Title of Collection: Study of Promising Features of Teacher Preparation Programs; Phase 1—Recruitment.
OMB Control Number: Pending.

Type of Review: New.
Total Estimated Number of Annual Responses: 3,295.

Total Estimated Number of Annual Burden Hours: 3,084.

Abstract: The objective of this study is to use causal methods to examine the effectiveness of certain university-based clinical practice features for novice teachers. Teachers who have experienced certain types of clinical practice features and who have completed those features are hypothesized to produce higher average student test scores than teachers who have not done so. Using a randomized controlled trial, students will be randomly assigned to a pair of teachers in the same school and grade level, one of whom will have experienced the type of clinical practice of interest ("treatment") while the other will not have experienced the feature ("control"). Average test scores of the two groups will then be compared.

The Phase I—Recruitment ICR entails the identification of recently-hired teacher pairs who meet the study's eligibility requirements. The study will use a multi-step process to identify these teachers, including identifying feasible states for the study, selecting the specific features related to clinical practice (i.e., the "program"), identifying university-based teacher preparation programs that require such clinical practice, identifying feasible districts and schools for the study, and finally, confirming eligibility of potential teachers for the study. The Phase I—Recruitment ICR requests approval to collect information from preparation programs about their requirements, focusing on aspects of clinical practice specifically, and to collect preliminary information from teachers about their training to determine their eligibility for the study. This package also provides an overview of the study, including its design and data collection procedures.

Dated: March 27, 2012.
