The objective of the proposed research is to use chemical signals to provide insight into the dietary preferences and feeding ecology of Antarctic marine mammals by analyzing seal and whale samples for persistent organic pollutants, mercury, and stable isotopes. The following archived samples will be imported from the Swedish Museum of Natural History: fur, blood, and fat biopsies from up to 300 crabeater seals (Lobodon carcinophaga), 200 Weddell seals (Leptonychotes weddellii), 50 Ross seals (Ommatophoca rossii), and 25 leopard seals (Hydrurga leptonyx) that were collected in Antarctica in 1987–1988, 2008–2009, and 2010–2011. The requested duration of the import permit is 5 years.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the Federal Register, NMFS is forwarding copies of the application to the Marine Mammal Commission and its Committee of Scientific Advisors.
