register approves this incorporation by reference action under title 1, Code of Federal Regulations, part 51, subject to the annual revision of FAA, Order 7400.9 and publication of conforming amendments.

ADDRESSES: Send comments on this rule to: U.S. Department of Transportation, Docket Operations, West Building Ground Floor, Room W12–140, 1200 New Jersey Ave. SE., Washington, DC 20590–0001; Telephone: 1–800–647–5527; Fax: 202–493–2251. You must identify the Docket Number FAA–2011–1211; Airspace Docket No. 11–ASO–40, at the beginning of your comments. You may also submit and review received

comments through the Internet at *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, P.O. Box 20636, Atlanta, Georgia 30320; telephone (404) 305–6364.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to comment on this rule by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal.

Communications should identify both docket numbers (FAA Docket No. FAA–2011–1211; Airspace Docket No. 11–ASO–40) and be submitted in triplicate to the Docket Management System (see **ADDRESSES** section for address and phone number). You may also submit comments through the Internet at *http://www.regulations.gov.*

Persons wishing the FAA to acknowledge receipt of their comments on this action must submit with those comments a self-addressed stamped postcard on which the following statement is made: ''Comments to Docket No. FAA–2011–1211; Airspace Docket No. 11–ASO–40.'' The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded from and comments submitted through *http://www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's Web page at *http://www.faa.gov/airports_airtraffic/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the **ADDRESSES** section for address and phone number) between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. An informal docket may also be examined during normal business hours at the office of the Eastern Service Center, Federal Aviation Administration, room 350, 1701 Columbia Avenue, College Park, Georgia 30337.

Persons interested in being placed on a mailing list for future NPRM's should contact the FAA's Office of Rulemaking, (202) 267–9677, to request a copy of Advisory Circular No. 11–2A, Notice of Proposed Rulemaking distribution System, which describes the application procedure.

The Proposal

The FAA is considering an amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 to amend Class E airspace extending upward from 700 feet above the surface to support new standard instrument approach procedures developed at Memphis International Airport, Memphis, TN. Airspace reconfiguration is necessary due to the decommissioning of the West Memphis NDB and cancellation of the NDB approach, and for continued safety and management of IFR operations at the airport. Also, West Memphis Municipal Airport, West Memphis, AR, would be removed from the Memphis, TN, airspace designation to accommodate the separation of existing Class E airspace surrounding Memphis International Airport, Memphis, TN. The establishment of the new designator for the controlled airspace at West Memphis Municipal Airport, West Memphis, AR, would simultaneously be coordinated with this action.

Class E airspace designations are published in Paragraph 6005 of FAA order 7400.9V, dated August 9, 2011, and effective September 15, 2011, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This proposed rulemaking is promulgated under the authority described in Subtitle VII, Part, A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This proposed regulation is within the scope of that authority as it would amend Class E airspace at Memphis International Airport, Memphis TN.

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1E, ''Environmental Impacts: Policies and procedures'' prior to any FAA final regulatory action.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (Air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR Part 71 as follows:

PART 71 —DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

1. The authority citation for Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9V, Airspace Designations and Reporting Points, dated August 9, 2011, effective September 15, 2011, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

ASO TN E5 Memphis, TN

Memphis International Airport, TN
(Lat. 35°02′33″ N., long. 89°58′36″ W.)

Olive Branch, MS, Olive Branch Airport
(Lat. 34°58′44″ N., long. 89°47′13″ W.)
General DeWitt Spain Airport
(Lat. 35°12′02″ N., long. 90°03′14″ W.)
Elvis NDB
(Lat. 35°03′41″ N., long. 90°04′18″ W.)

That airspace extending upward from 700 feet above the surface within an 8-mile radius of Memphis International Airport, and within 4 miles north and 8 miles south of the 271° bearing from the Elvis NDB extending from the 8-mile radius to 16 miles west of the Elvis NDB, and within a 7.5-mile radius of Olive Branch Airport, Olive Branch, MS, and within 4 miles west and 8 miles east of the 017° bearing and 4 miles west and 8 miles east of the 170° bearing from the Olive Branch NDB extending from the 7.5-mile radius to 16 miles northeast and south of the airport, and within a 6.4-mile radius of General DeWitt Spain Airport; excluding that airspace within the Millington, TN, Class E airspace area.

Issued in College Park, Georgia, on March 14, 2012.

Barry A. Knight,

Manager, Operations Support Group, Eastern Service Center, Air Traffic Organization.

Proposed Modification of Class D and Class E Airspace and Revocation of Class E Airspace; Bellingham, WA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to modify Class D and Class E airspace at Bellingham, WA, to accommodate aircraft departing and arriving under Instrument Flight Rules (IFR) at Bellingham International Airport. This action also would remove Class E airspace designated as an extension to a Class D or E surface area at Bellingham International Airport. This action, initiated by the biennial review of the Bellingham airspace area, would enhance the safety and management of aircraft operations at the airport.

DATES: Comments must be received on or before May 10, 2012.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590; telephone (202) 366–9826. You must identify FAA Docket No. FAA–2011–0363; Airspace Docket No. 11–ANM–8, at the beginning of your comments. You may also submit comments through the Internet at *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Eldon Taylor, Federal Aviation Administration, Operations Support Group, Western Service Center, 1601 Lind Avenue SW., Renton, WA 98057; telephone (425) 203–4537.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal.

Communications should identify both docket numbers (FAA Docket No. FAA 2011–0363 and Airspace Docket No. 11–ANM–8) and be submitted in triplicate to the Docket Management System (see **ADDRESSES** section for address and phone number). You may also submit comments through the Internet at *http://www.regulations.gov.*

Commenters wishing the FAA to acknowledge receipt of their comments on this action must submit with those comments a self-addressed stamped postcard on which the following statement is made: ''Comments to FAA Docket No. FAA–2011–0363 and Airspace Docket No. 11–ANM–8''. The postcard will be date/time stamped and returned to the commenter.

All communications received on or before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this action may be changed in light of comments received. All comments submitted will be available for examination in the public docket both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRM's

An electronic copy of this document may be downloaded through the Internet at *http://www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *http://www.faa.gov/airports_airtraffic/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the **ADDRESSES** section for the address and phone number) between 9 a.m. and 5 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Northwest Mountain Regional Office of the Federal Aviation Administration, Air Traffic Organization, Western Service Center, Operations Support Group, 1601 Lind Avenue SW., Renton, WA 98057.

Persons interested in being placed on a mailing list for future NPRM's should contact the FAA's Office of Rulemaking, (202) 267–9677, for a copy of Advisory Circular No. 11–2A, Notice of Proposed Rulemaking Distribution System, which describes the application procedure.

The Proposal

The FAA is proposing an amendment to Title 14 Code of Federal Regulations (14 CFR) Part 71 by modifying Class D airspace and Class E airspace designated as surface area to meet current standards for IFR departures and arrivals at Bellingham International Airport, Bellingham, WA. This modification eliminates the need for Class E airspace designated as an extension to a Class D or E surface area, and, therefore, would be removed. This action, initiated by a biennial review of the airspace, is necessary for the safety and management of aircraft departing and arriving under IFR operations at the airport.

Class D and E airspace designations are published in paragraph 5000, 6002 and 6004, respectively, of FAA Order 7400.9V, dated August 9, 2011, and effective September 15, 2011, which is incorporated by reference in 14 CFR Part 71.1. The Class D and E airspace designation listed in this document will be published subsequently in this Order.

The FAA has determined this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this proposed regulation; (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a

regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified this proposed rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the U.S. Code. Subtitle 1, Section 106, describes the authority for the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This proposal is within the scope of that authority as it modifies controlled airspace at Bellingham International Airport, Bellingham, WA.

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1E. ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR Part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR Part 71.1 of the Federal Aviation Administration Order 7400.9V, Airspace Designations and Reporting Points, dated August 9, 2011, and effective September 15, 2011 is amended as follows:

Paragraph 5000 Class D airspace.

* * * * *

ANM WA D Bellingham, WA [Modified]

Bellingham International Airport, WA

(Lat. 48°47′34″ N., long. 122°32′15″ W.)

That airspace extending upward from the surface to and including 2,700 feet MSL within a 4.1-mile radius of Bellingham International Airport. This Class D airspace is effective during the dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Airport/Facility Directory.

Paragraph 6002 Class E airspace designated as surface areas.

* * * * *

ANM WA E2 Bellingham, WA [Modified]

Bellingham International Airport, WA

(Lat. 48°47′34″ N., long. 122°32′15″ W.)

That airspace extending upward from the surface within a 4.1-mile radius of Bellingham International Airport. This Class E airspace is effective during the dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Airport/Facility Directory.

Paragraph 6004 Class E airspace areas designated as an extension to Class D or Class E surface area.

* * * * *

ANM WA E4 Bellingham, WA [Removed]

Issued in Seattle, Washington, on March 19, 2012.

Vered Lovett,

Acting Manager, Operations Support Group, Western Service Center.

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2012–0155; Airspace Docket No. 12–ASW–1]

Proposed Establishment of Class E Airspace; West Memphis, AR

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to establish Class E airspace at West Memphis, AR. Separation of existing Class E airspace surrounding West Memphis Municipal Airport from the Class E airspace of Memphis International Airport, Memphis, TN, has made this action necessary to enhance the safety and management of Instrument Flight Rules (IFR) operations at the airport.

DATES: 0901 UTC. Comments must be received on or before May 10, 2012.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, Washington, DC 20590–0001. You must identify the docket number FAA–2012–0155/Airspace Docket No. 12–ASW–1, at the beginning of your comments. You may also submit comments through the Internet at *http://www.regulations.gov.* You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The Docket Office (telephone 1–800–647–5527) is on the ground floor of the building at the above address.

FOR FURTHER INFORMATION CONTACT: Scott Enander, Central Service Center, Operations Support Group, Federal Aviation Administration, Southwest Region, 2601 Meacham Blvd., Fort Worth, TX 76137; telephone: (817) 321–7716.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: ''Comments to Docket No. FAA–2012–0155/Airspace Docket No. 12–ASW–1.'' The postcard will be date/time stamped and returned to the commenter.

Availability of NPRMs

An electronic copy of this document may be downloaded through the Internet at *http://www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's Web page at *http://www.faa.gov/airports_airtraffic/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments

received and any final disposition in person in the Dockets Office (see **ADDRESSES** section for address and phone number) between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. An informal docket may also be examined during normal business hours at the office of the Central Service Center, 2601 Meacham Blvd., Fort Worth, TX 76137.

Persons interested in being placed on a mailing list for future NPRMs should contact the FAA's Office of Rulemaking (202) 267–9677, to request a copy of Advisory Circular No. 11–2A, Notice of Proposed Rulemaking Distribution System, which describes the application procedure.

The Proposal

This action proposes to amend Title 14, Code of Federal Regulations (14 CFR), Part 71 by establishing Class E airspace extending upward from 700 feet above the surface at West Memphis, AR, to accommodate the separation of existing Class E airspace surrounding West Memphis Municipal Airport from the Class E airspace of Memphis International Airport, Memphis, TN. The amendment for the existing Class E airspace surrounding Memphis International Airport, Memphis, TN, would be simultaneously coordinated with this action. Controlled airspace is needed for the safety and management of IFR operations at the airport.

Class E airspace areas are published in Paragraph 6005 of FAA Order 7400.9V, dated August 9, 2011 and effective September 15, 2011, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document would be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the U.S. Code. Subtitle 1, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would establish controlled airspace at West Memphis Municipal Airport, West Memphis, AR.

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1E, ''Environmental Impacts: Policies and Procedures,'' prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (Air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR Part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.9V, Airspace Designations and Reporting Points, dated August 9, 2011, and effective September 15, 2011, is amended as follows:

Paragraph 6005 Class E Airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

ASW AR E5 West Memphis, AR [New]

West Memphis Municipal Airport, AR
(Lat. 35°08′06″ N., long. 90°14′04″ W.)

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of West Memphis Municipal Airport.

Issued in Fort Worth, TX, on March 14, 2012.

David P. Medina,

Manager, Operations Support Group, ATO Central Service Center.

BILLING CODE 4901–13–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

DEPARTMENT OF THE TREASURY

19 CFR Part 12

[Docket No. USCBP–2012–0004]

RIN 1515–AD82

Inadmissibility of Consumer Products and Industrial Equipment Noncompliant With Applicable Energy Conservation or Labeling Standards

AGENCIES: U.S. Customs and Border Protection, Department of Homeland Security; Department of the Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: This document proposes amendments to the Customs and Border Protection (CBP) regulations to provide that if certain imports do not comply with applicable energy conservation or labeling standards, CBP will refuse admission when so notified by the Department of Energy (DOE) or the Federal Trade Commission (FTC) and CBP may, upon a recommendation from DOE or FTC, conditionally release the goods so that they may be brought into compliance. Specifically, CBP will refuse admission into the customs territory of the United States to consumer products and industrial equipment deemed noncompliant with the Energy Policy and Conservation Act of 1975 (EPCA) and its implementing regulations, and for which CBP has received written notice from the DOE or the FTC that identifies merchandise as noncompliant with applicable EPCA requirements. In lieu of immediate refusal of admission, and upon written or electronic notice by DOE or FTC, CBP may conditionally release under bond to the importer such noncompliant products or equipment for purposes of reconditioning, re-labeling, or other action so as to bring the subject product or equipment into compliance with applicable energy conservation and labeling admissibility standards. If the subject import is not timely brought into compliance, CBP, at the direction of DOE or FTC, will issue a refusal of admission notice to the importer and

demand redelivery of the subject products to CBP custody. A failure to comply with a demand for redelivery will result in the assessment of liquidated damages. This proposed regulation, if adopted, will implement the mandate of the EPCA, as amended, to preclude admission into the United States of certain consumer products and industrial equipment that do not meet applicable labeling or energy conservation requirements.

DATES: Comments must be received on or before May 25, 2012.

ADDRESSES: You may submit comments, identified by *USCBP docket number,* by *one* of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments via docket number USCBP–2012–0004.
- *Mail:* Trade and Commercial Regulations Branch, Regulations and Rulings, Office of International Trade, U.S. Customs and Border Protection, 799 9th Street NW. (Mint Annex), Washington, DC 20229–1179.

Instructions: All submissions received must include the agency name and USCBP docket number for this rulemaking. All comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided. For detailed instructions on submitting comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov.* Submitted comments may also be inspected during regular business days between the hours of 9 a.m. and 4:30 p.m. at the Trade and Commercial Regulations Branch, Regulations and Rulings, Office of International Trade, U.S. Customs and Border Protection, 799 9th Street NW., 5th Floor, Washington, DC. Arrangements to inspect submitted comments should be made in advance by calling Joseph Clark at (202) 325–0118.

FOR FURTHER INFORMATION CONTACT: Mike Craig, Chief, Interagency Requirements Branch, Trade Policy and Programs, Office of International Trade, (202) 863–6558. Valarie M. Neuhart, Import Safety & Interagency Requirements Division, Office of International Trade, (202) 863–6223.

SUPPLEMENTARY INFORMATION:

Public Participation

Interested persons are invited to participate in this rulemaking by submitting written data, views, or arguments on all aspects of the proposed rule. Customs and Border Protection (CBP) also invites comments that relate to the economic, environmental, or federalism effects that might result from this proposed rule. If appropriate to a specific comment, the commenter should reference the specific portion of the proposed rule, explain the reason for any recommended change, and include data, information, or authority that support such recommended change.

Background

General

Title III, Part B of the Energy Policy and Conservation Act of 1975 (EPCA), Public Law 94–163 (42 U.S.C. 6291–6309), as amended, established the Energy Conservation Program for Consumer Products Other Than Automobiles, a program covering most major household appliances. Similarly, Title III, Part C of the EPCA, (42 U.S.C. 6311–6317) as amended, added by Public Law 95–619, Title IV, section 441(a), established the Energy Conservation Program for Certain Industrial Equipment, a program covering industrial equipment.

Section 6302(a) of title 42 of the United States Code (42 U.S.C. 6302(a)), and its implementing regulations, prescribe the specific energy conservation and labeling standards applicable to manufacturers and, in some instances, private labelers, distributors, and retailers. Sections 6301 and 6316 of title 42 of the United States Code (42 U.S.C. 6301 and 6316) require the Secretary of the Treasury to issue regulations refusing admission into the customs territory of the United States to covered products or covered equipment offered for importation in violation of 42 U.S.C. 6302. The statute also provides the Secretary with the discretion to authorize the importation of covered products or covered industrial equipment under such terms and conditions (including the furnishing of a bond) that ensure that the merchandise will not violate 42 U.S.C. 6302.

Proposed Regulation

Pursuant to 42 U.S.C. 6301, this document proposes to amend part 12 of title 19 of the Code of Federal Regulations (19 CFR Part 12) by adding a new § 12.50 which provides that CBP will refuse admission into the customs territory of the United States to covered imports that the Department of Energy (DOE) or the Federal Trade Commission (FTC) has determined to be in violation of 42 U.S.C. 6302, upon receipt of written or electronic notice from the DOE or FTC, as appropriate. The notice will identify a named regulated party as being in violation of 42 U.S.C. 6302 and will describe the subject product or equipment in a manner sufficient to enable CBP to identify the articles.

While refusal of admission will be the norm, there may be instances where reconditioning, re-labeling, or other modification may bring an import into compliance with applicable energy conservation or labeling admissibility standards. Accordingly, this rule proposes a procedure to allow CBP to conditionally release noncompliant imports to the importer under a CBP basic importation and entry bond for purposes of bringing the merchandise into conformity with the applicable standards, upon a recommendation by the DOE or FTC. In any case involving conditional release of a covered import under bond, the CBP port director always retains the discretion to require additional security in any case where he believes that acceptance of a continuous bond would hamper the enforcement of the law. *See* 19 CFR 113.13(d). An initial conditional release period of 30 days is proposed to be established by this rulemaking.

If the DOE or FTC notifies CBP that the subject imports have been brought into compliance with applicable energy conservation and labeling admissibility standards before the conclusion of the 30-day conditional release period, or any authorized extension thereof, CBP may release the subject goods into the commerce and entry may be completed.

If attempts at modification fail within the 30-day conditional release period, or any authorized extension thereof, the DOE or FTC will notify CBP of that fact, and CBP will issue a notice of refusal of admission to the importer concurrent with a demand for redelivery under the terms and conditions of the CBP bond. A failure to comply with the demand for redelivery will result in the assessment of liquidated damages equal to three times the value of the imports at issue. Moreover, covered imports that are conditionally released will be under the concurrent jurisdiction of DOE and/or FTC.

The proposed amendments are consistent with § 429.5(b) of title 10 of the Code of Federal Regulations (10 CFR 429.5(b)), which is a DOE regulation that further notifies the importing public that any covered product or equipment offered for importation that does not meet the applicable energy

conservation standards set forth in 42 U.S.C. 6291–6317 will be refused admission into the customs territory of the United States under CBP issued regulations.

Executive Order 12866

Executive Orders 13563 and 12866 direct agencies to assess costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has been designated a ''significant regulatory action'' although not economically significant, under section 3(f) of Executive Order 12866. Accordingly, the rule has been reviewed by the Office of Management and Budget.

The Regulatory Flexibility Act

This section examines the impact of the rule on small entities as required by the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*), as amended by the Small Business Regulatory Enforcement and Fairness Act of 1996. A small entity may be a small business (defined as any independently owned and operated business not dominant in its field that qualifies as a small business per the Small Business Act); a small not-for-profit organization; or a small governmental jurisdiction (locality with fewer than 50,000 people).

The proposed rule, if finalized, will establish a procedure whereby the DOE or the FTC will notify CBP of any imported article that is in violation of 42 U.S.C 6302 and its implementing regulations. Upon notification, CBP will refuse these articles admission into the commerce of the United States. Upon a recommendation by the DOE or FTC, however, CBP will conditionally release noncompliant imported articles under a CBP basic importation and entry bond for the purpose of bringing the merchandise into compliance with 42 U.S.C. 6302 and its implementing regulations. This conditional release is valid for a period of 30 days, but it may be extended by the DOE or FTC.

The DOE has identified only a small number of businesses importing noncompliant articles, of which fewer than five were small entities. When notified of their noncompliance, each of these businesses ceased importation of these articles. Given the small number of small entities identified by DOE as having been noncompliant and that the law prohibiting the importation of these noncompliant articles within the United States was enacted in 1975, CBP does not anticipate a significant number of small entities attempting to import articles which violate 42 U.S.C 6302 and its implementing regulations. If a small entity does import an article in violation of 42 U.S.C 6302 and its implementing regulations, the small entity can request the DOE or the FTC allow CBP to grant the imported article a conditional release. CBP believes that cost associated with this conditional release to be negligible because this request is virtually costless to the small entity and the importer is already required to maintain a CBP basic importation and entry bond.

Accordingly, CBP does not believe this rule will have a significant impact on a substantial number of small entities. CBP welcomes any comments regarding this assessment. If CBP does not receive any comments contradicting this finding, CBP will certify that this rule will not have a significant economic impact on a substantial number of small entities at the final rule stage.

Paperwork Reduction Act

As there is no collection of information proposed in this document, the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3507) are inapplicable.

Signing Authority

This proposed regulation is being issued in accordance with 19 CFR 0.1(a)(1) pertaining to the Secretary of the Treasury's authority (or that of his delegate) to approve regulations related to certain customs revenue functions.

List of Subjects in 19 CFR Part 12

Customs duties and inspection, Electronic products, Entry of merchandise, Imports, Prohibited merchandise, Reporting and recordkeeping requirements, Restricted merchandise, Seizure and forfeiture.

Proposed Amendments to the CBP Regulations

For the reasons stated above, it is proposed to amend part 12 of title 19 of the Code of Federal Regulations (19 CFR Part 12) as set forth below.

PART 12—SPECIAL CLASSES OF MERCHANDISE

1. The general authority citation for part 12 continues to read as follows and the specific authority citation is added to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States (HTSUS)), 1624;

* * * * *

Section 12.50 also issued under 42 U.S.C. 6301;

* * * * *

2. A new center heading and new § 12.50 are added to read as follows:

Consumer Products and Industrial Equipment Subject to Energy Conservation or Labeling Standards

§ 12.50 Consumer products and industrial equipment subject to energy conservation or labeling standards.

(a) *Definitions.* For purposes of this section, the following terms have the meanings indicated:

Covered import. The term ''*covered import''* means a consumer product or industrial equipment that is classified by the Department of Energy as covered by an applicable energy conservation standard, or by the Federal Trade Commission as covered by an applicable energy labeling standard, pursuant to the Energy Policy and Conservation Act of 1975, as amended (42 U.S.C. 6291-6317), and that is imported or attempted to be imported.

DOE. The term ''*DOE''* means the Department of Energy.

Energy conservation standard. The term ''*energy conservation standard''* means any standard meeting the definitions of that term in 42 U.S.C. 6291(6) or 42 U.S.C. 6311(18).

FTC. The term ''*FTC''* means the Federal Trade Commission.

Noncompliant covered import. The term ''*noncompliant covered import''* means a covered import that the Department of Energy (DOE) or the Federal Trade Commission (FTC) has determined to be in violation of 42 U.S.C. 6302.

(b) *CBP action.* If a covered import does not comply with applicable energy conservation or labeling admissibility standards, the DOE or FTC may direct CBP to either refuse admission of the covered import pursuant to paragraph (c) of this section or recommend conditional release of the covered import to be brought into compliance pursuant to paragraph (d) of this section.

(c) *Refusal of admission.* CBP will refuse admission into the customs territory of the United States to any noncompliant covered import upon receipt of written or electronic notice from the DOE (*see also* 10 CFR 429.5) or FTC that identifies the importer of the noncompliant covered import and describes the subject import in a manner

sufficient to enable CBP to identify the article.

(d) *Conditional release.* In lieu of immediate refusal of admission into the customs territory of the United States, CBP, upon a recommendation from the DOE or FTC, may permit the release of a noncompliant covered import to the importer of record for purposes of reconditioning, re-labeling, or other modification. The release from CBP custody of any such covered import will be deemed conditional and subject to the bond conditions set forth in § 113.62 of this Chapter. Note: Conditionally released covered imports will also be subject to the jurisdiction of DOE and/or FTC.

(1) *Duration.* Unless extended in accordance with paragraph (d)(2) of this section, the conditional release period will terminate upon the earliest occurring of the following events:

(i) The date that CBP issues a notice of refusal of admission pursuant to paragraph (c) of this section;

(ii) The date that the DOE or FTC issues a notice to CBP stating that the covered import is in compliance and may proceed; or

(iii) At the conclusion of the 30-day period following the date of release.

(2) *Extension.* The conditional release period may be extended if both CBP and the importer of record receive, within the initial 30-day conditional release period or any subsequent authorized extension thereof, a written or electronic notice from the DOE or FTC stating the reason for and anticipated length of the extension.

(3) *Issuance of a redelivery notice and demand for redelivery.* If the noncompliant covered import is not timely brought into compliance, and if so directed by DOE or FTC, CBP will issue a refusal of admission notice to the importer pursuant to paragraph (c) of this section and, in addition, CBP will demand the redelivery of the specified covered product to CBP custody. The demand for redelivery may be made concurrently with the notice of refusal of admission.

(4) *Liquidated damages.* A failure to comply with a demand for redelivery made under this paragraph (d) will result in the assessment of liquidated damages equal to three times the value of the covered product. Value as used in this provision means value as determined under 19 U.S.C. 1401a.

Approved: March 20, 2012.

David V. Aguilar,

Acting Commissioner, U.S. Customs and Border Protection.

Timothy E. Skud,

Deputy Assistant Secretary of the Treasury.

U.S. Customs and Border Protection

19 CFR Part 111

[USCBP–2010–0038]

RIN 1651–AA80

Permissible Sharing of Client Records by Customs Brokers

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security.

ACTION: Withdrawal of notice of proposed rulemaking.

SUMMARY: This document withdraws a notice of proposed rulemaking, published in the **Federal Register** on October 27, 2010, that proposed amendments to the Customs and Border Protection (CBP) regulations that would allow brokers, upon the client's consent in a written authorization, to share client information with affiliated entities related to the broker so that these entities may offer non-customs business services to the broker's clients. Although the proposed rule was prepared in response to a request from a member of the broker community seeking to allow brokers to share clients' information for marketing purposes, there was opposition to the proposal from brokers due to the condition on sharing the information that CBP included in the document to protect importers' proprietary information. The notice is being withdrawn to permit further consideration of the relevant issues involved in the proposed rulemaking.

DATES: Effective March 26, 2012, the proposed rule published October 27, 2010, (75 FR 66050), is withdrawn.

FOR FURTHER INFORMATION CONTACT: Anita Harris, Chief, Broker Compliance Branch, Trade Policy and Programs, Office of International Trade, (202) 863–6069.

SUPPLEMENTARY INFORMATION:

Background

On October 27, 2010, Customs and Border Protection (CBP) published a notice of proposed rulemaking in the **Federal Register** (75 FR 66050) pertaining to the obligations of customs brokers to keep clients' information confidential. The proposed amendment would allow brokers, upon the client's written consent, to share client information with affiliated entities related to the broker so that these entities may offer non-customs business services to the broker's clients. The proposed amendment would also allow customs brokers to use a third-party to perform photocopying, scanning, and delivery of client records for the broker. These proposed changes were intended to update the regulations to reflect modern business practices, while protecting the confidentiality of client (importer) information. The comment period ended on December 27, 2010.

CBP received public comment on the proposed rulemaking. The majority of commenters expressed concern that the proposed rule did not serve the interests of the importing public. Specifically, there was opposition to the proposal from brokers due to the condition on sharing the information that CBP included in the document to protect importers' proprietary information.

Withdrawal of Notice of Proposed Rulemaking

CBP is withdrawing the notice published in the **Federal Register** (75 FR 66050) on October 27, 2010, pending further consideration of the relevant issues involved in the proposed rulemaking.

Dated: March 21, 2012.

David V. Aguilar,

Acting Commissioner, U.S. Customs and Border Protection.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R01–OAR–2009–0919; A–1–FRL–9651–9]

Approval and Promulgation of Air Quality Implementation Plans; Connecticut; Regional Haze

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing approval of a revision to the Connecticut State Implementation Plan (SIP) that addresses regional haze for the first planning period from 2008 through

2018. It was submitted by the Connecticut Department of Environmental Protection (now known as Connecticut Department of Energy and Environmental Protection, CT DEEP) on November 18, 2009, February, 24, 2012 and March 12, 2012. This revision addresses the requirements of the Clean Air Act (CAA) and EPA's rules that require States to prevent any future, and remedy any existing, manmade impairment of visibility in mandatory Class I areas (also referred to as the ''regional haze program''). States are required to assure reasonable progress toward the national goal of achieving natural visibility conditions in Class I areas.

DATES: Written comments must be received on or before April 25, 2012.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA–R01–OAR–2009–0919 by one of the following methods:

1. *www.regulations.gov:* Follow the on-line instructions for submitting comments.

2. *Email: arnold.anne@epa.gov*.

3. *Fax:* (617) 918–0047.

4. *Mail:* ''Docket Identification Number EPA–R01–OAR–2009–0919 Anne Arnold, U.S. Environmental Protection Agency, EPA New England Regional Office, Office of Ecosystem Protection, Air Quality Planning Unit, 5 Post Office Square—Suite 100, (Mail code OEP05–2), Boston, MA 02109–3912.

5. *Hand Delivery or Courier:* Deliver your comments to: Anne Arnold, Manager, Air Quality Planning Unit, U.S. Environmental Protection Agency, EPA New England Regional Office, Office of Ecosystem Protection, Air Quality Planning Unit, 5 Post Office Square—Suite 100, (mail code OEP05–2), Boston, MA 02109–3912. Such deliveries are only accepted during the Regional Office's normal hours of operation. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding legal holidays.

Instructions: Direct your comments to Docket ID No. EPA–R01–OAR–2009–0919. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *www.regulations.gov*, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit through *www.regulations.gov*, or email, information that you consider to be CBI or otherwise protected. The *www.regulations.gov* Web site is an ''anonymous access'' system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through *www.regulations.gov* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the electronic docket are listed in the *www.regulations.gov* index. Although listed in the index, some information is not publicly available, i.e., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in *www.regulations.gov* or in hard copy at Office of Ecosystem Protection, U.S. Environmental Protection Agency, EPA New England Regional Office, Office of Ecosystem Protection, Air Quality Planning Unit, 5 Post Office Square—Suite 100, Boston, MA. EPA requests that if at all possible, you contact the contact listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding legal holidays.

In addition, copies of the State submittal are also available for public inspection during normal business hours, by appointment at the Bureau of Air Management, Department of Energy and Environmental Protection, State Office Building, 79 Elm Street, Hartford, CT 06106–1630.

FOR FURTHER INFORMATION CONTACT: Anne McWilliams, Air Quality Unit, U.S. Environmental Protection Agency, EPA New England Regional Office, 5 Post Office Square—Suite 100, (Mail Code OEP05–02), Boston, MA 02109–3912, telephone number (617) 918–1697, fax number (617) 918–0697, email *mcwilliams.anne@epa.go*.

Throughout this document, wherever ''we,'' ''us,'' or ''our'' is used, we mean the EPA.

I. What is the background for EPA's proposed action?

A. The Regional Haze Problem

Regional haze is visibility impairment that is produced by a multitude of sources and activities which are located across a broad geographic area and emit fine particles and their precursors (e.g., sulfur dioxide, nitrogen oxides, and in some cases, ammonia and volatile organic compounds). Fine particle precursors react in the atmosphere to form fine particulate matter ($PM_{2.5}$) (e.g., sulfates, nitrates, organic carbon, elemental carbon, and soil dust), which also impair visibility by scattering and absorbing light. Visibility impairment reduces the clarity, color, and visible distance that one can see. $PM_{2.5}$ can also cause serious health effects and mortality in humans and contributes to environmental effects such as acid deposition.

Data from the existing visibility monitoring network, the ''Interagency Monitoring of Protected Visual Environments'' (IMPROVE) monitoring network, show that visibility impairment caused by air pollution occurs virtually all the time at most national park and wilderness areas. The average visual range in many Class I areas (i.e., national parks and memorial parks, wilderness areas, and international parks meeting certain size criteria) in the Western United States is 100–150 kilometers, or about one-half to two-thirds of the visual range that would exist without manmade air pollution. In most of the eastern Class I areas of the United States, the average visual range is less than 30 kilometers, or about one-fifth of the visual range that would exist under estimated natural conditions. See 64 FR 35715 (July 1, 1999).

B. Background Information

In section 169A(a)(1) of the 1977 Amendments to the CAA, Congress created a program for protecting visibility in the nation's national parks and wilderness areas. This section of the CAA establishes as a national goal the ''prevention of any future, and the remedying of any existing, impairment of visibility in mandatory Class I Federal areas [1] which impairment results from manmade air pollution.'' On December 2, 1980, EPA promulgated regulations to address visibility impairment in Class I areas that is ''reasonably attributable'' to a single source or small group of sources, i.e., ''reasonably attributable visibility impairment'' (RAVI). See 45 FR 80084 (Dec. 2, 1980). These regulations represented the first phase in addressing visibility impairment. EPA deferred action on regional haze that emanates from a variety of sources until monitoring, modeling and scientific knowledge about the relationships between pollutants and visibility impairment were improved.

Congress added section 169B to the CAA in 1990 to address regional haze issues. EPA promulgated a rule to address regional haze on July 1, 1999 (64 FR 35714), the Regional Haze Rule. The Regional Haze Rule revised the existing visibility regulations to integrate into the regulation provisions addressing regional haze impairment and established a comprehensive visibility protection program for Class I areas. The requirements for regional haze, found at 40 CFR 51.308 and 51.309, are included in EPA's visibility protection regulations at 40 CFR 51.300–309. Some of the main elements of the regional haze requirements are summarized in Section II. The requirement to submit a regional haze SIP applies to all 50 States, the District of Columbia and the Virgin Islands. In 40 CFR 51.308(b), States are required to submit the first implementation plan addressing regional haze visibility impairment no later than December 17, 2007. On January 15, 2009, EPA found that 37 States, the District of Columbia and the U.S. Virgin Islands failed to submit this required implementation plan. See 74 FR 2392 (Jan. 15, 2009). In particular, EPA found that Connecticut failed to submit a plan that met the requirements of 40 CFR 51.308. See 74 FR 2393. On November 18, 2009, the Bureau of Air Management of the CT DEEP submitted revisions to the Connecticut State Implementation Plan (SIP) to address regional haze as required by 40 CFR 51.308. EPA has reviewed Connecticut's submittal and is proposing to find that it is consistent with the requirements of 40 CFR 51.308 as outlined in Section II.

C. Roles of Agencies in Addressing Regional Haze

Successful implementation of the regional haze program will require long-term regional coordination among States, tribal governments and various federal agencies. As noted above, pollution affecting the air quality in Class I areas can be transported over long distances, even hundreds of kilometers. Therefore, to effectively address the problem of visibility impairment in Class I areas, States need to develop strategies in coordination with one another, taking into account the effect of emissions from one jurisdiction on the air quality in another.

Because the pollutants that lead to regional haze can originate from sources located across broad geographic areas, EPA has encouraged the States and Tribes across the United States to address visibility impairment from a regional perspective. Five regional planning organizations (RPOs) were developed to address regional haze and related issues. The RPOs first evaluated technical information to better understand how their States and Tribes impact Class I areas across the country, and then pursued the development of regional strategies to reduce emissions of $PM_{2.5}$ and other pollutants leading to regional haze.

The Mid-Atlantic/Northeast Visibility Union (MANE–VU) RPO is a collaborative effort of State governments, tribal governments, and various federal agencies established to initiate and coordinate activities associated with the management of regional haze, visibility and other air quality issues in the Northeastern United States. Member State and Tribal governments include: Connecticut, Delaware, the District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Penobscot Indian Nation, Rhode Island, and Vermont.

D. The Relationship of the Clean Air Interstate Rule and the Cross-State Air Pollution Rule to Regional Haze Requirements

The Clean Air Interstate Rule (CAIR) required some states to reduce emissions of SO_2 and NO_X that contribute to violations of the 1997 National Ambient Air Quality Standards (NAAQS) for $PM_{2.5}$ and ozone. See 70 FR 25162 (May 12, 2005). CAIR established emissions budgets for SO_2 and NO_X. On October 13, 2006, EPA's ''Regional Haze Revisions to Provisions

[1] Areas designated as mandatory Class I Federal areas consist of national parks exceeding 6000 acres, wilderness areas and national memorial parks exceeding 5000 acres, and all international parks that were in existence on August 7, 1977 (42 U.S.C. 7472(a)). In accordance with section 169A of the CAA, EPA, in consultation with the Department of Interior, promulgated a list of 156 areas where visibility is identified as an important value (44 FR 69122, November 30, 1979). The extent of a mandatory Class I area includes subsequent changes in boundaries, such as park expansions (42 U.S.C. 7472(a)). Although States and Tribes may designate as Class I additional areas which they consider to have visibility as an important value, the requirements of the visibility program set forth in section 169A of the CAA apply only to ''mandatory Class I Federal areas.'' Each mandatory Class I Federal area is the responsibility of a ''Federal Land Manager'' (FLM). (42 U.S.C. 7602(i)). When we use the term ''Class I area'' in this action, we mean a ''mandatory Class I Federal area.''

Governing Alternative to Source-Specific Best Available Retrofit Technology (BART) Determinations; Final Rule'' (hereinafter known as the ''Alternative to BART Rule'') was published in the **Federal Register.** See 71 FR 60612. This rule establishes that states participating in the CAIR program need not require Best Available Retrofit Technology (BART) for SO_2 and NO_X at BART-eligible electric generating units (EGUs). Many States relied on CAIR as an alternative to BART for SO_2 and NO_X for their subject EGUs.

CAIR was later found to be inconsistent with the requirements of the CAA and the rule was remanded to EPA. *See North Carolina* v. *EPA,* 550 F.3d 1176 (D.C. Cir. 2008). The court left CAIR in place until replaced by EPA with a rule consistent with its opinion. *See North Carolina* v. *EPA,* 550 F.3d 1176, 1178 (D.C. Cir. 2008).

EPA promulgated the Cross-State Air Pollution Rule (CSAPR), to replace CAIR in 2011 (76 FR 48208, August 8, 2011). Connecticut was subject to ozone season NO_X controls under the CAIR program, however, the State was not subject to any of the requirements of CSAPR and thus the option to rely on CSAPR as an alternative to BART was not available to the State.

On December 30, 2011, the DC Circuit Court issued an order addressing the status of CSAPR and CAIR in response to motions filed by numerous parties seeking a stay of CSAPR pending judicial review. In that order, the D.C. Circuit stayed CSAPR pending the court's resolutions of the petitions for review of that rule in *EME Homer Generation, L.P.* v. *EPA* (No. 11–1302 and consolidated cases). The court also indicated that EPA is expected to continue to administer CAIR in the interim until the court rules on the petitions for review of CSAPR.

On December 15, 2011, Connecticut held a public hearing on proposed Regulations of Connecticut State Agencies (RCSA) section 22a–174–22d. This regulation, once adopted, will permanently maintain the ozone season NO_X emission reductions that were previously required under the CAIR program. Connecticut has requested the parallel processing of RCSA section 22a–174–22d with EPA's action on the Connecticut Regional Haze SIP revision. Under this procedure, EPA prepared this action before the State's final adoption of this regulation. Connecticut has indicated that they plan to have a final adopted regulation by June 2012, prior to our final action on its Regional Haze SIP. After Connecticut submits its final adopted regulation, EPA will review the regulation to determine whether it differs from the proposed regulation. If the final regulation does differ from the proposed regulation, EPA will determine whether these differences are significant. Ordinarily, changes that are limited to issues such as allocation methodology would not be deemed significant for SIP approval purposes, assuming the methodology does not lead to allocations in excess of the total state budget. Based on EPA's determination regarding the significance of any changes in the final regulation, EPA would then decide whether it is appropriate to prepare a final rule and describe the changes in the final rulemaking action, re-propose action based on the Connecticut's final adopted regulation, or other such action as may be appropriate.

RCSA 22a–174–22d is a replacement for RCSA 22a–174–22c, ''The Clean Air Interstate Rule (CAIR) Nitrogen Oxides (NO_X) Ozone Season Trading Program,'' which is federally approved by EPA and currently being implemented in Connecticut. Proposed regulation RCSA 22a–174–22d is one component of Connecticut's NO_X Alternative BART Program. This alternative program is discussed in detail in Section III.B.5.

II. What are the requirements for regional haze SIPs?

A. The CAA and the Regional Haze Rule (RHR)

Regional haze SIPs must assure reasonable progress towards the national goal of achieving natural visibility conditions in Class I areas. Section 169A of the CAA and EPA's implementing regulations require States to establish long-term strategies for making reasonable progress toward meeting this goal. Implementation plans must also give specific attention to certain stationary sources that were in existence on August 7, 1977, but were not in operation before August 7, 1962, and require these sources, where appropriate, to install Best Available Retrofit Technology (BART) controls for the purpose of eliminating or reducing visibility impairment. The specific regional haze SIP requirements are discussed in further detail below.

B. Determination of Baseline, Natural, and Current Visibility Conditions

The RHR establishes the deciview (dv) as the principal metric for measuring visibility. This visibility metric expresses uniform changes in haziness in terms of common increments across the entire range of visibility conditions, from pristine to extremely hazy conditions. Visibility is determined by measuring the visual range (or deciview), which is the greatest distance, in kilometers or miles, at which a dark object can be viewed against the sky. The deciview is a useful measure for tracking progress in improving visibility, because each deciview change is an equal incremental change in visibility perceived by the human eye. Most people can detect a change in visibility at one deciview.[2]

The deciview is used in expressing Reasonable Progress Goals (RPGs) (which are interim visibility goals towards meeting the national visibility goal), defining baseline, current, and natural conditions, and tracking changes in visibility. The regional haze SIPs must contain measures that ensure ''reasonable progress'' toward the national goal of preventing and remedying visibility impairment in Class I areas caused by manmade air pollution by reducing anthropogenic emissions that cause regional haze. The national goal is a return to natural conditions, i.e., manmade sources of air pollution would no longer impair visibility in Class I areas.

To track changes in visibility over time at each of the 156 Class I areas covered by the visibility program and as part of the process for determining reasonable progress, States must calculate the degree of existing visibility impairment at each Class I area within the State at the time of each regional haze SIP submittal and periodically review progress every five years midway through each 10-year planning period. To do this, the RHR requires States to determine the degree of impairment (in deciviews) for the average of the 20 percent least impaired (''best'') and 20 percent most impaired (''worst'') visibility days over a specified time period at each of their Class I areas. In addition, States must also develop an estimate of natural visibility conditions for the purposes of comparing progress toward the national goal. Natural visibility is determined by estimating the natural concentrations of pollutants that cause visibility impairment and then calculating total light extinction based on those estimates. EPA has provided guidance to States regarding how to calculate baseline, natural and current visibility conditions in documents entitled, *Guidance for Estimating Natural Visibility Conditions Under the Regional Haze Rule,* September 2003, (EPA–454/B–03–005) available at www.epa.gov/ttncaaa1/t1/memoranda/rh_envcurhr_gd.pdf (hereinafter referred to as ''EPA's 2003

[2] The preamble to the RHR provides additional details about the deciview. See 64 FR 35714, 35725 (July 1, 1999).

Natural Visibility Guidance''), and *Guidance for Tracking Progress Under the Regional Haze Rule,* September 2003 (EPA–454/B–03–004), available at www.epa.gov/ttncaaa1/t1/memoranda/rh_tpurhr_gd.pdf (hereinafter referred to as ''EPA's 2003 Tracking Progress Guidance'').

For the first regional haze SIPs that were due by December 17, 2007, ''baseline visibility conditions'' were the starting points for assessing ''current'' visibility impairment. Baseline visibility conditions represent the degree of impairment for the 20 percent least impaired days and 20 percent most impaired days at the time the regional haze program was established. Using monitoring data from 2000 through 2004, States are required to calculate the average degree of visibility impairment for each Class I area within the State, based on the average of annual values over the five year period. The comparison of initial baseline visibility conditions to natural visibility conditions indicates the amount of improvement necessary to attain natural visibility, while the future comparison of baseline conditions to the then current conditions will indicate the amount of progress made. In general, the 2000–2004 baseline period is considered the time from which improvement in visibility is measured.

C. Determination of Reasonable Progress Goals (RPGs)

The vehicle for ensuring continuing progress towards achieving the natural visibility goal is the submission of a series of regional haze SIPs from the States that establish RPGs for Class I areas for each (approximately) 10-year planning period. The RHR does not mandate specific milestones or rates of progress, but instead calls for States to establish goals that provide for ''reasonable progress'' toward achieving natural (i.e., ''background'') visibility conditions for their Class I areas. In setting RPGs, States must provide for an improvement in visibility for the most impaired days over the (approximately) 10-year period of the SIP, and ensure no degradation in visibility for the least impaired days over the same period.

States have significant discretion in establishing RPGs, but are required to consider the following factors established in the CAA and in EPA's RHR: (1) The costs of compliance; (2) the time necessary for compliance; (3) the energy and non-air quality environmental impacts of compliance; and (4) the remaining useful life of any potentially affected sources. States must demonstrate in their SIPs how these factors are considered when selecting the RPGs for the best and worst days for each applicable Class I area. See 40 CFR 51.308(d)(1)(i)(A). States have considerable flexibility in how they take these factors into consideration, as noted in EPA's July 1, 2007 memorandum from William L. Wehrum, Acting Administrator for Air and Radiation, to EPA Regional Administrators, EPA Regions 1–10, entitled *Guidance for Setting Reasonable Progress Goals under the Regional Haze Program* (p. 4–2, 5–1)(EPA's Reasonable Progress Guidance). In setting the RPGs, States must also consider the rate of progress needed to reach natural visibility conditions by 2064 (referred to as the ''uniform rate of progress'' or the ''glide path'') and the emission reduction measures needed to achieve that rate of progress over the 10-year period of the SIP. The year 2064 represents a rate of progress which States are to use for analytical comparison to the amount of progress they expect to achieve. In setting RPGs, each State with one or more Class I areas (''Class I State'') must also consult with potentially ''contributing States,'' i.e., other nearby States with emission sources that may be contributing to visibility impairment at the Class I State's areas. See 40 CFR 51.308(d)(1)(iv).

D. Best Available Retrofit Technology (BART)

Section 169A of the CAA directs States to evaluate the use of retrofit controls at certain larger, often uncontrolled, older stationary sources in order to address visibility impacts from these sources. Specifically, the CAA requires States to revise their SIPs to contain such measures as may be necessary to make reasonable progress towards the natural visibility goal, including a requirement that certain categories of existing stationary sources built between 1962 and 1977 procure, install, and operate the ''Best Available Retrofit Technology'' as determined by the State. (CAA 169A(b)(2)a)).[3] States are directed to conduct BART determinations for such sources that may be anticipated to cause or contribute to any visibility impairment in a Class I area. Rather than requiring source-specific BART controls, States also have the flexibility to adopt an emissions trading program or other alternative program as long as the alternative provides greater reasonable progress towards improving visibility than BART.

On July 6, 2005, EPA published the *Guidelines for BART Determinations Under the Regional Haze Rule* at Appendix Y to 40 CFR part 51 (hereinafter referred to as the ''BART Guidelines'') to assist States in determining which of their sources should be subject to the BART requirements and in determining appropriate emission limits for each applicable source. In making a BART applicability determination for a fossil fuel-fired electric generating plant with a total generating capacity in excess of 750 megawatts (MW), a State must use the approach set forth in the BART Guidelines. A State is encouraged, but not required, to follow the BART Guidelines in making BART determinations for other types of sources.

States must address all visibility impairing pollutants emitted by a source in the BART determination process. The most significant visibility impairing pollutants are sulfur dioxide (SO_2), nitrogen oxides (NO_X), and particulate matter (PM). EPA has stated that States should use their best judgment in determining whether volatile organic compounds (VOCs), or ammonia (NH_3) and ammonia compounds impair visibility in Class I areas.

The RPOs provided air quality modeling to the States to help them in determining whether potential BART sources can be reasonably expected to cause or contribute to visibility impairment in a Class I area. Under the BART Guidelines, States may select an exemption threshold value for their BART modeling, below which a BART eligible source would not be expected to cause or contribute to visibility impairment in any Class I area. The State must document this exemption threshold value in the SIP and must state the basis for its selection of that value. Any source with emissions that model above the threshold value would be subject to a BART determination review. The BART Guidelines acknowledge varying circumstances affecting different Class I areas. States should consider the number of emission sources affecting the Class I areas at issue and the magnitude of the individual sources' impacts. Any exemption threshold set by the State should not be higher than 0.5 deciviews. See 70 FR 39161 (July 6, 2005).

In their SIPs, States must identify potential BART sources, described as ''BART-eligible sources'' in the RHR, and document their BART control determination analyses. The term ''BART-eligible source'' used in the

[3] The set of ''major stationary sources'' potentially subject to BART are listed in CAA section 169A(g)(7).

BART Guidelines means the collection of individual emission units at a facility that together comprises the BART-eligible source. See 70 FR 39161 (July 6, 2005). In making BART determinations, section 169A(g)(2) of the CAA requires that States consider the following factors: (1) The costs of compliance; (2) the energy and non-air quality environmental impacts of compliance; (3) any existing pollution control technology in use at the source; (4) the remaining useful life of the source; and (5) the degree of improvement in visibility which may reasonably be anticipated to result from the use of such technology. States are free to determine the weight and significance to be assigned to each factor. See 70 FR 39170 (July 6, 2005).

A regional haze SIP must include source-specific BART emission limits and compliance schedules for each source subject to BART. Once a State has made its BART determination, the BART controls must be installed and in operation as expeditiously as practicable, but no later than five years after the date of EPA approval of the regional haze SIP, as required by CAA (section 169(g)(4)) and the RHR (40 CFR 51.308(e)(1)(iv)). In addition to what is required by the RHR, general SIP requirements mandate that the SIP must also include all regulatory requirements related to monitoring, recordkeeping, and reporting for the BART controls on the source. States have the flexibility to choose the type of control measures they will use to meet the requirements of BART.

E. Long-Term Strategy (LTS)

In 40 CFR 51.308(d)(3) of the RHR, States are required to include a LTS in their SIPs. The LTS is the compilation of all control measures a State will use to meet any applicable RPGs. The LTS must include ''enforceable emissions limitations, compliance schedules, and other measures as necessary to achieve the reasonable progress goals'' for all Class I areas within, or affected by emissions from, the State. See 40 CFR 51.308(d)(3).

When a State's emissions are reasonably anticipated to cause or contribute to visibility impairment in a Class I area located in another State, the RHR requires the impacted State to coordinate with the contributing States in order to develop coordinated emissions management strategies. See 40 CFR 51.308(d)(3)(i). In such cases, the contributing State must demonstrate that it has included in its SIP all measures necessary to obtain its share of the emission reductions needed to meet the RPGs for the Class I area. The RPOs have provided forums for significant interstate consultation, but additional consultations between States may be required to sufficiently address interstate visibility issues. This is especially true where two States belong to different RPOs.

States should consider all types of anthropogenic sources of visibility impairment in developing their LTS, including stationary, minor, mobile, and area sources. At a minimum, States must describe how each of the seven factors listed below is taken into account in developing their LTS: (1) Emission reductions due to ongoing air pollution control programs, including measures to address RAVI; (2) measures to mitigate the impacts of construction activities; (3) emissions limitations and schedules for compliance to achieve the RPG; (4) source retirement and replacement schedules; (5) smoke management techniques for agricultural and forestry management purposes including plans as currently exist within the State for these purposes; (6) enforceability of emissions limitations and control measures; (7) the anticipated net effect on visibility due to projected changes in point, area, and mobile source emissions over the period addressed by the LTS. See 40 CFR 51.308(d)(3)(v).

F. Coordinating Regional Haze and Reasonably Attributable Visibility Impairment (RAVI) LTS

As part of the RHR, EPA revised 40 CFR 51.306(c) regarding the LTS for RAVI to require that the RAVI plan must provide for a periodic review and SIP revision not less frequently than every three years until the date of submission of the State's first plan addressing regional haze visibility impairment, which was due December 17, 2007, in accordance with 40 CFR 51.308(b) and (c). On or before this date, the State must revise its plan to provide for review and revision of a coordinated LTS for addressing reasonably attributable and regional haze visibility impairment, and the State must submit the first such coordinated LTS with its first regional haze SIP. Future coordinated LTS's, and periodic progress reports evaluating progress towards RPGs, must be submitted consistent with the schedule for SIP submission and periodic progress reports set forth in 40 CFR 51.308(f) and 51.308(g), respectively. The periodic reviews of a State's LTS must report on both regional haze and RAVI impairment and must be submitted to EPA as a SIP revision.

G. Monitoring Strategy and Other Implementation Plan Requirements

In 40 CFR 51.308(d)(4), the RHR requires a monitoring strategy for measuring, characterizing, and reporting of regional haze visibility impairment that is representative of all mandatory Class I Federal areas within the State. The strategy must be coordinated with the monitoring strategy required in 40 CFR 51.305 for RAVI. Compliance with this requirement may be met through participation in the Interagency Monitoring of Protected Visual Environments (IMPROVE) network. The monitoring strategy is due with the first regional haze SIP, and it must be reviewed every five years. The monitoring strategy must also provide for additional monitoring sites if the IMPROVE network is not sufficient to determine whether RPGs will be met.

The SIP must also provide for the following:

- Procedures for using monitoring data and other information in a State with mandatory Class I areas to determine the contribution of emissions from within the State to regional haze visibility impairment at Class I areas both within and outside the State;
- Procedures for using monitoring data and other information in a State with no mandatory Class I areas to determine the contribution of emissions from within the State to regional haze visibility impairment at Class I areas in other States;
- Reporting of all visibility monitoring data to the Administrator at least annually for each Class I area in the State, and where possible, in electronic format;
- Developing a statewide inventory of emissions of pollutants that are reasonably anticipated to cause or contribute to visibility impairment in any Class I area. The inventory must include emissions for a baseline year, emissions for the most recent year for which data are available, and estimates of future projected emissions. A State must also make a commitment to update the inventory periodically; and
- Other elements, including reporting, recordkeeping, and other measures necessary to assess and report on visibility.

Pursuant to 40 CFR 51.308(f) of the RHR, state control strategies must cover an initial implementation period extending to the year 2018, with a comprehensive reassessment and revision of those strategies, as appropriate, every 10 years thereafter. Periodic SIP revisions must meet the core requirements of 40 CFR 51.308(d) with the exception of BART. The BART

provisions of 40 CFR 51.308(e), as noted above, apply only to the first implementation period. Periodic SIP revisions will assure that the statutory requirement of reasonable progress will continue to be met.

H. Consultation With States and Federal Land Managers (FLMs)

The RHR requires that States consult with FLMs before adopting and submitting their SIPs. See 40 CFR 51.308(i). States must provide FLMs an opportunity for consultation, in person and at least 60 days prior to holding any public hearing on the SIP. This consultation must include the opportunity for the FLMs to discuss their assessment of impairment of visibility in any Class I area and to offer recommendations on the development of the RPGs and on the development and implementation of strategies to address visibility impairment. Further, a State must include in its SIP a description of how it addressed any comments provided by the FLMs. Finally, a SIP must provide procedures for continuing consultation between the State and FLMs regarding the State's visibility protection program, including development and review of SIP revisions, five-year progress reports, and the implementation of other programs having the potential to contribute to impairment of visibility in Class I areas.

III. What is EPA's analysis of Connecticut's regional haze SIP submittal?

On November 18, 2009, February, 24, 2012, and March 12, 2012, CT DEEP's Bureau of Air Management submitted revisions to the Connecticut SIP to address regional haze as required by 40 CFR 51.308. EPA has reviewed Connecticut's submittal and is proposing to find that it is consistent with the requirements of 40 CFR 51.308 as outlined in Section II. A detailed analysis follows.

Connecticut is responsible for developing a regional haze SIP which addresses Connecticut's impact on any nearby Class I areas. As Connecticut has no Class I areas within its borders, Connecticut is not required to address the following Regional Haze SIP elements: (a) Calculation of baseline and natural visibility conditions; (b) establishment of reasonable progress goals; (c) monitoring requirements; and d) RAVI requirements.

A. Connecticut's Impact on MANE–VU Class I Areas

Connecticut is a member of the MANE–VU RPO. The MANE–VU RPO contains seven Class I areas in four States: Moosehorn Wilderness Area, Acadia National Park, and Roosevelt/Campobello International Park in Maine; Presidential Range/Dry River Wilderness Area and Great Gulf Wilderness Area in New Hampshire; Brigantine Wilderness Area in New Jersey; and Lye Brook Wilderness Area in Vermont.

Through source apportionment modeling, MANE–VU assisted States in determining their contribution to the visibility impairment of each Class I area in the MANE–VU region. Connecticut and the other MANE–VU States adopted a weight-of-evidence approach which relied on several independent methods for assessing the contribution of different sources and geographic source regions to regional haze in the northeastern and mid-Atlantic portions of the United States. Details about each technique can be found in the Northeast States for Coordinated Air Use Management (NESCAUM) document *Contributions to Regional Haze in the Northeast and Mid-Atlantic United States,* August 2006 (hereinafter referred to as the ''Contribution Report'').[4]

The source apportionment modeling demonstrated that the contribution of Connecticut emissions to total sulfate (the main contributor to visibility impairment in the Northeast, see Section III.C.3) was consistently determined to be no more than 0.76% of the total sulfate at any Class I area. This finding was consistently predicted by different assessment techniques that are based on the application of disparate chemical, meteorological and physical principles. The greatest modeled contribution from Connecticut for each of the MANE–VU Class I areas was 0.76% sulfate at Acadia National Park, 0.56% sulfate at Moosehorn Wilderness Area and Roosevelt Campobello International Park, 0.48% sulfate at Great Gulf Wilderness Area and Presidential Range—Dry River Wilderness Area, 0.55% sulfate at Lye Brook Wilderness Area, and 0.53% at Brigantine Wilderness Area. The impact of sulfate on visibility is discussed in greater detail below.

The MANE–VU Class I States determined that any State contributing at least 2.0% of the total sulfate observed on the 20 percent worst visibility days in 2002 were contributors to visibility impairment at the Class I area. Connecticut, Rhode Island, Vermont, and the District of Columbia were determined to contribute less than 2.0% of sulfate at any of the Class I areas in the Northeast.

EPA is proposing to find that CT DEEP has adequately demonstrated that emissions from Connecticut sources do not cause or contribute to visibility impairment in nearby Class I Areas.

B. Best Available Retrofit Technology (BART)

According to 51.308(e), ''The State must submit an implementation plan containing emission limitations representing BART and schedules for compliance with BART for each BART-eligible source that may reasonably be anticipated to cause or contribute to any impairment of visibility in any Class I Federal area, unless the State demonstrates that an emissions trading program or other alternative will achieve greater reasonable progress toward natural visibility conditions.'' On October 13, 2006, EPA's ''Regional Haze Regulations to Provisions Governing Alternative to Source-Specific Best Available Retrofit Technology (BART) Determinations; Final Rule'' (hereinafter known as the ''Alternative to BART Rule'') was published in the **Federal Register**. See 71 FR 60612. Connecticut chose to demonstrate that programs already developed by the State provide greater progress in visibility improvement than source-by-source BART determinations. A demonstration that the alternative program will achieve greater reasonable progress than would have resulted from the installation and operation of BART at all sources subject to BART in the state must be based on the following:

(1) A list of all BART-eligible sources within the State.

(2) A list of all BART-eligible sources and all BART source categories covered by the alternative program.

(3) Determination of the BART benchmark. If the alternative program has been designed to meet a requirement other than BART, as in the case of Connecticut, the State may determine the best system of continuous emission control technology and associated emission reductions for similar types of sources within a source category based on both source specific and category-wide information, as appropriate.

(4) An analysis of the projected emission reductions achieved through the alternative program.

(5) A determination based on a clear weight of evidence that the alternative program achieves greater reasonable progress than would be achieved through the installation and operation of BART at the covered sources.

[4] The August 2006 NESCAUM document *Contributions to Regional Haze in the Northeast and Mid-Atlantic United States* has been provided as part of the docket to this proposed rulemaking.

1. Identification of All BART Eligible Sources

Determining BART-eligible sources is the first step in the BART process. BART-eligible sources in Connecticut were identified in accordance with the methodology in Appendix Y of the Regional Haze Rule, *Guidelines for BART Determinations Under the Regional Haze Rule, Part II, How to Identify BART–Eligible Sources.* See 70 FR 39158. This guidance consists of the following criteria:

- The unit falls into one of the listed source categories;
- The unit was constructed or reconstructed between 1962 and 1977; and
- The unit has the potential to emit over 250 tons per year of sulfur dioxide, nitrogen oxides, particulate matter, volatile organic compounds, or ammonia.

The BART Guidelines require States to address SO_2, NO_X, and particulate matter. States are allowed to use their best judgment in deciding whether VOC or ammonia emissions from a source are likely to have an impact on visibility in the area. The State of Connecticut addressed SO_2, NO_X, and used particulate matter less than 10 microns in diameter (PM_{10}) as an indicator for particulate matter to identify BART eligible units, as the BART Guidelines require. Consistent with the BART Guidelines, the State of Connecticut did not evaluate emissions of VOCs and ammonia in BART determinations due to the lack of impact on visibility in the area due to anthropogenic sources. The majority of VOC emissions in Connecticut are biogenic in nature. Therefore, the ability to further reduce total ambient VOC concentrations at Class I areas is limited. Point, area, and mobile sources of VOCs in Connecticut are already comprehensively controlled as part of an ozone attainment and maintenance strategy. With respect to ammonia, the overall ammonia inventory is very uncertain, but the amount of anthropogenic emissions at sources that were BART-eligible is relatively small, and no additional sources were identified that had greater than 250 tons per year ammonia and required a BART analysis.

The identification of BART sources in Connecticut was undertaken as part of a multi-State analysis conducted by the NESCAUM. NESCAUM worked with CT DEEP licensing engineers to review all sources and determine their BART eligibility. CT DEEP identified ten sources as BART-eligible. Pfizer Inc. Boilers No. 5, No. 8, and the Organic Synthesis Plant 2 (OSP2) were originally included in the list of BART-eligible units. On March 10, 2006, the CT DEEP issued Consent Order No. 8262 to Pfizer Inc. which caps the actual aggregated emissions from the boilers and OSP2 to less than 250 tons per year for each of the air pollutants NO_X, SO_2, and PM_{10}. Therefore, Pfizer's facility is no longer considered BART-eligible. The final BART-eligible sources are listed below.

TABLE 1—BART-ELIGIBLE SOURCES IN CONNECTICUT

Source, unit and location	Fuel	BART source category	2002 Emissions (ton/yr)	Highest 2002 visibility impact dv) [5]
Middletown Power LLC, Unit 3,* Middletown, CT	Residual Oil, Natural Gas	240 MW EGU	SO_2: 269 NO_X: 468	0.11
Middletown Power LLC, Unit 4,* Middletown, CT	Residual Oil, Natural Gas	400 MW EGU	SO_2: 308 NO_X: 145	0.06
Montville Power LLC, Unit 6, Montville, CT	Residual Oil Distillate Oil	410 MW EGU	SO_2: 794 NO_X: 312	0.16
Norwalk Power LLC, Unit 2, Norwalk, CT	Residual Oil	172 MW EGU	SO_2: 322 NO_X: 82	0.08
PSEG Power Connecticut LLC, Bridgeport Harbor Station, Unit 3, Bridgeport, CT.	Coal, Residual Oil	410 MW EGU	SO_2: 4,024 NO_X: 1,689	0.84
PSEG Power Connecticut LLC, New Haven Harbor Station, Unit 1, New Haven, CT.	Residual Oil, Distillate Oil, Natural Gas.	465 MW EGU	SO_2: 4,010 NO_X: 1,143	0.74
Cascades Boxboard Group—CT LLC, PFI Boiler, Versailles, CT.	Residual Oil, Natural Gas	275 MMbtu/hr Industrial Boiler.	SO_2: 0.5 NO_X: 215	0.03

*Located at a facility greater than 750 MW.

2. Identification of All BART Source Categories Covered by the Alternative Program

In crafting Connecticut's alternative to BART demonstration, the State relied on SO_2 emission reductions required by Regulations of Connecticut State Agencies (RCSA section 22a–174–19a (Control of Sulfur Dioxide Emissions from Power Plant and Other Large Stationary Sources of Air Pollution). The Connecticut programs to reduce NO_X emissions are RCSA Section 22a–174–22 (Control of Nitrogen Oxide Emissions), and proposed RCSA Section 22a–174–22d (Post-2011 Connecticut Ozone Season NO_X Budget Program).[6] A complete list of sources addressed can be found in Table 9.4 of Connecticut's November 18, 2009 SIP submittal. All of the identified BART-eligible EGUs are included in Connecticut's alternative to BART demonstration.

3. Determination of the BART Benchmark

According to the Alternative to BART Rule, in developing the BART benchmark, with one exception, States must follow the approach for making BART determinations under section 51.308(e)(1). The one exception to this general approach is where the alternative program has been designed to meet requirements other than BART; in this case, States are not required to make BART determinations under 51.308(e)(1) and may use a simplifying assumption in establishing a BART benchmark based on an analysis of what BART is likely to be for similar types of sources within a source category. Under either approach to establishing a BART

[5] Visibility Impact is measured in units of deciviews (dv). A deciview measures the incremental visibility change discernable by the human eye. The deciview values included in Table 1 are from Attachment X of Connecticut's November 18, 2009 SIP submittal.

[6] CT RCSA Section 22a–175–22d maintains NO_X emission reductions required by the Clean Air Interstate Rule. Connecticut is subject to ozone-season CAIR limits, however, the State was not included in the final Cross State Air Pollution Rule. See 76 FR 48208 (Aug. 8, 2011). Therefore Connecticut has proposed an intra-state trading program for NO_X to make permanent these emission reductions.

benchmark, we believe that the presumptions for EGUs in the BART Guidelines should be used for comparison to a trading program or other alternative program, unless the State determines that such presumptions are not appropriate for a particular EGU. See 71 FR 60619. Even though Connecticut had the option of using the less stringent EPA presumptive limits, the State opted to use the MANE–VU recommended BART emission limits for non-CAIR EGUs and industrial boilers in setting the BART benchmark. These limits are listed in Table 2.

TABLE 2—MANE–VU RECOMMENDED BART LIMITS

Category	SO_2 Limits	NO_X Limits
Non-CAIR EGUs	Coal—95% control or 0.15 lb/MMbtu Oil—95% control or 0.33 lb/MMBtu (0.3% fuel sulfur limit.	In NO_X SIP call area, extend use of controls to year round 0.1–0.25 lb/MMBtu depending on coal and boiler type.
Industrial Boilers	90% control, or 0.5% fuel sulfur limit (0.55 lb/MMBtu)	0.1–0.4 lb/MMBtu, depending on boiler and fuel type.

4. Connecticut's SO_2 Alternative BART Program

RCSA section 22a–174–19a (Control of Sulfur Dioxide Emissions from Power Plant and Other Large Stationary Sources of Air Pollution) was submitted to EPA as part of Connecticut's November 18, 2008 $PM_{2.5}$ attainment demonstration SIP revision. RCSA Section 22a–174–19a became effective December 28, 2000. It includes a two-tiered timeframe for reducing SO_2 emissions from large EGUs and industrial sources (approximately 59 sources). Starting January 1, 2002, all sources subject to Connecticut's Post 2002–NO_X Budget Program were required to:

- Combust liquid fuel, gaseous fuel or a combination of each, provided that each fuel possesses a fuel sulfur limit of equal to or less than 0.5% sulfur, by weight;
- Meet an average emission rate of equal to or less than 0.55 pounds of SO_2 per MMBtu for each calendar quarter for an affected unit; or
- Meet an average emission rate of equal to or less than 0.5 pounds of SO_2 per MMBtu calculated for each calendar quarter, if such owner or operator averages the emissions from two or more affected units at the premises.

Starting on January 1, 2003, all sources in Connecticut that are Acid Rain Sources under Title IV of the Clean Air Act and are subject to Connecticut's Post-2002 NO_X Budget Program were required to:

- Combust liquid fuel, gaseous fuel or a combination of each, provided that each fuel possesses a fuel sulfur limit of equal to or less than 0.3% sulfur, by weight;
- Meet an average emission rate of equal to or less than 0.33 pounds of SO_2 per MMBtu for each calendar quarter for an affected unit at a premises; or
- Meet an average emission rate of equal to or less than 0.3 pounds of SO_2 per MMBtu calculated from two or more affected units at a premises.

Prior to January 1, 2005, CT DEEP allowed sources subject to the January 1, 2003 emission rates to meet such emission rates by using SO_2 discrete emission reduction credits certified by CT DEEP or EPA's SO_2 Acid Rain Program allowances; also known as emissions credit trading. Connecticut General Statues (CGS) section 22a-198 suspended SO_2 emission credit trading starting January 1, 2005.

The first phase of Connecticut's SO_2 controls plan commenced in January 1, 2002, therefore, CT DEEP selected 2001 as the base year for the alternative to BART demonstration. Likewise, since the second phase of Connecticut's SO_2 plan was fully implemented in 2005, Connecticut chose 2006 for comparison.

TABLE 3—ANNUAL POTENTIAL (ALLOWABLE AT 8760 HOURS) EMISSIONS

[Tons per year]

BART-eligible unit	2001 *	2002 *	2006 *	MANE–VU BART workgroup presumptive BART 2012	EPA presumptive BART 2012
Middletown Unit 3	**5,709	5,709	3,426	3,426	11,419
Middletown Unit 4	**11,284	11,284	6,770	6,770	22,568
Montville Unit 6	22,442	11,221	6,733	6,733	22,442
Norwalk Unit 2	8,557	4,278	2,567	2,567	8,557
PSEG Bridgeport Harbor Unit 3	18,212	9,877	5,926	2,694	***2,694
PSEG New Haven Harbor Unit 1	20,508	10,282	6,169	6,169	20,508
Cascades Boxboard Group PFI Boiler	1,325	662	662	662	1,325
Total	88,037	53,313	32,253	29,021	89,513

* Based on the lower of RCSA section 22a-174–19a regulatory limits or federally enforceable permit conditions.
** Fuel sulfur limited to 0.5% in Consent Order no. 7024.
*** While this level of control is not required by EPA Guidelines, it is recommended that such level of control be considered.

Presumptive BART potential emission levels for 2012 (tons per year) in Table 3 were calculated by multiplying the MANE–VU BART workgroup and EPA recommended BART emission rates in lb/MMBtu by the design capacity of the unit in MMBtu/hr by 8760 hrs/year as follows:

- For Bridgeport Harbor 3, the sole coal-burning unit, 0.15 lb/MMBtu, the MANE–VU BART workgroup's and EPA's recommended SO_2 emission rate for coal-burning units, was used.
- For the five oil-burning EGUs, the MANE–VU BART workgroup's and

EPA's recommended BART emission rates of 0.33 lb/MMBtu and 1.1 lb/MMBtu respectively, were used in the calculations.

• MANE–VU BART workgroup post-BART SO_2 potential emissions for Cascades Boxboard Group were assumed not to change after 2002 because the source became subject to RCSA section 22a 174–19a in 2002 (0.55 lb/MMBtu) and the allowable SO_2 limit did not change after that date so the 2006 potential emissions remain the same.

Table 4 lists the actual 2001, 2002, and 2006 SO_2 emissions from the Connecticut BART-eligible units. It should be noted that, for the most part, the actual emissions are well below the potential emission limits.

TABLE 4—ACTUAL ANNUAL SO_2 EMISSIONS

[Tons per year]

BART-eligible Unit	2001	2002	2006
Middletown Unit 3	1,830	269	124
Middletown Unit 4	1,015	308	123
Montville Unit 6	2,182	794	217
Norwalk Unit 2	1,701	322	374
PSEG Bridgeport Harbor Unit 3	10,429	4,024	2,808
PSEG New Haven Harbor Unit 1	9,543	4,010	689
Cascades Boxboard Group PFI Boiler	251	0.5	215
Total	26,951	9,727	4,550

As detailed in Attachment X of Connecticut's SIP submittal, potential emissions from all sources subject to RCSA 22a–174–19a was 89,537 tons in 2002 and 60,304 tons in 2006. As shown in Table 5, by comparing SO_2 potential emission reductions since 2002 from all Post-2002 NO_X Budget Program sources subject to RCSA section 22a–174–19a (89,537 tons minus 60,304 tons equals 29,233 tons) with SO_2 potential post-BART emission reductions from BART-eligible sources since 2002 (53,313 tons minus 29,021 tons equals 24,292), it is apparent that Connecticut's existing SO_2 regulatory requirements achieve approximately 4,841 tons of greater reductions than estimated reductions from BART alone.

TABLE 5—COMPARISON OF SO_2 POTENTIAL EMISSIONS AND REDUCTIONS SINCE 2002 FROM ALL POST-2002 NO_X BUDGET PROGRAM SOURCES VS. BART-ELIGIBLE SOURCES ALONE

[Tons per year]

Option	2002	2006	Reduction in potential emissions
SO_2 potential emissions from all Post-2002 NO_X Budget Program sources	89,537	60,304	29,233
SO_2 potential emissions from BART-eligible sources alone	53,313	29,021	24,292
Additional reductions beyond BART-eligible sources alone	.....	.....	4,841

In addition, Table 6 shows the reductions in actual SO_2 emissions from all Post-2002 NO_X Budget Program sources and all BART-eligible sources since 2001. Note the significant reduction in actual SO_2 emissions starting in 2002 (effective year of Tier 1 of RCSA section 22a–174–19a) and continuing in 2006 (Tier 2 of RCSA section 22a–174–19a was effective in 2003).

Furthermore, Attachment X of Connecticut's November 18, 2009 Regional Haze SIP submittal contains maps of the facility reductions in actual SO_2 emissions since 2001 from all Post-2002 NO_X Budget Program sources as well as all BART-eligible sources (both Connecticut-specific and as related to Class I areas). These graphics demonstrate that the emission reductions resulting from RCSA section 22a–174–19a are geographically comparable to the locations of the BART-eligible sources.

TABLE 6—COMPARISON OF SO_2 ACTUAL EMISSION REDUCTIONS SINCE 2001 FROM ALL POST-2002 NO_X BUDGET PROGRAM SOURCES VS. BART-ELIGIBLE SOURCES ALONE

[Tons per year]

Option	2001	2002	2006	Reduction in actual emissions since 2001
SO_2 actual emissions from all Post-2002 NO_X Budget Program sources	35,625	13,056	7,146	28,479
SO_2 actual emissions from BART-eligible sources alone	26,951	9,727	4,549	22,402
Additional reductions beyond BART-eligible sources alone	.....	.....	.....	6,077

5. Connecticut's NO_X Alternative BART Program

Most of the BART-eligible units in Connecticut installed NO_X reduction technology during the early to mid 1990s in response to Connecticut's ozone reduction strategies, whereby lower NO_X emission limits were promulgated. As described below, CT DEEP has concluded that the NO_X emission limits contained in the existing regulations are at least as stringent as BART. The CT DEEP alternative NO_X program is comprised of ozone season emission limits and non-ozone season emission limits.

Pursuant to the ozone reasonably available control technology (RACT) provisions of the 1990 Clean Air Act Amendments, in 1995, CT DEEP adopted NO_X control regulations (RCSA section 22a–174–22) achieving substantial reductions in 24-hour NO_X emission rates from a variety of sources, including the BART-eligible units. The maximum allowable 24-hour NO_X emission rate for cyclone furnaces (including Middletown Unit 3) was reduced by 52%, the maximum allowable 24-hour NO_X emission rate for existing coal-fired boilers (Bridgeport Unit 3) was reduced by 58%, and the maximum allowable 24-hour NO_X emission rate for No. 6 oil-fired boilers (including Middletown Unit 4, Montville Unit 6, Norwalk Unit 2, New Haven Harbor Unit 1 and Cascades Boxboard's PFI boiler) was reduced by 17% when compared to previously adopted NO_X limits. This regulation was approved into the Connecticut SIP on October 6, 1997. See 62 FR 52016.

Since 1999, CT DEEP has adopted several NO_X budget trading programs which progressively reduced allowances allocated to Connecticut's NO_X Budget Program sources (i.e., EGUs 15 MW and greater and certain large industrial sources) during the summer ozone season. RCSA section 22a–174–22a limited the summer NO_X emissions budget to 5,866 tons beginning in 1999 and RCSA section 22a–174–22b reduced the summer NO_X budget further to 4,466 tons beginning in 2003. All of Connecticut's BART-eligible units are currently subject to the Post-2002 NO_X Budget Program and are also included in the CAIR NO_X Ozone Season Trading Program starting in 2009 pursuant to RCSA section 22a–174–22c. The CAIR NO_X Ozone Season Trading Program includes a NO_X budget for Connecticut sources of 2,691 tons that is not to be exceeded during the ozone season (May 1st through September 30th each year). Implementation of the CAIR Program will result in a 76% reduction from the estimated 11,203 tons of ozone season NO_X emissions from NO_X Budget Program sources in 1990. Each of these sections (i.e., RCSA section 22a–174–22a, RCSA section 22a–174–22b, and RCSA section 22a–174–22c) were previously approved into the Connecticut SIP.[7]

On December 23, 2008, CAIR was remanded without vacatur.[8] On July 6, 2011, EPA promulgated the Cross State Air Pollution Rule (CSAPR) as a replacement to the remanded CAIR Rule. See 76 FR 48208 (Aug. 8, 2011). Connecticut was not included in the final CSAPR. On December 15, 2011, CT DEEP held a public hearing on proposed 22a–174–22d as a replacement to the remanded CAIR ozone season program for Connecticut (i.e., RCSA section 22a–174–22c). On February 24, 2012, CT DEEP submitted a request for parallel processing of this regulation. Under this procedure, EPA prepared this action before the State's final adoption of 22a–174–22d. Connecticut has indicated that they plan to have a final adopted regulation by June 2012, prior to our final action on its Regional Haze SIP. EPA will review the finalized version of 22a–174–22d to determine whether it differs from the proposed regulation. If the final regulation does differ from the proposed regulation, EPA will determine whether these differences are significant. Ordinarily, changes that are limited to issues such as allocation methodology would not be deemed significant for SIP approval purposes, assuming the methodology does not lead to allocations in excess of the total state budget. Based on EPA's determination regarding the significance of any changes in the final regulation, EPA would then decide whether it is appropriate to prepare a final rule and describe the changes in the final rulemaking action, re-propose action based on Connecticut's final adopted regulation, or other such action as may be appropriate.

RCSA section 22a–174–22d limits Connecticut's ozone season NO_X budget to 2,691 tons, the same budget as included in the CAIR Ozone Season Trading Program. In addition, RCSA section 22a–174–22d only allows for intra-state trading which will insure that all reductions necessary to meet the ozone season NO_X budget will occur in the state.

In addition to the ozone season requirements for NO_X Budget Program sources (i.e., EGUs 15 MW and greater and large industrial sources), Connecticut adopted subdivision 22a–174–22(e)(3) on October 30, 2000 which requires that, starting in October 2003, NO_X Budget Program sources that are also subject to RCSA section 22a–174–22 meet a non-ozone seasonal NO_X emission rate of 0.15 lb/MMBtu. These revisions to RCSA section 22a–174–22 were submitted to EPA as part of Connecticut's November 18, 2008 $PM_{2.5}$ attainment demonstration SIP revision.[9] Therefore, all of Connecticut's NO_X Budget Program sources, including all of Connecticut's BART-eligible sources, are subject to year-round NO_X emission restrictions. Pursuant to RCSA section 22a–174–22, CT DEEP allows sources subject to the 24-hour and non-ozone season NO_X emission limits to use NO_X discrete emission reduction credits or NO_X Budget Program allowances to comply with the subject emission limits. Table 7 shows the NO_X reductions in potential emissions between 2002 and 2006 from all Post-2002 NO_X Budget Program sources as compared with the reduction in NO_X potential emissions from BART-eligible sources alone. The ''low end'' and ''high end'' numbers referenced in the 2006 column in Table 7 are based on the MANE–VU BART workgroup's recommended emission limit range of 0.1 lb/MMBtu (low end) to 0.25 lb/MMBtu (high end) for Non-CAIR EGUs and 0.1 lb/MMBtu (low end) to 0.4 lb/MMBtu (high end) for industrial boilers, depending on coal and boiler type.

[7] RCSA section 22a–174–22a was approved by EPA on September 28, 1999. See 64 FR 52233. RCSA section 22a–174–22b was approved by EPA on December 27, 2000. See 65 FR 81743. With the finalization of Connecticut's CAIR rule (RSCA section 22a–174–22c), Connecticut repealed both RCSA section 22a–174–22a (effective September 4, 2007) and 22a–174–22b (effective May 1, 2010). RCSA section 22a–174–22c was approved by EPA on January 24, 2008. See 73 FR 4105.

[8] *www.epa.gov/airmarkets/progsregs/cair/docs/CAIRRemandOrder.pdf.*

[9] On March 12, 2012, CT DEEP submitted a letter to EPA clarifying that the Appendix to the November 18, 2008 Fine Particulate Matter ($PM_{2.5}$) Attainment Demonstration should have included the regulatory text of RCSA section 22a–174–22(e)(3). All of the documentation necessary to satisfy the public participation requirements of 40 CFR 51 was included in the Appendix.

TABLE 7—COMPARISON OF NO_X POTENTIAL EMISSIONS AND REDUCTIONS SINCE 2002 FROM ALL POST-2002 NO_X BUDGET PROGRAM SOURCES VS. BART-ELIGIBLE SOURCES ALONE

[Tons per year]

Option	2002	2006	Reduction in potential emissions
NO_X potential emissions from all Post-2002 NO_X Budget Program sources	46,188	34,833	11,355.
NO_X potential emissions from BART-eligible sources alone	27,554	High End—24,434	High End—3,120.
		Low End—9,701	Low End—17,853.

Connecticut noted that between 1994 and 2006 NO_X potential emissions from all Post-2002 NO_X Budget Program sources were reduced from 89,812 tons to 34,833 tons (a difference of 54,979 tons), whereas application of BART alone would have resulted in reductions between 19,225 tons (high end) and 33,958 tons (low end).

Connecticut cites three elements of its BART alternative program to support a finding that the clear weight of evidence demonstrates that its NO_X BART alternative program achieves better than BART reductions:

—Under RCSA section 22a–174–22 sources that create trading credits must automatically retire 10% of those credits and sources using credits are required to retire 5% more than the need to meet emission obligations.

—Connecticut's budget under CAIR is a conservative allocation of emissions. After the initial budget determination, another source was added to the universe of sources subject to CAIR without increasing the budget. In addition, the CAIR budget was based on an outdated NO_X SIP Call budget that did not incorporate changes due to a memorandum of understanding between Connecticut, Rhode Island, and Massachusetts.

—Under its CAIR program, Connecticut changed the methodology for allocating allowances such that it is based on megawatt output instead of heat input. Thus, less efficient EGUs receive substantially fewer allowances than they received under Connecticut's earlier NO_X Budget Programs, thereby encouraging further NO_X reducing measures such as controls and/or repowering. That same allocation methodology is also included in proposed RCSA section 22a–174–22d.

While CAIR is currently still in place, it is only effective pending review of CSAPR. However, Connecticut has proposed parallel processing of its replacement to CAIR, RCSA section 22a–174–22d. This regulation as proposed maintains a cap of 2,691 tons per ozone season and allocates emissions credits to EGUs based in part on their megawatt generation.

Furthermore, Attachment X of Connecticut's November 18, 2009 Regional Haze SIP submittal contains maps of the facility reductions in actual NO_X emissions since 1994 from all Post-2002 NO_X Budget Program sources as well as all BART-eligible sources (both Connecticut-specific and as related to Class I areas). These graphics demonstrate that the emission reductions resulting from RCSA Section 22a–174–22 including subdivision 22a–174–22(e)(3) and proposed RCSA section 22a–174–22d (the replacement for RCSA section 22a–174–22c) are geographically comparable to the locations of the BART-eligible sources.

6. EPA's Assessment of Connecticut's Alternative to BART Program Demonstration

EPA is proposing to find that Connecticut has adequately demonstrated that the potential and actual SO_2 emission reductions from RCSA section 22a–174–19a provide greater emission reductions than the presumptive BART level. Connecticut has shown via Attachment X of the November 18, 2009 Regional Haze SIP submittal that for both SO_2 and NO_X emissions, the geographic area covered by the Post-2002 NO_X Budget Program sources is comparable to the geographic area covered by the BART-eligible units, therefore visibility modeling is not required, as noted in the Alternative to BART Rule. See 71 FR 60612. Therefore, EPA is proposing to find that the SO_2 alternative to BART program demonstration meets the requirements of our Alternative to BART Rule.

As part the NO_X alternative to BART program demonstration, Connecticut has presented a weight of evidence demonstration. EPA approved of the weight of evidence approach Connecticut has taken in our Alternative to BART Rule. See 71 FR 60621–22 (Oct. 13, 2006). This approach was intended to provide flexibility for States who wished to pursue alternatives to BART but had difficulty directly showing that their alternative program would necessarily result in greater reasonable progress than the application of BART alone. Under the theoretical scenario where Connecticut would require the most stringent of the MANE–VU recommended controls for each and every one of its BART-eligible sources, it may be difficult or time consuming and expensive for Connecticut to show that its alternative program is at least as stringent as BART alone. However, we note that this scenario is not realistic for several reasons. First, unlike many BART-eligible sources, Connecticut's BART-eligible sources have installed a variety of control equipment in order to meet Connecticut's NO_X Budget Program. As Connecticut noted, since 1994, Connecticut's NO_X programs have resulted in over 55,000 tons per year of reductions from Post-2002 NO_X Budget Program sources, well in excess of what application of BART alone would achieve. Moreover, Connecticut has demonstrated that the NO_X emissions from the BART-eligible sources have a minimal impact on nearby Class I areas. As summarized in Table 8, the greatest impact that any BART-eligible source has on any Class I area due to NO_X emissions in 2002 is PSEG Bridgeport Unit 3 with an impact of only 0.31 dv.

TABLE 8—HIGHEST VISIBILITY IMPACT AT ANY CLASS I AREA DUE TO NO_X FROM EACH BART-ELIGIBLE SOURCE IN CONNECTICUT

Facility	Highest deciview impact [10]
Middletown Unit 3	0.06
Middletown Unit 4	0.03
Montville Unit 6	0.04
Norwalk Unit 2	0.01
PSEG Bridgeport Harbor Unit 3	0.31
PSEG New Haven Harbor Unit 1	0.14
Cascade Boxboard Group PFI Boiler	0.03

HadConnecticut conducted a source-by-source BART analysis, the current

[10] The deciview impact of each BART-eligible source, by pollutant, can be found in Attachment X of Connecticut's November 18, 2009 SIP submittal.

controls and the minimal impact from the BART-eligible sources would have been among the individualized factors that Connecticut would have considered. Based on these factors, we do not believe that the most stringent level of controls would have necessarily been appropriate for Connecticut's BART-eligible sources, and therefore do not believe that the low end emission rates from the MANE–VU recommended BART limit reflect a realistic BART baseline.

An additional piece of evidence for Connecticut's alternative to BART program demonstration is that, while Connecticut does not have a firm state-wide, year-round cap on emissions from EGUs, the firm cap during ozone season acts as an impediment to emissions growth during non-ozone season.

In EPA's Alternative to BART Rule, the included scenario was only intended to be demonstrative of those situations where a weight of evidence approach would be appropriate. Connecticut's NO_X alternative to BART program demonstration fits comfortably within the intent behind the weight of evidence approach. Given the extent of evidence—the controls already required prior to the baseline year, the minimal visibility impact of the BART-eligible sources, and the impediment of NO_X emission growth from new EGUs—we are proposing to find that Connecticut has shown by a clear weight of evidence that their NO_X BART alternative which relies on RCSA Section 22a–174–22 including subdivision 22a–174–22(e)(3), and RCSA section 22a–174–22d meets the requirements of our BART alternative rule.

7. Connecticut's PM BART Determinations

EPA's BART Guidelines for 750 MW and greater power plants do not contain presumptive emission limits for PM. The MANE–VU BART workgroup's recommended BART emission limits for $PM_{2.5}$ (measured as particles less than 2.5 microns in diameter, or $PM_{2.5}$) are emission rate ranges of 0.02–0.04 lb/MMBtu for non-CAIR EGUs and 0.02–0.07 lb/MMBtu for industrial boilers.

Existing Controls at Sources

Table 9 shows the visibility impact and existing PM controls at BART-eligible units in Connecticut. Several units have electrostatic precipitators (ESP) already in place.

TABLE 9—THE VISIBILITY IMPACT AND EXISTING CONTROLS AT THE BART-ELIGIBLE UNITS

BART-eligible Unit	Highest PM_{10} impact on 20% best days (deciview)	Existing PM controls
Middletown Unit 3	0.0000	ESP
Middletown Unit 4	0.0025	None
Montville Unit 6	0.0005	None
Norwalk Unit 2	0.0002	ESP
PSEG Bridgeport Harbor Unit 3	0.0035	ESP, Baghouse
PSEG New Haven Harbor Unit 1	0.0012	ESP
Cascades Boxboard Group PFI Boiler	0.0004	None

Middletown Unit 3, Norwalk Unit 2, PSEG Bridgeport Harbor Unit 3, and PSEG New Haven Harbor Unit 1 have existing ESP control. PSEG Bridgeport Harbor Unit 3 also installed a baghouse for mercury control in July 2008, thereby achieving concomitant PM reduction benefits.

Visibility Improvement Reasonably Expected From Application of Controls

MANE–VU's 2002 individual unit modeling shows that none of Connecticut's PM emissions from BART-eligible sources have a significant visibility impact on any Class I area. As can be seen in Table 9, the highest individual PM visibility impact (0.0035 dv) is significantly less than the 0.1 deciview individual impact MANE–VU warrants worthy of consideration of BART controls.[11]

Cost of Controls

Table 10 shows the cost of PM controls per year for those BART-eligible units without PM controls as well as actual PM emissions for 2005. Numbers were calculated by using the range of control technologies and cost per actual cubic feet per minute (ACFM) of gas flow values provided in NESCAUM's *Assessment of Control Technology Options for BART-Eligible Sources*[12] and ACFM values provided in the 2005 emission statement.

TABLE 10—COST OF PM CONTROLS AND 2005 ACTUAL EMISSIONS

BART-eligible unit	Capital cost ranges ($)	Fixed & Variable operation and maintenance cost ranges ($/year)	2005 Actual PM emissions (tons)
Middletown Unit 4	$20,496,000–68,320,000	$683,200–3,416,000	46
Montville Unit 6	20,220,000–67,400,000	674,000–3,370,000	18
Cascades Boxboard Group PFI Boiler	120,000–4,800,000	48,000–324,000	42

[11] See Section 4.1 of the MANE–VU Five Factor Analysis of BART-Eligible Sources, Attachment W of Connecticut's November 18, 2009 SIP submittal.

[12] See Attachment Z of the Connecticut November 18, 2009 SIP submittal.

Remaining Useful Life of the Source

The MANE–VU BART workgroup's recommendation for sources which rely on the remaining useful life factor for the determination of BART is that these sources should either control emissions from the BART-eligible sources prior to 2013 or accept a federally enforceable permit limitation or retirement date prior to each state's public notice and hearing processes and FLM review of BART SIP elements. Similar to the other New England States, the Connecticut analysis did not weight this factor.

Energy and Non-Air Quality Environmental Impacts

No significant energy or non-air quality environmental benefits or disbenefits associated with PM controls were identified.

Connecticut's Determination

Given the very high cost per ton reduced for the remaining BART-eligible units without PM controls along with the lack of PM contribution evidence from MANE–VU's modeling, Connecticut determined that the existing conditions with respect to PM control are equivalent to BART.

EPA's Assessment

EPA is proposing to approve Connecticut's determination that further primary PM control beyond the controls already implemented by Connecticut's BART-eligible units is not warranted at this time as such measures are not cost-effective and the visibility contribution from Connecticut's BART-eligible units with respect to PM is insignificant.

8. BART Enforceability

EPA is proposing to approve RCSA Section 22a–174–19a and revisions to RCSA Section 22a–174–22, including new subdivision 22a–174–22(e)(3), with this rulemaking. In addition, pursuant to CT DEEP's request for parallel processing, EPA is proposing approval of Connecticut's proposed RCSA Section 22a–174–22d. After the State submits the adopted State Regulation RCSA 22a–174–22d (including a response to all public comments raised during the State's public participation process), EPA will prepare a final rulemaking notice. If the State's formal SIP submittal contains changes which occur after EPA's notice of proposed rulemaking, such changes must be described in EPA's final rulemaking action. If the State's changes are significant, then EPA must decide whether it is appropriate to re-propose our action with regard to the State's SIP submittal.

C. Long-Term Strategy

As described in Section II.E of this action, the LTS is a compilation of State-specific control measures relied on by the State to obtain its share of emission reductions to support the RPGs established by Maine, New Hampshire, Vermont, and New Jersey, the nearby Class I area States. Connecticut's LTS for the first implementation period addresses the emissions reductions from federal, State, and local controls that take effect in the State from the baseline period starting in 2002 until 2018. Connecticut participated in the MANE–VU regional strategy development process and supported a regional approach towards deciding which control measures to pursue for regional haze, which was based on technical analyses documented in the following reports: (a) The Contribution Report; (b) *Assessment of Reasonable Progress for Regional Haze in MANE–VU Class I Areas* (available at *www.marama.org/visibility/RPG/FinalReport/RPGFinalReport_070907.pdf*); (c) *Five-Factor Analysis of BART-Eligible Sources: Survey of Options for Conducting BART Determinations* (available at *www.nescaum.org/documents/bart-final-memo-06-28-07.pdf*); and (d) *Assessment of Control Technology Options for BART–Eligible Sources: Steam Electric Boilers, Industrial Boilers, Cement Plants and Paper, and Pulp Facilities* (available at *www.nescaum.org/documents/bart-control-assessment.pdf*).

1. Emissions Inventory for 2018 With Federal and State Control Requirements

The State-wide emissions inventories used by MANE–VU in its regional haze technical analyses were developed by MARAMA for MANE–VU with assistance from Connecticut. The 2018 emissions inventory was developed by projecting 2002 emissions forward based on assumptions regarding emissions growth due to projected increases in economic activity and emissions reductions expected from federal and State regulations. MANE–VU's emissions inventories included estimates of NO_X, coarse particulate matter (PM_{10}), $PM_{2.5}$, and SO_2, VOC, and NH_3. The BART guidelines direct States to exercise judgment in deciding whether VOC and NH_3 impair visibility in their Class I area(s). As discussed further in Section III.C.3 below, MANE–VU demonstrated that anthropogenic emissions of sulfates are the major contributor to $PM_{2.5}$ mass and visibility impairment at Class I areas in the Northeast and Mid-Atlantic region. It was also determined that the total ammonia emissions in the MANE–VU region are extremely small.

MANE–VU developed emissions inventories for four inventory source classifications: (1) Stationary point sources, (2) stationary area sources, (3) non-road mobile sources, and (4) on-road mobile sources. The New York Department of Environmental Conservation also developed an inventory of biogenic emissions for the entire MANE–VU region. Stationary point sources are those sources that emit greater than a specified tonnage per year, depending on the pollutant, with data provided at the facility level. Stationary area sources are those sources whose individual emissions are relatively small, but due to the large number of these sources, the collective emissions from the source category could be significant. Non-road mobile sources are equipment that can move but do not use the roadways. On-road mobile source emissions are automobiles, trucks, and motorcycles that use the roadway system. The emissions from these sources are estimated by vehicle type and road type. Biogenic sources are natural sources like trees, crops, grasses, and natural decay of plants. Stationary point sources emission data is tracked at the facility level. For all other source types, emissions are summed on the county level.

There are many federal and State control programs being implemented that MANE–VU and Connecticut anticipate will reduce emissions between the baseline period and 2018. Emission reductions from these control programs in the MANE–VU region were projected to achieve substantial visibility improvement by 2018 at all of the MANE–VU Class I areas. To assess emissions reductions from ongoing air pollution control programs, BART, and reasonable progress goals, MANE–VU developed 2018 emissions projections called ''Best and Final.'' The emissions inventory provided by the State of Connecticut for the Best and Final 2018 projections is based on expected control requirements.

Connecticut relied on emission reductions from the following ongoing and expected air pollution control programs as part of the State's long term strategy. For electrical generating units (EGUs), Connecticut relied on RCSA sections 22a–174–19a which limits SO_2 emissions from all EGUs, proposed RCSA section 22a–174–22d which limits ozone season NO_X for all EGUs, RCSA section 22a–174–22 which limits the non-ozone season NO_X emissions for all EGUs, and Connecticut General

Statues, section 22a–199 which limits mercury emissions for all coal-fired EGUs. Connecticut also relied on the following controls on non-EGU point sources in estimating 2018 emissions inventories: NO_X SIP Call Phases I and II; NO_X Reasonably Available Control Technology (RACT) in 1-hour Ozone SIP; NO_X Ozone Transport Commission (OTC) 2001 Model Rule for Industrial, Commercial, and Institutional (ICI) Boilers; VOC 2-year, 4-year, 7-year and 10-year Maximum Achievable Control Technology (MACT) Standards; Combustion Turbine and Reciprocating Internal Combustion Engine (RICE) MACT; and Industrial Boiler/Process Heater MACT (also known as the Industrial Boiler MACT).

On July 30, 2007, the U.S. Court of Appeals for the District of Columbia vacated and remanded the Industrial Boiler MACT Rule. *NRDC* v. *EPA,* 489F.3d 1250 (DC Cir. 2007). This MACT was vacated since it was directly affected by the vacatur and remand of the Commercial and Industrial Solid Waste Incinerator (CISWI) definition rule. EPA proposed a new Industrial Boiler MACT rule to address the vacatur on June 4, 2010 (75 FR 32006) and issued a final rule on March 21, 2011 (76 FR 15608). On May 18, 2011, EPA stayed the effective date of the Industrial Boiler MACT pending review by the DC Circuit or the completion of EPA's reconsideration of the rule. See 76 FR 28662.

On December 2, 2011, EPA issued a proposed reconsideration of the MACT standards for existing and new boilers at major (76 FR 80598) and area (76 FR 80532) source facilities, and for Commercial and Industrial Solid Waste Incinerators (76 FR 80452). On January 9, 2012, the U.S. District Court for the District of Columbia vacated EPA's stay of the effectiveness date of the Industrial Boiler MACT, reinstating the original effective date and therefore requiring compliance with the current rule in 2014. *Sierra Club* v. *Jackson,* Civ. No. 11–1278, slip op. (D.D.C. Jan. 9, 2012).

Even though Connecticut's modeling is based on the old Industrial Boiler MACT limits, Connecticut's modeling conclusions are unlikely to be affected because the expected reductions in SO_2 and PM resulting from the vacated MACT rule are a relatively small component of the Connecticut inventory and the expected emission reductions from the final MACT rule are comparable to those modeled. In addition, the new MACT rule requires compliance by 2014 and therefore the expected emission reductions will be achieved prior to the end of the first implementation period in 2018. Thus, EPA does not expect that differences between the old and revised Industrial Boiler MACT emission limits would affect the adequacy of the existing Connecticut regional haze SIP. If there is a need to address discrepancies between projected emissions reductions from the old Industrial Boiler MACT and the Industrial Boiler MACT finalized in March 2011, we expect Connecticut to do so in its 5-year progress report.

Controls on area sources expected by 2018 include: the OTC VOC rules for consumer products (RCSA 22a–174–40); VOC control measures for architectural and industrial maintenance coatings (RCSA 22a–174–41) and solvent cleaning (RCSA 22a–174–20(l)); VOC control measures for adhesive and sealants (RCSA 22a–174–44); VOC control measures for emulsified and cutback asphalt paving (RCSA 22a–174–20(k)); and VOC control measures for portable fuel containers (contained in EPA's Mobile Source Air Toxics rule).

Controls on mobile sources expected by 2018 include: On-board diagnostics testing for 1979 and new vehicles (RCSA 22a–174–27); Federal On-Board Refueling Vapor Recovery (ORVR) Rule; Federal Tier 2 Motor Vehicle Emissions Standards and Gasoline Sulfur Requirements; Federal Heavy-Duty Diesel Engine Emission Standards for Trucks and Buses; and Federal Emission Standards for Large Industrial Spark-Ignition Engines and Recreation Vehicles.

Controls on non-road sources expected by 2018 include the following federal regulations: Control of Air Pollution: Determination of Significance for Nonroad Sources and Emission Standards for New Nonroad Compression Ignition Engines at or above 37 kilowatts (59 FR 31306, June 17, 1994); Control of Emissions of Air Pollution from Nonroad Diesel Engines (63 FR 56967, Oct. 23, 1998); Control of Emissions from Nonroad Large Spark-Ignition Engines and Recreational Engines (67 FR 68241, Nov. 8, 2002); and Control of Emissions of Air Pollution from Nonroad Diesel Engines and Fuels (69 FR 38958, June 29, 2004).

Tables 11 and 12 are summaries of the 2002 baseline and 2018 estimated emissions inventories for Connecticut. The 2018 estimated emissions include emissions growth as well as emission reductions due to ongoing emission control strategies and reasonable progress goals.

2. Modeling To Support the LTS and Determine Visibility Improvement for Uniform Rate of Progress

MANE–VU performed modeling for the regional haze LTS for the 11 Mid-Atlantic and Northeast States and the District of Columbia. The modeling analysis is a complex technical evaluation that began with selection of the modeling system. MANE–VU used the following modeling system:

- *Meteorological Model:* The Fifth-Generation Pennsylvania State University/National Center for Atmospheric Research (NCAR) Mesoscale Meteorological Model (MM5) version 3.6 is a nonhydrostatic, prognostic meteorological model routinely used for urban- and regional-scale photochemical, $PM_{2.5}$, and regional haze regulatory modeling studies.
- *Emissions Model:* The Sparse Matrix Operator Kernel Emissions (SMOKE) version 2.1 modeling system is an emissions modeling system that generates hourly gridded speciated emission inputs of mobile, non-road mobile, area, point, fire, and biogenic emission sources for photochemical grid models.
- *Air Quality Model:* The EPA's Models-3/Community Multiscale Air Quality (CMAQ) version 4.5.1 is a photochemical grid model capable of addressing ozone, PM, visibility and acid deposition at a regional scale.
- *Air Quality Model:* The Regional Model for Aerosols and Deposition (REMSAD), is a Eulerian grid model that was primarily used to determine the attribution of sulfate species in the Eastern US via the species-tagging scheme.
- *Air Quality Model:* The California Puff Model (CALPUFF), version 5 is a non-steady-state Lagrangian puff model used to access the contribution of individual States' emissions to sulfate levels at selected Class I receptor sites.

CMAQ modeling of regional haze in the MANE–VU region for 2002 and 2018 was carried out on a grid of 12x12 kilometer (km) cells that covers the 11 MANE–VU States (Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont) and the District of Columbia and States adjacent to them. This grid is nested within a larger national CMAQ modeling grid of 36x36 km grid cells that covers the continental United States, portions of Canada and Mexico, and portions of the Atlantic and Pacific Oceans along the east and west coasts. Selection of a representative period of meteorology is crucial for evaluating baseline air quality conditions and projecting future changes in air quality due to changes in emissions of visibility-impairing pollutants. MANE–VU conducted an in-depth analysis which resulted in the selection of the entire year of 2002 (January 1–December 31) as the best period of meteorology available for conducting the CMAQ modeling. The MANE–VU States' modeling was developed consistent with EPA's *Guidance on the Use of Models and Other Analyses for Demonstrating Attainment of Air Quality Goals for Ozone, $PM_{2.5}$, and Regional Haze*, April 2007 (EPA–454/B–07–002, available at *www.epa.gov/scram001/guidance/guide/final-03-pm-rh-guidance.pdf*), and EPA document, *Emissions Inventory Guidance for Implementation of Ozone and Particulate Matter National Ambient Air Quality Standards (NAAQS) and Regional Haze Regulations,* August 2005 and updated November 2005 (EPA–454/R–05–001, available at *www.epa.gov/ttnchie1/eidocs/eiguid/index.html*) (hereinafter referred to as ''EPA's Modeling Guidance'').

MANE–VU examined the model performance of the regional modeling for the areas of interest before determining whether the CMAQ model results were suitable for use in the regional haze assessment of the LTS and for use in the modeling assessment. The modeling assessment predicts future levels of emissions and visibility impairment used to support the LTS and to compare predicted, modeled visibility levels with those on the uniform rate of progress. In keeping with the objective of the CMAQ modeling platform, the air quality model performance was evaluated using graphical and statistical assessments based on measured ozone, fine particles, and acid deposition from various monitoring networks and databases for the 2002 base year. MANE–VU used a diverse set of statistical parameters from the EPA's Modeling Guidance to stress and examine the model and modeling inputs. Once MANE–VU determined the model performance to be acceptable, MANE–VU used the model to assess the 2018 RPGs using the current and future year air quality modeling predictions, and compared the RPGs to the uniform rate of progress.

In accordance with 40 CFR 51.308(d)(3), the State of Connecticut provided the appropriate supporting documentation for all required analyses used to determine the State's LTS. The technical analyses and modeling used to develop the glide path and to support the LTS are consistent with EPA's RHR, and interim and final EPA Modeling Guidance. EPA is proposing to find the MANE–VU technical modeling to support the LTS and determine visibility improvement for the uniform rate of progress acceptable because the modeling system was chosen and used according to EPA Modeling Guidance. EPA agrees with the MANE–VU model performance procedures and results, and that CMAQ, REMSAD, and CALPUFF are appropriate tools for the regional haze assessments for the Connecticut LTS and regional haze SIP.

3. Relative Contributions of Pollutants to Visibility Impairment

An important step toward identifying reasonable progress measures is to identify the key pollutants contributing to visibility impairment at each Class I area. To understand the relative benefit of further reducing emissions from different pollutants, MANE–VU developed emission sensitivity model runs using CMAQ to evaluate visibility and air quality impacts from various groups of emissions and pollutant scenarios in the Class I areas on the 20 percent worst visibility days.

Regarding which pollutants are most significantly impacting visibility in the MANE–VU region, MANE–VU's contribution assessment demonstrated that sulfate is the major contributor to $PM_{2.5}$ mass and visibility impairment at Class I areas in the Northeast and Mid-Atlantic Region. Sulfate particles

commonly account for more than 50 percent of particle-related light extinction at northeastern Class I areas on the clearest days and for as much as, or more than, 80 percent on the haziest days. For example, at the Brigantine National Wildlife Refuge Class I area (the MANE–VU Class I area with the greatest visibility impairment), on the 20 percent worst visibility days in 2000—2004, sulfate accounted for 66 percent of the particle extinction. After sulfate, organic carbon (OC) consistently accounts for the next largest fraction of light extinction. Organic carbon accounted for 13 percent of light extinction on the 20 percent worst visibility days for Brigantine, followed by nitrate that accounts for 9 percent of light extinction. On the best visibility days, sulfate accounts for 50 percent of the particle related visibility extinction. Organic carbon accounts for the next largest contribution of 40 percent of the visibility impairment on the clearest days. Nitrate, elemental carbon, and fine soil typically contribute less than 10 percent of the visibility impairment mass on the clearest days.

The emissions sensitivity analyses conducted by MANE–VU predict that reductions in SO_2 emissions from EGU and non-EGU industrial point sources will result in the greatest improvements in visibility in the Class I areas in the MANE–VU region, more than any other visibility-impairing pollutant. As a result of the dominant role of sulfate in the formation of regional haze in the Northeast and Mid-Atlantic Region, MANE–VU concluded that an effective emissions management approach would rely heavily on broad-based regional SO_2 control efforts in the eastern United States.

4. Reasonable Progress Goal

Since the State of Connecticut does not have a Class I area, it is not required to establish RPGs. However, as a MANE–VU member State, Connecticut adopted the ''Statement of MANE–VU Concerning a Request for a Course of Action by States Within MANE–VU Toward Assuring Reasonable Progress'' on June 7, 2007. This document included four emission management strategies that will provide for reasonable progress towards achieving natural visibility at the MANE–VU Class I areas. These emission management strategies are collectively known as the MANE–VU ''Ask,'' and include: (a) Timely implementation of BART requirements; (b) a 90 percent reduction in SO_2 emissions from each of the EGU stacks identified by MANE–VU comprising a total of 167 stacks;[13] (c) adoption of a low sulfur fuel oil strategy; and (d) continued evaluation of other control measures to reduce SO_2 and NO_X emissions.

Connecticut will be controlling its BART sources with Connecticut's alternative to BART program. This program is discussed in detail in Section III.B. Connecticut does not have any EGU stacks identified by MANE–VU as a top contributor to visibility impairment in any of the MANE–VU Class I areas.

The MANE–VU low sulfur fuel oil strategy includes: Phase I reduction of distillate oil to 0.05% sulfur by weight (500 parts per million (ppm)) by no later than 2014; Phase II reductions of #4 residual oil to 0.25% sulfur by weight by no later than 2018; #6 residual oil to 0.5% sulfur by weight by no later than 2018; and further reduction of the sulfur content of distillate oil to 15 ppm by 2018.

The expected reduction in SO_2 emissions by 2018 from the MANE–VU ''Ask'' will yield corresponding reductions in sulfate aerosol, the main culprit in fine-particle pollution and regional haze. For Connecticut, the MANE–VU analysis demonstrates that the reduction of the sulfur content in fuel oil will lead to an average reduction of 0.13—0.18 ug/m^3 in the 24 hour $PM_{2.5}$ concentration within the State, improving health and local visibility. In addition, the use of low sulfur fuels will result in cost savings to owners/operators of residential furnaces and boilers due to reduced maintenance costs and extended life of the units.

EPA is today proposing approval of the Connecticut Regional Haze SIP for the first implementation period without Connecticut's implementation of a low sulfur fuel oil strategy.[14] As described in Section III.A of this notice, Connecticut neither causes nor contributes to visibility impairment in the closest Class I areas located in New Jersey, Vermont, New Hampshire, and Maine. For each of these Class I areas, the contribution of Connecticut's emissions to total sulfate is less than the 2% threshold set by the MANE–VU States to determine whether any State contributed to visibility impairment. While the SO_2 reductions being achieved by Connecticut are somewhat less than the statewide reductions that were projected to result from adoption of a low-sulfur fuel oil strategy by 2012, this shortfall is not anticipated to interfere with the ability of other States to meet their respective reasonable progress goals. All emissions from Connecticut contribute no more than 0.76% of total sulfate at any Class I area. In its November 18, 2009 SIP submittal, Connecticut states that it will review the details of its long term strategy in five years, coincident with Connecticut's first regional haze SIP progress report. We encourage adoption of a low-sulfur fuel oil strategy by Connecticut and the surrounding States as such a strategy will have local air quality and some, limited visibility benefits. However, we do not believe it is a necessary component of an approvable Regional Haze SIP for Connecticut for the first implementation period.

Despite our conclusion that a low sulfur fuel oil strategy is not a necessary component of its Regional Haze SIP for this first implementation period, Connecticut has adopted a partial low sulfur fuel oil strategy that is contingent on its neighboring states adopting similar policies. Section 16a–21a of the Connecticut General Statutes (CGS) limits sulfur content of heating distillate oil and off road diesel to 500 ppm as of the date on which the last of the States of New York, Massachusetts, and Rhode Island limit the sulfur content of such fuels. Currently, all three States have yet to adopt these measures. Connecticut has submitted CGS Section16a–21a for approval into its SIP.[15] Actual emission reductions from CGS Section 16a–21a are not certain to occur because the neighboring States may never adopt their counterparts. Therefore, we are not relying upon any potential emissions reductions from CGS Section 16a–21a for the purposes of our approval of this revision to Connecticut's SIP. *See Safe Air for Everyone* v. *EPA,* 475 F.3d 1096, 1108 (9th Cir. 2007). However, the content of a State's implementation plan

[13] See Appendix E—''Top Electrical Generating Unit List'' of the Connecticut SIP submittal for a complete listing of the 167 stacks.

[14] On January 15, 2009, EPA made a finding that, among other States, Connecticut had failed to submit a Regional Haze SIP by the required deadline. 74 FR 2392. We have proposed a consent decree to resolve a deadline suit regarding this finding as well as the finding of failure for 36 other States, the District of Columbia, and the U.S. Virgin Islands. *National Parks Conservation Association* v. *Jackson,* Civ. No. 1:11–cv–1548 (D.D.C. 2011). Because we do not believe a low-sulfur fuel oil strategy is necessary for Connecticut's LTS during this first implementation period, EPA is moving forward with this proposed approval of the State's SIP submittal in order to satisfy our obligations under the Clean Air Act.

[15] Connecticut submitted Sec. 16a–21a as part of the November 18, 2009 Regional Haze SIP submittal. See Attachment GG. Sec. 16a–21a was subsequently amended, effective July 1, 2011, to include additional sulfur in fuel content reductions for number two home heating oil and number two off road diesel to 15 ppm at such time that New York, Massachusetts, and Rhode Island adopt substantially similar provisions. EPA is not proposing action on this amendment in this rulemaking.

is generally left to the discretion of the State so long as it meets the requirements of the Clean Air Act. *See Union Electric* v. *EPA,* 427 U.S. 246 (1976). Therefore, because CGS Section 16a–21a does not weaken or impede implementation of the rest of the SIP, we are also proposing to approve CGS Section 16a–21a.

5. Additional Considerations for the LTS

In 40 CFR 51.308(d)(3)(v), States are required to consider the following factors in developing the long term strategy:

a. Emission reductions due to ongoing air pollution control programs, including measures to address reasonably attributable visibility impairment;

b. Measures to mitigate the impacts of construction activities;

c. Emission limitations and schedules for compliance to achieve the reasonable progress goal;

d. Source retirement and replacement schedules;

e. Smoke management techniques for agricultural and forestry management purposes including plans as currently exist within the State for these purposes;

f. Enforceability of emissions limitations and control measures; and

g. The anticipated net effect on visibility due to projected changes in point area, and mobile source emissions over the period addressed by the long term strategy.

a. Emission Reductions Including RAVI

Since Connecticut does not contain any Class I areas, the State is not required to address RAVI, nor has any Connecticut source been identified as subject to RAVI. A list of Connecticut's ongoing air pollution control programs is included in Section III.B.1.

b. Construction Activities

The Regional Haze Rule requires Connecticut to consider measures to mitigate the impacts of construction activities on regional haze. MANE–VU's consideration of control measures for construction activities is documented in *Technical Support Document on Measures to Mitigate the Visibility Impacts of Construction Activities in the MANE–VU Region*, Draft, October 20, 2006.[16]

The construction industry is already subject to requirements for controlling pollutants that contribute to visibility impairment. For example, federal regulations require the reduction of SO_2 emissions from construction vehicles. At the State level, Connecticut's RCSA 22a–174–18, ''Control of particulate matter and visible emissions,'' addresses the control of airborne particulate matter and fugitive particulate matter in subsections (c) and (d). These regulations, which include dust control measures and visible emissions from diesel powered mobile sources, apply to road building and construction activities.[17]

MANE–VU's Contribution Report found that, from a regional haze perspective, crustal material generally does not play a major role. On the 20 percent best-visibility days during the 2000–2004 baseline period, crustal material accounted for 6 to 11 percent of the particle-related light extinction at the MANE–VU Class I Areas. On the 20 percent worst-visibility days, however, the contribution was reduced to 2 to 3 percent. Furthermore, the crustal fraction is largely made up of pollutants of natural origin (e.g., soil or sea salt) that are not targeted under the Regional Haze Rule. Nevertheless, the crustal fraction at any given location can be heavily influenced by the proximity of construction activities; and construction activities occurring in the immediate vicinity of MANE–VU Class I area could have a noticeable effect on visibility.

For this regional haze SIP, Connecticut concluded that its current regulations are currently sufficient to mitigate the impacts of construction activities. Any future deliberations on potential control measures for construction activities and the possible implementation will be documented in the first regional haze SIP progress report in 2014. EPA proposes to find that Connecticut has adequately addressed measures to mitigate the impacts of construction activities.

c. Emission Limitations and Schedules for Compliance To Achieve the RPG

In addition to the existing CAA control requirements discussed in Section III.C.1, Connecticut has legislation to implement a low sulfur fuel oil strategy consistent with the MANE–VU ''Ask'' at such time that New York, Massachusetts, and Rhode Island adopt a comparable sulfur in fuel oil limit. As described in Section III.C.4 above, we do not believe inclusion of the low sulfur oil strategy is a necessary component of an approvable Regional Haze SIP for Connecticut. Therefore, EPA is proposing to determine that Connecticut has satisfactorily considered emission limitations and schedules as part of the LTS.

d. Source Retirement and Replacement Schedule

Pursuant to 40 CFR 51.308(d)(3)(v)(D) of the Regional Haze Rule, Connecticut is required to consider source retirement and replacement schedules in developing the long term strategy. Source retirement and replacement were considered in developing the 2018 emissions. The sources in Connecticut that were shut down after the 2002 base year and therefore were not included in the 2018 inventory are: Devon Unit 7 (109 MW EGU) and Devon Unit 8 (109 MW EGU). The modeling used to develop the 2018 emission inventories, EPA's Integrated Planning Model (IPM), projected that several large EGUs in Connecticut, including five of the six BART-eligible EGUs would retire by 2018 and be replaced by newer units to meet future electric growth. However, Connecticut did not directly rely on the closures of any particular plant in establishing the 2018 inventory upon which the reasonable progress goals were set. EPA is proposing to determine that Connecticut has satisfactorily considered source retirement and replacement schedules as part of the LTS.

e. Smoke Management Techniques

The Regional Haze Rule requires States to consider smoke management techniques related to agricultural and forestry management in developing the long-term strategy. MANE–VU's analysis of smoke management in the context of regional haze is documented in *Technical Support Document on Agricultural and Smoke Management in the MANE–VU Region*, September 1, 2006, (hereinafter referred to as the ''Smoke TSD'').[18]

Connecticut currently regulates outdoor wood burning through a statute at CGS 22a–174(f) and a regulation at RCSA 22a–174–17. The open burning requirements limit the locations and times when open burning can take place. Although CT DEEP does not have a formal smoke management program (SMP), as a smoke management policy, CT DEEP's Division of Forestry can only initiate prescribed burns when such activity has less significant impacts on air quality.[19] SMPs are required only when smoke impacts from fires managed for resources benefits contribute significantly to regional haze.

[16] This document has been provided as part of the docket to this proposed rulemaking.

[17] The Regulations are available at *www.dep.state.ct.us/air2/regs/mainregs.htm.*

[18] This document has been included as part of the docket to this proposed rulemaking.

[19] See Attachment FF—Connecticut Smoke Management Policy Documentation

The emissions inventory presented in the Smoke TSD indicates that agricultural, managed, prescribed, and open burning emissions are very minor; the inventory estimates that, in Connecticut, those emissions from those source categories totaled 30.8 tons of PM_{10} and $PM_{2.5}$ in 2002, which constitute 0.06% and 0.17% of the total inventory for these pollutants, respectively.

Source apportionment results show that wood smoke is a moderate contributor to visibility impairment at some Class I areas in the MANE–VU region; however, smoke is not a large contributor to haze in MANE–VU Class I areas on either the 20% best or 20% worst visibility days. Moreover, most of wood smoke is attributable to residential wood combustion. Therefore, it is unlikely that fires for agricultural or forestry management cause large impacts on visibility in any of the Class I areas in the MANE–VU region. On rare occasions, smoke from major fires degrades air quality and visibility in the MANE–VU area. However, these fires are generally unwanted wildfires that are not subject to SMPs. EPA proposes to approve Connecticut's decision that an Agricultural and Forestry Smoke Management Plan to address visibility impairment is not required at this time.

f. Enforceability of Emission Limitations and Control Measures

Connecticut has asked, and we are proposing to process approval of RCSA Section 22a–174–22d in parallel with the approval of Connecticut's Regional Haze SIP. Connecticut indicated that they plan to have a final adopted regulation by June 2012, prior to the finalization of this action. EPA will review the final regulation and determine whether it differs significantly from the proposed regulation. At the same time we take final action on Connecticut's Regional Haze SIP, we will then take final action on RCSA 22a–174–22d, at which point it will be federally enforceable. Therefore, once today's action is finalized, all emission limitations included as part of Connecticut's Regional Haze SIP will be federally enforceable. EPA is proposing to find that Connecticut has adequately addressed the enforceability of emission limitations and control measures.

g. The Anticipated Net Effect on Visibility

MANE–VU used the best and final emission inventory to model progress expected toward the goal of natural visibility conditions for the first regional haze planning period. All of the MANE–VU Class I areas are expected to achieve greater progress toward the natural visibility goal than the uniform rate of progress, or the progress expected by extrapolating a trend line from current visibility conditions to natural visibility conditions.[20]

In summary, EPA is proposing to find that Connecticut has adequately addressed the LTS regional haze requirements.

D. Consultation With States and Federal Land Managers

On May 10, 2006, the MANE–VU State Air Directors adopted the Inter-RPO State/Tribal and FLM Consultation Framework that documented the consultation process within the context of regional phase planning, and was intended to create greater certainty and understanding among RPOs. MANE–VU States held ten consultation meetings and/or conference calls from March 1, 2007 through March 21, 2008. In addition to MANE–VU members attending these meetings and conference calls, participants from the Visibility Improvement State and Tribal Association of the Southeast (VISTAS) RPO, Midwest RPO, and the relevant Federal Land Managers were also in attendance. In addition to the conference calls and meeting, the FLMs were given the opportunity to review and comment on each of the technical documents developed by MANE–VU.

On February 4, 2009, Connecticut submitted a draft Regional Haze SIP to the relevant FLMs for review and comment pursuant to 40 CFR 51.308(i)(2). The FLMs provided comments on the draft Regional Haze SIP in accordance with 40 CFR 51.308(i)(3). The comments received from the FLMs were addressed and incorporated in Connecticut's SIP revision. Most of the comments were requests for additional detail as to various aspects of the SIP. These comments and Connecticut's response to comments can be found in the docket for this proposed rulemaking.

On July 17, 2009, Connecticut proposed its Regional Haze SIP for public hearing. Comments were received from U.S. EPA, the National Park Service, the U.S. Department of Agriculture and a private citizen.[21] To address the requirement for continuing consultation procedures with the FLMs under 40 CFR 51.308(i)(4), Connecticut commits in its SIP to ongoing consultation with the FLMs on emission strategies, major new source permits, assessments or rulemaking concerning sources identified as probable contributors to visibility impairment, any changes to the monitoring strategy, work on the periodic revisions to the SIP, and ongoing communications regarding visibility impairment.

EPA is proposing to find that Connecticut has addressed the requirements for consultation with the Federal Land Managers.

E. Periodic SIP Revisions and Five-Year Progress Reports

Consistent with the requirements of 40 CFR 51.308(g), Connecticut has committed to submitting a report on reasonable progress (in the form of a SIP revision) to the EPA every five years following the initial submittal of its regional haze SIP. The reasonable progress report will evaluate the progress made towards the RPGs for the MANE–VU Class I areas, located in Maine, New Hampshire, Vermont, and New Jersey.

Pursuant to 40 CFR 51.308(f), CT DEEP is required to submit periodic revisions to its Regional Haze SIP by July 31, 2018, and every ten years thereafter. CT DEEP acknowledges and agrees to comply with this schedule.

Pursuant to 40 CFR 51.308(d)(4)(v), CT DEEP will also make periodic updates to the Connecticut emissions inventory. CT DEEP proposes to complete these updates to coincide with the progress reports. Actual emissions will be compared to projected modeled emissions in the progress reports.

Lastly, pursuant to 40 CFR 51.308(h), CT DEEP will submit a determination of adequacy of its regional haze SIP revision whenever a progress report is submitted. Connecticut's regional haze SIP states that, depending on the findings of its five-year review, Connecticut will take one or more of the following actions at that time, whichever actions are appropriate or necessary:

- If Connecticut determines that the existing State Implementation Plan requires no further substantive revision in order to achieve established goals for visibility improvement and emissions reductions, CT DEEP will provide to the EPA Administrator a negative declaration that further revision of the existing plan is not needed.
- If CT DEEP determines that its implementation plan is or may be inadequate to ensure reasonable progress as a result of emissions from sources in one or more other State(s)

[20] Projected visibility improvements for each MANE–VU Class I area can be found in the NESCAUM document dated May 13, 2008, ''2018 Visibility Projections'' (*www.nescaum.org/documents/2018-visibility-projections-final-05-13-08.pdf/*).

[21] The comments and CT DEEP's responses have been included in the docket.

which participated in the regional planning process, Connecticut will provide notification to the EPA Administrator and to those other State(s). Connecticut will also collaborate with the other State(s) through the regional planning process for the purpose of developing additional strategies to address any such deficiencies in Connecticut's plan.

- If Connecticut determines that its implementation plan is or may be inadequate to ensure reasonable progress as a result of emissions from sources in another country, Connecticut will provide notification, along with available information, to the EPA Administrator.
- If Connecticut determines that the implementation plan is or may be inadequate to ensure reasonable progress as a result of emissions from sources within the State, Connecticut will revise its implementation plan to address the plan's deficiencies within one year from this determination.

IV. What action is EPA proposing to take?

EPA is proposing approval of Connecticut's November 18, 2009 SIP revision as meeting the applicable requirements of the Regional Haze Rule found in 40 CFR 51.308. In addition, EPA is proposing approval of Connecticut's RCSA Section 22a–174–19a, ''Control of sulfur dioxide emissions from power plants and other large stationary sources of air pollution'' and revisions to RCSA Section 22a–174–22, ''Control of Nitrogen Oxides Emissions,'' including subdivision 22a–174–22(e)(3), and CGS 16a–21a, ''Sulfur content of home heating oil and off-road diesel fuel. Suspension of requirements for emergency.'' Furthermore, pursuant to CT DEEP's request under parallel processing, EPA is proposing approval of Connecticut's proposed RCSA Section 22a–174–22d, ''Post-2011 Connecticut Ozone Season NO_X Budget Program.'' Under this procedure, EPA prepared this action before the State's final adoption of this regulation. Connecticut has already held a public hearing on the proposed regulation and received public comment. Connecticut may revise the regulation in response to comments. After Connecticut submits its final adopted regulation, EPA will review this regulation to determine whether it is significantly different from the proposed regulation. EPA will determine whether it is appropriate to approve the final rule with a description of any changes since the proposal, re-propose action based on the final adopted regulations, or take other actions as appropriate.

RCSA 22a–174–22d is a replacement for RCSA 22a–174–22c, ''The Clean Air Interstate Rule (CAIR) Nitrogen Oxides (NO_X) Ozone Season Trading Program,'' which is federally approved by EPA and currently being implemented in Connecticut.

V. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve State choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this proposed action merely approves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this proposed action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the State, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: March 15, 2012.

Ira W. Leighton,

Acting Regional Administrator, EPA Region 1.

[FR Doc. 2012–7216 Filed 3–23–12; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 721

[EPA–HQ–OPPT–2011–0489; FRL–9341–6]

RIN 2070–AJ88

Significant New Use Rule for Hexabromocyclododecane and 1,2,5,6,9,10-Hexabromocyclododecane

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing a significant new use rule (SNUR) under section 5(a)(2) of the Toxic Substances Control Act (TSCA) for two chemical substances: Hexabromocyclododecane (Chemical Abstracts Service Registry Number (CASRN) 25637–99–4) and 1,2,5,6,9,10-hexabromocyclododecane (CASRN 3194–55–6), hereinafter collectively referred to as HBCD. This proposed rule would designate ''use in consumer textiles, other than for use in motor vehicles'' as a significant new use. This action would require persons who intend to manufacture (including import) or process HBCD for use in covered consumer textiles to notify EPA at least 90 days before commencing that activity. The required notification would provide EPA with the opportunity to evaluate the intended use and, if appropriate, to prohibit or limit that activity before it occurs. For this proposed rule, the general SNUR article exemption for persons who

import or process chemical substances as part of an article would not apply.

DATES: Comments must be received on or before May 25, 2012.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPPT–2011–0489, by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Mail:* Document Control Office (7407M), Office of Pollution Prevention and Toxics (OPPT), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001.
- *Hand Delivery:* OPPT Document Control Office (DCO), EPA East, Rm. 6428, 1201 Constitution Ave. NW., Washington, DC. Attention: Docket ID Number EPA–HQ–OPPT–2011–0489. The DCO is open from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The telephone number for the DCO is (202) 564–8930. Such deliveries are only accepted during the DCO's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to docket ID number EPA–HQ–OPPT–2011–0489. EPA's policy is that all comments received will be included in the docket without change and may be made available online at *http://www.regulations.gov*, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through regulations.gov or email. The regulations.gov Web site is an ''anonymous access'' system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through regulations.gov, your email address will be automatically captured and included as part of the comment that is placed in the docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the docket are listed in the docket index available at *http://www.regulations.gov.* Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available electronically at *http://www.regulations.gov*, or, if only available in hard copy, at the OPPT Docket. The OPPT Docket is located in the EPA Docket Center (EPA/DC) at Rm. 3334, EPA West Bldg., 1301 Constitution Ave. NW., Washington, DC. The EPA/DC Public Reading Room hours of operation are 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number of the EPA/DC Public Reading Room is (202) 566–1744, and the telephone number for the OPPT Docket is (202) 566–0280. Docket visitors are required to show photographic identification, pass through a metal detector, and sign the EPA visitor log. All visitor bags are processed through an X-ray machine and subject to search. Visitors will be provided an EPA/DC badge that must be visible at all times in the building and returned upon departure.

FOR FURTHER INFORMATION CONTACT: *For technical information contact:* Sue Slotnick, National Program Chemicals Division, Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001; telephone number: (202) 566–1973; email address: *slotnick.sue@epa.gov*.

For general information contact: The TSCA–Hotline, ABVI–Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: *TSCA-Hotline@epa.gov*.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you manufacture (defined by statute to include import) or process HBCD for consumer textiles. Potentially affected entities may include, but are not limited to organizations identified by the following North American Industry Classification System (NAICS) codes:

- Chemical Manufacturing (NAICS code 325).
- Painting and Wall Covering Contractors (NAICS code 238320).
- Textile and Fabric Finishing (except Broadwoven Fabric) Mills (NAICS code 313312).
- Curtain and Drapery Mills (NAICS code 314121).
- Other Household Textile Product Mills (NAICS code 314129).
- All Other Miscellaneous Textile Product Mills (NAICS code 314999).
- Upholstered Household Furniture Manufacturing (NAICS code 337121).
- Household Furniture (except Wood and Metal) Manufacturing (NAICS code 337125).
- Mattress Manufacturing (NAICS code 337910).
- Blind and Shade Manufacturing (NAICS code 337920).
- Furniture Merchant Wholesalers (NAICS code 423210).
- Home Furnishing Merchant Wholesalers (NAICS code 423220).
- Reupholstery and Furniture Repair (NAICS code 811420).

This listing is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in this unit could also be affected. The North American Industrial Classification System (NAICS) codes have been provided to assist you and others in determining whether this action might apply to certain entities. To determine whether you or your business may be affected by this action, you should carefully examine the applicability provisions in § 721.5. If you have any questions regarding the applicability of this action to a particular entity, consult the technical person listed under **FOR FURTHER INFORMATION CONTACT**.

In addition, chemical importers are subject to the TSCA section 13 (15 U.S.C. 2612) import certification requirements promulgated at 19 CFR 12.118 through 12.127; see also 19 CFR 127.28 (the corresponding EPA policy appears at 40 CFR part 707, subpart B). Chemical importers must certify that shipments of chemical substances comply with all applicable rules and orders under TSCA, including SNURs. In addition, any persons who export or intend to export a chemical substance that is the subject of a proposed or final SNUR are subject to the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b)) (see § 721.20), and must comply with the export notification requirements in 40 CFR part 707, subpart D.

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through regulations.gov or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that

you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When submitting comments, remember to:

i. Identify the document by docket ID number and other identifying information (subject heading, **Federal Register** date and page number).

ii. Follow directions. The Agency may ask you to respond to specific questions or organize comments by referencing a Code of Federal Regulations (CFR) part or section number.

iii. Explain why you agree or disagree; suggest alternatives and substitute language for your requested changes.

iv. Describe any assumptions and provide any technical information and/or data that you used.

v. If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.

vi. Provide specific examples to illustrate your concerns and suggest alternatives.

vii. Explain your views as clearly as possible, avoiding the use of profanity or personal threats.

viii. Make sure to submit your comments by the comment period deadline identified.

II. Background

A. What action is the agency taking?

EPA is proposing a SNUR for HBCD which would require persons to notify EPA at least 90 days before commencing the manufacture (including import) or processing of HBCD for use in consumer textiles other than for use in motor vehicles. EPA is considering future regulatory action on additional uses of HBCD.

B. What is the agency's authority for taking this action?

Section 5(a)(2) of TSCA (15 U.S.C. 2604(a)(2)) authorizes EPA to determine that a use of a chemical substance is a ''significant new use.'' EPA must make this determination by rule after considering ''all relevant factors including:

- The projected volume of manufacturing and processing of a chemical substance,
- The extent to which a use changes the type or form of exposure of human beings or the environment to a chemical substance,
- The extent to which a use increases the magnitude and duration of exposure of human beings or the environment to a chemical substance, and
- The reasonably anticipated manner and methods of manufacturing, processing, distribution in commerce, and disposal of a chemical substance.''

In addition to these factors enumerated in TSCA section 5(a)(2), the statute authorizes EPA to consider any other relevant factors.

Once EPA determines that a use of a chemical substance is a significant new use, TSCA section 5(a)(1)(B) requires persons to submit a significant new use notice (SNUN) to EPA at least 90 days before they manufacture or process the chemical substance for that use (15 U.S.C. 2604(a)(1)(B)). As described in Unit II.C., the general SNUR provisions are found at 40 CFR part 721, subpart A.

C. Applicability of General Provisions

General provisions for SNURs appear under 40 CFR part 721, subpart A. These provisions describe persons subject to the rule, recordkeeping requirements, exemptions to reporting requirements, and applicability of the rule to uses occurring before the effective date of the final rule. Provisions relating to user fees appear at 40 CFR part 700. Additional provisions appear at § 721.1(c) which describe how persons subject to SNURs must comply with the same notice requirements and EPA regulatory procedures as submitters of Premanufacture Notices (PMNs) under TSCA section 5(a)(1)(A). In particular, these requirements include the information submission requirements of TSCA section 5(b) and 5(d)(1), the exemptions authorized by TSCA section 5(h)(1), (h)(2), (h)(3), and (h)(5), and the regulations at 40 CFR part 720. Once EPA receives a SNUN, the Agency may take regulatory action under TSCA section 5(e), 5(f), 6, or 7 to control the activities on which it has received the SNUN. If EPA does not take action, the Agency is required under TSCA section 5(g) to explain in the **Federal Register** its reasons for not taking action.

EPA proposes that a person who imports or processes HBCD as part of an article for use in consumer textiles (except for use in motor vehicles) would not be exempt from submitting a SNUN. (See rationale at Unit VI.C.) For this reason, § 721.45(f), which exempts persons importing or processing a chemical substance as part of an article, would not apply to this proposed SNUR.

Persons who export or intend to export a chemical substance(s) identified in a proposed or final SNUR are subject to the export notification provisions of TSCA section 12(b). The regulations that interpret TSCA section 12(b) appear at 40 CFR part 707, subpart D. Persons who import chemical substances are subject to the TSCA section 13 import certification requirements, codified at 19 CFR 12.118 through 12.127; see also 19 CFR 127.28. Such persons must certify that the shipment of the chemical substance(s) comply with all applicable rules and orders under TSCA, including any SNUR requirements. The EPA policy in support of import certification appears at 40 CFR part 707, subpart B.

III. Overview of HBCD

A. What chemicals are included in the proposed SNUR?

This proposed SNUR would apply to two chemical substances: Hexabromocyclododecane (CASRN 25637–99–4) and 1,2,5,6,9,10-hexabromocyclododecane (CASRN 3194–55–6). Hexabromocyclododecane is manufactured by adding bromine to technical grade 1,5,9-cyclododecatriene to make a chemical substance where the positions of the six bromine atoms are not specified on the cyclododecane ring, corresponding to CASRN 25637–99–4. The specific 1,2,5,6,9,10-hexabromocyclododecane isomer (CASRN 3194–55–6) is the major component of CASRN 25637–99–4. Throughout this proposed rule, the term ''HBCD'' represents both chemical substances, unless a specific CASRN is also noted.

B. What is the production volume of HBCD?

The Inventory Update Rule (IUR) [1] submissions to EPA reported annual U.S. import/production volumes of 10–50 million pounds (lb) in both 2002 and 2006 for CASRN 3194–55–6 (EPA, 2006). IUR submissions to EPA reported annual U.S. import/production volumes of 10,000 to 500,000 lb in 2002 for CASRN 25637–99–4; no import/production was reported in 2006 (EPA, 2006).

[1] As of August 16, 2011, the Inventory Update Rule (IUR) was renamed ''Chemical Data Reporting rule (CDR).'' See the TSCA Inventory Update Reporting Modifications; Chemical Data Reporting final rule in the **Federal Register** issue of August 16, 2011 (76 FR 50816) (FRL–8872–9).

C. What are the uses of HBCD?

Based on information gathered from research, industry, and government, EPA believes that HBCD is not used in consumer textiles other than for use in motor vehicles. The major use of HBCD is in polystyrene foam insulation boards used in construction. It is also used to a minor extent in high-impact polystyrene in electronic products and in textile coatings in carpets, vehicles, furniture, and upholstery, such as draperies (Posner, 2006). In the IUR data, one manufacturer/importer of HBCD (CASRN 3194–55–6) reported the use of the chemical substance under the NAICS code for textile and fabric finishing mills (EPA, 2006). For this use, 1% of the total production volume of the chemical substance was in consumer and commercial products. However, the reporting does not distinguish between commercial and consumer use (EPA, 2006).

Information available to EPA indicates that the use of HBCD in textiles is as a backcoating to function as a flame retardant. EPA conducted preliminary research to determine whether HBCD was used in textile applications for end products sold to consumers. In 2010, an HBCD expert with the Consumer Product Safety Commission (CPSC) expressed to EPA his understanding that HBCD is used only in non-consumer textiles such as firefighters' suits (CPSC, 2010). In 2011, EPA requested information from current and former manufacturers of HBCD. The responses indicate that only one manufacturer sells HBCD for textile uses. The company does not know whether the end use of any of those textiles is a consumer article. (ACC, 2011). Additionally, a representative of the furniture manufacturing company Herman Miller told EPA that HBCD is not in their products (Herman Miller, 2011). EPA also received information from a group of textile formulators that the end uses of HBCD-containing textiles are for military, institutional, and aviation uses only (EPP, 2011). EPA solicits comment on whether any of these uses could be considered consumer textile uses. (See definition of ''consumer textile'' at § 721.10281 in the regulatory language of this proposed rule).

EPA found that a small amount of HBCD is used in floor mats, headliners, and possibly other interior fabrics in motor vehicles made in the United States, including passenger vehicles. The automotive industry plans to phase out these uses in 2015. This phase-out is consistent with the addition of HBCD to the Annex XIV List of Substances Subject to Authorisation under the European Union's Registration, Evaluation, Authorisation and Restriction of Chemical Substances (REACH) regulations (REACH, 2011). See *http://echa.europa.eu/reach_en.asp.* The REACH regulations are expected to effectively ban the use of HBCD by major U.S. automotive companies unless authorized for use in the European Union (EU) after July 21, 2015. The companies are not likely to manufacture a different set of products for sale in the EU and for sale in the United States. Because the use of HBCD in textiles in motor vehicles is currently ongoing, that use is not included in this proposed rule.

Based on the sum of available information, EPA believes HBCD is not used in consumer textiles other than those used in motor vehicles. The Agency also believes HBCD could potentially be used in the future in consumer textiles in the United States because the chemical substance:

1. Is used in non-consumer textile applications in the United States including institutional, military, and aviation uses.

2. Is used in textiles in motor vehicles in the United States.

3. Has been used in residential consumer textile applications.

See more information on uses of HBCD in EPA's ''Economic Analysis of the Proposed Significant New Use Rule for Hexabromocyclododecane (HBCD)'' (EPA, 2011).

D. What are the potential health and environmental effects of HBCD?

1. *Human health effects.* Repeated exposure of HBCD to rats showed disturbances in thyroid hormone system and effects on the thyroid in males and females (Chengelis, 2001). A study by Eriksson, *et al.* (2006), concluded that neonatal exposure of HBCD to mice affected spontaneous motor behavior, learning and memory processes in adult mice. However, this study was not conducted according to established Organization for Economic Cooperation and Development (OECD) Test Guidelines.

In a recently conducted, more robust, 2-generation reproductive toxicity study in rats conducted according to established OECD test guidelines, HBCD showed treatment-related reproductive effect (a significant decrease in the number of primordial follicles in the F1 females) (Ema, *et al.,* 2008). Although this decrease in ovarian follicles did not affect any reproductive parameters in this study, this effect is suggestive of potential reproductive toxicity. Developmental effects were observed including delays in eye opening in the second (F2) generation and transient changes in learning and memory in F1 males, but exposure did not cause any changes in spontaneous behavior. In addition, there was high and dose-dependent pup mortality during lactation (Ema, *et al.,* 2008).

2. *Environmental effects.* Laboratory studies have shown that HBCD is capable of producing adverse effects in a variety of organisms including algae, fish, invertebrates, and soil-dwelling organisms at environmentally relevant concentrations. HBCD is toxic to algae and acutely toxic to fish embryos (Desjardins, *et al.,* 2004 and Deng, *et al.,* 2009). A number of sub-lethal effects (e.g., altered thyroid status, protein metabolism, oxidative stress, reproductive activity) have also been observed in fish (Palace, *et al.,* 2008; Kling *et al.,* 2009; Zhang, *et al.,* 2008; and Ronisz, *et al.,* 2004). One study reported a reduced number and size of daphnid offspring in first and second generations (Drottar, 1998). Thyroid hormone-dependent developmental effects were observed in tadpoles (*Xenopus laevis*) exposed to HBCD (Schriks, *et al.,* 2006). HBCD has been reported to reduce egg production and lower biomass in soil dwelling organisms (*Lumbriculus variegatus*) (Oetken, *et al.,* 2001). HBCD administered to chicken (*Gallus domesticus*) embryonic hepatocytes *in vitr*o resulted in significant alterations in expression of genes (mRNA) associated with liver and thyroid function (Crump, *et al.,* 2008). Thinner egg shells were measured in American kestrels exposed to a combination of polybrominated diphenyl ethers (PBDEs) and HBCD (Fernie, *et al.,* 2009).

E. What are the potential sources and routes of exposure to HBCD?

Because HBCD is not chemically bound to its substrate (the protected textile material), there is potential for HBCD to be released at any point in the lifecycle. There is potential for release when the HBCD is initially manufactured, when it is being formulated into the material that is commonly used in textile back coatings, as well as when it is being combined with the textile material to which it is added. In addition, HBCD can be released during the service life of the textile material containing it, including release into water used to wash the treated textiles or into the air via dust particulates. Workers and the general population can be exposed to HBCD through direct contact as it migrates across land, in air, and in water by diffusion or environmental transport.

Other opportunities for release can occur at the end of the lifecycle of the consumer articles when they are transported as waste and disposed of, although incineration at high temperatures destroys the HBCD (Posner, 2006).

Evidence strongly suggests there is potential for exposure to the general population from HBCD in the environment and also from products and dust in the home and workplace. HBCD is found world-wide in the environment and wildlife. Human exposure is evidenced from its presence in breast milk, adipose tissue, and blood (Covaci, *et al.,* 2006). The chemical substance bioaccumulates and biomagnifies in food chains. The frequent detection of HBCD over a large geographic area, with increasing exposure in remote locations such as the Arctic, where no demonstrable local sources exist that can account for these exposures, suggest that HBCD is persistent and undergoes long-range transport (UNEP, 2007).

To the extent HBCD is present in household applications (e.g., building foam, furniture upholstery, carpeting), children could be exposed, especially given children's increased exposure via dust and the hand-to-mouth ingestion pathway. *In vitro* experiments conducted to demonstrate leaching of HBCD from textiles showed that the presence of simulated biological fluids (sweat, saliva) and fruit juices enhances the leaching of HBCD from back-coated samples (Ghanem, 2009). Children's exposure to HBCD from mouthing of textiles and from ingestion of dust has been estimated (EC, 2008).

HBCD has been measured in air and sediment in Scandinavian countries, North America and Asia (Covaci, *et al.,* 2006 and Arnot, *et al.,* 2009). HBCD has also been measured in marine and arctic mammals, freshwater and marine fish, aquatic invertebrates, birds and bird eggs, and one plant species (Covaci, *et al.,* 2006 and Arnot, *et al.,* 2009). HBCD has been detected in Arctic air in northern Scandinavia and in Arctic birds and bird eggs, Arctic fish, ringed seals and polar bears (UNEP, 2009). It has been detected in freshwater, marine, and avian organisms, and in upper trophic-level mammals (polar bears and seals).

For more information on HBCD concerning its physical-chemical properties, fate, releases, and human and environmental exposure, see EPA's ''Hexabromocyclododecane (HBCD) Action Plan'' dated August 18, 2010 (HBCD Action Plan, 2010).

IV. Summary of Proposed Rule

EPA is proposing to designate as a significant new use any use of HBCD in consumer textiles other than for use in motor vehicles. EPA believes the only current use of HBCD for consumer textiles is in motor vehicles. Thus any use of HBCD in consumer textiles (other than for textiles in motor vehicles) would be a significant new use. A proposed definition of ''consumer textile'' can be found at § 721.10281 of the regulatory text of this proposed rule. The proposed definition of ''motor vehicle'' refers to 40 CFR 85.1703.[2]

This proposed rule would add a section to 40 CFR part 721 to require persons who intend to manufacture (including import) or process HBCD for an activity preliminarily designated as a significant new use by this action to notify EPA at least 90 days before commencing that activity. The required notification would provide EPA with the opportunity to evaluate the intended use and, if appropriate, to prohibit or limit that activity before it occurs. For this proposed rule, the general SNUR exemption for persons that import or process chemical substances as part of an article at § 721.45(f) would not apply. (See discussion at Unit VI.C.)

V. Significant New Use Determination

A. Rationale

As summarized in Unit III.D. and E., EPA has concerns regarding the potential exposure to and human health and environmental effects of HBCD. EPA believes that HBCD could be manufactured or processed for consumer textiles other than for use in motor vehicles in the future. Accordingly, EPA wants the opportunity to evaluate and control, where appropriate, activities associated with that use, if such manufacturing or processing were to be commenced in the future. The required notification provided by a SNUN would provide EPA with the opportunity to evaluate activities associated with the significant new use and an opportunity to protect against unreasonable risks, if any, from exposure to HBCD.

Consistent with EPA's past practice for issuing SNURs under TSCA section 5(a)(2), EPA's decision to propose a SNUR for a particular chemical use need not be based on an extensive evaluation of the hazard, exposure, or potential risk associated with that use. Rather, the Agency's action is based on EPA's determination that if the use begins or resumes, it may present a risk that EPA should evaluate before the manufacturing or processing for that use begins. Since the new use does not currently exist, deferring a detailed consideration of potential risks or hazards related to that use is an effective use of resources. If a person decides to begin manufacturing or processing the chemical for the new use, the SNUN to EPA allows EPA to evaluate the use according to the specific parameters and circumstances surrounding that intended use.

B. Objectives

Based on the considerations in Unit V.A., EPA has the following objectives with regard to the significant new use that is preliminarily designated in this proposed rule:

1. EPA would receive notification of any person's intent to manufacture (including import) or process HBCD for the described significant new use before that activity begins.

2. EPA would have an opportunity to review and evaluate data submitted in a SNUN before the SNUN submitter begins manufacturing or processing of HBCD for the described significant new use.

3. EPA would be able to regulate prospective manufacturers or processors of HBCD before the described significant new use of the chemical substance(s) occur, provided that regulation is warranted pursuant to TSCA sections 5(e), 5(f), 6, or 7.

C. Relevant Factors Considered for This Proposed SNUR

TSCA states that EPA's determination that a use of a chemical substance is a significant new use must be made after consideration of all relevant factors, including those listed at TSCA section 5(a)(2) (see list at Unit II.B.). EPA has preliminarily determined that manufacturing or processing of HBCD for use in consumer textiles other than

[2] The definition at 40 CFR 85.1703 is: ''a vehicle which is self-propelled and capable of transporting a person or persons or any material or any permanently or temporarily affixed apparatus shall be deemed a motor vehicle, unless any one or more of the criteria set forth below are met, in which case the vehicle shall be deemed not a motor vehicle and excluded from the operation of the [Clean Air] Act:

(1) The vehicle cannot exceed a maximum speed of 25 miles per hour over level, paved surfaces; or

(2) The vehicle lacks features customarily associated with safe and practical street or highway use, such features including, but not being limited to, a reverse gear (except in the case of motorcycles), a differential, or safety features required by state and/or federal law; or

(3) The vehicle exhibits features which render its use on a street or highway unsafe, impractical, or highly unlikely, such features including, but not being limited to, tracked road contact means, an inordinate size, or features ordinarily associated with military combat or tactical vehicles such as armor and/or weaponry.''

40 CFR 85.1703 is available online at: *http://www.gpo.gov/fdsys/pkg/CFR–2000-title40-vol12/xml/CFR–2000-title40-vol12-sec85–1703.xml.*

for use in motor vehicles is a significant new use. This determination is based primarily on the following factor listed at TSCA section 5(a)(2): ''The extent to which a use increases the magnitude and duration of exposure of human beings or the environment to a chemical substance.'' The latest information available to EPA indicates that the only ongoing use of HBCD in consumer textiles is for use in motor vehicles. Initiation of new uses of HBCD in consumer textiles could increase the magnitude and duration of exposure to the general population from HBCD in the environment and from products and dust in the home and workplace. Workers could be exposed to HBCD at facilities of all types involved in the lifecycle of the products, as described in greater detail in Unit III.E. Releases to the environment are expected to occur during the service life of the textiles containing HBCD. Such increase in releases could contribute additional HBCD to the atmosphere, long-range transport, and greater concentrations in water, which could be detrimental to overall environmental and human health. Thus, EPA believes that initiating the use of HBCD in consumer textiles other than for use in motor vehicles would increase the magnitude and duration of exposure to humans and the environment over that which would otherwise exist.

D. Request for Comment

EPA welcomes comment on all aspects of this proposed rule, including:

1. The basis for the significant new use determination presented for this proposed rule.

2. Information about any ongoing manufacture, import, or processing of HBCD for use in consumer textiles.

VI. Alternative Regulatory Approaches

Before proposing this SNUR, EPA considered the following alternative regulatory actions:

A. Promulgate a TSCA Section 8(a) Reporting Rule

Under a TSCA section 8(a) rule, EPA could, among other things, generally require persons to report information to the Agency when they intend to manufacture or process a listed chemical for a specific use or any use. However, for HBCD in consumer textiles, the use of TSCA section 8(a) rather than SNUR authority would have several limitations. First, if EPA were to require reporting under TSCA section 8(a) instead of TSCA section 5(a), EPA would not have the opportunity to review human and environmental hazards and exposures associated with the use in consumer textiles and, if necessary, take immediate follow-up regulatory action under TSCA sections 5(e) or 5(f) to prohibit or limit the activity before it begins, if warranted. In addition, EPA might not receive important information from small businesses, because such firms generally are exempt from TSCA section 8(a) reporting requirements. In view of health and environmental concerns related to HBCD, if used for the proposed significant new use, EPA believes that a TSCA section 8(a) rule for these chemical substances would not meet EPA's regulatory objectives.

B. Regulate HBCD in Consumer Textiles Under TSCA Section 6

EPA may regulate under TSCA section 6 if ''the Administrator finds that there is a reasonable basis to conclude that the manufacture, processing, distribution in commerce, use or disposal of a chemical substance or mixture . . . presents or will present an unreasonable risk of injury to health or the environment.'' (TSCA section 6(a)). EPA concluded that risk management action under TSCA section 6 is not necessary at this time because EPA:

1. Believes HBCD is not being used in consumer textiles in the United States, other than for use in motor vehicles.

2. Has not determined as of this date that use of HBCD in motor vehicles presents unreasonable risk.

3. Expects the use in motor vehicles to end within a few years. This proposed SNUR would allow the Agency to address the potential risks associated with the proposed significant new use.

C. Allow the Exemption for Persons Who Import or Process HBCD as Part of Articles That Would Be Subject to the Proposed SNUR

Under the SNUR exemption provision at § 721.45(f), a person who imports or processes a chemical substance covered by a SNUR identified in 40 CFR part 721, subpart E, as part of an article is not generally subject to the notification requirements of § 721.25 for that chemical substance. However, EPA is concerned that exempting HBCD as part of articles would render the SNUR less effective because of the possibility that consumer textile articles containing HBCD, the primary concern of EPA associated with this proposed rule, could be imported or processed for uses subject to this proposed SNUR without the submission of a SNUN. This proposed rule would not include the exemption at § 721.45(f).

VII. Applicability of Rule to Uses Occurring Before Effective Date of the Final Rule

As discussed in the **Federal Register** of April 24, 1990 (55 FR 17376), EPA has decided that the intent of TSCA section 5(a)(1)(B) is best served by designating a use as a significant new use as of the date of publication of this proposed rule rather than as of the effective date of the final rule. If uses begun after publication of the proposed rule were considered ongoing rather than new, it would be difficult for EPA to establish SNUR notification requirements, because a person could defeat the SNUR by initiating the proposed significant new use before the rule became final, and then argue that the use was ongoing as of the effective date of the final rule. Thus, persons who begin commercial manufacture or processing of the chemical substance(s) (including manufacturing or processing the chemical substance(s) as part of an article) for a use that would be regulated through this proposed rule, if finalized, would have to cease any such activity before the effective date of the rule if and when finalized. To resume their activities, these persons would have to comply with all applicable SNUR notification requirements and wait until the notification review period, including all extensions, expires. EPA has promulgated provisions (§ 721.45(h)) to allow persons to submit a SNUN before the effective date of the SNUR. If a person were to meet the conditions of § 721.45(h), that person would be considered to have met the requirements of the final SNUR for those activities. If persons who begin commercial manufacture, import, or processing of the chemical substance between publication of the proposed rule and the effective date of the final SNUR do not meet the conditions of advance compliance, they must cease that activity before the effective date of the final rule. To resume their activities, these persons would have to comply with all applicable SNUN requirements and wait until the notification review period, including all extensions, expires.

VIII. Test Data and Other Information

EPA recognizes that TSCA section 5 does not require the development of any particular test data before submission of a SNUN. There are two exceptions:

1. Development of test data is required where the chemical substance subject to the SNUR is also subject to a test rule under TSCA section 4 (see TSCA section 5(b)(1)).

2. Development of test data may be necessary where the chemical substance has been listed under TSCA section 5(b)(4) (see TSCA section 5(b)(2)).

In the absence of a TSCA section 4 test rule or a TSCA section 5(b)(4) listing covering the chemical substance, persons are required only to submit test data in their possession or control and to describe any other data known to or reasonably ascertainable by them (TSCA section 5(d); 40 CFR 720.50 and 40 CFR 721.25). However, as a general matter, EPA recommends that SNUN submitters include data that would permit a reasoned evaluation of risks posed by the chemical substance during its manufacture, processing, use, distribution in commerce, or disposal. EPA encourages persons to consult with the Agency before submitting a SNUN. As part of this optional pre-SNUN consultation, EPA would discuss specific data it believes may be useful in evaluating a significant new use. SNUNs submitted for significant new uses without any test data may increase the likelihood that EPA will take action under TSCA section 5(e) to prohibit or limit activities associated with this chemical.

SNUN submitters should be aware that EPA will be better able to evaluate SNUNs that provide detailed information on:

- Human exposure and environmental releases that may result from the significant new use of the chemical substance.
- Potential benefits of the chemical substance.
- Information on risks posed by the chemical substances compared to risks posed by potential substitutes.

IX. SNUN Submissions

According to § 721.1(c), persons submitting a SNUN must comply with the same notification requirements and EPA regulatory procedures as persons submitting a PMN, including submission of test data on health and environmental effects as described in 40 CFR 720.50. SNUNs must be on EPA Form No. 7710–25, generated using e-PMN software, and submitted to the Agency in accordance with the procedures set forth in 40 CFR 720.40 and 40 CFR 721.25. The e-PMN software is available electronically at *http://www.epa.gov/opptintr/newchems*.

X. Economic Analysis

EPA has evaluated the potential costs of establishing SNUR reporting requirements for potential manufacturers and processors of HBCD in consumer textiles. The evaluation is in the ''Economic Analysis of the Proposed Significant New Use Rule for Hexabromocyclododecane (HBCD)'' (EPA, 2011). It is briefly summarized here and is available in the docket for this proposed rule.

Because there appears to be no use of HBCD in consumer textiles in the United States at the current time, other than for use in motor vehicles, EPA expects very few, if any, entities would submit a SNUN. As a result, the economic impact of this rule is anticipated to be either zero or very low.

In the event that a SNUN is submitted, costs are estimated at approximately $8,300 per SNUN submission for large businesses and $5,900 for small businesses, and include the cost to prepare and submit the SNUN and the payment of a user fee. Businesses that submit a SNUN would be subject to either a $2,500 user fee required by 40 CFR 700.45(b)(2)(iii), or, if they are a small business with annual sales of less than $40 million when combined with those of the parent company (if any), a reduced user fee of $100 (40 CFR 700.45(b)(1)). In its evaluation of this proposed rule, EPA also considered the potential costs a company might incur by avoiding or delaying the significant new use in the future, but these costs have not been quantified.

XI. References

The following documents are specifically referenced in the preamble for this proposed rule. In addition to these documents, other materials may be available in the docket established for this proposed rule under docket ID number EPA–HQ–OPPT–2011–0489, which you can access through *http://www.regulations.gov*. Those interested in the information considered by EPA in developing this proposed rule, should also consult documents that are referenced in the documents that EPA has placed in the docket, regardless of whether the other documents are physically located in the docket.

XII. Statutory and Executive Order Reviews

A. Regulatory Planning and Review

Under Executive Order 12866, entitled ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993), this action has been designated a ''significant regulatory action.'' Accordingly, EPA submitted this action to the Office of Management and Budget (OMB) for review under Executive Orders 12866 and 13563, entitled ''Improving Regulation and Regulatory Review'' (76 FR 3821, January 21, 2011), and any changes made in response to OMB recommendations have been documented in the docket for this action as required by section 6(a)(3)(E) of the Executive Order.

EPA has prepared an economic analysis of this action, entitled ''Economic Analysis of the Proposed Significant New Use Rule for Hexabromocyclododecane (HBCD)'' (EPA, 2011). A copy of the document is available in the docket for this proposed rule and is summarized in Unit X.

B. Paperwork Reduction Act

According to the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.,* an Agency may not conduct or sponsor, and a person is not required to respond to a collection of information that requires OMB approval under PRA, unless it has been approved by OMB and displays a currently valid OMB control number. The OMB control numbers for certain EPA regulations in title 40 of the CFR, after appearing in the **Federal Register**, are listed in 40 CFR part 9, and included on the related collection instrument, or form, if applicable.

The information collection requirements related to this action have already been approved by OMB pursuant to PRA under OMB control number 2070–0038 (EPA ICR No. 1188). This action does not impose any burden requiring additional OMB approval. If an entity were to submit a SNUN to the Agency, the annual burden is estimated to average 97 hours per response. This burden estimate includes the time needed to review instructions; search existing data sources; gather and maintain the data needed; and complete, review, and submit the required SNUN.

Send any comments about the accuracy of the burden estimate, and any suggested methods for minimizing respondent burden to the Director, Collection Strategies Division, Office of Environmental Information (2822T), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001. Please remember to include the OMB control number in any correspondence, but do not submit any completed forms to this address.

C. Small Entity Impacts

Pursuant to section 605(b) of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), the Agency hereby certifies that promulgation of this SNUR would not have a significant adverse economic impact on a substantial number of small entities. The rationale supporting this conclusion is as follows.

Under RFA, small entities include small businesses, small organizations, and small governmental jurisdictions. Small entity is defined in accordance with section 601 of RFA as: A small business as defined by the Small Business Administration's (SBA) regulations at 13 CFR 121.201; a small governmental jurisdiction that is a government of a city, county, town, school district or special district with a population of less than 50,000; and a small organization that is any not-for-profit enterprise which is independently owned and operated and is not dominant in its field. For purposes of assessing the impacts of this proposed rule on small entities, EPA has determined that this proposed rule is not expected to impact any small not-for-profit organizations or small governmental jurisdictions. As such, the Agency estimated potential impacts on small business.

A SNUR applies to any person (including small or large entities) who intends to manufacture, import, or process a chemical substance for a use the EPA has designated as a ''significant new use.'' By definition of the word ''new,'' and based on information currently available to EPA, it appears that no small or large entities presently engage in such activity. Since this proposed SNUR would require a person who intends to engage in such activity in the future to first notify EPA by submitting a SNUN, no economic impact will occur unless someone files a SNUN to pursue a significant new use in the future or forgoes profits by avoiding or delaying the significant new use. Although some small entities may decide to conduct such activities in the future, EPA cannot presently determine how many, if any, there may be. However, EPA's experience to date is that, in response to the promulgation of SNURs covering over 1,000 chemical substances, the Agency receives only a handful of SNUNs per year. For example, the number of SNUNs was four in Federal fiscal year 2005, eight in FY2006, six in FY2007, eight in FY2008, and seven in FY2009. During this 5-year period, three small entities submitted a SNUN. Therefore, EPA believes that the potential economic impact of complying with a SNUR is not expected to be significant or adversely impact a substantial number of small entities. In a SNUR that published as a final rule on August 8, 1997 (62 FR 42690) (FRL–5735–4), the Agency presented its general determination that proposed

and final SNURs are not expected to have a significant economic impact on a substantial number of small entities, which was provided to the Chief Counsel for Advocacy of the Small Business Administration.

D. Unfunded Mandates

Based on EPA's experience with proposing and finalizing SNURs, State, local, and Tribal governments have not been impacted by these rulemakings, and EPA does not have any reason to believe that any State, local, or Tribal government would be impacted by this proposed rule. As such, EPA has determined that this regulatory action would not impose any enforceable duty, contain any unfunded mandate, or otherwise have any effect on small governments subject to the requirements of sections 202, 203, 204, or 205 of the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1531–1538).

E. Federalism

This action would not have federalism implications because it is not expected to have a substantial direct effect on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999).

F. Indian Tribal Governments

This action would not have tribal implications as specified in Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 9, 2000). This action is not expected to have substantial direct effects on Indian Tribes, would not significantly or uniquely affect the communities of Indian Tribal governments, and would not involve or impose any requirements that affect Indian Tribes. Thus, Executive Order 13175 does not apply to this action.

G. Protection of Children

This action is not subject to Executive Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997), because this is not an economically significant regulatory action as defined by Executive Order 12866, and this action does not address environmental health or safety risks disproportionately affecting children.

H. Effect on Energy Supply, Distribution, or Use

This action is not a ''significant energy action'' as defined in Executive Order 13211, entitled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001), because this action is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

I. Technical Standards

Because this action would not involve any technical standards, section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA) (15 U.S.C. 272 note), does not apply to this action.

J. Environmental Justice

This action would not entail special considerations of environmental justice related issues as delineated by Executive Order 12898, entitled ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'' (59 FR 7629, February 16, 1994).

List of Subjects in 40 CFR Part 721

Environmental protection, Chemicals, Hazardous substances, Reporting and recordkeeping requirements.

Dated: March 20, 2012.

Wendy C. Hamnett,

Director, Office of Pollution Prevention and Toxics.

Therefore, it is proposed that 40 CFR part 721 be amended as follows:

PART 721—[AMENDED]

1. The authority citation for part 721 continues to read as follows:

Authority: 15 U.S.C. 2604, 2607, and 2625(c).

2. Add § 721.10281 to subpart E to read as follows:

§ 721.10281 Hexabromocyclododecane and 1,2,5,6,9,10-hexabromocyclododecane.

(a) *Chemical substances and significant new uses subject to reporting.* (1) The chemical substances identified as hexabromocyclododecane (CASRN 25637–99–4) and 1,2,5,6,9,10-hexabromocyclododecane (CASRN 3194–55–6) are subject to reporting under this section for the significant new use described in paragraph (a)(2) of this section.

(2) The significant new use is use in consumer textiles, other than for use in motor vehicles.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph.

(1) *Definitions.* The definitions in § 721.3 apply to this section. In addition, the following definitions apply:

Consumer textile means any cloth, fabric, or other item produced during the milling process (including spinning, weaving, knitting, felting, or finishing), consisting in whole or in part as a product that is sold to or made available to a private individual who uses the product in or around a permanent or temporary household or residence, during recreation, or for any personal use or enjoyment. Consumer textiles include, but are not limited to, upholstered household furniture, mattresses, and draperies.

Motor vehicle has the meaning found at 40 CFR 85.1703.

(2) *Revocation of article exemption.* The provisions of § 721.45(f) do not apply to this section. A person who imports or processes the chemical substances identified in paragraph (a)(1) of this section as part of an article for the significant new use described in paragraph (a)(2) of this section must submit a significant new use notice (SNUN).

[FR Doc. 2012–7207 Filed 3–23–12; 8:45 am]

BILLING CODE 6560–50–P

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

49 CFR Part 173

[Docket No. PHMSA–2010–0201 (HM–254)]

RIN 2137–AE62

Hazardous Materials: Approval and Communication Requirements for the Safe Transportation of Air Bag Inflators, Air Bag Modules, and Seat-Belt Pretensioners

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: In this NPRM, PHMSA is proposing to revise the Hazardous Materials Regulations applicable to air bag inflators, air bag modules, and seat-belt pretensioners. The proposed changes would incorporate the provisions of two special permits into the regulations. In addition, PHMSA proposes to revise the current approval and documentation requirements for a material appropriately classified as a

UN3268 air bag inflator, air bag module, or seat-belt pretensioner. The proposed changes will, if adopted, reduce the regulatory burden on the automotive industry while maintaining the current level of safety.

DATES: Comments must be submitted by May 25, 2012. To the extent possible, PHMSA will consider late-filed comments as a final rule is developed.

ADDRESSES: You may submit comments identified by the docket number (PHMSA–2010–0201 (HM–254)) by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov*. Follow the online instructions for submitting comments.
- *Fax:* 1–202–493–2251.
- *Mail:* Docket Operations, U.S. Department of Transportation, West Building, Ground Floor, Room W12–140, Routing Symbol M–30, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* To Docket Operations; Room W12–140 on the ground floor of the West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Instructions: All submissions must include the agency name and docket number for this notice at the beginning of the comment. All comments received will be posted without change to the Federal Docket Management System (FDMS), including any personal information. Please see the Privacy Act section within the Regulatory Analyses and Notices.

Docket: For access to the dockets to read background documents or comments received, go to *http://www.regulations.gov* or DOT's Docket Operations Office (see **ADDRESSES**).

Privacy Act: Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477–78) or you may visit *http://www.dot.gov*.

FOR FURTHER INFORMATION CONTACT: Matthew Nickels, Standards and Rulemaking Division, Office of Hazardous Materials Safety, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, telephone (202) 366–8553.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Background
II. Summary Review of Proposed Amendments
III. Regulatory Analyses and Notices
IV. List of Subjects

I. Background

The Hazardous Materials Regulations (HMR; 49 CFR Parts 171–180) are issued by the Pipeline and Hazardous Materials Safety Administration (PHMSA) and govern the safe transportation of hazardous materials by highway, rail, vessel, and air. The scope of the HMR includes hazardous materials classification, packaging, hazard communication, emergency response information, and training, etc. Furthermore, included within these provisions are the regulations for the transportation of air bag inflators, air bag modules, and seat-belt pretensioners in § 173.166.

Found in § 173.166(a), PHMSA provides definitions for an air bag inflator (a gas generator used to inflate an air bag in a supplemental restraint system in a motor vehicle), an air bag module (the air bag inflator plus an inflatable bag assembly), and a seat-belt pretensioner (containing similar hazardous materials and is used in the operation of a seat-belt restraining system in a motor vehicle). In § 173.166(b)–(f), PHMSA also provides the regulatory requirements for the classification, EX number assignments, exceptions, packagings, and labeling requirements for these air bag inflators, air bag modules, and seat-belt pretensioners.

In a petition dated June 24, 2008 (P–1523) and two addendums submitted on February 26, 2009 and June 14, 2011, the North American Automotive Hazmat Action Committee (NAAHAC), representing numerous automobile manufacturers and component suppliers located in North America as well as in Asia and Europe, requested revisions to requirements in the HMR applicable to safety restraint systems (e.g., air bag inflators, air bag modules, and seat-belt pretensioners). NAAHAC suggests that subjecting Class 9, UN3268 safety restraint systems to the EX approval process in accordance with § 173.56 imposes an unnecessary burden on the industry that does not advance safety.

In addition, NAAHAC suggests that PHMSA incorporate the following long-standing special permits into the HMR:

- *DOT–SP 12332*—This special permit authorizes the transportation in commerce of certain air bag inflators, air bag modules, and seat-belt pretensioners that meet the requirements for use in the United States, and have been removed from or were intended to be used in a motor vehicle without listing the EX-approval numbers or product names on the shipping papers. This special permit applies to Class 9, UN3268 materials that are packaged using either of the two following methods:

a. Non-specification steel drums with a wall and lid thickness not less than 20 gauge. The lid must be securely affixed with a lever-locking or bolted-ring assembly. The threaded bung closure in the top of the drum must be removed prior to shipment and the bung opening covered with waterproof plastic tape or a waterproof soft plastic cap that must easily provide ventilation of the drum contents in the event of a fire. The drum may be filled with any combination of air bag inflators, air bag modules, or seat-belt pretensioner devices to a capacity not greater than fifty (50) percent of the drum's total volume; inner packagings are not necessary; or

b. Outer packagings that are UN Standard 4H2 solid plastic boxes or non-specification rugged reusable plastic containers with either trays or cushioning material in the containers to prevent movement of articles during transportation. Inner packagings are static-resistant plastic bags or trays, as appropriate.

- *DOT–SP 13996*—This special permit provides relief from § 173.166(e)(4) in that it authorizes the transportation, under certain conditions, of Class 9, UN3268 air bag inflators, air bag modules and seat-belt pretensioners in reusable containers manufactured from high-strength plastic, metal, or other suitable material, or other dedicated handling devices.

As stated above, in addition to NAAHAC's petition suggesting that subjecting Class 9, UN3268 safety restraint systems to the EX approval process in accordance with § 173.56 imposes an unnecessary burden on the industry that does not advance safety, the petition also suggests that PHMSA incorporate these two long-standing special permits into the HMR. PHMSA agrees with the petition and proposes to amend the HMR to incorporate certain requirements based on these two existing special permits issued under 49 CFR Part 107, Subpart B (§§ 107.101 to 107.127). These special permits set forth alternative requirements (variances) to the requirements in the HMR by means that achieve a safety level that at the least corresponds to the safety level required under the regulations and that is consistent with the public interest. Congress expressly authorized DOT to issue variances in the Hazardous Materials Transportation Act of 1975, when appropriate.

The HMR generally are performance-oriented regulations that provide the regulated community a certain amount of flexibility in meeting safety requirements. Even so, not every transportation situation can be anticipated and built into the regulations. The hazardous materials community is particularly strong at developing new materials and technologies and innovative ways of moving materials. Special permits enable the hazardous materials industry to quickly, effectively and safely integrate new products and technologies into the production and transportation stream. Thus, special permits allow developing products and technologies to move in commerce for testing and other purposes, promote increased transportation efficiency and productivity, and support global competitiveness.

A special permit must achieve at least an equivalent level of safety to that specified in the HMR. Implementation of new technologies and operational techniques can enhance safety because the authorized operations or activities achieve a greater level of safety than currently required under the regulations. Special permits also reduce the volume and complexity of the HMR by addressing unique or infrequent transportation situations that would be difficult to accommodate in regulations intended for use by a wide range of shippers and carriers. PHMSA conducts ongoing reviews of special permits to identify widely-used and longstanding special permits with established safety records for incorporation into the HMR for broader applicability.

Incorporating these two special permits into regulations reduces paperwork burdens and facilitates commerce while maintaining an acceptable level of safety. Additionally, adoption of special permits as rules of general applicability provides wider access to the benefits and regulatory flexibility of the provisions granted in the special permits. Factors that influence whether a specific special permit is a candidate for regulatory action include: The safety record for hazardous materials transported; transportation operations conducted under a special permit; the potential for broad application of a special permit; suitability of provisions in the special permit for incorporation into the HMR; rulemaking activity in related areas; and agency priorities.

Regarding the proper classifying of air bag inflators, air bag modules, and seat-belt pretensioners, NAAHAC notes that it is the responsibility of the device manufacturer to ensure that testing, verification, and classification of its products has been conducted in accordance with the HMR. Special Provision 160 (see § 172.102 of the HMR) requires the manufacturer to get the air bag inflators, air bag modules, and seat-belt pretensioners tested by a DOT explosives test lab, in accordance with Test series 6(c) of Part I of the UN Manual of Tests and Criteria (incorporated by reference; see § 171.7 of the HMR), and then the manufacturer must submit a hazard classification recommendation from that DOT explosives test lab to the DOT. This test is performed to ensure that air bag inflators, air bag modules, and seat-belt pretensioners meet the criteria for classification as Class 9 materials. To pass the test there must be no fragmentation of the device casing or pressure vessel, and no projection hazard or thermal effect that would significantly hinder emergency response efforts in the immediate vicinity. Failure of Test series 6(c) necessitates treatment as an explosive in Class 1, including the EX approval process and inclusion of the EX number on the shipping documentation.

NAAHAC indicates that the current requirement to reference the EX number on the shipping paper for Class 9, UN3268 safety restraint systems is a burden that offers little in terms of hazard communication or transportation safety. In fact, NAAHAC states that the requirement imposes unnecessary costs to obtain, record, and transfer the EX number to shipping documents. According to NAAHAC, the industry-wide costs associated with first verifying and then transferring the EX number to the shipping paper is in excess of $890,000.00 annually.

II. Summary Review of Proposed Amendments

PHMSA agrees with the petitioner that requiring Class 9 air bag inflators, air bag modules, and seat-belt pretensioners to be subjected to the EX approval process is unnecessarily burdensome and that eliminating the approval requirement will not adversely affect safety. Further, PHMSA agrees that incorporating the terms of DOT–SP 12332 and DOT–SP 13996 into the HMR will promote compliance and safety. As a result, PHMSA proposes to revise § 173.166 to address the concerns highlighted in NAAHAC's petition. PHMSA believes changes proposed by this NPRM will promote the safe transportation of Class 9 air bag inflators, air bag modules, and seat-belt pretensioners, while significantly reducing the financial burden on the automotive industry for shipping these devices. The changes proposed by this NPRM are described in detail below.

A. Approval Process

In this NPRM, PHMSA proposes to allow manufacturers of air bag inflators, air bag modules, or seat-belt pretensioners to receive a classification of Class 9 (UN3268) to new designs that pass Test series 6(c) of the UN Manual of Tests and Criteria—currently required by Special Provision 160. As proposed, an air bag inflator, air bag module, or seat-belt pretensioner may be classed as Class 9 (UN3268) if the air bag inflator, air bag module, or seat-belt pretensioner design is examined and successfully tested by a person or agency (authorized testing agency) who is authorized by the Associate Administrator to perform such examination and testing of explosives under 173.56(b)(1).

As proposed in this NPRM, persons who test and examine air bag inflators, air bag modules, or seat-belt pretensioners will be required to provide a detailed report on each tested design to the manufacturer. Key components of the report include a description of the design; explanation of the tests performed and results; and a recommended classification for tested designs. The manufacturer must retain the report for as long as the design is in production and for 15 years thereafter. Additionally, the manufacturer must make the report available to Department officials upon request. This record retention requirement ensures that a detailed test report of each air bag inflator, air bag module, or seat-belt pretensioner design is maintained and available for the useful life of the device. These records may be used to verify the accuracy and validity of the tests and classification recommendation.

In summary, the proposed amendment provides manufacturers of air bag inflators, air bag modules, or seat-belt pretensioners with the option to utilize new designs that are proven to meet the criteria of a Class 9 through established test criteria, without receiving an EX approval from PHMSA. The result is a significant cost savings and no change in the level of safety. Additionally, we propose to permit manufacturers to continue to receive EX approval by submitting their designs for examination and testing in accordance with § 173.56(b) if they so choose.

Air bag inflators, air bag modules, or seat-belt pretensioners that meet the criteria for a Division 1.4G explosive, (e.g., a device that fails Test series 6(c) of the UN Manual of Tests and Criteria, as provided by Special Provision 160) must continue to be approved by

PHMSA in accordance with the explosive examination, classification, and approval process in § 173.56(b).

B. Shipping Papers

PHMSA is proposing in this NPRM to except Class 9 air bag inflators, air bag modules, or seat-belt pretensioners assigned to UN3268 from the requirement to provide the EX number on the shipping paper. As suggested by NAAHAC, the documentation requirement imposes a cost burden, but does not provide a safety benefit.

C. Safety Restraint Systems Installed in Vehicles

In this NPRM, PHMSA proposes to clarify that a safety restraint device that is installed in a vehicle or vehicle component is not subject to the HMR. This change makes it clear that the exception will continue to apply to Class 9, UN3268 materials that are not approved by the Associate Administrator.

D. Packaging

In this NPRM, PHMSA is also proposing to authorize the use of non-DOT specification, reusable containers manufactured from high strength plastic, metal, or other suitable material, or other dedicated handling devices, for transportation of air bag inflators, air bag modules, and seat-belt pretensioners. This change would incorporate the provisions of Special Permit DOT–SP 13996 into the HMR. The special permit has been in effect since 2005, and has been utilized by 31 grantees with no known safety problems. A review of the Hazardous Materials Incident Data library did not reveal any incidents related to this special permit since the date of its issuance.

Special Permit DOT–SP 13996 allows the specified packaging to be used for transportation from the manufacturing facility to an intermediate handling location; from an intermediate handling location to the assembly facility; from the assembly facility to an intermediate handling location; from the intermediate handling location back to the manufacturing facility; or from the assembly facility directly to the manufacturer with no intermediate facility involved. As proposed in this NPRM, there would be no limit on the use of the authorized packaging to transportation between specific destinations. However, no modifications or changes may be made to the original package and the transportation must be made by private or contract carrier. By requiring no modifications to the original package, this will ensure that adequate packaging and handling considerations are maintained.

In this NPRM, PHMSA also proposes to authorize additional packaging alternatives for air bag inflators, air bag modules, and seat-belt pretensioners that have been removed from, or were intended to be used in, a motor vehicle that meets the requirements for use in the United States. The proposed change would incorporate the provisions of Special Permit DOT–SP 12332 into the HMR. The special permit has been in effect since 2000, and has been utilized by more than 2,100 grantees with no known safety problems. A review of the Hazardous Materials Incident Data library did not reveal any incidents related to this special permit since the date of its issuance. In accordance with the special permit, this additional packaging option would be limited to devices that are offered for transportation and transported domestically by highway.

E. Shipments for Recycling/Reuse

In this NPRM, we did not propose any changes to the requirements for shipping air bag modules or seat-belt pretensioners for recycling. In the current HMR, when offered for domestic transportation by highway, rail freight, cargo vessel or cargo aircraft, a serviceable air bag module or seat-belt pretensioner removed from a motor vehicle that was manufactured as required for use in the U.S. may be offered for transportation and transported without compliance with the shipping paper requirement prescribed in § 173.166(c), but the word ''Recycled'' must be entered on the shipping paper immediately after the basic description prescribed in § 172.202. However, we believe that the word ''Reuse'' might be a more appropriate description for the actual action that is taking place. We request comments regarding a potential change from the word ''Recycled'' to ''Reuse'' that would appear on shipping papers in accordance with an altered § 173.166(d)(4).

F. Additional Packaging Authorizations

To maintain alignment of the HMR with international requirements, in this NPRM, we are proposing to incorporate changes based on the Seventeenth revised edition of the UN Model Regulations. Specifically, in addition to the packagings authorized currently in § 173.166(e)(1), (e)(2), and (e)(3), we propose to permit 1N2 and 1D drums, 3B2 jerricans, and 4A, 4B, 4N, and 4H1 boxes.

III. Regulatory Analyses and Notices

A. Statutory/Legal Authority for This Rulemaking

This notice of proposed rulemaking is published under the authority of 49 U.S.C. 5103(b) which authorizes the Secretary to prescribe regulations for the safe transportation, including security, of hazardous material in intrastate, interstate, and foreign commerce. 49 U.S.C. 5117(a) authorizes the Secretary of Transportation to issue a special permit from a regulation prescribed in 5103(b), 5104, 5110, or 5112 of the Federal Hazardous Materials Transportation Law to a person transporting, or causing to be transported, hazardous material in a way that achieves a safety level at least equal to the safety level required under the law, or consistent with the public interest, if a required safety level does not exist. If adopted as proposed, the final rule would amend the regulations incorporating a petition and provisions from certain widely-used and longstanding special permits that have established a history of safety and which may, therefore, be converted into the regulations for general use.

B. Executive Order 12866, Executive Order 13563, and DOT Regulatory Policies and Procedures

This notice of proposed rulemaking is not considered a significant regulatory action under section 3(f) of Executive Order 12866 and, therefore, was not reviewed by the Office of Management and Budget. Furthermore, this rule is not significant under the Regulatory Policies and Procedures of the Department of Transportation (44 *FR* 11034).

Executive Order 13563 is supplemental to and reaffirms the principles, structures, and definitions governing regulatory review that were established in Executive Order 12866 Regulatory Planning and Review of September 30, 1993. By building off of each other, these two Executive Orders 12866 and 13563 require agencies to regulate in the ''most cost-effective manner,'' to make a ''reasoned determination that the benefits of the intended regulation justify its costs,'' and to develop regulations that ''impose the least burden on society.''

In this NPRM, the proposed amendments to the HMR will not impose increased compliance costs on the regulated industry. Rather, the proposed rule incorporates current approval procedures for the transportation of air bag inflators, air bag modules, and seat-belt pretensioners into the HMR and provides additional

flexibility for persons seeking to obtain such approval. In addition, the proposals in this NPRM will reduce the paperwork burden on industry and this agency caused by continued renewals of special permits. The provisions of this proposed rule will promote the continued safe transportation of hazardous materials while reducing transportation costs for the industry and administrative costs for the agency. Therefore, the requirements of Executive Orders 12866 and 13563, and the DOT policies and procedures concerning these orders have been satisfied. Overall, this proposed rule should reduce the compliance burden on the regulated industry without compromising transportation safety.

C. Executive Order 13132

This proposed rule has been analyzed in accordance with the principles and criteria contained in Executive Order 13132 (''Federalism''). This proposed rule would preempt State, local, and Indian tribe requirements but does not propose any regulation that has substantial direct effects on the States, the relationship between the national government and the States, or the distribution of power and responsibilities among the various levels of government. Therefore, the consultation and funding requirements of Executive Order 13132 do not apply.

The Federal hazardous materials transportation law, 49 U.S.C. 5101–5127, contains an express preemption provision (49 U.S.C. 5125(b)) that preempts State, local, and Indian tribe requirements on the following subjects:

(1) The designation, description, and classification of hazardous materials;

(2) The packing, repacking, handling, labeling, marking, and placarding of hazardous materials;

(3) The preparation, execution, and use of shipping documents related to hazardous materials and requirements related to the number, contents, and placement of those documents;

(4) The written notification, recording, and reporting of the unintentional release in transportation of hazardous material; and

(5) The design, manufacture, fabrication, marking, maintenance, recondition, repair, or testing of a packaging or container represented, marked, certified, or sold as qualified for use in transporting hazardous material.

This proposed rule addresses subject areas (1), (3), and (5), above. If adopted as final, this rule would preempt any State, local, or Indian tribe requirements concerning these subjects unless the non-Federal requirements are ''substantively the same'' as the Federal requirements. Furthermore, this proposed rule is necessary to update, clarify, and provide relief from regulatory requirements.

Federal hazardous materials transportation law provides at § 5125(b)(2) that, if DOT issues a regulation concerning any of the covered subjects, DOT must determine and publish in the **Federal Register** the effective date of Federal preemption. The effective date may not be earlier than the 90th day following the date of issuance of the final rule and not later than two years after the date of issuance. PHMSA has determined that the effective date of Federal preemption for these requirements will be one year from the date of publication of a final rule in the **Federal Register.**

D. Executive Order 13175

This NPRM has been analyzed in accordance with the principles and criteria contained in Executive Order 13175 (''Consultation and Coordination with Indian Tribal Governments''). Because this NPRM does not significantly or uniquely affect the communities of the Indian tribal governments and does not impose substantial direct compliance costs, the funding and consultation requirements of Executive Order 13175 do not apply.

E. Regulatory Flexibility Act, Executive Order 13272, and DOT Procedures and Policies

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires an agency to review regulations to assess their impact on small entities unless the agency determines that a rule is not expected to have a significant impact on a substantial number of small entities. The proposed rule will not impose increased compliance costs on the regulated industry. Rather, the proposed rule incorporates current approval procedures for the transportation of air bag inflators, air bag modules, and seat-belt pretensioners into the HMR and provides additional flexibility for persons seeking to obtain such approval. In addition, the proposed rulemaking excepts certain shipments from the specific documentation requirements of the HMR; these exception provisions will increase shipping options and reduce shipment costs. Overall, this proposed rule should reduce the compliance burden on the regulated industry without compromising transportation safety. Therefore, we certify that this proposed rulemaking will not have a significant or negative economic impact on a substantial number of small entities, and in reality should provide a slight positive economic benefit (i.e., reduced compliance burden) for those small entities.

This notice has been developed in accordance with Executive Order 13272 (''Proper Consideration of Small Entities in Agency Rulemaking'') and DOT's procedures and policies to promote compliance with the Regulatory Flexibility Act to ensure that potential impacts of draft rules on small entities are properly considered.

F. Paperwork Reduction Act

PHMSA currently has an approved information collection under Office of Management and Budget (OMB) Control Number 2137–0051, entitled ''Rulemaking, Special Permits, and Preemption Requirements,'' with an expiration date of April 30, 2014. This NPRM may result in a decrease in the annual burden and costs under OMB Control Number 2137–0051 due to proposed changes to incorporate provisions contained in certain widely-used or longstanding special permits that have an established safety record.

PHMSA also has an approved information collection under OMB Control Number 2137–0557, entitled ''Approvals for Hazardous Materials,'' with an expiration date of May 31, 2014. While this NPRM may result in a slight increase in the annual burden and cost to OMB Control Number 2137–0557 for proposed minor recordkeeping requirements under § 173.166, this NPRM should result in an overall decrease in the annual burden and cost to OMB Control Number 2137–0557 due to the larger cost savings of reducing the number of approvals required by testers of air bags and air bag modules.

PHMSA has an approved information collection under OMB Control Number 2137–0034, entitled ''Hazardous Materials Shipping Papers and Emergency Response.'' This NPRM may result in a decrease in the annual burden and cost due to shippers no longer being required to put the EX numbers on shipping papers for air bag modules.

Under the Paperwork Reduction Act of 1995, no person is required to respond to an information collection unless it has been approved by OMB and displays a valid OMB control number. Section 1320.8(d), title 5, Code of Federal Regulations requires that PHMSA provide interested members of the public and affected agencies an opportunity to comment on information and recordkeeping requests.

This notice identifies revised information collection requests that PHMSA will submit to OMB for

approval based on the requirements in this proposed rule. PHMSA has developed burden estimates to reflect changes in this proposed rule and estimates that the information collection and recordkeeping burdens would be revised as follows:

OMB Control No. 2137–0051:
Decrease in Annual Number of Respondents: 45
Decrease in Annual Responses: 45
Decrease in Annual Burden Hours: 360
Decrease in Annual Burden Costs: $18,000.00

OMB Control No. 2137–0557:
Decrease in Annual Number of Respondents: 207
Decrease in Annual Responses: 207
Decrease in Annual Burden Hours: 569.25
Decrease in Annual Burden Costs: $11,385.00

OMB Control No. 2137–0034:
Decrease in Annual Number of Respondents: 207
Decrease in Annual Responses: 15,500
Decrease in Annual Burden Hours: 285.33
Decrease in Annual Burden Costs: $5,706.60

PHMSA specifically requests comments on the information collection and recordkeeping burdens associated with developing, implementing, and maintaining these requirements for approval under this proposed rule.

Requests for a copy of this information collection should be directed to Steven Andrews or T. Glenn Foster, Office of Hazardous Materials Standards (PHH–12), Pipeline and Hazardous Materials Safety Administration, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, Telephone (202) 366–8553.

Address written comments to the Dockets Unit as identified in the **ADDRESSES** section of this rulemaking. We must receive comments regarding information collection burdens prior to the close of the comment period identified in the **DATES** section of this rulemaking. In addition, you may submit comments specifically related to the information collection burden to the PHMSA Desk Officer, Office of Management and Budget, at fax number (202) 395–6974.

G. Regulation Identifier Number (RIN)

A regulation identifier number (RIN) is assigned to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN contained in the heading of this document can be used to cross-reference this action with the Unified Agenda.

H. Unfunded Mandates Reform Act of 1995

This proposed rule does not impose unfunded mandates under the Unfunded Mandates Reform Act of 1995. It does not result in costs of $141.3 million or more to either state, local or tribal governments, in the aggregate, or to the private sector, and is the least burdensome alternative that achieves the objective of the rule.

I. Environmental Assessment

The National Environmental Policy Act of 1969 (NEPA), as amended (42 U.S.C. 4321–4347), and implementing regulations by the Council on Environmental Quality (40 CFR part 1500) require Federal agencies to consider the consequences of Federal actions and prepare a detailed statement on actions that significantly affect the quality of the human environment.

The hazardous materials regulatory system is a risk management system that is prevention oriented and focused on identifying a hazard and reducing the probability and quantity of a hazardous materials release. Hazardous materials are categorized by hazard analysis and experience into hazard classes and packing groups. The regulations require each shipper to classify a material in accordance with these hazard classes and packing groups; the process of classifying a hazardous material is itself a form of hazard analysis. Further, the regulations require the shipper to communicate the material's hazards by identifying the hazard class, packing group, and proper shipping name on shipping papers and with labels on packages and placards on transport vehicles. Thus, the shipping paper, labels, and placards communicate the most significant findings of the shipper's hazard analysis. Most hazardous materials are assigned to one of three packing groups based upon its degree of hazard, from a high hazard Packing Group I material to a low hazard Packing Group III material. The quality, damage resistance, and performance standards for the packagings authorized for the hazardous materials in each packing group are appropriate for the hazards of the material transported.

Hazardous materials are transported by aircraft, vessel, rail, and highway. The potential for environmental damage or contamination exists when packages of hazardous materials are involved in transportation incidents. The need for hazardous materials to support essential services means transportation of highly hazardous materials is unavoidable. However, these shipments frequently move through densely populated or environmentally sensitive areas where the consequences of an incident could be loss of life, serious injury, or significant environmental damage. The ecosystems that could be affected by a hazardous materials release during transportation include atmospheric, aquatic, terrestrial, and vegetal resources (for example, wildlife habitats). The adverse environmental impacts associated with releases of most hazardous materials are short-term impacts that can be greatly reduced or eliminated through prompt clean-up of the incident scene. In this NPRM, we are requesting comments on the potential environmental impacts of the proposals.

In this NPRM, PHMSA proposes to incorporate the terms of two special permits into the HMR. Further, all of the proposals in this NPRM involve the transportation of air bag inflators, air bag modules, or seat-belt pretensioners that have been classed as UN3268, miscellaneous hazardous materials (Class 9). While this classification indicates that the material presents a hazard during transportation (but which does not meet the definition of any other hazard class in the HMR), a Class 9 material ranks last in all items regulated by the U.S. DOT in terms of hazard precedence and risk. The proposals in this NPRM reflect that fact and if finalized, would reduce the unnecessary burdens on not just the offerors of these UN3268 materials, but reduce PHMSA's own administrative costs from reviewing unnecessary approvals and special permits.

The purpose and need of this rulemaking is to incorporate widely-used special permits or those with an established safety record into the HMR for universal use. More information about the advantages of the proposed action can be found in the preamble (i.e., Summary Review of Proposed Amendments) to this rulemaking. The alternatives considered in the analysis include: (1) The proposed action, that is, incorporation of the proposed special permits as amendments to the HMR; and (2) the ''no action'' alternative, meaning that none of the proposed special permits would be incorporated into the HMR. PHMSA believes that either of these alternatives would result in equal environmental risk and/or impact because special permits are intended to offer equivalent safety and environmental protection as the HMR.

In considering the potential environmental impacts of the proposed

action, PHMSA does not anticipate that the incorporation of the listed special permits will result in any significant impact on the human environment because the process through which special permits are issued requires the applicant to demonstrate that the alternative transportation method or packaging proposed provides an equivalent level of safety as that provided in the HMR. However, PHMSA welcomes and will consider and address comments about foreseeable environmental impacts or risk associated with the incorporation of any proposed special permit that commenters believe PHMSA might have overlooked in this NPRM.

Given that this rulemaking proposes to amend the HMR to incorporate provisions contained in certain widely-used or longstanding special permits that have an established safety record, these proposed changes in regulation should increase safety and environmental protections.

J. International Trade Analysis

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standards have a legitimate domestic objective, such as the protection of safety, and do not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards. PHMSA notes the purpose is to ensure the safety of the American public, and has assessed the effects of this rule to ensure that it does not exclude imports that meet this objective. As a result, this proposed rule is not considered as creating an unnecessary obstacle to foreign commerce.

IV. List of Subjects in 49 CFR Part 173

Hazardous materials transportation, Packaging and containers, Radioactive materials, Reporting and recordkeeping requirements, and Uranium.

In consideration of the foregoing, we propose to amend 49 CFR Chapter I as follows:

PART 173—SHIPPERS—GENERAL REQUIREMENTS FOR SHIPMENTS AND PACKAGINGS

1. The authority citation for part 173 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; 49 CFR 1.45, 1.53.

2. Section 173.166 is proposed to be revised as follows:

§ 173.166 Air bag inflators, air bag modules and seat-belt pretensioners.

(a) *Definitions.* An *air bag inflator* (consisting of a casing containing an igniter, a booster material, a gas generant and, in some cases, a pressure receptacle (cylinder)) is a gas generator used to inflate an air bag in a supplemental restraint system in a motor vehicle. An *air bag module* is the air bag inflator plus an inflatable bag assembly. A *seat-belt pre-tensioner* contains similar hazardous materials and is used in the operation of a seat-belt restraining system in a motor vehicle.

(b) *Classification.* (1) An air bag inflator, air bag module, or seat-belt pretensioner may be classed as Class 9 (UN3268) if the air bag inflator, air bag module, or seat-belt pretensioner design is examined and successfully tested by a person or agency (authorized testing agency) who is authorized by the Associate Administrator to perform such examination and testing of explosives under 173.56(b)(1) of this subchapter, and who:

(i) Does not manufacture or market explosives, air bag inflators, air bag modules, or seat-belt pretensioners, is not owned in whole or in part, or is not financially dependent upon any entity that manufactures or markets explosives, air bag inflators, air bag modules, or seat-belt pretensioners;

(ii) Performs all examination and testing in accordance with the applicable requirements as specified in Special Provision 160 (see § 172.102); and

(iii) Maintains records in accordance with paragraph (g) of this section.

(iv) By adhering to all the provisions specified in § 173.166(b)(1), the Class 9 (UN3268) air bag inflator, air bag module, or seat-belt pretensioner design is not required to be submitted to the Associate Administrator for approval or assigned an EX number.

(2) An air bag inflator, air bag module, or seat-belt pretensioner may be classed as Division 1.4G if it has been examined and successfully tested by a person or agency (authorized testing agency) who is authorized by the Associate Administrator to perform such examination and testing of explosives under 173.56 of this subchapter. For domestic transport, air bag inflators, air bag modules or seat-belt pretensioners that meet the criteria for a Division 1.4G explosive must be transported using the description, ''UN0431, Articles, pyrotechnic *for technical purposes''* as specified in Special Provision 161 (see § 172.102). Further, as a Class 1 explosive, the manufacturer must submit to the Associate Administrator a report of the examination and assignment of a recommended shipping description, division, and compatibility group and if the Associate Administrator finds the approval request meets the regulatory criteria, the explosive will be approved in writing and assigned an EX number; or

(3) The manufacturer has submitted an application, including a classification issued by the competent authority of a foreign government to the Associate Administrator, and received written notification from the Associate Administrator that the device has been approved for transportation and assigned an EX number.

(c) *EX numbers.* (1) When an air bag inflator, air bag module, or seat-belt pretensioner is classed as a Division 1.4G, the packaging is subject to the EX number marking requirements in § 172.320 (or the shipping paper requirements in § 172.202(a)). For shipping papers, the EX number or product code for each approved inflator, module or pretensioner must be listed in association with the basic description required by § 172.202(a) of this subchapter. Product codes must be traceable to the specific EX number assigned to the inflator, module or pretensioner by the Associate Administrator. The EX number or product code is not required to be marked on the outside package.

(2) An air bag inflator, air bag module, or seat-belt pretensioner when classed as a Class 9 (UN3268), is excepted from the EX number requirements of paragraph (c).

(d) *Exceptions.* (1) An air bag module or seat-belt pretensioner that is classed as a Class 9 (UN3268) and is installed in a motor vehicle, aircraft, boat or other transport conveyance or its completed components, such as steering columns or door panels, is not subject to the requirements of this subchapter. An air bag module or seat-belt pretensioner that has been classed as a Division 1.4G and approved by the Associate Administrator and is installed in a motor vehicle, aircraft, boat or other transport conveyance or its completed components, such as steering columns or door panels, is not subject to the requirements of this subchapter.

(2) An air bag module containing an inflator that has been previously approved by the Associate Administrator for transportation is not required to be submitted for further examination or approval.

(3) An air bag module containing an inflator that has previously been approved by the Associate Administrator as a Division 2.2 material is not required to be submitted for further examination to be reclassed as a Class 9 material.

(4) *Shipments for Recycling.* When offered for domestic transportation by highway, rail freight, cargo vessel or cargo aircraft, a serviceable air bag module or seat-belt pretensioner removed from a motor vehicle that was manufactured as required for use in the United States may be offered for transportation and transported without compliance with the shipping paper requirement prescribed in paragraph (c) of this section. However, the word ''Recycled'' must be entered on the shipping paper immediately after the basic description prescribed in § 172.202 of this subchapter. No more than one device is authorized in the packaging prescribed in paragraph (e)(1), (2) or (3) of this section. The device must be cushioned and secured within the package to prevent movement during transportation.

(e) *Packagings.* Rigid, outer packagings, meeting the general packaging requirements of part 173, and the packaging specification and performance requirements of part 178 of this subchapter at the Packing Group III performance level are authorized as follows. The packagings must be designed and constructed to prevent movement of the articles and inadvertent operation. Further, if the Class 9 designation is contingent upon packaging specified by the authorized testing agency, shipments of the air bag inflator, air bag module, or seat-belt pretensioner must be in full compliance with the prescribed packaging.

(1) 1A2, 1B2, 1N2, 1D, 1G, or 1H2 drums.

(2) 3A2, 3B2, or 3H2 jerricans.

(3) 4A, 4B, 4N, 4C1, 4C2, 4D, 4F, 4G, 4H1, or 4H2 boxes.

(4) *Reusable High-Strength Containers or Dedicated Handling Devices.* (i) Reusable containers manufactured from high-strength plastic, metal, or other suitable material, or other dedicated handling devices are authorized for shipment of air bag inflators, air bag modules, and seat-belt pretensioners from a manufacturing facility to the assembly facility, subject to the following conditions:

(A) The gross weight of the containers or handling devices may not exceed 1000 kg (2205 pounds). Containers or handling devices must provide adequate support to allow stacking at least three units high with no resultant damage;

(B) If not completely enclosed by design, the container or handling device must be covered with plastic, fiberboard, metal, or other suitable material. The covering must be secured to the container by banding or other comparable methods; and

(C) Internal dunnage must be sufficient to prevent movement of the devices within the container.

(ii) Reusable containers manufactured from high-strength plastic, metal, or other suitable material, or other dedicated handling devices are authorized for shipment of air bag inflators, air bag modules, and seat-belt pretensioners to, between, and from, intermediate handling locations, provided they meet the conditions specified in paragraph (e)(4)(i)(A)–(C) of this section and:

(A) No modifications or changes are made to the packagings; and

(B) Transportation must be made by private or contract carrier.

(5) Packagings which were previously authorized in an approval issued by the Associate Administrator may continue to be used until January 1, 2018, provided a copy of the approval is maintained while such packaging is being used.

(6) *Devices removed from a vehicle.* When removed from, or were intended to be used in, a motor vehicle that was manufactured as required for use in the United States and offered for domestic transportation by highway, a serviceable air bag inflator, air bag module, or seat-belt pretensioner may be offered for transportation and transported in the following additional packaging:

(i) Specification and non-specification steel drums with a wall and lid thickness not less than 20 gauge. The lid must be securely affixed with a lever-locking or bolted-ring assembly. The lid of the drum must provide ventilation of the drum contents in a fire. The drum may be filled with any combination of air bag inflators, air bag modules, or seat-belt pretensioner devices to a capacity not greater than fifty (50) percent of the drum's total volume. In addition, inner packagings are not required; or

(ii) Outer packaging consisting of 4H2 solid plastic boxes or non-specification rugged reusable plastic outer packaging and inner static-resistant plastic bags or trays, as appropriate. If not completely enclosed by design, the container or handling device must be covered with plastic, fiberboard, metal or other suitable material. The covering must be secured to the container by banding or other comparable methods. The articles must be packed to prevent movement within the container during transportation.

(f) *Labeling.* Notwithstanding the provisions of § 172.402 of this subchapter, each package or handling device must display a CLASS 9 label. Additional labeling is not required when the package contains no hazardous materials other than the devices.

(g) *Recordkeeping requirements.* (1) Following the examination of each new design type classed as a Class 9 in accordance with paragraph (b)(1) of this section, the person that conducted the examination must prepare a test report and provide the test report to the manufacturer of the air bag inflator, air bag module, or seat-belt pretensioner. At a minimum, the test report must contain the following information:

(i) Name and address of the test facility;

(ii) Name and address of the applicant;

(iii) Manufacturer of the device. For a foreign manufacturer, the U.S. agent or importer must be identified;

(iv) A test report number, drawing of the device, and description of the air bag inflator, air bag module, or seat-belt pretensioner in sufficient detail to ensure that the test report is traceable (e.g. a unique product identifier) to a specific inflator design;

(v) The tests conducted and the results; and

(vi) A certification that the air bag inflator, air bag module, or seat-belt pretensioner is properly classed as a Class 9 (UN3268).

(2) For as long as any air bag inflator, air bag module, or seat-belt pretensioner design is being manufactured, and for at least fifteen (15) years thereafter, a copy of each test report must be maintained by the authorized testing agency that performed the examination and testing, and by the manufacturer of the product.

(3) Test reports must be made available to a representative of the Department upon request.

Issued in Washington, DC, on March 20, 2012 under authority delegated in 49 CFR part 106.

Magdy El-Sibaie,

Associate Administrator for Hazardous Materials Safety, Pipeline and Hazardous Materials Safety Administration.

Notices

Federal Register
Vol. 77, No. 58
Monday, March 26, 2012

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

March 21, 2012.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments regarding (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), *OIRA_Submission@OMB.EOP.GOV* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602. Comments regarding these information collections are best assured of having their full effect if received within 30 days of this notification. Copies of the submission(s) may be obtained by calling (202) 720–8681.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Risk Management Agency

Title: Multiple Peril Crop Insurance.

OMB Control Number: 0563–0053.

Summary of Collection: Previous amendments to the Federal Crop Insurance Act expanded the role of the crop insurance program to be the principal tool for risk management by producers of farm products and provided that crop insurance program operate on an actuarially sound basis, provided for independent review of crop insurance products by person experienced as actuaries and in underwriting, and required that the crop insurance program operate on an actuarially sound basis. To meet these goals, existing crop programs must be improved and expanded, new crop products developed, and new insurance concepts studied for possible implementation. Federal Crop Insurance Corporation (FCIC) offers a Standard Reinsurance Agreement to eligible crop insurance companies under which FCIC will use data elements instead of standards forms.

Need and Use of the Information: FCIC requires crop acreage information to be submitted to the insurance agent by each producer on or before a specific date. The basic provision covers information such as the name of the crop, the number of timely planted acres, person sharing in the crop, location of the acreage, etc. This information is used to determine liability, premium and subsidy. Federal agencies, Risk Management Agency, crop insurance companies that are reinsured by FCIC, and other agencies that require such information in the performance of their duties may use this information. If the information were not collected by specified dates, the producers may not have insurance coverage or the amount of insurance may be reduced and the crop insurance program would not be administered in an actuarially sound manner.

Description of Respondents: Farms; Business or other for-profit.

Number of Respondents: 556,408.

Frequency of Responses: Recordkeeping; Reporting: Quarterly; Weekly; Semi-annually; Monthly; Annually.

Total Burden Hours: 7,963,982.

Charlene Parker,

Departmental Information Clearance Officer.

[FR Doc. 2012–7191 Filed 3–23–12; 8:45 am]

BILLING CODE 3410–08–P

DEPARTMENT OF AGRICULTURE

Forest Service

Black Hills National Forest Advisory Board

AGENCY: Forest Service, USDA.

ACTION: Revised notice of intent to call for nominations for membership to the Black Hills National Forest Advisory Board.

SUMMARY: The U.S. Department of Agriculture, Forest Service has re-established the Black Hills National Forest Advisory Board (Board). The purpose is to obtain advice and recommendations on a broad range of forest issues such as forest plan revisions or amendments, forest health including fire management and mountain pine beetle infestations, travel management, forest monitoring and evaluation, recreation fees, and site-specific projects having forest wide implications. In an earlier notice, the Forest Service indicated it was seeking nominations for individuals to be considered as committee members, and the public was invited to submit nominations for membership. That notice, ''Notice of intent to re-establish the Black Hills National Forest Advisory Board and call for nominations,'' was published in the **Federal Register**, Volume 77, No. 30, page 8214, on Tuesday, February 14, 2012 and indicated that nominations and applications to the Board must be received by March 15, 2012. This revised notice extends the deadline for nominations and applications to April 30, 2012.

DATES: Written nominations must be received by April 30, 2012. Instructions for submitting a nomination package may be found in the section below entitled, ''Advisory Committee Organization''.

ADDRESSES: Send nominations and applications to Craig Bobzien, Forest Supervisor, Black Hills National Forest, 1019 North 5th Street, Custer, SD 57730.

FOR FURTHER INFORMATION CONTACT: Marie Curtin, Planning and Public Affairs, USDA, Forest Service, Black Hills National Forest, telephone: 605–673–9324, fax: 605–673–9208, or email: *mcurtin@fs.fed.us*. Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: USDA 16565–Black Hills National Forest Advisory Board is a non-scientific program advisory Board established by the Secretary of Agriculture in 2003 to provide advice and counsel to the U. S. Forest Service, Black Hills National Forest, in the wake of increasingly severe and intense wild fires and mountain pine beetle epidemics.

The purpose of the Board is to provide advice and recommendations on a broad range of forest issues such as forest plan revisions or amendments, travel management, forest monitoring and evaluation, and site-specific projects having forest-wide implications. The Board also serves to meet the needs of the Recreation Enhancement Act of 2005 as a recreation resource advisory board (RRAC) for the Black Hills of South Dakota. The Board provides timely advice and recommendations to the regional forester through the forest supervisor regarding programmatic forest issues and project-level issues that have forest-wide implications for the Black Hills National Forest.

The Board meets approximately ten times a year, with one month being a field trip, held in August and focusing on both current issues and the educational value of seeing management strategies and outcomes on the ground. This Board has been established as a truly credible entity and a trusted voice on forest management issues and is doing often astonishing work in helping to develop informed consent for forest management.

For years, the demands made on the Black Hills National Forest have resulted in conflicts among interest groups resulting in both forest-wide and site-specific programs being delayed due to appeals and litigation. The Board provides a forum to resolve these issues to allow for the Black Hills National Forest to move forward in its management activities. The Board is believed to be one of the few groups with broad enough scope to address all of the issues and include all of the jurisdictional boundaries.

Significant Contributions

The Board's most significant accomplishments include:

1. A 2004 report on the Black Hills Fuels Reduction Plan, a priority following the major fires including the 86,000 acre Jasper Fire in 2000;

2. A 2004 initial Off-Highway Vehicle Travel Management Subcommittee report;

3. A report on their findings regarding the thesis, direction, and assumptions of Phase II of our Forest Plan produced in 2005;

4. The Invasive Species Subcommittee Report in 2005 covering recommendations to better stop invasive species from infiltrating the Forest;

5. A final Travel Management Subcommittee Report in 2006 in which the Board made 11 recommendations regarding characteristics of a designated motor vehicle trail system, the basis for our initial work to prepare our Motor Vehicle Use Map in 2010–2011;

6. The Board's annual work to attract funding through grants based on the Collaborative Landscape Forest Restoration Program (CFLRP), a program of the Secretary of Agriculture CFLR Program to encourage the collaborative, science-based ecosystem restoration of priority forest landscapes;

7. A letter to the Secretary and the Chief of the Forest Service to work, restore and maintain open space for wildlife habitat and recreation needs like snowmobile trails; and

8. The annual reports to the Secretary detailing the Board's activities, issues, and accomplishments.

The Board is deemed to be among the most effective public involvement strategies in the Forest Service and continues to lead by example for Federal, State, and local government agencies working to coordinate and cooperate in the Black Hills of South Dakota and Wyoming.

Background

Pursuant to the Federal Advisory Committee Act (5 U.S.C. App. II), notice is hereby given that the Secretary of Agriculture intends to calls for nominations for membership to the Black Hills National Forest Advisory Board. The Board provides advice and recommendations on a broad range of forest planning issues and, in accordance with the Federal Lands Recreation Enhancement Act (Pub. L. 108–447 (REA)), more specifically will provide advice and recommendations on Black Hills National Forest recreation fee issues (serving as the RRAC for the Black Hills National Forest). The Board membership consists of individuals representing commodity interests, amenity interests, and State and local government.

The Board has been determined to be in the public interest in connection with the duties and responsibilities of the Black Hills National Forest. National forest management requires improved coordination among the interests and governmental entities responsible for land management decisions and the public that the agency serves.

Advisory Committee Organization

The Board consists of 16 members that are representative of the following interests (this membership is similar to the membership outlined by the Secure Rural Schools and Community Self Determination Act for Resource Advisory Committees (16 U.S.C. 500, *et seq.*)):

1. Economic development;
2. Developed outdoor recreation, off-highway vehicle users, or commercial recreation;
3. Energy and mineral development;
4. Commercial timber industry;
5. Permittee (grazing or other land use within the Black Hills area);
6. Nationally recognized environmental organizations;
7. Regionally or locally recognized environmental organizations;
8. Dispersed recreation;
9. Archeology or history;
10. Nationally or regionally recognized sportsmen's groups, such as anglers or hunters;
11. South Dakota State-elected offices;
12. Wyoming State-elected offices;
13. South Dakota or Wyoming county- or local-elected officials;
14. Tribal government elected or-appointed officials;
15. South Dakota State natural resource agency official; and
16. Wyoming State natural resource agency official.

No individual who is currently registered as a Federal lobbyist is eligible to serve as a member of the Committee. The Committee will meet approximately nine times, and will attend at least one summer field tour as designated by the Designated Federal Officer (DFO).

The appointment of members to the Board will be made by the Secretary of Agriculture. Any individual or organization may nominate one or more qualified persons to serve on the Board. Individuals may also nominate themselves. To be considered for membership, nominees must submit a:

1. Resume describing qualifications for membership to the Committee;

2. Cover letter with rationale for serving on the committee and what you can contribute; and

3. Complete form AD–755, Advisory Committee Membership Background Information.

Letters of recommendations are welcome. The AD–755 may be obtained from Forest Service contact person or from the following Web site: *http://www.fsa.usda.gov/Internet/FSA_File/ad755.pdf*. All nominations will be vetted by USDA. The Secretary of Agriculture will appoint committee members to the Board from the list of qualified applicants.

The members of the Board will elect and determine the responsibilities of the Chairperson and the Vice-Chairperson. In absence of the Chairperson, the Vice-Chairperson will act in the Chairperson's stead. The Forest Supervisor of the Black Hills National Forest serves as the Designated Federal Official under sections 10(e) and (f) of the Federal Advisory Committee Act (5 U.S.C. App. II).

Members will serve without compensation, but may be reimbursed for travel expenses while performing duties on behalf of the Board, subject to approval by the DFO.

Equal opportunity practices are followed in all appointments to the Board in accordance with USDA policies. To ensure that the recommendations of the Board have been taken into account the needs of diverse groups, served by the Black Hills National Forest, membership shall include, to the extent practicable, individuals with demonstrated ability to represent minorities, women, and persons with disabilities.

Dated: March 19, 2012.

Craig Bobzien,

Forest Supervisor.

BILLING CODE 3410–11–P

DEPARTMENT OF AGRICULTURE

National Agricultural Statistics Service

Notice of Intent To Seek Approval To Revise and Extend a Currently Approved Information Collection

AGENCY: National Agricultural Statistics Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the intention of the National Agricultural Statistics Service (NASS) to request revision and extension of a currently approved information collection, the Agricultural Resources Management Survey and Chemical Use Surveys. A revision to burden hours will be needed due to changes in the size of the target population, sampling design, and/or questionnaire length.

DATES: Comments on this notice must be received by May 25, 2012 to be assured of consideration.

ADDRESSES: You may submit comments, identified by docket number 0535–0218, by any of the following methods:

- *Email: omboffi cer@nass.usda.gov.* Include docket number above in the subject line of the message.
- *Fax:* (202) 720–6396.
- *Mail:* Mail any paper, disk, or CD–ROM submissions to: David Hancock, NASS Clearance Officer, U.S. Department of Agriculture, Room 5336 South Building, 1400 Independence Avenue SW., Washington, DC 20250–2024.
- *Hand Delivery/Courier:* Hand deliver to: David Hancock, NASS Clearance Officer, U.S. Department of Agriculture, Room 5336 South Building, 1400 Independence Avenue SW., Washington, DC 20250–2024.

FOR FURTHER INFORMATION CONTACT: Joseph T. Reilly, Associate Administrator, National Agricultural Statistics Service, U.S. Department of Agriculture, (202) 720–4333.

SUPPLEMENTARY INFORMATION:

Title: Agricultural Resources Management Survey and Chemical Use Surveys.

OMB Control Number: 0535–0218.

Expiration Date of Current Approval: December 31, 2012.

Type of Request: Intent to revise and extend a currently approved information collection.

Abstract: The Agricultural Resource Management Surveys (ARMS) are the primary source of information for the U.S. Department of Agriculture on a broad range of issues related to: Production practices, costs and returns, pest management, chemical usage, and contractor expenses. Data is collected on both a whole farm level and on selected commodities.

ARMS is the only source of information available for objective evaluation of many critical issues related to agriculture and the rural economy, such as: Whole farm finance data, including data sufficient to construct estimates of income for farms by: type of operation, loan commodities, income for operator households, credit, structure, and organization; marketing information; and other economic data on input usage, production practices, and crop substitution possibilities.

Data from ARMS are used to produce estimates of net farm income by type of commercial producer as required in 7 U.S.C. 7998 and estimates of enterprise production costs as required in 7 U.S.C. 1441(a). Data from ARMS are also used as weights in the development of the Prices Paid Index, a component of the Parity Index referred to in the Agricultural Adjustment Act of 1938. These indexes are used to calculate the annual federal grazing fee rates as described in the Public Rangelands Improvement Act of 1978 and Executive Order 12548 and as promulgated in regulations found at 36 CFR 222.51.

In addition, ARMS is used to produce estimates of sector-wide production expenditures and other components of income that are used in constructing the estimates of income and value-added which are transmitted to the U.S. Department of Commerce, Bureau of Economic Analysis, by the USDA Economic Research Service (ERS) for use in constructing economy-wide estimates of Gross Domestic Product. This transmittal of data, prepared using the ARMS, is undertaken to satisfy a 1956 agreement between the Office of Management and Budget and the Departments of Agriculture and Commerce that a single set of estimates be published on farm income.

Chemical Use Surveys: Congress has mandated that NASS and ERS build nationally coordinated databases on agricultural chemical use and related farm practices; these databases are the primary vehicles used to produce specified environmental and economic estimates. The surveys will help provide the knowledge and technical means for producers and researchers to address on-farm environmental concerns in a manner that maintains agricultural productivity.

Authority: These data will be collected under the authority of 7 U.S.C. 2204(a). Individually identifiable data collected under this authority are governed by section 1770 of the Food Security Act of 1985, 7 U.S.C. 2276, which requires USDA to afford strict confidentiality to non-aggregated data provided by respondents. This Notice is submitted in accordance with the Paperwork Reduction Act of 1995 (at 44 U.S.C. 3501, *et seq.*) and Office of Management and Budget regulations at 5 CFR part 1320.

NASS also complies with OMB Implementation Guidance, ''Implementation Guidance for Title V of the E-Government Act, Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA),'' 72 FR 33362 (June 15, 2007).

Estimate of Burden: Public reporting burden for this collection of information

is estimated to average approximately 35–40 minutes per survey.

Respondents: Farmers, ranchers, farm managers, farm contractors, and farm households.

Estimated Number of Respondents: Approximately 80,000 respondents will be sampled each year. Over half of these respondents will be contacted more than one time in a single year.

Estimated Total Annual Burden on Respondents: Approximately 66,000 hours per year.

Copies of this information collection and related instructions can be obtained without charge from the NASS Clearance Officer, at (202) 690–2388 or at: *omboffi cer@nass.usda.gov.*

Comments: Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, through the use of appropriate automated, electronic, mechanical, technological or other forms of information technology collection methods. All responses to this notice will become a matter of public record and be summarized in the request for OMB approval.

Signed at Washington, DC, March 06, 2012.

Joseph T. Reilly,

Associate Administrator.

BILLING CODE 3410–20–P

DEPARTMENT OF AGRICULTURE

National Agricultural Statistics Service

Notice of Intent To Revise a Previously Approved Information Collection

AGENCY: National Agricultural Statistics Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the intent of the National Agricultural Statistics Service (NASS) to seek reinstatement of an information collection, the National Childhood Injury and Occupational Injury Survey of Farm Operators.

DATES: Comments on this notice must be received by May 25, 2012 to be assured of consideration.

ADDRESSES: You may submit comments, identified by docket number 0535–0235, by any of the following methods:

- *Email: omboffi cer@nass.usda.gov.* Include docket number above in the subject line of the message.
- *Fax:* (202) 720–6396.
- *Mail:* Mail any paper, disk, or CD–ROM submissions to: David Hancock, NASS Clearance Officer, U.S. Department of Agriculture, Room 5336 South Building, 1400 Independence Avenue SW., Washington, DC 20250–2024.
- *Hand Delivery/Courier:* Hand deliver to: David Hancock, NASS Clearance Officer, U.S. Department of Agriculture, Room 5336 South Building, 1400 Independence Avenue SW., Washington, DC 20250–2024.

FOR FURTHER INFORMATION CONTACT: Joseph T. Reilly, Associate Administrator, National Agricultural Statistics Service, U.S. Department of Agriculture, (202) 720–4333.

SUPPLEMENTARY INFORMATION:

Title: National Childhood Injury and Occupational Injury Survey of Farm Operators.

OMB Control Number: 0535–0235.

Expiration Date of Previous Approval: 12/31/2011.

Type of Request: To seek reinstatement of an information collection for a period of three years.

Abstract: The National Childhood Injury and Adult Occupational Injury Survey of Farm Operators is designed to: (1) Provide estimates of childhood nonfatal injury incidence and description of injury occurring to children less than 20 years of age who reside, work, or visit farms and (2) describe the occupational injury experience of farm operators. These surveys are being conducted as part of a cooperative agreement between the Center for Disease Control (CDC) and the National Agricultural Statistics Service (NASS). In 2012, NASS will conduct the General Adult and Child Injury survey and will use the total farm population to sample from. In 2013, NASS will not be conducting an injury survey, since we will be concentrating on the Census of Agriculture survey (OMB #0535–0226). In 2014, NASS plans to again conduct the General Adult and Child Injury Survey, and this time, the survey will concentrate on minority farm operators.

DATA COLLECTION FOR THE THREE YEAR APPROVAL PERIOD

Survey targeted group	Reference year	Survey year	Sample size
General Adult and Child Injury Survey Target Population—All Farm Operators)	2011	2012	50,000
No Survey Conducted this Year	2012	2013	0
General Adult and Child Injury Survey (Minority Farm Operators)	2013	2014	50,000

Data will be collected by telephone from all 50 states. Questions will relate to farm injuries occurring during the reference calendar year. These data will update and enhance existing data series used by the National Institute of Occupational Safety and Health (NIOSH) to: (1) Establish a measure of the number and rate of childhood injuries associated with farming operations and study the specific types of injuries sustained and (2) describe the scope and magnitude of occupational injuries associated with farming operations. The collection combines the youth and occupational injury studies to reduce the number of contacts on the targeted farm population. Reports will be generated and information disseminated to all interested parties concerning the findings from this study.

Authority: These data will be collected under the authority of 7 U.S.C. 2204(a). Individually identifiable data collected under this authority are governed by Section 1770 of the Food Security Act of 1985, 7 U.S.C. 2276, which requires USDA to afford strict confidentiality to non-aggregated data provided by respondents. This Notice is submitted in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501, *et seq.*) and Office of Management and Budget regulations at 5 CFR part 1320.

NASS also complies with OMB Implementation Guidance, ''Implementation Guidance for Title V of the E-Government Act, Confidential

Information Protection and Statistical Efficiency Act of 2002 (CIPSEA),'' 72 FR 33362 (June 15, 2007).

Estimate of Burden: Reporting burden for this collection of information is estimated to average 12 minutes per response; screen-outs will be allowed early in the interview process if no injuries were incurred in the reference year. Burden is based on a minimum response rate of 80%. NASS will be utilizing several pieces of publicity and informational materials to encourage respondents to participate in this important survey.

Respondents: Farm Operators.

Estimated Annual Number of Respondents: 33,500.

Estimated Total Annual Burden on Respondents: 10,500 hours.

Copies of this information collection and related instructions can be obtained without charge from David Hancock, NASS—OMB Clearance Officer, at (202) 690–2388 or at *ombofficer@nass.usda.gov*.

Comments: Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, technological, or other forms of information technology collection methods. All responses to this notice will become a matter of public record and be summarized in the request for OMB approval.

Signed at Washington, DC, March 06, 2012.

Joseph T. Reilly,

Associate Administrator.

[FR Doc. 2012–7257 Filed 3–23–12; 8:45 am]

BILLING CODE 3410–20–P

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: Bureau of Industry and Security.

Title: Request for Investigation Under Section 232 of the Trade Expansion Act.

OMB Control Number: 0694–0120.

Form Number(s): N/A.

Type of Request: Regular.

Burden Hours: 3,000 hours.

Number of Respondents: 400 respondents.

Average Hours per Response: 7.5 hours per response.

Needs and Uses: Upon request, BIS will initiate an investigation to determine the effects of imports of specific commodities on the national security, and will make the findings known to the President for possible adjustments to imports through tariffs. The findings are made publicly available and are reported to Congress. The purpose of this collection is to account for the public burden associated with the surveys distributed to determine the impact on national security.

Affected Public: Businesses and other for-profit institutions.

Frequency: On occasion.

Respondent's Obligation: Required to obtain benefits.

OMB Desk Officer: Jasmeet Seehra, FAX number (202) 395–7285.

Copies of the above information collection proposal can be obtained by calling or writing Jennifer Jessup, Departmental Paperwork Clearance Officer, (202) 482–0336, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at *jjessup@doc.gov*).

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to Jasmeet Seehra, Office of Management and Budget (OMB), by email to *jseehra@omb.eop.gov*, or by fax to (202) 395–7285.

Dated: March 20, 2012.

BILLING CODE 3510–33–P

DEPARTMENT OF COMMERCE

National Climate Assessment and Development Advisory Committee (NCADAC) Meeting

AGENCY: Office of Oceanic and Atmospheric Research (OAR), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Notice of open public meeting.

SUMMARY: This notice sets forth the schedule and proposed agenda of a forthcoming meeting of the DoC NOAA National Climate Assessment and Development Advisory Committee (NCADAC).

DATE AND TIME: The meeting is scheduled for: Tuesday, April 10, 2012 from 2–4 p.m. Eastern Time.

ADDRESSES: Conference call. Public access will be available at the office of the U.S. Global Change Research Program, Conference Room A, Suite 250, 1717 Pennsylvania Avenue NW., Washington, DC 20006. Please check the National Climate Assessment Web site for additional information at *http://www.globalchange.gov/what-we-do/assessment*.

Matters To Be Considered

Please refer to the Web page *http://www.nesdis.noaa.gov/NCADAC/index.html* for the most up-to-date meeting agenda, when available.

Status: The meeting will be open to public participation with a 10-minute public comment period from 3:45–3:55 p.m. The NCADAC expects that public statements presented at its meetings will not be repetitive of previously submitted verbal or written statements. In general, each individual or group making a verbal presentation will be limited to a total time of two minutes. Written comments should be received in the NCADAC DFO's office by Tuesday, April 3, 2012, to provide sufficient time for NCADAC review. Written comments received by the NCADAC DFO after April 3, 2012, will be distributed to the NCADAC, but may not be reviewed prior to the meeting date.

FOR FURTHER INFORMATION CONTACT: Dr. Cynthia Decker, Designated Federal Official, National Climate Assessment and Development Advisory Board, NOAA, Rm. 11230, 1315 East-West Highway, Silver Spring, Maryland 20910. (Phone: 301–734–1156, Fax: 301–713–1459, Email: *Cynthia.decker@noaa.gov*). Individuals planning to attend are requested to RSVP to Dr. Decker by Tuesday, April 3, 2012 because space may be limited at the venue.

SUPPLEMENTARY INFORMATION: The National Climate Assessment and Development Advisory Committee was established in December 2010. The committee's mission is to synthesize and summarize the science and information pertaining to current and future impacts of climate change upon the United States; and to provide advice and recommendations toward the

development of an ongoing, sustainable national assessment of global change impacts and adaptation and mitigation strategies for the Nation. Within the scope of its mission, the committee's specific objective is to produce a National Climate Assessment.

Dated: March 20, 2012.

Terry Bevels,

Acting Chief Financial Officer/Chief Administrative Officer, Office of Oceanic and Atmospheric Research, National Oceanic and Atmospheric Administration.

DEPARTMENT OF COMMERCE

U.S. Census Bureau

Proposed Information Collection; Comment Request; Annual Survey of School System Finances (Formerly Named Annual Survey of Local Government Finances—School Systems)

AGENCY: U.S. Census Bureau, Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)).

DATES: To ensure consideration, written comments must be submitted on or before May 25, 2012.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, (202) 482–0336, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at *jjessup@doc.gov*).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Jeremy Phillips, U.S. Census Bureau, Governments Division, 4600 Silver Hill Road, Washington, DC 20233–6800; (301) 763–5653.

SUPPLEMENTARY INFORMATION:

I. Abstract

The United States Census Bureau plans to request an extension to the current Office of Management and Budget clearance for the Annual Survey of School System Finances.

The Annual Survey of School System Finances is the only comprehensive source of public elementary-secondary school system finance data collected on a nationwide scale using uniform definitions, concepts, and procedures. The collection covers the revenues, expenditures, debt, and assets of all public elementary-secondary school systems. This data collection has been coordinated with the National Center for Education Statistics (NCES). The NCES uses this collection to satisfy its need for school finance data.

Fiscal data provided by respondents aid data users in measuring the effectiveness of resource allocation. The products of this data collection make it possible for data users to search a single database to obtain information on such things as per pupil expenditures and the percent of state, local, and federal funding for each school system. Elementary-secondary education related spending is the single largest financial activity of state and local governments. Education finance statistics provided by the Census Bureau allow for analyses of how public elementary-secondary school systems receive their funding and how they are spending their funds.

The forms and survey announcement used in the school finance portion of the survey are:

F–33 Survey Announcement. This letter is mailed electronically at the beginning of each survey period to solicit the assistance of the state education agencies. It establishes the conditions by which the state education agencies provide their school finance data to the Census Bureau.

Form F–33. This form contains item descriptions and definitions of the elementary-secondary education finance items collected jointly by the Census Bureau and NCES. It is used primarily as a worksheet and instruction guide by the state education agencies providing school finance data centrally for the school systems in their respective states. All states supply their data by electronic means. Revisions to this survey include the removal of the data item collecting Title V, Part A (Innovative Programs) revenue. (Funding for this federal program ended on September 30, 2009.) There may also be the removal of three data items collecting data for the American Recovery and Reinvestment Act funds. Once states are no longer able to collect or expend American Recovery and Reinvestment Act funds, those data items will be removed from the collection. The data items were added as non-substantial changes to the data collection after the previous OMB clearance, and collection began with fiscal year 2009 data.

Form F–33–L1. This is a supplemental form sent directly to school systems in states where the state education agencies cannot provide information on the assets of individual school systems. School systems have the choice to submit their data via paper, fax, or Internet.

Form F–33–L2. This is a supplemental form sent directly to school systems in states where the state education agency cannot provide information on the indebtedness of individual school systems. School systems have the choice to submit their data via paper, fax, or Internet.

Form F–33–L3. This is a supplemental form sent directly to school systems in states where the state education agency cannot provide information on both indebtedness and assets. This letter combines the items requested on the forms F–33–L1 and F–33–L2. School systems have the choice to submit their data via paper, fax, or Internet.

II. Method of Collection

The Census Bureau collects almost all of the finance data for local school systems from state education agency databases through central collection arrangements with the state education agencies. The states transfer most of this information in electronic format over the Internet via file transfer protocol. The Census Bureau has facilitated central collection of school system finance data by accepting data in multiple formats.

III. Data

OMB Control Number: 0607–0700.

Form Number: F–33, F–33–L1, F–33–L2 and F–33–L3.

Type of Review: Regular submission.

Affected Public: State and local governments.

Estimated Number of Respondents: 3,230.

Estimated Time per Response: 1.24 hours.

Estimated Total Annual Burden Hours: 3,990.

Estimated Total Annual Cost: $92,229.

Respondents Obligation: Voluntary.

Legal Authority: Title 13, U.S.C., Sections 161 and 182.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c)

ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: March 20, 2012.

Glenna Mickelson,

Management Analyst, Office of the Chief Information Officer.

BILLING CODE 3510–07–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Docket 19–2012]

Foreign-Trade Zone 204—Tri-Cities Area, TN/VA; Application for Reorganization Under Alternative Site Framework

An application has been submitted to the Foreign-Trade Zones (FTZ) Board (the Board) by the Tri-Cities Airport Commission, grantee of FTZ 204, requesting authority to reorganize the zone under the alternative site framework (ASF) adopted by the Board (74 FR 1170, 1/12/09 (correction 74 FR 3987, 1/22/09); 75 FR 71069–71070, 11/22/10). The ASF is an option for grantees for the establishment or reorganization of general-purpose zones and can permit significantly greater flexibility in the designation of new ''usage-driven'' FTZ sites for operators/users located within a grantee's ''service area'' in the context of the Board's standard 2,000-acre activation limit for a general-purpose zone project. The application was submitted pursuant to the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the Board (15 CFR part 400). It was formally filed on March 20, 2012.

FTZ 204 was approved by the Board on October 18, 1994 (Board Order 706, 59 FR 54432, 10/31/94) and expanded on June 7, 2002 (Board Order 1233, 67 FR 41393–41394, 06/18/02) and on June 22, 2010 (Board Order 1691, 75 FR 38979–38980).

The current zone project includes the following sites: *Site 1* (977 acres, expires 6/30/15)—Tri-Cities Regional Airport complex, 2525 Highway 75, Blountville, Sullivan County, TN; *Site 2* (26 acres, expires 6/30/15)—Johnson City Chemical Company, 402 Steel Street, Johnson City, Washington County, TN; *Site 3* (330 acres, expires 6/30/15)—Northeast Tennessee Business Park, intersection of TN 357 and Highway 75, Kingsport, Sullivan County, TN; *Site 4* (129 acres, expires 6/30/15)—Bristol Tennessee Industrial Park, SR394, Bristol, Sullivan County, TN; *Site 5* (799 acres)—Tri-County Industrial Park, Industrial Park Road, Piney Flats, Sullivan County, TN; *Site 6* (206 acres, 6/30/15)—Regional Med-Tech Center, Med-Tech Parkway, Johnson City, Washington County, TN; *Site 7* (103 acres, expires 6/30/15)—Linden/Hairston Industrial Park, Linden Drive at Bonham Road, Bristol, Washington County, VA; *Site 8* (2,100 acres, expires 6/30/15)—Holston Business and Technology Park, 4509 West Stone Drive, Kingsport, Hawkins County, TN; *Site 9* (134 acres, expires 6/30/15)—Washington County Industrial Park, Cherry Hill Road, Johnson City, Washington County, TN; *Site 10* (113 acres, expires 8/31/12)—Oak Park Industrial Park, Westinghouse Road/Rt. 11, Washington County, VA; and, *Site 11* (226 acres, expires 6/30/17)—The Partnership Park II, 2504 Weaver Pike, Bristol, Sullivan County, TN.

The grantee's proposed service area under the ASF would be the Counties of Sullivan, Hawkins, Greene, Washington, Unicoi, Carter, Hamblen, and Johnson, Tennessee and the Counties of Buchanan, Dickenson, Wise, Lee, Russell, Scott and Washington, Virginia and the Cities of Norton and Bristol, Virginia as described in the application. If approved, the grantee would be able to serve sites throughout the service area based on companies' needs for FTZ designation. The proposed service area is within/adjacent to the Tri-Cities Customs and Border Protection port of entry.

The applicant is requesting authority to reorganize its existing zone project under the ASF as follows: Sites 1 through 11 would become magnet sites. The ASF allows for the possible exemption of one magnet site from the ''sunset'' time limits that generally apply to sites under the ASF, and the applicant proposes that proposed magnet Site 1 be so exempted. Because the ASF only pertains to establishing or reorganizing a general-purpose zone, the application would have no impact on FTZ 204's authorized subzone.

In accordance with the Board's regulations, Kathleen Boyce of the FTZ Staff is designated examiner to evaluate and analyze the facts and information presented in the application and case record and to report findings and recommendations to the Board.

Public comment is invited from interested parties. Submissions (original and 3 copies) shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is May 25, 2012. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to June 11, 2012.

A copy of the application will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 2111, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230–0002, and in the ''Reading Room'' section of the Board's Web site, which is accessible via *www.trade.gov/ftz.* For further information, contact Kathleen Boyce at *Kathleen.Boyce@trade.gov* or (202) 482–1346.

Dated: March 20, 2012.

Andrew McGilvray,

Executive Secretary.

BILLING CODE P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Docket 20–2012]

Foreign-Trade Zone 151—Findlay, OH; Application for Reorganization Under Alternative Site Framework

An application has been submitted to the Foreign-Trade Zones (FTZ) Board (the Board) by the Findlay/Hancock County Chamber of Commerce, grantee of FTZ 151, requesting authority to reorganize the zone under the alternative site framework (ASF) adopted by the Board (74 FR 1170, 1/12/09 (correction 74 FR 3987, 1/22/09); 75 FR 71069–71070, 11/22/10). The ASF is an option for grantees for the establishment or reorganization of general-purpose zones and can permit significantly greater flexibility in the designation of new ''usage-driven'' FTZ sites for operators/users located within a grantee's ''service area'' in the context of the Board's standard 2,000-acre activation limit for a general-purpose zone project. The application was submitted pursuant to the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the Board (15 CFR part 400). It was formally filed on March 20, 2012.

FTZ 151 was approved by the Board on July 6, 1988 (Board Order 389, 53 FR 27058, 7/18/1988) and expanded on February 10, 1999 (Board Order 1023, 64 FR 8542, 2/22/1999) and April 4, 2004 (Board Order 1332, 69 FR 26067, 5/11/2004).

The current zone project includes the following sites: *Site 1* (820 acres)—Tall Timbers Industrial Center, Intersection of State Route 12 and County Road 95, Findlay; and *Site 3* (373 acres)—Ottawa Industrial Park, Intersection of Williamstown Street and Sugarmill Drive, Ottawa.

The grantee's proposed service area under the ASF would be Hardin, Putnam, Seneca, Allen and Hancock Counties, Ohio, as described in the application. If approved, the grantee would be able to serve sites throughout the service area based on companies' needs for FTZ designation. The proposed service area is within and adjacent to the Toledo Customs and Border Protection port of entry.

The applicant is requesting authority to reorganize its existing zone project to include both of the existing sites as ''magnet'' sites. The ASF allows for the possible exemption of one magnet site from the ''sunset'' time limits that generally apply to sites under the ASF, and the applicant proposes that Site 1 be so exempted. No usage-driven sites are being requested at this time. Because the ASF only pertains to establishing or reorganizing a general-purpose zone, the application would have no impact on FTZ 151's authorized subzones.

In accordance with the Board's regulations, Elizabeth Whiteman of the FTZ Staff is designated examiner to evaluate and analyze the facts and information presented in the application and case record and to report findings and recommendations to the Board.

Public comment is invited from interested parties. Submissions (original and 3 copies) shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is May 25, 2012. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to June 11, 2012.

A copy of the application will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 2111, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230–0002, and in the ''Reading Room'' section of the Board's Web site, which is accessible via *www.trade.gov/ftz.* For further information, contact Elizabeth Whiteman at *Elizabeth.Whiteman@trade.gov* or (202) 482–0473.

Dated: March 20, 2012.

Andrew McGilvray,

Executive Secretary.

BILLING CODE P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[A(32b)–3–2011]

Foreign-Trade Zone 45—Portland, OR Expansion of Manufacturing Authority Epson Portland, Inc. (Inkjet Ink); Notice of Approval of Restricted Authority

On December 22, 2011, the Port of Portland, grantee of Foreign-Trade Zone (FTZ) 45, requested to expand the scope of manufacturing authority approved within Subzone 45F, on behalf of Epson Portland, Inc. (EPI), in Hillsboro, Oregon. The request involved the use of privileged foreign (PF) status (19 CFR 146.41) inputs in manufacturing of ink for inkjet printer cartridges. Notice was given in the **Federal Register** inviting public comment (A(32b)–3–2011, 76 FR 81475–81476, 12/28/2011).

Section 400.32(b)(1) of the FTZ Board's regulations (15 CFR part 400) allows the Assistant Secretary for Import Administration to act for the Board in making decisions on new manufacturing authority when the zone benefits sought do not involve the election of non-privileged foreign status on items involving inverted tariffs. Pursuant to that regulatory provision, on March 8, 2012, the Assistant Secretary for Import Administration approved authority to include the use of certain PF status inputs in the manufacturing of ink for inkjet printer cartridges within Subzone 45F, subject to the FTZ Act (19 U.S.C. 81a–81u) and the Board's regulations, including Section 400.28.

The applicant's request for broader authority, including the manufacturing of inkjet ink involving foreign-sourced inputs that would be admitted to the subzone under nonprivileged foreign (NPF) status (19 CFR 146.42), will continue to be reviewed and processed under FTZ Docket 7–2012 (77 FR 4006, 1/26/2012).

Dated: March 20, 2012.

Andrew McGilvray,

Executive Secretary.

BILLING CODE P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–831]

Fresh Garlic From the People's Republic of China: Extension of Time Limit for Final Results of the 2009–2010 Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

FOR FURTHER INFORMATION CONTACT: Lingjun Wang, AD/CVD Operations, Office 6, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–2316.

SUPPLEMENTARY INFORMATION:

Background

On October 20, 2011, the Department published partial preliminary results of the administrative review.[1] On December 7, 2011, the Department published preliminary results of the administrative review.[2] On February 27, 2012, the Department published partial final results of the administrative review.[3] The final results of the administrative review are currently due no later than April 5, 2012.

Statutory Time Limits

In antidumping duty administrative reviews, section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act), requires the Department to make a final determination in an administrative review of an antidumping duty order within 120 days after the day on which the preliminary results are published. However, if it is not practicable to complete the review within this time period, section 751(a)(3)(A) of the Act allows the Department to extend the 120-day period to 180 days after publication of the preliminary results.

Extension of Time Limit for Final Results

The Department has determined that it is not practicable to complete the review within the 120-day time period

[1] *See Fresh Garlic From the People's Republic of China: Partial Preliminary Results, Rescission of, and Intent To Rescind, in Part, the 2009–2010 Administrative Review,* 76 FR 65172 (October 20, 2011).

[2] *See Fresh Garlic From the People's Republic of China: Preliminary Results of the 2009–2010 Antidumping Duty Administrative Review,* 76 FR 76375 (December 7, 2011) (*Preliminary Results*).

[3] *See Fresh Garlic From the People's Republic of China: Partial Final Results and Partial Final Rescission of the 2009–2010 Administrative Review,* 77 FR 11486 (February 27, 2012).

because it requires additional time to evaluate the surrogate value submissions and arguments made by the interested parties following the *Preliminary Results.* Therefore, in accordance with section 751(a)(3)(A) of the Act, the Department is extending the time limit for completing the final results of the administrative review from 120 days to 180 days. The final results are now due no later than June 4, 2012.

This notice is published in accordance with sections 751(a) and 777(i) of the Act.

Dated: March 20, 2012.

Gary Taverman,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Solid Urea From the Russian Federation: Extension of Time Limit for Preliminary Results of Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

DATES: *Effective Date:* March 26, 2012.

FOR FURTHER INFORMATION CONTACT: Dustin Ross or Minoo Hatten, AD/CVD Operations, Office 1, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–0747 or (202) 482–1690, respectively.

SUPPLEMENTARY INFORMATION:

Background

At the request of interested parties, the Department of Commerce (the Department) initiated an administrative review of the antidumping duty order on solid urea from the Russian Federation for the period July 1, 2010, through June 30, 2011. *See Initiation of Antidumping and Countervailing Duty Administrative Reviews and Requests for Revocation in Part,* 76 FR 53404 (August 26, 2011).

Extension of Time Limit for Preliminary Results

Section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act), requires the Department to complete the preliminary results within 245 days after the last day of the anniversary month of an order for which a review is requested. If it is not practicable to complete the review within this time period, section 751(a)(3)(A) of the Act allows the Department to extend the time limit for the preliminary results to a maximum of 365 days after the last day of the anniversary month.

We determine that it is not practicable to complete the preliminary results of this review by the current deadline of April 1, 2012, because we require additional time to analyze a detailed response to a supplemental questionnaire that was submitted on March 7, 2012. In addition, the numerous extensions we have granted for filing various responses has contributed to us requiring additional time to complete the preliminary results.

Therefore, we are extending the time period for issuing the preliminary results of this review by 75 days, until June 15, 2012.

This notice is published in accordance with section 751(a)(3)(A) of the Act and 19 CFR 351.213(h)(2).

Dated: March 20, 2012.

Gary Taverman,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Bottom Mount Combination Refrigerator-Freezers From the Republic of Korea: Final Affirmative Countervailing Duty Determination

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) determines that countervailable subsidies are being provided to producers and exporters of bottom mount combination refrigerator-freezers (bottom mount refrigerators) from the Republic of Korea (Korea). For information on the estimated subsidy rates, see the ''Suspension of Liquidation'' section of this notice.

DATES: *Effective Date:* March 26, 2012.

FOR FURTHER INFORMATION CONTACT: Myrna L. Lobo, Justin M. Neuman, or Milton Koch, AD/CVD Operations, Office 6, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–2371, (202) 482–0486, and (202) 482–2584, respectively.

SUPPLEMENTARY INFORMATION:

Background

The U.S. producer that filed the petition for this investigation is Whirlpool Corporation (hereafter, Whirlpool, or ''petitioner''). This investigation covers 41 programs. The mandatory respondents in this investigation are: (1) Samsung Electronics Co., Ltd. (SEC), and its cross-owned affiliates Samsung Gwangju Electronics Co., Ltd. (SGEC) and Samsung Electronics Logitech (SEL); (2) LG Electronics (LGE) and its cross-owned affiliate, ServeOne Co., Ltd., and (3) Daewoo Electronics Corporation (DWE).

Period of Investigation

The period of investigation for which we are measuring subsidies is January 1, 2010, through December 31, 2010.

Case History

The following events have occurred since the Department published the *Preliminary Determination.*[1] From September through December 2011, the Department issued numerous supplemental questionnaires to all parties concerning the New Subsidies Allegations (NSA), cross ownership, and other program issues. All parties timely responded to the Department's supplemental questionnaires.

In September and October 2011, the petitioner filed comments on the supplemental responses of LGE and SEC, on the NSA questionnaire responses, and on cross-ownership of respondents. On October 17, 2011, the Government of Korea (GOK) submitted to the record the public version of a verification report from a prior investigation. Also in October, SEC filed pre-verification corrections. On October 27, 2011, the Department placed independent research on the record. On October 31, 2011, the Department placed on the record the Preliminary Scope Memorandum,[2] prepared in the companion antidumping duty (AD) investigation.

[1] *See Bottom Mount Combination Refrigerator-Freezers From the Republic of Korea: Preliminary Negative Countervailing Duty Determination and Alignment of Final Determination With Final Antidumping Determination,* 76 FR 55044 (September 6, 2011) (*Preliminary Determination*).

[2] *See* Memorandum from the Team to Gary Taverman, Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, Re: Scope Modification Requests, dated October 26, 2011 (Preliminary Scope Memorandum).

In November 2011, the petitioner filed new information and comments on the NSA supplemental responses of the GOK and DWE, and on suppliers and verification issues for LGE and SEC. On November 28, 2011, the petitioner met with the Department and filed pre-verification comments.[3] On that date, the Department also issued verification outlines to the GOK, LGE, SEC, and DWE.

The Department conducted verification from December 5, 2011, through December 16, 2011. On December 21, 2011, the Department issued its Post-Preliminary Analysis of Cross-ownership and its Post-Preliminary Analysis of New Subsidy Allegations. On that date, the Department also issued its Post-Preliminary Analysis Regarding the Restructuring of Daewoo Electronics Corporation.

On February 2, 2012, the Department issued verification reports for LGE and SEC. On February 3, 2012, the Department issued verification reports for the GOK and DWE. Also on February 3, 2012, the Department met with counsel for SEC.[4] On February 14, 2012, the GOK, LGE, SEC, and DWE filed case briefs. On February 21, 2012, the Department issued its Post-Preliminary Analysis: GOK Preferential Lending Under the Daewoo Workout, and the GOK, LGE, SEC, and the petitioner filed rebuttal briefs. On February 24, 2012, the GOK and DWE filed case briefs on GOK Preferential Lending Under the Daewoo Workout. On February 27, 2012, the petitioner filed a rebuttal brief on GOK Preferential Lending Under the Daewoo Workout. On February 28, 2012, the Department held a public hearing, based on the timely requests of the petitioner, SEC, LGE, and DWE, filed in September and October 2011. On March 5, 2012, the Department met with the GOK and counsel for DWE.[5]

Scope Comments

In the *Preliminary Determination,* the Department stated that it was evaluating comments filed by the parties regarding the scope in the companion AD investigation. In *AD Preliminary Determination,*[6] we did not modify the description of the scope of the investigations in the manner requested by certain interested parties. Specifically, we did not modify the scope to be consistent with the Association of Home Appliance Manufacturers definition, nor did we exclude kimchi refrigerators or Quatro Cooling Refrigerators from the scope. We did, however, clarify the scope to eliminate any ambiguity with respect to the inclusion of Quatro Cooling Refrigerators in the scope of the investigation. *See AD Preliminary Determination,* 76 FR at 67690–67691; *see also* Preliminary Scope Memorandum. No party commented on our preliminary scope determination. Therefore, we have made no further changes to the description of the scope of the investigation.

Scope of the Investigation

The products covered by the investigation are all bottom mount combination refrigerator-freezers and certain assemblies thereof from Korea. For purposes of the investigation, the term ''bottom mount combination refrigerator-freezers'' denotes freestanding or built-in cabinets that have an integral source of refrigeration using compression technology, with all of the following characteristics:

- The cabinet contains at least two interior storage compartments accessible through one or more separate external doors or drawers or a combination thereof;
- An upper-most interior storage compartment(s) that is accessible through an external door or drawer is either a refrigerator compartment or convertible compartment, but is not a freezer compartment; [7] and
- There is at least one freezer or convertible compartment that is mounted below an upper-most interior storage compartment(s).

For purposes of the investigation, a refrigerator compartment is capable of storing food at temperatures above 32 degrees F (0 degrees C), a freezer compartment is capable of storing food at temperatures at or below 32 degrees F (0 degrees C), and a convertible compartment is capable of operating as either a refrigerator compartment or a freezer compartment, as defined above.

Also covered are certain assemblies used in bottom mount combination refrigerator-freezers, namely: (1) Any assembled cabinets designed for use in bottom mount combination refrigerator-freezers that incorporate, at a minimum: (a) An external metal shell, (b) a back panel, (c) a deck, (d) an interior plastic liner, (e) wiring, and (f) insulation; (2) any assembled external doors designed for use in bottom mount combination refrigerator-freezers that incorporate, at a minimum: (a) An external metal shell, (b) an interior plastic liner, and (c) insulation; and (3) any assembled external drawers designed for use in bottom mount combination refrigerator-freezers that incorporate, at a minimum: (a) An external metal shell, (b) an interior plastic liner, and (c) insulation.

The products subject to the investigation are currently classifiable under subheadings 8418.10.0010, 8418.10.0020, 8418.10.0030, and 8418.10.0040 of the Harmonized Tariff System of the United States (HTSUS). Products subject to this investigation may also enter under HTSUS subheadings 8418.21.0010, 8418.21.0020, 8418.21.0030, 8418.21.0090, and 8418.99.4000, 8418.99.8050, and 8418.99.8060. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the merchandise subject to this scope is dispositive.

Analysis of Subsidy Programs and Comments Received

The subsidy programs under investigation and the issues raised in the case and rebuttal briefs by parties in this investigation are discussed in Memorandum to Paul Piquado, Assistant Secretary for Import Administration, Issues and Decision Memorandum for the Final Determination in the Countervailing Duty Investigation of Bottom Mount Combination Refrigerator-Freezers from the Republic of Korea (Decision Memorandum), which is hereby adopted by this notice. A list of the subsidy programs and the issues that parties raised and to which we responded in the Decision Memorandum is attached to this notice as an Appendix. The Decision Memorandum is a public document, which is on file electronically via Import Administration's Antidumping and Countervailing Duty Centralized Electronic Service System (IA ACCESS). Access to IA ACCESS is available in the Central Records Unit (CRU), room 7046 of the main Department of Commerce

[7] The existence of an interior sub-compartment for ice-making in an upper-most storage compartment does not render an upper-most storage compartment a freezer compartment.

building. In addition, a complete version of the Decision Memorandum is also accessible on the Web at *http://ia.ita.doc.gov/frn/*. The signed Decision Memorandum and the electronic versions of the Decision Memorandum are identical in content.

Use of Facts Otherwise Available, Including Adverse Inferences

For purposes of this final determination, we relied, in part, on adverse facts available (AFA), as provided for in sections 776(a) and (b) of the Tariff Act of 1930, as amended (Act), to determine the countervailable subsidy rate for one program under investigation. A full discussion of our decision to apply AFA is presented in the Decision Memorandum in the section ''Application of Facts Available, Including the Application of Adverse Inferences.''

Injury Test

Because Korea is a ''Subsidies Agreement Country'' within the meaning of section 701(b) of the Act, the International Trade Commission (ITC) is required to determine pursuant to section 701(a)(2) of the Act whether imports of the subject merchandise from Korea materially injure, or threaten material injury to, a U.S. industry. On May 23, 2011, the ITC published its affirmative preliminary determination that there is a reasonable indication that an industry in the United States is materially injured by reason of allegedly subsidized imports from Korea of subject merchandise.[8]

Suspension of Liquidation

In accordance with section 705(c)(1)(B)(i)(I) of the Act, we have calculated an individual countervailable subsidy rate for each respondent. Section 705(c)(5)(A)(i) of the Act states that for companies not individually investigated, we will determine an ''all others'' rate equal to the weighted average of the countervailable subsidy rates established for exporters and producers individually investigated, excluding any zero and *de minimis* countervailable subsidy rates, and any rates based entirely on AFA under section 776 of the Act.

Notwithstanding the language of section 705(c)(5)(A)(i) of the Act, we have not calculated the ''all others'' rate by weight averaging the rates of DWE and SEC, because doing so risks disclosure of proprietary information. Therefore, we have calculated an average rate using other information on the record.[9] Since both DWE and SEC received countervailable export subsidies and the ''all others'' rate is an average based on the individually investigated exporters and producers, the ''all others'' rate includes export subsidies.[10]

Company	*Ad valorem* net subsidy rate (percent)
Daewoo Electronics Corporation	12.90
LG Electronics Inc	0.30
Samsung Electronics Co., Ltd./Samsung Gwangju Electronics Co., Ltd	2.46
All Others	2.79

Because the *Preliminary Determination* was negative, we did not instruct U.S. Customs and Border Protection (CBP) to suspend entries of subject merchandise. In accordance with sections 705(c)(1)(B)(ii) and (C) of the Act, as applicable, we are directing CBP to suspend liquidation of and to require the posting of a cash deposit or bond on all imports of the subject merchandise from Korea, other than those produced and exported by LGE because LGE's rate is *de minimis,* that are entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register.** The suspension of liquidation will remain in effect until further notice.

If the ITC issues a final affirmative injury determination, we will issue a CVD order. If the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or canceled.

ITC Notification

In accordance with section 705(d) of the Act, we will notify the ITC of our determination. In addition, we are making available to the ITC all non-privileged and non-proprietary information relating to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order, without the written consent of the Assistant Secretary for Import Administration. In accordance with section 705(b)(3) of the Act, because our preliminary determination was negative and our final determination is affirmative, the ITC will make its final determination within 75 days after the Department makes its final determination.

Return or Destruction of Proprietary Information

In the event that the ITC issues a negative final injury determination, this notice will serve as the only reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

This determination is issued and published pursuant to sections 705(d) and 777(i) of the Act.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–580–865]

Notice of Final Determination of Sales at Less Than Fair Value and Negative Critical Circumstances Determination: Bottom Mount Combination Refrigerator-Freezers From the Republic of Korea

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: We determine that imports of narrow bottom mount combination refrigerator-freezers (bottom mount refrigerators) from the Republic of Korea (Korea) are being, or are likely to be, sold in the United States at less than fair value (LTFV), as provided in section 735 of the Tariff Act of 1930, as amended (the Act). In addition, we determine that there is no reasonable basis to believe or suspect that critical circumstances exist with respect to the subject merchandise exported from Korea.

Based on our analysis of the comments received, we have made changes in the margin calculations. Therefore, the final determination differs from the preliminary determination. The final weighted-average dumping margins for the investigated companies are listed below in the section entitled ''Final Determination Margins.''

DATES: *Effective Date:* March 26, 2012.

FOR FURTHER INFORMATION CONTACT: Elizabeth Eastwood or Henry Almond, AD/CVD Operations, Office 2, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–3874 and (202) 482–0049, respectively.

SUPPLEMENTARY INFORMATION:

Background

On November 2, 2011, the Department published in the **Federal Register** the preliminary determination of sales at LTFV in the antidumping duty investigation of bottom mount refrigerators from Korea.[1] Since the preliminary determination, the following events have occurred.

In November 2011, we issued supplemental questionnaires to two respondents, LG Electronics, Inc. (LG), and Samsung Electronics Co., Ltd. (Samsung), and we received responses to these supplemental questionnaires in this same month.

In November and December 2011, we verified the questionnaire responses of three respondents in this case, Daewoo Electronics Corporation (Daewoo), LG, and Samsung, in accordance with section 782(i) of the Act.

In January 2012, the Government of Korea submitted comments on certain aspects of the Department's preliminary determination.

In February 2012, Whirlpool Corporation (hereafter, the petitioner) and two of the three respondents submitted case and rebuttal briefs. Daewoo submitted only a rebuttal brief. Also in February 2012, the Department held a public hearing at the request of the petitioner and the three respondents.

Subsequent to the *Preliminary Determination,* the Department revised the computer programs used to calculate the respondents' dumping margins to ensure that they accurately reflected the methodological choices made in that determination. These revisions to the programming, had they been included in the preliminary determination, would not have altered the weighted-average dumping margins calculated there.[2]

Period of Investigation

The period of investigation (POI) is January 1, 2010, through December 31, 2010.

Scope of Investigation

The products covered by the investigation are all bottom mount combination refrigerator-freezers and certain assemblies thereof from Korea. For purposes of the investigation, the term ''bottom mount combination refrigerator-freezers'' denotes freestanding or built-in cabinets that have an integral source of refrigeration using compression technology, with all of the following characteristics:

- The cabinet contains at least two interior storage compartments accessible through one or more separate external doors or drawers or a combination thereof;
- An upper-most interior storage compartment(s) that is accessible through an external door or drawer is either a refrigerator compartment or convertible compartment, but is not a freezer compartment; [3] and
- There is at least one freezer or convertible compartment that is mounted below an upper-most interior storage compartment(s).

For purposes of the investigation, a refrigerator compartment is capable of storing food at temperatures above 32 degrees F (0 degrees C), a freezer compartment is capable of storing food at temperatures at or below 32 degrees F (0 degrees C), and a convertible compartment is capable of operating as either a refrigerator compartment or a freezer compartment, as defined above.

Also covered are certain assemblies used in bottom mount combination refrigerator-freezers, namely: (1) Any assembled cabinets designed for use in bottom mount combination refrigerator-freezers that incorporate, at a minimum: (a) An external metal shell, (b) a back panel, (c) a deck, (d) an interior plastic liner, (e) wiring, and (f) insulation; (2) any assembled external doors designed for use in bottom mount combination refrigerator-freezers that incorporate, at a minimum: (a) An external metal shell, (b) an interior plastic liner, and (c) insulation; and (3) any assembled external drawers designed for use in bottom mount combination refrigerator-freezers that incorporate, at a minimum: (a) An external metal shell, (b) an interior plastic liner, and (c) insulation.

The products subject to the investigation are currently classifiable under subheadings 8418.10.0010, 8418.10.0020, 8418.10.0030, and 8418.10.0040 of the Harmonized Tariff System of the United States (HTSUS). Products subject to this investigation may also enter under HTSUS subheadings 8418.21.0010, 8418.21.0020, 8418.21.0030, 8418.21.0090, and 8418.99.4000, 8418.99.8050, and 8418.99.8060. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the merchandise subject to this scope is dispositive.

Scope Comments

In the *Preliminary Determination,* we did not modify the description of the scope of this investigation in the manner requested by certain interested parties. Specifically, we did not modify the scope to be consistent with the Association of Home Appliance Manufacturers (AHAM) definition, nor did we exclude kimchi refrigerators or Quatro Cooling Refrigerators from the scope. We did, however, clarify the scope to eliminate any ambiguity with respect to the inclusion of Quatro Cooling Refrigerators in the scope of the investigation. *See Preliminary Determination,* 76 FR at 67677. No party

[1] *See Notice of Preliminary Determination of Sales at Less Than Fair Value, Postponement of Final Determination, and Negative Critical Circumstances Determination: Bottom Mount Combination Refrigerator-Freezers from the Republic of Korea,* 76 FR 67675 (Nov. 2, 2011) (*Preliminary Determination*).

[2] *See* March 16, 2012, Memoranda to the File entitled, ''Calculations Performed for Daewoo Electronics Corporation (Daewoo) for the Final Determination in the Antidumping Duty Investigation of Bottom Mount Combination Refrigerator-Freezers from the Republic of Korea,'' ''Calculations Performed for LG for the Final Determination in the Antidumping Duty Investigation of Bottom Mount Combination Refrigerator-Freezers from the Republic of Korea'' (LG Calculation Memo), and ''Calculations Performed for Samsung Electronics Corporation (Samsung) for the Final Determination in the Antidumping Duty Investigation of Bottom Mount Refrigerators from Korea'' (Samsung Calculation Memo), which contain the revised preliminary antidumping duty margin program log and output for each respondent.

[3] The existence of an interior sub-compartment for ice-making in an upper-most storage compartment does not render an upper-most storage compartment a freezer compartment.

commented on our preliminary scope determination. Therefore, we made no further changes to the description of the scope, as stated in the *Preliminary Determination.*

Cost of Production

As discussed in the preliminary determination, we conducted an investigation to determine whether the respondents made comparison market sales of the foreign like product during the POI at prices below their COP within the meaning of section 773(b) of the Act. *See Preliminary Determination,* 76 FR 67684–85 (Nov. 2, 2011). For this final determination, we performed the cost test following the same methodology as in the *Preliminary Determination.*

We found that 20 percent or more of each respondent's sales of a given product during the POI were at prices less than the weighted-average COP for this period. Thus, we determined that these below-cost sales were made in ''substantial quantities'' within an extended period of time and at prices which did not permit the recovery of all costs within a reasonable period of time in the normal course of trade. *See* sections 773(b)(1)–(2) of the Act.

Therefore, for purposes of this final determination, we found that each respondent made below-cost sales not in the ordinary course of trade. Consequently, we disregarded these sales and used the remaining sales as the basis for determining normal value for each respondent pursuant to section 773(b)(1) of the Act.

Targeted Dumping

The Act allows the Department to employ the average-to-transaction margin calculation methodology under the following circumstances: (1) There is a pattern of export prices that differ significantly among purchasers, regions or periods of time; and (2) the Department explains why such differences cannot be taken into account using the average-to-average or transaction-to-transaction methodology. *See* section 777A(d)(1)(B) of the Act.

In the *Preliminary Determination,* we conducted time-period targeted dumping analyses for LG and Samsung based on timely allegations of targeted dumping filed by the petitioner, using the methodology adopted in *Certain Steel Nails from the United Arab Emirates: Notice of Final Determination of Sales at Not Less Than Fair Value,* 73 FR 33985 (June 16, 2008), and *Certain Steel Nails from the People's Republic of China: Final Determination of Sales at Less Than Fair Value and Partial Affirmative Determination of Critical Circumstances,* 73 FR 33977 (June 16, 2008), and applied in more recent investigations.[4] As a result, we preliminarily determined that there was a pattern of U.S. prices for comparable merchandise that differed significantly among certain time periods for Samsung and LG, in accordance with section 777A(d)(1)(B)(i) of the Act.

Further, for both Samsung and LG, we found that the standard average-to-average methodology did not take into account the price differences because the alternative average-to-transaction methodology yielded a material difference in the margin. Accordingly, we preliminarily applied the average-to-transaction methodology to all U.S. sales made by LG and Samsung. *See Preliminary Determination,* 76 FR at 67678–67679.

For purposes of the final determination, we performed our targeted-dumping analysis following the methodology employed in the *Preliminary Determination,* after taking into account the petitioner's revised targeted dumping allegation with respect to Samsung, and making certain revisions to LG's and Samsung's reported U.S. sales data based on verification findings and other comments submitted by the parties, as enumerated in the ''Margin Calculations'' section of the ''Issues and Decision Memorandum'' (Decision Memorandum) from Gary Taverman, Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, Import Administration, to Paul Piquado, Assistant Secretary for Import Administration, dated March 16, 2012. In so doing, we found that the results of our final targeted-dumping analysis were generally consistent with those of our preliminary targeted-dumping analysis. Therefore, we continued to apply the alternative average-to-transaction methodology for LG's and Samsung's U.S. sales, in the final determination. *See* the LG Calculation Memo and the Samsung Calculation Memo for further discussion.

Critical Circumstances

In the *Preliminary Determination,* we found that critical circumstances do not exist with respect to imports of bottom mount refrigerators produced in, and exported from, Korea. *See Preliminary Determination,* 76 FR at 67686–67687. Samsung submitted comments in support of our preliminary negative critical circumstances determination with respect to it, and reiterated, among other things, that its imports have not been massive since the filing of the petition.

For the final determination, we relied on updated shipment data provided by Daewoo, LG, and Samsung, which we examined at verification. Based on our analysis of these data and the comments submitted by the parties, we continue to find that critical circumstances do not exist with respect to imports of bottom mount refrigerators from Korea, as explained below.

Section 735(a)(3) of the Act provides that the Department will determine that critical circumstances exist if there is a reasonable basis to believe or suspect that: (A)(i) There is a history of dumping and material injury by reason of dumped imports in the United States or elsewhere of the subject merchandise; or (ii) the person by whom, or for whose account, the merchandise was imported knew or should have known that the exporter was selling the subject merchandise at less than its fair value and that there was likely to be material injury by reason of such sales; and (B) there have been massive imports of the subject merchandise over a relatively short period. Section 351.206(h)(1) of the Department's regulations provides that, in determining whether imports of the subject merchandise have been ''massive,'' the Department normally will examine: (i) The volume and value of the imports; (ii) seasonal trends; and (iii) the share of domestic consumption accounted for by the imports. In addition, 19 CFR 351.206(h)(2) provides that an increase in imports of 15 percent during the ''relatively short period'' of time may be considered ''massive.'' Section 351.206(i) of the Department's regulations defines ''relatively short period'' as normally being the period beginning on the date the proceeding begins (*i.e.,* the date the petition is filed) and ending at least three months later. The regulations also provide, however, that if the Department finds that importers, exporters, or producers had reason to believe, at some time prior to the beginning of the proceeding, that a proceeding was likely, the Department may consider a period of not less than three months from that earlier time.

In determining whether the above criteria have been satisfied, we examined: (1) The evidence placed on the record by the respondents and the petitioner; and (2) the International

[4] These investigations include *Certain Coated Paper Suitable for High-Quality Print Graphics Using Sheet-Fed Presses From Indonesia: Final Determination of Sales at Less Than Fair Value,* 75 FR 59223 (Sept. 27, 2010), and accompanying Issues and Decision Memorandum at Comment 1, and *Multilayered Wood Flooring From the Peoples' Republic of China: Final Determination of Sales at Less Than Fair Value,* 76 FR 64318 (Oct. 18, 2011), and accompanying Issues and Decision Memorandum at Comment 4.

Trade Commission's (ITC's) preliminary determination of injury (*see Bottom Mount Refrigerator Freezers from Mexico and Korea, Investigation Nos. 701–TA–477 and 731–TA–1180–1181* (Preliminary), 76 FR 29791 (May 23, 2011) (*ITC Preliminary Determination*)).

To determine whether there is a history of injurious dumping of the merchandise under investigation, in accordance with section 735(a)(3)(A)(i) of the Act, the Department normally considers evidence of an existing antidumping duty order on the subject merchandise in the United States or elsewhere to be sufficient.[5] As mentioned in the *Preliminary Determination,* while the petitioner noted that New Zealand imposed antidumping duties on the subject merchandise produced in Korea in 2001, this order was terminated in 2006. Moreover, the petitioner did not identify any additional proceedings with respect to Korean-origin products, nor are we aware of any antidumping duty order in any country on bottom mount refrigerators from Korea. For this reason, the Department does not find a history of injurious dumping of the subject merchandise from Korea pursuant to section 735(a)(3)(A)(i) of the Act.

To determine whether the person by whom, or for whose account, the merchandise was imported knew or should have known that the exporter was selling the subject merchandise at LTFV, and that there was likely to be material injury by reason of such sales in accordance with section 735(a)(3)(A)(ii) of the Act, the Department normally considers margins of 25 percent or more for export price (EP) sales or 15 percent or more for constructed export price (CEP) transactions sufficient to impute knowledge of dumping.[6]

The final dumping margin calculated for LG exceeds the threshold sufficient to impute knowledge of dumping (*i.e.,* 15 percent for CEP sales, which are the vast majority of the sales on which the calculation is based). Therefore, we determine that there is sufficient basis to find that importers should have known that LG was selling the subject merchandise at LTFV pursuant to section 735(a)(3)(A)(ii) of the Act. For Daewoo and Samsung, we calculated final margins of *de minimis* and 5.16 percent, respectively, which do not meet the 15- and 25-percent thresholds necessary to impute knowledge of dumping for either CEP or EP sales. Finally, for the companies covered by the ''All Others'' rate, the final calculated dumping margin of 10.29 percent also does not meet the 15-percent threshold necessary to impute knowledge of dumping for CEP sales, which are the vast majority of the sales on which the calculation of the ''All Others'' rate is based. Therefore, we find that the importer knowledge criterion, as set forth in section 735(a)(3)(A)(ii) of the Act, has been met for LG, but has not been met for Daewoo, Samsung, and the companies covered by the ''All Others'' rate.

In determining whether an importer knew or should have known that there was likely to be material injury by reason of dumped imports, the Department normally will look to the preliminary injury determination of the ITC. If the ITC finds a reasonable indication of present material injury to the relevant U.S. industry, the Department will determine that a reasonable basis exists to impute importer knowledge that material injury is likely by reason of such imports. *See e.g., Certain Orange Juice from Brazil.* In the present case, the ITC preliminarily found reasonable indication that an industry in the United States is materially injured by imports of bottom mount refrigerators from Korea. *See ITC Preliminary Determination.* Based on the ITC's preliminary determination of injury, and the final antidumping margin for LG, the Department finds that there is a reasonable basis to conclude that the importer knew or should have known that there was likely to be injurious dumping of subject merchandise for these companies.

In determining whether there are ''massive imports'' over a ''relatively short period,'' pursuant to section 735(a)(3)(B) of the Act, the Department normally compares the import volumes of the subject merchandise for at least three months immediately preceding the filing of the petition (*i.e.,* the base period) to a comparable period of at least three months following the filing of the petition (*i.e.,* the comparison period). Accordingly, in determining whether imports of the subject merchandise have been massive, we based our analysis for each of the three companies on shipment data for comparable seven-month periods preceding and following the filing of the petition.

Specifically, the Department requested and obtained from each of the respondents monthly shipment data from January 2008 to October 2011. To determine whether imports of subject merchandise have been massive over a relatively short period, we compared, pursuant to 19 CFR 351.206(h)(1)(i), the respondents' export volumes for the seven months before the filing of the petition (*i.e.,* September 2010–March 2011) to those during the seven months after the filing of the petition (*i.e.,* April through October 2011). These periods were selected based on the Department's practice of using the longest period for which information is available up to the date of the preliminary determination.[7] According to the monthly shipment information, we found the volume of shipments of bottom mount refrigerators increased by more than 15 percent for LG.

For purposes of our ''massive imports'' determination, we also considered the impact of seasonality on imports of bottom mount refrigerators based on interested party comments and information contained in the ITC's preliminary determination. In order to determine whether the seasonality factor accounted for the increase in imports observed for each of the respondents in the post-petition filing period (the comparison period), we analyzed company-specific shipment data for a historical three-year period, where possible, using the same base and comparison time periods noted above. As a result of this analysis, we found that there is a consistent pattern of seasonality in the industry, and that seasonal trends account for the increase in imports subsequent to the filing of the petition from each of the respondents. Specifically, with respect to LG, we found that the percentage increase in shipments during the comparison period is not related to the filing of the petition but rather to the consistent seasonal trends in the industry because shipments during the April–October time period were consistently higher than those in the September–March time period, and the shipment increases observed in the April–October time period from year to

[5] *See e.g., Certain Magnesia Carbon Bricks From the People's Republic of China: Notice of Preliminary Affirmative Determination of Critical Circumstances,* 75 FR 28237 (May 20, 2010), unchanged in *Certain Magnesia Carbon Bricks From the People's Republic of China: Final Determination of Sales at Less Than Fair Value and Critical Circumstances* 75 FR 45468 (Aug. 2, 2010).

[6] *See e.g., Notice of Preliminary Determination of Sales at Less Than Fair Value, Postponement of Final Determination, and Affirmative Preliminary Critical Circumstances Determination: Certain Orange Juice from Brazil,* 70 FR 49557 (Aug. 24, 2005), unchanged in *Notice of Final Determination of Sales at Less than Fair Value and Affirmative Final Determination of Critical Circumstances: Certain Orange Juice from Brazil,* 71 FR 2183 (Jan. 13, 2006) (*Certain Orange Juice from Brazil*).

[7] *See Notice of Preliminary Determination of Sales at Less Than Fair Value and Postponement of Final Determination: Silicon Metal From the Russian Federation,* 67 FR 59253, 59256 (Sept. 20, 2001), unchanged in *Notice of Final Determination of Sales at Less Than Fair Value: Silicon Metal From the Russian Federation,* 68 FR 6885 (Feb. 11, 2003).

year decreased. Therefore, for purposes of the final determination, we find that imports from LG during the period after the filing of the petition have not been massive in accordance with section 735(a)(3)(B) of the Act.

In summary, we find that there is a reasonable basis to believe or suspect importers had knowledge of dumping and the likelihood of material injury with respect to bottom mount refrigerators produced and exported from Korea by LG. However, we do not find that there have been massive imports of bottom mount refrigerators over a relatively short period from LG due to seasonality. Therefore, for the reasons stated above, the Department finds that critical circumstances do not exist for imports of the subject merchandise from Korea. For a complete discussion of our final critical circumstances analysis, see the Decision Memorandum at Comment 2 and the March 16, 2012, Memorandum to James P. Maeder, Jr., Director, Office 2, from The Team entitled, ''Antidumping Duty Investigation of Certain Bottom Mount Refrigerator Freezers from Korea—Final Determination of Critical Circumstances.''

Analysis of Comments Received

All issues raised in the case and rebuttal briefs by parties in this investigation are addressed in the Decision Memorandum, which is adopted by this notice. Parties can find a complete discussion of the issues raised in this investigation and the corresponding recommendations in this public memorandum, which is on file in the Central Records Unit, room 7046 of the main Department building.

In addition, a complete version of the Decision Memorandum can be accessed directly on the Web at *http://ia.ita.doc.gov/frn/index.html.* The paper copy and electronic version of the Decision Memorandum are identical in content.

Changes Since the Preliminary Determination

Based on our analysis of the comments received and our findings at verification, we have made certain changes to the margin calculations. For a discussion of these changes, see the ''Margin Calculations'' section of the Decision Memorandum.

Verification

As provided in section 782(i) of the Act, we verified the sales and cost information submitted by the respondents for use in our final determination. We used standard verification procedures including an examination of relevant accounting and production records, and original source documents provided by the respondents.

Continuation of Suspension of Liquidation

Pursuant to 735(c)(1)(B) of the Act, we will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of all entries of subject merchandise from Korea, entered, or withdrawn from warehouse, for consumption on or after November 2, 2011, the date of publication of the preliminary determination in the **Federal Register**. CBP shall require a cash deposit or the posting of a bond equal to the estimated amount by which the normal value exceeds the U.S. price as shown below, adjusted for export subsidies found in the final determination of the companion countervailing duty investigation of this merchandise. Specifically, consistent with our practice, where the product under investigation is also subject to a concurrent countervailing duty investigation, we instruct CBP to require a cash deposit or posting of a bond equal to the amount by which the normal value exceeds the EP or CEP, as indicated below, less the amount of the countervailing duty determined to constitute an export subsidy.[8]

Accordingly, for cash deposit purposes, we are subtracting from the applicable cash deposit rate that portion of the rate attributable to the export subsidies found in the affirmative countervailing duty determination for each respondent with a final dumping margin above *de minimis* (*i.e.,* 1.65 percent for Samsung and 1.60 percent for the companies covered by the ''All Others'' rate). After the adjustment for the cash deposit rates attributed to export subsidies, the resulting cash deposit rates will be 3.51 percent for Samsung and 8.69 percent for the companies covered by the ''All Others'' rate. For LG, although its final dumping margin is above *de minimis,* the Department found no export subsidies for this company and therefore we have not adjusted LG's final cash deposit rate. For Daewoo, because its estimated weighted-average final dumping margin is zero, we are not directing CBP to suspend liquidation of entries of bottom mount refrigerators produced and exported by this company. These instructions suspending liquidation will remain in effect until further notice.

Final Determination Margins

The weighted-average dumping margins are as follows:

Exporter/manufacturer	Weighted-average margin percentage	Critical circumstances
Daewoo Electronics Corporation	0.00	No.
LG Electronics, Inc	15.41	No.
Samsung Electronics Co., Ltd	5.16	No.
All Others	10.29	No.

''All Others'' Rate

In accordance with section 735(c)(5)(A) of the Act, we have based the ''All Others'' rate on the simple average of the dumping margins calculated for the exporters/manufacturers investigated in this proceeding. The ''All Others'' rate is calculated exclusive of all *de minimis* margins and margins based entirely on AFA. Because we cannot apply our normal methodology of calculating a weighted-average margin due to requests to protect business-proprietary information, we find this rate to be the best proxy of the actual weighted-average margin determined for the mandatory respondents.[9]

Disclosure

We will disclose the calculations performed within five days of the date of publication of this notice to parties in this proceeding in accordance with 19 CFR 351.224(b).

[8] *See, e.g., Notice of Final Determination of Sales at Less Than Fair Value: Carbazole Violet Pigment 23 From India,* 69 FR 67306, 67307 (Nov. 17, 2004).

[9] *See Ball Bearings and Parts Thereof From France, et al.: Final Results of Antidumping Duty Administrative Reviews, Final Results of Changed-Circumstances Review, and Revocation of an Order in Part,* 75 FR 53661, 53663 (Sept. 1, 2010).

ITC Notification

In accordance with section 735(d) of the Act, we have notified the ITC of our final determination. As our final determination is affirmative, the ITC will determine within 45 days whether imports of the subject merchandise are causing material injury, or threat of material injury, to an industry in the United States. If the ITC determines that material injury or threat of injury does not exist, the proceeding will be terminated and all securities posted will be refunded or canceled. If the ITC determines that such injury does exist, the Department will issue an antidumping duty order directing CBP to assess antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation.

Return or Destruction of Proprietary Information

This notice will serve as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

We are issuing and publishing this determination and notice in accordance with sections 735(d) and 777(i) of the Act.

Dated: March 16, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

Galvanized Steel Wire From the People's Republic of China: Final Affirmative Countervailing Duty Determination

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) determines that countervailable subsidies are being provided to producers and exporters of galvanized steel wire (galvanized wire) from the People's Republic of China (the PRC). For information on the estimated subsidy rates, see the ''Suspension of Liquidation'' section of this notice.

DATES: *Effective Date:* March 26, 2012.

FOR FURTHER INFORMATION CONTACT: Nicholas Czajkowski or David Lindgren, AD/CVD Operations, Office 6, Import Administration, U.S. Department of Commerce, Room 7866, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: 202–482–1395 or 202–482–3870, respectively.

SUPPLEMENTARY INFORMATION:

Background

The U.S. producers that filed the petition for this investigation are Davis Wire Corporation, Johnstown Wire Technologies, Inc., Mid-South Wire Company, Inc., National Standard, LLC, and Oklahoma Steel & Wire Company, Inc. (collectively, Petitioners). This investigation covers 40 programs. The mandatory respondents in this investigation are: (1) M&M Industries Co. Ltd. (M&M); (2) Shandong Hualing Hardware and Tool Co., Ltd. (Hualing); (3) Shanghai Bao Zhang Industry Co. Ltd. and its cross-owned affiliated companies Anhui Bao Zhang Metal Products Co., Ltd. and Shanghai Li Chao Industry Co., Ltd. (collectively, the Bao Zhang Companies); and, (4) Tianjin Huayuan Metal Wire Products Co., Ltd. and its cross-owned affiliated companies Tianjin Tianxin Metal Products Co., Ltd. and Tianjin Mei Jia Hua Trade Co., Ltd. (collectively, the Huayuan Companies).

Period of Investigation

The period of investigation for which we are measuring subsidies is January 1, 2010, through December 31, 2010.

Case History

The following events have occurred since the Department published the *Preliminary Determination* [1] on September 6, 2011.[2] The Huayuan Companies filed a ministerial error allegation on September 7, 2011, and, on September 12, 2011, Petitioners filed responses to the Huayuan Companies' allegation. On September 29, 2011, the Department released its analysis of the ministerial error allegation, finding that no ministerial errors were made in the *Preliminary Determination.* Petitioners, the Huayuan Companies and the

[1] *See Galvanized Steel Wire From the People's Republic of China: Preliminary Affirmative Countervailing Duty Determination and Alignment of Final Determination With Final Antidumping Determination,* 76 FR 55031 (September 6, 2011) (*Preliminary Determination*).

[2] Public versions of all business proprietary documents and all public documents are on file electronically via Import Administration's Antidumping and Countervailing Duty Centralized Electronic Service System (IA ACCESS). Access to IA ACCESS is available in the Central Records Unit (CRU), room 7046 of the main Department of Commerce building.

Government of the People's Republic of China (GOC) filed requests for a hearing on September 14, 22 and October 6, 2011, respectively, and, on January 30, 2012, all three parties withdrew their requests for a hearing.

Between September 15 and October 21, 2011, the GOC, Petitioners, the Bao Zhang Companies and the Huayuan Companies filed factual information submissions. Except for the Bao Zhang Companies' October 21, 2011 wire rod benchmark submission, all were rejected by the Department as untimely under 19 CFR 351.301(c). The Department informed Petitioners they could re-file certain portions of their rejected material, which they did on October 31, 2011. On September 19, 2011, the Department issued supplemental questionnaires to the GOC, the Bao Zhang Companies, and the Huayuan Companies, which, in turn, submitted responses between September 28 and October 3, 2011. On October 7, 2011, the Department issued additional supplemental questionnaires to the Bao Zhang Companies and the GOC, with responses filed on October 13 and 14, 2011, respectively. Moreover, on October 14, 2011, Department issued a supplemental questionnaire to the Huayuan Companies, which filed a response on October 24, 2011.

Between October 21 and November 2, 2011, the Department issued verification outlines to the GOC, the Bao Zhang Companies, the Huayuan Companies and M&M. On October 24, 2011, Petitioners filed pre-verification comments. The Department conducted verification of the Bao Zhang Companies and the GOC from October 31 to November 8, 2011. Although scheduled for verification, the Huayuan Companies and M&M verbally informed the Department on November 3, 2011 that they would not participate in verification; a letter filed on November 9, 2011 stated the reasons for their decision not to participate. The Bao Zhang Companies filed minor corrections on November 4, 2011, and on November 10 and 15, 2011, the Bao Zhang Companies and the GOC, respectively, timely filed verification exhibits. The Department issued verification reports for the Bao Zhang Companies and the GOC on December 22, 2011.

With respect to scope issues, on November 2, 2011, Qingdao Ant Hardware Manufacturing Co., Ltd. (AHM) placed on the record physical samples and other information pertaining to the scope of the investigation, and, on November 16, 2011, a public viewing of the physical samples was held at the Department. On December 15, 2011, the Department placed on the record of this investigation the preliminary determinations in the corresponding antidumping duty (AD) investigations of galvanized wire from the PRC and Mexico [3] in which scope comments filed prior to the preliminary countervailing duty (CVD) determination were addressed. When placing these preliminary AD determinations on the record, we requested that parties submit any comments on scope issues when they filed their case briefs.[4]

On January 9, 2012, the GOC requested that the Department terminate this investigation based on the U.S. Court of Appeals for the Federal Circuit December 19, 2011 ruling in *GPX International Tire Corp.* v. *United States*.[5] On January 13, 2012, Petitioners filed rebuttal comments in response to the GOC's request for termination.

The Department issued a post-preliminary analysis memorandum regarding three programs on January 17, 2012.[6] Interested parties submitted case briefs on January 25 and 31, 2012, and rebuttal briefs on February 6, 2012. On March 1, 2012, the Department requested all parties in all three galvanized wire investigations that filed scope comments in their case and rebuttal briefs to ensure their comments were placed on the records of all three investigations, and all parties were provided an opportunity to comment on these scope comments. No additional comments on scope issues were submitted.

Scope Comments

As referenced in the ''Case History'' section above, the Department placed the preliminary determinations of the companion galvanized wire AD investigations from Mexico and the PRC on the record of this investigation. In those preliminary determinations, the Department found that galvanized wire with a diameter less than one millimeter was subject to the scope of the investigation. We invited parties to comment on this issue. No additional comments were made on this issue. Thus, the Department continues to find, specifically, that galvanized wire with a diameter less than one millimeter but equal to or greater than 0.5842 millimeters is covered by the scope.

Also, as noted in the ''Case History'' section above, all scope-related comments submitted by parties in all three investigations in their case and rebuttal briefs are on the record of all three investigations. Petitioners and AHM provided comments on the scope and merchandise that is to be covered under the scope. Based on our analysis of these comments, the Department continues to find that hobby wire, which is galvanized steel wire, in lengths of more than 15 feet, is properly included in the scope of this investigation.[7] Further, certain parties in the companion AD investigation involving Mexico provided comments on the scope and merchandise that is to be covered under the scope. Based on our analysis of these comments, the Department has clarified the scope language to include not only circular cross section material, but also out-of-round material that meets the circular tolerances. In addition, the Department has included an additional HTSUS subheading as part of the scope description.[8]

Scope of Investigation

The merchandise covered by this investigation is galvanized steel wire. *See* Appendix I for a complete description of the scope of this investigation.

Analysis of Subsidy Programs and Comments Received

The subsidy programs under investigation and the issues raised in the case and rebuttal briefs by parties in this investigation are discussed in Memorandum to Paul Piquado, Assistant Secretary for Import Administration, Issues and Decision Memorandum for the Final

Tillman, Director, AD/CVD Operations, Office 6, through Christian Marsh Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations ''Countervailing Duty Investigation on Galvanized Steel Wire from the People's Republic of China: Post-Preliminary Analysis Memorandum,'' dated January 17, 2012.

[7] AMH's and Petitioners comments on the scope of the investigation are fully addressed in *Galvanized Steel Wire from the People's Republic of China: Final Determination of Sales at Less Than Fair Value* and accompanying Issues and Decision Memorandum at Comment 3, issued concurrently with this final determination.

[8] These comments are fully addressed in *Notice of Final Determination of Sales at Less Than Fair Value: Galvanized Steel Wire from Mexico* and accompanying Issues and Decision Memorandum at Comments 3 and 4, issued concurrently with this final determination.

Determination in the Countervailing Duty Investigation of Galvanized Steel Wire from the People's Republic of China (Decision Memorandum), which is hereby adopted by this notice. A list of the subsidy programs and the issues that parties raised and to which we responded in the Decision Memorandum is attached to this notice as Appendix II. The Decision Memorandum is a public document, which is on file electronically via IA ACCESS. In addition, a complete version of the Decision Memorandum is also accessible on the Web at *http://ia.ita.doc.gov/frn/*. The signed Decision Memorandum and the electronic versions of the Decision Memorandum are identical in content.

Use of Facts Otherwise Available, Including Adverse Inferences

For purposes of this final determination, we have continued to rely on facts available and have continued to apply adverse inferences in accordance with sections 776(a) and (b) of the Tariff Act of 1930, as amended (the Act) with regard to: (1) The CVD rate to be applied to the non-cooperative mandatory company respondent, Hualing; (2) whether the wire rod and zinc input producers at issue are government authorities that provide wire rod and zinc for less than adequate remuneration (LTAR); and, (3) the GOC's provision of electricity for LTAR. In addition, for the purposes of this final determination, we are also applying adverse facts available (AFA) to (1) determine the CVD rate to be applied to the non-cooperating mandatory respondents the Huayuan Companies and M&M, and (2) determine that the Zhabei District ''Save Energy Reduce Emission Team'' award is specific pursuant to sections 776(a) and (b) of the Act. A full discussion of our decision to apply AFA is presented in the Decision Memorandum under the section ''Use of Facts Otherwise Available and Adverse Inferences.''

Suspension of Liquidation

In accordance with section 703(d)(1)(A)(i) of the Act, we have calculated a rate for each individually investigated producer/exporter of the subject merchandise. Section 705(c)(5)(A)(i) of the Act states that for companies not investigated, we will determine an ''all-others'' rate equal to the weighted average countervailable subsidy rates established for exporters and producers individually investigated, excluding any zero and *de minimis* countervailable subsidy rates, and any rates determined entirely under section 776 of the Act.

In this investigation, the only rate not based entirely on AFA is the rate calculated for the Bao Zhang Companies. Consequently, the rate calculated for the Bao Zhang Companies is also assigned as the ''all-others'' rate. For those non-cooperative companies that did not fully participate in this investigation, we have determined rates based solely on AFA, in accordance with sections 776(a) and (b) of the Act.[9] Therefore, we determine the total estimated net countervailable subsidy rates to be:

Company	*Ad Valorem* net subsidy rate (percent)
M&M Industries Co. Ltd	223.27
Shandong Hualing Hardware and Tool Co., Ltd.	223.27
Shanghai Bao Zhang Industry Co. Ltd., Anhui Bao Zhang Metal Products Co., Ltd., and Shanghai Li Chao Industry Co., Ltd. (collectively the Bao Zhang Companies)	19.06
Tianjin Huayuan Metal Wire Products Co., Ltd., Tianjin Tianxin Metal Products Co., Ltd., and Tianjin Mei Jia Hua Trade Co., Ltd. (collectively, the Huayuan Companies)	223.27
All Others Rate	19.06

As a result of our *Preliminary Determination* and pursuant to section 703(d) of the Act, we instructed U.S. Customs and Border Protection (CBP) to suspend liquidation of all entries of subject merchandise from the PRC which were entered or withdrawn from warehouse, for consumption on or after September 6, 2011, the date of the publication of the *Preliminary Determination* in the **Federal Register**. In accordance with section 703(d) of the Act, we later issued instructions to CBP to discontinue the suspension of liquidation for CVD purposes for subject merchandise entered, or withdrawn from warehouse, on or after January 4, 2012, but to continue the suspension of liquidation of all entries from September 6, 2011, through January 3, 2012.

We will issue a CVD order and reinstate the suspension of liquidation under section 706(a) of the Act if the U.S. International Trade Commission (ITC) issues a final affirmative injury determination, and will require a cash deposit of estimated CVDs for such entries of merchandise in the amounts indicated above. If the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or canceled.

ITC Notification

In accordance with section 705(d) of the Act, we will notify the ITC of our determination. In addition, we are making available to the ITC all non-privileged and non-proprietary information related to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order (APO), without the written consent of the Assistant Secretary for Import Administration.

Return or Destruction of Proprietary Information

In the event that the ITC issues a final negative injury determination, this notice will serve as the only reminder to parties subject to an APO of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

[9] *See* ''Non-Cooperative Companies'' in the ''Use of Facts Otherwise Available and Adverse Inferences'' section of the Decision Memorandum.

This determination is issued and published pursuant to sections 705(d) and 777(i) of the Act.

Dated: March 19, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

Appendix I

Scope of Investigation

The scope of this investigation covers galvanized steel wire which is a cold-drawn carbon quality steel product in coils, of circular or approximately circular, solid cross section with any actual diameter of 0.5842 mm (0.0230 inch) or more, plated or coated with zinc (whether by hot-dipping or electroplating).

Steel products to be included in the scope of this investigation, regardless of Harmonized Tariff Schedule of the United States (HTSUS) definitions, are products in which: (1) iron predominates, by weight, over each of the other contained elements; (2) the carbon content is two percent or less, by weight; and (3) none of the elements listed below exceeds the quantity, by weight, respectively indicated:

—1.80 percent of manganese, or
—1.50 percent of silicon, or
—1.00 percent of copper, or
—0.50 percent of aluminum, or
—1.25 percent of chromium, or
—0.30 percent of cobalt, or
—0.40 percent of lead, or
—1.25 percent of nickel, or
—0.30 percent of tungsten, or
—0.02 percent of boron, or
—0.10 percent of molybdenum, or
—0.10 percent of niobium, or
—0.41 percent of titanium, or
—0.15 percent of vanadium, or
—0.15 percent of zirconium.

Specifically excluded from the scope of this investigation is galvanized steel wire in coils of 15 feet or less which is pre-packed in individual retail packages. The products subject to this investigation are currently classified in subheadings 7217.20.30, 7217.20.45, or 7217.90.10 of the HTSUS which cover galvanized wire of all diameters and all carbon content. Galvanized wire is reported under statistical reporting numbers 7217.20.3000, 7217.20.4510, 7217.20.4520, 7217.20.4530, 7217.20.4540, 7217.20.4550, 7217.20.4560, 7217.20.4570, 7217.20.4580, and 7217.90.1000. These products may also enter under HTSUS subheadings 7229.20.0015, 7229.20.0090, 7229.90.5008, 7229.90.5016, 7229.90.5031, and 7229.90.5051. Although the HTSUS subheadings are provided for convenience and Customs purposes, the written description of the merchandise is dispositive.

International Trade Administration

[A–201–839]

Notice of Final Determination of Sales at Less Than Fair Value and Affirmative Critical Circumstances Determination: Bottom Mount Combination Refrigerator-Freezers From Mexico

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: We determine that imports of bottom mount combination refrigerator-freezers (bottom mount refrigerators) from Mexico are being, or are likely to be, sold in the United States at less than fair value (LTFV), as provided in section 735 of the Tariff Act of 1930, as amended (the Act). In addition, we determine that critical circumstances exist with respect to the subject merchandise exported from Mexico by Samsung Electronics Mexico, S.A. de C.V. (Samsung).

Based on our analysis of the comments received, we made changes in the margin calculations. Therefore, the final determination differs from the preliminary determination. The final weighted-average dumping margins for the investigated companies are listed below in the section entitled ''Final Determination Margins.''

DATES: *Effective Date:* March 26, 2012.

FOR FURTHER INFORMATION CONTACT: David Goldberger or Katherine Johnson, AD/CVD Operations, Office 2, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–4136 and (202) 482–4929, respectively.

SUPPLEMENTARY INFORMATION:

Background

On November 2, 2011, the Department published in the **Federal Register** the preliminary determination of sales at LTFV in the antidumping duty investigation of bottom mount refrigerators from Mexico.[1] Since the preliminary determination, the following events have occurred.

In November 2011, we issued supplemental questionnaires to, and received responses from, all four respondents: Electrolux Home Products Corp. NV/Electrolux Home Products De Mexico, S.A. de C.V. (Electrolux), LG Electronics Monterrey Mexico, S.A. de C.V. (LGEMM), Controladora Mabe, S.A. de C.V./Mabe, S.A. de C.V. (Mabe), and Samsung. Also, in November 2011, we received updated shipment information for our critical circumstances analysis from Electrolux, LGEMM, and Samsung.

On December 5, 2011, Whirlpool Corporation (hereafter, the petitioner) amended its targeted dumping allegation with respect to Samsung to reflect the revised U.S. sales data submitted by Samsung in response to the Department's November 2011, supplemental questionnaire.

In November and December 2011, we verified the questionnaire responses of the four respondents in this case, in accordance with section 782(i) of the Act. In December, January and February 2012, we issued our verification findings for each respondent.[2]

In February 2012, the Department requested, and the respondents submitted, revised U.S. and/or comparison-market sales listings to reflect certain verification findings.

Also, in February 2012, the petitioner and the respondents (except for Electrolux) submitted case and rebuttal briefs. On February 22, 2012, the Government of Mexico submitted comments on certain aspects of the Department's preliminary determination. On February 24, 2012, the Department held a hearing in this case.

Subsequent to the *Preliminary Determination,* the Department revised the computer programs used to calculate the respondents' dumping margins to ensure that they accurately reflected the methodological choices made in that determination. These revisions to the programming, had they been included in the preliminary determination, would not have altered the weighted-average dumping margins calculated there. *See* March 16, 2012, Memoranda to The File entitled ''Final Determination Margin Calculation for LG Electronics Monterrey Mexico, S.A. de C.V. (LGEMM)'' (LGEMM Calculation Memo); ''Final Determination Margin Calculation for Samsung Electronics Mexico S.A. de C.V. (SEM)'' (Samsung Calculation Memo); ''Final Determination Margin Calculation for Electrolux Home Products, Corp. N.V./ Electrolux Home Products de Mexico, S.A. de C.V'' (Electrolux Calculation Memo); and ''Final Determination Margin Calculation for Controladora Mabe S.A. de C.V., Mabe S.A. de C.V., and Leiser S. de R.L. (collectively, Mabe),'' which contain the revised preliminary antidumping duty margin program log and output for each respondent.

Period of Investigation

The period of investigation (POI) is January 1, 2010, through December 31, 2010.

Mabe S.A. de C.V., and Leiser S. de R.L. in the Antidumping Investigation of Bottom-Mount Combination Refrigerator-Freezers from Mexico,'' dated January 4, 2012; Memorandum to The File entitled ''Verification of the Sales Responses of General Electric Company,'' dated January 13, 2012; Memorandum to The File entitled ''Verification of the Sales Responses of Controladora Mabe S.A. de C.V., and Mabe S.A. de C.V. (collectively, ''Mabe''),'' dated January 25, 2012; Memorandum to The File entitled ''Verification of the Cost Response of Samsung Electronics Mexico S.A. de C.V. in the Less-Than-Fair-Value Investigation of Bottom Mount Combination Refrigerator-Freezers from Mexico'', dated December 21, 2011; Memorandum to The File entitled ''Verification of the U.S. Sales Response of Samsung Electronics Mexico, S.A. de C.V.,'' dated January 9, 2012; and Memorandum to The File entitled ''Verification of Samsung Electronics America Inc.,'' dated January 26, 2012.

Scope of Investigation

The products covered by the investigation are all bottom mount combination refrigerator-freezers and certain assemblies thereof from Mexico. For purposes of the investigation, the term ''bottom mount combination refrigerator-freezers'' denotes freestanding or built-in cabinets that have an integral source of refrigeration using compression technology, with all of the following characteristics:

- The cabinet contains at least two interior storage compartments accessible through one or more separate external doors or drawers or a combination thereof;
- An upper-most interior storage compartment(s) that is accessible through an external door or drawer is either a refrigerator compartment or convertible compartment, but is not a freezer compartment;[3] and
- There is at least one freezer or convertible compartment that is mounted below an upper-most interior storage compartment(s).

For purposes of the investigation, a refrigerator compartment is capable of storing food at temperatures above 32 degrees F (0 degrees C), a freezer compartment is capable of storing food at temperatures at or below 32 degrees F (0 degrees C), and a convertible compartment is capable of operating as either a refrigerator compartment or a freezer compartment, as defined above.

Also covered are certain assemblies used in bottom mount combination refrigerator-freezers, namely: (1) Any assembled cabinets designed for use in bottom mount combination refrigerator-freezers that incorporate, at a minimum: (a) an external metal shell, (b) a back panel, (c) a deck, (d) an interior plastic liner, (e) wiring, and (f) insulation; (2) any assembled external doors designed for use in bottom mount combination refrigerator-freezers that incorporate, at a minimum: (a) an external metal shell, (b) an interior plastic liner, and (c) insulation; and (3) any assembled external drawers designed for use in bottom mount combination refrigerator-freezers that incorporate, at a minimum: (a) an external metal shell, (b) an interior plastic liner, and (c) insulation.

The products subject to the investigation are currently classifiable under subheadings 8418.10.0010, 8418.10.0020, 8418.10.0030, and 8418.10.0040 of the Harmonized Tariff System of the United States (HTSUS). Products subject to this investigation may also enter under HTSUS subheadings 8418.21.0010, 8418.21.0020, 8418.21.0030, 8418.21.0090, and 8418.99.4000, 8418.99.8050, and 8418.99.8060. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the merchandise subject to this scope is dispositive.

[3] The existence of an interior sub-compartment for ice-making in an upper-most storage compartment does not render an upper-most storage compartment a freezer compartment.

Scope Comments

In the *Preliminary Determination,* we did not modify the description of the scope of this investigation in the manner requested by certain interested parties. Specifically, we did not modify the scope to be consistent with the Association of Home Appliance Manufacturers (AHAM) definition, nor did we exclude kimchi refrigerators or Quatro Cooling Refrigerators from the scope. We did, however, clarify the scope to eliminate any ambiguity with respect to the inclusion of Quatro Cooling Refrigerators in the scope of the investigation. *See Preliminary Determination,* 76 FR at 67690–67691. No party commented on our preliminary scope determination. Therefore, we made no further changes to the description of the scope, as stated in the *Preliminary Determination.*

Analysis of Comments Received

All issues raised in the case and rebuttal briefs by parties in this investigation are addressed in the Issues and Decision Memorandum (Decision Memorandum), which is adopted by this notice. A list of the issues raised is attached to this notice as Appendix I. The Decision Memorandum is a public document and is on file electronically via Import Administration's Antidumping and Countervailing Duty Centralized Electronic Service System (IA ACCESS). Access to IA ACCESS is available in the Central Records Unit (CRU), room 7046 of the main Department of Commerce building. In addition, a complete version of the Decision Memorandum can be accessed directly on the internet at *http://www.trade.gov/ia/*. The signed Decision Memorandum and the electronic version of the Decision Memorandum are identical in content.

Verification

As provided in section 782(i) of the Act, we verified the sales and cost information submitted by the respondents for use in our final determination. We used standard verification procedures including an examination of relevant accounting and production records, and original source documents provided by the respondents.

Changes Since the Preliminary Determination

Based on our analysis of the comments received and our findings at verification, we made certain changes to the margin calculations for each respondent. For a discussion of these changes, see the ''Margin Calculations'' section of the Decision Memorandum.

Cost of Production

As discussed in the *Preliminary Determination,* we conducted an investigation to determine whether the respondents made comparison-market sales of the foreign like product during the POI at prices below their cost of production (COP) within the meaning of section 773(b) of the Act. *See Preliminary Determination,* 76 FR at 67698–67699. For this final determination, we performed the cost test following the same methodology as in the *Preliminary Determination,* after making certain adjustments to the reported comparison-market cost and sales data based on our analysis of the comments received and our findings at verification, where appropriate.

We found that 20 percent or more of each respondent's sales of a given product during the POI were at prices less than the weighted-average COP for this period. Thus, we determined that these below-cost sales were made in ''substantial quantities'' within an extended period of time and at prices which did not permit the recovery of all costs within a reasonable period of time in the normal course of trade. *See* sections 773(b)(1)–(2) of the Act.

Therefore, for purposes of this final determination, we found that each respondent made below-cost sales not in the ordinary course of trade. Consequently, we disregarded these sales and used the remaining sales as the basis for determining normal value for each respondent pursuant to section 773(b)(1) of the Act.

MNC Provision

As we discussed in the *Preliminary Determination,* we applied the Special Rule for Certain Multinational Corporations (MNC Provision) in the calculation of normal value (NV) for LGEMM because, based on the record evidence, LGEMM satisfied each of the three criteria enumerated under section 773(d) of the Act. In so doing, we based NV for LGEMM on the prices of sales made by LG Electronics, Inc. (LGE) in Korea. *See Preliminary Determination,* 76 FR at 67692–67693.

We have continued to apply the MNC Provision to the calculation of LGEMM's NV for purposes of the final determination because all three criteria enumerated in the Act have been met. Specifically, we verified that LGEMM is owned in part by LGE, which produces bottom mount refrigerators, and that LGEMM's home market sales are not viable for comparison to its U.S. sales. Furthermore, using the same methodology as that employed in the *Preliminary Determination,* after taking into account adjustments made to LGEMM's and LGE's sales and cost data based on our analysis of other comments received and our findings at verification, we continue to find that the NV of the foreign like product produced in Korea is higher than the NV of the foreign like product produced in Mexico. Therefore, we compared LGEMM's U.S. prices to the prices of sales made by LGE in Korea. For further discussion of this issue, *see Comment 3* of the Decision Memorandum.

Targeted Dumping

The Act allows the Department to employ the average-to-transaction margin calculation methodology under the following circumstances: (1) There is a pattern of export prices that differ significantly among purchasers, regions or periods of time; and (2) The Department explains why such differences cannot be taken into account using the average-to-average or transaction-to-transaction methodology. *See* section 777A(d)(1)(B) of the Act.

In the *Preliminary Determination,* we conducted time-period targeted dumping analyses for Electrolux, LGEMM, and Samsung based on timely allegations of targeted dumping filed by the petitioner, using the methodology adopted in *Certain Steel Nails From the United Arab Emirates: Notice of Final Determination of Sales at Not Less Than Fair Value,* 73 FR 33985 (June 16, 2008), and *Certain Steel Nails From the People's Republic of China: Final Determination of Sales at Less Than Fair Value and Partial Affirmative Determination of Critical Circumstances,* 73 FR 33977 (June 16, 2008) (*Nails*), and applied in more recent investigations.[4] As a result, we preliminarily determined that there was a pattern of U.S. prices for comparable merchandise that differed significantly among certain time periods for Samsung and LGEMM, in accordance with section 777A(d)(1)(B)(i) of the Act. We also preliminarily determined that no such pattern existed for Electrolux.

Furthermore, for Samsung, we found that the standard average-to-average methodology took into account the price differences because the alternative average-to-transaction methodology yielded no difference in the margin or yielded a difference in the margin that was so insignificant relative to the size of the resulting margin as to be immaterial. Accordingly, we preliminarily applied the standard average-to-average methodology to all U.S. sales made by Samsung. For LGEMM, we found that that the standard average-to-average methodology did not take into account the price differences because the alternative average-to-transaction methodology yielded a material difference in the margin. Accordingly, we preliminarily applied the average-to-transaction methodology to all U.S. sales made by LGEMM. For Electrolux, because we did not find a pattern of prices that differed significantly for certain time periods, we applied our standard average-to-average price comparison methodology to all U.S. sales made by Electrolux. *See Preliminary Determination* at 76 FR 67691–67692.

For purposes of the final determination, we performed our targeted-dumping analysis following the methodology employed in the *Preliminary Determination,* after taking into account the petitioner's revised targeted dumping allegation with respect to Samsung, and making certain revisions to Electrolux's, LGEMM's and Samsung's reported U.S. sales data based on verification findings and our evaluation of other comments submitted by the parties, as enumerated in the ''Margin Calculations'' section of the Decision Memo. In so doing, we found that the results of our final targeted-dumping analysis were consistent with those of our preliminary targeted-dumping analysis with respect to Electrolux. Therefore, we continued to apply the standard average-to-average methodology to all of Electrolux's U.S. sales. For Samsung and LGEMM, while we found a pattern of price differences that differed significantly for certain time periods pursuant to section 777A(d)(1)(B) of the Act, we determined that the differences can be taken into account using the average-to-average methodology. Therefore, we applied the standard average-to-average methodology to all U.S. sales made by Samsung and LGEMM. *See* LGEMM Calculation Memo, Samsung Calculation Memo, and Electrolux Calculation Memo. For further discussion, *see Comment 2* of the Decision Memorandum.

Critical Circumstances

In the *Preliminary Determination,* we found that critical circumstances exist with respect to imports of the subject merchandise from Samsung but not with respect to imports of subject merchandise from Electrolux or LGEMM.[5] *See Preliminary Determination,* 76 FR at 67701–67702. Samsung objected to our preliminary affirmative critical circumstances determination with respect to it, arguing among other things, that its imports have not been massive since the filing of the petition.

In conducting our critical circumstances analysis for the final determination, we relied on updated shipment data provided by Electrolux, LGEMM, and Samsung which we examined at verification. Based on our analysis of these data and the criteria enumerated under section 735(a)(3) of the Act, we continue to find that critical circumstances exist only with respect to imports of bottom mount refrigerators from Samsung, as explained below.

Section 735(a)(3) of the Act provides that the Department will determine that critical circumstances exist if there is a reasonable basis to believe or suspect that: (A)(i) There is a history of dumping and material injury by reason of dumped imports in the United States or elsewhere of the subject merchandise; or (ii) the person by whom, or for whose account, the merchandise was imported knew or should have known that the exporter was selling the subject merchandise at less than its fair value and that there was likely to be material injury by reason of such sales; and (B) there have been massive imports of the subject merchandise over a relatively short period. Section 351.206(h)(1) of the Department's regulations provides that, in determining whether imports of the subject merchandise have been ''massive,'' the Department normally will examine: (i) the volume and value of the imports; (ii) seasonal trends; and (iii) the share of domestic consumption accounted for by the imports. In addition, 19 CFR 351.206(h)(2) provides that an increase in imports of 15 percent during the ''relatively short period'' of time may be considered ''massive.''

[4] These investigations include *Certain Coated Paper Suitable for High-Quality Print Graphics Using Sheet-Fed Presses From Indonesia: Final Determination of Sales at Less Than Fair Value,* 75 FR 59223 (Sept. 27, 2010) and accompanying Issues and Decision Memorandum at Comment 1, and *Multilayered Wood Flooring From the Peoples' Republic of China: Final Determination of Sales at Less Than Fair Value,* 76 FR 64318 (Oct. 18, 2011) and accompanying Issues and Decision Memorandum at Comment 4.

[5] The petitioner did not make a critical circumstances allegation with respect to imports from Mabe or All Others.

Section 351.206(i) of the Department's regulations defines ''relatively short period'' as normally being the period beginning on the date the proceeding begins (*i.e.,* the date the petition is filed) and ending at least three months later. The regulations also provide, however, that if the Department finds that importers, exporters, or producers had reason to believe, at some time prior to the beginning of the proceeding, that a proceeding was likely, the Department may consider a period of not less than three months from that earlier time.

In determining whether the above criteria have been satisfied, we examined: (1) The evidence placed on the record by the respondents and the petitioner; and (2) the International Trade Commission's (ITC's) preliminary determination of injury (*see Bottom Mount Refrigerator Freezers from Mexico and Korea, Investigation Nos. 701–TA–477 and 731–TA–1180–1181* (Preliminary), 76 FR 29791 (May 23, 2011) (*ITC Preliminary Determination*)).

To determine whether there is a history of injurious dumping of the merchandise under investigation, in accordance with section 735(a)(3)(A)(i) of the Act, the Department normally considers evidence of an existing antidumping duty order on the subject merchandise in the United States or elsewhere to be sufficient.[6] As mentioned in the *Preliminary Determination,* the petitioner did not identify any proceeding with respect to bottom mount refrigerators from Mexico, nor are we aware of any existing antidumping duty order in any country on bottom mount refrigerators from Mexico. For this reason, the Department does not find a history of injurious dumping of the subject merchandise from Mexico pursuant to section 735(a)(3)(A)(i) of the Act.

To determine whether the person by whom, or for whose account, the merchandise was imported knew or should have known that the exporter was selling the subject merchandise at LTFV, and that there was likely to be material injury by reason of such sales in accordance with section 735(a)(3)(A)(ii) of the Act, the Department normally considers margins of 25 percent or more for export price (EP) sales or 15 percent or more for constructed export price (CEP) transactions sufficient to impute knowledge of dumping.[7]

Electrolux made only CEP sales and the vast majority of LGEMM's sales are CEP. Samsung had both EP and CEP sales, a majority of which are CEP sales. The final dumping margins calculated for Electrolux, LGEMM, and Samsung exceed the threshold sufficient to impute knowledge of dumping (*i.e.,* 15 percent for CEP sales). Therefore, we determine that there is sufficient basis to find that importers should have known that each of these companies was selling the subject merchandise at LTFV pursuant to section 735(a)(3)(A)(ii) of the Act. In determining whether an importer knew or should have known that there was likely to be material injury by reason of dumped imports, the Department normally will look to the preliminary injury determination of the ITC. If the ITC finds a reasonable indication of present material injury to the relevant U.S. industry, the Department will determine that a reasonable basis exists to impute importer knowledge that material injury is likely by reason of such imports. *See e.g., Certain Orange Juice from Brazil.* In the present case, the ITC preliminarily found reasonable indication that an industry in the United States is materially injured by imports of bottom mount refrigerators from Mexico. *See ITC Preliminary Determination.* Based on the ITC's preliminary determination of injury, and the final antidumping margins for Electrolux, LGEMM, and Samsung, the Department finds that there is a reasonable basis to conclude that the importer knew or should have known that there was likely to be injurious dumping of subject merchandise for these companies.

In determining whether there are ''massive imports'' over a ''relatively short period,'' pursuant to section 735(a)(3)(B) of the Act, the Department normally compares the import volumes of the subject merchandise for at least three months immediately preceding the filing of the petition (*i.e.,* the base period) to a comparable period of at least three months following the filing of the petition (*i.e.,* the comparison period). Accordingly, in determining whether imports of the subject merchandise have been massive, we based our analysis for each of the three companies on shipment data for comparable seven-month periods preceding and following the filing of the petition.

Specifically, the Department requested and obtained from each of the respondents monthly shipment data from January 2008 to October 2011. To determine whether imports of subject merchandise have been massive over a relatively short period, we compared, pursuant to 19 CFR 351.206(h)(1)(i), the respondents' export volumes for the seven months before the filing of the petition (*i.e.,* September 2010–March 2011) to those during the seven months after the filing of the petition (*i.e.,* April through October 2011). These periods were selected based on the Department's practice of using the longest period for which information is available up to the date of the preliminary determination.[8] According to the monthly shipment information, we found the volume of shipments of bottom mount refrigerators increased by more than 15 percent for Electrolux, LGEMM, and Samsung.

For purposes of our ''massive imports'' determination, we also considered the impact of seasonality on imports of bottom mount refrigerators based on interested party comments and information contained in the ITC's preliminary determination. In order to determine whether the seasonality factor accounted for the increase in imports observed for each of the respondents in the post-petition filing period (the comparison period), we analyzed company-specific shipment data for a historical three-year period, where possible, using the same base and comparison time periods noted above. As a result of this analysis, we found that there is a consistent pattern of seasonality in the industry, and that seasonal trends account for the increase in imports subsequent to the filing of the petition from each of the respondents except one. Specifically, with respect to Electrolux and LGEMM, we found that the percentage increase in shipments during the comparison period is not related to the filing of the petition but rather to the consistent seasonal trends in the industry because shipments during the April–October time period were consistently higher than those in the September–March

[6] *See e.g., Certain Magnesia Carbon Bricks From the People's Republic of China: Notice of Preliminary Affirmative Determination of Critical Circumstances,* 75 FR 28237 (May 20, 2010), unchanged in *Certain Magnesia Carbon Bricks From the People's Republic of China: Final Determination of Sales at Less Than Fair Value and Critical Circumstances* 75 FR 45468 (August 2, 2010).

[7] *See e.g., Notice of Preliminary Determination of Sales at Less Than Fair Value, Postponement of Final Determination, and Affirmative Preliminary Critical Circumstances Determination: Certain Orange Juice from Brazil,* 70 FR 49557 (August 24, 2005), unchanged in *Notice of Final Determination of Sales at Less than Fair Value and Affirmative Final Determination of Critical Circumstances: Certain Orange Juice from Brazil,* 71 FR 2183 (January 13, 2006) (*Certain Orange Juice from Brazil*).

[8] *See e.g., Notice of Preliminary Determination of Sales at Less Than Fair Value and Postponement of Final Determination: Silicon Metal From the Russian Federation,* 67 FR 59253, 59256 (Sept. 20, 2002), unchanged in *Notice of Final Determination of Sales at Less Than Fair Value: Silicon Metal From the Russian Federation,* 68 FR 6885 (February 11, 2003).

time period from year to year, and the shipment increases observed in the April–October time period from year to year decreased. Therefore, for purposes of the final determination, we find that imports from these companies during the period after the filing of the petition have not been massive in accordance with section 735(a)(3)(B) of the Act. However, with respect to Samsung, we found that the percentage increase in shipments during the comparison period is not related to seasonal trends but associated with the filing of the petition because shipments in the April–October 2010 time period were lower than those in the September 2009–March 2010 time period, and the shipment increase observed in the April–October period between 2010 and 2011 was substantial. Accordingly, for purposes of the final determination, we find that imports from Samsung during the period after the filing of the petition have been massive in accordance with section 735(a)(3)(B) of the Act.

In summary, we find that there is a reasonable basis to believe or suspect importers had knowledge of dumping and the likelihood of material injury with respect to bottom mount refrigerators produced and exported from Mexico by Electrolux, LGEMM, and Samsung. In addition, we find that there have been massive imports of bottom mount refrigerators over a relatively short period from Samsung, irrespective of seasonality. However, we do not find that there have been massive imports of bottom mount refrigerators over a relatively short period from Electrolux and LGEMM due to seasonality. Therefore, for the reasons stated above, the Department finds that critical circumstances do not exist for imports of the subject merchandise from Electrolux and LGEMM, but continues to find that critical circumstances exist for imports of the subject merchandise from Samsung in the final determination. For a complete discussion of our final critical circumstances analysis, see the Decision Memorandum at Comment 34 and the March 16, 2012, Memorandum to James P. Maeder, Jr., Director, Office 2, from The Team entitled, ''Antidumping Duty Investigation of Certain Bottom Mount Refrigerator Freezers from Mexico—Final Determination of Critical Circumstances.''

Continuation of Suspension of Liquidation

Pursuant to 735(c)(1)(B) of the Act, we will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of all entries of subject merchandise from Mexico, produced/exported by Electrolux, LGEMM, Mabe, and ''All Others'' and entered, or withdrawn from warehouse, for consumption on or after November 2, 2011, the date of publication of the preliminary determination in the **Federal Register**. Pursuant to 735(c)(1)(B) of the Act, we will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of all entries of subject merchandise from Mexico, produced/exported by Samsung and entered, or withdrawn from warehouse, for consumption on or after August 4, 2011, which is 90 days prior to the date of publication of the preliminary determination in the **Federal Register**, *i.e.,* November 2, 2011. CBP shall require a cash deposit or the posting of a bond equal to the estimated amount by which the normal value exceeds the U.S. price as shown below. These instructions suspending liquidation will remain in effect until further notice.

Final Determination Margins

The weighted-average dumping margins are as follows:

Exporter/manufacturer	Weighted-Average margin percentage	Critical circumstances
Electrolux Home Products, Corp. NV/Electrolux Home Products De Mexico, S.A. de C.V	22.94	No.
LG Electronics Monterrey Mexico, S.A. de C.V.	30.34	No.
Controladora Mabe S.A. de C.V./Mabe S.A. de C.V.	6.00	NA.
Samsung Electronics Mexico, S.A. de C.V.	15.95	Yes.
All Others	20.26	NA.

''All Others'' Rate

In accordance with section 735(c)(5)(A) of the Act, we based the ''All Others'' rate on the weighted average of the dumping margins calculated for the exporters/manufacturers investigated in this proceeding. The ''All Others'' rate is calculated exclusive of all *de minimis* margins and margins based entirely on AFA.

Disclosure

We will disclose the calculations performed within five days of the date of publication of this notice to parties in this proceeding in accordance with 19 CFR 351.224(b).

ITC Notification

In accordance with section 735(d) of the Act, we notified the ITC of our final determination. As our final determination is affirmative, the ITC will determine within 45 days whether imports of the subject merchandise are causing material injury, or threat of material injury, to an industry in the United States. If the ITC determines that material injury or threat of injury does not exist, the proceeding will be terminated and all securities posted will be refunded or canceled. If the ITC determines that such injury does exist, the Department will issue an antidumping duty order directing CBP to assess antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation.

Return or Destruction of Proprietary Information

This notice will serve as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

We are issuing and publishing this determination and notice in accordance with sections 735(d) and 777(i) of the Act.

Dated: March 16, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

International Trade Administration

[A–201–840]

Notice of Final Determination of Sales at Less Than Fair Value: Galvanized Steel Wire From Mexico

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

DATES: *Effective Date:* March 26, 2012.

SUMMARY: On November 4, 2011, the Department of Commerce (the Department) published its preliminary determination in the investigation of sales at less than fair value of galvanized steel wire (galvanized wire) from Mexico.[1]

The Department has determined that galvanized wire from Mexico is being, or is likely to be, sold in the United States at less than fair value, as provided in section 735 of the Tariff Act of 1930, as amended (the Act). The final margins of sales at less than fair value are listed below in the section entitled ''Final Determination of Investigation.''

FOR FURTHER INFORMATION CONTACT: Patrick Edwards or Ericka Ukrow, AD/CVD Operations, Office 7, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–8029 or (202) 482–0405, respectively.

SUPPLEMENTARY INFORMATION:

Background

The preliminary determination in this investigation was published on November 4, 2011. *See Preliminary Determination.* We invited parties to comment on the *Preliminary Determination.* On November 8, 2011, we received timely-filed allegations from Deacero S.A. de C.V. (Deacero) that the Department made several ministerial errors in calculating its dumping margin for the preliminary determination.[2]

On November 10 and 23, 2011, the Department issued Deacero supplemental questionnaires.

On December 5, 2011, the Department released its memorandum addressing Deacero's ministerial error allegations, finding that no amendment to the preliminary determination was warranted. *See* Ministerial Error Memorandum.[3]

On December 5, 2011, Deacero submitted its response to the November 23, 2011, questionnaire.[4] Also on December 5, 2011, Petitioners[5] and respondent Aceros Camesa S.A. de C.V. (Camesa) timely filed a request for a public hearing.[6]

We conducted cost and sales verifications of the responses submitted by Deacero and Camesa (collectively, respondents).[7] All verification reports

[1] *See Galvanized Steel Wire from Mexico: Preliminary Determination of Sales at Less Than Fair Value and Postponement of Final Determination,* 76 FR 68422 (November 4, 2011) (*Preliminary Determination*).

[2] *See* Letter from Deacero, regarding ''Galvanized Steel Wire from Mexico,'' dated November 8, 2011. Petitioners did not comment on Deacero's ministerial error allegations.

[3] *See* Memorandum to Richard O. Weible, Director, Office 7, from Patrick Edwards and Ericka Ukrow, Case Analysts, through Angelica Mendoza, Program Manager, Office 7, entitled ''Ministerial Error Allegation in the Preliminary Determination of the Antidumping Duty Investigation of Galvanized Steel Wire from Mexico: Deacero S.A. de C.V.,'' dated December 5, 2011 (Ministerial Error Memorandum).

[4] *See* Deacero's Fourth Supplemental Questionnaire Response, dated December 8, 2011.

[5] The Petitioners in this investigation are Davis Wire Corporation, Johnston Wire Technologies, Inc., Mid-South Wire Company, Inc., National Standard, LLC, and Oklahoma Steel & Wire Company, Inc. (collectively, Petitioners).

[6] Deacero, also on December 5, 2011, requested to participate in a hearing in the event that another party requested a hearing.

Halper, Director, Office of Accounting, entitled ''Verification of the Cost of Production and Constructed Value Data Submitted by Deacero S.A. de C.V. in the Antidumping Duty Investigation of Galvanized Steel Wire from Mexico,'' dated January 13, 2012 (Deacero Cost Verification Report); Memorandum to the File from Frederick W. Mines and Christopher J. Zimpo, Case Accountants, through Theresa C. Deeley, Lead Accountant, and Neal M. Halper, Director, Office of Accounting, entitled ''Verification of the Cost Response of Aceros Camesa S.A. de C.V. in the Antidumping Duty Investigation of Galvanized Steel Wire from Mexico,'' dated January 13, 2012 (Camesa Cost Verification Report); Memorandum to the File from Christopher J. Zimpo and Frederick W. Mines, Case Accountants, through Theresa C. Deeley, Lead Accountant, and Neal M. Halper, Director, Office of Accounting, entitled ''Verification of the Further Manufacturing Data Submitted by Deacero S.A. de C.V. for Deacero USA Inc. and Stay-Tuff Fence Manufacturing, Inc. in the Antidumping Duty Investigation of Galvanized Steel Wire from Mexico,'' dated January 27, 2012 (Deacero Further-Manufacturing Verification Report); Memorandum to the File from Patrick Edwards, Case Analyst, through Angelica Mendoza, Program Manager, Office 7, entitled ''Verification of the Sales Responses of Aceros Camesa, S.A. de C.V. in the Antidumping Duty Investigation on Galvanized Steel Wire from Mexico,'' dated February 13, 2012 (Camesa Verification Report); Memorandum to the File from Ericka Ukrow and Patrick Edwards, Case Analysts, through Angelica L. Mendoza, Program Manager, Office 7, entitled ''Verification of the Sales Response of Deacero USA Inc. (Deacero USA) and Stay-Tuff Fence Manufacturing, Inc. (Stay-Tuff) in the Antidumping Duty Investigation of Galvanized Steel Wire from Mexico,'' dated February 15, 2012 (Deacero CEP Verification Report); Memorandum to the File from Patrick Edwards and Ericka Ukrow, Case Analysts, through Angelica Mendoza, Program Manager, Office 7, entitled ''Verification of the Sales Responses of Deacero S.A. de C.V. in the

Continued

are on file and available electronically via Import Administration's Antidumping and Countervailing Duty Centralized Electronic Service System (IA ACCESS). Access to IA ACCESS is available in the Central Records Unit (CRU), room 7046 of the main Department of Commerce building.

Based on the Department's findings at verification, as well as the minor corrections presented by Deacero and Camesa at the start of their respective verifications, we requested respondents to submit revised sales databases.[8] On February 27, 2012, as requested, Deacero and Camesa submitted their revised sales databases.

Subsequent to the release of the verification reports in this investigation, parties timely filed case and rebuttal briefs. We received a case brief from Petitioners, Deacero, and Camesa on February 23, 2012; Petitioners and Deacero filed rebuttal briefs on February 28, 2012. No public hearing was held because all requests for a hearing were withdrawn.

On March 2, 2012, at the Department's request, respondents in the companion galvanized wire investigations involving the People's Republic of China (both antidumping and countervailing duty) filed on the record of this investigation certain scope comments that were raised in those proceedings' case and rebuttal briefs. We allowed a period of time for parties in the instant proceeding to comment on those submissions, and we received no comments.

Analysis of Comments Received

All issues raised in the case and rebuttal briefs by parties to this antidumping investigation are addressed in the ''Issues and Decision Memorandum for the Final Determination of the Antidumping Duty Investigation of Galvanized Steel Wire from Mexico'' (Decision Memorandum) from Christian Marsh, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, to Paul Piquado, Assistant Secretary for Import Administration, dated March 19, 2012, which is hereby adopted by this notice. A list of the issues which parties have raised and to which we have responded, all of which are in the Decision Memorandum, is attached to this notice as an appendix. Parties can find a complete discussion of all issues raised in this investigation and the corresponding recommendations in the Decision Memorandum which is on file and available electronically via IA ACCESS, which is accessible in the CRU, room 7046 of the main Department of Commerce building. In addition, a complete version of the Decision Memorandum can be accessed directly on the Web at *http://ia.ita.doc.gov/.* The paper copy and electronic version of the Decision Memorandum are identical in content.

Scope of Investigation

The scope of this investigation covers galvanized steel wire which is a cold-drawn carbon quality steel product in coils, of circular or approximately circular, solid cross section with any actual diameter of 0.5842 mm (0.0230 inch) or more, plated or coated with zinc (whether by hot-dipping or electroplating).

Steel products to be included in the scope of this investigation, regardless of Harmonized Tariff Schedule of the United States (HTSUS) definitions, are products in which: (1) Iron predominates, by weight, over each of the other contained elements; (2) the carbon content is two percent or less, by weight; and (3) none of the elements listed below exceeds the quantity, by weight, respectively indicated:

—1.80 percent of manganese, or
—1.50 percent of silicon, or
—1.00 percent of copper, or
—0.50 percent of aluminum, or
—1.25 percent of chromium, or
—0.30 percent of cobalt, or
—0.40 percent of lead, or
—1.25 percent of nickel, or
—0.30 percent of tungsten, or
—0.02 percent of boron, or
—0.10 percent of molybdenum, or
—0.10 percent of niobium, or
—0.41 percent of titanium, or
—0.15 percent of vanadium, or
—0.15 percent of zirconium.

Specifically excluded from the scope of this investigation is galvanized steel wire in coils of 15 feet or less which is pre-packed in individual retail packages. The products subject to this investigation are currently classified in subheadings 7217.20.30, 7217.20.45, and 7217.90.10 of the HTSUS which cover galvanized wire of all diameters and all carbon content. Galvanized wire is reported under statistical reporting numbers 7217.20.3000, 7217.20.4510, 7217.20.4520, 7217.20.4530, 7217.20.4540, 7217.20.4550, 7217.20.4560, 7217.20.4570, 7217.20.4580, and 7217.90.1000. These products may also enter under HTSUS subheadings 7229.20.0015, 7229.20.0090, 7229.90.5008, 7229.90.5016, 7229.90.5031, and 7229.90.5051. Although the HTSUS subheadings are provided for convenience and Customs purposes, the written description of the merchandise is dispositive.

Scope Comments

In their case and rebuttal briefs, Petitioners, respondents, and other interested parties provided comments on the scope and merchandise that is to be covered under the scope. We have discussed these comments fully in the Decision Memorandum. *See* Decision Memorandum at Comments 3 and 4. As a result of considering these comments, we have clarified the scope language to include not only circular cross section material, but also out-of-round material that meets the circular tolerances. *Id.* at Comment 3. We have also included an additional HTSUS subheading as part of the scope description. *Id.* at Comment 4. In addition, and as referenced in the ''Background'' section above, certain parties in the companion galvanized wire antidumping duty investigation involving the People's Republic of China provided scope comments. These comments have been addressed in the *Notice of Final Determination of Sales at Less than Fair Value: Galvanized Steel Wire from the People's Republic of China,* signed concurrently with this notice, and the accompanying Issues and Decision Memorandum at Comment 3.

In addition, in the *Preliminary Determination,* we responded to scope comments provided by Tree Island Wire (USA), Inc. and Preferred Wire Products, Inc., and we preliminarily determined that galvanized wire with a diameter less than one millimeter is subject to the scope of the investigation. No additional comments were made on this issue in the case or rebuttal briefs. For the final, we have made no changes on this determination from the *Preliminary Determination* and continue to find, specifically, that galvanized wire with a diameter less than one millimeter but equal to or greater than 0.5842 millimeters is covered by the scope. *See Preliminary Determination,* 76 FR at 68425.

Period of Investigation

The period of investigation (POI) is January 1, 2010, to December 31, 2010.

Antidumping Duty Investigation of Galvanized Steel Wire from Mexico,'' dated February 16, 2012 (Deacero Verification Report); and Memorandum to the File from Ericka Ukrow and Patrick Edwards, Case Analysts, through Angelica L. Mendoza, Program Manager, entitled ''Verification of Sales Response of Aceros Camesa S.A. de C.V. (Camesa) and WireCo World Group, Inc. (WireCo) in the Antidumping Duty Investigation of Galvanized Steel Wire from Mexico,'' dated February 16, 2012 (Camesa CEP Verification Report).

[8] *See* Letters from Angelica L. Mendoza, Program Manager, Office 7, to Deacero S.A. de C.V., dated February 21, 2012, and February 22, 2012; Letter from Angelica L. Mendoza, Program Manager, Office 7, to Aceros Camesa S.A. de C.V., dated February 21, 2012.

This period corresponds to the four most recent fiscal quarters prior to the month of the filing of the Petition. *See* 19 CFR 351.204(b)(1).

Verification

As provided in section 782(i) of the Act and noted above, we verified the information submitted by the respondents for use in our final determination. We used standard verification procedures, including examination of relevant accounting and production records, and original source documents provided by the respondents.

Changes Since the Preliminary Determination

Based on our analysis of the comments received and our findings at verification, we have made certain changes to the margin calculation for both Deacero and Camesa. For a discussion of these changes, *see* Decision Memorandum at Comments 1, 2, 7, 8, 9, and 11.[9] Additionally, subsequent to the *Preliminary Determination,* the Department revised its margin calculation program to ensure that it accurately reflected the methodological choices made in that determination. These revisions to the programming, had they been included in the preliminary determination, would not have altered the weighted average dumping margins calculated there. *See* Decision Memorandum at Comment 10; *see also,* Deacero Analysis Memo and Camesa Analysis Memo at Attachments I–VIII.

All Others Rate

Section 735(c)(5)(A) of the Act provides that the estimated ''all others'' rate shall be an amount equal to the weighted average of the estimated weighted average dumping margins established for exporters and producers individually investigated, excluding any zero or *de minimis* margins and any margins determined entirely under section 776 of the Act. Deacero and Camesa are the only respondents selected for individual examination in this investigation and, for each company, the Department has calculated a company-specific rate that is not zero or *de minimis.* Therefore, for purposes of determining the ''all others'' rate, and pursuant to section 735(c)(5)(A) of the Act, we are using the weighted average of the dumping margins calculated for Deacero and Camesa for the ''all others'' rate, as referenced in the ''Continuation of Suspension of Liquidation'' section below, *i.e.,* 22.43 percent, as indicated in the ''Final Determination of Investigation'' section below.[10]

Final Determination of Investigation

We determine that the following weighted-average dumping margins exist for the period January 1, 2010, through December 31, 2010:

Manufacturer or exporter	Weighted-Average margin (percent)
Deacero S.A. de C.V	20.89
Aceros Camesa S.A. de C.V	37.69
All-Others	22.43

Continuation of Suspension of Liquidation

Pursuant to section 735(c)(1)(B) of the Act and 19 CFR 351.211(b)(1), we will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of all entries of subject merchandise from Mexico entered, or withdrawn from warehouse, for consumption on or after November 4, 2011, the date of the publication of the *Preliminary Determination,* for all producers/exporters. We will instruct CBP to require a cash deposit or the posting of a bond equal to the weighted-average margin, as indicated in the chart above, as follows: (1) The rate for the respondents will be the rates we have determined in this final determination; (2) if the exporter is not a firm identified in this investigation but the producer is, the rate will be the rate established for the producer of the subject merchandise; (3) the rate for all other producers or exporters will be 22.43 percent. These suspension-of-liquidation instructions will remain in effect until further notice.

International Trade Commission Notification

In accordance with section 735(d) of the Act, we have notified the International Trade Commission (ITC) of our final determination. As our final determination is affirmative and in accordance with section 735(b)(2) of the Act, the ITC will determine, within 45 days, whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports or sales (or the likelihood of sales) for importation of the subject merchandise. If the ITC determines that material injury or threat of material injury does not exist, the proceeding will be terminated and all securities posted will be refunded or canceled. If the ITC determines that such injury does exist, the Department will issue an antidumping duty order directing CBP to assess antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation.

Notification Regarding APO

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305. Timely notification of return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

This determination is issued and published pursuant to sections 735(d) and 777(i)(1) of the Act.

Dated: March 19, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

Galvanized Steel Wire From the People's Republic of China: Final Determination of Sales at Less Than Fair Value

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

DATES: *Effective Date:* March 26, 2012.

SUMMARY: On November 4, 2011, the Department of Commerce (the ''Department'') published the *Preliminary Determination* of sales at less than fair value (''LTFV'') in the antidumping investigation of galvanized steel wire from the People's Republic of China (''PRC'').[1] On November 29, 2011, the Department published an *Amended Preliminary Determination*.[2] The period of investigation (''POI'') is July 1, 2010, through December 31, 2010. Based on our analysis of the comments received, we have made changes to our *Preliminary Determination* and *Amended Preliminary Determination.* The Department continues to find that galvanized steel wire from the PRC is being, or is likely to be, sold in the United States at LTFV, as provided in section 735 of the Tariff Act of 1930, as amended (''the Act''). The estimated margins of sales at LTFV are shown in the ''Final Determination Margins'' section of this notice.

FOR FURTHER INFORMATION CONTACT: Irene Gorelik, Katie Marksberry or Kabir Archuletta, AD/CVD Operations, Office 9, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC, 20230; telephone: (202) 482–6905, (202) 482–7906, or 482–2593, respectively.

SUPPLEMENTARY INFORMATION:

Background

On November 4, 2011, Shanghai Bao Zhang Industry Co., Ltd., Anhui Bao Zhang Metal Products Co., Ltd., and B&Z Galvanized Wire Industry (collectively, ''Baozhang''), one of the three respondents selected for individual examination in this investigation, notified the Department that it would not participate in any the scheduled verifications.[3] On November 9, 2011, Tianjin Honbase Machinery Manufactory Co., Ltd. (''Honbase''), another respondent selected for individual examination in this investigation, also notified the Department that it would not participate in any scheduled verifications.[4]

On November 2, 2011, Qingdao Ant Hardware Manufacturing Co., Ltd. (''AHM''), one of the non-individually examined exporters that received a separate rate, placed on the record samples of products which it believes should be excluded from the scope of the investigation. On November 9, 2011, the Department notified all interested parties that it would allow any interested parties to physically view the samples.[5]

Between December 9 and 14, 2011, we received case and rebuttal briefs from Petitioners,[6] AHM, Tianjin Huayuan Metal Wire Products Co., Ltd. (''Huayuan''),[7] and Baozhang. The Department did not hold a public hearing, pursuant to 19 CFR 351.310(d), as the hearing requests made by interested parties were withdrawn.[8]

On March 2, 2012, at the Department's request, interested parties in the companion galvanized wire investigations involving Mexico filed on the record of this investigation certain scope comments that were raised in that proceeding's case and rebuttal briefs. We allowed a period of time for parties in the instant proceeding to comment on those submissions. We received no comments.

Analysis of Comments Received

All issues raised in the case and rebuttal briefs by parties to this investigation are addressed in the ''Antidumping Duty Investigation of Galvanized Steel Wire from the People's Republic of China: Issues and Decision Memorandum for the Final Determination'' (''Decision Memo''), dated concurrently with this notice and which is hereby adopted by this notice. A list of the issues which parties raised, and to which we respond in the Decision Memo, are attached to this notice as Appendix I. The Decision Memo is a public document and is on file electronically via Import Administration's Antidumping and Countervailing Duty Centralized Electronic Service System (''IA ACCESS''). Access to IA ACCESS is available in the Central Records Unit (''CRU''), room 7046 of the main Department of Commerce building. In addition, a complete version of the Decision Memo can be accessed directly on the internet at *http://www.trade.gov/ia/*. The signed Decision Memo and the electronic versions of the Decision Memo are identical in content.

Changes Since the Preliminary Determination

Based on our analysis of information on the record of this investigation, we have made changes regarding Honbase and Baozhang for the final determination. Specifically, for the final determination, we have applied total adverse facts available (''AFA'') for Honbase's and Baozhang's failure to participate and their subsequent inclusion as part of the PRC-wide entity.

[1] *See Galvanized Steel Wire From the People's Republic of China: Preliminary Determination of Sales at Less Than Fair Value and Postponement of Final Determination,* 76 FR 68407 (November 4, 2011) (''*Preliminary Determination*'').

[6] Davis Wire Corporation, Johnstown Wire Technologies, Inc., Mid-South Wire Company, Inc., National Standard, LLC and Oklahoma Steel & Wire Company, Inc. (hereinafter collectively referred to as ''Petitioners'').

[7] In this case, Huayuan refers to the collective group of affiliated companies comprised of Tianjin Huayuan Metal Wire Products Co., Ltd., Tianjin Tianxin Metal Products, Co., Ltd., Tianjin Huayuan Times Metal Products Co., Ltd., and Tianjin Meijiahua Trade Co., Ltd.

[8] *See* Letter to the Department from Huayuan; Re: Galvanized Steel Wire from the People's Republic of China: Withdrawal of Request for a Hearing, dated December 15, 2011.

Scope of Investigation

The scope of this investigation covers galvanized steel wire which is a cold-drawn carbon quality steel product in coils, of circular or approximately circular, solid cross section with any actual diameter of 0.5842 mm (0.0230 inch) or more, plated or coated with zinc (whether by hot-dipping or electroplating).

Steel products to be included in the scope of this investigation, regardless of Harmonized Tariff Schedule of the United States (''HTSUS'') definitions, are products in which: (1) Iron predominates, by weight, over each of the other contained elements; (2) the carbon content is two percent or less, by weight; and (3) none of the elements listed below exceeds the quantity, by weight, respectively indicated:

—1.80 percent of manganese, or
—1.50 percent of silicon, or
—1.00 percent of copper, or
—0.50 percent of aluminum, or
—1.25 percent of chromium, or
—0.30 percent of cobalt, or
—0.40 percent of lead, or
—1.25 percent of nickel, or
—0.30 percent of tungsten, or
—0.02 percent of boron, or
—0.10 percent of molybdenum, or
—0.10 percent of niobium, or
—0.41 percent of titanium, or
—0.15 percent of vanadium, or
—0.15 percent of zirconium.

Specifically excluded from the scope of this investigation is galvanized steel wire in coils of 15 feet or less which is pre-packed in individual retail packages. The products subject to this investigation are currently classified in subheadings 7217.20.30, 7217.20.45, and7217.90.1000 of the HTSUS which cover galvanized wire of all diameters and all carbon content. Galvanized wire is reported under statistical reporting numbers 7217.20.3000, 7217.20.4510, 7217.20.4520, 7217.20.4530, 7217.20.4540, 7217.20.4550, 7217.20.4560, 7217.20.4570, 7217.20.4580, and 7217.90.1000. These products may also enter under HTSUS subheadings 7229.20.0015, 7229.20.0090, 7229.90.5008, 7229.90.5016, 7229.90.5031, and 7229.90.5051. Although the HTSUS subheadings are provided for convenience and Customs purposes, the written description of the merchandise is dispositive.

Scope Comments

In their case and rebuttal briefs, interested parties provided comments on the scope and merchandise that is to be covered under the scope. We have discussed these comments fully in the Decision Memo.[9] In addition, and as referenced in the ''Background'' section above, certain parties in the companion galvanized wire investigation involving Mexico provided scope comments.[10] As a result of considering these comments, we have made a slight modification of the scope to clarify that galvanized steel wire of circular or approximately circular, solid cross section is included within the scope.[11] We have also included an additional HTSUS subheading as part of the scope description.[12]

In addition, in the *Preliminary Determination,* we responded to scope comments provided by Tree Island Wire (USA), Inc. and Preferred Wire Products, Inc., and we preliminarily determined that galvanized wire with a diameter less than one millimeter is subject to the scope of the investigation. No additional comments were made on this issue in the case or rebuttal briefs. Thus, for the final determination, we have made no changes on this determination from the *Preliminary Determination* and continue to find, specifically, that galvanized wire with a diameter less than one millimeter but equal to or greater than 0.5842 millimeters is covered by the scope.

Separate Rates

In proceedings involving non-market-economy (''NME'') countries, the Department begins with a rebuttable presumption that all companies within the country are subject to government control and, thus, should be assigned a single antidumping duty deposit rate. It is the Department's policy to assign all exporters of merchandise subject to an investigation in an NME country this single rate unless an exporter can demonstrate that it is sufficiently independent so as to be entitled to a separate rate.[13] In the *Preliminary Determination,* we found that Shijiazhuang Kingway Metal Products Co., Ltd.; Shanxi Yuci Broad Wire Products Co., Ltd.; Huanghua Jinhai Hardware Products Co., Ltd.; Huanghua Jinhai Import & Export Trading Co., Ltd.; Guizhou Wire Rope Incorporated Company; Hebei Minmetals Co., Ltd.; Shandong Minmetals Co., Ltd.; Fasten Group Imp. & Exp. Co., Ltd.; Qingdao Ant Hardware Manufacturing Co., Ltd.; Suntec Industries Co., Ltd.; M & M Industries Co., Ltd.; Shaanxi New Mile International Trade Co., Ltd.; Hebei Cangzhou New Century Foreign Trade Co., Ltd.; Dezhou Hualude Hardware Products Co., Ltd.; Shanghai SETI Enterprise International Co., Ltd.; and Xi'an Metals and Minerals Import and Export Co., Ltd., demonstrated their eligibility for, and were hence assigned, separate rate status.

No parties commented on the above companies' eligibility for separate rate status. Consequently, for the final determination, we continue to find that these companies demonstrated both a *de jure* and *de facto* absence of government control with respect to their exports of the merchandise under investigation, and are eligible for separate rate status for the final determination.

The Department received comments from Huayuan and Petitioners regarding the Department's preliminary determination with respect to Huayuan's separate rate status. The Department has addressed the arguments in Comment 1 of the Decision Memo. For the final determination, we continue to find that Huayuan has not overcome the presumption of government control with respect to its exports of the merchandise under investigation.[14] Thus, we continue to find that Huayuan is not eligible for a separate rate and remains part of the PRC-wide entity.

Additionally, as discussed in the ''PRC-wide Entity and Facts Available'' section below and in Comment 2 of the Decision Memo, Honbase and Baozhang failed to demonstrate their eligibility for a separate rate by preventing the Department from verifying the accuracy of their information and will, therefore, be considered part of the PRC-wide entity for this final determination.

Calculation of Separate Rate

In the *Preliminary Determination,* we calculated a weighted-average separate rate based on the margins calculated for Honbase and Baozhang and their submitted publicly ranged sales quantities. However, none of the mandatory respondents are receiving a

separate rate for this final determination. If the estimated weighted-average margins for all individually investigated respondents are *de minimis* or based entirely on facts available (''FA''), the Department may use any reasonable method to determine the separate rate margin.[15] Therefore, pursuant to section 735(c)(5)(A) and (B) of the Act, we have, for the final determination, determined the separate rate margin using a reasonable method that is consistent with our established practice. Specifically, we have assigned to the separate rate companies the simple average of all of the margins alleged in the Petition,[16] as revised in the *Initiation Notice,*[17] which is 194.00 percent.[18]

The PRC-Wide Entity and Facts Available

In the *Preliminary Determination,* the Department found that:

> information on the record of this investigation indicates that there were more exporters of galvanized steel wire from the PRC than those indicated in the response to our request for Q&V information during the POI * * * Although all producers/exporters were given an opportunity to provide Q&V information, not all producers/exporters provided a response to the Department's Q&V letter.[19]

Furthermore, the Department did not grant a separate rate to Tianjin Jinghai Yicheng Metal Products Co., Ltd. (''Tianjin Jinghai'') because it withdrew its participation from this investigation as a selected mandatory respondent, having never provided any evidence demonstrating an absence of government control both in law and in fact. As such, the Department preliminarily determined that there were PRC producers/exporters of galvanized steel wire during the POI that did not respond to the Department's request for information. We treated these PRC producers/exporters as part of the PRC-wide entity because they did not qualify for a separate rate.[20]

Further, as stated above, in the *Preliminary Determination,* the Department did not grant a separate rate to Huayuan because it did not overcome the presumption of government control.[21] The Department has addressed this issue at length in the Decision Memo, based on comments received from Huayuan and Petitioners.[22] However, because the Department begins with the presumption that all companies within an NME country are subject to government control, and because only the separate rate recipients have overcome that presumption, because Huayuan did not qualify for a separate rate, the Department is applying the PRC-wide entity rate to Huayuan and its affiliates. Despite Huayuan's submission of sales and factor of production data, because Huayuan did not receive a separate rate and was found to be part of the PRC-wide entity, we have not used this data to calculate a separate antidumping duty margin for Huayuan. Rather, we have assigned to Huayuan the rate assigned to the PRC-wide entity. This is consistent with our long-standing practice of assigning a country-wide rate to NME companies that do not qualify for a separate rate, and has been affirmed by the court.[23]

Section 776(a)(2) of the Act provides that if an interested party: (A) Withholds information that has been requested by the Department; (B) fails to provide such information in a timely manner or in the form or manner requested, subject to subsections 782(c)(1) and (e) of the Act; (C) significantly impedes a determination under the antidumping statute; or (D) provides such information but the information cannot be verified, the Department shall, subject to subsection 782(d) of the Act, use facts otherwise available in reaching the applicable determination.

Section 782(c)(1) of the Act provides that if an interested party ''promptly after receiving a request from {the Department} for information, notifies {the Department} that such party is unable to submit the information in the requested form and manner, together with a full explanation and suggested alternative form in which such party is able to submit the information,'' the Department may modify the requirements to avoid imposing an unreasonable burden on that party.

Section 782(d) of the Act provides that, if the Department determines that a response to a request for information does not comply with the request, the Department will inform the person submitting the response of the nature of the deficiency and shall, to the extent practicable, provide that person the opportunity to remedy or explain the deficiency. If that person submits further information that continues to be unsatisfactory, or this information is not submitted within the applicable time limits, the Department may, subject to section 782(e) of the Act, disregard all or part of the original and subsequent responses, as appropriate.

Section 782(e) of the Act states that the Department shall not decline to consider information deemed ''deficient'' under section 782(d) if: (1) The information is submitted by the established deadline; (2) the information can be verified; (3) the information is not so incomplete that it cannot serve as a reliable basis for reaching the applicable determination; (4) the interested party has demonstrated that it acted to the best of its ability; and (5) the information can be used without undue difficulties.

Furthermore, section 776(b) of the Act states that if the administering authority finds that an interested party has not acted to the best of its ability to comply with a request for information, the administering authority may, in reaching its determination, use an inference that is adverse to that party. The adverse inference may be based upon: (1) The Petition, (2) a final determination in the investigation under this title, (3) any previous review under section 751 or determination under section 753, or (4) any other information placed on the record.

Information on the record of this investigation indicates that the PRC-

wide entity was unresponsive to the Department's requests for information. Certain companies: (1) Did not respond to our questionnaires requesting quantity and value (''Q&V'') information; or (2) withdrew participation from the investigation. As a result, pursuant to section 776(a)(2)(A) of the Act, we found that the use of facts available is appropriate to determine the PRC-wide rate.

Since the *Preliminary Determination,* Honbase and Baozhang, the two mandatory respondents for which we calculated preliminary antidumping duty margins, both withdrew their participation from their respective, scheduled on-site verifications. By ceasing to participate in the verification of their questionnaire responses, Honbase and Baozhang prevented the Department from verifying the accuracy of their information as provided by section 782(i) of the Act, and thus, failed to demonstrate their eligibility for a separate rate.[24] Therefore, for the final determination, the Department finds that Honbase and Baozhang are considered to be part of the PRC-wide entity (along with Tianjin Jinghai, the companies unresponsive to the Q&V questionnaires and Huayuan). Because the PRC-wide entity, which now also includes Honbase and Baozhang, significantly impeded the Department's proceeding pursuant to sections 776(a)(2)(C) of the Act, by failing to provide the requested information and by refusing to allow verification of their data, we find that the PRC-wide entity withheld information requested by the Department pursuant to section 776(a)(2)(A) of the Act. Based on the foregoing, we have determined that the PRC-wide entity failed to act to the best of its ability by not providing the requested information and by ceasing their participation in the proceeding. Therefore, we continue to find that when selecting from among the FA, an adverse inference is warranted for the PRC-wide entity, including Honbase and Baozhang, pursuant to section 776(b) of the Act.

The PRC-Wide Entity Rate

Because we begin with the presumption that all companies within a NME country are subject to government control, and because only the companies listed under the ''Final Determination Margins'' section, below, have overcome that presumption, we are applying a single antidumping rate (*i.e.,* the PRC-wide rate) to all other exporters of the merchandise under consideration. These other companies did not demonstrate entitlement to a separate rate.[25] The PRC-wide rate applies to all entries of the merchandise under consideration except for entries from the companies receiving a separate rate.[26]

In the *Preliminary Determination,* the Department determined that there were: (1) Exporters/producers of the merchandise subject to the investigation during the POI from the PRC that did not respond to the Department's request for information; (2) exporters that withdrew from participation from the review; and (3) exporters that did not overcome the presumption of government control (specifically Huayuan [27]). Further, we treated these PRC producers/exporters as part of the PRC-wide entity because they did not qualify for a separate rate. Finally, we found that the use of FA was appropriate to determine the PRC-wide rate pursuant to section 776(a)(2)(A) of the Act.[28]

In the *Preliminary Determination,* the Department also determined that, in selecting from among the FA, an adverse inference is appropriate because the PRC-wide entity failed to cooperate by not acting to the best of its ability to comply with requests for information.[29] As AFA, we preliminarily assigned to the PRC-wide entity a rate of 235.00 percent, the highest calculated rate from the Petition.[30]

Section 776(a)(2) of the Act provides that, if an interested party (A) withholds information requested by the Department, (B) fails to provide such information by the deadline, or in the form or manner requested, (C) significantly impedes a proceeding, or (D) provides information that cannot be verified, the Department shall use, subject to sections 782(d) and (e) of the Act, facts otherwise available in reaching the applicable determination. Because the PRC-wide entity (now including Honbase and Baozhang) did not respond to our requests for information, withheld information requested by the Department, and did not allow their information to be verified, pursuant to sections 776(a)(2)(A), (C), and (D) of the Act, we determine, as in the *Preliminary Determination,* that the use of facts otherwise available is appropriate to determine the PRC-wide rate. The PRC-wide entity has not provided the Department with the requested information; therefore, pursuant to section 776(a)(2)(A) of the Act, the Department continues to find that the use of FA is appropriate to determine the PRC-wide rate. As noted above, section 776(b) of the Act provides that, in selecting from among the facts otherwise available, the Department may employ an adverse inference if an interested party fails to cooperate by not acting to the best of its ability to comply with requests for information.[31] We find that, because the PRC-wide entity did not respond to our request for information, it has failed to cooperate to the best of its ability. Therefore, the Department finds that, in selecting from among the facts otherwise available, an adverse inference is appropriate for the PRC-wide entity.

Corroboration

Section 776(c) of the Act provides that, when the Department relies on secondary information, rather than on information obtained in the course of an investigation as facts available, it must, to the extent practicable, corroborate that information from independent sources reasonably at its disposal. Secondary information is described in the SAA as ''information derived from the petition that gave rise to the investigation or review, the final determination concerning subject merchandise, or any previous review under Section 751 concerning the subject merchandise.'' [32] The SAA provides that to ''corroborate'' means simply that the Department will satisfy itself that the secondary information to be used has probative value.[33] The SAA also states that independent sources used to corroborate may include, for example, published price lists, official import statistics and customs data, and

[32] *See* SAA at 870.

[33] *See id.*

information obtained from interested parties during the particular investigation.[34] To corroborate secondary information, the Department will, to the extent practicable, examine the reliability and relevance of the information used.[35]

At the *Preliminary Determination,* as AFA the Department selected a rate of 235.00 percent, the highest rate from the Petition,[36] as recalculated by the Department in the *Initiation Notice.*[37] Petitioners' methodology for calculating the export price and normal value (''NV'') in the Petition is discussed in the *Initiation Notice.*[38] To corroborate the AFA margin that we selected, we compared this margin to the model-specific margins we found for the cooperating mandatory respondents. We found that the margin of 235.00 percent had probative value because it is within the range of the non-aberrational, model-specific margins that we preliminarily calculated for one of the mandatory respondents during the POI.[39] Accordingly, we found that 235.00 percent was a reliable and relevant rate, considering the record information, and thus, had probative value for the *Preliminary Determination.*

For the final determination, because there were no margins calculated for the mandatory respondents, to corroborate the 235.00 percent margin used as AFA for the PRC-wide entity, to the extent appropriate information was available, we are affirming our pre-initiation analysis of the adequacy and accuracy of the information in the Petition.[40] During our pre-initiation analysis, we examined evidence supporting the calculations in the Petition and the supplemental information provided by Petitioners prior to initiation to determine the probative value of the margins alleged in the Petition. During our pre-initiation analysis, we examined the information used as the basis of export price and NV in the Petition, and the calculations used to derive the alleged margins. Also during our pre-initiation analysis, we examined information from various independent sources provided either in the Petition or, based on our requests, in supplements to the Petition, which corroborated key elements of the export price and NV calculations.[41] Therefore, for the final determination, we have corroborated our AFA margin by affirming our pre-initiation analysis. Because no parties commented on the selection of the PRC-wide rate, we continue to find that the margin of 235.00 percent has probative value. Accordingly, we find that the rate of 235.00 percent is corroborated within the meaning of section 776(c) of the Act.

Surrogate Country

In the *Preliminary Determination,* we stated that we selected Thailand as the appropriate surrogate country to use in this investigation for the following reasons: (1) It is a significant producer of comparable merchandise; (2) it is at a similar level of economic development pursuant to 773(c)(4) of the Act; and (3) we have reliable data from Thailand that we can use to value the factors of production.[42] For the final determination, we are not calculating any margins that require surrogate values from a surrogate country and, therefore, there is no need to consider comments with respect to the selection of a surrogate country.[43]

Final Determination Margins

We determine that the below percentage margins exist for the following entities for the POI:

Exporter	Producer	Weighted-average margin (percent)

Disclosure

We will disclose the calculations performed within five days of the date of publication of this notice to parties in this proceeding in accordance with 19 CFR 351.224(b).

[44] The PRC-wide entity includes: Tianjin Honbase Machinery Manufactory Co., Ltd.; Anhui Bao Zhang Metal Products Co., Ltd.; Shanghai Bao Zhang Industry Co., Ltd.; Tianjin Huayuan Metal Wire Products Co., Ltd.; Tianjin Meijiahua Trade Co., Ltd.; Tianjin Huayuan Times Metal Products Co., Ltd.; Tianjin Tianxin Metal Products Co., Ltd.; Tianjin Jinghai Yicheng Metal Products Co., Ltd.; Anping Shuangmai Metal Products Co., Ltd.; Anping Xinhong Wire Mesh Co., Ltd.; Beijing Catic Industry Limited; Benxi Wasainuo Metal Packaging Production Co., Ltd.; China National Electronics Imp. & Exp. Ningbo Co., Ltd.; Easen Corp.; Ecms O/B Tianjin Huayuan Metal Wire; Hebei Dongfang Hardware And Mesh Co., Ltd.; Hebei Longda Trade Co., Ltd.; Huanghua Yufutai Hardware Products Co., Ltd.; Maccaferri (Changsha) Enviro-Tech Co.; Nantong Long Yang International Trade Co., Ltd.; Shandong Hualing Hardware & Tools Co. Ltd.; Shanghai Multi-development Enterprises; Shanghai Suntec Industries Co., Ltd.; Tianjin Jing Weida International Trade Co., Ltd.; Tianjin Pcss Trading Co., Ltd.; and Weifang Hecheng International Trade Co., Ltd.

Continuation of Suspension of Liquidation

In accordance with section 735(c)(1)(B) of the Act, we are directing U.S. Customs and Border Protection (''CBP'') to continue to suspend liquidation of all imports of merchandise subject to the investigation entered or withdrawn from warehouse, for consumption for the PRC-wide entity and the Separate Rate Recipients on or after November 4, 2011. We will instruct CBP to require a cash deposit or the posting of a bond equal to the weighted-average amount by which the NV exceeds U.S. price, as follows: (1) The rate for the exporter/producer combinations listed in the chart above will be the rate we have determined in this final determination; (2) for all PRC exporters of subject merchandise which have not received their own rate, the cash-deposit rate will be the PRC-wide rate; and (3) for all non-PRC exporters of subject merchandise which have not received their own rate, the cash-deposit rate will be the rate applicable to the PRC exporter/producer combination that supplied that non-PRC exporter. These suspension of liquidation instructions will remain in effect until further notice.

Additionally, the Department found in its final determination for the companion countervailing duty (''CVD'') investigation that Baozhang's merchandise benefited from export subsidies.[45] However, as noted above, we have determined that Baozhang is part of the PRC-wide entity in this proceeding. With respect to the PRC-wide entity, we have applied as AFA the highest rate from the Petition. Therefore, we will not instruct CBP to deduct any export subsidy from the PRC-wide entity's cash deposit rate.[46]

With respect to M&M Industries Co., Ltd., a separate rate recipient in this case, but a mandatory respondent in the companion CVD case to which total AFA was assigned, the Department

[45] *See Galvanized Steel Wire from the People's Republic of China: Final Affirmative Countervailing Duty Determination,* dated concurrently with this notice.

[46] *See, e.g., Drill Pipe From the People's Republic of China: Final Determination of Sales at Less Than Fair Value and Critical Circumstances,* 76 FR 1966, 1970 (January 11, 2011).

calculated the AFA rate for M&M Industries using program-specific rates calculated for the cooperating respondents. Therefore, in the CVD investigation, because there was only one export subsidy rate calculated (for Baozhang, a cooperative respondent in the CVD investigation), the export subsidy portion of the AFA-rate for M&M Industries is equal to the export subsidy rate calculated for Baozhang (0.21%). In addition, Baozhang's rate is the basis for the all-others rate in the CVD case. Therefore, we will instruct CBP to require a cash deposit or posting of a bond equal to the amount by which normal value exceeds U.S. price for the M&M Industries, reduced by the export subsidy rate (0.21%) found for all companies.

Further, with respect to the other companies receiving a separate rate in the instant investigation, excluding M&M Industries Co., Ltd., these companies are subject to the all-others rate in the companion CVD investigation. Moreover, as noted above, all companies were found to have the same amount of export subsidies, the amount found for the cooperative respondent in the CVD case. Therefore, for companies receiving a separate rate, we will instruct CBP to require a cash deposit or posting of a bond equal to the amount by which normal value exceeds U.S. price for the separate rate recipients, as indicated above, reduced by the export subsidy rate (0.21%) found for all companies.

Notification Regarding APO

This notice also serves as a reminder to the parties subject to administrative protective order (''APO'') of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305. Timely notification of return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

This determination and notice are issued and published in accordance with sections 735(d) and 777(i)(1) of the Act.

Dated: March 19, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–972]

Certain Stilbenic Optical Brightening Agents From the People's Republic of China: Final Determination of Sales at Less Than Fair Value

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

DATES: *Effective Date:* March 26, 2012.

SUMMARY: On November 3, 2011, the Department of Commerce (the ''Department'') published its preliminary determination of sales at less than fair value (''LTFV'') in the antidumping investigation of certain stilbenic optical brightening agents (''stilbenic OBAs'') from the People's Republic of China (''PRC'').[1] The Department invited interested parties to comment on the *Preliminary Determination.* Based on the Department's analysis of the comments received, the Department has made changes from the *Preliminary Determination,* and continues to find that stilbenic OBAs from the PRC are being, or are likely to be, sold in the United States at LTFV, as provided in section 735 of the Tariff Act of 1930, as amended (the ''Act''). The final dumping margins for this investigation are listed in the ''Final Determination'' section below.

FOR FURTHER INFORMATION CONTACT: Shawn Higgins or Maisha Cryor, AD/CVD Operations, Office 4, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–0679, or (202) 482–5831, respectively.

SUPPLEMENTARY INFORMATION:

Background

The Department published its *Preliminary Determination* of sales at LTFV and postponement of the final determination on November 3, 2011. Between November 7, 2011, and November 18, 2011, the Department conducted verification of mandatory respondents Zhejiang Transfar Whyyon Chemical Co., Ltd. (''Transfar'') and Zhejiang Hongda Chemicals Co., Ltd. (''Hongda'').[2] Clariant Corporation (''Petitioner''), Transfar, and Hongda submitted case briefs on January 6, 2012.[3] On January 11, 2012, Petitioner and Transfar filed rebuttal briefs. The Department conducted a public hearing on February 1, 2012.

Period of Investigation

The period of investigation (''POI'') is July 1, 2010, through December 31, 2010. This period corresponds to the two most recent fiscal quarters prior to the month of the filing of the petition, which was March 2011.[4]

Analysis of Comments Received

All issues raised in the case and rebuttal briefs by parties to this investigation are addressed in the Issues and Decision Memorandum.[5] A list of

these issues is attached to this notice as Appendix I. The Issues and Decision Memorandum is a public document and is on file electronically via Import Administration's Antidumping and Countervailing Duty Centralized Electronic Service System (''IA ACCESS''). Access to IA ACCESS is available in the Central Records Unit, room 7046 of the main Department of Commerce building. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly on the Internet at *http://www.trade.gov/ia/.* The signed Issues and Decision Memorandum and the electronic versions of the Issues and Decision Memorandum are identical in content.

Changes Since the Preliminary Determination

- The Department changed the surrogate value (''SV'') for ocean freight to reflect shipping rates that actually occurred during the POI. In addition, the Department included certain additional charges (*i.e.,* fuel surcharges, destination delivery charges, and bill of lading charges) in the ocean freight calculation because these charges were not separately covered by the brokerage and handling SV.[6]
- The Department changed the SV for ice blocks from Global Trade Atlas import data to a value reported in the publication *Business Report Thailand.*[7]
- The Department made changes based on minor corrections presented at verification.[8]

Scope of the Investigation

The stilbenic OBAs covered by this investigation are all forms (whether free acid or salt) of compounds known as triazinylaminostilbenes (*i.e.,* all derivatives of 4,4'-bis [1,3,5- triazin-2-yl][9] amino-2,2'-stilbenedisulfonic acid), except for compounds listed in the following paragraph. The stilbenic OBAs covered by this investigation include final stilbenic OBA products, as well as intermediate products that are themselves triazinylaminostilbenes produced during the synthesis of stilbenic OBA products.

Excluded from this investigation are all forms of 4,4'-bis[4-anilino-6-morpholino-1,3,5-triazin-2-yl][10] amino-2,2'-stilbenedisulfonic acid, $C_{40}H_{40}N_{12}O_8S_2$ (''Fluorescent Brightener 71''). This investigation covers the above-described compounds in any state (including but not limited to powder, slurry, or solution), of any concentrations of active stilbenic OBA ingredient, as well as any compositions regardless of additives (*i.e.,* mixtures or blends, whether of stilbenic OBAs with each other, or of stilbenic OBAs with additives that are not stilbenic OBAs), and in any type of packaging.

These stilbenic OBAs are classifiable under subheading 3204.20.8000 of the Harmonized Tariff Schedule of the United States (''HTSUS''), but they may also enter under subheadings 2933.69.6050, 2921.59.4000 and 2921.59.8090. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the merchandise is dispositive.

Verification

As provided in section 782(i) of the Act, the Department verified the information submitted by Transfar and Hongda for use in its final determination. The Department used standard verification procedures, including examination of relevant accounting and production records and original source documents provided by the respondents.[11]

Non-Market Economy Country

The Department considers the PRC to be a non-market economy (''NME'') country. In accordance with section 771(18)(C)(i) of the Act, any determination that a foreign country is an NME country shall remain in effect until revoked by the administering authority. The Department has not revoked the PRC's status as an NME country. No party has challenged the designation of the PRC as an NME country in this investigation. Therefore, the Department continues to treat the PRC as an NME for purposes of the final determination.

Surrogate Country

In the preliminary determination, the Department selected Thailand as the appropriate surrogate country for use in this investigation pursuant to section 773(c)(4) of the Act based on the following: (1) It is at a similar level of economic development as the PRC; (2) it is a significant producer of merchandise comparable to the merchandise under consideration; and (3) the record contains reliable data from Thailand that the Department can use to value the factors of production.[12] The Department has not made changes to these findings for the final determination.

Use of Facts Available and Adverse Facts Available

Section 776(a) of the Act provides that the Department shall apply facts available (''FA'') if (1) necessary information is not on the record, or (2) an interested party or any other person (A) withholds information that has been requested, (B) fails to provide information within the deadlines established, or in the form and manner requested by the Department, subject to subsections (c)(1) and (e) of section 782 of the Act, (C) significantly impedes a proceeding, or (D) provides information that cannot be verified as provided by section 782(i) of the Act.

Section 776(b) of the Act further provides that the Department may use an adverse inference in applying FA when a party has failed to cooperate by not acting to the best of its ability to comply with a request for information. Such an adverse inference may include

reliance on information derived from the petition, the final determination, a previous administrative review, or other information placed on the record.

PRC-Wide Entity

In the *Preliminary Determination,* the Department determined that certain PRC exporters/producers did not respond to the Department's requests for information including information pertaining to whether they were separate from the PRC-wide entity.[13] Thus, the Department has found that these PRC exporters/producers are part of the PRC-wide entity and the PRC-wide entity has not responded to requests for information.[14] No additional information was placed on the record with respect to any of these companies after the *Preliminary Determination.* Because the PRC-wide entity did not provide the Department with requested information, pursuant to section 776(a)(2)(A) of the Act, the Department continues to find it appropriate to base the PRC-wide rate on FA.

Because the PRC-wide entity did not respond to our request for information, the Department has determined that the PRC-wide entity has failed to cooperate to the best of its ability. Therefore, pursuant to section 776(b) of the Act, the Department has found that, in selecting from among the FA, an adverse inference is appropriate for the PRC-wide entity.

Because the Department begins with the presumption that all companies within an NME country are subject to government control and only the mandatory respondents have overcome that presumption, the Department is applying a single antidumping rate to all other exporters of merchandise under consideration from the PRC. Such companies have not demonstrated entitlement to a separate rate.[15] Accordingly, the PRC-wide entity rate applies to all entries of merchandise under consideration except for entries from Transfar and Hongda.

Selection of the Adverse Facts Available Rate for the PRC-Wide Entity

In selecting a rate for adverse facts available (''AFA''), the Department selects a rate that is sufficiently adverse ''as to effectuate the purpose of the adverse facts available rule to induce respondents to provide the Department with complete and accurate information in a timely manner.'' [16] Further, it is the Department's practice to select a rate that ensures ''that the party does not obtain a more favorable result by failing to cooperate than if it had cooperated fully.'' [17] It is the Department's practice to select as AFA the higher of (a) the highest margin alleged in the petition or (b) the highest rate calculated for any respondent in the investigation.[18] The highest margin alleged in the petition is 203.16 percent.[19] This rate is higher than any of the rates calculated for individually examined companies. Thus, as AFA, the Department's practice would be to assign the rate of 203.16 percent to the PRC-wide entity. However, in order to determine the probative value of the margins in the petition for use as AFA for purposes of this final determination, the Department examined information on the record and found that it was unable to corroborate either the highest margin in the petition or both its U.S. price and normal value components. In addition, the Department does not find the highest calculated weighted-average margin of the mandatory respondents to be sufficiently adverse to act as the AFA rate.[20] The Department finds, however, that the highest transaction-specific margin of the mandatory respondents (*i.e.,* 109.95 percent) is sufficiently adverse to serve as the AFA rate.[21] No corroboration of this rate is necessary because the Department is relying on information obtained in the course of this investigation, rather than secondary information.[22] This was the same methodology the Department employed in the *Preliminary Determination.* No interested party has commented on this methodology for calculating the PRC-wide rate.

The dumping margin for the PRC-wide entity applies to all entries of the merchandise under investigation except for entries of merchandise under investigation from the exporter/manufacturer combinations listed in the chart in the ''Final Determination'' section below.

Combination Rates

In the *Initiation Notice,* the Department stated that it would calculate combination rates for respondents that are eligible for a separate rate in this investigation.[23] This practice is described in Policy Bulletin 05.1.[24]

Final Determination

The Department determines that the following dumping margins exist for the period July 1, 2010, through December 31, 2010:

Exporter	Producer	Weighted average margin
Zhejiang Hongda Chemicals Co., Ltd	Zhejiang Hongda Chemicals Co., Ltd	95.29
Zhejiang Transfar Whyyon Chemical Co., Ltd	Zhejiang Transfar Whyyon Chemical Co., Ltd	63.98
PRC-wide Entity		109.95

Disclosure

The Department intends to disclose the calculations performed to parties in this proceeding within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

In accordance with section 735(c)(1)(B) of the Act, the Department will instruct U.S. Customs and Border Protection (''CBP'') to continue to suspend liquidation of all appropriate entries of stilbenic OBAs from the PRC as described in the ''Scope of Investigation'' section, entered, or withdrawn from warehouse, for consumption on or after November 3, 2011, the date of publication of the *Preliminary Determination* in the **Federal Register**. The Department will instruct CBP to require a cash deposit or the posting of a bond equal to the weighted-average amount by which the normal value exceeds U.S. price, as indicated above.

International Trade Commission Notification

In accordance with section 735(d) of the Act, we have notified the International Trade Commission (''ITC'') of the final affirmative determination of sales at LTFV. As the Department's final determination is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will determine, within 45 days, whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports, or sales (or the likelihood of sales) for importation, of the merchandise under consideration. If the ITC determines that such injury does exist, the Department will issue an antidumping duty order directing CBP to assess, upon further instruction by the Department, antidumping duties on all imports of the merchandise under consideration entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation.

Notification Regarding APO

This notice also serves as a reminder to the parties subject to administrative protective order (''APO'') of their responsibility concerning the disposition of propriety information disclosed under APO in accordance with 19 CFR 351.305. Timely notification of return or distruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a sanctionable violation.

This determination is issued and published in accordance with sections 735(d) and 777(i)(1) of the Act.

Dated: March 19, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

Appendix I

Issues for Final Determination

Issue 1: Whether the Department Should Revise the Surrogate Value for 4,4′-Diamino-2,2′ Stilbenedisulfonic Acid
Issue 2: Whether the Department Should Revise the Calculation of the Surrogate Financial Ratios
Issue 3: Whether the Department Should Revise the Surrogate Value for Ice Blocks
Issue 4: Whether the Department Should Revise the Surrogate Value for Ocean Freight
Issue 5: Whether the Department Should Revise the Surrogate Value for Brokerage and Handling
Issue 6: Whether the Department Should Revise the Surrogate Value for Labor

International Trade Administration

[C–570–980]

Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Preliminary Affirmative Countervailing Duty Determination

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) preliminarily determines that countervailable subsidies are being provided to producers and exporters of crystalline silicon photovoltaic cells, whether or not assembled into modules (solar cells) from the People's Republic of China (PRC). For information on the estimated subsidy rates, *see* the ''Suspension of Liquidation'' section of this notice.

DATES: *Effective Date:* March 26, 2012.

FOR FURTHER INFORMATION CONTACT: Gene Calvert, Jun Jack Zhao, or Emily Halle, AD/CVD Operations, Office 6, Import Administration, U.S. Department of Commerce, Room 7866, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–3586, (202) 482–1396, or (202) 482–0176, respectively.

SUPPLEMENTARY INFORMATION:

Case History

The Department initiated a countervailing duty (CVD) investigation of solar cells from the PRC on November 8, 2011.[1] Since the initiation, the following events have occurred. The Department released U.S. Customs and Border Protection (CBP) entry data for U.S. imports of solar cells from the PRC for the period January 1, 2010, through December 31, 2010, to be used as the basis for respondent selection. The CBP entry data covered products included in this investigation which entered under the Harmonized Tariff Schedule of the United States (HTSUS) numbers likely to include subject merchandise: 8541.40.6020 and 8541.40.6030. The entry data did not cover entries under the other HTSUS numbers included in the scope description below because those numbers represent broad basket categories. In the memorandum releasing the entry data, the Department stated that, because the subject merchandise is imported as either solar cells or solar cells assembled into modules or panels, and thus quantity is not recorded consistently in the entry data, the Department intended to select respondents based on the aggregate value (as opposed to quantity) of subject merchandise that was imported into the United States.

On November 29, 2011, the Department completed its respondent selection analysis. Given available resources, the Department determined it could examine no more than two producers/exporters and selected Changzhou Trina Solar Energy Co., Ltd. (Trina Solar) and Wuxi Suntech Power Co., Ltd. (Wuxi Suntech) as mandatory respondents.[2] These companies were the two largest producers/exporters of subject merchandise, based on aggregate value, to the United States.

On December 5, 2011, the petitioner, Solar World Industries, America, Inc. (Petitioner), submitted an additional subsidy allegation, claiming that the government of the PRC (GOC), through state-owned enterprises (SOEs),

[1] *See Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Initiation of Countervailing Duty Investigation*, 76 FR 70966 (November 16, 2011) (*Initiation Notice*), and accompanying Initiation Checklist. Public documents and public versions of proprietary Departmental memoranda referenced in this notice are on file electronically on Import Administration's Antidumping and Countervailing Duty Centralized Electronic Services System (IA ACCESS), accessible via the Central Records Unit, Room 7046 of the main Commerce building and on the web at http://ia.ita.doc.gov/frn/.

[2] *See* Memorandum to Christian Marsh, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, ''Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic of China, Countervailing Duty Investigation: Respondent Selection,'' November 29, 2011 (Respondent Selection Memorandum).

provides glass to Chinese producers of subject merchandise for less than adequate remuneration (LTAR). The Department issued the CVD questionnaire to the GOC on December 7, 2011. Copies of the questionnaire were also sent to the mandatory company respondents. On December 16, 2011, Petitioner submitted a request to extend the preliminary determination 30 days, from January 12 to February 13, 2012. On December 19, 2011, Petitioner submitted an allegation that Wuxi Suntech was uncreditworthy from 2005 through 2010. On December 22, 2011, Petitioner submitted an allegation that Trina Solar was uncreditworthy from 2005 through 2010. Also on December 22, 2011, the Department determined not to initiate an investigation of Petitioner's December 5, 2011, allegation that the GOC provides glass for LTAR, stating that Petitioner did not support its allegation with reasonably available information, pursuant to section 702(b)(1) of the Tariff Act of 1930, as amended (the Act). On December 29, 2011, the Department published in the **Federal Register** a 30-day postponement of the preliminary determination until February 11, 2012.[3]

On January 3, 2012, Wuxi Suntech requested an extension of the January 13 deadline for responding to the Department's December 7, 2011 questionnaire. On January 5, 2012, the GOC and Trina Solar each requested an extension of the January 13 deadline for responding to the questionnaire. The Department extended the deadline until January 23, 2012.

On January 3, 2012, the GOC requested that the Department terminate the CVD investigation, stating that, in a recent decision, the U.S. Court of Appeals for the Federal Circuit found that the Department does not have the authority to apply the CVD law to countries the Department considers non-market economies (NMEs).[4] On January 6, 2012, Trina Solar, Wuxi Suntech, and other interested parties requested that the Department terminate the CVD investigation, also citing the *GPX* ruling. On January 26, 2012, interested parties DelSolar Co., Ltd. and DelSolar (Wujiang) Ltd. also requested that the CVD investigation be terminated, citing *GPX.*

On January 9, 2012, Trina Solar and Wuxi Suntech each requested that the Department further extend the deadline for the preliminary determination by an additional 35 days, noting the Department had the authority to do so in extraordinary circumstances. In these same submissions, both Trina Solar and Wuxi Suntech also requested an additional extension of the deadline for responding to the Department's December 7, 2011 questionnaire. Also on January 9, 2012, the GOC reiterated its January 5, 2012 request for additional time to respond to the Department's December 7, 2011 questionnaire, requesting the deadline be extended to February 3, 2012. On January 19, 2012, Petitioner requested that the Department extend the deadline for submitting additional subsidy allegations. Based on this request from Petitioner, the Department extended this deadline until February 10, 2012. Also on January 19, 2012, Petitioner requested that the preliminary determination be further extended until March 2, 2012. On January 23, Petitioner re-submitted its allegation that the GOC provided solar cells producers with glass for LTAR. On January 19, 2012, the Department extended the deadline until January 31, 2012, for the GOC, Trina Solar, and Wuxi Suntech to respond to the Department's December 7, 2011 questionnaire. On January 31, 2012, the Department published in the **Federal Register** the second postponement of the preliminary determination until March 2, 2012.[5] Also on January 31, 2012, the GOC, Trina Solar, and Wuxi Suntech each submitted timely responses to the Department's December 7, 2011 questionnaire.

On February 9, 2012, Petitioner submitted a request to extend further the deadline for submitting additional subsidy allegations. Based on this request from Petitioner, the Department extended the deadline until February 14, 2012, for submitting additional subsidy allegations. Also on February 9, 2012, the Department issued supplemental questionnaires to Trina Solar and Wuxi Suntech. On February 14, 2012, Trina Solar and Wuxi Suntech each requested that the Department extend the deadline until February 29, 2012, for responding to the February 9, 2012 supplemental questionnaire. In its submission, Wuxi Suntech also reiterated its January 9, 2012 request to extend fully the deadline for the preliminary determination. The Department extended the supplemental questionnaire response deadline to February 27, 2012, for Trina Solar and Wuxi Suntech. On February 14, 2012, Petitioner submitted five additional new subsidy allegations. The Department has not yet reached a determination of whether to include these five additional allegations, or the uncreditworthiness allegations noted above, in the investigation, but intends to do so after the issuance of this preliminary determination.

On February 15, 2012, the Department issued a supplemental questionnaire to the GOC. On February 17, 2012, the GOC requested an extension until March 5, 2012, for responding to the Department's February 15, 2012 supplemental questionnaire. The Department extended the deadline until March 1, 2012. On February 22, 2012, the Department published in the **Federal Register** the third postponement of the preliminary determination in the CVD investigation, postponing the preliminary determination until March 17, 2012.[6] Between February 22 and February 24, 2012, Petitioner submitted comments on the initial questionnaire responses submitted by the GOC, Trina Solar, and Wuxi Suntech. On February 27, 2012, Trina Solar and Wuxi Suntech each submitted timely responses to the Department's February 9, 2012 supplemental questionnaire. The GOC timely submitted its response to the supplemental questionnaire on March 1, 2012. On March 7, 2012, Trina Solar submitted comments to be considered in the Department's preliminary determination, and Petitioner submitted its pre-preliminary determination comments on March 8, 2012. Also on March 8, 2012, the Department initiated the new subsidy allegation for the provision of glass at LTAR. On March 9, 2012, Petitioner submitted new factual information for the Department to consider in the preliminary determination. On March 12, 2012, the GOC submitted pre-preliminary comments, and Petitioner submitted comments in response to Trina Solar's March 7, 2012 comments. On March 13, 2012, Wuxi Suntech submitted pre-preliminary comments, as well as comments on Petitioner's December 19, 2011 and February 28, 2012 letters regarding Wuxi Suntech's creditworthiness.

Scope Comments

In accordance with the preamble to the Department's regulations, in our *Initiation Notice* we set aside a period of time for parties to raise issues regarding product coverage, and encouraged all parties to submit comments within 20 calendar days of that notice.[7] Between November 23, 2011 and March 14, 2012, we received numerous comments concerning the scope of the investigations. Based on these comments, the Department has clarified the scope of the investigation. The revised scope is set forth in the ''Scope of Investigation'' section below. A full discussion of the Department's preliminary conclusions regarding these scope comments are set forth in a memorandum issued concurrently with this notice.[8]

Scope of the Investigation

The merchandise covered by this investigation are crystalline silicon photovoltaic cells, and modules, laminates, and panels, consisting of crystalline silicon photovoltaic cells, whether or not partially or fully assembled into other products, including, but not limited to, modules, laminates, panels and building integrated materials.

This investigation covers crystalline silicon photovoltaic cells of thickness equal to or greater than 20 micrometers, having a p/n junction formed by any means, whether or not the cell has undergone other processing, including, but not limited to, cleaning, etching, coating, and/or addition of materials (including, but not limited to, metallization and conductor patterns) to collect and forward the electricity that is generated by the cell.

Subject merchandise may be described at the time of importation as parts for final finished products that are assembled after importation, including, but not limited to, modules, laminates, panels, building-integrated modules, building-integrated panels, or other finished goods kits. Such parts that otherwise meet the definition of subject merchandise are included in the scope of this investigation.

Excluded from the scope of this investigation are thin film photovoltaic products produced from amorphous silicon (a-Si), cadmium telluride (CdTe), or copper indium gallium selenide (CIGS).

Also excluded from the scope of this investigation are crystalline silicon photovoltaic cells, not exceeding 10,000mm^2 in surface area, that are permanently integrated into a consumer good whose function is other than power generation and that consumes the electricity generated by the integrated crystalline silicon photovoltaic cell. Where more than one cell is permanently integrated into a consumer good, the surface area for purposes of this exclusion shall be the total combined surface area of all cells that are integrated into the consumer good.

Modules, laminates, and panels produced in a third-country from cells produced in the PRC are covered by this investigation; however, modules, laminates, and panels produced in the PRC from cells produced in a third-country are not covered by this investigation.

Merchandise covered by this investigation is currently classified in the Harmonized Tariff System of the United States (HTSUS) under subheadings 8501.61.0000, 8507.20.80, 8541.40.6020 and 8541.40.6030. These HTSUS subheadings are provided for convenience and customs purposes; the written description of the scope of this investigation is dispositive.

Injury Test

Because the PRC is a ''Subsidies Agreement Country'' within the meaning of section 701(b) of the Act, the U.S. International Trade Commission (ITC) is required to determine whether imports of the subject merchandise from the PRC materially injure, or threaten material injury to, a U.S. industry. On December 16, 2011, the ITC published its preliminary determination that there is a reasonable indication that an industry in the United States is materially injured by reason of imports of solar cells from the PRC.[9]

Application of the Countervailing Duty Law to Imports From the PRC

On October 25, 2007, the Department published its final determination on coated free sheet paper from the PRC.[10] In *CFS from the PRC,* the Department found that

> * * *given the substantial differences between the Soviet-style economies and China's economy in recent years, the Department's previous decision not to apply the CVD law to these Soviet-style economies does not act as a bar to proceeding with a CVD investigation involving products from China.[11]

The Department has affirmed its decision to apply the CVD law to the PRC in numerous subsequent determinations.[12] Furthermore, on March 13, 2012, HR 4105 was enacted which makes clear that the Department has the authority to apply the CVD law to NMEs such as the PRC. The effective date provision of the enacted legislation makes clear that this provision applies to this proceeding.[13]

Additionally, for the reasons stated in the CWP from the PRC Decision Memorandum, we are using the date of December 11, 2001, the date on which the PRC became a member of the World Trade Organization (WTO), as the date from which the Department will identify and measure subsidies in the PRC for purposes of CVD investigations.[14]

Preliminary Determination of Critical Circumstances

On January 27, 2012, the Department determined that critical circumstances exist with respect to imports of solar cells from the PRC for Trina Solar, Wuxi Suntech, and all other PRC producers or exporters, finding that there have been massive imports of subject merchandise over a relatively short period of time by these entities.[15] Further, at this preliminary stage, the Department continues to have a reasonable basis to believe or suspect that there are countervailable subsidies inconsistent with the Subsidies and Countervailing Measures Agreement of the WTO. As a result, we will instruct CBP to suspend liquidation of all entries of the subject

merchandise from the PRC that are entered or withdrawn from warehouse, for consumption on or after the date 90 days prior to the date of publication of this notice in the **Federal Register**, and to require a cash deposit or bond for such entities of the merchandise in the amounts indicated in the section ''Suspension of Liquidation,'' below. Parties will have the opportunity to comment on the Department's preliminary determination of critical circumstances in their case briefs for the final determination.

Voluntary Respondents

On November 17, 2011, CNPV Dongying Solar Power Company Limited requested that it be selected as a voluntary respondent, if the company was not selected as a mandatory respondent. Also on November 17, 2011, Yingli Green Energy Holding Company Limited and Yingli Green Energy Americas, Inc. requested that they be selected collectively as a voluntary respondent. On November 22, 2011, both Trina Solar and Wuxi Suntech requested that they be selected as voluntary respondents. Jiangsu Green Power PV Co., Ltd. requested that it be selected as a voluntary respondent on November 28, 2011. On December 23, 2011, Motech (Suzhou) Renewable Energy Co., Ltd. requested that it be a selected as a voluntary respondent.

In the Respondent Selection Memorandum, the Department explained that it did not have resources available to examine any of the several parties, noted above, requesting to be investigated as voluntary respondents.[16] Therefore, we continued, we would not examine any voluntary respondents unless one of the mandatory respondents failed to cooperate. In such event, we noted, any party requesting to be a voluntary respondent would have to be in compliance with four criteria, one of which was the submission of questionnaire responses in accordance with deadlines established for the mandatory respondents.[17] Subsequently, both mandatory respondents have cooperated and no voluntary respondent applicant submitted any questionnaire responses. Therefore, we are not calculating individual rates for any of the voluntary respondent applicants.

Use of Facts Otherwise Available and Adverse Inferences

Sections 776(a)(1) and (2) of the Act provide that the Department shall apply ''facts otherwise available'' if necessary information is not on the record or if an interested party or any other person: (A) Withholds information that has been requested; (B) fails to provide information within the deadlines established, or in the form and manner requested by the Department, subject to subsections (c)(1) and (e) of section 782 of the Act; (C) significantly impedes a proceeding; or (D) provides information that cannot be verified as provided by section 782(i) of the Act.

Section 776(b) of the Act further provides that the Department may use an adverse inference in applying the facts otherwise available when a party has failed to cooperate by not acting to the best of its ability to comply with a request for information. Section 776(b) of the Act also authorizes the Department to use as adverse facts available (AFA), information derived from the petition, the final determination, a previous administrative review, or other information placed on the record.

Section 776(c) of the Act provides that, when the Department relies on secondary information rather than on information obtained in the course of an investigation or review, it shall, to the extent practicable, corroborate that information from independent sources that are reasonably at its disposal. Secondary information is defined as ''{i}nformation derived from the petition that gave rise to the investigation or review, the final determination concerning the subject merchandise, or any previous review under section 751 concerning the subject merchandise.'' [18] For purposes of this preliminary determination, we find it necessary to apply AFA in the following circumstances. However, we are not relying upon ''secondary information'' in our application of AFA in the following circumstances.

Application of AFA: Polysilicon Producers Are ''Authorities''

As discussed below under the section ''Programs Preliminarily Determined to be Countervailable,'' the Department is investigating the provision of polysilicon for LTAR by the GOC. We requested information from the GOC regarding the specific companies that produced this input product that Trina Solar and Wuxi Suntech purchased during the period of investigation (POI). Specifically, we sought information from the GOC that would allow us to determine whether the producers are ''authorities'' within the meaning of section 771(5)(B) of the Act. In our original and supplemental questionnaires, we requested detailed information from the GOC that would be needed for this analysis.

For each producer in which the GOC was a majority owner, we stated that the GOC needed to provide the following information that is relevant to our analysis of whether that producer is an ''authority.''

- Translated copies of source documents that demonstrate the producer's ownership during the POI, such as capital verification reports, articles of association, share transfer agreements, or financial statements.
- The names of the ten largest shareholders and the total number of shareholders.
- The identification of any government ownership or other affiliations between the ten largest shareholders and the government.
- Total level of state ownership of the company's shares and the names of all government entities that own shares in the producer
- Any other relevant evidence the GOC believes demonstrates that the company is not controlled by the government.

For each producer that the GOC claimed was privately owned by individuals or companies during the POI, we requested the following.

- Translated copies of source documents that demonstrate the producer's ownership during the POI, such as capital verification reports, articles of association, share transfer agreements, or financial statements.
- Identification of the owners, members of the board of directors, or managers of the producers who were also government or Chinese Communist Party (CCP) officials or representatives during the POI.
- A statement regarding whether the producer had ever been an SOE, and, if so, whether any of the current owners, directors, or senior managers had been involved in the operations of the company prior to its privatization.
- A discussion of whether and how operational or strategic decisions made by the management or board of directors are subject to government review or approval.

Finally, for producers owned by other corporations (whether in whole or in part) or with less-than-majority state ownership during the POI, we requested information tracing the ownership of the producer back to the ultimate individual or state owners. For such producers, we requested the following information.

[16] Respondent Selection Memorandum at 5.

[17] *Id.* at 6.

[18] *See* Statement of Administrative Action accompanying the Uruguay Round Agreements Act, H. Doc. No. 316, 103d Cong. 2d Session, at 870 (1994).

• The identification of any state ownership of the producer's shares; the names of all government entities that own shares, either directly or indirectly, in the producer; the identification of all owners considered ''SOEs'' by the GOC; and the amount of shares held by each government owner.

• For each level of ownership, identification of the owners, directors, or senior managers of the producer who were also government or CCP officials during the POI.

• A discussion of whether and how operational or strategic decisions made by the management or board of directors are subject to government review or approval.

• A statement regarding whether any of the shares held by government entities have any special rights, priorities, or privileges with regard to voting rights or other management or decision-making powers of the company; a statement regarding whether there are restrictions on conducting, or acting through, extraordinary meetings of shareholders; a statement regarding whether there are any restrictions on the shares held by private shareholders; and a discussion of the nature of the private shareholders' interests in the company (*e.g.,* operational, strategic, or investment-related).

In its questionnaire response on January 31, 2012, the GOC provided incomplete ownership information for nearly all of the companies that produced polysilicon purchased by Trina Solar and Wuxi Suntech. For the vast majority of these producers, it provided none of the information requested in the standard ''input producers'' appendix the Department issues to determine the individual owners of producers and to determine the extent of GOC control, if any, over the producers.[19] For example, for the vast majority of producers, it did not provide capital verification reports, articles of association, business registrations, or any other documents demonstrating the producers' ownership. For other producers, it provided some information, but not enough to trace ownership back to the ultimate individual owners, as the questionnaire requested. Further, it provided no information at all regarding the identification of owners, directors, or senior managers who were also GOC or CCP officials or representatives. On February 15, 2012, we issued a supplemental questionnaire to the GOC requesting that it provide the remaining ownership information for the polysilicon producers. We also requested that the GOC respond to the questions above regarding the role, if any, that GOC and CCP officials and representatives had as owners, directors, or senior managers of the producers, or explain in detail the efforts it undertook to obtain the requested information.[20]

In its March 1, 2012 response, the GOC did not provide any information regarding the role of GOC and CCP officials and representatives, nor did the GOC explain the efforts it undertook to obtain the requested information. The GOC provided further ownership information, but the information provided was still incomplete in that no ownership information was provided for some companies, and, in other instances, the ownership information provided was not sufficient to determine the ultimate individual owners.[21] In the GOC's submission, several companies' ownership is deemed ''uncertain'' by the GOC itself. The GOC informed the Department that it was still gathering the requested ownership information and that it expected to submit this information at a later date.[22]

In addition to not providing all of the requested information regarding government and CCP officials and representatives, the GOC also declined to answer questions about the CCP's structure and functions that are relevant to our determination of whether the producers of polysilicon are ''authorities'' within the meaning of section 771(5)(B) of the Act. In its initial questionnaire response, the GOC objected to our questions, stating that the CCP, along with other related organizations, is not a government organization and that the involvement of CCP officials in the management or operations of the input producers ''does not lead to interference by the Chinese government in the management and operation of the input supplier.''[23] Additionally, the GOC stated that Chinese law prohibits GOC officials from taking positions in private companies.[24] Furthermore, the GOC stated that ''there is no central informational database to search for the requested information and the industry and commerce administration does not require the companies to provide such information.''[25] As such, the GOC claimed it was unable to respond to the Department's questions.[26]

Regarding the GOC's objection to the Department's questions about the role of CCP officials in the management and operations of the polysilicon producers, we have explained our understanding of the CCP's involvement in the PRC's economic and political structure in a past proceeding.[27] Public information suggests that the CCP exerts significant control over activities in the PRC.[28] This conclusion is supported by, among other documents, a publicly available background report from the U.S. Department of State.[29] With regard to the GOC's claim that Chinese law prohibits GOC officials from taking positions in private companies, we have previously found that this particular law does not pertain to CCP officials.[30]

Because the GOC did not respond to our requests for information on this issue, we have no further basis for evaluating the GOC's claim that the role of the CCP is irrelevant. Thus, the Department finds, as it has in past investigations, that the information requested regarding the role of CCP officials in the management and operations of the polysilicon producers, and in the management and operations of the producers' owners, is necessary to our determination of whether these producers are authorities within the meaning of section 771(5)(B) of the Act. In addition, the GOC did not promptly notify the Department, in accordance with section 782(c), that it was unable to submit the information requested in the requested form and manner, nor did it suggest any alternative forms for submitting this information. Further, the GOC did not provide any information regarding the attempts it undertook to obtain this information, despite the fact that we provided the GOC with a second opportunity to provide the information

and significant extensions for responding to both the original and supplemental questionnaires. Therefore, we have no basis to accept the GOC's claim that it is unable to provide this information. This is particularly appropriate given that the GOC has informed the Department that such information regarding the CCP is irrelevant, when the Department has made it abundantly clear on the record of this investigation and previous investigations that such information is relevant to our analysis of whether input producers are ''authorities'' under the statute.

Therefore, we preliminarily determine that the GOC has withheld necessary information that was requested of it and, thus, that the Department must rely on ''facts otherwise available'' in making our preliminary determination.[31] Moreover, we preliminarily determine that the GOC has failed to cooperate by not acting to the best of its ability to comply with our request for information. By stating that the requested information is not relevant, the GOC has placed itself in the position of the Department, and only the Department can determine what is relevant to its investigation.[32] Furthermore, stating that it is unable to obtain the information because the CCP is not the government is effectively telling the Department it must reach the conclusion based on the statements of the GOC without any of the information that the Department considers necessary and relevant to evaluating fully the role of the CCP in the government and in input producers. Consequently, we determine that the GOC has withheld information and impeded the investigation, and that an adverse inference is warranted in the application of facts available.[33] As AFA, we are finding that all of the producers of polysilicon purchased by the respondents during the POI are ''authorities'' within the meaning of section 771(5)(B) of the Act.

Application of AFA: The Provision of Polysilicon is Specific to Solar Cells Producers

The Department asked the GOC to provide a list of industries in the PRC that purchase polysilicon directly and to provide the amounts (volume and value) purchased by each of the industries, including the solar cells industry.[34] The GOC did not respond as requested, but instead simply stated that it did ''not impose any limitations on the use of polysilicon'' and that ''polysilicon has a wide range of uses, including but not limited to use in the solar and semiconductor industries.'' [35] The Department asked this question again in its supplemental to the GOC, and again the GOC did not provide the requested information, but simply stated once more that ''polysilicon has a wide range of uses, including but not limited to use in the solar and semiconductor industries.'' [36]

Therefore, we preliminarily determine that the GOC has withheld necessary information that was requested of it and, thus, that the Department must rely on ''facts available'' in making our preliminary determination.[37] Moreover, we preliminarily determine that the GOC has failed to cooperate by not acting to the best of its ability to comply with our request for information. Consequently, an adverse inference is warranted in the application of facts available.[38] In drawing an adverse inference, we find that the GOC's provision of polysilicon to solar cells producers is specific within the meaning of section 771(5A) of the Act. For details regarding the remaining elements of our analysis, *see* the ''Provision of Polysilicon for LTAR'' section below.

Application of AFA: Land Provided to Trina Solar Is Specific to the Solar Cells Industry

In the initial questionnaire, the Department stated that if the GOC claimed that the provision of land or land-use rights to the respondents was not contingent upon any particular status or activity (*e.g.,* being a solar cells producer or residing in an industrial park), the GOC must provide a discussion of how the prices paid by the respondents were determined. The Department requested that the GOC provide information on the policies of the relevant local governments that had jurisdiction over the land and land-use rights. The GOC responded that it ''does not direct the price of land or land-use rights, which were established between the mandatory respondents and local governments.''[39] In its questionnaire response, Trina Solar explained that its land-use rights had been purchased through a public bidding process and that all of its land was located in an industrial park. Therefore, in our supplemental questionnaire to the GOC, we asked the GOC to provide information regarding the public bidding process, demonstrating, among other things, the floor prices of these auctions, the public notices inviting bids, and the number of bidders for all of Trina Solar's land-use rights purchases. The GOC provided the requested information for only one of the tracts of land provided by the local land bureau to Trina Solar. In providing this information, the GOC stated: ''The GOC has obtained and provides information relating to the fifth piece of Trina's land, but does not warrant that the information provided below regarding the fifth piece of land is representative for the other pieces of land for Trina.''[40]

Because the GOC did not provide complete responses to either the Department's initial or supplemental questions regarding the derivation of the prices paid by Trina Solar for land-use rights, the Department is unable to determine whether or not the provision of these land use rights was specific. Therefore, we preliminarily determine that the GOC has withheld necessary information that was requested of it and, thus, that the Department must rely on facts available in making our preliminary determination for all of Trina Solar's tracts. Moreover, we preliminarily determine that the GOC has failed to cooperate by not acting to

The Court in *Ansaldo* criticized the respondent for refusing to submit information which the respondent alone had determined was not needed, for failing to submit data which the respondent decided could not be a basis for the Department's decision, and for claiming that submitting such information would be ''an unreasonable and unnecessary burden on the company.'' *Id. [40] *See* the GOC's March 1, 2012 supplemental questionnaire response at 42.

the best of its ability to comply with our request for information. The GOC refused to provide necessary information regarding prices paid by Trina Solar. In its first response, quoted above, the GOC appears to be suggesting it cannot obtain information from local governments regarding land transactions. However, such information has been provided in other proceedings,[41] and some information from the local government was, in fact, provided in this investigation; *e.g.,* information concerning one tract of land auctioned to Trina Solar by the Changzhou government, and the GOC's confirmation that all tracts sold to the respondents have been reported. In its second response, the GOC candidly admits the inadequacy of its response when it advises the Department that it ''does not warrant that the information provided below regarding the fifth piece of land is representative for the other pieces of land for Trina.'' Consequently, the GOC has not cooperated to the best of its ability and an adverse inference is warranted in the application of facts available.[42] In drawing an adverse inference, we find that the GOC's provision of land to Trina Solar is specific within the meaning of section 771(5A) of the Act. For details regarding the remainder of our analysis for this program, *see* the ''Provision of Land for LTAR'' section below.

Application of AFA: ''Subsidies Discovered During the Investigation''

In supplemental questionnaires to the respondents and the GOC, we identified a number of grants that the companies appeared to have received based on information from the financial statements and filings with the U.S. Securities and Exchange Commission (SEC) that parties had placed on the record. Respondents had not reported these grants nor did they complete appropriate appendices, despite the Department's request in its initial questionnaire that the respondents should report all subsidies used during the POI, not merely those related to allegations under investigation. In the supplemental questionnaire, we requested that Trina Solar and Wuxi Suntech provide more information about these grants and that the GOC coordinate with the companies to provide information concerning the programs under which these grants were provided, including complete responses to the questions on specificity in our ''standard appendix.'' While both companies provided a listing of their grants and the names of the projects or programs under which they themselves classified these grants, the GOC only confirmed the amounts of the grants reported by one respondent. The GOC did not provide any other information but instead noted: ''The GOC objects to inquiries concerning purported subsidies as to which no timely allegations have been filed, and as to which the Department has not initiated any investigation.'' [43]

The Department, however, has the authority pursuant to section 775 of the Act to examine subsidies discovered during the course of an investigation. Because the GOC has declined to provide information necessary for our analysis of whether these grants are specific, we find that the GOC has withheld information that was requested and has impeded our investigation. Further, the GOC has not cooperated to the best of its ability in responding to our request for information and therefore, we find the use of AFA is warranted in determining the specificity of the grants the respondents reported. Accordingly, as AFA, we are finding all grant programs for these subsidies to be specific (hereinafter, referred to as the ''Discovered Grants'' to distinguish them from other grants provided under programs named in the petition). A list of all Discovered Grants identified publicly by the respondents and found to be used in the POI is included below in the section ''Programs Preliminarily Determined to be Countervailable.'' Most grants provided prior to the POI did not pass the ''0.5 percent test'' provided for in 19 CFR 351.524(b)(2) (discussed below) and, thus, no benefit is allocable to the POI from these grants. A list of the grants provided prior to the POI that can be identified publicly is included below in the section ''Programs Preliminarily Determined to be Not Used By Respondents.'' Because the names of some of the grants were bracketed by the respondents, a full list of the Discovered Grants can only be found in the business-proprietary Preliminary Calculations Memoranda.[44]

Subsidies Valuation Information

Period of Investigation

The POI for which we are measuring subsidies is January 1, 2010, through December 31, 2010.[45]

Allocation Period

The Department normally allocates the benefits from non-recurring subsidies over the average useful life (AUL) of renewable physical assets used in the production of subject merchandise. The Department finds the AUL in this proceeding to be 10 years, pursuant to 19 CFR 351.524(d)(2) and the U.S. Internal Revenue Service's 1977 Class Life Asset Depreciation Range System.[46] The Department notified the respondents of the 10-year AUL in the initial questionnaire and requested data accordingly.[47] No party in this proceeding has disputed this allocation period.

Furthermore, for non-recurring subsidies, we have applied the ''0.5 percent test,'' as described in 19 CFR 351.524(b)(2). Under this test, we divide the amount of subsidies approved under a given program in a particular year by the relevant sales value (*e.g.,* total sales or export sales) for the same year. If the amount of the subsidies is less than 0.5 percent of the relevant sales value, then the benefits are allocated to the year of receipt rather than across the AUL.

Attribution of Subsidies

In accordance with 19 CFR 351.525(b)(6)(i), the Department normally attributes a subsidy to the products produced by the company that received the subsidy. However, 19 CFR 351.525(b)(6)(ii)-(v) provides additional rules for the attribution of subsidies received by respondents with cross-owned affiliates. Subsidies to the following types of cross-owned affiliates

[41] *See, e.g.,* Additional Documents Memorandum at Attachment V (includes a public version of a memorandum describing a discussion with county officials of respondent's land transaction as well as the transactions of several other nearby companies that were not even respondents in the proceeding; *e.g.,* ''We asked for and were provided * * * land contracts as well as the accompanying agreements for several companies located in the New Century Industrial Park.'').

[42] *See* section 776(b) of the Act.

[43] *See* GOC's March 1, 2012 supplemental questionnaire response at 55.

[44] Memorandum to Mark Hoadley, Program Manager, ''Preliminary Affirmative Countervailing Duty Determination: Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic of China; Preliminary Determination Calculations for Wuxi Suntech Power Co., Ltd.,'' March 19, 2012, and Memorandum to Mark Hoadley, Program Manager, ''Preliminary Affirmative Countervailing Duty Determination: Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic of China; Preliminary Determination Calculations for Changzhou Trina Solar Energy Co., Ltd.,'' March 19, 2012 (collectively, Preliminary Calculations Memoranda).

[45] *See* 19 CFR 351.204(b)(2).

[46] *See* U.S. Internal Revenue Service Publication 946 (2008), ''How to Depreciate Property,'' at Table B–2: Table of Class Lives and Recovery Periods.

[47] As discussed above and in accordance with the Department's practice, regardless of the AUL chosen, we will not countervail subsidies conferred before December 11, 2011, the date of the PRC's accession to the WTO. *See, e.g., Certain Magnesia Carbon Bricks From the People's Republic of China: Final Affirmative Countervailing Duty Determination,* 75 FR 45472 (August 2, 2010), and accompanying Issues and Decision Memorandum at ''Subsidies Valuation Information.''

are covered in these additional attribution rules: (ii) Producers of the subject merchandise; (iii) holding companies or parent companies; (iv) producers of an input that is primarily dedicated to the production of the subject merchandise; or (v) an affiliate producing non-subject merchandise that otherwise transfers a subsidy to a respondent.

Cross-Ownership

According to 19 CFR 351.525(b)(6)(vi), cross-ownership exists between two or more corporations where one corporation can use or direct the individual assets of another corporation in essentially the same ways it can use its own assets. This standard will normally be met where there is a majority voting interest between two corporations, or through common ownership of two (or more) corporations. The Court of International Trade (CIT) has upheld the Department's authority to attribute subsidies based on whether a company could use or direct the subsidy benefits of another company in essentially the same ways it could use its own subsidy benefits.[48]

Based on information on the record, we preliminarily determine that cross-ownership exists, in accordance with 19 CFR 351.525(b)(6)(vi), among the following companies.

1. The Trina Solar Companies

As discussed above, we selected Changzhou Trina Solar Energy Co., Ltd. (*i.e.,* Trina Solar) as a mandatory respondent. Trina Solar reported that it is affiliated with Trina Solar (Changzhou) Science and Technology Co., Ltd. (TST), which is a producer of subject merchandise located in the PRC. Since both companies produce subject merchandise, Trina Solar and TST responded collectively to the Department's questionnaires. In the questionnaire responses, these companies stated that they have the same board of directors and chairman. Both Trina Solar and TST are ultimately owned by Trina Solar Limited (TSL), a company located in the Cayman Islands that is publicly traded on the New York Stock Exchange.[49] Trina Solar and TST have reported that the CEO of TSL is also their shared board chairman. Therefore, pursuant to 19 CFR 351.525(b)(6)(vi), we preliminarily determine that Trina Solar and TST are cross-owned.[50] Trina Solar has reported that both it and TST are affiliated with numerous companies.[51] While Trina Solar has stated that, for various reasons, none of these affiliates are required to provide questionnaire responses under the Department's attribution and cross-ownership regulations, we will be seeking further information and will be examining the relationship between and among Trina Solar, TST, and its affiliated companies during the course of this investigation. Because both Trina Solar and TST are producers of subject merchandise, we are attributing any subsidy received by either company to the combined sales of both companies, excluding intercompany sales. Hereinafter, we refer to Trina Solar and TST collectively as Trina Solar, unless otherwise indicated.

2. The Wuxi Suntech Companies

Wuxi Suntech has responded to the Department's original and supplemental questionnaires on behalf of itself and five cross-owned affiliates: Luoyang Suntech Power Co., Ltd. (Luoyang Suntech), Suntech Power Co., Ltd. (Shanghai Suntech), Yangzhou Rietech Renewal Energy Co., Ltd. (Yangzhou Rietech), Zhenjiang Huantai Silicon Science & Technology Co., Ltd. (Zhenjiang Huantai), and Kuttler Automation Systems (Suzhou) Co., Ltd. (Suzhou Kuttler). In its annual Form 20–F SEC filing for the year ending December 31, 2010,[52] Suntech Power Holdings Co., Ltd. (Suntech Holdings), the holding company registered in the Cayman Islands and listed on the New York Stock Exchange, reported that it owns the majority (*i.e.,* wholly owns or owns more than 50 percent) of the shares of Wuxi Suntech, Luoyang Suntech, Shanghai Suntech, Yangzhou Rietech, Zhenjiang Huantai and Suzhou Kuttler. As all these companies have common ownership through Suntech Holdings, we preliminarily determine that Wuxi Suntech, Luoyang Suntech, Shanghai Suntech, Yangzhou Rietech, Zhenjiang Huantai and Suzhou Kuttler are cross-owned within the meaning of 19 CFR 351.525(b)(6)(vi). Wuxi Suntech has reported that it is affiliated with numerous companies. While Wuxi Suntech has stated that, for various reasons, none of these affiliates are required to provide questionnaire responses under the Department's attribution and cross-ownership regulations, we will be seeking further information and will be examining the relationship between and among these various affiliated companies during the course of this investigation.[53]

Wuxi Suntech, Luoyang Suntech, and Shanghai Suntech are producers of subject merchandise. Accordingly, we are attributing subsidies received by Wuxi Suntech, Luoyang Suntech, and Shanghai Suntech to the combined sales of the three companies, excluding inter-company sales, in accordance with 19 CFR 351.525(b)(6)(ii). Yangzhou Rietech, Zhenjiang Huantai and Suzhou Kuttler provide either inputs or equipment for the production of subject merchandise. With regard to the inputs, we preliminarily determine that these inputs are primarily dedicated to the production of solar cells in accordance with 19 CFR 351.524(b)(6)(iv).[54] Therefore, we are attributing subsidies received by each of these three companies to the combined sales of the company itself and the three producers of subject merchandise discussed above, excluding inter-company sales, in accordance with 19 CFR 351.525(b)(6)(iv).

Hereinafter, we refer to Wuxi Suntech, Luoyang Suntech, Shanghai Suntech, Yangzhou Rietech, Zhenjiang Huantai, and Suzhou Kuttler collectively as Wuxi Suntech, unless otherwise indicated.

Denominators

When selecting an appropriate denominator for use in calculating the *ad valorem* subsidy rate, the Department considers the basis for the respondent's receipt of benefits under each program. As discussed in further detail below in the ''Programs Preliminarily Determined to be Countervailable'' section, where the program has been found to be an export subsidy, we used the recipient's total export sales as the denominator (or the total combined export sales of the cross-owned affiliates, as described above). Where the program has been found to be countervailable as a domestic subsidy, we used the recipient's total sales as the denominator (or the total combined sales of the cross-owned affiliates, as described above). For a further discussion of the denominators used,

[48] *See Fabrique de Fer de Charleroi* v. *United States,* 166 F. Supp 2d 593, 600–604 (CIT 2001).

[49] *See* Trina Solar's January 31, 2012 questionnaire response at III–2.

[50] The Department's regulations at 19 CFR 351.525(b)(6)(vi) state that cross-ownership exists when one corporation can use or direct the assets of another corporation in essentially the same way it can use its own. Normally, however, ''this standard will be met where there is a majority voting ownership interest between two corporations or through common ownership of two (or more) corporations.''

see the Preliminary Calculations Memoranda.

Discount Rates for Allocating Non-Recurring Subsidies

Consistent with 19 CFR 351.524(d)(3)(i)(C) and the Department's practice over multiple PRC CVD investigations, we have used as our discount rates the long-term interest rate benchmarks calculated according to the methodology described below for the years in which the government provided non-recurring subsidies.

Interest Rate Benchmarks

1. Short-Term Interest Rate Benchmark

Section 771(5)(E)(ii) of the Act explains that the benefit for loans is the ''difference between the amount the recipient of the loan pays on the loan and the amount the recipient would pay on a comparable commercial loan that the recipient could actually obtain on the market,'' indicating that a benchmark must be a market-based rate. Normally, the Department uses comparable commercial loans reported by the company for benchmarking purposes.[55] If the firm does not receive any comparable commercial loans during the relevant periods, the Department's regulations provide that we ''may use a national average interest rate for comparable commercial loans.''[56] The Department, however, has determined that loans provided by Chinese banks reflect significant government intervention in the banking sector, and do not reflect rates that would be found in a functioning market.[57] Therefore, the benchmarks that are described under 19 CFR 351.505(a)(3) are not appropriate options. The Department is, therefore, using an external, market-based benchmark interest rate.

In past proceedings involving imports from the PRC, we calculated the external benchmark using the methodology first developed in *CFS from the PRC*[58] and more recently updated in *LWTP from the PRC.*[59] Under that methodology, we first determine which countries are similar to the PRC in terms of gross national income (GNI), based on the World Bank's classification of countries as: Low income; lower-middle income; upper-middle income; and high income. As explained in *CFS from the PRC,* this pool of countries captures the broad inverse relationship between income and interest rates. For 2001 through 2009, the PRC fell in the lower-middle income category.[60] Beginning in 2010, however, the PRC is in the upper-middle income category. Accordingly, as explained further below, we are using the interest rates of upper-middle income countries to construct the 2010 benchmark.

After identifying the appropriate interest rates, the next step in constructing the benchmark has been to incorporate an important factor in interest rate formation, the strength of governance. These indicators measure the quality of the countries' institutions and they have been built into the analysis by using a regression analysis that relates the interest rates to the governance indicators. In each of the years from 2001–2009, the results of the regression analysis reflected the intended, common sense result: stronger institutions meant relatively lower interest rates, while weaker institutions meant relatively higher interest rates. For 2010, however, the regression does not yield that outcome for the PRC's income group.

This contrary result for a single year in ten does not lead us to reject the strength of governance as a determinant of interest rates. As confirmed by the Federal Reserve, ''there is a significant negative correlation between institutional quality and the real interest rate, such that higher quality institutions are associated with lower real interest rates.'' [61] However, for 2010, incorporating the governance indicators in our analysis does not make for a better benchmark. Therefore, while we have continued to rely on the regression-based analysis used since *CFS from the PRC* to compute the benchmarks for loans taken out prior to the POI, for the 2010 benchmark we are using an average of the interest rates of the upper-middle income countries. Based on our experience for the 2001–2009 period, in which the average interest rate of the lower-middle income group did not differ significantly from the benchmark rate resulting from the regression for that group, use of the average interest rate for 2010 does not introduce a distortion into our calculations.

With the following exceptions, we have used the interest and inflation rates reported in the International Financial Statistics (IFS), collected by the International Monetary Fund, for the countries identified as ''upper middle income'' by the World Bank for 2010 and ''lower-middle income'' for 2001–2009.[62] First, we did not include those economies that the Department considered to be NMEs for antidumping purposes during any part of the years in question, for example: Armenia, Azerbaijan, Belarus, Georgia, Moldova, and Turkmenistan. Second, the pool necessarily excludes any country that did not report lending and inflation rates to the IFS for those years. Third, we removed any country that reported a rate that was not a lending rate or that based its lending rate on foreign-currency denominated instruments. For example, if a country reports a deposit rate, not a lending rate, or reports dollar-denominated rates, not rates in its local currency, the rate for such a country has been excluded. Finally, for each year for which the Department calculated a benchmark rate, we have also excluded any countries with aberrational or negative real interest rates for the year in question.[63] Because the resulting interest rate benchmarks are net of inflation, we adjusted the benchmarks to include an inflation component.

For loans denominated in U.S. dollars, we are again following the methodology developed over a number of successive PRC investigations. Specifically, for U.S. dollar loans, the Department used as a benchmark the one-year dollar London Interbank Offering Rate (LIBOR), plus the average spread between LIBOR and the one-year corporate bond rates for companies with a BB rating. Likewise, for loans denominated in other foreign currencies, we used as a benchmark the one-year LIBOR for the given currency plus the average spread between the LIBOR rate and the one-year corporate bond rate for companies with a BB rating.

[55] 19 CFR 351.505(a)(3)(i).

[56] 19 CFR 351.505(a)(3)(ii).

[57] *See* CFS from the PRC Decision Memorandum at Comment 10.

[58] *Id.*

[59] *See Lightweight Thermal Paper From the People's Republic of China: Final Affirmative Countervailing Duty Determination,* 73 FR 57323 (October 2, 2008) (*LWTP from the PRC*), and accompanying Issues and Decision Memorandum (LWTP from the PRC Decision Memorandum) at 8–10.

[60] *See* The World Bank Country Classification, http://econ.worldbank.org/.

[61] *See* Additional Documents Memorandum at Attachment I (a Department memorandum entitled ''Consultations with Government Agencies'').

[62] As discussed below, short-term loan benchmarks are the basis for long-term loan benchmarks. Therefore, we calculated short-term loan benchmarks for several years other than those in which short-terms loans were provided that were outstanding in the POI.

[63] Because we are countervailing loans provided in a number of years, for the exact details regarding the countries excluded in each year, *see* Memorandum regarding ''Preliminary Affirmative Countervailing Duty Determination: Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from the People's Republic of China—Preliminary Benchmark Memorandum,'' March 19, 2012 (Preliminary Benchmark Memorandum).

2. Long-Term Interest Rate

The lending rates reported in the IFS represent short-term and medium-term lending, and there are not sufficient, publicly available long-term interest rate data upon which to base a robust benchmark for long-term loans. To address this problem, the Department previously developed an adjustment to the short-term rates described above to convert them to long-term rates using BB-rated corporate bond rates.[64] In subsequent CVD investigations, this long-term conversion markup was revised to equal the difference between the two-year BB bond rate and the n-year BB bond rate, where ''n'' equals or approximates the number of years of the term of the loan in question.[65] The resulting inflation-adjusted lending rates, which we are also using as discount rates, are provided in the Preliminary Benchmark Memorandum.[66] We continue to use the same methodology for this case.

Land Benchmark

Section 351.511(a)(2) of the Department's regulations sets forth the basis for identifying comparative benchmarks for determining whether a government good or service is provided for LTAR. These potential benchmarks are listed in hierarchical order by preference: (1) Market prices from actual transactions within the country under investigation; (2) world market prices that would be available to purchasers in the country under investigation; or (3) an assessment of whether the government price is consistent with market principles. As explained in detail in previous investigations, the Department cannot rely on the use of so called ''first-tier'' and ''second-tier'' benchmarks to assess the benefits from the provision of land for LTAR in the PRC.[67]

Consistent with the prior determinations, we have preliminarily determined that measuring the extent by which land is provided for LTAR is best achieved by comparing prices for land-use rights in the PRC with comparable market-based prices in a country at a comparable level of economic development that is within the geographic vicinity of the PRC. In previous PRC investigations,[68] we concluded that the most appropriate benchmark for the respondents' land-use rights were sales of certain industrial land plots in industrial estates, parks, and zones in Thailand. We relied on prices from a real estate market report on Asian industrial property that was prepared outside the context of any Department proceeding by an independent and internationally recognized real estate agency with a long-established presence in Asia. In relying on a land benchmark from Thailand, we noted that the PRC and Thailand had similar levels of per capita GNI and that population density in the PRC and Thailand are roughly comparable. Additionally, we noted that producers consider a number of markets, including Thailand, as options for diversifying production bases in Asia beyond the PRC. Therefore, we concluded, the same producers may compare prices across borders when deciding what land to buy. We cited to a number of sources which named Thailand as an alternative production base to the PRC.[69]

For this investigation, we have obtained updated data from the same independent and internationally recognized real estate agency for all four quarters of 2010. These are updated versions of the same reports, relied on in the prior determinations, which include industrial land values for plots in industrial estates, parks, and zones in Thailand, the Philippines, and other Asian countries. We are placing all four of the *Asian Marketview* reports, which are publicly available on the Internet, on the record of this investigation.[70] In evaluating which of these locations is most appropriate to use as the source of the benchmark, we have focused on Thailand, consistent with the prior determinations.

Based on our analysis, we preliminarily determine that a simple average of all land values for industrial property in Thailand provides the closest match, among options on the record, to the PRC in terms of per capita GNI and population density. The per capita GNI of Thailand is $3,760, compared to $3,590 for the PRC, while the per capita GNI for the Philippines is $2,840.[71] (*Asian Marketview* includes data for other Asian nations, but all have either higher incomes or are considered NMEs by the Department; *e.g.,* Singapore and Vietnam.) For 2010, Thailand is also a closer match in terms of population density with 135 people per square kilometer (psk) compared to the PRC's 140 people psk (the Philippines has a population density of 311 psk).[72] The calculated average of the rates for Thailand is $8.21 per square foot.[73] As explained in the Preliminary Benchmark Memorandum, the Department is deflating this value to calculate the benchmark for any land that may have been purchased in 2008 and 2009.

We are continuing to use the 2007 benchmark calculated in the investigations of laminated woven sacks and new pneumatic off-the-road tires cited above as the land benchmark for any land that may have been purchased in 2007 or earlier years. As mentioned, this benchmark was calculated using the same source, *Asian Marketview,*[74] discussed above, and also is a simple average of industrial land values reported in *Asian Marketview* for Thailand. The analysis relied upon in determining that this figure was the most appropriate benchmark for PRC land-use rights in 2007 can be found in those prior determinations.[75]

Polysilicon Benchmark

We have selected the benchmark for measuring the adequacy of the remuneration for polysilicon in accordance with 19 CFR 351.511(a)(2). In its supplemental questionnaire response, the GOC confirmed that there were 47 producers in the PRC of polysilicon during the POI, but the GOC did not provide the production volume

[75] *See, e.g., LWS Preliminary Determination,* 72 FR at 67909.

for any of these polysilicon producers, claiming it was prohibited from providing such information.[76] The GOC provided the names of nine polysilicon producers in which it maintains an ownership or management interest according to the National Bureau of Statistics of the GOC.[77] The mandatory respondents purchased polysilicon from 30 polysilicon producers during the POI, two of which were included in the list of producers in which the GOC maintains an ownership or management interest.[78]

As explained in the ''Application of AFA: Polysilicon Producers are 'Authorities''' section above, the Department has preliminarily determined that all the producers of polysilicon purchased by the respondents during the POI are ''authorities'' within the meaning of section 771(5)(B) of the Act. Because the GOC did not provide the production volumes for any of the polysilicon producers in the PRC, the Department cannot determine, on the basis of production volumes, what percentage of total domestic production or total domestic consumption is accounted for by the producers determined to be ''authorities.''[79] Therefore, we have determined whether polysilicon consumption in the PRC is dominated by the GOC based on the number of producers that are ''authorities.'' In addition to the 30 producers determined to be ''authorities,'' the GOC reports it maintains an ownership or management interest in another seven,[80] bringing to 37 the number of producers through which the GOC influences and distorts the domestic market for polysilicon, out of a total universe of 47 producers in the PRC.

Therefore, we determine that the GOC is the predominant provider of polysilicon in the PRC and that its significant presence in the market distorts all transaction prices. As such, we cannot rely on domestic prices in the PRC as a ''tier-one'' benchmark. For the same reasons, we determine that import prices into the PRC cannot serve as a benchmark. Turning to tier-two benchmarks, *i.e.,* world market prices available to purchasers in the PRC, pursuant to 19 CFR 351.511(a)(2)(ii), Petitioner submitted monthly world market prices for polysilicon.[81] Based on our review of the data, we are preliminarily relying on these world market prices, from Photon Consulting ''Silicon Price Index,'' as a benchmark price for polysilicon.

We note that Petitioner submitted alternative polysilicon benchmark data in its pre-preliminary determination comments. It argued that these data were more appropriate because they represent values for long-term contracts in 2008, which might cover shipments in 2010, according to the SEC filings of Trina Solar. Trina Solar's SEC filings, however, state that it purchased polysilicon in 2007 and 2008 ''through a combination of multi-year supply agreements, short-term supply arrangements and spot market purchases.''[82] In addition, the Web site for Photon Consulting states that its ''Silicon Price Index'' is a ''weighted index in which silicon prices reported by each survey participant are weighted to reflect the nuances found in the length of reported silicon contracts, prepayments and price digression.''[83] Therefore, it appears that the Photon Consulting price index is the most appropriate match to Trina Solar's purchases.[84] We intend, however, to gather information concerning the exact structure of the respondents' purchases of polysilicon to evaluate whether their purchase terms indicate that the use of a different benchmark is more appropriate.

Terminated Programs

The GOC reported that six programs used by the respondents have been terminated. However, the GOC did not request a program wide change adjustment to the cash deposit rate under 19 CFR 351.526(a), nor did it provide all of the documentation necessary to conduct such an evaluation. In addition, several of the programs the GOC claims were terminated have residual benefits in the POI. For example, certain parties continue to enjoy benefits from the ''Two Free, Three Half'' income tax program for Foreign Invested Enterprises (FIEs). Therefore, we are not making any adjustments to the cash deposit rates in this preliminary determination for terminated programs.

Analysis of Programs

Based upon our analysis of the petition, the responses to our questionnaires, and other information on the record, we preliminarily determine the following.

I. *Programs Preliminarily Determined To Be Countervailable*

A. Golden Sun Demonstration Program

The Golden Sun Demonstration Program (Golden Sun program) is a combination of financial assistance, technological support, and market approaches developed to accelerate the industrialization and development of the PRC's domestic photovoltaic power industry and to promote the progress of photovoltaic power generation. According to the GOC, the central government has allocated renewable energy funds to support the implementation of the Golden Sun program under Article 20 of the GOC's ''Renewable Energy Law.'' As detailed in the ''Notice concerning the Implementation of the Golden Sun Demonstration Project,'' (CaiJian {2009} No. 397), the program was established in 2009, and was designed to provide one-time assistance to recipients over the course of its two-year term.

The GOC states that the Golden Sun program was created to assist constructive investment in photovoltaic electricity-generation projects, with the goal of narrowing the gap between the costs of photovoltaic electricity generation and the costs of fossil fuel electricity generation. Financial assistance through this program includes support for, *inter alia,* the following: (1) The use of large-scale mining, commercial enterprises, and public welfare institutions to construct the user's side of the electrical grid for photovoltaic power generation demonstration projects; (2) increasing the power supply capacity in remote locations; and (3) construction of large-scale grid-connected photovoltaic power generation demonstration projects in solar energy rich regions.

To be eligible for financial support for this program, the GOC states that projects must: (1) Be included in the Golden Sun program within the local geographic region; (2) have an installed capacity of not less than 300 kWh; (3) have a construction period of not more than one year, and an operation period

[77] *See* the GOC's January 31, 2012 questionnaire response at II–91.

[78] *See* Trina Solar's January 31, 2012 questionnaire response at Exhibit 27; Wuxi Suntech's January 31, 2012 questionnaire response at Exhibit S–17; Zhenjiang Huantai's February 27, 2012 questionnaire response at Exhibit S–19; and Yangzhou Rietech's January 31, 2012 questionnaire response at Exhibit 5.

[79] *See* section 776(b) of the Act.

[80] The GOC reported that it maintains an ownership or management interest in nine producers. However, two of these companies were among the 30 already analyzed above.

[81] *See* October 19, 2011 CVD Petition at 40, Exhibit 154.

[82] *See* Trina Solar's February 27, 2012 supplemental questionnaire response at Exhibit 16–18.

[83] *See* Preliminary Benchmark Memorandum at Attachment 2.

[84] There appears to be no information on the record indicating whether Suntech purchases polysilicon through short-term or long-term contracts, the spot market, or a mixture of one or more of these.

of not less than 20 years; (4) the total assets of the owner hosting the project must not be less than 100 million Yuan, and its capital must not be less than 30 percent of the total investment; and (5) the photovoltaic project must be technologically advanced, and the project's host must be able to operate and protect the project. Project applications are then reviewed by the GOC's Ministry of Finance, Ministry of Science, and the National Energy Board. According to the GOC, grid-connected photovoltaic power generation projects can receive up to 50 percent of their total investment from the GOC. For independent photovoltaic power generation systems located in distant areas without an established electrical grid, project operators can receive up to 70 percent of their total investment from the GOC.

To receive funding under this program, the GOC states that an operator of an eligible project must complete any preparation work beforehand, which includes inviting bids for necessary equipment, finalizing plans for the project's construction, and submitting application documents to the GOC. Once these documents are approved by the GOC, the Ministry of Finance will allocate the funds to the project's operator.

Wuxi Suntech reported that it did not participate in this program in 2009 (the year this program was established) or during the POI. Trina Solar, however, reported that it received a grant during the POI from the Jiangsu Reform and Development Committee for installing a photovoltaic energy-generating project.[85] We preliminarily determine that the grant received by Trina Solar through the Golden Sun program confers a countervailable subsidy. The grant is a financial contribution pursuant to section 771(5)(D)(i) of the Act and provides a benefit in the amount of the grant provided, pursuant to 19 CFR 351.504(a). We find that grants from this program are specific as a matter of law to certain enterprises, namely those involved in the construction of solar-powered projects, pursuant to section 771(5A)(D)(i) of the Act. In its March 1, 2012 supplemental questionnaire, the GOC contends that the Golden Sun program is similar to several programs alleged in the CVD petition for wind towers from the PRC that the Department determined not to investigate. According to the GOC, the Department determined the benefit element of a subsidy had not been demonstrated, despite the petition's allegation that wind tower producers benefitted through an increase in demand caused by the GOC's financial assistance to the operators of wind tower projects.[86] Thus, the GOC contends that the Department should discontinue its investigation of the Golden Sun program because it does not benefit Chinese producers of solar cells, only those involved in the construction of solar power projects.[87] However, in the instant investigation, it is not necessary to address this argument as Trina Solar benefitted directly from the program as the recipient of the grant.

In accordance with 19 CFR 351.504(c)(1) and 19 CFR 351.524(b)(2), we have treated the grant as a non-recurring subsidy and performed the ''0.5 percent test'' for the year the grant was provided to Trina Solar. Specifically, we divided the total amount of the grant by the appropriate total sales denominator, as discussed in the ''Subsidies Valuation Information'' section above, and in the Preliminary Calculations Memoranda. Because the resulting percentage was less than 0.5 percent, we have expensed the full amount of the grant in the POI. To determine Trina Solar's subsidy rate from the grant, we divided the benefit expensed in the POI by the appropriate total sales denominator, as discussed in the ''Subsidies Valuation Information'' section above, and in the Preliminary Calculations Memoranda. On this basis, we preliminarily determine a countervailable subsidy rate of 0.09 percent *ad valorem* for Trina Solar.

B. Preferential Policy Lending

Petitioner alleged that the GOC subsidizes solar cells producers through the provision of policy loans. According to Petitioner, the GOC provides for preferential policy lending to solar cells producers through the Renewable Energy Law, the Medium- and Long-Term Development Plan for Renewable Energy in China, the ''Interim Measures for the Administration of Financial Subsidy Fund for Renewable and Energy Saving-Building Materials,'' and a ''multitude of other Chinese central government programs and measures, notably including the PRC's Twelfth Five-Year Plan.''

Both respondents reported having loans outstanding during the POI. The Department finds that the loans to both respondents are countervailable. The information on the record indicates the GOC has placed great emphasis on targeting the renewable energy industry, including solar cells producers, for development in recent years.[88] The Renewable Energy Law, in Article 25, calls specifically for the use of loans in implementing the GOC's plans for renewable energy: ''Financial institutions may offer favorable loans with a financial discount for renewable energy development and utilization projects that are listed in the renewable energy industry development guidance catalogue and meet credit requirements.'' The catalogue referenced in the Renewable Energy Law includes an entire section for solar power projects. Among those projects, most, if not all, of which would require the use of solar cells, are three projects specifically for the production of solar cells, including subject merchandise: ''Single crystal silicon solar energy cell and multi-crystal silicon solar energy cell'' (project 39). As Petitioner notes, the Renewable Energy Law is noted by Trina Solar in its 2010 SEC filing (form 20–F). On page 49 of its SEC filing, Trina Solar notes that the law ''provides financial incentives, such as national funding, preferential loans and tax preferences for the development of renewable energy projects.''

Renewable energy is also among the projects listed in the ''Directory Catalogue on Readjustment of Industrial Structure'' of the National Development and Reform Commission (NDRC) (Catalogue No. 40), which contains a list of encouraged projects the GOC develops through loans and other forms of assistance,[89] and which the Department has relied upon in prior specificity determinations. Catalogue

[85] Besides this single grant, other grants have been approved for respondents but none resulted in disbursements during the POI.

[86] *See Utility Scale Wind Towers From the People's Republic of China: Initiation of Countervailing Duty Investigation,* 77 FR 3447 (January 24, 2012), and accompanying Initiation Checklist at 38–39; *see also* the GOC's March 1, 2012 supplemental questionnaire response at 3.

[87] *See* the GOC's March 1, 2012 supplemental questionnaire response at 4.

[88] In addition to the documents noted by Petitioner, referred to above, concern with the solar cells industry is demonstrated in the National Medium- and Long-Term Program for Science and Technology Development (the GOC's January 31, 2012 questionnaire response at Exhibit O–II–A–6–b) and the Interim Measures for Special Fund Management for the Development of Renewable Energies (the GOC's January 31, 2012 questionnaire response at Exhibit O–II–A–6–d), and specific projects undertaken pursuant to these plans, laws, and measures, such as the Golden Sun program (O–II–A–6–h). This concern has culminated in the recently issued five-year plan for the Solar Cells Industry (for the 12th planning period, beginning after the end of the POI), the first five-year plan issued for this industry.

[89] *See, e.g., Certain New Pneumatic Off-the-Road Tires From the People's Republic of China: Final Affirmative Countervailing Duty Determination and Final Negative Determination of Critical Circumstances,* 73 FR 40480 (July 15, 2008) (*Tires Final Determination*) and accompanying Issues and Decision Memorandum at ''Government Policy Lending'' section.

No. 40 includes an encouraged project (number IV(5)) for: ''Development and utilization of wind energy power to generate electricity and such renewable resources as solar energy, geothermal energy, ocean energy, biomass energy and etc.'' [90]

Therefore, given the evidence demonstrating the GOC's objective of developing the renewable energy sector, and solar cells producers in particular, through loans and other financial incentives, we preliminarily determine there is a program of preferential policy lending specific to solar cells producers, within the meaning of section 771(5A)(D)(i) of the Act. We also preliminarily find that loans from state owned commercial banks (SOCBs) under this program constitute financial contributions, pursuant to sections 771(5)(B)(i) and 771(5)(D)(i) of the Act, because SOCBs are ''authorities.'' [91] The loans provide a benefit equal to the difference between what the recipients paid on their loans and the amount they would have paid on comparable commercial loans.[92] To calculate the benefit from this program, we have used the benchmarks discussed above under the ''Subsidy Valuation Information'' section.[93] On this basis, we preliminarily determine a subsidy rate of 0.84 percent *ad valorem* for Trina Solar and 1.23 percent *ad valorem* for Wuxi Suntech.

C. Provision of Polysilicon for LTAR

Petitioners have alleged that the respondents received countervailable subsidies in the form of the provision of polysilicon for LTAR. For the reasons explained in the ''Use of Facts Otherwise Available and Adverse Inferences'' section above, we are basing our determination regarding the government's provision of polysilicon, in part, on AFA. Specifically, we have determined as AFA that the producers of the polysilicon purchased by both respondents are ''authorities'' within the meaning of section 771(5)(B) of the Act and, as such, the provision of polysilicon constitutes a financial contribution under section 771(5)(D)(iii) of the Act. Further, we have determined as AFA that the provision of polysilicon at LTAR is specific to solar cells producers. Lastly, a benefit is being conferred because the polysilicon is being provided for LTAR, as explained below.

As discussed above under the ''Subsidies Valuation Information'' section, the Department is selecting for polysilicon benchmarks contemporaneous monthly world market prices from Photon Consulting's ''Silicon Price Index.'' This information was placed on the record of this investigation in the petition. The Department has adjusted the benchmark price to include delivery charges, import duties, and value added tax (VAT) pursuant to 19 CFR 351(a)(2)(iv).[94] Regarding delivery charges, we have included ocean freight and the inland freight charges that would be incurred to deliver polysilicon to respondents' production facilities. We have added import duties as reported by the GOC, and the VAT applicable to imports of polysilicon into the PRC, also as reported by the GOC.[95] In calculating VAT, we applied the applicable VAT rate to the benchmark after first adding amounts for ocean freight and import duties. We have compared these monthly benchmark prices to the respondents' reported purchase prices for individual transactions, including VAT and delivery charges.

Based on this comparison, we preliminarily determine that polysilicon was provided for LTAR and that a benefit exists for each respondent in the amount of difference between the benchmark prices and the prices each respondent paid.[96] We divided the total benefits for each respondent by the appropriate total sales denominator, as discussed in the ''Subsidies Valuation Information'' section above, and in the Preliminary Calculations Memoranda. On this basis, we preliminarily determine a countervailable subsidy rate of 1.07 percent *ad valorem* for Trina Solar and 0.35 percent *ad valorem* for Wuxi Suntech.

D. Provision of Land for LTAR

Petitioner has alleged that Trina Solar and Wuxi Suntech benefited from the provision of land to solar cells producers by the GOC at either a discounted rate or for free. The sale of land-use rights constitutes a financial contribution from a government authority in the form of providing goods or services pursuant to section 771(5)(D)(iii) of the Act. As discussed above in the ''Application of AFA: Land Provided to Trina Solar is Specific to the Solar Cells Industry'' section, the Department has preliminarily determined as AFA that the provision of land to Trina Solar was specific.

In order to calculate the benefit, we first multiplied the Thailand industrial land benchmarks discussed above under the ''Land Benchmark'' section, by the total area of Trina Solar's countervailed tracts. As noted above, we have benchmarks for 2007 and 2010. For other years in which land was provided, we deflated either the 2007 or 2010 figure, depending on which was closer in time to the year of the relevant land-use agreement. We then subtracted the price actually paid for each tract to derive the total unallocated benefit. We next conducted the ''0.5 percent test'' of 19 CFR 351.524(b)(2) for the year of the relevant land-use agreement by dividing the total unallocated benefit for each tract by the appropriate sales denominator. If more than one tract was provided in a single year, we combined the total unallocated benefits from the tracts before conducting the ''0.5 percent test.'' As a result, we found that the benefits were greater than 0.5 percent of relevant sales and that allocation was appropriate for all tracts. We allocated the total unallocated benefit amounts across the terms of the land-use agreements, using the standard allocation formula of 19 CFR 351.524(d), and determined the amount attributable to the POI. We then summed all of the benefits attributable to the POI and divided this amount by the appropriate total sales denominator, as discussed in the ''Subsidies Valuation Information'' section above, and in the Preliminary Calculations Memoranda, to derive a subsidy rate of 0.63 percent *ad valorem* for Trina Solar.

As discussed below under the section ''Programs for Which Additional Information is Required,'' we will be requesting additional information regarding land-use rights provided to Wuxi Suntech.

E. ''Two Free, Three Half'' Program for Foreign-Invested Enterprises

Under Article 8 of the ''Income Tax Law of the People's Republic of China for Enterprises with Foreign Investment and Foreign Enterprises,'' an FIE that is ''productive'' and scheduled to operate for more than ten years may be exempted from income tax in the first two years of profitability and pay income taxes at half the standard rate for the next three years. According to the GOC, the program was terminated effective January 1, 2008, by the Enterprise Income Tax Law, but

[90] Additional Documents Memorandum (which includes the Directory Catalogue on Readjustment of Industrial Structure (2005 version)) at Attachment VI.

[91] *See, e.g., Tires Final Determination,* and accompanying Issues and Decision Memorandum at Comment E2.

[92] *See* section 771(5)(E)(ii) of the Act.

[93] *See also* 19 CFR 351.505(c).

[94] The Department has concluded that these data do not already include delivery charges. *See* Preliminary Benchmark Memorandum.

[95] *See* Preliminary Benchmark Memorandum for a full explanation of how the benchmarks were adjusted.

[96] *See* 19 CFR 351.511(a).

companies already enjoying the preference were permitted to continue paying taxes at reduced rates. Trina Solar did not claim these tax exemptions during the POI. However, two of Wuxi Suntech's cross-owned affiliated companies, Luoyang Suntech and Zhenjiang Huantai, paid taxes at a reduced rate under this program during the POI.

The Department has previously found the ''Two Free, Three Half'' program to confer a countervailable subsidy.[97] Consistent with the earlier cases, we preliminarily determine that the ''Two Free, Three Half'' income tax exemption/reduction confers a countervailable subsidy. The exemption/reduction is a financial contribution in the form of revenue forgone by the GOC and it provides a benefit to the recipient in the amount of the tax savings.[98] We also determine that the exemption/reduction afforded by the program is limited as a matter of law to certain enterprises, *i.e.,* productive FIEs, and, hence, is specific under section 771(5A)(D)(i) of the Act.

To calculate the benefit, we treated the income savings by Luoyang Suntech and Zhenjiang Huantai as a recurring benefit, consistent with 19 CFR 351.524(c)(1). To compute the amount of the tax savings, we compared the two companies' tax rates to the rates they would have paid in the absence of the program. We divided Luoyang Suntech's and Zhenjiang Huantai's tax savings for their returns filed during the POI by the appropriate total sales denominator, as discussed in the ''Subsidies Valuation Information'' section above, and in the Preliminary Calculations Memoranda, in accordance with 19 CFR 351.525(b)(6)(ii) and 19 CFR 351.525(b)(6)(iv), respectively. We then summed the two companies' *ad valorem* rates to compute Suntech's total *ad valorem* rate under this program. On this basis, we preliminarily determine a countervailable subsidy rate for Wuxi Suntech of 0.13 percent *ad valorem* for this program.

F. Preferential Tax Programs for High or New Technology Enterprises [99]

According to the GOC, this program became effective in January 2008 as part of the Enterprise Income Tax Law of the PRC (Decree 63 of the PRC, 2007). Article 28.2 of the Enterprise Income Tax Law of the PRC provides for the reduction of the income tax rate to 15 percent, from 25 percent, for enterprises that are recognized as high or new technology enterprises (HNTEs), regardless of whether the enterprise is an FIE or domestic company. The ''Circular of the Ministry of Science and Technology, the Ministry of Finance and the State Administration of Taxation on Printing and Distributing the Administrative Measures for Certification of New and High Technology Enterprises'' (Guo Ke Fa Huo {2008} No. 172), of April 14, 2008, identifies HNTEs as enterprises that have been registered for more than one year within the PRC and that have been engaged in continuous research and development and in the transformation of their scientific and technological achievements. This circular also specifically identifies the HNTEs that qualify for key state support, which includes renewable, clean energy technologies such as solar photovoltaic technologies.[100]

To apply as an HNTE, Chinese companies must complete a self-assessment process regarding whether they can meet the criteria for an HNTE, and they must submit the requisite application form, business license and tax registration forms, and documents that establish that the company has been conducting high technological or innovative activities. Enterprises that meet the eligibility criteria will be certified as HNTEs by the approving GOC authority, and this designation remains effective for three years. Both Trina Solar and Wuxi Suntech were recognized as HNTEs by the GOC during the POI, and their income tax rates were therefore reduced from 25 percent to 15 percent for tax returns filed during the POI as a result.

We preliminarily determine that the reduction in income tax paid by HNTEs under this program confers a countervailable subsidy. The income tax reduction is a financial contribution in the form of revenue forgone by the government, and it provides a benefit to the recipients in the amount of the tax savings, pursuant to section 771(5)(D)(ii) of the Act and 19 CFR 351.509(a)(1). We also preliminarily determine that the income tax reduction afforded by this program is limited as a matter of law to certain enterprises, *i.e.,* HNTEs, and, thus, is specific under section 771(5A)(D)(i) of the Act.

To calculate the benefit from this program to Trina Solar and Wuxi Suntech, we treated the income tax reductions claimed by Trina Solar and Wuxi Suntech as recurring benefits, consistent with 19 CFR 351.524(c)(1). To compute the amount of the tax savings, we compared their tax rates (15 percent) to the rate that would have been paid by Trina Solar and Wuxi Suntech otherwise (the standard income tax rate of 25 percent). We multiplied the difference by the taxable income of each company. We then divided these amounts by the appropriate total sales denominator, as discussed in the ''Subsidies Valuation Information'' section above, and in the Preliminary Calculations Memoranda. On this basis, we preliminarily determine a countervailable subsidy rate of 1.25 percent *ad valorem* for Trina Solar and 0.28 percent *ad valorem* for Wuxi Suntech.

G. Import Tariff and Value Added Tax (VAT) Exemptions for Use of Imported Equipment

Enacted in 1997, the ''Circular of the State Council on Adjusting Tax Policies on Imported Equipment'' (GUOFA No. 37), exempts both FIEs and certain domestic enterprises from VAT and tariffs on imported equipment used in projects identified in related catalogues. The NDRC, or its provincial branch, provides a certificate to enterprises that receive the exemption. The objective of the program is to encourage foreign investment and to introduce foreign advanced technology equipment and industry technology upgrades. Trina Solar, Wuxi Suntech, Luoyang Suntech, Shanghai Suntech, Zhenjiang Huantai, and Suzhou Kuttler received VAT and tariff exemptions under this program as FIEs. The Department has previously found VAT and tariff exemptions under this program to confer countervailable subsidies.[101]

Consistent with the earlier cases, we preliminarily determine that VAT and tariff exemptions on imported equipment confer a countervailable subsidy. The exemptions are a financial contribution in the form of revenue forgone by the GOC and they provide a benefit to the recipient in the amount of VAT and tariff savings.[102] We also

[97] *See CFS from the PRC* and CFS from the PRC Decision Memorandum at 11–12; *see also Seamless Pipe Final Determination,* and Seamless Pipe from the PRC Decision Memorandum at 25.

[98] *See* section 771(5)(D)(ii) of the Act and 19 CFR 351.509(a)(1).

[99] The Department notes we initiated an investigation of a program entitled, ''Preferential Tax Programs for FIEs Recognized as High or New Technology Enterprises.'' *See Initiation Notice* and accompanying Initiation Checklist at 20. The GOC states that this income tax reduction program for FIEs was terminated, but that a replacement program was created in 2008 by the Enterprise Income Tax Law of the PRC. *See* the GOC's January 31, 2012 questionnaire response at II–65.

[100] This program was described in detail in the GOC's March 1, 2012 supplemental questionnaire response at 23–24.

[101] *See* CFS from the PRC Decision Memorandum at 13–14; *see also Seamless Pipe Final Determination,* and Seamless Pipe from the PRC Decision Memorandum at 23–25.

[102] *See* section 771(5)(D)(ii) of the Act and 19 CFR 351.510(a)(1).

preliminarily determine that the VAT and tariff exemptions afforded by the program are specific under section 771(5A)(D)(iii)(I) of the Act because the program is limited to certain enterprises, *i.e.,* FIEs and domestic enterprises involved in ''encouraged'' projects.[103]

Normally, we treat exemptions from indirect taxes and import charges, such as VAT and tariff exemptions, as recurring benefits, consistent with 19 CFR 351.524(c)(1), and allocate the benefits to the year in which they were received. However, when an indirect tax or import charge exemption is provided for, or tied to, the capital structure or capital assets of a firm, the Department normally treats it as a non-recurring benefit and allocates the benefit to the firm over the AUL.[104] In the instant investigation, Trina Solar, Wuxi Suntech, Luoyang Suntech, Shanghai Suntech, Zhenjiang Huantai, and Suzhou Kuttler have provided a list of VAT and tariff exemptions that they received for capital equipment imported after December 11, 2001. Based on this submitted information, we preliminarily determine that the VAT and tariff exemptions are tied to the capital structure or capital assets of these companies, and, as such, should be allocated over time.

To calculate the countervailable subsidy, we used our standard methodology for non-recurring grants.[105] In the years that the benefits received by each company under this program exceeded 0.5 percent of relevant sales for that year, we allocated the benefits over the AUL of 10 years, pursuant to 19 CFR 351.524(b)(1); in the years that the benefits received by each company under this program did not exceed 0.5 percent of relevant sales for that year, we expensed those benefits to the years that they were received, pursuant to 19 CFR 351.524(b)(2). We used the discount rates described above in the section ''Subsidies Valuation Information,'' to calculate the amount of the benefit allocable to the POI. We then divided the benefit amount by the appropriate sales denominators as discussed in the ''Subsidies Valuation Information'' section above. On this basis, we preliminarily determine that Trina Solar received a countervailable benefit of 0.45 percent *ad valorem* and Wuxi Suntech received a countervailable benefit of 0.55 percent *ad valorem* for this program.

H. VAT Rebates on FIE Purchases of Chinese-Made Equipment

As outlined in GUOSHUIFA (1999) No. 171, ''Trial Administrative Measures on Purchase of Domestically Produced Equipment by FIEs,'' the GOC refunds the VAT on purchases of certain Chinese produced equipment to FIEs if the equipment is used for certain encouraged projects identified in related catalogues.[106] The Department has previously found this program to be countervailable.[107]

Trina Solar reported using this program from 2005 through 2009; Louyang Suntech reported using this program in 2008; and Zhenjiang Huantai reported using this program from 2004 through 2008. We preliminarily determine that the rebate of the VAT paid on purchases of Chinese-made equipment by FIEs confers a countervailable subsidy. The rebates are a financial contribution in the form of revenue forgone by the GOC and they provide a benefit to the recipients in the amount of the tax savings.[108] We further preliminarily determine that the VAT rebates are contingent upon the use of domestic over imported equipment and, hence, specific under section 771(5A)(A) and (C) of the Act.

Normally, we treat rebates from indirect taxes and import charges, such as VAT rebates, as recurring benefits, consistent with 19 CFR 351.524(c)(1), and expense these benefits in the year they were received. However, when an indirect tax or import charge exemption is provided for, or tied to, the capital structure or capital assets of a firm, the Department normally treats it as a non-recurring benefit and allocates the benefit to the firm over the AUL.[109] Because the rebates under this program were tied to purchased equipment, we preliminarily determine that the benefits under this program are tied to the capital structure or capital assets of the companies and that they should be allocated over time.

For those companies that received benefits under this program, we applied the ''0.5 percent test,'' pursuant to 19 CFR 351.524, for each of the years in which rebates were received. For the years in which the rebate amount was less than 0.5 percent of the relevant sales figure, we expensed the rebates in the year of receipt, consistent with 19 CFR 351.524(a). For those years in which the VAT rebates were greater than or equal to 0.5 percent, we allocated the rebate amount over the AUL. We used the discount rates described above in the ''Subsidies Valuation Information'' section to calculate the amount of the benefit allocable to the POI. On this basis, we preliminarily determine that Trina Solar received a countervailable subsidy rate of 0.01 percent *ad valorem* under this program. As Luoyang Suntech and Zhenjiang Huantai did not receive rebates during the POI and, as none of the rebates they received prior to the POI passed the 0.5 percent test, no benefits for either company were allocated to the POI. Therefore, we preliminarily determine that Wuxi Suntech did not receive a benefit under this program during the POI.

I. Sub-Central Government Subsidies for Development of ''Famous Brands'' and ''China World Top Brands''

According to the ''Implementation Opinion on Further Promoting the Development of Brand Economy'' (XIZHENGFA {2006} No. l06), the government of Wuxi City provides a lump sum award to enterprises that receive a ''famous brands'' certificate. The award is jointly provided by the city, county, and district finance bureaus. Though this program is operated at the local level, the GOC issued the circular titled ''Measures for the Administration of Chinese Top-Brand Products,'' which requires that firms provide information in their ''famous brands'' applications concerning their export ratios as well as the extent to which their product quality meets international standards.[110] During the POI, Wuxi Suntech reported receiving a famous brands grant under this program from the local government.

We preliminarily determine that the grant that Wuxi Suntech received under this program constitutes a financial contribution and a benefit under sections 771(5)(D)(i) and 771(5)(E) of the Act, respectively. Regarding specificity, section 771(5A)(B) of the Act states that an export subsidy is a subsidy that is, in law or in fact, contingent upon export performance, alone or as one of two or more conditions. Consistent with prior determinations regarding grants under

[103] *See* CFS from the PRC Decision Memorandum at Comment 16.

[104] *See* 19 CFR 351.524(c)(2)(iii) and 19 CFR 351.524(d)(2).

[105] *See* 19 CFR 351.524(b).

[106] *See* the GOC's January 31, 2012 questionnaire response at II–79, and at Exhibit O–II–D–2–a.

[107] *See* Citric Acid from the PRC Decision Memorandum at 20; *see also* CFS from the PRC Decision Memorandum at 13–14.

[108] *See* section 771(5)(D)(ii) of the Act and 19 CFR 351.510(a)(1).

[109] *See* 19 CFR 351.524(c)(2)(iii) and 19 CFR 351.524(d)(2).

[110] *See* the GOC's March 1, 2012 supplemental questionnaire response at Exhibit S1–1–a, Chapter 3 of the ''Measures for the Administration of Chinese Top-Brand Products.''

the famous brands program,[111] we determine that the grant provided to Wuxi Suntech under the ''famous brands'' program is contingent on export activity. As noted above, ''Measures for the Administration of Chinese Top-Brand Products'' of the central government makes clear that one criterion under this program is a company's export activity. As such, therefore, we find that the program is specific under section 771(5A)(B) of the Act. Grants are normally treated as non-recurring subsidies under 19 CFR 351.524(c). After conducting the ''0.5 percent test'' of 19 CFR 351.524(b)(2), we determine that the grant should be expensed to the year of receipt (*i.e.,* the POI). To calculate the subsidy, we divided the full amount of the grant received in the POI by the appropriate total sales denominator, as discussed in the ''Subsidies Valuation Information'' section above, and in the Preliminary Calculations Memoranda, to determine a subsidy rate less than 0.005 percent *ad valorem.* As such, this subsidy has no impact on the overall subsidy rate.

J. Discovered Grants

As explained above, the Department has determined that numerous grants provided to respondents are countervailable based upon AFA. Pursuant to 19 CFR 351.524(c) the Department normally treats grants as non-recurring subsidies. As such, the Department applied the ''0.5 percent test'' of 19 CFR 351.524(b) to each grant, individually, to determine whether it should be allocated. None of the Discovered Grants received during the POI passed the 0.5 percent test and, therefore, all such grants were attributed to the POI. In addition, some of the Discovered Grants received prior to the POI passed the 0.5 percent test and have been allocated to the POI. We calculated the subsidy from each grant separately by dividing the entire amount of the grant by the appropriate sales figure for the POI. Respondents' program descriptions indicate certain grants were export contingent. We determined such grants were export subsidies and used total export sales as the denominator. If the subsidy rate calculated for any particular grant was less than 0.005 percent *ad valorem,* that grant was determined to have no impact on the overall subsidy rate, and was therefore disregarded. After summing all the subsidy rates arising from the remaining Discovered Grants, rounded to the nearest one-hundredth of one percent, we calculated a combined subsidy rate of 0.39 percent *ad valorem* for Trina Solar and 0.36 percent *ad valorem* for Wuxi Suntech. The grants found to be used during the POI that are publicly identified by respondents are listed below. Those grants that were bracketed by the respondents, along with the individual subsidy rates for all grants, are listed in the business-proprietary Preliminary Calculations Memoranda.[112]

1. Wuxi Airport 800KW program
2. PV Technology Research Institute of Jiangsu (Suntech)
3. Fund for Solar Optoelectronic Application Demonstration by Management Committee of the New District
4. Self-Research on Core Equipment of Solar PV and Semiconductor Lighting Industry—Self Research on New On-Line Direct Method PEVCD
5. Demonstration Project of 300KW Roof Solar PV Grid Power Generation System
6. Industrialization and Research of New Solar Cells
7. Research and Industrialization of Thin Film Cells
8. Research on Highly Efficient and Low-Cost Thin Film Cells
9. Technology and Application Research on Glass-Base Suede Gazno Transparent and Electrically Conductive Film Manufacture
10. Demonstration Program of 300KV Roof Solar PV Grid Power Generation System
11. Renewable Energy of Finance of Bureau, Wuxi City
12. Research on New-Style High-Transmission Solar Cell Reducing the Refection Film with Nano Structure
13. Fund for Construction of Suntech's Energy Institution by the Management Committee of New District
14. Public Welfare Project Funding From Supervision and Examination Station of Product Quality, Wuxi City
15. Provincial Export Credit Insurance Supporting Development Fund Allocation by Management Committee of New District from December 2008 to June 2009
16. Patent Fund from Management Committee of New District, Wuxi Government
17. Special Reward for ''333'' Program by Municipal Organization Department
18. Science and Research Budget Allocation for Renewable-Energy Construction Application Technology Project of Wuxi Suntech's R&D Building by Construction Bureau of Wuxi
19. Photovoltaic Technology Research Expenses by Personnel Bureau
20. Social Insurance Fund for Employers from Sichuan Earthquake Stricken Area
21. Import Discount by Jiangsu Provincial Government
22. Employment Expansion Planning Reward by Management Committee of New District
23. Fund for Demonstration Company of 2009 Provincial Intelligence Introduction Program
24. The First Group of Patent Fund in 2010 Provided by the Wuxi Government
25. Research, Development and Industrialization of Technology and Key Equipment for P–Type Solar Power Cells with High Efficiency and Low Cost
26. Award for Luoyang City Outstanding Private Enterprise for 2009
27. Plan for Thousand Talents

II. Programs Preliminarily Determined To Be Not Used by Respondents in the POI

We preliminarily determine that Trina Solar and Wuxi Suntech did not apply for or receive benefits during the POI under the programs listed below. Because of the complicated cross-ownership issues in this investigation, we are continuing to gather information concerning the reported non-use of these programs by all companies that may be cross-owned within each company's corporate structure.

[111] *See, e.g., Aluminum Extrusions From the People's Republic of China: Final Affirmative Countervailing Duty Determination,* 76 FR 18521 (April 4, 2011), and accompanying Issues and Decision Memorandum at the section ''GOC and Sub-Central Government Grants, Loans, and Other Incentives for Development of Famous Brands and China World Top Brands,'' and *Pre-Stressed Concrete Steel Wire Strand from the People's Republic of China: Final Affirmative Countervailing Duty Determination,* 75 FR 28557 (May 21, 2010) (*PC Strand from the PRC*), and accompanying Issues and Decision Memorandum (PC Strand from the PRC Decision Memorandum) at the section ''Subsidies for Development of Famous Export Brands and China World Top Brands at Central and Sub-Central Level.''

[112] The Department intends to seek clarification from the respondents regarding why most program names are business proprietary.

A. Export Product Research and Development Fund

B. Subsidies for Development of ''Famous Brands'' and ''China World Top Brands''

C. Special Energy Fund (Established by Shandong Province

D. Funds for Outward Expansion of Industries in Guangdong Province

E. Government Provision of Aluminum for LTAR

Petitioner's allegation focused on primary aluminum.[113] Both respondents reported that they did not purchase primary aluminum, only aluminum extrusions, a downstream product produced from primary aluminum. Therefore, we are preliminarily finding this program to be not used by the respondents.

F. Income Tax Reductions for Export-Oriented FIEs

G. Income Tax Benefits for FIEs Based on Geographic Location

H. Local Income Tax Exemption and Reduction Programs for ''Productive'' FIEs

I. Tax Refunds for Reinvestment of FIE Profits in Export-Oriented Enterprises

J. Tax Reductions for High and New-Technology Enterprises Involved in Designated Projects

K. Preferential Income Tax Policy for Enterprises in the Northeast Region

L. Guangdong Province Tax Programs

M. VAT and Tariff Exemptions for Purchases of Fixed Assets Under the Foreign Trade and Development Fund Program

N. Tax Reductions for FIEs Purchasing Chinese-Made Equipment

Certain cross-owned affiliates of the respondents reported receiving tax reductions under this program prior to the POI. Because the Department has treated this program as a recurring subsidy program in prior investigations, we preliminarily determine the reductions to be recurring in this investigation as well. Therefore, no benefits were received during the POI by the respondents.

O. Export Credit Subsidy Programs

P. Export Guarantees and Insurance for Green Technology

After analyzing the responses of Trina Solar and Wuxi Suntech, the Department preliminarily determines that neither of the respondents received benefits under this program during the POI.[114]

Q. Discovered Grants

As explained above, the Department has determined, as AFA, that numerous grants provided to the respondents are countervailable. Pursuant to 19 CFR 351.524(c) the Department normally treats grants as non-recurring subsidies. As such, the Department applied the ''0.5 percent test'' of 19 CFR 351.524(b) to each grant, individually, to determine whether it should be allocated. Most of the Discovered Grants received prior to the POI failed the 0.5 percent test and were therefore expensed prior to the POI. Thus, all such grants are preliminarily found to have been not used during the POI by the respondents. None of these grants were publicly identified by the respondents. Therefore, these ''non-used'' grants are all listed in the business-proprietary Preliminary Calculations Memoranda.

III. Programs for Which Additional Information Is Required

The Department finds that additional information is needed in order to determine whether the following programs are countervailable. After gathering and analyzing the additional information, the Department intends to issue a post-preliminary analysis regarding whether these programs are countervailable.

A. The Provision of Land for LTAR to Wuxi Suntech

As discussed above, the GOC did not provide all of the information requested regarding how prices paid by respondents for land-use rights were determined and the information provided requires further clarification.[115] The Department intends to request further information for land provided to Wuxi Suntech. The Department also intends to request additional information from the GOC regarding the reported private nature of some of the parties from which Wuxi Suntech purchased land-use rights.

B. Provision of Electricity for LTAR

The questionnaire responses were not complete regarding the alleged provision of electricity for LTAR. These questions requested information needed by the Department to determine whether such a provision was specific with the meaning of section 771(5A) of the Act, and whether a benefit within the meaning of section 771(5)(E) of the Act was provided. The Department intends to request further information from the GOC after the issuance of this preliminary determination.

C. Enterprise Income Tax Law, Research and Development (R&D) Program

According to the GOC, Article 30.1 of the Enterprise Income Tax Law of the PRC created a new program regarding the deduction of research and development expenditures for all enterprises.[116] This provision allows enterprises to deduct, through tax credits, research expenditures incurred in the development of new technologies, products, and processes. Article 95 of ''The Release of Regulations on the Implementation of Enterprise Income Tax Law of the People's Republic of China by the State Council, [2007] No. 512,'' December 6, 2007, provides that if eligible research expenditures do not ''form part of the intangible assets value,'' an additional 50 percent deduction from taxable income may be taken on top of the actual accrual amount. Where these expenditures form the value of certain intangible assets, the expenditures may be amortized based on 150 percent of the intangible assets costs. Trina Solar and Wuxi Suntech both reported benefitting from this program during the POI. The Department intends to request additional information regarding the specificity of the program.

Verification

In accordance with section 782(i)(1) of the Act, the Department will verify the information submitted by the GOC, Trina Solar, and Wuxi Suntech, prior to making our final determination.

Suspension of Liquidation

In accordance with section 705(c)(1)(B)(i)(I) of the Act, we have calculated an individual countervailable subsidy rate for each respondent. Section 705(c)(5)(A)(i) of the Act states that for companies not individually investigated, we will determine an all others rate equal to the weighted average of the countervailable subsidy rates established for exporters and producers individually investigated, excluding any zero and *de minimis* countervailable subsidy rates, and any

[113] *See* Initiation Checklist at 12.

[114] *See* Preliminary Calculations Memoranda for an analysis of the respondents' business proprietary information.

[115] The Department did not ask exactly the same questions of the GOC regarding land provided to both respondents. The Department had additional questions regarding auction sales to Trina Solar that were not relevant to Suntech.

[116] The GOC notes that the provision providing this income tax reduction to FIEs was terminated in 2008 by the Enterprise Income Tax Law of the PRC. *See* the GOC's January 31, 2012 submission at II–62.

rates based entirely on AFA under section 776 of the Act.

Notwithstanding the language of section 705(c)(5)(A)(i) of the Act, we have not calculated the ''all others'' rate by weight averaging the rates of Trina Solar and Wuxi Suntech, because doing so risks disclosure of proprietary information. Therefore, we have calculated an average rate using other information on the record.[117] Since both Trina Solar and Wuxi Suntech received countervailable export subsidies and the ''all others'' rate is an average based on the individually investigated exporters and producers, the ''all others'' rate includes export subsidies.

We preliminarily determine the total countervailable subsidy rates to be as follows.

Company	Subsidy rate
Changzhou Trina Solar Energy Co., Ltd.	4.73 percent *ad valorem*.
Trina Solar (Changzhou) Science and Technology Co., Ltd (collectively, Trina Solar)	
Wuxi Suntech Power Co., Ltd	2.90 percent *ad valorem*.
Luoyang Suntech Power Co., Ltd	
Suntech Power Co., Ltd	
Yangzhou Rietech Renewal Energy Co., Ltd	
Zhenjiang Huantai Silicon Science & Technology Co., Ltd	
Kuttler Automation Systems (Suzhou) Co., Ltd (collectively, Wuxi Suntech)	
All Others Rate	3.61 percent *ad valorem*.

In accordance with sections 703(d)(1)(B) and (2), and 703(e)(2)(A) of the Act, in light of our preliminary affirmative determination of critical circumstances, we are directing CBP to suspend liquidation of all entries of the subject merchandise from the PRC that are entered or withdrawn from warehouse, for consumption on or after the date 90 days prior to the date of publication of this notice in the **Federal Register**, and to require a cash deposit or bond for such entities of the merchandise in the amounts indicated above.

ITC Notification

In accordance with section 703(f) of the Act, we will notify the ITC of our determination. In addition, we are making available to the ITC all non-privileged and non-proprietary information relating to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order, without the written consent of the Assistant Secretary for Import Administration.

In accordance with section 705(b)(2) of the Act, if our final determination is affirmative, the ITC will make its final determination within 45 days after the Department makes its final determination.

Disclosure and Public Comment

In accordance with 19 CFR 351.224(b), we will disclose to the parties the calculations for this preliminary determination within five days of its announcement. We will notify parties of the schedule for submitting case briefs and rebuttal briefs, in accordance with 19 CFR 351.309(c) and 19 CFR 351.309(d)(1), respectively. A list of authorities relied upon, a table of contents, and an executive summary of issues should accompany any briefs submitted to the Department. Executive summaries should be limited to five pages total, including footnotes. Section 774 of the Act provides that the Department will hold a public hearing to afford interested parties an opportunity to comment on arguments raised in case or rebuttal briefs, provided that such a hearing is requested by an interested party.

Interested parties who wish to request a hearing, or to participate if one is requested, must submit a written request to the Assistant Secretary for Import Administration, U.S. Department of Commerce, Room 1870, within 30 days of the publication of this notice, pursuant to 19 CFR 351.310(c). Requests should contain: (1) The party's name, address, and telephone number; (2) the number of participants; and (3) a list of the issues to be discussed. Oral presentations will be limited to issues raised in the briefs. If a request for a hearing is made in this investigation, we intend to hold the hearing two days after the deadline for submission of the rebuttal briefs, pursuant to 19 CFR 351.310(d). Any such hearing will be held at the U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230. Parties should confirm by telephone, the date, time, and place of the hearing 48 hours before the scheduled time.

This determination is issued and published pursuant to sections 703(f) and 771(i) of the Act.

Dated: March 19, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

[FR Doc. 2012–7273 Filed 3–23–12; 8:45 am]

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

[Docket Number: 120216139–2138–01]

Buy American Exception Under the American Recovery and Reinvestment Act of 2009

AGENCY: National Institute of Standards and Technology, U.S. Department of Commerce.

SUMMARY: The Department of Commerce, National Institute of Standards and Technology is providing notice of a determination of an exception to the Buy American Provisions of the American Recovery and Reinvestment Act of 2009 (ARRA or Recovery Act), for inverters necessary for the construction of a solar array system at NIST's WWVH radio station in Kauai, HI.

FOR FURTHER INFORMATION CONTACT: Jason Gerloff, Contracting Officer, Acquisition Management Division, 303–497–6320, National Institute of Standards and Technology, 325 Broadway, Boulder, CO 80305.

SUPPLEMENTARY INFORMATION: Section 1605 of the Recovery Act (Pub. L. 111–5) prohibits use of recovery funds ''for a project for the construction, alteration, maintenance, or repair of a public building or public work unless all of the iron, steel, and manufactured goods

[117] *See* Memorandum to the File from Emily Halle, ''Calculation of the All-Others Rate,'' March 19, 2012, providing the precise calculation and demonstrating the proximity of the resulting figure to the figure derived using the business-proprietary data.

used in the project are produced in the United States.'' However, section 1605(b)(2) allows the head of a Federal department or agency to issue a ''determination of nonavailability'' if the iron, steel, or manufactured good is not produced or manufactured in the United States in sufficient and reasonably available quantities and of a satisfactory quality. Pursuant to section 1605(b)(2), and a delegation of authority by the Secretary of Commerce, the NIST Director has determined that the required inverters were not manufactured in the United States.

In May 2010, NIST awarded a Recovery Act contract in the amount of $1,415,000.00 to Adon Construction for the construction of a 120kw photovoltaic solar array system to be built in eight 15kw sub-arrays at NIST's WWVH radio station in Kauai, HI. The objective of the solar array project is to produce power for the radio station and feed electricity back to the local grid. By doing this, the NIST radio station will be able to cut its utility costs and show a cost savings for future years on electricity.

The contract specifications required that all exterior photovoltaic equipment be in stainless steel or PVC enclosures that carried a minimum National Electrical Manufacturers Association (NEMA) 3R rating. An inverter is an essential piece of electrical equipment that converts DC electrical power to AC electrical power; without the inverters, the solar array could not be used for site operations. In July of 2010, the contractor proposed using three 5kw, 208V AC, single phase inverters inside of NEMA 3R, 6060 aluminum enclosures for each 15kw sub-array. The contractor notified NIST that its research indicated there were no American-made products that met the project specifications. NIST completed a review of the contractor's findings and concurred that neither the 5kw nor 15kw inverters in stainless steel, PVC, or aluminum 6060 enclosures were produced or manufactured in the U.S. in sufficient and reasonably available quantities of a satisfactory quality in July 2010. NIST also determined that the aluminum enclosures were an acceptable alternative to the stainless steel or PVC materials originally specified because they would be able to withstand the rigors of outdoor use in a tropical climate.

Based on NIST and the contractor's review of the market place and various vendors' product availability, NIST determined there were no inverters manufactured in the United States that met the contract specifications or NIST's requirements.

Authority: Pub. L. 111–5, section 1605.

Dated: March 16, 2012.

Willie E. May,

Associate Director for Laboratory Programs.

BILLING CODE 3510–13–P

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

Work Group on Alternative Test Methods for Commercial Measuring Devices

AGENCY: National Institute of Standards and Technology, Commerce.

ACTION: Notice.

SUMMARY: The National Institute of Standards and Technology (NIST) is forming a Work Group (WG) to examine alternative methods for testing the accuracy of commercial measuring devices including, but not limited to retail motor-fuel dispensers. The WG will investigate the current methodology and standards (*e.g.*, neck-type volumetric field standards and associated test procedures) widely used by weights and measures officials and service companies to test commercial measuring devices as well as proposed alternatives to ensure that the methodologies and standards facilitate measurements that are traceable to the International System of Units (SI). WG membership is open to any interested party. This notice also summarizes key issues to be considered by this WG.

DATES: An initial WG meeting will be held on Tuesday, April 24, 2012, from 10 a.m. to 5 p.m. Subsequent meeting dates will be determined based on the concurrence of the WG members.

ADDRESSES: An initial meeting of the WG will be at NIST, 100 Bureau Drive, Gaithersburg, MD 20899. Subsequent locations for WG meetings may include NIST as well as sites suggested by WG members offering to host meetings. WG meetings will also be conducted via Web conferencing. Please note admittance instructions under the **SUPPLEMENTARY INFORMATION** section of this notice.

FOR FURTHER INFORMATION CONTACT: Ms. Carol Hockert, Chief, NIST, Office of Weights and Measures, 100 Bureau Drive, Stop 2600, Gaithersburg, MD 20899–2600. You may also contact Ms. Hockert by telephone (301) 975–5507 or by email at *Carol.Hockert@nist.gov.* Please contact Ms. Hockert for information on upcoming meetings.

SUPPLEMENTARY INFORMATION: The formation of this WG and its associated meetings is intended to bring together government officials and representatives of business, industry, trade associations, and consumer organizations on the subject of standards and test procedures used in the testing of commercial measuring devices by regulatory officials and service companies. NIST participates to promote uniformity among the states in laws, regulations, methods, and testing equipment that comprises the regulatory control of commercial weighing and measuring devices and other trade and commerce issues.

Included among the topics to be discussed by the WG for current and proposed device technologies used in testing commercial measuring devices are: metrology laboratory standards and test procedures; uncertainties; measurement traceability; tolerances and other technical requirements for commercial measuring devices; existing standards for testing equipment; field implementation; data analysis; field test procedures; field enforcement issues; training at all levels; and other relevant issues identified by the WG. WG recommendations may result in the revision of current standards or the development of new standards for testing equipment, including documents such as the NIST Handbook 105 Series for field standards; NIST Handbook 44, *Specifications, Tolerances, and Technical Requirements for Weighing and Measuring Devices;* and NIST Examination Procedure Outlines, as well as proposed changes to requirements and testing procedures for commercial measuring devices.

All visitors to the NIST site are required to pre-register to be admitted. Anyone wishing to attend this meeting must register by close of business Tuesday, April 17, 2012, in order to attend. Please submit your full name, email address, and phone number to Ms. Hockert. Non-U.S. citizens must also submit their country of citizenship, title, and employer/sponsor. Ms. Hockert's email address is *carol.hockert@nist.gov* and her phone number is (301) 975–5507.

Dated: March 16, 2012.

Willie E. May,

Associate Director for Laboratory Programs.

BILLING CODE 3510–13–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Proposed Information Collection; Comment Request; Observer Programs' Information that Can Be Gathered Only Through Questions

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before May 25, 2012.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at *JJessup@doc.gov*).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Chris Rilling, (301) 427–8168, (*Chris.Rilling@noaa.gov*).

SUPPLEMENTARY INFORMATION:

I. Abstract

The National Oceanic and Atmospheric Administration (NOAA), National Marine Fisheries Service (NMFS) deploys fishery observers on United States (U.S.) commercial fishing vessels and to fish processing plants in order to collect biological and economic data. NMFS has at least one observer program in each of its six Regions. These observer programs provide the most reliable and effective method for obtaining information that is critical for the conservation and management of living marine resources. Observer programs primarily obtain information through direct observations by employees or agents of NMFS; and such observations are not subject to the Paperwork Reduction Act (PRA). However, observer programs also collect the following information that requires clearance under the PRA: (1) Standardized questions of fishing vessel captains/crew or fish processing plant managers/staff, which include gear and performance questions, safety questions, and trip costs, crew size and other economic questions; (2) questions asked by observer program staff/contractors to plan observer deployments; (3) forms that are completed by observers and that fishing vessel captains are asked to review and sign; (4) questionnaires to evaluate observer performance; and (5) a form to certify that a fisherman is the permit holder when requesting observer data from the observer on the vessel. NMFS seeks to renew OMB PRA clearance for these information collections.

The information collected will be used to: (1) Monitor catch and bycatch in federally-managed commercial fisheries; (2) understand the population status and trends of fish stocks and protected species, as well as the interactions between them; (3) determine the quantity and distribution of net benefits derived from living marine resources; (4) predict the biological, ecological, and economic impacts of existing management action and proposed management options; and (5) ensure that the observer programs can safely and efficiently collect the information required for the previous four uses. In particular, these biological and economic data collection programs contribute to legally mandated analyses required under the Magnuson-Stevens Fishery Conservation and Management Act (MSA), the Endangered Species Act (ESA), the Marine Mammal Protection Act (MMPA), the National Environmental Policy Act (NEPA), the Regulatory Flexibility Act (RFA), Executive Order 12866 (EO 12866), as well as a variety of state statutes. The confidentiality of the data will be protected as required by the MSA, Section 402(b).

II. Method of Collection

The information will be collected by (1) NMFS observers while they are deployed on a vessel to observe a particular fishing trip; questions will be asked in-person to the captain, crew and/or owner (if on board the vessel) during the course of the observed trip; (2) via mail through a follow up surveys of economic information not available during the trip; (3) via telephone or mail survey by the observer program staff or contractor planning to deploy observers; or (4) via feedback questionnaires mailed to the vessel owners or captains to evaluate observer performance.

III. Data

OMB Control Number: 0648–0593.

Form Number: None.

Type of Review: Regular submission (extension of a currently approved information collection).

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 20,643.

Estimated Time per Response: 51 minutes. Information will be collected for observed fishing trips and deployments to fish processing plants; therefore, there will be multiple responses for some respondents, but counted as one response per trip or plant visit.

Estimated Total Annual Burden Hours: 26,172.

Estimated Total Annual Cost to Public: $1,160.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: March 21, 2012.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XB110

Marine Mammals; File No. 17159

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application.

SUMMARY: Notice is hereby given that Simon Nash, Parthenon Entertainment Ltd, 34 Whiteladies Road, Bristol, BS8 2LG, United Kingdom, has applied in due form for a permit to conduct commercial or educational photography

on spinner dolphins (*Stenella longirostris*).

DATES: Written, telefaxed, or email comments must be received on or before April 25, 2012.

ADDRESSES: These documents are also available upon written request or by appointment in the following offices:

Permits and Conservation Division, Office of Protected Resources, NMFS, 1315 East-West Highway Room 13705, Silver Spring, MD 20910; phone (301) 427–8401; fax (301) 713–0376; and

Pacific Islands Region, NMFS, 1601 Kapiolani Blvd., Rm. 1110, Honolulu, HI 96814–4700; phone (808) 944–2200; fax (808) 973–2941.

Written comments on this application should be submitted to the Chief, Permits and Conservation Division, at the address listed above. Comments may also be submitted by facsimile to (301) 713–0376, or by email to *NMFS.Pr1Comments@noaa.gov*. Please include the File No. in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request to the Chief, Permits and Conservation Division at the address listed above. The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Carrie Hubard or Kristy Beard, (301) 427–8401.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 *et seq.*) and the regulations governing the taking and importing of marine mammals (50 CFR part 216).

The applicant is requesting authorization to film spinner dolphins near Midway Atoll in the Pacific Ocean. Dolphins would be approached during morning and late afternoon when they are typically active, but would not be approached during their mid-day resting period. Filming techniques include above water from a vessel, a pole-mounted underwater camera, and a waterproof camera used by a snorkeling cameraman. Up to 1,300 dolphins could be approached annually during filming activities. Footage would be used primarily for a television documentary about Hawaiian wildlife that would be aired on Animal Planet in the U.S. and elsewhere internationally. The initial filming period is scheduled for two weeks in June/July 2012. The permit would be valid for five years.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of the application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: March 20, 2012.

Tammy C. Adams,

Acting Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XB107

Pacific Fishery Management Council (Pacific Council); Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting.

SUMMARY: The Pacific Council will convene a meeting of the Ecosystem Plan Development Team (EPDT) which is open to the public.

DATES: The EPDT will meet on Thursday, April 12, 2012 from 9 a.m. to 5 p.m., or when business for the day is completed.

ADDRESSES: The meeting will be held at the Hilton Seattle Airport, Mercer B Room, 17620 International Boulevard, Seattle, WA 98188–4001; telephone: (206) 244–4800.

FOR FURTHER INFORMATION CONTACT: Mike Burner, Staff Officer; telephone: (503) 820–2280.

SUPPLEMENTARY INFORMATION: Please note, this is not a public hearing; it is a work session for the primary purpose of drafting a report and recommendations to the Council on the Development of a Fishery Ecosystem Plan (FEP). The primary purpose of the meeting is to address Council requests from and since the November 2011 Council meeting, revise and expand sections of the Council's developing Fishery Ecosystem Plan, discuss the content and format of an annual ecosystem report, explore mechanisms for incorporating ecosystem science into stock assessments, and revisit the need and mechanisms for expanding protective measures for unexploited forage species. The EPDT may also develop recommendations for the June 2012 Council meeting.

Although non-emergency issues not contained in the meeting agenda may come before the EPDT for discussion, those issues may not be the subject of formal EPDT action during this meeting. EPDT action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under Section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt at (503) 820–2280 at least 5 days prior to the meeting date.

Dated: March 21, 2012.

Tracey L. Thompson,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

New England Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: The New England Fishery Management Council (Council) is scheduling a public meeting of its Whiting Oversight Committee on April 17, 2012 to consider actions affecting New England fisheries in the exclusive economic zone (EEZ). Recommendations from this group will be brought to the full Council for formal consideration and action, if appropriate.

DATES: This meeting will be held on Tuesday, April 17, 2012 at 10 a.m.

ADDRESSES: The meeting will be held at the Hotel Providence, 139 Mathewson Street, Providence, RI 02903; telephone: (401) 861–8000; fax: (401) 454–4306.

Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950.

FOR FURTHER INFORMATION CONTACT: Paul J. Howard, Executive Director, New England Fishery Management Council; telephone: (978) 465–0492.

SUPPLEMENTARY INFORMATION: The Oversight Committee will choose final alternatives for Draft Amendment 19, based on public hearing input and analysis of impacts. The draft alternatives include annual limits on catch and landings by fishery program and/or stock, in-season and post-season accountability measures including incidental possession limits, year-round red hake possession limits, and monitoring and specification procedures. These final alternatives will be recommended for approval at the April 24–26 Council meeting. Other matters relative to whiting or skate management may also be discussed.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Paul J. Howard, Executive Director, at (978) 465–0492, at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: March 21, 2012.

RIN 0660–XA27

Multistakeholder Process To Develop Consumer Data Privacy Codes of Conduct

AGENCY: National Telecommunications and Information Administration, U.S. Department of Commerce.

ACTION: Notice; Extension of Comment Period.

SUMMARY: The National Telecommunications and Information Administration (NTIA) announces that the closing deadline for submitting comments responsive to the March 5, 2012 request for public comments on the multistakeholder process to develop consumer data privacy codes of conduct has been extended until 5 p.m. Eastern Daylight Time (EDT) on April 2, 2012.

DATES: Comments are due by 5 p.m. EDT on April 2, 2012.

ADDRESSES: Written comments may be submitted by email to *privacyrfc2012@ntia.doc.gov.* Comments submitted by email should be machine-searchable and should not be copy-protected. Written comments also may be submitted by mail to 1401 Constitution Avenue NW., Room 4725, Washington, DC 20230. Responders should include the name of the person or organization filing the comment, as well as a page number on each page of their submissions. All comments received are a part of the public record and will generally be posted to *http://www.ntia.doc.gov/federal-register-notice/2012/comments-multistakeholder-process* without change. All personal identifying information (for example, name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: For general questions about this amended Notice contact Aaron Burstein, National Telecommunications and Information Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Room 4725, Washington, DC 20230; telephone (202) 482–1055; email *aburstein@ntia.doc.gov.* Please direct media inquiries to NTIA's Office of Public Affairs, (202) 482–7002.

SUPPLEMENTARY INFORMATION: On February 23, 2012, the Executive Office of the President released *Consumer Data Privacy in a Networked World: A Framework for Protecting Privacy and Promoting Innovation in the Global Digital Economy* (''the Privacy and Innovation Blueprint'').[1] The Privacy and Innovation Blueprint articulates a Consumer Privacy Bill of Rights and directs NTIA to convene open, transparent, consensus-based processes in which stakeholders develop legally enforceable codes of conduct that implement the Consumer Privacy Bill of Rights in specific settings. On March 5, 2012, NTIA requested public comments on (1) which consumer data privacy issues should be the focus of NTIA-convened multistakeholder processes, and (2) specific procedural considerations that NTIA should take into account when initiating a privacy multistakeholder process.[2] The request for public comments set a deadline for submission of comments on March 26, 2012. NTIA announces that the closing deadline for submission of comments responsive to the March 5, 2012 request has been extended until 5 p.m. EDT on April 2, 2012.

Dated: March 20, 2012.

Lawrence E. Strickling,

Assistant Secretary for Communications and Information.

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID DoD–2012–OS–0038]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense (Personnel and Readiness), DoD.

ACTION: Notice.

SUMMARY: In compliance with Section 3506(c)(2)(A) of the *Paperwork Reduction Act of 1995,* the Office of the Under Secretary of Defense (Personnel and Readiness) announces the following proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by May 25, 2012.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

• *Federal eRulemaking Portal: http://www.regulations.gov*. Follow the instructions for submitting comments.

• *Mail:* Federal Docket Management System Office, 4800 Mark Center Drive, East Tower, Suite 02G09, Alexandria, VA 22350–3100.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Defense Manpower Data Center (DMDC) ATTN: Ms. Kristin Williams, 4800 Mark Center Drive, Ste 04E25, Alexandria, VA, 22350, or call at (571) 372–1102.

Title, Associated Form, and OMB Control Number: The 2012 Post-Election Survey of State and Local Election Officials; OMB Control Number 0704–0125.

Needs and Uses: The information collection requirement is necessary to fulfill the mandate of the Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA of 1986 [42 U.S.C. 1973ff]). UOCAVA requires a statistical analysis report to the President and Congress on the effectiveness of assistance under the Act, a statistical analysis of voter participation, and a description of State/Federal cooperation.

Affected Public: State, Local or Tribal Government.

Annual Burden Hours: 2,000 hours.

Number of Respondents: 3,000.

Responses per Respondent: 1.

Average Burden per Response: 40 minutes.

Frequency: One time.

SUPPLEMENTARY INFORMATION:

Summary of Information Collection

UOCAVA requires the States to allow Uniformed Services personnel, their family members, and overseas citizens to use absentee registration procedures and to vote by absentee ballot in general, special, primary, and runoff elections for Federal offices. The Act covers members of the Uniformed Services and the merchant marine to include the commissioned corps of the National Oceanic and Atmospheric Administration and Public Health Service and their eligible dependents, Federal civilian employees overseas, and overseas U.S. citizens not affiliated with the Federal Government. Local Election Officials (LEO) process voter registration and absentee ballot applications, send absentee ballots to voters, and receive and process the voted ballots in counties, cities, parishes, townships and other jurisdictions within the U.S. LEOs, independently and in relation to their respective State election officicals, are often one of the most important pieces in the absentee voting process for UOCAVA citizens. The Federal Voting Assistance Program (FVAP) conducts the post-election survey of State and Local Election Officials to determine participation rates that are representative of all citizens covered by the Act, to measure State-Federal cooperation, and to evaluate the effectiveness of the overall absentee voting program. By design, the information collected be both quantitative (collected from both the State and Local Election Officials) and qualitative (collected from the Local Election Officials), and will be used for overall program evaluation, management and improvement, and to compile the congressionally-mandated report to the President and Congress.

Dated: March 2, 2012.

Patricia L. Toppings,

OSD Federal Register Liaison Officer, Department of Defense.

Proposed Reinstatement; Comment Request

AGENCY: Defense Logistics Agency, DoD.

ACTION: Notice.

SUMMARY: In compliance with Section 3506(c)(2)(A) of the *Paperwork Reduction Act of 1995,* the Defense Logistics Agency announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information shall have practical utility; (b) the accuracy of the Agency's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by May 25, 2012.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

• *Federal eRulemaking Portal: http://www.regulations.gov*. Follow the instructions for submitting comments.

• *Mail:* Federal Docket Management System Office, 4800 Mark Center Drive, East Tower, Suite 02G09, Alexandria, VA 22350–3100.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Defense Logistics Agency, ATTN: U.S./Canada Joint Certification Office, DLA Logistics Information Service-LFT, Attn: Stephen G. Riley, Federal Center, 74 Washington Ave. N., Battle Creek, MI 49017–3084, or call (269) 961–5464.

Title; Associated Form; and OMB Number: Militarily Critical Technical Data Agreement, DD Form 2345, OMB 0704–0207.

Needs and Uses: The information collection requirement is necessary as a basis for certifying enterprises or individuals to have access to DoD export-controlled militarily critical technical data subject to the provisions of 32 CFR part 250. Enterprises and individuals that need access to unclassified DoD-controlled militarily critical technical data must certify on DD Form 2345, Militarily Critical Technical Data Agreement, that data will be used only in ways that will inhibit unauthorized access and maintain the protection afforded by U.S. export control laws. The information collected is disclosed only to the extent

consistent with prudent business practices, current regulations, and statutory requirements and is so indicated on the Privacy Act Statement of DD Form 2345.

Affected Public: Individuals or households; businesses or other for profit; not-for-profit institutions.

Annual Burden Hours: 2667.

Number of Respondents: 8,000.

Responses per Respondent: 1.

Average Burden per Response: 0.33 hours (20 minutes).

Frequency: On occasion

SUPPLEMENTARY INFORMATION:

Summary of Information Collection

Use of DD Form 2345 permits U.S. and Canada defense contractors to certify their eligibility to obtain certain unclassified technical data with military and space applications. Non-availability of this information prevents defense contractors from accessing certain restricted databases and obstructs conference attendance where restricted data will be discussed.

Dated: February 15, 2012.

BILLING CODE 5001–06–P

DEPARTMENT OF EDUCATION

Notice of Submission for OMB Review; Institute of Education Sciences; Quick Response Information System (QRIS) 2012–2015 System Clearance

SUMMARY: The National Center for Education Statistics (NCES) Quick Response Information System (QRIS) consists of the Fast Response Survey System (FRSS) and the Postsecondary Education Quick Information System (PEQIS). The QRIS currently conducts surveys under OMB generic clearance 1850–0733, which expires in June 2012. This submission requests approval to continue the current clearance conditions through 2015. FRSS primarily conducts surveys of the elementary/secondary sector (districts, schools) and public libraries. PEQIS conducts surveys of the postsecondary education sector.

DATES: Interested persons are invited to submit comments on or before April 25, 2012.

ADDRESSES: Written comments regarding burden and/or the collection activity requirements should be electronically mailed to *ICDocketMgr@ed.gov* or mailed to U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Washington, DC 20202–4537. Copies of the proposed information collection request may be accessed from *http://edicsweb.ed.gov,* by selecting the ''Browse Pending Collections'' link and by clicking on link number 04777. When you access the information collection, click on ''Download Attachments'' to view. Written requests for information should be addressed to U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Washington, DC 20202–4537. Requests may also be electronically mailed to *ICDocketMgr@ed.gov* or faxed to 202–401–0920. Please specify the complete title of the information collection and OMB Control Number when making your request.

Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires that Federal agencies provide interested parties an early opportunity to comment on information collection requests. The Director, Information Collection Clearance Division, Privacy, Information and Records Management Services, Office of Management, publishes this notice containing proposed information collection requests at the beginning of the Departmental review of the information collection. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Quick Response Information System (QRIS) 2012–2015 System Clearance.

OMB Control Number: 1850–0733.

Type of Review: Revision.

Total Estimated Number of Annual Responses: 104,004.

Total Estimated Number of Annual Burden Hours: 31,704.

Abstract: FRSS and PEQIS surveys are cleared under the QRIS generic clearance. The QRIS clearance is subject to the regular clearance process at the Office of Management and Budget (OMB) with a 60-day notice and a 30-day notice as part of the 120-day review period. Each individual FRSS or PEQIS survey is then subject to clearance process with an abbreviated clearance package, justifying the particular content of the survey, describing the sample design, the timeline for the survey activities, and the questionnaire. The review period for each individual survey is approximately 45 days, including a 30-day **Federal Register** notice period. OMB will provide comments as soon after the end of the 30-day notice period as possible. This generic clearance request is for surveys of state education agencies, school districts, schools, postsecondary institutions, and libraries. Surveys of teachers, students, commercial establishments, and households are not included in this request.

Dated: March 21, 2012.

Darrin A. King,

Director, Information Collection Clearance Division, Privacy, Information and Records Management Services, Office of Management.

DEPARTMENT OF EDUCATION

Notice of Submission for OMB Review; Institute of Education Sciences; National Assessment of Educational Progress (NAEP) 2011–13 System Clearance

SUMMARY: The National Assessment of Educational Progress (NAEP) is a federally authorized survey of student achievement at grades 4, 8, and 12 in various subject areas, such as mathematics, reading, writing, science, U.S. history, civics, geography, economics, and the arts.

DATES: Interested persons are invited to submit comments on or before April 25, 2012.

ADDRESSES: Written comments regarding burden and/or the collection activity requirements should be electronically mailed to *ICDocketMgr@ed.gov* or mailed to U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Washington, DC 20202–4537. Copies of the proposed information collection request may be accessed from *http://edicsweb.ed.gov,* by selecting the ''Browse Pending Collections'' link and by clicking on link number 04829. When you access the information collection, click on ''Download Attachments'' to view. Written requests for information should be addressed to U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Washington, DC 20202–4537. Requests may also be electronically mailed to *ICDocketMgr@ed.gov* or faxed to 202–401–0920. Please specify the complete title of the information collection and OMB Control Number when making your request.

Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35) requires that Federal agencies provide interested parties an early opportunity to comment on information collection requests. The Director, Information Collection Clearance Division, Privacy, Information and Records Management Services, Office of Management, publishes this notice containing proposed information collection requests at the beginning of the Departmental review of the information collection. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: National Assessment of Educational Progress (NAEP) 2011–13 System Clearance.

OMB Control Number: 1850–0790.

Type of Review: Revision.

Total Estimated Number of Annual Responses: 789,350.

Total Estimated Number of Annual Burden Hours: 221,888.

Abstract: The National Assessment of Educational Progress (NAEP) is a federally authorized survey of student achievement at grades 4, 8, and 12 in various subject areas, such as mathematics, reading, writing, science, U.S. history, civics, geography, economics, and the arts. In the current legislation that reauthorized NAEP (20 U.S.C. 9622), Congress again mandated the collection of national education survey data through a national assessment program. The 2013 Wave 1 submittal contains the following questionnaires for main NAEP: (1) The grades 4, 8, and 12 core (demographic) student background questions, and (2) the grades 4 and 8 reading and mathematics subject-specific student background questionnaires.

Dated: March 21, 2012.

Darrin A. King,

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Proposed Agency Information Collection

AGENCY: U.S. Department of Energy, DOE.

ACTION: Notice and Request for OMB Review and Comment.

SUMMARY: The Department of Energy (DOE) has submitted to the Office of Management and Budget (OMB) for clearance, a proposal for collection of information under the provisions of the Paperwork Reduction Act of 1995. The proposed collection will be used to report the progress of participants in the DOE Better Buildings Challenge (BBC) program. The Better Buildings Challenge is a presidential leadership initiative intended to drive greater energy efficiency in the commercial and industrial marketplace to create cost savings and jobs. This will be accomplished by highlighting the ways participants overcome market barriers and persistent obstacles with replicable, marketplace solutions. The program will showcase real solutions and partner with industry leaders to better understand policy and technical opportunities. President Obama launched the Better Buildings Challenge on December 2, 2011.

DATES: Comments regarding this collection must be received on or before April 25, 2012. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, please advise the DOE Desk Officer at OMB of your intention to make a submission as soon as possible. The Desk Officer may be telephoned at 202–395–4650.

ADDRESSES: Written comments should be sent to the DOE Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10102, 735 17th Street NW., Washington, DC 20503.

And to Monica Neukomm, 202–586–8177, *monica.neukomm@ee.doe.gov.*

FOR FURTHER INFORMATION CONTACT: Monica Neukomm, 202–586–8177, *monica.neukomm@ee.doe.gov*.

SUPPLEMENTARY INFORMATION: This information collection request contains: (1) OMB No. {''New''}; (2) Information Collection Request Title: Department of Energy Better Buildings Challenge Information Collection Request; (3) Type of Request: New collection; (4) Purpose: The collected information will be used to report the progress of participants in the DOE Better Buildings Challenge (BBC) program; (5) Annual Estimated Number of Respondents: 130; (6) Annual Estimated Number of Total Responses: 1,714; (7) Annual Estimated Number of Burden Hours: 788; (8) Annual Estimated Reporting and Recordkeeping Cost Burden: $0.

Statutory Authority: Section 421 of the Energy Independence and Security Act of 2007 (42 U.S.C. 17081); Section 911 of the Energy Policy Act of 2005, as amended (42 U.S.C. 16191).

Issued in Washington, DC, on March 20, 2012.

Maria Tikoff Vargas,

Energy Technology Specialist, Better Buildings Challenge, Office of Energy Efficiency and Renewable Energy.

[FR Doc. 2012–7192 Filed 3–23–12; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

U.S. Energy Information Administration

Agency Information Collection Extension

AGENCY: U.S. Energy Information Administration (EIA), Department of Energy.

ACTION: Agency Information Collection Activities: Information Collection Extension; Notice and Request for Comments.

SUMMARY: The EIA intends to extend for three years, Form EIA–851A ''Domestic Uranium Production Report (Annual),'' Form EIA–851Q ''Domestic Uranium Production Report (Quarterly),'' and Form EIA–858 ''Uranium Marketing Annual Survey,'' with the Office of Management and Budget (OMB) pursuant to the Paperwork Reduction Act of 1995. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Comments regarding this proposed information collection must be received on or before May 25, 2012. If you anticipate difficulty in submitting comments within that period, contact the person listed in **ADDRESSES** as soon as possible.

ADDRESSES: Send comments to Douglas Bonnar. The mailing address is Department of Energy, U.S. Energy Information Administration, Attn: Douglas Bonnar, EI–23, Forrestal Building, 1000 Independence Avenue SW., Washington, DC 20585. To ensure receipt of the comments by the due date, submission by email (*douglas.bonnar@eia.gov*) is recommended. Alternatively, Douglas Bonnar may be contacted by telephone at 202–586–1085 or by fax at 202–586–3045.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the forms and instructions should be directed to Douglas Bonnar at the contact information given above. Forms and instructions are also available on the Internet at: *http://www.eia.gov/survey/#uranium.*

SUPPLEMENTARY INFORMATION: This information collection request contains:

(1) OMB No. 1905–0160;

(2) *Information Collection Request Title:* Uranium Data Program;

(3) *Type of Request:* Three-year extension;

(4) *Purpose:*

The Federal Energy Administration Act of 1974 (Pub. L. 93–275, 15 U.S.C. 761 *et seq.*) and the DOE Organization Act (Pub. L. 95–91, 42 U.S.C. 7101 *et seq.*) require the EIA to carry out a centralized, comprehensive, and unified energy information program. This program collects, evaluates, assembles, analyzes, and disseminates information on energy resource reserves, production, demand, technology, and related economic and statistical information. This information is used to assess the adequacy of energy resources to meet near and longer term domestic demands.

The EIA, as part of its effort to comply with the Paperwork Reduction Act of 1995, (Pub. L. 104–13, 44 U.S.C. chapter 3501 *et seq.*), provides the general public and other Federal agencies with opportunities to comment on collections of energy information conducted by or in conjunction with the EIA. Any comments received help the EIA to prepare data requests that maximize the utility of the information collected, and to assess the burden of collection requirements on the public. The EIA will later seek approval by the Office of Management and Budget (OMB) under Section 3507(a) of the Paperwork Reduction Act of 1995.

Form EIA–851A collects annual data from the U.S. uranium industry on

uranium milling and processing, uranium feed sources, uranium mining, employment, drilling, expenditures, and uranium reserves. The data are used by Congress and the public. The data collected may appear in the following EIA publications: *Domestic Uranium Production Report—Annual, http://www.eia.gov/uranium/production/annual/; Domestic Uranium Production Report—Quarterly, http://www.eia.gov/uranium/production/quarterly/;* and *Annual Energy Review, http://www.eia.gov/totalenergy/data/annual/.*

Form EIA–851Q collects monthly data from the U.S. uranium industry on uranium production and sources (mines and other) on a quarterly basis. The data are used by Congress and the public. The data collected may appear in the following EIA publications: *Domestic Uranium Production Report—Quarterly, http://www.eia.gov/uranium/production/quarterly/; Domestic Uranium Production Report—Annual, http://www.eia.gov/uranium/production/annual/;* and *Annual Energy Review, http://www.eia.gov/totalenergy/data/annual/.*

Form EIA–858 collects annual data from the U.S. uranium market on uranium contracts, deliveries, inventories, enrichment services purchased, uranium use in fuel assemblies, feed deliveries to enrichers, and unfilled market requirements. Uranium deliveries, feed deliveries to enrichers, and unfilled market requirements are reported both for the current reporting year and for the following ten years. The data are used by Congress and the public. The data collected may appear in the following EIA publications: *Uranium Marketing Annual Report, http://www.eia.gov/uranium/marketing/; Domestic Uranium Production Report—Annual, http://www.eia.gov/uranium/production/annual/;* and *Annual Energy Review, http://www.eia.gov/totalenergy/data/annual/.*

(4a) Proposed Changes to Information Collection:

The EIA proposes the following changes:

For Form EIA–851A, EIA proposes two minor changes to clarify the instructions for Item 8, Reserve (Reasonably Assured Resource) Estimate. The proposed instructions are:

Item 8: Reserve (Reasonably Assured Resource) Estimate

For each property, provide:

State—Enter the State of the property.

Reserve (Reasonably Assured Resource) Estimates by Forward Cost Categories—Enter the reserve (reasonably assured resource) quantities for ore, grade, and pounds U_3O_8 by cost categories. For reporting purposes, EIA considers reserves and reasonably assured resources to be functionally equivalent. Do not report inferred resources.

For Form EIA–851Q, EIA purposes to collect supervisor information in addition to the responding company, the parent company, and the contact/preparer information.

For Form EIA–858, EIA proposes changes to clarify the instructions for Item 5, Uranium Feed Deliveries to U.S. and Foreign Enrichers in the Survey Year. The proposed instructions are:

Item 5. Uranium Feed Deliveries to U.S. and Foreign Enrichers in the Survey Year: Enter the country origins and associated quantity of uranium feed *shipped* to enrichment plants, indicating each country where enrichment plant is located.

(5) *Annual Estimated Number of Respondents:* 160;

(6) *Annual Estimated Number of Total Responses:* 205;

(7) *Annual Estimated Number of Burden Hours:* 1,450 hours;

(8) *Annual Estimated Reporting and Recordkeeping Cost Burden:* $0. There are no additional costs to respondents associated with the survey other than the costs associated with the burden hours.

Statutory Authority: Section 13(b) of the Federal Energy Administration Act of 1974, Pub. L. 93–275, codified at 15 U.S.C. 772(b).

Issued in Washington, DC, on March 20, 2012.

Stephanie Brown,

Director, Office of Survey Development and Statistical Integration, U.S. Energy Information Administration.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2177–090]

Georgia Power Company; Notice of Application for Amendment of License and Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Amendment of License.

b. *Project No.:* 2177–090.

c. *Date Filed:* February 10, 2012.

d. *Applicant:* Georgia Power Company.

e. *Name of Project:* Middle Chattahoochee Project.

f. *Location:* The project is located on the Chattahoochee River in Harris and Muscogee Counties, Georgia, and Lee and Russell Counties, Alabama.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Mr. Stan Connally, Senior Vice-President and Senior Production Officer, Southern Company Generation, 241 Ralph McGill Boulevard NE., Bin 10240, Atlanta, Georgia 30308–3374, (404) 506–7033.

i. *FERC Contact:* Kelly Houff, (202) 502–6393, *Kelly.Houff@ferc.gov.*

j. Deadline for filing comments, motions to intervene, and protests: April 19, 2012.

All documents may be filed electronically via the Internet. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and seven copies to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. Description of Application: Georgia Power Company seeks approval to construct a 615-foot-long rock and concrete weir, with top elevation of 225.5 feet, in the existing tailrace of the North Highland Dam of the Middle Chattahoochee Project. The proposed weir will act to support the tailwater elevation required to continue operating the North Highlands Development once the downstream City Mills Dam licensed by Uptown Columbus is breached. In addition, Georgia Power Company also seeks to construct a permanent access road to the weir and a staging area reserved for future plant

inspection and maintenance of the weir. The proposed action requires that Georgia Power Company move the existing project boundary downstream by 200 feet to accommodate the structure and the proposed safety signage, as well as a new positive boat barrier. With the installation of the tailrace weir, Georgia Power Company is not proposing to change current project operations, so all flows would remain the same as currently authorized by the license for the Middle Chattahoochee Project. During construction of the tailrace weir, Georgia Power Company will, for a short period, divert flows over the North Highlands spillway, not through the powerhouse.

l. A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number (P–2177–090) excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support. A copy is also available for inspection and reproduction at the address in item h above.

You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. Comments, Protests, or Motions to Intervene: Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

Any filings must bear in all capital letters the title ''COMMENTS,'' ''PROTEST,'' or ''MOTION TO INTERVENE,'' as applicable, and the Project Number of the particular application to which the filing refers. A copy of any motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

o. Agency Comments: Federal, state, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

Dated: March 20, 2012.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 12690–005]

Public Utility District No. 1 of Snohomish County, WA; Notice of Application Tendered for Filing With the Commission and Establishing Procedural Schedule for Licensing and Deadline for Submission of Final Amendments

Take notice that the following hydrokinetic pilot project license application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* License for Pilot Project.

b. *Project No.:* 12690–005.

c. *Date Filed:* March 1, 2012.

d. *Applicant:* Public Utility District No. 1 of Snohomish County, Washington (Snohomish PUD).

e. *Name of Project:* Admiralty Inlet Pilot Tidal Project.

f. *Location:* On the east side of Admiralty Inlet in Puget Sound, Washington, about 1 kilometer west of Whidbey Island, entirely within Island County, Washington. The project would not occupy any federal lands.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C. 791(a)–828(c).

h. *Applicant Contact:* Steven J. Klein, Public Utility District of Snohomish County, Washington, P.O. Box 1107, 2320, California Street, Everett, WA 98206–1107; (425) 783–8473.

i. *FERC Contact:* David Turner (202) 502–6091.

j. This application is not ready for environmental analysis at this time.

k. With this notice, we are asking federal, state, local, and tribal agencies with jurisdiction and/or expertise with respect to environmental issues to cooperate with us in the preparation of the environmental document. Agencies who would like to request cooperating status should follow the instructions for filing described below.

All documents may be filed electronically via the Internet. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site *http://www.ferc.gov/docs-filing/efiling.asp*. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll free at 1–866–208–3676, or for TTY, (202) 502–8659. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and seven copies to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

l. The proposed Admiralty Inlet Pilot Tidal Project would consist of (1) two 19.7-foot-diameter Open-Centre Turbines supplied by OpenHydro Group Ltd., mounted on completely submerged gravity foundations; (2) two transmission cables, which run from the turbines to the cable termination vault; (3) two transmission cables from the cable termination vault to the proposed cable control building; (4) a proposed cable control building housing the power conditioning and monitoring equipment; (5) a transmission cable bringing power from the cable control building to an existing 12.47-kV transmission line; and (6) appurtenant facilities for operation and maintenance. The estimated average annual generation of the project is 216,000 kilowatt-hours.

m. *Locations of the Application:* A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support. A copy is also available for inspection and reproduction at the address in item (h) above.

n. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

o. Procedural Schedule:

The application will be processed according to the following preliminary Hydro Licensing Schedule. Revisions to the schedule may be made as appropriate.

Milestone	Target date
Filing of requested additional information.	April 16, 2012.
Commission issues REA notice.	April 23, 2012.
Filing of recommendations, preliminary terms and conditions, and preliminary fishway prescriptions.	May 23, 2012.
Commission issues Single EA.	July 23, 2012.
Comments on EA	August 22, 2012.

p. Final amendments to the application must be filed with the Commission no later than 30 days from the issuance date of the notice of ready for environmental analysis.

Dated: March 16, 2012.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[EL11–22–000, QF11–115–001, QF11–116–001, *et al.*]

Notice of Compliance Filing

	Docket Nos.
OREG 1, Inc.	EL11–22–000
OREG 2, Inc.	QF11–115–001
OREG 3, Inc.	QF11–116–001
OREG 4, Inc.	QF11–117–001
	QF11–118–001
	QF11–119–001
	QF11–120–001
	QF11–121–001
	QF11–122–001
	QF11–123–001
	QF11–124–001

Take notice that on March 19, 2012, OREG 1, Inc., OREG 2, Inc., OREG 3, Inc., and OREG 4, Inc filed compliance refund reports, pursuant to the Federal Energy Regulatory Commission's (Commission) Orders issued in this proceeding on May 19, 2011, 135 FERC ¶ 61,150 (2011), and February 16, 2012, 138 FERC ¶ 61,110 (2012) and the Notice Extending the Date to Make Refunds, issued on June 15, 2011.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or

protests must be filed on or before the comment date. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant and all the parties in this proceeding.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

This filing is accessible on-line at *http://www.ferc.gov,* using the ''eLibrary'' link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an ''eSubscription'' link on the web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP11–50–000]

PetroLogistics Natural Gas Storage Company, LLC; Notice of Availability of the Environmental Assessment for the Proposed Choctaw Hub Expansion Project

The staff of the Federal Energy Regulatory Commission (FERC or Commission) has prepared an environmental assessment (EA) for the Choctaw Hub Expansion Project (Project) proposed by PetroLogistics Natural Gas Storage, LLC (PetroLogistics) in the above-referenced docket. PetroLogistics requests authorization to build and operate high-deliverability, multi-cycle natural gas storage facilities in order to increase the total working capacity of the Choctaw Hub from 16 billion cubic feet (bcf) to 26.6 bcf. The proposed facilities would be adjacent to PetroLogistics' existing natural gas storage, compression and pipeline facilities within the Choctaw Salt Dome located approximately 4 miles northwest of the City of Plaquemine, Louisiana.

The EA assesses the potential environmental impacts of the construction and operation of the Project in accordance with the requirements of the National Environmental Policy Act of (NEPA). The FERC staff concludes that approval of the Project, with appropriate mitigating measures, would not constitute a major federal action significantly affecting the quality of the human environment.

The U.S. Army Corps of Engineers participated as a cooperating agency in the preparation of the EA. Cooperating agencies have jurisdiction by law or special expertise with respect to resources potentially affected by the proposal and participate in the NEPA analysis.

The Project includes the following:

Within the Choctaw Salt Dome

- A change in service of one existing underground storage cavern to natural gas storage: Cavern 28, currently used for commercial brine service;
- Addition of two compressor units totaling 27,000 horsepower to the existing PetroLogistics Compressor Station;
- One 0.67-mile-long, 30-inch-diameter cavern injection/withdrawal pipeline from the compressor station expansion site to the Cavern 28 wellhead (30-Inch Lateral to Cavern 28); and
- One 0.06-mile-long, 10-inch-diameter cavern injection/withdrawal pipeline extending from the 30-Inch-Lateral to Cavern 28 to the existing certificated Cavern 24 wellhead (10-Inch Lateral to Cavern 24).

Extending South From the Choctaw Salt Dome

- One 13-mile-long, 30-inch-diameter expansion header pipeline (30-Inch Expansion Header) looping PetroLogistics' existing pipelines,[1]
- One 0.90-mile-long, 20-inch-diameter pipeline to the proposed Texas Eastern Transmission, LP (TETCO) Station Expansion (20-Inch TETCO Lateral);
- One 0.11-mile-long, 12-inch-diameter interconnect pipeline to CrossTex LIG Pipeline Company's (Crosstex) existing system (12-Inch CrossTex Lateral);
- One 0.04-mile-long, 12-inch diameter interconnect pipeline to Florida Gas Transmission Company, LLC (FGT) (12-Inch FGT Lateral);
- A 0.23-acre expansion of the meter station interconnect to Bridgeline Pipeline System (Bridgeline) at Station Number (SN) 381+00 (Milepost (MP) 7.21) (Bridgeline Station Expansion);
- A 0.68-acre expansion of the existing Southern Natural Gas Company (SONAT) Station at SN 684+50 (MP 12.95) (SONAT Station Expansion);
- A 0.52-acre expansion of the TETCO Station at SN 47+74 of the 20-Inch TETCO Lateral (TETCO Station Expansion);
- A 0.05-acre expansion of the TETCO-future Gulf South Pipeline Company, LP (Gulf South) Interconnect Station at SN 384+00 (MP 7.27) (TETCO-future Gulf South Interconnect Station Expansion);
- Expansion of two valve sites on the existing PetroLogistics mainline to accommodate the 30-Inch Expansion Header, at SN 228+40 (MP 4.33) and SN 292+42 (MP 5.54) (Expanded Mainline Valve Sites 1 and 2);
- Three side valves on the 30-Inch Expansion Header for future lateral interconnects to Gulf South's, Cypress Pipeline Company's (Cypress'), and Enterprise Products Partners' (Enterprise's) natural gas systems at SN 83+50 (MP 1.58) (Cypress Valve Set); and
- A 5.5-acre non-jurisdictional electrical substation (Sawmill Substation) along with a 200-foot-long 69-kilovolt (kv) electrical supply line to Entergy LLC's (Entergy's) powerline.

The FERC staff mailed copies of the EA to federal, state, and local government representatives and agencies; elected officials; environmental and public interest groups; Native American tribes; potentially affected landowners and other interested individuals and groups; newspapers and libraries in the project area; and parties to this proceeding. In addition, the EA is available for public viewing on the FERC's Web site (*www.ferc.gov*) using the eLibrary link. A limited number of copies of the EA are available for distribution and public inspection at: Federal Energy Regulatory Commission, Public Reference Room, 888 First Street NE., Room 2A, Washington, DC 20426. (202) 502–8371.

Any person wishing to comment on the EA may do so. Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. The more specific your comments, the more useful they will be. To ensure that the Commission has the opportunity to consider your comments prior to making its decision on this project, it is important that we receive your

[1] A pipeline loop is constructed parallel to an existing pipeline to increase capacity.

comments in Washington, DC on or before April 16, 2012.

For your convenience, there are three methods you can use to file your comments with the Commission. In all instances please reference the project docket number (CP11–50–000) with your submission. The Commission encourages electronic filing of comments and has dedicated eFiling expert staff available to assist you at (202) 502–8258 or *efiling@ferc.gov.*

(1) You can file your comments electronically using the *eComment* feature on the Commission's Web site at (*www.ferc.gov*) under the link to *Documents and Filings.* This is an easy method for submitting brief, text-only comments on a project;

(2) You can also file your comments electronically using the *eFiling* feature on the Commission's Web site (*www.ferc.gov*) under the link to *Documents and Filings.* With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''*eRegister.*'' You must select the type of filing you are making. If you are filing a comment on a particular project, please select ''Comment on a Filing;'' or

(3) You can file a paper copy of your comments by mailing them to the following address: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Room 1A, Washington, DC 20426.

Any person seeking to become a party to the proceeding must file a motion to intervene pursuant to Rule 214 of the Commission's Rules of Practice and Procedures (18 CFR 385.214).[2] Only intervenors have the right to seek rehearing of the Commission's decision. The Commission grants affected landowners and others with environmental concerns intervenor status upon showing good cause by stating that they have a clear and direct interest in this proceeding which no other party can adequately represent. Simply filing environmental comments will not give you intervenor status, but you do not need intervenor status to have your comments considered.

Additional information about the project is available from the Commission's Office of External Affairs, at (866) 208–FERC or on the FERC Web site (*www.ferc.gov*) using the eLibrary link. Click on the eLibrary link, click on ''General Search'' and enter the docket number excluding the last three digits in the Docket Number field (i.e., CP11–50). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at *FercOnlineSupport@ferc.gov* or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659. The eLibrary link also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to *www.ferc.gov/esubscribenow.htm.*

Dated: March 16, 2012.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 13080–003–CT]

Putnam Green Power, LLC; Notice of Availability of Environmental Assessment

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's regulations, 18 CFR Part 380 (Order No. 486, 52 FR 47879), the Office of Energy Projects has reviewed the application for exemption from licensing for the Cargill Falls Hydroelectric Project, to be located on the Quinebaug River, in the Town of Putnam in Windham County, Connecticut, and has prepared an Environmental Assessment (EA). In the EA, Commission staff analyzes the potential environmental effects of the project and conclude that issuing an exemption for the project, with appropriate environmental measures, would not constitute a major federal action significantly affecting the quality of the human environment.

A copy of the EA is on file with the Commission and is available for public inspection. The EA may also be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll-free at 1–866–208–3676, or for TTY, (202) 502–8659.

You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

For further information, contact Jeff Browning at (202) 502–8677.

Dated: March 19, 2012.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP11–56–000]

Texas Eastern Transmission, LP, Algonquin Gas Transmission, LLC; Notice of Availability of the Final Environmental Impact Statement for the Proposed New Jersey-New York Expansion Project

The staff of the Federal Energy Regulatory Commission (FERC or Commission) has prepared a final environmental impact statement (EIS) for the New Jersey-New York Expansion Project (NJ-NY Project or Project), proposed by Texas Eastern Transmission, LP (Texas Eastern) and Algonquin Gas Transmission, LLC (Algonquin), both Spectra Energy Corporation natural gas pipeline companies, in the above-referenced docket. Texas Eastern and Algonquin request authorization to expand their natural gas pipeline systems in New Jersey, New York, and Connecticut, to deliver up to 800,000 dekatherms per day of natural gas from multiple receipt points on the Texas Eastern and Algonquin pipeline systems to new delivery points in New Jersey and New York.

The final EIS assesses the potential environmental effects of the construction and operation of the NJ-NY Project in accordance with the requirements of the National Environmental Policy Act (NEPA). The FERC staff concludes that approval of the proposed Project would have some adverse environmental impact; however, these impacts would be reduced to less-than-significant levels with the implementation of Texas Eastern's and Algonquin's proposed

mitigation and the additional measures we recommend in the EIS.

The U.S. Environmental Protection Agency (EPA), U.S. Department of Transportation, U.S. Army Corps of Engineers, New York City Mayor's Office, and New York City Department of Environmental Protection participated as cooperating agencies in the preparation of the EIS. Cooperating agencies have jurisdiction by law or special expertise with respect to resources potentially affected by the proposal and participate in the NEPA analysis. Although the cooperating agencies provided input to the conclusions and recommendations presented in the EIS, the agencies will present their own conclusions and recommendations in their respective Records of Decision for the project.

The final EIS addresses the potential environmental effects of the following project facilities:

- Construction and operation of approximately 15.2 miles of new 30-inch-diameter pipeline and 4.8 miles of 42-inch-diameter pipeline;
- Abandonment of 8.95 miles of existing 12-, 20-, and 24-inch-diameter pipeline;
- Installation of seven new metering and regulating (M&R) stations;
- Modifications to four existing compressor stations and one existing M&R station; and
- Modifications and installations of associated valves and piping.

The FERC staff mailed copies of the EIS to federal, state, and local government representatives and agencies; elected officials; environmental and public interest groups; Native American tribes; local newspapers and libraries in the Project area; intervenors to the FERC's proceeding; and potentially affected landowners and other interested individuals and groups. Paper copy versions of the EIS were mailed to those specifically requesting them; all others received a CD version. In addition, the EIS is available for public viewing on the FERC's Web site (*www.ferc.gov*) using the eLibrary link. A limited number of copies are available for distribution and public inspection at: Federal Energy Regulatory Commission, Public Reference Room, 888 First Street NE., Room 2A, Washington, DC 20426. (202) 502–8371.

In accordance with the Council on Environmental Quality's (CEQ) regulations implementing NEPA, no agency decision on a proposed action may be made until 30 days after the EPA publishes a notice of availability of the final EIS in the **Federal Register**. However, the CEQ regulations provide an exception to this rule when an agency decision is subject to a formal internal appeal process that allows other agencies or the public to make their views known. In such cases, the agency decision may be made at the same time the notice of the final EIS is published, allowing both periods to run concurrently. The Commission decision for this proposed action is subject to a 30-day rehearing period.

Questions

Additional information about the Project is available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC Web site (*www.ferc.gov*) using the eLibrary link. Click on the eLibrary link, click on ''General Search,'' and enter the docket number excluding the last three digits in the Docket Number field (i.e., CP11–56). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at *FercOnlineSupport@ferc.gov* or toll free at (866) 208–3676; for TTY, contact (202) 502–8659. The eLibrary link also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER12–1291–000]

Wellhead Power Delano, LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding of Wellhead Power Delano, LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR Part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR Part 34, of future issuances of securities and assumptions of liability, is April 9, 2012.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

[Project No. 14333–000]

Natural Currents Energy Services, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On December 6, 2011, Natural Currents Energy Services, LLC filed an application, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of the Orient Point Tidal Energy Project, which would be located on the eastern end of the Long Island Sound in Suffolk County, New York. The proposed project would not use a dam or impoundment. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would consist of: (1) Installation of 45 NC Sea Dragon tidal turbines at a rated capacity of 110 kilowatts, (2) an estimated 2,500 meters in length of additional transmission infrastructure, and (3) appurtenant facilities. Initial estimated production will be a minimum of 5 megawatt hours per year with the installation of 45 units.

Applicant Contact: Mr. Roger Bason, Natural Currents Energy Services, LLC, 24 Roxanne Boulevard, Highland, New York 12561, (845) 691–4009.

FERC Contact: Woohee Choi (202) 502–6336.

Deadline for filing comments, motions to intervene, competing applications (without notices of intent), or notices of intent to file competing applications: 60 days from the issuance of this notice. Competing applications and notices of intent must meet the requirements of 18 CFR 4.36. Comments, motions to intervene, notices of intent, and competing applications may be filed electronically via the Internet. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll free at 1–866–208–3676, or for TTY, (202) 502–8659. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and seven copies to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

More information about this project, including a copy of the application, can be viewed or printed on the ''eLibrary'' link of the Commission's Web site at *http://www.ferc.gov/docs-filing/elibrary.asp.* Enter the docket number (P–14333) in the docket number field to access the document. For assistance, contact FERC Online Support.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 14346–000]

Southern Energy, Inc.; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On January 11, 2012, Southern Energy, Inc. filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the Walker Lake Hydroelectric Project (Walker Lake Project or project) to be located on Walker Lake, near Haines, Haines Borough, Alaska. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would utilize the existing Walker Lake and would consist of the following new features: (1) Two rockfilled dams approximately 15-foot-wide, 250- and 325-foot-long, respectively making usable capacity of Walker Lake to be 4,300 acre-feet at a normal maximum operating elevation of 1,195 feet mean sea level (msl); (2) a concrete spillway and diversion channel for controlled releases to Walker Creek; (3) a freestanding concrete intake and reservoir outlet works at elevation 1,170 feet msl diverting flow from the southeast dam into the penstock; (4) a 24-inch-diameter, 12,000-foot-long penstock, of which approximately 10,000 feet will be buried and 2,000 feet will be aboveground; (5) a powerhouse containing one generating unit rated for one megawatt at 780 feet of net head; (6) a 50-foot-long tailrace connecting the powerhouse with the Little Salmon River; (7) an underground 4-mile-long, 12.5-kilovolt (kV) transmission line extending from the project to a transmission line owned by Inside Passage Electric Cooperative (the point of interconnection); and (8) appurtenant facilities. The estimated annual generation of the Walker Lake Project would be 3,615 megawatt-hours.

Applicant Contact: Mr. Darrell Maple, President, Lynn Canal Professional Services, 660 S. Oregon Street, Jacksonville, Oregon, 97530; phone: (541) 261–3764.

DATES: The public teleconferences will be held on Thursday, April 19, 2012 from 11 a.m. to 3 p.m. (Eastern Daylight Time), Friday, April 20, 2012 from 11 a.m. to 3 p.m. (Eastern Daylight Time) and Thursday, July 12, 2012 from 11 a.m. to 3 p.m. (Eastern Daylight Time).

ADDRESSES: The teleconferences will be conducted by telephone only.

FOR FURTHER INFORMATION CONTACT: Any member of the public who wants further information concerning the meeting may contact Dr. Holly Stallworth, Designated Federal Officer (DFO), EPA Science Advisory Board (1400R), U.S. Environmental Protection Agency, 1300 Pennsylvania Avenue NW, Washington, DC 20460; via telephone/voice mail (202) 564–2073; fax (202) 565–2098; or email at *stallworth.holly@epa.gov.* General information concerning the SAB can be found on the EPA Web site at *http://www.epa.gov/sab.*

SUPPLEMENTARY INFORMATION:

Background: Pursuant to the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C., App., notice is hereby given that the SAB Environmental Economics Advisory Committee (EEAC) will hold a public teleconferences to review the EPA draft report ''Retrospective Study of the Costs of EPA Regulations: An Interim Report'' (March 2012). The SAB was established pursuant to 42 U.S.C. 4365 to provide independent scientific and technical advice to the Administrator on the technical basis for Agency positions and regulations. The SAB is a Federal Advisory Committee chartered under FACA. The SAB will comply with the provisions of FACA and all appropriate SAB Staff Office procedural policies.

The U.S. Environmental Protection Agency (EPA) conducts benefit-cost analyses of its rules and regulations. EPA strives to use the best available information to conduct its analyses. Benefit-cost analyses are by definition predictive, relying on *ex ante* or forecasted information. To improve future benefit-cost analyses, it is important to learn how well EPA's estimates compare with actual (*ex post*) costs and, if they differ substantially, to understand why. EPA's National Center for Environmental Economics has launched a series of case studies attempting to assess compliance costs retrospectively that, if successful, could help identify reasons for any systematic differences between *ex ante* and *ex post* cost estimates. The purpose is to identify potential improvements in the way in which *ex ante* analyses are

performed. EPA's draft ''Retrospective Study of the Costs of EPA Regulations: An Interim Report'' (March 2012) summarizes the work done to date, describes the methodologies employed thus far and discusses the numerous challenges faced in conducting these analyses. The report may be found at the SAB Web site (www.epa.gov/sab and on the EPA Web site at *http://yosemite.epa.gov/ee/epa/eed.nsf/Webpages/RetroCost.html*). EPA has requested the SAB's review of its approach to assessing ex post costs as detailed in its draft paper.

Technical Contacts: Any questions concerning EPA's White Paper should be directed to Dr. Nathalie Simon, NCEE at (202) 566–2347 or *simon.nathalie@epa.gov*.

Availability of Meeting Materials: A meeting agenda, charge questions, and other materials for the teleconferences will be placed on the SAB Web site at *www.epa.gov/sab*.

Procedures for Providing Public Input: Public comment for consideration by EPA's federal advisory committees and panels has a different purpose from public comment provided to EPA program offices. Therefore, the process for submitting comments to a federal advisory committee is different from the process used to submit comments to an EPA program office. Federal advisory committees and panels, including scientific advisory committees, provide independent advice to EPA. Members of the public can submit relevant comments pertaining to the group conducting this advisory activity, EPA's charge, or meeting materials. Input from the public to the SAB will have the most impact if it consists of comments that provide specific scientific or technical information or analysis for the SAB to consider. Members of the public wishing to provide comment should contact the Designated Federal Officer for the relevant advisory committee directly. *Oral Statements:* In general, individuals or groups requesting an oral presentation at a public teleconference will be limited to five minutes per speaker. To be placed on the public speaker list for the April 19, 2012 meeting, interested parties should notify Dr. Holly Stallworth, DFO, by email no later than April 12, 2012. To be placed on the public speaker list for the July 12, 2012 teleconference, interested parties should notify Dr. Holly Stallworth by July 5, 2012. *Written Statements:* Written statements for the April 19, 2012 teleconference should be received in the SAB Staff Office by April 12, 2012 so that the information may be made available to the SAB Panel for its consideration prior to this meeting. Written statements for the July 12, 2012 teleconference should be received by July 5, 2012. Written statements should be supplied to the DFO via email (acceptable file format: Adobe Acrobat PDF, MS Word, WordPerfect, MS PowerPoint, or Rich Text files in IBM–PC/Windows 98/2000/XP format).

Accessibility: For information on access or services for individuals with disabilities, please contact Dr. Stallworth at the phone number or email address noted above, preferably at least ten days prior to the meeting, to give EPA as much time as possible to process your request.

Dated: March 14, 2012.

Vanessa T. Vu,

Director, EPA Science Advisory Board Staff Office.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

Information Collections Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: The Federal Communications Commission (FCC), as part of its continuing effort to reduce paperwork burdens, invites the general public and other Federal agencies to take this opportunity to comment on the following information collection, as required by the Paperwork Reduction Act (PRA) of 1995. Comments are requested concerning (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and (e) ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

DATES: Written PRA comments should be submitted on or before May 25, 2012. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to the Federal Communications Commission via email to *PRA@fcc.gov* and *Cathy.Williams@fcc.gov*.

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION: *OMB Control Number:* 3060–xxxx.

Title: Creation of a Low Power Radio Service and Amendment of Service and Eligibility Rules for FM Broadcast Translator Stations, Fourth Report and Order and Third Order on Reconsideration (''Fourth Report and Order''), MM Docket 99–25, MB Docket No. 07–172, RM–11338; Implementation of Application Caps.

Form Number: N/A.

Type of Review: New collection.

Respondents: Not-for-profit institutions; State, local or tribal government.

Number of Respondents and Responses: 300 respondents; 300 responses.

Estimated Time per Response: 2 hours.

Frequency of Response: One-time reporting requirement.

Total Annual Burden: 600 hours.

Total Annual Costs: None.

Obligation to Respond: Required to obtain or retain benefits. The statutory authority for this collection is contained in Sections 154(i) of the Communications Act of 1934, as amended.

Nature and Extent of Confidentiality: There is no need for confidentiality with this collection of information.

Privacy Impact Assessment(s): No impact(s).

Needs and Uses: On March 19, 2012, the Commission adopted a Fourth Report and Order and Third Order on Reconsideration (''Fourth Report and Order''), FCC 12–29. In the Fourth Report and Order, the Commission adopts the national and market-specific caps proposed in the Third Further Notice, FCC 11–105, and requires parties with more than 50 pending applications and/or more than one pending application in the markets identified in Appendix A of the Fourth

Report and Order (the top 150 Arbitron markets plus markets with more than 4 pending translator applications) to request the dismissal of applications to comply with these limits. Applicants may request such dismissal by filing a letter with the Commission (''Dismissal Letter'') identifying the applications they wish to be dismissed. In the event that an applicant does not timely comply with these dismissal procedures, the Commission staff will first apply the national cap, retaining on file the first 50 filed applications and dismissing those that were subsequently filed. The staff will then dismiss all but the first filed application in each of the markets identified in Appendix A.

OMB Control Number: 3060-xxxx.

Title: Creation of a Low Power Radio Service and Amendment of Service and Eligibility Rules for FM Broadcast Translator Stations, Fourth Report and Order and Third Order on Reconsideration (''Fourth Report and Order''), MM Docket 99–25, MB Docket No. 07–172, RM–11338; Translator Amendments and Top 50 Market Preclusion Showings.

Form Number: N/A.

Type of Review: New collection.

Respondents: Not-for-profit institutions; State, local or tribal government.

Number of Respondents and Responses: 500 respondents; 1,300 responses.

Estimated Time per Response: 2 hours.

Frequency of Response: One time reporting requirement.

Total Annual Burden: 2,600 hours.

Total Annual Costs: None.

Obligation to Respond: Required to obtain or retain benefits. The statutory authority for this collection is contained in Sections 154(i) of the Communications Act of 1934, as amended.

Nature and Extent of Confidentiality: There is no need for confidentiality with this collection of information.

Privacy Impact Assessment(s): No impact(s).

Needs and Uses: On March 19, 2012, the Commission adopted a Fourth Report and Order and Third Order on Reconsideration (''Fourth Report and Order''), FCC 12–29. It adopts the market-based dismissal policy proposed in the Third Further Notice, FCC 11–105, with certain modifications. Among other things, it gives all translator applicants a limited opportunity to amend their proposals. It holds that translator applicants in ''spectrum available'' markets may modify their proposals so long as they do not preclude any LPFM channel/point combination identified in the Bureau's study (''Spectrum Available Amendments''). It further holds that translator applicants with proposals in ''spectrum limited'' markets will be allowed to modify their proposals to eliminate their preclusive impact on any of the LPFM point/channel combinations that would be available within the grid if all translator window applications in that market were dismissed (''Spectrum Limited Amendments'') (''Spectrum Available Amendments'' and ''Spectrum Limited Amendments'' are collectively referred to herein as, ''Amendments''). In addition, any translator applicant in any top 50 spectrum limited market must demonstrate that its out-of-grid proposal would not preclude the only LPFM station licensing opportunity at that location (''Top 50 Market Preclusion Showing''). Specifically, it needs to demonstrate either that no LPFM station could be licensed at the proposed transmitter site or, if an LPFM station could be licensed at the site, that an additional channel remains available for a future LPFM station at the same site.

Federal Communications Commission.

Marlene H. Dortch,

Secretary, Office of the Secretary, Office of Managing Director.

BILLING CODE 6712–01–P

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Announcement of Board Approval Under Delegated Authority and Submission to OMB

AGENCY: Board of Governors of the Federal Reserve System.

SUMMARY: Notice is hereby given of the final approval of a proposed information collection by the Board of Governors of the Federal Reserve System (Board) under OMB delegated authority, as per 5 CFR 1320.16 (OMB Regulations on Controlling Paperwork Burdens on the Public). Board-approved collections of information are incorporated into the official OMB inventory of currently approved collections of information. Copies of the Paperwork Reduction Act Submission, supporting statements and approved collection of information instrument(s) are placed into OMB's public docket files. The Federal Reserve may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Cynthia Ayouch—Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, DC 20551 (202–452–3829). Telecommunications Device for the Deaf (TDD) users may contact (202–263–4869), Board of Governors of the Federal Reserve System, Washington, DC 20551.

OMB Desk Officer—Shagufta Ahmed—Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW., Washington, DC 20503.

Final approval under OMB delegated authority of the extension for three years, with revision, of the following report:

Report title: Survey of Terms of Lending.

Agency form number: FR 2028A, FR 2028B, and FR 2028S.

OMB Control number: 7100–0061.

Frequency: Quarterly.

Reporters: Commercial banks and U.S. branches and agencies of foreign banks (FR 2028A and FR 2028S only).

Estimated annual reporting hours: 7,358 hours.

Estimated average hours per response: FR 2028A, 3.6 hours; FR 2028B, 1.4 hours; and FR 2028S, 0.1 hours.

Number of respondents: FR 2028A, 398; FR 2028B, 250; and FR 2028S, 567.

General description of report: This information collection is authorized by section 11(a)(2) of the Federal Reserve Act (12 U.S.C. 248(a)(2)) and is voluntary. Individual responses reported on the FR 2028A and FR 2028B are regarded as confidential under the Freedom of Information Act (5 U.S.C. 552(b)(4)).

Abstract: The Survey of Terms of Lending collects unique information concerning price and certain nonprice terms of loans made to businesses and farmers during the first full business week of the mid-month of each quarter (February, May, August, and November). The survey comprises three reporting forms: The FR 2028A, Survey of Terms of Business Lending; the FR 2028B, Survey of Terms of Bank Lending to Farmers; and the FR 2028S, Prime Rate Supplement to the Survey of Terms of Lending. The FR 2028A and FR 2028B collect detailed data on individual loans made during the survey week, and the FR 2028S collects the prime interest rate for each day of the survey from both FR 2028A and FR

2028B respondents. From these sample STL data, estimates of the terms of business loans and farm loans extended during the reporting week are constructed. The aggregate estimates for business loans are published in the quarterly E.2 release, *Survey of Terms of Business Lending,* and aggregate estimates for farm loans are published in the E.15 release, *Agricultural Finance Databook.*

Current Actions: On October 13, 2011, the Federal Reserve published a notice in the **Federal Register** (76 FR 63619) requesting public comment for 60 days on the extension, with revision, of the FR 2028ABS. The comment period for this notice expired on December 12, 2011. The Federal Reserve received one comment letter on the proposed revisions from a banking association. The commenter did not support the addition of a column to collect the Research Statistics Supervision Discount (RSSD) ID of the branch that originated each loan nor a column for the loan origination fee. The commenter stated that the data are not readily available and questioned how the data to be reported in the column for the RSSD ID would be used. The commenter also suggested deferring the implementation date of any changes until after the May 2012 survey week. After receiving this comment letter, in February 2012, the Federal Reserve consulted with several members of the banking association about the comments and discussed possible alternatives to the original proposal. After considering these alternatives, the Federal Reserve decided to modify the proposal by (1) replacing the proposed column to collect the RSSD ID of the branch that originated each loan with the state where the borrower is headquartered, (2) removing the proposed column for the loan origination fee, and (3) deferring the implementation date to the August 2012 survey week; however, banks that need additional time to program the changes would be able to report the new items as not available until the February 2013 survey week.

Board of Governors of the Federal Reserve System, March 21, 2012.

Jennifer J. Johnson,

Secretary of the Board.

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than April 19, 2012.

A. Federal Reserve Bank of San Francisco (Kenneth Binning, Vice President, Applications and Enforcement) 101 Market Street, San Francisco, California 94105–1579:

1. *CU Bancorp, Encino, California* to become a bank holding company by acquiring 100 percent of California United Bank, also of Encino. CU Bancorp also has applied to acquire Premier Commercial Bancorp, and thereby indirectly acquire Premier Commercial Bank, N.A., both of Anaheim, California.

Board of Governors of the Federal Reserve System, March 20, 2012.

BILLING CODE 6210–01–P

FEDERAL TRADE COMMISSION

[Docket No. 9351]

Star Pipe Products, Ltd.; Analysis of Proposed Consent Order To Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed consent agreement.

SUMMARY: The consent agreement in this matter settles alleged violations of federal law prohibiting unfair or deceptive acts or practices or unfair methods of competition. The attached Analysis to Aid Public Comment describes both the allegations in the complaint and the terms of the consent order—embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before April 20, 2012.

ADDRESSES: Interested parties may file a comment online or on paper, by following the instructions in the Request for Comment part of the **SUPPLEMENTARY INFORMATION** section below. Write ''Star Pipe, Docket No. 9351'' on your comment, and file your comment online at *https://ftcpublic.commentworks.com/ftc/starconsent,* by following the instructions on the web-based form. If you prefer to file your comment on paper, mail or deliver your comment to the following address: Federal Trade Commission, Office of the Secretary, Room H–113 (Annex D), 600 Pennsylvania Avenue NW., Washington, DC 20580.

FOR FURTHER INFORMATION CONTACT: Linda M. Holleran (202–326–2267), FTC, Bureau of Competition, 600 Pennsylvania Avenue NW., Washington, DC 20580.

SUPPLEMENTARY INFORMATION: Pursuant to section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46(f), and 3.25(f) the Commission Rules of Practice, 16 CFR 3.25(f), notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of thirty (30) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An electronic copy of the full text of the consent agreement package can be obtained from the FTC Home Page (for March 20, 2012), on the World Wide Web, at *http://www.ftc.gov/os/actions.shtm.* A paper copy can be obtained from the FTC Public Reference

Room, Room 130–H, 600 Pennsylvania Avenue NW, Washington, DC 20580, either in person or by calling (202) 326–2222.

You can file a comment online or on paper. For the Commission to consider your comment, we must receive it on or before April 20, 2012. Write ''Star Pipe, Docket No. 9351'' on your comment. Your comment—including your name and your state—will be placed on the public record of this proceeding, including, to the extent practicable, on the public Commission Web site, at *http://www.ftc.gov/os/publiccomments.shtm.* As a matter of discretion, the Commission tries to remove individuals' home contact information from comments before placing them on the Commission Web site.

Because your comment will be made public, you are solely responsible for making sure that your comment does not include any sensitive personal information, like anyone's Social Security number, date of birth, driver's license number or other state identification number or foreign country equivalent, passport number, financial account number, or credit or debit card number. You are also solely responsible for making sure that your comment does not include any sensitive health information, like medical records or other individually identifiable health information. In addition, do not include any ''[t]rade secret or any commercial or financial information which is obtained from any person and which is privileged or confidential,'' as provided in Section 6(f) of the FTC Act, 15 U.S.C. 46(f), and FTC Rule 4.10(a)(2), 16 CFR 4.10(a)(2). In particular, do not include competitively sensitive information such as costs, sales statistics, inventories, formulas, patterns, devices, manufacturing processes, or customer names.

If you want the Commission to give your comment confidential treatment, you must file it in paper form, with a request for confidential treatment, and you have to follow the procedure explained in FTC Rule 4.9(c), 16 CFR 4.9(c).[1] Your comment will be kept confidential only if the FTC General Counsel, in his or her sole discretion, grants your request in accordance with the law and the public interest.

Postal mail addressed to the Commission is subject to delay due to heightened security screening. As a result, we encourage you to submit your comments online. To make sure that the Commission considers your online comment, you must file it at *https://ftcpublic.commentworks.com/ftc/starconsent* by following the instructions on the web-based form. If this Notice appears at *http://www.regulations.gov/#!home,* you also may file a comment through that Web site.

If you file your comment on paper, write ''Star Pipe, Docket No. 9351'' on your comment and on the envelope, and mail or deliver it to the following address: Federal Trade Commission, Office of the Secretary, Room H–113 (Annex D), 600 Pennsylvania Avenue NW., Washington, DC 20580. If possible, submit your paper comment to the Commission by courier or overnight service.

Visit the Commission Web site at *http://www.ftc.gov* to read this Notice and the news release describing it. The FTC Act and other laws that the Commission administers permit the collection of public comments to consider and use in this proceeding as appropriate. The Commission will consider all timely and responsive public comments that it receives on or before April 20, 2012. You can find more information, including routine uses permitted by the Privacy Act, in the Commission's privacy policy, at *http://www.ftc.gov/ftc/privacy.htm.*

Analysis of Agreement Containing Consent Order To Aid Public Comment

The Federal Trade Commission (''Commission: or ''FTC'') has accepted, subject to final approval, an agreement containing a proposed consent order (''Agreement'') from Star Pipe Products, Ltd. (''Star''). The Agreement seeks to resolve in part an administrative complaint issued by the Commission on January 4, 2012. The complaint charges that Star and certain of its competitors violated Section 5 of the Federal Trade Commission Act, 15 U.S.C. 45, by engaging in collusive acts and practices in the market for ductile iron pipe fittings (''DIPF'').

The Commission anticipates that, with regard to Star, the competitive issues described in the complaint will be resolved by accepting the proposed order, subject to final approval, contained in the Agreement. The Agreement has been placed on the public record for 30 days for receipt of comments from interested members of the public. Comments received during this period will become part of the public record. After 30 days, the Commission will again review the Agreement and any comments received, and will decide whether it should withdraw from the Agreement or make final the proposed order contained in the Agreement.

The purpose of this Analysis to Aid Public Comment is to invite and facilitate public comment concerning the proposed order. It is not intended to constitute an official interpretation of the Agreement and proposed order or in any way to modify its terms.

The proposed order is for settlement purposes only and does not constitute an admission by Star that it violated the law, or that the facts alleged in the complaint, other than jurisdictional facts, are true.

I. The Complaint

The following allegations are taken from the complaint and publicly available information.

A. Background

The largest sellers of DIPF in the United States are Star, McWane, Inc. (''McWane''), and Sigma Corporation (''Sigma''). DIPF are used in municipal water distribution systems to change pipe diameter or pipeline direction. There are no widely available substitutes for DIPF. Both imported and domestically produced DIPF are commercially available.

DIPF suppliers distribute these products through wholesale distributors, known as waterworks distributors, which specialize in distributing products for water infrastructure projects. The end users of DIPF are typically municipal and regional water authorities.

DIPF prices are based off of published list prices and discounts, with customers negotiating additional discounts off of those list prices and discounts on a transaction-by-transaction basis. DIPF suppliers also offer volume rebates.

B. Challenged Conduct

Between January 2008 and January 2009, Star allegedly conspired with McWane and Sigma to increase the prices at which DIPF were sold in the United States. In furtherance of the conspiracy, and at the request of McWane, Star changed its business methods to make it easier to coordinate price levels, first by limiting the discretion of regional sales personnel to offer price discounts, and later by exchanging information documenting the volume of its monthly sales, along with sales by McWane and Sigma, through an entity known as the Ductile Iron Fittings Research Association (''DIFRA'').

[1] In particular, the written request for confidential treatment that accompanies the comment must include the factual and legal basis for the request, and must identify the specific portions of the comment to be withheld from the public record. *See* FTC Rule 4.9(c), 16 CFR 4.9(c).

II. Legal Analysis

The January and June 2008 price restraints among Star, McWane, and Sigma alleged in the complaint are naked restraints on competition that are *per se* unlawful.[2]

The June 2008 agreement, which was allegedly reached after a public invitation to collude by McWane, illustrates how price fixing agreements may be reached in public. Here, McWane's invitation to collude was conveyed in a letter sent to waterworks distributors, the common customers of Star, McWane, and Sigma. McWane's letter contained a section that was meaningless to waterworks distributors, but was intended to inform Star and Sigma of the terms on which McWane desired to fix prices.[3]

The DIFRA information exchange was a component of the illegal price fixing agreement. Specifically, the complaint alleges that the DIFRA information exchange played a critical role in the 2008 price fixing conspiracy, first as the *quid pro quo* for a price increase by McWane in June 2008, and then by enabling Star, McWane, and Sigma to monitor each others' adherence to the collusive arrangement through the second half of 2008.

Evaluated apart from the price fixing conspiracy, Star's participation in the information exchange is an independent violation of the antitrust laws because this concerted action facilitated price coordination among the three competitors.[4]

III. The Proposed Order

The proposed order is designed to remedy the unlawful conduct charged against Star in the complaint and to prevent the recurrence of such conduct.

Paragraph II.A of the proposed order prohibits Star from participating in or maintaining any combination or conspiracy between any competitors to fix, raise or stabilize the prices at which DIPF are sold in the United States, or to allocate or divide markets, customers, or business opportunities.

Paragraph II.B of the proposed order prohibits Star from soliciting or inviting any competitor to participate in any of the actions prohibited in Paragraphs II.A.

Paragraph II.C of the proposed order prohibits Star from participating in or facilitating any agreement between competitors to exchange ''Competitively Sensitive Information'' (''CSI''), defined as certain types of information related to the cost, price, output or customers of or for DIPF. Paragraph II.D of the proposed order prohibits Star from unilaterally disclosing CSI to a competitor, except as part of the negotiation of a joint venture, license or acquisition, or in certain other specified circumstances. Paragraph II.E of the proposed order prohibits Star from attempting to engage in any of the activities prohibited by Paragraphs II.A, II.B, II.C, or II.D.

The prohibitions on Star's communication of CSI with competitors contained in Paragraphs II.C and II.D of the proposed order are subject to a proviso that permits Star to communicate CSI to its competitors under certain circumstances. Under the proposed order, Star may participate in an information exchange with its competitors in the DIPF market provided that the information exchange is structured in such a way as to minimize the risk that it will facilitate collusion among Star and its competitors. Specifically, the proposed order requires any exchange of CSI to occur no more than twice yearly, and to involve the exchange of aggregated information more than six months old. In addition, the aggregated information that is exchanged must be made publicly available, which increases the likelihood that an information exchange involving Star will simultaneously benefit consumers. The proposed order also prohibits Star's participation in an exchange of CSI involving price, cost or total unit cost of or for DIPF when the individual or collective market shares of the competitors seeking to participate in an information exchange exceed specified thresholds. The rationale for this provision is that in a highly concentrated market the risk that the information exchange may facilitate collusion is high. Due to the highly concentrated state of the DIPF market as currently structured, an information exchange involving Star and relating to price, output or total unit cost of or for DIPF is unlikely to reoccur in the foreseeable future.

Paragraph III of the proposed order requires Star to cooperate with Commission staff in the still-pending administrative litigation against McWane.

The proposed order has a term of 20 years.

By direction of the Commission.

Donald S. Clark,

Secretary.

[FR Doc. 2012–7234 Filed 3–23–12; 8:45 am]

BILLING CODE 6750–01–P

[2] Federal Trade Commission & United States Department of Justice, Antitrust Guidelines for Collaboration Among Competitors (''Competitor Collaboration Guidelines'') § 1.2 (2000); *In re North Texas Specialty Physicians,* 140 F.T.C. 715, 729 (2005) (''We do not believe that the per se condemnation of naked restraints has been affected by anything said either in *California Dental or Polygram''*).

[3] Because McWane's communication informed its rivals of the terms of price coordination desired by McWane without containing any information for customers, this communication had no legitimate business justification. *See In re Petroleum Products Antitrust Litig.,* 906 F.2d 432, 448 (9th Cir. 1990) (public communications may form the basis of an agreement on price levels when ''the public dissemination of such information served little purpose other than to facilitate interdependent or collusive price coordination'').

[4] The Commission articulated a safe harbor for exchanges of price and cost information in Statement 6 of the 1996 Health Care Guidelines. *See* Dep't of Justice & Federal Trade Comm'n, Statements of Antitrust Enforcement Policy in Health Care, Statement 6: Enforcement Policy on Provider Participation in Exchanges of Price and Cost Information (1996). The DIFRA information exchange failed to qualify for the safety zone of the Health Care Guidelines for several reasons. Although the DIFRA information exchange was managed by a third party, the information exchanged was insufficiently historical, the participants in the exchange too few, and their individual market shares too large to qualify for the permissive treatment contemplated by the Health Care Guidelines. While failing to qualify for the safety zone of the Health Care Guidelines is not in itself a violation of Section 5, firms that wish to minimize the risk of antitrust scrutiny should consider structuring their collaborations in accordance with the criteria of the safety zone.

GENERAL SERVICES ADMINISTRATION

[OMB Control No. 3090–0262; Docket 2012–0001; Sequence 3]

General Services Administration Acquisition Regulation; Information Collection; Identification of Products With Environmental Attributes

AGENCY: Office of Acquisition Policy, GSA.

ACTION: Notice of request for comments regarding a extension of a previously existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act the Regulatory Secretariat will be submitting to the Office of Management and Budget (OMB) a request to review and approve an extension of a previously approved information collection requirement regarding identification of products with environmental attributes.

Public comments are particularly invited on: Whether this collection of information is necessary and whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate and based on valid assumptions and methodology; and ways to enhance the quality, utility, and clarity of the information to be collected.

DATES: Submit comments on or before: May 25, 2012.

FOR FURTHER INFORMATION CONTACT: Ms. Dana Munson, Procurement Analyst, General Services Acquisition Policy Division, GSA, at telephone (202) 357–9652 or via email to *dana.munson@gsa.gov.*

ADDRESSES: Submit comments identified by Information Collection 3090–0262, Identification of Products with Environmental Attributes, by any of the following methods:

- *Regulations.gov: http://www.regulations.gov.* Submit comments via the Federal eRulemaking portal by inputting ''Information Collection 3090–0262, Identification of Products with Environmental Attributes'', under the heading ''Enter Keyword or ID'' and selecting ''Search''. Select the link ''Submit a Comment'' that corresponds with ''Information Collection 3090–0262, Identification of Products with Environmental Attributes''. Follow the instructions provided at the ''Submit a Comment'' screen. Please include your name, company name (if any), and ''Information Collection 3090–0262, Identification of Products with Environmental Attributes'' on your attached document.
- *Fax:* 202–501–4067.
- *Mail:* General Services Administration, Regulatory Secretariat (MVCB), 1275 First Street NE., Washington, DC 20417. Attn: Hada Flowers/IC 3090–0262, Identification of Products with Environmental Attributes.

Instructions: Please submit comments only and cite Information Collection 3090–0262, Identification of Products with Environmental Attributes, in all correspondence related to this collection. All comments received will be posted without change to *http://www.regulations.gov,* including any personal and/or business confidential information provided.

SUPPLEMENTARY INFORMATION:

A. Purpose

General Services Administration (GSA) requires contractors submitting Multiple Award Schedule Contracts to identify in their GSA price lists those products that they market commercially that have environmental attributes. The identification of these products will enable Federal agencies to maximize the use of these products to meet the responsibilities expressed in statutes and executive orders.

B. Annual Reporting Burden

Respondents: 9,000.
Responses per Respondent: 1.
Annual Responses: 9,000.
Hours per Response: 3.
Total Burden Hours: 27,000.

Obtaining Copies of Proposals: Requesters may obtain a copy of the information collection documents from the Regulatory Secretariat Division (MVCB), 1275 First Street NE., Washington, DC 20417, telephone (202) 501–4755. Please cite OMB Control No. 3090–0262, Identification of Products with Environmental Attributes, in all correspondence.

Dated: March 19, 2012.

Joseph A. Neurauter,

Director, Office of Acquisition Policy, Senior Procurement Executive.

[FR Doc. 2012–7197 Filed 3–23–12; 8:45 am]

BILLING CODE 6820–61–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration on Aging

Agency Information Collection Activities; Submission for OMB Review; Comment Request; State Annual Long-Term Care Ombudsman Report and Instructions

AGENCY: Administration on Aging, HHS.

ACTION: Notice.

SUMMARY: The Administration on Aging (AoA) is announcing that the proposed collection of information listed below has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments on the collection of information by April 25, 2012.

ADDRESSES: Submit written comments on the collection of information by fax 202.395.6974 or by mail to the Office of Information and Regulatory Affairs, OMB, New Executive Office Bldg., 725 17th St. NW., Rm. 10235, Washington, DC 20503, Attn: Brenda Aguilar, Desk Officer for AoA.

FOR FURTHER INFORMATION CONTACT: Louise Ryan, telephone: (202) 357–3503; email: *louise.ryan@aoa.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, AoA has submitted the following proposed collection of information to OMB for review and clearance.

States provide the following data and narrative information in the report:

1. Numbers and descriptions of cases filed and complaints made on behalf of long-term care facility residents to the statewide ombudsman program;
2. Major issues identified impacting on the quality of care and life of long-term care facility residents;
3. Statewide program operations; and
4. Ombudsman activities in addition to complaint investigation.

The report form and instructions have been in continuous use, with minor modifications, since they were first approved by OMB for the FY 1995 reporting period. This request is for approval to extend use of the current form and instructions, with no modifications, for three years, covering the FY 2012–2014 reporting periods.

The data collected on complaints filed with ombudsman programs and narrative on long-term care issues provide information to Centers for Medicare and Medicaid Services and others on patterns of concerns and major long-term care issues affecting residents of long-term care facilities. Both the complaint and program data collected assist the states and local ombudsman programs in planning strategies and activities, providing training and technical assistance and developing performance measures.

A reporting form and instructions may be viewed in the ombudsman section of the AoA Web site, *www.aoa.gov.*

AoA estimates the burden of this collection and entering the report information as follows: Approximately 8,569 hours, with 52 State Agencies on Aging responding annually.

Dated: March 2, 2012.

Kathy Greenlee,

Assistant Secretary for Aging.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2011–N–0624]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Notice of Participation

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Fax written comments on the collection of information by April 25, 2012.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be faxed to the Office of Information and Regulatory Affairs, OMB, Attn: FDA Desk Officer, FAX: 202–395–7285, or emailed to *oira_submission@omb.eop.gov.* All comments should be identified with the OMB control number 0910–0191. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Ila S. Mizrachi, Office of Information Management, Food and Drug Administration, 1350 Piccard Dr., PI50–400B, Rockville, MD 20850, 301–796–7726, *Ila.Mizrachi@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Notice of Participation—21 CFR 12.45 (OMB Control Number 0910–0191)—Extension

Section 12.45 (21 CFR 12.45), issued under section 701 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 371), sets forth the format and procedures for any interested person to file a petition to participate in a formal evidentiary hearing, either personally or through a representative. Section 12.45 requires that any person filing a notice of participation state their specific interest in the proceedings, including the specific issues of fact about which the person desires to be heard. This section also requires that the notice include a statement that the person will present testimony at the hearing and will comply with specific requirements in 21 CFR 12.85, or, in the case of a hearing before a Public Board of Inquiry, concerning disclosure of data and information by participants (21 CFR 13.25). In accordance with § 12.45(e), the presiding officer may omit a participant's appearance.

The presiding officer and other participants will use the collected information in a hearing to identify specific interests to be presented. This preliminary information serves to expedite the pre-hearing conference and commits participation.

The respondents are individuals or households, State or local governments, not-for-profit institutions and businesses, or other for-profit groups and institutions.

In the **Federal Register** of September 9, 2011 (76 FR 55918), FDA published a 60-day notice requesting public comment on the proposed collection of information. No comments were received.

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

21 CFR Section	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
12.45	4	1	4	3	12

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

The burden estimates for this collection of information are based on Agency records and experience over the past 3 years.

Dated: March 20, 2012.

Leslie Kux,

Acting Assistant Commissioner for Policy.

[FR Doc. 2012–7137 Filed 3–23–12; 8:45 am]

BILLING CODE 4160–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2011–N–0776]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Reclassification Petitions for Medical Devices

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Fax written comments on the collection of information by April 25, 2012.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be faxed to the Office of Information and Regulatory Affairs, OMB, Attn: FDA Desk Officer, FAX: 202–395–7285, or emailed to *oira_submission@omb.eop.gov.* All comments should be identified with the OMB control number 0910–0138 and also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Daniel Gittleson, Office of Information Management, Food and Drug Administration, 1350 Piccard Dr., PI50–400B, Rockville, MD 20850, 301–796–5156, *Daniel.Gittleson@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Reclassification Petitions for Medical Devices—21 CFR 860.123 (OMB Control Number 0910–0138)—Extension

Under sections 513(e) and (f), 514(b), 515(b), and 520(l) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 360c(e) and (f), 360d(b), 360e(b), and 360j(l)) and part 860 (21 CFR part 860), subpart C, FDA has responsibility to collect data and information contained in reclassification petitions. The reclassification provisions of the FD&C Act allow any person to petition for reclassification of a device from any of the three classes i.e., I, II, and III, to another class. The reclassification procedure regulation requires the submission of specific data when a manufacturer is petitioning for reclassification. This includes a ''Supplemental Data Sheet,'' Form FDA 3427, and a ''Classification Questionnaire,'' Form FDA 3429. Both forms contain a series of questions concerning the safety and effectiveness of the device type. Further, the reclassification content regulation (§ 860.123) requires the submission of valid scientific evidence demonstrating that the proposed reclassification will provide a reasonable assurance of safety and effectiveness of the device type for its indications for use. Thus, the reclassification provisions of the FD&C Act serve primarily as a vehicle for manufacturers to seek reclassification from a higher to a lower class, thereby reducing the regulatory requirements applicable to a particular device type, or

to seek reclassification from a lower to a higher class, thereby increasing the regulatory requirements applicable to that device type. If approved, petitions requesting classification from class III to class II or class I provide an alternative route to market in lieu of premarket approval for class III devices. If approved, petitions requesting reclassification from class I or II, to a different class, may increase requirements.

In the **Federal Register** of November 14, 2011 (76 FR 70460), FDA published a 60-day notice requesting public comment on the proposed collection of information. No comments were received.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

21 CFR section	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
860.123	6	1	6	500	3,000

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Based on the last 3 years, and actual reclassification petitions received, FDA anticipates that six petitions will be submitted each year. The time required to prepare and submit a reclassification petition, including the time needed to assemble supporting data, averages 500 hours per petition. This average is based upon estimates by FDA administrative and technical staff who: (1) Are familiar with the requirements for submission of a reclassification petition, (2) have consulted and advised manufacturers on these requirements, and (3) have reviewed the documentation submitted.

Dated: March 20, 2012.

David Dorsey,

Acting Associate Commissioner for Policy and Planning.

FOR FURTHER INFORMATION CONTACT: Juanmanuel Vilela, Office of Information Management, Food and Drug Administration, 1350 Piccard Dr., PI50–400B, Rockville, MD 20850, 301–796–7651, *juanmanuel.vilela@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Registration of Producers of Drugs and Listing of Drugs in Commercial Distribution—21 CFR Part 207—(OMB Control Number 0910–0045)—Extension

Requirements for drug establishment registration and drug listing are set forth in section 510 of the Federal Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 360); section 351 of the Public Health Service Act; and part 207 (21 CFR part 207). Fundamental to FDA's mission to protect the public health is the collection of this information, which is used for important activities such as postmarket surveillance for serious adverse drug reactions, inspection of drug manufacturing and processing facilities, and monitoring of drug products imported into the United States. Comprehensive, accurate, and up-to-date information is critical to conducting these activities with efficiency and effectiveness.

Under section 510 of the FD&C Act, FDA is authorized to establish a system for registration of producers of drugs and for listing of drugs in commercial distribution. To implement section 510 of the FD&C Act, FDA issued part 207.[1] Under current § 207.20, manufacturers, repackers, and relabelers that engage in the manufacture, preparation, propagation, compounding, or processing of human or veterinary drugs and biological products, including bulk drug substances and bulk drug substances for prescription compounding, and drug premixes as well as finished dosage forms, whether prescription or over-the-counter, are required to register their establishment. In addition, manufacturers, repackers, and relabelers are required to submit a listing of every drug or biological product in commercial distribution. Owners or operators of establishments that distribute under their own label or trade name a drug product manufactured by a registered establishment are not required either to register or list. However, distributors may elect to submit drug listing information in lieu of the registered establishment that manufactures the drug product. Foreign drug

[1] This document addresses the information collection in current part 207. In the **Federal Register** of August 29, 2006 (the 2006 proposed rule) (71 FR 51276), FDA proposed to revise part 207. The proposed revisions would reorganize, consolidate, clarify, and modify current regulations concerning who must register establishments and list, and describes when and how to register and list and what information must be submitted for registration and listing. In addition, the proposal would make certain changes to the National Drug Code (NDC) system and would require the appropriate NDC number to appear on the labels for drugs subject to the listing requirements. The proposed regulations generally also require the electronic submission of all registration and most listing information. The 2006 proposed rule requested comments on the information collection for revised part 207. When the proposal is finalized, the information collection for a revised part 207 will replace the information collection in this document.

establishments must also comply with the establishment registration and product listing requirements if they import or offer for import their products into the United States.

Under current § 207.21, establishments, both domestic and foreign, must register with FDA within 5 days after beginning the manufacture of drugs or biologicals, or within 5 days after the submission of a drug application or biological license application (BLA). In addition, establishments must register annually. Changes in individual ownership, corporate or partnership structure, location, or drug-handling activity must be submitted as amendments to registration under current § 207.26 within 5 days of such changes. Under § 207.20(b), private label distributors may request their own labeler code and elect to submit drug listing information to FDA. In such instances, at the time of submitting or updating drug listing information, private label distributors must certify to the registered establishment that manufactured, prepared, propagated, compounded or processed (which includes, among other things, repackaging and relabeling) the listed drug that the drug listing submission was made. Establishments must, within 5 days of beginning the manufacture of drugs or biologicals, submit to FDA a listing for every drug or biological product in commercial distribution at that time. Private label distributors may elect to submit to FDA a listing of every drug product they place in commercial distribution. Registered establishments must submit to FDA drug product listing for those private label distributors who do not elect to submit listing information.

Under § 207.25, product listing information submitted to FDA by domestic and foreign manufacturers must, depending on the type of product being listed, include any new drug application (NDA) number or biological establishment license number, copies of current labeling and a sampling of advertisements, a quantitative listing of the active ingredient for each drug or biological product not subject to an approved application or license, the NDC number, and any drug imprinting information.

In addition to the product listing information required, FDA may also require, under § 207.31, a copy of all advertisements and a quantitative listing of all ingredients for each listed drug or biological product not subject to an approved application or license; the basis for a determination, by the establishment, that a listed drug or biological product is not subject to marketing or licensing approval requirements; and a list of certain drugs or biological products containing a particular ingredient. FDA may also request, but not require, the submission of a qualitative listing of the inactive ingredients for all listed drugs or biological products, and a quantitative listing of the active ingredients for all listed drugs or biological products subject to an approved application or license.

Under § 207.30, establishments must update their product listing information every June and December or, at the discretion of the establishment, when any change occurs. These updates must include the following information: (1) A listing of all drug or biological products introduced for commercial distribution that have not been included in any previously submitted list; (2) all drug or biological products formerly listed for which commercial distribution has been discontinued; (3) all drug or biological products for which a notice of discontinuance was submitted and for which commercial distribution has been resumed; and (4) any material change in any information previously submitted. No update is required if no changes have occurred since the previously submitted list.

Historically, drug establishment registration and drug listing information have been submitted in paper form using Form FDA 2656 (Registration of Drug Establishment/Labeler Code Assignment), Form FDA 2657 (Drug Product Listing), and Form FDA 2658 (Registered Establishments' Report of Private Label Distributors) (collectively referred to as FDA Forms).

Changes in the FD&C Act resulting from enactment of the Food and Drug Administration Amendments Act of 2007 (Pub. L. 110–85) (FDAAA) require that drug establishment registration and drug listing information be submitted electronically unless a waiver is granted. Before the enactment of FDAAA, section 510(p) of the FD&C Act expressly provided for electronic submission of drug establishment registration information upon a finding that electronic receipt was feasible, and section 510(j) of the FD&C Act provided that drug listing information be submitted in the form and manner prescribed by FDA. Section 224 of FDAAA, which amends section 510(p) of the FD&C Act, now expressly, requires electronic drug listing in addition to drug establishment registration. In certain cases, if it is unreasonable to expect a person to submit registration and listing information electronically, FDA may grant a waiver from the electronic format requirement.

In the **Federal Register** of June 1, 2009 (74 FR 26248), FDA announced the availability of a guidance for industry entitled ''Providing Regulatory Submissions in Electronic Format—Drug Establishment Registration and Drug Listing'' (the 2009 guidance). The document provides guidance to industry on the statutory requirement to submit electronically drug establishment registration and drug listing information. The guidance describes the types of information to include for purposes of drug establishment registration and drug listing and how to prepare and submit the information in an electronic format (Structured Product Labeling (SPL) files) that FDA can process, review, and archive.

In addition to the information that previously was collected by the FDA Forms, the guidance addresses electronic submission of other required information as follows:

- For registered foreign drug establishments, the name, address, and telephone number of its U.S. agent (§ 207.40(c));
- The name of each importer that is known to the establishment (the U.S. company or individual in the United States that is an owner, consignee, or recipient of the foreign establishment's drug that is imported into the United States. An importer does not include the consumer or patient who ultimately purchases, receives, or is administered the drug, unless the foreign establishment ships the drug directly to the consumer or the patient) (section 510(i)(1)(A) of the FD&C Act); and
- The name of each person who imports or offers for import (the name of each agent, broker, or other entity, other than a carrier, that the foreign drug establishment uses to facilitate the import of their drug into the United States) (section 510(i)(1)(A) of the FD&C Act).

FDA also recommends the voluntary submission of the following additional information, when applicable:

- To facilitate correspondence between foreign establishments and FDA, the email address for the U.S. agent, and the telephone number(s) and email address for the importer and person who imports or offers for import their drug;
- A site-specific Data Universal Numbering System (DUNS) number for each entity (e.g., the registrant, establishments, U.S. agent, importer);
- The NDC product code for the source drug that is repacked or relabeled;

• Distinctive characteristics of certain listed drugs, i.e., the flavor, the color, and image of the actual solid dosage form; and

• Registrants may indicate that they view as confidential the registrant's business relationship with an establishment, or an inactive ingredient.

In addition to the collection of information, there is additional burden for the following activities:

• Preparing a standard operating procedure (SOP) for the electronic submission of drug establishment registration and drug listing information;

• Creating the SPL file, including accessing and reviewing the technical specifications and instructional documents provided by FDA (accessible at *http://www.fda.gov/oc/datacouncil/spl.html*);

• Reviewing and selecting appropriate terms and codes used to create the SPL file (accessible at *http://www.fda.gov/oc/datacouncil/spl.html*);

• Obtaining the digital certificate used with FDA's electronic submission gateway and uploading the SPL file for submission (accessible at *http://www.fda.gov/esg/default.htm*); and

• Requests for waivers from the electronic submission process as described in the draft guidance.

When FDA published the 2009 guidance on submitting establishment registration and drug listing information in electronic format, the Agency also amended its burden estimates for OMB control number 0910–0045 to include the additional burden for collection of information that had not been submitted using the FDA Forms, and to create and upload the SPL file. The amended burden estimates included the one-time preparation of an SOP for creating and uploading the SPL file. Although most firms will already have prepared an SOP for the electronic submission of drug establishment registration and drug listing information, each year additional firms will need to create an SOP. As provided in table 2 of this document, FDA estimates that approximately 1,000 firms will have to expend a one-time burden to prepare, review, and approve an SOP, and the Agency estimates that it will take 40 hours per recordkeeper to create 1,000 new SOPs for a total of 40,000 hours. The information collection requirements of the Drug Listing and Establishment Registration regulations have been grouped according to the information collection areas of the regulations.

In the **Federal Register** of October 24, 2011 (76 FR 65730), FDA published a 60-day notice requesting public comment on the proposed collection of information. FDA received one comment.

Comment

The comment raised two issues and asked for several procedural clarifications. The first issue raised suggested that the burden to industry might be greater than the 4.5-hour average provided in the estimate. The next issue questioned the process by which FDA issued a guidance to address the electronic submissions process without changing the regulation that still describes a paper submission process, which would have allowed for public comment on that change. The comment then sought several procedural clarifications on: (1) How to submit changes in ownership of an establishment, (2) how to select a business function, (3) how to ensure that an establishment is represented consistently between a vendor's registration and the client's drug establishment registration, (4) how to link an importer with a particular product, (5) how to list bulk tablets that will be imported for packaging, and (6) how to certify to the registered establishment that the private label distributor has listed the product.

Response

FDA acknowledges that the 2009 guidance is different from the process described in the current part 207. As was stated in the **Federal Register** notice and as acknowledged by the commenter, the current regulation predates the electronic process and describes a paper-based submission process. FDA is in the process of rewriting part 207, and published the draft version for public comment in 2006. Afterward, the FDAAA mandated the electronic submission of drug establishment and drug product information. The 2009 guidance was created to address the mandate of FDAAA. The 2006 proposed rule will be modified appropriately to address the FDAAA mandates as well. With regards to the estimated burden, FDA collaborated with members of industry and international health information data standards organizations to arrive at the current process and estimates for the burden of gathering, assembling, and submitting data. The estimates are considered to be averages that will vary up or down per individual respondent.

The following paragraphs are intended to clarify one of the commenter's issues mentioned previously in this document:

1. Changes to the establishment name, registrant name, or other registration information can be made by submitting an updated registration submission via SPL. Changes in corporate ownership or officers that do not affect names, addresses, or the DUNS number(s) for a registered establishment should be made with Dun and Bradstreet. That data is then referenced as needed by FDA using the DUNS number. Information about submitting SPL can be found at the link at the end of the FDA response. It should be noted that changes in ownership may also require the submission of updates to listing information, labeler code name and DUNS, and application data for NDAs, abbreviated new drug applications (ANDAs), BLAs, new animal drug applications (NADAs), and abbreviated new animal drug applications (ANADAs).

2. For selecting a business operation, a current list of valid business functions and their associated codes can be found at the link at the end of this response. Please note that if more than one business function apply, a registrant should select all that apply and include them in the registration SPL.

3. FDA has implemented an automated validation of all drug product listing submissions to ensure that each establishment referenced in the product listing is registered under the same business operation. For example, a product listing SPL that references a particular facility as a packer of the product will be rejected if that establishment has not chosen Pack as a business operation in its registration. FDA expects vendors and clients to communicate this information directly to each other and, if necessary, coordinate their submissions in order to avoid issues with this validation.

4. The importer information is submitted via the registration of the foreign establishment. Any product listing referencing that foreign establishment should therefore provide the necessary link from importer to product. Information about submitting SPL can be found at the link at the end of the FDA response.

5. A product listing for bulk tablets intended for further processing or packaging should be listed using the SPL product/document type of Bulk Ingredient and a marketing category of Drug for Further Processing. Information about submitting SPL can be found at the link at the end of the FDA response.

6. For finished dosage forms, appearance in the NDC Directory is proof of submission of listing. Note that unfinished products and active pharmaceutical ingredient listings will not appear in the NDC Directory.

Instructions and SPL resources may be found on the SPL Resources Web page at *http://www.fda.gov/ForIndustry/DataStandards/StructuredProductLabeling/default.htm*

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
New registrations, including new labeler codes requests	39	14.72	574	4.5	2,583
Annual updates of registration information	3,256	2.99	9,735	4.5	43,808
New drug listings	1,567	6.57	10,295	4.5	46,328
New listings for private label distributor	146	10.06	1,469	4.5	6,611
June and December updates of all drug listing information	1,677	11.21	18,799	4.5	84,596
Waiver requests	1	1	1	1	1
Total					183,927

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

TABLE 2—ESTIMATED ANNUAL RECORDKEEPING BURDEN [1]

Activity resulting from section 510(p) of the FD&C Act as amended by FDAAA	Number of recordkeepers	Number of records per recordkeeper	Total annual records	Average burden per recordkeeping	Total hours
One-time preparation of SOP	1,000	1	1,000	40	40,000
SOP maintenance	3,295	1	3,295	1	3,295
Total					43,295

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Dated: March 20, 2012.

Leslie Kux,

Acting Assistant Commissioner for Policy.

BILLING CODE 4160–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2012–N–0001]

Antiviral Drugs Advisory Committee; Notice of Meeting

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

This notice announces a forthcoming meeting of a public advisory committee of the Food and Drug Administration (FDA). The meeting will be open to the public.

Name of Committee: Antiviral Drugs Advisory Committee.

General Function of the Committee: To provide advice and recommendations to the Agency on FDA's regulatory issues.

Date and Time: The meeting will be held on May 11, 2012, from 8 a.m. to 5 p.m.

Location: DoubleTree by Hilton Hotel Washington DC/Silver Spring, The Ballrooms, 8727 Colesville Rd., Silver Spring, MD. The hotel telephone number is 301–589–5200.

Contact Person: Yvette Waples, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 31, Rm. 2417, Silver Spring, MD 20993–0002, 301–796–9001, FAX: 301–847–8533, email: *AVAC@fda.hhs.gov,* or FDA Advisory Committee Information Line, 1–800–741–8138 (301–443–0572 in the Washington, DC area), and follow the prompts to the desired center or product area. Please call the Information Line for up-to-date information on this meeting. A notice in the **Federal Register** about last minute modifications that impact a previously announced advisory committee meeting cannot always be published quickly enough to provide timely notice. Therefore, you should always check the Agency's Web site and call the appropriate advisory committee hot line/phone line to learn about possible modifications before coming to the meeting.

Agenda: The committee will discuss new drug application (NDA) 203–100, for a fixed-dose combination tablet of elvitegravir/cobicistat/emtricitabine/tenofovir disoproxil fumarate, submitted by Gilead Sciences, Inc. The application proposes an indication for the treatment of HIV–1 infection in adults who are antiretroviral naïve or have no known substitutions associated with resistance to the individual components.

FDA intends to make background material available to the public no later than 2 business days before the meeting. If FDA is unable to post the background material on its Web site prior to the meeting, the background material will be made publicly available at the location of the advisory committee meeting, and the background material will be posted on FDA's Web site after the meeting. Background material is available at *http://www.fda.gov/AdvisoryCommittees/Calendar/default.htm.* Scroll down to the appropriate advisory committee link.

Procedure: Interested persons may present data, information, or views, orally or in writing, on issues pending before the committee. Written submissions may be made to the contact person on or before April 27, 2012. Oral presentations from the public will be scheduled between approximately 1 p.m. and 2 p.m. Those individuals interested in making formal oral presentations should notify the contact person and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time requested to make their presentation on or before April 19, 2012. Time allotted for each presentation may be limited. If the number of registrants requesting to

speak is greater than can be reasonably accommodated during the scheduled open public hearing session, FDA may conduct a lottery to determine the speakers for the scheduled open public hearing session. The contact person will notify interested persons regarding their request to speak by April 20, 2012.

Persons attending FDA's advisory committee meetings are advised that the Agency is not responsible for providing access to electrical outlets.

FDA welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with physical disabilities or special needs. If you require special accommodations due to a disability, please contact Yvette Waples at least 7 days in advance of the meeting.

FDA is committed to the orderly conduct of its advisory committee meetings. Please visit our Web site at *http://www.fda.gov/AdvisoryCommittees/AboutAdvisoryCommittees/ucm111462.htm* for procedures on public conduct during advisory committee meetings.

Notice of this meeting is given under the Federal Advisory Committee Act (5 U.S.C. app. 2).

Dated: March 20, 2012.

Leslie Kux,

Acting Assistant Commissioner for Policy.

National Library of Medicine; Notice of Meeting

Pursuant to section 10(a) of the Federal Advisory Committee Act, as amended (5 U.S.C. App), notice is hereby given of a meeting of the PubMed Central National Advisory Committee.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

Name of Committee: PubMed Central National Advisory Committee.

Date: June 19, 2012.

Time: 9:30 a.m. to 3 p.m.

Agenda: Review and Analysis of Systems.

Place: National Library of Medicine, Building 38, 2nd Floor, Board Room, 8600 Rockville Pike, Bethesda, MD 20892.

Contact Person: David J. Lipman, M.D., Director, National Center for Biotechnology Information, National Library of Medicine, Building 38, Room 8N805, Bethesda, MD 20894, 301–435–5985, *dlipman@mail.nih.gov*.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

In the interest of security, NIH has instituted stringent procedures for entrance onto the NIH campus. All visitor vehicles, including taxicabs, hotel, and airport shuttles will be inspected before being allowed on campus. Visitors will be asked to show one form of identification (for example, a government-issued photo ID, driver's license, or passport) and to state the purpose of their visit.

Information is also available on the Institute's/Center's home page: *http://www.pubmed.central.nih.gov/about/nac/html,* where an agenda and any additional information for the meeting will be posted when available.

National Institutes of Health

National Library of Medicine; Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App), notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable materials, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Library of Medicine Special Emphasis Panel, Conflict R01/K99/K22.

Date: May 17, 2012.

Time: 12 p.m. to 4 p.m.

Agenda: To review and evaluate grant applications.

Place: National Library of Medicine, 6705 Rockledge Drive, Suite 301, Bethesda, MD 20817, (Telephone Conference Call).

Contact Person: Zoe H. Huang, M.D., Scientific Review Officer, Extramural Programs, National Library of Medicine, NIH, 6705 Rockledge Drive, Suite 301, Bethesda, MD 20892–7968, 301–594–4937, *hungz@mail.nih.gov*.

(Catalogue of Federal Domestic Assistance Program No. 93.879, Medical Library Assistance, National Institutes of Health, HHS).

Dated: March 20, 2012.

Jennifer S. Spaeth,

Director, Office of Federal Advisory Committee Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Library of Medicine; Notice of Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App), notice is hereby given of meetings of the Board of Regents of the National Library of Medicine.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable materials, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Board of Regents of the National Library of Medicine Disaster Information Management Research Center Working Group.

Date: May 7, 2012.

Open: 9 a.m. to 4 p.m.

Agenda: Review and discuss the current activities of NLM's Disaster Information Management Research Center.

Place: National Library of Medicine, Building 38, 2nd Floor, Board Room, 8600 Rockville Pike, Bethesda, MD 20892.

Contact Person: Donald A.B. Lindberg, M.D., Director, National Library of Medicine, 8600 Rockville Pike, Bethesda, MD 20892, 301–496–6221, *lindberg@mail.nih.gov.*

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

In the interest of security, NIH has instituted stringent procedures for entrance onto the NIH campus. All visitor vehicles, including taxicabs, hotel, and airport shuttles will be inspected before being allowed on campus. Visitors will be asked to show one form of identification (for example, a government-issued photo ID, driver's license, or passport) and to state the purpose of their visit.

Information is also available on the Institute's/Center's home page: *www.nlm.nih.gov/od/bor/bor.html,* where an agenda and any additional information for the meeting will be posted when available.

(Catalogue of Federal Domestic Assistance Program No. 93.879, Medical Library Assistance, National Institutes of Health, HHS).

Dated: March 20, 2012.

Jennifer S. Spaeth,

Director, Office of Federal Advisory Committee Policy.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2012–0091]

National Offshore Safety Advisory Committee

AGENCY: United States Coast Guard, Department of Homeland Security.

ACTION: Committee Management; Notice of Federal Advisory Committee Meetings.

SUMMARY: The National Offshore Safety Advisory Committee (NOSAC) will meet on April 11 and 12, 2012, in New Orleans, Louisiana to discuss various issues related to safety of operations and other matters affecting the oil and gas offshore industry. These meetings are open to the public.

DATES: NOSAC will meet Wednesday, April 11, 2012 from 12 p.m. to 5 p.m. and Thursday, April 12, 2012, from 8:30 a.m. to 5 p.m. Three subcommittees will meet the afternoon of April 11. Please note that the meetings may close early if the committee has completed its business or be extended based on the level of public comments.

ADDRESSES: The meetings will be held at the Renaissance New Orleans Arts Hotel, 700 Tchoupitoulas Street, New Orleans, Louisiana 70130, *http://www.marriott.com/hotels/travel/msydt-renaissance-new-orleans-arts-hotel/.* There are three breakout rooms reserved for the afternoon on April 11. The April 12 meeting will also be held at Renaissance New Orleans Arts Hotel, in the Patrons Room.

For information on facilities or services for individuals with disabilities or to request special assistance at the meeting, contact the person listed in **FOR FURTHER INFORMATION CONTACT** as soon as possible.

To facilitate public participation, we are inviting public comment on the issues to be considered by the committee as listed in the ''AGENDA'' section below. Comments must be submitted in writing no later than April 1, 2012, and must be identified by USCG–2012–0091 and may be submitted by *one* of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* (202) 493–2251.
- *Mail:* Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590–0001.
- *Hand Delivery:* Same as mail address above, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The telephone number is 202–366–9329.

Instructions: All submissions received must include the words ''Department of Homeland Security'' and the docket number for this action. Comments received will be posted without alteration at *http://www.regulations.gov,* including any personal information provided. You may review a Privacy Act notice regarding our public dockets in the January 17, 2008, issue of the **Federal Register** (73 FR 3316).

Docket: For access to the docket to read documents or comments related to this Notice, go to *http://www.regulations.gov.*

A public comment period will be held during the meeting on April 12, 2012, and speakers are requested to limit their comments to 3 minutes. Please note that the public comment period may end before the time indicated, following the last call for comments. Contact the individual listed below to register as a speaker.

FOR FURTHER INFORMATION CONTACT: Commander Rob Smith, Designated Federal Officer of NOSAC, Commandant (CG–5222), U.S. Coast Guard, 2100 Second Street SW., Stop 7126, Washington, DC 20593–0001 or Mr. Kevin Pekarek, Alternate Designated Federal Officer of NOSAC, Commandant (CG–5222), U.S. Coast Guard, 2100 Second Street SW., Stop 7126, Washington, DC 20593–0001; telephone (202) 372–1386, fax (202) 372–1926. If you have questions on viewing or submitting material to the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION: Notice of this meeting is given under the *Federal Advisory Committee Act,* 5 U.S.C. App. (Pub. L. 92–463). The National Offshore Safety Advisory Committee (NOSAC) provides advice and recommendations to the Department of Homeland Security on matters and actions concerning activities directly involved with or in support of the exploration of offshore mineral and energy resources insofar as they relate to matters within U.S. Coast Guard jurisdiction.

Agenda

Day 1

NOSAC's three subcommittees will meet on April 11, 2012 between 12 p.m. and 5 p.m., to discuss its ongoing work. Times for these meetings are as follows: (1) Standards for Dynamic Positioning (DP) Operating Personnel (12 p.m. to 2:30 p.m.); (2) Medical Evacuation of Injured Divers (2 p.m. to 4 p.m.); and (3) Review of the Mississippi Canyon Incident Reports stemming from the Deepwater Horizon casualty event (2:30 p.m. to 5 p.m.).

Day 2

The NOSAC will meet on April 12, 2012 to review and discuss reports and recommendations received from the three subcommittees from their deliberations on April 11. The Committee will then use this information to formulate recommendations to the agency. The meeting will be open for public comment at the end of the day, see Agenda item (17).

A complete agenda for April 12th is as follows:

(1) Roll call of committee members and determination of a quorum.

(2) Approval of minutes from the February 15, 2012, meeting.

(3) Committee Administration.

The swearing in of new members from fiscal year 2009, 2010 and 2011 (if seated) slates of candidates.

(4) Welcoming comments from Eighth District Commander; Director of Commercial Regulations and Standards (CG–52); and Commander, Sector New Orleans.

(5) Presentation and discussion of reports and recommendations from the subcommittees and subsequent actions on:

(a) Standards for DP Operating Personnel.

(b) Medical Evacuation of Injured Divers.

(c) Mississippi Canyon Incident Reports.

(6) An update and discussion on recent U.S. Coast Guard regulations and **Federal Register** notices that affect the offshore industry.

(7) Offshore Operators Committee (OOC) update regarding medical evacuations from the Outer Continental Shelf (OCS).

(8) Present a capsulation of the industry comments received from the Mobile Offshore Drilling Unit Guidance Policy, Notice of Availability, request for comments and public meeting published in the **Federal Register** December 29, 2011 (76 FR 81957), docket No. USCG–2011–1106; and discuss a way forward to ensuring these vital systems are appropriately maintained and tested.

(9) U.S. Coast Guard National Center of Expertise (NCOE) Outer Continental Shelf Inspections will lead discussions on where and how can the USCG improve on training.

(10) Update from the Bureau of Safety and Environmental Enforcement (BSEE) concerning the status of their Deepwater Horizon Investigation Recommendations.

(11) Updates on International Maritime Organization (IMO) activities of interest to the OCS community.

(12) Statistical discussion on commercial diving casualties and analysis of OCS casualties.

(13) Update on alternatives and enforcement policy concerning the Notice of Arrival on the Outer Continental Shelf rulemaking, published in the **Federal Register** January 13, 2011 (76 FR 2254).

(14) Discussion on the state of the industry: Well Control Training and current issues to be resolved to improve training for persons with Well Control responsibilities.

(15) Task Statement discussion of Safety and Environmental Management System: A joint regulatory effort between the U.S. Coast Guard and BSEE.

(16) A progress report from the U.S. Coast Guard on the last 5 years of NOSAC's submitted final reports and the disposition/actions the U.S. Coast Guard has taken regarding these reports.

(17) Period for Public comment.

(18) Adjournment of meeting.

A copy of each report is available at the *https://www.fido.gov* Web site or by contacting Kevin Y. Pekarek. Use ''code 68'' to identify NOSAC when accessing this material. Once you have accessed the Committee page, click on the meetings tab and then the ''View'' button for the meeting dated April 12, 2012, to access the information for this meeting. Minutes will be available approximately 30 days after this meeting. Both minutes and documents applicable for this meeting can also be found at an alternative site using the following Web address: *https://homeport.uscg.mil* and use these key strokes: Missions>Port and Waterways>Safety Advisory Committee>NOSAC and then use the event key.

The meeting will be recorded by a court reporter. A transcript of the meeting and any material presented at the meeting will be made available through the *https://www.fido.gov* Web site.

The committee will review the information presented on each issue, deliberate on any recommendations presented in the subcommittees' reports, and formulate recommendations for the Department's consideration.

The committee will also receive tasking from CDR Rob Smith, Designated Federal Officer, on one proposed task statements: Safety and Environmental Management System and to make recommendations to the U.S. Coast Guard on same.

Dated: March 15, 2012.

J.G. Lantz,

Director of Commercial Regulations and Standards.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

[CBP Dec. No. 12–05]

Expansion of Global Entry to Additional Airports

AGENCY: U.S. Customs and Border Protection; Department of Homeland Security.

ACTION: General notice.

SUMMARY: U.S. Customs and Border Protection (CBP) has established an international trusted traveler program, referred to as Global Entry, at twenty major U.S. airports. Global Entry allows pre-approved, low-risk participants expedited entry into the United States using Global Entry kiosks located at designated airports. This document announces the expansion of the program to include four additional airports.

DATES: Global Entry will be available at all four airport locations on or before September 22, 2012. The exact starting date for each airport location will be announced on the Web site at *http://www.globalentry.gov.*

FOR FURTHER INFORMATION CONTACT: Larry Panetta, Office of Field Operations, (202) 344–1253, *Larry.Panetta@dhs.gov.*

SUPPLEMENTARY INFORMATION:

Background

Global Entry Program

Global Entry is a voluntary program that allows for the expedited clearance of pre-approved, low-risk travelers arriving in the United States at Global Entry kiosks located at designated airports. The Global Entry final rule, published on February 6, 2012, promulgated the regulation to establish Global Entry as a permanent regulatory program and contains a detailed description of the program, the eligibility criteria, the application and selection process, and the initial airport locations. *See* 77 FR 5681 and 8 CFR 235.12. Travelers who wish to participate in Global Entry must apply via the CBP Global Entry Web site, *http://www.globalentry.gov* or through the Global On-Line Enrollment System (GOES) Web site, *https://goes-app.cbp.dhs.gov.* Applications must be completed and submitted electronically.

The twenty airports initially chosen for Global Entry were those facilities which typically experience the largest numbers of travelers arriving from outside of the United States. They include:

- John F. Kennedy International Airport, Jamaica, New York (JFK);
- The George Bush Intercontinental Airport, Houston, Texas (IAH);
- The Washington Dulles International Airport, Sterling, Virginia (IAD);
- Los Angeles International Airport, Los Angeles, California (LAX);
- Hartsfield-Jackson Atlanta International Airport, Atlanta, Georgia (ATL);
- Chicago O'Hare International Airport, Chicago, Illinois (ORD);

• Miami International Airport, Miami, Florida (MIA);

• Newark Liberty International Airport, Newark, New Jersey (EWR);

• San Francisco International Airport, San Francisco, California (SFO);

• Orlando International Airport, Orlando, Florida (MCO);

• Detroit Metropolitan Wayne County Airport, Romulus, Michigan (DTW);

• Dallas Fort Worth International Airport, Dallas, Texas (DFW);

• Honolulu International Airport, Honolulu, Hawaii (HNL);

• Boston—Logan International Airport, Boston, Massachusetts (BOS);

• Las Vegas—McCarran International Airport, Las Vegas, Nevada (LAS);

• Sanford—Orlando International Airport, Sanford, Florida (SSB);

• Seattle—Tacoma International Airport-SEATAC, Seattle, Washington (STT);

• Philadelphia International Airport, Philadelphia, Pennsylvania (PHL);

• San Juan—Luis Munos Marin International Airport, San Juan, Puerto Rico (SAJ);

• Ft. Lauderdale Hollywood International Airport, Fort Lauderdale, Florida (FLL), including the General Aviation Facility private aircraft terminal.

The preamble to the final rule states that when CBP is ready to expand Global Entry to additional airports and has selected the airports, CBP will publish an announcement in the **Federal Register** and in a posting on the Web site, *http://www.globalentry.gov.*

Expansion of Global Entry Program to Additional Airports

CBP is expanding the Global Entry program to include the following four additional airports: St. Paul International Airport, Minneapolis, Minnesota (MSP); Charlotte Douglas International Airport, Charlotte, North Carolina (CLT); Phoenix Sky Harbor International Airport, Phoenix, Arizona (PHX); and Denver International Airport, Denver, Colorado (DEN). Global Entry will become operational at all four airports on or before September 22, 2012. The exact starting dates of the expansion of Global Entry to each airport location will be announced on the Web site at *http://www.globalentry.gov.*

Dated: March 21, 2012.

Kevin K. McAleenan,

Acting Assistant Commissioner, Office of Field Operations.

BILLING CODE 9111–14–P

DEPARTMENT OF THE INTERIOR

Office of the Secretary

Agency Information Collection Activities: Proposed Collection; Comment Request; DOI Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery

AGENCY: Department of the Interior.

ACTION: 30-Day notice of submission of information collection to the Office of Management and Budget and request for comments.

SUMMARY: As part of a Federal Government-wide effort to streamline the process to seek feedback from the public on service delivery, the U.S. Department of the Interior has submitted a Generic Information Collection Request (Generic ICR): ''DOI Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery'' to OMB for approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*).

DATES: Comments must be submitted by April 25, 2012.

ADDRESSES: Written comments may be submitted to the Desk Officer for the Department of the Interior (DOI) at the Office of Management and Budget (OMB) via email to *OIRA_DOCKET@omb.eop.gov* or via facsimile (202) 395–5806. Please also send a copy of your comments to Don Bieniewicz at DOI via email at *Donald_Bieniewicz@ios.doi.gov* or via facsimile (202) 208–4867.

FOR FURTHER INFORMATION CONTACT: Don Bieniewicz (202) 208–4915. You may also review the submitted ICR online at *http://www.reginfo.gov.* Follow the instructions to review Department of the Interior collections under review by OMB.

SUPPLEMENTARY INFORMATION:

I. Abstract

The information collection activity will garner qualitative customer and stakeholder feedback in an efficient, timely manner, in accordance with the Administration's commitment to improving service delivery. By qualitative feedback we mean information that provides useful insights on perceptions and opinions, but are not statistical surveys that yield quantitative results that can be generalized to the population of study. This feedback will provide insights into customer or stakeholder perceptions, experiences and expectations, provide an early warning of issues with service, or focus attention on areas where communication, training or changes in operations might improve delivery of products or services. These collections will allow for ongoing, collaborative and actionable communications between the Agency and its customers and stakeholders. It will also allow feedback to contribute directly to the improvement of program management.

Feedback collected under this generic clearance will provide useful information, but it will not yield data that can be generalized to the overall population. This generic clearance for qualitative information will not be used for quantitative information collections that are designed to yield reliably actionable results, such as monitoring trends over time or documenting program performance. Such data uses require more rigorous designs that address: the target population to which generalizations will be made, the sampling frame, the sample design (including stratification and clustering), the precision requirements or power calculations that justify the proposed sample size, the expected response rate, methods for assessing potential non-response bias, the protocols for data collection, and any testing procedures that were or will be undertaken prior to fielding the study.

II. Request for Comments

No comments were received in response to the 60-day notice published in the **Federal Register** of December 22, 2010 (75 FR 80542). We again request public comments on this proposed information collection. Your comments should address: (a) The necessity of the information collection for the proper performance of the agency, including whether the information will have practical utility; (b) the accuracy of our estimate of the burden; (c) ways we could enhance the quality, utility, and clarity of the information to be collected; and (d) ways we could minimize the burden of the collection on the respondents, such as through the use of automated collection techniques or other information technology.

A Federal agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid Office of Management and Budget control number.

III. Data

OMB Control Number: 1090—NEW.

Title: DOI Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

Type of Review: New Collection.

Affected Public: Individuals and Households, Businesses and

Organizations, State, Local or Tribal Government.

Expected Annual Number of Activities: 400.

Annual Respondents: 100,000 for surveys, 60,000 for comment cards, 1,000 for focus groups.

Frequency of Response: Once per request.

Annual Responses: 100,000 for surveys, 60,000 for comment cards, 1,000 for focus groups.

Average Time per Response: 15 minutes for surveys, 2 minutes for comment cards, 2 hours for focus groups.

Estimated Total Annual Burden Hours: 29,000.

Dated: March 19, 2012.

Benjamin Simon,

Assistant Director, Office of Policy Analysis, U.S. Department of the Interior.

[FR Doc. 2012–7100 Filed 3–23–12; 8:45 am]

Fish and Wildlife Service

[FWS–R9–IA–2012–N074; FXIA16710900000P5–123–FF09A30000]

Endangered Species; Receipt of Applications for Permit

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of applications for permit.

SUMMARY: We, the U.S. Fish and Wildlife Service, invite the public to comment on the following applications to conduct certain activities with endangered species. With some exceptions, the Endangered Species Act (ESA) prohibits activities with listed species unless Federal authorization is acquired that allows such activities.

DATES: We must receive comments or requests for documents on or before April 25, 2012.

ADDRESSES: Brenda Tapia, Division of Management Authority, U.S. Fish and Wildlife Service, 4401 North Fairfax Drive, Room 212, Arlington, VA 22203; fax (703) 358–2280; or email *DMAFR@fws.gov.*

FOR FURTHER INFORMATION CONTACT: Brenda Tapia, (703) 358–2104 (telephone); (703) 358–2280 (fax); *DMAFR@fws.gov* (email).

SUPPLEMENTARY INFORMATION:

I. Public Comment Procedures

A. How do I request copies of applications or comment on submitted applications?

Send your request for copies of applications or comments and materials concerning any of the applications to the contact listed under **ADDRESSES**. Please include the **Federal Register** notice publication date, the PRT-number, and the name of the applicant in your request or submission. We will not consider requests or comments sent to an email or address not listed under **ADDRESSES**. If you provide an email address in your request for copies of applications, we will attempt to respond to your request electronically.

Please make your requests or comments as specific as possible. Please confine your comments to issues for which we seek comments in this notice, and explain the basis for your comments. Include sufficient information with your comments to allow us to authenticate any scientific or commercial data you include.

The comments and recommendations that will be most useful and likely to influence agency decisions are: (1) Those supported by quantitative information or studies; and (2) Those that include citations to, and analyses of, the applicable laws and regulations. We will not consider or include in our administrative record comments we receive after the close of the comment period (see **DATES**) or comments delivered to an address other than those listed above (see **ADDRESSES**).

B. May I review comments submitted by others?

Comments, including names and street addresses of respondents, will be available for public review at the address listed under **ADDRESSES**. The public may review documents and other information applicants have sent in support of the application unless our allowing viewing would violate the Privacy Act or Freedom of Information Act. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

II. Background

To help us carry out our conservation responsibilities for affected species, and in consideration of section 10(a)(1)(A) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), along with Executive Order 13576, ''Delivering an Efficient, Effective, and Accountable Government,'' and the President's Memorandum for the Heads of Executive Departments and Agencies of January 21, 2009—Transparency and Open Government (74 FR 4685; January 26, 2009), which call on all Federal agencies to promote openness and transparency in Government by disclosing information to the public, we invite public comment on these permit applications before final action is taken.

III. Permit Applications

Applicant: University of California, UC Davis Stable Isotope Facility, Davis, CA; PRT–60610A

The applicant requests a permit to import biological specimens of loggerhead sea turtles (*Caretta caretta*), leatherback sea turtles (*Dermochelys coriacea*), and leatherback sea turtles from Argentina for the purpose of scientific research. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: University of Georgia, College of Veterinary Medicine, Infectious Diseases Laboratory, Athens, GA; PRT–009445

The applicant requests a renewal of their permit to import tissue or blood samples of any avian species (class Aves), reptile species (class Reptilia), and any fish (within the taxonomic phylum Chordata), from worldwide locations for the purpose of diagnostic testing for infectious diseases/scientific research. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Harkey Ranch, Eldorado, TX; PRT–67611A

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the Eld's deer (*Rucervus eldii*), barasingha (*Rucervus duvaucelii*), Arabian oryx (*Oryx leucoryx*), scimitar-horned oryx (*Oryx dammah*), addax (*Addax nasomaculatus*), and Dama gazelle (*Nanger dama*), to enhance their propagation or survival. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Michelle Rod Crawford, Sugarland, TX; PRT–67541A

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the scimitar-horned oryx (*Oryx dammah*), to enhance their propagation or survival. This

notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Michelle Rod Crawford, Sugarland, TX; PRT–67542A

The applicant requests a permit authorizing interstate and foreign commerce, export, and cull of excess scimitar-horned oryx (*Oryx dammah*), from the captive herd maintained at their facility, for the purpose of enhancement of the survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Earth Promise Inc., Fossil Rim Wildlife Center, Glen Rose, TX; PRT–726004

The applicant requests renewal and amendment of their captive-bred wildlife registration under 50 CFR 17.21(g) to add the family Bovidae to the families Equidae, and Felidae. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Jay Russo, Katy, TX; PRT–819300

The applicant requests renewal of their captive-bred wildlife registration under 50 CFR 17.21(g) for radiated tortoise (*Astrochelys radiata*), to enhance their propagation or survival. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: James Thompson, Houston TX; PRT–67603A

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the scimitar-horned oryx (*Oryx dammah*), to enhance their propagation or survival. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Georgia Aquarium, Atlanta, GA; PRT–67609A

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the jackass penguin (*Spheniscus demersus*) to enhance their propagation or survival. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Lionshare Farm Zoological LLC, Greenwich, CT; PRT–195196

The applicant requests renewal of their captive-bred wildlife registration under 50 CFR 17.21(g) for the following families, genus, and species, to enhance their propagation or survival. This notification covers activities to be conducted by the applicant over a 5-year period.

Families:
- Bovidae
- Hylobatidae
- Tapiridae

Species:
- Ring-tailed lemur (*Lemur catta*)
- Black lemur (*Eulemur macaco*)
- Black and white ruffed lemur (*Varecia variegata*)
- Cotton-headed tamarin (*Saguinus oedipus*)
- Mandrill (*Mandrillus sphinx*)
- Diana monkey (*Cercopithecus diana*)
- Bornean orangutan (*Pongo pygmaeus*)
- Snow leopard (*Uncia uncia*)
- Leopard (*Panthera pardus*)
- Grevy's zebra (*Equus grevyi*)
- Galapagos tortoise (*Chelonoidis nigra*)
- Radiated tortoise (*Astrochelys radiata*)

Applicant: Dakota Resources, Inc., Midland, TX; PRT–67605A

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the addax (*Addax nasomaculatus*), to enhance their propagation or survival. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Dakota Resources, Inc., Midland, TX; PRT–67606A

The applicant requests a permit authorizing interstate and foreign commerce, export, and cull of excess addax (*Addax nasomaculatus*), from the captive herd maintained at their facility, for the purpose of enhancement of the survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Wayne Hahn, Hollywood, SC; PRT–785931

The applicant requests renewal of their captive-bred wildlife registration under 50 CFR 17.21(g) for golden parakeet (*Guarouba guarouba*) to enhance their propagation or survival. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Jack Phillips, Gladewater, TX; PRT–195823

The applicant requests amendment of their captive-bred wildlife registration under 50 CFR 17.21(g) to add scimitar-horned oryx (*Oryx dammah*) and addax (*Addax nasomaculatus*), to enhance their propagation or survival. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Jack Phillips, Gladewater, TX; PRT–67438A

The applicant requests a permit authorizing interstate and foreign commerce, export, and cull of excess scimitar-horned oryx (*Oryx dammah*) and addax (*Addax nasomaculatus*), from the captive herd maintained at their facility, for the purpose of enhancement of the survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Feld Entertainment, Inc., Vienna, VA; PRT–59285A, 65776A, 65778A, 65780A, 65781A, 65782A, 65783A, 65785A, 65787A, 65789A, 657190A, 65792A, 65793A, 65796A, 65797A, 65800A, 66545A, 66546A, 66547A, 66548A, 66549A, and 66550A

The applicant request permits to export, re-export, and re-import captive-born tigers (*Panthera tigris*) and Asian elephants (*Elephas maximus*) to worldwide locations for the purpose of enhancement of the species through conservation education. This notification covers activities to be conducted by the applicant over a 3-year period and the import of any potential progeny born while overseas. The permit numbers and animals are:

Tigers:
- Julie—65793A
- Bali—65782A
- Blanca—65783A
- Della—65785A
- Dragon—65787A
- Govinda—65789A
- India—65790A
- Isis—65792A
- Katana—65796A
- Kimba—65797A
- Mika—65800A
- Tasha—66550A
- Tyra—66549A
- Singapur—66547A
- Princess—66545A
- Sundrum—66546A
- Rambo—66548A

Asian elephants:
- Asia—59285A
- Luna—65776A
- Tonka—65778A
- Banko—657808
- Siam II—65781A

Multiple Applicants

The following applicants each request a permit to import the sport-hunted trophy of one male bontebok (*Damaliscus pygargus pygargus*) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancement of the survival of the species.

Applicant: James Young, Issaquah, WA; PRT–68172A

Applicant: James McNicol, Chandler, AZ; PRT–66555A

Brenda Tapia,

Program Analyst/Data Administrator, Branch of Permits, Division of Management Authority.

RIN 1018–AX45

Fisheries and Habitat Conservation and Migratory Birds Programs; Final Land-Based Wind Energy Guidelines

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce the availability of the final voluntary Land-Based Wind Energy Guidelines (Guidelines). These Guidelines supersede the Service's 2003 voluntary interim guidelines for land-based wind energy development. They respond to accelerated development of land-based wind energy generation projects in the United States. These voluntary Guidelines provide developers and agency staff with an iterative process to make sound decisions in selecting sites to avoid, minimize and compensate for adverse effects to wildlife, particularly birds and bats, and their habitats resulting from construction, operation, and maintenance of land-based wind energy facilities.

DATES: These voluntary Guidelines are effective March 26, 2012.

ADDRESSES: The Guidelines may be downloaded from *http://www.fws.gov/windenergy*. To request a copy of the draft Guidelines by U.S. Mail, write: U.S. Fish and Wildlife Service, 4401 North Fairfax Drive; Room 840, Arlington, VA 22203. You may also send an email request to: *windenergy@fws.gov.* Please specify whether you want to receive a hard copy by U.S. mail or an electronic copy by email.

FOR FURTHER INFORMATION CONTACT: Christy Johnson-Hughes, Division of Habitat and Resource Conservation, U.S. Fish and Wildlife Service, Department of the Interior, (703) 358–1922. Individuals who are hearing-impaired or speech-impaired may call the Federal Relay Service at 1–800–877–8337 for TTY assistance, 24 hours a day, 7 days a week.

SUPPLEMENTARY INFORMATION: The mission of the U.S. Fish and Wildlife Service is to work with others to conserve, protect, and enhance fish, wildlife, plants, and their habitats for the continuing benefit of the American people. As part of this mission, we implement statutes including the Endangered Species Act (ESA; 16 U.S.C. 1531 *et seq.*), the Migratory Bird Treaty Act (MBTA; 16 U.S.C. 703–711), and the Bald and Golden Eagle Protection Act (BGEPA; 16 U.S.C. 668–668d). These statutes prohibit taking of federally listed species, migratory birds, and eagles unless otherwise authorized.

Increased energy demands and the nationwide goal to increase energy production from renewable sources have intensified the development of renewable energy facilities, including wind energy. The Service supports renewable energy development that is compatible with wildlife conservation.

The voluntary Guidelines will provide Service staff, developers, landowners and other stakeholders with a tool to assist in avoiding, minimizing, and compensating for significant adverse impacts to wildlife and their habitats. Adherence to the Guidelines is voluntary and does not relieve any individual, company, or agency of the responsibility to comply with laws and regulations. However, if a violation of law occurs, the Service will consider a developer's documented efforts to communicate with the Service and adhere to the Guidelines. The Guidelines include a Communications Protocol that provides guidance to both developers and Service personnel regarding expectations of appropriate communication and documentation.

The Service anticipates that these Guidelines, when used in concert with appropriate regulatory tools and other existing policies, provide the best practical approach for wildlife conservation.

Background

In July 2003, the Service released voluntary interim guidelines for land-based wind energy projects to assist developers in avoiding, minimizing, and/or compensating for effects to wildlife and their habitats related to land-based wind energy facilities. In 2007, the Secretary of the Interior (Secretary) established the Wind Turbine Guidelines Advisory Committee (Committee) under the Federal Advisory Committee Act (5 U.S.C. App.). The Committee submitted final recommendations to the Secretary on March 4, 2010. The Service appreciates all the time and effort that members of the Committee devoted to developing their recommendations, as well as since that time, as the Service developed these final Guidelines. The Service used the recommendations as a basis to develop the Service's draft Guidelines, which we circulated for comment in February 2011 (76 FR 9590, February 18, 2011).

We announced several opportunities for the public to attend Committee meetings and to submit comments or otherwise participate in the development of the Guidelines as follows:

Federal Register citation	Date of publication	Purpose of notice
76 FR 18238	April 1, 2011	Announced Committee meeting of April 27, 2011.
76 FR 20006	April 11, 2011	Announced availability of teleconference line for April 27, 2011, Committee meeting.
76 FR 38677	July 1, 2011	Announced Committee meeting of July 20–21, 2011.
76 FR 48174	August 8, 2011	Announced Committee meeting of August 23, 2011.
76 FR 54481	September 1, 2011	Announced Committee meeting of September 20–21, 2011.

The Service received more than 30,000 comments (summarized below) on the draft Guidelines from a wide range of interests, including Federal, State, and local agencies; tribes; wind energy developers; utilities; national and local wildlife conservation organizations; universities; and concerned citizens. The Service made

subsequent revisions of draft Guidelines available on July 13, 2011, and September 13, 2011, for additional public comment. Following circulation of both revised drafts, we reconvened the Committee to obtain input from Committee members as well as the public attending the Committee meetings (July 20–21 and September 20–21, 2011). Approximately an additional 1,000 comments were received on the revised drafts.

The final Guidelines incorporate elements from the Committee's recommendations, the draft Guidelines, as well as extensive public comment received during comment periods and the public Committee meetings. The majority of the comments focused on either the need to make the Guidelines mandatory or to keep them strictly voluntary. The following is a succinct summary of comments received and our responses.

Comment: The Service received a large number of comments stating that the Guidelines should be made mandatory. We also received a large number of comments supporting voluntary Guidelines.

Response: The Service believes that voluntary initiatives to avoid and minimize impacts to species of concern can be effective. The wind industry has clearly expressed its willingness to take seriously the need to site and operate projects in a responsible manner. Furthermore, under existing authorities, the Service cannot mandate compliance with the Guidelines as currently written. Mandatory application would require a significant narrowing of the scope of the Guidelines. As currently written, the Guidelines contemplate a process in which developers consider proposed wind energy projects in the context of the entire landscape, focusing on species and habitats that may be significantly impacted by their proposed project. The Guidelines anticipate that developers will include in their review species beyond the scope of Service jurisdiction, such as prairie chickens and non-ESA-listed bat species, which can be negatively affected by wind energy development. The Guidelines also contemplate that developers will include in their review impacts to rare habitats that are currently unprotected but that are important to conserve. The Service believes that the comprehensive approach described by the Guidelines in combination with use of existing tools such as Habitat Conservation Plans, Bird and Bat Conservation Strategies, and Eagle Conservation Plans will provide robust conservation of wildlife and their habitats. If appropriate, based on experience gained under these Guidelines, the Service can revisit their voluntary nature in the future.

Comment: The Guidelines should clarify consultation requirements and Service decision-making.

Response: The final Guidelines clarify that wind energy developers may decide to move from one tier to the next, but that this decision should be made in two-way communication with Service field offices. The final Guidelines commit the Service to providing feedback to wind project developers within 60 days of receiving such communications, and to respond in writing to developers before or during Tier 3 of a project (prior to initiating construction) with any concerns or recommendations.

Comment: The Service received many comments supporting a phase-in period of 6 months to 2 years for currently operating projects and those under development. Other comments supported immediate use of the final Guidelines.

Response: The Service has decided not to ''phase-in'' the implementation of the Guidelines, but rather to employ them immediately with publication of this notice. To address concerns about the lack of a phase-in period, the final Guidelines clarify that: (a) All projects that commence after the effective date should apply them; (b) developers are not expected to go back to earlier tiers for projects in development or operation; and (c) operating projects should adhere to Tiers 4 and 5 as appropriate. The Service believes that because the Guidelines are voluntary, there is no need to delay implementation beyond publication. Many developers and the Service are currently discussing numerous wind energy projects and how to reduce the impacts of those projects on species of concern.

Comment: The Guidelines should include species-specific science information rather than have the information provided elsewhere, such as on the Service's Web site.

Response: While the draft version of the Guidelines did place species-specific information on the Service's Web site, this process was cumbersome for reviewers and inefficient for practitioners. Therefore, we moved the recommended methods and metrics to be used for bird and bat species back into the Guidelines in the Chapters focused on pre- and post-construction studies.

Comment: The Guidelines should discuss the appropriateness of the various methods and metrics available, rather than list them.

Response: The Service agreed with commenters that providing context and discussion of the methods and metrics within the Guidelines is helpful to the reader. The final Guidelines provide discussion of the various methods and metrics available for pre- and post-construction studies, as had been recommended by the Committee.

Comment: The Guidelines should be peer reviewed, and the Committee recommendations should also be peer reviewed.

Response: The draft Guidelines were peer reviewed by the Wildlife Society. We have posted the peer review on the FWS Wind Energy Web site. The Committee recommendations were not separately peer reviewed. The Service determined that it is not necessary to conduct a peer review on the recommendations prepared by the Committee because the final Guidelines have evolved since the recommendations were provided to the Secretary in 2010.

Comment: The Guidelines should differentiate between emerging issues and established science. Commenters felt that while there may be valid concern over certain issues such as the effects of wind turbine noise on wildlife, these issues have not been widely studied and are not yet understood well enough to be addressed by individual wind energy developers.

Response: Tiers 3 and 4 (pre- and post-construction studies and monitoring) point to topics typically considered when determining what to study, including: Collision, habitat loss and degradation, displacement and behavioral changes, and indirect effects. The Guidelines include collision and habitat loss as topics for wind project developers to assess and monitor in the tiered approach. Others, such as the effects of sound, are mentioned in Tier 5 in the context of research. These are topics that the Service would not expect a developer to assess except in rare circumstances. However, the tiered approach does not preclude them from consideration during preconstruction studies if they are determined to be a viable concern.

Comment: Several comments pertained to how the Service should incorporate new science as it becomes available. We received suggestions to create an advisory panel that meets annually; open any new information to public comment; and ensure that the addition of any new information conforms to the principles outlined in the Committee's recommendations.

Response: The final Guidelines do not establish an advisory panel to incorporate new information. A process

for recommending which new studies or methods/metrics developers should use is not identified in the Guidelines. The Service will consider the best way to incorporate new science as it becomes available.

Comment: The Guidelines should adopt a risk-based approach to study duration as opposed to requiring a minimum of 3 years of preconstruction studies.

Response: The Service received many differing opinions on the appropriate duration of preconstruction studies in Tier 3. While some felt that a minimum of 3 years is prohibitive, others felt that it was not long enough. The final Guidelines remove the default of 3 years of preconstruction monitoring and instead recommend that studies be of sufficient duration and intensity to ensure that adequate data are collected to characterize wildlife use of the proposed project area as determined in communication with the Service. This approach allows for data collection commensurate with the level of risk, as opposed to an across-the-board standard that does not take into consideration the circumstances at individual sites.

Comment: The scope of the Guidelines should be ''species of concern'' as originally used by the Committee in their recommendations, as opposed to ''fish, wildlife and their habitats.''

Response: After reviewing the definition of ''species of concern,'' the Service agrees that this term is most appropriate as it narrows the focus of developer's studies to species that may potentially be significantly impacted by a wind energy project. The final Guidelines use the term ''species of concern'' for scope of species covered.

Comment: The Guidelines should not apply to distributed and community-scale wind energy projects. The costs associated with adhering to the Guidelines are prohibitive for smaller scale projects and will stall or prevent the development of small-scale wind energy.

Response: The Service recognizes that studies have not shown small-scale wind energy projects to have significant adverse impacts to wildlife. However, the Service also recognizes that a poorly sited project, no matter the size, has the potential to cause significant impacts. For this reason, distributed and community-scale projects are not ''exempted'' from the Guidelines. The Guidelines are voluntary. No wind energy developer is bound to follow them. The final Guidelines clarify that, in most cases, small-scale wind energy projects will not have significant adverse impacts, but developers should still do a Tier 1 and/or Tier 2 analysis using publicly available information (e.g., internet searches) to ensure that the risk for potential impacts is low.

The final Guidelines preserve many elements from the previous drafts including descriptions of the information needed to identify, assess, mitigate, and monitor the potential adverse effects of wind energy projects on wildlife and their habitats; and flexibility to accommodate the unique circumstances of each project. The framework helps developers understand how to avoid or minimize effects to certain species, which is important for compliance with a number of laws, including MBTA, BGEPA, and ESA.

The levels of surveying, monitoring, assessing, and collecting other information will vary among different wind-energy projects due to the diverse geographic, climatological, and ecological features of potential wind development sites. Founded upon a ''tiered approach'' for assessing potential effects to species of concern and their habitats, the guidelines are intended to promote: Compliance with relevant laws and statutes; the use of scientifically rigorous survey, monitoring, assessment, and research designs proportionate to the potential risk to affected species; the accumulation of comparable data across the landscape; the identification of trends and patterns of effects; and, ultimately, the improved ability to predict and resolve effects locally, regionally, and nationally.

Authority: The authorities for this action are the Endangered Species Act of 1973 as amended (16 U.S.C. 1531 *et seq.*); the Migratory Bird Treaty Act of 1918 as amended (16 U.S.C. 703–711); and the Bald and Golden Eagle Protection Act of 1940, as amended (16 U.S.C. 668–668d).

Dated: March 20, 2012.

Daniel M. Ashe,

Director, U.S. Fish and Wildlife Service.

Recovery Plan for the Endangered Spigelia gentianoides (Gentian Pinkroot)

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of document availability.

SUMMARY: We, the Fish and Wildlife Service, announce the availability of the final recovery plan for *Spigelia gentianoides* (Gentian pinkroot), a threatened species restricted to six locations within three counties in the Florida Panhandle and two counties in Alabama. The recovery plan includes specific recovery objectives and criteria to be met in order to reclassify this species from endangered to threatened status under the Endangered Species Act of 1973, as amended (Act).

ADDRESSES: You may obtain a copy of the recovery plan by contacting the Panama City Field Office (PCFO), by U.S. mail at U.S. Fish and Wildlife Service, 1601 Balboa Ave, Panama City, FL 32405, or by telephone at (850) 769–0552. Alternatively, you may visit the Fish and Wildlife Service's recovery plan Web site at *http://www.fws.gov/endangered/species/recovery-plans.html* or the PCFO Web site at *http://www.fws.gov/panamacity/listedplants.html.*

FOR FURTHER INFORMATION CONTACT: Dr. Vivian Negrón-Ortiz, at the above address, or by telephone at (850) 769–0552, ext. 231.

SUPPLEMENTARY INFORMATION:

Background

We listed *Spigelia gentianoides* (Gentian pinkroot) as an endangered species under the Act (16 U.S.C. 1531 *et seq.*) on November 26, 1990 (55 FR 49046). *Spigelia gentianoides* is a small herbaceous plant and has two varieties: Var. *gentianoides* is restricted to five locations within three counties in the Florida Panhandle and southern Alabama, and var. *alabamensis* is limited to Bibb County, Alabama. The loss or alteration of habitat is thought to be the primary reason for the species' decline. The extant plants of var. *gentianoides* are located in fire-dependent longleaf pine-wiregrass and pine-oak-hickory ecosystems. Much of this habitat has been reduced in its range, converted to pine plantation, and managed without fire. Variety *alabamensis* is a narrow endemic, restricted to the Bibb County Glades (open, almost treeless areas within woodlands). Some of the glades are owned and protected by The Nature Conservancy. However, this variety is threatened by potential development of privately owned glades.

Restoring an endangered or threatened animal or plant to the point where it is again a secure, self-sustaining member of its ecosystem is a primary goal of the endangered species program. To help guide the recovery effort, we are preparing recovery plans

for most listed species. Recovery plans describe actions considered necessary for conservation of the species, establish criteria for downlisting or delisting, and estimate time and cost for implementing recovery measures.

The Act requires the development of recovery plans for listed species, unless such a plan would not promote the conservation of a particular species. Section 4(f) of the Act requires us to provide a public notice and an opportunity for public review and comment during recovery plan development. We made the draft of this recovery plan available for public comment from March 23 through May 23, 2011 (76 FR 16439). We considered information we received during this public comment period and information from peer reviewers in our preparation of this final recovery plan. Some sections of the recovery plan were edited based on peer reviewer and public comments. However, no substantial changes were made to the final plan.

Recovery Plan Criteria

The goal of this plan is to provide a framework to conserve and recover *S. gentianoides* so it may be reclassified to threatened status. *Spigelia gentianoides* will be considered for reclassification to threatened status when:

- Extant populations and newly discovered sites are identified and mapped;
- Inventories have been conducted across the species' historic sites and/or on new locations;
- Monitoring programs and management protocols on selected populations are established for 15 years to track threats to the species and its habitat;
- Extant populations located on public land are stable;
- The minimum viable population (MVP) size has been determined for each variety;
- Research on key aspects related to demography, reproductive biology, and seed ecology is accomplished; and
- Collect viable seeds from at least 50 percent of the populations for each variety and store them *ex situ* (off site—that is, in designated seed storage facilities).

In addition, the following specific actions must be completed for each variety:

○ Var. *gentianoides:*

■ Sizes of populations # 1 to # 4 (out of 5) are increased via prescribed burns until plant numbers are stabilized;

■ At least one new population is found; and

■ At least one population is re-established within the historic range.

○ Var. *alabamensis:*

■ Fifty percent of the Bibb County glades known to support the variety on private land are protected through conservation agreements, easements, or land acquisition.

As reclassification criteria are met the status of the species will be reviewed, and the species will be considered for reclassification to threatened status.

Defining delisting criteria is not possible at this time, given the current low numbers of populations and individuals, lack of information about the species' biology, and the magnitude of current threats from development. Reclassification criteria will be reevaluated and delisting criteria will be created as new scientific data and information become available and recovery actions are implemented.

Authority

The authority for this action is section 4(f) of the Endangered Species Act, 16 U.S.C. 1533(f).

Dated: January 24, 2012.

Mark J. Musaus,

Acting Regional Director, Southeast Region.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLCO956000.L14200000 BJ0000]

Notice of Filing of Plats

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of filing of plats; Colorado.

SUMMARY: The Bureau of Land Management (BLM) Colorado State Office is publishing this notice to inform the public of the intent to file the land survey plats listed below, and to afford all affected parties a proper period of time to protest this action, prior to the plat filing.

DATES: Unless there are protests of this action, the filing of the plats described in this notice will happen on April 25, 2012.

ADDRESSES: BLM Colorado State Office, Cadastral Survey, 2850 Youngfield Street, Lakewood, Colorado 80215–7093.

FOR FURTHER INFORMATION CONTACT: Randy Bloom, Chief Cadastral Surveyor for Colorado, (303) 239–3856.

SUPPLEMENTARY INFORMATION: The plat and field notes of the dependent resurvey in Township 10 South, Range 70 West, Sixth Principal Meridian, Colorado, were accepted on January 13, 2012.

The plat and field notes of the dependent resurvey and survey in Township 9 South, Range 71 West, Sixth Principal Meridian, Colorado, were accepted on January 13, 2012.

The plat and field notes of the dependent resurvey and survey in Township 10 South, Range 71 West, Sixth Principal Meridian, Colorado, were accepted on January 13, 2012.

The supplemental plat, in 4 sheets, of Section 8, in Township 1 North, Range 71 West, Sixth Principal Meridian, Colorado, was accepted on January 20, 2012.

The supplemental plat of Section 13, in Township 1 North, Range 72 West, Sixth Principal Meridian, Colorado, was accepted on January 27, 2012.

The plat incorporating the field notes, in 2 sheets, of the dependent resurvey in Township 51 North, Range 5 East, New Mexico Principal Meridian, Colorado, was accepted on February 3, 2012.

The plat and field notes of the section subdivision and survey in Township 7 South, Range 95 West, Sixth Principal Meridian, Colorado, were accepted on February 8, 2012.

The plat and field notes of the corrective dependent resurvey in Township 36 North, Range 11 West, New Mexico Principal Meridian, Colorado, were accepted on February 21, 2012.

Randy Bloom,

Chief Cadastral Surveyor for Colorado.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[WY–923–1310–FI; WYW163161]

Notice of Proposed Reinstatement of Terminated Oil and Gas Lease WYW163161, Wyoming

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: Under the provisions of the Mineral Leasing Act of 1920, as amended, the Bureau of Land Management (BLM) received a petition for reinstatement from Larry Napolitano, Twylla Napolitano, Michael K. Smith, and Patricia J. Smith for competitive oil and gas lease WYW163161 for land in Niobrara County, Wyoming. The petition was filed on time and was accompanied by all the rentals due since the date the lease terminated under the law.

FOR FURTHER INFORMATION CONTACT: Bureau of Land Management, Julie L. Weaver, Chief, Fluid Minerals Adjudication, at (307) 775–6176. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The lessees have agreed to the amended lease terms for rentals and royalties at rates of $10 per acre or fraction thereof, per year and 16⅔ percent, respectively. The lessees have paid the required $500 administrative fee and $159 to reimburse the Department for the cost of this **Federal Register** notice. The lessees have met all the requirements for reinstatement of the lease as set out in Sections 31(d) and (e) of the Mineral Lands Leasing Act of 1920 (30 U.S.C. 188), and the BLM is proposing to reinstate lease WYW163161 effective June 1, 2011, under the original terms and conditions of the lease and the increased rental and royalty rates cited above. The BLM has not issued a valid lease to any other interest affecting the lands.

Julie L. Weaver,

Chief, Branch of Fluid Minerals Adjudication.

DEPARTMENT OF JUSTICE

[OMB Number 1105–0025]

Agency Information Collection Activities: Proposed Collection; Comments Requested

ACTION: 30-Day Notice of Information Collection Under Review: Federal Coal Lease Request.

The Department of Justice (DOJ), Antitrust Division (ATR), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. This proposed information collection was previously published in the **Federal Register** Volume 77, Number 14, page 3282 on January 23, 2012, allowing for a 60 day comment period.

The purpose of this notice is to allow for an additional 30 days for public comment until April 25, 2012. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments (especially regarding the estimated public burden or associated response time), suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Jill Ptacek, Antitrust Division, United States Department of Justice, 450 5th Street NW., Suite 8000, Washington, DC 20530.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—The quality, utility and clarity of the information to be collected; and

—How to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *Title of the Form/Collection:* Federal Coal Lease Reserves.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Numbers: ATR–139 and ATR–140, Antitrust Division, Department of Justice.

(4) *Affected public who will be asked or required to respond, as well as brief abstract:* Primary: Business or other for Profit. Other: None. The Department of Justice evaluates the competitive impact of issuances, transfers and exchanges of federal coal leases. These forms seek information regarding a prospective coal lessee's existing coal reserves. The Department uses this information to determine whether the issuance, transfer or exchange of the federal coal lease is consistent with the antitrust laws.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond;* It is estimated that 20 respondents will complete each form, with each response taking approximately two hours.

(6) *An estimate of the total public burden (in hours) associated with the collection:* There are an estimated 40 annual burden hours associated with this collection, in total.

If additional information is required, contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution

Square, 145 N Street NE., Washington, DC 20530.

Jerri Murray,

Department Clearance Officer, PRA, United States Department of Justice.

BILLING CODE 4410–10–P

DEPARTMENT OF JUSTICE

[OMB Number 1123–0009]

Agency Information Collection Activities: Information Collection Renewal; Comments Requested: Inspection of Records Relating to Visual Depictions of Simulated Sexually Explicit Performances

ACTION: 30-Day Notice of Information Collection.

The Department of Justice (DOJ), Criminal Division, Child Exploitation and Obscenity Section (CEOS) will be submitting the following information collection renewal to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995. The information collection renewal is published to obtain comments from the public and affected agencies. This information collection renewal was previously published in the **Federal Register** Volume 77, Number 13, pages 3003–04, on January 20, 2012, allowing for a 60-day comment period.

The purpose of this notice is to allow for an additional 30 days for public comment until April 25, 2012. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments especially on the estimated number of respondents, estimated public burden or associated response time, suggestions, or need additional information, please contact Andrew G. Oosterbaan, Chief, Child Exploitation and Obscenity Section, Criminal Division, United States Department of Justice, Washington, DC 20530, email: *admin.ceos@usdoj.gov,* phone: (202) 514–5780. This is not a toll-free number.

Written comments and suggestions from the public and affected agencies concerning the collection of information are encouraged. Your comments should address one or more of the following four points:

(1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) How to enhance the quality, utility, and clarity of the information to be collected; and

(4) How to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Summary of Information Collection

(1) *Type of Information Collection:* Renewal of a currently approved collection.

(2) *Title:* Inspection of Records Relating to Visual Depictions of Simulated Sexually Explicit Performances.

(3) *Agency form number, if any:* None.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Business or other for-profit. Other: None. Abstract: This is a renewal of an existing information collection implementing the recordkeeping, labeling, and inspection requirements of 28 CFR part 75, accounting for changes in the underlying statute made by Congress in enacting the Adam Walsh Child Protection and Safety Act of 2006.

Need for Collection

The information collection documents the recordkeeping, labeling, and inspection requirements for producers of visual depictions of actual and simulated sexually explicit conduct, and the certification regime for the exemption from these requirements, in certain circumstances, for producers of visual depictions of simulated sexually explicit conduct and visual depictions of actual sexually explicit conduct constituting the lascivious exhibition of the genitals or pubic area of a person. These statutory requirements of 28 CFR part 75, codified at 18 U.S.C. 2257 and 2257A, are designed to ensure that visual depictions of sexually explicit conduct are produced in accordance with laws and regulations, and without the involvement of minors under 18 years of age.

(5) An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond: The Department is unable to estimate with any precision the number of entities producing visual depictions of simulated sexually explicit conduct. As a partial indication, the Department's 2008 regulatory review, including the information collection request and PRA Supporting Statement (RIN 1105–AB19), cited data collected by the U.S. Census Bureau in 2002. Employing the same method of analysis, according to data collected by the U.S. Census Bureau in 2007, there were 11,974 establishments engaged in motion picture and video production in the United States. Based on a rough assumption that 10% of the establishments are engaged in the production of visual depictions of simulated sexually explicit conduct, the Department estimates that approximately 1,974 motion picture and video producing establishments are required to comply with these statutory requirements. (The Department does not Additionally, the statute provides an exemption from these requirements applicable in certain circumstances, and it requires producers to submit certifications to qualify for this exemption. From March 18, 2009, the effective date of the certification regime, to the present, the Department has received approximately 865 certification letters. For the entities that qualify for the exemption, the Department estimates that it would take less than 20 hours per year to prepare the biennial certification required for the exemption.

(6) An estimate of the total public burden (in hours) associated with the collection: If OMB were to assume that 3,000,000 visual depictions of simulated sexually explicit conduct are created each year and that it requires 6 minutes to complete the recordkeeping requirement for each depiction, the recordkeeping requirements would impose a burden of 300,000 hours. If, however, OMB were to assume that producers of 90% of these depictions qualify for the statutory exemption from these requirements, the requirements would only impose a burden of 30,000 hours (These estimates were included in the Department's 2008 regulatory review, including the information collection request and PRA Supporting Statement (RIN 1105–AB19). The Department does not certify the accuracy of these numbers.)

If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, Department of Justice, Two Constitution Square, Room 2E–508, 145 Street NE., Washington, DC 20530.

Jerri Murray,

Department Clearance Officer, PRA, United States Department of Justice.

BILLING CODE 4410–CW–P

DEPARTMENT OF JUSTICE

Bureau of Alcohol, Tobacco, Firearms and Explosives

[OMB Number 1140–0002]

Agency Information Collection Activities: Proposed Collection; Comments Requested: Application for Restoration of Firearms Privileges

ACTION: 60-Day Notice of Information Collection Under Review.

The Department of Justice (DOJ), Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for ''sixty days'' until May 25, 2012. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Stuart Lowrey, Chief, Firearms Operations Division at *fipb-informationcollection@atf.gov.*

Request written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Enhance the quality, utility, and clarity of the information to be collected; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of this information collection:

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *Title of the Form/Collection:* Application For Restoration of Firearms Privileges.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: ATF F 3210.1, Bureau of Alcohol, Tobacco, Firearms and Explosives.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Individuals or households. Other: Business or other for profit. Certain categories of persons are prohibited from possessing firearms. ATF F 3210.1, Application For Restoration of Firearms Privileges is the basis for ATF investigating the merits of an applicant to have his/her rights restored.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that 250 respondents will complete a 30 minute form.

(6) *An estimate of the total public burden (in hours) associated with the collection:* There are an estimated 125 annual total burden hours associated with this collection.

If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, Department of Justice, Two Constitution Square, Room 2E–508, 145 N Street NE., Washington, DC 20530.

Jerri Murray,

Department Clearance Officer, PRA, United States Department of Justice.

[OMB Number 1140–0052]

Agency Information Collection Activities: Proposed Collection; Comments Requested: Strategic Planning Environmental Assessment Outreach

ACTION: 60-Day Notice of Information Collection Under Review:

The Department of Justice (DOJ), Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for ''sixty days'' until May 25, 2012. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Jacqueline Pitts, Office of Strategic Management, 99 New York Avenue NE.,Washington, DC 20226.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Enhance the quality, utility, and clarity of the information to be collected; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of this information collection:

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *Title of the Form/Collection:* Strategic Planning Environmental Assessment Outreach.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: None. Bureau of Alcohol, Tobacco, Firearms and Explosives.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Business or other for-profit. Other: Not-for-profit institutions,

Federal Government, State, Local, or Tribal Government. Under the provisions of the Government Performance and Results Act, Federal agencies are directed to improve their effectiveness and public accountability by promoting a new focus on results, service quality, and customer satisfaction. This act requires that agencies update and revise their strategic plans every three years. The Strategic Planning Office at ATF will use the voluntary outreach information to determine the agency's internal strengths and weaknesses.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that 1,500 respondents will complete a 18 minute questionnaire.

(6) *An estimate of the total public burden (in hours) associated with the collection:* There are an estimated 450 annual total burden hours associated with this collection.

If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, Department of Justice, Two Constitution Square, Room 2E–508, 145 N Street NE., Washington, DC 20530.

Jerri Murray,

Department Clearance Officer, PRA, United States Department of Justice.

Agency Information Collection Activities: Proposed Collection; Comments Requested: Federal Firearms Licensee Firearms Inventory Theft/Loss Report

ACTION: 60-Day Notice of Information Collection Under Review.

The Department of Justice (DOJ), Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for ''sixty days'' until May 25, 2012. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Ben Hayes, Chief, Law Enforcement Support Branch, National Tracing Center, 244 Needy Road, Martinsburg, WV 25405.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Enhance the quality, utility, and clarity of the information to be collected; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of this information collection:

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *Title of the Form/Collection:* Federal Firearms Licensee Firearms Inventory Theft/Loss Report.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: ATF F 3310.11. Bureau of Alcohol, Tobacco, Firearms and Explosives.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Individuals or households. Other: Business or other for-profit. Authorization of this form is requested as the Violent Crime Control and Law Enforcement Act requires Federal firearms licensees to report to the Bureau of Alcohol, Tobacco, Firearms and Explosives and to the appropriate local authorities any theft or loss of a firearm from the licensee's inventory or collection, within a specific time frame after the theft or loss is discovered.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that 4,000 respondents will complete a 24 minute form.

(6) *An estimate of the total public burden (in hours) associated with the collection:* There are an estimated 1,600 annual total burden hours associated with this collection.

If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, Department of Justice, Two Constitution Square, Room 2E–508, 145 N Street NE., Washington, DC 20530.

Jerri Murray,

Agency Information Collection Activities: Proposed Collection; Comments Requested; Identification Markings Placed on Firearms

ACTION: 30-Day Notice of Information Collection.

The Department of Justice (DOJ), Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. This proposed information collection was previously published in the **Federal Register** Volume 77, Number 10, page 2320 on January, 17, 2012, allowing for a 60-day comment period.

The purpose of this notice is to allow for an additional 30 days for public comment until April 25, 2012. This process is conducted in accordance with 5 CFR 1320.10.

Written comments concerning this information collection should be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attn: DOJ Desk Officer. The best way to ensure your comments are

received is to email them to *oira_submission@omb.eop.gov* or fax to 202–395–7285. All comments should reference the eight digit OMB number for the collection or the title of the collection. If you have any questions concerning the collection, please contact John Spencer, *fire_tech@atf.gov.*

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Enhance the quality, utility, and clarity of the information to be collected; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Summary of Collection

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *Title of the Form/Collection:* Identification Markings Placed on Firearms.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: None. Bureau of Alcohol, Tobacco, Firearms and Explosives.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Business or other for-profit. Other: None. Abstract:

Need for Collection

Each licensed firearms manufacturer or licensed importer must legibly identify each firearm by engraving, casting, stamping (impressing), or otherwise conspicuously placing on the frame or receiver an individual serial number. Also, ATF requires minimum height and depth requirements for identification markings placed on firearms.

(5) An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond: There will be an estimated 2,962 respondents who will take 5 seconds to mark the firearm.

(6) An estimate of the total burden (in hours) associated with the collection: There are an estimated 2,500 total burden hours associated with this collection.

If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, Department of Justice, Two Constitution Square, Room 2E–508, 145 N Street NE., Washington, DC 20530.

Agency Information Collection Activities: Proposed Collection; Comments Requested: Notification to Fire Safety Authority of Storage of Explosive Materials

ACTION: 60-Day Notice of Information Collection Under Review.

The Department of Justice (DOJ), Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for ''sixty days'' until May 25, 2012. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact William Miller, Chief, Explosives Industry Programs Branch at *eipb@atf.gov.*

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Enhance the quality, utility, and clarity of the information to be collected; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *Title of the Form/Collection:* Notification to Fire Safety Authority of Storage of Explosive Materials.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: None. Bureau of Alcohol, Tobacco, Firearms and Explosives.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Business or other for-profit. Other: Farms, State, Local, or Tribal Government, Individuals or households. The information is necessary for the safety of emergency response personnel responding to fires at sites where explosives are stored. The information is provided both orally and in writing to the authority having jurisdiction for fire safety in the locality in which explosives are stored.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that 1,025 respondents will take 30 minutes to complete the notifications.

(6) *An estimate of the total public burden (in hours) associated with the collection:* There are an estimated 513 annual total burden hours associated with this collection.

If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, Department of Justice, Two Constitution

Square, Room 2E–508, 145 N Street NE., Washington, DC 20530.

BILLING CODE 4410–FY–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. 11–1]

Morris W. Cochran, M.D.: Revocation of Registration

On September 22, 2010, I, the then-Deputy Administrator of the Drug Enforcement Administration, issued an Order to Show Cause and Immediate Suspension of Registration to Morris W. Cochran, M.D. (Respondent), of Birmingham, Alabama. The Order proposed the revocation of Respondent's DEA Certificate of Registration BC1701184, and the denial of any pending applications to renew or modify his registration, on the ground that his ''continued registration is inconsistent with the public interest.'' 21 U.S.C. 824(a)(4).

More specifically, the Order alleged that while Respondent is authorized to prescribe Suboxone and Subutex ''for maintenance or detoxification treatment pursuant to 21 U.S.C. 823(g)(2) under DEA identification number XC1701184,'' he had ''prescribed methadone,'' a schedule II controlled substance, ''to patients for the purpose of drug addiction treatment'' without the registration required under 21 U.S.C. 823(g)(1). ALJ Ex.1, at 1–2.

Next, the Order alleged that Respondent had prescribed both methadone and Suboxone, the latter being a Schedule III controlled substance, to numerous patients whose charts show that he ''did not obtain a prior medical history,'' that he ''did not perform an initial physical exam,'' that he ''established little or no basis for the diagnoses,'' and that he ''offered no other treatment other than prescribing controlled substances.'' *Id.* at 2. The Order further alleged that ''[s]uch prescribing was not for a legitimate medical purpose in the usual course of professional practice in violation of 21 CFR 1306.04(a), and in violation of Alabama Administrative Code 540–X–11)(1), which requires that a physician personally obtain an appropriate history, perform a physical exam, make a diagnosis and formulate a therapeutic plan before prescribing drugs to a patient.'' *Id.* Finally, the Order alleged that Respondent had ''continue to prescribe alprazolam, a schedule IV controlled substances depressant, to a patient after [the] patient file explicitly noted that the patient abused this drug.'' *Id.*

Based on the above, I concluded that Respondent's continued registration during the pendency of the proceeding ''constitute[d] an imminent danger to the public health and safety.'' *Id.* I therefore invoked my authority under 21 U.S.C. 824(d) and immediately suspended Respondent's registration.

Respondent requested a hearing on the allegations and the matter was placed on the docket of the Agency's Administrative Law Judges (ALJs). On November 2–4, 2010, an ALJ conducted a hearing in Birmingham, Alabama. ALJ Decision (also ALJ), at 3.

On January 5, 2011, the ALJ issued her decision which recommended that Respondent's registration be revoked. *Id.* at 51. Therein, the ALJ found that the Alabama Medical Board had not made a recommendation in the matter (factor one) and that Respondent has not been convicted of an offense related to the manufacture and distribution of controlled substances (factor three). *Id.* at 43, 48.

With respect to factors two (Respondent's experience in dispensing controlled substances) and four (Respondent's compliance with applicable laws related to controlled substances), the ALJ made extensive findings. First, the ALJ found that Respondent violated DEA regulations because he prescribed drugs other than Suboxone or Subutex on prescription forms that used only his Data Waiver (or X) number. ALJ at 43. The ALJ also found that Respondent ''improperly prescribed Suboxone for substance abuse using his regular DEA registration number rather than the required ''X'' number.'' *Id.*

Next, the ALJ found that Respondent prescribed methadone for detoxification and maintenance treatment without holding the separate registration required to do so under Federal law. ALJ at 43–45. The ALJ specifically rejected Respondent's testimony that he had prescribed methadone to nine patients to treat pain (which does not require a separate registration), noting that Respondent had initially told a DEA Investigator that he was prescribing methadone for detoxification purposes, that several patients who had received methadone had told the Investigator that they were being treated for substance abuse, and that several of the patients had come to Respondent's clinic ''directly after'' being treated by a methadone clinic ''where the prescription of methadone for pain is prohibited'' and had been diagnosed by Respondent as being substance abusers. *Id.* at 44–45. The ALJ also found that Respondent had violated the limitation imposed under Federal law and regulations which limit to 100, the number of patients who can be treated for substance abuse with Suboxone. ALJ at 46–47 (citing 21 U.S.C. 823(g)(2)(B)(iii) and 21 CFR 1301.28(b)(1)(iii)).

Next, the ALJ found that Respondent violated both Federal and State regulations because his medical charts ''fail[ed] to list the source and severity of pain when chronic pain [wa]s the diagnosis. ALJ at 47 (citing Ala. Admin. Code 540–X–4.08; 21 CFR 1306.04(a) and 1306.07(c)). The ALJ further found that Respondent's charts ''fail[ed] to record when medical examinations were conducted and the specific results of those examinations in support of diagnoses,'' and that ''[i]n some instances, patients actually reported that no examination was conducted.'' *Id.* The ALJ also found that the ''charts failed to show the use of any treatment options besides the prescribing of controlled substances,'' and that the ''lack of attempts of alternative treatment modalities prior to determining that the patient suffers from chronic pain violates 21 CFR 1306.07(c).'' *Id.*

The ALJ further found that Respondent had post-dated prescriptions for schedule II controlled substances in violation of Federal regulations. *Id.* at 47–48 (citing 21 CFR 1306.05(a) and 1306.12(b)). In addition, the ALJ found that Respondent had admitted to having issued a controlled substance prescription after he was served with the Immediate Suspension Order. *Id.* at 48. The ALJ then found that ''Respondent testified, and the record contains no expert evidence to the contrary, that his treatment of his patients met the standard of care.'' *Id.* However, based on Respondent's improper use of his data-waiver number on prescriptions, his unauthorized prescribing of methadone for maintenance and detoxification purposes, his incomplete records, his failure to recommend any treatment options for his chronic pain patients besides the prescribing of controlled substances, and his issuance of a controlled substance prescription after his registration was suspended, the ALJ concluded that these factors supported the revocation of his registration. *Id.*

With respect to factor five—such other conduct which may threaten public health or safety—the ALJ found that Respondent lacked candor. More

specifically, the ALJ noted that ''[p]ractically all of the patient charts in this record had the same diagnoses: Chronic pain and substance abuse. However, when most of the patients were asked about their treatment by the Respondent, they stated that they were being treated for substance abuse.'' *Id.* at 49. While the ALJ acknowledged ''that it may be difficult to accurately diagnose chronic pain or substance abuse,'' she found Respondent's testimony that the patients did not know that they were being treated for chronic pain to ''lack[] credibility.'' *Id.* The ALJ thus concluded that Respondent's ''lack of candor also threatens public health and safety.'' *Id.* at 49.

The ALJ then turned to Respondent's evidence as to his remedial measures. The ALJ noted that Respondent had stopped using his X number improperly (to prescribe drugs other than Suboxone and for purposes other than substance abuse treatment), that he had stopped prescribing methadone, and that at the hearing, he had ''apologized for the issuance of prescriptions for controlled substances without a proper DEA registration.'' *Id.* at 50. However, noting that upon being served with the Immediate Suspension Order, Respondent had stated that he did not intend to comply with it, as well as his testimony that while he currently lacks ''authority to handle controlled substances, he continues to 'help' with the Suboxone at [another] clinic,'' the ALJ found that Respondent's ''actions do not indicate remorse, but, rather, are more indicative of a failure to appreciate the seriousness of the allegations against him and the responsibility with which he was charged.'' *Id.* The ALJ further found that ''Respondent, through his actions, likely facilitated'' drug abuse. *Id.*

The ALJ thus concluded that Respondent had failed to rebut the Government's *prima facie* case. *Id.* at 51. She further recommended that Respondent's registration be revoked and that any pending applications be denied. *Id.*

Neither party filed exceptions to the ALJ's decision. Thereafter, the record was forwarded to this Office for Final Agency Action. Having considered the record as a whole, I adopt the ALJ's findings of fact and conclusions of law except as otherwise noted herein. I further adopt the ALJ's recommendation that Respondent's registration be revoked and that any pending application be denied. I make the following findings.

Findings

Respondent is a physician licensed by the Alabama State Board of Medical Examiners (hereinafter, State Board or Medical Board) and is board certified in family practice. As of the date of the hearing, Respondent's state license remains current and unrestricted. Tr. 259. The State Board, however, has an open investigation of Respondent. *Id.* at 257–58.

Respondent is also the holder of DEA Certificate of Registration BC1701184, which prior to the issuance of the Immediate Suspension Order, authorized him to dispense controlled substances as a practitioner in schedules II through V, with the registered location of Narrows Health & Wellness, 151 Narrows Parkway, Suite 110, Birmingham, Alabama.[1] ALJ at 4 (stipulated facts). Respondent's registration does not expire until August 31, 2012. *Id.*

Respondent is also authorized to dispense Suboxone and Subutex, under the Drug Addiction Treatment Act of 2000 (DATA), for the purpose of treating opiate addicted patients and is authorized to treat up to 100 patients; Respondent has been assigned identification number XC1701184 for this purpose. *Id.; see* 21 U.S.C. 823(g)(2). Suboxone and Subutex are schedule III controlled substances (and are the only schedule III through V drugs) which have been approved by the Food and Drug Administration for the treatment of opiate addiction by a DATA Waiver physician.

Respondent is not, however, authorized to dispense methadone, a schedule II narcotic, for the purpose of treating opiate addiction as he does not have the registration required by 21 U.S.C. 823(g)(1). GXs 1 & 2. Respondent can, however, lawfully dispense methadone for the purpose of treating pain.

The Investigation

Respondent first came to the attention of the authorities when several pharmacies complained to a State Board Investigator that he was prescribing large amounts of methadone using his X number. Tr. 35–36. The State Investigator passed this information on to a DEA Diversion Investigator (DI); on February 28, 2010, which was a Sunday morning, the two Investigators went to Respondent's Red Bay Clinic and arrived there at 6:30 a.m. *Id.* at 37. While the Investigators were in the parking lot taking photographs, they were approached by TS, who said ''[h]e was waiting to get his methadone from'' Respondent. *Id.* at 38. TS also stated that he paid cash for his visits, that he was seeing Respondent for an old football injury, that he did not provide any medical records to Respondent, and that he was not asked for identification when he first registered as a patient. *Id.* at 39–40.

Respondent did not arrive at the office until shortly before 11 a.m., by which time ''close to 50 people'' were waiting to see him. *Id.* The State Investigator then went inside to register in an attempt to see Respondent. *Id.* However, when the State Investigator was told that he would have to wait five to six hours to see Respondent, the Investigators decided to identify themselves and interview him. *Id.* at 42. Respondent initially told the Investigators that ''he was operating a detox clinic where he was using methadone to get his patients onto Suboxone.'' *Id.* at 43. Respondent also said that he accepted cash only, that he saw an average of 80 patients on Sundays at the Red Bay clinic, and that he also treated chronic pain patients on whom he performed ''range of motion tests.'' *Id.* at 43–44.

With respect to his chronic pain patients, Respondent told the State Investigator that he would look for surgical scars on the patient's body and that he sent some of his patients for X–Rays and MRIs. *Id.* at 218–19. Respondent admitted to the State Investigator that ''he did not'' follow the Board's guidelines for the use of controlled substances in treating pain. *Id.* at 220. In the interview, Respondent also stated that he would require his substance abuse patients to undergo drug screens ''if he felt that they needed one.'' *Id.* at 219.

Respondent also maintained that he knew the requirements for using his X number and that he was not prescribing any other drugs under this number. *Id.* at 44–45. The State Investigator then showed Respondent a methadone prescription he had written under his X number; Respondent said that the ''prescription was a mistake.'' *Id.* at 45. The DI then told Respondent that he had found ''close to 200 prescriptions * * * written under his X number for'' drugs other than Suboxone and Subutex, including Xanax (a schedule IV depressant) and Adderall (a schedule II stimulant). *Id.; see also id.* at 221 (testimony of State Investigator).

The DI then asked Respondent how many patients he was treating under his X number. *Id.* at 46. Respondent said that he had 60 patients at his Red Bay clinic and another 50 patients at his

[1] Respondent also was practicing at offices in Red Bay and Russellville, Alabama. ALJ at 4–5 (Stipulated Facts at para. 4); Tr. 35.

Birmingham office. *Id.* When told by the DI that this exceeded the 100 patient limit, Respondent claimed that ten of the patients were actually being treated with Suboxone for pain. *Id.* at 46.

During the visit, the DI encountered JKB in Respondent's waiting room and asked to speak with him. *Id.* at 51. The DI asked JKB what Respondent was treating him for; JKB stated that he was treating him for an addiction to opiates with methadone. *Id.* at 52. JKB also told the DI that he had previously gone to a narcotic treatment program which used methadone and that he was going to Respondent because it was cheaper. *Id.* at 53. JKB also stated that he was not seeing Respondent for chronic pain. *Id.*

Following this interview, the DI resumed his interview of Respondent. Respondent now maintained that he was prescribing methadone for pain. *Id.* When the DI told Respondent that he had just interviewed a patient who said he was being treated for opiate addiction with methadone, Respondent stated that the patient was mistaken. *Id.* at 54. When the DI reminded Respondent that he had earlier stated that he was using methadone to transfer patients onto Suboxone, he stated that he had previously misspoken and ''[t]hat he was only using methadone for pain'' and not to treat addiction. *Id.* at 55. When the DI asked Respondent whether it was possible to see eighty patients in a day and ''provide the kind of treatment that was necessary for'' them, Respondent stated that ''he was overwhelmed and . . . needed some guidance.'' *Id.* at 56–57.

Upon leaving the clinic, the Investigators observed ''approximately 50 patients inside of [the] office and probably another 50 to 60 . . . in the parking lot.'' *Id.* at 57. The Investigators then went to a local CVS pharmacy and interviewed its pharmacist, who stated that since the opening of Respondent's Red Bay clinic, he had ''seen a tremendous spiking in the amount of prescriptions for methadone.'' *Id.* at 58. The pharmacist further stated that Respondent was writing methadone prescriptions to treat addiction and that he would not fill these prescriptions. *Id.* at 59; *see also* GX 7.

On May 17, 2010, the Investigators (along with a Supervisory DI) went to Respondent's Russellville office and obtained various patients' files through either an administrative subpoena or a warrant. Tr. 48–50, 62–63. The Investigators again interviewed Respondent who stated that he was mainly seeing pain patients. *Id.* at 63. The DI then asked Respondent if he had made any changes to his practice; Respondent states that ''he had switched pretty much everybody from methadone to Suboxone and that out of the 85 percent [of his] patients that he was seeing for pain, 95 percent . . . were being treated with Suboxone.'' *Id.* at 64. Respondent also stated that he had stopped prescribing methadone for pain because he was having more success using Suboxone. *Id.* at 65.

During the interview, Respondent identified AK as a chronic pain patient who he was treating with Suboxone and who was waiting to see him. *Id.* at 65–66. The DI proceeded to interview AK, who had yet to see Respondent that day; AK stated that Respondent ''was treating her for an addiction to opiates,'' and that after the February visit by the Investigators, he had stopped writing methadone prescriptions. *Id.* at 66.

The DI also interviewed another patient, SH, who was in the parking lot. *Id.* at 73–74. SH stated that Respondent was treating him for opiate addiction and not for chronic pain. *Id.* at 74.

The DIs seized 114 patient files which were selected on the basis of pharmacy records showing that Respondent had prescribed either Suboxone or methadone to the patients. *Id.* at 171–72, 174. The files were taken to the DIs' office where they were reviewed. *Id.* at 68. Thereafter, the DIs focused their investigation on approximately 28 patients, whose files were introduced into evidence.[2] During the course of the investigation, the DIs interviewed most of these patients by telephone to determine why they were seeing Respondent. *Id.* at 172.

The Patient Files and Interviews

Respondent's Methadone Patients

TP

On June 1, 2010, the DI spoke with TP. TP told him that Respondent did not physically examine her, that she paid $100.00 for the visit and that he prescribed methadone to her. Tr. 103–105; GX 5X. TP went to Respondent because she had heard that he was using methadone to treat addiction. Tr. 105.

TP saw Respondent on three occasions (Feb. 7 and 21, and Mar. 7, 2010). GX 5X. TP completed an intake form on which she listed her medications as ''methadone 12 10s a day'' and wrote that her pharmacy was the ''methadone clinic.'' *Id.* at 2. At her first visit, Respondent checked ''YES'' for whether TP had pain and listed her legs and back as the location. *Id.* at 3. Respondent diagnosed TP as having chronic pain, substance abuse and anxiety. *Id.*

However, Respondent did not document the nature and intensity of the pain, current and past treatments for the pain, and its effect on TP's physical and psychological functioning. *Id.* at 3, 5. No vital signs were recorded at any of her visits. *Id.* In addition, the chart contains no medical history. *See generally* GX 5X.

Moreover, while TP indicated that she had previously gone to a methadone clinic, Respondent did not know the name of the clinic and did not even attempt to obtain her treatment records. *See generally* GX 5X; Tr. 727–28. In addition, the progress note for TP's third visit contains no information other than her name, date of birth and the date of the visit.

At each of TP's three visits, Respondent prescribed a daily dose of eleven tablets of methadone 10 mg, with the first two prescriptions being written under his X number for 154 tablets each. *See* GX 5X. While TP told the DI that after DEA's February 28, 2010 visit, Respondent told her that he was no longer prescribing methadone, Tr. 105; on March 7, Respondent again prescribed 88 tablets of methadone 10 mg to her. GX 5X, at 1. When Respondent offered TP alternative medications to methadone, she elected to return to a methadone treatment program. Tr. 501, 728.

When asked on cross-examination if the methadone clinic which TP had previously gone to was treating her for abusing narcotics, Respondent testified that while the only purpose of a methadone clinic is to treat ''substance abuse,'' she was ''going for pain.'' *Id.* at 728. While Respondent also diagnosed TP as having substance abuse, he did not document the substances that she was abusing. GX 5X.

DG

DG first saw Respondent on January 3, 2010. GX 5O. On the intake form, DG listed his medications as ''methadone.'' Respondent made a diagnosis of chronic pain even though he checked ''NO'' for whether DG had pain and the progress note for the visit does not document the nature and intensity of the pain, whether any treatments had been previously tried, and the pain's effect on his psychological and physical function. GX 5O, at 4. While Respondent noted that he performed a physical exam, he found each of the areas of the examination to be normal. *Id.* Respondent prescribed methadone to

[2] Twenty-six of the patient files were entered into evidence as Government Exhibit 5; the two remaining files were entered into evidence as Government Exhibits 22–23. Respondent also introduced copies of the same files. *See* RXS 2, 4–28. I have carefully reviewed both sets of files and conclude that there are no material differences between the two sets.

DG at this visit, as well as on January 12, 19, and February 1, 14, and 28, 2010. *Id.* at 5, 7, 9, 11.

On July 9, 2010, the lead DI interviewed DG. Tr. 106. DG stated that Respondent had told him on February 28, 2010, that he would no longer prescribe methadone, but that he would prescribe Suboxone to DG if he was having trouble getting off of the methadone. *Id.* at 107–08, 386.

Respondent testified that on January 19, 2010, he diagnosed DG as having a substance abuse problem, yet the medical chart does not document the basis for that diagnosis. *Id.* at 701–02. Respondent testified that his diagnosis was based on DG's demeanor and ''probably . . . also a drug screen.'' *Id.* However, there is no drug screen in the file. *See* GX 5O.

DG testified at the hearing. The ALJ found credible his testimony that he was also seeing the Respondent for pain in his shoulder and lower back. ALJ at 23. While DG believed this pain was a result of masonry work he had done since he was a teenager, as well as a snowboarding accident he had when he had lived in Utah, DG's chart does not reflect any of this information. Tr. 367, 374; GX 5O.

According to DG, Respondent examined him and would spend about 7 to 10 minutes with him during his visits. Tr. 370. DG also denied having told the DI that Respondent did not perform a physical exam on him and that he was seeing Respondent for substance abuse. Tr. 371.

Respondent used his X number to prescribe methadone for DG. GX 5O, at 5, 7, 9, 11. The methadone prescriptions were for lesser and lesser amounts. GX 5O, at 1. In March of 2010, Respondent proposed to offer DG an alternative medication treatment plan. *Id.* at 11; Tr. 386–87. The medical chart stops at that point. GX 5O. Respondent stated that he believed his treatment of DG was appropriate. Tr. 488.

MB

On July 20, 2010, the lead DI interviewed MB. Tr. 108; GX 5A. MB stated that she was seeing Respondent for an addiction to Lorcet and not for chronic pain, that she paid cash for her prescriptions, and that Respondent did not perform any physical examinations. Tr. 109–110. MB also commented that she thought there were too many people waiting inside and outside the office to see Respondent. *Id.* at 109.

On the progress note for MB's first visit, Respondent circled ''YES'' for whether she had pain and diagnosed her as having chronic pain due to headaches. GX 5A, at 7. At the hearing, Respondent testified that MB was being treated for both periodic headaches and substance abuse. Respondent did not, however, further document the nature and intensity of the pain, how it affected MB's ability to function, and any prior treatments for her pain. *See id.* Nor did he document the history of MB's substance abuse. Tr. 533–37. Respondent did not obtain information from MB's prior physicians. Tr. 533–34. While Respondent indicated that the physical examination was normal, he did not take MB's vital signs. Tr. 532–33; GX 5A, at 7.

Respondent described his treatment of MB as tapering her down on her methadone prescriptions, and the prescriptions show that Respondent was gradually reducing her daily dosage from 150 mg to 130 mg over the course of the slightly more than two months in which he treated her.[3] Tr. 463, 545, 550; GX 5A, at 5–6. At MB's last visit (Mar. 14), Respondent offered her the option of using different medication to control any potential withdrawal symptoms she may have from the lack of methadone. Tr. 464–65. However, MB chose to seek treatment elsewhere. Tr. 551.

Respondent issued MB two methadone prescriptions on his X prescription pad. Tr. 541–42; GX 5A, at 6. MB's file has no entry for her visits of February 28 and March 14, even though MB's drug log notes that a methadone prescription was issued on each date for 182 and 106 dosage units of methadone respectively. GX 5A, at 2–3.

JC1

Respondent saw JC1 three times in February and March of 2010. GX 5N. On his intake form, JC1 listed his medications as methadone and Xanax. GX 5N, at 2. On the progress note for JC1's first visit (Feb. 9), Respondent noted that he had been in an automobile accident and wrote ''back'' on the chart. *Id.* at 4. However, Respondent also noted that JC1 had ''NO'' pain and did not document the nature and intensity of the pain, details regarding the accident such as when it occurred, what treatments had been used, and the pain's effect on his physical and psychological functioning. *Id.* The progress note indicated that Respondent did a physical exam, during which he did not find any area to be abnormal. *Id.* Respondent did not document having taken JC1's vital signs. *Id.* At this visit, Respondent gave JC1 prescriptions for 210 tablets of methadone 10 mg, with a daily dose of 15 tablets, and 60 tablets of Valium, even though he noted that JC1 was not agitated or moody and did not have insomnia. *Id.* at 4–5. These prescriptions were written under his X number. *Id.* at 5.

At JC1's next visit (Feb. 23), Respondent again indicated that he had ''NO'' pain and did a physical exam at which he found all areas normal. *Id.* at 4. At this visit, Respondent noted diagnoses of both chronic pain and substance abuse. *Id.* Respondent issued JC1 a prescription for 210 tablets of methadone 10 mg, with a daily dose of 15 tablets ''for pain.'' *Id.* Respondent wrote the prescription under his X number. *Id.* at 5.

On March 9, Respondent wrote JC1 two more prescriptions, one for another 210 tablets of methadone with the same daily dose ''for pain'' as before, and one for twenty-eight tablets of Valium. *Id.* at 1, 7. Respondent wrote the prescriptions under his X number. *Id.* at 7. Respondent did not, however, create a progress note to document the issuance of the prescriptions. *See generally* GX 5N.

Respondent testified that JC1 had been in an automobile accident and had fractured his back, that he had developed a tolerance for pain medicine and was taking more and more, and thus went to a methadone clinic. Tr. 486. Respondent further testified that JC1 had come from either the Shoal's clinic or a narcotic treatment program in Hamilton because he ''wanted to take a cleaner medicine for his pain.'' *Id.* at 486, 699. Respondent denied that JC1 had gone to the narcotic treatment program ''to be treated for addiction'' and maintained that ''he was going there to be treated for pain from a fractured back.'' *Id.* at 699.

As for the basis of the substance abuse diagnosis which he made at JC1's second visit, Respondent testified that ''we probably got our February 9 drug screen back. And he probably had some [illicit] drug in there.'' *Id.* at 700. However, Respondent acknowledged that he was speculating about this because JC1's chart did not contain any drug test results. *Id.*

Respondent prescribed methadone at a lower dosage amount than the dosage JC1 reported he had been on. *Id.* at 486; GX 5N at 1, 5, 7. However, while Respondent maintained that JC1 ''wanted to take a cleaner medicine for his pain,'' Respondent did not taper the methadone prescriptions for JC1, but rather prescribed the same daily dose of 150 mg in each prescription between February 9, 2010, and March 9, 2010. Tr. 486; GX 5N, at 1, 5, 7. When in

[3] Respondent issued MB a total of six methadone prescriptions between January 5 and March 14, 2010. GX 5A, at 2. Some of the prescriptions indicated that they were ''for pain.'' *Id.* at 4, 6.

March, Respondent offered him alternative medications, JC1 elected to go to another treatment facility. Tr. 486. Respondent maintained that his care of JC1 was appropriate. *Id.* at 487.

JB

Respondent treated JB in February and March of 2010.[4] GX 5L. On the intake form, JB listed his medications as ''methadone,'' and on the progress note for his visit, Respondent wrote that JB had been a patient at the Shoals Treatment Center, that he had been on 230 mg. of methadone, but that he ''was kicked out.'' GX 5L, at 5. Respondent further wrote that JB ''desires to get off methadone.'' *Id.* In addition, Respondent noted that JB had foot pain, back pain and knee pain which had been caused by ''a four-wheeler accident.'' *Id.;* Tr. 696. Respondent performed a physical examination and took JB's blood pressure and heart rate. GX 5L, at 5. Respondent also noted that JB had withdrawal, was agitated/moody, had insomnia, and had a positive MDQ (Mood Disorder Questionnaire). *Id.* Respondent then issued JB a prescription for a fourteen-day supply of methadone 10 mg, at a daily dose of 18 tablets, *id.,* and noted that his plan included placing JB on his alternative medication (KCZZU) program. *Id.* Respondent issued JB a prescription for methadone, which was written under his X number, and wrote on it ''for pain.'' *Id.* at 6. Respondent also wrote JB a prescription for Ultram, a non-controlled drug, on the same form, which listed only his X number. *Id.*

On February 28, 2010, JB again saw Respondent. Respondent circled ''YES'' for whether JB had pain and insomnia, and made a further notation that his pain was worse, although the precise area is illegible. *Id.* at 5. Respondent again noted a diagnosis of chronic pain and issued JB another prescription for 252 methadone 10 mg, with a daily dose of 18 tablets ''for pain.'' *Id.* at 6. This prescription was also issued under his X number.

At JB's final visit (Mar. 14), Respondent noted that his ''pain persists'' and that he was ''anxious about stopping methadone.'' *Id.* at 3. Respondent issued him a prescription for 156 tablets of methadone 10 mg with a daily dose of 17 tablets ''for pain.'' *Id.* at 4. Respondent wrote the prescription on a form, which contained both his X number and regular DEA number. *Id.*

Respondent testified that JB had been asked to leave a drug treatment program before he saw the Respondent. Tr. 482. Respondent testified that he had done a drug screen on JB and that he did not ''see anything that bothered [him], such as cocaine * * * or marijuana at that time.'' *Id.* at 483. However, JB's file does not contain the results of a drug screen. GX 5L.

According to Respondent, JB had been in a four-wheeler accident, took narcotics, and went to the drug treatment program because his other physician would not write anymore prescriptions for narcotics. Tr. 696. Respondent did not, however obtain JB's records from the drug treatment program and Respondent maintained that the fact that JB was being treated at a methadone clinic did not tell him that JB was being treated for opiate addiction. *Id.* at 695–96. Respondent stated that he prescribed methadone in a tapered amount to prevent JB from going into withdrawal. *Id.* at 483; GX 5L, at 1.

Respondent also testified that he had provided JB with the option of other treatment medications, but that he elected to go to another methadone clinic. Tr. 483. Respondent annotated in the medical chart that he was treating JB for back and knee pain. GX 5L, at 5–6. Respondent did not document the severity of the pain. GX 5L. Respondent stated that his treatment of JB was appropriate. Tr. 483–84.

NB

Respondent saw NB three times in February and March of 2010. GX 5M. At her first visit (Feb. 7), Respondent diagnosed her as having chronic pain even though he indicated that she had ''NO'' pain. GX 5M, at 3. Respondent did not document any further information regarding NB's condition (such as the nature and intensity of the pain, its history, whether any treatments had been previously tried, and the pain's effect on her psychological and physical functioning) at any of her three visits. *Id.* at 3, 5.

The progress note for NB's first visit indicates that Respondent performed a physical exam. *Id.* at 3. However, Respondent noted that all areas were normal. *Id.* Respondent did not document having taken NB's vital signs. *Id.* At this visit, Respondent issued NB prescriptions under his X number, for 210 tablets of methadone 10 mg (with a daily dose of 15 tablets) and 30 Xanax. *Id.* at 4. Respondent did not diagnose NB as having anxiety; indeed, he noted that she was not agitated/moody and did not have insomnia. *Id.* at 3.

On Feb. 21, Respondent issued NB additional prescriptions for methadone and Xanax under his X number. *Id.* at 4. The progress note for this visit, however, contains no information regarding her medical condition. *Id.* at 3. On the progress note for NB's final visit (Mar. 7), Respondent circled ''CHRONIC PAIN'' but made no other findings. *Id.* at 5. At this visit, Respondent issued her prescriptions for 112 tablets of methadone 10 mg, with a daily dose of 14 tablets ''For Pain,'' and for 20 tablets of Klonopin ''for anxiety.'' *Id.* at 6. Respondent wrote the prescriptions on a form which listed both his X number and his regular registration number. *Id.*

Respondent testified that NB told her at the initial visit that she had been on 180 mg of methadone and that ''she was taking it for pain.'' Tr. 484. He then testified that ''she also had some anxiety'' and that she was a ''troubling patient'' because she was ''on a combination of methadone and Xanax'' which caused him great concern, especially if ''those two drugs get mixed with alcohol.'' *Id.* at 485. None of this was documented.

Respondent also testified that he gave her ''150 methadone,'' which was ''much less methadone than she was on,'' and that he ''gave her 28 tablets of the Xanax in fear of seizure potential if we went below that.'' *Id.* At her last visit, Respondent offered NB the option of alternative medications, after which she did not return to his clinic. *Id.* 485; GX 5M. Respondent believed his care of NB was appropriate. Tr. 485–86.

KI

Respondent saw KI four times in February and March of 2010. GX 5T. On the intake form, KI noted that her medications included ''methadone, Xanex[sic], [and] Ambien.'' *Id.* at 2.

According to Respondent, KI was being treated at Shoals, a narcotic treatment facility, and she wanted out of the clinic. Tr. 494. Respondent testified that KI had back pain; however, Respondent indicated that she had ''NO'' pain on the progress note for her first visit. Tr. 494, GX 5T, at 3. Although Respondent wrote ''Back'' as the location, once again, he did not document the nature and intensity of the pain, the history of the pain, what treatments had been used, and the pain's effect on KI's physical and psychological functioning. GX 5T, at 3; Tr. 494, 718.

Respondent performed a physical examination but did not note any abnormalities; he also did not document

[4] It is unclear whether JB is the same person as JKB, who was interviewed in the waiting room on February 28, 2010, and who told Investigators that he had previously gone to a methadone clinic and that Respondent was treating him for opiate addiction, as the Government did not establish that this chart (GX 5L) was JKB's.

having taken KI's vital signs. GX 5T, at 3. Respondent noted the diagnoses of both chronic pain and substance abuse and prescribed a lesser dose of methadone (130 mg per day) than what KI reported she had been receiving at Shoals (150 mg). Tr. 494; GX 5T, at 3–4. However, Respondent did not taper KI's methadone prescriptions; rather, he prescribed 130 mg per day of methadone to her three times between February 7, 2010, and March 7, 2010, with the first two prescriptions being written under his X number. GX 5T, at 1, 4, 6.

Respondent did not obtain treatment records from the narcotic treatment facility and did not know what substance KI was abusing; he also did not obtain any records related to her back pain. Tr. 715–16. Respondent testified that KI began taking narcotics to treat her pain, became addicted to those narcotics, but then denied that she had told him that she then entered the methadone clinic to treat her addiction. *Id.* at 716–17. Respondent testified that he offered alternative medications to KI, that on March 21, 2010, he refused to prescribe methadone to her, and that she then ''went to another facility.'' *Id.* at 494–95. Respondent maintained that his care of KI was appropriate. *Id.* at 495.

Respondent's Suboxone Patients

SS

On June 1, 2010, the DI spoke with SS by phone. Tr. 96. SS said that he was being treated for opiate addiction, that he received a Suboxone prescription from Respondent, and that he was not being treated for chronic pain. He also stated that he paid $100.00 cash directly to Respondent for his prescription and that Respondent did not conduct any examination on him. Tr. 95–98; GX 5H.

SS saw Respondent only on May 2, 2010. GX 5H, at 2–3. On the intake form, SS listed methadone as his medication and Respondent noted on the progress note that he was on 120 mg. *Id.* at 3. Respondent diagnosed SS as having both chronic pain and methadone use; while Respondent checked ''NO'' for SS's pain, he indicated that SS had disc surgery at L5S1. *Id.* at 3; Tr. 475. While Respondent recalled, and the chart reflects, that SS had back surgery, SS's chart does not contain any copies of records related to his back surgery and does not document the date of the surgery. Tr. 475, 673; GX 5H. SS's chart does not document the nature and intensity of the pain, current and past treatments for it other than the surgery, and the pain's effect on his physical and psychological functioning. GX 5H, at 3. No vital signs were recorded at SS's visit. *Id.*

Respondent testified that SS was on methadone, which he was getting ''off the street,'' but that fact is not annotated in his chart. Tr. 672. Respondent, however, refused to prescribe methadone to SS. Instead, he prescribed Suboxone and offered SS the choice of an alternative medical treatment program for getting off of methadone. *Id.* at 475–76, 674. Respondent believed that he gave SS appropriate care. *Id.* at 476.

AG

On May 17, 2010, the DI interviewed AG. *Id.* at 80. AG stated that she was seeing Respondent for treatment of her addiction to Lortab, a schedule III narcotic containing hydrocodone. *Id.* at 80–81. AG further explained that she was not being treated for chronic pain, although such treatment was indicated in her chart. AG stated she did not know why her chart listed this condition. *Id.* at 81; *see also* GX 5P.

According to her chart, Respondent diagnosed AG as having chronic pain and substance abuse as a secondary condition. GX 5P, at 3; Tr. 488–89. However, the chart does not specify the basis for this diagnosis and Respondent checked ''NO'' for whether AG had pain. Tr. 704; GX 5P, at 3. In addition, Respondent did not record any vital signs at this or any subsequent visit.

Respondent prescribed Suboxone to AG at both the initial and several subsequent visits. Tr. 488; GX 5P, at 1, 4, 6, 8, 9. Moreover, at subsequent visits, Respondent continued to diagnose AG as having both chronic pain and substances abuse while checking ''NO'' for whether she had pain. *See id.* In other instances, the progress notes indicate that AG visited on a certain date but are otherwise blank even though Respondent issued AG a prescription. GX 5P, at 5. At AG's final visit, Respondent circled ''YES'' for whether she had pain but provided no further documentation as to the location of the pain, the nature and intensity of the pain, current and past treatment for pain, and its effect on her physical and psychological functioning. *Id.* at 7. In addition, the chart contains no medical history. *See generally* GX 5P. Respondent nonetheless maintained that he met the standard of care with respect to AG. Tr. 489.

LM

On June 1, 2010, DI Michael Jones interviewed LM by telephone. *Id.* at 82. LM stated that the Respondent was treating her for an addiction to pain killers. *Id.* at 83. Respondent had been treating LM since December 27, 2009, at the Red Bay clinic. LM confirmed that she was not being treated for chronic pain. Tr. 82–83.

LM completed a form in which she listed her medications as Adderall and Oxycontin, the latter being a schedule II narcotic. Tr. 193; GX 5V, at 2. At LM's first visit, Respondent diagnosed LM as having chronic pain, substance abuse, and bipolar disorder. GX 5, at 3. While Respondent checked ''YES'' for whether LM had pain and listed her ''back'' as the location, the chart does not document the nature and intensity of the pain, current and past treatments for pain, and its effect on her physical and psychological functioning. *Id.* In addition, the chart contains no medical history. *See generally id.* Respondent prescribed Suboxone and Adderall on an X prescription pad. GX 5V, at 4, 6. Subsequently, he prescribed both controlled substances using his regular DEA registration number. GX 5V, at 6–7.

At subsequent visits, Respondent continued to list chronic pain as a diagnosis while checking ''NO'' for whether LM had pain.[5] *Id.* at 3. Respondent testified that he was treating LM for back pain and for bipolar disorder. He further stated that LM was on Oxycontin and wanted to get ''onto a better pain medicine.'' Tr. 498. However, when asked on cross-examination as to whether his diagnosis of substance abuse was ''based on her abuse of Oxycontin,'' Respondent stated: ''I think it had to do with—she had multiple things. She had stimulants * * * such as Adderall,'' and ''I think she had taken periodically Xanax.'' *Id.* at 723.

LM's progress notes do not, however, indicate what substance(s) she was abusing. GX 5V, at 3 & 5. Moreover, notwithstanding his testimony that her substance abuse was based in part on her use of Adderall, Respondent prescribed this drug to LM at four of her subsequent visits. *Id.* at 4, 6, 7. Respondent believed his treatment of LM was within the standard of care. Tr. 498–99.

ET

On June 1, 2010, the DI interviewed ET by telephone. ET explained that the Respondent was treating him for an addiction to pain killers. Tr. 83–84. Respondent prescribed Suboxone to ET on an X pad on four occasions between December 2009 and March 2010; in

[5] At LM's second visit, Respondent listed substance abuse as a diagnosis; however, at two subsequent visits, he no longer listed substance abuse as a diagnosis. *See* GX 5V.

April, he prescribed Suboxone to ET on a prescription pad which listed both his X number and his practitioner's registration number. GX 5Z, at 4, 6, 8. ET told the DI that he was not being treated for chronic pain. Tr. 83–84.

The first two progress notes (one of which is undated but which is above the note for January 5, 2010 [6]) indicate a diagnosis of chronic pain but not substance abuse, the latter not being listed as a diagnosis until ET's third visit (Feb. 2, 2010). GX 5Z, at 3, 7. Here again, Respondent noted on the chart that ET had ''NO'' pain and the chart does not indicate the location of the pain, the nature and intensity of the pain, current and past treatments for the pain, and its effect on his physical and psychological functioning. *Id.* at 3, 5, 7. No vital signs were recorded at any of ET's visits. *Id.* In addition, the chart contains no medical history. *See generally* GX 5Z. Respondent maintained that his care of ET was appropriate. Tr. 503.

CT

On June 2, 2010, a DI spoke with CT. CT stated that Respondent was treating her for opiate addiction with Suboxone. Tr. 87–88. On the intake form, CT listed her medications as ''Suboxone, methadone, and Zanex [sic].'' GX 5Y, at 2.

At CT's first visit, Respondent diagnosed her as having both substance abuse and chronic pain. GX 5Y, at 3. However, Respondent did not indicate in the chart what substance she was abusing. *Id.* Moreover, Respondent indicated that she had ''NO'' pain. *Id.* Respondent did not indicate a location of CT's pain until the third visit (approximately two months later) when he noted its location as her ''back,'' but once again checked that she had ''NO'' pain. *Id.* at 5. While Respondent listed a diagnosis of chronic pain at each of CT's four visits, he never checked ''YES'' for pain on any of the progress notes. *Id.* at 3, 5. Respondent did not document the nature and intensity of the pain, current and past treatments for the pain, and its effect on CT's physical and psychological functioning. *Id.* Nor did he record vital signs at any of CT's visits. *Id.*

In his testimony, Respondent admitted that he did not know what substance(s) CT was abusing, but added that ''usually they're on multiple medicines to get whatever desired effect they want.'' Tr. 729–30. Respondent did not obtain any prior treatment records for CT, whether for pain or substance abuse. *Id.* at 731.

Respondent wrote CT prescriptions for Suboxone on a pad which contained only his X number, as well as on a pad which contained both his X number and his regular DEA registration number. GX 5Y, at 4, 6. Respondent believed his treatment of CT was within the standard of care. Tr. 502.

JH

On June 2, 2010, the lead DI spoke with JH. JH stated that Respondent was treating him for ''a bad addiction to Oxycontin'' with Suboxone and that he was not being treated for chronic pain. Tr. 89–90; GX 5R. JH listed his medications as ''OXY 80 mg x4.'' GX 5R, at 9. According to Respondent, JH was taking ''four [Oxycontin] a day for his pain,'' which he was getting off the street because ''his doctors fired him.'' Tr. 710.

At JH's first visit, Respondent diagnosed him as having substance abuse, attention deficit disorder and chronic pain. GX 5R, at 10. While in his testimony, Respondent maintained that JH had told him that he needed OxyContin ''to get by with his pain,'' on JH's chart, Respondent indicated that JH had ''NO'' pain and did not document a cause of the pain. *Id.* Moreover, while JH saw Respondent multiple times thereafter and diagnosed him as having chronic pain at each visit, Respondent never checked ''YES'' in the pain entry of the progress notes and never provided a description and location of the pain. *See generally* GX 5R. Moreover, Respondent never recorded vital signs for any of JH's visits. *See generally id.* Nor does JH's chart include a medical history. *See generally id.*

Respondent obtained a printout of JH's prescriptions from the State's prescription monitoring program. *Id.* at 2–8. While the report showed that JH had also obtained Suboxone from another physician (Dr. H.), Respondent neither obtained JH's records from Dr. H. nor conferred with him. Tr. 711–12; GX 5. Respondent wrote JH prescriptions for both Suboxone and Adderall under his X number. GX 5R, at 11, 15. However, Respondent required JH to undergo a drug test; while this test showed that JH was taking Suboxone (buprenorphine) and amphetamine (Adderall), he also tested positive for marijuana use. GX 5R, at 12. Respondent believed his care of JH was appropriate. Tr. 492.

KP

On June 2, 2010, the lead DI spoke with KP. KP stated that Respondent was prescribing Suboxone to treat her opiate addiction and that she was not being treated for chronic pain. Tr. 92–94. While Respondent testified that KP was on a narcotic which she wanted off of, KP did not list any medications she was on. GX 5W, at 2. Moreover, Respondent did not document the name of the narcotic in KP's record. Tr. 499.

Respondent testified that KP had ''a complaint of pain.'' *Id.* At KP's first two visits (Dec. 6, 2009 and January 3, 2010), Respondent diagnosed her as having only chronic pain. GX 5W, at 3. However, for both visits, Respondent checked ''NO'' for whether KP had pain and did not list a cause or location of any such pain. *Id.*

Respondent did not make a diagnosis of substance abuse until her third visit (Jan. 19, 2010); however, none of the progress notes for KP's subsequent visits list a diagnosis of substance abuse.[7] *See id.* at 5, 7, 9, 11. Moreover, while Respondent continued to diagnose KP as having chronic pain, he did not check ''YES'' for whether she was having pain on any of the progress notes. *See id.* Nor did he document the cause, location or severity of her pain, or record her vital signs, at any of her visits. *See id.*

KP stated that she had to pay cash for her prescriptions as Respondent would not file a claim with Medicare for her. Tr. 94. She also stated that the Respondent did not perform any medical examinations on her, although Respondent indicated on the progress notes that he had done so and noted that the various parts of the examinations were normal (by either checking or lining through them). Tr. 95, *see also* GX 5W, at 3, 5, 9.

Respondent prescribed Suboxone and Xanax for KP on an X prescription pad. *Id.* at 499; *see also* GX 5W, at 4, 6. Respondent believed his treatment of KP was within the standard of care. Tr. 500.

TB

On June 10, 2010, the lead DI spoke with TB. TB stated that Respondent was prescribing Suboxone to him for both pain and addiction. Tr. 98–99; GX 5B. TB wrote on the intake sheet that he had used Suboxone, but Respondent did not know who prescribed it, and he commented that he could not tell from TB's chart if the Suboxone had been prescribed for substance abuse. GX 5B, at 1; Tr. 580–81.

At the first visit (Dec. 20, 2009), Respondent diagnosed TB as having chronic pain and substance abuse. Tr.

[6] For this reason, I conclude that the undated note was for ET visit of December 8, 2009, at which Respondent issued him a prescription for Suboxone. *See* GX 5Z, at 1 & 4.

[7] Respondent also diagnosed KP as having anxiety, for which he prescribed Xanax. GX 5W, at 5.

466. Respondent checked ''YES'' for whether TB had pain and indicated the location as the lumbar area. GX 5B, at 6. While Respondent testified that ''[w]e got him to tell us about his back problems,'' if he had undergone any surgeries and how ''it affect[ed] his everyday activity,'' Respondent did not document the nature and intensity of the pain, whether any treatments had been previously tried, and the pain's effect on his psychological and physical function. *Id.*; Tr. 578–79. Moreover, Respondent did not know if TB's back pain was caused by an injury or a degenerative condition. Tr. 578–79.

The chart indicates that Respondent performed an examination at which all areas including TB's back were found to be normal. GX 5B, at 6. However, no vital signs were recorded. *Id.* at 6–7. Respondent prescribed Suboxone to TB, as well as Ambien. *Id.* While Respondent testified that he prescribed the Suboxone for TB's back pain, he issued the prescription under his X number; he also issued the Ambien prescription on the same form. *Id.* at 7.

Respondent also saw TB on January 19, February 16,[8] and May 2, 2010. *Id.* at 4–7. At both the January and February visits, Respondent prescribed both Suboxone and Ambien to TB using his X number. *Id.* at 5, 7; Tr. 466–67, 587–88. Respondent did not obtain TB's records from other doctors even though TB listed Suboxone as one of his medications. Tr. 578–580; GX 5B. When asked if he knew the name of the doctor who had previously prescribed Suboxone to TB, Respondent testified ''We might have found it out—I just didn't document it * * *. It could be a local doctor there.'' Tr. 581. When asked why TB had previously gotten Suboxone, Respondent could not definitively answer if it had been for pain or substance abuse. *Id.* at 582. With respect to the Ambien prescriptions, Respondent admitted that he did not document an insomnia diagnosis. *Id.* at 583.

SW

SW's chart indicates that he was being treated for chronic pain and substance abuse. While the chart for SW's first visit indicates that he was on Oxy 160 mg, Respondent checked ''NO'' for whether SW had pain and did not document the cause or severity of SW's pain. GX 5J at 3, 5. Respondent did not identify a potential source of SW's pain until his third and final visit, when he noted that SW had a herniated disc in his back and had undergone surgery. *Id.* at 3.

SW testified at the hearing and the ALJ found credible his testimony that he had a herniated disc in his back, that he had been taking Oxycontin for the pain, and that he had begun treatment with the Respondent in order to get a different pain medication. Tr. 346. The ALJ also found credible SW's testimony that he told a DI that Respondent was treating him for chronic pain and that the Respondent had performed a physical examination on him.[9] However, the ALJ also found credible SW's subsequent testimony that he had told the DI that he was being treated for substance abuse because ''it was better being on Suboxone than it was Oxycontin.'' Tr. 363.

Respondent did not know who had prescribed Oxycontin to SW, and SW's chart does not contain any prior medical records. Tr. 684–85; GX 5J. SW testified that he was addicted to his pain medications. Tr. 355. Respondent spent 15 to 20 minutes with SW and prescribed Suboxone to him. *Id.* at 351–52; GX 5J. SW testified that he had an MRI in 2005 or 2006, and a bone scan in 2001 or 2002, but these test results were not part of his patient chart in evidence. Tr. 346, 349, 353, 357; GX 5J.

SW saw Respondent three times. *See* GX 5J.[10] At the time of the hearing, SW was still taking Suboxone, but he was not getting it from Respondent. Tr. at 364–65. Respondent refused to file an insurance claim for SW., and required that he pay $100 cash for the visits. *Id.* at 102–103.

CL

CL first saw Respondent on December 20, 2009. *See* GX 22, at 6. Respondent made a diagnosis of both chronic pain and bipolar disorder; however, Respondent did not document the nature and intensity of the pain (he did not check either ''YES'' or ''NO'' for whether CL had pain), the history of the pain, whether any treatments had been previously tried, and the pain's effect on her psychological and physical function. *Id.* While Respondent noted that he had performed a physical exam and found all areas normal, he did not record any vital signs. *Id.* Respondent did not make a substance abuse diagnosis at this visit and yet prescribed Suboxone to CL under his X number. *Id.* at 7.

Respondent saw CL again on January 17, 2010. *Id.* at 6. At this visit, Respondent again diagnosed CL as having pain even though he noted that she had ''NO'' pain and made none of the findings as explained above. *Id.* He also diagnosed her as having substance abuse and required that CL undergo a drug screen, the results of which are not in her chart. Tr. 127–28, 153–54; GX 22. Respondent did not, however, document CL's history of substance abuse. GX 22, at 6. Respondent again provided CL with a prescription for Suboxone. *Id.* at 7.

Respondent provided CL with prescriptions for Suboxone on February 14, March 14, April 10, and May 9, 2010. *Id.* at 2–3, 5. However, the progress notes for both February 14 and March 14 contain no information besides CL's name, date of birth and the date of the visit. *Id.* at 4. The progress note for April 10 indicates that CL had chronic pain even though Respondent checked ''NO'' for her pain and no longer listed substance abuse as a diagnosis. *Id.* at 1. Finally, the progress note for CL's last visit (May 9) again lists chronic pain as one of three diagnoses even though Respondent checked that she had ''NO'' pain. *Id.* While the notes for both the April 10 and May 9 visits indicate that CL's physical exam was normal, Respondent did not document having taken any vital signs as either visit. *Id.*

CP

The earliest progress note for CP is dated December 20, 2009, which also corresponds with the earliest date listed on the record of CP's Suboxone prescriptions. GX 23, at 5, 10. The progress note indicates a diagnosis of chronic pain, even though Respondent checked that CP had ''NO'' pain and contains no other documentation (such as the nature and intensity of the pain, its history, and its effect on CP's functioning) to support this diagnosis. *Id.* at 5. Respondent also diagnosed CP as having substance abuse (with no supporting findings) and anxiety. *Id.* While Respondent performed a physical exam and found all areas normal, he did not document having taken CP's vital

[8] In the progress note for this visit, Respondent indicated that TB had ''NO'' pain while continuing to indicate that he had chronic pain. GX 5B, at 4. In his testimony, Respondent explained he ''marked off that [TB's] pain was controlled under the no part.'' Tr. 588. The ALJ did not, however, credit this testimony. *See* ALJ at 21–22. Nor do I.

[9] The ALJ noted that the testimony of the lead DI and SW conflicted on this point. ALJ at 22 n.3. The DI testified that SW told him that Respondent was not treating him for chronic pain and had not performed a physical examination on him; SW testified to the contrary. *Compare* Tr. 102–03, *with id.* at 348–49. The ALJ found, however, that the DI had difficulty recalling the conversation that he had with SW and his memory had to be refreshed by the use of his notes, *id.* at 101–102, but that SW's memory required no similar refreshment. *Id.* at 345–65. I therefore adopt the ALJ credibility finding that SW's testimony is a more reliable account of the conversation that took place between SW and the DI.

[10] SW testified that he saw Respondent four or five times. Tr. 364. However, SW's patient file documents only three visits.

signs. *Id.* Respondent prescribed Suboxone and Xanax at this visit using his X number.

At the next visit, Respondent again noted that CP had chronic pain while indicating that he had ''NO'' pain. *Id.* Respondent, however, made an entry in the blank for ''EXT'' and for the ''Location,'' both of which are illegible. *Id.* Respondent did not, however, note a diagnosis of substance abuse at this or any subsequent visit. *See generally id.* at 1,3,5.

At CP's next visit (Feb. 16), Respondent again diagnosed him as having chronic pain while noting that he had ''NO'' pain. *Id.* at 3. Subsequently, at CP's April 10 visit, Respondent again checked that CP had ''NO'' pain while writing ''knee pain'' in the ''Review of Systems'' section; he also made a note next to the ''EXT'' section of the Examination which is illegible but was not asked about this during his testimony. *Id.* Finally, at CP's final visit, Respondent again diagnosed him as having chronic pain but noted that he had ''NO'' pain and did not otherwise document any other findings regarding CP's pain. *Id.* at 1. Moreover, the Government did not offer any testimony as to whether it had interviewed CP.

Respondent issued CP prescriptions for Suboxone on Dec. 20, 2009, Jan. 17, Feb. 16, Mar. 16, April 10, and May 9, 2010; he also wrote CP prescriptions for Xanax on each of these dates except for April 10. GX 23. Respondent wrote both the Suboxone and Xanax prescriptions on Dec. 20, 2009, as well as the Jan. 17, Feb. 16, and March 16, under his X number. *Id.* He also wrote the April 10 Suboxone prescription under his X number even though he did not list a diagnosis of substance abuse on any of CP's visits after the first visit. *Id;* Tr. 130–31.

CML

On June 23, 2010, another DI interviewed CML and asked whether she was ''being treated for pain or addiction.'' Tr. 266–67. CML stated that she was being treated for addiction to controlled substances and that the Respondent was prescribing Suboxone to her. *Id.* at 267–68. She paid $100.00 cash for her visits. *Id.* at 268.

On the progress note for CML's first visit (Dec. 8, 2009), Respondent checked that she had both pain and chronic pain, as well as insomnia. GX 5F, at 7. While Respondent noted that her physical exam was normal in all areas, he did not record any vital signs and did not document the nature and intensity of the pain, the history of the pain, whether any treatments had been previously tried, and the pain's effect on her psychological and physical function at any of her subsequent visits. *See* GX 5F. Respondent did not document that CML had back pain until her sixth and final visit (April 27, 2010), while on the same note checking that she had ''NO'' pain. *Id.* at 3.

Indeed, several of the progress notes for CML's visits contain no medical information whatsoever. With respect to this, Respondent testified, ''In fact, there's some entries I didn't even put in on February and March of 2010 and I don't know why that's the case.'' Tr. 472.

At CML's second visit, Respondent noted a diagnosis of substance abuse. GX 5F, at 7. However, Respondent did not note this diagnosis at any of CML's subsequent visits. *See* GX 5F. Moreover, the chart contains no information about what substances CML was abusing and her history of substance abuse. GX 5F, at 7; Tr. 666.

Respondent admitted that the chart fails to adequately document CML's pain. Tr. 472. Respondent also testified that he was tapering CML's dosages of Suboxone to find the appropriate levels to treat her chronic pain. *Id.* at 473. Respondent maintained that his care of CML was within the standard of care. *Id.* Respondent prescribed Suboxone (and Ambien at the first visit) to CML under his X number at several of the visits even though he did not document that he was treating her for substance abuse at those visits. *See* GX 5F.

SJW

On December 29, 2009, SJW made her initial visit to Respondent.[11] GX 5I, at 7. At the visit, Respondent diagnosed SJW as having both chronic pain and substance abuse, although he noted that she had ''NO'' pain and did not document the nature and intensity of the pain, the history of the pain, whether any treatments had been previously tried, and the pain's effect on her psychological and physical function at this or any of her subsequent visits. *Id.* While Respondent indicated that all areas of her physical examination were normal, he did not record any vital signs at this visit. *Id.* Nor did Respondent make any notes regarding SJW's history of substance abuse. There is, however, no evidence that Respondent prescribed to SJW at this visit.

Respondent did, however, prescribe Suboxone (and Xanax) to SJW at her second visit, which occurred one week later. *Id.* at 7–8. On the progress note for this visit, Respondent listed the diagnoses as chronic pain (while indicating that she had ''NO'' pain and failing to document any other information regarding her condition) and substance abuse, again without any documentation. *Id.* at 7. Moreover, he again documented that SJW's physical exam was normal but did not record any vital signs. *Id.* Nor did Respondent document that SJW had anxiety, the condition for which Xanax is typically prescribed, and, in fact, Respondent indicated ''NO'' for whether she was agitated/moody. *Id.*

While SJW's chart shows that she received prescriptions for Suboxone (and Xanax) in February and March, the progress notes for this period contain no information regarding her medical condition(s). *Id.* at 2,—5–6. Regarding these incidents, Respondent stated: ''I don't have an explanation for it unless I had to zip over and take care of another patient and I just took care of her and then took off. I don't know the situation.'' Tr. 681.

On May 9, 2010, SJW made her final visit to Respondent. GX 5I, at 3. At this visit, Respondent again diagnosed her as having chronic pain while indicating that she had ''NO'' pain and that her physical examination was normal in all areas. *Id.* at 3. Respondent also diagnosed her as having anxiety, even though he indicated ''NO'' for whether she was agitated or moody. *Id.* Respondent issued her prescriptions for both Suboxone and Xanax. *Id.* at 4.

On June 23, 2010, a DI phoned SJW and interviewed her. SJW told the DI that Respondent was treating her for her addiction to controlled substances and that she paid $100 cash for each visit. Tr. 268–69. On two occasions (Jan. 5 and Feb. 2), Respondent prescribed both Suboxone and Xanax to SJW under his X number. Tr. 269; GX 5I, at 6, 8. Respondent testified that he was treating SJW for pain and anxiety. Tr. 477, 679.

As for how he made his diagnosis of substance abuse, Respondent testified that ''[i]t could be in her history with me; it could be a drug screen.'' *Id.* at 679. There is, however, no evidence in SJW's chart establishing that Respondent took a history or that he required her to undergo a drug screen. *See generally* GX 5I. Moreover, when asked ''do we see an indication that [SJW] complained of pain?,'' Respondent answered: ''No. I did not fill that out.'' TR. at 679–80. As for Respondent's failure to note why he prescribed Xanax, Respondent testified: ''No, I did not put an anxiety there. And there was a good chance that she was on Xanax already. Did not give it to her in the December because she probably

[11] SJW's file includes an intake form in which she listed her medications as ''Suboxin.'' GX 5I, at 1.

already had an active prescription for it. And we probably got that from the drug monitoring system.'' *Id.* at 680. Respondent believed his treatment of SJW was appropriate, but that his documentation was ''terrible.'' Tr. 478.

LMJ

On her intake form, LMJ listed her medications as ''Loricets'' [sic]. GX 5E. At her first visit (Feb. 16, 2010), Respondent made diagnoses of both chronic pain and substance abuse. *Id.* at 4. However, Respondent noted that LMJ had ''NO'' pain, that her physical examination was normal and did not document the nature and intensity of the pain, the history of the pain, whether any treatments had been previously tried, and the pain's effect on her psychological and physical function at this visit or her next two visits. *Id.* at 2 & 4. Respondent did not note a location of any pain LMJ had until her final visit; even then, however, he did not document any information other than that the pain was in her ''back & arms.'' *Id.* at 2. Respondent did not document having taken LMJ's vital signs at any of her visits. *Id.* at 2, 4. Moreover, while at LMJ's first three visits, Respondent listed a diagnosis of substance abuse, the chart contains no information as to her history of substance abuse. *Id.* at 2, 4. At each of LMJ's visits, Respondent prescribed Suboxone to her. *Id.* at 3, 5.

On June 24, 2010, a DI interviewed LMJ by phone. Tr. 270. The DI asked LMJ whether she was seeing Respondent for pain or for addiction to controlled substances; LMJ said that she was seeing Respondent for addiction for which he was prescribing Suboxone. *Id.* LMJ also stated that she paid $100.00 cash for each visit. *Id.*

The ALJ found that Respondent credibly testified that he did not ''have a good grasp on her history and physical as to, is this chronic pain or substance abuse, so we put the differential as both of these right now.'' *Id.* at 470. She also found credible Respondent's testimony that LMJ was a patient ''who wanted to get off Lorcet because she was building such a tolerance having to take more and more of this for her pain, but I could not totally rule out that she had a substance abuse problem.'' *Id.* at 471. While Respondent testified that he could sometimes rule out a substance abuse diagnosis ''later on as [I] get a grasp on these patients, and periodic random drug screens help me with this also,'' there is no evidence that Respondent required LMJ to undergo a drug test. *Id.* Respondent thought his treatment of LMJ was within the standard of care. *Id.*

MR

MR first saw Respondent on December 15, 2009. GX 5G, at 7. Respondent diagnosed MR as having chronic pain even though he noted that MR had ''NO'' pain. *Id.* Respondent documented the pain's location as MR's ''Teeth'' and prescribed Suboxone to him. *Id.* at 7–8. Respondent testified that MR's pain was in his mouth and jaw, but the chart does not contain any other information regarding this condition. Tr. 474, 668; GX 5G. Moreover, Respondent continued to list a diagnosis of chronic pain at MR's visits of Jan. 17, Feb. 14, and Mar. 30, even though on the respective progress notes, he checked ''NO'' for whether MR had pain, did not list a location of the pain, noted that the physical exam was normal in all areas, and did not document having taken any vital signs *Id.* at 5, 7. Nor is there any evidence that Respondent referred MR to a dentist.

On both the January 17 and March 30 progress notes, Respondent also listed a diagnosis of substance abuse. *Id.* at 5, 7. However, Respondent did not document the basis for his diagnosis. *Id.* At MR's final visit, Respondent no longer listed a diagnosis of substance abuse. However, he now documented that MR had right shoulder pain as the result of a motor vehicle accident. *Id.* at 3; Tr. 671. Respondent testified that MR had gone to the emergency room, but that he had not obtained those records. Tr. 671.

When asked whether MR's tooth pain ''was no longer an issue in the subsequent visits''; Respondent maintained that ''I just didn't enter it.'' *Id.* at 672. As for the diagnosis of substance abuse, Respondent did not note in MR's chart the substances he abused, and Respondent could not remember during his testimony.[12] *Id.* at 668–69; GX 5G.

On June 24, 2010, a DI phoned MR and interviewed him. *Id.* at 271. The DI asked MR whether he was seeing Respondent for chronic pain or for addiction; MR stated that ''he was addicted.'' *Id.* at 271–72. MR also said that he paid $100.00 cash for each visit. *Id.* at 272. MR was treated with Suboxone, which was written on an X prescription pad. Tr. 474; GX 5G, at 6, 8. Respondent believed his treatment of MR was appropriate. Tr. 475.

SHY

SHY first saw Respondent on December 13, 2009. GX 5D, at 8. On the intake form, SHY listed his medications as Suboxone and Zyprexa. *Id.* at 1. Respondent diagnosed SHY as having chronic pain even though he circled ''NO'' for whether SHY had pain, did not note the location of the pain, and did a physical examination during which he found all areas normal. *Id.* at 8. Moreover, Respondent did not document a history of the pain, whether any treatments had been previously tried, and the pain's effect on his psychological and physical function at this visit. *Id.* Respondent also did not document having taken SHY's vital signs.[13] *Id.*

At SHY's subsequent visits, Respondent continued to document that SHY had chronic pain even though he repeatedly noted that he had ''NO'' pain, never found anything that was not normal during the physical exams, and never listed a location of any pain. *Id.* at 4, 6. Respondent also noted a diagnosis of substance abuse on two separate occasions, but did not document SHY's history of substance abuse and what substances he was abusing. *Id.* He did, however, require SHY to undergo a drug screen at the first visit, the results of which were negative with the exception of the test for synthetic opioids, which was consistent with SHY having indicated that his medications included Suboxone. *Id.* at 1, 10–11.

On June 22, 2010, a DI called SHY, and asked him why he was seeing Respondent. Tr. 288. SHY said that he was being treated for opiate addiction and that he was not being treated for chronic pain. *Id.* at 288–89.

At the hearing, Respondent testified that he thought SHY was probably abusing either Lorcet or Oxycontin. *Id.* at 659. However, he then admitted that he did not document this. *Id.* Respondent then claimed that SHY ''probably had a little marijuana or something like that in a drug screen, and that's where we probably gave him a substance abuse diagnosis.'' *Id.* at 660. SHY did not, however, test positive for THC. *See* GX 5D, at 10–11. Respondent also admitted that he ''did not document * * * any details of the pain,'' but then stated that ''[a] lot of these people with major depression have pain from the depression, but we still put a diagnosis of potential chronic pain.'' *Id.* at 468, *see also id.* at 655–56. Respondent acknowledged that he inappropriately prescribed other medications than Suboxone using his X number to SHY. *Id.* at 468. Respondent believed his care of SHY was within the standard of care. *Id.* 469–70.

[12] The ALJ found credible Respondent's testimony that he had also diagnosed MR with bipolar disorder, but that he had failed to annotate that in the patient's chart as well. Tr. 474.

[13] Respondent also diagnosed SHY as having major depression.

JC2

Respondent treated JC2 for chronic pain, substance abuse, attention deficit disorder, and extreme anxiety. Tr. 458; GX 5C. Respondent acknowledged that JC2 was ''a tough patient,'' who had been ''fired'' by other doctors and had abused Xanax. Tr. 458–60. A note in JC2's chart dated ''9–1–09'' indicates that a friend of JC2 had stated that he was taking twelve Xanax pills at a time. GX 5C, at 3.

Respondent noted in the chart that JC2 was abusing Xanax and ''MUST STOP XANAX.'' *Id.* at 2, 12; *see also* Tr. 459–60, 628. In his testimony, Respondent stated that his treatment plan was to gradually taper JC2 off Xanax, which could take up to a year, or to manage JC2's intake. Tr. 460–62, 630. The chart also notes that in November 2009, JC2 missed two appointments and was jailed for distribution. GX 5C, at 8. The chart also again notes ''Reported taking [greater than] #12 Xanax @ a time.'' *Id.* Respondent also testified that he knew ''for a fact in this young man's history [that] he has been jailed before'' for ''doing things [that were] inappropriate.'' Tr. 631.

The ALJ found that Respondent credibly testified that he could not just cease prescribing Xanax to JC2 because he could have seizures. *Id.* at 460–61. However, the patient file shows that notwithstanding Respondent's testimony that he planned to taper JC2 off of Xanax, he actually increased the daily doses of the prescriptions. *Compare* GX 5C, at 11 (Aug. 30, 2009 RX for 30 tablets of Xanax 1.0 mg, ½ BID (for daily dose of 1 mg)), *with id.* at 10 (Oct. 25, 2009 RX for 90 tablet of Xanax 1.0 mg., 1 TID (for daily dose of 3 mg)), *with id.* at 5 (Apr. 17, 2010 RX for 60 tablets of Xanax 2.0 mg, 1q12, with 2 refills (for daily dose of 4 mg)). The chart also demonstrates that Respondent wrote multiple Xanax and Suboxone prescriptions under his X number prior to February 28, 2010. GX 5C, at 7, 9–11, 13. Respondent testified that he conducted drug screens on JC2, but the results of these tests were not in JC2's medical record. Tr. 633–34.

Respondent testified that he prescribed Suboxone to treat JC2's substance abuse and that substance abuse was JC2's primary diagnosis. *Id.* at 643, 645. Moreover, a note for a visit of April 5, 2009, states ''Desires To Get OFF Narcotics.'' GX 5C, at 15. Respondent also testified that JC2 was being seen for chronic pain caused by a football injury when he was a teenager, but he then admitted that JC2's chart does not document the source or severity of that pain. Tr. 654–55. Nor did Respondent document the history of the pain, any prior treatments for it and its effect on JC2's functioning. *See* GX 5C. Respondent maintained, however, that he knew JC2's history and ''that he's had a lot of problems.'' Tr. 655.

Respondent also testified that JC2 had been in a narcotic treatment program in 2007 or 2008 and had left against medical advice. *Id.* at 631–632. Yet Respondent did not document this in JC2's chart and did not obtain his treatment records from the narcotic treatment facility. GX 5C. Respondent believed he treated JC2 within the standard of care. Tr. 461.

DA

DA saw Respondent three times: in December 2009, and in January and February of 2010. GX 5K. According to the progress note for the first visit, Respondent diagnosed DA with chronic pain and anxiety. *Id.* at 3. Respondent circled ''YES'' for whether DA had pain and noted that the location was his back and both legs. *Id.* Respondent did not, however, document the nature and intensity of the pain, its history, whether any treatments had been previously tried, and the pain's effect on his psychological and physical function at either this visit or his next visit. *Id.* at 3. Moreover, the progress notes for DA's first two visits (there is no note for a third visit on Feb. 21, 2010, even though there is a prescription for this date), indicate that Respondent performed a physical examination and found all areas normal. *Id.* Respondent did not document DA's vital signs for either visit. *Id.* Respondent also noted a diagnosis of substance abuse at DA's second visit but did not document the basis for this diagnosis. *Id.* Respondent issued DA prescriptions for both Suboxone and Xanax at all three visits, including on the second visit when he noted that DA had ''NO'' pain; on each occasion, Respondent issued the prescriptions under his X number. *Id.* at 4–5.

On June 1, 2010, the lead DI interviewed DA by phone. Tr. 85. DA told the DI that he was addicted to pain killers and that Respondent was treating him for this condition and not for chronic pain. *Id.* at 85–87. In his testimony, Respondent admitted that he did not get DA's medical records for his pain condition but maintained that he was familiar with this patient from treating him in the emergency department of the Red Bay Hospital. Tr. 693; *see generally* GX 5K. Respondent believed that his care was appropriate for DA. Tr. 482.

AH

Respondent saw AH four times beginning on December 13, 2009, and ending on March 28, 2010. GX 5S. Respondent noted that AH was taking 12 Lortab 10 mg a day, which she was getting ''from doctors, friends, [and] off the street.'' Tr. 493. Respondent diagnosed AH with both substance abuse and chronic pain as a secondary diagnosis. GX 5S, at 3. While Respondent noted ''YES'' for whether AH had pain, he did not document the nature, intensity and location of the pain; the history of the pain; what treatments had been used; and the pain's effect on her physical and psychological functioning. *Id.* at 3. Respondent also noted that AH was undergoing withdrawal, was agitated/moody, had insomnia and a positive MDQ. *Id.* AH's physical exam was normal and Respondent did not document having taken her vital signs. *Id.* At this visit, Respondent prescribed Suboxone to her under his X number. GX 5S, at 4.

At AH's second visit (Feb. 1), Respondent noted that she had ''NO'' pain and did not make any other findings about her pain; he also indicated that she did not demonstrate withdrawal, that she was not agitated or moody and did not have insomnia or a positive MDQ. GX 5S, at 7. Respondent did not note any abnormalities in the physical exam and did not document having taken AH's vital signs. *Id.* Respondent noted his diagnosis as Suboxone 16 mg. and gave AH a prescription for Suboxone which he wrote under his X number. *Id.* at 8.

On Feb. 28, Respondent issued AH a third prescription for Suboxone, again using his X number. *Id.* at 8. The progress note for this visit, however, lists AH's name, date of birth and a visit date but contains no medical information. *Id.* at 7.

On March 28, AH again saw Respondent. *Id.* at 5. At this visit, Respondent circled ''YES'' for whether she had pain and noted its location as her neck and back. *Id.* Once again, he did not document the nature and intensity of the pain, the history of the pain, what treatments had been used, and the pain's effect on her physical and psychological functioning. *Id.* Again, Respondent performed a physical exam but found no abnormalities; he also did not document having taken AH's vital signs. *Id.* Respondent made diagnoses of both chronic pain and substance abuse. *Id.* Respondent issued AH a new prescription for Suboxone, which was written on a prescription form that contained both of his numbers. *Id.* at 6.

Respondent testified that AH had some neck and back pain, but ''appeared to be functional.'' Tr. 493. He was also ''not convinced that [he] could not add the substance abuse potential to her.'' *Id.* Respondent stated that his treatment of AH was within the standard of care. *Id.* at 494.

NK

NK saw Respondent three times during February and March 2010. GX 5U. On the intake form, NK listed his medications as Suboxone and Xanax. *Id.* at 2. On the progress note for NK's first visit, Respondent noted that he had ''NO'' pain and did not indicate a location for any pain. *Id.* at 3. Respondent noted that he had performed a physical examination, but found no abnormalities; Respondent also did not document having taken NK's vital signs. *Id.* Respondent nonetheless diagnosed NK as having both chronic pain and anxiety (but not substance abuse) and gave him prescriptions for Suboxone and Xanax, both of which were written under his X number. *Id.* at 5.

On March 9, Respondent issued NK a second prescription for Suboxone, and on March 21, he issued NK prescriptions for both Suboxone and Xanax. *Id.* at 4–5. However, the progress note dated Mar. 9 contains no medical information and there is no note for Mar. 21. *See generally* GX 5U.

On May 25, 2010, the lead DI interviewed NK. Tr. 78. NK stated that Respondent was treating him for opiate addiction, and not for any other medical problem including chronic pain. *Id.* at 79. NK also told the DI that he was no longer seeing Respondent and that ''he would kick the habit himself.'' *Id.* at 78. NK's chart also contains a prescription for Suboxone dated April 17, 2010, even though NK did not see Respondent on that date. GX 5U, at 6. Respondent explained that he had prepared the prescription in advance of NK's visit, but that ''no one gets that prescription unless I hand it to them.'' Tr. 497.

Respondent's Post-Suspension Conduct

On September 27, 2010, Respondent was personally served with the Order to Show Cause and Immediate Suspension of Registration. At that time, the lead DI explained to Respondent that, as of that date, he was no longer authorized to prescribe or handle any controlled substances. Tr. 112–13. Respondent told the DI that ''he was not going to abide by this order and that (the DI) didn't have the authority to tell him that he couldn't prescribe any controlled substances.'' *Id.* at 113.

Thereafter, the lead DI discovered that Respondent had issued controlled-substance prescriptions which were dated September 29, October 3 and October 4, 2010. Tr. 114; GX 6. While the ALJ found that there were a total of four post-suspension prescriptions, two of the prescription forms contained prescriptions for two controlled substances. ALJ at 34; *but see* GX 6, at 3–4.

The first prescription, which was issued to CW and dated September 29, 2010, was for the drug Adderall, a schedule II controlled substance. GX 6, at 1. CW told the lead DI that Respondent wrote the prescription after she had been seen by Respondent's Physician's Assistant, CC. CW picked up the prescription the next day, September 30. Tr. 115–118; GX 6, at 1. Respondent admitted to signing this prescription. Tr. 506–07; *see also* RX 29, at 17–19 (CW's chart for Sept. 29, 2010 visit).

The second prescription, which was issued to JB and dated October 3, 2010, was also for Adderall. Tr. 118–19, 200–01; GX 6, at 2. However, the evidence showed that Respondent had issued the prescription on September 3, 2010. Tr. 119–20, 508, 733–34. This prescription did not, however, include Respondent's registration number and listed only his X number. GX 6, at 2.

The lead DI contacted the pharmacist who filled the prescription, and was told that the pharmacy would not accept a post-dated prescription for a scheduled drug. Tr. 123. The pharmacist remembered this prescription and further stated that it had actually been presented for filling on October 3, 2010. Tr. 123–24, 158–59. The lead DI testified that while it would have been permissible to write a prescription and sign it on September 3, 2010, with the annotation of ''do not fill until October 3, 2010,'' it was not permissible for Respondent to sign a schedule II prescription on September 3 but date the prescription for October 3rd. Tr. 124.

The evidence also included two prescriptions issued (on a single prescription form) to MK and dated October 4, 2010; the prescriptions were for 60 Adderall and 90 Lortab 10 mg, another schedule III narcotic. GX 6, at 3. The lead DI contacted MK about the prescriptions; MK confirmed that the prescriptions were written and received on October 4, 2010. Tr. 124–25. While Respondent testified that the prescriptions had been post-dated, he admitted to having written the prescriptions on September 29, two days after he was served with the Immediate Suspension Order. Tr. 508–09; 740–41. Respondent maintained that the prescription was given to MK by mistake. *Id.* at 741. MK's patient file includes a progress note which establishes that she saw Respondent on September 29, 2010. RX 32, at 28. Notwithstanding the testimony regarding MK's statement as to the date the prescriptions were written, I find that the prescriptions were written on September 29.

The evidence also included two prescriptions which were issued to DH and also dated October 4, 2010. GX 6, at 4. The prescriptions were for 90 Lortab 10 mg and 90 Xanax 1 mg. Tr. 126, 509; GX 6, at 4.

Respondent testified that he thought that he had seen DH in September but that he did not know ''exactly which day I saw him.'' Tr. 509. Respondent admitted, however, that the prescription was in his handwriting and that he ''signed it.'' Continuing, he maintained that he did not have an explanation for it, that ''[t]his was an accident,'' and that he ''would never do anything to violate an order.'' *Id.* at 509.

According to DH's patient file, DH saw Respondent on September 29, 2010.[14] RX 31, at 28. The chart for the visit noted that DH was ''Here for med refills'' and that he was ''here for Dr. Cochran,'' and that his ''Current Meds'' were Lortab and Xanax. *Id.* In addition, Respondent signed the chart. *Id.* I therefore find that Respondent wrote the prescriptions on September 29.

Respondent's Testimony

Respondent maintained that some of the patients did not know what they were being treated for. Tr. 743–44. However, Respondent did not document any patient's lack of understanding of his diagnosis in the patient files. Tr. 745. Moreover, the ALJ did not find this testimony credible. ALJ at 49.

As noted above, Respondent provided evidence that he had stopped prescribing methadone to his patients. Moreover, Respondent established that he had stopped using his X number to write prescriptions for drugs other than Suboxone and when prescribing Suboxone to treat pain. However, on September 3, 2010, Respondent wrote a further controlled substance prescription for Adderall (which was post-dated) under his X number. GX 6, at 2.

Respondent also testified that he maintained the drugs screens he ordered on his patients in a separate file which he called the ''Drug Screen Book.'' Tr. 687. Respondent testified that when the

[14] DH's previous visit was on August 4, 2010. RX 31, at 30.

DIs obtained the patient files, they did not take the Drug Screen Book.'' *Id.* Respondent did not, however, submit the Drug Screen Book for the record.

Respondent agreed that his patient charts were incomplete. Tr. 452. In one case Respondent testified that his record keeping was incorrect and he had mistakenly written the wrong primary diagnosis for the patient. *Id.* at 654. Respondent, however, offered no evidence that he was prepared to comply with the Alabama Board's *Guidelines For The Use Of Controlled Substances For The Treatment Of Pain. See* Ala. Admin Code r.540–x–4–.08.

Discussion

Section 304(a) of the Controlled Substances Act provides that a ''registration pursuant to section 823 of this title to * * * dispense a controlled substance * * * may be suspended or revoked by the Attorney General upon a finding that the registrant * * * has committed such acts as would render his registration under section 823 of this title inconsistent with the public interest as determined under such section.'' 21 U.S.C. 824(a)(4). In determining the public interest, Congress directed that the following factors be considered:

(1) The recommendation of the appropriate State licensing board or professional disciplinary authority.

(2) The applicant's experience in dispensing * * * controlled substances.

(3) The applicant's conviction record under Federal or State laws relating to the manufacture, distribution, or dispensing of controlled substances.

(4) Compliance with applicable State, Federal, or local laws relating to controlled substances.

(5) Such other conduct which may threaten the public health and safety.

21 U.S.C. 823(f). In addition, pursuant to 21 U.S.C. 824(d), ''[t]he Attorney General may, in his discretion, suspend any registration simultaneously with the institution of proceedings under this section, in cases where he finds that there is an imminent danger to public health or safety.''

The public interest factors are considered in the disjunctive. *Robert A. Leslie,* 68 FR 15227, 15230 (2003). I may rely on any one or a combination of factors and may give each factor the weight I deem appropriate in determining whether to revoke an existing registration or to deny an application for a registration. *Id.* Moreover, I am ''not required to make findings as to all of the factors.'' *Hoxie* v. *DEA,* 419 F.3d 477, 482 (6th Cir. 2005); *see also Morall* v. *DEA,* 412 F.3d 165, 173–74 (DC Cir. 2005).

The Government has ''the burden of proving that the requirements for * * * revocation or suspension pursuant to section 304(a) * * * are satisfied.'' 21 CFR 1301.44(e); *see also* 21 CFR 1301.44(d) (Government has ''the burden of proving that the requirements for [a] registration pursuant to section 303 * * * are not satisfied''). However, where the Government satisfies its *prima facie* burden, the burden then shifts to the registrant to demonstrate why he can be entrusted with a new registration. *Medicine Shoppe-Jonesborough,* 73 FR 364, 380 (2008).

Having considered all of the factors, I conclude that the Government's evidence pertinent to factors two (Respondent's experience in dispensing controlled substances) and four (Respondent's compliance with applicable laws related to controlled substances), establishes that Respondent has committed acts which render his registration ''inconsistent with the public interest.'' 21 U.S.C. 824(a)(4). I further conclude that Respondent has not rebutted the Government's *prima facie* case.

Factors One and Three—The Recommendation of the State Board and Respondent's Record of Convictions Under Laws Relating to the Manufacture, Distribution and Dispensing of Controlled Substances

The record establishes that the State Board has an open investigation of Respondent. However, the Board has not made a recommendation in this matter, and it is undisputed that Respondent's medical license remains active and unrestricted. Accordingly, this factor does not support a finding either for, or against, the continuation of Respondent's registration. *See Joseph Gaudio,* 74 FR 10083, 10090 n.25 (2009); *Mortimer B. Levin,* 55 FR 8209, 8210 (1990).

There is also no evidence in the record that Respondent has been convicted of an offense related to the manufacture, distribution or dispensing of controlled substances. While this factor supports the continuation of Respondent's registration, DEA has long held that this factor is not dispositive. *See, e.g., Edmund Chein,* 72 FR 6580, 6593 n.22 (2007).

Factors Two and Four—Respondent's Experience in Dispensing Controlled Substances and Compliance With Applicable Laws Related to Controlled Substances

The record establishes that Respondent violated numerous provisions of Federal law and DEA regulations. These include: (1) The prescribing of methadone for substance abuse treatment without being registered to do so under 21 U.S.C. 823(g)(1), in violation of 21 U.S.C. 841(a)(1); (2) the prescribing of methadone for substance abuse treatment, in violation of 21 CFR 1306.04(c) and 1306.07; (3) prescribing controlled substances without a legitimate medical purpose, in violation of 21 CFR 1306.04(a); (4) the post-dating of prescriptions, in violation of 21 CFR 1306.05(a); and (5) prescribing controlled substances when his registration had been suspended, in violation of 21 U.S.C. 843(a)(2).

The Methadone Prescriptions

Under 21 U.S.C. 823(g)(1), ''practitioners who dispense narcotic drugs to individuals for maintenance treatment or detoxification treatment shall obtain annually a separate registration [from their practitioner's registration] for that purpose.''[15] In the Drug Addiction Treatment Act of 2000, Congress provided that the requirement to obtain a separate registration is ''waived in the case of the dispensing (including the prescribing), by a practitioner, of narcotic drugs *in schedule III, IV, or V* or combinations of such drugs if the practitioner meets the conditions specified in [section 823(g)(2)(B)] and the narcotic drugs or combinations of such drugs meet the conditions specified in [section 823(g)(2)(C)].'' *Id.* § 823(g)(2)(A) (emphasis added).

Methadone is, however, a schedule II narcotic, and thus, except for where a patient presents with acute withdrawal symptoms (and then for no more than a total of three days), cannot be lawfully dispensed for the purpose of maintenance or detoxification treatment absent the practitioner's holding a registration under section 823(g)(1). *See* 21 U.S.C. 812(c) (Schedule II (b)(11)); 21 CFR 1308.12(c)(15). Moreover, under DEA's regulations, ''[a] prescription may not be issued for 'detoxification treatment' or 'maintenance treatment,' unless the prescription is for a Schedule III, IV, or V narcotic drug approved by the Food and Drug Administration

[15] An applicant for registration under this provision must meet three requirements: (1) The applicant must be ''determined by the Secretary [of HHS] to be qualified * * * to engage in the treatment with respect to which registration is sought; (2) the Attorney General must ''determine[] that the applicant will comply with standards * * * respecting (i) security of stocks of narcotic drugs for such treatment, and (ii) the maintenance of records * * *. on such drugs,'' and (3) ''if the Secretary determines that the applicant will comply with standards * * * respecting the quantities of narcotic drugs which may be provided for unsupervised use by individuals in such treatment.'' 21 U.S.C. 823(g)(1).

specifically for use in maintenance or detoxification treatment.'' 21 CFR 1306.04(c).[16] *See also id.* 1306.07(a) (''A practitioner may administer or dispense directly (*but not prescribe*) a narcotic drug listed in any schedule * * * for the purpose of maintenance or detoxification treatment if the practitioner * * * is separately registered with DEA as a narcotic treatment program [and] is in compliance with DEA regulations regarding treatment qualifications, security, records, and unsupervised use of the drugs pursuant to the [CSA].'') (emphasis added); *id.* 1306.07(b) (''Nothing in this section shall prohibit a physician * * * from administering (*but not prescribing*) narcotic drugs to a person for the purpose of relieving acute withdrawal symptoms when necessary while arrangements are being made for referral for treatment. Not more than one day's medication may be administered to the person or for the person's use at one time. Such emergency treatment may be carried out for not more than three days and may not be renewed or extended.'') (emphasis added).

Also relevant here is the definition of the term ''maintenance treatment.'' 21 U.S.C. 802(29). Under the CSA, the term ''means the dispensing, for a period in excess of twenty-one days, of a narcotic drug in the treatment of an individual for dependence upon heroin or other morphine-like drugs.'' *Id.*[17]

Finally, Respondent claimed that most of the patients whose files were introduced into evidence (including some of the methadone patients) were chronic pain patients. Under a longstanding DEA regulation, to be effective, ''[a] prescription for a controlled substance * * * must be issued for a legitimate medical purpose by an individual practitioner acting in the usual course of his professional practice.'' 21 CFR 1306.04(a). As the Supreme Court has explained, ''the prescription requirement * * * ensures patients use controlled substances under the supervision of a doctor so as to prevent addiction and recreational abuse. As a corollary, [it] also bars doctors from peddling to patients who crave the drugs for those prohibited uses.'' *Gonzales* v. *Oregon,* 546 U.S. 243, 274 (2006) (citing *United States* v. *Moore,* 423 U.S. 122, 135, 143 (1975)).

Under the CSA, it is fundamental that a practitioner must establish and maintain a bonafide doctor-patient relationship in order to act ''in the usual course of * * * professional practice'' and to issue a prescription for a ''legitimate medical purpose.'' *Laurence T. McKinney,* 73 FR 43260, 43265 n.22 (2008); *see also Moore,* 423 U.S. at 142–43 (noting that evidence established that physician ''exceeded the bounds of 'professional practice,''' when ''he gave inadequate physical examinations or none at all,'' ''ignored the results of the tests he did make,'' and ''took no precautions against * * * misuse and diversion''). The CSA, however, generally looks to state law to determine whether a doctor and patient have established a bonafide doctor-patient relationship. *See Kamir Garces-Mejias,* 72 FR 54931, 54935 (2007); *United Prescription Services, Inc.,* 72 FR 50397, 50407 (2007).

By regulation, the Alabama Board of Medical Examiners has adopted *Guidelines For The Use of Controlled Substances For The Treatment of Pain. See* Ala. Admin. Code r. 540–X–4-.08. According to the Board, the ''guidelines are not intended to define complete or best practice, but rather to communicate what the Board considers to be within the boundaries of professional practice.'' *Id.* (1)(g). Guideline (2)(a), which is captioned ''Evaluation of the Patient,'' states:

> A complete medical history and physical examination must be conducted and documented in the medical record. The medical record should document the nature and intensity of the pain, current and past treatments for pain, underlying or coexisting diseases or conditions, the effect of the pain on physical and psychological function, and history of substance abuse. The medical record also should document the presence of one or more recognized medical indications for the use of a controlled substance. *Id.* (2)(a).[18]

The record contains substantial evidence that Respondent prescribed methadone to opiate addicted patients for the purpose of providing maintenance treatment. During his initial interview (on Feb. 28, 2010) with the Investigators, Respondent told them that ''he was operating a detox clinic where he was using methadone to get his patients onto Suboxone.'' Tr. 43. It was not until later that day, when the Investigators interviewed Respondent for the second time, that he claimed that he prescribed methadone for pain and that he had previously misspoken. *Id.* at 55.

Other evidence supports the conclusion that Respondent was prescribing methadone to provide maintenance or detoxification treatment to opiate addicted patients. On the date of the visit, Investigators interviewed JKB, who told them that he was being treated by Respondent with methadone for opiate addiction. *Id.* at 52. JKB further stated that he had previously gone to a narcotic treatment program, which used methadone, and that he was seeing Respondent because the latter charged less. *Id.* at 52–53. JKB also stated that Respondent was not treating him for chronic pain. *Id.* at 53.

The Government introduced into evidence seven files of patients who received methadone prescriptions from Respondent. GXs 5X; 5O; 5A; 5N; 5L; 5M; and 5T. The Government also elicited the testimony of the DIs to the effect that they had interviewed several of the patients to determine what condition they were being treated for.

Patient TP related that she had gone to Respondent because she had heard that he was using methadone to treat addiction; TP also noted on her intake form that she had previously gone to a methadone clinic and was taking twelve tablets of methadone 10 mg strength a day. Respondent issued her prescriptions for methadone on three separate dates over the course of a month, and ultimately TP returned to a methadone clinic.

While Respondent maintained that TP had been going to the methadone clinic for pain, he conceded that the purpose of a methadone clinic is to treat addiction. Moreover, while Respondent noted diagnoses of both chronic pain and substance abuse on TP's progress

[16] *See also* 21 CFR 1306.07(d) (''A practitioner may administer or dispense (including prescribe) any Schedule III, IV, or V narcotic drug approved specifically by the Food and Drug Administration specifically for use in maintenance or detoxification treatment to a drug dependent person if the practitioner complies with the requirements of [21 CFR 1301.28].'' 21 CFR 1301.28 is the provision which implements the DATA Waiver Act.

[17] The CSA also defines the term ''detoxification treatment.'' 21 U.S.C. 802(30). The term ''means the dispensing, for a period not in excess of one hundred and eighty days, of a narcotic drug in decreasing doses to an individual in order to alleviate adverse physiological or psychological effects incident to withdrawal from the continuous or sustained use of a narcotic drug and as a method of bringing the individual to a narcotic drug-free state within such period.'' *Id.*

[18] *See also* Ala. Admin. Code r. 540–X–4.08(2)(b) (''The written treatment plan should state objectives that will be used to determine treatment success, such as pain relief and improved physical and psychosocial function, and should indicate if any further diagnostic evaluations or other treatments are planned.'').

The Guidelines also provide that:

The physician should keep accurate and complete records to include

1. The medical history and physical examination;
2. Diagnostic, therapeutic and laboratory results;
3. Evaluations and consultations;
4. Treatment objectives;
5. Discussion of risks and benefits;
6. Treatments;
7. Medications (including date, type, dosage and quantity prescribed);
8. Instructions and agreements;
9. Periodic reviews.

Id. 2(f).

notes, he did not document having taken a medical history, the nature and intensity of any pain, current and past treatments for paint, and its effect on her physical and psychological functioning.

I thus conclude that Respondent prescribed methadone to TP for maintenance or detoxification purposes and not to treat chronic pain. In doing so, he violated the CSA because he did not have the registration required under section 823(g)(1) to dispense methadone for this purpose; he also violated DEA regulations which prohibit the prescribing of narcotic drugs for this purpose except for those drugs in schedules III through V which have been specifically approved by the FDA to provide maintenance or detoxification treatment. 21 CFR 1306.04(c).

The DIs also interviewed MB, who stated that she was being treated by Respondent for an addiction to Lorcet and not for chronic pain. Respondent testified, however, that he was treating MB both for chronic pain cause by headaches and substance abuse. Respondent prescribed methadone to her on six different dates.

Notably, the Government did not produce any evidence corroborating MB's statement that she was not being treated for chronic pain. *See Consolidated Edison Co.* v. *NLRB,* 305 U.S. 197, 230 (1938) (''Mere uncorroborated hearsay * * * does not constitute substantial evidence.). However, even if this evidence is not sufficient to establish that Respondent was treating her only for substance abuse and crediting his testimony that he was also treating her for chronic pain, I conclude that the prescriptions were unlawful.

Notably, Respondent did not document the nature and intensity of her pain, its effect on both her physical and psychological function, any prior or current treatment for it, and her history of substance abuse. *See* Ala. Admin Code r.540–X–4.08(2)(a). Accordingly, because Respondent did not make any of the findings required under the Alabama guidelines, I conclude that he did not have a basis for his diagnosis of chronic pain. I thus conclude that Respondent acted outside of ''the usual course of * * * professional practice'' and lacked a ''legitimate medical purpose'' in issuing the methadone prescriptions to MB and violated Federal law. 21 CFR 1306.04(a).[19]

Respondent issued three methadone prescriptions (on Feb. 9, 23, and Mar. 9) to JC1 (GX 5N), each of which was for 210 tablets with a daily dose of 150 mg. Respondent admitted that JC1 had come from another methadone clinic even though he denied that JC1 had gone to the clinic to be treated for addiction and maintained that he had gone there for pain management. Moreover, while Respondent also maintained that JC1 had come to him because ''he wanted to take a cleaner medicine for his pain,'' when Respondent stopped writing methadone prescriptions, JC1 decided to go to another treatment facility.

In addition, notwithstanding Respondent's claim that he was treating JC1 for pain, at his first two visits (and at which Respondent prescribed methadone), Respondent noted that JC1 had ''NO'' pain; and at the third visit, where he issued a further methadone prescription, Respondent did not even make a progress note. Respondent also failed to document any of the findings set forth in Alabama's Guideline 2(a). Accordingly, I conclude that Respondent prescribed methadone to JC1 for maintenance/detoxification purposes without the required registration and violated DEA regulations which prohibit the prescribing of schedule II narcotics for this purpose. 21 U.S.C. 823(g)(1); 21 CFR 1306.04(c).

JB also came to Respondent from a narcotic treatment program, which he had been kicked out of. Respondent noted this in the chart and that JB ''desire[d] to get off methadone.'' Respondent asserted that the fact that JB had been treated at a methadone clinic did not mean that the clinic was treating him for addiction, even though that is the purpose of a methadone clinic; moreover, he admitted that he did not obtain JB's records from the clinic. After Respondent stopped prescribing methadone to JB, the latter went to another methadone clinic.

While Respondent documented that JB had foot and knee pain, and the progress notes include a few additional statements regarding his pain such as the location and that JB had been in an accident, the notes do not document the nature and intensity of pain, any prior treatments for it, and its effect on JB's functioning. Moreover, Respondent noted that he planned to put JB on his alternative medication program. Given JB's prior history of substance abuse treatment and his express ''desire to get off methadone,'' I conclude that Respondent's primary purpose in prescribing methadone to him (which he did on three occasions over a month) was to provide maintenance/detoxification treatment. I thus conclude that Respondent violated the CSA and DEA regulations in doing so. 21 U.S.C. 823(g)(1); 21 CFR 1306.04(c).

Respondent testified that NB told him at the initial visit that she had been on 180 mg of methadone which she was taking for pain. He also testified that she was a ''troubling patient'' because she was on both methadone and Xanax and that this was a great concern, especially if she mixed the drugs with alcohol. Respondent diagnosed NB as having chronic pain even though he noted on her chart that she had ''NO'' pain, and he did not document any further findings to support a diagnosis of chronic pain. Moreover, notwithstanding his express concern that NB was on both methadone and Xanax, Respondent prescribed Xanax to her and did not document that she had anxiety, although he maintained in his testimony that she ''had some anxiety.''

The evidence is insufficient to support the conclusion that NB sought treatment from Respondent for a substance abuse problem. However, the evidence does support the conclusion that Respondent acted outside of the usual course of professional practice and lacked a legitimate medical purpose in prescribing methadone to her. 21 CFR 1306.04(a). Having noted on NB's chart that she had ''NO'' pain, and having failed to document any further findings as required by the Guidelines to support his chronic pain diagnosis (and to explain the inconsistency between his diagnosis and his notation that she had no pain), it is clear that Respondent lacked a legitimate medical purpose in prescribing methadone to her.

KI noted on her intake form that she was using three controlled substances: methadone, Xanax and Ambien. Respondent also acknowledged that KI had previously been treated at a narcotic treatment facility and that she had taken narcotics and become addicted to them. However, he denied that KI had told her that she had gone to the methadone clinic to treat her addiction—as if there was any other reason a person would seek treatment from a methadone clinic. While Respondent maintained that KI had diagnoses of both substance abuse and chronic pain, on the progress note for her initial visit, he noted that she had ''NO'' pain although he wrote ''Back'' as the location. Respondent did not document any findings that would explain the inconsistency between his diagnosis and his having noted that KI had ''NO'' pain; he also did not document the history of any pain, what

[19] As explained above, if Respondent was treating MB for substance abuse, the methadone prescriptions were illegal because methadone cannot be prescribed for this purpose and because he did not hold the required registration. *See* 21 U.S.C. 823(g)(1); 21 CFR 1306.07(a) & (b).

treatment had been used, and the pain's effect on her physical and psychological functioning.

Respondent issued three methadone prescriptions to KI. I conclude that Respondent's purpose in doing so was not to treat pain, but to provide maintenance/detoxification treatment to her. I thus conclude that Respondent violated Federal law by prescribing methadone to KI for maintenance/detoxification treatment without the required registration and violated DEA regulations which prohibit the prescribing of schedule II narcotics for this purpose. 21 U.S.C. 823(g)(1); 21 CFR 1306.04(c).[20]

The Suboxone Prescriptions

As found above, Respondent also prescribed Suboxone, a schedule III controlled substance, to numerous patients. The Government elicited the testimony of the DIs as to phone interviews they conducted with sixteen of these patients, the majority of whom said that Respondent was treating them for substance abuse and not chronic pain. *See* Tr. at 78 (NK); *id.* at 80–81 (AG); *id.* at 82–83 (LM); *id.* at 83–84 (ET); *id.* at 85–87 (DA); *id.* at 87–88 (CT); *id.* at 89–90 (JH); *id.* at 92–94 (KP); *id.* at 95–98 (SS); *id.* at 266–67 (CML); *id.* at 268–69 (SJW); *id.* at 270 (LMJ); *id.* at 271 (MR); *id.* at 288–89 (SHY).

As found above, Respondent testified that many of these patients were actually being treated for chronic pain in addition to substance abuse, or were just being treated for chronic pain. Moreover, Respondent frequently noted both diagnoses on the patient's charts, although in some instances he did not note a substance abuse diagnosis until after the first visit (and sometimes not until after several visits). *See, e.g.,* GX 5P (AG); GX 5V (LM); GX 5Y (CT); GX 5R (JH); GX 5B (TB); GX 5J (SW); GX 5I (SJW); GX 5E (LMJ); GX 5D (SHY); GX 5K (DA).

However, even if it is the case that most of the Suboxone patients were being treated only for substance abuse, the Government did not offer any evidence (whether in the form of clinical standards or expert testimony) establishing what the appropriate course of professional practice requires of a physician treating patients for substance abuse.[21] In short, while in its brief, the Government repeatedly argues that Respondent lacked a medical justification to support his diagnosis of substance abuse for the various patients and his issuance of the Suboxone prescriptions, the Government's failure to offer any probative evidence as to the standards of medical practice for diagnosing and treating a substance abuse patient precludes a finding that Respondent lacked a legitimate medical purpose when he prescribed Suboxone to these patients.

Respondent, however, testified that many of the Suboxone patients were actually being treated for chronic pain, and he noted this as his primary diagnosis in many of their charts. As explained above, the Alabama Guidelines require that a physician who prescribes controlled substances to treat pain, obtain ''[a] complete medical history'' and document this in the patient's medical record. Moreover, the Guidelines state that the record ''should document the nature and intensity of the pain, current and past treatments for pain, underlying or coexisting diseases or conditions, the effect of the pain on physical and psychological function, and history of substance abuse.'' Ala. Admin. Code r. 540–X–4–.08(2)(A).

As found above, at the initial visits of nine of the Suboxone patients, Respondent diagnosed them as having chronic pain but not substance abuse. *See supra* Findings for Patients SS, ET, KP, CL, CML, MR, SHY, DA, and NK. Notwithstanding his diagnosis, Respondent typically did not even list a location of a patient's purported pain and/or did not list a location until after the patient had made several visits. *See supra* Findings for ET, KP, CL, CML, SHY, NK. Moreover, Respondent did not document the nature and intensity of the patient's pain, the pain's effect on the patient's ability to function, and rarely documented any past treatments for the pain, and the patient's substance abuse history at either the initial visit or follow-up visits.[22]

Tellingly, in the charts, Respondent frequently noted that the patients had ''NO'' pain, yet nonetheless diagnosed them as having chronic pain. *See* Findings for SS, ET, KP, CL, MR, SHY, and NK. Respondent offered no explanation for the inconsistency between his findings and his diagnosis with respect to any of these patients. Based on Respondent's having noted that these patients had no pain and his failure to offer any explanation for why he nonetheless diagnosed the patients as having chronic pain, I conclude that Respondent lacked a legitimate medical purpose and acted outside of the usual course of professional practice in violation of 21 CFR 1306.04(a) when he prescribed Suboxone to these patients for the purpose of treating chronic pain.

The Government further argues, and the ALJ agreed, that Respondent violated 21 CFR 1306.07(c), because his ''charts failed to show the use of any treatment options besides the prescribing of controlled substances.'' ALJ at 47. The ALJ further explained that ''[s]uch lack of attempts of alternative modalities prior to determining that the patient suffers from chronic pain violates'' this regulation. *Id.*

Both the Government and the ALJ clearly misread the regulation. This provision, which is part of the regulation setting forth the requirements for dispensing narcotic controlled substances ''to a narcotic dependant[sic] person for the purpose of maintenance or detoxification treatment'' states:

> This section is not intended to impose any limitations on a physician or authorized hospital staff to administer or dispense narcotic drugs in a hospital to maintain or detoxify a person as an incidental adjunct to medical or surgical treatment of conditions other than addiction, or to administer or dispense narcotic drugs to persons with intractable pain in which no relief or cure is possible or none had been found after reasonable efforts.

21 CFR 1306.07(c).

The Government's and the ALJ's construction of this regulation as imposing—by implication no less—an affirmative obligation for a physician to engage in alternative treatment modalities cannot be squared with the purpose of the CSA, which ''manifests no intent to regulate the practice of medicine generally,'' an authority which remains vested in the States. *Gonzales* v. *Oregon,* 546 U.S. 243, 270 (2006). Rather, in any case, whether a physician has an adequate basis for concluding that ''no relief or cure is possible'' for a patient's pain, or that alternative treatments should be tried, is a clinical judgment which must be assessed by reference to the standards of medical practice as set by the state medical boards and the profession itself. While a practitioner's failure to recommend alternative treatments may provide some evidence as to whether a prescription complies with 21 CFR 1306.04(a), the Government produced no expert testimony establishing with respect to any patient, that under the standards of medical practice,

[20] Given the conflicting evidence regarding DG, I decline to make any legal conclusions regarding Respondent's prescribing of methadone to him.

[21] While the Government introduced the Alabama Guidelines on using controlled substances to treat pain, it offered no evidence establishing that these standards apply to the treatment of substance abuse patients.

[22] While Respondent's charts included a Plan section, none of them included the ''objectives that will be used to determine treatment success.'' Ala. Admin. Code r.540–X–4-.08(2)(b).

Respondent was required to recommend alternative treatments.[23]

Other Allegations

The ALJ found that ''[t]he parties do not dispute that Respondent improperly used his 'X' prescription registration to prescribe controlled and non-controlled substances other than Suboxone or Subutex.'' ALJ at 43. The problem with the ALJ's reasoning is that an X number is not a registration at all, but only an identification number.

As the statute states: ''Upon receiving a notification under subparagraph (B) [of a practitioner's intent to prescribe narcotic drugs in schedules III through V for maintenance or detoxification treatment], the Attorney General shall assign the practitioner involved *an identification number under this paragraph for inclusion with the registration issued for the practitioner pursuant to subsection (f) of this section.''* 21 U.S.C. 823(g)(2)(D)(ii) (emphasis added). *See also* 21 CFR 1301.28(a) (''An individual practitioner may dispense or prescribe Schedule III, IV, or V narcotic controlled drugs * * * which have been approved by the Food and Drug Administration (FDA) specifically for use in maintenance or detoxification treatment without obtaining the separate registration required by § 1301.13(e). * * *''); *id.* § 1301.28(d)(1) (''If the individual practitioner has the appropriate registration under § 1301.13, then the Administrator will issue the practitioner *an identification number*. * * * '') (emphasis added).

Moreover, under DEA's regulations,

> [a]ll prescriptions for controlled substances shall be dated as of, and signed on, the day when issued and shall bear the full name and address of the patient, the drug name, strength, dosage form, quantity prescribed, directions for use and the name, address and *registration number of the practitioner. In addition, a prescription for a Schedule III, IV, or V narcotic drug approved by FDA specifically for 'detoxification treatment' or 'maintenance treatment' must include the identification number issued by the Administrator under § 1301.28(d) of this chapter* or a written notice stating that the practitioner is acting under the good faith exception of § 1301.28(e).

21 CFR 1306.05(a). *See also* 21 CFR 1301.28(d)(3) (''The individual practitioner must include the identification number on all records when dispensing and on all prescriptions when prescribing narcotic drugs under this section.'').

As found above, Respondent issued numerous controlled substance prescriptions (for both Suboxone and other drugs) on forms that listed only his X number. The Suboxone prescriptions issued in this manner violated DEA's regulation because Respondent was required to include both his X number and his practitioner's registration number on them. *See* 21 CFR 1306.05(a). Moreover, because he did not include his practitioner's registration number, the non-Suboxone controlled substance prescriptions violated this provision as well.

The ALJ also concluded that ''Respondent improperly prescribe Suboxone for substance abuse using his regular DEA registration number rather than the required X number.'' ALJ at 43. Apparently, this was because Respondent eventually started listing both numbers on his prescription blanks. However, as set forth above, DEA's regulation expressly requires that a practitioner include both his registration number and his X number when issuing a prescription for Suboxone for maintenance or detoxification treatment under the authority of 21 CFR 1301.28. *See* 21 CFR 1306.05(a).

Moreover, while a ''practitioner must include the identification number * * * on all prescriptions when prescribing narcotic drugs'' for the purpose of providing maintenance or detoxification treatment, *id.* 1301.28(d), nothing in DEA regulations prohibits a practitioner from including both his practitioner's registration number and his X identification number on his prescription blanks. Nor does any DEA regulation require that a practitioner cross-out his X number when writing a prescription for controlled substances other than Suboxone (or Subutex) on a prescription blank that includes both numbers.

The evidence also shows that Respondent violated the Immediate Suspension Order by issuing multiple prescriptions after he was served with the Order. Under 21 U.S.C. 843(a)(2), it is ''unlawful for any person knowingly or intentionally * * * to use in the course of the distribution[] or dispensing of a controlled substance, a registration number which is * * * suspended[.]''

The evidence clearly shows that Respondent was personally served with the Immediate Suspension Order on September 27, 2010, at which time he told the Investigator that ''he was not going to abide by this order and that [the DI] didn't have the authority to tell him that he couldn't prescribe any controlled substances.'' Tr. 113. True to his word, two days later, however, he issued prescriptions to CW for Adderall, to MK for Adderall and Lortab, and to DH for Lortab and Xanax. Respondent's explanation that these prescriptions were just mistakes or accidents is totally unpersuasive.

The prescriptions to MK and DH, as well as a further Adderall prescription which was issued to JB, were unlawful for the further reason that they were post-dated. As set forth above, under 21 CFR 1306.05(a), ''[a]ll prescriptions for controlled substances shall be dated as of, and signed on, the day when issued.'' Respondent admitted that on September 3, 2010, he issued CW a prescription for Adderall, a schedule II controlled substance which he dated October 3, 2010. Moreover, both Respondent's testimony and documentary evidence establish that Respondent wrote the prescription to MK and DH on September 29, while post-dating them to October 4. Accordingly, I also find that Respondent violated DEA regulations in writing these prescriptions.

I further find that Respondent lacked a legitimate medical purpose in prescribing Xanax to JC2. The evidence shows that Respondent knew that JC2 was abusing Xanax and that he had been jailed for distribution. While Respondent testified that he could not simply stop prescribing the drug to JC2 because JC2 could have seizures, and that he planned to taper JC2 off the drug, Respondent actually increased the daily dose of JC2's Xanax prescriptions. Given the inconsistency between the medical justification Respondent offered for his continuing to prescribe Xanax to JC2 and the actual prescriptions he issued, I conclude that Respondent lacked a legitimate medical purpose and acted outside the usual course of professional practice in prescribing Xanax to JC2. 21 CFR 1306.04(a).

The record thus establishes that Respondent's experience in dispensing controlled substances (factor two) and his record of compliance with applicable laws related to controlled substances (factor four) is characterized by his multiple violations of Federal law. These include his prescribing of methadone for maintenance or detoxification purposes without being registered to do so and in violation of DEA regulations prohibiting the prescribing of methadone for this

[23] The ALJ noted that ''Respondent testified, and the record contains no expert evidence to the contrary, that his treatment of his patients met the standard of care.'' ALJ at 48. While evidence as to the standard of care is admissible in criminal prosecutions under 21 U.S.C. 841(a)(1), I conclude that the Alabama Guidelines provide substantial evidence as to accepted boundaries of professional practice in prescribing controlled substances for the treatment of pain. *See* Ala. Admin. Code r. 540–X–4–.08(1)(g) (guidelines are intended ''to communicate what the Boards considers to be within the boundaries of professional practice'').

purpose; his prescribing of controlled substances to treat chronic pain without a legitimate medical purpose; his prescribing of Xanax to JC2; his issuance of prescriptions which lacked his practitioner's registration number; his issuance of post-dated prescriptions; and his issuance of multiple prescriptions after his registration had been suspended. I further conclude that the Government has made a *prima facie* showing that Respondent has committed acts which render his registration ''inconsistent with the public interest,'' 21 U.S.C. 824(a)(4), and that this conduct is sufficiently egregious to warrant the revocation of his registration.[24]

Sanction

Under Agency precedent, where, as here, the Government has made out a *prima facie* case that a registrant has committed acts which render his ''registration inconsistent with the public interest,'' he must '' 'present[] sufficient mitigating evidence to assure the Administrator that [he] can be entrusted with the responsibility carried by such a registration.' '' *Samuel S. Jackson,* 72 FR 23848, 23853 (2007) (quoting *Leo R. Miller,* 53 FR 21931, 21932 (1988)). ''Moreover, because 'past performance is the best predictor of future performance,' *ALRA Labs., Inc.* v. *DEA,* 54 F.3d 450, 452 (7th Cir. 1995), this Agency has repeatedly held that where a registrant has committed acts inconsistent with the public interest, the registrant must accept responsibility for [his] actions and demonstrate that [he] will not engage in future misconduct.'' *Medicine Shoppe-Jonesborough,* 73 FR 364 (2008). As the Sixth Circuit has recognized, this Agency also ''properly consider[s]'' a registrant's admission of fault and his candor during the investigation and hearing to be ''important factors'' in the public interest determination. *See Hoxie,* 419 F.3d at 483.

The ALJ found, and the record supports the conclusion, that Respondent eventually ceased prescribing methadone for maintenance and detoxification purposes. ALJ at 49–50. The record generally supports the conclusion that Respondent stopped writing controlled substance prescriptions which did not include his registration number, as required by DEA regulations. However, as found above, in September 2010, Respondent issued a further Adderall prescription to JB and did not include his registration number.

The ALJ further noted that Respondent expressed remorse for some of his wrongdoing. ALJ at 50. However, while Respondent maintained that he had mistakenly issued the post-suspension prescriptions, and ''would never do anything to violate an order,'' Tr. 509, his testimony is belied by the evidence that upon being served with the Immediate Suspension Order, he stated his intention not to comply with it. Indeed, his testimony is patently disingenuous, given that he wrote the prescriptions only two days after he was served with the Order. In short, Respondent's conduct manifests a deliberate and egregious disregard for his obligations as a DEA registrant.

Finally, while the ALJ noted that ''Respondent testified passionately about the prevalence of narcotic abuse in Red Bay and his want to eliminate it,'' she further concluded that he ''likely facilitated some of that abuse.'' *Id.* The ALJ's conclusion is well supported. Indeed, as found above, in numerous instances, Respondent issued controlled-substance prescriptions for the purported purpose of treating a patient's pain, even though he recorded in the patient's chart that the patient had ''NO'' pain and/or failed to make the findings required under the State's Guidelines to properly diagnose the patient. Moreover, during one of the interviews by the Investigators, Respondent admitted that he did not follow the State's Guidelines. Tr. 220. Respondent, however, offered no evidence that he now intends to comply with the Guidelines.

Accordingly, I hold that Respondent has not rebutted the Government's *prima facie* case. I will therefore order that Respondent's registration be revoked and that any pending application be denied. For the same reasons that led me to order the Immediate Suspension of Respondent's registration, I conclude that the public interest requires that this Order be effective immediately.

Order

Pursuant to the authority vested in me by 21 U.S.C. 823(f) & 824(a)(4), as well as by 28 CFR 0.100(b) & 0.104, I order that DEA Certificate of Registration, BC1701184, and Identification Number XC1701184, issued to Morris W. Cochran, M.D., be, and they hereby are, revoked. I further order that any application for renewal or modification of such registration be, and it hereby is, denied. This Order is effective immediately.

Dated: March 16, 2012.

Michele M. Leonhart,

Administrator.

[FR Doc. 2012–7107 Filed 3–23–12; 8:45 am]

BILLING CODE 4410–09–P

[24] With respect to factor five, the ALJ found that Respondent's ''lack of candor * * * threatens public health and safety.'' ALJ at 49. As support for this conclusion, the ALJ noted that most of the patients who were interviewed by the Investigators had stated that Respondent was treating them for substance abuse, yet Respondent testified that they were being treated for chronic pain but did not realize this. *Id.*

While I agree with the ALJ that Respondent lacked candor, and appreciate that she personally observed his testimony, I do so based on different evidence. First, during the initial interview on Feb. 28, 2010, Respondent told the investigators that he was operating a detox clinic and was using methadone to transfer his patients to Suboxone. Tr. 43. Yet later that day, he claimed that he was prescribing methadone only for pain and had previously misspoken. *Id.* at 54–55. Second, when confronted with evidence that several of his methadone patients had come to him from methadone clinics, he attempted to justify his unlawful prescribing of methadone to them by claiming that the patients had actually gone to these clinics to treat their pain. *See* Tr. 695–96 (testimony regarding JB); *id.* at 699 (testimony regarding JC); *id.* at 716–17 (testimony regarding KI); *id.* at 728 (testimony regarding TP). This factor thus also supports revocation.

Agency Information Collection Agencies: New Collection; Comments Requested

ACTION: 60-Day notice of information collection under review.

The Department of Justice, Office of Justice Programs, Bureau of Justice Statistics, will be submitting the following information collection request for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for ''sixty days'' until May 25, 2012. This process is conducted in accordance with 5 CFR 1320.10.

If you have additional comments, especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact: Ron Malega, 202–353–0487, Bureau of Justice Statistics, Office of Justice Programs, Department of Justice, 810 Seventh Street NW., Washington DC 20531 or *Ronald.Malega@usdoj.gov.*

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

• Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

• Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

• Enhance the quality, utility, and clarity of the information to be collected; and

• Minimize the burden of collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of this information:

1. *Type of information collection:* New data collection, Census of Problem-Solving Courts (CPSC), 2012.

2. *The title of the form/collection:* Census of Problem-Solving Courts or CPSC 2012.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* The form labels are CPSC, Bureau of Justice Statistics, Office of Justice Programs, U.S. Department of Justice.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:* Problem-solving courts at all levels of government. Abstract: The Bureau of Justice Statistics (BJS) proposes to implement a Census of Problem-Solving Courts (CPSC). Problem-solving courts target defendants who have ongoing social and/or psychological conditions that underlie their repeated contact with the criminal justice system. Most of the existing information about problem-solving courts (PSC) consists of court evaluations or outcome analyses. No prior census of these courts has been conducted to date despite the substantial proliferation of such courts during the past thirty years. Hence, the CPSC will allow BJS to provide national level information on problem-solving courts and case processing statistics. The CPSC is designed to provide BJS and other interested stakeholders with the first systematic empirical information on problem-solving courts. A goal of the census is to obtain information on problem-solving court operations, staffing, administration, and to generate accurate and reliable aggregate statistics on offenders who enter problem-solving court programs. Information will be collected for the most recent 12-month period in 2012. The CPSC will collect information on the following categories:

a. Court Operations and Staffing
   i. Provide the number of problem-solving courts by type (e.g., mental health, drug, etc.),
   ii. Determine PSCs level of government operations (e.g., local, state, etc.), court jurisdiction (e.g., limited, general, other) and intake of felony, misdemeanor, or status offenses,
   iii. Court session frequency,
   iv. Number of full- and part-time staff members currently employed by PSCs.
b. Funding: Types and prevalence of PSC funding (e.g., local government budget, state budget, etc.)
c. Commonly Used Services:
   i. Count the types and prevalence of offender/victim services (e.g., anger management), counseling or treatment services (e.g., outpatient mental health treatment), and general supportive services (e.g., life skills)
d. Participant participation
   i. Participant inclusionary and exclusionary factors,
   ii. Participant point of entry (e.g. pre-plea, post-plea/pre-sentence, etc.)
   iii. Case closure: Benefits of successful participation in PSC program (e.g., case dismissal).
e. Capacity and Enrollment
   i. Design Capacity: Total number of active participants PSC can manage at any one time,
   ii. Current number of active participants.
f. Data Collection Practices:
   i. Use of automated case management systems,
   ii. Ability to share case management information with external agencies,
   iii. PSCs' ability to track participant outcomes after graduation.
g. Selected PSC Aggregate Participant information:
   i. Number of offenders admitted for participation in PSC over a 12 month period,
   ii. Number of offender participants exiting program over a 12 month period, including type of exit (e.g., successful program completion),
   iii. Percentage of participants by gender over a 12 month period,
   iv. Percentage of participants by race/ethnicity over a 12 month period.

5. *An Estimate of the Total Number of Respondents and the Amount of Time Estimated for an Average Respondent to Respond:* Estimates suggest 3,800 respondents will take part in the Census of Problem-Solving Courts 2012. Based on pilot testing and in-house review, the average (mean) burden for each completed survey is expected to be approximately 30 minutes per respondent. The estimated range of burden for respondents is expected to be between 15 minutes to 1 hour for completion. The following factors were considered when creating the burden estimate: the estimated total number of problem-solving courts, the ability of problem-solving courts to access data, and the type of data capabilities generally found in the field. BJS estimates that nearly all of the approximately 3,800 respondents will fully complete the questionnaire.

6. *An Estimate of the Total Public Burden (in hours) Associated with the collection:* The estimated public burden associated with this collection is 1,918 hours. It is estimated that respondents will take 30 minutes to complete a questionnaire. The burden hours for collecting respondent data sum to 1,900 hours (3,800 respondents × 0.5 hours = 1,900 hours). In addition to respondents' burden of completing the census questionnaire, the CPSC requires voluntary participation from State Points of Contacts (SPOCs) to develop an initial list of problem-solving court docket contact information. While SPOCs will not complete actual questionnaires, their effort is a necessary first step in identifying the universe of problem-solving courts nationwide. BJS estimates it will take, on average, 20 minutes for each SPOC to provide the requested list of problem-solving courts in their respective state. There are 54 SPOCS (including DC, Guam, Virgin Islands, and Puerto Rico). The total time burden is 18 hours (54 SPOCS × 20 minutes = 18 hours). Therefore the total estimated burden for the entire CPSC 2012 project is 1,918 hours (1,900 hours for respondents + 18 hours for SPOCS = 1,918 hours).

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., Room 2E–508, Washington, DC 20530.

Jerri Murray,

Department Clearance Officer, PRA, U.S. Department of Justice.

DEPARTMENT OF JUSTICE

Office of Justice Programs

[OMB Number 1121–0111]

Agency Information Collection Activities: Extension of a Currently Approved Collection; Comments Requested; National Crime Victimization Survey (NCVS)

ACTION: 60-day Notice of Information Collection Under Review.

The Department of Justice (DOJ), Office of Justice Programs, Bureau of Justice Statistics will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for ''sixty days'' until May 25, 2012. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Lynn Langton, Statistician, Bureau of Justice Statistics, Office of Justice Programs, Department of Justice, 810 7th Street NW., Washington, DC 20531, or facsimile (202) 616–1351.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Enhance the quality, utility, and clarity of the information to be collected; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of this information:

(1) *Type of information collection:* Extension of a currently approved collection.

(2) *Title of the form/collection:* National Crime Victimization Survey.

(3) *Agency form number, if any, and the applicable component of the department sponsoring the collection:* NCVS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract.* Primary: Persons 12 years or older living in NCVS sampled households located throughout the United States. The National Crime Victimization Survey (NCVS) collects, analyzes, publishes, and disseminates statistics on the criminal victimization in the U.S.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond/reply:* An estimate of the total number of respondents is 84,700. It will take the average interviewed respondent an estimated 23 minutes to respond, the average non-interviewed respondent an estimated 7 minutes to respond, the estimated average follow-up interview is 12 minutes, and the estimated average follow-up for a non-interview is 1 minute.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total respondent burden is approximately 67,657 hours.

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., Room 2E–508, Washington, DC 20530.

DEPARTMENT OF LABOR

Employment and Training Administration

[TA–W–80,459]

Roseburg Forest Products, Composite Panels Division, Missoula, MT; Notice of Affirmative Determination Regarding Application for Reconsideration

By application dated February 29, 2012, a company official requested administrative reconsideration of the negative determination regarding workers' eligibility to apply for Trade Adjustment Assistance (TAA) applicable to workers and former workers of Roseburg Forest Products, Composite Panels Division, Missoula, Montana (subject facility). The Notice of Determination was issued on February 2, 2012 and published in the **Federal Register** on February 21, 2012 (77 FR 9973).

The workers engage in activities related to the production of particleboard. The initial determination was based on the findings that worker separations were not attributable to increased imports by the subject firm or its declining customers of articles like or directly competitive with particleboard or a shift/acquisition of these articles to/from a foreign country by the workers' firm.

In the request for reconsideration, the petitioner supplied additional information regarding possible import competition.

The Department of Labor has carefully reviewed the request for reconsideration and the existing record, and has determined that the Department will conduct further investigation to determine if the workers meet the eligibility requirements to apply for TAA.

Conclusion

After careful review of the application, I conclude that the claim is of sufficient weight to justify reconsideration of the U.S. Department of Labor's prior decision. The application is, therefore, granted.

Signed at Washington, DC, this 14th day of March 2012.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

BILLING CODE 4510–FN–P

DEPARTMENT OF LABOR

Employment and Training Administration

[TA–W–80,502; TA–W–80,502A]

Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

TA–W–80,502

Lexis Nexis, Quality & Metrics Department, Including Employees Located Throughout the United States Who Report to Miamisburg, OH

TA–W–80,502A

Lexis Nexis, Quality & Metrics Department, Including Employees Located Throughout the United States Who Report To Colorado Springs, CO

In accordance with Section 223 of the Trade Act of 1974, as amended (''Act''), (19 U.S.C. 2273), the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on February 3, 2012, applicable to workers of Lexis Nexis, Quality & Metrics Division, Miamisburg, Ohio. The workers are engaged in

activities related to the supply of quality and metric services. The Department's Notice was published in the **Federal Register** on February 21, 2012 (77 FR 9971).

At the request of a company official, the Department reviewed the certification for workers of the subject firm. New information shows that worker separations occurred within Lexis Nexis, Quality & Metrics Department in states other than Ohio, including but not limited to Colorado, and within the State of Ohio, including but not limited to Miamisburg.

These employees provide various activities related to the supply of quality and metric services. The acquisition of these services from Manila, Philippines contributed importantly to worker separations at these locations of the subject firm.

Based on these findings, the Department is amending this certification to include workers of Lexis Nexis, Quality & Metrics Department located throughout the United States who report to the Miamisburg, Ohio facility (TA–W–80,502) and to include workers of Lexis Nexis, Quality & Metrics Department located throughout the United States who report to the Colorado Springs, Colorado facility (TA–W–80,502A).

The intent of the Department's certification is to include all workers of the subject firm who were adversely affected by the acquisition of quality and metric services from Manila, Philippines.

The amended notice applicable to TA–W–80,502 is hereby issued as follows:

All workers of Lexis Nexis, Quality & Metrics Department, including employees throughout the United States who report to, Miamisburg, OH (TA–W–80,502) and Lexis Nexis, Quality & Metrics Department, including employees throughout the United States who report to, Colorado Springs, CO (TA–W–80,502), who became totally or partially separated from employment on or after October 6, 2010, through February 3, 2014, and all workers in the group threatened with total or partial separation from employment on the date of certification through two years from the date of certification, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended.

Signed at Washington, DC this 14th day of March, 2012.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

BILLING CODE 4510–FN–P

DEPARTMENT OF LABOR

Employment and Training Administration

[TA–W–81,260]

Cinram Distribution, LLC, a Subsidiary of Cinram International Income Fund, Including On-Site Leased Workers From Good People, Including Workers Whose Unemployment Insurance (UI) Wages Are Reported Through Real Time Staffing, Aurora, IL; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, as amended (''Act''), 19 U.S.C. 2273, the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on February 3, 2012, applicable to workers of Cinram Distribution, LLC, a subsidiary of Cinram International Income Fund, including on-site leased workers from Good People, Aurora, Illinois. The workers are engaged in the supply of optical media distribution services. The notice was published in the **Federal Register** on February 21, 2012 (77 FR 9971).

At the request of Illinois State, the Department reviewed the certification for workers of the subject firm. New information shows that workers leased from Good People employed on-site at the Aurora, Illinois location of Cinram Distribution, LLC, a subsidiary of Cinram International Income Fund had their wages reported through a separate unemployment insurance (UI) tax account under the name Real Time Staffing.

Accordingly, the Department is amending this certification to properly reflect this matter.

The intent of the Department's certification is to include all workers of the subject firm who were adversely affected by increased company imports of the supply of optical media distribution.

The amended notice applicable to TA–W–81,260 is hereby issued as follows:

All workers from Cinram Distribution, LLC, a subsidiary of Cinram International Income Fund, including on-site leased workers from Good People, including workers whose unemployment insurance (UI) wages are reported through Real Time Staffing, Aurora, Illinois, who became totally or partially separated from employment on or after January 20, 2011 through February 3, 2014, and all workers in the group threatened with total or partial separation from employment on date of certification through two years from the date of certification, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1074, as amended.

Signed at Washington, DC, this 14th day of March 2012.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

DEPARTMENT OF LABOR

Employment and Training Administration

[TA–W–80,487]

Stimson Lumber Company Arden Division Including On-Site Leased Workers From Securitas Security Services USA and Briteway Janitorial Colville, WA; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance and Alternative Trade Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 (19 U.S.C. 2273), and Section 246 of the Trade Act of 1974 (26 U.S.C. 2813), as amended, the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance and Alternative Trade Adjustment Assistance on January 18, 2012, applicable to workers and former workers of Stimson Lumber Company, Arden Division, Colville, Washington. The workers are engaged in activities related to the production of cedar lumber. The Department's Notice was published in the **Federal Register** on February 14, 2012 (77 FR 8283).

At the request of the State agency, the Department reviewed the certification for workers of the subject firm and the new information supplied by the State.

The Department determines that workers from Securitas Security Services USA and Briteway Janitorial were employed on-site at the Colville, Washington location of Stimson Lumber Company and were sufficiently under the control of Stimson Lumber Company to be considered leased workers.

The intent of the Department's certification is to include all workers of the subject firm adversely affected by customer imports of articles from Canada.

Based on these findings, the Department is amending this certification to include workers leased from Securitas Security Services USA and Briteway Janitorial working on-site

at the Colville, Washington location of the subject firm.

The amended notice applicable to TA–W–80,487 is hereby issued as follows:

All workers of Stimson Lumber Company, Arden Division, including on-site leased workers from Securitas Security Services USA and Briteway Janitorial, Colville, Washington, who became totally or partially separated from employment on or after September 27, 2010, through January 18, 2014, are eligible to apply for adjustment assistance under Section 223 of the Trade Act of 1974, and are also eligible to apply for alternative trade adjustment assistance under Section 246 of the Trade Act of 1974.

Signed at Washington, DC, this 14th day of March 2012.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

Notice of Determinations Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, as amended (19 U.S.C. 2273) the Department of Labor herein presents summaries of determinations regarding eligibility to apply for trade adjustment assistance for workers by (TA–W) number issued during the period of *March 5, 2012 through March 9, 2012*.

In order for an affirmative determination to be made for workers of a primary firm and a certification issued regarding eligibility to apply for worker adjustment assistance, each of the group eligibility requirements of Section 222(a) of the Act must be met.

I. Under Section 222(a)(2)(A), the following must be satisfied:

(1) A significant number or proportion of the workers in such workers' firm have become totally or partially separated, or are threatened to become totally or partially separated;

(2) The sales or production, or both, of such firm have decreased absolutely; and

(3) One of the following must be satisfied:

(A) Imports of articles or services like or directly competitive with articles produced or services supplied by such firm have increased;

(B) Imports of articles like or directly competitive with articles into which one or more component parts produced by such firm are directly incorporated, have increased;

(C) Imports of articles directly incorporating one or more component parts produced outside the United States that are like or directly competitive with imports of articles incorporating one or more component parts produced by such firm have increased;

(D) Imports of articles like or directly competitive with articles which are produced directly using services supplied by such firm, have increased; and

(4) The increase in imports contributed importantly to such workers' separation or threat of separation and to the decline in the sales or production of such firm; or

II. Section 222(a)(2)(B) all of the following must be satisfied:

(1) A significant number or proportion of the workers in such workers' firm have become totally or partially separated, or are threatened to become totally or partially separated;

(2) One of the following must be satisfied:

(A) There has been a shift by the workers' firm to a foreign country in the production of articles or supply of services like or directly competitive with those produced/supplied by the workers' firm;

(B) There has been an acquisition from a foreign country by the workers' firm of articles/services that are like or directly competitive with those produced/supplied by the workers' firm; and

(3) The shift/acquisition contributed importantly to the workers' separation or threat of separation.

In order for an affirmative determination to be made for adversely affected workers in public agencies and a certification issued regarding eligibility to apply for worker adjustment assistance, each of the group eligibility requirements of Section 222(b) of the Act must be met.

(1) A significant number or proportion of the workers in the public agency have become totally or partially separated, or are threatened to become totally or partially separated;

(2) The public agency has acquired from a foreign country services like or directly competitive with services which are supplied by such agency; and

(3) The acquisition of services contributed importantly to such workers' separation or threat of separation.

In order for an affirmative determination to be made for adversely affected secondary workers of a firm and a certification issued regarding eligibility to apply for worker adjustment assistance, each of the group eligibility requirements of Section 222(c) of the Act must be met.

(1) A significant number or proportion of the workers in the workers' firm have become totally or partially separated, or are threatened to become totally or partially separated;

(2) The workers' firm is a Supplier or Downstream Producer to a firm that employed a group of workers who received a certification of eligibility under Section 222(a) of the Act, and such supply or production is related to the article or service that was the basis for such certification; and

(3) Either—

(A) The workers' firm is a supplier and the component parts it supplied to the firm described in paragraph (2) accounted for at least 20 percent of the production or sales of the workers' firm; or

(B) A loss of business by the workers' firm with the firm described in paragraph (2) contributed importantly to the workers' separation or threat of separation.

In order for an affirmative determination to be made for adversely affected workers in firms identified by the International Trade Commission and a certification issued regarding eligibility to apply for worker adjustment assistance, each of the group eligibility requirements of Section 222(f) of the Act must be met.

(1) The workers' firm is publicly identified by name by the International Trade Commission as a member of a domestic industry in an investigation resulting in—

(A) An affirmative determination of serious injury or threat thereof under section 202(b)(1);

(B) An affirmative determination of market disruption or threat thereof under section 421(b)(1); or

(C) An affirmative final determination of material injury or threat thereof under section 705(b)(1)(A) or 735(b)(1)(A) of the Tariff Act of 1930 (19 U.S.C. 1671d(b)(1)(A) and 1673d(b)(1)(A));

(2) The petition is filed during the 1-year period beginning on the date on which—

(A) A summary of the report submitted to the President by the International Trade Commission under section 202(f)(1) with respect to the affirmative determination described in paragraph (1)(A) is published in the **Federal Register** under section 202(f)(3); or

(B) Notice of an affirmative determination described in subparagraph (1) is published in the **Federal Register**; and

(3) The workers have become totally or partially separated from the workers' firm within—

(A) The 1-year period described in paragraph (2); or

(B) Notwithstanding section 223(b)(1), the 1- year period preceding the 1-year period described in paragraph (2).

Affirmative Determinations for Worker Adjustment Assistance

The following certifications have been issued. The date following the company name and location of each determination references the impact date for all workers of such determination.

The following certifications have been issued. The requirements of Section 222(a)(2)(A) (increased imports) of the Trade Act have been met.

TA–W No.	Subject firm	Location	Impact date
81,051	Parkdale America, LLC, Plant #24, Serve Source/Defender Services	Rabun Gap, GA.	February 13, 2010
81,162	Kennametal, Inc., JSCL Division	Greenfield, MA	April 1, 2011.
81,324	CSB Fashion Inc	New York, NY	February 10, 2011.
81,337	Fu Sing Fashion, Inc	Brooklyn, NY	February 12, 2011.
81,374	Emhart Teknologies, Emhart-Parker Kalon Plant, A Stanley Black & Decker Company.	Campbellsville, KY	February 27, 2011.

The following certifications have been issued. The requirements of Section 222(a)(2)(B) (shift in production or services) of the Trade Act have been met.

TA–W No.	Subject firm	Location	Impact date
81,234	Onyx Enterprises International Corporation	Cranbury, NJ	February 13, 2010.
81,252	Littelfuse, Inc., Corporate Resource, Aerotek	Chicago, IL	September 22, 2011.
81,252A	Dysis and Tek, Working on-site at Littelfuse, Inc.	Chicago, IL	February 13, 2010.
81,306	Allstate Insurance Company, Customer Enterprise Services, Claims Services Department.	Irving, TX	February 6, 2011.
81,308	Maxim Integrated Products, Inc., Worldwide Test Engineering Unit	Hillsboro, OR	February 6, 2011.
81,316	Finisar Corporation, Workforce Logic	Wilmington, MA	January 30, 2011.
81,320	Bose Corporation, Manufacturing Division, Randstad, Aerotek & Resource Mfg.	Blythewood, SC	February 1, 2011.

81,106	International Business Machines, Optim Data & Warehousing Tools Organization.	San Francisco, CA.	
81,133	Grifols Therapeutics, Inc., Formerly Known as Talecris Biotherapeutics, Inc.	Research Triangle Park, NC.	
81,282	International Paper Company, Container The Americas Div., Manpower	El Paso, TX.	
81,287	American Woodmark Corporation	Moorefield, WV.	
81,305	Zurn Industries, LLC, Rexnord Industries, Adecco and Express Personnel	Falconer, NY.	
81,332	American Apparel, Inc.	Fort Deposit, AL.	

Determinations Terminating Investigations of Petitions for Worker Adjustment Assistance

After notice of the petitions was published in the **Federal Register** and on the Department's Web site, as required by Section 221 of the Act (19 U.S.C. 2271), the Department initiated investigations of these petitions.

The following determinations terminating investigations were issued because the petitioner has requested that the petition be withdrawn.

TA–W No.	Subject firm	Location	Impact date
81,044	FabSol, LLC, Staff Partners	Cadiz, KY.	
81,161	Emlinq LLC	Simi Valley, CA.	
81,256	Verizon Business Networks, Inc	Ashburn, VA.	
81,326	European Touch	Milwaukee, WI.	
81,388	Header Products, Inc	Romulus, MI.	

I hereby certify that the aforementioned determinations were issued during the period of *March 5, 2012 through March 9, 2012.* These determinations are available on the Department's Web site tradeact/taa/taa search form.cfm under the searchable listing of determinations or by calling of Office of Trade Adjustment Assistance toll-free at 888–365–6822.

Dated: March 16, 2012.

Michael. W. Jaffe,

Certifying Officer, Office of Trade Adjustment Assistance.

BILLING CODE 4510–FN–P

DEPARTMENT OF LABOR

Employment and Training Administration

Investigations Regarding Certifications of Eligibility To Apply for Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under Section 221(a) of the Trade Act of 1974 (''the Act'') and are identified in the Appendix to this notice. Upon receipt of these petitions, the Director of the Division of Trade Adjustment Assistance, Employment and Training Administration, has instituted investigations pursuant to Section 221(a) of the Act.

The purpose of each of the investigations is to determine whether the workers are eligible to apply for adjustment assistance under Title II, Chapter 2, of the Act. The investigations will further relate, as appropriate, to the determination of the date on which total or partial separations began or threatened to begin and the subdivision of the firm involved.

The petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than April 5, 2012.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than April 5, 2012.

The petitions filed in this case are available for inspection at the Office of the Director, Office of Trade Adjustment Assistance, Employment and Training Administration, U.S. Department of Labor, Room N–5428, 200 Constitution Avenue NW., Washington, DC 20210.

Signed at Washington, DC, this 15th day of March 2012.

Michael Jaffe,

Certifying Officer, Office of Trade Adjustment Assistance.

LEGAL SERVICES CORPORATION

Request for Comments—Financial Eligibility Screening and Online Intake

AGENCY: Legal Services Corporation.

ACTION: Notice; request for comments.

SUMMARY: The Legal Services Corporation seeks public comment on a draft program letter discussing minimum screening requirements for LSC recipients to apply when determining financial eligibility of applicants based on information collected through online systems.

DATES: Written comments will be accepted until April 25, 2012.

ADDRESSES: Written comments may be submitted by mail, fax or email to Mark Freedman, Senior Assistant General Counsel, Legal Services Corporation, 3333 K St. NW., Washington, DC 20007; 202–295–1623 (phone); 202–337–6519 (fax); *mfreedman@lsc.gov.*

FOR FURTHER INFORMATION CONTACT: Mark Freedman, Senior Assistant General Counsel, Legal Services Corporation, 3333 K St. NW., Washington, DC 20007; 202–295–1623 (phone); 202–337–6519 (fax); *mfreedman@lsc.gov.*

SUPPLEMENTARY INFORMATION: The Legal Services Corporation (''LSC'' or ''Corporation'') was established by the United States Congress ''for the purpose of providing financial support for legal assistance in noncriminal matters or proceedings to persons financially unable to afford such assistance.'' 42 U.S.C. 2996b(a). LSC performs this function primarily through providing federal funding to civil legal aid programs providing legal services to low-income persons throughout the United States and its possessions and territories in geographic areas determined by LSC. Each LSC recipient must screen all applicants for LSC funded legal assistance to determine if they meet the recipient's financial eligibility requirements, which themselves must comply with the LSC financial eligibility requirements set forth at 45 CFR part 1611.

Over the last several years, LSC has seen a marked increase in the number of LSC grant recipients implementing online systems as part of their client-eligibility screening systems to improve efficiency in their intake processes. LSC has received a corresponding increase in compliance-related inquiries pertaining to these systems. LSC has prepared this draft program letter to assist LSC recipients in complying with eligibility screening requirements for all methods of intake, including online intake systems. It reflects LSC's obligation to ensure compliance with statutory and regulatory requirements governing the use of LSC funds, as well as LSC's recognition of the realities of practices in the field.

The draft program letter can be found in the ''Matters for Comment'' section of LSC's Web site at: *http://www.lsc.gov/about/matters-comment.*

LSC recognizes the importance of input from the public and from LSC recipients. It is LSC's intention that the Program Letter balance recognition of the advancements in technology with LSC's obligation to ensure compliance with the statutory and regulatory requirements governing the use of LSC funds. LSC encourages all interested parties and program staff whose work involves screening applicants to review the draft Program Letter and provide input to LSC. Interested parties may submit comments to LSC within thirty (30) days of the date of publication of this notice.

Dated: March 20, 2012.

Victor M. Fortuno,

Vice President & General Counsel.

NUCLEAR REGULATORY COMMISSION

Notice of Charter Renewal: Advisory Committee on the Medical Uses of Isotopes

AGENCY: U.S. Nuclear Regulatory Commission.

ACTION: This notice is to announce the renewal of the Advisory Committee on the Medical Uses of Isotopes (ACMUI) for a period of two years.

SUPPLEMENTARY INFORMATION: The U.S. Nuclear Regulatory Commission (NRC) has determined that the renewal of the Charter for the Advisory Committee on the Medical Uses of Isotopes for the two year period commencing on March 14, 2012 is in the public interest, in connection with duties imposed on the Commission by law. This action is being taken in accordance with the Federal Advisory Committee Act, after consultation with the Committee Management Secretariat, General Services Administration.

The purpose of the ACMUI is to provide advice to NRC on policy and technical issues that arise in regulating the medical use of byproduct material for diagnosis and therapy. Responsibilities include providing guidance and comments on current and proposed NRC regulations and regulatory guidance concerning medical use; evaluating certain non-routine uses of byproduct material for medical use;

and evaluating training and experience of proposed authorized users. The members are involved in preliminary discussions of major issues in determining the need for changes in NRC policy and regulation to ensure the continued safe use of byproduct material. Each member provides technical assistance in his/her specific area(s) of expertise, particularly with respect to emerging technologies. Members also provide guidance as to NRC's role in relation to the responsibilities of other Federal agencies as well as of various professional organizations and boards.

Members of this Committee have demonstrated professional qualifications and expertise in both scientific and non-scientific disciplines including nuclear medicine; nuclear cardiology; radiation therapy; medical physics; nuclear pharmacy; State medical regulation; patient's rights and care; health care administration; and Food and Drug Administration regulation.

FOR FURTHER INFORMATION CONTACT: Ashley Cockerham, Office of Federal and State Materials and Environmental Management Programs, U.S. Nuclear Regulatory Commission, Washington, DC 20555; Telephone (240) 888–7129; email *Ashley.Cockerham@nrc.gov.*

Dated: March 19, 2012.

Andrew L. Bates,

Federal Advisory Committee Management Officer.

BILLING CODE 7590–01–P

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of Investor Education and Advocacy, Washington, DC 20549–0213.

Extension:

Rule 23c–1, SEC File No. 270–253, OMB Control No. 3235–0260.

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520), the Securities and Exchange Commission (the ''Commission'') is soliciting comments on the collection of information summarized below. The Commission plans to submit this existing collection of information to the Office of Management and Budget for extension and approval.

Rule 23c–1 (17 CFR 270.23c–1) under the Investment Company Act of 1940 (15 U.S.C. 80a), among other things, permits a closed-end fund to repurchase its securities for cash if in addition to the other requirements set forth in the rule: (i) Payment of the purchase price is accompanied or preceded by a written confirmation of the purchase; (ii) the asset coverage per unit of the security to be purchased is disclosed to the seller or his agent; and (iii) if the security is a stock, the fund has, within the preceding six months, informed stockholders of its intention to purchase stock. Commission staff estimates that approximately 29 closed-end funds rely on Rule 23c–1 annually to undertake 261 repurchases of their securities. Commission staff estimates that, on average, a fund spends 2.5 hours to comply with the paperwork requirements listed above each time it undertakes a security repurchase under the rule. Commission staff thus estimates the total annual burden of the rule's paperwork requirements is 653 hours.

In addition, the fund must file with the Commission a copy of any written solicitation to purchase securities given by or on behalf of the fund to 10 or more persons. The copy must be filed as an exhibit to Form N–CSR (17 CFR 249.331 and 274.128). The burden associated with filing Form N–CSR is addressed in the submission related to that form.

The estimate of average burden hours is made solely for the purposes of the Paperwork Reduction Act, and is not derived from a comprehensive or even a representative survey or study of the costs of Commission rules and forms.

Written comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the Commission, including whether the information has practical utility; (b) the accuracy of the Commission's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

Please direct your written comments to Thomas Bayer, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 6432 General Green Way, Alexandria, VA 22312; or send an email to: *PRA_Mailbox@sec.gov.*

Dated: March 20, 2012.

Kevin M. O'Neill,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–66624]

Order Granting an Application of Edward Jones & Co. LLP Exemption From Exchange Act Section 11(d)(1) Pursuant to Exchange Act Section 36(a)

March 20, 2012.

By letter dated December 5, 2011, counsel for Edward Jones & Co., L.P. (''Edward Jones'') requested that the Securities and Exchange Commission (''Commission'') issue to Edward Jones an exemption from Section 11(d)(1) of the Securities Exchange Act of 1934 (''Exchange Act'') pursuant to Section 36(a) of the Exchange Act. Specifically, the letter requested that the Commission exempt Edward Jones from the prohibitions of Section 11(d)(1) of the Exchange Act if Edward Jones extends to a customer margin on newly-purchased shares of mutual funds not managed or sponsored by Edward Jones or any affiliate of Edward Jones (''non-proprietary mutual funds'') in instances in which the customer makes a dollar-for-dollar substitution by selling an already-margined non-proprietary mutual fund and buying another non-proprietary mutual fund on margin without incurring any fees, commissions or other costs for the transactions and without Edward Jones otherwise charging the respective customers any fees, commissions or other costs to effect the transactions.

We find that it is appropriate and in the public interest and consistent with the protection of investors to grant Edward Jones a conditional exemption from Section 11(d)(1) of the Exchange Act.

Conclusion

It is hereby ordered, pursuant to Section 36(a) of the Exchange Act, that Edward Jones, based on the representations and the facts presented in its letter and subject to the conditions contained in this order, is exempt from the new issue lending restriction of Section 11(d)(1) of the Exchange Act to the extent that Edward Jones extends to a customer margin on newly-purchased shares of non-proprietary mutual funds in instances in which the customer makes a dollar-for-dollar substitution by selling an already-margined non-

proprietary mutual fund and buying another non-proprietary mutual fund on margin without incurring any fees, commissions or other costs for the transactions and without Edward Jones otherwise charging the respective customers any fees, commissions or other costs to effect the transactions.

This exemption is subject to the conditions that

• Edward Jones does not receive any sales commissions, Rule 12b–1 fees, revenue sharing or any other compensation, directly or indirectly, from the mutual fund complexes in which investments are made, and Edward Jones does not charge or receive any compensation, fees, expenses or other costs as a result of its effecting transactions in the funds; and

• Edward Jones, its affiliates, associates, related persons, management and employees have no affiliation with the mutual funds subject to the request, other than that Edward Jones will effect transactions in the funds for its customers.

The foregoing exemption is subject to modification or revocation if at any time the Commission determines that such action is necessary or appropriate in furtherance of the purposes of the Exchange Act.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[1]

Kevin M. O'Neill,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–66623; File No. SR–ISE–2012–23]

Self-Regulatory Organizations; International Securities Exchange, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Regarding the Short Term Option Series Program

March 20, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that, on March 13, 2012, the International Securities Exchange, LLC (''Exchange'' or ''ISE'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange filed the proposal as a ''non-controversial'' proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[3] and Rule 19b–4(f)(6) thereunder.[4] The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend its rules regarding the Short Term Option Series Program. The text of the proposed rule change is available on the Exchange's Web site *www.ise.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this proposed rule change is to amend ISE Rules 504 and 2009 regarding the Short Term Option Series Program (''STOS Program'').[5] Specifically, the Exchange proposes to amend its rules to allow the Exchange to open short term option series that are opened by other securities exchanges in option classes selected by other exchanges under their respective short term option rules.

Currently, ISE may select up to 30 currently listed option classes on which short term option series may be opened in the STOS Program. The Exchange may also match any option classes that are selected by other securities exchanges that employ a similar program under their respective rules. For each option class eligible for participation in the STOS Program, the Exchange may open up to 30 short term option series for each expiration date in that class.

This proposal seeks to allow the Exchange to open short term option series that are opened by other securities exchanges in option classes selected by other exchanges under their respective short term option rules. This change is being proposed notwithstanding the current cap of 30 series per class under the STOS Program. This is a competitive filing and is based on approved filings and existing rules of The NASDAQ Stock Market LLC for the NASDAQ Options Market (''NOM'') and NASDAQ OMX PHLX, Inc. (''PHLX'').[6]

ISE is competitively disadvantaged since it operates a substantially similar STOS Program as NOM and PHLX but is limited to listing a maximum of 30 series per options class that participates in its STOS Program (whereas PHLX and NOM are not similarly restricted).

The Exchange is not proposing any changes to the STOS Program other than the ability to open short term option series that are opened by other securities exchanges in option classes selected by other exchanges under their respective short term option rules.

ISE notes that the STOS Program has been well-received by market participants, in particular by retail investors. ISE believes that the current proposed revision to the STOS Program will permit the Exchange to meet increased customer demand and provide market participants with the ability to hedge in a greater number of option classes and series.

With regard to the impact of this proposal on system capacity, ISE has analyzed its capacity and represents that it and the Options Price Reporting Authority (''OPRA'') have the necessary systems capacity to handle the potential additional traffic associated with trading of an expanded number of series for the classes that participate in the STOS Program.

The proposed increase to the number of series per classes eligible to participate in the STOS Program is required for competitive purposes as well as to ensure consistency and uniformity among the competing

[1] 17 CFR 200.30–3(62).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A)(iii).

[4] 17 CFR 240.19b–4(f)(6).

[5] The Exchange adopted the STOS Program on a pilot basis in 2005. *See* Securities Exchange Act Release No. 52012 (July 12, 2005), 70 FR 41246 (July 18, 2005) (SR–ISE–2005–17). The STOS Program was approved on a permanent basis in 2010. *See* Securities Exchange Act Release No. 62444 (July 2, 2010), 75 FR 39595 (July 9, 2010) (SR–ISE–2010–72).

[6] *See* Securities Exchange Act Release Nos. 65775 (November 17, 2011), 76 FR 72473 (November 23, 2011) (SR–NASDAQ–2011–138) and 65776 (November 17, 2011), 76 FR 72482 (November 23, 2011) (SR–PHLX–2011–131).

options exchanges that have adopted similar STOS Programs.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934 [7] (the ''Act'') in general, and furthers the objectives of Section 6(b)(5) of the Act [8] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest. The Exchange believes that expanding the current short term options program will result in a continuing benefit to investors by giving them more flexibility to closely tailor their investment decisions and hedging decisions in greater number of securities. The Exchange believes that expanding the current program will provide the investing public and other market participants with additional opportunities to hedge their investment thus allowing these investors to better manage their risk exposure. While the expansion of the STOS Program will generate additional quote traffic, the Exchange does not believe that this increased traffic will become unmanageable since the proposal remains limited to a fixed number of classes.

B. Self-Regulatory Organization's Statement on Burden on Competition

ISE does not believe that this proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Exchange Act. In this regard and as indicated above, the Exchange notes that the rule change is being proposed as a competitive response to existing NOM and PHLX rules. ISE believes this proposed rule change is necessary to permit fair competition among the options exchanges with respect to their short term options programs.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any unsolicited written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not significantly affect the protection of investors or the public interest, does not impose any significant burden on competition, and, by its terms, does not become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act [9] and Rule 19b–4(f)(6) thereunder.[10]

The Exchange has requested that the Commission waive the 30-day operative delay. The Commission believes that waiver of the operative delay is consistent with the protection of investors and the public interest because the proposal is substantially similar to those of other exchanges that have been approved by the Commission and permit such exchanges to open short term option series that are opened by other securities exchanges under their respective short term option rules.[11] Therefore, the Commission designates the proposal operative upon filing.[12]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–ISE–2012–23 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–ISE–2012–23. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street, NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ISE–2012–23 and should be submitted on or before April 16, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[13]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–66628; File No. SR–ICEEU–2012–01]

Self-Regulatory Organizations; ICE Clear Europe Limited; Order Approving Proposed Rule Change To Revise Rules and Procedures Related to Certain Technical and Operational Changes Relating to Credit Default Swap Contracts

March 20, 2012.

I. Introduction

On January 24, 2012, ICE Clear Europe Limited (''ICE Clear Europe'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change SR–ICEEU–2012–01 pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder.[2] The proposed rule change was published for comment in the **Federal Register** on February 13, 2012.[3] The Commission received no comment letters regarding the proposal. For the reasons discussed below, the Commission is granting approval of the proposed rule change.

II. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The proposed changes were set out in revisions to the Rules and CDS Procedures that were described in circular no. C11/170 published on November 25, 2011 (available on the Internet Web site of ICE Clear Europe at: *https://www.theice.com/publicdocs/clear_europe/circulars/C11170_att1.pdf* and *https://www.theice.com/publicdocs/clear_europe/circulars/C11170_att2.pdf*). According to ICE Clear Europe, the purpose of these rule changes is to allow the clearing agency to make certain technical operational changes relating to CDS Contracts (as defined at ICE Clear Europe Rule 101), including those that arise under its rules on an occasional basis as part of the end-of-day price submission process by Clearing Members.

Specifically, these changes can be grouped into three categories:

First, under ICE Clear Europe's current rule framework, CDS Contracts that arise following the end-of-day pricing process give rise to non-cleared transactions that may later be submitted for clearing. However, since the applicable CDS Contract is typically intended to be cleared between the parties, and since trades that arise following end-of-day pricing arise at the direction of the clearing house, ICE Clear Europe believes that it is more efficient and reduces risk for such CDS Contract to arise upon notice by ICE Clear Europe, rather than to require the applicable parties to submit the CDS Contract later. Accordingly, the first change establishes Rule 401(a)(xi) to permit ICE Clear Europe to specify the time and terms of entry into a CDS Contract arising following the submission of end-of-day prices by a Clearing Member. Once ICE Clear Europe has notified the two affected clearing members of a contract under Rule 401(a)(xi), the contract will stand, unless it is voidable under Rule 404 (for example due to illegality or manifest error). This change gives rise to the majority of the proposed rule changes in the text of the ICE Clear Europe Rules and the CDS Procedures. As a practical matter, this change operationalizes a technical service by which the terms of a CDS Contract entered into following submission of end-of-day prices can be promptly cleared by ICE Clear Europe. In order to operationalize this change, certain conforming changes are required. For example, various Rules establishing procedures for other automatically effective CDS Contracts are amended to include new Rule 401(a)(xi).

In addition, a new paragraph (c) has been added to Rule 602 which deems Clearing Members not to be in violation of Position Limits (as defined in the Rules) as a result of CDS Contracts that arise by notice of ICE Clear Europe. Rule 602(c) provides a procedure under which the Clearing Member can close out such a position within five business days of the applicable Position Limit adoption or determination date. In this manner, both the policy of ensuring the pricing process through automatically effective trades and the policy of ensuring Position Limits are respected. ICE Clear Europe notes that these provisions relating to accommodation of Clearing Members in respect of Position Limits that may be applicable to CDS Contracts that are automatically effective applies not only to Rule 401(a)(xi), but also to Rules 401(a)(v), (vi), and (x). In the case of Rule 401(a)(v), new Rule 602(c) would apply to CDS Contracts that arise from transactions generated by ICE Futures Europe or the ICE OTC Operator as a result of the operation of their contra trade, error trade, invalid trade, cancelled trade, error correction or similar policies and rules and procedures relating thereto or otherwise. In the case of Rule 401(a)(vi), new Rule 602(c) would apply to CDS Contracts that form as a result of another Contract being invoiced back by ICE Clear Europe. Finally, in the case of Rule 401(a)(x), new Rule 602(c) would apply to CDS Contracts arising pursuant to Rule 903(a)(xii), which generally governs the creation of new CDS Contracts between ICE Clear Europe and non-defaulting Clearing Members to replace any remaining CDS Contracts of a defaulting Clearing Member.

Under the second category of changes, settlement and coupon payments under CDS Contracts will take place through the ICE Clear Europe's payment banking network used for other cleared products, and not through the CLS Bank International (''CLS'') system. At present, Section 8.9 of the CDS Procedures provides that where a CDS Contract is to be settled in circumstances in which Rule 1514 (CDS Alternative Delivery or Settlement Procedure) does not apply, relevant cash payments between ICE Clear Europe and CDS Clearing Members will take place through The Depository Trust and Clearing Corporation using CLS, unless otherwise specified by ICE Clear Europe in a circular prior to the date on which such cash payments are due. However, following consultation with Clearing Members, ICE Clear Europe has determined it is more efficient if settlement and coupon payments are effected through ICE Clear Europe's current payment system (which is also permitted by the current CDS Procedures). ICE Clear Europe has determined to harmonize the system described at Section 8.9 of the CDS Procedures into a single payment system. This is achieved through the deletion of Section 8.9 of the CDS Procedures.[4] It should be noted that this proposed change also serves to further harmonize the ICE Clear Europe Rules and CDS Procedures with those of ICE Clear Credit LLC, the U.S.-based

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] Securities Exchange Act Release No. 34–66341 (January 24, 2012), 77 FR 7652 (February 13, 2012). In its filing with the Commission, ICE Clear Europe included statements concerning the purpose of and basis for the proposed rule change. The text of these statements is incorporated into the discussion of the proposed rule change in Section II below.

[4] On January 12, 2012, ICE Clear Europe published circular no. C12/003 (available at: *https://www.theice.com/publicdocs/clear_europe/circulars/C12003.pdf*), pursuant to which ICE Clear Europe used its authority under Rule 8.9 of the CDS Procedures to specify that, effective January 17, 2012, all payments that had been settled via CLS including Upfront Fees, Quarterly Coupon Payments and Cash Credit Event Settlements would subsequently be settled in accordance with standard process set out in the Finance Procedures.

clearing agency affiliate of ICE Clear Europe.

The third category of changes involves various cross-reference and typographical amendments to the processes for submission of CDS Contracts. The typographical changes are as follows: (i) Section 4.2 of the CDS Procedures, the words ''Bilateral CDS Contract'' are changed to ''Bilateral CDS Transaction'', and (ii) Section 8.4 of the CDS Procedures, the words ''submission of'' are added. According to ICE Clear Europe, these changes are made solely to correct typographical and cross-reference drafting in the text of the Rules and make no substantive changes to the Rules.

In its filing with the Commission, ICE Clear Europe indicated that it has engaged in extensive private consultation with its CDS Clearing Members involving both operational and legal consultation groups and has presented the changes to its CDS Risk Committee, which approved the changes. ICE Clear Europe has also engaged in a public consultation process in relation to all the changes, pursuant to the Circulars referred to above, and as required under applicable U.K. legislation. This public consultation involved the publication of such Circulars on a publicly accessible portion of the Internet Web site of ICE Clear Europe. ICE Clear Europe has received no opposing views from its Clearing Members in relation to the proposed rule amendments and received no responses to its public consultations during the consultation period.

III. Discussion

Section 19(b)(2)(B) of the Act directs the Commission to approve a proposed rule change of a self-regulatory organization if it finds that such proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to such organization.[5] For example, Section 17A(b)(3)(F) of the Act[6] requires, among other things, that the rules of a clearing agency be designed to remove impediments to and perfect the mechanism of a national system for the prompt and accurate clearance and settlement of securities transactions and to assure the safeguarding of securities and funds in the custody or control of the clearing agency or for which it is responsible.

If approved, the proposed rule change would allow ICE Clear Europe to implement certain operational changes related to the processing of CDS contracts, including with respect to (i) CDS Contracts that arise as a result of the end-of-day pricing process and (ii) and the process by which settlement and coupon payments under CDS Contracts will be made. After considering these changes, the Commission believes that the proposed rule change is consistent with Section 17A(b)(3)(F) of the Act, including ICE Clear Europe's obligation to ensure that its rules be designed to remove impediments to and perfect the mechanism of a national system for the prompt and accurate clearance and settlement of securities transactions.

IV. Conclusion

On the basis of the foregoing, the Commission finds that the proposal is consistent with the requirements of the Act and in particular with the requirements of Section 17A of the Act[7] and the rules and regulations thereunder.

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[8] that the proposed rule change (File No. SR–ICEEU–2012–01) be, and hereby is, approved.[9]

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[10]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–66630; File No. SR–DTC–2012–02]

Self-Regulatory Organizations; The Depository Trust Company; Notice of Filing of Proposed Rule Change To Amend Rules Relating to the Issuance of and Maturity Presentment Processing for Money Market Instruments

March 20, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on March 8, 2012, The Depository Trust Company (''DTC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared primarily by DTC. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The purpose of DTC's proposed rule change is to amend DTC's Settlement Service Guide to change certain deadlines associated with processing issuances and maturity presentments of money market instruments.[3]

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, DTC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. DTC has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of these statements.[4]

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The Maturity Presentment[5] processing for money market instruments (''MMIs'') is initiated automatically by DTC each morning for all of the MMIs maturing that day. The automatic process electronically sweeps all maturing positions of MMI CUSIPs from a participant's accounts against credits in the amount of the payments to be received with respect to such presentments. The matured MMIs are delivered to the applicable issuing or paying agent (''IPA''),[6] also a DTC

[3] The text of the proposed rule change is attached as Exhibit 5 to DTC's filing, which is available at *www.dtcc.com/downloads/legal/rule_filings/2012/dtc/2012-02.pdf.*

[4] The Commission has modified the text of the summaries prepared by DTC.

[5] The term ''Maturity Presentment'' is defined in Rule 1 of DTC's Rules and Procedures as a Delivery Versus Payment of matured MMI securities from the account of a presenting participant to the designated paying agent account for that issue as provided for in Rule 9(C) and as specified in DTC's procedures.

[6] Rule 1 of DTC's Rules and Procedures defines the term ''MMI Issuing Agent'' generally as a participant acting as an issuing agent for an issuer with respect to a particular issue of MMI securities of that issuer and an ''MMI Paying Agent'' generally as a participant acting as a paying agent for an

participant, the IPA's account is debited for the amount of the maturity proceeds. The debited amount will be included in the IPA's net settlement amount. Similarly, the credits of participants that presented maturing MMIs will be included in those participants' net settlement amount.

MMI issuers and IPAs commonly view the primary source of funding for payments of MMI maturity presentments as flowing from new issuances of MMIs in the same program by that MMI issuer on that day. If the MMI issuer issues more new MMIs than the number of MMIs maturing, there would be no net funds payment to the IPA on that day. When an issuer has more maturing MMIs than new issuances, it will have an obligation to pay to the IPA the net amount of the MMIs maturing that day over the new issuance. When net maturity presentments exceed issuances on a day, IPAs at their discretion may provide significant intraday credit to issuers for the excess. However, the IPA as an agent of an issuer is not obligated to fund the presentments unless payment is received from the issuer.

The business relationships between IPAs and their MMI issuers play a key role in determining if an IPA will execute a refusal to pay at DTC with respect to an MMI issuance. Because maturity presentments of an issuer's MMIs for which the IPA acts are processed automatically and randomly against the IPA's account, IPAs are permitted to refuse to pay for all of an issuer's maturities in an MMI program.[7] An IPA that refuses payment on an MMI maturity must communicate its intention to DTC using the DTC Participant Terminal/Browser Service (PTS/PBS) MMRP function. This communication, referred to as an Issuer Failure/Refusal to Pay (''RTP''), allows the Paying Agent to enter a refusal to pay instruction for a particular issuer up to 3 p.m. Eastern Time (''ET'') on the date of the affected maturity presentment. Such an instruction causes DTC to reverse all transactions related to any new issuances in that issuer's program, including the maturity presentments. An IPA RTP may have a significant market impact on the issuer's reputation and credit standing.

In late 2009, DTC and the Securities Industry and Financial Markets Association (''SIFMA'') formed the MMI Blue-Sky Task Force (''Task Force'') to address systemic and unique market risks associated with the MMI process, including those related to DTC's maturity presentment processing. The Task Force, along other money market industry members,[8] determined that DTC's current MMI processing schedule permits issuance and other transaction activity that can affect an issuer's net funding amount or proceeds after the 3 p.m. E.T. deadline for RTP instructions.[9] Accordingly, DTC is proposing to amend certain provisions in its Settlement Service Guide in order to provide increased transparency for IPAs before the 3 p.m. RTP deadline, which should in turn assist IPAs in making better informed credit decisions when an issuer has more maturities than issuances.[10] The proposed changes to DTC's Settlement Service Guide include:

1. Making all MMI issuance and deliver order transactions subject to DTC's Receiver Authorized Delivery (''RAD'') function for approval regardless of transaction value.[11]

2. Adjusting the MMI valued new issuance cut-off time from 3:20 p.m. E.T. to 2 p.m. E.T.

3. Creating a new MMI RAD approval of new valued issuance transactions at 2:45 p.m. E.T. instead of 3:30 p.m. E.T.[12]

DTC is proposing to implement the changes described above on the date the proposed rule change is approved.

DTC believes that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to DTC because the earlier cutoffs and the elimination of MMI matched reclaims should reduce potential late day reversals due to non-payment instructions from IPAs, which should in turn allow IPAs to determine before the 3 p.m. RTP deadline if there is a funding shortfall with respect to an issuer. Additionally, the changes to the Settlement Service Guide, as proposed, should serve to reinforce consistent MMI business practices by implementing earlier deadlines for issuances processing and receiver approvals. DTC expects these proposed changes to make the processing of MMI issuances and maturities more efficient. Finally, the proposed rule change is consistent with the CPSS/IOSCO Recommendations for Securities Settlement Systems applicable to DTC.

(B) Self-Regulatory Organization's Statement on Burden on Competition

DTC does not believe that the proposed rule change would impose any burden on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The proposed rule change was developed in consultation with the Task Force and other securities industry organizations. Written comments relating to the proposed rule change have not been solicited or received. DTC will notify the Commission of any written comments received by DTC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within forty-five days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to ninety days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory

issuer with respect to a particular issue of MMI securities of that issuer. Since MMI Issuing Agents and MMI Paying Agents are often a single entity, this filing refers to both entities collectively as ''IPAs.''

[7] DTC employs a four-character acronym to designate an issuer's MMI program. An issuer can have multiple acronyms. The IPA uses the acronym(s) when submitting an instruction of its refusal to pay for a given issuer's program(s).

[8] The other MMI related industry members include the Commercial Paper Issuers Working Group, which is comprised of both bank and corporate commercial paper issuers, and the Asset Managers Forum, whose whole membership is buy-side investors.

[9] The Task Force's short-term recommendations focused on addressing the credit risk exposure that IPAs face because of a lack of transparency around the amount an issuer must fund to cover its maturities. The recommendations called for funding maturities by 1 p.m. if there is a net debit and for establishing new deadlines of 1:30 p.m. for the submission of all new valued issuance to DTC and of 2:15 p.m. for receivers of new valued issuance to accept delivery. By implementing these new deadlines, the IPA should have sufficient time to calculate its exposure and if a funding shortfall exists work with the issuer to resolve the deficiency before 3 p.m., which is the deadline at DTC for the IPA to fund the maturities or to issue an RTP. For more information, see DTCC Press Release ''DTCC and SIFMA Release Task Force Report Identifying Opportunities to Mitigate Systemic and Credit Risk in Processing of Money Market Instruments'' (March 31, 2011), which can be found at *www.dtcc.com/news/press/releases/2011/dtcc_sifma_task_force_report.php*.

[10] In addition to the changes described in this filing, DTC is also making unrelated technical changes to its Settlement Service Guide in order to conform its rules to current practice and to a prior rule filing, SR–DTC–2011–01, approved in January 2011. Securities Exchange Release Act No. 34–63775 (January 26, 2011), 76 FR 5843 (February 2, 2011).

[11] This change will eliminate the ability for a receiver to ''force'' a reclaim upon an IPA close to or after the 3 p.m. RTP cutoff that would alter the amount of funding an issuer needs to provide late in the day and would also eliminate matched reclaims that currently override participant risk management controls.

[12] If a transaction is not approved in RAD by 2:45 p.m. E.T., the transaction will drop and will need to be resubmitted.

organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*) or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–DTC–2012–02 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submission should refer to File Number SR–DTC–2012–02. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Section, 100 F Street NE., Washington, DC 20549–1090, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filings will also be available for inspection and copying at the principal office of DTC and on DTC's Web site at *http://www.dtcc.com/downloads/legal/rule_filings/2012/dtc/2012-02.pdf*. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–DTC–2012–02 and should be submitted on or before April 16, 2012.

For the Commission by the Division of Trading and Markets, pursuant to delegated authority.[13]

Kevin M. O'Neill,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–66631; File No. SR–ICC–2012–03]

Self-Regulatory Organizations; ICE Clear Credit LLC; Notice of Filing of Proposed Rule Change to Its Risk Model To Reduce the Current Level of Risk Mutualization Among Its Clearing Participants and To Modify the Initial Margin Risk Model so That It Is Easier for Market Participants To Measure Their Risk

March 20, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder[2] notice is hereby given that on March 8, 2012, ICE Clear Credit LLC (''ICC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared primarily by ICC. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The purpose of the proposed rule change (*i.e.,* modifications to the ICC risk model) is to (1) reduce the current level of risk mutualization among ICC's clearing participants (Modification #1) and (2) modify the initial margin risk model approach in a manner that will make it easier for market participants to measure their risk (Modification #2).

As discussed in more detail in Item II below, Modification #1 reduces the level of default resources held in the mutualized ICC guaranty fund and significantly increases the level of resources held in initial margin. Modification #2 modifies the initial margin risk model by removing the conditional Recovery Rate stress-scenarios and adding a new Recovery Rate sensitivity component that is computed by considering changes in Recovery Rate assumptions that impact the Net Asset Value of the portfolio.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, ICC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. ICC has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of these statements.[3]

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The counterparty risk brought to ICC by any of its clearing participants is ''collateralized'' in the first instance by the clearing participant counterparty through its initial margin. In the event that any defaulting clearing participant's initial margin and guaranty fund contributions are insufficient to cover its obligations, any such deficit is mutualized across all non-defaulting clearing participants through their respective guaranty fund contributions.[4] The respective initial margin contributions of non-defaulting clearing participants are *not* mutualized and would *not* be used to satisfy the deficit of another clearing participant's default.

Since its launch, ICC has maintained a very high percentage of its default resources in the mutualized guaranty fund. On average, the size of the guaranty fund has been roughly 50% of the initial margin held by ICC. Whereas, historically, traditional futures clearinghouse have maintained guaranty funds in an amount equal to roughly 5–7% of the initial margin held. In other words, at ICC, the clearing participant resources available to be mutualized in the guaranty fund versus the resources available as initial margin have been approximately ten times greater on a

[13] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The Commission has modified the text of the summaries prepared by ICC.

[4] ICC has also contributed a total of $50 million to the guaranty fund. $25 million of ICC's contribution is exposed prior to the mutualization of the non-defaulting clearing participants' contributions and the second $25 million of ICC's contribution is mutualized along with the non-defaulting clearing participants' contributions to the guaranty fund on a pro rata basis.

percentage basis than at traditional futures clearinghouses.

Modification #1 reduces the level of default resources held in the mutualized ICC guaranty fund and increases the level of resources held in initial margin (collateral).

The ICC guaranty fund is relatively much larger, as compared to traditional futures clearinghouses, in part because the guaranty fund model is currently designed to cover the uncollateralized losses that would result from the three single names that would cause the greatest losses when entering a state of default. Modification #1 incorporates into the initial margin risk model the single name that causes the greatest loss when entering a state of default (i.e., the single name that results in the greatest amount of loss when stress-tested). This change effectively collateralizes the loss that would occur from the single name that causes the greatest loss entering a state of default. Consequently, the amount of uncollateralized loss that would result from the three single names causing the greatest losses when entering a state of default is reduced, thereby reducing the amount of required guaranty fund contributions.

This change to the guaranty fund and initial margin risk model will, as noted above, result in a reduction of the guaranty fund requirements and an increase in the initial margin requirements. However, it is important to note that the decrease in the guaranty fund and the increase in initial margin requirements are not symmetrical. Instead, based upon current portfolios, for every $1 decrease to the guaranty fund there will be a corresponding increase to the initial margin requirements of approximately $5.

Modification #2 modifies the initial margin risk model by removing the conditional Recovery Rate stress-scenarios and adding a new Recovery Rate sensitivity component that is computed by considering changes in the Recovery Rate assumptions and their impact on the Net Asset Value of the Credit Default Swap portfolio. This modification will make it easier for market participants to measure their risk.

ICC believes that the proposed rule change is consistent with the requirements of Section 17A of the Act and the rules and regulations thereunder applicable to it. ICC believes that by reducing the level of default resources held in the guaranty fund and increasing the level of default resources held as initial margin and by modifying the initial margin risk model as described above, it is able to safeguard securities and funds in its custody or control or for which it is responsible.

(B) Self-Regulatory Organization's Statement on Burden on Competition

ICC does not believe the proposed rule change would have any impact, or impose any burden, on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments relating to the proposed rule change have not been solicited or received. ICC will notify the Commission of any written comments received by ICC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–ICC–2012–03 on the subject line.

Paper Comments

Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–ICC–2012–03. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Section, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filings will also be available for inspection and copying at the principal office of ICC and on ICC's Web site at *https://www.theice.com/publicdocs/regulatory_filings/ICEClearCredit_030812.pdf.*

All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ICC–2012–03 and should be submitted on or before April 16, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[5]

Kevin O'Neill,

Deputy Secretary.

[FR Doc. 2012–7206 Filed 3–23–12; 8:45 am]

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–66629; File No. SR–ICEEU–2012–05]

Self-Regulatory Organizations; ICE Clear Europe Limited; Notice of Filing of Proposed Rule Change To Amend the ICE Clear Europe CDS Procedures, Finance Procedures, and Rules With Respect to the Calculation and Payment of Interest on Mark-To-Market Margin on CDS Transactions

March 20, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder[2] notice is hereby given that on March 12, 2012, ICE Clear Europe Limited (''ICE Clear Europe'') filed with the Securities

[5] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared primarily by ICE Clear Europe. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

ICE Clear Europe proposes rule and CDS procedural amendments that are intended to modify the terms of the calculation and payment of interest on mark-to-market margin for CDS transactions. The amendments would provide further detail for calculation of interest on mark-to-market margin for CDS at the position level, but would not change the overall calculation of that interest. The amendments would also move payment of such interest from a monthly to a daily basis.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, ICE Clear Europe included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. ICE Clear Europe has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of these statements.[3]

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

As noted above, the proposed rule changes consist of operational changes to the Rules, CDS Procedures and Finance Procedures ICE Clear Europe has consulted with its CDS Risk Committee, which supports the proposed amendment.

ICE Clear Europe submits proposed amendments to its CDS Procedures, Finance Procedures and Rules in relation to the calculation and payment of interest on the mark-to-market margin for CDS transactions on a daily basis. The amendments also clarify, consistent with ICE Clear Europe's current practice, mark-to-market margin and variation margin may be required to be provided by the clearing member to the clearing house or vice versa.

ICE Clear Europe proposes to update Parts 1 and 3 of its CDS Procedures to state more clearly the daily calculation of interest on mark-to-market margin for CDS transactions and to provide further detail about such calculations. The new definitions of ''Daily Aggregate MTM Interest Amount,'' ''Mark-to-Market Interest'' and ''Mark-to-Market Margin Balance'' and the provisions of Part 3 of the CDS Procedures reflect these changes. ''Daily Aggregate MTM Interest Amount'' means for any Clearing Member for a currency on any day the sum of the Mark-to-Market Margin Balances in such currency for that day in respect of that Clearing Member. The Daily Aggregate MTM Interest Amount will be determined separately in respect of the Clearing Member's Proprietary Account and any relevant customer account. Where the Daily Aggregate MTM Interest Amount is positive, it will be owed by ICE Clear Europe to the relevant Clearing Member; where it is negative, the relevant Clearing Member will owe the absolute value of the Daily Aggregate MTM Interest Amount to ICE Clear Europe. ''Mark-to-Market Interest'' will mean interest calculated daily in accordance with the market convention for the relevant currency by applying the applicable overnight rate. ''Mark-to-Market Margin Balance'' will mean the sum of all Mark-to-Market Margin delivered up to, but excluding that day, by the relevant Clearing Member in respect of such CDS Contract to ICE Clear Europe less all Mark-to-Market Margin delivered up to, but excluding that day, by ICE Clear Europe in respect of such CDS Contract to such Clearing Member, as determined at the close of business on such day. Pursuant to the amendments to Section 3.1 of the CDS Procedures and 6.11(h)(iv) of the Finance Procedures, interest on Mark-to-Market Margin will be payable on a daily, rather than a monthly basis, although the interest calculation is substantially unchanged.

ICE Clear Europe believes that the proposed rule change is consistent with the requirements of Section 17A of the Act[4] and the rules and regulations thereunder applicable to ICE Clear Europe because it amends rules and procedures which allow ICE Clear Europe to effectively manage risk. As such, it assures the safeguarding of securities and funds, which are in the custody or control of ICE Clear Europe or for which it is responsible.

(B) Self-Regulatory Organization's Statement on Burden on Competition

ICE Clear Europe does not believe the proposed rule and procedural changes would have any impact, or impose any burden, on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments relating to the proposed rule change have not been solicited or received. ICE Clear Europe will notify the Commission of any written comments received by ICE Clear Europe.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*) or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–ICEEU–2012–05 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–ICEEU–2012–05. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/*

[3] The Commission has modified the text of the summaries prepared by ICE Clear Europe.

[4] 15 U.S.C. 78q–1.

rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Section, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filings will also be available for inspection and copying at the principal office of ICE Clear Europe and on ICE Clear Europe's Web site at *https://www.theice.com/publicdocs/regulatory_filings/ICE_Clear_Europe_PAI_and_MTMM_Proposed_Changes.pdf*.

All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ICEEU–2012–05 and should be submitted on or before April 16, 2012.

For the Commission by the Division of Trading and Markets, pursuant to delegated authority.[5]

Kevin O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–66627; File No. SR–NYSEARCA–2012–18]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Proposed Rule Change To List and Trade Shares of the APMEX Physical—1 oz. Gold Redeemable Trust Pursuant to NYSE Arca Equities Rule 8.201

March 20, 2012.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (the ''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on March 5, 2012, NYSE Arca, Inc. (the ''Exchange'' or ''NYSE Arca'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange proposes to list and trade shares of the APMEX Physical—1 oz. Gold Redeemable Trust (the ''Trust'') pursuant to NYSE Arca Equities Rule 8.201. The text of the proposed rule change is available at the Exchange, the Commission's Public Reference Room, and *www.nyse.com*.

II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to list and trade Units (''Units'') of the Trust under NYSE Arca Equities Rule 8.201.[4] Under NYSE Arca Equities Rule 8.201, the Exchange may propose to list and/or trade pursuant to unlisted trading privileges (''UTP'') ''Commodity-Based Trust Shares.''[5] The Commission has previously approved listing on the Exchange under NYSE Arca Equities Rule 8.201 shares of the ETFS Gold Trust [6], as well as the Sprott Physical Gold Trust.[7] In addition, the Commission has approved listing on the Exchange of streetTRACKS Gold Trust and iShares COMEX Gold Trust.[8] Prior to their listing on the Exchange, the Commission approved listing of the streetTRACKS Gold Trust on the New York Stock Exchange (''NYSE'') and listing of iShares COMEX Gold Trust on the American Stock Exchange LLC.[9]

[7] Securities Exchange Act Release No. 61496 (February 4, 2010), 75 FR 6758 (February 10, 2010) (SR–NYSEArca–2009–113).

[8] *See* Securities Exchange Act Release Nos. 56224 (August 8, 2007), 72 FR 45850 (August 15, 2007) (SR–NYSEArca-2007–76) (approving listing on the Exchange of the streetTRACKS Gold Trust); 56041 (July 11, 2007), 72 FR 39114 (July 17, 2007) (SR–NYSEArca-2007–43) (order approving listing on the Exchange of iShares COMEX Gold Trust).

[9] *See* Securities Exchange Act Release Nos. 50603 (October 28, 2004), 69 FR 64614 (November 5, 2004) (SR–NYSE–2004–22) (order approving listing of streetTRACKS Gold Trust on NYSE); 51058 (January 19, 2005), 70 FR 3749 (January 26, 2005) (SR–Amex–2004–38) (order approving listing of iShares COMEX Gold Trust on the American Stock Exchange LLC).

APMEX Precious Metals Management Services, Inc. is the manager of the Trust (''Manager''),[10] Computershare Trust Company of Canada is the trustee of the Trust (''Trustee''),[11] and RBC Dexia Investor Services (''RBC Dexia'') Trust is the custodian of the Trust (''Custodian'') [12] and the valuation agent for the Trust (''Valuation Agent'').[13]

According to the Registration Statement, the investment objective of the Trust is to invest and hold substantially all of its assets in 1 oz. gold coins. The assets of the Trust will consist of 1 oz. American Gold Eagle bullion coins and 1 oz. Canadian Gold Maple Leaf bullion coins, although the Trust is also permitted to purchase 1 oz. gold bullion bars and rounds. The Trust seeks to provide a secure, convenient and exchange-traded investment alternative for investors interested in holding 1 oz. gold coins. The Trust believes that investing in 1 oz. gold coins has several advantages over investing in bullion, including (i) 1 oz. gold coins contain a known quantity of gold that is guaranteed by the government issuing them, whereas gold bullion has no such guarantee; (ii) it is a crime to tamper with 1 oz. gold coins, so those receiving them have more confidence as to the amount of gold the coin contains; (iii) because the amount of gold contained in each unit is small (1 oz.), redemptions for the underlying precious metal can be done at lower amounts than similar investments in gold bullion; and (iv) if an investor chooses to redeem the investor's interests in the Trust, the investor would receive 1 oz. gold coins, the value of which is known since the precious metals it contains are of a known and fixed quantity, as opposed to bullion, the value of which would have to be re-determined for the benefit of a transferee when the investor wanted to transfer it. The Trust does not anticipate making regular cash distributions to unitholders. The Trust is neither an investment company registered under the Investment Company Act of 1940 [14] nor a commodity pool for purposes of the Commodity Exchange Act.[15]

The Exchange represents that the Units satisfy the requirements of NYSE Arca Equities Rule 8.201 and thereby qualify for listing on the Exchange.[16]

Operation of the Gold Bullion Market

According to the Registration Statement, the global gold market is influenced by several industries, organizations and activities which may be categorized as banking, governmental, mining, manufacturing and investment. For example:

- Multi-national bullion banks provide a variety of bullion-related products and services to the global gold market, including physical purchases and sales, gold leasing, hedging and gold deposits.
- Governments, through central bank activities for each nation, buy, sell and hold gold reserves.
- Mining companies produce gold directly and combine with other companies that produce gold as a by-product and companies that are scrap merchants and gold recyclers to provide a supply of gold.
- Manufacturers which use gold in the process of making or constructing a final product, including products in the industrial community, electronic products, dental applications and jewelry, combine to provide demand for gold.
- Investment activities of individuals, corporations, pooled accounts, exchange traded funds and other investment oriented trading activity combine to provide demand for gold.

Gold can be purchased in a physical form in almost every country in the world. The most popular forms of gold ownership include coins, most commonly in one ounce gold coins of a known fineness, struck by sovereign governments including the United States, Canada, South Africa, Australia, Austria and others, along with bars and rounds also commonly containing one ounce or less in a known or expressed fineness, provided by major gold refiners including Johnson & Matthey, Produits Artistiques Métaux Précieux, Credit Suisse and others. Physical gold can be purchased in the United States through most precious metal or coin dealers and over the Internet, while in Europe and other parts of the world, purchases can also be made through banks and other financial institutions.

Physical gold is paid at the time of delivery and generally the prices track the world price of gold directly plus a small premium for manufacturing and distribution costs. The owner of the gold has a responsibility to store and insure the gold, but that is at the discretion of the owner. Private depositories and bank safe deposit vaults are available for annual fees.

Sources of gold supply include both mine production and recycling of existing previously mined gold. Gold mine production constitutes the largest portion of gold supplied into the market annually. Gold scrap, from jewelry and other manufactured products, is the second largest source of annual gold supply. Although many central banks have recently been purchasing gold rather than selling, central bank sales have historically accounted for a significant supply of gold coming into the marketplace.

[10] The Manager is a Delaware corporation and is a wholly-owned subsidiary of Apmex, Inc. (formerly known as American Precious Metals Exchange, Inc.) (the ''parent company''). The parent company is an Internet-based company that sells a selection of precious metals in bar and coin form to the public, primarily in the United States. The Manager is responsible for the day-to-day activities and administration of the Trust. The Manager manages, or causes to be managed at the expense of the Trust, the Trust pursuant to the management agreement, as authorized under the amended and restated trust agreement. Additional details regarding the Manager are set forth in the Registration Statement.

[11] The Trustee is a trust company existing under the federal laws of Canada. The Trustee holds title to the Trust's assets and has exclusive authority over the assets and affairs of the Trust. The Trustee has a fiduciary responsibility to act in the best interest of the unitholders. Additional details regarding the Trustee are set forth in the Registration Statement.

[12] RBC Dexia is a trust company existing under the federal laws of Canada, and is a jointly-owned subsidiary of the Royal Bank of Canada and Dexia N.V./S.A. RBC Dexia is affiliated with a broker-dealer. RBC Dexia has represented to the Exchange that it has put in place and will maintain the appropriate information barriers and controls between itself and the broker dealer affiliate so that the broker dealer affiliate will not have access to information concerning the composition and/or changes to the Trust's holdings that are not available on the Trust's Web site. The Custodian will act as custodian for the assets that the Trust owns and will appoint a gold custodian as sub-custodian to hold the 1 oz. gold coins, as described below. The Custodian is responsible for the property of the Trust (cash, cash equivalents (as described below) and gold coins) that the Custodian, its affiliates or appointed sub-custodians directly hold. The Bank of Nova Scotia, a sub-custodian of RBC Dexia, will act as gold custodian for the 1 oz. gold coins that the Trust owns. The Custodian is responsible for and bears the risk of loss of, and damage to, the Trust's 1 oz. gold coins that it deposits with the Bank of Nova Scotia (the ''Gold Custodian''), regardless of whether they are actually in possession of the gold custodian, subject to certain limitations based on events beyond the control of the Custodian. The Manager, with the consent of the Trustee, may determine to change the custodial arrangements of the Trust. The Trust represents that the agreement with the Custodian does not limit the options the Custodian may use for storage, although the Custodian must comply with the law and regulations as promulgated by the federal government of Canada and the Province of Ontario. Currently, the Custodian has decided to store the gold with the Bank of Nova Scotia which bank attests that it meets all applicable legal and regulatory requirements. Additional details regarding the Custodian and the gold custodian are set forth in the Registration Statement.

[13] The Trust's Valuation Agent will calculate the value of the net assets of the Trust on a daily basis and reconciles all purchases and redemptions of Units to determine the net asset value (''NAV''), as described further below.

[14] 15 U.S.C. 80a–1.

[15] 17 U.S.C. 1 [sic].

[16] With respect to application of Rule 10A–3 (17 CFR 240.10A–3) under the Act, the Trust relies on the exemption contained in Rule 10A–3(c)(7).

Mine production includes gold produced from a primary or a secondary deposit. For the five years ended December 31, 2010, gold from net mining activity (gold from mining producers less hedging by producers) has been relatively stable at a level of between approximately 2,031 metric tons and approximately 2,686 metric tons per year. Notwithstanding this steady production, this supply represents only approximately 58% to 63% of the total annual demand for gold. During the seven quarters ended September 30, 2011, with rising prices and, accordingly, greater incentive for mining, net mining activity is providing from 57% to 75% of the total demand for gold.

According to the Registration Statement, central banks, as well as other governmental agencies, have historically retained gold as a strategic asset. However, since 1989, the governmental segment has been a net seller of gold to the private sector until the fourth quarter of 2010. For the five years ended December 31, 2010, central bank sales of gold have declined from approximately 370 metric tons in 2006, or approximately 10% of total annual supply of 3,574 metric tons, turning to negative supply, or otherwise a factor in demand, to approximately 77 metric tons in 2010, a significant turnaround from a source of supply to a source of demand. In the seven quarters ended September 30, 2011, central bank sales have provided a source of demand, not a source of supply, except for the fourth quarter of 2010, ranging from the provision of demand of as much as approximately 148 metric tons in the third quarter of 2011, to a swing as a source of supply of approximately 18 metric tons in the fourth quarter of 2010. Overall for 2010, central banks provided a net of approximately 77 metric tons of demand, not supply, in the global market.

According to the Registration Statement, as a result of the swing from net seller in 2006 to a net buyer in 2010, these central banks have ceased providing a supply of gold to the market and have become a consumer of gold in the market. This dramatic shift may have significant impact on supply and demand relationships in the future.

Industrial gold demand includes production for electronic devices, dental applications and other uses. Gold has manufacturing properties that include malleability, resistance to corrosion and conductivity that make the metal ideal for a variety of electronic components such as smartphones and notebooks and in emerging technology such as nanoparticles. During the five years ended December 31, 2010, industrial demand has been as high as 466 metric tons per year to as low as 410 metric tons per year and has represented as much as 13% of total annual demand and as low as 11% of total annual demand. For the seven quarters ended September 30, 2011, industrial demand has increased from 114 metric tons in the first quarter of 2010 to 120 metric tons in the third quarter of 2011, with a high of 120 metric tons in the third quarters of 2010 and 2011.

Gold jewelry continues to be the primary source of gold demand worldwide, although in 2009, institutional demand exceeded jewelry demand. India is the most significant market for gold jewelry demand followed by China, the United States and Saudi Arabia. For the five years ended December 31, 2010, jewelry demand has been between 50% and 69% of the total annual demand. For the seven quarters ended September 30, 2011, jewelry demand has varied from 418 metric tons in the second quarter of 2010 to 558 metric tons in the first quarter of 2011. As a portion of total demand during the seven quarters ended September 30, 2011, jewelry has represented between 38% and 60% of total demand.

Retail and institutional investment demand includes government gold coin production, medals and other coin and bar production, gold bar hoarding, increases in gold on deposit for exchange traded funds and other gold fund investments and other physical investment demand. For the five years ended December 31, 2010, investment demand has grown from 830 metric tons in 2006 to 1,518 metric tons in 2010. During the seven quarters ended September 30, 2011, investment demand has fluctuated from 248 metric tons in the first quarter of 2010 to a high of 575 metric tons in the second quarter of 2010. For the seven quarters ended September 30, 2011, investment demand has provided from 27% to 52% of total demand.

Gold is traded around the world daily on a 24 hour basis. Gold can be owned directly or indirectly in several ways and traded in several different markets depending on the form of gold ownership or rights to own the underlying gold.

Determining Value of Gold Coins

According to the Registration Statement, the Valuation Agent will determine the fair market value of the 1 oz. American Gold Eagle bullion coins [17] and the 1 oz. Canadian Gold Maple Leaf bullion coins [18] by using the closing price information provided by Bloomberg Finance LP. The closing price of each coin is separately recognized by Bloomberg as COINGEAG and COINGCML, respectively, determined by the mid-point between the high bid and low ask for that coin on the applicable date.[19] Bloomberg's quotations are based on information provided by the Certified Coin Exchange. The Certified Coin Exchange is an electronic exchange for coins that obtains bid and ask information from its member dealers, of which there are more than 500, that post over 100,000 bid and ask prices on a wide variety of coins, including the 1 oz. American Gold Eagle and the 1 oz. Canadian Gold Maple Leaf, at a given time. To the extent that the Trust holds 1 oz. gold bars or rounds, the fair market value is equal to the market value of 1 oz. of gold in the current market, which the Trust will obtain from Bloomberg.

1 oz. gold coins are manufactured and distributed by the United States Mint and the Royal Canadian Mint.[20] Both of these mints offer the 1 oz. gold coins at a price equal to the value of 1 oz. of gold plus a premium. The premium is a percentage of the value of the then applicable price of 1 oz. of gold, and such amount is intended to cover the cost of manufacturing and certain other distribution costs. This premium is set by the respective mints and generally does not change substantially, although

[17] The American Eagle Gold Bullion Coin was authorized by the Bullion Coin Act of 1985 and recorded under United States Code, Title 31, Subtitle IV, Chapter 51, Subchapter II, Section 5112.

[18] The Canadian Gold Maple Leaf is the official gold bullion coin of Canada and is struck by the Royal Canadian Mint and enabled under the Royal Canadian Mint Act, Revised Statutes of Canada 1985, c.-R–9, as amended. The objectives of the Royal Canadian Mint are ''to mint coins in anticipation of profit and to carry out other related activities.'' The Royal Canadian Mint has all the powers of a natural person. The Royal Canadian Mint is a Schedule III–Part II for profit Crown corporation under the Financial Administration Act and operates under the general direction of its board of directors. The Royal Canadian Mint reports to the Canadian Parliament through the Minister of Transport, Infrastructure and Communities.

[19] Information relating to gold coin prices is updated by Bloomberg each business day as of 4:30 p.m. Eastern time.

[20] According to the Registration Statement, the American Gold Eagle and the Canadian Gold Maple Leaf, are two of the most recognized forms of gold in the world. These 1 oz. gold coins are struck by the United States and Canadian Governments so that there are a sufficient number of coins available to meet the demand for them, and are backed by the full faith and credit of the respective countries as to the quality of the coins. These 1 oz. gold coins are primarily distributed through qualifying financial institutions and large bullion dealers that meet the criteria of the respective issuing countries.

the price of the 1 oz. of gold changes with market conditions.

Each of the mints offers the 1 oz. gold coins to a group of authorized distributors, which are approved by the respective mint.[21] Each of the mints has established a set of criteria that must be met by prospective and current authorized distributors. The authorized distributors for the United States Mint include eight companies, of which three are publicly traded banks, four are units of publicly traded companies, and one is a private company.[22] There are six authorized distributors for the Royal Canadian Mint, of which one is a unit of a publicly traded bank, three are units of publicly traded companies and two are private companies.[23]

Based on the supply chain from the respective mints, the authorized distributors set their prices based on current market conditions, creating a spread between the purchase price of the 1 oz. gold coins from the mints and the selling price of such distributors with such selling price based on current market demand. Since the market value of the 1 oz. gold coins are primarily based on the price of 1 oz. of gold, and, further, since all of the coins from the respective mints are identical, the selling price of all the authorized distributors is substantially similar in what is a competitive commodity market. Generally, these authorized distributors (or ''primary dealers'') offer the 1 oz. gold coins to wholesalers and to larger retail sellers.

The Trust will hold substantially all of its assets in the 1 oz. American Gold Eagle bullion coin and the 1 oz. Canadian Gold Maple Leaf bullion coin.[24]

The United States Mint charges the authorized purchasers a premium of 3% over the price of gold on the 1 oz American Gold Eagle. The Royal Canadian Mint does not disclose or publish the premium for the 1 oz. Gold Maple Leaf.[25]

Each of the mints has established a set of criteria that must be met by prospective and current authorized distributors. The United States Mint publishes the application to become an authorized purchaser online at *http://www.usmint.gov/consumer/index.cfm?action=AmericanEagles*, while the Royal Canadian Mint does not publish any of its criteria.

According to the Registration Statement, the correlation of the market value of the 1 oz. American Gold Eagle coin to the gold spot, as reported by Bloomberg Finance L.P., for the period from January 2009 to August 2011 as of the last trading day each month, is 0.978. The correlation of the market value of the 1 oz. Canadian Gold Maple Leaf coin to the gold spot, as reported by Bloomberg Finance L.P., for the period from January 2009 to August 2011 as of the last trading day each month, is 0.976. The data provided by Bloomberg Finance L.P. for the value of the 1 oz. American Gold Eagle Coin and the 1 oz. Canadian Gold Maple Leaf Coin is the same data that will be used by the Trust to calculate the NAV.

Commodity Exchanges

There are several commodity exchanges around the world that provide the ability to purchase a contract for delivery of a fixed amount of gold in a specified purity, or fineness, with delivery at a specific time in the future. Commodity exchange contracts can be satisfied either financially or by physical delivery. The current delivery month contract trades at a price that approximates the current value of the underlying amount of gold while future delivery months trade at a premium to the current delivery month. Generally, the longer the time until the contract delivery month, the higher the premium per ounce of gold the contract trades relative to the current delivery month. Because the contracts expire and must be satisfied either financially or by physical delivery, there is some action required by the contract owner every month for the current contract.

Gold Company Stocks

Stock exchanges around the world trade the equities of gold mining companies. These publicly traded gold mining companies may or may not have profitable operations and may or may not have ownership or rights to gold mines. The gold mines in which the gold mining companies have exploration rights may or may not be producing gold. The public disclosure of the details and explanations of the operations of the gold mining companies that trade on the exchanges vary in each country and in each trading exchange.

Gold Derivatives

There are several worldwide exchanges that trade gold derivatives. Gold derivatives include options to purchase or sell gold, forwards and other forms of trading rights to buy or sell gold. Such gold derivatives usually carry a fixed price of gold at which the gold must be bought or sold and have a tenor, or fixed timeframe when the right to buy or sell expires. Settlement of the derivative trade is most often completed financially and no physical gold is generally ever bought, sold or delivered. The owner of a derivative holds a right to buy or sell gold and not the physical gold and prices at which these derivatives trade are not directly related to the price of gold, but trade at prices that include the price of gold, the premium of the option, the remaining time before expiration of the option and other factors. Gold futures are traded on the COMEX, an affiliate of the Chicago

[21] The Trust deems authorized distributors to be those entities that have met the criteria established by the U.S. Mint and the Royal Canadian Mint, respectively, in their sole discretion, for the purposes of recognition as a buyer directly from such mint in order to distribute the products of the respective mint into the marketplace. These criteria include financial experience, operations and other criteria, that would be satisfactory to such mint.

[22] Authorized distributors of U.S. gold bullion coins are required to meet specified qualification criteria relating to experience as market-maker in gold coins, tangible net worth and audit by an independent certified public accounting firm. See ''Procedures to Qualify for Bulk Purchase of Gold Bullion Coins'', available at *http://www.usmint.gov/consumer/GoldAPRequirements.pdf*. The authorized distributors of American Gold Eagles for the United States Mint are published and known to be as follows: A–Mark Precious Metals, Scotia Mocatta, MTB, Prudential Securities, Coins 'N' Things, Commerzbank International, Deutsche Bank, and Tanaka Kinkinzoku.

[23] Although the Royal Canadian Mint does not publicize the requirements to become an authorized distributor or the authorized distributors themselves, the Manager believes that the following entities are authorized distributors of the Canadian Maple Leaf for the mint: A–Mark Precious Metals, Scotia Mocatta, MTB, Prudential Securities, Coins 'N' Things, and Dillon Gage.

[24] According to the Registration Statement, the American Gold Eagle coin contains one troy ounce of gold and, along with other alloys, uses the durable 22-karat standard (0.9167 fine gold or similar) for gold coinage. Each coin contains the stated amount of pure gold, plus small amounts of silver and copper alloys, added for increased hardness and durability. They are struck to the U.S. Mint's exacting standards for quality. Each one troy ounce coin must contain one troy ounce of pure gold, must weigh 1.0909 troy ounces, must have a diameter of 32.70 millimeters and must be 2.87 millimeters thick. The American Gold Eagle is required, by law, to be struck from newly mined sources of gold in the United States. The Canadian Gold Maple Leaf coin contains one troy ounce of gold with a 24-karat fineness of 0.9999. The coins are guaranteed for their weight, purity and fineness by the Government of Canada. The coin has a diameter of 30 millimeters and is 2.8 millimeters thick.

[25] Neither the United States Mint nor the Royal Canadian Mint sells the American Gold Eagle or the Canadian Maple Leaf directly to the public. Although the Web sites of the respective mints (the United States Mint at *http://www.usmint.gov/mint_programs/american_eagles/index.cfm?Action=american_eagle_gold* and the Royal Canadian Mint at *http://www.mint.ca/store/mint/about-the-mint/bullion-1300002*) discuss the 1 oz. gold coins manufactured by the respective mints, there is no opportunity to purchase directly from the mints. The United States Mint offers a listing of retailers by state and the Royal Canadian Mint offers a form to complete in order to identify a retailer. Neither of the mints offers a list of companies that are authorized purchasers from the respective mint and neither of the mints offers any explanation for premiums or pricing.

Mercantile Exchange, Inc., and the Tokyo Commodity Exchange.[26]

Gold Funds

There are several gold funds operating around the world with the majority of the funds traded on public exchanges in the form of open or closed end funds, or alternatively, in exchange traded funds. These publicly traded funds are a form of asset backed securities where the owner of the security holds an undivided interest in the pool of gold that the public fund holds. Generally, the public funds hold gold in safekeeping, and the value of the securities is directly related to the value of the gold that the public fund holds. However, there can be some trading premium or discount to the value of the underlying gold based on current market conditions, the need for liquidity by the owners of the public funds, temporary imbalances of buy or sell orders for the securities, tax treatments of the public funds, or other factors. Generally, the interest in the public funds is bought or sold through brokerage firms with official access to the exchanges on which the securities of the public funds trade.

Operation of the Trust

According to the Registration Statement, the Trust will not hold or trade in commodity futures contracts regulated by the Commodity Exchange Act, as administered by the U.S. Commodity Futures Trading Commission (''CFTC''). According to the Registration Statement, the Trust is not a commodity pool for purposes of the Commodity Exchange Act,[27] and none of the Manager, the Trustee or the underwriters is subject to CFTC regulation as a commodity pool operator or a commodity trading advisor in connection with the Units.

The Trust intends to invest in long-term holdings of 1 oz. gold coins but intends to hold highly liquid investments (consisting of short term certificates of deposit or any U.S. Government Security) or cash [sic] an amount equal to approximately 3% of its total net assets generally to pay expenses and cash redemptions. The Trust does not intend to speculate in gold. The Trust may be required to sell some of its 1 oz. gold coins from time to time in order to replenish the amount held in cash. The Trust is authorized to issue an unlimited number of Units.

Except with respect to cash and highly liquid investments that the Trust will hold to pay expenses and anticipated redemptions, the Trust expects to own only 1 oz. gold coins. While the Trust, pursuant to its investment guidelines (''Investment Guidelines''), will be permitted to invest up to 20% of its assets in securities other than 1 oz. gold coins, the Manager intends to invest and hold approximately 97% of the total net assets of the Trust in 1 oz. gold coins.[28]

The Manager will not buy and sell 1 oz. gold coins for the Trust through its current parent company, APMEX Precious Metals Exchange, Inc., of which the Manager's officers and directors are officers, or its affiliates.

To purchase all of the 1 oz. gold coins pursuant to the Trust's investment guidelines using the initial public offering proceeds, the Manager will negotiate on behalf of the Trust for multiple transactions with certain authorized distributors; all of such distributors are independent of the Manager and any affiliate of the parent company. These negotiations and related transactions will include the pricing of the 1 oz. gold coins, the proposed terms of payment and certain delivery requirements in each transaction for the 1 oz. gold coins to be received at the gold custodian.[29] For each transaction, the Manager expects that the price per coin for the specified number of coins in the order will be quoted and offered by the distributors at a fixed amount over the price of gold per ounce on a date certain in the future as published by London Gold Market Fixing, or the London PM Fix, although the Manager may use other processes to establish a fair, competitive market price and related terms.

The process of determining the worldwide price of gold occurs twice daily in London, once in the morning and once in the afternoon, by a committee of five internationally recognized bullion dealers, all of which are members of the London Bullion Market Association. Once the Manager identifies an offer of price and terms as acceptable for a transaction, it will prepare a purchase order for the transaction that specifies the Trust as the buyer and the seller as the identified distributor and will set forth in reasonable detail the price and terms. The Manager will sign the purchase order on behalf of the Trust and deliver it to the selling distributor. In accordance with the terms of the purchase order, funds will be delivered to the selling distributor directly from the Trust. As the physical delivery of the 1 oz. gold coins is completed at the gold custodian, a representative of the Manager will be present. At delivery, the Manager will inspect the 1 oz. gold coins and complete a random review of the count and authenticity of the gold content. Once the Manager is satisfied with the completeness and accuracy of the delivery of the 1 oz. gold coins, the gold custodian will put the 1 oz. gold coins in storage and provide a written report to the Custodian of the details of such receipt.

Secondary Market Trading

The Units may trade in the secondary market on the Exchange at prices that are lower or higher relative to their NAV per Unit. The amount of the discount or premium in the trading price relative to the NAV may be influenced by non-concurrent trading hours between the COMEX, which is the U.S. exchange on which gold for physical delivery is traded, and NYSE Arca and the Toronto Stock Exchange (''TSX''). While the Units will trade on NYSE Arca and the TSX until 4 p.m. Eastern time, liquidity in the global gold market will lessen after the close of the COMEX at 1:30 p.m. Eastern time. As a result, during this time, trading spreads, and the resulting premium or discount to the NAV may widen.

Trust Expenses

The Trust pays the Manager a monthly management fee. Fees payable to the Manager are calculated and accrued daily and will be paid monthly in arrears. Except as otherwise described in the Registration Statement, the Trust is responsible for all costs and expenses incurred in connection with

[26] For additional information regarding the gold bullion market, gold futures exchanges, and regulation of the global gold market, see Securities Exchange Act Release No. 59895 (May 8, 2009), 74 FR 22993 (May 15, 2009) (SR–NYSEArca–2009–40) (order approving Exchange listing and trading of the ETFS Gold Trust).

[27] 7 U.S.C. 1 *et seq.*

[28] The Trust's Investment Guidelines provide that the Trust will invest in and hold a minimum of 80% of the total net assets of the Trust in 1 oz. gold coins and hold no more than 20% of the total net assets of the Trust in cash (such as interest-bearing accounts and short-term certificates of deposit) or any U.S. Government Security, as defined below (except during the 90-day period following the closing of the Trust's initial public offering or additional offerings or prior to the distribution of assets of the Trust, at which times the Trust may hold more than 20% of the total net assets of the Trust in cash (such as interest-bearing accounts and short-term certificates of deposit) and U.S. Government Securities). U.S. Government Security means any direct obligations of or obligations guaranteed as to principal or interest by the United States, or securities issued or guaranteed by corporations in which the United States has a direct or indirect interest which shall have been designated by the Secretary of the Treasury, pursuant to section 3(a)(12) of the Act, as exempted securities for the purposes of the Exchange Act.

[29] This procedure will not apply continually and will apply only with respect to the initial public offering, and if the Trust engages in other public offerings for the purchase of gold using the initial public offering proceeds.

the ongoing operation and administration of the Trust including, but not limited to: The fees and expenses payable to and incurred by the Trustee, the Manager, any investment manager, the Custodian, any sub-custodians, including the gold custodian, the registrar and transfer agent, the Valuation Agent and the independent review committee; acquisition, transaction and handling costs for the 1 oz. gold coins (other than the redemption expenses); and storage fees for the 1 oz. gold coins.

Initial Public Offering and Redemption of Units

The Trust will offer at a minimum, 1,000,000 Units in its initial public offering. Each Unit will represent an equal, undivided ownership interest in the net assets of the Trust attributable to the Units. The Trust may not issue additional Units following the completion of this offering (i) unless the per Unit offering price, after deducting underwriting fees, commissions and offering expenses, will not yield proceeds less than the NAV per Unit, as determined on the business day prior to the pricing of the units to be sold in the offering, or (ii) except by way of Unit distribution in connection with an income distribution.

Unitholders may redeem their Units on a weekly basis, as described below.

Redemption of Units for 1 oz. Gold Coins

Subject to the terms of the amended and restated trust agreement, a unitholder may redeem Units at its option for 1 oz. gold coins on each Thursday. Unitholders who redeem their Units for 1 oz. gold coins are entitled to receive a redemption price equal to 100% of the aggregate NAV of the redeemed Units determined at 4 p.m., Eastern time, on the Thursday on which NYSE Arca and/or the TSX is open for trading for the week in respect of which the redemption request is processed, or the weekly redemption date and time, less the redemption expenses, or the gold redemption amount. Such redemption requests must be for a minimum redemption amount of at least $10,000 (the ''gold redemption minimum'').

A unitholder that owns a sufficient number of Units (a number of Units equal to the gold redemption minimum) who desires to exercise his, her or its redemption privileges for 1 oz. gold coins must do so by instructing the unitholder's broker, who must be a direct or indirect participant of Depository Trust Company in the United States (''DTC''), or CDS Clearing and Depository Services, Inc. in Canada (''CDS''), to deliver to the registrar and transfer agent, on behalf of the unitholder a written notice (the ''gold redemption notice'') of the unitholder's intention to redeem Units for 1 oz. gold coins. The Trust's registrar and transfer agent must receive a gold redemption notice no later than 4 p.m., Eastern time, on the third day on which NYSE Arca or the TSX is open for trading prior to the weekly redemption date and time. The Trust will process any gold redemption notice that it receives after that time on the next weekly redemption date, following the date on which the unitholder gives timely notice.

A common carrier will deliver the 1 oz. gold coins to be delivered to a unitholder as a result of a redemption of Units, and the shipping provider will fully insure the 1 oz. gold coins during transit. The Trust will engage the shipping service provider in connection with a redemption. The 1 oz. gold coins can be delivered to any physical address (subject to approval by the Trust). In the event that a redeeming unitholder does not provide an acceptable physical address for delivery of its 1 oz. gold coins in its gold redemption notice, such unitholder may elect to either have up [sic] its 1 oz. gold coins delivered to the Manager for pickup by the unitholder at the office of the Manager or redeem its Units for cash as described below. If the unitholder requests that the 1 oz. gold coins be delivered to the Manager, the risk of loss transfers to the unitholder upon delivery to the Manager. Once the Trust places the 1 oz. gold coins representing the redeemed Units with the shipping service provider, which will fully insure the shipment, the Trust will have completed its responsibilities with respect to the redemption and the redeeming unitholder will bear the risk of loss of, and damage to, such 1 oz. gold coins and seek any redress for any loss or damage from the shipping service provider or the insurance provider, as the case may be. The shipping service provider will receive 1 oz. gold coins in connection with a redemption of Units approximately seven business days after the redemption is processed by the registrar and transfer agent.

Redemption of Units for Cash

According to the Registration Statement, subject to the terms of the amended and restated trust agreement, a unitholder may redeem Units at its option for cash on a monthly basis. Units redeemed for cash will receive a redemption price equal to 95% of the lesser of (i) the volume-weighted average trading price of the Units traded on NYSE Arca or, if trading has been suspended on NYSE Arca, the trading price of the Units traded on the TSX, for the last five days on which the respective exchange is open for trading during the month in which the redemption request is processed by the registrar and transfer agent, and (ii) the NAV of the redeemed Units as of 4 p.m., Eastern time, on the last day of the month on which NYSE Arca is open for trading during the month in which the redemption request is processed (in each case, less any applicable taxes). A redeeming unitholder will receive cash redemption proceeds approximately three business days after the end of the month in which the redemption notice is processed. The Trust will retain the remaining 5% of the value of the Units.

The Trust's registrar and transfer agent must receive a redemption notice no later than 4 p.m., Eastern time, on the 15th day of the month in order for the Manager to process such redemption notice that month or, if such day is not a business day, then on the immediately following day that is a business day. The Manager will process any redemption notice to redeem Units for cash that it receives after such time in the next month.

According to the Registration Statement, the Trust may suspend the right of unitholders to request a redemption of their Units or postpone the date of delivery or payment of the redemption proceeds (whether 1 oz. gold coins and/or cash, as the case may be) for any period during which the Trust determines that conditions exist which render impractical the sale of assets of the Trust or which impair the ability of the Trust or the Valuation Agent to determine the value of the assets of the Trust and the NAV or the redemption amount for the Units. Pursuant to Sections 5.7(2) and 5.7(3) of National Instrument 81–102, the Trust must apply to the Ontario Securities Commission, the securities regulatory authority for the jurisdiction in which the head office of the Trustee is located, for approval to suspend redemptions and must concurrently file a copy of the application with the securities regulatory authority in each of the other Canadian jurisdictions in which the Units will be offered. The Trust may suspend redemptions only after the application is approved by the Ontario Securities Commission and has not been disallowed by any of the other relevant Canadian jurisdictions.[30]

[30] Other Canadian securities regulatory authorities which must be notified are as follows:

In the event of any such suspension, the Trust will issue a press release, and publicly file such press release with the Commission via the Edgar system, with the TSX and with the Canadian securities regulatory authorities on SEDAR, announcing the suspension and will advise all agents of the Trust, as applicable. The suspension may apply to all requests for redemption received prior to the suspension, but as for which payment has not been made, as well as to all requests received while the suspension is in effect. All unitholders making such requests will be advised of the suspension and that the redemption will be effected at a price determined on the first valuation date that the value of the net assets of the Trust per Unit is calculated following the termination of the suspension. All such unitholders will have, and will be advised that during such suspension of redemptions that they have, the right to withdraw their requests for redemption. The suspension will terminate in any event on the first business day on which the condition giving rise to the suspension has ceased to exist or when the Trust has determined that such condition no longer exists, provided that no other condition under which a suspension is authorized then exists, at which time the Trust will issue a press release announcing the termination of the suspension and will advise all agents of the Trust, as applicable. Subject to applicable Canadian and U.S. securities laws, any declaration of suspension made by the Trust will be conclusive.

During any period in which the right of unitholders to request a redemption of their Units for 1 oz. gold coins and/or cash is suspended, the Trust will direct the Trust's Valuation Agent to suspend the calculation of the value of the net assets of the Trust and the NAV. During any such period of suspension, the Trust will not issue or redeem any Units.

Termination Events

The Trust does not have a fixed termination date but will dissolve and be subsequently terminated in the event that:

- There are no Units outstanding;
- The Trustee resigns or is removed and no successor trustee is appointed within the time limit prescribed in the amended and restated trust agreement;
- The Manager resigns and no successor manager is appointed and approved by unitholders within the time limit prescribed in the amended and restated trust agreement;
- The Manager is, in the opinion of the Trustee, in material default of its obligations under the amended and restated trust agreement and such default continues for 120 days from the date that the Manager receives notice of such default from the Trustee and no successor manager has been appointed by the unitholders;
- The Manager has been declared bankrupt or insolvent or has entered into liquidation or winding-up, whether compulsory or voluntary (and not merely a voluntary liquidation for the purposes of amalgamation or reconstruction), and no successor manager has been appointed by the unitholders within 90 days from such date;
- The Manager makes a general assignment for the benefit of its creditors or otherwise acknowledges its insolvency, and no successor manager has been appointed by the unitholders within 90 days of such date; or
- The assets of the Manager have become subject to seizure or confiscation by any public governmental authority, and no successor manager has been appointed by the unitholders within 90 days from such date.

In addition, the Trustee may at any time terminate and dissolve the Trust if, in the opinion of the Trustee, after consulting with the Manager and the independent review committee, the value of the net assets of the Trust has been reduced such that it is no longer economically feasible to continue the Trust and would be in the best interests of the unitholders to terminate the Trust, by giving each holder of Units at the time at least 90 days' notice. To the extent such termination in the discretion of the Manager may involve a matter that would be a ''conflict of interest matter'' as set forth in applicable Canadian laws, the Manager will refer the matter to the independent review committee established by the Manager for its recommendation. In connection with the termination of the Trust, the Trust will, to the extent possible, convert its assets to cash and, after paying or making adequate provision for all of the Trust's liabilities and expenses, distribute the net assets of the Trust to unitholders, on a pro rata basis, as soon as practicable after the termination date.

Valuation of Gold and Definition of NAV

The Valuation Agent will determine the value of the net assets of the Trust and the NAV on each business day, unless the Trust determines that its assets cannot be valued as frequently as a result of the occurrence of a force majeure event, such as a war, earthquake, hurricane, civil disturbance or terrorist act. The value of the net assets of the Trust as of the valuation time on each business day will be the amount obtained by deducting from the aggregate fair market value of the assets of the Trust as of such date an amount equal to the value of the liabilities of the Trust (excluding all liabilities represented by outstanding Units, if any) as of such date. The NAV will be determined by dividing the value of the net assets of the Trust on a date by the total number of Units then outstanding on such date. Registration or transfers of the Units may be made through the book-based system of CDS and/or DTC, each of which hold the Units on behalf of its participants (i.e., brokers), which in turn may hold the Units on behalf of their customers.

Intraday Indicative Value

The Trust Web site will provide an intraday indicative value (''IIV'') per share for the Units, as calculated by a third party financial data provider during the Exchange's Core Trading Session (9:30 a.m. to 4 p.m. Eastern time).[31] The IIV will be calculated by:

1. Subtracting the closing spot price of gold for the prior business day from the current applicable spot price of gold (the ''Spread'');
2. Multiplying the Spread by the aggregate number of the Trust's 1 oz. gold coins for the prior business day (the ''Adjustment'');
3. Dividing the Adjustment by the aggregate number of units of the Trust outstanding for the prior business day (the ''Per Unit Adjustment''); and
4. Adding the Per Unit Adjustment to the NAV per Unit of the Trust for the prior business day.

Availability of Information

The Web site for the Trust, which the Trust will launch upon the closing of the initial public offering, will contain the following information, on a per Unit basis, for the Trust:

(a) The midpoint of the bid-ask price at the close of trading in relation to the NAV as of the time the NAV is

British Columbia Securities Commission, Alberta Securities Commission, Saskatchewan Securities Commission, Manitoba Securities Commission, Autorite des marches financiers, New Brunswick Securities Commission, Nova Scotia Securities Commission, Securities Commission of Newfoundland and Labrador, and Prince Edward Island Securities Office, Office of the Attorney General.

[31] The IIV on a per Unit basis disseminated during the Core Trading Session should not be viewed as a real-time update of the NAV, which will be calculated once a day.

calculated (''Bid/Ask Price''), and a calculation of the premium or discount of such price against such NAV; and

(b) Data in chart format displaying the frequency distribution of discounts and premiums of the Bid/Ask Price against the NAV, within appropriate ranges, for each of the four previous calendar quarters. The Web site for the Trust will also provide the Trust's prospectus, as well as the two most recent reports to stockholders.

The Trust Web site also will provide the last sale price of the Units as traded in the U.S. market, as well as a breakdown of the holdings of the Trust by coin type.

Currently, the Consolidated Tape Plan does not provide for dissemination of the spot price of a commodity, such as gold, over the Consolidated Tape. However, there will be disseminated over the Consolidated Tape the last sale price for the Units, as is the case for all equity securities traded on the Exchange. In addition, there is a considerable amount of gold price and gold market information available on public Web sites and through professional and subscription services. The IIV relating to the Units will be widely disseminated by one or more major market data vendors at least every 15 seconds during the Core Trading Session.[32]

Investors may obtain on a 24-hour basis gold pricing information based on the spot price for an ounce of gold from various financial information service providers, such as Reuters and Bloomberg. Reuters and Bloomberg provide at no charge on their Web sites delayed information regarding the spot price of gold and last sale prices of gold futures, as well as information about news and developments in the gold market. Reuters and Bloomberg also offer a professional service to subscribers for a fee that provides information on gold prices directly from market participants. An organization named EBS provides an electronic trading platform to institutions such as bullion banks and dealers for the trading of spot gold, as well as a feed of live streaming prices to Reuters and Moneyline Telerate subscribers. Gold coin price information is widely available for free from many precious metals dealers. For example, it is free at *www.APMEX.com* with a delay of several minutes. Investors also can obtain gold coin pricing information on the Certified Coin Exchange Web site at w*ww.certifiedcoinexchange.com.*

Complete real-time data for gold futures and options prices traded on the COMEX are available by subscription from Reuters and Bloomberg. The NYMEX also provides delayed futures and options information on current and past trading sessions and market news free of charge on its Web site. There are a variety of other public Web sites providing information on gold, ranging from those specializing in precious metals to sites maintained by major newspapers, such as The Wall Street Journal. In addition, the London AM Fix and London PM Fix are publicly available at no charge at *www.thebulliondesk.com.*

The Trust's daily (or as determined by the Manager in accordance with the amended and restated trust agreement) NAV is posted on the Trust's Web site as soon as practicable. The Exchange will provide on its Web site (*www.nyx.com*) a link to the Trust's Web site. In addition, the Exchange will make available over the Consolidated Tape quotation information, trading volume, closing prices and NAV for the Units from the previous day.

Criteria for Initial and Continued Listing

The Trust will be subject to the criteria in NYSE Arca Equities Rule 8.201(e) for initial and continued listing of the Units.

It is anticipated that a minimum of 1,000,000 Units will be required to be outstanding at the start of trading. The minimum number of Units required to be outstanding is comparable to requirements that have been applied to previously listed shares of the Sprott Physical Gold Trust.[33] The Exchange believes that the anticipated minimum number of Units outstanding at the start of trading is sufficient to provide adequate market liquidity.

Trading Rules

The Exchange deems the Units to be equity securities, thus rendering trading in the Fund subject to the Exchange's existing rules governing the trading of equity securities. Trading in the Units on the Exchange will occur in accordance with NYSE Arca Equities Rule 7.34(a). The Exchange has appropriate rules to facilitate transactions in the Units during all trading sessions. As provided in NYSE Arca Equities Rule 7.6, Commentary .03, the minimum price variation (''MPV'') for quoting and entry of orders in equity securities traded on the NYSE Arca Marketplace is $0.01, with the exception of securities that are priced less than $1.00 for which the MPV for order entry is $0.0001.

With respect to trading halts, the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Units. Trading on the Exchange in the Units may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Units inadvisable. These may include: (1) The extent to which conditions in the underlying gold market have caused disruptions and/or lack of trading, or (2) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present. In addition, trading in Units will be subject to trading halts caused by extraordinary market volatility pursuant to the Exchange's ''circuit breaker'' rule.[34] The Exchange will halt trading of the Units on the Exchange if trading in the Units is halted on TSX and in the event the Trust directs the Trust's Valuation Agent to suspend the calculation of the value of the net assets of the Trust and the NAV.

Surveillance

The Exchange intends to utilize its existing surveillance procedures applicable to derivative products (including Commodity-Based Trust Shares) to monitor trading in the Units. The Exchange represents that these procedures are adequate to properly monitor Exchange trading of the Units in all trading sessions and to deter and detect violations of Exchange rules and applicable federal securities laws.

NYSE Arca Equities Rule 8.201 sets forth certain restrictions on ETP Holders acting as registered Market Makers in the Units to facilitate surveillance. Pursuant to NYSE Arca Equities Rule 8.201(g), an ETP Holder acting as a registered Market Maker in the Units is required to provide the Exchange with information relating to its trading in the underlying gold, related futures or options on futures, or any other related derivatives. Commentary .04 of NYSE Arca Equities Rule 6.3 requires an ETP Holder acting as a registered Market Maker, and its affiliates, in the Units to establish, maintain and enforce written policies and procedures reasonably designed to prevent the misuse of any material nonpublic information with respect to such products, any components of the related products, any physical asset or commodity underlying the product, applicable currencies, underlying indexes, related futures or

[32] Currently, it is the Exchange's understanding that several major market data vendors display and/or make widely available IIVs published on CTA or other data feeds.

[33] *See* note 7, *supra.*

[34] *See* NYSE Arca Equities Rule 7.12.

options on futures, and any related derivative instruments (including the Units).

As a general matter, the Exchange has regulatory jurisdiction over its ETP Holders and their associated persons, which include any person or entity controlling an ETP Holder. A subsidiary or affiliate of an ETP Holder that does business only in commodities or futures contracts would not be subject to Exchange jurisdiction, but the Exchange could obtain information regarding the activities of such subsidiary or affiliate through surveillance sharing agreements with regulatory organizations of which such subsidiary or affiliate is a member.

The Exchange's current trading surveillance focuses on detecting securities trading outside their normal patterns. When such situations are detected, surveillance analysis follows and investigations are opened, where appropriate, to review the behavior of all relevant parties for all relevant trading violations. Also, pursuant to NYSE Arca Equities Rule 8.201(g), the Exchange is able to obtain information regarding trading in the Units and the underlying gold, gold futures contracts, options on gold futures, or any other gold derivative, through ETP Holders acting as registered Market Makers, in connection with such ETP Holders' proprietary or customer trades through ETP Holders which they effect on any relevant market. In addition, the Exchange may obtain trading information via the Intermarket Surveillance Group (''ISG'') from other exchanges who are members of the ISG, including the COMEX.[35]

The Exchange also has a general policy prohibiting the distribution of material, non-public information by its employees.

Information Bulletin

Prior to the commencement of trading, the Exchange will inform its ETP Holders in an Information Bulletin of the special characteristics and risks associated with trading the Units. Specifically, the Information Bulletin will discuss the following: (1) The procedures for purchases and redemptions of Units; (2) NYSE Arca Equities Rule 9.2(a), which imposes a duty of due diligence on its ETP Holders to learn the essential facts relating to every customer prior to trading the Units; (3) the requirement that ETP Holders deliver a prospectus to investors purchasing newly issued Units prior to or concurrently with the confirmation of a transaction; (4) the possibility that trading spreads and the resulting premium or discount on the Units may widen as a result of reduced liquidity of gold trading during the Core and Late Trading Sessions after the close of the major world gold markets; and (5) trading information. For example, the Information Bulletin will advise ETP Holders, prior to the commencement of trading, of the prospectus delivery requirements applicable to the Trust. The Exchange notes that investors purchasing Units directly from the Trust will receive a prospectus. ETP Holders purchasing Units from the Trust for resale to investors will deliver a prospectus to such investors.

In addition, the Information Bulletin will reference that the Trust is subject to various fees and expenses described in the Registration Statement. The Information Bulletin will also reference the fact that there is no regulated source of last sale information regarding physical gold, that the Commission has no jurisdiction over the trading of gold as a physical commodity, and that the CFTC has regulatory jurisdiction over the trading of gold futures contracts and options on gold futures contracts.

The Information Bulletin will also discuss any relief, if granted, by the Commission or the staff from any rules under the Act.

2. Statutory Basis

The basis under the Act for this proposed rule change is the requirement under Section 6(b)(5)[36] that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the Shares will be listed and traded on the Exchange pursuant to the initial and continued listing criteria in NYSE Arca Equities Rule 8.201. The Exchange has in place surveillance procedures that are adequate to properly monitor trading in the Shares in all trading sessions and to deter and detect violations of Exchange rules and applicable federal securities laws. The Exchange may obtain information via ISG from other exchanges that are members of ISG or with which the Exchange has entered into a comprehensive surveillance sharing agreement, including COMEX.

The proposed rule change is designed to promote just and equitable principles of trade and to protect investors and the public interest in that there is a considerable amount of gold price and gold market information available on public Web sites and through professional and subscription services. Investors may obtain on a 24-hour basis gold pricing information based on the spot price for an ounce of gold from various financial information service providers. Complete real-time data for gold futures and options prices traded on the COMEX are available by subscription from Reuters and Bloomberg. In addition, the London AM Fix and London PM Fix are publicly available at no charge at *www.thebulliondesk.com.* The Trust's daily (or as determined by the Manager in accordance with the amended and restated trust agreement) NAV is posted on the Trust's Web site as soon as practicable. The market value of each coin is separately recognized by Bloomberg as COINGEAG and COINGCML, respectively. Bloomberg's quotations are based on information provided by the Certified Coin Exchange. The Trust's Web site will provide an IIV per share for the Units, as calculated by a third party financial data provider during the Exchange's Core Trading Session. The Trust's Web site will also provide the Trust's prospectus, as well as the two most recent reports to stockholders. The Exchange will provide on its Web site a link to the Trust's Web site. In addition, the Exchange will make available over the Consolidated Tape quotation information, trading volume, closing prices and NAV for the Units from the previous day.

The proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest in that it will facilitate the listing and trading of an additional type of exchange-traded product that will enhance competition among market participants, to the benefit of investors and the marketplace. As noted above, the Exchange has in place surveillance procedures relating to trading in the Shares and may obtain information via ISG from other exchanges that are members of ISG or with which the Exchange has entered into a comprehensive surveillance sharing agreement. In addition, as noted above, investors will have ready access to information regarding gold pricing and gold futures information.

[35] A list of ISG members is available at *www.isgportal.org.* The Investment Industry Regulatory Organization of Canada is a member of ISG.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml);* or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSEARCA–2012–18 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEARCA–2012–18. This file number should be included on the subject line if email is used.

To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street, NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEARCA–2012–18, and should be submitted on or before April 16, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[37]

Kevin M. O'Neill,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–66625; File No. SR–MSRB–2012–04]

Self-Regulatory Organizations; Municipal Securities Rulemaking Board; Notice of Filing of Proposed Rule G–43, on Broker's Brokers; Proposed Amendments to Rule G–8, on Books and Records, Rule G–9, on Record Retention, and Rule G–18, on Execution of Transactions; and a Proposed Interpretive Notice on the Duties of Dealers That Use the Services of Broker's Brokers

March 20, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Exchange Act'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on March 5, 2012, the Municipal Securities Rulemaking Board (''Board'' or ''MSRB'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the MSRB. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The MSRB is filing with the SEC a proposed rule change consisting of (i) proposed MSRB Rule G–43 governing the municipal securities activities of broker's brokers and certain alternative trading systems (''Proposed Rule G–43''), (ii) proposed amendments to MSRB Rule G–8 (on recordkeeping by broker's brokers and certain alternative trading systems), MSRB Rule G–9 (on record retention), and MSRB Rule G–18 (on agency trades and trades by broker's brokers) (collectively, the ''Proposed Amendments''); and (iii) a proposed interpretive notice on the duties of brokers, dealers, and municipal securities dealers (''dealers'') that use the services of broker's brokers (the ''Proposed Notice''). The MSRB requests that the proposed rule change be made effective six months after approval by the Commission.

The text of the proposed rule change is available on the MSRB's Web site at *www.msrb.org/Rules-and-Interpretations/SEC-Filings/2012-Filings.aspx*, at the MSRB's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the MSRB included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The MSRB has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The MSRB decided to consider additional rulemaking concerning broker's brokers and the dealers that use their services due to the important role that broker's brokers play in the provision of secondary market liquidity for retail investors in municipal

[37] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

securities. In 2004,[3] the MSRB issued a notice that, among other things, addressed the role of broker's brokers in large intra-day price differentials in the sale of retail size blocks of securities.

''Transaction Chains''

A frequent scenario in large intra-day price differentials occurs when a single block of securities moves through a ''chain'' of transactions during the day. The securities involved in these scenarios often are infrequently traded issues with credits that are relatively unknown to most market participants. In a typical case, the transaction chain starts with a dealer buying securities from a customer, usually in a ''retail'' size block of $5,000 to $100,000. The securities are then sold through a broker's broker. Two or more inter-dealer transactions follow, with a final sale of the securities being made by a dealer to a customer. In certain cases, the difference between the price received by the selling customer and the price received by the purchasing customer is abnormally large, exceeding 10% or more. In reviewing such transaction chains, it often appears that the two dealers effecting trades with customers at each end of the chain—one dealer purchasing from a customer and the other selling to a customer—did not make excessive profits on their trades. Instead, the abnormally large intra-day price differentials can be attributed in major part to the price increases found in the inter-dealer trading occurring after the broker's broker's trade.

The MSRB deferred its rulemaking on the subject of broker's brokers until the completion of Commission and Financial Industry Regulatory Authority (''FINRA'') enforcement actions, which subsequently highlighted broker's broker activities that constitute clear violations of MSRB rules.[4]

The MSRB recognizes that some broker's brokers make considerable efforts to comply with MSRB rules. However, given the nature of the rule violations brought to light by Commission and FINRA enforcement actions and the important role of broker's brokers in the provision of secondary market liquidity for retail investors, the MSRB determined that additional guidance and/or rulemaking concerning the activities of broker's brokers was warranted.

Summary of Proposed Rule G–43

The role of the broker's broker is that of intermediary between selling dealers and bidding dealers. Proposed Rule G–43(a) would set forth the basic duties of a broker's broker to such dealers.[5] Proposed Rule G–43(a)(i) would incorporate the same basic duty currently found in Rule G–18. That is, a broker's broker would be required to make a reasonable effort to obtain a price for the dealer that was fair and reasonable in relation to prevailing market conditions. The broker's broker would be required to employ the same care and diligence in doing so as if the transaction were being done for its own account.

Proposed Rule G–43(a)(ii) would provide that a broker's broker that undertook to act for or on behalf of another dealer in connection with a transaction or potential transaction in municipal securities could not take any action that would work against that dealer's interest to receive advantageous pricing. Under Proposed Rule G–43(a)(iii), a broker's broker would be presumed to act for or on behalf of the seller[6] in a bid-wanted, unless both the seller and bidders agreed otherwise in writing in advance of the bid-wanted.

Proposed Rule G–43(b) would create a safe harbor. The safe harbor would provide that a broker's broker that conducted bid-wanteds in the manner described in Proposed Rule G–43(b) would satisfy its pricing duty under Proposed Rule G–43(a)(i).[7] The provisions of the safe harbor are designed to increase the likelihood that the highest bid in the bid-wanted is fair and reasonable.

Proposed Rule G–43(b)(i) and (ii) would require a broker's broker to disseminate a bid-wanted widely and, in the case of securities of limited interest, to make a reasonable effort to reach dealers with specific knowledge of the issue or known interest in comparable securities.

Proposed Rule G–43(b)(iii) would require that each bid-wanted have a deadline for the acceptance of bids to assist in measuring compliance with the safe harbor.

Proposed Rule G–43(c)(i)(F) would require broker's brokers that availed themselves of the safe harbor to use predetermined parameters designed to identify possible off-market bids in the conduct of bid-wanteds. For example, the predetermined parameters could be based on yield curves, pricing services, recent trades reported to the MSRB's Real-Time Trade Reporting System (RTRS), or bids submitted to a broker's broker in previous bid-wanteds or offerings. Broker's brokers would be required to test the predetermined parameters periodically to see whether they were achieving their designed purpose.

Proposed Rule G–43(b)(iv) would permit a broker's broker that availed itself of the safe harbor to contact the high bidder in a bid-wanted about its bid price prior to the deadline for bids without the seller's consent, if the bid was outside of the predetermined parameters described above and the broker's broker believed that the bid might have been submitted in error. If the high bid was within the predetermined parameters, yet the broker's broker believed it might have been submitted in error (*e.g.,* because it significantly exceeded the cover bid), the broker's broker would be required to obtain the seller's consent before contacting the bidder. In all events, under Proposed Rule G–43(c)(i)(D), the broker's broker would be required to notify the seller if the high bidder's bid or the cover bid had been changed prior to execution and provide the seller with the original and changed bids.

Under Proposed Rule G–43(b)(v), a broker's broker would be required to notify the seller if the highest bid received in a bid-wanted was below the predetermined parameters and receive the seller's oral or written consent

[3] MSRB Notice 2004–3 (January 26, 2004).

[4] *FINRA* v. *Associated Bond Brokers, Inc.* Letter of Acceptance, Waiver and Consent No. E052004018001 (November 19, 2007) (settlement in connection with alleged violation of Rule G–17 by broker's broker due to lowering the highest bids to prices closer to the cover bids without informing either bidders or sellers); *FINRA* v. *Butler Muni, LLC* Letter of Acceptance, Waiver and Consent No. 2006007537201 (May 28, 2010) (settlement in connection with alleged violation of Rule G–17 by broker's broker due to failure to inform the seller of higher bids submitted by the highest bidders); *D. M. Keck & Company, Inc. d/b/a Discount Munibrokers, et al.,* Exchange Act Release No. 56543 (September 27, 2007) (settlement in connection with alleged violation of Rules G–13 and G–17 by broker's broker for dissemination of fake cover bids to both seller and winning bidder; also settlement in connection with alleged violation of Rules G–14 and G–17 by broker's broker due to payment to seller of more than highest bid on some trades in return for a price lower than the highest bid on other trades, in each case reporting the fictitious trade prices to the MSRB's Real-Time Trade Reporting System); *Regional Brokers, Inc. et al.,* Exchange Act Release No. 56542 (September 27, 2007) (settlement in connection with alleged violation of Rules G–13 and G–17 by broker's broker for dissemination of fake cover bids to both seller and winning bidder; broker's broker allegedly violated Rule G–17 by accepting bids after bid deadline); *SEC* v. *Wolfe & Hurst Bond Brokers, Inc. et al.,* Exchange Act Release No. 59913 (May 13, 2009) (settlement in connection with alleged violation of Rule G–17 by broker's broker for dissemination of fake cover bids to both seller and winning bidder and for lowering of the highest bids to prices closer to the cover bids without informing either bidders or sellers). These cases also involved violations of Rules G–8, G–9, and G–28.

[5] The duties of a broker's broker to any customers (as defined in Rule D–9) it may have are addressed under Rule G–18 (in the case of agency transactions) and Rule G–30 (in the case of principal transactions).

[6] Under Proposed Rule G–43(d)(ix), ''seller'' would mean the selling dealer, or potentially selling dealer, in a bid-wanted or offering and would not include the customer of a selling dealer.

[7] A broker's broker that did not avail itself of the safe harbor in section (b) would still be subject to sections (a), (c), and (d) of Proposed Rule G–43.

before proceeding with the trade. This required notice would have the effect of notifying the selling dealer that the high bid in a bid-wanted might be off-market. The selling dealer would then need to satisfy itself that the high bid was, in fact, fair and reasonable, if it wished to purchase the securities from its customer at that price as a principal.

Proposed Rule G–43(c) is designed to ensure that bid-wanteds and offerings are conducted in a fair manner. Many of the requirements of Proposed Rule G–43(c) would address behavior that would also be a violation of Rule G–17 (*e.g.,* the prohibitions on providing bidders with ''last looks,'' encouraging off-market bids, engaging in self-dealing, changing bid or cover prices without permission, and failing to inform the seller of the highest bid), although the requirements of Proposed Rule G–43(c) would not supplant those of Rule G–17. Other requirements of Proposed Rule G–43(c) are designed to notify sellers and bidders of the manner in which bid-wanteds and offerings will be conducted and disclosing potential conflicts of interest on the part of broker's brokers (*e.g.,* when a broker's broker has its own customers or when it allows an affiliate to enter bids). Proposed Rule G–43(c) would apply to the conduct of all bid-wanteds and offerings by broker's brokers, regardless of whether the broker's broker had elected to satisfy its Proposed Rule G–43(a)(i) pricing duty for bid-wanteds by means of the Proposed Rule G–43(b) safe harbor. A broker's broker would be required by Proposed Rule G–43(c)(i)(G) to describe the manner in which it would satisfy its Proposed Rule G–43(a)(i) pricing obligation in the case of offerings and in the case of bid-wanteds not subject to the Proposed Rule G–43(b) safe harbor.

Proposed Rule G–43(d) would contain the definitions of terms used in Proposed Rule G–43. Under Proposed Rule G–43(d)(iii), the term ''broker's broker'' would mean a dealer, or a separately operated and supervised division or unit of a dealer, that principally effects transactions for other dealers or that holds itself out as a broker's broker, whether a separate company or part of a larger company. Certain alternative trading systems would be excepted from the definition of ''broker's broker.'' To be excepted, the alternative trading system would be required, with respect to its municipal securities activities, to utilize only automated and electronic means to communicate with bidders and sellers in a systematic and non-discretionary fashion (with certain limited exceptions), limit any customers to sophisticated municipal market professionals, and operate in accordance with most of the provisions of Proposed Rule G–43(c). In essence, an alternative trading system qualifying for the exception from the definition of ''broker's broker'' would be subject to most [8] of the requirements of Proposed Rule G–43 except the Proposed Rule G–43(a)(i) pricing obligation.

Summary of Proposed Amendments

The proposed amendments to Rule G–8 would require recordkeeping designed to assist in the enforcement of Proposed Rule G–43. Records would be required to be kept of bids, offers, changed bids and offers, the time of notification to the seller of the high bid, the policies and procedures of the broker's broker concerning bid-wanteds and offerings, and any agreements by which bidders and sellers agreed to joint representation by the broker's broker.

Proposed Rule G–8(a)(xxv)(D) would require broker's brokers to keep the following records of communications with bidders and sellers regarding possibly erroneous bids: The date and time of the communication; whether the bid deviated from the predetermined parameters and, if so, the amount of the deviation; the full name of the person contacted at the bidder; the full name of the person contacted at the seller, if applicable; the direction provided by the bidder to the broker's broker following the communication; the direction provided by the seller to the broker's broker following the communication, if applicable; and the full name of the person at the bidder, or seller, if applicable, who provided that direction.

Under Proposed Rule G–8(a)(xxv)(E), the broker's broker would be required to keep records of the date and time it notified the seller that the high bid was below the predetermined parameters; the amount by which the bid deviated from the predetermined parameters; the full name of the person contacted at the seller; the direction provided by the seller to the broker's broker following the communication; and the full name of the person at the seller who provided that direction.

Proposed Rule G–8(a)(xxv)(J) would require that each broker's broker keep a record of its predetermined parameters, its analysis of why those predetermined parameters were reasonably designed to identify most bids that might not represent the fair market value of municipal securities that were the subject of bid-wanteds to which the parameters were applied, and the results of the periodic tests of such predetermined parameters required by Proposed Rule G–43(c)(i)(F).

Proposed Rule G–8(a)(xxvi) would impose comparable recordkeeping requirements on alternative trading systems.

In the case of broker's brokers or alternative trading systems that are separately operated and supervised divisions of other dealers, separately maintained or separately extractable records of the municipal securities activities of the broker's broker or alternative trading system would be required to be maintained to assist in enforcement of Proposed Rule G–43.

The proposed amendments to Rule G–9 would provide for the retention of the records described above for six years.

The proposed amendment to Rule G–18 would eliminate duplication, as the deleted text would be moved to Proposed Rule G–43(a)(i).

Summary of Proposed Notice

The Proposed Notice would discuss the duties of dealers that use the services of broker's brokers.

Under the Proposed Notice, selling dealers would be reminded that the high bid obtained in a bid-wanted or offering is not necessarily a fair and reasonable price and that such dealers have an independent duty under Rule G–30 to determine that the prices at which they purchase municipal securities as a principal from their customers are fair and reasonable. Selling dealers would be cautioned that any direction they provided to broker's brokers to ''screen'' other dealers from their bid-wanteds or offerings could affect whether the high bid represented a fair and reasonable price and should be limited to valid business reasons, not anti-competitive behavior. Selling dealers would be urged not to assume that their customers needed to liquidate their securities immediately without inquiring as to their customers' particular circumstances and discussing with their customers the possible improved pricing benefit associated with taking additional time to liquidate their securities. The Proposed Notice also would provide that, depending upon the facts and circumstances, the use of bid-wanteds by selling dealers solely for price discovery purposes, without any intention of selling the securities through the broker's brokers might be an

[8] Such an excepted alternative trading system would not be subject to the provision of Proposed Rule G–43(c)(i)(C) concerning compensation. It would also not be subject to the requirements of Proposed Rule G–43(c)(i)(D) and (E) in recognition of the fact that much of the municipal securities trading conducted on alternative trading systems is computerized and it would be difficult for alternative trading systems to satisfy those requirements.

unfair practice within the meaning of Rule G–17.

Under the Proposed Notice, bidding dealers that submitted bids to broker's brokers that they believed were below the fair market value of the securities or that submitted ''throw-away'' bids to broker's brokers would violate MSRB Rule G–13. The Proposed Notice would provide that, while Rule G–30 provides that bidders are entitled to make a profit, Rule G–13 does not permit them to do so by ''picking off'' other dealers at off-market prices.

2. Statutory Basis

The MSRB believes that the proposed rule change is consistent with Section 15B(b)(2) of the Securities Exchange Act (''Exchange Act''), which provides that:

> The Board shall propose and adopt rules to effect the purposes of this title with respect to transactions in municipal securities effected by brokers, dealers, and municipal securities dealers and advice provided to or on behalf of municipal entities or obligated persons by brokers, dealers, municipal securities dealers, and municipal advisors with respect to municipal financial products, the issuance of municipal securities, and solicitations of municipal entities or obligated persons undertaken by brokers, dealers, municipal securities dealers, and municipal advisors.

Section 15B(b)(2)(C) of the Exchange Act, provides that the rules of the MSRB shall:

> be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in municipal securities and municipal financial products, to remove impediments to and perfect the mechanism of a free and open market in municipal securities and municipal financial products, and, in general, to protect investors, municipal entities, obligated persons, and the public interest.

The proposed rule change is consistent with Sections 15B(b)(2) and 15B(b)(2)(C) of the Exchange Act for the following reasons. Enforcement agencies have informed the MSRB that they continue to observe the same kinds of series of transactions in municipal securities that prompted the MSRB's 2004 pricing guidance. They have also informed the MSRB about their observations of other trading patterns that indicate some market participants may misuse the role of the broker's broker in the provision of secondary market liquidity and may cause retail customers who liquidate their municipal securities by means of broker's brokers to receive unfair prices. Proposed Rule G–43 is designed to improve pricing in the secondary market for retail investors in municipal securities by increasing the likelihood that bid-wanteds and offerings made through broker's brokers will result in fair and reasonable prices. It would do that by encouraging the wide dissemination of bid-wanteds to those who are likely to have interest in the securities, drawing potential below market prices to the attention of selling dealers, and discouraging the type of fraudulent and unfair conduct that may result in prices that are lower than they would otherwise have been. At the same time, Proposed Rule G–43 is structured in a manner that should not impede the operation of the secondary market for municipal securities. The MSRB has worked extensively with broker's brokers and other dealers to refine the proposed rule so that it targets abuses without reducing liquidity. The proposed amendments to Rules G–8 and G–9 would assist the Commission and FINRA in the enforcement of Rule G–43. The proposed amendment to Rule G–18 would eliminate unnecessary duplication as the broker's brokers pricing obligation would be transferred to Proposed Rule G–43. The Proposed Notice would remind dealers that use the services of broker's brokers of their own pricing obligations, as sellers and as bidders. In order for retail investors to receive fair and reasonable prices for their municipal securities, all dealers in the secondary market (whether sellers, broker's brokers, or bidders) must satisfy their pricing obligations.

B. Self-Regulatory Organization's Statement on Burden on Competition

The MSRB does not believe that the proposed rule change would impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act, since it would apply equally to all broker's brokers and all alternative trading systems would have the opportunity to qualify for the exception from the definition of ''broker's broker.'' The MSRB notes that alternative trading systems that have voice brokerage components would be subject to all of the provisions of Proposed Rule G–43 and would not be given a competitive advantage over voice brokers. The MSRB also does not believe that the provisions of the proposed rule change would be unduly burdensome to broker's brokers or would have the effect of reducing the number of broker's brokers.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

On September 8, 2011, the MSRB requested comment on a draft of the proposed rule change.[9] Comments were received from Bond Dealers of America (''BDA''); Tom Dolan (''Mr. Dolan''); Hartfield, Titus & Donnelly, LLC (''Hartfield Titus''); Knight BondPoint; Regional Brokers, Inc. (''RBI''); Securities Industry and Financial Markets Association (''SIFMA''); TMC Bonds L.L.C. (''TMC''); Vista Securities, Inc. (''Vista Securities''); and Wolfe & Hurst Bond Brokers, Inc. (''Wolfe & Hurst''). Summaries of those comments and the MSRB's responses follow.

References in this section to ''Draft Rule G–43'' and ''Draft Rule G–8(a)(xxv)'' are to the draft version of Proposed Rule G–43 and the draft amendments to Rule G–8 upon which comment was requested in MSRB Notice 2011–50. The underlined rule text in this section does not reflect amendments agreed to by the MSRB's Board that are now included in the proposed rule change. This text has been included in this filing for the convenience of the reader because a number of the sections of the draft rule were reordered in the proposed rule change, although not substantively changed.

Draft Rule G–43(a)(i): Each dealer acting as a ''broker's broker'' with respect to the execution of a transaction in municipal securities for or on behalf of another dealer shall make a reasonable effort to obtain a price for the dealer that is fair and reasonable in relation to prevailing market conditions. The broker's broker must employ the same care and diligence in doing so as if the transaction were being done for its own account.

Comments: Wolfe & Hurst argued that ''it is not feasible for a broker's broker to determine fair market value nor is this the role of a broker's broker.'' It further argued that the clients of a broker's broker, broker-dealers and bank dealers, are in a better position to make a determination as to fair market value and should therefore be responsible for making this determination, not broker's brokers.

MSRB Response: The pricing duty of a broker's broker under Draft Rule G–43(a)(i) is not new. It is the same duty as that found in existing Rule G–18. In view of the important role that a broker's broker plays in arriving at a fair and reasonable price for a retail investor

[9] MSRB Notice 2011–50 (September 8, 2011).

in the secondary market, the MSRB considers it important to reemphasize that duty by including it in a rule directed solely to broker's brokers. Draft Rule G–43 clearly spells out the duties of broker's brokers and the conduct in which they may not engage. However, the MSRB also has proposed the companion notice on the duties of dealers using the services of broker's brokers because it agrees that both sellers and bidders also play an important role in the achievement of a fair and reasonable price for retail investors.

Draft Rule G–43(a)(iii): A broker's broker will be presumed to act for or on behalf of the seller in a bid-wanted or offering, unless both the seller and bidders agree otherwise in writing in advance of the bid-wanted or offering.

Comments: SIFMA requested that the reference to offerings in Draft Rule G–43(a)(iii) be removed. In the conduct of offerings, it said that there is not, in practice, a presumption that the broker's broker is working for the seller of bonds. It agreed that the presumption is accurate in the case of bid-wanteds. SIFMA also requested that ''the requirement to obtain prior written authorization from buyers and sellers should be clarified to reflect that the authorization is not intended to be required on a transaction-by-transaction basis, and that it may be included in a customer agreement or similar terms-of-use agreement for electronic systems.'' If a transaction-by-transaction scheme was envisioned, SIFMA requested the MSRB to reconsider such an approach, as obtaining written consents in this manner would be unworkable in practice.

Hartfield Titus also suggested restricting this section to bid-wanteds. It said that broker's broker activity in offerings is not consistent with the requirement of Draft Rule G–43(a)(iii). It said that a broker's broker works for either the seller or buyer in the negotiation, depending on which side initiates the negotiation.

RBI said that Draft Rule G–43(a)(iii) should be revised to indicate the difference between ''bid-wanteds'' and ''offerings.'' It agreed that the broker's broker represents the seller in the operation of a bid-wanted auction, but did not agree that the broker's broker will always work for the seller in an ''offering'' as it represents the bidder and seller equally.

Wolfe & Hurst said that a broker's broker is a ''dual-agent for the seller and the buyer of securities.'' It stated that it is not practicable to require a broker's broker to get written consent from both the buyer and seller in advance of the bid-wanted or offering. Wolfe & Hurst suggested that the definition of a broker's broker be revised to reflect the dual nature of their business. If not modified, it suggested that the provision clarify that ''the clients of a broker's broker could consent to a dual-agency relationship either through an initial service agreement or through Terms of Use on the firm's Web site.''

MSRB Response: The MSRB agrees with the comments concerning the role of a broker's broker in an offering and has modified Proposed Rule G–43(a)(iii) to remove references to ''offerings'' and to clarify that a broker's broker may obtain the requisite agreement in a customer agreement.

Draft Rule G–43(b)(i): Unless otherwise directed by the seller, a broker's broker must make a reasonable effort to disseminate a bid-wanted or offering widely (including, but not limited to, the underwriter of the issue and prior known bidders on the issue) to obtain exposure to multiple dealers with possible interest in the block of securities, although no fixed number of bids is required.

Comments: Hartfield Titus suggested restricting this section to bid-wanteds. It said that offerings are displayed by dealers on many systems and through many broker's brokers, unlike bid-wanteds, which are usually given to one broker's broker. Therefore the requirement for disseminating an offering widely is not necessary. In bid-wanteds, there is an obligation to find the buyer, but there is no such obligation for an offering. If any such an obligation does exist, it is with the seller.

SIFMA noted that, in offerings, a broker's broker will typically approach a dealer with known interest in the securities being offered or comparable securities, rather than reaching out to a wide universe of dealers.

MSRB Response: The MSRB has modified the safe harbor of Rule G–43(b) so that it applies to bid-wanteds, but not offerings, in view of the fact that most offerings are the subject of negotiations among a limited number of parties, unlike bid-wanteds, which are generally distributed widely.

Draft Rule G–43(b)(iii), (iv), (vii), and (viii):

(iii) A broker's broker may not encourage bids that do not represent the fair market value of municipal securities that are the subject of a bid-wanted or offering.

(iv) A broker's broker may not give preferential information to bidders in bid-wanteds or offerings, including where they currently stand in the bidding process (including, but not limited to, ''last looks,'' directions to a specific bidder that it should ''review'' its bid or that its bid is ''sticking out''); provided, however, that after the deadline for bids has passed, bidders may be informed whether their bids are the high bids (''being used'') in the bid-wanteds or offerings.

(vii) A broker's broker may not change a bid without the bidder's permission or change an offered price without the seller's permission.

(viii) A broker's broker must not fail to inform the seller of the highest bid in a bid-wanted or offering.

Comments: SIFMA said Draft Rule G–43(b) includes both safe harbor provisions and anti-fraud provisions for which the failure to adhere likely would constitute violations of Rule G–17. SIFMA thus requested that Draft Rule G–43(b)(iii), (iv), (vii), and (viii) be removed and either be published as interpretations under G–17, or moved to G–43(c).

SIFMA agreed with Draft Rule G–43(b)(iv), which prohibits broker's brokers from giving preferential treatment to bidders during a bid-wanted. However, it suggested that broker's brokers be allowed to inform a bidder whether their bid is being used before a bid-wanted is completed. Wolfe & Hurst agreed with SIFMA.

Hartfield Titus suggested restricting Draft Rule G–43(b)(iv) to bid-wanteds. It said that offerings are traded through negotiation rather than an auction. It also suggested that broker's brokers ''be allowed to give a bidder information on whether their bid is being used and subsequently prohibit them from any further bidding on the item.''

TMC noted that Draft Rule G–43, by its definition, includes all of the electronic trading platforms. It said that Draft Rule G–43(b)(vii) would be meaningless as all alternative trading systems would be required to inform every registered firm that every price they post will be changed, and in multiple ways, as each recipient firm defines its own matrix. Current guidelines already prohibit unfair dealing. TMC suggested that Draft Rule G–43(b)(vii) be removed or modified to accommodate private label Web sites that allow customers and registered reps to view inventory.

MSRB Response: The MSRB agrees that Draft Rule G–43(b)(iii), (iv), (vii), and (viii) should be applicable whether or not the safe harbor is availed of by a broker's broker and has moved these provisions to Proposed Rule G–43(c). The MSRB is sensitive to the need to maintain liquidity in the secondary market for municipal securities and has,

accordingly, modified the draft rule to permit a broker's broker to tell a bidder whether its bid is being used before a bid-wanted is completed. Nevertheless, to protect against gaming of the bid-wanted process, bidders would not be permitted to change their bids (other than to withdraw them) or resubmit bids for the same bid-wanted after receiving a comment. This portion of the draft rule has been moved to Proposed Rule G–43(c), so that it is applicable whether or not the safe harbor is used. As noted above, the MSRB has removed references to offerings in Proposed Rule G–43(b) and in the comparable text moved to Proposed Rule G–43(c).

The MSRB does not agree with TMC's comment. Under the proposal, a seller's consent would be required before an offered price could be changed by a broker's broker. The same would be true for alternative trading systems excepted from the rule. However, that consent could be obtained in advance (*e.g.,* in a customer agreement).

Draft Rule G–43(b)(v): Notwithstanding subsection (a)(ii) of this rule, each bid-wanted or offering must have a deadline for the acceptance of bids, after which the broker's broker must not accept bids or changes to bids. That deadline may be either a precise (or ''sharp'') deadline or an ''around time'' deadline that ends when the high bid has been provided (or ''put up'') to the seller.

Comments: SIFMA agreed that bid-wanteds must have identifiable deadlines, but disagreed that the deadline for ''around time'' bid-wanteds should be based on when the bids are ''put up'' to the seller. SIFMA suggested that the deadline for ''around time'' bid-wanteds should be defined to occur at the time the seller informs the broker's broker that the bonds should be sold to the high bidder (when the bonds are ''marked for sale''), or when the seller informs the broker's broker that the bonds will not be sold in that bid-wanted (that the bonds ''will not trade''). If neither of these events occurs in an ''around time'' bid-wanted, it should be deemed to terminate at the end of the trading day. SIFMA said that the rule as currently drafted would have a ''detrimental effect on liquidity, especially for retail customers of the broker-dealer.''

Hartfield Titus suggested restricting Draft Rule G–43(b)(v) to apply only to bid-wanteds and not to offerings. It said that current industry practices have no time limits on offerings. Hartfield Titus agreed with SIFMA that ''the deadline for accepting bids on an 'around time' item be when the bonds are marked 'FOR SALE'.''

RBI said that the imposition of a deadline could drastically deny the retail customer from receiving the highest bid available. RBI also noted that, in MSRB Notice 2011–18 (February 24, 2011), the MSRB stated that it ''believes that most retail customers would prefer a better price to a speedy trade.'' RBI agreed with this and said the imposition of an arbitrary ''deadline'' does the opposite. ''RBI believes that any deadline that is imposed upon its ability to accept bids, especially on odd-lot bid-wanted items that are being advertised as an 'around time', will be vastly detrimental to the ability of broker's brokers to provide the best price, and therefore the best execution, for the retail seller who is trying to get the best price for their municipal bonds.'' RBI also commented that the MSRB has not provided guidelines regarding the procedures that should be taken when late, high bids are returned to the broker's broker that cannot be reported to the seller because of this ''deadline.'' Like SIFMA and Hartfield Titus, RBI proposed that instead of the bid deadline ending at the time that a bid is ''put up'' to the seller, that the bid deadline should end when the bonds are marked ''for sale.''

Wolfe & Hurst objected to Draft Rule G–43(b)(v). It said that the rule currently applies to both ''sharp'' and ''around time'' deadlines. It argued that the ''requirement restricts the broker's broker from getting the best bid for its client, which will ultimately have a negative impact on smaller retail clients and the market as a whole. Wolfe & Hurst suggested that the ''rule be modified in the case of 'around time' bid-wanteds only. Specifically, where a selling dealer requests an 'around time' deadline, the broker's broker should be permitted to accept and change bids up until the point that the trade is marked for sale. Prohibiting modification at the point where the high bid is 'put up' to the seller is restricting liquidity in the market. This rule change would be detrimental to the industry.''

MSRB Response: The MSRB's principal reason for proposing Rule G–43 was to improve the pricing received by retail investors in the secondary market. Accordingly, the MSRB has modified the deadline provisions of the safe harbor to increase the likelihood of the receipt of higher prices. Under the revision, an ''around time'' deadline would end upon the earliest of: (1) the time the seller directs the broker's broker to sell the securities to the current high bidder, (2) the time the seller informs the broker's broker that the bonds will not be sold in that bid-wanted, or (3) the end of the trading day as publicly posted by the broker's broker prior to the bid-wanted. Additionally, the deadline provisions would apply only to bid-wanteds.

Draft Rule G–43(b)(vi): If the high bid received in a bid-wanted is above or below the predetermined parameters of the broker's broker and the broker's broker believes that the bid may have been submitted in error, the broker's broker may contact the bidder prior to the deadline for bids to determine whether its bid was submitted in error, without having to obtain the consent of the seller. If the high bid is not above or below the predetermined parameters but the broker's broker believes that the bid may have been submitted in error, the broker's broker must receive the permission of the seller before it may contact the bidder to determine whether its bid was submitted in error. In all events, if a bid has been changed, the broker's broker must disclose the change to the seller prior to execution and provide the seller with the original and changed bids.

Comments: Hartfield Titus suggested that there was no need to notify the seller of all changes in bids under the safe harbor and that to do so would only delay the process. It stated that such a requirement should apply only when the safe harbor was not being used.

TMC said, ''The requirement of a broker's broker to contact a seller for permission to contact a bidder, when the bid itself is within the parameters of the safe harbor is neither practical nor realistic. A selling dealer, who is acting in the best interest of its selling client, is not likely to give such approval.'' TMC also said that ''the requirement to document the communication, the original bid, and the changed bid is superfluous and an added regulatory burden.''

BDA expressed concern that ''if a broker's broker set the parameters too broadly on the upper end, erroneous bids would not be identified, the bidder would not be notified and might, in future dealings with that broker's broker, bid more conservatively or not at all. The result would be reduced liquidity in the market and lower prices for investors. Similarly, if the broker's broker set the parameters too narrowly on the lower end, the selling broker would receive a notice and quite likely not go through with the trade, or risk litigation if it did.''

Wolfe & Hurst objected to the use of predetermined parameters for bid-wanteds. It said that erroneous bids typically occur due to human error and should not be permitted to reach the marketplace as they do not reflect an accurate bid. Wolfe & Hurst also said

that ''requiring a broker's broker to obtain written permission from the seller prior to contacting the owner of an erroneous bid may result in a distortion of the market.'' It suggested that broker's brokers be allowed to inform a bidder of ''a clearly erroneous bid without the consent of the seller and without providing the same opportunity for modification to all bidders.''

MSRB Response: By definition, ''predetermined parameters'' must be designed to identify off-market bids. Broker's brokers currently compare bids to where securities have traded before with them and where they have traded most recently, as displayed on the MSRB's Electronic Municipal Market Access (EMMA®) System.[10] Some also subscribe to pricing services. Many broker's brokers already notify sellers and bidders if they think bids may be off-market. The requirement that they establish pre-determined parameters and use them to alert sellers and bidders to possible off-market bids simply incorporates current business practice in many cases. As markets move over time, the predetermined parameters of a broker's broker may cease to be effective in identifying off-market bids. That is the purpose of the periodic testing requirement.

The concept of ''predetermined parameters'' has two purposes. First, if the high bid in a bid-wanted is below the predetermined parameters, a broker's broker using the safe harbor must notify the seller of that fact, thus alerting the seller that the bid may be off market. Second, if the high bid is outside of the parameters, the broker's broker may inquire of the bidder whether its bid was in error. Considerable abuse has occurred previously when some broker's brokers signaled to bidders that they could lower their bids to be closer to cover bids. This practice resulted in less favorable prices for retail investors. Cover bids are, therefore, under the proposal not permitted to be taken into account in the pricing parameters of a broker's broker.

The MSRB has modified Proposed Rule G–43(b)(vi) to clarify that a broker's broker need only inform the seller of changes in the winning high bidder's bids and in cover bids, rather than changes to other bids. Additionally, the MSRB has clarified that the permission of a seller to contact a bidder need not be in writing, although a broker's broker must keep a written record of such communication.

Draft Rule G–43(b)(ix): If the highest bid received in a bid-wanted is below the predetermined parameters of the broker's broker, the broker's broker must disclose that fact to the seller, in which case the broker's broker may still effect the trade, if the seller acknowledges such disclosure either orally or in writing.

Comments: TMC acknowledged the MSRB's desire to limit the number of off-market trades that result from the bid-wanted process, but said that the attempt to add written communication and/or oral confirmation will greatly reduce the efficiency and accuracy of the electronic market. TMC stated that ''(t)he fallacy of the proposal lies in the belief that a single model will be sufficient for determining reasonableness.'' TMC also noted that Draft Rule G–43(b)(ix) ''still proposes that the broker's broker provide a fair price, but the Board has relaxed the requirement to include a price band.'' TMC responded that ''its tools are designed to help with a user's valuation process, not to replace the decision maker.'' TMC said that ''recognizing that volatile periods will generate the most exceptions with any model, the burdens placed on participants to record and acknowledge price levels will be unbearable.'' TMC suggested that ''a standard of reasonable care for broker's brokers should include 'reasonable' tools to help with the decision process, but the construction of a scheme to establish value in a fragmented and diffuse market seems to be more appropriate for a position taker than for an intermediary.''

BDA also said that it is not a function of a broker's broker to determine a fair price or a range of fair prices. It also noted a practical problem if the draft rule is applied to alternative trading systems (''ATSs''). BDA suggested that ''the Proposal should not be applied to ATSs, which allow for the wide and impartial distribution of bids.''

MSRB Response: The MSRB believes that the exception for certain alternative trading systems from the definition of ''broker's broker'' in the revised rule should address TMC's and BDA's concerns.

Draft Rule G–43(c)(i)(F): [A broker's broker must adopt and comply with policies and procedures pertaining to the operation of bid-wanteds and offerings, which at a minimum:] subject to the provisions of section (b) of this rule, if applicable, prohibit the broker's broker from providing any person other than the seller (which may receive all bid prices) and the winning bidder (which may receive only the price of the cover bid) with information about bid prices, until the bid-wanted or offering has been completed, unless the broker's broker makes such information available to all market participants on an equal basis at no cost, together with disclosure that any bids may not represent the fair market value of the securities, and discloses publicly that it will make such information public.

Comments: SIFMA said Draft Rule G–43(c)(i)(F) should not apply to offerings. It also requested clarification regarding when a transaction has been completed. It suggested the appropriate point in time for the purposes of this provision should be the time at which both the purchase and sale sides of the transaction have been executed.

Hartfield Titus suggested restricting Draft Rule G–43(c)(i)(F) to apply only to bid-wanteds. It said that offer and bid information on offerings should be made available to interested parties throughout the negotiation process. Hartfield Titus also suggested that a definition of when a bid-wanted is ''completed'' be any of the following: ''1) the item traded, i.e., the sell is executed and the buy is executed; 2) the item is 'Traded Away' (it was traded by the seller to another dealer or customer); and 3) the item is identified as 'No Trade' (we are told by the seller that the item will not trade).''

MSRB Response: In response to this comment, the MSRB has removed the reference to offerings in this section of the rule and proposed a definition of when a bid-wanted will be considered ''completed'' that is consistent with Hartfield Titus' request.

Draft Rule G–43(c)(i)(G): [A broker's broker must adopt and comply with policies and procedures pertaining to the operation of bid-wanteds and offerings, which at a minimum:] if a broker's broker has customers, provide for the disclosure of that fact to both sellers and bidders in writing and provide for the disclosure to the seller if the high bid in a bid-wanted or offering is from a customer of the broker's broker.

Comments: Hartfield Titus suggested that generally disclosing that it has customers would be a sufficient way to inform its clients instead of telling them on a transaction-by-transaction basis. A general statement would help the broker's broker keep anonymity in its brokering services while informing its clients that it also brokers with sophisticated municipal market professionals.

TMC supported the notion that brokers' brokers should prominently disclose the types of firms that constitute its client base but does not agree with disclosing to a seller information about the buyer of an item at the time of trade stating this to be

[10] EMMA® is a registered trademark of the MSRB.

''unfair and against the anonymous nature of the broker's market.'' TMC said that ''[a]nonymity is an extremely important component of the utility of an intermediary (either a voice broker or an ATS) in the municipal market.'' It said that ''[a]ny regulatory requirement that would serve to compromise anonymity would be a negative development for a market that has always given participants ways to protect their identities.''

MSRB Response: The role of the broker's broker has traditionally been that of an intermediary, and the MSRB has previously said that a broker's broker has a special relationship with other dealers. Therefore, the MSRB continues to be of the view that a broker's broker should make it known to a seller if it has customers and if the high bid in a bid-wanted or offering is from a customer of the broker's broker. The MSRB has, however, modified the draft rule to clarify that the broker's broker need not disclose the name of its customer. The MSRB believes that the same concerns would exist if an affiliate of a broker's broker could bid in a bid-wanted or offering and has added comparable provisions concerning affiliates.

Draft Rule G–43(c)(i)(H): [A broker's broker must adopt and comply with policies and procedures pertaining to the operation of bid-wanteds and offerings, which at a minimum:] if the broker's broker wishes to conduct a bid-wanted in accordance with section (b) of this rule, require the broker's broker to adopt predetermined parameters for such bid-wanted, disclose such predetermined parameters in advance of the bid-wanted in which they are used, and periodically test such predetermined parameters to determine whether they have identified most bids that did not represent the fair market value of municipal securities that were the subject of bid-wanteds to which the predetermined parameters were applied.

Comments: BDA said that the requirement that the parameters be tested periodically is problematic. It stated that Draft Rule G–43(c)(i)(H) is not clear regarding what constitutes a successful test. ''If no bids exceeded the parameters, is that an indication that the parameters are correct? Or that they are too broadly set? Or does it say something about the bids.''

TMC said that ''providing users with useful market and security specific tools should suffice to satisfy the Board's desire to improve bid quality. If a firm uses the same systematic approach for each posted bid-wanted and has a set of tools that helps traders establish value, then there should be no need for a safe harbor.''

MSRB Response: If many trades were occurring at prices outside the parameters, that would be an indication that the parameters should be adjusted. A broker's broker could adjust its predetermined parameters as frequently as it considered necessary to adapt to changing markets, as long as the new parameters were disclosed in advance of use and not made applicable to bid-wanteds already under way.

Draft Rule G–43(d)(iii): ''Broker's broker'' means a dealer, or a separately operated and supervised division or unit of a dealer, that principally effects transactions for other dealers or that holds itself out as a broker's broker. A broker's broker may be a separate company or part of a larger company.

Comments: Knight BondPoint requested that the draft definition of a broker's broker be revised to clarify that ''ATS operators whose platforms operate in a manner in which subscribers electronically disseminate their bids and offers broadly to other subscribers and electronically interact with such bids and offers to consummate transactions, and which offer subscribers an automated, systematic and non-discretionary platform to conduct their bids wanted auctions—are not broker's brokers for purposes of this rule.''

BDA argued that the inclusion of ATSs within the definition of broker's broker is not warranted.

Wolfe & Hurst suggested a more detailed definition of broker's broker to include the nature and role of a broker's broker as well as the duties and responsibilities of a broker's broker. It argued that this would eliminate the need to include the phrase, ''or that holds itself out as a broker's broker'' in Draft Rule G–43(d)(iii).

TMC said that the language in Draft Rule G–43(d)(iii) on whether a firm ''holds itself out as a broker's broker'' discourages dealers from competitive (''in-comp'') bidding. TMC requested clarification regarding the following questions: (1) As a dealer's business is not usually ''principally effecting transactions for other dealers'' but for its client, would a broker-dealer be exempt from the definition or is acting like a broker's broker the equivalent of ''holds itself out as a broker's broker?'' (2) Many dealers post the same bid-wanted with multiple broker's brokers. Does the use of multiple broker's brokers create an unfair practice with respect to G–17? (3) If a dealer uses multiple brokers, should that be disclosed to the broker so that the broker can disclose that fact to potential bidders? (4) If the same bond is out for the bid with multiple broker's brokers, and the bond can only trade once, would that be viewed negatively by the regulators, barring disclosure to the marketplace? (5) If a broker's broker receives a bid-wanted that has been posted to multiple firms, does the broker need to use the same level of care as if the item were for its own account?

MSRB Response: This proposal would not require selling dealers to keep any records or discourage competitive bidding. It also would not prevent a selling dealer from posting bid-wanteds with multiple firms. The portion of the Proposed Notice on price discovery concerns a practice of some dealers of using broker's brokers to gauge the market price of securities so that they themselves may purchase the securities rather than trading them at the high bids obtained by broker's brokers. The pricing duty of a broker's broker does not depend upon whether the selling dealer has posted the bid-wanted with multiple broker's brokers.

The MSRB continues to be of the view that a function-based definition of ''broker's broker'' is appropriate, rather than a detailed list such as that proposed by Wolfe & Hurst.

The MSRB has determined that it is appropriate to except certain alternative trading systems from the definition of ''broker's broker,'' because they do not engage in the types of voice communications that have led to abuses in the past. Nevertheless, in order to qualify for the exception, under Proposed Rule G–43(d)(iii) such systems would be subject to the same prohibitions on abusive behavior to which a broker's broker would be subject.

Miscellaneous

Comments: SIFMA said that the restrictions on control of bid-wanteds by the selling dealers in the draft interpretive notice are unreasonably restrictive. It suggested that ''an appropriate standard would be to allow selling dealers discretion to control this aspect of bid-wanteds so long as they could demonstrate that any restrictions imposed were intended to benefit the selling customer, and were not intended to solely benefit the selling dealer.''

MSRB Response: The MSRB is concerned that the standard for permissible screening suggested by SIFMA would be difficult to employ and to enforce. It also has the potential for resulting in a less favorable price for the customer than had the screening not occurred. Moreover, if a selling dealer's customer were to request expressly that the dealer screen certain bidders from the bid-wanted or offering for its

securities, such screening would not be requested for competitive reasons.

Comments: Mr. Dolan asked whether a broker-dealer using an electronic platform is permitted to screen its competitor's bonds from the platform, thereby encouraging its customers to purchase securities from the dealer's inventory (i.e., whether the MSRB had a best execution rule).

MSRB Response: The MSRB is concerned that certain dealers may be refusing to show their customers municipal securities offered by their competitors at more favorable prices than those the dealers place on the same securities in their inventory. At this time, the MSRB has no best execution rule comparable to that of the Financial Industry Regulatory Authority. As long as the price paid by the customer is fair and reasonable, there is no requirement under MSRB rules that a dealer seek out the most favorable price for its customer. The MSRB will take this comment under advisement as it continues to review its rules.

Comments: Vista Securities asked, ''If there is a material change in the description of a bond being advertised for the bid, * * * is not the item as incorrectly advertised simply invalid and any bids null and void? As opposed to the broker's broker not being 'prohibited' from notifying all bidders about material changes in a bid-wanted item, should not the broker's broker be obliged to notify all bidders that the item was incorrectly described, all bids are void, and have the seller resubmit the item for the bid if the seller so chooses? Can a potential buyer of any security, municipal or otherwise, be held to his/her bid if the security is advertised incorrectly in a material way? If an intermediary in the transaction becomes aware of the problem, should not the intermediary be obliged to halt the process?''

MSRB Response: If a broker's broker learned of material changes in a bid-wanted item it would be required by MSRB Rule G–17 to notify all bidders and accept changed bids.

Draft Rule G–8(a)(xxv)(A): [A broker's broker (as defined in Rule G–43(d)(iii)) shall maintain the following records:] (A) All bids to purchase municipal securities, and offers to sell municipal securities, that it receives, together with the time of receipt.

Comments: SIFMA said that the requirements under Draft Rule G–8(a)(xxv)(A) are not workable or necessary for offerings. It said that applying this requirement will impose a significant recordkeeping burden on broker's brokers, and is not warranted. It requested clarification if Draft Rule G–8(a)(xxv)(A) is intended to apply only to the initial time an offering is given to a broker's broker.

Hartfield Titus said that the majority of negotiations on municipal offerings are performed through ''voice brokering.'' Price may change many times. It suggested that the time and price record be limited to when the offering is first received, when it is updated for display or distribution, and displaying the offering as it was given to the brokers' broker or updated, by the seller. Hartfield Titus also said that there should be no requirement to record the reason.

RBI agreed that the requirements are reasonable for bid-wanteds, but said they are not workable or necessary for offerings. Negotiated offerings involve back and forth communications between a potential buyer and seller, not always resulting in a trade. RBI said the requirement would impose a significant recordkeeping burden on broker's brokers while adding no significant compliance benefits.

MSRB Response: The MSRB agrees with the comments concerning records of offers and has amended the rule to require that a broker's brokers' records concerning offers must include the time of first receipt and the time the offering has been updated for display or distribution.

Draft Rule G–8(a)(xxv)(E)–(F): [A broker's broker (as defined in Draft Rule G–43(d)(iii)) shall maintain the following records:]

(E) *For all changed bids, the full name of the person at the bidder firm that authorized the change; the reason given for the change in bid; and the full name of the person at the broker's broker at whose direction the change was made;*

(F) For all changed offers, the full name of the person at the seller firm that authorized the change; the reason given for the change in offering price; and the full name of the person at the broker's broker at whose direction the change was made.

Comments: Wolfe & Hurst said that the ''recordkeeping requirements as set forth in the draft rule are overly burdensome to broker's brokers and would cause unnecessary delay and inefficiency in the market.''

TMC said that ''[r]equiring brokers' brokers to document price changes would be of no value to the market, as traders know that offering prices are always subject to change.'' It also added that ''documenting tens of thousands of price changes on a daily basis would be cost prohibitive.''

MSRB Response: The requirement that a record of the reason for a change in bid or offering price has been eliminated. However, the remaining recordkeeping requirements have not been modified. Many were suggested by broker's brokers themselves, and good records are essential for enforcement of Proposed Rule G–43.

The MSRB issued two other requests for comment on the regulation of broker's brokers prior to the request for comment described above. On September 9, 2010, the MSRB published ''Request for Comment on MSRB Guidance on Broker's Brokers'' (''MSRB Notice 2010–35''). In MSRB Notice 2010–35, the MSRB requested comment on an interpretive notice reviewing the fair pricing requirements of MSRB Rules G–18 and G–30 and the fair practice requirements of MSRB Rule G–17 as they applied to transactions effected by broker's brokers. It also proposed to discuss the recordkeeping and record retention requirements for broker's brokers. On February 24, 2011, the MSRB published ''Request for Comment on Draft Broker's Brokers Rule (Rule G–43) and Associated Recordkeeping and Transaction Amendments'' (''MSRB Notice 2011–18''). In MSRB Notice 2011–18, the MSRB requested comment on the original version of Draft Rule G–43 (on broker's brokers), as well as associated draft amendments to Rule G–8 (on books and records), G–9 (on records preservation), and G–18 (on execution of transactions). Copies of MSRB Notices 2010–35 and 2011–18 and associated comment letters are included in Attachment 2 hereto. Each subsequent request for comment has included a summary of the comments received on the previous request for comment, as well as the MSRB's responses to those comments.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule

change is consistent with the Exchange Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–MSRB–2012–04 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–MSRB–2012–04. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Web site *(http://www.sec.gov/rules/sro.shtml).* Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the MSRB's offices. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–MSRB–2012–04 and should be submitted on or before April 16, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[11]

Kevin M. O'Neill,

Deputy Secretary.

[FR Doc. 2012–7133 Filed 3–23–12; 8:45 am]

BILLING CODE 8011–01–P

[11] 17 CFR 200.30–3(a)(12).

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–66622, File No. SR–MSRB–2012–01]

Self-Regulatory Organizations; Municipal Securities Rulemaking Board; Order Granting Approval of Amendments to Rule G–14, on Reports of Sales or Purchases, Including the Rule G–14 RTRS Procedures, and Amendments to the Real-Time Transaction Reporting System

March 20, 2012.

I. Introduction

On January 20, 2012, the Municipal Securities Rulemaking Board (''MSRB'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Exchange Act''),[1] and Rule 19b–4 thereunder,[2] a proposed rule change consisting of amendments to Rule G–14, Reports of Sales or Purchases, including the Rule G–14 RTRS Procedures, and amendments to the Real-Time Transaction Reporting System. The proposed rule change was published for comment in the **Federal Register** on February 8, 2012.[3] The Commission received no comments on the proposed rule change. This order approves the proposed rule change.

II. Background and Description of Proposal

The proposed rule change consists of amendments to Rule G–14, Reports of Sales or Purchases, including the Rule G–14 RTRS Procedures, and amendments to the Real-Time Transaction Reporting System (''RTRS'') information system and subscription service (the ''RTRS Facility''; collectively, ''proposed rule change''). The proposed changes to Rule G–14 would remove certain outdated information. The proposed changes to the RTRS Facility would (A) remove certain outdated information and amend certain definitions to reflect current system operating hours and business days; (B) add an RTRS-calculated yield to the information disseminated for inter-dealer transactions; (C) remove certain infrequently used data reporting requirements; (D) require dealers to submit dollar prices for certain trades; and (E) reduce the number of customer trades suppressed from dissemination because of potentially erroneous price/yield calculations. The MSRB proposes that the proposed rule change be implemented in three phases, as further described herein.

Amendments to Rule G–14, on Reports of Sales or Purchases, and Rule G–14 RTRS Procedures. MSRB Rule G–14 requires brokers, dealers, and municipal securities dealers (collectively, ''dealers'') to report certain information about each purchase and sale transaction effected in municipal securities to RTRS. Such transaction information is made available to the public, the SEC, the Financial Industry Regulatory Authority (''FINRA'') and certain federal bank regulatory agencies to assist in the inspection for compliance with and enforcement of MSRB rules. The reporting requirements are further outlined in Rule G–14 RTRS Procedures and the RTRS Users Manual.[4]

The proposed rule change would amend Rule G–14 and the Rule G–14 RTRS Procedures to update certain references (such as references to the National Association of Securities Dealers, the predecessor of FINRA); eliminate certain provisions that are no longer relevant (such as provisions relating to testing during the original RTRS start-up period) or that, by their original terms, have expired; and conform terms in certain definitions.

Amendments to the RTRS Facility. The RTRS Facility provides for the collection and dissemination of information about transactions occurring in the municipal securities market, and requires dealers to submit information about each purchase and sale transaction effected in municipal securities. The proposed rule change would (A) remove certain outdated information and reporting requirements and amend certain definitions to reflect current system operating hours and business days; (B) modify RTRS specifications to perform certain yield calculations for inter-dealer transactions; (C) remove certain infrequently used data reporting requirements; (D) require dealers to submit dollar prices for certain trades; and (E) modify RTRS specifications to reduce the number of trades suppressed from dissemination because of erroneous price and yield calculations.

Remove certain outdated information and conform definitions to reflect current system operating hours and business days. The proposed rule

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 66309 (February 2, 2012), 77 FR 6615.

[4] Rule G–14 RTRS Procedures are included in the text of MSRB Rule G–14, and the RTRS Users Manual is available on the MSRB Web site at *www.msrb.org.* The RTRS Users Manual will be revised as necessary to reflect the changes made by the proposed rule change.

change would remove references throughout the text of the RTRS Facility to prior amendments to Rule G–14, to certain testing requirements and to the implementation plan relevant to the initial phases of the RTRS system; update current hours of operation; conform certain definitions to reflect such change; and make non-substantive revisions to the language of certain portions of the RTRS Facility to reflect the passage of time since its initial approval.

Yields on inter-dealer transactions. Inter-dealer transaction reporting is accomplished by both the purchasing and selling dealers submitting information about the transaction to the DTCC's real-time trade matching system (''RTTM''). Information submitted to RTTM is forwarded to RTRS for trade reporting. For most inter-dealer transactions, dealers report final money, par amount and accrued interest to RTTM—as opposed to a dollar price and yield [5] as is done for customer trades—and RTRS computes a dollar price from these values for inter-dealer transaction price dissemination.[6] Currently, RTRS does not compute a corresponding yield from the RTRS-computed dollar price for dissemination, resulting in a disparity between what is disseminated for inter-dealer and customer transactions.

To facilitate yield-based comparisons of transaction data across securities, the proposed rule change would cause RTRS to be reprogrammed to perform this calculation so that a yield for most inter-dealer transactions would be added to the information disseminated from RTRS, thereby improving the usefulness of the inter-dealer data disseminated to subscribers and displayed on the MSRB's Electronic Municipal Market Access (EMMA®) Web site.[7] Since EMMA® is a subscriber to the RTRS real-time subscription service, the yield disseminated for inter-dealer transactions also would be displayed on EMMA® in the same manner as it would be provided to RTRS subscribers.[8] This amendment to the RTRS Facility is reflected in the changes under the heading ''Price Dissemination by RTRS—List of Information Items to be Disseminated'' and ''MSRB Real-Time Transaction Data Subscription Service—Description—Transaction Data Disseminated—Yield (if applicable),'' and conforming changes to the RTRS Users Manual will be made.

Transaction reporting requirements. MSRB rules on transaction reporting contain two requirements that were included in the original design for RTRS in 2005 to provide additional details about certain transactions for use in market surveillance. These requirements have applied to few transactions, yet continue to generate questions from dealers, and have provided only limited value for use in market surveillance. The proposed rule change would revise the RTRS specifications to remove these requirements.

The first of these two requirements relates to inter-dealer transactions and requires the identity of an ''intermediate dealer,'' or correspondent of a clearing broker that passes data to the clearing broker about transactions effected by a third dealer (''effecting dealer''), to be included on applicable trade reports. One of the original purposes of having the intermediate dealer included in a trade report was to assist market surveillance staff by having an additional dealer associated with a transaction reported in the event that the effecting dealer's identity was erroneously reported. However, few transaction reports contain such an intermediate dealer and, since the November 2009 enhancement to transaction reporting to add the effecting broker to the matching criteria in RTTM, the identity of the effecting dealer is rarely, if ever, erroneous. The proposed rule change would delete the requirement for dealers to identify the intermediate dealer. This amendment to the RTRS Facility is reflected by the deletion of the penultimate paragraph under the heading ''RTRS Facility—Enhancement of Information Available to Regulators,'' and conforming changes to the RTRS Users Manual will be made.

The second requirement applies to any transaction effected at a price that substantially differs from the market price as a result of the parties to the transaction agreeing to significantly deviate from a normal settlement cycle. For such transactions, dealers are required to include an identifier on the trade report that allows the trade report to be entered into the RTRS audit trail yet suppressed from price dissemination. Since a small number of transactions are reported with this identifier, for example only .01% of trade reports were identified with this indicator in August 2011, these transactions could be reported using the generic ''away from market'' indicator used for reporting any transaction at a price that differs from the current market price for the security to simplify transaction reporting requirements. Thus, concurrently with the elimination of the intermediate dealer reporting requirement, the RTRS Users Manual would be revised to delete the ''away from market—extraordinary settlement'' special condition indicator from RTRS and require that such transactions be reported using the generic ''away from market'' indicator.

Reporting dollar price for all inter-dealer transactions. RTRS currently computes a dollar price for inter-dealer transactions using the final money, par amount and accrued interest submitted to DTCC. Since the information reported for inter-dealer transactions also is used by DTCC for purposes of clearance and settlement, DTCC procedures require dealers to report par value as an expression of the number of bonds traded as opposed to the actual par amount traded. If the par value of a security is no longer a $1,000 multiple because, for example, the issuer has prepaid a portion of the principal on a security on a pro rata basis, dealers continue to report for inter-dealer transactions par value expressed as the number of bonds (i.e. ten bonds would be reported as $10,000 par value). Transactions between dealers in this security would result in erroneous RTRS-calculated dollar prices since the final money reported by the dealers would be based on a transaction in a security for which each bond costs less than $1,000.[9]

Since MSRB transaction reporting for inter-dealer transactions began in 1994, a very small portion of inter-dealer transactions have been in securities with a non-standard $1,000 par

[5] Dollar price and yield on customer transactions are required to be computed in the same manner as required under MSRB Rule G–15(a), on customer confirmations. Accordingly, from the transaction dollar price, dealers report yield calculated to the lower of an in-whole call feature or maturity.

[6] For transactions in new issue securities traded on a when, as and if issued basis prior to the closing date being known, dealers only report a dollar price or yield since a final money and accrued interest calculation cannot be performed.

[7] In addition to calculating and disseminating yield for future inter-dealer transactions, amendments to RTRS specifications would calculate and disseminate yields for historical inter-dealer transactions in RTRS to the extent that such calculations can be accurately performed.

[8] Since the RTRS subscription service already includes a field for yield, no significant system changes should be necessary for existing RTRS subscribers to receive yields on inter-dealer transactions.

[9] For example, if an issuer has prepaid 50% of the principal on a $1,000 denominated security, each bond would cost $500 so a transaction of 10 bonds at ''par'' would be reported with a par value of $10,000 and final money of $5,000 resulting in an RTRS-computed dollar price of $50. This anomaly only occurs on inter-dealer transactions since customer transactions are reported with a dollar price and yield. In this example, the dollar price on a customer transaction in this security would be reported as $100, or 100% of the principal amount.

multiple.[10] However, primarily since many Build America Bonds issued in recent years included partial call features with a pro-rata redemption provision, there is a likelihood that many more securities may contain par values that are no longer $1,000 multiples. In addition, there have been press reports that more securities may be issued in nontraditional denominations, such as securities issued in $25 par amounts similar to preferred stock and other ''mini bonds'' with sub-$1,000 principal values.

To ensure that the dollar price disseminated for inter-dealer transactions remains accurate and to minimize the impact on dealer operations as well as the clearance and settlement use of the data submitted to DTCC, the MSRB proposes to require dealers to report—in addition to the information currently reported for inter-dealer transactions—the contractual dollar price at which the transaction was executed.[11] This amendment to the RTRS Facility is reflected in the changes under the heading ''MSRB Real-Time Transaction Data Subscription Service—Description—Transaction Data Disseminated—Dollar Price,'' and conforming changes to the RTRS Users Manual will be made.

Increase dissemination of customer transactions. As described above, dealer reports of customer transactions include both a dollar price and yield. Depending on whether the transaction was executed on the basis of a dollar price or yield, a corresponding value must be computed and reported to RTRS by the dealer consistent with the customer confirmation requirements so that the corresponding value reflects a value to the lower of an in-whole call feature or maturity. RTRS also computes the dollar price from the reported yield on customer transactions using security descriptive information from the RTRS security master as a data quality check to ensure that the reported information is accurate. Currently, this data quality check returns an error to dealers and suppresses the transaction from being disseminated in the event that the dollar price computed by RTRS does not exactly match the dollar price reported by the dealer. Dealers receiving this error are required to review the information reported and, if incorrect, modify the transaction information in RTRS. However, in some cases, dealers submit correct information yet RTRS computes an erroneous dollar price as a result of an error in the security descriptive information used by RTRS.[12]

In 2010, of those trades receiving this error, over 75% of the reported dollar prices disagreed with the RTRS-calculated dollar price by less than one dollar. To increase the number of customer transactions disseminated, the proposed rule change would cause RTRS to be reprogrammed to adjust the tolerance of the error code so that the error would continue to be returned to dealers for customer transactions where the reported dollar price disagrees with the RTRS calculated price but allow the trade report to be disseminated so long as the dealer and RTRS-calculated dollar prices are within $1 of each other. Further, since the disseminated dollar price would be unable to be exactly verified, RTRS would also be programmed to include with the disseminated trade report an indicator that the dollar price of these trades was unable to be verified. Thus, concurrently with the amendment to require dollar price reporting for all inter-dealer transactions, the RTRS Users Manual would be revised to reflect these changes in programming.

Phased Effective Dates of Proposed Rule Change. The MSRB proposes that the proposed rule change be implemented in three phases. Those changes to Rule G–14, the Rule G–14 RTRS Procedures, and the RTRS Facility removing outdated provisions and amending certain definitions, as described above under the caption ''Amendments to the RTRS Facility—Remove certain outdated information and conform definitions to reflect current system operating hours and business days'', would be made effective upon approval by the SEC. Those changes to the RTRS Facility not requiring dealers to perform significant system changes, as described above under the captions ''Amendments to the RTRS Facility—Yields on inter-dealer transactions'' and ''Amendments to the RTRS Facility—Transaction reporting requirements'', would be made effective on April 30, 2012. Those changes to the RTRS Facility requiring dealers and subscribers to the RTRS subscription service to make significant system changes, as described above under the captions ''Amendments to the RTRS Facility—Reporting dollar price for all inter-dealer transactions'' and ''Amendments to the RTRS Facility—Increase dissemination of customer transactions'', would be made effective on a date to be announced by the MSRB in a notice published on the MSRB Web site, which date shall be no later than November 30, 2012 and shall be announced no later than 30 days prior to the effective date thereof.

III. Discussion and Commission Findings

The Commission has carefully considered the proposed rule change and finds that the proposed rule change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to the MSRB.[13] In particular, the proposed rule change is consistent with Section 15B(b)(2)(C) of the Exchange Act, which provides that the MSRB's rules shall be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in municipal securities and municipal financial products, to remove impediments to and perfect the mechanism of a free and open market in municipal securities and municipal financial products, and, in general, to protect investors, municipal entities, obligated persons, and the public interest.[14]

The Commission believes that the proposed rule change is consistent with the Exchange Act because the proposed rule change would remove impediments to and perfect the mechanism of a free and open market in municipal securities by improving trade reporting and market transparency. The proposed rule change would facilitate comparison of trade data across securities and within data for a security, thereby contributing to fairer pricing, improve the reliability and accuracy of price information disseminated for inter-dealer

[10] Historically, this problem primarily has been limited to transactions in certain municipal collateralized mortgage obligations.

[11] For data quality purposes, RTRS would compare the buy and sell-side contractual dollar prices and return errors to dealers in the event of a material difference between the two reported dollar prices and continue to calculate a dollar price from the reported final money, par value and accrued interest. Since the dealer reported dollar price would not be used for clearance or settlement at DTCC, this data field would be able to be modified in RTRS by dealers to correct errors, even after trade matching had occurred. In the event that the dollar prices disagree between dealers, RTRS would disseminate the RTRS-calculated dollar price and if the dealer reported dollar prices agree yet differ from the RTRS-calculated dollar price (which would occur if the security par value is no longer a $1,000 multiple) RTRS would disseminate the dealer reported dollar price.

[12] In these cases, there is no action the dealer can take to disseminate the trade report and, to ensure the integrity of RTRS, the MSRB does not manually manipulate trade data or security descriptive information to cause the trade to meet the criteria of the error code.

[13] In approving this proposed rule change, the Commission notes that it has considered the proposed rule's impact on efficiency, competition and capital formation. 15 U.S.C. 78c(f).

[14] 15 U.S.C. 78*o*–4(b)(2)(C).

transactions, and increase the number of customer transactions disseminated to the market. The Commission believes that these changes would contribute to the MSRB's continuing efforts to improve market transparency and to protect investors and the public interest.

IV. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Exchange Act,[15] that the proposed rule change (SR–MSRB–2012–01) be, and it hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[16]

Kevin M. O'Neill,

Deputy Secretary.

BILLING CODE 8011–01–P

SMALL BUSINESS ADMINISTRATION

[Disaster Declaration #13041 and #13042]

Missouri Disaster #MO–00057

AGENCY: Small Business Administration.

ACTION: Notice.

SUMMARY: This is a notice of an Administrative declaration of a disaster for the State of Missouri dated 03/15/2012.

Incident: Severe Storms, Tornadoes, Hail, High Winds, Heavy Rain, and Flooding.

Incident Period: 02/28/2012 through 03/01/2012.

DATES: *Effective Date:* 03/15/2012.

Physical Loan Application Deadline Date: 05/14/2012.

Economic Injury (Eidl) Loan Application Deadline Date: 12/17/2012.

ADDRESSES: Submit completed loan applications to: U.S. Small Business Administration, Processing and Disbursement Center, 14925 Kingsport Road, Fort Worth, TX 76155.

FOR FURTHER INFORMATION CONTACT: A. Escobar, Office of Disaster Assistance, U.S. Small Business Administration, 409 3rd Street SW., Suite 6050, Washington, DC 20416.

SUPPLEMENTARY INFORMATION: Notice is hereby given that as a result of the Administrator's disaster declaration, applications for disaster loans may be filed at the address listed above or other locally announced locations.

The following areas have been determined to be adversely affected by the disaster:

Primary Counties: Dallas, Stone, Taney.

Contiguous Counties:

Missouri: Barry, Camden, Christian, Douglas, Greene, Hickory, Laclede, Lawrence, Ozark, Polk, Webster.

Arkansas: Boone, Carroll, Marion.

The Interest Rates are:

	Percent
For Physical Damage:	
Homeowners with Credit Available Elsewhere	3.750
Homeowners without Credit Available Elsewhere	1.875
Businesses with Credit Available Elsewhere	6.000
Businesses without Credit Available Elsewhere	4.000
Non-profit Organizations with Credit Available Elsewhere	3.125
Non-profit Organizations without Credit Available Elsewhere	3.000
For Economic Injury:	
Businesses & Small Agricultural Cooperatives without Credit Available Elsewhere	4.000
Non-profit Organizations without Credit Available Elsewhere	3.000

The number assigned to this disaster for physical damage is 13041B and for economic injury is 130420.

The States which received an EIDL Declaration # are Missouri, Arkansas.

BILLING CODE 8025–01–P

SMALL BUSINESS ADMINISTRATION

Advisory Committee on Veterans Business Affairs; Meeting

AGENCY: Small Business Administration.

ACTION: Notice of Open Federal Advisory Committee Meeting.

SUMMARY: The SBA is issuing this notice to announce the location, date, time, and agenda for the next meeting of the Advisory Committee on Veterans Business Affairs. The meeting will be open to the public.

DATES: March 26, 2012 from 9 a.m. to 5 p.m. in the Eisenhower Conference room, side B, located on the 2nd floor.

ADDRESSES: U.S. Small Business Administration, 409 3rd Street SW., Washington, DC 20416.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a) (2) of the Federal Advisory Committee Act (5 U.S.C., Appendix 2), SBA announces the meeting of the Advisory Committee on Veterans Business Affairs. The Advisory Committee on Veterans Business Affairs serves as an independent source of advice and policy recommendation to the Administrator of the U.S. Small Business Administration.

The purpose of this meeting is scheduled as a full committee meeting. It will focus on strategic planning, updates on past and current events, and the ACVBA's objective for 2012. For information regarding our veterans' resources and partners, please visit our Web site at www.sba.gov/vets.

Further Information: The meeting is open to the public. Anyone wishing to attend this meeting or to make a presentation to the Advisory Committee on Veterans Business Affairs, advance notice is requested. Please contact Cheryl Simms, Program Liaison, at the U.S. Small Business Administration, Office of Veterans Business Development, 409 3rd Street SW., Washington, DC 20416; Telephone number: (202) 619–1697; Fax number (202) 481–6085 or by email at *cheryl.simms@sba.gov.*

If you require accommodations because of a disability, please contact the Office of Veterans Business Development at (202) 205–6773 at least two weeks in advance.

Dated: March 14, 2012.

Dan S. Jones,

SBA Committee Management Officer.

BILLING CODE 8025–01–P

DEPARTMENT OF STATE

[Public Notice 7831]

Notification of the Next CAFTA–DR Environmental Affairs Council Meeting and Request for Comments on the Meeting Agenda

AGENCY: Department of State.

ACTION: Notice of the CAFTA–DR Environmental Affairs Council meeting and request for comments on the meeting agenda.

SUMMARY: The Department of State and the Office of the United States Trade Representative are providing notice that the government parties to the Dominican Republic-Central America-United States Free Trade Agreement (CAFTA–DR) intend to hold the sixth meeting of the Environmental Affairs Council (Council) established under Chapter 17 of that agreement in San Pedro Sula, Honduras on April 12, 2012 at the Hilton Princess Hotel, 10 Calle y Ave. Circunvalación, S.O. Col. Trejo. All interested persons are invited to attend a public session beginning at 2:30 p.m. on April 12.

During the meeting, each Council Member will present their country's progress in implementing Chapter 17 obligations and on the impacts of environmental cooperation in their countries. The Council will also receive a presentation from the CAFTA–DR Secretariat for Environmental Matters (SEM) and discuss the Organization of

American States Third Evaluation Report: Monitoring Progress of the Environmental Cooperation Agenda in the CAFTA–DR Countries. For the public session of the meeting, the Council will highlight issues from the above discussion elements with a particular focus on Chapter 17 obligations and environmental cooperation successes.

All interested persons are invited to attend a public session where they will have the opportunity to ask questions and discuss implementation of Chapter 17 and environmental cooperation with Council Members. In addition, the SEM will present on the citizen submission process established under Chapter 17. More information on the Council is included below under

SUPPLEMENTARY INFORMATION. The Department of State and Office of the United States Trade Representative invite written comments or suggestions regarding the meeting agenda. In preparing comments, we encourage submitters to refer to Chapter 17 of the CAFTA–DR, the Final Environmental Review of the CAFTA–DR and the Agreement among the CAFTA–DR countries on Environmental Cooperation (ECA) (all documents available at *http://www.state.gov/e/oes/env/trade/caftadr/index.htm*).

DATES: To be assured of timely consideration, all written comments or suggestions are requested no later than April 6, 2012.

ADDRESSES: Written comments or suggestions should be submitted to both: (1) Rebecca Slocum, U.S. Department of State, Bureau of Oceans and International Environmental and Scientific Affairs, Office of Environmental Policy by email to *SlocumRB@state.gov* with the subject line ''CAFTA–DR EAC Meeting'' or by fax to (202) 647–5947; and (2) Kelly Milton, Director for International Environmental and Conservation Policy, Office of the United States Trade Representative by email to *KMilton@ustr.eop.gov* with the subject line ''CAFTA–DR EAC Meeting'' or by fax to (202) 395–9517. If you have access to the Internet you can view and comment on this notice by going to: *http://www.regulations.gov/#!home* and searching on docket number DOS–2012–0023.

FOR FURTHER INFORMATION, CONTACT: Rebecca Slocum, (202) 647–4828 or Kelly Milton, (202) 395–9590.

SUPPLEMENTARY INFORMATION: Article 17.5 of the CAFTA–DR establishes an Environmental Affairs Council (the Council). Article 17.5 requires the Council to meet to oversee the implementation of, and review progress under, Chapter 17. Article 17.5 further requires, unless the governments otherwise agree, that each meeting of the Council include a session in which members of the Council have an opportunity to meet with the public to discuss matters relating to the implementation of Chapter 17.

In Article 17.9 of the CAFTA–DR, the governments recognize the importance of strengthening capacity to protect the environment and to promote sustainable development in concert with strengthening trade and investment relations and state their commitment to expanding their cooperative relationship on environmental matters. Article 17.9 also references the ECA, which sets out certain priority areas of cooperation on environmental activities that are also reflected in Annex 17.9 of the CAFTA–DR. These priority areas include, among other things: Reinforcing institutional and legal frameworks and the capacity to develop, implement, administer, and enforce environmental laws, regulations, standards and policies; conserving and managing shared, migratory and endangered species in international trade and management of protected areas; promoting best practices leading to sustainable management of the environment; and facilitating technology development and transfer and training to promote clean production technologies. The public is advised to refer to the State Department Web site at *http://www.state.gov/e/oes/env/* and the USTR Web site at *www.ustr.gov* for more information.

Disclaimer: This Public Notice is a request for comments and suggestions, and is not a request for applications. No granting of money is directly associated with this request for suggestions on the Council meeting agenda. There is no expectation of resources or funding associated with any comments or suggestions for the agenda.

Dated: March 20, 2012.

Sezaneh M. Seymour,

Acting Director, Office of Environmental Policy.

BILLING CODE 4710–09–P

STATE JUSTICE INSTITUTE

SJI Board of Directors Meeting, Notice

AGENCY: State Justice Institute.

ACTION: Notice of meeting.

SUMMARY: The SJI Board of Directors will be meeting on Monday, April 23, 2012 at 1 p.m. The meeting will be held at the National Center for State Courts Headquarters in Williamsburg, Virginia. The purpose of this meeting is to consider grant applications for the 2nd quarter of FY 2012, and other business. All portions of this meeting are open to the public.

ADDRESSES: National Center for State Courts Headquarters, 300 Newport Avenue, Williamsburg, VA 23185, 800–616–6164.

FOR FURTHER INFORMATION CONTACT: Jonathan Mattiello, Executive Director, State Justice Institute, 11951 Freedom Drive, Suite 1020, Reston, VA 22314, 571–313–8843, *contact@sji.gov.*

Jonathan D. Mattiello,

Executive Director.

BILLING CODE P

SUSQUEHANNA RIVER BASIN COMMISSION

Low Flow Protection Policy

AGENCY: Susquehanna River Basin Commission.

ACTION: Notice.

SUMMARY: As part of its regular business meeting held on March 15, 2012, in Harrisburg, Pennsylvania, the Susquehanna River Basin Commission (Commission) approved the release of a proposed Low Flow Protection Policy (Policy) for public review and comment. The Policy can be accessed on the Commission's Web site at *http://www.srbc.net/pubinfo/businessmeeting.htm,* or by contacting the Commission to receive a copy by first-class mail. Persons interested in providing comments are directed to submit the same in writing on or before May 16, 2012.

DATES: The deadline for the submission of written comments is May 16, 2012.

ADDRESSES: Comments may be mailed to: Mr. John Balay, Susquehanna River Basin Commission, 1721 N. Front Street, Harrisburg, PA 17102–2391, or electronically submitted through *http://www.srbc.net/pubinfo/businessmeeting.htm.*

FOR FURTHER INFORMATION CONTACT: John Balay, Manager of Planning and Operations, telephone: (717) 238–0423; fax: (717) 238–2436.

SUPPLEMENTARY INFORMATION: On March 15, 2012, the Commission approved the release of a proposed Low Flow Protection Policy for public review and comment. The Policy was developed over the past year in coordination with the Commission's Water Resources

Management Advisory Committee to improve low flow protection standards associated with approved water withdrawals. The improvements are largely based on scientific advances in ecosystem flow protection. The Commission will use the Policy and supporting technical guidance when reviewing withdrawal applications to establish limits and conditions on approvals consistent with the Commission's regulatory standards (18 CFR 806.23).

Authority: Public Law 91–575, 84 Stat. 1509 *et seq.,* 18 CFR parts 806, 807, and 808.

Dated: March 15, 2012.

Stephanie L. Richardson

Secretary to the Commission.

BILLING CODE 7040–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Public Notice for Waiver of Aeronautical Land-Use Assurance; Jackson Municipal Airport, Jackson, MN

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of intent of waiver with respect to land.

SUMMARY: The Federal Aviation Administration (FAA) is considering a proposal to authorize the release of 18 acres of the airport property at the Jackson Municipal Airport, Jackson MN. The City is proposing a land swap to exchange this 18 acre parcel for another parcel of 24.72 acres.

The acreage being released is not needed for aeronautical use as currently identified on the Airport Layout Plan.

The acreage comprising this parcel was originally acquired in 1976 with an Airport Development Aid Program (ADAP) grant (76–5–27–0045–01). In exchange for the 18 acres the airport will receive a new parcel of land in the approach to the crosswind runway 4/22. The appraised fair market value of the proposed release parcel is $130,500, the fair market value of the proposed acquire parcel is $165,000. The FAA approved a Categorical Exclusion for environmental requirements on May 13, 2010. Approval does not constitute a commitment by the FAA to financially assist in the disposal of the subject airport property nor a determination of eligibility for grant-in-aid funding from the FAA. The disposition of proceeds from the disposal of the airport property will be in accordance with FAA's Policy and Procedures Concerning the Use of Airport Revenue, published in the **Federal Register** on February 16, 1999.

In accordance with section 47107(h) of title 49, United States Code, this notice is required to be published in the **Federal Register** 30 days before modifying the land-use assurance that requires the property to be used for an aeronautical purpose.

DATES: Comments must be received on or before April 25, 2012.

ADDRESSES: Ms. Sandra E. DePottey, Program Manager, Federal Aviation Administration, Airports District Office, 6020 28th Avenue South, Room 102, Minneapolis, MN 55450–2706. Telephone Number (612) 253–4642/ FAX Number (612) 253–4611. Documents reflecting this FAA action may be reviewed at this same location or at the Minnesota Department of Transportation, 222 East Plato Blvd., St. Paul, MN 55107.

FOR FURTHER INFORMATION CONTACT: Ms. Sandra E. DePottey, Program Manager, Federal Aviation Administration, Airports District Office, 6020 28th Avenue South, Room 102, Minneapolis, MN 55450–2706. Telephone Number (612) 253–4642/FAX Number (612) 253–4611. Documents reflecting this FAA action may be reviewed at this same location or at the Minnesota Department of Transportation, 222 East Plato Blvd., St. Paul, MN 55107.

SUPPLEMENTARY INFORMATION: Following is a description of the subject airport property to be released at Jackson Municipal Airport in Jackson, Minnesota and described as follows:

A parcel of land located in the westerly 18.00 acres of that part of the North Half of the Northeast Quarter (N1/ 2NE1/4) of Section 13, Township 102 North, Range 35 West.

Said parcel subject to all easements, restrictions, and reservations of record.

Issued in Minneapolis, MN, on January 30, 2012.

Steven J. Obenauer,

Manager, Minneapolis Airports District Office, FAA, Great Lakes Region.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Notice of Final Federal Agency Actions on Proposed Highway in Utah

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Limitation on Claims for Judicial Review of Actions by FHWA and other Federal agencies.

SUMMARY: This notice announces actions taken by the FHWA and other Federal agencies that are final within the meaning of 23 U.S.C. 139(l)(1). The actions relate to a proposed transportation corridor project (Cottonwood Street; 4500 South to Vine Street in Murray City, Salt Lake County in the State of Utah). These actions grant licenses, permits, and approvals for the project.

DATES: By this notice, the FHWA is advising the public of final agency actions subject to 23 U.S.C. 139(l)(1). A claim seeking judicial review of the FHWA actions on the highway project will be barred unless the claim is filed on or before September 22, 2012. If the Federal law that authorizes judicial review of a claim provides a time period of less than 180 days for filing such claim, then that shorter time period still applies.

FOR FURTHER INFORMATION CONTACT: For FHWA: Mr. Edward Woolford, Environmental Program Manager, Federal Highway Administration, 2520 West 4700 South, Suite 9A, Salt Lake City, Utah 84129; telephone (801) 955–3524; email: *Edward.Woolford@dot.gov.* The FHWA Utah Division's regular business hours are Monday through Friday, 7:30 a.m. to 4:30 p.m. MST.

SUPPLEMENTARY INFORMATION: Notice is hereby given that the FHWA and other Federal agencies have taken final agency actions subject to 23 U.S.C. 139(l)(1) by issuing licenses, permits, and approvals for the following highway project in the State of Utah: Cottonwood Street; 4500 South to Vine Street in Murray City, Salt Lake County, project number S–LC35(198). The project will be a one-way couplet with southbound traffic on Box Elder Street and northbound traffic on Hanauer Street. The project includes construction of a new section of Hanauer Street between 4800 South and Vine Street. The project will improve connectivity and reduce pedestrian and auto travel distances between the planned Murray City Center District, transit stations, neighborhoods, and nearby arterials; and it supports Murray City's plans for economic redevelopment and a more livable, walkable community in the year 2040.

The actions by the FHWA and the laws under which such actions were taken, are described in the Environmental Assessment (EA) for the project, approved on August 17,2011, in the FHWA Finding of No Significant Impact (FONSI) issued on March 1,

2012, and in other documents in the FHWA project files. The EA, FONSI, are available by contacting the FHWA at the address provided above. The FHWA EA and FONSI can be viewed and downloaded from the project Web site at *www.cottonwoodstreetstudy.com* or viewed at public libraries in the project area.

This notice applies to all Federal agency decisions, actions, approvals, licenses and permits on the project as of the issuance date of this notice and all laws under which such actions were taken, including but not limited to:

1. General: National Environmental Policy Act (NEPA) [42 U.S.C. 4321–4347]; Federal-Aid Highway Act [23 U.S.C. 109];

2. Air: Clean Air Act [42 U.S.C. 7401–7671(q)];

3. Land: Section 4(f) of the Department of Transportation Act of 1966 [49 U.S.C. 303];Wildlife: Endangered Species Act [16 U.S.C. 1531–1544]; Migratory Bird Treaty Act [16 U.S.C. 703–712];

4. Historic and Cultural Resources: Section 106 of the National Historic Preservation Act of 1966, as amended [16 U.S.C. 470f.];

5. Social and Economic: Civil Rights Act of 1964 [42 U.S.C. 2000(d)–2000(d)(1)]; Farmland Protection Policy Act (FPPA) [7 U.S.C. 4201–4209];

6. Wetlands and Water Resources: Clean Water Act, 33 U.S.C. 1251–1377 [Section 404, Section 401, Section 319]; Safe Drinking Water Act [42 U.S.C. 300f et seq.]; TEA–21 Wetlands Mitigation [23 U.S.C. 103(b)(6)(m), 133(b)(11)]; Flood disaster Protection Act [42 U.S.C. 4001–4129].

Executive Orders: E.O. 11990, Protection of Wetlands; E.O. 11988, Floodplain Management; E.O. 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low Income Populations; E.O. 13175, Consultation and Coordination with Indian Tribal Governments; E.O. 13112, Invasive Species. Nothing in this notice creates a cause of action under these Executive Orders. (Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

Authority: 23 U.S.C. 139(l)(1).

Issued on: March 19, 2012.

James C. Christian,

Division Administrator, Salt Lake City.

[FR Doc. 2012–7162 Filed 3–23–12; 8:45 am]

BILLING CODE 4910–RY–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Notice of Final Federal Agency Actions on Proposed Transportation Improvements in Utah

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Limitation on Claims for Judicial Review of Actions by FHWA and Other Federal Agencies.

SUMMARY: This notice announces actions taken by the FHWA and other Federal agencies that are final within the meaning of 23 U.S.C. 139(l)(1). The actions relate to the proposed interchange and roadway improvement project (Bangerter 600 West Project) in Draper, Salt Lake County in the State of Utah. These actions grant licenses, permits, and approvals for the project.

DATES: By this notice, the FHWA is advising the public of final agency actions subject to 23 U.S.C. 139(l)(1). A claim seeking judicial review of the Federal agency actions on the highway project will be barred unless the claim is filed on or before September 22, 2012. If the Federal law that authorizes judicial review of a claim provides a time period of less than 180 days for filing such claim, then that shorter time period still applies.

FOR FURTHER INFORMATION CONTACT: For FHWA: Mr. Edward Woolford, Environmental Program Manager, Federal Highway Administration, 2520 West 4700 South, Suite 9A, Salt Lake City, Utah 84129; telephone: (801) 955–3500; email: *Edward.Woolford@dot.gov.* The FHWA Utah Division Office's normal business hours are 7:35 a.m. to 4:30 p.m. (Mountain Standard Time).

SUPPLEMENTARY INFORMATION: Notice is hereby given that the FHWA and other Federal agencies have taken final agency actions by issuing licenses, permits, and approvals for the following highway project in the State of Utah: The Bangerter 600 West Project in Draper, Salt Lake County, Utah, project number FHWA–UT–EIS–11–01–F. Federal Lead Agency: Federal Highway Administration. Project Description: The project consists of improvements to Bangerter Highway between Interstate 15 (I–15) and the Union Pacific Railroad (UPRR) line at about 900 West in the city of Draper in Salt Lake County. The Selected Alternative (600 West Interchange with Right Turns Only at 200 West Alternative (Alternative 4F)) implements a transportation project consisting of: (1) A new interchange on Bangerter Highway at about 600 West; (2) eliminates the signals from the intersection at 200 West; (3) allows only right turns at the 200 West intersection. Left turns would not be permitted; (4) adds an additional west travel lane on Bangerter Highway between I–15 and the 600 West interchange; (5) adds an additional lane on the southbound I–15 off ramp; (6) adds a dedicated right-turn lane on westbound Bangerter Highway between I–15 and 200 West; (7) adds an acceleration lane from 200 West onto westbound Bangerter Highway to 600 West; (8) builds a connecting five-lane arterial from the 600 West interchange to the intersection of 13490 South and 200 West; (9) builds a connecting five-lane arterial to tie into 13800 South; (10) makes improvements to the 13490 South/200 West intersection to improve traffic flow. This would include providing double left-turn lanes from eastbound 13490 South to northbound 200 West; (11) relocates the Jordan and Salt Lake City Canal or place it in a pipe; (12) relocates utilities (fiber optic and drainage features) along Bangerter Highway; (13) includes stormwater drainage and passive water quality treatment.

The actions by the FHWA and other Federal agencies, and the laws under which such actions were taken, are described in the Final Environmental Impact Statement (FEIS) for the project, approved on November 18, 2011, in the FHWA Record of Decision (ROD) issued on March 7, 2012, and other key documents. The FEIS and ROD are available by contacting FHWA at the address provided above. The FHWA FEIS and ROD can be viewed and downloaded from the project Web site at *http://www.udot.utah.gov/bangerter600west/,* or viewed at public libraries in the project area.

This notice applies to all Federal agency decisions on the project as of the issuance date of this notice and all laws under which such actions were taken, including but not limited to:

1. *General:* National Environmental Policy Act (NEPA) [42 U.S.C. 4321–4347]; Federal-Aid Highway Act [23 U.S.C. 109];

2. *Air:* Clean Air Act [42 U.S.C. 7401–7671(q)];

3. *Land:* Section 4(f) of the Department of Transportation Act of 1966 [49 U.S.C. 303];

4. *Wildlife:* Endangered Species Act [16 U.S.C. 1531–1544]; Migratory Bird Treaty Act [16 U.S.C. 703–712];

5. *Historic and Cultural Resources:* Section 106 of the National Historic Preservation Act of 1966, as amended [16 U.S.C. 470f];

6. *Social and Economic:* Civil Rights Act of 1964 [42 U.S.C. 2000(d)–

2000(d)(1)]; Farmland Protection Policy Act (FPPA) [7 U.S.C. 4201–4209];

7. *Wetlands and Water Resources:* Clean Water Act, 33 U.S.C. 1251–1377 [Section 404, Section 401, Section 319]; Safe Drinking Water Act [42 U.S.C. 300f et seq.]; TEA–21 Wetlands Mitigation [23 U.S.C. 103(b)(6)(m), 133(b)(11)]; Flood Disaster Protection Act [42 U.S.C. 4001–129].

Executive Orders: E.O. 11990, Protection of Wetlands; E.O. 11988, Floodplain Management; E.O. 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low Income Populations; E.O. 13175, Consultation and Coordination with Indian Tribal Governments; E.O. 13112, Invasive Species. Nothing in this notice creates a cause of action under these Executive Orders.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

Authority: 23 U.S.C. 139(l)(1).

Issued on: March 19, 2012.

BILLING CODE 4910–RY–P

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

[Docket No. FTA–2012–0006]

Notice of Proposed Buy America Waivers

AGENCY: Federal Transit Administration (FTA), DOT.

ACTION: Notice of proposed Buy America waiver and request for comment.

SUMMARY: The purpose of this notice is to solicit comment a request from Allison Transmission, Inc. to renew a waiver for its hybrid electric propulsion system, Energy Storage Unit subsystem H 49.40 EPSystem, until December 31, 2013 so they may complete their ongoing process to secure a domestic supplier of Lithium Ion batteries. FTA seeks public comment before deciding whether to grant Allison's request.

DATES: Comments must be received by April 2, 2012. Late filed comments will be considered to the extent practicable.

ADDRESSES: Please submit your comments by only one of the following means, identifying your submissions by docket number FTA–2012–0006. All electronic submissions must be made to the U.S. Government electronic site at *www.regulations.gov.* Commenters should follow the instructions below for mailed and hand delivered comments.

(1) *Web site: www.regulations.gov.* Follow the instructions for submitting comments on the U.S. Government electronic docket site;

(2) *Fax:* (202) 493–2251;

(3) *Mail:* U.S. Department of Transportation, 1200 New Jersey Avenue SE, Docket Operations, M–30, Room W12–140, Washington, DC 20590–0001.

(4) *Hand Delivery:* Room W12–140 on the first floor of the West Building, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Instructions: All submissions must make reference to the ''Federal Transit Administration'' and include docket number FTA–2012–0006. Due to security procedures in effect since October 2001, mail received through the U.S. Postal Service may be subject to delays. Parties making submissions responsive to this notice should consider using an express mail firm to ensure the prompt filing of any submissions not filed electronically or by hand. Note that all submissions received, including any personal information therein, will be posted without change or alteration to *www.regulations.gov.* For More information, you may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477), or visit *www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Jayme L. Blakesley at (202) 366–0304 or *jayme.blakesley@dot.gov.*

SUPPLEMENTARY INFORMATION: The purpose of this notice is to seek public comment on whether the Federal Transit Administration (FTA) should waive its Buy America requirements of 49 U.S.C. 5323(j), as implemented at 49 CFR Part 661, until December 31, 2013, for an Energy Storage Unit (ESU) manufactured by Allison Transmission, Inc. (Allison). The purpose of the waiver is to allow Allison until December 2013 to complete its ongoing process to secure and qualify a domestic supplier of Lithium Ion batteries.

The ESU is one of five subsystems of Allison's hybrid-electric propulsion system known as the H 40/50 EP System. The ESU supplies and stores energy for the H 40/50 EP System during normal motor-generator operation and during regenerative braking. The ESU is a packaged subsystem comprised of proprietary batteries, a battery management system, thermal management equipment and containment. It is manufactured to Allison's specifications and is functionally critical and specific to the H 40/50 EP System. The company currently procures the ESU completely assembled from a supplier that cannot comply with FTA's Buy America requirements.

With few exceptions, FTA's Buy America rules require that all steel, iron and manufactured goods used in FTA-funded projects be produced in the United States. One exception to Buy America is non-availability—that in some instances certain steel, iron, and manufactured goods are not produced in the United States in sufficient and reasonably available quantities or are not of a satisfactory quality. When this is the case, FTA may waive its Buy America requirements and allow the use of foreign-produced goods in an FTA-funded project.

On April 3, 2009, FTA granted a limited non-availability waiver to Allison. The waiver allowed Allison to produce its ESU outside the United States. While the waiver was in effect, FTA instructed Allison to identify and qualify a domestic manufacturer capable of producing ESUs for Allison's H 40/50 EP System. The waiver expired and, despite its best efforts, Allison has not identified and qualified a U.S. manufacturer.

Allison asked FTA to renew and extend the waiver until December 31, 2013, to allow it to complete the qualification process. According to Allison, since the issuance of the 2009 waiver, Allison has utilized competitive assessments, technical reviews, and independent market studies with U.S. based Lithium Ion suppliers. The company compared its current Nickel Metal Hydride (NiMH) batteries with Lithium Ion and determined Lithium Ion was appropriate for transit bus applications. In addition, Allison is changing from NiMH to Lithium Ion because no NiMH supplier is producing within the U.S. to meet Allison's requirements (design, reliability, quality, pricing, etc). Most domestic suppliers who expressed interest in starting production of the ESU subsystem quoted Lithium Ion technologies. Five companies have started or are starting cell production in the United States. Five additional companies are starting pack production in the Unites States.

After contacting and surveying a number of potential suppliers, Allison has chosen a domestic supplier. The selection and approval of this supplier

and its product is subject to the guidelines and requirements of Allison's structured product development and approval process known as the Process of Concurrent Engineering (POCE). This process applies to all products developed, manufactured and sold by Allison, including components and/or subcomponents that are purchased by Allison and provided as part of Allison's system or product that are delivered to its customers. The POCE process consists of four activity areas of focus with each having durations of approximately three months to one year. Allison is currently in the Concept Validation (CV) phase, evaluating/validating the possibility of utilizing a current U.S. hybrid ESS supplier who is working with Allison through an ARRA grant awarded in fiscal year 2009 (DOE Gran DE–EE00002025). Beyond the CV phase, additional joint work has been planned for Design Validation, OEM vehicle testing, and Production Validation phases that are needed to assure an appropriate Start of Production launch.

FTA proposes to grant Allison a waiver through December 31, 2013. Unlike other requests for non-availability waivers, the granting of which would enable otherwise non-compliant materials to be utilized until a U.S. producers comes forward, this waiver would allow Allison to maintain its position in the market while continuing the process of securing a domestic manufacturer for its ESU subsystems. Without a waiver extension, Allison faces a potential loss of volume, market share, and revenue, and a potential loss of U.S. Jobs. In addition, Allison's bus manufacturing customers would be limited in their ability to offer buses utilizing hybrid propulsion technology, without furthering the goals of Buy America.

Before deciding whether to grant Allison's request, FTA seeks comment from all interested parties. In the interest of transparency, FTA has published copies of Allison's request to the docket. Interested parties may access these materials by visiting the docket comments by April 2, 2012. Late-filed comments will be considered to the extent practicable.

Issued this 16th day of March 2012.

Dorval R. Carter, Jr.,

Chief Counsel.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2012–0031, Notice 1]

Notice of Receipt of Petition for Decision That Nonconforming Right-Hand Drive 2000–2003 Jeep Wrangler Multi-Purpose Passenger Vehicles Are Eligible for Importation

AGENCY: National Highway Traffic Safety Administration, DOT.

ACTION: Notice of receipt of petition.

SUMMARY: This document announces receipt by the National Highway Traffic Safety Administration (NHTSA) of a petition for a decision that right-hand drive (RHD) 2000–2003 Jeep Wrangler multi-purpose passenger vehicles (MPVs) that were not originally manufactured to comply with all applicable Federal Motor Vehicle Safety Standards (FMVSS) are eligible for importation into the United States because they have safety features that comply with, or are capable of being altered to comply with, all such standards.

DATES: The closing date for comments on the petition is April 25, 2012.

ADDRESSES: Comments should refer to the docket and notice numbers above and be submitted by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Mail:* Docket Management Facility: U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.
- *Fax:* 202–493–2251.

Instructions: Comments must be written in the English language, and be no greater than 15 pages in length, although there is no limit to the length of necessary attachments to the comments. If comments are submitted in hard copy form, please ensure that two copies are provided. If you wish to receive confirmation that your comments were received, please enclose a stamped, self-addressed postcard with the comments. Note that all comments received will be posted without change to *http://www.regulations.gov*, including any personal information provided. Please see the Privacy Act heading below.

Privacy Act: Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78).

How to Read Comments submitted to the Docket: You may read the comments received by Docket Management at the address and times given above. You may also view the documents from the Internet at *http://www.regulations.gov.*

Follow the online instructions for accessing the dockets. The docket ID number and title of this notice are shown at the heading of this document notice. Please note that even after the comment closing date, we will continue to file relevant information in the Docket as it becomes available. Further, some people may submit late comments. Accordingly, we recommend that you periodically search the Docket for new material.

FOR FURTHER INFORMATION CONTACT: George Stevens, Office of Vehicle Safety Compliance, NHTSA (202–366–5308).

SUPPLEMENTARY INFORMATION:

Background

Under 49 U.S.C. 30141(a)(1)(B), a motor vehicle that was not originally manufactured to conform to all applicable FMVSS, and has no substantially similar U.S.-certified counterpart, shall be refused admission into the United States unless NHTSA has decided that the motor vehicle has safety features that comply with, or are capable of being altered to comply with, all applicable FMVSS based on destructive test data or such other evidence as NHTSA decides to be adequate.

Petitions for eligibility decisions may be submitted by either manufacturers or importers who have registered with NHTSA pursuant to 49 CFR Part 592. As specified in 49 CFR 593.7, NHTSA publishes notices in the **Federal Register** of each petition that it receives, and affords interested persons an opportunity to comment on the petition. At the close of the comment period, NHTSA decides, on the basis of the petition and any comments that it has received, whether the vehicle is eligible for importation. The agency then publishes this decision in the **Federal Register.**

US SPECS of Havre de Grace, Maryland (Registered Importer 03–321) has petitioned NHTSA to decide

whether nonconforming RHD 2000–2003 Jeep Wrangler MPVs are eligible for importation into the United States. US SPECS believes these vehicles are capable of being modified to meet all applicable FMVSS.

In its petition, US SPECS notes that Chrysler Corporation certified an RHD 2003 Jeep Wrangler MPV to all applicable FMVSS and offered that vehicle for sale in the United States. US SPECS contends that the non-U.S certified RHD 2000–2003 Jeep Wrangler MPV shares the same platform with the U.S.-certified RHD 2003 model, and on that basis compares the non-U.S. certified models to that vehicle to establish their conformity with many applicable FMVSS. Because there is no U.S.-certified counterpart for the RHD 2000, 2001, and 2002 Jeep Wrangler MPV, the petitioner acknowledged that it could not base its petition on the substantial similarity of those vehicles to the U.S.-certified RHD 2003 Jeep Wrangler MPV in light of the petitioning requirements of 49 U.S.C. 30141(a)(1)(A), as set forth in 49 CFR Part 593. Instead, the petitioner chose to establish import eligibility on the basis that the vehicles have safety features that comply with, or are capable of being modified to comply with, the FMVSS based on destructive test data or such other evidence that NHTSA decides to be adequate as set forth in 49 U.S.C. 30141(a)(1)(B). Nevertheless, the petitioner contends that the non-U.S. certified RHD 2000–2003 Jeep Wrangler MPV utilizes the same components as the U.S.- certified RHD 2003 Jeep Wrangler MPV in virtually all of the systems subject to the applicable FMVSS.

US SPECS submitted information with its petition intended to demonstrate that non-U.S. certified RHD 2000–2003 Jeep Wrangler MPVs conform to many FMVSS and are capable of being altered to comply with all other standards to which they were not originally manufactured to conform.

Specifically, the petitioner claims that non-U.S. certified RHD Jeep Wrangler MPVs, as originally manufactured, conform to: Standard Nos. 102 *Transmission Shift Lever Sequence, Starter Interlock, and Transmission Braking Effect,* 103 *Windshield Defrosting and Defogging Systems,* 104 *Windshield Wiping and Washing Systems,* 106 *Brake Hoses,* 113 *Hood Latch System,* 116 *Motor Vehicle Brake Fluids,* 119 *New Pneumatic Tires,* 124 *Accelerator Control Systems,* 135 *Light Vehicle Brake Standard,* 202 *Head Restraints,* 204 *Steering Control Rearward Displacement,* 205 *Glazing Materials,* 206 *Door Locks and Door Retention Components,* 207 *Seating Systems,* 210 *Seat Belt Assembly Anchorages,* 212 *Windshield Mounting,* 214 *Side Impact Protection,* 216 *Roof Crush Resistance,* 219 *Windshield Zone Intrusion,* and 302 *Flammability of Interior Materials.*

The petitioner also contends that the vehicles are capable of being altered to meet the following standards, in the manner indicated:

Standard No. 101 *Controls and Displays:* replacement of the speedometer with a unit calibrated in miles per hour if the vehicle is not already so equipped.

Standard No. 108 *Lamps, Reflective Devices and Associated Equipment:* if the vehicle is not already so equipped, installation of U.S.-model: (a) Headlamps and front side marker lamps; (b) tail lamp assemblies that incorporate rear side marker lamps; (c) center high-mounted stop lamp; and (d) front and rear side reflex reflectors.

Standard No. 111 *Rearview Mirrors:* installation of a U.S.-model passenger side rearview mirror, or inscription of the required warning statement on the face of that mirror, if the vehicle is not already so equipped.

Standard No. 114 *Theft Protection:* installation of a warning buzzer if the vehicle is not already so equipped.

Standard No. 118 *Power-Operated Window, Partition, and Roof Panel Systems:* inspection of each vehicle and reprogramming or rewiring of the power operated window system if the vehicle is not already equipped with a compliant system.

Standard No. 120 *Tire Selection and Rims for Motor Vehicles Other than Passenger Cars:* installation of a tire and rim information placard.

Standard No. 201 *Occupant Protection in Interior Impact:* inspection of each vehicle and replacement of components if necessary to ensure compliance with the standard.

Standard No. 208 *Occupant Crash Protection:* inspection of each vehicle to confirm that U.S.-model airbags, control unit, sensors, seat belts, and knee bolsters have been installed. The petitioner states that the vehicles are equipped with a seat belt and audible warning buzzer that are identical to those found on U.S.-certified models. In addition, the petitioner states that the vehicles are equipped with dual front airbags and knee bolsters, and combination lap and shoulder belts at the front and rear outboard seating positions that are self-tensioning and are released by means of a single red push button.

Standard No. 209 *Seat Belt Assemblies:* Replacement of the passenger side seat belt with a U.S. model component on vehicles that are not already so equipped.

Standard No. 225 *Child Restraint Anchorage Systems:* inspection of each vehicle and installation of a U.S. model anchorage on all vehicles that are not already so equipped.

Standard No. 301 *Fuel System Integrity:* inspection of each vehicle and installation of U.S.-conforming components on all vehicles not already so equipped to ensure that the fuel system meets the requirements of this standard.

In addition, the petitioner states that a vehicle identification number plate must be installed in the area of the left windshield post to meet the requirements of 49 CFR Part 565 if the vehicle is not already so equipped.

All comments received before the close of business on the closing date indicated above will be considered, and will be available for examination in the docket at the above addresses both before and after that date. To the extent possible, comments filed after the closing date will also be considered. Notice of final action on the petition will be published in the **Federal Register** pursuant to the authority indicated below.

Authority: 49 U.S.C. 30141(a)(1)(A) and (b)(1); 49 CFR 593.8; delegations of authority at 49 CFR 1.50 and 501.8.

Issued on: March 19, 2012.

Claude H. Harris,

Director, Office of Vehicle Safety Compliance.

National Highway Traffic Safety Administration

[Docket No. NHTSA–2012–0030, Notice 1]

Notice of Receipt of Petition for Decision That Nonconforming 2005 Ifor Williams LM85G Trailers Are Eligible for Importation

AGENCY: National Highway Traffic Safety Administration, DOT.

ACTION: Notice of receipt of petition.

SUMMARY: This document announces receipt by the National Highway Traffic Safety Administration (NHTSA) of a petition for a decision that 2005 Ifor Williams LM85G trailers that were not originally manufactured to comply with all applicable Federal Motor Vehicle Safety Standards (FMVSS) are eligible for importation into the United States because they have safety features that

comply with, or are capable of being altered to comply with, all such standards.

DATES: The closing date for comments on the petition is April 25, 2012.

ADDRESSES: Comments should refer to the docket and notice numbers above and be submitted by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Mail:* Docket Management Facility: U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, Washington, DC 20590–0001
- *Hand Delivery or Courier:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.
- *Fax:* 202–493–2251.

Instructions: Comments must be written in the English language, and be no greater than 15 pages in length, although there is no limit to the length of necessary attachments to the comments. If comments are submitted in hard copy form, please ensure that two copies are provided. If you wish to receive confirmation that your comments were received, please enclose a stamped, self-addressed postcard with the comments. The docket ID number and title of this notice are shown at the heading of this document notice. Please note that even after the comment closing date, we will continue to file relevant information in the Docket as it becomes available. Further, some people may submit late comments. Accordingly, we recommend that you periodically search the Docket for new material.

FOR FURTHER INFORMATION CONTACT: George Stevens, Office of Vehicle Safety Compliance, NHTSA (202–366–5308).

SUPPLEMENTARY INFORMATION:

Background

Under 49 U.S.C. 30141(a)(1)(B), a motor vehicle, including a trailer, that was not originally manufactured to conform to all applicable FMVSS, and has no substantially similar U.S.-certified counterpart, shall be refused admission into the United States unless NHTSA has decided that the motor vehicle has safety features that comply with, or are capable of being altered to comply with, all applicable FMVSS based on destructive test data or such other evidence as NHTSA decides to be adequate.

Petitions for eligibility decisions may be submitted by either manufacturers or importers who have registered with NHTSA pursuant to 49 CFR Part 592. As specified in 49 CFR 593.7, NHTSA publishes notices in the **Federal Register** of each petition that it receives, and affords interested persons an opportunity to comment on the petition. At the close of the comment period, NHTSA decides, on the basis of the petition and any comments that it has received, whether the vehicle is eligible for importation. The agency then publishes this decision in the **Federal Register.**

J.K. Technologies, LLC of Baltimore, Maryland (J.K.) (Registered Importer 90–006) has petitioned NHTSA to decide whether nonconforming 2005 Ifor Williams LM85G trailers are eligible for importation into the United States. J.K. believes these vehicles are capable of being modified to meet all applicable FMVSS.

J.K. submitted information with its petition intended to demonstrate that 2005 Ifor Williams LM85G trailers conform to one FMVSS and are capable of being altered to comply with all other standards to which they were not originally manufactured to conform.

Specifically, the petitioner claims that 2005 Ifor Williams LM85G trailers, as originally manufactured, are equipped with DOT-compliant tires, as required by Standard No. 119 *New Pneumatic Tires for Vehicles other than Passenger Cars.*

The petitioner contends that the nonconforming 2005 Ifor Williams LM85G trailers are capable of being readily altered to meet the following standards, in the manner indicated:

Standard No. 108 *Lamps, Reflective Devices and Associated Equipment:* Installation of conforming reflex reflectors, tail lamps, license plate lamps, rear side marker lamps, front side marker lamps, intermediate side markers lamps, rear identification lamps, and front and rear clearance lamps, as necessary to achieve compliance with the standard.

Standard No. 120 *Tire Selection and Rims for Motor Vehicles Other than Passenger Cars:* installation of a tire information placard, and inspection of all vehicles and replacement of any nonconforming rims with ones that meet the standard.

In addition, the petitioner states that a vehicle identification number plate or label must be installed to meet the requirements of 49 CFR part 565 if the vehicle is not already so equipped.

All comments received before the close of business on the closing date indicated above will be considered, and will be available for examination in the docket at the above addresses both before and after that date. To the extent possible, comments filed after the closing date will also be considered. Notice of final action on the petition will be published in the **Federal Register** pursuant to the authority indicated below.

Authority: 49 U.S.C. 30141(a)(1)(A) and (b)(1); 49 CFR 593.8; delegations of authority at 49 CFR 1.50 and 501.8.

Issued on: March 9, 2012.

Claude H. Harris,

Director, Office of Vehicle Safety Compliance.

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA–2012–0058; Notice No. 12–4]

United States-Canada Regulatory Cooperation Council (RCC)—Transportation—Dangerous Goods Working Group

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation.

ACTION: Notice of request for stakeholder input.

SUMMARY: This notice is a request for comments and suggestions relative to the draft work plan of the Transportation—Dangerous Goods Working Group, of the United States-Canada Regulatory Cooperation Council (RCC). Comments will be accepted from all interested stakeholders.

DATES: Comments must be received by April 25, 2012.

ADDRESSES: *Comments:* It is requested that comments be submitted via email to *rcc@trade.gov* as well as by any one of the following methods (please identify comments by the docket number PHMSA–2012–0058):

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Fax:* 1–202–493–2251.
- *Mail:* Docket Operations, U.S. Department of Transportation, West Building, Ground Floor, Room W12–140, Routing Symbol M–30, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* To Docket Operations, Room W12–140 on the ground floor of the West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Instructions: All submissions must include the agency name and docket number for this notice at the beginning of the comment. Note that all comments received will be posted without change to the Federal eRulemaking Portal, including any personal information provided.

Privacy Act: Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the document (or signing the document, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477–78), which may also be found at *http://www.dot.gov.*

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov* or DOT's Docket Operations Office (see **ADDRESSES**).

FOR FURTHER INFORMATION CONTACT: Mr. Shane Kelley or Mr. Vincent Babich, Office of Hazardous Materials Safety, Department of Transportation, Washington, DC 20590; (202) 366–0656.

SUPPLEMENTARY INFORMATION: President Barack Obama and Prime Minister Stephen Harper created the U.S.-Canada Regulatory Cooperation Council (RCC) on February 4, 2011. After private sector consultations and bilateral negotiations, the RCC released the Joint Action Plan on Regulatory Cooperation on December 7, 2011. The Joint Action Plan is a practical first step to increased regulatory cooperation between the United States and Canada.

In order to address the dangerous goods (hazardous materials) transportation opportunities identified in the Joint Action Plan, the Transportation—Dangerous Goods Working Group led by senior officials of regulatory agencies from both countries has developed a work plan with concrete objectives, deliverables and milestones for tangible progress within the RCC's two-year mandate. When available, the work plan will be posted at *http://www.trade.gov/rcc/.*

The purpose of this request is to invite all interested stakeholders to provide comments relative to the plan and the RCC. The draft work plan has also been posted and is available for viewing under this docket number. All stakeholders including those who may not have participated in the United States-Canada Regulatory Cooperation Council (RCC) stakeholder engagement session on January 31, 2012 in Washington, DC are welcome to submit additional comments. Comments that were submitted prior to the publication date of this notice will be posted to this docket and do not need to be resubmitted.

PHMSA is particularly soliciting comments and suggestions in the following areas:

- The development of ongoing cooperation frameworks and alignment mechanisms in the work plan.
- Technical input relevant to issues identified in the work plan or otherwise in relation to the transportation of hazardous materials between the U.S. and Canada.
- Your preferred method and frequency of stakeholder engagement for the working group.
- Overall United States-Canada regulatory cooperation and the RCC process with respect to the transportation of hazardous materials.

Additional information concerning the RCC and the Joint Action Plan is available at *http://www.trade.gov/rcc/.*

Issued in Washington, DC on March 13, 2012.

Magdy El-Sibaie,

Associate Administrator for Hazardous Materials Safety.

DEPARTMENT OF THE TREASURY

Proposed Collection; Comment Request for Notice 2011–87

ACTION: Notice; correction.

SUMMARY: The Department of the Treasury published a document in the **Federal Register** on February 9, 2012, inviting comments on a proposed and/or continuing information collection, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). This document contained incorrect references.

Correction

In the **Federal Register** of February 9, 2011, in FR Doc. 2012–2980, make the following corrections:

- Page 6858, in the third column, under **SUMMARY**:, replace ''Alabama'' with ''New York''.
- Page 6858, in the third column, under **SUPPLEMENTARY INFORAMTION**:, *Title:* replace ''Alabama'' with ''New York''.
- Page 6859, in the first column, fourth line of text beginning with ''caused by'', replace ''caused by severe storms, tornadoes, straight-line winds and flooding in Alabama beginning on April 15, 2011.'' with ''in the State of New York caused by either Hurricane Irene during the period of August 26, 2011, to September 5, 2011, or the remnants of Tropical Storm Lee during the period of September 7, 2011, to September 11, 2011.''
- Page 6859, in the first column, under *Estimated Number of Respondents:,* replace ''600'' with ''1,200''.
- Page 6859, in the first column, under *Estimated Total Annual Burden Hours:,* replace ''150'' with ''300''.

Dated: March 20, 2012.

Dawn D. Wolfgang,

Treasury PRA Clearance Officer.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Art Advisory Panel—Notice of Closed Meeting

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice of Closed Meeting of Art Advisory Panel.

SUMMARY: Closed meeting of the Art Advisory Panel for Fine Art will be held in New York, NY.

DATES: The meeting will be held April 19, 2012.

ADDRESSES: The closed meeting of the Art Advisory Panel will be held on April 19, 2012, beginning at 9:30 a.m.,

at 290 Broadway, Foley Square, New York, NY 10007.

FOR FURTHER INFORMATION CONTACT: Ruth M. Vriend, C:AP:P&V:ART, 999 N. Capitol Street NE., Washington, DC 20003. Telephone (202) 435–5739 (not a toll free number).

SUPPLEMENTARY INFORMATION: Notice is hereby given pursuant to section 10(a)(2) of the Federal Advisory Committee Act, 5 U.S.C. App., that a closed meeting of the Art Advisory Panel will be held on April 19, 2012, beginning at 9:30 a.m., at 290 Broadway, Foley Square, New York, NY 10007.

The agenda will consist of the review and evaluation of the acceptability of fair market value appraisals of works of art involved in Federal income, estate, or gift tax returns. This will involve the discussion of material in individual tax returns made confidential by the provisions of 26 U.S.C. 6103.

A determination as required by section 10(d) of the Federal Advisory Committee Act has been made that this meeting is concerned with matters listed in section 552b(c)(3), (4), (6), and (7), and that the meeting will not be open to the public.

Christopher Wagner,

Chief, Appeals.

FEDERAL REGISTER

Vol. 77 Monday,
No. 58 March 26, 2012

Part II

Department of Labor

Occupational Safety and Health Administration

29 CFR 1910, 1915 and 1926
Hazard Communication; Final Rule

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Parts 1910, 1915, and 1926

[Docket No. OSHA–H022K–2006–0062 (formerly Docket No. H022K)]

RIN 1218–AC20

Hazard Communication

AGENCY: Occupational Safety and Health Administration (OSHA), DOL.

ACTION: Final rule.

SUMMARY: In this final rule, OSHA is modifying its Hazard Communication Standard (HCS) to conform to the United Nations' Globally Harmonized System of Classification and Labelling of Chemicals (GHS). OSHA has determined that the modifications will significantly reduce costs and burdens while also improving the quality and consistency of information provided to employers and employees regarding chemical hazards and associated protective measures. Consistent with the requirements of Executive Order 13563, which calls for assessment and, where appropriate, modification and improvement of existing rules, the Agency has concluded this improved information will enhance the effectiveness of the HCS in ensuring that employees are apprised of the chemical hazards to which they may be exposed, and in reducing the incidence of chemical-related occupational illnesses and injuries.

The modifications to the standard include revised criteria for classification of chemical hazards; revised labeling provisions that include requirements for use of standardized signal words, pictograms, hazard statements, and precautionary statements; a specified format for safety data sheets; and related revisions to definitions of terms used in the standard, and requirements for employee training on labels and safety data sheets. OSHA is also modifying provisions of other standards, including standards for flammable and combustible liquids, process safety management, and most substance-specific health standards, to ensure consistency with the modified HCS requirements. The consequences of these modifications will be to improve safety, to facilitate global harmonization of standards, and to produce hundreds of millions of dollars in annual savings.

DATES: This final rule becomes effective on May 25, 2012 Affected parties do not need to comply with the information collection requirements in the final rule until the Department of Labor publishes in the **Federal Register** the control numbers assigned by the Office of Management and Budget (OMB). Publication of the control numbers notifies the public that OMB has approved these information collection requirements under the Paperwork Reduction Act of 1995.

The incorporation by reference of the specific publications listed in this final rule is approved by the Director of the Federal Register as of May 25, 2012.

ADDRESSES: In compliance with 28 U.S.C. 2112(a), the Agency designates Joseph M. Woodward, Associate Solicitor for Occupational Safety and Health, Office of the Solicitor, Room S–4004, U.S. Department of Labor; 200 Constitution Avenue NW., Washington, DC 20210, as the recipient of petitions for review of this final standard.

FOR FURTHER INFORMATION CONTACT: *For general information and press inquiries, contact:* Frank Meilinger, OSHA Office of Communications, Room N–3647, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210, telephone (202) 693–1999. *For technical information, contact:* Dorothy Dougherty, Director, Directorate of Standards and Guidance, Room N–3718, OSHA, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693–1950.

SUPPLEMENTARY INFORMATION: This final rule modifies the Hazard Communication standard (HCS) and aligns it with the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) as established by the United Nations (UN). This action is consistent with Executive Order 13563 and, in particular, with its requirement of ''retrospective analysis of rules that may be outmoded, ineffective, insufficient, or excessively burdensome.'' The preamble to the final rule provides a synopsis of the events leading up to the establishment of the final rule, a detailed description of OSHA's rationale for the necessity of the modification, and final economic and voluntary flexibility analyses that support the Agency's determinations. Also included are explanations of the specific provisions that are modified in the HCS and other affected OSHA standards and OSHA's responses to comments, testimony, and data submitted during the rulemaking. The discussion follows this outline:

I. Introduction
II. Events Leading to the Revised Hazard Communication Standard
III. Overview of the Final Rule and Alternatives Considered
IV. Need and Support for the Revised Hazard Communication Standard
V. Pertinent Legal Authority
VI. Final Economic Analysis and Voluntary Regulatory Flexibility Analysis

XIV. Authority and Signature

The HCS requires that chemical manufacturers and importers evaluate the chemicals they produce or import and provide hazard information to downstream employers and employees by putting labels on containers and preparing safety data sheets. This final rule modifies the current HCS to align with the provisions of the UN's GHS. The modifications to the HCS will significantly reduce burdens and costs, and also improve the quality and consistency of information provided to employers and employees regarding chemical hazards by providing harmonized criteria for classifying and labeling hazardous chemicals and for preparing safety data sheets for these chemicals.

OSHA is required by the Occupational Safety and Health (OSH) Act of 1970 to assure, as far as possible, safe and healthful working conditions for all working men and women. Section 3(8) of the OSH Act (29 U.S.C. 652(8)) empowers the Secretary of Labor to promulgate standards that are ''reasonably necessary or appropriate to provide safe or healthful employment and places of employment.'' This language has been interpreted by the Supreme Court to require that an OSHA standard address a significant risk and reduce this risk significantly. *See Industrial Union Dep't* v. *American Petroleum Institute,* 448 U.S. 607 (1980). As discussed in Sections IV and V of this preamble, OSHA finds that inadequate communication to

employees regarding the hazards of chemicals constitutes a significant risk of harm and estimates that the final rule will reduce this risk significantly.

Section 6(b)(7) of the Act (29 U.S.C. 655(b)(7)) allows OSHA to make appropriate modifications to its hazard communication requirements as new knowledge and techniques are developed. The GHS system is a new approach that has been developed through international negotiations and embodies the knowledge gained in the field of chemical hazard communication since the current rule was first adopted in 1983. As indicated in Section IV of this preamble, OSHA finds that modifying the HCS to align with the GHS will enhance worker protections significantly. As noted in Section VI of this preamble, these modifications to HCS will also result in less expensive chemical hazard management and communication. In this way, the modifications are in line with the requirements of Executive Order 13563 and its call for streamlining of regulatory burdens.

OSHA is also required to determine if its standards are technologically and economically feasible. As discussed in Section VI of this preamble, OSHA has determined that this final standard is technologically and economically feasible.

The Regulatory Flexibility Act, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA), requires OSHA to determine if a regulation will have a significant impact on a substantial number of small entities. As discussed in Section VI, OSHA has determined and certified that this rule will not have a significant impact on a substantial number of small entities.

Executive Orders 13563 and 12866 require OSHA to assess the benefits and costs of final rules and of available regulatory alternatives. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. This rule has been designated an economically significant regulatory action under section 3(f)(1) of Executive Order 12866. Accordingly, the rule has been reviewed by the Office of Management and Budget, and the remainder of this section summarizes the key findings of the analysis with respect to the costs and benefits of the final rule.

Because this final rule modifies the current HCS to align with the provisions of the UN's GHS, the available alternatives to the final rule are somewhat limited. The Agency has qualitatively discussed the two major alternatives to the proposed rule—(1) voluntary adoption of GHS within the existing HCS framework and (2) a limited adoption of specific GHS components—in Section III of this preamble, but quantitative estimates of the costs and benefits of these alternatives could not reasonably be developed. However, OSHA has determined that both of these alternatives would eliminate significant portions of the benefits of the rule, which can only be achieved if the system used in the U.S. is consistently and uniformly applied throughout the nation and in conformance with the internationally harmonized system.

Table SI–1, derived from material presented in Section VI of this preamble, provides a summary of the costs and benefits of the final rule. As shown, the final rule is estimated to prevent 43 fatalities and 521 injuries and illnesses annually. Also as shown, OSHA estimates that the monetized health and safety benefits of the final rule are $250 million annually and that the annualized cost reductions and productivity gains are $507 million annually. In addition, OSHA anticipates that the final rule will generate substantial (but unquantified) savings from simplified hazard communication training and from expanded opportunities for international trade due to a reduction in trade barriers.

The estimated cost of the rule is $201 million annually. As shown in Table SI–1, the major cost elements associated with the final rule include the classification of chemical hazards in accordance with the GHS criteria and the corresponding revision of safety data sheets and labels to meet new format and content requirements ($22.5 million); training for employees to become familiar with new warning symbols and the revised safety data sheet format ($95.4 million); management familiarization and other management-related costs as may be necessary ($59.0 million); and costs to purchase upgraded label printing equipment and supplies or to purchase pre-printed color labels in order to include the hazard warning pictogram enclosed in a red-bordered diamond on the product label ($24.1 million).

The final rule is estimated to generate net monetized benefits of $556 million annually, using a discount rate of 7 percent to annualize costs and benefits. Using a 3 percent discount rate instead would have the effect of lowering the costs to $161 million per year and increasing the gross benefits to $839 million per year. The result would be to increase net benefits from $556 million to $678 million per year.

These estimates are for informational purposes only and have not been used by OSHA as the basis for its decision concerning the requirements for this final rule.

BILLING CODE 4510–26–P

The point estimates below do not reflect the uncertainties described throughout the analysis. While OSHA is reluctant to provide quantified ranges, OSHA recognizes that these estimates are uncertain. OSHA provides a Sensitivity Analysis on these estimates in Section VI.K of this preamble.

Table SI-1: Annual Benefits, Costs, and Net Benefits of OSHA's Final Hazard Communication Standard (2010 dollars)

Annualized Costs (discounted at 7 percent)	
Reclassification of Chemical Hazards and Revision of SDSs and Labels	$22.5 million
Employee Training	$95.4 million
Management Familiarization and Other Costs	$59.0 million
Printing Packaging and Labels for Hazardous Chemicals in Color	$24.1 million
Total Annualized Costs	$201 million
Annual Health and Safety Benefits	
Number of Non-lost-workday Injuries and Illnesses Prevented	318 (159 -1,590)
Number of Lost Workday Injuries and Illnesses Prevented	203 (101 – 1,015)
Number of Chronic Injuries Prevented	64 (33 – 320)
Number of Fatalities Prevented	43 (22 – 215)
Annualized Benefits	
Monetized Benefits of Reduction in Safety and Health Risks	$250.0 million
Savings from Productivity Improvements for Health and Safety Managers and Logistic Personnel	$475.2 million
Savings from Periodic Updating of SDSs and Labels	$32.2 million
Savings from Simplified Hazard Communication Training	Unquantified
Savings from Reductions in Non-tariff Trade Barriers	Unquantified
OSHA Standards that Are Consistent with International Standards, Consensus Standards, and Standards of Other Federal Agencies	Unquantified
Contribution towards Achieving International Goals Supported by the U.S. Government	Unquantified
Total Annual Monetized Benefits	$757 million ($632 - $1,757 million)
Net Annual Monetized Benefits (Benefits Minus Costs)	$556 million ($431 - $1,556 million)

BILLING CODE 4510–26–C

I. Introduction

In the preamble, OSHA refers to supporting materials. References to these materials are given as ''Document ID #'' followed by the last four digits of the document number. The referenced materials are posted in Docket No. OSHA–H022K–2006–0062, which is available at *http://www.regulations.osha.gov;* however, some information (*e.g.,* copyrighted material) is not publicly available to read or download through that Web site. All of the documents are available for inspection and, where permissible, copying at the OSHA Docket Office, U.S. Department of Labor, Room N–2625, 200 Constitution Avenue NW., Washington, DC 20210.

II. Events Leading to the Revised Hazard Communication Standard

The HCS was first promulgated in 1983 and covered the manufacturing sector of industry (48 FR 53280, Nov. 25, 1983). (Please note: The Agency's HCS (29 CFR 1910.1200; 1915.1200; 1917.28; 1918.90; and 1926.59) will be referred to as the ''current HCS'' throughout this rule.) In 1987, the Agency expanded the scope of coverage to all industries where employees are potentially exposed to hazardous chemicals (52 FR 31852, Aug. 24, 1987). Although full implementation in the non-manufacturing sector was delayed by various court and administrative actions, the rule has been fully enforced in all industries regulated by OSHA since March 17, 1989 (54 FR 6886, Feb. 15, 1989) (29 CFR 1910.1200; 1915.1200; 1917.28; 1918.90; and 1926.59). In 1994, OSHA made minor changes and technical amendments to the HCS to help ensure full compliance and achieve better protection of employees (59 FR 6126, Feb. 9, 1994). The development of the HCS is discussed in detail in the preambles to the original and revised final rules (*See* 48 FR at 53280–53281; 52 FR at 31852–31854; and 59 FR at 6127–6131). This discussion will focus on the sequence of events leading to the development of the GHS and the associated modifications to the HCS included in the final rule.

The current HCS requires chemical manufacturers and importers to evaluate the chemicals they produce or import to determine if they are hazardous. The standard provides definitions of health and physical hazards to use as the criteria for determining hazards in the evaluation process. Information about hazards and protective measures is then required to be conveyed to downstream employers and employees through labels on containers and through material safety data sheets, which are now called ''safety data sheets'' (SDS) under the final rule and in this preamble. All employers with hazardous chemicals in their workplaces are required to have a hazard communication program, including container labels, safety data sheets, and employee training. Generally, under the final rule, these obligations on manufacturers, importers, and employers remain, but how hazard communication is to be accomplished has been modified.

To protect employees and members of the public who are potentially exposed to hazardous chemicals during their production, transportation, use, and disposal, a number of countries have developed laws that require information about those chemicals to be prepared and transmitted to affected parties. The laws vary on the scope of chemicals covered, definitions of hazards, the specificity of requirements (*e.g.,* specification of a format for safety data sheets), and the use of symbols and pictograms. The inconsistencies among the laws are substantial enough that different labels and safety data sheets must often be developed for the same product when it is marketed in different nations.

Within the U.S., several regulatory authorities exercise jurisdiction over chemical hazard communication. In addition to OSHA, the Department of Transportation (DOT) regulates chemicals in transport; the Consumer Product Safety Commission (CPSC) regulates consumer products; and the Environmental Protection Agency (EPA) regulates pesticides, as well as exercising other authority over the labeling of chemicals under the Toxic Substances Control Act. Each of these regulatory authorities operates under different statutory mandates, and all have adopted distinct hazard communication requirements.

Tracking and complying with the hazard communication requirements of different regulatory authorities is a burden for manufacturers, importers, distributors, and transporters engaged in commerce in the domestic arena. This burden is magnified by the need to develop multiple sets of labels and safety data sheets for each product in international trade. Small businesses have particular difficulty in coping with the complexities and costs involved. The problems associated with differing national and international requirements were recognized and discussed when the HCS was first promulgated in 1983. At that time, OSHA committed to periodically reviewing the standard in recognition of an interagency trade policy that supported the U.S. pursuing international harmonization of requirements for chemical classification and labeling. The potential benefits of harmonization were noted in the preamble of the 1983 standard:

> * * * [O]SHA acknowledges the long-term benefit of maximum recognition of hazard warnings, especially in the case of containers leaving the workplace which go into interstate and international commerce. The development of internationally agreed standards would make possible the broadest recognition of the identified hazards while avoiding the creation of technical barriers to trade and reducing the costs of dissemination of hazard information by elimination of duplicative requirements which could otherwise apply to a chemical in commerce. As noted previously, these regulations will be reviewed on a regular basis with regard to similar requirements which may be evolving in the United States and in foreign countries. (48 FR at 53287)

OSHA has actively participated in many such efforts in the years since that commitment was made, including trade-related discussions on the need for harmonization with major U.S. trading partners. The Agency issued a Request for Information (RFI) in the **Federal Register** in January 1990, to obtain input regarding international harmonization efforts, and on work being done at that time by the International Labour Organization (ILO) to develop a convention and recommendations on safety in the use of chemicals at work (55 FR 2166, Jan. 22, 1990). On a closely related matter, OSHA published a second RFI in May 1990, requesting comments and information on improving the effectiveness of information transmitted under the HCS (55 FR 20580, May 17, 1990). Possible development of a standardized format or order of information was raised as an issue in the RFI. Nearly 600 comments were received in response to this request. The majority of responses expressed support for a standard safety data sheet format, and the majority of responses that expressed an opinion on the topic favored a standardized format for labels as well.

In June 1992, the United Nations Conference on Environment and Development issued a mandate (Chapter 19 of Agenda 21), supported by the U.S., calling for development of a globally harmonized chemical classification and labeling system:

> A globally harmonized hazard classification and compatible labeling system, including material safety data sheets and easily understandable symbols, should be available, if feasible, by the year 2000.

This international mandate initiated a substantial effort to develop the GHS,

involving numerous international organizations, many countries, and extensive stakeholder representation.

A coordinating group comprised of countries, stakeholder representatives, and international organizations was established to manage the work. This group, the Inter-Organization Programme for the Sound Management of Chemicals Coordinating Group for the Harmonization of Chemical Classification Systems, established overall policy for the work and assigned tasks to other organizations. The Coordinating Group then took the work of these organizations and integrated it to form the GHS. OSHA served as chair of the Coordinating Group.

The work was divided into three main parts: classification criteria for physical hazards; classification criteria for health and environmental hazards (including criteria for mixtures); and hazard communication elements, including requirements for labels and safety data sheets. The criteria for physical hazards were developed by a United Nations Sub-committee of Experts on the Transport of Dangerous Goods/ International Labour Organization working group and were based on the already harmonized criteria for the transport sector. The criteria for classification of health and environmental hazards were developed under the auspices of the Organization for Economic Cooperation and Development. The ILO developed the hazard communication elements. OSHA participated in all of this work, and served as U.S. lead on classification of mixtures and hazard communication.

Four major existing systems served as the primary basis for development of the GHS. These systems were the requirements in the U.S. for the workplace, consumers, and pesticides; the requirements of Canada for the workplace, consumers, and pesticides; European Union directives for classification and labeling of substances and preparations; and the United Nations Recommendations on the Transport of Dangerous Goods. The requirements of other systems were also examined as appropriate, and taken into account as the GHS was developed. The primary approach to reconciling these systems involved identifying the relevant provisions in each system; developing background documents that compared, contrasted, and explained the rationale for the provisions; and undertaking negotiations to find an agreed approach that addressed the needs of the countries and stakeholders involved. Principles to guide the work were established, including an agreement that protections of the existing systems would not be reduced as a result of harmonization. Thus, countries could be assured that the existing protections of their systems would be maintained or enhanced in the GHS.

An interagency committee under the auspices of the Department of State coordinated U.S. involvement in the development of the GHS. In addition to OSHA, DOT, CPSC, and EPA, other agencies were involved that had interests related to trade or other aspects of the GHS process. Different agencies took the lead in various parts of the discussions. Positions for the U.S. in these negotiations were coordinated through the interagency committee. Interested stakeholders were kept informed through email dissemination of information, as well as periodic public meetings. In addition, the Department of State published a notice in the **Federal Register** that described the harmonization activities, the agencies involved, the principles of harmonization, and other information, as well as invited public comment on these issues (62 FR 15951, Apr. 3, 1997). Stakeholders also actively participated in the discussions at the international level and were able to present their views directly in the negotiating process. The GHS was formally adopted by the new United Nations Committee of Experts on the Transport of Dangerous Goods and the Globally Harmonized System of Classification and Labelling of Chemicals in December 2002. In 2003, the adoption was endorsed by the Economic and Social Council of the United Nations. Countries were encouraged to implement the GHS as soon as possible, and have fully operational systems by 2008. This goal was adopted by countries in the Intergovernmental Forum on Chemical Safety, and was endorsed by the World Summit on Sustainable Development. The U.S. participated in these groups, and agreed to work toward achieving these goals.

OSHA published an Advance Notice of Proposed Rulemaking (ANPR) on the GHS in September of 2006 (71 FR 53617, Sept. 12, 2006). At the same time the ANPR was published, OSHA made available on its Web site a document summarizing the GHS (*http://www.osha.gov*). The ANPR provided information about the GHS and its potential impact on the HCS, and sought input from the public on issues related to GHS implementation. Over 100 responses were received, and the comments and information provided were taken into account in the development of the modifications to the HCS included in the September 2009 Notice of Proposed Rulemaking (NPRM) (74 FR 50279–50549, Sept. 30, 2009). A notice of correction was published on November 5, 2009, in order to correct misprints in the proposal (74 FR 57278, Nov. 5, 2009). Over 100 comments were received in response to the NPRM. Commenters represented the broad spectrum of affected parties and included government agencies, industries, professional and trade associations, academics, employee organizations and individuals. Public hearings were held in Washington, DC, from March 2 through March 5, 2010, and in Pittsburgh, PA, on March 31, 2010. Over 40 panels participated in the hearings. The comments, testimony, and other data received regarding this rulemaking were overwhelmingly favorable, and will be discussed in detail later in this preamble. The final post-hearing comment period for further submissions and briefs ended and the record was certified by Administrative Law Judge Stephen L. Purcell and closed on May 31, 2010. Executive Order 13563, emphasizing the importance of retrospective analysis of rules, was issued on January 18, 2011.

This final rule is based on Revision 3 of the GHS. The adoption of the GHS will improve OSHA's current HCS standard by providing consistent, standardized hazard communication to downstream users. However, even after the U.S. and other countries implement the GHS, it will continue to be updated in the future. These updates to the GHS will be completed as necessary to reflect new technological and scientific developments as well as provide additional explanatory text. Any future changes to the HCS to adopt subsequent changes to the GHS would require OSHA's rulemaking procedures.

OSHA will remain engaged in activities related to the GHS. The U.S. is a member of the United Nations Committee of Experts on the Transport of Dangerous Goods and the Globally Harmonized System of Classification and Labelling of Chemicals, as well as the Sub-committee of Experts on the Globally Harmonized System of Classification and Labelling of Chemicals, where OSHA is currently the Head of the U.S. Delegation. These permanent UN bodies have international responsibility for maintaining, updating as necessary, and overseeing the implementation of the GHS. OSHA and other affected Federal agencies actively participate in these UN groups. In addition, OSHA will also continue to participate in the GHS Programme Advisory Group under the United Nations Institute for Training and Research (UNITAR). UNITAR is

responsible for helping countries implement the GHS, and has ongoing programs to prepare guidance documents, conduct regional workshops, and implement pilot projects in a number of nations. OSHA will also continue its involvement in interagency discussions related to coordination of domestic implementation of the GHS, and in discussions related to international work to implement and maintain the GHS.

III. Overview of the Final Rule and Alternatives Considered

Based on consideration of the record as a whole, OSHA has modified the HCS to make it consistent with the GHS. OSHA finds that harmonizing the HCS with the GHS will improve worker understanding of the hazardous chemicals they encounter every day. Such harmonization will also reduce costs for employers.

OSHA believes that adopting the GHS will result in a clearer, more effective methodology for conveying information on hazardous chemicals to employers and employees. Commenters overwhelmingly supported the revision, and their submissions form a strong evidentiary basis for this final rule. The American Health Care Association stated that the GHS ''would enhance the effectiveness of the HCS in ensuring that employees are apprised of the chemical hazards to which they might be exposed'' (Document ID #0346). The National Institute of Environmental Health Sciences concurred, and added that adopting the GHS ''would provide better worker health and safety protections'' (Document ID #0347). (*See also* Document ID #0303, 0313, 0322, 0324, 0327, 0328, 0329, 0330, 0331, 0334, 0335, 0336, 0339, 0340, 0341, 0344, 0345, 0346, 0347, 0349, 0350, 0351, 0352, 0353, 0354, 0356, 0357, 0359, 0363, 0365, 0367, 0369, 0370, 0371, 0372, 0374, 0375, 0376, 0377, 0378, 0379, 0381, 0382, 0383, 0385, 0386, 0387, 0388, 0389, 0390, 0392, 0393, 0396, 0397, 0399, 0400, 0402, 0403, 0404, 0405, 0407, 0408, 0409, 0410, 0411, 0412, 0414, 0417, 0453, 0456, 0461, and 0463.)

Consistent with Executive Order 13563, OSHA has concluded that the revision significantly improves the current HCS standard. Moreover, there is widespread agreement that aligning the HCS with the GHS would establish a valuable, systematic approach for employers to evaluate workplace hazards, and provide employees with consistent information regarding the hazards they encounter. A member of the United Steel Workers aptly summed up the revision by stating that ''the HCS in 1983 gave the workers the 'right to know' but the GHS will give the workers the 'right to understand' '' (Document ID #0403). The American Society of Safety Engineers (ASSE) concurred, stating that adoption of the HCS was ''necessary to help this nation's workers deal with the increasingly difficult challenge of understanding the hazards and precautions needed to handle and use chemicals safely in an increasingly connected workplace'' (Document ID #0336). Phlymar, ORC, BCI, 3M, American Iron & Steel Institute, and the North American Metals Council (NAMC) all agreed that the adoption of the GHS would improve the quality and consistency of information and the effectiveness of hazard communication (Documents ID #0322, 0336, 0339, 0370, 0377, 0390, 0405, and 0408). (*See also* Document ID #0327, 0338, 0339, 0346, 0347, 0349, 0351, 0354, 0363, 0365, 0370, 0372, 0374, 0379, 0389, 0390, 0397, 0405, 0408, and 0414.) The evidence supporting the Agency's conclusions is discussed more thoroughly below in Sections IV, V, and VI; the revisions to the HCS are discussed in detail in Section XIII.

This section of the preamble provides an overview of the current HCS and how the adoption of the GHS will change this standard. Moreover, this section will also discuss the alternatives to mandatory implementation and the benefits of the final rule. The specific issues for which OSHA solicited comments in the NPRM will be discussed within their respective sections.

1. The Hazard Communication Standard

The HCS requires a comprehensive hazard evaluation and communication process, aimed at ensuring that the hazards of all chemicals are evaluated, and also requires that the information concerning chemical hazards and necessary protective measures is properly transmitted to employees. The HCS achieves this goal by requiring chemical manufacturers and importers to review available scientific evidence concerning the physical and health hazards of the chemicals they produce or import to determine if they are hazardous. For every chemical found to be hazardous, the chemical manufacturer or importer must develop a container label and an SDS, and provide both documents to downstream users of the chemical. All employers with employees exposed to hazardous chemicals must develop a hazard communication program, and ensure that exposed employees are provided with labels, access to SDSs, and training on the hazardous chemicals in their workplace.

There are three information communication components in this system—labels, SDSs, and employee training, all of which are essential to the effective functioning of the program. Labels provide a brief, but immediate and conspicuous, summary of hazard information at the site where the chemical is used. SDSs provide detailed technical information and serve as a reference source for exposed employees, industrial hygienists, safety professionals, emergency responders, health care professionals, and other interested parties. Training is designed to ensure that employees understand the chemical hazards in their workplace and are aware of protective measures to follow. Labels, SDSs, and training are complementary parts of a comprehensive hazard communication program—each element reinforces the knowledge necessary for effective protection of employees. Information required by the HCS reduces the incidence of chemical-related illnesses and injuries by enabling employers and employees to implement protective measures in the workplace. Employers can select less hazardous chemical alternatives and ensure that appropriate engineering controls, work practices, and personal protective equipment are in place. Improved understanding of chemical hazards by supervisory personnel results in safer handling of hazardous substances, as well as proper storage and housekeeping measures.

Employees provided with information and training on chemical hazards are able to fully participate in the protective measures instituted in their workplaces. Knowledgeable employees can take the steps required to work safely with chemicals, and are able to determine what actions are necessary if an emergency occurs. Information on chronic effects of exposure to hazardous chemicals helps employees recognize signs and symptoms of chronic disease and seek early treatment. Information provided under the HCS also enables health and safety professionals to provide better services to exposed employees. Medical surveillance, exposure monitoring, and other services are enhanced by the ready availability of health and safety information. The modifications that make up this final rule build on these core principles by establishing a more detailed and consistent classification system and requiring uniform labels and SDSs, which will better ensure that workers are informed and adequately protected from chemical exposures.

2. Current HCS Provisions for Classification, Labeling, and SDSs

The current HCS covers a broad range of health and physical hazards. The standard is performance-oriented, providing definitions of hazards and parameters for evaluating the evidence to determine whether a chemical is considered hazardous. The evaluation is based upon evidence that is currently available, and no testing of chemicals is required.

The current standard covers every type of health effect that may occur, including both acute and chronic effects. Definitions of a number of adverse health effects are provided in the standard. These definitions are indicative of the wide range of coverage, but are not exclusive. Mandatory Appendix A of the current standard lists criteria for specific health effects; however, it also notes that these criteria are not intended to be an exclusive categorization scheme, but rather any available scientific data on the chemical must be evaluated to determine whether the chemical presents a health hazard. Any adverse health effect that is substantiated by a study conducted according to established scientific principles, and reporting a statistically significant outcome, is sufficient for determining that a chemical is hazardous under the rule.

Most chemicals in commerce are not present in the pure state (*i.e.,* as individual elements or compounds), but are ingredients in mixtures of chemicals. Evaluation of the health hazards of mixtures is based on data for the mixture as a whole when such data are available. When data on the mixture as a whole are not available, the mixture is considered to present the same health hazards as any ingredients present at a concentration of 1% or greater, or, in the case of carcinogens, concentrations of 0.1% or greater. The current HCS also recognizes that risk may remain at concentrations below these cut-offs, and where there is evidence that that is the case, the mixtures are considered hazardous under the standard.

The current HCS establishes requirements for minimum information that must be included on labels and SDSs, but does not provide specific language to convey the information or a format in which to provide it. When the current HCS was issued in 1983, the public record strongly supported this performance-oriented approach (*See* 48 FR at 53300–53310). Many chemical manufacturers and importers were already providing information voluntarily, and in the absence of specific requirements had developed their own formats and approaches. The record indicated that a performance-oriented approach would reduce the need for chemical manufacturers and importers to revise these existing documents to comply with the HCS, thus reducing the cost impact of the standard.

3. GHS Provisions for Classification, Labeling, and SDSs

The GHS is an internationally harmonized system for classifying chemical hazards and developing labels and safety data sheets. However, the GHS is not a model standard that can be adopted verbatim. Rather, it is a set of criteria and provisions that regulatory authorities can incorporate into existing systems, or use to develop new systems.

The GHS allows a regulatory authority to choose the provisions that are appropriate to its sphere of regulation. This is referred to as the ''building block approach.'' The GHS includes all of the regulatory components, or building blocks, that might be needed for classification and labeling requirements for chemicals in the workplace, transport, pesticides, and consumer products. This rule only adopts those sections of the GHS that are appropriate to OSHA's regulatory sector. For example, while the GHS includes criteria on classifying chemicals for aquatic toxicity, these provisions were not adopted because OSHA does not have the regulatory authority to address environmental concerns. The building block approach also gives regulatory agencies the authority to select which classification criteria and provisions to adopt. OSHA is adopting the classification criteria and provisions for labels and SDSs, because the current HCS covers these elements. Broad criteria were established for the GHS in order to allow regulatory bodies to apply the same standards to a wide array of hazards. The building block approach may also be applied to the criteria for defining hazard categories. As a result, the GHS criteria are more comprehensive than what was in the current HCS, and OSHA did not need to incorporate all of the GHS hazard categories into this final rule.

Under the GHS, each hazard or endpoint (*e.g.,* Explosives, Carcinogenicity) is considered to be a hazard class. The classes are generally sub-divided into categories of hazard. For example, Carcinogenicity has two hazard categories. Category one is for known or presumed human carcinogens while category two encompasses suspected human carcinogens. The definitions of hazards are specific and detailed. For example, under the current HCS, a chemical is either an explosive or it is not. The GHS has seven categories of explosives, and assignment to these categories is based on the classification criteria provided. In order to determine which hazard class a mixture falls under, the GHS generally applies a tiered approach. When evaluating mixtures, the first step is consideration of data on the mixture as a whole. The second step allows the use of ''bridging principles'' to estimate the hazards of the mixture based on information about its components. The third step of the tiered approach involves use of cut-off values based on the composition of the mixture or, for acute toxicity, a formula that is used for classification. The approach is generally consistent with the requirements of the pre-modified HCS, but provides more detail and specification and allows for extrapolation of data available on the components of a mixture to a greater extent—particularly for acute effects.

Hazard communication requirements under the GHS are directly linked to the hazard classification. For each class and category of hazard, a harmonized signal word (*e.g.,* Danger), pictogram (*e.g.,* skull and crossbones), and hazard statement (*e.g.,* Fatal if Swallowed) must be specified. These specified elements are referred to as the core information for a chemical. Thus, once a chemical is classified, the GHS provides the specific core information to convey to users of that chemical. The core information allocated to each category generally reflects the degree or severity of the hazard.

Precautionary statements are also required on GHS labels. The GHS provides precautionary statements; while they have been codified (numbered), they are not yet considered formally harmonized. In other words, regulatory authorities may choose to use different language for the precautionary statements and still be considered to be harmonized with the GHS. The GHS has codified these statements (*i.e.,* assigned numbers to them) as well as aligned them with the hazard classes and categories. Codification allows the precautionary statements to be referenced in a shorthand form and makes it easier for authorities using them in regulatory text to organize them. In addition, there are provisions to allow inclusion of supplementary information so that chemical manufacturers can provide data in addition to the specified core information.

The GHS establishes a standardized 16-section format for SDSs to provide a consistent sequence for presentation of information to SDS users. Items of

primary interest to exposed employees and emergency responders are presented at the beginning of the document, while more technical information is presented in later sections. Headings for the sections (*e.g.,* First-aid measures, Handling and storage) are standardized to facilitate locating information of interest. The harmonized data sheets are consistent with the order of information included in the voluntary industry consensus standard for safety data sheets (ANSI Z400.1).

4. Revisions to the Hazard Communication Standard

The GHS uses an integrated, comprehensive process of identifying and communicating hazards, and the GHS modifications improve the HCS by providing more extensive criteria for defining the hazards in a consistent manner, as well as standardizing label elements and SDS formats to help to ensure that the information is conveyed consistently. The GHS does not include requirements for a written hazard communication program, and this final rule does not make substantive changes to the current HCS requirements for a written hazard communication program. Nor does the GHS impose employee training requirements; however, OSHA believes that additional training will be necessary to ensure that employees understand the new elements, particularly on the new pictograms. Therefore, modified training requirements have been included in the final rule in order to address the new label elements and SDS format required under this revised standard.

a. Modifications

The revised HCS primarily affects manufacturers and importers of hazardous chemicals. Pursuant to the final rule, chemical manufacturers and importers are required to re-evaluate chemicals according to the new criteria in order to ensure the chemicals are classified appropriately. For health hazards, this will involve assigning the chemical both to the appropriate hazard category and subcategory (called hazard class). For physical hazards, these new criteria are generally consistent with current DOT requirements for transport. Therefore, if the chemicals are transported (*i.e.,* they are not produced and used in the same workplace), this classification should already be done to comply with DOT's transport requirements. This will minimize the work required for classifying physical hazards under the revised rule.

Preparation and distribution of modified labels and safety data sheets by chemical manufacturers and importers will also be required. However, those chemical manufacturers and importers following the ANSI Z400.1 standard for safety data sheets should already have the appropriate format, and will only be required to make some small modifications to the content of the sheets to be in compliance with the final rule.

Using the revised criteria, a chemical will be classified based on the type, the degree, and the severity of the hazard it poses. This information will help employers and employees understand chemical hazards and identify and implement protective measures. The detailed criteria for classification will result in greater accuracy in hazard classification and more consistency among classifiers. Uniformity will be a key benefit; by following the detailed criteria, classifiers are less likely to reach different interpretations of the same data.

b. Specific Changes From the Proposal

Based on comments from the rulemaking effort, OSHA has made some modifications from the proposal to the final rule. These changes were the result of OSHA's analysis of the comments and data received from interested parties who submitted comments or participated in the public hearings. The major changes are summarized below and are discussed in the Summary and Explanation Section of this Preamble (Section XIII).

Safety Data Sheet

In the proposal, OSHA asked interested parties to comment on whether OSHA's permissible exposure limits (PELs) should be included on SDSs, as well as any other exposure limit used or recommended by the chemical manufacturer, importer, or employer who prepares SDSs. After reviewing and analyzing the comments and testimony, OSHA has decided not to modify the HCS with regard to the American Conference of Government Industrial Hygienists (ACGIH) Threshold Limit Values (TLVs) and so will continue to require ACGIH TLVs on SDSs. We have also retained the classification listings of the International Agency for Research on Cancer (IARC) and the National Toxicology Program (NTP) on SDSs. As explained more fully in the Summary and Explanation, OSHA finds that requiring ACGIH TLVs as well as the IARC and NTP classification listings on the SDS will provide employers and employees with useful information to help them assess the hazards presented by their workplaces.

Labels

As discussed in the NPRM, the GHS gives individual countries the option of using black, rather than red, borders around pictograms for labels used in domestic commerce. OSHA proposed requiring red frames for all labels, domestic and international. The final rule carries forward this requirement. As discussed in Sections IV and XIII, studies showed that there is substantial benefit to the use of color on the label. The color red in particular will make the warnings on labels more noticeable, because red borders are generally perceived to reflect the greatest degree of hazard. Further, while commenters who objected to this requirement cited the cost of printing in red ink as a reason to allow domestic use of black borders, OSHA was unconvinced that the costs involved made the provision infeasible, excessively burdensome, or warranted the diminished protection provided by black borders. (*See* Sections VI and XIII below.)

One option suggested by commenters was requiring a red label but allowing manufacturers and importers to use preprinted labels with multiple red frames. This would save costs because the preprinted label stock could be used for different products requiring different pictograms. Use of this option, however, would mean that the label for a particular chemical might have empty red frames if the chemical did not require as many pictograms as there were red frames on the label stock.

As explained in Sections IV and XIII, OSHA has concluded that a red border without a pictogram can create confusion and draw worker attention away from the appropriate hazard warnings (*See* Section IV for more detail). Additionally, OSHA is concerned that empty red borders might be inconsistent with DOT regulations (*See* 49 CFR 172.401). Therefore, while OSHA is not opposed to the use of preprinted stock, OSHA has decided not to allow the use of blank red frames on finished labels.

Hazard Classification

Another change to the final rule is the inclusion of the IARC and NTP as resources for determining carcinogenicity. Commenters generally supported this modification, and OSHA believes the inclusion of this information will assist evaluators with the classification process. Therefore, descriptions of both the IARC and NTP classification criteria have been added to Appendix F, and IARC and NTP classifications may be used to determine

whether a chemical should be classified as a carcinogen.

Unclassified Hazards

OSHA has made several modifications to clarify and specify the definition for unclassified hazards, based on the comments provided. Executive Order 13563 states that our regulatory system ''must promote predictability and reduce uncertainty,'' and these efforts at clarification are designed to achieve that goal. OSHA included this definition to preserve existing safeguards under requirements of the HCS for chemical manufacturers and importers to disseminate information on hazardous chemicals to downstream employers, and for all employers to provide such information to potentially exposed employees. Inclusion of the definition does not create new requirements. OSHA has made certain changes to clarify application of the definition, and to ensure that the relevant provisions do not create confusion or impose new burdens.

In order to minimize confusion, OSHA has renamed unclassified hazards, ''hazards not otherwise classified.'' More fundamentally, and in response to the majority of the comments on this issue, OSHA has removed from the coverage of the general definition the hazards identified in the NPRM as not currently classified under the GHS criteria. These hazards are: pyrophoric gases, simple asphyxiants, and combustible dust. As described below, OSHA has added definitions to the final rule for pyrophoric gases and simple asphyxiants, and provided guidance on defining combustible dust for purposes of complying with the HCS. In addition, the Agency has also provided standardized label elements for these hazardous effects.

Precautionary/Hazard Statements

In response to concerns by commenters that, on occasion, a specified precautionary statement might not be appropriate, OSHA modified mandatory Appendix C to provide some added flexibility. Where manufacturers, importers, or responsible parties can show that a particular statement is inappropriate for the product, that precautionary statement may be omitted from the label. This is discussed in more detail in section XIII below.

Other Standards Affected

Changing the HCS to conform to the GHS requires modification of other OSHA standards. For example, modifications have been made to the standards for Flammable and Combustible Liquids in general industry (29 CFR 1910.106) and construction (29 CFR 1926.152) to align the requirements of the standards with the GHS hazard categories for flammable liquids. Modifications to the Process Safety Management of Highly Hazardous Chemicals standard (29 CFR 1910.119) will ensure that the scope of the standard is not changed by the revisions to the HCS. In addition, modifications have been made to most of OSHA's substance-specific health standards, ensuring that requirements for signs and labels and SDSs are consistent with the modified HCS.

Effective Dates

In the proposal, OSHA solicited comments regarding whether it would be feasible for employers to train employees regarding the new labels and SDSs within two years after publication of the final rule. Additionally, OSHA inquired as to whether chemical manufacturers, importers, distributors, and employers would be able to comply with all the provisions of the final rule within three years, and whether a phase-in period was necessary.

OSHA received many comments and heard testimony regarding the effective dates which are discussed in detail in Section XIII below. First, after analysis of the record, the Agency has determined that covered employers must complete all training regarding the new label elements and SDS format by December 1, 2013 since, as supported by record, employees will begin seeing the new style labels considerably earlier than the compliance date for labeling. Second, OSHA is requiring compliance with all of the provisions for preparation of new labels and safety data sheets by June 1, 2015. However, distributors will have an additional six months (by December 1, 2015) to distribute containers with manufacturers' labels in order to accommodate those they receive very close to the compliance date. Employers will also be given an additional year (by June 1, 2016) to update their hazard communication programs or any other workplace signs, if applicable.

Additionally, OSHA has decided not to phase in compliance based on whether a product is a substance or a mixture. OSHA has concluded that adequate information is available for classifiers to use to classify substances and mixtures. Finally, as discussed in the NPRM, employers will be considered to be in compliance with the HCS during the transition period as long as they are complying with either the existing HCS (as it appears in the CFR as of October 1, 2011) or this revised HCS. A detailed discussion regarding the effective dates is in Section XIII.

5. Alternatives of Mandatory Implementation

In the NPRM, OSHA proposed several alternatives to mandatory implementation of the GHS in response to concerns raised by commenters through the ANPR (74 FR at 50289). Commenters generally supported the concept of adopting the GHS as it was proposed. However, a few commenters indicated that they were concerned with what they saw as the cost burden on small businesses that are not involved in international trade. To address these concerns, OSHA solicited comments in the NPRM on several options proposed by the Agency regarding alternatives to mandatory harmonization. The following is a discussion of these alternatives; the potential impact and the response from participants in the rulemaking regarding the relative benefit, feasibility, impact on small business; and the impact on worker safety and health.

The first alternative OSHA proposed was to facilitate voluntary adoption of GHS within the existing HCS framework, and give manufacturers and importers the option to use the current HCS or the GHS system. This option would have permitted companies to decide whether they wanted to comply with the existing standard or with the GHS. A variation of this alternative was also proposed that would have adopted the GHS with an exemption allowing small chemical producers to continue to use the HCS, even after this GHS-modified HCS is promulgated.

The second alternative was a limited adoption of specific GHS components. Under this approach, producers could either comply with the GHS or a modified HCS that would retain the current HCS hazard categories, but require standardized hazard statements, signal words, and precautionary statements. A variation of this alternative would have omitted mandatory precautionary statements.

Commenters almost universally objected to both of the alternatives listed above (Document ID #0324, 0328, 0329, 0330, 0335, 0338, 0339, 0341, 0344, 0351, 0352, 0355, 0365, 0370, 0377, 0381, 0382, 0385, 0387, 0389, 0393, 0495, 0403, 0404, and 0412). American Industrial Hygiene Association (AIHA), in a representative comment, stated that ''permitting voluntary use of some of the system * * * or exempting certain sectors based on business size or other criteria [would] defeat the purpose of revising this standard and of the GHS'' (Document ID #0365). Additionally, the

Compressed Gas Association stated they ''would not support any alternative approach as it would defeat the goal of global hazard communication coordination'' (Document ID #0324).

Many commenters argued that a dual system that permitted businesses to opt out of complying with the GHS would undermine the key benefits of implementation. For example, Ferro Corporation stated that ''for GHS to be effective and efficient in the U.S., implementation should be consistent and congruent'' (Document ID #0363). DuPont Company argued ''dual systems would be confusing for employers'' (Document ID #0329). ORC also rejected voluntary implementation, reasoning that ''consistent requirements for all manufacturers and importers of chemicals [are] needed to maximized efficiency in the chemical supply chain'' (Document ID #0370). Additionally, the AFL–CIO cited consistent hazard information for workers and employers as the core objective of this rulemaking (Document ID #0340).

The commenters who supported GHS as proposed indicated that consistency was an essential aspect of this rule. Stericycle, Inc., stated that SDSs which ''do not follow a consistent format would cause issues in understanding and implementing the controls to limit exposure and protect employee safety and health,'' and argued that exemptions from GHS requirements would ''shift the burden from the chemical industry to all employers'' (Document ID #0338). Additionally, commenters did not support exempting small businesses from adopting the GHS. Ecolab argued that ''large and small businesses use each others' products'' and are inextricably linked, and they indicated that voluntary adoption ''could cause confusion about product hazards if two identical products are labeled differently due solely to the size of the business from which [they are] obtained'' (Document ID #0351).

OSHA agrees that the first alternative is unworkable as even one business's adoption of one of the alternatives would affect other companies. As stated in the comments above, if small businesses do not adopt the GHS, then large businesses or distributors will either have to generate GHS classifications for chemicals purchased, or request that small businesses supply data and labels using GHS classifications. Likewise, chemical producers often provide their products to distributors who then sell them to customers who are unknown to the original producer. This would lead to a plethora of product labels, a situation that is bound to make hazard communication far more difficult.

Commenters specifically cited issues with safety as their basis for rejecting the first proposed alternative. The AIHA (Document ID #0365) stated:

> If employers and employees cannot have confidence that labels and MSDSs provide a consistent safety message superficial standardization will not improve safety. Safety is also seriously compromised if different hazard communication systems are present in the work area. Effective training is not possible if pictograms and hazard statements are not used in a consistent manner * * *. All of the approaches discussed will create competitive pressures that can affect classification decisions and make good and consistent hazard communication more difficult.

North American Metal Council argued that the alternative would penalize workers of small business, and asserted that a ''worker's right to know about chemical hazards, should not depend on the source of a chemical or the size of the worker's employer'' (Document ID #0337).

Moreover, commenters asserted that the benefits derived from the harmonized labeling of chemicals would be significantly diluted if employers were not uniformly required to adopt the GHS. United Steel Workers Union aptly reiterated that the primary benefit of adopting the GHS is not the facilitation of international trade, but rather is the protection of workers, which is ''best accomplished through a uniform system of classification leading to comprehensible hazard information'' (Document ID #0403). (*See also* Document ID #0339, 0351, 0376, 0377, 0382, and 0412.)

Several commenters supported the voluntary adoption of the GHS (Document ID #0355, 0389, and 0502). For example, Intercontinental Chemical Corporation supported voluntary adoption for companies not involved in international trade (Document ID #0502). Additionally, Betco supported allowing ''small businesses that market domestically'' to retain the current HCS and suggested that ''voluntary adoption would not be any less protective for employees or create confusion'' (Document ID #0389).

OSHA acknowledges that small chemical manufacturers will have some burdens associated with the adoption of GHS. However, employees who use products produced by small employers are entitled to the same protections as those who use products produced by companies engaged in international trade. The confusion created by two or more competing systems would undermine the consistency of hazard communication achievable by a GHS-modified HCS. Moreover, whether or not a product will wind up in international trade may not be known to the manufacturer or even the first distributer. A producer may provide a chemical to another company, which then formulates it into a product that is sold internationally. Thus, the original producer is involved in international trade without necessarily realizing it. For these reasons, OSHA has determined that, in order to achieve a national, consistent standard, all businesses must be required to adhere to the revised HCS.

OSHA concludes that the rulemaking record does not support adoption of the first alternative. The majority of private industry, unions, and professional organizations did not support this approach, arguing persuasively that piecemeal adoption would undermine the benefits of harmonization. As discussed above, while improvements to international trade are a benefit of this rulemaking; they are not the primarily intended benefit. OSHA believes that implementation of the GHS, without exceptions based on industry or business size, will enhance worker safety through providing consistent hazard communication and, consequently, safe practices in the workplace. However, as indicated above, OSHA does recognize that there are burdens with any change and as discussed in Section XIII, OSHA will use the input OSHA has received to the record to develop an outreach plan for additional guidance.

The second alternative, a halfway measure allowing businesses to adopt some of the features of a GHS-modified HCS but not requiring adoption of others, drew little interest or comment from the participants. OSHA has concluded that this alternative, which would have led to even more inconsistencies in hazard communication, is not a viable alternative. OSHA's conclusion is supported by the overwhelming number of commenters who spoke out against the first option and strongly supported the proposed standard. Allowing employers to adopt, say, only the provisions for the labels or safety data sheets will result in inconsistent use of the standardized hazard statement, signal word, and precautionary statement without clear direction on when they would be required, a situation that is sure to compromise safety in the workplace. Therefore, OSHA has concluded that implementation of the GHS is also preferable to the second alternative.

Pursuant to its analysis of the entire rulemaking record, OSHA has decided to adopt the GHS as proposed and is not incorporating any of the alternatives into this final rule. The adoption of any of the alternatives would undermine the key benefits associated with the GHS. OSHA has concluded, as discussed in Section V, that the adoption of GHS as proposed will strengthen and refine OSHA's hazard communication system, leading to safer workplaces.

IV. Need and Support for the Modifications to the Hazard Communication Standard

Chemical exposure can cause or contribute to many serious adverse health effects such as cancer, sterility, heart disease, lung damage, and burns. Some chemicals are also physical hazards and have the potential to cause fires, explosions, and other dangerous incidents. It is critically important that employees and employers are apprised of the hazards of chemicals that are used in the workplace, as well as the associated protective measures. This knowledge is needed to understand the precautions necessary for safe handling and use, to recognize signs and symptoms of adverse health effects related to exposure when they do occur, and to identify appropriate measures to be taken in an emergency.

OSHA established the need for disclosure of chemical hazard information when the Hazard Communication Standard (HCS) was issued in 1983 (48 FR 53282–53284, Nov. 25, 1983). As noted in the NPRM (74 FR 50291, Sept. 30, 2009), this need continues to exist. The Agency estimates that 880,000 hazardous chemicals are currently used in the U.S., and over 40 million employees are now potentially exposed to hazardous chemicals in over 5 million workplaces. During the September 29, 2009, press conference announcing the publication of the HCS NPRM, Deputy Assistant Secretary of Labor for Occupational Safety and Health, Jordan Barab, discussed the impact that the HCS has had on reducing injury and illness rates. Mr. Barab stated that, since the HCS's original promulgation in 1983, ''OSHA estimates that chemically-related acute injuries and illness [have] dropped at least 42%.'' Reiterating information from OSHA's preliminary economic analysis in the NPRM, Mr. Barab also stated:

> [T]here are still workers falling ill or dying from exposure to hazardous chemicals. OSHA estimates, based on BLS data, that more than 50,000 workers became ill and 125 workers died due to acute chemical exposure in 2007. These numbers are dwarfed by chronic illnesses and fatalities that are estimated in the tens of thousands.
>
> OSHA believes that aligning the Hazard Communication Standard with the provisions of the GHS will improve the effectiveness of the standard and help to substantially improve worker safety and health. The GHS will provide a common system for classifying chemicals according to their health and physical hazards and it will specify hazard communication elements for labeling and safety data sheets.

Data collected and analyzed by the Agency also reflect this critical need to improve hazard communication. Chemical exposures result in a substantial number of serious injuries and illnesses among exposed employees. The Bureau of Labor Statistics estimates that employees suffered 55,400 illnesses that could be attributed to chemical exposures in 2007, the latest year for which data are available (BLS, 2008). In that same year, 17,340 chemical-source injuries and illnesses involved days away from work (BLS, 2009).

The BLS data, however, do not indicate the full extent of the problem, particularly with regard to illnesses. As noted in the preamble to the HCS in 1983, BLS figures probably only reflect a small percentage of the incidents occurring in exposed employees (48 FR 53284, Nov. 25, 1983). Many occupational illnesses are not reported because they are not recognized as being related to workplace exposures, are subject to long latency periods between exposure and the manifestation of disease, and other factors (*e.g.,* Herbert and Landrigan, 2000, Document ID #0299; Leigh *et al.,* 1997, Document ID #0274; Landrigan and Markowitz, 1989, Document ID #0299).

While the current HCS serves to ensure that information concerning chemical hazards and associated protective measures is provided to employers and employees, the Agency has determined that the revisions adopted in this final rule will substantially improve the quality and consistency of the required information. OSHA believes these revisions to the HCS, which align it with the GHS, will enhance workplace protections significantly. Better information will enable employers and employees to increase their recognition and knowledge of chemical hazards and take measures that will reduce the number and severity of chemical-related injuries and illnesses.

A key foundation underlying this belief relates to the comprehensibility of information conveyed under the GHS. All hazard communication systems deal with complicated scientific information being transmitted to largely non-technical audiences. During the development of the GHS, in order to construct the most effective hazard communication system, information about and experiences with existing systems were sought to help ensure that the best approaches would be used. Ensuring the comprehensibility of the GHS was a key principle during its development. As noted in a **Federal Register** notice published by the U.S. Department of State (62 FR 15956, April 3, 1997): ''A major concern is to ensure that the requirements of the globally harmonized system address issues related to the comprehensibility of the information conveyed.'' This concern is also reflected in the principles of harmonization that were used to guide the negotiations and discussions during the development of the GHS. As described in Section 1.1.1.6(g) of the GHS, the principles included the following: ''[T]he comprehension of chemical hazard information, by the target audience, *e.g.,* workers, consumers and the general public should be addressed.''

As was discussed in the proposal (74 FR 50291), to help in the development of the GHS, OSHA had a review of the literature conducted to identify studies on effective hazard communication, and made the review and the analysis of the studies available to other participants in the GHS process. One such study, prepared by researchers at the University of Maryland, entitled ''Hazard Communication: A Review of the Science Underpinning the Art of Communication for Health and Safety'' (Sattler *et al.,* 1997, Document ID #0191) has also long been available to the public on OSHA's Hazard Communication web page. Additionally, OSHA conducted an updated review of the literature published since the 1997 review. This updated review examined the literature relevant to specific hazard communication provisions of the GHS (ERG, 2007, Document ID #0246).

Further work related to comprehensibility was conducted during the GHS negotiations by researchers in South Africa at the University of Cape Town—the result is an annex to the GHS on comprehensibility testing (*See* GHS Annex 6, Comprehensibility Testing Methodology) (United Nations, 2007, Document ID #0194). Such testing has been conducted in some of the developing countries preparing to implement the GHS, and has provided these countries with information about which areas in the GHS will require more training in their programs to

ensure people understand the information. The primary purpose of these activities was to ensure that the system developed was designed in such a way that the messages would be effectively conveyed to the target audiences, with the knowledge that the system would be implemented internationally in different cultures with varying interests and concerns.

Another principle that was established to guide development of the GHS was the agreement that levels of protection offered by an existing hazard communication system should not be reduced as a result of harmonization. Following these principles, the best aspects of existing systems were identified and included in a single, harmonized approach to classification, labeling, and development of SDSs.

The GHS was developed by a large group of experts representing a variety of perspectives. Over 200 experts provided technical input on the project. The United Nations Sub-Committee of Experts on the GHS, the body that formally adopted the GHS and is now responsible for its maintenance, includes 35 member nations as well as 14 observer nations. Authorities from these member states are able to convey the insight and understanding acquired by regulatory authorities in different sectors, and to relate their own experiences in implementation of hazard communication requirements. In addition, over two dozen international and intergovernmental organizations, trade associations, and unions are represented, and their expertise serves to inform the member nations. The GHS consequently represents a consensus recommendation of experts with regard to best practices for effective chemical hazard communication, reflecting the collective knowledge and experience of regulatory authorities in many nations and in different regulatory sectors, as well as other organizations that have expertise in this area.

United States-based scientific and professional associations have endorsed adoption of the GHS since publication of the Advance Notice of Proposed Rulemaking (ANPR) in 2006 (71 FR 53617, Sept. 12, 2006). For example, the American Chemical Society (ACS) indicated its support for the GHS, stating: ''The American Chemical Society strongly supports the adoption of the GHS for hazard communication in general and specifically as outlined in the ANPR'' adding that ''* * * ACS anticipates that OSHA implementation of GHS in the U.S. will enhance protection of human health and the environment through warnings and precautionary language that are consistent across different products and materials as well as across all workplaces'' (Document ID #0165). The American Industrial Hygiene Association (AIHA) affirmed its support for modification of the HCS to adopt the GHS. AIHA maintained that standardized labels and safety data sheets will make hazard information easier to use, thereby improving protection of employees (Document ID #0034). While acknowledging that the GHS presents a number of concerns and challenges, the Society of Toxicology has also expressed its support for the GHS, stating that ''a globally harmonized system for the classification of chemicals is an important step toward creating consistent communications about the hazards of chemicals used around the world'' (Document ID #0304). The American Association of Occupational Health Nurses joined these organizations in advocating adoption of the GHS, arguing that standardization of chemical hazard information is critical to protecting the safety and health of employees (Document ID # 0099). Responders to the 2009 NPRM reiterated their support or, in the case of new commenters, echoed the comments from other scientific and professional associations to the ANPR (*See, e.g.,* Document ID #0338, 0357, 0365, 0393, and 0410). The positions taken by these organizations point to wide support for the GHS among the scientific and professional communities.

Stakeholders representing a wide range of sectors and interests agreed with OSHA that aligning the HCS with the GHS will improve comprehensibility, and thus lead to reductions in chemical source illnesses and injuries. American Society of Safety Engineers, Dow Chemical, and ORC all voiced their support for the proposed rule, citing improved comprehensibility and quality of transmitted information as key benefits (Document ID #0336, 0353, and 0370). Representing union labor, the American Federation of State, County and Municipal Employees (AFSCME) stated that this rulemaking would ''allow critical communication about the hazards of chemicals to be understood by all workers, regardless of their literacy level or primary language * * * [and] will in turn lead to safer, more productive workplaces'' (Document ID #0414). Many stakeholders asserted that adopting the GHS would lead to safer workplaces. The Chamber of Commerce provided its support for the rulemaking, stating that the GHS could ''improve worker safety, and facilitate business growth and international trade'' (Document ID #0397). The American Subcontractors Association, Inc. added that consistent hazard communication is critical to having a safe work program (Document ID #0322). Additionally, North American Metals Council (NAMC), which represents the interests of the metals and mining industry, stated that a single, globally harmonized classification and labeling system is of vital interest to its members (Document ID #0233). The position that GHS would increase worker protection was also raised in testimony during the hearings. Elizabeth Treanor of Phylmar Regulatory Roundtable testified that adopting the GHS would ''enhance the effectiveness of the hazard communication standard by improving the quality and consistency of chemical hazard information that is provided to employees and employers'' (Document ID #0497 Tr. 92).

In addition to the endorsement of the GHS by a group of experts with extensive knowledge and experience in chemical hazard communication, support from scientific and professional associations with expertise in this area, and support from industry and labor stakeholders, a substantial body of evidence indicates that the modifications to the HCS will better protect employees. Specifically, this evidence supports OSHA's findings that: (1) Standardized label elements—signal words, pictograms, hazard statements and precautionary statements—will be more effective in communicating hazard information; (2) standardized headings and a consistent order of information will improve the utility of SDSs; and (3) training will support and enhance the effectiveness of the new label and SDS requirements.

This evidence was obtained from sources predating the ANPR and from more recent data. OSHA commissioned several studies to examine the quality of information on SDSs (Karstadt, 1988, Document ID #0296; Kearney/Centaur 1991a, 1991b, Document ID #0309 and 0310; Lexington Group, 1999, Document ID #0257); the General Accounting Office (GAO) has issued two reports based on its evaluation of certain aspects of the HCS (GAO 1991 and 1992, Document ID #0271 and 0272); a National Advisory Committee on Occupational Safety and Health (NACOSH) workgroup conducted a review of hazard communication and published a report of its findings (NACOSH, 1996, Document ID #0260); and a substantial amount of scientific literature relating to hazard communication has been published. As mentioned previously, OSHA

commissioned a review of the literature, and a report based on that review was published in 1997 (Sattler *et al.,* 1997, Document ID #0191). An updated review was conducted in 2007 (ERG, 2007, Document ID #0246). In addition, OSHA conducted a review of the requirements of the HCS and published its findings in March of 2004 (OSHA, 2004, Document ID #0224). Key findings derived from these sources are discussed below.

No commenters questioned the validity of studies presented in the NPRM. Similarly, commenters did not question OSHA's analysis or interpretation of the study findings. Only one commenter suggested that OSHA should adopt more ''conservative expectations for the effects that warning format changes can have on the behavior of end users,'' adding that ''real-world conditions'' must be accounted for when determining the actual responses of users (Document ID #0396). However, the commenter did not disagree with OSHA's overall conclusion that this final rule would improve safety. OSHA agrees that external factors may influence the overall benefits of label elements (this will be addressed in Section VI).

The studies discussed in the NPRM formed the evidentiary basis for the revised HCS. As such, OSHA infers that commenters generally found the studies, as well as OSHA's analysis, to be sound. OSHA's rationale for adopting the GHS is tied to anticipated improvements in the quality and consistency of the information that would be provided to employers and employees. Hazard classification is the foundation for development of this improved information. Indeed, hazard classification is the procedure of identifying and evaluating available scientific evidence in order to determine if a chemical is hazardous, and the degree of hazard, pursuant to the criteria for health and physical hazards set forth in the standard. Hazard classification provides the basis for the hazard information that is provided in labels, SDSs, and employee training. As such, it is critically important that classification be performed accurately and consistently.

The GHS provides detailed scientific criteria to direct the evaluation process. The specificity and detail provided help ensure that different evaluators would reach the same conclusions when evaluating the same chemical. Moreover, the GHS refines the classification process by establishing categories of hazard within most hazard classes. These categories indicate the relative degree of hazard, and thereby provide a basis for determining precise hazard information that is tailored to the level of hazard posed by the chemical. The classification criteria established in the GHS thus provide the necessary basis for development of the specific, detailed hazard information that would enhance the protection of employees.

Labels

Labels serve as immediate visual reminders of chemical hazards, and complement the information presented in training and on SDSs. The current HCS requires that labels on hazardous chemical containers include the identity of the hazardous chemical; appropriate hazard warnings that convey the specific physical and health hazards, including target organ effects; and the name and address of the chemical manufacturer, importer, or other responsible party. The HCS does not specify a standard format or design elements for labels.

In the NPRM, OSHA proposed to improve the HCS by changing the performance requirements for labels to the GHS-specific requirements that labels include four standardized elements: a signal word; hazard statement(s); pictogram(s); and precautionary statement(s) (*See* Section XV for a detailed discussion of the requirements). The appropriate label elements for a chemical are to be determined by the hazard classification. OSHA has concluded that these standardized label elements better convey critically important hazard warnings, and provide useful information regarding precautionary measures that will serve to better protect employees than the performance-oriented approach of the current rule.

This requirement is different from the current HCS in that it will require consistent and detailed information regarding a chemical based on the hazard classification. The current rule does not specify a standard format or design elements for labels. Rather, all that is required in the current HCS is that the label of the hazardous chemical containers include the identity of the hazardous chemical; appropriate hazard warnings that convey the specific physical and health hazards, including target organ effects; and the name and address of the chemical manufacturer, importer, or other responsible party.

Additionally, as discussed in the proposal (74 FR 50291, Sept. 30, 2009), a great deal of literature has been developed that examines the effectiveness of warnings on labels. These studies support OSHA's adoption of standardized warnings on the labels of hazardous chemicals. Although the studies discussed below pertain to prescription and non-prescription medications, alcoholic beverages, or consumer products rather than hazardous chemicals, it does not diminish the importance or relevance of the data. This literature provides a substantial body of information directly applicable and analogous to workplace chemical labels. In spite of the differences in affected populations, workplace chemical labels have many characteristics that are comparable to those found in other sectors. Pharmaceutical labels, for example, are similar to chemical labels in that they often have explicit instructions for use which, if not followed, can cause adverse health effects or death. Designers of pharmaceutical labels also encounter many of the same challenges faced by those who design chemical labels, such as container space limitations and the need to convey information to low-literate or non-English-literate users. In addition, some of the research is not directly related to any particular sector or type of product. Some findings related to use of color, for example, could reasonably be applied to a wide variety of label applications. The studies are discussed below in the specific labeling sections.

Signal Words

A signal word is a word that typically appears near the top of a warning, sometimes in all capital letters. Common examples include DANGER, WARNING, CAUTION, and NOTICE. The signal word is generally understood to serve a dual purpose: Alerting the user to a hazard and indicating a particular level of hazard. For example, users generally perceive the word DEADLY to indicate a far greater degree of hazard than a term like NOTICE.

This final rule requires the use of one of two signal words for labels—DANGER or WARNING—depending on the hazard classification of the substance in question. These are the same two signal words used in the GHS. DANGER is used for the more severe hazard categories, while WARNING denotes a less serious hazard. These signal words are similar to those in other established hazard communication systems, except that some other systems have three or more tiers. For example, ANSI Z129.1 (the American National Standard for Hazardous Industrial Chemicals—Precautionary Labeling) uses DANGER, WARNING, and CAUTION, in descending order of severity (ANSI, 2006, Document ID #0280).

A number of studies have examined how people perceive signal words and,

in particular, how they perceive signal words to be different from one another. Overall, this research supports the use of signal words on labels, demonstrating that they can attract attention and help people clearly distinguish between levels of hazard. The research also supports the decision to use only two tiers, as many recent studies have found clear differences between DANGER and WARNING, but little perceived difference between WARNING and CAUTION.

Wogalter *et al.* investigated the influence of signal words on perceptions of hazard for consumer products (Wogalter *et al.,* 1992, Document ID #0300). Under the pretext of a marketing research study, 90 high school and college students rated product labels on variables such as product familiarity, frequency of use, and perceived hazard. Results showed that the presence of a signal word increased perceived hazard compared to its absence. Between extreme terms (*e.g.,* NOTE and DANGER), significant differences were noted.

Seeking to test warning signs in realistic settings, Adams *et al.* tested five industrial warning signs on a group of 40 blue-collar workers employed in heavy industry, as well as a group of students (Adams *et al.,* 1998, Document ID #0235). Signs were manipulated to include four key elements (signal word, hazard statement, consequences statement, and instructions statement) or a subset of those elements. Participants were asked questions to gauge their reaction and behavioral intentions. Overall, 77 percent (66 percent of the worker group) recognized DANGER as the key word when it appeared, and more than 80 percent recognized BEWARE and CAUTION, suggesting that the signal word was generally noticed, and it was recognized as the key alerting element. DANGER was significantly more likely than other words to influence behavioral intentions.

Laughery *et al.* also demonstrated the usefulness of signal words. The authors tested the warnings on alcoholic beverage containers in the U.S., and found that a signal word (WARNING) was one of several factors that decreased the amount of time it took for participants to locate the warning (Laughery *et al.,* 1993, Document ID #0281).

Several studies have tested the arousal strength or perceived hazard of different signal words. *Arousal strength* is a term used to indicate the overall importance of the warning, and incorporates both the likelihood and severity of the potential threat. Silver and Wogalter tested the arousal strength of signal words on college students and found that DANGER connoted greater strength than WARNING and CAUTION (Silver and Wogalter, 1993, Document ID #0308). The results failed to show a difference between WARNING and CAUTION. Among other words tested, DEADLY was seen as having the strongest arousal connotation, and NOTE the least.

Griffith and Leonard asked 80 female undergraduates (who were unlikely to have already received industrial safety training) to rate signal words. Results included a list of terms in order of ''meaningfulness,'' representing conceptual ''distance'' from the neutral term NOTICE (Griffith and Leonard, 1997, Document ID #0250). From most to least meaningful, these terms were reported to be DANGER, URGENT, BEWARE, WARNING, STOP, CAUTION, and IMPORTANT.

Wogalter *et al.* asked over 100 undergraduates and community volunteers to rank signal words (Wogalter *et al.,* 1998, Document ID #0286). DEADLY was perceived as most hazardous, followed by DANGER, WARNING, and CAUTION. All differences were statistically significant. In a follow-up experiment using labels produced in the ANSI Z535.2 (American National Standard for Environmental and Facility Safety Signs), ANSI Z535.4 (American National Standard for Product Safety Signs and Labels), and alternative formats, the authors found a similar rank order for signal words with all labeling systems. Finally, the authors tested the same terms on employees from manufacturing and assembly plants and found the same general order: DEADLY, then DANGER, then WARNING and CAUTION with no significant difference between the last two terms.

In more of a free-form experiment, Young asked 30 subjects to produce warning signs for a set of scenarios, using different sign components available on a computer screen (Young, 1998, Document ID #0289). In roughly 80 percent of the signs, the participant chose to use a signal word. DANGER, DEADLY, and LETHAL were more likely to be used for scenarios with severe hazards; CAUTION and NOTICE for non-severe scenarios. WARNING was used equally in both types of scenarios. The author suggests that these results support a two-tiered system of signal words. In a separate task, users ranked the perceived hazard of signal words, resulting in the following list from most to least severe: DEADLY, LETHAL, DANGER, WARNING, CAUTION, and NOTICE.

While these studies have focused on the relative perceptions of signal words, others have sought to evaluate how the absolute meaning of common signal words is perceived. Drake *et al.* asked a group of students and community volunteers to match signal words with definitions borrowed from consensus standards and other sources (Drake *et al.,* 1998, Document ID #0244). Participants matched DANGER to a correct definition 64 percent of the time, while NOTICE was matched correctly 68 percent of the time. WARNING and CAUTION were matched correctly less than half of the time, suggesting confusion. The authors recommended using WARNING and CAUTION interchangeably. The authors also suggested that a standard set of signal words (but not synonyms) is helpful for users with limited English skills, who can be trained to recognize a few key words.

Signal word perceptions are reported to be consistent among some non-U.S. populations, as well. Hellier *et al.* asked 984 adults in the UK to rate DANGER, WARNING, and CAUTION on a hazard scale from 1 (low) to 10 (high) (Hellier *et al.,* 2000a, Document ID #0252). DANGER was ranked as 8.5, WARNING was ranked as 7.8, while CAUTION was rated as 7.25. These results are consistent with the findings of studies on subjects in the U.S. In a second study published in 2000, Hellier *et al.* asked a mixed-age group of participants in the UK to rate the arousal strength of 84 signal words commonly used in the U.S. (Hellier *et al.,* 2000b, Document ID #0253). The authors found that DANGER is stronger than WARNING, while WARNING and CAUTION are not significantly different from each other.

Similar results were found among workers in Zambia. Banda and Sichilongo tested GHS-style labels using four different signal words (as well as other variables) (Banda and Sichilongo, 2006, Document ID #0237). Among workers in the industrial and transport sectors, DANGER was generally perceived as the most hazardous signal word. WARNING was one of a group of terms that were largely indistinguishable from one another, but distinct from DANGER. The authors support adoption of the GHS, suggesting that having just two possible signal words will lead to ''more impact and less confusion about the extent of hazard.''

In addition, comparable results were found in South Africa (London, 2003, Document ID #0311). In a large study on SDS and label comprehensibility conducted for South Africa's National Economic Development and Labour

Council (NEDLAC), DANGER was generally ranked as more hazardous than WARNING by participants in the four sectors tested: industry, transport, agriculture, and consumers.

Cumulatively, these studies provide a clear indication that signal words are effective in alerting readers that a hazard exists, and in conveying the existence of a particular level of hazard. The studies found a generally consistent hierarchy of signal words with respect to perceived hazard. DANGER and WARNING appear to connote different levels of hazard, while the perceived difference between WARNING and CAUTION is often insignificant.

In response to the NPRM, OSHA received a comment from Croplife America about the impact of using a two-tiered signal word system on pesticide labels (Document ID #0387). Croplife America explained that they believe a three-tiered system (DANGER, WARNING and CAUTION) provides ''a little more distinction in the relative toxicity of a compound'' and ''if everything says 'warning,' we run the risk of diluting the effectiveness of the signal word'' (Document ID #0495 Tr. 251). During the informal public hearings, OSHA requested that Croplife America support their position on why a three-tiered warning system is better than a two-tiered system. To support this assertion, Croplife America submitted a late comment containing an additional paper by Hellier *et al.* which analyzed how signal words are interpreted (Hellier *et al.,* 2007, Document ID #0646).

This paper discusses two studies performed in 2007 to analyze if alternative information is communicated with signal words (Hellier *et al.,* 2007, Document ID #0646). Using 17 signal words, 30 undergraduate students were asked to rate the similarities of paired signal words. In the first study, the result ratings revealed that signal words were interpreted by the participants along three dimensions; dimension one: the level of hazard implied by the signal words, dimension two: the extent to which they explicitly implied a risk, and dimension three': the clarity of the instruction given by the signal word. Using the same signal words as in the first study, the second study explored how these signal words were interpreted by the study participants. Using statistical analysis, the analysis confirmed that the participants were able to discern the levels of hazard implied by the signal words and how it to relates to the explicitness of the implied risk (dimensions one and two). The results of the third dimension were unclear. The studies indicate that the extent to which signal words imply risk is important—people may not respond when repeatedly exposed to warnings that do not explicitly imply a risk. The results support using signal words to denote the level of hazard implied by the situation, and that there might be utility in using signal words to convey both information about a potential risk and the level of hazard.

Even if it had been timely submitted, OSHA is not convinced that this study supplies sufficient evidence that using a two-tiered signal word approach will diminish the chemical user's ability to distinguish hazard severity. In OSHA's opinion, if anything, the Hellier study provides additional support for the use of signal words on labels to attract attention and to identify levels of hazard. Indeed, its results show that the signal word ''caution'' was substantially less connected by participants with communicating hazards than ''warning'' and ''danger,'' which supports OSHA's decision not to use ''caution'' as a signal word. The record supports OSHA's determination that using the signal word in combination with the hazard statement alerts the chemical user to the hazard and allows him or her to distinguish the level of hazard severity posed by hazardous chemicals in the workplace.

Commenting on the studies presented in the proposal, Applied Safety and Ergonomics (ASE) agreed that there are benefits associated with the standardization of warning elements. However, they also urged ''OSHA to adopt more conservative expectations for the effect that warning format changes can have on the behavior of end users'' (Document ID #0396). *See* Section VI of this final rule for a detailed discussion of the benefits of standardized warning elements. OSHA does not disagree with these comments and has determined that requiring the use of the combined labeling elements (pictograms, signal words, hazard statements, and precautionary statements) will result in a uniform and consistent system of identifying and communicating chemical hazards in the workplace. No other comments were received on the studies OSHA used in its discussion of the need for signal words in this revised HCS.

Comments received from stakeholders support the revision of the HCS to include the use of standardized signal words (Document ID #0321, 0338, 0339, and 0349). For example, the Communications Workers of America (CWA) stated: ''Clearly, the Rule's requirements regarding revised SDSs and labeling provisions requiring the use of standardized signal words, pictograms, and hazard and precautionary statements would prove invaluable to affected CWA members whom have been exposed to hazardous chemicals and chemical products that have produced negative health effects and medical problems'' (Document ID #0349). These comments support OSHA's conclusion that signal words alert chemical users to a hazard and indicate a particular level of hazard.

After reviewing the comments received and the evidence presented in the record, OSHA has determined that, in this revised rule, use of the signal words ''DANGER'' and ''WARNING'' is appropriate.

Pictograms

A pictogram is a graphical composition that may include a symbol along with other graphical elements, such as a border or background color. A pictogram is a communication tool and is intended to convey specific information. The proposed rule included requirements for use of eight different pictograms. Each of these pictograms consists of a different symbol in black on a white background within a red square frame set on a point (*i.e.,* a red diamond). The specific pictograms on a label were to be determined based on the hazard classification of the substance in question. OSHA has found ample evidence to support the requirement for pictograms.

A study by Kalsher *et al.* reported that users preferred labels with pictorials. The authors concluded that pictorials focused the attention of the user, helped users who were unable to read the small font size or print on the labels, and were useful for individuals who did not understand English (Kalsher *et al.,* 1996, Document ID #0256). The presence of the symbol can attract attention to the warnings and are more memorable than written warnings (Parsons *et al.,* 1999, Document ID #0262). Symbols serve several important functions in warning labels. As Wogalter *et al.* explained (Wogalter *et al.,* 2006, Document ID #0275), symbols may alert the user to a hazard more effectively than text alone:

> Symbols may be more salient than text because of visual differentiations of shape, size, and color. Usually symbols have unique details and possess more differences in appearance than do the letters of the alphabet. Letters are highly familiar and are more similar to one another than most graphical symbols.

Other investigators have examined the benefits of pictograms for those with low literacy levels and those who do not understand the language in which the

label text is written. A study by Parsons *et al.* concluded that nonverbal graphics are especially helpful for ensuring that individuals, who do not speak English or who have limited understanding of English, understand the meaning of the intended warning (Parsons *et al.,* 1999, Document ID #0262). Another study has shown that people with low literacy skills can, with the help of pictographs, recall large amounts of medical information over significant periods of time (Houts *et al.,* 2001, Documents ID #0254).

Several researchers have sought to evaluate how people comprehend symbols, including the symbols that were proposed to be required. Several studies have found that the skull and crossbones icon—one of the symbols proposed and included in the final rule—is among the most recognizable of safety symbols. For example, Wogalter *et al.* asked 112 undergraduates and community volunteers to rank various label elements (Wogalter *et al.,* 1998, Document ID #0244). Among shapes and icons, the skull symbol (in this case, without the crossbones) was rated most hazardous and most noticeable. The skull connoted the greatest hazard among industrial employees as well. Smith-Jackson and Wogalter asked 48 English-speaking workers to rate the perceived hazards of six alerting symbols (Smith-Jackson and Wogalter, 2000, Document ID #0196). The skull was rated significantly higher than all other symbols.

Several studies have examined other pictograms included in the final rule. As part of an experiment to see how individuals comprehend warnings on household chemical labels, Akerboom and Trommelen asked 60 university students whether they understood the meaning of several pictograms, including four that are included in the final rule (Akerboom and Trommelen, 1998, Document ID #0236). The authors reported the following levels of comprehension for these pictograms:

- Flame: 93 percent comprehension;
- Skull and crossbones: 85 percent comprehension;
- Corrosion: 20 percent comprehension; and
- Flame over circle: 13 percent comprehension.

Only the flame and skull and crossbones pictograms met the 85 percent comprehension criteria suggested by ANSI Z535.3 (the American National Standard Criteria for Safety Symbols) (ANSI, 2002a, Document ID #0276). The authors recommend that labels present the hazard phrase [statement] and symbol together, along with corresponding precautions, as has been included as a requirement in the final rule.

Banda and Sichilongo tested comprehension of labels among 364 workers in four sectors in Zambia (transport, agriculture, industrial, and household consumers) (Banda and Sichilongo, 2006, Document ID #0237). Within this population, the skull and crossbones symbol was widely understood, as was the ''flame'' symbol. Based on these results, the authors suggest a preference for symbols that depict familiar, meaningful, and recognizable images.

London performed a similar study among the same four sectors in South Africa, finding that the skull and crossbones was understood by at least 96 percent of each sector and ''flame'' by at least 89 percent (London, 2003, Document ID #0311). ''Exploding bomb'' was correctly comprehended by 44 to 71 percent of each sector. On the other hand, many health-related symbols did not fare well, and six symbols had less than 50 percent comprehension across all four sectors. Outside the transport sector, ''Gas cylinder'' was the least comprehended symbol.

These findings indicate that some of the pictograms included in the final rule are already widely recognized by a general audience. Others, however, are not commonly understood. Therefore, simply adding some of the pictograms on labels will not provide useful information unless efforts are also undertaken to ensure that employees understand the meaning of the pictograms. As Wogalter *et al.* noted, some studies have found slower processing, poorer recognition, and greater learning difficulties with symbols versus with text—particularly if the symbols are complex or non-intuitive (Wogalter *et al.,* 2006, Document ID #0275). These results emphasize the need to train employees on the meaning of the pictograms that will be included on chemical labels.

Where pictograms are used and understood, communication of hazards can be improved. Houts *et al.* studied long-term recall of spoken medical instructions when accompanied by a handout with pictograms (Houts *et al.,* 2001, Document ID #0254). Nearly 200 pictograms were tested with 21 low-literate adults (less than grade 5 reading level). Immediately after training, participants recalled the meaning of 85 percent of the pictograms, and they recalled 71 percent after 4 weeks. This study found that recall was better for simple pictograms where there is a direct relationship between the image and its meaning—that is, where no inference is required.

Another body of literature focuses on the utility of symbols in general. Ganier found that people generally construct mental representations faster with pictures than they do with text, supporting earlier findings on the usefulness of symbols (Ganier, 2001, Document ID #0275). Evans *et al.* found similar results with a task in which undergraduates were asked to sort items into categories using either text clues, visual clues, or a combination of pictures and text (Evans *et al.,* 2002; Document ID #0192). When categories were fixed (*i.e.,* sorting instructions were specific), people sorted the cards more consistently with one another when presented with pictures than when presented with text alone.

In a follow-up article on the South African study mentioned previously, Dowse and Ehlers found that patients receiving antibiotics adhered to instructions much better when the instructions included pictograms—(54 percent with high adherence, versus 2 percent when given text-only instructions) (Dowse and Ehlers, 2005, Document ID #0243).

Pictograms also serve to attract attention to the hazard warnings on a label. To examine factors that influence the effectiveness of pharmaceutical labels, Kalsher *et al.* asked subjects to rate the noticeability, ease of reading, and overall appeal of labels with or without pictorials (Kalsher *et al.,* 1996, Document ID #0256). A group of 84 undergraduates gave consistently higher ratings to labels with pictorials. A group of elderly subjects had similar preferences, rating labels with pictorials as significantly more noticeable and likely to be read.

Laughery *et al.* found similar results with a timed test on alcoholic beverage labels (Laughery *et al.,* 1993, Document ID #0281). When a pictorial was present to the left of the warning showing what not to do when drinking, the amount of time it took to find the label was significantly reduced. An icon consisting of the alert symbol (an exclamation mark set within a triangle) and the signal word WARNING also decreased response time. The fastest response time came when four different enhancements (including the pictorial and the icon) were included. In a follow-up exercise, an eye scan test found that the pictorial had a particularly strong influence on reaction time, compared with other enhancements.

Where chemical labels are concerned, London found that symbols tend to be the most easily recalled label elements (London, 2003, Document ID #0311). In the comprehensibility test of labels

among South African workers mentioned previously, symbols were the most commonly recalled elements—particularly the skull and crossbones—and people recalled looking at symbols first. Symbols were also cited as by far the most important factor in determining hazard perception. The author concludes that ''Symbols are therefore key to attracting attention and informing risk perception regarding a chemical'' (London, 2003, Document ID #0311).

Wogalter *et al.* found factors other than pictorials influenced workers (Wogalter *et al.,* 1993, Document ID #0285). The authors tested the influence of various warning variables on whether subjects wore proper protective equipment during a task involving measuring and mixing chemicals. Warning location and the amount of clutter around the warning had significant effects on compliance, but the presence or absence of pictorials did not.

Meingast asked subjects to recall warning content after viewing labels that were considered either high quality (with color signal icons, pictorials, and organized text conforming to ANSI Z535.4, the American National Standard for Product Safety Signs and Labels) or low quality (text only) (Meingast, 2001, Document ID #0210). Pictorials were the items remembered most often, accounting for 48 percent of what viewers of high-quality labels recalled. The author suggests that these pictorials also served the role of dual coding, meaning that they help to improve the retention of corresponding text.

Other studies support this dual-coding function of pictorials, finding that symbols tend to be most effective when paired with redundant or reinforcing text. For example, Sojourner and Wogalter asked 35 participants to rate several prescription label formats in terms of ease of reading, ease of understanding, overall effectiveness, likelihood of reading, overall preference, pictorial understanding, and how helpful pictorials are in helping to remember the instructions (Sojourner and Wogalter, 1997, Document ID #0288). The authors found that people prefer fully redundant text and pictorials, which they judged easiest to read, most effective, and preferred overall. Dual-coded pictorials aided understanding and memory more than labels with pictorials only (no text).

In a follow-up study, Sojourner and Wogalter gave undergraduates, young adults, and older adults a free recall test after viewing medication labels (Sojourner and Wogalter, 1998, Document ID #0288). Fully redundant text and pictorials led to significantly greater recall than other formats, and were rated most effective by all age groups.

Similarly, Sansgiry *et al.* found that pictograms on over-the-counter drug labels improved comprehension, but only when they were congruent with the corresponding text (Sansgiry *et al.,* 1997, Document ID #0264). The 96 adults who were tested were less confused, were more satisfied, were more certain about their knowledge, and understood more when shown labels that contained congruent pictures and verbal instructions, versus verbal instructions alone. The results were significantly better with congruent pictures and text than with either pictures alone or incongruent pictures and text.

Some evidence links use of pictograms directly to safer behavior. Jaynes and Boles investigated whether different warning designs, specifically those with symbols, affect compliance rates (Jaynes and Boles, 1990, Document ID #0290). Five conditions were tested: a verbal warning, a pictograph warning with a circle enclosing each graphic, a pictograph warning with a triangle on its vertex enclosing each graphic, a warning with both words and pictographs, and a control (no warning). Participants performed a chemistry laboratory task using a set of instructions that contained one of the five conditions. The warnings instructed them to wear safety goggles, mask, and gloves. All four warning conditions had significantly greater compliance than the no-warning condition. A significant effect was also found for the ''presence of pictographs'' variable, suggesting that the addition of pictographs will increase compliance rates.

NIOSH submitted an additional study at the informal public hearings that analyzed the use of pictograms on labels. In 1997, Wilkinson *et al.* (Document ID #0480.6), interviewed 206 farmers in Victoria Australia. Two widely used agricultural herbicides were used for the basis of the research. The researchers developed three ''mocked-up'' labels for each herbicide—one containing existing warning text, one containing existing text with pictograms of appropriate safety precautions, and one containing text with pictograms that had been tested for recognition and comprehension across a variety of cultures and literacy levels. The interviewees answered questions using a rating scale, which was subjected to a statistical analysis to determine the significance of the responses. The authors concluded that ''the labels with added pictograms were perceived by pesticide users as significantly easier to obtain information from than labels containing text only'' (Document ID #0480.6).

Stakeholders on the whole supported the inclusion of pictograms on the labels of hazardous substances. During the hearings, Chris Trahan of the AFL–CIO voiced support for including pictograms on the labels of hazardous chemicals, and cited construction workers as a group whose safety and health conditions would be greatly improved by OSHA's adoption of ''a system of symbols [workers] can then readily use to make decisions on a daily basis'' (Document ID #0494 Tr. 8).

As discussed in the proposal, a considerable amount of evidence shows that pictograms can serve as useful and effective communication tools. In the final rule, OSHA has decided to adopt the eight GHS pictograms initially proposed in the NPRM. Each of these pictograms consists of a different symbol in black on a white background within a red square frame set on a point (*i.e.,* a red diamond). The specific pictograms that are required on a particular label are to be determined based on the hazard classification of the substance in question.

OSHA finds, based on scores of supporting studies and persuasive testimony that the pictograms will make warnings on labels more noticeable and easier for employees to understand. In particular, symbols will improve comprehension among people with low literacy levels and those who are not literate in the English language. Moreover, pictograms will be used not only in conjunction with other label elements, but also in the context of the hazard communication program as a whole. Training that includes an explanation of labels (included in the final rule) will ensure that the pictograms are understood by employees.

Red Borders

GHS allows regulatory authorities the option of permitting black pictogram borders for labels on domestic products, and in the proposal OSHA requested comment on this issue. Mandating the use of red borders was supported by stakeholders, who argued persuasively that red borders would make labels more noticeable and would make the warnings appear to be more important (Document ID #0339, 0341, 0365, 0383, 0408, 0410, 0412, and 0456). The National Association of Chemical Distributers, in supporting the use of red borders, reasoned that they would be consistent with the overall goal of the

GHS (Document ID #0341). Additionally, the AIHA stated that requiring red borders would promote the safe use of chemicals (Document ID #0365).

Several commenters raised economic concerns, suggesting that because red ink is more expensive, the use of black borders should be permitted (Document ID #0318, 0328, 0370, 0377, 0382, 0393, and 0411). Dow Chemical, Troy Corporation, and several other commenters recommended that red borders should only be required on products that were being exported (Document ID #0352, 0353, 0399, 0405, and 0389). Similarly, API argued that in order to remain consistent with the GHS, OSHA should only require exported chemicals to have a red border (Document ID #0376).

OSHA finds this argument to be unpersuasive. In order to reap the benefits of consistency in warnings, labels must have a degree of sameness and that includes the colors used. Moreover, OSHA analyzed the impact that the use of red borders would have on production costs. While the use of red borders may increase the cost of printing, OSHA has determined that the cost does not render the rule infeasible. This issue is discussed in greater detail in Section VI. Finally, the GHS does not even state a preference for black borders on labels of domestic products; it simply gives the competent authority discretion to allow black borders when the product will not enter into international commence.

Numerous studies have found that substantial benefits exist when color is used on labels. Due to the extensive amount of information that needs to be displayed, warning labels can become cluttered. Swindell found that searching for needed information on a cluttered label is very challenging for the user (Swindell, 1999, Document ID #0284). Her study concluded that minor changes to an extensive warning label, such as the addition of color, can greatly improve the noticeability of the warning, grab the attention of the user faster, and produce quicker reaction times.

Swindell also researched the effect that different colors (red, blue, and black) had on the time it took users to locate and respond to a warning. Red was perceived to indicate the highest degree of hazard and was shown to increase the perceived hazard of a word presented in that color (*e.g.,* DANGER in blue is perceived as less hazardous than WARNING in red).

Swindell's findings echo the results reported by Laughery *et al.,* who found that alcoholic beverage labels were located significantly faster when the text was red instead of black (Laughery *et al.,* 1993, Document ID #0281). These studies involve color on label elements other than the pictogram borders, but the presence of color and the particular color is germane to the red borders of labels.

The primacy of red as an understandable color denoting danger is also supported by these studies.

- Smith-Jackson and Wogalter asked English-speaking community members to rate the perceived hazard of ten ANSI safety colors (Smith-Jackson and Wogalter, 2000, Document ID #0196). Red, yellow, black, and orange were rated the highest (in descending order). Differences were statistically significant except the difference between yellow and black.
- Among 80 college students asked to rate colors by Griffith and Leonard, red was rated the most ''meaningful'' color (*i.e.,* most distinct in meaning from neutral gray), followed by green, orange, black, white, blue, and yellow (Griffith and Leonard, 1997, Document ID #0250).
- Wogalter *et al.* asked Spanish speakers to rank the perceived hazard of ANSI safety colors (Wogalter *et al.,* 1997b, Document ID #0266). Red was ranked highest, followed by orange, black, and yellow.
- Dunlap *et al.* surveyed 1169 subjects across several different language groups including English, German, and Spanish speakers (Dunlap et *al.,* 1986, Document ID #0191). Subjects rated the color words red, orange, yellow, blue, green, and white according to the level of perceived hazard. The results demonstrated that the hazard information communicated by different colors followed a consistent pattern across language groups, with red having the highest hazard ratings.
- Wogalter *et al.* asked undergraduates and community volunteers to rank various warning components (Wogalter *et al.,* 1998, Document ID #0286). Red connoted a significantly greater hazard than other colors, followed by yellow, orange, and black (in that order). A group of industrial workers ranked the colors from greatest to least hazard as follows: red, yellow, black, orange.
- London asked workers in four sectors in South Africa to rank the colors red, yellow, green, and blue in terns of perceived hazard; 95 percent said red represents the greatest hazard, and 58 percent said yellow is the second greatest hazard (London, 2003; Document ID #0311).
- Banda and Sichilongo asked workers in Zambia to rate the perceived hazard of various colors used in chemical labels (Banda and Sichilongo, 2006, Document ID #0237). Red was associated with the greatest hazard, followed by yellow.
- Among a sample of 30 undergraduates who rated the perceived hazard of 105 signal word/color combinations, Braun *et al.* reported that red conveyed the highest level of perceived hazard followed by orange, black, green, and blue (Braun *et al.,* 1994, Document ID #0298).

These reports are consistent in showing that red is commonly understood to be associated with a high level of hazard—the highest of any color.

After reviewing stakeholder comments and studies investigating the benefits of using the color red to signal a hazard, OSHA has decided to require all pictograms to have red borders. OSHA finds that these labels will be more effective in communicating hazards to employees—both by drawing the attention of employees to the label and by indicating the presence of a hazard through non-verbal means. Consistently applying red borders to all labels, regardless of the final destination, will ensure that workers are protected. OSHA has determined that red pictogram borders will maximize recognition of the warning label and ensure consistency; therefore the final rule requires red borders for both domestic and international labeling.

Blank Diamonds

The final rule requires that all red diamonds printed on a label have one of the eight pictograms printed inside the diamond. The prohibition of blank diamonds on labels will ensure that users do not get desensitized to warnings placed on labels. Two commenters proposed alternatives to the prohibition of blank diamonds. The American Chemical Council (ACC) suggested that, because the red diamond border for pictograms are often pre-printed on shipping labels, OSHA allow printing the word ''BLANK'' on, or writing ''pictogram intentionally left blank'' in, the unused diamond (Document ID #0393). Additionally, Michelle Sullivan also suggested writing ''intentionally left blank'' in the empty diamonds (Document ID #0382).

OSHA acknowledges that prohibiting blank diamonds on labels may require an adjustment in practice for entities that use pre-printed labels or require businesses to inventory additional blank stock. OSHA analyzed the impact that prohibiting the use of blank diamonds on labels would have on production costs. While this requirement may

increase costs associated with labeling, OSHA has determined that the costs do not render the rule infeasible. This issue is discussed in greater detail in Section VI.

Including diamonds on labels only when a pictogram is required will ensure that such warnings stand out to users. Prohibiting the use of blank diamonds will improve the likelihood that users will notice and react to the warning on the label. Therefore, OSHA has determined that prohibiting the use of blank diamonds on labels is necessary to provide the maximum recognition and impact of warning labels and to ensure that users do not get desensitized to the warnings placed on labels.

Hazard Statements and Precautionary Statements

Hazard statements describe the hazards associated with a chemical. Precautionary statements describe recommended measures that should be taken to protect against hazardous exposures, or improper storage or handling of a chemical. This revised rule replaces the current performance-oriented requirement for ''appropriate hazard warnings'' on labels with a requirement for specific hazard and precautionary statements on labels. The statements are prescribed, based on the hazard classification of the chemical.

Standardized requirements for hazard and precautionary statements provide a degree of consistency that is lacking among current chemical labels. This lack of consistency among current labels makes it difficult for users to understand the nature and degree of hazard associated with a chemical, and to compare chemical hazards. For example, in an article reviewed for the record, Dr. Beach relates experiences from the perspective of a doctor treating occupationally exposed patients (Beach, 2002, Document ID #0238). The author noted that different suppliers use different risk phrases for the same chemical, making it difficult for users to compare relative risks.

ANSI standard Z129.1, Hazardous Industrial Chemicals—Precautionary Labeling (Document ID #0610), was developed to provide a consistent approach to labeling of hazardous chemicals. This standard gives manufacturers and importers guidance on how to provide information on a label, including standardized phrases and other information that can improve the quality of labels. Because it is a voluntary standard, however, not all chemical manufacturers and importers have adopted the ANSI approach. As a result of the diverse formats and language used in the past, a consistent and understandable presentation of information was not fully achieved.

A preference for hazard statements was shown in EPA's Consumer Labeling Initiative (Abt Associates, 1999, Document ID #0209). This study asked consumers about their attitudes toward labels on household chemical products. Overall, consumers indicated that they like to have information that clearly connects consequences with actions, and they prefer to know why they are being instructed to take a particular precaution. A clear hazard statement provides this information.

In some cases, clear and concise precautionary information is necessary to enable employees to identify appropriate protective measures. For example, Frantz *et al.* examined the impact of flame and poison warning symbols prescribed in certain regulations by the Canadian government (Frantz *et al.,* 1994, Document ID #0191). The results suggest that although the generic meanings of these two symbols are well understood, people may have difficulty inferring the specific safety precautions necessary for a particular product.

Other reports indicate that users prefer information that includes both an indication of the hazard and the recommended action (*i.e.,* the precautionary statement). Braun *et al.* examined statements in product instructions for a pool treatment chemical and a polyvinyl chloride (PVC) adhesive, asking subjects to rate the injury risk posed by each product (Braun *et al.,* 1995, Document ID #0246). The experimenters manipulated the instructions to include either recommended actions only, actions followed by consequences, consequences followed by actions, or a simple restatement of the product label. The authors found that actions paired with consequences led to significantly higher risk perception than a restatement of the label or actions alone. Although the preferred wording was longer than the alternatives, subjects did not feel that the instructions were too complex, suggesting that they appreciate having actions and consequences paired together. Freeman echoed these findings in a discussion on communicating health risks to fishermen and farmers, noting that to be useful, risk statements should be balanced with equally strong statements of ways to reduce or avoid the risk (Freeman, 2001, Document ID #0249).

Explicit precautionary statements make it more likely that employees will take appropriate precautions. Bowles *et al.* asked subjects to review product warnings, then either decide what actions they should take or evaluate whether someone else's actions were safe, based on the warning (Bowles *et al.,* 2002, Document ID #0246). In general, situations that required the user to make inferences about a hazard—particularly when they had to come up with their own ideas for protective actions—led to decreased intent to comply. By providing clear precautionary instructions on the label, the revised rule eliminates the need for users to infer protective actions.

Evidence indicates that using key label elements together improves warning performance, compared with labels that only contain a subset of these elements. This is the approach taken in the revised rule, which requires the signal word, pictogram(s), hazard statement(s), and precautionary statement(s) together on the label. In one study, Meingast asked students to recall information from two variations of warning labels: Enhanced warnings with color, signal icons, pictorials, and organized text (following the ANSI Z535.4 standard, American National Standard for Product Safety Signs and Labels); and warnings with text only (Meingast, 2001, Document ID #0246). The authors reported that the enhanced warnings were more noticeable, led to significantly greater recall, and made people report a higher likelihood of compliance.

Other findings agree that improving all label elements can improve warning performance. For example, Lehto tested information retrieval from three chemical label formats and found that subjects generally did best with an ''extensive'' format that included pictograms, paragraphs, and horizontal bars indicating the degree of hazard (Lehto, 1998, Document ID #0258). Subjects were able to answer more questions correctly when the label included a range of content—particularly information on first aid and spill procedures.

Wogalter *et al.* reported similar results in a test of four different signs that discouraged people from using an elevator for short trips (Wogalter *et al.,* 1997a, Document ID #0287). Three signs were text-only. The fourth sign had a signal word panel, icons, a pictorial, and more explicit wording indicating the desired behavior (*i.e.,* ''use the stairs''). Subjects rated the enhanced sign as more understandable, and a field test found that it significantly increased compliance over the other options.

The effectiveness of a combination of elements was also investigated in a study of warnings on alcoholic beverage containers (Laughery *et al.,* 1993,

Document ID #0281). Laughery et al. tested warnings to determine which elements influenced notice ability. The authors manipulated labels by adding a pictorial, adding an alert symbol with a signal word, making the text red, and/or adding a border around the warning. The warning was located fastest when all four of these modifications were present, suggesting that the best designs include a combination of enhancements.

The findings of these reports support OSHA's belief that the combined label elements, *i.e.,* pictogram, signal word, hazard and precautionary statements, is more effective in communicating hazard information than the individual elements would be if presented alone. Although the warnings examined in these studies are different than those warnings required in this final rule, they indicate that enhancements such as color and symbols can increase the effectiveness of a label, and that presenting hazard information and corresponding precautions together improves understanding.

Overall, the record shows that the presentation of information on labels through standardized signal words, hazard statements, pictograms, and precautionary statements would provide clearer, more consistent, and more complete information to chemical users. Comments received in response to the ANPR support this view (*e.g.,* Document ID #0032, 0054, 0124, and 0158). For example, the Refractory Ceramic Fibers Coalition (Document ID #0030) pointed to the benefits of this approach, stating:

> Employers and employees would be given the same information on a chemical regardless of the supplier. This consistency should improve communication of the hazards. It may also improve communication for those who are not functionally literate, or who are not literate in the language written on the label. In addition, having the core information developed already, translated into multiple languages, and readily available to whomever wishes to access it, should eliminate the burden on manufacturers and users to develop and maintain their own such systems. Thus the specification approach should be beneficial both to the producers and the users of chemicals.

The majority of comments received in response to the proposal support the use of hazard and precautionary statements on labels (*See, e.g.,* Document ID #0313, 0324, 0327, 0328, 0329, 0330, 0335, 0336, 0338, 0339, 0344, 0347, 0349, 0351, 0352, 0353, 0365, 0370, 0372, 0376, 0377, 0379, 0381, 0382, 0383, 0389, 0393, 0399, 0402, 0405, 0408, 0410, 0412, 0453, 0456, and 0461). No comments or testimony were received that opposed the use of hazard or precautionary statements on labels or safety data sheets.

In response to the proposal, stakeholders commented on the importance of being able to comprehend hazard and precautionary statements (*See, e.g.,* Document ID #0321, 0339, 0349, 0410, and 0412). Morganite Industries, Inc. and Morgan Technical Ceramics USA stated: ''Hazard Statements, by and large, convey fact in simple language'' (Document ID #0321). Commenting on the use of precautionary statements, the Phylmar Group noted that ''clear, concise use of key labeling elements can improve warning performance'' (Document ID #0339). The American Industrial Hygiene Association also supports the use of precautionary statements, stating that they ''should improve comprehensibility and compliance'' (Document ID #0410).

Labels are intended to provide an immediate visual reminder of chemical hazards. Whereas labels in the past could be presented in a variety of formats using inconsistent terminology and visual elements, labels prepared in accordance with the requirements in this final rule will be consistent. Standardized signal words and hazard statements attract attention and communicate the degree of hazard. Pictograms reinforce the message presented in text and enhance communication for low-literacy populations. Precautionary statements provide useful instructions for protecting against chemical-source injuries and illnesses.

A number of stakeholders submitted comments in support of standardized labeling for hazardous chemical containers. Several commenters stated that standardized label elements would better convey critically important hazard warnings, and provide useful information regarding precautionary measures that would serve to better protect employees (Document ID #0313, 0341, 0344, 0365, 0381, 0382, 0402, and 0405). The studies contained in the record reinforce OSHA's position on the use standardized label elements—including the use of standardized pictograms, signal words, and hazard and precautionary statements—to alert and inform chemical users of the hazards posed by hazardous chemicals in the workplace.

OSHA concludes, based on the studies discussed above and supported by the comments submitted to the record that standardizing the labels for hazardous chemicals is an essential step in harmonizing the HCS with the GHS. In addition, OSHA concludes that the labeling requirements in this revised final rule will result in more effective transmittal of information to employees. Therefore, OSHA has adopted the labeling requirements set forth in the NPRM in this final rule.

Safety Data Sheets

The HCS requires chemical manufacturers and importers to develop an SDS for each hazardous chemical they produce or import. SDSs serve as a source of detailed information on chemical hazards and protective measures. Each SDS must indicate the identity of the chemical used on the label; the chemical and common name(s) of hazardous ingredients; physical and chemical characteristics; physical and health hazards; the primary route(s) of entry; exposure limits; generally applicable precautions for safe handling and use; generally applicable control measures; emergency and first aid procedures; the date of preparation of the SDS; and the name, address and telephone number of the party preparing or distributing the SDS. Prior to this final standard, the information was not required to be presented in any particular order or to follow a specific format.

While the effectiveness of SDSs is evident, there are concerns regarding the quality of information provided. In particular, concerns have been raised regarding the accuracy (*i.e.,* the correctness and completeness of the information provided) and comprehensibility (*i.e.,* the ability of users to understand the information presented) of information provided on SDSs. In the NPRM, OSHA proposed requiring the information on SDSs to be presented using consistent headings in the sequence specified in the GHS (*See* Section XV for a detailed discussion of the requirements). The Agency has determined that a standardized order of information will improve the utility of SDSs by making it easier for users to locate and understand the information they are seeking. A standardized format is also expected to improve the accuracy of the information presented on SDSs.

Since the HCS was promulgated in 1983, access to chemical information has improved dramatically due to the availability of SDSs. OSHA believes that adopting a standardized format will build on the demonstrated benefits that have already clearly been established from the use of SDSs. As discussed in the proposal, the General Accounting Office (GAO) issued a report in May 1992 that addressed issues employers had with complying with the HCS (GAO, 1992, Document ID #0292). The findings were based on the results of a national survey of construction, manufacturing, and personal services

providers. A total of 1,120 responses were received from employers.

One very important finding of the GAO survey was that almost 30% of employers reported that they had replaced a hazardous chemical with a less hazardous substitute because of information presented on an SDS. With regard to the HCS as a whole, GAO found that over 56% of employers reported ''great'' or ''very great'' improvement in the availability of hazard information in the workplace and in management's awareness of workplace hazards. Forty-five percent of those in compliance with the HCS considered the standard to have a positive effect on employees, compared with only 9% who viewed the effect as negative. The results indicate that when chemical hazard information is provided, the result is generally recognized as beneficial to employees. A number of other studies support this conclusion.

Conklin demonstrated the utility of SDSs among employees of a multinational petrochemical company (Conklin, 2003; Document ID #0245). Across three countries (the U.S., Canada, and the United Kingdom), 98 percent felt that the SDS is a satisfactory information source (the percentage was similar across all three countries). Seventy-two percent said they would request an SDS all or most of the time when introduced to a new chemical, although 46 percent of workers said that SDSs are too long. The author notes that this sample did not include any workers with low literacy.

However, while these studies show a clear benefit related to the use of SDS in the workplace, a number of investigations raise concerns that the information on SDSs is not comprehensible to employees. In 1991, OSHA commissioned a study that evaluated the comprehensibility of SDSs by a group of unionized employees in manufacturing industries located in the state of Maryland (Kearney/Centaur, 1991a, 1991b, Document ID #0309 and 0310). The study assessed the ability of these employees to understand information regarding the route of entry of the substance, the type of health hazard present, appropriate protective measures, and sources of additional help.

Each of the 91 participating workers was provided with and tested on four different SDSs. The workers answered the test questions based on information supplied on each of the SDSs. It should be noted that the employees who volunteered for this study understood that it relied on reading comprehension. This created a selection bias, as employees with reading difficulties would not be likely to volunteer for the study.

The results of the tests indicated that workers on average understood about two-thirds of the health and safety information on the SDSs. The best comprehension was associated with information providing straightforward procedures to follow (*e.g.,* in furnishing first aid, dealing with a fire, or in using personal protective equipment) or descriptions of how a chemical substance can enter the body. Workers had greater difficulty understanding health information addressing different target organs, particularly when more technical language was used. Workers also reportedly had difficulty distinguishing acute from chronic effects based on information presented in the SDSs.

Conklin reported a similar result in a study involving employees of a multinational petrochemical company (Conklin, 2003, Document ID #0245). After viewing information on an unfamiliar chemical in a variety of SDS formats, a questionnaire was administered to workers to gauge their comprehension of the material presented. The workers reportedly answered 65 percent of the questions correctly.

The Printing Industries of America reported a study that examined the comprehensibility of SDSs to master printers in 1990 (PIA, 1990, Document ID #0295). The subjects had an average of 13.9 years of formal education, or approximately two years beyond high school. In this study, 27 SDSs were selected and analyzed for reading levels using a software program, finding an average reading grade level of 14. The investigators found that employees with 15 years of education or more understood 66.2% of the information presented.

Some of the difficulty workers experience in understanding information presented on SDSs may be due to the vocabulary used in the document. Information presented at a reading level that exceeds the capability of the user is unlikely to be well understood. An example of this situation was reported by Frazier *et al.* (Frazier *et al.,* 2001, Document ID #0212). The authors evaluated a sample of SDSs from 30 manufacturers of toluene diisocyanate, a chemical known to cause asthma. Half of the SDSs indicated that asthma was a potential health effect. One SDS made no mention of any respiratory effects, while others used language (*e.g.,* allergic respiratory sensitization) that the authors believed may not clearly communicate that asthma is a risk. However, the more technical language meets the requirements of the HCS.

Other reports substantiate the belief that many SDS users have difficulty understanding the information on the documents. For example, in a study evaluating the comprehensibility of SDSs at a large research laboratory, 39 percent of the workers found SDSs ''difficult to understand'' (Phillips, 1997, Document ID #0263). The study also indicated that a third of the information provided on SDSs was not understood. These results were obtained from a study population of literate, trained workers who spoke English as their first language.

Smith-Jackson and Wogalter corroborated this finding in a study involving 60 undergraduates and community volunteers (Smith-Jackson and Wogalter, 1998, Document ID #0188). The subjects were asked to sort SDS data into a logical order. After completing the task, subjects were asked for their opinions on the difficulty of the content. Overall, 43 percent found the information easy to understand, 42 percent said it was not easy, and the remaining 15 percent felt that only scientists, experts, or very experienced workers would be able to understand the information.

These studies are consistent in reporting that workers have difficulty understanding a substantial portion of the information presented on SDSs. This finding can be explained at least in part by the fact that not all of the information on SDSs is intended for workers. SDSs are intended to provide detailed technical information on a hazardous chemical. While they serve as a reference source for exposed employees, SDSs are meant for other audiences as well. SDSs provide information for the benefit of emergency responders, industrial hygienists, safety professionals, and health care providers. Much of this information may be of a technical nature and would not be readily understood by individuals who do not have training or experience in these areas. For example, language that may be readily understood by a population of firefighters may be poorly understood by chemical workers.

In addition, Title III of the Superfund Amendments and Reauthorization Act (SARA, also known as the Emergency Response and Community Right-to-Know Act of 1986) mandated that SDSs be made available to state emergency response commissions, local emergency planning committees, and fire departments in order to assist in planning and response to emergencies, as well as to provide members of the

general public with information about chemicals used in their communities. It is difficult, if not impossible, for a document to meet the informational needs of all of these audiences while being comprehensible to all as well.

Product liability concerns also play a role in the comprehensibility of SDSs. Producers of chemicals may be subject to ''failure to warn'' lawsuits that can have significant financial implications. Attempts to protect themselves against lawsuits can affect the length and complexity of SDSs, as well as the way in which information is presented. In some cases the length and complexity of SDSs reportedly make it difficult to locate desired information on the documents. For example, in testimony before the U.S. Senate Subcommittee on Employment, Safety, and Training, one hospital safety director described a situation in which an employee was unable to find critical information on an SDS in an emergency situation (Hanson, 2004, Document ID #0200):

* * * two gallons of the chemical xylene spilled in the lab of my hospital. By the time an employee had noticed the spill, the ventilation had already sucked most of the vapors into the HVAC. This, in turn, became suspended in the ceiling tile over our radiology department. Twelve employees were sent to the emergency room. To make the matter worse, the lab employee was frantically searching through the MSDS binder in her area for the xylene MSDS. Once she found it, she had difficulty locating the spill response section. After notifying our engineering department, she began to clean up the spill with solid waste rags, known for spontaneous combustion, and placing the rags into a clear plastic bag for disposal. She did not know that xylene has a flash point of 75 degrees Fahrenheit. She then walked the bag down to our incinerator room and left it there, basically creating a live bomb. Twelve people were treated from this exposure. The lab employee was very upset and concerned about the safety of the affected employees and visitors, and hysterically kept stating that she could not find the necessary spill response information.

SDSs at this particular hospital were reported to range from one page to 65 pages in length.

To accommodate the needs of the diverse groups who rely on SDSs, a standardized format has been viewed as a way to make the information on SDSs easier for users to find, and to segregate technical sections of the document from more basic elements. A standardized format was also thought to facilitate computerized information retrieval systems and to simplify employee training.

The first attempt to establish a format for SDS was made in 1985, when OSHA established a voluntary format to assist manufacturers and importers who desired some guidance in organizing SDS information. This two-page form (OSHA Form 174) includes spaces for each of the items included in the SDS requirements of the standard, to be filled in with the appropriate information as determined by the manufacturer or importer. However, some members of the regulated community desired a more comprehensive, structured approach for developing clear, complete, and consistent SDSs.

In order to develop this structure, the Chemical Manufacturers Association (now known as the American Chemistry Council) formed a committee to establish guidelines for the preparation of SDSs. This effort resulted in the development of American National Standards Institute (ANSI) standard Z400.1, a voluntary consensus standard for the preparation of SDSs. Employers, workers, health care professionals, emergency responders, and other SDS users participated in the development process. The standard established a 16-section format for presenting information as well as standardized headings for sections of the SDS. In 2004, an updated version of the ANSI standard that was consistent with the GHS format was published. This ANSI standard has since been combined with the ANSI Z129 consensus standard on precautionary labeling preparation. The ANSI Z400.1/Z129.1 standard was issued in 2010.

By following the recommended format, the information of greatest concern to employees is featured at the beginning of the document, including information on ingredients and first aid measures. More technical information that addresses topics such as the physical and chemical properties of the material and toxicological data appears later in the document. The ANSI standard also includes guidance on the appearance and reading level of the text in order to provide a document that can be easily understood by readers.

OSHA currently allows the ANSI format to be used as long as the SDS includes all of the information required by the HCS. Because it is a voluntary standard, however, the ANSI format has not been adopted by all chemical manufacturers and importers. As a result, different formats are still used on many SDSs.

The International Organization for Standardization (ISO) has published its own standard for SDS preparation. This standard, ISO 11014–1, has been revised for consistency with the GHS (new version issued in 2009). The standard includes the same 16 sections as the GHS, as well as similar data requirements in each section. These two consensus standards, ANSI Z400.1–2004 and ISO 11014–1 (2009), have essentially the same provisions and are consistent with GHS. There are minor differences, such as units of measure recommended in the national ANSI standard versus the international ISO standard.

Another development has been the creation of International Chemical Safety Cards (ICSCs). The documents, developed by the International Programme on Chemical Safety, summarize essential health and safety information on chemicals for use at the ''shop floor'' level by workers and employers (Niemeier, 1997, Document ID #0191). ICSCs are intended to present information in a concise and simple manner, and they follow a standardized format that is shorter (one double-sided page) and less complex than the ANSI approach. The ICSCs were field tested in their initial stages of development, and new ICSCs are verified and peer reviewed by internationally recognized experts (*id.*). ICSCs have been developed in English for 1,646 chemicals, and are also available in 16 other languages. The ICSCs are being updated to be consistent with the GHS.

A study by Phillips compared the effectiveness of different SDS formats as well as ICSCs among workers at a large national laboratory (Phillips, 1997, Document ID #0191). The employees represented a variety of trades, including painters, carpenters, truck drivers, and general laborers. Each worker was tested for knowledge regarding a hazardous chemical before and after viewing an SDS or ICSC. Three designs were tested: a 9-section OSHA form, the 16-section ANSI Z400.1 format (an earlier and slightly different version of the current ANSI Z400.1 format), and the 9-section ICSC. A subsequent paper described the final results of this study (Phillips, 1999, Document ID #0263). All three formats led to significant improvements in subjects' knowledge, and there was no statistically significant difference among the three formats in terms of total test score. However, there were a few significant differences in how well readers of each SDS format answered specific types of questions:

- The ICSC performed better than the OSHA form regarding chronic and immediate health effects.
- The other two formats performed better than the ANSI format on fire-related questions.
- The OSHA form performed better than the other two formats on spill response questions.

▪ The OSHA form performed better than the ANSI format regarding carcinogenic potential.

The ANSI Z400.1 template has been used by a wide number of employers for creating SDSs. By following the recommended format, the information of greatest concern to employees is featured at the beginning of the document, including information on ingredients and first aid measures. More technical information that addresses topics such as the physical and chemical properties of the material and toxicological data appears later in the document. The ANSI standard also includes guidance on the appearance and reading level of the text in order to provide a document that can be easily understood by readers.

The ANSI format is commonly used. However, because it is a voluntary standard, not all chemical manufacturers and importers have adopted it. As a result, different formats are still used on many SDSs. Of the comments received regarding SDS, none were in favor of allowing voluntary adoption of the SDS format. The California Industrial Hygiene Council (CIHC) (Document ID #0463) reiterated its support for a uniform format, and specifically the implementation of the ANSI format for SDSs. The CIHC also stated that a mandatory format would establish a harmonized structure for all ''global target audiences'' (Document ID #0463).

In a separate comparison, Conklin also found similarities in the overall performance of several standard SDS formats (Conklin, 2003, Document ID #0245). In this study, employees of a multinational petrochemical company were given one of three versions of an SDS for an unfamiliar chemical: A U.S. version (OSHA's required content within an ANSI Z400.1–1998 16-part structure); a Canadian version following the 9-part structure prescribed by Canada's Workplace Hazardous Materials Information System (WHMIS); and a version following the European Union's content and 16-part structure. SDSs were controlled for font, layout, and reading level. Overall, Conklin found no statistically significant difference in mean post-test scores using the three different formats, although there were significant differences on 5 out of 10 questions (no one format was consistently better).

OSHA also examined several studies addressing what sequence of information would prove to be most beneficial for users. Because extensive searching can be a barrier to SDS use, researchers have examined whether there is a preferred order of information that more closely matches users' cognitive expectations. Smith-Jackson and Wogalter asked 60 undergraduates and community volunteers to arrange portions of six SDSs in the order they considered most usable (Smith-Jackson and Wogalter, 1998; Document ID #0188). The authors found a few consistent results:

▪ Information about health hazards, protective equipment, and fire and explosion data tended to be placed toward the beginning.

▪ Physical and reactivity data tended to be placed near the end.

▪ Spill or leak procedures were placed near the beginning or the middle, depending on the type of chemical.

A majority of subjects reported that they had attempted to prioritize the hazard information that needed to be communicated. The participants' suggested order of information generally did not match either the original SDS order or the order listed in the HCS—particularly the subjects' emphasis on health hazard information near the beginning.

In the previously discussed 1991 study that evaluated the comprehensibility of SDSs by a group of 91 unionized workers in manufacturing industries in the state of Maryland, a subset of the group (18 workers) was also tested on an ICSC (Kearney/Centaur, 1991a, 1991b, Document ID #0309 and 0310). While the results indicated that workers on average understood about two-thirds of the health and safety information on SDSs, ICSCs provided better results. The average ICSC test score ranged from 6% to 23% higher than the average test score on the four SDSs evaluated. This finding was considered by the authors to suggest that an improved format for SDSs may serve to increase user comprehension of the information presented.

OSHA believes that a standardized format will improve the effectiveness of SDSs for the following reasons: A consistent format makes it easier for users to find information on an SDS. Headings for SDS sections are standardized, so SDS users know which section to consult for the information they desire. The sections are presented in a consistent, logical sequence to further facilitate locating information of interest. Information commonly desired by exposed employees and of greatest interest to emergency responders (*e.g.,* Hazards Identification; First Aid Measures) is presented in the beginning of the document for easy reference. More technical information (*e.g.,* Stability and Reactivity; Toxicological Information) is presented later.

Specifically, the revised SDS format now segregate more complex information from information that is generally easier to understand. This order of information places basic information in the first sections, allowing SDS users to find basic information about hazardous chemicals without having to sift through a great deal of technical information that may have little meaning to them. In emergency situations, rapid access to information such as first-aid measures, fire-fighting measures, and accidental release measures can be critically important.

Several stakeholders expressed dissatisfaction with the degree that current SDSs vary from manufacturer to manufacturer (Document ID #0330 and 0351). The International Brotherhood of Teamsters stated that the quality and usefulness of SDSs has been grossly inconsistent in terms of content and format, adding that such discrepancies ultimately result ''in a failure to achieve the objective of the standard'' (Document ID #0357). John Schriefer, head of Local 9477, indicated that workers often didn't bother to request SDSs, because they are so complicated (Document ID #0494 Tr. 54–55). He suggested that a simplified, standard format for SDSs would go a long way toward improving worker safety (Document ID #0494 Tr. 63).

Commenters supported putting information targeted to the employees first on the SDS in order to improve how emergency situations are addressed (Document ID #0332, 0386 and 0414). Stericycle, Inc. supported placing hazard identification information in one location rather than ''sprinkling it through the documents, as is sometimes the case with [SDSs]'' (Document ID #0338). United Steelworkers stated that the difficulty in locating information on current SDSs ''is bad enough with routine assessments, but in an emergency situation like a spill, splash or fire it can be deadly'' (Document ID #0402). Additionally, the American Wind Energy Association argued that requiring hazard identification and first aid information to be placed in the first sections of the SDS would serve to ''better assist emergency response teams to more efficiently recognize hazards during incidents'' (Document ID #0386). American Federation of State, County and Municipal Employees (AFSCME) also supported the adoption of a standardized SDS, reasoning that it would enable workers to better understand SDSs, and could ultimately lead to faster responses as well as a reduction in the number of incidents altogether (Document ID #0386).

A standardized format does not address all issues affecting SDS comprehensibility. Reading level and some design elements would continue to vary. In many respects, this is inevitable given the different target audiences that SDSs have, and the varying qualifications of those who prepare SDSs. Nevertheless, OSHA believes that the revisions will result in a substantial improvement in the quality and ease of comprehension of information provided on SDSs.

In addition to the issues regarding comprehensibility, researchers raised concerns that some SDSs may be incomplete or contain erroneous information. The magnitude of the problem is unclear, because only very limited numbers of SDSs have been evaluated in these studies, and in some cases the investigations were performed so long ago that the results may not reflect current practices. Nevertheless, the evidence appears to indicate that a substantial number of SDSs may not contain complete and correct information.

An initial examination of the accuracy of SDSs was commissioned by OSHA shortly after the scope of the rule was expanded to cover all industries in 1987 (Karstadt, 1988, Document ID #0296). The report, which analyzed the content of 196 SDSs for products used in auto repair and body shops, provided a general indication that the content and presentation of information was inconsistent on the SDSs examined. In 1991, OSHA commissioned an additional study that examined the accuracy of SDSs (Kearney/Centaur, 1991a, 1991b, Document ID #0309 and 0310). The study examined information presented in five areas considered crucial to the health of workers potentially exposed to hazardous substances. The five areas assessed were: Chemical identification of ingredients; reported health effects of ingredients; recommended first aid procedures; use of personal protective equipment; and exposure level regulations and guidelines. The evaluation indicated that 37% of the SDSs examined accurately identified health effects data, 76% provided complete and correct first aid procedures, 47% accurately identified proper personal protective equipment, and 47% correctly noted all relevant occupational exposure limits. Only 11% of the SDSs were accurate in all four information areas, but more (51%) were judged accurate, or considered to include both accurate and partially accurate information, than were judged inaccurate (10%). The study also concluded that the more recent SDSs examined (those prepared between 1988 and 1990) appeared to be more accurate than those prepared earlier.

This belief that some SDSs are not complete and correct was corroborated by an examination of SDSs for lead and ethylene glycol ethers (Paul and Kurtz, 1994, Document ID #0302). Although these substances are known reproductive and developmental toxicants, researchers found that 421 of 678 SDSs examined (62%) made no mention of effects on the reproductive system. OSHA also commissioned a study, completed in 1999, focusing specifically on the accuracy of first aid information provided on SDSs (Lexington Group, 1999, Document ID #0257). A total of 56 SDSs for seven chemicals were examined. First aid information on the SDSs was compared with information from established references. The researchers reported that nearly all of the SDSs reviewed had at least minor inaccuracies.

A standardized format does not directly address the concerns that have been raised regarding the accuracy of information present on SDSs. However, standardization would improve the accuracy of chemical hazard information indirectly. With consistent presentation of information, the task of reviewing SDSs and labels to ensure accuracy will be simplified. Individuals preparing and reviewing these documents should find it easier to identify any missing elements and compare information presented on an SDS to reference sources and other SDSs. OSHA enforcement personnel will be able to more efficiently examine SDSs when conducting inspections. The detailed entries for SDSs are particularly noteworthy in this regard. The sub-headings provide an organized and detailed list of pertinent information to be included under the headings on the SDS. For example, while the HCS currently requires physical and chemical characteristics of a hazardous chemical to be included on the SDS, the final rule provides a list of 18 properties for Section 9 of the SDS. The party preparing the SDS must either include the relevant information for these entries, or indicate that the information is not available or not applicable. This approach provides both a reminder to the party preparing the SDS regarding the information required and a convenient means of reviewing the section to ensure that relevant information is included and is accurate.

Additionally, several stakeholders agreed that standardization would result in improved accuracy of the information on SDSs. For example, Ecolab, Inc. stated that a uniform approach to hazard classification and labeling would improve the accuracy of the information presented on labels and SDSs and reduce ''the currently observed variability among suppliers in chemical classification and presentation of that information'' (Document ID #0351). Additionally, American Iron and Steel Works noted that ''standardized criteria to evaluate and communicate hazards via SDSs * * * should assure consistent communication and lower the likelihood of miscommunication and misinterpretation'' (Document ID #0408). Alliance for Hazardous Materials Professionals also indicated that the standardization of SDSs is likely to ''resolve language and content inconsistencies among similar product providers'' (Document ID #0327).

OSHA concludes that the classification criteria included in the final rule will also improve the accuracy and precision of information on SDSs. The detailed criteria provided will direct evaluators to the appropriate classification for a chemical. For example, while directing the evaluator to use expert judgment in taking all existing hazard information into account, the criteria for serious eye damage/eye irritation is tied to specific results found in animal testing. In addition, assignment to hazard categories would lead to provision of detailed information that would be specific to the degree of hazard presented by the chemical.

Classification of hazards will play an important role in increasing the usefulness of SDSs under the final rule. By including the classification of the substance on the SDS, employers will be in a much better position to compare the hazards of different chemicals. Hazard categories generally give an indication of the severity of the hazard associated with a chemical. For example, all other things being equal, a chemical classified for skin corrosion/irritation in category 1 as a skin corrosive would be more hazardous than a chemical classified in category 2 as a skin irritant. If chemicals are classified into hazard categories, this information can be used to simplify the process of comparing chemicals. As noted previously, employers use SDSs as a means of comparing chemical hazards to select less hazardous alternatives. Thus, it is reasonable to conclude that this final rule will result in more effective use of the SDS as an instrument for identifying less hazardous substitutes for hazardous chemicals.

Stakeholders have expressed support for a standard SDS format. The development of an industry consensus standard for preparation of SDSs, ANSI

Z400.1, in itself, shows a desire on the part of many parties for a consistent approach to SDSs. The final rule follows the same section and sequence as the ANSI Z400.1, which was updated in 2004 and combined with the ANSI 129 standard in 2010.

A report drafted by the GAO recommended that OSHA clearly specify the language and presentation of information on SDSs (GAO, 1991, Document ID #0292). In addition, the report of the National Advisory Committee for Occupational Safety and Health Review of Hazard Communication (September 12, 1996) indicated that during the public presentations and workgroup discussions, there was general agreement that a uniform format should be encouraged, and most workgroup members agreed that OSHA should endorse use of the ANSI Z400.1 format (NACOSH, 1996, Document ID #0260).

Comments received in response to the ANPR indicated widespread support for a standard format for SDS (*See, e.g.,* Document ID #0030, 0054, 0064, 0124, and 0158). The American Foundry Society, for example, said that consistent SDSs make it easier for users to find information and compare products (Document ID #0158). The Jefferson County Local Emergency Planning Committee maintained that critical information can be missed by first responders due to the current lack of consistency in presentation of information on SDSs, stating: ''It is not overreaching for us to say that lives will be saved through harmonization'' (Document ID #0037).

Moreover, stakeholder response to the NPRM also overwhelmingly supported requiring a consistent, standardized format for SDSs (Document ID #0307, 0313, 0321, 0322, 0328, 0329, 0330, 0335, 0341, 0344, 0349, 0352, 0357, 0365, 0372, 0374, 0381, 0382, 0383, 0386, 0389, 0392, 0393, 0403, 0404, 0405, 0410, 0415, 0456, and 0463). American Subcontractors of America stated that a standardized format would make SDSs a more effective resource and better educational tool (Document ID #0322). Additionally, the Communications Workers of America asserted that standardizing SDSs would be an invaluable solution for addressing current inconsistencies and quality issues on SDSs (Document ID #0349).

Based on the studies and comments in the record, OSHA has concluded that not only will the standardized SDS format indirectly improve the quality of information provided on SDSs, but that it is in the format that stakeholders already know and overwhelmingly prefer.

Training

Along with labels on containers and SDSs, employee training is one of three core components of a comprehensive hazard communication program. Training is needed to explain and reinforce the information presented on labels and SDSs, to ensure that employees understand the chemical hazards in their workplace and are aware of the protective measures they need to follow. The final rule includes a relatively minor revision to the existing HCS training requirements for employers to train employees on the label elements and SDS format. This revision is intended to ensure that labels and SDSs are adequately explained to employees (*See* Section XIII for a detailed discussion of the training requirements). In light of the evidence discussed and new information submitted to the record related to label and SDS comprehension, the importance of training should not be underestimated.

Training is necessary to ensure that employees understand the standardized headings and sequence of information on SDSs. Likewise, employees must be able to understand the meaning of the standardized label elements in order for them to be effective. In certain instances, label elements already appear to be fairly well understood. For example, ''Danger'' appears to be generally recognized to represent a higher degree of hazard than ''Warning.'' Other label elements, particularly some pictograms, are less well understood. This finding is not surprising given the limited amount of exposure that most of the population has had to some of these pictograms.

A relatively high level of understanding is generally recommended for pictograms. For example, ANSI Z535.3, the American National Standard that addresses criteria for safety symbols (Document ID #0276), contains a test method for determining the effectiveness of a pictogram. The criterion for a successful, effective pictogram is 85% correct responses, with no more than 5% critical confusion. (Critical confusion refers to when the message conveyed is the opposite of the intended message.) A score below 85% does not mean the pictogram should not be used, but rather that it should not be used without some additional element, such as written text. The International Standards Organization has similar criteria in ISO 9186, Procedures for the Development and Testing of Public Information Symbols (Document ID #0255). This standard recommends testing methodologies to evaluate symbols intended to be used internationally. It sets a somewhat lower level of acceptability (66%) than the ANSI standard.

While initial understanding of some pictograms may not be satisfactory, research shows that training can improve comprehension. In one study, Wogalter *et al.* tested how well undergraduate subjects comprehended a set of 40 pharmaceutical and industrial safety pictorials before and after training (Wogalter *et al.,* 1997c, Document ID #0288). Training led to a significant increase in pictorial comprehension. The improvement was greatest for the most complex symbols. Training was equally effective whether the subject was given a simple printed label (*e.g.,* ''Danger, cancer-causing substance'') or a label with additional explanatory text.

Lesch conducted a similar study, testing how well workers recognized a set of 31 chemical and physical safety symbols before and after training (Lesch, 2002, Document ID #0246; Lesch, 2003, Document ID #0282). Training significantly improved comprehension, which remained higher up to 8 weeks later. As in the Wogalter *et al.* study described above, Lesch found little difference in performance whether training took the form of a written label assigned to each symbol, a label plus explanatory text, or an accident scenario. Training also improved response speed.

In a survey of South African workers, London examined the impact of brief training on the meaning of symbols and hazard phrases (London, 2003, Document ID #0311). Here, the author found no statistical difference in comprehensibility of four familiar hazard symbols, but did find that training improved comprehension of one symbol (the GHS health hazard symbol), and it also reduced the overall incidence of critical confusion. This study also found that workers with previous workplace training were more likely to understand label text and some pictograms, and were better able to identify the active ingredient. Banda and Sichilongo reported a similar result in their evaluation of GHS labels in Zambia. The authors found that ''correct responses to label elements were not a result of social class and/or age but appeared to be influenced by extent of duration of exposure either through specialized training or acquaintance'' (Banda and Sichilongo, 2006, Document ID #0237). Recognizing that symbols are the items most often recalled from a label, London advised a strong emphasis on training for GHS symbols, particularly the ''flame over circle'' and

''flame'' symbols—which were reported to be easily confused—and other symbols that may generate critical confusion (London, 2003, Document ID #0311).

NIOSH, in its post-hearing comments, provided the following additional studies. These studies support OSHA's position that training ensures the understanding of standardized label elements (pictograms, signal words, hazard statement, and precautionary statements) and is an essential part of an effective hazard communication program.

Burt *et al.* (1999, Document ID #0480.1) conducted an ergonomic study of correct lifting posture. The project included three separate studies: using 135 undergraduate students, Study 1 consisted of a questionnaire to evaluate nine symbols to select the most appropriate symbols to encourage correct lifting posture. Four of the symbols used in Study 1 met the appropriateness criteria and were used in Study 2 by 21 city council workers to test their understanding of each symbol. Using 100 random subjects, Study 3 was a field test that examined the effect of the best performing symbol (from Study 2) on subjects when asked to lift a box. Burt *et al.* found that once trained on the meaning of a label, the presence of a standard recognized label prompted the test subject to take the proper action. The author also found significant increases in correct lifting posture when a symbol was present compared with a control condition in which people were trained in correct lifting techniques, but did not see the symbol as a reminder.

In 2007, Lesch (Document ID #0480.3) conducted a study looking at different training conditions. During the training, warning symbols with labels (to better explain the meaning of the symbol) were paired with accident scenarios. The accident scenarios illustrated the nature of the hazard, the required or prohibited actions, and the possible consequences of failing to comply with the warning. The participants were tested before and following the training (immediately after and two weeks later). The results showed the benefits of training—improved comprehension, reduced reaction times, and an improved confidence in their responses—and illustrated that, by strengthening the connections between the warning symbol and its associated meaning, accident scenario training can be used to prevent accidents and injuries.

In 2007, Su and Hsu (Document ID #0480.5) tested 1,000 college students on their perception of GHS labels and traffic safety signs. The study found that students who had taken training did better in perceiving various traffic safety signs than those who did not. With regards to chemical labeling, students who had taken hazard communication training had better perception ratings than those without training. Analysis showed that 17 out of 27 hazards had perception ratings lower than 66%, the ISO suggested acceptable rate for a good sign. The statistical analysis used in the study indicated that pictograms should not be used alone but accompanied by warning statements or other kinds of textual materials. The study also suggested that training on pictograms and warning statements should be integrated into school curriculum.

Rother (2008, Document ID #0480.4) conducted a study to assess how South African farm workers interpret the pictograms used in the pesticide industry. Administered to 115 farm workers from commercial vineyards in Western Cape, South Africa, this study used a questionnaire designed to interpret the workers' understanding of 10 pictograms commonly used in the pesticide industry. Fifty percent or more of the study participants had misleading, incorrect, or critically confused interpretations of the label pictograms. The study identified a response as critically confused when a farm worker incorrectly interpreted a pictogram to require an action or behavior that would increase his or her health risks. OSHA agrees with NIOSH's interpretation that the study ''found that lack of training severely affected farm worker's abilities to correctly interpret pesticide pictogram warning labels'' (Document ID #0470).

These reports reinforce OSHA's longstanding belief that labels, SDSs, and training are complementary parts of a comprehensive hazard communication program—each element reinforces the knowledge necessary for effective protection of employees. The need for training to ensure comprehension of hazard information is widely recognized. Annex A of ANSI Z535.2 (the American National Standard for Environmental and Facility Safety Signs) (Document ID #0277), for example, recommends training on the meaning of standard safety symbols and signal words, and ANSI Z535.4 (Document ID #0278) contains similar guidance.

OSHA received many comments supporting the importance of training (*See, e.g.,* Document ID #0329, 0331, 0347, 0370, 0382, 0387, 0412, 0527, 0640, 0644, and 0647). The National Institute of Occupational Safety and Health (NIOSH) (Document ID #0412) stated:

> Training is key to ensuring effective hazard communication. Although written information is important, training is an opportunity to explain the data and helps to ensure that the messages are being received accurately so they can be acted on appropriately.

The USW stated that ''there is no question good training greatly improves the ability to understand chemical labeling and safety data sheets. Unfortunately, the OSHA standard is vague * * *'' (Document ID #0403). Several organizations, including Western Region Universities Consortium, ORC Worldwide, SOCMA, NIOSH, Building & Construction Trades Department of AFL–CIO, NIEHS, and USW (*e.g.,* Document ID #0331, 0370, 0402, 0412, 0527, 0640, and 0647) stated that training, though essential, is often not done well, and urged OSHA to ''strengthen training requirements and worker protection'' (Document ID #0331).

Others, such as DuPont, API, Michelle Sullivan, ACC, and American Iron and Steel Institute/American Coke & Coal Chemicals Institute, stated that the standardized SDS and label format should facilitate training efforts and the overall effectiveness of hazard communication in industry (Document ID #0329, 0376, 0382, 0393, and 0408). The American Iron and Steel Institute stated: ''Standardized criteria to evaluate chemicals should facilitate training. With a single teaching format for SDSs and Labels, understanding, regardless of an employee's educational background, should be improved'' (Document ID #0408).

OSHA not only received many comments indicating that the training requirements in the HCS are not adequate, several organizations requested that OSHA either add regulatory text or a mandatory appendix specifying training content, frequency, and methods of evaluation (Document ID #0331, 0340, 0347, 0349, 0357, 0403, 0414, 0456, 0640, and 0647). For example, the National Institute of Environmental Health Sciences Worker Education and Training Program (NIEHS WETP) (Document ID #0347 and, 0516) provided training information, including a training program guidance manual, and an outline detailing specific training topics for the HCS.

OSHA agrees that training is important for ensuring effective hazard communication. However, OSHA did not propose to change the training provisions in the HCS other than initial training on the new GHS elements.

Similarly, the GHS discusses the importance of training, but does not contain specific training requirements. Since the purpose of this rulemaking is to align with the requirements of the GHS, OSHA did not propose modifications that were outside of those necessary to maintain alignment with the GHS. OSHA has decided to stay within the scope of the rulemaking and retain the proposed training provisions in the HCS final rule. *See* Section XIII for a more detailed discussion on training.

Conclusion

It is a longstanding Agency position that employees have the ''right to know'' and understand the hazards of chemicals they are exposed to in the workplace (53 FR 29826, Aug. 8, 1988; 59 FR 6126, Feb. 9, 1994). This knowledge is needed in order to take the precautions necessary for safe handling and use, to recognize adverse health effects associated with chemical exposure, and to respond appropriately in emergency situations.

Equally important in terms of employee protection is that employers have access to chemical hazard information as well. Chemical information is the foundation of workplace chemical safety programs—without it, sound management of chemicals is impossible. By ensuring that emergency responders, physicians, nurses, industrial hygienists, safety engineers and other professionals have the information they need, the HCS reduces the likelihood of chemical source illnesses and injuries. Selection of appropriate engineering controls, work practices, and personal protective equipment is predicated upon knowing the chemicals that are present, the form they are present in, and their hazardous properties.

In his testimony at the informal public hearings, Mr. David Irby, a union safety representative at the Severstal Steel Plant in Sparrows Point, Maryland, expressed the importance of the right to understand SDSs, stating that employees ''need an easy-to read format written in a clear, precise and understandable manner in our workplace'' (Document ID #0494 Tr. 55–57). OSHA agrees that employees must be able to read and comprehend the information presented on both labels and SDSs so that they can respond accordingly. Therefore, OSHA has determined that the provisions in this final rule—the standardized label elements (including pictograms, signal words, and hazard and precautionary statements), a standardized 16-section SDS, and the requisite training provisions—provide the necessary conventions to support understanding the hazards posed by chemicals in the workplace and that this final rule provides employees not only with the ''right to know'' but also the ''right to understand.''

OSHA concludes that aligning the HCS with the GHS will improve the quality and consistency of the chemical hazard information provided to employers and employees. A combination of label elements—signal word, hazard statement(s), pictogram(s), and precautionary statement(s)—is expected to make label warnings more noticeable and easier to understand, and will better communicate hazard and precautionary information. Standardized headings and a consistent order of information are anticipated to make it easier for users to find information on SDSs, improve their accuracy, and better enable users to compare the relative hazards of different substances. Along with effective training in the context of a comprehensive chemical hazard communication program, OSHA has determined that these revisions will more adequately inform employees of chemical hazards, and lead to better protections in the workplace.

V. Pertinent Legal Authority

The primary purpose of the Occupational Safety and Health Act (the ''OSH Act'' or ''Act'') (29 U.S.C. 651 *et seq.*) is to assure, so far as possible, safe and healthful working conditions for every American employee over the period of his or her working lifetime. One means prescribed by Congress to achieve this goal is the mandate given to, and the authority vested in, the Secretary of Labor to ''promulgate, modify, or revoke'' mandatory occupational safety and health standards. OSH Act § 6(b), 29 U.S.C. 655(b).

An occupational safety and health standard is defined under the Act as:

> [A] standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment.

OSH Act § 3(8), 29 U.S.C. 652(8). The Supreme Court has interpreted this provision as requiring OSHA to determine, before promulgating a permanent standard under section 6(b) of the Act, that the standard is reasonably necessary and appropriate to remedy a significant risk of material health impairment. *Indus. Union Dep't* v. *Am. Petroleum Inst.,* 448 U.S. 607, 642 (1980) (''*Benzene*''). This ''significant risk'' determination constitutes a finding that, absent the change in practices mandated by the standard, the workplace in question would be ''unsafe'' in the sense that employees would be threatened with a significant risk of harm. *Id.*

Section 6(b)(5) provides that:

> The Secretary, in promulgating standards dealing with toxic materials or harmful physical agents under this subsection, shall set the standard which most adequately assures, to the extent feasible, on the basis of the best available evidence, that no employee will suffer material impairment of health or functional capacity even if such employee has regular exposure to the hazard dealt with by such standard for the period of his working life. Development of standards under this subsection shall be based upon research, demonstrations, experiments, and such other information as may be appropriate. In addition to the attainment of the highest degree of health and safety protection for the employee, other considerations shall be the latest available scientific data in the field, the feasibility of the standards, and experience gained under this and other health and safety laws. Whenever practicable, the standard promulgated shall be expressed in terms of objective criteria and of the performance desired.

29 U.S.C. 655(b)(5).

Thus, once OSHA determines that a significant risk due to a health hazard is present and that such risk can be reduced or eliminated by a proposed standard, section 6(b)(5) requires it to issue the standard, based on the best available evidence, that ''most adequately assures'' employee protection, subject only to feasibility considerations. As the Supreme Court has explained, in passing section 6(b)(5) ''Congress * * * plac[ed] the 'benefit' of worker health above all other considerations save those making attainment of this 'benefit' unachievable.'' *Am. Textile Mfrs. Inst. Inc.* v. *Donovan,* 452 U.S. 490, 509 (1981) (''*Cotton Dust*''). Where, however, there are two equally effective methods of reducing significant risk to the most protective feasible level, OSHA must choose the less costly method. *See Cotton Dust,* 452 U.S. 490, 513 n.32; *Int'l Union, UAW* v. *OSHA,* 37 F.3d 665, 668 (D.C. Cir. 1994).

In addition, section 6(b)(7) of the Act provides in part that:

> Any standard promulgated under this subsection shall prescribe the use of labels or other appropriate forms of warning as are necessary to insure that employees are apprised of all hazards to which they are exposed, relevant symptoms and appropriate emergency treatment, and proper conditions and precautions of safe use or exposure.

29 U.S.C. 655(b)(7). Section 6(b)(7)'s labeling and employee warning

requirements provide basic protections for employees in the absence of specific permissible exposure limits, particularly by providing employers and employees with information necessary to design work processes that protect employees against exposure to hazardous chemicals in the first instance. The Supreme Court has recognized such protective measures that may be imposed in workplaces where chemical exposure levels are below that for which OSHA has found a significant risk. *Benzene,* 448 U.S. at 657–58 & n.66. In *Benzene,* the Court relied on section 6(b)(7) to sanction OSHA's requirements for monitoring and medical testing when it sets a permissible exposure limit ''in reliance on less-than-perfect methods.'' *Id.* These requirements serve as a ''backstop,'' the Court said, allowing OSHA to check the validity of its assumptions in developing the PEL, and employers to remove particularly susceptible workers before they suffered any permanent damage. *Id.* at 657–58; *See also Nat'l Cottonseed Products Ass'n* v. *Brock,* 825 F.2d 482, 485–87 (D.C. Cir. 1987) (upholding decision to retain medical monitoring requirement while revoking PEL to ''provide a backstop if that judgment is incorrect and this surveillance will protect the health of the employees'').

In promulgating a standard under the Act, OSHA's determinations will be deemed conclusive if they are ''supported by substantial evidence in the record considered as a whole.'' OSH Act § 6(f), 29 U.S.C. 655(f). When the standard deals with toxic materials or harmful physical agents, OSHA must use the ''best available evidence.'' Such evidence includes ''the latest scientific data in the field,'' ''research, demonstrations, experiments, and such other information as may be appropriate,'' and ''experience gained under this and other health and safety laws.'' OSH Act § 6(b)(5), 29 U.S.C. 655(b)(5). The Supreme Court has held that OSHA is not required to support its finding of significant risk of material health impairment ''with anything approaching scientific certainty'' and that the determination of whether a level of particular risk is '''significant' will be based largely on policy considerations.'' *Benzene,* 448 U.S. at 655–56 & n.62.

The OSH Act allows the Secretary to ''modify'' and ''revoke'' existing occupational safety or health standards. OSH Act § 6(b)(2); 29 U.S.C. 655(b)(2). In passing the Act, Congress recognized that OSHA should revise and replace its standards as ''new knowledge and techniques are developed.'' S. Rep. 91–1282 at 6 (1970). The Supreme Court has observed that administrative agencies ''do not establish rules of conduct to last forever, and * * * must be given ample latitude to adapt their rules and policies to the demands of changing circumstances.'' *Motor Vehicle Mfrs. Ass'n* v. *State Farm Mut. Auto. Ins. Co.,* 463 U.S. 29, 42 (1983) (internal quotation marks and citations omitted).

A. Legal Authority for the Current HCS

OSHA's Hazard Communication Standard (''HCS'') is a standard promulgated under the authority of sections 6(b)(5) and 6(b)(7) of the Act (29 U.S.C. 655(b)(5) and 655(b)(7)). *See Associated Builders and Contractors, Inc.* v. *Brock,* 862 F.2d 63, 67–68 (3rd Cir. 1988); *United Steelworkers of Am.* v. *Auchter,* 763 F.2d 728, 738 (3rd Cir. 1985); *United Steelworkers of Am.* v. *Auchter,* 819 F.2d 1263, 1267 (3rd Cir. 1987). Authority for the HCS may also be found in section 8(c) and 8(g) of the Act, 29 U.S.C. 657(c) and 657(g). Section 8(c)(1) of the Act requires employers to make, keep, and preserve records regarding activities related to the Act and to make such records available to the Secretary pursuant to regulations that the Secretary may prescribe. 29 U.S.C. 657(c)(1). Section 8(g)(2) of the Act authorizes the Secretary to ''prescribe such rules and regulations as [she] may deem necessary to carry out [her] responsibilities under this Act * * *.'' 29 U.S.C. 657(g)(2).

As a 6(b)(5) standard, OSHA was required to establish that the HCS would substantially reduce a significant risk of material harm. Some OSHA standards protect employees from exposure to a concentration of a hazardous substance that OSHA has found to create a significant risk of material health impairment. Thus, in making the significant risk determination in these cases, OSHA is concerned with determining the level at which a significant risk arises.

OSHA took a different approach to its significant risk determinations in promulgating the HCS in 1983 and revising it in 1994. The agency relied on NIOSH data showing that about 25 million, or about 25% of, American employees were potentially exposed to one or more of 8,000 NIOSH-identified chemical hazards and that, for the years 1977 and 1978, more than 174,000 illnesses were likely caused by workplace exposure to hazardous chemicals. 48 FR 53280, 53282 (Nov. 25, 1983). It then noted the consensus evident in the record among labor, industry, health professionals, and government that an ''effective federal standard requiring employers to identify workplace hazards, communicate hazard information to employees, and train employees in recognizing and avoiding those hazards'' was necessary to protect employee health. *Id.* at 53283.

Thus, OSHA found that because:

> * * * inadequate communication about serious chemical hazards endangers workers and that the practices required by this standard are necessary or appropriate to the elimination or mitigation of these hazards, the Secretary is hereby able to make the threshold ''significant risk'' determination that is an essential attribute of all permanent standards.

Id. at 53321. The U.S. Court of Appeals for the Third Circuit agreed that ''inadequate communication is itself a hazard, which the standard can eliminate or mitigate.'' *United Steelworkers* v. *Auchter,* 763 F.2d at 735. The Third Circuit has upheld OSHA's finding of significant risk as sufficient to justify the HCS on several occasions. *See Associated Builders and Contractors,* 862 F.2d at 67 (discussing the history of its review of the issue). OSHA reaffirmed its finding of significant risk in adopting revisions to the HCS in 1994. 59 FR 6126, 6136–40 (Feb. 9, 1994).

A characteristic of hazard communication that OSHA confronted in adopting the HCS is that information about the hazards associated with a particular chemical, and the exposures associated with its use, is not uniformly distributed across industry. That is, chemical manufacturers and importers tend to have greater knowledge and scientific expertise with respect to the composition of the chemicals they make or import than do downstream employers. *See* 48 FR at 53322 (Nov. 25, 1983). Therefore, manufacturers and importers are usually in the best position to assess the inherent hazards associated with them. *Id.* However, it is the downstream users and their employees who tend to have the best information about the means and methods of exposure, and are therefore usually in the best position to determine the risk arising from the use of the chemical in their workplaces. *See* 48 FR at 53307 (Nov. 25, 1983); 59 FR at 6132–33 (Feb. 9, 1994).

OSHA's approach in promulgating the HCS reflects this reality. It places the duty to ascertain and disclose chemical hazards on manufacturers and importers, so that downstream users can use this information to avoid harmful exposures to chemical hazards. But because manufacturers and importers will often have less information about the particular exposures of downstream users, their hazard assessment and communication obligations are imposed only for all normal conditions of use of

their chemicals and foreseeable emergencies associated with those chemicals. 29 CFR 1910.1200(b)(2).

In previous rulemakings, OSHA rejected suggestions that the hazard assessment and communication obligations should arise only where the downstream use creates a significant risk because it is difficult, if not impossible, for OSHA or manufacturers and importers to know where these risks might occur before the fact. 48 FR at 53295, 53296, 53307 (Nov. 25, 1983; 59 FR at 6132 (Feb. 9, 1994). Further, it is only by the provision of hazard information that downstream employers and employees can determine how to use the chemical so that exposure and risk may be minimized. *Id.* Thus, the HCS protects employees from significant risk by requiring communications about all chemicals that may present a hazard to employees, regardless of the exposure or risk levels any particular downstream user might actually experience. *See Durez Div. of Occidental Chem. Corp.* v. *OSHA,* 906 F.2d 1, 3–4 (D.C. Cir. 1990); *General Carbon Co.* v. *OSHRC,* 860 F.2d 479, 484–85 (D.C. Cir. 1988).

For these reasons, hazard communication—as opposed to risk communication—''most adequately assures'' employee protection from the significant risk of material impairment of health arising from the use of hazardous chemicals in the workplace for purposes of OSHA's authority under section 6(b)(5) of the Act. In addition, the HCS is authorized under section 6(b)(7), which requires OSHA to prescribe ''labels or other appropriate forms of warning as are necessary to insure that employees are apprised of all hazards to which they are exposed, relevant symptoms and appropriate emergency treatment, and proper conditions and precautions of safe use or exposure.'' 29 U.S.C. 655(b)(7). As noted above, the *Benzene* case recognizes that the ''backstop'' provisions of section 6(b)(7) allow OSHA to impose information requirements even before the employee is exposed to the significant risk. In this way, the HCS ensures that employers and employees have the information they need to avoid situations of exposure in the workplace even before the employee is exposed to a hazardous chemical. As OSHA explained in the preamble to the 1994 HCS amendments: ''OSHA has concluded that imposing informational requirements is necessary and appropriate to protect workers even when OSHA has not determined that the level of risk at a particular worksite warrants a substance-specific standard that would employ more elaborate types of controls.'' 59 FR at 6132 (Feb. 9, 1994).

B. Authority for the Final Rule

1. Section 6(b)(7) Authority. OSHA has authority to adopt the revisions to the HCS made in the final rule under the last sentence of section 6(b)(7) of the Act, which provides that:

> The Secretary, in consultation with the Secretary of Health and Human Services, may by rule promulgated pursuant to section 553 of title 5, United States Code, make appropriate modifications in the foregoing requirements relating to the use of labels or other forms of warning, monitoring or measuring, and medical examinations as may be warranted by experience, information, or medical or technological developments acquired subsequent to the promulgation of the relevant standard.

29 U.S.C. 655(b)(7).

This provision exempts modifications to hazard communication, monitoring, and medical examination requirements from the standard-setting requirements of section 6(b), and so evidences Congress's intent to provide OSHA with an expedited procedure to update these requirements. OSHA believes that exercise of this authority does not require a new finding of significant risk. As noted above, the ''backstop'' 6(b)(7) requirements of hazard communication, exposure monitoring, and medical surveillance may be imposed even in the absence of a significant risk finding. *See Benzene,* 448 U.S. at 657–58; *Nat'l Cottonseed Products Ass'n,* 825 F.2d at 485–87. The last sentence of section 6(b)(7) merely allows these requirements to be updated to reflect the latest knowledge available. The authorization to use Administrative Procedure Act notice and comment procedures rather than the more elaborate framework established by section 6(b) demonstrates congressional intent to treat such modifications differently from rulemakings to adopt standards. Congress envisaged a simple, expedited process that is inconsistent with the idea that OSHA must undertake additional significant risk analyses before exercising this authority.

Rather than requiring a finding of significant risk, the last sentence of section 6(b)(7) provides other assurances that OSHA is exercising its authority appropriately: by requiring the involvement of the Secretary of Health and Human Services, and by limiting the authority only to modifications that are based on ''experience, information, or medical or technological developments'' acquired since the promulgation of the standard in the limited areas of hazard communication, monitoring, and medical examinations. Therefore, OSHA need not make any new significant risk findings; rather, the final rule is supported by the significant risk findings that OSHA made when it adopted the current HCS.

OSHA has used the authority of section 6(b)(7) in the past to revise its standards. *See, e.g.,* Standards Improvement Project-Phase II, 70 FR 1112 (Jan. 5, 2005); Standards Improvement (Miscellaneous Changes) for General Industry and Construction Standards, 63 FR 33450, 33458 (June 18, 1998). For example, it used this authority to revise the inorganic arsenic and coke oven emissions standards to eliminate the requirement of sputum cytology testing and to reduce the required frequency of mandatory chest x-rays from semi-annual to annual. 63 FR at 33458 (June 18, 1998). OSHA justified these changes on the grounds that studies reported after the promulgation of the relevant standards showed that sputum cytology did not improve employee survival rates and that the survival rates when semi-annual x-rays were used were not higher than when annual exams were administered. 63 FR at 33458–59 (June 18, 1998). In addition, OSHA has used its section 6(b)(7) authority to authorize new respirator fit protocols under its respiratory protection standard. 69 FR 46986 (Aug. 4, 2004); *See generally* 29 CFR 1910.134 App. A, Pt. II. On neither occasion has OSHA made new findings about significant risk.

The final rule fits well within the authority granted by the last sentence of section 6(b)(7). Adoption of GHS provisions constitutes a ''modification[]'' of the HCS regarding ''the use of labels or other forms of employee warning.'' For the reasons summarized above and explained more fully elsewhere in this preamble, OSHA believes that the adoption of GHS is ''appropriate'' based on ''experience, information, or medical or technological developments acquired subsequent to the promulgation of the relevant standard.'' The formulation of GHS may also be considered a ''technological development'' that has occurred since the promulgation of the original standard in 1983. GHS was negotiated and drafted through the involvement of labor, industry, and governmental agencies, and thus represents the collective experience and information on hazard communication gathered by the participants in these sectors over the last several decades. *See* Parts III and XIII of this preamble; 74 FR 50280, 2085–86 (Sept. 30, 2009); 71 FR 53617, 53618–19 (Sept. 12, 2006). Indeed, OSHA noted the possibility of a future

internationally harmonized standard in the preamble accompanying the original HCS rule. *See* 48 FR at 53287 (Nov. 25, 1983).

The last sentence of section 6(b)(7) also requires consultation with the Secretary of Health and Human Services. As detailed in the NPRM, NIOSH was involved in the development of the proposal through briefings and review of the proposed rule before publication. *See* 74 FR at 50306 (Sept. 30, 2009). NIOSH strongly supported the proposal in comments and hearing testimony (Document ID #0412, 0470, 0472, and 0497) and has actively supported the development of the GHS. *See* 74 FR at 50306 (Sept. 30, 2009).

Paul A. Shulte, Ph.D., testified on behalf of NIOSH that:

> [A] significant advantage of the proposed standard is the detailed technically sound criteria for classification that will improve accuracy and consistency in the information provided to employers and employees on chemical hazards and protective measures * * *. In summary, the proposed standard will serve as a powerful tool for the protection of working people.

(Document ID #0497 Tr. 36–37). OSHA has consulted with HHS in accordance with section 6(b)(7). For all the reasons set forth above, revision of the HCS through adoption of the GHS as proposed by OSHA is authorized by section 6(b)(7) of the OSH Act, 29 U.S.C. 655(b)(7).

2. Section 6(b)(5) Authority. OSHA also has authority to adopt the proposal under section 6(b)(5) of the Act, 29 U.S.C. 655(b)(5). As noted above, section 6(b) explicitly allows OSHA to ''modify'' standards, and adoption of the GHS is justified because it ''most adequately assures'' employee protection for purposes of section 6(b)(5) for the reasons detailed in parts IV and XIII of this preamble.

HCS is a 6(b)(5) standard since it acts to mitigate the significant health risk of using dangerous chemicals without adequate hazard communication. *See Int'l Union, UAW* v. *OSHA,* 938 F.2d 1310, 1313 (D.C. Cir. 1991). The Society of the Plastics Industry, Inc. (SPI), however, argues that because the rule also addresses physical hazards, ''the agency must comply with the more demanding burden of proof at least with respect to the safety hazards,'' and that some form of cost-benefit analysis is required (Document ID #0392). OSHA disagrees. Safety standards must be ''highly protective,'' which means OSHA may ''deviate only slightly from the stringency required by section 6(b)(5).'' *Int'l Union, UAW* v. *OSHA,* 37 F.3d 665, 669 (D.C. Cir. 1994). The burden of proof for safety standards is therefore not more demanding than that required for 6(b)(5) standards, as SPI argues. Nor does OSHA believe that the OSH Act requires a cost-benefit analysis in setting safety standards. *See Control of Hazardous Energy Sources, Supplemental Statement of Reasons,* 58 FR 16612, 16621–23 (Mar. 30, 1993). However, as discussed in Section VI, Final Economic Analysis, OSHA has examined the costs and benefits of the final rule, and found that the benefits exceed costs by a large margin. In any event, OSHA believes that the more protective requirements of section 6(b)(5) apply to this standard because the standard addresses health hazards.

Standards adopted under the authority of section 6(b)(5) must be supported by a finding of significant risk. However, as explained elsewhere, the GHS is an improved method of communicating chemical hazards to employers and employees over the current standard, and therefore the final rule, which incorporates the GHS, is now the ''standard that most adequately assures'' worker protection. OSH Act § 6(b)(5); 29 U.S.C. 655(b)(5). Adoption of GHS will substantially reduce the significant risk of inadequate communication workers face. As discussed above, OSHA supported the current rule with a finding, affirmed by the Third Circuit, that ''inadequate communication about serious chemical hazards endangers workers'' and that the HCS will mitigate this risk. 48 FR 53321 (Nov. 25, 1983); *United Steelworkers* v. *Auchter,* 763 F.2d at 735; *See also* 59 FR 6126, 6127, 6129, 6132–38 (Feb. 9, 1994). The record shows that this significant risk of inadequate communication was not eliminated by the current standard.

As discussed in Section IV, several studies show that employees do not understand approximately one-third of the safety and health information listed on SDSs prepared in accordance with the current standard (Document ID #0245, 0263, 0295, 0309, and 0310). Studies also report that roughly 40% of persons reviewing SDSs found them difficult to understand (Document ID #0188 and 0262). The results from these studies probably overstate the level of comprehension in the workforce, because the studies had a selection bias towards employees who have stronger English reading skills. These findings are corroborated by worker testimony stating that they and their coworkers find SDSs ''difficult and confusing,'' ''inadequate and incomprehensible,'' and a ''nightmare.'' One witness stated that employees he works with would not ask to see SDSs because they were too complicated, and as a result, the employees unwittingly expose themselves to chemical hazards (Document ID #0494 Tr. 50, 54–55; and 0499 Tr. 134, 147–48, 151, 162, 165–66, and 167).

Moreover, the evidence in the record shows workers who read SDSs prepared in a standardized format have substantially improved comprehension of the information they present (Document ID #0191, 0263, 0309, and 0310). Indeed, standards specifying uniform formats for SDSs have been adopted by ANSI and other standards bodies, indicating a consensus that standardized SDSs will more effectively communicate chemical hazards to workers and employers. Moreover, commenters overwhelmingly agreed that standardizing SDSs would improve hazard communication. (*See, e.g.,* Document ID #0330, 0335, 0336, 0341, 0344, 0348, 0357, 0370, 0372, 0376, 0381, 0410, 0414, and 0415).

Likewise, the record shows that the current HCS's performance-oriented labeling requirements result in inadequate communication. Research conducted over the last twenty years and summarized in section IV of this preamble shows that use of the signal words ''Danger'' and ''Warning,'' pictograms, red borders, and standardized hazard warnings and precautionary statements better convey information about chemical hazards. Studies show that the information conveyed by these techniques is better understood, especially among low literacy populations, better remembered, and more likely to be acted upon. Again, commenters agreed that the current performance-oriented labeling requirement leads to worker confusion, and that the standardized GHS labeling requirements would minimize that confusion. (*See, e.g.,* Document ID #0313, 0327, 0335, 0336, 0341, 0344, 0348, 0351, 0365, 0370, 0410, 0412, and 0644.)

Finally, employees still continue to suffer chemical-related injuries, illnesses and deaths. As discussed in more detail in Section VI, Final Economic Analysis, of the preamble, OSHA estimates that over 40 million employees are potentially exposed to hazardous chemicals. BLS data show that in 2007, there were approximately 55,400 illnesses related to hazardous chemical exposures and 125 chemical-related fatalities. These statistics probably represent only a small portion of the illnesses experienced by exposed employees; most occupational illnesses are not reported because they are not recognized as being related to workplace exposures and are subject to long

latency periods between exposure and the manifestation of disease. The most recent nationwide study of chronic illness estimated that in 1992, there were between 46,900 to 73,700 fatalities from chronic illnesses related to occupational exposures to chemicals (Document ID #0274). In addition, a 2004 study of chronic occupational illness in California reported that more than 200,000 workers were diagnosed with serious chronic diseases attributable to chemical exposures in the workplace, and that an additional 4,400 workers in California died during that year from chemical exposures in the workplace (Document ID #0269).

These data corroborate the idea that currently there is inadequate communication of chemical hazards in the workplace. Further, they show that the use of chemical hazards in the workplace creates a significant risk to employees. For the reasons explained above and in sections IV and XIII of the preamble, OSHA believes that the final rule will reduce the risk to employees by providing better and more easily understood information to employees and employers about the hazards of the chemicals they use, which in turn will allow precautionary measures to be taken.

In its post-hearing comment, the Styrene Information and Research Council (SIRC) argued that OSHA should also have examined injury and illness rates in the EU. It states that ''the GHS is substantially the system that has been in place in the EU for the last 40 years'' for substances covered by the EU Dangerous Substances Directive and for the 10 years for mixtures covered by the EU Dangerous Preparations Directive (Document ID #0642). OSHA disagrees with SIRC's premise. There are significant differences between the GHS and the relevant EU directives. These differences include the criteria for classifying hazards, as well as the label elements used to communicate the hazardous effects. In addition, even if the EU's hazard communications obligations were substantially similar to the GHS, there are technical hurdles that would have to be overcome before such a study could yield useful information. There are significant differences in the way that statistics for occupational illness and injuries collected by the US and the EU (and its members) that make direct comparisons difficult. Furthermore, the regulatory structure for mitigating the hazards identified and communicated in varying systems also differ significantly, and this would confound any effort to compare illness and injury rates in the two jurisdictions. In any event, OSHA need not wait for scientific certainty to update its regulations, but rather it must rely on the best available evidence, and may use conservative assumptions in interpreting the evidence. OSH Act § 6(b)(5), 29 U.S.C. 655(b)(5); *Benzene,* 448 U.S. at 655–56 & n.62. As discussed above and in Sections IV and XIII, the best available evidence indicates that a significant risk continues to exist under the current standard and that the final rule will improve chemical hazard communications, thereby reducing the risk of injury, illness or death associated with the use of hazardous chemicals in the workplace.

C. Feasibility

OSHA standards must be feasible, which means ''capable of being done, executed or effected.'' *Cotton Dust,* 452 U.S. at 508–09. Feasibility has two aspects, economic and technological. *United Steelworkers of Am.* v. *Marshall,* 647 F.2d 1189, 1264 (D.C. Cir. 1981) (''*Lead I*''). A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that can reasonably be expected to be developed. *Id.* at 1272. A standard is economically feasible if industry can absorb or pass on the cost of compliance without threatening its longer term profitability or competitive structure. (*See Cotton Dust,* 452 U.S. at 530 n.55; *Lead I,* 647 F.2d at 1265.)

In addressing feasibility in the 1994 HCS revisions, OSHA found that:

> The feasibility question raised by the HCS is not difficult to resolve. This standard does not relate to activities on the frontiers of scientific knowledge; the requirements are not the sorts of obligations that approach the limits of feasibility. *Associated Builders & Contractors,* 862 F.2d at 68. The record on which the original and expanded HCS's were based did not contain credible evidence that the HCS would be technologically or economically infeasible for any industrial sector, *id.,* and there was substantial evidence of feasibility, 52 FR 31855–58.

59 FR at 6133 (Feb. 9, 1994). OSHA has repeatedly found that the requirements of the HCS are technologically feasible. *See* 52 FR at 31855–57 (Aug. 24, 1987); 59 FR at 6133 (Feb. 9, 1994). While the GHS modifications to HCS impose more specific requirements for hazard classification, labeling, and safety data sheets, employers may use the same expertise and methods to meet these requirements as they are already utilizing to comply with the requirements of HCS.

As discussed below and in section VI.E of this preamble, OSHA believes the final rule poses no technological feasibility issues. The most important resource employers will need in order to comply with the GHS modifications to HCS is technical expertise in hazard classification and the communication of those hazards. OSHA found that such expertise was already available in promulgating the initial HCS rule in 1983. 48 FR at 53296–99 (Nov. 25, 1983). OSHA believes that the availability of professionals with this expertise has only increased in the intervening time. The GHS has already been implemented, in whole or in part, by a number of major U.S. trading partners, including Japan and the EU. Companies that export to these jurisdictions should already have developed expertise in the GHS, and there are a number of GHS training resources developed on the international level (Document ID #0405, 0410, and 0514). At least one professional organization currently provides GHS training in hazard communication to professionals and businesses in the United States (Document ID #0021 and 0145). Through OSHA's Alliance with the Society for Chemical Hazard Communication, training to small businesses in the requirements of hazard communication and information about the GHS modifications has been made available. *See http://www.osha.gov/dcsp/alliances/schc/schc.html.* NIOSH is preparing a program for employers to use in training their employees in the new labeling scheme (Document ID #0412). OSHA received numerous comments discussing the professionals and tools (both manual and electronic) that employers have available to comply with current hazard communication requirements. (*See, e.g.,* Document ID #0015, 0024, 0026, 0036, 0038, 0042, 0046, 0050, 0053, 0072, 0077, 0107, 0108, 0116, 0123, 0128, 0141, 0144, 0145, 0154, 0155, 0163, 0330, 0352, and 0389.) The Agency has been engaged on several fronts to facilitate the transition from the current standard to the GHS modifications. For instance, the United Nations Institute for Training and Research is developing basic and more advanced training courses for the GHS, and OSHA has been involved with and committed resources to this effort. As discussed in more detail below in the Summary and Explanation, OSHA plans to issue a number of outreach and compliance assistance materials. Additionally, NIOSH testified that the World Health Organization has started the process to convert International Safety Cards to GHS and as of March 2010; approximately 249 (15%) have

already been converted (Document ID #0497 Tr. 46). OSHA believes that adopting the GHS modifications poses no technological feasibility issues.

Likewise, for the reasons more fully discussed in Section VI, Final Economic Analysis, OSHA believes that the adoption of GHS will not pose economic feasibility issues. Again, OSHA previously found that the implementation of HCS would have no such effect. *See* 52 FR at 31855–57 (Aug. 24, 1987); 59 FR at 6133 (Feb. 9, 1994). As discussed in Section VI, OSHA has found that, once conversion to the new system is completed, compliance with the GHS-modified HCS will not be more expensive than compliance with the current HCS and will result in savings for employers. While industry will incur the cost of converting to the new system, OSHA does not believe that this cost is so substantial as to threaten long term profitability or the competitive structure of any industry.

VI. Final Economic Analysis and Voluntary Regulatory Flexibility Analysis

A. Introduction and Summary

Introduction

OSHA is required by the Occupational Safety and Health (OSH) Act of 1970 to ensure and demonstrate that standards promulgated under the Act are reasonably necessary and appropriate, as well as technologically and economically feasible. Executive Orders 12866 and 13563, the Regulatory Flexibility Act, and the Unfunded Mandates Reform Act also require OSHA to estimate the costs, assess the benefits, and analyze the impacts of certain rules that the Agency promulgates. Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. OSHA has determined that this action is ''economically significant'' within the meaning of 3(f)(1) of the executive order because it is likely to have an effect on the economy of $100 million or more in any one year. Accordingly, the rule has been reviewed by OMB.

Accordingly, OSHA has prepared this Final Economic Analysis (FEA), including a Final Regulatory Flexibility Screening Analysis (FRFSA), for the modifications to the Hazard Communication Standard (HCS). The OSHA FEA is based largely on research conducted for the Preliminary Economic Analysis (PEA) by Policy, Planning, and Evaluation, Inc. (PP&E), as presented in its revised final report, ''Data and Analysis in Support of an Economic Analysis of Proposed Changes to the OSHA Hazard Communication Standard,'' prepared under contract to OSHA, and on research conducted for purposes of completing this FEA by Eastern Research Group (ERG). ERG and OSHA analyses updated both costs and benefits. The materials prepared by PP&E, 2009 (Document ID #0273) and ERG (2010, 2011, and 2012) [1] are available in the public docket for this rulemaking, OSHA–H022K–2006–0062, through *www.regulations.gov.*

Need for Regulation

Employees in work environments covered by the HCS are exposed to a variety of significant hazards that can and do cause serious injury and death. The HCS serves to ensure that both employers and employees are provided needed information about chemical hazards that was not provided by markets in the absence of such a standard. The HCS also facilitates interstate commerce by promoting consistency among federal and individual state requirements.

The changes to the HCS will create a uniformity standard for the presentation of hazard information and, as such, will serve to improve the efficiency and effectiveness of the existing hazard communication system in the U.S., and to reduce unnecessary barriers to trade. Hazard communication is currently addressed by many different international, national, and State authorities. As described in Section IV of this preamble, these existing requirements are not always consistent and often contain different definitions of hazards and varying provisions for what information is required on labels and safety data sheets. Complying with these different rules results in increased costs for employers with hazardous chemicals in their workplace and for chemical manufacturers, distributors, and transporters involved in international trade. In addition to these effects on businesses, the different existing requirements result in workplaces receiving chemicals with varying information, with potential adverse impacts on the safety and health of employees. The revisions to the OSHA HCS will standardize the hazard communication requirements for products used in U.S. workplaces, and thus provide employees with uniform and consistent hazard communication information. Secondarily, because these revisions will harmonize the U.S. system with international norms, they will facilitate international trade.

Affected Industries

The revisions would affect employers and employees in many different industries across the economy. Based on ERG (2012), OSHA estimates that the HCS covers over five million workplaces in which employees are potentially exposed to hazardous chemicals (*see* Table VI–3).

For establishments with employees whose only exposures to hazardous chemicals result from their use of the chemical products, the revisions to the HCS would generally involve minor effects, such as familiarization with new warning labels. For establishments producing hazardous chemicals, which are generally part of the chemical manufacturing industry, the revisions to the standard would involve reclassifying chemicals in accordance with the new classification system and revising safety data sheets (SDSs) and labels associated with hazardous chemicals. OSHA has judged that SDSs for imported chemicals would normally be produced in the country of origin, and thus would not represent expenses for importers. OSHA solicited comment on this judgment in the PEA and did not receive any contrary testimony or evidence.

Benefits

There is ample evidence of the substantial risks of chemical exposure in the workplace. In 2007, according to the Bureau of Labor Statistics, employees suffered an estimated 55,400 illnesses attributable to chemical exposures (BLS, 2008), and some 17,340 chemical-source injuries and illnesses involved days away from work (BLS, 2009). However, as noted in the preamble to the HCS in 1983, BLS

estimates probably only reflect a small percentage of occupational illnesses (48 FR 53284, Nov. 25, 1983) because most occupational illnesses are not reported. The principal reasons are that they are not recognized as being related to workplace exposures and are subject to long latency periods between exposure and the manifestation of disease. The key study of the issue of the number of fatalities from chronic illnesses, not recorded in any way by BLS, is Leigh *et al.,* 1997 (Document ID#0274). That study found that in 1992, there were from 46,900 to 73,700 fatalities from chronic illnesses related to occupational exposures to chemicals. This critical category dwarfs all acute injuries and illnesses due to chemicals recorded by BLS.[2]

Section IV of this preamble describes some of the incidents that may have been related to the non-standardized approach to SDSs in the current HCS, including xylene exposure at a hospital when an employee was unable to find critical information on an SDS in an emergency spill situation (Document ID #0251). As a result, twelve employees required emergency room treatment. Were the information on SDSs more uniformly formatted and comprehensible, as required under the modifications to HCS, incidents such as this would be less likely to occur.

In general, the modifications to the HCS are expected to result in increased safety and health for the affected employees and to reduce the numbers of accidents, fatalities, injuries, and illnesses associated with exposures to hazardous chemicals.

It is difficult to quantify precisely how many injuries, illnesses, and fatalities would be prevented due to the revisions to the HCS.[3] The benefits associated with the current HCS may indirectly help provide a general sense of the potential magnitude of the benefits of the revisions to the HCS. OSHA estimates that if the rule could capture one percent of the benefits estimated for the original 1983 and 1987 HCS rules, the revisions would result in the prevention of 318 non-lost-workday injuries and illnesses, 203 lost-workday injuries and illnesses, 64 chronic illnesses, and 43 fatalities annually. The monetized value of the corresponding reduction in occupational risks among the affected employees is an estimated $250 million on an annualized basis.

The harmonization of hazard classifications, safety data sheet formats, and warning labels for affected chemicals and products would also yield substantial savings to businesses. Fewer different SDSs would have to be produced for affected chemicals, and many SDSs would be able to be produced at lower cost due to harmonization and standardization. The benefits represented by these cost reductions would primarily affect businesses involved in chemical manufacturing. In addition, businesses that purchase or use hazardous chemicals can expect reductions in operating costs as a result of the promulgation and implementation of the modifications to the HCS due the standardization of SDSs, which will make it easier to locate information and determine handling requirements, and other factors related to simplification and uniformity which will improve workplace efficiency.

In 2008, in preparation for OSHA's Notice of Proposed Rulemaking, PP&E conducted extensive research on the processes that companies use to classify chemical hazards, to develop SDSs and labels, and to handle, store, and use hazardous chemicals. PP&E evaluated how these processes would be affected by the revisions to the HCS and analyzed the potential savings that would be realized as a result of adopting these revisions. Using the parameters estimated by PP&E through its research and employing updated data on wages and the number of affected establishments and employees, OSHA has concluded that the annual cost savings for these companies would be an estimated $507.4 million.

OSHA also expects the revised HCS will reduce the costs of providing hazard communication training to employees in future periods. Stakeholders largely corroborated that expectation. Standardized SDS and label formats will reduce the amount of time needed to familiarize employees with the HCS, which will reduce the training time for all employees once the final rule is fully implemented. OSHA did not monetize these estimated cost savings, but anticipates that they will be substantial.

As an additional benefit, the modification of the HCS by the inclusion of the globally harmonized system (GHS) of classification and labeling of chemicals would be expected to facilitate international trade, increasing competition, increasing export opportunities for U.S. businesses, reducing costs for imported products, and generally expanding the selection of chemicals and products available to U.S. businesses and consumers. As a result of both the direct savings resulting from harmonization and the increased competitiveness, prices for the affected chemicals and products, and the corresponding goods and services using them, would be lowered.

Finally, the GHS modifications to the OSHA HCS would meet the international goals for adoption and implementation of the GHS that have been supported by the U.S. government. Implementing GHS in U.S. federal laws and policies through appropriate legislative and regulatory action was anticipated by the U.S. support of international mandates regarding the GHS in the Intergovernmental Forum on Chemical Safety, the World Summit on Sustainable Development, and the United Nations. It is also consistent with the established goals of the Strategic Approach to International Chemicals Management, a policy framework that the U.S. helped to craft (*See http://www.chem.unep.ch/saicm/*).

Compliance Costs

The estimated compliance costs for the revisions to the HCS represent the additional costs necessary for employers to achieve full compliance. They do not include costs associated with current compliance that has already been achieved; nor do they include costs necessary to achieve compliance with existing requirements, to the extent that some employers may currently not be fully complying with applicable regulatory requirements.

The majority of the costs associated with compliance with the revisions to the HCS would generally be incurred by the affected industries as one-time transitional costs over the phase-in period of four years including the costs to reclassify chemical hazards and revise SDSs and labels, to train workers, and for management to familiarize itself with the requirements of the final rule. There will be additional ongoing annual compliance costs associated with the revisions to the HCS due to the cost to purchase and maintain color printing ink or cartridges or to purchase pre-printed color labels in order to comply

[2] A more recent study prepared by the University of California Centers for Occupational and Environmental Health, and commissioned by the California Environmental Protection Agency, suggests that fatalities from chronic illnesses remain an important problem (University of California COEH, 2008 p. 18). That study estimated that, in 2004, more than 200,000 workers, in California alone, were diagnosed with serious chronic diseases (encompassing cancer, COPD, asthma, pneumoconiosis, chronic renal failure, and Parkinson's disease) attributable to chemical exposures in the workplace, and that an additional 4,400 workers in California died during that year from chemical exposures in the workplace.

[3] While comments in the record did not attempt to estimate the magnitude of these safety and health benefits, they largely supported the conclusion that these revisions would yield increased protection for workers. For additional discussion of the comments regarding OSHA's estimate of benefits, see Section VI:D Benefits in this preamble.

with the requirement that the GHS hazard warning pictogram be presented with a red border. However, OSHA's analysis has found that these costs will not be substantial relative to the other costs of the rule.

The compliance costs are expressed as an annualized cost for purposes of assessing the cost-effectiveness of the revisions, in order to be able to compare the economic impact of the rulemaking with other regulatory actions, and to be able to add and track federal regulatory compliance costs and economic impacts in a consistent manner. Annualized costs also represent a better measure for assessing the longer-term potential impacts of the rulemaking. A seven percent discount rate was applied to costs incurred in future years to calculate the present value of these costs for the base year in which the standard becomes effective, and the same discount rate was then applied to the total present value costs, over a 20-year period,[4] to calculate the annualized cost.

The total annualized cost of compliance with the final rule is estimated to be about $201 million. The major cost elements associated with the revisions to the standard include the classification of chemical hazards in accordance with the GHS criteria and the corresponding revision of safety data sheets and labels to meet new format and content requirements ($22.5 million); training for employees to become familiar with new warning symbols and the revised safety data sheet format ($95.4 million); management familiarization and other management-related costs as may be necessary ($59.0 million); and costs to purchase upgraded label printing equipment and supplies or to purchase pre-printed color labels in order to include the hazard warning pictogram enclosed in a red-bordered diamond on the product label ($24.1 million).

Net Benefits, Cost-Effectiveness, and Regulatory Alternatives

Table VI–1 provides a summary of the costs and benefits of the modifications to the OSHA HCS, and it shows the net benefits of the modifications to the standard are estimated to be $556 million annually, using a discount rate of 7 percent to annualize costs and benefits. (Using a 3 percent discount rate instead would have the effect of lowering the costs to $161 million per year and increasing the gross benefits to $839 million per year. The result would be to increase net benefits from $556 million to $674 million per year.) Because compliance with the standard would result in cost savings that exceed costs, OSHA has not provided estimates of costs per life saved or other metrics of cost-effectiveness. However, it should be noted that the estimated benefits exceed costs by more than a factor of three.

In response to comments on the proposed rule, OSHA has made the following changes to the economic analysis from the PEA to the FEA:

(1) Increased by 100 percent the amount of training time necessary to train employees on the revised HCS during the transition period—from 30 minutes to 60 minutes;

(2) Increased by over 60 percent the number of SDSs (with corresponding labels) covered by the rule—from approximately 0.9 million to over 1.4 million;

(3) Added annualized costs of $24.1 million to print product labels in color; and

(4) Incorporated updated economic data on the number of establishments, number of employees, annual revenues, annual profits, etc. and adjusted estimates from 2007 dollars to 2010 dollars.

The change from 2007 to 2010 dollars using the GDP deflator (for non-wage-related costs and benefits) increased affected costs and benefits by about 4 percent. The rule changes that increased the phase-in period reduced the annualization factors and the associated costs and benefits by about 9.6 percent. All other changes to costs and benefits were the result of updated economic data, including wages, and revised cost factors (e.g., number of SDSs, number of affected employees) in response to comments on the proposed rule.

BILLING CODE 4510–26–P

[4] OSHA annualized costs for this rule over a 20-year period in accordance with Executive Order 13563, which directs agencies ''to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible.'' In addition, OMB Circular A–4 states that analysis should include all future costs and benefits using a ''rule of reason'' to consider for how long it can reasonably predict the future and should limit its analysis to this time period. The choice of a 20-year period is designed to capture out-year benefits given a 4-year phase-in period. A shorter period would place too much emphasis on the phase-in period, where benefits would not be accruing. A longer discount period might over-emphasize the long-term benefits since net benefits increase with the length of the annualization period. As a comparison, the life of OSHA's original hazard communication rule was 1987 to 2011, a 24-year period, suggesting that 20 years is a reasonable estimate.

Table VI-1: Net Benefits

The point estimates below do not reflect the uncertainties described throughout the analysis. While OSHA is reluctant to provide quantified ranges, OSHA recognizes that these estimates are uncertain. OSHA provides a Sensitivity Analysis on these estimates in the final section of the FEA.

Annualized Costs	
Reclassification of Chemical Hazards and Revision of SDSs and Labels	$22.5 million
Employee Training	$95.4 million
Management Familiarization and Other Costs	$59.0 million
Additional Label Printing Costs	$24.1 million
Total Annualized Costs:	$201 million
Annual Benefits	
Number of Non-lost-workday Injuries and Illnesses Prevented	318 (159 - 1,590)
Number of Lost Workday Injuries and Illnesses Prevented	203 (101 - 1,015)
Number of Chronic Injuries Prevented	64 (32 - 302)
Number of Fatalities Prevented	43 (22 - 215)
Monetized Benefits of Reduction in Safety and Health Risks	$250 ($125 - $1,250) million
Savings from Productivity Improvements for Health and Safety Managers and Logistics Personnel	$475.2 million
Savings during Periodic Updating of SDSs and Labels	$32.2 million
Savings from Simplified Hazard Communication Training	unquantified
Reductions in non-tariff trade barriers	unquantified
OSHA standards that are consistent with international standards, consensus standards, and standards of other federal regulatory agencies	unquantified
Contribution towards achieving international goals supported by the U.S. government	unquantified
Total Annual Monetized Benefits:	$757 ($632 - $1,757) million
Net Annual Monetized Benefits (Benefits Minus Costs):	$556 ($431-1,556) million

Note: Costs and benefits are expressed in 2010 dollars and are discounted at a 7% discount rate.

BILLING CODE 4510–26–C

As discussed in Section III of this preamble, the available alternatives to the final rule are somewhat limited since this final rule modifies the current HCS in order to align with the provisions of the UN's GHS. In Section III, the Agency qualitatively discussed the two major alternatives presented during this rulemaking process—(1) voluntary adoption of GHS within the existing HCS framework and (2) a limited adoption of specific GHS components and a variation on (1) that would require compliance with GHS but allow an exemption for small businesses to comply with either the current HCS or with the GHS-compliant HCS. All of these alternatives were soundly rejected by stakeholders. To allow certain parties to follow an alternative system or to allow voluntary adoption of the elements of a uniformity standard does nothing to reduce confusion, improve efficiency, or simplify processes. In order for those benefits to be realized, all elements must apply to all affected parties. OSHA has determined that both of the alternatives presented above would eliminate significant portions of the benefits of the rule.

OSHA did not attempt to evaluate the costs and benefits for the regulatory alternatives that involved partial or voluntary adoption of the GHS. The Agency did evaluate two alternatives where the effective dates were altered. In the first alternative considered, all elements of the revised HCS would be required to be implemented within two years. Under this alternative, all transitional costs would be incurred in two years and benefits would be realized beginning in the third year. The second alternative that OSHA evaluated extended the timeline for training to be completed. For this alternative, all elements of the revised HCS (including training) would be required to be implemented by June 1, 2016. Under this alternative, training costs would not be realized for four and a half years (as opposed to the two year requirement for training in the final version of this rule) while benefits would not be realized for five years (unchanged from the final rule). The results of these evaluations are presented in Table VI–2 below and are discussed in further detail, *including significant qualifications,* in Section VI:G Net Benefits, Cost Effectiveness, and Regulatory Alternatives in this preamble. Although both alternatives show greater net benefits, the Agency concludes that the timing of the final rule is preferable because of additional (but unquantified) compliance costs and reduced (but unquantified) benefits under the first alternative and because of reduced (but unquantified) worker health and safety benefits under the second alternative. In addition, OSHA expects that the final rule offers coordination benefits in that its requirements will fully take effect at the same time as the EU completes its transition.

Table VI-2
Regulatory Alternatives

	Years After Promulgation								
	To Complete Training	For Full Implementation	Until Benefits are Realized	Annualized Benefits	Annualized Costs	Annualized Net Benefits	Benefits Relative to Final Rule Implementation Timeline	Costs Relative to Final Rule Implementation Timeline	Net Benefits Relative to Final Rule Implementation Timeline
Alternative 1									
	2 years	2 years	3 years	$923 million	$206 million	$717 million	+ $166 million	+ $5 million	+ $161 million
Final Rule Implementation Timeline									
	2 years	4.5 years	5 years	$757 million	$201 million	$556 million	--	--	--
Alternative 2									
	4.5 years	4.5 years	5 years	$756 million	$189 million	$568 million	--	-$12 million	+ $12 million

Source: Office of Regulatory Analysis, OSHA

Economic Impacts

To assess the nature and magnitude of the economic impacts associated with compliance with the final rule, OSHA developed quantitative estimates of the potential economic impact of the new requirements on entities in each of the affected industry sectors. The estimated compliance costs were compared with industry revenues and profits to provide an assessment of the economic feasibility of complying with the final rule and an evaluation of the potential economic impacts.

Only the compliance costs were considered for purposes of assessing the potential economic impacts and economic feasibility of the revisions. As described in Section VI.G: Net Benefits, Cost-effectiveness, and Regulatory Alternatives, in this preamble, the overall economic impacts associated with this rulemaking are expected to result in significant net benefits to employers, employees, and the economy generally.

As described in greater detail in Section VI.F: Costs of Compliance in this preamble, the costs of compliance with the rulemaking are not large in relation to the corresponding annual financial flows associated with each of the affected industry sectors. The estimated costs of compliance represent about 0.001 percent of revenues and about 0.011 percent of profits, on average, across all entities; compliance costs represent less than 0.09 percent of revenues or, with the exception of three chemical manufacturing industries, less than 0.9 percent of profits in any individual industry sector. These three chemical manufacturing industries are NAICS 325181 Alkalies & chlorine manufacturing, NAICS 325191 Gum & wood chemical manufacturing, and NAICS 325992 Photographic film, paper, plate, & chemical manufacturing, and their compliance costs as a percentage of profits are 4.3 percent, 2.1 percent, and 2.4 percent, respectively. The higher percentage of profits for these three industries are mainly the result of low profit margins, low baseline estimates of the number of color printers currently employed in these industries (causing higher costs of compliance with the color printing requirements), and a large estimated number of labels produced by these industries.

The economic impact of achieving compliance with the final rule, without considering the associated benefits, is most likely to consist of an extremely small increase in prices of about 0.001 percent, on average, for affected hazardous chemicals. It is highly unlikely that a price increase of this magnitude would significantly alter the types or amounts of goods and services demanded by the public or any other affected customers or intermediaries. If the compliance costs of the final rule can be substantially recouped with a minimal increase in prices, there may be little or no effect on profits.

In general, for most establishments, it would be very unlikely that none of the compliance costs could be passed along in the form of increased prices. In the event that a price increase of 0.001 percent were not possible, profits in the affected industries would be reduced by an average of about 0.011 percent.

Given the minimal potential impact on prices or profits in the affected industries, OSHA has concluded that compliance with the requirements of the rulemaking would be economically feasible in every affected industry sector.

In addition, based on an analysis of the costs and economic impacts associated with this rulemaking, OSHA concludes that the effect of the final rule on employment, wages, and economic growth for the United States would be negligible. The effect on international trade is likely to be beneficial and similar to the effect of a small reduction in non-tariff trade barriers.

Final Regulatory Flexibility Screening Analysis

OSHA has analyzed the potential impact of the final rule on small entities, and has prepared a Final Regulatory Flexibility Screening Analysis (FRFSA) in conjunction with this rulemaking to describe the potential effects on small entities. The FRFSA is included as a part of this preamble in Section VI:I.

As a result of the analysis of the potential impact on small entities, OSHA concludes and certifies that the rulemaking would not have a significant impact on a substantial number of small entities. Therefore, a Final Regulatory Flexibility Analysis (FRFA) is not required for this rulemaking. Nevertheless, OSHA has voluntarily provided the elements of the FRFA as part of the FRFSA presented in Section VI:I: Final Regulatory Flexibility Screening Analysis in this preamble. As part of this rulemaking, OSHA has fulfilled its requirements under the Regulatory Flexibility Act and under the Small Business Regulatory Enforcement Fairness Act, as applicable, to ensure that no unnecessary burdens are imposed on small businesses.

The remainder of this FEA includes the following sections:

B. Need for Regulation
C. Profile of Affected Industries
D. Benefits
E. Technological Feasibility
F. Costs of Compliance
G. Net Benefits, Cost-Effectiveness, and Regulatory Alternatives
H. Economic Feasibility and Impacts
I. Final Regulatory Flexibility Screening Analysis
J. Environmental Impacts
K. Unfunded Mandates Reform Act Analysis
L. Sensitivity Analysis

B. Market Failure and the Need for Regulation

Employees in work environments addressed by OSHA's hazard communication standard (HCS) are exposed to a variety of significant hazards associated with chemicals used in the workplace that can and do cause serious injury and death. OSHA's HCS was designed to ensure that employers and employees are provided the information they need about the hazards in chemical products both to make informed purchases and to provide for safe use. The current HCS contains a set of requirements for chemical products, including mandatory hazard determination, labeling, and detailed information (in safety data sheets). Based on evidence presented in the record,[5] OSHA determined that the revisions to the HCS will make employers' hazard communication programs more worker-protective, efficient, and effective. In addition, the revisions will have the effect of harmonizing hazard communication to facilitate international trade by replacing a plethora of national rules with a single international system.

The standard, through conformance with GHS (as explained in Section IV and XIII of this preamble), contains a number of changes to improve the performance of the U.S. hazard communication system:

- Revised criteria for more consistent classification of chemical hazards;
- Standardized signal words, pictograms, hazard statements, and precautionary statements on labels; and
- A standardized format for SDSs.

In short, GHS is a ''uniformity standard'' for the presentation of hazard information (Hemenway, 1975, Document ID #0293, Tr. 8). And much

[5] *See* Document ID #0303, 0313, 0322, 0324, 0327, 0328, 0329, 0330, 0331, 0334, 0335, 0336, 0339, 0340, 0341, 0344, 0345, 0346, 0347, 0349, 0350, 0351, 0352, 0353, 0354, 0356, 0357, 0359, 0363, 0365, 0367, 0369, 0370, 0371, 0372, 0374, 0375, 0376, 0377, 0378, 0379, 0381, 0382, 0383, 0385, 0386, 0387, 0388, 0389, 0390, 0392, 0393, 0396, 0397, 0399, 0400, 0402, 0403, 0404, 0405, 0407, 0408, 0409, 0410, 0411, 0412, 0414, 0417, 0453, 0456, 0461, and 0463 and additional discussion in Section III of this preamble.

like other uniformity standards, such as driving on the right side of the road (in the U.S.), screw threads for fire hose connectors, ''handshake'' protocols for communication between computers, and, for that matter, language, GHS will provide significant efficiencies and economies.[6] In the case of GHS, manufacturers will be able to produce SDSs at lower cost, and users of SDSs will be able to more fully and quickly utilize the information contained in the SDSs, thereby reducing costs and, more importantly, better protect workers against chemical hazards.[7]

Since publication of the current HCS, there has been some movement by industry toward standardization, consistent with the revisions. However, OSHA does not believe that full and comprehensive standardization as required under the revisions, or the goal of harmonizing the U.S. system with the international one, can be achieved voluntarily in the absence of regulation.

First, in a basic sense, GHS cannot simply be implemented by the market. Some aspects of GHS, such as the reorganization of SDSs, would be allowed under the current OSHA standard, but other aspects, such as the classifications system, would not be. Use of differing classification criteria would lead to label warnings that are not consistent with current HCS requirements in some situations. Thus, at a minimum, OSHA would need to modify HCS to allow the use of GHS in the U.S. OSHA cannot simply provide a compliance interpretation that labels and safety data sheets prepared in accordance with the GHS meet the HCS requirements because the requirements of a standard cannot be changed through a compliance interpretation. While there is considerable overlap between the HCS and the GHS in terms of coverage, there are differences in the criteria used to classify both substances and mixtures that can result in different hazards being covered in some situations. This is particularly true in the area of acute toxicity, where OSHA is covering more substances under the modified rule than the current HCS, but potentially fewer mixtures.[8]

Second, it is important to understand that while the costs of creating SDSs and labels under GHS are borne directly by the chemical producers, the bulk of the benefits of adopting GHS accrue to the users. The set of all users includes employers who are direct customers of a chemical manufacturer, employees who use or are exposed to workplace chemicals, and emergency responders who typically have no market relationship with the producers of the chemical. Even if one thought that market forces might ensure the socially optimal approach to SDSs between manufacturers of chemicals and their customers, there are limited market forces at work between the chemical manufacturer and these two other sets of users—the employees and the emergency response community. Therefore, the benefits achieved by a uniformity standard, such as GHS, cannot be obtained in the private market, without regulation.

OSHA does anticipate that there will be some increased market pressure to comply with GHS that will affect some firms that may think that they have no need to switch to the GHS system because they do not ship their products internationally. Many small firms do not realize the extent to which they are involved in international trade. There are probably few companies who have products that are never involved in international trade, or who never import chemical products and need hazard communication information for them. Many chemical producers ship their products to distributors and are unaware of where their products are ultimately used. OSHA can envision a likely scenario in which these distributors put pressure on their suppliers to become GHS-compliant. Further, small companies sell products to larger companies. The larger companies may use those products to prepare goods that are exported. These larger companies might also be expected to pressure their small-firm suppliers to be GHS-compliant. Nevertheless, such an approach would surely involve a long transition period, with attendant losses in worker protection and production efficiencies, and it is doubtful that market pressure alone would achieve full compliance.

The changes made by GHS will involve costs for all parties. Producers of chemicals will incur substantial costs, but will also achieve benefits—in part because they themselves benefit as both producers and users, and in part, as a result of foreign trade benefits that OSHA has not quantified. Some producers may not see these types of trade benefits unless they engage in chemical export. However, many small companies are currently prevented from engaging in international trade because of the substantial burdens of complying with many different countries' requirements. International harmonization of hazard communication requirements would enable these small companies to become involved in international trade if they so desire.

Of more significance to the concerns of the OSH Act, the changes also provide substantial benefits to users, including:

- Fewer worker illnesses, injuries, fatalities, and accidents due to a more consistent and comprehensible system that does not require English literacy to obtain some minimal hazard information;
- Greater ease of use of SDSs; and
- Less time needed to train workers due to a clearer and more uniform system.

Because many of these benefits require uniformity, and the benefits are dispersed throughout a network of producers and users, only some of which have direct market relationships with each other, OSHA believes that only a single, uniform standard can achieve the full net benefits available to a hazard communications system.

C. Profile of Affected Industries

The revisions to the HCS would affect establishments in a variety of different industries in which employees are exposed to hazardous chemicals or in which hazardous chemicals are produced. Every workplace in OSHA's jurisdiction in which employees are exposed to hazardous chemicals is covered by the HCS and is required to have a hazard communication program.

The revisions to the HCS are not anticipated to either increase or

[6] In contrast to a uniformity standard, a specification standard, such as an engineering standard, would spell out, in detail, the equipment or technology that must be used to achieve compliance. The usual rationale for a specification standard is that compliance would be difficult to verify under a performance standard; hence, only a specification standard would guarantee that employees are protected against the risk in question. A specification standard would generally not provide the efficiencies or economies (such as easier, less expensive training on uniform pictograms and a uniform SDS format made possible by this rule) to the regulated community that a uniformity standard would. On the contrary, a specification standard could impose additional costs on some firms that may be able to effectively protect workers using a cheaper alternative approach if such flexibility were permitted.

It is also worth noting that, for uniformity standards with technological implications, the benefits of reduced information costs, economies of uniformity, and facilitation of exchange may need to be weighed against possible losses of flexibility, experimentation, and innovation. However, because GHS is limited to the presentation of hazard information and does not involve other than incidental technological or strategic considerations, the possible costs of uniformity here would be non-existent or minuscule.

[7] On the ability of individuals to more fully and effectively utilize knowledge when uniformity requirements are present, see Hemenway, 1975 (Document ID #0293), pp. 34–35.

[8] The coverage of fewer mixtures is due to the bridging principles and formula being applied to the mixtures' classification, rather than being based strictly on a 1 percent cut-off.

decrease the scope of affected industries or establishments. The revisions define and revise specific classifications and categories of hazards, but the scope of the requirements under which a chemical, whether a substance or mixture of substances, becomes subject to the requirements of the standard is not substantially different from the previous version of HCS. Therefore, the revisions should have little or no effect on whether an entire establishment falls within the scope of the standard. OSHA solicited comment on this determination and received no comment in the record presenting contrary evidence.

For establishments with employees exposed to hazardous chemicals, the revisions to the HCS will generally involve management becoming familiar with and employees receiving training on the new warning labels and the new format of the SDSs. For establishments producing or importing hazardous chemicals, generally as part of the chemical manufacturing industry, these revisions to the standard will involve reclassifying chemicals in accordance with the new classification system and revising safety data sheets and labels associated with hazardous chemicals.

OSHA's estimates of the number of employees covered by the standard are based on the determination that all production employees in manufacturing will be covered, and that, in addition, employees in other industries working in any of the occupations specified in the PP&E (2009) report would also be exposed to hazardous chemicals.

Table VI–3 provides an overview of the industries and estimated numbers of employees potentially affected by the HCS. The data in this table update the estimates provided in the PEA in support of the proposed rule. They rely on the most recent data from the U.S. Census Bureau (2007a, 2007b).[9]

[9] U.S. Census Bureau (2007a). County Business Patterns, 2007. U.S. Department of Commerce. Available at: *http://www.census.gov/econ/cbp/*. U.S. Census Bureau (2007b). 2007 Economic Census. U.S. Department of Commerce. Available at: *http://www.census.gov/econ/census07/*.

The industries and establishments affected by the revisions can be divided into two categories. The first category contains establishments that are required to produce labels and SDSs; the second category contains establishments that do not produce labels or SDSs but are required to provide employee access to labels and SDSs, supplied by others, for the chemicals to which their employees may be exposed in the workplace. As noted in the introduction to this FEA, OSHA has judged that SDSs and labels for imported chemicals would normally be produced in the country of origin, and thus would not represent expenses for importers or other US firms.
